FEDERAL REGISTER

Vol. 83 Friday,

No. 226 November 23, 2018

Book 1 of 2 Books

Pages 59269–59834

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

How To Cite This Publication: Use the volume number and the page number. Example: 83 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

7 CFR Part 1970

RIN 0572–AC44

Rural Development Environmental Regulation for Rural Infrastructure Projects

AGENCY: Rural Business-Cooperative Service, Rural Housing Service, Rural Utilities Service, Farm Service Agency, USDA.

ACTION: Direct final rule.

SUMMARY: The United States Department of Agriculture (USDA) Rural Development (RD), comprised of the Rural Business-Cooperative Service (RBS), Rural Housing Service (RHS), and Rural Utilities Service (RUS), hereafter referred to as the Agency, is issuing a direct final rule to update the Agency's Environmental Policies and Procedures regulation (7 CFR 1970) to allow the Agency Administrators limited flexibility to obligate federal funds for infrastructure projects prior to completion of the environmental review while ensuring full compliance with National Environmental Policy Act (NEPA) procedures prior to project construction and disbursement of any RD funding. This change will allow RD to more fully meet the Administration's goals to speed the initiation of infrastructure projects and encourage planned community economic development without additional cost to taxpayers or change to environmental review requirements.

DATES: This rule is effective January 7, 2019, without further action, unless the Agency receives significant adverse comments or, an intent to submit a significant adverse comment, by December 24, 2018. Written significant adverse comments or, an intent to submit a significant adverse comment, must be received by Rural Development or carry a postmark or equivalent no later than December 24, 2018. If significant adverse comments are received, the Agency will publish a timely **Federal Register** document withdrawing this rule. The Agency is publishing a proposed rule contemporaneously with this final rule.

ADDRESSES: Submit your comments on this rule by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and, in the lower ''Search Regulations and Federal Actions'' box, select ''Rural Utilities Service'' from the agency drop-down menu, then click on ''Submit.'' In the Docket ID column, select RUS–18–AGENCY–0005 to submit or view public comments and to view supporting and related materials available electronically. Information on using *Regulations.gov*, including instructions for accessing documents, submitting comments, and viewing the docket after the close of the comment period, is available through the site's ''User Tips'' link.
- *Postal Mail/Commercial Delivery:* Please send your comment addressed to Michele Brooks, Rural Development Innovation Center, Regulations Team Lead, U.S. Department of Agriculture, 1400 Independence Ave. SW, Stop 1522, Room 1562, Washington, DC 20250. Please state that your comment refers to Docket No. RUS–18–AGENCY–0005.

Other Information: Additional information about Rural Development and its programs is available on the internet at *https://www.usda.gov/topics/rural.*

FOR FURTHER INFORMATION CONTACT: Kellie McGinness Kubena, Director, Engineering and Environmental Staff, Rural Utilities Service, USDA Rural Development, 1400 Independence Ave SW, Mail Stop 1571, Room 2242, Washington, DC 20250–1571 Phone: 202–720–1649.

SUPPLEMENTARY INFORMATION:

Executive Order 12866

This final rule has been determined to be not significant for the purposes of Executive Order 12866, Regulatory Planning and Review, and therefore has not been reviewed by the Office of Management and Budget (OMB).

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. The Agency has determined that this rule meets the applicable standards provided in section 3 of the Executive Order. In addition, all state and local laws and regulations that are in conflict with this rule will be preempted. No retroactive effect will be given to this rule and, in accordance with section 212(e) of the Department of Agriculture Reorganization Act of 1994 (7 U.S.C. 6912(e)), administrative appeal procedures must be exhausted before an action against the Department or its agencies may be initiated.

Executive Order 12372

This final rule is not subject to the requirements of Executive Order 12372, ''Intergovernmental Review,'' as implemented under USDA's regulations at 2 CFR part 415, subpart C, because this rule provides general guidance on NEPA and related environmental reviews of applicants' proposals. Applications for Agency programs will be reviewed individually under Executive Order 12372 as required by program procedures.

Regulatory Flexibility Act Certification

The Agency has determined that this final rule will not have a significant economic impact on a substantial number of small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. §§ 601 *et seq.*), given that the amendment is only an administrative, procedural change on the government's part with respect to obligation of funds.

National Environmental Policy Act

In this final rule, the Agency proposes to create limited flexibility for the timing of obligation of funds relative to the completion of environmental review. The Council on Environmental Quality (CEQ) does not direct agencies to prepare a NEPA analysis before establishing agency procedures that supplement the CEQ regulations for implementing NEPA. The requirements for establishing agency NEPA procedures are set forth at 40 CFR 1505.1 and 1507.3. The determination that establishing agency NEPA

procedures does not require NEPA analysis and documentation has been upheld in *Heartwood, Inc.* v. *U.S. Forest Service,* 73 F. Supp. 2d 962, 972–73 (S.D. III. 1999), aff'd, 230 F.3d 947, 954–55 (7th Cir. 2000).

Catalog of Federal Domestic Assistance

The Catalog of Federal Domestic Assistance (CFDA) numbers assigned to the RD Programs affected by this rulemaking are as follows:

10.760—Water & Waste Disposal System Systems for Rural Communities.
10.761—Technical Assistance and Training Grants.
10.762—Solid Waste Management Grants.
10.763—Emergency Community Water Assistance Grants.
10.770—Water & Waste Disposal Loan and Grants (Section 306C).
10.766—Community Facilities Loans and Grants.
10.850—Rural Electrification Loans and Loan Guarantees.
10.851—Rural Telephone Loans and Loan Guarantees.
10.855—Distance Learning & Telemedicine Grants.
10.857—State Bulk Fuel Revolving Loan Fund.
10–858—Assistance to High Energy Cost-Rural Communities.
10.863—Community Connect Grants.
10.865—Biorefinery, Renewable Chemical, & Biobased Product Manufacturing Assistance Program.
10.866—Repowering Assistance Program.
10.867—Advanced Biofuel Payment Program.
10.868—Rural Energy for America Program.
10.886—Rural Broadband Access Loan and Loan Guarantee Program.

All active CFDA programs can be found at *www.cfda.gov*. The Catalog is available on the internet at *http://www.cfda.gov* and the General Services Administration's (GSA's) free CFDA website at *http://www.cfda.gov*. The CFDA website also contains a PDF file version of the Catalog that, when printed, has the same layout as the printed document that the Government Publishing Office (GPO) provides. GPO prints and sells the CFDA to interested buyers. For information about purchasing the Catalog of Federal Domestic Assistance from GPO, call the Superintendent of Documents at 202–512–1800 or toll free at 866–512–1800, or access GPO's online bookstore at *http://bookstore.gpo.gov*.

Rural Development infrastructure programs not listed in this section nor on the CFDA website, but which are enacted pursuant to the Rural Electrification Act of 1936, 7 U.S.C. 901 *et seq.,* the Consolidated Farm and Rural Development Act of 1972, 7 U.S.C. 1921 *et seq.,* or any other Congressional act for Rural Development, will be covered by the requirements of this action when enacted.

Unfunded Mandates Reform Act

This final rule contains no Federal mandates (under the regulatory provisions of Title II of the Unfunded Mandates Reform Act of 1995) for state, local, and tribal governments or the private sector. Therefore, this rule is not subject to the requirements of §§ 202 and 205 of the Unfunded Mandates Reform Act of 1995.

E-Government Act Compliance

The Agency is committed to the E-Government Act, which requires Government agencies in general to provide the public the option of submitting information or transacting business electronically to the maximum extent possible.

Executive Order 13132, Federalism

The policies contained in this final rule do not have any substantial direct effect on states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Nor does this final rule impose substantial direct compliance costs on state and local governments. Therefore, consultation with the states is not required.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

This rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes. The latest revision of the Agency's Environmental Policies and Procedures in 2016 involved Tribal consultation via comment period and webinar as a baseline for future consultation on individual program actions. The creation of limited flexibility for the timing of obligation of funds relative to the completion of environmental review is only an administrative, procedural change on the government's part and in no way abridges or alters that agreement. Therefore, no further consultation is necessary on this rule change. The policies contained in this final rule do not have Tribal implications that preempt Tribal law. The Agency will continue to work directly with Tribes and Tribal applicants to improve access to Agency programs. This includes providing focused outreach to Tribes regarding implementation of this rule change. Additionally, the Agency will respond in a timely and meaningful manner to all Tribal government requests for consultation concerning this rule. For further information on the Agency's Tribal consultation efforts, please contact Rural Development's Native American Coordinator at (720) 544–2911 or *AIAN@wdc.usda.gov*.

USDA Non-Discrimination Policy

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (*e.g.,* Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720–2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877–8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *http://www.ascr.usda.gov/complaint_filing_cust.html* and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To

request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by: (1) Mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410; (2) fax: (202) 690–7442; or (3) email: *program.intake@usda.gov*.

USDA is an equal opportunity provider, employer, and lender.

Information Collection and Recordkeeping Requirements

In accordance with the Paperwork Reduction Act, the paperwork burden associated with this final rule has been approved by the Office of Management and Budget (OMB) under the currently approved OMB Control Number 0575–0197. The Agency has determined that changes contained in this regulatory action do not substantially change current data collection that would require approval under the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Background

The United States Department of Agriculture (USDA) Rural Development (RD) programs provide loans, grants and loan guarantees to support investment in rural infrastructure to spur rural economic development, create jobs, improve the quality of life, and address the health and safety needs of rural residents. Infrastructure investment is an important national policy priority. As directed by E.O. 13807 in 2017, USDA as a member of the Federal Permitting Improvement Steering Council has reviewed its NEPA implementing regulations and policies to identify impediments to efficient and effective environmental reviews and authorizations for infrastructure projects. This final rule is part of that effort to improve the efficiency and effectiveness of RD's environmental reviews and authorizations for infrastructure projects in rural America.

On April 25, 2017, the President created the Interagency Task Force on Agriculture and Rural Prosperity (Task Force) through E.O. 13790 and appointed the Secretary of Agriculture as the Task Force's Chair. Among the purposes and functions of the Task Force was to,

''. . . identify legislative, regulatory, and policy changes to promote in rural America agriculture, economic development, job growth, infrastructure improvements, technological innovation, energy security, and quality of life, including changes that remove barriers to economic prosperity and quality of life in rural America.''

The Task Force Report issued on October 21, 2017, included calls to action on achieving e-Connectivity for Rural America, improving rural quality of life, harnessing technological innovation and developing the rural economy.

Purpose of the Regulatory Action

This rulemaking fulfills the mandate of E.O. 13807 as well as the goals of the President's Interagency Task Force on Agriculture and Rural Prosperity by identifying regulatory changes that promote economic development and improve the quality of life in rural America. The RD infrastructure projects impacted by this rule are often critical to the health and safety and quality of life in rural communities. In some cases, funding decisions made by Rural Development are the first step upon which a much larger process of community economic development depends. This amendment to existing regulation will allow the Agency to obligate funding *conditioned upon* the full and satisfactory completion of environmental review for infrastructure projects. This change will give applicants, and often the distressed communities they represent, some comfort to proceed with an economic development strategy, including the planning process associated with NEPA, without fear that funds may be rescinded before the NEPA process is completed. With this change in place, RD can more fully meet the government's goals of speeding up the initiation of infrastructure projects, encouraging planned community economic development, and leveraging investment without additional cost to taxpayers or any change in environmental review requirements. Infrastructure projects covered by this final rule include those, such as broadband, telecommunications, electric, energy efficiency, smart grid, water, sewer, transportation, and energy capital investments in physical plant and equipment.

Changes to the Current Regulation

Nothing in this final rule reduces RD's obligation to complete the NEPA planning process prior to foreclosing reasonable alternatives to the federal action. The current regulation at 7 CFR 1970.6 (''Financial assistance'') states that the Agency defines the major decision point for completion of NEPA as the approval of financial assistance. Similarly, 7 CFR 1970.11(b) identifies Agency obligation as the point by which the environmental review must be concluded. As amended by this final rule, 7 CFR 1970.11(b) will now provide RD Administrators limited flexibility to obligate funds for infrastructure projects prior to the completion of the environmental review process where the assurance that funds will be available is important for community health, safety, or economic development. As a result, the environmental review process must be completed prior to disbursement of any RD funds, or any other action that would have adverse environmental impact or limit the choice of reasonable alternatives. The conditions of obligation will be defined in the documentation of the agreement approving the financial assistance between the Agency and the applicant. If, however, the conditions of obligation are not met, or the agency chooses not to proceed with the project after considering the results of the NEPA process, the Agency will rescind the obligated funds. With these conditions, the Agency retains control of the final decision to authorize construction and release funds based on the satisfactory completion of the environmental review. Note, this final rule will not, and does not, change any of the requirements for environmental reviews. Should an applicant choose to commence a project and thus foreclose reasonable alternatives, such action would result in de-obligation of federal funding, thereby eliminating any federal action for NEPA purposes on the part of Rural Development. Until the Agency concludes the environmental review and decides to proceed with the project, the obligated funds will be reserved for the infrastructure project and less susceptible to Congressional rescission.

List of Subjects in 7 CFR Part 1970

Administrative practice and procedure, Buildings and facilities, Environmental impact statements, Environmental protection, Grant programs, Housing, Loan programs, Natural resources, Utilities.

Accordingly, for reasons set forth in the preamble, chapter XVII, of subtitle B, title 7, Code of Federal Regulations is amended as follows:

PART 1970—ENVIRONMENTAL POLICIES AND PROCEDURES

■ 1. The authority citation for part 1970 continues to read as follows:

Authority: 7 U.S.C. 6941 *et seq.,* 42 U.S.C. 4241 *et seq.;* 40 CFR parts 1500–1508; 5 U.S.C. 301; 7 U.S.C. 1989; and 42 U.S.C. 1480.

■ 2. Revise § 1970.11(b) to read as follow:

§ 1970.11 Timing of the environmental review process.

* * * * *

(b) The environmental review process must be concluded before the obligation of funds; except for infrastructure projects where the assurance that funds will be available for community health, safety, or economic development has been determined as necessary by the Agency Administrator. At the discretion of the Agency Administrator, funds may be obligated contingent upon the conclusion of the environmental review process prior to any action that would have an adverse effect on the environment or limit the choices of any reasonable alternatives. Funds so obligated shall be rescinded if the Agency cannot conclude the environmental review process before the end of the fiscal year after the year in which the funds were obligated, or if the Agency determines that it cannot proceed with approval based on findings in the environmental review process. For the purposes of this section, infrastructure projects shall include projects such as broadband, telecommunications, electric, energy efficiency, smart grid, water, sewer, transportation, and energy capital investments in physical plant and equipment, but not investments authorized in the Housing Act of 1949.

Appraisals for Higher-Priced Mortgage Loans Exemption Threshold

AGENCY: Office of the Comptroller of the Currency, Treasury (OCC), Board of Governors of the Federal Reserve System (Board); and Bureau of Consumer Financial Protection (Bureau).

ACTION: Final rules, official interpretations and commentary.

SUMMARY: The OCC, the Board, and the Bureau are finalizing amendments to the official interpretations for their regulations that implement section 129H of the Truth in Lending Act (TILA). Section 129H of TILA establishes special appraisal requirements for ''higher-risk mortgages,'' termed ''higher-priced mortgage loans'' or ''HPMLs'' in the agencies' regulations. The OCC, the Board, the Bureau, the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), and the Federal Housing Finance Agency (FHFA) (collectively, the Agencies) issued joint final rules implementing these requirements, effective January 18, 2014. The Agencies' rules exempted, among other loan types, transactions of $25,000 or less, and required that this loan amount be adjusted annually based on any annual percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W). If there is no annual percentage increase in the CPI–W, the OCC, the Board, and the Bureau will not adjust this exemption threshold from the prior year. However, in years following a year in which the exemption threshold was not adjusted, the threshold is calculated by applying the annual percentage increase in the CPI–W to the dollar amount that would have resulted, after rounding, if the decreases and any subsequent increases in the CPI–W had been taken into account. Based on the CPI–W in effect as of June 1, 2018, the exemption threshold will increase from $26,000 to $26,700, effective January 1, 2019.

DATES: This final rule is effective January 1, 2019.

FOR FURTHER INFORMATION CONTACT: *OCC:* MaryAnn Nash, Counsel, Chief Counsel's Office, (202) 649–6287; for persons who are deaf or hard of hearing TTY, (202) 649–5597. *Board:* Lorna M. Neill, Senior Counsel, Division of Consumer and Community Affairs, Board of Governors of the Federal Reserve System, at (202) 452–3667; for users of Telecommunications Device for the Deaf (TDD) only, contact (202) 263–4869. *Bureau:* Shelley Thompson, Counsel, Office of Regulations, Bureau of Consumer Financial Protection, at (202) 435–7700.

SUPPLEMENTARY INFORMATION:

I. Background

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) amended the Truth in Lending Act (TILA) to add special appraisal requirements for ''higher-risk mortgages.'' [1] In January 2013, the Agencies issued a joint final rule implementing these requirements and adopted the term ''higher-priced mortgage loan'' (HPML) instead of ''higher-risk mortgage'' (the January 2013 Final Rule).[2] In July 2013, the Agencies proposed additional exemptions from the January 2013 Final Rule (the 2013 Supplemental Proposed Rule).[3] In December 2013, the Agencies issued a supplemental final rule with additional exemptions from the January 2013 Final Rule (the December 2013 Supplemental Final Rule).[4] Among other exemptions, the Agencies adopted an exemption from the new HPML appraisal rules for transactions of $25,000 or less, to be adjusted annually for inflation.

The OCC's, the Board's, and the Bureau's versions of the January 2013 Final Rule and December 2013 Supplemental Final Rule and corresponding official interpretations are substantively identical. The FDIC, NCUA, and FHFA adopted the Bureau's version of the regulations under the

[1] Public Law 111–203, section 1471, 124 Stat. 1376, 2185–87 (2010), codified at TILA section 129H, 15 U.S.C. 1639h.

[2] 78 FR 10368 (Feb. 13, 2013).

[3] 78 FR 48548 (Aug. 8, 2013).

[4] 78 FR 78520 (Dec. 26, 2013).

January 2013 Final Rule and December 2013 Supplemental Final Rule.[5]

The OCC's, Board's, and Bureau's regulations,[6] and their accompanying interpretations,[7] provide that the exemption threshold for smaller loans will be adjusted effective January 1 of each year based on any annual percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W) that was in effect on the preceding June 1. Any increase in the threshold amount will be rounded to the nearest $100 increment. For example, if the annual percentage increase in the CPI–W would result in a $950 increase in the threshold amount, the threshold amount will be increased by $1,000. However, if the annual percentage increase in the CPI–W would result in a $949 increase in the threshold amount, the threshold amount will be increased by $900. If there is no annual percentage increase in the CPI–W, the OCC, the Board, and the Bureau will not adjust the threshold amounts from the prior year.[8]

On November 30, 2016, the OCC, the Board, and the Bureau published a final rule in the **Federal Register** to memorialize the calculation method used by the agencies each year to adjust the exemption threshold to ensure that, as contemplated in the December 2013 Supplemental Final Rule (HPML Small Dollar Adjustment Calculation Rule), the values for the exemption threshold keep pace with the CPI–W.[9] The HPML Small Dollar Adjustment Calculation Rule memorialized the policy that, if there is no annual percentage increase in the CPI–W, the OCC, the Board, and Bureau will not adjust the exemption threshold from the prior year. The HPML Small Dollar Adjustment Calculation Rule also provided that, in years following a year in which the exemption threshold was not adjusted because there was a decrease in the CPI–W from the previous year, the threshold is calculated by applying the annual percentage change in the CPI–W to the dollar amount that would have resulted, after rounding, if the decreases and any subsequent increases in the CPI–W had been taken into account. If the resulting amount calculated, after rounding, is greater than the current threshold, then the threshold effective January 1 the following year will increase accordingly; if the resulting amount calculated, after rounding, is equal to or less than the current threshold, then the threshold effective January 1 the following year will not change, but future increases will be calculated based on the amount that would have resulted, after rounding.

II. 2019 Adjustment and Commentary Revision

Effective January 1, 2019, the exemption threshold amount is increased from $26,000 to $26,700. This is based on the CPI–W in effect on June 1, 2018, which was reported on May 10, 2018. The Bureau of Labor Statistics publishes consumer-based indices monthly, but does not report a CPI change on June 1; adjustments are reported in the middle of the prior month. The CPI–W is a subset of the CPI–U index (based on all urban consumers) and represents approximately 29 percent of the U.S. population. The CPI–W reported on May 10, 2018, reflects a 2.6 percent increase in the CPI–W from April 2017 to April 2018. Accordingly, the 2.6 percent increase in the CPI–W from April 2017 to April 2018 results in an exemption threshold amount of $26,700. The OCC, the Board, and the Bureau are revising the commentaries to their respective regulations to add new comments as follows:

- Comment 203(b)(2)–3.vi to 12 CFR part 34, Appendix C to Subpart G (OCC);
- Comment 43(b)(2)–3.vi to Supplement I of 12 CFR part 226 (Board); and
- Comment 35(c)(2)(ii)–3.vi to Supplement I of 12 CFR part 1026 (Bureau).

These new comments state that, from January 1, 2019, through December 31, 2019, the threshold amount is $26,700. These revisions are effective January 1, 2019.

III. Regulatory Analysis

Administrative Procedure Act

Under the Administrative Procedure Act, notice and opportunity for public comment are not required if an agency finds that notice and public comment are impracticable, unnecessary, or contrary to the public interest.[10] The amendments in this rule are technical and apply the method previously set forth in the 2013 Supplemental Proposed Rule [11] and the HPML Small Dollar Adjustment Calculation Rule. For these reasons, the OCC, the Board, and the Bureau have determined that publishing a notice of proposed rulemaking and providing opportunity for public comment are unnecessary. Therefore, the amendments are adopted in final form.

Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) does not apply to a rulemaking where a general notice of proposed rulemaking is not required.[12] As noted previously, the agencies have determined that it is unnecessary to publish a general notice of proposed rulemaking for this joint final rule. Accordingly, the RFA's requirements relating to an initial and final regulatory flexibility analysis do not apply.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995,[13] the agencies reviewed this final rule. No collections of information pursuant to the Paperwork Reduction Act are contained in the final rule.

Unfunded Mandates Reform Act

The OCC analyzes proposed rules for the factors listed in Section 202 of the Unfunded Mandates Reform Act of 1995, before promulgating a final rule for which a general notice of proposed rulemaking was published.[14] As discussed above, the OCC has determined that the publication of a general notice of proposed rulemaking is unnecessary.

Bureau Congressional Review Act Statement

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Bureau will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to the rule taking effect. The Office of Information and Regulatory Affairs (OIRA) has designated this rule as not a ''major rule'' as defined by 5 U.S.C. 804(2).

[5] *See* NCUA: 12 CFR 722.3; FHFA: 12 CFR part 1222. Although the FDIC adopted the Bureau's version of the regulation, the FDIC did not issue its own regulation containing a cross-reference to the Bureau's version. *See* 78 FR 10368, 10370 (Feb. 13, 2013).

[6] 12 CFR 34.203(b)(2) (OCC); 12 CFR 226.43(b)(2) (Board); and 12 CFR 1026.35(c)(2)(ii) (Bureau).

[7] 12 CFR part 34, Appendix C to Subpart G, comment 203(b)(2)–1 (OCC); 12 CFR part 226, Supplement I, comment 43(b)(2)–1 (Board); and 12 CFR part 1026, Supplement I, comment 35(c)(2)(ii)–1 (Bureau).

[8] *See* 78 FR 48548, 48565 (Aug. 8, 2013) (''Thus, under the proposal, if the CPI–W decreases in an annual period, the percentage increase would be zero, and the dollar amount threshold for the exemption would not change.'').

[9] *See* 81 FR 86250 (Nov. 30, 2016).

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Authority and Issuance

For the reasons set forth in the preamble, the OCC amends 12 CFR part 34 as set forth below:

PART 34—REAL ESTATE LENDING AND APPRAISALS

■ 1. The authority citation for part 34 continues to read as follows:

Authority: 12 U.S.C. 1 *et seq.,* 25b, 29, 93a, 371, 1462a, 1463, 1464, 1465, 1701j–3, 1828(o), 3331 *et seq.,* 5101 *et seq.,* 5412(b)(2)(B) and 15 U.S.C. 1639h.

■ 2. In Appendix C to Subpart G, under *Section 34.203—Appraisals for Higher-Priced Mortgage Loans,* paragraph 34.203(b)(2), paragraph 3.vi is added to read as follows:

Appendix C to Subpart G—OCC Interpretations

* * * * *

Section 34.203—Appraisals for Higher-Priced Mortgage Loans

* * * * *

Paragraph 34.203(b)(2)

* * * * *

3. * * *

vi. From January 1, 2019, through December 31, 2019, the threshold amount is $26,700.

* * * * *

Board of Governors of the Federal Reserve System

Authority and Issuance

For the reasons set forth in the preamble, the Board amends Regulation Z, 12 CFR part 226, as set forth below:

PART 226—TRUTH IN LENDING (REGULATION Z)

■ 3. The authority citation for part 226 continues to read as follows:

Authority: 12 U.S.C. 3806; 15 U.S.C. 1604, 1637(c)(5), 1639(l), and 1639h; Pub. L. 111–24, section 2, 123 Stat. 1734; Pub. L. 111–203, 124 Stat. 1376.

■ 4. In Supplement I to part 226, under *Section 226.43—Appraisals for Higher-Risk Mortgage Loans,* paragraph 43(b)(2), paragraph 3.vi is added to read as follows:

Supplement I to Part 226—Official Staff Interpretations

* * * * *

Section 226.43—Appraisals for Higher-Risk Mortgage Loans

* * * * *

Paragraph 43(b)(2)

* * * * *

3. * * *

vi. From January 1, 2019, through December 31, 2019, the threshold amount is $26,700.

* * * * *

Bureau of Consumer Financial Protection

Authority and Issuance

For the reasons set forth in the preamble, the Bureau amends Regulation Z, 12 CFR part 1026, as set forth below:

PART 1026—TRUTH IN LENDING (REGULATION Z)

■ 5. The authority citation for part 1026 continues to read as follows:

Authority: 12 U.S.C. 2601, 2603–2605, 2607, 2609, 2617, 3353, 5511, 5512, 5532, 5581; 15 U.S.C. 1601 *et seq.*

■ 6. In Supplement I to part 1026, under *Section 1026.35—Requirements for Higher-Priced Mortgage Loans,* paragraph 35(c)(2)(ii), paragraph 3.vi is added to read as follows:

Supplement I to Part 1026—Official Interpretations

* * * * *

Section 1026.35—Requirements for Higher-Priced Mortgage Loans

* * * * *

Paragraph 35(c)(2)(ii)

* * * * *

3. * * *

vi. From January 1, 2019, through December 31, 2019, the threshold amount is $26,700.

* * * * *

Dated: November 6, 2018.

Joseph M. Otting,

Comptroller of the Currency.

By order of the Board of Governors of the Federal Reserve System under delegated authority, November 13, 2018.

Ann E. Misback,

Secretary of the Board.

Dated: November 9, 2018.

Mick Mulvaney,

Acting Director, Bureau of Consumer Financial Protection.

[Docket No. R–1632]

RIN 7100–AF24

BUREAU OF CONSUMER FINANCIAL PROTECTION

12 CFR Part 1013

RIN 3170–AA89

Consumer Leasing (Regulation M)

AGENCY: Board of Governors of the Federal Reserve System (Board); and Bureau of Consumer Financial Protection (Bureau).

ACTION: Final rules, official interpretations and commentary.

SUMMARY: The Board and the Bureau are finalizing amendments to the official interpretations and commentary for the agencies' regulations that implement the Consumer Leasing Act (CLA). The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) amended the CLA by requiring that the dollar threshold for exempt consumer leases be adjusted annually by the annual percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W). If there is no annual percentage increase in the CPI–W, the Board and the Bureau will not adjust this exemption threshold from the prior year. However, in years following a year in which the exemption threshold was not adjusted, the threshold is calculated by applying the annual percentage change in the CPI–W to the dollar amount that would have resulted, after rounding, if the decreases and any subsequent increases in the CPI–W had been taken into account. Based on the annual percentage increase in the CPI–W as of June 1, 2018, the exemption threshold will increase from $55,800 to $57,200 effective January 1, 2019.

Because the Dodd-Frank Act also requires similar adjustments in the Truth in Lending Act's threshold for exempt consumer credit transactions, the Board and the Bureau are making similar amendments to each of their respective regulations implementing the Truth in Lending Act elsewhere in this issue of the **Federal Register**.

DATES: This final rule is effective January 1, 2019.

FOR FURTHER INFORMATION CONTACT:

Board: Vivian W. Wong, Senior Counsel, Division of Consumer and Community Affairs, Board of Governors of the Federal Reserve System, at (202) 452–3667; for users of Telecommunications Device for the Deaf (TDD) only, contact (202) 263–4869.

Bureau: Shelley Thompson, Counsel, Office of Regulations, Bureau of Consumer Financial Protection, at (202) 435–7700.

SUPPLEMENTARY INFORMATION:

I. Background

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) increased the threshold in the Consumer Leasing Act (CLA) for exempt consumer leases, and the threshold in the Truth in Lending Act (TILA) for exempt consumer credit transactions,[1] from $25,000 to $50,000, effective July 21, 2011.[2] In addition, the Dodd-Frank Act requires that, on and after December 31, 2011, these thresholds be adjusted annually for inflation by the annual percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W), as published by the Bureau of Labor Statistics. In April 2011, the Board issued a final rule amending Regulation M (which implements the CLA) consistent with these provisions of the Dodd-Frank Act, along with a similar final rule amending Regulation Z (which implements TILA) (collectively, the Board Final Threshold Rules).[3]

Title X of the Dodd-Frank Act transferred rulemaking authority for a number of consumer financial protection laws from the Board to the Bureau, effective July 21, 2011. In connection with this transfer of rulemaking authority, the Bureau issued its own Regulation M implementing the CLA, 12 CFR part 1013, substantially duplicating the Board's Regulation M.[4] Although the Bureau has the authority to issue rules to implement the CLA for most entities, the Board retains authority to issue rules under the CLA for certain motor vehicle dealers covered by section 1029(a) of the Dodd-Frank Act, and the Board's Regulation M continues to apply to those entities.[5]

The Board's and the Bureau's regulations,[6] and their accompanying commentaries, provide that the exemption threshold will be adjusted annually effective January 1 of each year based on any annual percentage increase in the CPI–W that was in effect on the preceding June 1. They further provide that any increase in the threshold amount will be rounded to the nearest $100 increment. For example, if the annual percentage increase in the CPI–W would result in a $950 increase in the threshold amount, the threshold amount will be increased by $1,000. However, if the annual percentage increase in the CPI–W would result in a $949 increase in the threshold amount, the threshold amount will be increased by $900.[7] Since 2011, the Board and the Bureau have adjusted the Regulation M exemption threshold annually, in accordance with these rules.

On November 30, 2016, the Board and the Bureau published a final rule in the **Federal Register** to memorialize the calculation method used by the agencies each year to adjust the exemption threshold to ensure that, as contemplated by section 1100E(b) of the Dodd-Frank Act, the values for the exemption threshold keep pace with the CPI–W (Regulation M Adjustment Calculation Rule).[8] The Regulation M Adjustment Calculation Rule memorialized the policy that, if there is no annual percentage increase in the CPI–W, the Board and Bureau will not adjust the exemption threshold from the prior year. The Regulation M Adjustment Calculation Rule also provided that, in years following a year in which the exemption threshold was not adjusted because there was a decrease in the CPI–W from the previous year, the threshold is calculated by applying the annual percentage change in the CPI–W to the dollar amount that would have resulted, after rounding, if the decreases and any subsequent increases in the CPI–W had been taken into account. If the resulting amount calculated, after rounding, is greater than the current threshold, then the threshold effective January 1 the following year will increase accordingly; if the resulting amount calculated, after rounding, is equal to or less than the current threshold, then the threshold effective January 1 the following year will not change, but future increases will be calculated based on the amount that would have resulted, after rounding.

II. 2019 Adjustment and Commentary Revision

Effective January 1, 2019, the exemption threshold amount is increased from $55,800 to $57,200. This is based on the CPI–W in effect on June 1, 2018, which was reported on May 10, 2018. The Bureau of Labor Statistics publishes consumer-based indices monthly, but does not report a CPI change on June 1; adjustments are reported in the middle of the prior month. The CPI–W is a subset of the CPI–U index (based on all urban consumers) and represents approximately 29 percent of the U.S. population. The CPI–W reported on May 10, 2018 reflects a 2.6 percent increase in the CPI–W from April 2017 to April 2018. Accordingly, the 2.6 percent increase in the CPI–W from April 2017 to April 2018 results in an exemption threshold amount of $57,200. The Board and the Bureau are revising the commentaries to their respective regulations to add new comment 2(e)–11.x to state that, from January 1, 2019 through December 31, 2019, the threshold amount is $57,200. These revisions are effective January 1, 2019.

[1] Although consumer credit transactions above the threshold are generally exempt, loans secured by real property or by personal property used or expected to be used as the principal dwelling of a consumer and private education loans are covered by TILA regardless of the loan amount. *See* 12 CFR 226.3(b)(1)(i) (Board) and 12 CFR 1026.3(b)(1)(i) (Bureau).

[5] Section 1029(a) of the Dodd-Frank Act states: ''Except as permitted in subsection (b), the Bureau may not exercise any rulemaking, supervisory, enforcement, or any other authority * * * over a motor vehicle dealer that is predominantly engaged in the sale and servicing of motor vehicles, the leasing and servicing of motor vehicles, or both.'' 12 U.S.C. 5519(a). Section 1029(b) of the Dodd-Frank Act states: ''Subsection (a) shall not apply to any person, to the extent that such person (1) provides consumers with any services related to residential or commercial mortgages or self-financing transactions involving real property; (2) operates a line of business (A) that involves the extension of retail credit or retail leases involving motor vehicles; and (B) in which (i) the extension of retail credit or retail leases are provided directly to consumers; and (ii) the contract governing such extension of retail credit or retail leases is not routinely assigned to an unaffiliated third party finance or leasing source; or (3) offers or provides a consumer financial product or service not involving or related to the sale, financing, leasing, rental, repair, refurbishment, maintenance, or other servicing of motor vehicles, motor vehicle parts, or any related or ancillary product or service.'' 12 U.S.C. 5519(b).

III. Regulatory Analysis

Administrative Procedure Act

Under the Administrative Procedure Act, notice and opportunity for public comment are not required if the Board and the Bureau find that notice and public comment are impracticable, unnecessary, or contrary to the public interest.[9] The amendments in this rule are technical and apply the method previously set forth in the Board Final Threshold Rules and the Regulation M Adjustment Calculation Rule. For these reasons, the Board and the Bureau have determined that publishing a notice of proposed rulemaking and providing opportunity for public comment are unnecessary. Therefore, the amendments are adopted in final form.

Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) does not apply to a rulemaking where a general notice of proposed rulemaking is not required.[10] As noted previously, the agencies have determined that it is unnecessary to publish a general notice of proposed rulemaking for this joint final rule. Accordingly, the RFA's requirements relating to an initial and final regulatory flexibility analysis do not apply.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995,[11] the agencies reviewed this final rule. No collections of information pursuant to the Paperwork Reduction Act are contained in the final rule.

Bureau Congressional Review Act Statement

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Bureau will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to the rule taking effect. The Office of Information and Regulatory Affairs (OIRA) has designated this rule as not a ''major rule'' as defined by 5 U.S.C. 804(2).

Truth in Lending (Regulation Z)

AGENCY: Board of Governors of the Federal Reserve System (Board); and Bureau of Consumer Financial Protection (Bureau).

ACTION: Final rules, official interpretations and commentary.

SUMMARY: The Board and the Bureau are publishing final rules amending the official interpretations and commentary for the agencies' regulations that implement the Truth in Lending Act (TILA). The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) amended TILA by requiring that the dollar threshold for exempt consumer credit transactions be adjusted annually by the annual percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W). If there is no annual percentage increase in the CPI–W, the Board and the Bureau will not adjust this exemption threshold from the prior year. However, in years following a year in which the exemption threshold was not adjusted, the threshold is calculated by applying the annual percentage change in the CPI–W to the dollar amount that would have resulted, after rounding, if the decreases and any subsequent increases in the CPI–W had been taken into account.

[9] 5 U.S.C. 553(b)(B).

[10] 5 U.S.C. 603 and 604.

[11] 44 U.S.C. 3506; 5 CFR part 1320.

Based on the annual percentage increase in the CPI–W as of June 1, 2018, the exemption threshold will increase from $55,800 to $57,200 effective January 1, 2019.

Because the Dodd-Frank Act also requires similar adjustments in the Consumer Leasing Act's threshold for exempt consumer leases, the Board and the Bureau are making similar amendments to each of their respective regulations implementing the Consumer Leasing Act elsewhere in this issue of the **Federal Register**.

DATES: This final rule is effective January 1, 2019.

Board: Vivian W. Wong, Senior Counsel, Division of Consumer and Community Affairs, Board of Governors of the Federal Reserve System, at (202) 452–3667; for users of Telecommunications Device for the Deaf (TDD) only, contact (202) 263–4869.

Bureau: Shelley Thompson, Counsel, Office of Regulations, Bureau of Consumer Financial Protection, at (202) 435–7700.

SUPPLEMENTARY INFORMATION:

I. Background

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) increased the threshold in the Truth in Lending Act (TILA) for exempt consumer credit transactions,[1] and the threshold in the Consumer Leasing Act (CLA) for exempt consumer leases, from $25,000 to $50,000, effective July 21, 2011.[2] In addition, the Dodd-Frank Act requires that, on and after December 31, 2011, these thresholds be adjusted annually for inflation by the annual percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI–W), as published by the Bureau of Labor Statistics. In April 2011, the Board issued a final rule amending Regulation Z (which implements TILA) consistent with these provisions of the Dodd-Frank Act, along with a similar final rule amending Regulation M (which implements the CLA) (collectively, the Board Final Threshold Rules).[3]

Title X of the Dodd-Frank Act transferred rulemaking authority for a number of consumer financial protection laws from the Board to the Bureau, effective July 21, 2011. In connection with this transfer of rulemaking authority, the Bureau issued its own Regulation Z implementing TILA, 12 CFR part 1026, substantially duplicating the Board's Regulation Z.[4] Although the Bureau has the authority to issue rules to implement TILA for most entities, the Board retains authority to issue rules under TILA for certain motor vehicle dealers covered by section 1029(a) of the Dodd-Frank Act, and the Board's Regulation Z continues to apply to those entities.[5]

The Board's and the Bureau's regulations,[6] and their accompanying commentaries, provide that the exemption threshold will be adjusted annually effective January 1 of each year based on any annual percentage increase in the CPI–W that was in effect on the preceding June 1. They further provide that any increase in the threshold amount will be rounded to the nearest $100 increment. For example, if the annual percentage increase in the CPI–W would result in a $950 increase in the threshold amount, the threshold amount will be increased by $1,000. However, if the annual percentage increase in the CPI–W would result in a $949 increase in the threshold amount, the threshold amount will be increased by $900.[7] Since 2011, the Board and the Bureau have adjusted the Regulation Z exemption threshold annually, in accordance with these rules.

On November 30, 2016, the Board and the Bureau published a final rule in the **Federal Register** to memorialize the calculation method used by the agencies each year to adjust the exemption threshold to ensure that, as contemplated by section 1100E(b) of the Dodd-Frank Act, the values for the exemption threshold keep pace with the CPI–W (Regulation Z Adjustment Calculation Rule).[8] The Regulation Z Adjustment Calculation Rule memorialized the policy that, if there is no annual percentage increase in the CPI–W, the Board and Bureau will not adjust the exemption threshold from the prior year. The Regulation Z Adjustment Calculation Rule also provided that, in years following a year in which the exemption threshold was not adjusted because there was a decrease in the CPI–W from the previous year, the threshold is calculated by applying the annual percentage change in the CPI–W to the dollar amount that would have resulted, after rounding, if the decreases and any subsequent increases in the CPI–W had been taken into account. If the resulting amount calculated, after rounding, is greater than the current threshold, then the threshold effective January 1 the following year will increase accordingly; if the resulting amount calculated, after rounding, is equal to or less than the current threshold, then the threshold effective January 1 the following year will not change, but future increases will be calculated based on the amount that would have resulted, after rounding.

II. 2019 Adjustment and Commentary Revision

Effective January 1, 2019, the exemption threshold amount is increased from $55,800 to $57,200. This is based on the CPI–W in effect on June 1, 2018, which was reported on May 10, 2018. The Bureau of Labor Statistics publishes consumer-based indices monthly, but does not report a CPI change on June 1; adjustments are reported in the middle of the prior month. The CPI–W is a subset of the CPI–U index (based on all urban consumers) and represents approximately 29 percent of the U.S. population. The CPI–W reported on May 10, 2018 reflects a 2.6 percent increase in the CPI–W from April 2017 to April 2018. Accordingly, the 2.6 percent increase in the CPI–W from April 2017 to April 2018 results in an exemption threshold amount of $57,200. The Board and the Bureau are revising the commentaries to their respective regulations to add new comment 3(b)–

[1] Although consumer credit transactions above the threshold are generally exempt, loans secured by real property or by personal property used or expected to be used as the principal dwelling of a consumer and private education loans are covered by TILA regardless of the loan amount. *See* 12 CFR 226.3(b)(1)(i) (Board) and 12 CFR 1026.3(b)(1)(i) (Bureau).

3.x to state that, from January 1, 2019 through December 31, 2019, the threshold amount is $57,200. These revisions are effective January 1, 2019.

III. Regulatory Analysis

Administrative Procedure Act

Under the Administrative Procedure Act, notice and opportunity for public comment are not required if the Board and the Bureau find that notice and public comment are impracticable, unnecessary, or contrary to the public interest.[9] The amendments in this rule are technical and apply the method previously set forth in the Board Final Threshold Rules and the Regulation Z Adjustment Calculation Rule. For these reasons, the Board and the Bureau have determined that publishing a notice of proposed rulemaking and providing opportunity for public comment are unnecessary. Therefore, the amendments are adopted in final form.

Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) does not apply to a rulemaking where a general notice of proposed rulemaking is not required.[10] As noted previously, the agencies have determined that it is unnecessary to publish a general notice of proposed rulemaking for this joint final rule. Accordingly, the RFA's requirements relating to an initial and final regulatory flexibility analysis do not apply.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995,[11] the agencies reviewed this final rule. No collections of information pursuant to the Paperwork Reduction Act are contained in the final rule.

Bureau Congressional Review Act Statement

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Bureau will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to the rule taking effect. The Office of Information and Regulatory Affairs (OIRA) has designated this rule as not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects

12 CFR Part 226

Advertising, Consumer protection, Federal Reserve System, Reporting and recordkeeping requirements, Truth in lending.

12 CFR Part 1026

Advertising, Appraisal, Appraiser, Banking, Banks, Consumer protection, Credit, Credit unions, Mortgages, National banks, Reporting and recordkeeping requirements, Savings associations, Truth in lending.

Board of Governors of the Federal Reserve System

Authority and Issuance

For the reasons set forth in the preamble, the Board amends Regulation Z, 12 CFR part 226, as set forth below:

PART 226—TRUTH IN LENDING (REGULATION Z)

■ 1. The authority citation for part 226 continues to read as follows:

Authority: 12 U.S.C. 3806; 15 U.S.C. 1604, 1637(c)(5), 1639(l) and 1639h; Pub. L. 111–24, section 2, 123 Stat. 1734; Pub. L. 111–203, 124 Stat. 1376.

■ 2. In Supplement I to part 226, under *Section 226.3—Exempt Transactions,* under *3(b) Credit over applicable threshold amount,* paragraph 3.x is added to read as follows:

Supplement I to Part 226—Official Staff Interpretations

* * * * *

Subpart A—General

* * * * *

Section 226.3—Exemption Transactions

* * * * *

3(b) Credit over applicable threshold amount.

14 CFR Part 39

[Docket No. FAA–2018–0298; Product Identifier 2017–NM–179–AD; Amendment 39–19488; AD 2018–23–02]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for all Airbus SAS Model A318 and A319 series airplanes; Model A320–211, A320–212, A320–214, A320–216, A320–231, A320–232, and A320–233 airplanes; and Model A321–111, A321–112, A321–131, A321–211, A321–212, A321–213, A321–231, and A321–232 airplanes. This AD was prompted by reports of missing assembly hardware on the trimmable horizontal stabilizer actuator (THSA). This AD requires repetitive inspections and checks of the lower and upper THSA attachments and applicable related investigative and corrective actions; a one-time inspection of the THSA lower attachment and

replacement as applicable; and, for certain airplanes, activation of the electrical load sensing device (ELSD) and concurrent modifications. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 28, 2018.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 28, 2018.

ADDRESSES: For Airbus SAS service information identified in this final rule, contact Airbus SAS, Airworthiness Office—EIAS, Rond-Point Emile Dewoitine No: 2, 31700 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com;* internet *http://www.airbus.com*.

For United Technologies Corporation Aerospace Systems (UTAS) service information identified in this AD, contact United Technologies Corporation Aerospace Systems (UTAS): Goodrich Corporation, Actuation Systems, Stafford Road, Fordhouses, Wolverhampton WV10 7EH, England; phone: +44 (0) 1902 624938; fax: +44 (0) 1902 788100; email: *techpubs.wolverhampton@goodrich.com;* internet: *http://www.goodrich.com/TechPubs*

You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0298.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0298; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the regulatory evaluation, any comments received, and other information. The address for Docket Operations (phone: 800–647–5527) is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Sanjay Ralhan, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3223.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Airbus SAS Model A318 and A319 series airplanes; Model A320–211, A320–212, A320–214, A320–216, A320–231, A320–232, and A320–233 airplanes; and Model A321–111, A321–112, A321–131, A321–211, A321–212, A321–213, A321–231, and A321–232 airplanes. The NPRM published in the **Federal Register** on April 16, 2018 (83 FR 16251). The NPRM was prompted by reports of missing assembly hardware on the THSA. The NPRM proposed to require repetitive inspections and checks of the lower and upper THSA attachments and applicable related investigative and corrective actions; a one-time inspection of the THSA lower attachment and replacement as applicable; and, for certain airplanes, activation of the ELSD and concurrent modifications.

We are issuing this AD to address uncontrolled movement of the horizontal stabilizer as a result of the latent (undetected) failure of the THSA's primary load path and consequent loss of control of the airplane.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA Airworthiness Directive 2017–0237, dated December 4, 2017 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus SAS Model A318 and A319 series airplanes; Model A320–211, A320–212, A320–214, A320–216, A320–231, A320–232, A320–233 airplanes; and Model A321–111, A321–112, A321–131, A321–211, A321–212, A321–213, A321–231, and A321–232 airplanes. The MCAI states:

> The Trimmable Horizontal Stabilizer Actuator (THSA) of Airbus A320 Family aeroplanes has been rig-tested to check secondary load path behaviour in case of primary load path failure. In that configuration, the loads are transferred to the secondary load path, which should jam, preventing any Trimmable Horizontal Stabilizer motion. The test results showed that the secondary load path did not jam as expected, preventing detection of the primary load path failure. To verify the integrity of the THSA primary load path and the correct installation of the THSA, Airbus issued Service Bulletin (SB) A320–27–1164, later revised multiple times, and SB A320–27A1179, and EASA issued AD 2006–0223 [which corresponds to FAA AD 2007–06–02, Amendment 39–14983 (72 FR 12072, March 15, 2007) (''AD 2007–06–02'')], AD 2007–0178 [which corresponds to FAA AD 2008–09–16, Amendment 39–15497 (73 FR 24160, May 2, 2008)(''AD 2008–09–16'')], AD 2008–0150, and AD 2014–0147, each AD superseding the previous one, requiring one-time and repetitive inspections.
>
> Since EASA AD 2014–0147 was issued, Airbus designed a new device, called Electrical Load Sensing Device (ELSD), to introduce a new means of THSA upper secondary load path engagement detection. Consequently, Airbus issued several SBs (Airbus SB A320–27–1245, A320–27–1246, and A320–27–1247, depending on aeroplane configuration) providing instructions to install the wiring provision for ELSD installation and to install ELSD on the THSA, and SB A320–27–1248, providing instructions to activate the ELSD. Airbus also revised SB A320–27–1164, now at Revision 13, including instructions applicable for aircraft equipped with ELSD.
>
> Furthermore, following a visual inspection of the THSA, an operator reported that the THSA was found with a bush missing, inducing torqueing of the THSA lower attachment primary bolt against the THSA lug, which resulted in the application of a transverse force on the lug.
>
> Prompted by several other identical findings, Airbus released Alert Operator Transmission (AOT) A27N010–17 to provide instructions for inspection and associated corrective actions.
>
> For the reasons described above, this AD retains the requirements of EASA AD 2014–0147, which is superseded, and requires installation of ELSD on the THSA, ELSD activation, and a one-time inspection to verify the bush presence on the THSA lower attachment.

The unsafe condition is uncontrolled movement of the horizontal stabilizer as a result of the latent (undetected) failure of the THSA's primary load path and consequent loss of control of the airplane.

The required actions include repetitive inspections and checks of the lower and upper THSA attachments and applicable related investigative and corrective actions; a one-time inspection of the THSA lower attachment and replacement as applicable; and, for certain airplanes, activation of the ELSD and concurrent modifications.

Related investigative actions include an inspection of the upper THSA attachment, an inspection of the lower attachment, and a check of the upper and lower clearance between the secondary nut trunnion and the junction plate. Corrective actions include replacement of the THSA and repair.

You may examine the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0298.

Comments

We gave the public the opportunity to participate in developing this final rule. The following presents the comments received on the NPRM and the FAA's response to each comment.

Support for the NPRM

The Air Line Pilots Association, International, stated its support for the NPRM. United Airlines stated that it has no objection to the NPRM.

Request To Allow Future Revisions of Service Information

Delta Air Lines (DAL) requested that the proposed AD allow operators the opportunity to utilize the latest data and instructions available without the need to request an alternative method of compliance (AMOC). DAL proposed that after each reference made to service information in paragraphs (g), (h), (i), (j), (k), (m)(1), and (m)(2) of the proposed AD, the following statement is included:

Or using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or the European Aviation Safety Agency (EASA); or Airbus's EASA Design Organization Approval (DOA).

DAL noted that the service information has been revised multiple times or has been revised within a short period of time. DAL observed that the statement quoted above is based on language used in paragraph (g) of AD 2018–03–12, Amendment 39–19185 (83 FR 5906, February 12, 2018) (''AD 2018–03–12''), and should be considered as standard wording for future ADs, as applicable.

We disagree with the commenter's request. We infer that the commenter is requesting a way for operators to comply with the requirements of an AD by using service information revisions that are issued after an AD is published without having to request an AMOC. We may not refer to any document that does not yet exist. In general terms, we are required by Office of the Federal Register (OFR) regulations for approval of materials ''incorporated by reference,'' as specified in 1 CFR 51.1(f), to either publish the service document contents as part of the actual AD language; or submit the service document to the OFR for approval as ''referenced'' material, in which case we may only refer to such material in the text of an AD. The AD may refer to the service document only if the OFR approved it for ''incorporation by reference.'' See 1 CFR part 51. To allow operators to use later revisions of the referenced document (issued after publication of the AD), either we must revise the AD to reference specific later revisions, or operators must request approval to use later revisions as an AMOC with this AD. However, we may consider approving global AMOCs to allow operators to use future revisions of the service information. We reserve the use of the wording requested by the commenter for situations where no service information is available or a service document, such as an aircraft maintenance manual, cannot be incorporated by reference in an AD. Therefore, we have not changed this AD in this regard.

Request To Specify Required Paragraphs in Airbus Alert Operators Transmission

DAL requested that paragraph (k) of the proposed AD specify only paragraphs 4.2.2 and 4.2.3 of Airbus Alert Operators Transmission (AOT) A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17, because, as a whole, the service information contains data that are unrelated to the inspection process. Paragraphs 4.2.2 and 4.2.3 of the service information provide the inspection activities and corrective actions.

We agree with the commenter that the primary instructions for inspection and corrective actions are contained in paragraphs 4.2.2 and 4.2.3 of Airbus AOT A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17. We have revised paragraph (k) of this AD to require only paragraphs 4.2.2 and 4.2.3 of Airbus AOT A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17. Note that there is relevant information outside of those two paragraphs, such as references to part numbers, aircraft maintenance manual procedures, and an appendix. Procedures outside of paragraphs 4.2.2 and 4.2.3 can be deviated from, using accepted methods provided in an operator's maintenance or inspection program, provided the required AD actions can be done and the airplane can be put back in service in an airworthy condition.

Request To Modify Language Regarding Contacting the Manufacturer

DAL noted that paragraph (o) of the proposed AD provides exceptions to two Airbus service information documents—Airbus Service Bulletin A320–27–1164, Revision 13, dated August 8, 2016; and Airbus AOT A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17, with respect to contacting the manufacturer. DAL proposed that this paragraph be rewritten to state:

Any approved method which specifies to contact the manufacturer: Before further flight, accomplish the corrective actions in accordance with the procedures specified in paragraph (v)(2) of this AD.

We acknowledge the commenter's request to clarify paragraph (o) of this AD. When specifying exceptions to required service information, we are unable to generalize the required documents by stating ''any approved method,'' as requested by the commenter. We must identify the specific service information. Therefore, we have not changed this AD in this regard.

Request for Clarification of Service Information Instructions

DAL observed that Airbus Service Bulletin A320–27–1245, Revision 00, dated March 6, 2017, indicates multiple configurations for certain aircraft. As an example, DAL pointed out that aircraft manufacturer serial number (MSN) 118 is shown as both configuration 078 and configuration 082. DAL stated the service information does not provide clear guidance on determining if both or only one set of material/instructions is applicable. DAL requested that the service bulletin be revised to clarify the intent of the multiple configurations and how to address them.

We disagree with the commenter's request to revise the service information; however, we agree to clarify. The referenced service information is adequate because different aircraft configurations can be determined based on the type of placard installed. Airbus Service Bulletin A320–27–1245, Revision 00, dated March 6, 2017, provides airplane configuration definitions in paragraph 1.A.(5), ''Configuration Definition,'' of the ''Planning Information'' section. According to the configuration definition, configuration 078 has placard 33LM PN D11311117A00 installed and configuration 082 has placard 33LM PN 002051–09 installed. Once the placard installation is determined, an operator can follow the instructions based on each respective configuration. We have not changed this AD in this regard.

Request for One Comprehensive AD To Address THSA System

DAL noted that the Model A319, A320, and A321 THSA system has had a continually complicated maintenance and regulatory history. The THSA system has been subject to numerous ADs throughout the years that address numerous individual shortcomings. The

proposed AD encompasses several different aspects (inspections and alterations), yet there are still other regulatory actions such as the replacement of No-Back Brake components or overhaul restrictions, which complicate the operators' maintenance activities. DAL requested that future regulatory actions related to the system be reviewed with a goal of providing a singular, coordinated over-arching regulatory and maintenance requirement.

We agree that there have been several ADs issued on the THSA system addressed in this AD, and we acknowledge the commenter's concerns. We understand that the EASA and the airplane manufacturer are making an effort to combine as many THSA issues as possible into a single rulemaking action to simplify the THSA requirements. In response to their efforts, we may consider additional rulemaking in the future to simplify the THSA requirements. However, at this time, we are issuing this final rule AD to address the specified unsafe condition. No change has been made to this AD in this regard.

Request To Refer to Revised Service Information

Airbus noted that two of the service bulletins referred to in the NPRM were revised and requested that the revised service bulletins be referred to in the final rule. The current revision levels are Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018; and Airbus Service Bulletin A320–27–1248, Revision 01, dated April 16, 2018.

We agree with the commenter's request. In the NPRM we referred to Airbus Service Bulletin A320–27–1164, Revision 13, dated August 8, 2016; and Service Bulletin A320–27–1248, Revision 00, dated March 6, 2017. Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018, includes clarifications regarding reporting inspection results but does not change the proposed reporting requirements of the NPRM and otherwise adds no substantive changes compared with the previous version. Airbus Service Bulletin A320–27–1248, Revision 01, dated April 16, 2018, clarifies the instructions, but adds no substantive changes compared with the previous version. We have therefore revised the ''Related Service Information under 1 CFR part 51'' paragraph in this final rule to refer to Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018; and Airbus Service Bulletin A320–27–1248, Revision 01, dated April 16, 2018. We have also revised paragraphs (g), (h), (i), (j), and (o)(1) of this AD to refer to Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018. In addition, we revised paragraph (m) of this AD to refer to Airbus Service Bulletin A320–27–1248, Revision 01, dated April 16, 2018.

Furthermore, we revised paragraph (s), ''Credit for Previous Actions,'' of this AD to include Airbus Service Bulletin A320–27–1164, Revision 13, dated August 8, 2016; and Service Bulletin A320–27–1248, Revision 00, dated March 6, 2017. Specifically, we revised paragraph (s)(1) to provide credit for actions done before the effective date of this AD using Airbus Service Bulletin A320–27–1164, Revision 10, dated March 27, 2014; Revision 11, dated December 15, 2014; Revision 12, dated March 23, 2016; or Revision 13, dated August 8, 2016. We also added paragraph (s)(3) to this AD to provide credit for actions required by paragraph (m)(1) of this AD, if those actions were performed before the effective date of this AD using Airbus Service Bulletin A320–27–1248, Revision 00, dated March 6, 2017. We redesignated subsequent paragraphs of this AD accordingly.

Request To Supersede Affected ADs

Airbus requested that the FAA consider aligning with EASA's decision of superseding affected ADs instead of keeping the obsolete ADs active. We infer that Airbus is requesting that we supersede AD 2007–06–02 and AD 2008–09–16 instead of issuing this stand-alone AD that terminates the requirements of AD 2007–06–02 and AD 2008–09–16.

We acknowledge the commenter's request. Although paragraph (u) of this AD states ''Accomplishing the initial actions required by paragraphs (g) and (h) of this AD, and accomplishing the applicable actions required by paragraphs (i) and (j) of this AD, terminates all requirements of AD 2007–06–02 and AD 2008–09–16,'' it does not supersede those ADs. The purpose of issuing stand-alone AD actions is to reduce the complexity involved with superseding certain ADs. After certain compliance times in this AD have passed, we may consider rescinding AD 2007–06–02 and AD 2008–09–16 since they are terminated by certain actions in this AD. In addition, if we converted this AD to a supersedure, we would need to issue another notice for public comment, which would further delay issuance of this final rule. Therefore, we have not changed this AD in this regard.

Conclusion

We reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule with the changes described previously and minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

We also determined that these changes will not increase the economic burden on any operator or increase the scope of this final rule.

Related Service Information Under 1 CFR Part 51

Airbus has issued Alert Operators Transmission (AOT) A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17. This service information describes the procedure for a one-time general visual inspection of the THSA lower attachment to measure the gap between the THSA lower attachment tab washer and attachment plates and replacement of the THSA lower attachment if the measured gap is less than 0.5 mm. The replacement includes doing an inspection of the THSA parts to confirm the bushing is missing and applicable corrective actions (*i.e.,* repair).

Airbus has also issued Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018. This service information describes procedures for a general visual inspection of the upper THSA attachment for correct installation, cracks, damage and metallic particles; a general visual inspection of the lower and upper THSA attachments for correct installation; a check of the clearance between secondary nut trunnions and junction plates and correct installation of the lower THSA attachment; a general visual inspection of the THSA ball screw to check for the absence of dents; and applicable related investigative and corrective actions.

In addition, Airbus has issued Service Bulletin A320–27–1245, Revision 00, dated March 6, 2017. This service information describes the procedure to modify the wiring provisions for the ELSD.

Airbus has also issued Service Bulletin A320–27–1246, Revision 01, dated November 4, 2016. This service information describes the procedures to adapt the wiring provision of the ELSD

and THSA to accommodate the correct installation of the ELSD.

Airbus has issued Service Bulletin A320–27–1247, Revision 00, dated March 6, 2017. This service information describes the procedure to modify the upper attachment secondary load path of the THSA to accommodate the correct installation of the ELSD.

Airbus has issued Service Bulletin A320–27–1248, Revision 01, dated April 16, 2018. This service information describes the procedure to activate the ELSD.

UTAS has issued United Technologies Corporation (UTC) Aerospace Systems Repair Instructions RF–DSC–1361–17, Version 00, including Appendix A, dated May 24, 2017. This service information describes the repair instructions to follow if the bushing is missing, as specified in AOT A27N010–17, Revision 01, dated October 17, 2017.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 1,180 airplanes of U.S. registry.

We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspections, check, activation, and modifications.	Up to 59 work-hours × $85 per hour = $5,015.	Up to $15,353 ...	Up to $20,368 ...	Up to $24,034,240.
Reporting	1 work-hour × $85 per hour = $85	0	85	100,300.

We estimate the following costs to do any necessary replacements that would be required based on the results of the inspections. We have no way of determining the number of aircraft that might need this replacement:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Replacement	11 work-hours × $85 per hour = $935	$240,000	$240,935

We have received no definitive data that would enable us to provide cost estimates for the on-condition repairs specified in this AD.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB control number. The control number for the collection of information required by this AD is 2120–0056. The paperwork cost associated with this AD has been detailed in the Costs of Compliance section of this document and includes time for reviewing instructions, as well as completing and reviewing the collection of information. Therefore, all reporting associated with this AD is mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at 800 Independence Ave., SW, Washington, DC 20591, ATTN: Information Collection Clearance Officer, AES–200.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes and associated appliances to the Director of the System Oversight Division.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–23–02 Airbus SAS: Amendment 39–19488; Docket No. FAA–2018–0298; Product Identifier 2017–NM–179–AD.

(a) Effective Date

This AD is effective December 28, 2018.

(b) Affected ADs

This AD affects AD 2007–06–02, Amendment 39–14983 (72 FR 12072, March 15, 2007) (''AD 2007–06–02''); and AD 2008–09–16, Amendment 39–15497 (73 FR 24160, May 2, 2008) (''AD 2008–09–16'').

(c) Applicability

This AD applies to Airbus SAS Model A318–111, A318–112, A318–121, and A318–122 airplanes; Model A319–111, A319–112, A319–113, A319–114, A319–115, A319–131, A319–132, and A319–133 airplanes; Model A320–211, A320–212, A320–214, A320–216, A320–231, A320–232, and A320–233 airplanes; and Model A321–111, A321–112, A321–131, A321–211, A321–212, A321–213, A321–231, and A321–232 airplanes; certificated in any category, all manufacturer serial numbers.

(d) Subject

Air Transport Association (ATA) of America Code 27, Flight controls.

(e) Reason

This AD was prompted by reports of missing assembly hardware on the trimmable horizontal stabilizer actuator (THSA). We are issuing this AD to address uncontrolled movement of the horizontal stabilizer as a result of the latent (undetected) failure of the THSA's primary load path and consequent loss of control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Repetitive Actions: Lower THSA Attachment

Before exceeding 20 months since airplane first flight, or since airplane first flight following last THSA replacement, or within 20 months after the last inspection of the lower THSA attachment as specified in the instructions of Airbus Service Bulletin A320–27–1164, Revision 02 up to Revision 09, whichever occurs latest, do the actions specified in paragraphs (g)(1), (g)(2), and (g)(3) of this AD concurrently, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018. Repeat the actions thereafter at intervals not to exceed 20 months.

(1) Check the clearance between the secondary nut trunnions and the junction plates at the lower THSA attachment.

(2) Do a general visual inspection of the lower THSA attachment for correct installation of attachment parts.

(3) Do a general visual inspection of the THSA ball screw for dents.

(h) Repetitive Inspections: Upper THSA Attachment

Before exceeding 10 months since airplane first flight, or since airplane first flight following last THSA replacement, or within 10 months after the last inspection of the upper THSA attachment as specified in the instructions of Airbus Service Bulletin A320–27–1164, Revision 02 up to Revision 09, whichever occurs latest, do the actions specified in paragraphs (h)(1) and (h)(2) of this AD concurrently, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018. Repeat the inspections thereafter at intervals not to exceed 10 months.

(1) Do a general visual inspection of the upper THSA attachment for correct installation, cracks, damage, and metallic particles.

(2) Do a general visual inspection of the upper THSA attachment for correct installation of attachment parts.

(i) Related Investigative and Corrective Actions

If, during any action required by paragraph (g) or (h) of this AD, any discrepancy is detected (*e.g.,* any installation deviation, cracking, damage, metallic particles, or dent is found), before further flight, accomplish all applicable related investigative and corrective actions in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018; except as required by paragraph (o)(1) of this AD.

(j) Reporting Requirements for Actions Required by Paragraphs (g) and (h) of This AD

In case of any findings during any action required by paragraph (g) or (h) of this AD, report the inspection results to Airbus SAS using the applicable ''Inspection Reporting Sheet'' of Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018, at the applicable time specified in paragraph (j)(1) or (j)(2) of this AD. If operators have reported findings as part of obtaining any corrective actions approved by the EASA Design Organization Approval (DOA), operators are not required to report those findings as specified in this paragraph.

(1) If the inspection or check was done on or after the effective date of this AD: Submit the report within 30 days after the inspection.

(2) If the inspection or check was done before the effective date of this AD: Submit the report within 30 days after the effective date of this AD.

(k) One-Time Inspection and Replacement

For airplanes on which the THSA has been replaced or reinstalled since the date of issuance of the original certificate of airworthiness, or the date of issuance of the original export certificate of airworthiness: Within 6 months after the effective date of this AD, accomplish a detailed inspection of the THSA lower attachment gap clearances, in accordance with paragraphs 4.2.2 and 4.2.3 of Airbus Alert Operators Transmission (AOT) A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17. If the measured gap is less than 0.5 mm, before further flight, replace the THSA, including doing an inspection of the THSA parts to confirm the bushing is missing and applicable corrective actions, in accordance with the instructions of Airbus AOT A27N010–17, Revision 01, dated October 17, 2017, including AOT Appendix_A27N010–17; and United Technologies Corporation (UTC) Aerospace Systems Repair Instructions RF–DSC–1361–17, Version 00, including Appendix A, dated May 24, 2017, as applicable, except as required by paragraph (o)(2) of this AD.

(l) Definition of Groups

For the purpose of this AD: Group 1 airplanes are those that, on the effective date of this AD, do not have the electrical load sensing device (ELSD) activated. Group 2 airplanes are those that, on the effective date of this AD, have the ELSD activated.

(m) Activation and Concurrent Modification

For Group 1 airplanes (see paragraph (l) of this AD): Do the actions specified in paragraphs (m)(1) and (m)(2) of this AD.

(1) Within 4 years after the effective date of this AD, activate the ELSD of the THSA on the airplane, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1248, Revision 01, dated April 16, 2018.

(2) Concurrently with or before the activation of the ELSD required by paragraph (m)(1) of this AD, modify the airplane, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1245, Revision 00, dated March 6, 2017; or Airbus Service Bulletin A320–27–1246, Revision 01, dated November 4, 2016; as applicable.

(n) Concurrent Requirement for Airplanes Equipped With THSAs That do Not Have ELSDs

For an airplane equipped with a THSA having a part number listed in figure 1 to paragraphs (n), (p), and (q) of this AD: Concurrently with or before the activation required by paragraph (m)(1) of this AD, modify the airplane, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–27–1247, Revision 00, dated March 6, 2017.

Figure 1 to paragraphs (n), (p), and (q) of this AD: *Part Numbers for THSAs without ELSDs*

47145-136	47145-167
47145-137	47145-168

(o) Exceptions to Service Information

(1) Where Airbus Service Bulletin A320–27–1164, Revision 14, dated January 16, 2018, specifies to contact Airbus SAS for appropriate action, and specifies that action as ''RC'' (Required for Compliance): Before further flight, accomplish corrective actions in accordance with the procedures specified in paragraph (v)(2) of this AD.

(2) Where Airbus AOT A27N010–17, Revision 01, dated October 17, 2017, specifies to contact Airbus SAS for appropriate action: Before further flight, accomplish corrective actions in accordance with the procedures specified in paragraph (v)(2) of this AD.

(p) Parts Installation

Do not install on any airplane a THSA with a part number listed in figure 1 to paragraphs (n), (p), and (q) of this AD and do not deactivate the ELSD at the times specified in paragraph (p)(1) or (p)(2) of this AD, as applicable.

(1) Group 1 airplanes (see paragraph (l) of this AD): After modification of the airplane as required by paragraph (m)(1) of this AD.

(2) Group 2 airplanes (see paragraph (l) of this AD): From the effective date of this AD.

(q) Method of Compliance

An airplane on which Airbus SAS Modification 155955 has been embodied in production is considered compliant with paragraphs (m)(1), (m)(2), and (n) of this AD, provided that it is determined that no THSA with a part number listed in figure 1 to paragraphs (n), (p), and (q) of this AD is installed on that airplane, and that the ELSD remains activated. A review of airplane maintenance records is acceptable to make this determination, provided those records can be relied upon for that purpose.

(r) Airplanes Not Affected by the Requirements of Paragraph (k) of This AD

The inspection required by paragraph (k) of this AD is not required for airplanes on which the THSA has been installed, as specified in the instructions of Airbus A320 Airplane Maintenance Manual (AMM) 27–44–51–400–001, dated May 2017, or subsequent.

(s) Credit for Previous Actions

(1) This paragraph provides credit for the initial actions required by paragraphs (g), (h), (i), and (j) of this AD, if those actions were performed before the effective date of this AD using Airbus Service Bulletin A320–27–1164, Revision 10, dated March 27, 2014; Revision 11, dated December 15, 2014; Revision 12, dated March 23, 2016; or Revision 13, dated August 8, 2016.

(2) This paragraph provides credit for actions required by paragraph (k) of this AD, if those actions were performed before the effective date of this AD using Airbus AOT A27N010–17, dated March 27, 2017.

(3) This paragraph provides credit for actions required by paragraph (m)(1) of this AD, if those actions were performed before the effective date of this AD using Airbus Service Bulletin A320–27–1248, Revision 00, dated March 6, 2017.

(4) This paragraph provides credit for actions required by paragraph (m)(2) of this AD, if those actions were performed before the effective date of this AD using Airbus Service Bulletin A320–27–1246, dated March 20, 2015.

(t) No Terminating Action for Repetitive Inspections in This AD

Accomplishment on an airplane of the one-time inspection and replacement, as applicable, specified in paragraph (k) of this AD and the modifications specified in paragraphs (m)(1), (m)(2), and (n) of this AD, as applicable, do not constitute terminating action for the repetitive inspections required by paragraphs (g) and (h) of this AD for that airplane.

(u) Terminating Action for Other FAA ADs

Accomplishing the initial actions required by paragraphs (g) and (h) of this AD, and accomplishing the applicable actions required by paragraphs (i) and (j) of this AD, terminate all requirements of AD 2007–06–02 and AD 2008–09–16.

(v) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCs): The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Section, send it to the attention of the person identified in paragraph (x)(2) of this AD. Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) Contacting the Manufacturer: For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or the European Aviation Safety Agency (EASA); or Airbus SAS's EASA DOA. If approved by the DOA, the approval must include the DOA-authorized signature.

(3) Paperwork Reduction Act Burden Statement: A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 1 hour per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at: 800 Independence Ave. SW, Washington, DC 20591, Attn: Information Collection Clearance Officer, AES–200.

(4) Required for Compliance (RC): Except as specified in paragraph in (o)(1) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(w) Special Flight Permits

Special flight permits, as described in Section 21.197 and Section 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199), are not allowed.

(x) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA Airworthiness Directive 2017–0237, dated December 4, 2017, for related information. This MCAI may be found in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0298.

(2) For more information about this AD, contact Sanjay Ralhan, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone and fax: 206–231–3223.

(3) Service information identified in this AD that is not incorporated by reference is available at the addresses specified in paragraphs (y)(3) and (y)(5) of this AD.

(y) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2018–0764; Product Identifier 2018–NM–074–AD; Amendment 39–19502; AD 2018–23–15]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for all Airbus SAS Model A330–200 Freighter series airplanes, Model A330–200 and –300 series airplanes, and Model A340–200 and –300 series airplanes. This AD was prompted by defects found during production tests of ram air turbine (RAT) units; investigation revealed that the defects were due to certain RAT hydraulic pumps having an alternative manufacturing process of the pump pistons. This AD requires replacing any defective RAT hydraulic pump with a serviceable part and re-identifying the RAT module part number. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 28, 2018.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of December 28, 2018.

ADDRESSES: For Airbus SAS service information identified in this final rule, contact Airbus SAS, Airworthiness Office—EIAS, Rond-Point Emile Dewoitine No: 2, 31700 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com*; internet *http://www.airbus.com*. For UTC Aerospace service information identified in this final rule, contact UTC Aerospace Systems Goodrich Corporation, Actuation Systems, Stafford Road, Fordhouses, Wolverhampton, West Midlands WV10 7EH, England; phone: +44 (0) 1902 624644938; fax: +44 (0) 1902 788100624947; email: *techpubs.wolverhampton@goodrich.com*; internet: *https://www.customers.utcaerospacesystems.com*. You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0764.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0764; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the regulatory evaluation, any comments received, and other information. The address for Docket Operations (phone: 800–647–5527) is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Vladimir Ulyanov, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax: 206–231–3229.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Airbus SAS Model A330–200 Freighter series airplanes, Model A330–200 and –300 series airplanes, and Model A340–200 and –300 series airplanes. The NPRM published in the **Federal Register** on August 31, 2018 (83 FR 44514). The NPRM was prompted by defects found during production tests of RAT units; investigation revealed that the defects were due to certain RAT hydraulic pumps having an alternative manufacturing process of the pump pistons. The NPRM proposed to require replacing any defective RAT hydraulic pump with a serviceable part and re-identifying the RAT module part number. We are issuing this AD to address low performance of the pump, which, following a total engine flame-out, or during a total loss of normal electrical power generation, could result in reduced control of the airplane.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2018–0062, dated March 20, 2018 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus SAS Model A330–200 Freighter series airplanes, Model A330–200 and –300 series airplanes, and Model A340–200 and –300 series airplanes. The MCAI states:

> Four A330 RAT units were returned to the supplier due to low discharge pressure. These defects were detected during Airbus production tests. Subsequent investigations by the RAT manufacturer UTAS (formerly Hamilton Sundstrand) revealed that some RAT hydraulic pumps, [part number] P/N 5916430, were involved in an alternative manufacturing process of the pump pistons. This resulted in form deviations (rough surface finish and sharp edges), which caused excessive wear and damage to the bore where the pistons moved.
>
> This condition, if not corrected, could lead to low performance of the pump, possibly resulting in reduced control of the aeroplane, particularly if occurring following a total engine flame out, or during a total loss of normal electrical power generation.
>
> To address this potential unsafe condition, Airbus published [Service Bulletin] SB A330–29–3130 and SB A340–29–4098, providing instructions for identification and replacement of the affected parts.
>
> For the reasons described above, this [EASA] AD requires replacement of the affected parts. This [EASA] AD also requires re-identification of the RAT module.

You may examine the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0764.

Comments

We gave the public the opportunity to participate in developing this final rule. We have considered the comment received. The Air Line Pilots Association, International indicated its support for the NPRM.

New Service Information

We received UTC Aerospace Systems Service Bulletin ERPS06M–29–22, Revision 2, dated May 24, 2018. We referred to UTC Aerospace Systems Service Bulletins ERPS06M–29–22, dated March 17, 2017; and Revision 1, dated June 27, 2017; as the appropriate sources of service information for identifying certain affected serial numbers and parts therein. Revision 2 of the service information adds Hamilton Sundstrand and Parker hydraulic pump part number (P/N) 5917648 (Parker P/N 4207905) and alternate Hamilton Sundstrand and Parker hydraulic pump P/N 5916485 (Parker P/N 4207903) to table 3 and table 6 for clarification.

We have added UTC Aerospace Systems Service Bulletin ERPS06M–29–22, Revision 2, dated May 24, 2018, to the Related Service Information under 1 CFR part 51 section of this AD as an appropriate source of service information. We have also added Revision 2 of the service information to the definitions specified in paragraph (g)(1) of this AD.

Conclusion

We reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting this final rule with the change described previously and minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

We also determined that these changes will not increase the economic burden on any operator or increase the scope of this final rule.

Related Service Information Under 1 CFR Part 51

Airbus SAS has issued Service Bulletins A330–29–3130 and A340–29–4098, both dated May 3, 2017. This service information describes procedures for replacing any affected RAT hydraulic pump with a serviceable part and re-identifying the RAT module part number. These documents are distinct since they apply to different airplane models.

UTC Aerospace Systems has issued Service Bulletins ERPS06M–29–22, dated March 17, 2017; Revision 1, dated June 27, 2017; and Revision 2, dated May 24, 2018. This service information identifies affected part and serial numbers for the RAT hydraulic pump. These documents are distinct since each one applies to different hydraulic pump part numbers.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 103 airplanes of U.S. registry. We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 14 work-hours × $85 per hour = Up to $1,190.	$0	Up to $1,190	Up to $122,570.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes and associated appliances to the Director of the System Oversight Division.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–23–15 Airbus SAS: Amendment 39–19502; Docket No. FAA–2018–0764; Product Identifier 2018–NM–074–AD.

(a) Effective Date

This AD is effective December 28, 2018.

(b) Affected ADs

This AD affects AD 2016–14–01, Amendment 39–18582 (81 FR 44983, July 12, 2016; corrected August 16, 2016 (81 FR 51097, August 3, 2016)) (''AD 2016–14–01'').

(c) Applicability

This AD applies to the airplanes identified in paragraphs (c)(1), (c)(2), (c)(3), (c)(4), and (c)(5) of this AD, certificated in any category, all manufacturer serial numbers.

(1) Airbus SAS Model A330–223F and –243F airplanes.

(2) Airbus SAS Model A330–201, –202, –203, –223, and –243 airplanes.

(3) Airbus SAS Model A330–301, –302, –303, –321, –322, –323, –341, –342, and –343 airplanes.

(4) Airbus SAS Model A340–211, –212, –213 airplanes.

(5) Airbus SAS Model A340–311, –312, and –313 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 29, Hydraulic Power.

(e) Reason

This AD was prompted by defects found during production tests of ram air turbine (RAT) units; investigation revealed that the defects were due to certain RAT hydraulic pumps having an alternative manufacturing process of the pump pistons. We are issuing this AD to prevent low performance of the pump, which, following a total engine flame-out, or during a total loss of normal electrical power generation, could result in reduced control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Definitions for This AD

(1) An affected part is a RAT hydraulic pump having part number (P/N) 5916430 and a serial number identified in UTC Aerospace Systems Service Bulletin ERPS06M–29–22, dated March 17, 2017; Revision 1, dated June 27, 2017; or Revision 2, dated May 24, 2018.

(2) A serviceable part is a RAT hydraulic pump identified as acceptable in Airbus Service Bulletin A330–29–3130 or A340–29–4098, both dated May 3, 2017, as applicable.

(3) Group 1 airplanes are airplanes on which an affected part is installed.

(4) Group 2 airplanes are airplanes on which no affected part is installed. A Model A330 airplane on which Airbus SAS Modification 206604 has been embodied in production is a Group 2 airplane, provided that the airplane remains in that configuration.

(h) Replacement and Re-identification for Group 1 Airplanes

(1) Within 18 months after the effective date of this AD, replace any affected RAT hydraulic pump with a serviceable part, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A330–29–3130 or A340–29–4098, both dated May 3, 2017, as applicable.

(2) Concurrently with the replacement required by paragraph (h)(1) of this AD, re-identify the part number of the RAT module, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A330–29–3130 or A340–29–4098, both dated May 3, 2017, as applicable.

Note 1 to paragraph (h)(2) of this AD: Airbus Service Bulletins A330–29–3130 and A340–29–4098, both dated May 3, 2017, provide guidance for re-identification of the part numbers of the RAT hydraulic pumps that are not affected, and the part numbers of the RAT modules that are not equipped with an affected hydraulic pump.

(i) Compliance With AD 2016–14–01

After re-identification of a RAT module on an airplane, as required by paragraph (h)(2) of this AD, the airplane remains compliant with the RAT module re-identification requirements of AD 2016–14–01 for that airplane.

(j) Parts Installation Prohibition

(1) For Group 1 airplanes: After replacement of any affected RAT hydraulic pump as required by paragraph (h)(1) of this AD, do not install any affected RAT hydraulic pump.

(2) For Group 2 airplanes: As of the effective date of this AD, do not install any affected RAT hydraulic pump.

(k) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to the attention of the person identified in paragraph (l)(2) of this AD. Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or The European Aviation Safety Agency (EASA); or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(l) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA AD 2018–0062, dated March 20, 2018, for related information. This MCAI may be found in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0764.

(2) For more information about this AD, contact Vladimir Ulyanov, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax: 206–231–3229.

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Airbus Service Bulletin A330–29–3130, dated May 3, 2017.

(ii) Airbus Service Bulletin A340–29–4098, dated May 3, 2017.

(iii) UTC Aerospace Systems Service Bulletin ERPS06M–29–22, dated March 17, 2017.

(iv) UTC Aerospace Systems Service Bulletin ERPS06M–29–22, Revision 1, dated June 27, 2017.

(v) UTC Aerospace Systems Service Bulletin ERPS06M–29–22, Revision 2, dated May 24, 2018.

(3) For Airbus SAS service information identified in this AD, contact Airbus SAS, Airworthiness Office—EIAS, Rond-Point Emile Dewoitine No: 2, 31700 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com;* internet *http://www.airbus.com.*

(4) For UTC Aerospace service information identified in this final rule, contact UTC Aerospace Systems Goodrich Corporation, Actuation Systems, Stafford Road, Fordhouses, Wolverhampton, West Midlands WV10 7EH, England; phone: +44 (0) 1902 624644938; fax: +44 (0) 1902 788100624947; email: *techpubs.wolverhampton@goodrich.com;* internet: *https://www.customers.utcaerospacesystems.com.*

(5) You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(6) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued in Des Moines, Washington, on November 8, 2018.

Chris Spangenberg,

Acting Director, System Oversight Division, Aircraft Certification Service.

14 CFR Part 39

[Docket No. FAA–2017–0632; Product Identifier 2017–NE–16–AD; Amendment 39–19487; AD 2018–23–01]

RIN 2120–AA64

Airworthiness Directives; Zodiac Seats France Cabin Attendant Seats

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain Zodiac Seats France 536 Series Cabin Attendant Seats. This AD was prompted by cracks found in a highly concentrated stress area of the seat pan hinges. This AD requires repetitive inspections and replacement of the seat pan. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 28, 2018.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 28, 2018.

ADDRESSES: For service information identified in this final rule, contact Zodiac Seats France, Rue Robert Marechal Senior B.P. 69, 36100 Issoudun, France; phone: +33 (0) 2 54 03 39 39; fax: +33 (0) 2 54 03 39 00; email: *zs.tac@zodiacaerospace.com;* internet: *https://services.zodiacaerospace.com.* You may view this service information at the FAA, Engine & Propeller Standards Branch, 1200 District Avenue, Burlington, MA, 01803. For information on the availability of this material at the FAA, call 781–238–7759. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0632.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0632; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), the regulatory evaluation, any comments received, and other information. The address for Docket Operations (phone: 800–647–5527) is U.S. Department of Transportation, Docket Operations, M–

30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC, 20590.

FOR FURTHER INFORMATION CONTACT: Dorie Resnik, Aerospace Engineer, Boston ACO Branch, FAA, 1200 District Avenue, Burlington, MA, 01803; phone: 781–238–7693; fax: 781–238–7199; email: *dorie.resnik@faa.gov*.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking NPRM to amend 14 CFR part 39 by adding an AD that would apply to certain Zodiac Seats France 536 Series Cabin Attendant Seats. The NPRM published in the **Federal Register** on December 22, 2017 (82 FR 60690). The NPRM was prompted by cracks found in a highly concentrated stress area of the seat pan hinges. The NPRM proposed to require repetitive inspections of the affected cabin attendant seats and, depending on findings, replacement of the seat pan. We are issuing this AD to address the unsafe condition on these products.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA AD 2017–0001, dated January 6, 2017 (referred to after this as ''the MCAI'') to correct an unsafe condition for the specified products. The MCAI states:

> Cases of cracks were found on Zodiac Seats France cabin attendant seats 536 series installed on some ATR 42 and ATR 72 aeroplanes. The detected damage was located in the area of the seat pan hinges. Investigations identified that fatigue had caused these cracks in a highly concentrated stress area.
>
> This condition, if not detected and corrected, could lead to failure of the seat, possibly resulting in injury to the seat occupant.
>
> To address this potential unsafe condition, Zodiac Seats France issued Service Bulletin (SB) 536–25–003 to provide inspection and replacement instructions. Consequently, EASA issued AD 2016–0164, requiring repetitive visual inspections of the affected cabin attendant seats and, depending on findings, replacement of the seat pan.
>
> Since that AD was issued, Zodiac Seats France developed a reinforced seat pan, and revised SB 536–25–003 accordingly. After installation of a reinforced seat pan, the seat P/N amendment status is updated.
>
> For the reason described above, this AD retains the requirements of EASA AD 2016–0164, which is superseded, prohibits installation of unreinforced seat pans on seats already modified, and introduces the reinforced seat pan installation as optional terminating action for the repetitive inspections.

You may obtain further information by examining the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2017–0632.

Comments

We gave the public the opportunity to participate in developing this final rule. We received no comments on the NPRM or on the determination of the cost to the public.

Conclusion

We reviewed the relevant data and determined that air safety and the public interest require adopting this final rule as proposed except for minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

We reviewed Zodiac Seats France Service Bulletin (SB) No. 536–25–003, Rev. 3, dated June 2, 2017. The SB describes procedures for inspection, modification, or replacement of the seat pan of certain model seats known to be installed on ATR 42 and ATR 72 airplanes. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 55 seat assemblies installed on, but not limited to, ATR 42 and ATR 72 airplanes of U.S. registry.

We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Seat inspection, modification, or replacement	1.2 work-hours × $85 per hour = $102	$1,500	$1,602	$88,110

According to the manufacturer, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to engines, propellers, and associated appliances to the Manager, Engine and Propeller Standards Branch, Policy and Innovation Division.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–23–01 Zodiac Seats France (formerly SICMA Aero Seat): Amendment 39–19487; Docket No. FAA–2017–0632; Product Identifier 2017–NE–16–AD.

(a) Effective Date

This AD is effective December 28, 2018.

(b) Affected ADs

None.

(c) Applicability

(1) This AD applies to all Zodiac Seats France Cabin Attendant Seats, 536 Series, part numbers (P/N) 53600, all dash numbers, and all serial numbers, with seat pan P/N F0433453, installed.

(2) These appliances are installed on, but not limited to, ATR 42 and ATR 72 airplanes of U.S. registry.

(d) Subject

Joint Aircraft System Component (JASC) Code 2500, Cabin Equipment/Furnishings.

(e) Unsafe Condition

This AD was prompted by cracks found in a highly concentrated stress area of the seat pan hinges. We are issuing this AD to prevent failure of affected seats. The unsafe condition, if not addressed, could result in injury to the seat occupants.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Before exceeding 2,500 flight cycles (FCs), or within 100 FCs after the effective date of this AD, whichever occurs later, inspect the seat pan structure in both deployed and stowed positions using paragraph 2.A., Accomplishment Instructions, of Zodiac Seats France Service Bulletin (SB) No. 536–25–003, Rev. 3, dated June 2, 2017.

(2) If cracks are found, before the next flight:

(i) Replace seat pan with reinforced seat pan, P/N F0511530, using paragraph 2.B., Accomplishment Instructions, of Zodiac Seats France SB No. 536–25–003, Rev. 3, dated June 2, 2017.

(ii) Re-mark the seat using paragraph 2.C., Accomplishment Instructions, of Zodiac Seats France SB No. 536–25–003, Rev. 3, dated June 2, 2017.

(3) If no cracks are found, do the following:

(i) Re-mark the seat using paragraph 2.C., Accomplishment Instructions, of Zodiac Seats France SB No. 536–25–003, Rev. 3, dated June 2, 2017.

(ii) Reinspect the seat pan every 100 FCs since last inspection, or replace seat pan with reinforced seat pan, P/N F0511530, using paragraph 2.B., Accomplishment.

Instructions, of Zodiac Seats France SB No. 536–25–003, Rev. 3, dated June 2, 2017.

(4) After the effective date of this AD, and until compliance with this AD is accomplished, stow and secure an affected attendant seat in the retracted position to prevent occupancy, in accordance with the provisions and limitations of the applicable Master Minimum Equipment List item.

(h) Optional Terminating Action

Installation of a reinforced seat pan, P/N F0511530, using paragraph 2.B., Accomplishment Instructions, of Zodiac Seats France SB No. 536–25–003, Rev. 3, dated June 2, 2017, is terminating action to this AD.

(i) Credit for Previous Actions

You may take credit for inspections and modifications performed in accordance with Zodiac Seats France SB No. 536–25–003, Rev. 2, dated September 16, 2016, or earlier versions, if you performed these actions before the effective date of this AD.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Boston ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO Branch, send it to the attention of the person identified in paragraph (k)(1) of this AD. You may email your request to: *9-ane-boston-aco-amocrequests@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

(1) For more information about this AD, contact Dorie Resnik, Aerospace Engineer, Boston ACO Branch, FAA, 1200 District Avenue, Burlington, MA, 01803; phone: 781–238–7693; fax: 781–238–7199; email: *dorie.resnik@faa.gov.*

(2) Refer to MCAI EASA AD 2017–0001, dated January 6, 2017, for more information. You may examine the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating it in Docket No. FAA–2017–0632.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Zodiac Seats France Service Bulletin No. 536–25–003, Rev. 3, dated June 2, 2017.

(ii) [Reserved.]

(3) For Zodiac Seats France service information identified in this AD, contact Zodiac Seats France, Rue Robert Marechal Senior B.P. 69, 36100 Issoudun, France; phone: +33 (0) 2 54 03 39 39; fax: +33 (0) 2 54 03 39 00; email: *zs.tac@zodiac*aerospace.com; internet: *https://services.zodiacaerospace.com.*

(4) You may view this service information at FAA, Engine & Propeller Standards Branch, 1200 District Avenue, Burlington, MA, 01803. For information on the availability of this material at the FAA, call 781–238–7759.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued in Burlington, Massachusetts, on November 16, 2018.

Robert J. Ganley,

Manager, Engine and Propeller Standards Branch, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–9392; Product Identifier 2016–NM–003–AD; Amendment 39–19499; AD 2018–23–12]

RIN 2120–AA64

Airworthiness Directives; Zodiac Aero Evacuation Systems (also known as Air Cruisers Company)

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for Zodiac Aero Evacuation Systems (also known as Air Cruisers Company) fusible plugs installed on emergency evacuation equipment for various transport category airplanes. This AD was prompted by reports indicating that affected fusible plugs activated (vented gas) below the rated temperature. This AD requires an inspection of the fusible plugs to determine the part number and lot number, and replacement of all affected fusible plugs. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 28, 2018.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of December 28, 2018.

ADDRESSES: For service information identified in this final rule, contact Air Cruisers, 1747 State Route 34, Wall Township, NJ 07727–3935; phone 732–681–3527; email *technicalpublications@zodiacaerospace.com*. You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9392.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–9392; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the regulatory evaluation, any comments received, and other information. The address for Docket Operations (phone: 800–647–5527) is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Darren Gassetto, Aerospace Engineer, Mechanical Systems and Admin Services Section, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7323; fax 516–794–5531; email *9-avs-nyaco-cos@faa.gov*.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to Zodiac Aero Evacuation Systems (also known as Air Cruisers Company) fusible plugs installed on emergency evacuation equipment for various transport category airplanes. The NPRM published in the **Federal Register** on November 18, 2016 (81 FR 81709). The NPRM was prompted by reports indicating that affected fusible plugs activated (vented gas) below the rated temperature. The NPRM proposed to require an inspection of the fusible plugs to determine the part number and lot number, and replacement of all affected fusible plugs.

We subsequently issued a supplemental NPRM (SNPRM) that was published in the **Federal Register** on January 24, 2018 (83 FR 3283). The SNPRM proposed to extend the compliance time, clarify the applicability, and clarify certain requirements.

We are issuing this AD to address fusible plugs that might activate below the rated temperature and render the evacuation system unusable.

Comments

We gave the public the opportunity to participate in developing this final rule. The following presents the comments received on the SNPRM and the FAA's response to each comment.

Request to Extend Compliance Time

Airlines for America (A4A), on behalf of its members, requested that we extend the compliance time specified in paragraph (h) of the proposed AD (in the SNPRM). A4A stated that the extended compliance time of 42 months after the effective date (in paragraph (g) of the proposed AD (in the SNPRM)) had an unintended consequence in the re-worded compliance paragraph (h) of the proposed AD (in the SNPRM). A4A noted that while the allowance for maintenance records inspection was added, the words ''[b]efore further flight'' remained. A4A concluded that the current version means that either a planeside finding or a maintenance records discovery will each require action before further flight. A4A stated that while a finding by direct inspection will happen only in a shop and not affect operation of any aircraft, the accommodation for records review could immediately ground an in-service aircraft. A4A requested that we allow 42 months for the replacement if a records review was done.

We agree to revise the compliance time in paragraph (h) of this AD because we have determined that a compliance time of 42 months to replace the affected part addresses the unsafe condition and provides an acceptable level of safety. We have revised paragraph (h) of the AD to specify a 42-month compliance time for the replacement.

Request To Specify Serial Numbers

All Nippon Airways (ANA) requested that we revise paragraph (c) of the proposed AD (in the SNPRM) to refer to service information that specifies the serial numbers and not only the part numbers of the affected emergency equipment. ANA stated that identifying affected [parts] by only the part number means that even after expiration of the compliance time specified in the proposed AD, the inspection must be continued every time the affected emergency equipment is purchased. ANA stated that the serial number of the affected emergency equipment should be specified in the service information listed in paragraph (c) of the proposed AD (in the SNPRM) in order to prevent endless inspections.

We do not agree because specific serial numbers for the affected emergency equipment have not been identified. In addition, since the fusible plugs are rotable we cannot limit the applicability to only the known emergency equipment on which the fusible plugs were initially installed. Therefore, in order to address the identified unsafe condition, all fusible plugs installed on emergency evacuation equipment identified in the service information specified in paragraph (c) of this AD must be inspected as specified in paragraph (g) of this AD. When installing new equipment on an airplane, operators must ensure the newly installed part is not one of the affected parts by complying with the parts installation prohibition specified in paragraph (i) of this AD. We have not changed this AD in this regard.

Request To Refer to Service Information

Southwest Airlines (SWA) and A4A, on behalf of its members, requested that we refer to service information for accomplishing the actions specified in paragraph (g) of the proposed AD (in the SNPRM). SWA stated that the Air Cruisers service bulletins listed in paragraphs (c)(1) through (c)(16) of the proposed AD (in the SNPRM) have steps to inspect for the affected fusible plugs and to remove fusible plugs that are stamped with Lot PA–21 or PA–22. SWA noted that the service bulletins have been incorporated into the various

Air Cruisers component maintenance manuals (CMMs). A4A stated that the service bulletins and CMMs specify an inspection for the suspect fusible plug lot numbers and replacement if found.

A4A and SWA also stated that maintenance records would not indicate the level of detail of the fusible plug part numbers and lot numbers installed. SWA stated that the revision of the CMM used to make the components serviceable is noted on FAA Form 8130–3. A4A also stated that access to the fusible plug part number and lot number is not achievable planeside, and noted that the equipment manufacturer recommends the system to be unpacked and inspected in the slide shop. SWA and A4A requested that paragraph (g) of the proposed AD (in the SNPRM) be revised to specify accomplishing the inspection in accordance with the applicable service information specified in paragraphs (c)(1) through (c)(16) of the proposed AD (in the SNPRM) and/or the applicable component maintenance manuals.

We do not agree with revising paragraph (g) of this AD to mandate service information because this AD does not require operators to accomplish the inspection using a specific method. However, we do agree that operators should be aware of the service information that can be used to do the inspection specified in paragraph (g) of this AD. Therefore, we have added Note 1 to paragraph (g) of this AD to specify service bulletins and CMMs that provide guidance for performing the inspection. We have redesignated subsequent notes in this AD accordingly.

We also acknowledge the commenters' statement that the records review might not be conclusive. As stated in paragraph (g) of this AD, the records review is allowed only if operators can conclusively determine the part number and lot number. For operators that do not have records that can conclusively determine the part number and lot number, the inspection must be done.

Request To Remove Paragraph (h) of the Proposed AD (in the SNPRM)

SWA requested that we remove paragraph (h) of the proposed AD (in the SNPRM). SWA stated that paragraph (h) of the proposed AD (in the SNPRM) would require immediate removal of the emergency equipment if an inspection or a records review determines an affected part is installed. SWA suggested that paragraph (h) of the proposed AD (in the SNPRM) be deleted because it is unnecessary. SWA stated the emergency equipment must be removed from the aircraft in order to inspect for the affected fusible plug. SWA noted the component maintenance documents do not provide the level of detail of the fusible plug part numbers and lot numbers installed.

We do not agree with removing paragraph (h) of this AD because in order to address the unsafe condition the affected fusible plug must not only be removed but must also be replaced as required by paragraph (h) of this AD. We have not changed this AD in this regard. However, as stated previously, we have revised the compliance time in paragraph (h) of this AD to specify replacing within 42 months instead of requiring immediate action.

Request for Credit for Actions Done Using Certain Service Information

SWA requested that we give credit for inspections of the affected fusible plugs previously done per Air Cruisers service bulletins and/or CMMs incorporating the requirements of the Air Cruisers service bulletins.

We agree to clarify. We have not mandated specific service information for accomplishing the actions specified in paragraphs (g) and (h) of this AD; therefore, it is not necessary to give credit for using specific service information. For operators that have already accomplished the actions required by paragraphs (g) and (h) of this AD, credit is given as specified in paragraph (f) of this AD, which states to accomplish the required actions within the compliance times specified, ''unless already done.'' Therefore, if operators have accomplished the actions required for compliance with paragraphs (g) and (h) of this AD before the effective date of this AD, no further action is necessary.

Request To Revise Parts Installation Prohibition

A4A, on behalf of its members, requested that we revise paragraph (i) of the proposed AD (in the SNPRM) to specify that no person may install on any airplane any slide, slide/raft, or off-wing escape system unless the inspection of the fusible plug has been done per the applicable service information specified in paragraphs (c)(1) through (c)(16) of the proposed AD (in the SNPRM) and/or the applicable CMM listed in Air Cruisers Service Information Letter (SIL) 25–246, Rev. No. 2, dated January 24, 2017. A4A stated that paragraph (i) of the proposed AD (in the SNPRM) does not sufficiently close the door on direct inspection of the plug, which can only be accomplished by unpacking slides and complete disassembly. A4A stated that only the inspection of records (including service bulletin accomplishment information directly stamped on the slide) can reasonably accomplish the intention of the proposed AD in a practical manner.

We do not agree because we have not mandated the service information specified by the commenter. In order to comply with paragraph (i) of this AD, operators must prevent the installation of an affected part on an airplane. Paragraph (i) of this AD does not mandate a specific method for operators to follow to ensure the affected part is not installed. We have not changed this AD in this regard.

Request To Revise Cost Estimate

A4A, on behalf of its members, requested that we revise the cost estimate. A4A stated that the NPRM assumes one hour of labor per aircraft. A4A noted that because the actions need to be done at an appropriate facility (off wing and often not the operator's own shop), the cost should be per system, and include all facets from uninstalling through reinstallation. A4A stated the operator's actions will consume closer to 4 hours per slide (at $85/hour), with the addition of $500 each way shipping, and the vendor cost (Zodiac's typical billing is $2,900 per slide).

We agree with revising the cost estimate because operators that cannot do a records review will need to remove the affected emergency equipment to accomplish the inspection. We disagree with including the shipping and vendor costs because not all operators will need to ship the equipment in order to do the inspection or records review. We have revised the Costs of Compliance section in this final rule to specify up to 4 work-hours for the inspection.

Clarification of Replacement Part

In paragraph (h) of the proposed AD (in the SNPRM), we specified to replace the fusible plug with a new part that does not have P/N B13984–3, stamped with Lot PA–21 or PA–22. However, we have determined that it is not necessary for the replacement part to be a new part. Therefore, we have revised paragraph (h) of this AD to specify to replace the fusible plug with a serviceable fusible plug P/N B13984–3 that is not stamped with Lot PA–21 or PA–22.

Additional Affected Parts—Other Related Service Information

We have reviewed Air Cruisers Service Information Letter (SIL) 25–246, Rev. No. 2, dated January 24, 2017, which indicates additional fusible plugs

might be affected by the identified unsafe condition. We have determined that to delay this action in order to allow the public to comment on the merits of inspecting the additional fusible plugs would be inappropriate, since we have determined that an unsafe condition exists and that inspections must be conducted to ensure continued safety. We are considering additional rulemaking to address additional fusible plugs.

Clarification of Manufacturer's Name

In the Summary of the SNPRM, we noted that Zodiac Aero Evacuation Systems was formerly known as Air Cruisers. However, Zodiac Aero Evacuation Systems is also known as Air Cruisers Company. For clarity, we have referred to the manufacturer as Zodiac Aero Evacuation Systems (also known as Air Cruisers Company) throughout this final rule.

Conclusion

We reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this final rule with the changes described previously and minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the SNPRM for addressing the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the SNPRM.

We also determined that these changes will not increase the economic burden on any operator or increase the scope of this final rule.

Related Service Information Under 1 CFR Part 51

We reviewed the following Air Cruisers service information. The service information identifies the affected fusible plugs. In addition, it describes procedures for inspecting and replacing affected fusible plugs. These documents are distinct since they apply to different airplane models or configurations.

- Air Cruisers Service Bulletin 737 103–25–50, dated August 27, 2010.
- Air Cruisers Service Bulletin 757 105–25–80, dated August 27, 2010.
- Air Cruisers Service Bulletin 757 105–25–81, dated August 27, 2010.
- Air Cruisers Service Bulletin 767 106–25–10, Rev. No. 1, dated October 15, 2010.
- Air Cruisers Service Bulletin 777 107–25–29, Rev. No. 1, dated July 8, 2011.
- Air Cruisers Service Bulletin A300/A310 001–25–19, dated August 27, 2010.
- Air Cruisers Service Bulletin A300/A310 003–25–33, dated August 27, 2010.

- Air Cruisers Service Bulletin F100 351–25–07, dated December 10, 2010.
- Air Cruisers Service Bulletin Liferaft 35–25–79, dated August 27, 2010.
- Air Cruisers Service Bulletin MD11 305–25–35, dated August 27, 2010.
- Air Cruisers Service Bulletin MD80/90/717 304–25–45, dated August 27, 2010.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD affects 3,384 airplanes of U.S. registry. We estimate the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Determination of part and lot number.	Up to 4 work-hours × $85 per hour = Up to $340.	$0	Up to $340	Up to $1,150,560.

We estimate the following costs per slide to do any necessary replacement of the fusible plug that would be required based on the results of the inspection. We have no way of determining the number of aircraft that might need these replacements:

ON-CONDITION COST

Action	Labor cost	Parts cost	Cost per product
Replacement	1 work-hour × $85 per hour = $85	Not available	$85

According to the manufacturer, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all available costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on

products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes and associated appliances to the Director of the System Oversight Division.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–23–12 Zodiac Aero Evacuation Systems (also known as Air Cruisers Company): Amendment 39–19499; Docket No. FAA–2016–9392; Product Identifier 2016–NM–003–AD.

(a) Effective Date

This AD is effective December 28, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Zodiac Aero Evacuation Systems (also known as Air Cruisers Company) fusible plugs installed on emergency evacuation equipment identified in the service information specified in paragraphs (c)(1) through (c)(16) of this AD. These affected fusible plugs might be installed on the emergency evacuation equipment of the following manufacturers' airplanes: Airbus, The Boeing Company, BAE Systems (Operations) Limited, and Fokker Services B.V.

(1) Air Cruisers Service Bulletin 737 103–25–50, dated August 27, 2010.

(2) Air Cruisers Service Bulletin 757 105–25–80, dated August 27, 2010.

(3) Air Cruisers Service Bulletin 757 105–25–81, dated August 27, 2010.

(4) Air Cruisers Service Bulletin 767 106–25–10, Rev. No. 1, dated October 15, 2010.

(5) Air Cruisers Service Bulletin 777 107–25–29, Rev. No. 1, dated July 8, 2011.

(6) Air Cruisers Service Bulletin A300/A310 001–25–19, dated August 27, 2010.

(7) Air Cruisers Service Bulletin A300/A310 003–25–33, dated August 27, 2010.

(8) Air Cruisers Service Bulletin A310 002–25–08, dated August 27, 2010.

(9) Air Cruisers Service Bulletin A320 004–25–87, Rev. No. 2, dated January 7, 2011.

(10) Air Cruisers Service Bulletin A321 005–25–21, dated August 27, 2010.

(11) Air Cruisers Service Bulletin BAe 146 201–25–23, dated December 10, 2010.

(12) Air Cruisers Service Bulletin F28 352–25–02, dated December 10, 2010.

(13) Air Cruisers Service Bulletin F100 351–25–07, dated December 10, 2010.

(14) Air Cruisers Service Bulletin Liferaft 35–25–79, dated August 27, 2010.

(15) Air Cruisers Service Bulletin MD11 305–25–35, dated August 27, 2010.

(16) Air Cruisers Service Bulletin MD80/90/717 304–25–45, dated August 27, 2010.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by reports indicating that affected fusible plugs activated (vented gas) below the rated temperature. We are issuing this AD to address fusible plugs that might activate below the rated temperature and render the evacuation system unusable.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Fusible Plug Identification

Within 42 months after the effective date of this AD, do an inspection to determine if any fusible plug has part number (P/N) B13984–3, stamped with Lot PA–21 or PA–22. A review of the airplane maintenance records is acceptable to make this determination if it can be conclusively determined from that review that a part not having P/N B13984–3, stamped with Lot PA–21 or PA–22, has been installed.

Note 1 to paragraph (g) of this AD: Guidance for performing the inspection specified in paragraph (g) of this AD can be found in applicable service information specified in paragraphs (c)(1) through (c)(16) of this AD and the applicable component maintenance manuals (CMMs) that have incorporated the appropriate Air Cruisers service information.

(h) Replacement of Affected Fusible Plug

If, during the inspection or records review required by paragraph (g) of this AD, it is determined that any fusible plug has part number (P/N) B13984–3, stamped with Lot PA–21 or PA–22: Within 42 months after the effective date of this AD, replace that fusible plug with a serviceable fusible plug P/N B13984–3 that is not stamped with Lot PA–21 or PA–22.

Note 2 to paragraph (h) of this AD: Guidance can be found in the applicable CMM for the replacement. In addition, Air Cruisers Service Information Letter (SIL) 25–246, Rev. No. 1, dated February 21, 2014, provides information regarding affected fusible plugs and guidance on the replacement.

(i) Parts Installation Prohibition

As of the effective date of this AD, no person may install on any airplane any fusible plug having P/N B13984–3, stamped with Lot PA–21 or PA–22.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, New York ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the certification office, send it to ATTN: Program Manager, Continuing Operational Safety, FAA, New York ACO Branch, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 516–228–7300; fax: 516–794–5531.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

[Docket No. PL19–2–000]

Accounting and Ratemaking Treatment of Accumulated Deferred Income Taxes and Treatment Following the Sale or Retirement of an Asset

AGENCY: Federal Energy Regulatory Commission, Department of Energy.

ACTION: Policy statement.

SUMMARY: In this Policy Statement, the Federal Energy Regulatory Commission (Commission) states its policy regarding the treatment of Accumulated Deferred Income Taxes for both accounting and ratemaking purposes as to Commission-jurisdictional public utilities, natural gas pipelines and oil pipelines, in light of the Tax Cuts and Jobs Act of 2017. In addition, the Commission addresses the accounting and ratemaking treatment of Accumulated Deferred Income Taxes following the sale or retirement of an asset.

DATES: This Policy Statement will become applicable November 23, 2018.

SUPPLEMENTARY INFORMATION:

1. In this Policy Statement, the Federal Energy Regulatory Commission (Commission) states its policy regarding the treatment of Accumulated Deferred Income Taxes (ADIT) for both accounting and ratemaking purposes as to Commission-jurisdictional public utilities, natural gas pipelines, and oil pipelines, in light of the Tax Cuts and Jobs Act of 2017.[1] The Commission also addresses the accounting and ratemaking treatment of ADIT following the sale or retirement of an asset.

I. Background

A. Tax Cuts and Jobs Act

2. On December 22, 2017, the President signed into law the Tax Cuts and Jobs Act. The Tax Cuts and Jobs Act, among other things, reduced the federal corporate income tax rate from 35 percent to 21 percent, effective January 1, 2018.[2] This means that, beginning January 1, 2018, companies subject to the Commission's jurisdiction will compute income taxes owed to the Internal Revenue Service (IRS) based on a 21 percent tax rate. The tax rate reduction will result in less corporate income tax expense going forward.

3. Importantly, the tax rate reduction will also result in a reduction in ADIT liabilities and ADIT assets on the books of rate-regulated companies. ADIT balances are accumulated on the regulated books and records of such regulated companies based on the requirements of the Uniform System of Accounts (USofA).[3] ADIT arises from timing differences between the method of computing taxable income for reporting to the IRS and the method of computing income for regulatory accounting and ratemaking purposes.[4] As a result of the Tax Cuts and Jobs Act reducing the federal corporate income tax rate from 35 percent to 21 percent, a portion of an ADIT liability that was collected from customers will no longer be due from public utilities, natural gas pipelines and oil pipelines to the IRS and is considered excess ADIT.

B. Order No. 144

4. The purpose of tax normalization is to match the tax effects of costs and revenues with the recovery in rates of those same costs and revenues.[5] As

[5] *Tax Normalization for Certain Items Reflecting Timing Differences in the Recognition of Expenses or Revenues for Ratemaking and Income Tax*

Continued

noted above, timing differences may exist between the method of computing taxable income for reporting to the IRS and the method of computing income for regulatory accounting and ratemaking purposes. The tax effects of these differences are placed in a deferred tax account to be used in later periods when the differences reverse.[6]

5. The Commission established this policy of tax normalization in Order No. 144 where it required use of ''the provision for deferred taxes [(*i.e.,* ADIT)] as a mechanism for setting the tax allowance at the level of current tax cost.'' [7] In keeping with this normalization policy, and as relevant to the Tax Cuts and Jobs Act's reduction of the federal corporate income tax rate, the Commission in Order No. 144 also required adjustments in the ADIT of public utilities' cost of service when excessive or deficient ADIT has been created as a result of changes in tax rates.[8] Furthermore, the Commission required ''a rate applicant to compute the income tax component in its cost of service by making provision for any excess or deficiency in its deferred tax reserves resulting . . . from tax rate changes.'' [9] The Commission required that such provision be consistent with a Commission-approved ratemaking method made specifically applicable to the rate applicant.[10] Where no ratemaking method has been made specifically applicable, the Commission required the rate applicant to advance some method in its next rate case.[11] The Commission stated that it would determine the appropriateness of any proposed method on a case-by-case basis, but as the issue is resolved in a number of cases, a method with wide applicability may be adopted.[12] The Commission codified the requirements of Order No. 144 in its regulations in 18 CFR 35.24.[13]

1. Public Utilities—18 CFR 35.24

6. Originally promulgated in Order No. 144, the Commission's regulations in 18 CFR 35.24 provide requirements for the proper ratemaking treatment of the tax effects of all transactions for which there are timing differences.[14] Under this section, a public utility must account for excess or deficient ADIT when computing the income tax component of its cost of service.[15] Additionally, in accounting for this excess or deficient ADIT, a public utility is required to apply the ratemaking method that has been specifically approved by the Commission for that public utility.[16] Where no such ratemaking method exists, a public utility may choose which ratemaking method to apply and the reasonableness of that ratemaking method will be determined on a case-by-case basis by the Commission.[17]

2. Natural Gas Pipelines—18 CFR 154.305

7. Order No. 144 also promulgated the Commission's regulations regarding tax normalization for natural gas pipelines which were originally located in part 2 of the regulations as section 2.202.[18] Order No. 144–A redesignated the tax normalization regulations for natural gas pipelines by removing them from part 2 of the Commission's regulations and placing them in part 154.[19] Subsequently, Order No. 582 redesignated the regulatory text in that part with respect to natural gas pipelines to its current designation in section 154.305, and made various revisions in that section.[20] The section requires a natural gas pipeline making a rate filing under the Natural Gas Act to compute the income tax component of its cost of service by using tax normalization for all transactions.[21] More specifically, the section requires natural gas pipelines to reduce rate base by the balances that are properly recordable in USofA Account 281 (Accumulated deferred income taxes—accelerated amortization property), Account 282 (Accumulated deferred income taxes—other property), and Account 283 (Accumulated deferred income taxes—other).[22] Conversely, rate base must be increased by balances that are properly recordable in Account 190 (Accumulated deferred income taxes).[23] The section also requires natural gas pipelines to compute the income tax component in its cost of service by including a provision for amortizing excess or deficiency in deferred taxes. This is done by applying a Commission-approved ratemaking method made specifically applicable to the natural gas pipeline for determining the cost-of-service provision: (1) If the natural gas pipeline has not provided deferred taxes in the same amount that would have accrued had tax normalization always been applied or (2) if, as a result of changes in tax rates, the accumulated provision for deferred taxes becomes deficient in, or in excess of, amounts necessary to meet future tax liabilities.[24] Similar to the tax normalization regulations for public utilities, if the Commission has not approved a specific ratemaking method specifically applicable to the natural gas pipeline, then the natural gas pipeline must use a previously approved ratemaking method.[25] The Commission will determine whether such method is appropriate on a case-by-case basis.[26]

3. Oil Pipelines

8. Unlike the Commission's regulations applicable to public utilities and natural gas pipelines, there is no tax normalization section under the Commission's regulations for oil pipelines. Instead, the Commission's regulations for oil pipelines under the USofA General Instructions, 1–12 *Accounting for Income Taxes,* require that when income tax rates are changed, oil pipelines reduce or increase their ADIT balances immediately by the full amount of the excess or deficient tax reserve.[27] Specifically, section (b) requires oil pipelines to apply the

enacted tax rate in determining the amount of deferred taxes and adjust their deferred tax liabilities and assets for the effect of the change in tax law or rates in the period that the change is enacted.[28] The section further requires the adjustment to be recorded in the appropriate deferred tax balance sheet accounts based on the nature of the temporary difference and the related classification requirements of the account.[29]

4. Prior Accounting Guidance for Public Utilities and Natural Gas Pipelines

9. In Docket No. AI93–5–000, the Chief Accountant issued accounting guidance on the proper accounting for income taxes.[30] Among other matters, the accounting guidance directed public utilities and natural gas companies to adjust their deferred tax liabilities and assets for the effect of the change in tax law or rates in the period that the change is enacted.[31] The guidance stated that adjustments should be recorded in the appropriate deferred tax balance sheet accounts (Accounts 190, 281, 282 and 283) based on the nature of the temporary difference and the related classification requirements of the accounts.[32] Further, if as a result of action by a regulator, it is probable that the future increase or decrease in taxes payable due to the change in tax law or rates will be recovered from or returned to customers through future rates, an asset or liability should be recognized in Account 182.3 (Other Regulatory Assets), or Account 254 (Other Regulatory Liabilities), as appropriate, for that probable future revenue or reduction in future revenue.[33]

C. Notice of Inquiry

10. Following the enactment of the Tax Cuts and Jobs Act, the Commission issued a Notice of Inquiry seeking comments on, among other things, whether, and if so, how, the Commission should address the effects on ADIT of the Tax Cuts and Jobs Act.[34] The Commission noted that the Tax Cuts and Jobs Act's reduction to the federal corporate income tax rate would potentially create excess or deficient ADIT on the books of public utilities.[35] As relevant to the guidance provided in this Policy Statement, the Commission sought comments on the treatment of ADIT for assets sold or retired after December 31, 2017, and the amortization of excess and deficient ADIT.[36]

II. Discussion

11. This Policy Statement states our requirements regarding the treatment of ADIT in light of the tax rate reduction implemented in the Tax Cuts and Jobs Act. Specifically, we provide guidance regarding: (1) The accounts in which public utilities, natural gas pipelines, and oil companies should record the amortization of excess and/or deficient ADIT for accounting purposes and ratemaking purposes and (2) whether, and if so how, such entities should address excess and/or deficient ADIT that is recorded on the books of public utilities, natural gas pipelines, and oil companies after December 31, 2017, as a result of assets being sold or retired for both accounting and ratemaking purposes.

12. First, we clarify that for both accounting purposes and ratemaking purposes, public utilities and natural gas companies should record the amortization of the excess and/or deficient ADIT recorded in Account 254 (Other Regulatory Liabilities) and/or Account 182.3 (Other Regulatory Assets) by recording the offsetting entries to Account 410.1 (Provision for Deferred Income Taxes, Utility Operating Income) or Account 411.1 (Provision for Deferred Income Taxes—Credit, Utility Operating Income), as required by the USofA. We further clarify that for accounting purposes oil pipelines should adjust their ADIT balances to reflect the change in federal income tax rates with offsetting entries to the appropriate income statement account, as required by the USofA. Accordingly, oil pipeline companies will not record excess or deficient ADIT for accounting purposes. As detailed below, we also clarify that oil pipelines should provide additional disclosures in the Notes that accompany their FERC Form No. 6, Annual Report of Oil Pipeline Companies (Form No. 6).

13. Second, for accounting purposes, we reiterate that public utilities and natural gas pipelines must continue to follow the accounting guidance issued by the Chief Accountant in Docket No. AI93–5–000 with respect to changes in tax law or rates. To ensure transparency in the accounting adjustments to the deferred tax accounts, we clarify that entities should provide additional disclosures in their 2018 FERC annual financial filing within the Notes to the Financial Statements as detailed below.

14. With respect to ratemaking, for a public utility or natural gas pipeline that continues to have an income tax allowance, any excess or deficient ADIT associated with an asset must continue to be amortized in rates even after the sale or retirement of that asset. This excess or deficient ADIT will continue to be refunded to or recovered from ratepayers based on the schedule that was initially established. Similarly, for ratemaking purposes oil pipelines should keep records of excess and deficient ADIT.

A. In Which Accounts Should Companies Record Amortization of Excess and Deficient ADIT

15. In the NOI, the Commission sought comment on whether a public utility or natural gas pipeline should record the amortization by recording a reduction to the regulatory asset or regulatory liability account and recording an offsetting entry to Account 407.3 (Regulatory Debits) or Account 407.4 (Regulatory Credits).[37] For oil pipelines, the Commission sought comment on whether this information should be recorded in Account 665 (Unusual or Infrequent Items (Debit)) or Account 645 (Unusual or Infrequent Items (Credit)).[38]

1. Comment Summary

16. Ameren takes issue with the premise of the Commission's question that a separate regulatory liability or asset account is necessary to record excess or deficient ADIT, respectively, arguing that the excess or deficient ADIT should remain in the accounts where they were originally recorded.[39] APPA and AMP, along with Indicated Customers, argue that it would be both appropriate and transparent to record the excess ADIT in the same ADIT accounts (*e.g.,* Accounts 190, 282 and 283) where the original entries for the ADIT assets and ADIT liabilities were established, but believe separate regulatory liability and/or asset accounts would also be appropriate.[40]

A list of commenters in that proceeding and the abbreviated names used in this Policy Statement appears in Appendix A.

[35] NOI, FERC Stats. & Regs. ¶ 35,582 at P 13.

[36] *Id.* PP 20–22.

[37] NOI, FERC Stats. & Regs. ¶ 35,582 at P 22.

[38] *Id.*

[39] Ameren, Comments to NOI, Docket No. RM18–12–000, at 16 (filed May 21, 2018) (Ameren NOI Comments).

[40] APPA and AMP, Comments to NOI, Docket No. RM18–12–000, at 16 (filed May 22, 2018) (APPA and AMP NOI Comments); Indicated Customers, Comments to NOI, Docket No. RM18–12–000, at 14 (filed May 21, 2018) (Indicated Customers NOI Comments).

17. When separate regulatory liability or assets are used, commenters' viewpoints diverge on the appropriate account to record the offsetting entry. Certain commenters agree with the Commission's initial suggestion.[41] PSEG states that Accounts 407.3 and 407.4 correspond to the appropriate balance sheet account where the excess deferred taxes reside.[42] Regarding natural gas pipelines, Berkshire asserts that recording the amounts in Account 407.3 or 407.4 will be easier for FERC Form No. 2 users to understand because it will result in similar treatment to other IRS schedule M items and above the line accounting while avoiding the requirement to spread the total year's amortization over each month using the FASB Interpretation No. 18 method.[43]

18. Other commenters believe that either Accounts 407.3 and 407.4 or 410.1 (Provision for deferred income taxes, utility operating income) and 411.1 (Provision for deferred income taxes) are appropriate. Avangrid asserts that Account 407 is consistent with the fact that the excess deferred tax obligation ceased upon tax reform enactment and that the utilities will prospectively amortize a regulatory deferral, rather than a deferred tax liability; however, use of Account 411 is consistent with USofA requirements.[44] EEI and INGAA state that their members' opinions are split between the two accounting options and request that the Commission recognize that both approaches may be appropriate.[45]

19. Many other commenters believe that only Accounts 410.1 and 411.1 are appropriate.[46] New York Transco notes that those accounts were originally used when the regulatory asset or regulatory liability was established.[47]

20. Regarding oil pipelines, AOPL states with respect to regulatory accounting under the USofA, any excess ADIT is eliminated when tax rates change consistent with generally accepted accounting principles, rather than being reduced over time through amortization. AOPL states there is no reason to change either the Commission's accounting rules or current oil pipeline accounting practices; the Commission's ratemaking precedent controls rather than accounting rules for purposes of setting cost-of-service rates.[48]

2. Determination

a. Accounting Guidance

21. We clarify that public utilities and natural gas pipelines should record the amortization of the excess and/or deficient ADIT recorded in Account 254 (Other Regulatory Assets) and/or Account 182.3 (Other Regulatory Assets) by recording the offsetting entries to Account 410.1 (Provision for Deferred Income Taxes, Utility Operating Income) or Account 411.1 (Provision for Deferred Income Taxes—Credit, Utility Operating Income), as appropriate. As explained below, recording the amortization in Account 410.1 and Account 411.1 is consistent with the instructions for those accounts as detailed in the Commission's regulations and provides more transparency as compared with recording the amounts in Account 407.3 and Account 407.4 because the specific source of the regulatory asset or regulatory liability will be known.

22. The Commission's instructions for Account 182.3 provide in part ''[w]hen specific identification of the particular source of a regulatory asset cannot be made . . . account 407.4, regulatory credits, shall be credited.'' [49] Similarly, the Commission's instructions for Account 254 state in part ''[w]hen specific identification of the particular source of the regulatory liability cannot be made . . . account 407.3, regulatory debits, shall be debited.'' [50]

23. In contrast, Account 410.1 and Account 411.1 are specifically designated for the recordation of ADIT.[51] In this situation where, as a result of a change in tax law or rates, excess and/or deficient ADIT have been reclassified to Account 254 and/or Account 182.3, in accordance with the Commission's prior guidance,[52] specific identification of the source of the regulatory liability and/or regulatory asset can be made. Accordingly, the Commission's existing regulations support amortizing the excess and/or deficient ADIT recorded in Account 254 and/or Account 182.3 to Account 410.1 or Account 411.1, as appropriate and consistent with the manner such amounts are reflected in rates.

24. With respect to oil pipelines, deferred tax balances should be adjusted for the effect of changes in tax law or rates in the period the change is enacted in accordance with the USofA for oil pipelines.[53] Specifically, upon the enactment of the Tax Cuts and Jobs Act, oil pipelines should have reduced their ADIT balances to reflect the 21 percent federal income tax rate with offsetting entries to the appropriate income statement account.[54] We believe the current guidance set forth in the USofA is appropriate and will not require oil pipelines to account for excess or deficient ADIT or record the amortization of such amounts. However, to ensure transparency with respect to these ADIT adjustments, oil pipelines should disclose in the Notes to their Form No. 6 financial statements, the amounts of their ADIT adjustments resulting from the change in the federal corporate income tax rate, supported by

a schedule that illustrates the calculation of the revised balances. Because the accounting for the excess and/or deficient ADIT may create differences between oil pipelines' accounting and ratemaking, such differences should also be disclosed in the Notes to their Form No. 6 financial statements, Form No. 6 Page 230, Analysis of Federal Income and Other Taxes Deferred, and Page 700, Annual Cost of Service Based Analysis Schedule.

b. Ratemaking Guidance

25. With respect to public utilities, the appropriate ratemaking treatment will be addressed in the Notice of Proposed Rulemaking (NOPR) we are issuing concurrent with this Policy Statement. In the NOPR, we are proposing to require all public utility transmission providers with transmission rates under an Open Access Transmission Tariff (OATT), a transmission owner tariff, or a rate schedule to revise those rates to account for changes caused by the Tax Cuts and Jobs Act. Natural gas pipelines should continue to file for changes in rates consistent with sections 154.305, 154.312, and 154.313 of the Commission's regulations.[55]

26. For oil pipelines, the current regulatory treatment of excess and/or deficient ADIT amounts is to maintain such amounts separately for rate making purposes only and to amortize them by removing the annual amortization amount from the cost of service in the process of determining an income tax allowance. We will continue the practice of amortizing and removing the excess and or deficiency by reducing the allowed return before it is grossed up for income taxes.

B. Whether, and If So How, To Address Excess ADIT That Is Removed From the Books of Public Utilities, Natural Gas Pipelines, and Oil Pipelines After December 31, 2017, as a Result of Assets Being Sold or Retired

27. In the NOI, the Commission sought comment on whether, and if so how, it should address excess ADIT that is removed from the books of public utilities, natural gas pipelines, and oil pipelines after December 31, 2017, as a result of assets being sold or retired.[56]

1. Comment Summary

28. Both public utility and natural gas pipeline commenters note that, to date and in response to the last time Congress changed the federal corporate income tax rate, the IRS only has issued guidance on the disposition of excess ADIT in the context of extraordinary retirements.[57] They suggest that the Commission defer addressing excess ADIT that is removed from the books as a result of assets being sold or retired unless and until the IRS has had an opportunity to weigh in on this issue.[58]

29. Certain public utilities argue that, for companies that properly reflect Average Rate Assumption or the Reverse South Georgia Method and have formula rates that reflect ADIT balances and adjustments thereto, there is no need for the Commission to address excess ADIT that is removed from the books after December 2017 as a result of assets being sold or retired.[59]

30. Similarly, several natural gas pipelines contend that Commission precedent is clear that when assets are sold or transferred as part of a taxable event, the ADIT balance associated with those assets is extinguished; similarly, deferred liabilities resulting from excess ADIT are also extinguished following the retirement of an asset. These pipelines believe that the Commission has provided no basis for departing from these clear rules.[60] These pipelines note that the Commission has stated that ''ADIT balances consist of deferred taxes that are intended to be paid at a future time—when the taxes become due. When a taxable event occurs such as the sale of assets . . . taxes are due and the ADIT balances are reduced to zero;'' thus, the ''ADIT balances that existed prior to the sale no longer exist and are no longer an offset against rate base.'' [61] These pipelines state the NOI explained that any ADIT associated with assets that are sold are removed from the regulated entity's ''books because any previously deferred tax effects related to the assets are now triggered as part of the computation of gains or losses associated with the sale (*i.e.,* the deferred taxes are now payable to the IRS).'' [62]

31. Eversource and Exelon submit that treatment of ADIT balances is best addressed on a company-specific basis and that companies should be able to either remove the ADIT associated with assets removed from their books or continue to amortize those balances over the remaining amortization period.[63] Indicated Local Distribution Companies suggest that any future sale or retirement event should be decided as part of a pipeline's general rate proceeding.[64]

32. Other commenters urge the Commission to require regulated entities to return any excess ADIT associated with any sold or retired assets. They argue that the Commission should be guided by the principle that all excess ADIT balances were provided by customers and thus customers should be credited with such balances through the combination of a credit to amortization expense and the continued offset to rate base. In support, they assert that when a public utility sells a jurisdictional asset, it will remove from its books the entire ADIT associated with a sold asset, which does not transfer with the asset to the new owner, and retain the entire ADIT for investors. Thus, customers are never credited with the excess or any other part of the ADIT that they have been paying during the useful life of the asset prior to its sale.[65]

33. Indicated Customers note that with regard to the sale of public utility assets for which there is an excess ADIT balance remaining on the books, the 2006 IRS Private Letter Ruling No. PLR–168537–02 prohibits the return to ratepayers of that ADIT and excess ADIT related to the asset that is being sold, because any ADIT and excess ADIT amounts that are on the books for that asset cease to exist as of the date of sale.[66] Notwithstanding, Indicated

Consequently, no portion of the related unamortized ADITC remaining at the date of sale may be returned to ratepayers by amortizing those ADITC amounts over the period [t]axpayer recovers stranded costs from its ratepayers or by decreasing the net loss from the sale of the nuclear generating

Continued

Customers, and APPA and AMP argue that the impact of not returning both the ADIT and excess ADIT, prior to the sale, and the consequent appropriation of customer-provided capital, should be given consideration in the Commission's evaluation of the application seeking approval of the asset transfer. If the ADIT and excess ADIT are not considered in the transfer transaction, they contend that the selling entity would receive a windfall to the detriment of ratepayers. Further, the acquiring utility could have no offsetting ADIT in its rate base related to the purchased assets, thereby causing an increase in rates to customers, in addition to the customers' loss of capital advanced to the selling utility.[67]

34. Commenters that believe that the Commission should require ADIT balances be returned to the customers offer several suggestions. APPA and AMP suggest that in the case of a sale or early retirement of public utility assets, the flowback should occur immediately in the formula rate update after the event; otherwise, the flowback should be in the form of a lump-sum payment or credit.[68] Indicated Customers suggest that the Commission should consider deploying remedies it has used in proceedings under FPA section 203, such as establishing an open season for customers to terminate their contracts, a commitment by applicants to protect customers from any adverse rate impacts, rate moratorium or rate reduction.[69] Natural Gas Indicated Shippers suggest that the excess ADIT associated with sold or retired assets should be amortized and returned to the customers in the same manner a pipeline proposes to return excess ADIT due to tax cost changes.[70]

2. Determination

a. Accounting Guidance

35. As discussed above, in 1993, the Chief Accountant issued guidance on how entities must account for the effect of a change in tax law or rates by adjusting its deferred tax liabilities and assets.[71] This guidance remains unchanged, and requires an entity to adjust its deferred tax liabilities and assets for the effect of the change in tax law or rates in the period that the change is enacted.[72] If as a result of action by a regulator, it is probable that the future increase or decrease in taxes payable due to a change in tax law or rates will be recovered from or returned to customers through future rates, an asset or liability shall be recognized in Account 182.3 (Other Regulatory Assets) for deficient ADIT, or Account 254 (Other Regulatory Liabilities) for excess ADIT, as appropriate.[73] Because these deficient ADIT and excess ADIT balances can no longer be characterized as deferred tax amounts to be settled with the IRS, the sale or retirement of any assets as of January 1, 2018 would not automatically reverse these balances as tax timing differences.

36. Accordingly, for public utilities and natural gas pipelines, the excess and/or deficient ADIT recorded in Account 254 and/or Account 182.3 should continue to be recorded in those accounts and amortized to Accounts 410.1 and/or Account 411.1, if those balances are still deemed to be either refundable to or recoverable from ratepayers. If the rate treatment of those balances is instead disallowed, then those amounts shall be written off to Account 421 (Miscellaneous Non-Operating Income) or Account 426.5 (Other Deductions), as appropriate, in the year of the disallowance.[74]

37. We clarify that, for public utilities and natural gas pipelines, the balances of excess and deficient ADIT recorded in Account 254 and Account 182.3, respectively, continue to exist as regulatory liabilities and assets after an asset sale, in cases for which the excess and deficient ADIT do not transfer to the purchaser of the plant asset. Similarly, we clarify that public utilities and natural gas companies should continue to account for excess and deficient ADIT related to retirements as regulatory liabilities and assets.

38. We acknowledge that numerous current and deferred tax accounts as well as other accounts may be affected by reversals of ADIT account balances recorded on the books of public utilities and natural gas companies subject to the Commission's jurisdiction. Thus, in order to provide transparency regarding the accounting and rate treatment of amounts removed from the ADIT accounts, we clarify that public utilities and natural gas pipelines should disclose in their FERC annual financial filings within the Notes to the Financial Statements: (1) The FERC accounts affected; (2) how any ADIT accounts were re-measured in the determination of the excess or deficient ADIT amounts in Accounts 182.3 and 254; (3) the related amounts associated with the reversal and elimination of ADIT balances in those accounts; (4) the amount of excess and deficient ADIT that is protected and unprotected; (5) the accounts to which the excess or deficient ADIT will be amortized; and (6) the amortization period of the excess and deficient ADIT to be returned or recovered through rates for both protected and unprotected ADIT.[75] Disclosures should also summarize the manner by which excess and deficient will be included in rates by rate jurisdiction.

39. As for oil pipelines, as discussed above, ADIT balances will be reduced immediately by the full amount of the excess or deficient tax reserve in line with the USofA for oil pipelines outlined in General Instruction 1–12.[76]

b. Ratemaking Guidance

40. The Commission has previously found that the sale or retirement of an asset with an ADIT balance is usually deemed a taxable event under IRS rules, and, as such, the ADIT balance is extinguished as the deferred taxes then become payable to the appropriate government authorities, and there is no longer an ADIT balance to ''return'' to customers.[77] However, we believe that

assets by those ADITC amounts. Additionally, the unamortized [accumulated deferred investment tax credit] and [excess deferred federal income taxes] associated with the sold generating assets ceases to exist at the date of sale.''). APPA and AMP argue that this Private Letter Ruling can be read to have no bearing on the flowback of unprotected ADIT balances. APPA and AMP NOI Comments at n. 8.

[75] Public utilities should include this information in FERC Form No. 1 or 1–A and natural gas pipelines should include this information in FERC Form No. 2 or 2–A.

[76] General Instructions 1–12, *Accounting for Income Taxes,* 18 CFR part 352.

[77] The Commission has found that master limited partnerships that were no longer entitled to an income tax allowance were not required to return any remaining ADIT balances. *Inquiry Regarding the Commission's Policy for Recovery of Income Tax Costs,* 162 FERC ¶ 61,227, *order on reh'g,* 164 FERC ¶ 61,030 (2018) (Revised Income Tax Policy Statement Order on Rehearing). However, as relevant here, the Commission found that ''[t]here is a critical distinction between adjustments to amortize excess or deficient ADIT to be included in future rates to account for changes in income tax rates, as opposed to a complete elimination of the income tax allowance. When income tax rates are merely reduced and an income tax allowance remains in *future* cost of service, it is appropriate to credit any excess in ADIT in the *future* cost of service.'' Revised Income Tax Policy Statement

excess or deficient ADIT associated with post-December 31, 2017, asset dispositions and retirements should be treated differently for ratemaking purposes. For these assets, there are two associated balances: (1) The ADIT balance based on the 21 percent tax rate that will be owed to the IRS and (2) deficient ADIT or excess ADIT balances resulting from the reduced tax liability that will not be payable to the IRS upon the sale or retirement of the asset. While the ADIT balance that needs to be settled with the IRS would be extinguished following a sale, the deficient ADIT or excess ADIT balances is more reflective of a regulatory liability or asset, and no longer reflects deferred taxes that are still to be settled with the IRS and need not be extinguished.

41. Additionally, we note that the rationale for continuing to amortize deficient ADIT or excess ADIT balances in rates upon sales or retirements of assets is substantively similar to the rationale for amortizing excess ADIT in rates for assets that have not been sold or retired. The difference is that for a sale or retirement, ADIT based on a 21 percent tax rate will be settled with the IRS immediately, while for an asset that is not sold or retired, the ADIT will be settled with the IRS over the remaining life of the asset as it depreciates. In other words, the difference between the ADIT for assets that are sold or retired and ADIT for assets that are not sold or retired is the timing of when companies will settle the 21 percent of ADIT with the IRS. In both scenarios, there is excess ADIT based on the 14 percent previously collected from the customers that will no longer be payable to the IRS.

42. While some commenters suggest that continuing to amortize excess or deficient ADIT following a sale or retirement would constitute a normalization violation based on certain IRS private letter rulings, the Commission notes that the IRS established a rulemaking proceeding and reversed its positions made in the PLR referenced by the commenters.[78] Current IRS regulations speak specifically to the normalization requirements for sales and retirements as a result of the Tax Reform Act of 1986.[79] These regulations permit the amortization of protected excess and/or deficient ADIT even in the event that the underlying asset associated with the ADIT has been sold or retired.[80] That is, the selling jurisdictional entity can continue to amortize excess ADIT in rates after the sale without violating the IRS' normalization requirements. The only limitation imposed by the IRS is that the timing of the amortization must be similar to protected excess and/or deficient ADIT for which the underlying asset has not been sold or retired.[81]

43. Consistent with the above discussion, oil pipelines should continue maintaining excess and/or deficient ADIT within the appropriate ADIT accounts for ratemaking purposes. When jurisdictional assets are retired or sold the oil pipeline should continue to amortize any excess and/or deficient amounts associated with those assets as part of the process of determining an income tax allowance within the rate making process, or seek prior Commission approval to do otherwise.

C. Conclusion

44. We adopt the policies set forth herein regarding the treatment of ADIT for public utilities, natural gas pipelines and oil pipelines. Above, we state our policy regarding the treatment of ADIT for both accounting and ratemaking purposes as to Commission-jurisdictional public utilities, natural gas pipelines and oil pipelines, in light of the Tax Cuts and Jobs Act of 2017 and also address the accounting and ratemaking treatment of ADIT following the sale or retirement of an asset. We expect such regulated entities to follow these policies absent prior Commission approval to use a different treatment. We further note that if a regulated entity determines that its unique circumstances merit a different treatment of ADIT, such an entity is free to request such treatment at any time.

AGENCY: Under Secretary of Defense for Personnel and Readiness (USD(P&R)), DoD.

ACTION: Final rule.

SUMMARY: This rulemaking establishes implementation guidelines for DoD Self-Service (DS) Logon to provide a secure means of authentication to applications containing personally identifiable information (PII) and personal health information (PHI). This will allow beneficiaries and other individuals with a continuing affiliation with DoD to update pay or health-care information in a secure environment. This service can be accessed by active duty, National Guard and Reserve, and Commissioned Corps members of the uniformed services when separating from active duty or from the uniformed service.

DATES: This rule is effective on December 24, 2018.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Eves, Defense Human Resources Activity, 571–372–1956.

SUPPLEMENTARY INFORMATION:

Public Comments and Responses

On Thursday, November 3, 2016 (81 FR 76325–76330), the Department of Defense (DoD) published a proposed rule titled, ''DoD Identity Management'' for a 60-day public comment period. When the comment period ended on January 3, 2017, no comments were received.

Discussion of Changes Made Based on Internal Review

While in final internal review, it was discovered, based on existing DoD instructions, that only certain retired DoD civilians should be included among the populations eligible for the DS Logon credential as identified in DoD Instruction 1330.17, ''DoD Commissary Program,'' and DoD Instruction 1330.21, ''Armed Services Exchange Regulations.'' Only those retired DoD civilians who are eligible for DoD commissary and exchange benefits are eligible for the DS Logon credential. Compliance with existing DoD policy and current instructions required modification of § 221.6(b)(1)(ii) of the final rule, which was amended to read ''Eligible retired DoD civilian employees in accordance with DoD Instruction 1330.17, ''DoD Commissary Program'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/133017p.pdf*) and DoD Instruction 1330.21, ''Armed Services Exchange Regulations'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/133021p.pdf*).'' This amendment was made to reflect current Department policy and clarifies that only certain retired DoD civilians (not all retired DoD civlians) are eligible for access to these programs.

Background

This final rule establishes implementation guidelines for DS Logon and describes procedures for obtaining a DS Logon credential. All active duty, National Guard and Reserve, and Commissioned Corps members of the uniformed services must obtain a DS Logon credential when separating from active duty or from the uniformed service. The DS Logon credential is also available to all beneficiaries that are eligible for DoD-related benefits or entitlements to facilitate secure authentication to critical websites, to include members of the uniformed services, veterans with a continuing affiliation to the DoD, spouses, dependent children aged 18 and over, certain retired DoD civilians, surrogates and other eligible individuals. It discusses how credential holders may maintain and update their credentials and manage their personal settings. Finally, it discusses the permissions credential holders have to access their information, who has access to view and edit their information, and who is eligible to act on their behalf.

DoD collects and maintains information on Service members, beneficiaries, DoD employees, and other individuals affiliated with the DoD in order to issue DoD identification (ID) cards that facilitate access to DoD benefits, DoD installations, and DoD information systems. This action formally establishes DoD policy requirements for DS Logon credentials that are used to facilitate logical access to self-service websites. This regulatory action will update the CFR for DoD Manual (DoDM) 1341.02, Volume 1, ''DoD Identity Management: DoD Self-Service (DS) Logon Program and Credential.''

Authorities

The DoD Personal Identity Protection (PIP) Program uses emerging technologies to support the protection of individual identity and to assist with safeguarding DoD physical assets, networks, and systems from unauthorized access based on fraudulent or fraudulently obtained credentials. DEERS is the authoritative data source for identity and verification of affiliation with the DoD in accordance with the DoD PIP Program. Specific authorities are listed below.

- Title 10 U.S.C. 1044a. This section establishes the authority for a Judge Advocate, other members of the armed forces designated by law and regulations, or other eligible persons to have the powers to act as a notary. The persons identified in Title 10 U.S.C. 1044a subsection (b) have the general power of a notary and may notarize a completed and signed DD Form 3005, ''Application for Surrogate Association for DoD Self-Service (DS) Logon.''
- DoD Instruction 1000.25, ''DoD Personnel Identity Protection (PIP) Program'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/100025p.pdf*). This issuance establishes minimum acceptable criteria for the establishment and confirmation of personal identity and for the issuance of DoD personnel identity verification credentials.
- DoD Instruction 1341.2, ''Defense Enrollment Eligibility Reporting System (DEERS) Procedures'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/134102p.pdf*). This issuance establishes DEERS as the authoritative data source for identity and verification of affiliation

with the DoD, and benefit eligibility to include medical, dental, and pharmacy.

• Office of Management and Budget M–04–04, ''E-Authentication Guidance for Federal Agencies'' (available at *https://georgewbush-whitehouse.archives.gov/omb/memoranda/fy04/m04-04.pdf*). This memorandum requires agencies to review new and existing electronic transactions to ensure that authentication processes provide the appropriate level of assurance, establishing and describing four levels of identity assurance for electronic transactions requiring authentication.

• 32 CFR part 310. This CFR part established the DoD Privacy Program in accordance with the provisions of the Privacy Act of 1974, and prescribes uniform procedures for the implementation of and compliance with the DoD Privacy Program.

Expected Impact of the Final Rule

The annual operating costs for the DS Logon program are approximately $1,700,000.00. Based on 6.8 million active users, the cost to the Department per user is about $0.25. This rule is not anticipated to change the population of individuals able to receive a DS Logon account. As part of the proposed rule, DoD requested comments on a new information collection request for this program. No public comment was received. Additional information on the collection can be found in the Paperwork Reduction Act section of this rule.

Regulatory Procedures

Executive Order 12866, ''Regulatory Planning and Review'' and Executive Order 13563, ''Improving Regulation and Regulatory Review''

Executive Orders 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distribute impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. It has been determined that this rule is not a significant regulatory action. The rule does not: (1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy; a section of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency; (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in these Executive Orders.

Executive Order 13771, ''Reducing Regulation and Controlling Regulatory Costs''

This final rule is not an E.O. 13771 regulatory action because this rule is not significant under E.O. 12866.

Section 202, Public Law 104–4, ''Unfunded Mandates Reform Act''

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4) requires agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately $141 million. This final rule would not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Public Law 96–354, ''Regulatory Flexibility Act'' (5 U.S.C. 601)

The Department of Defense certifies that this final rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

Public Law 96–511, ''Paperwork Reduction Act'' (44 U.S.C. Chapter 35)

It has been certified that 32 CFR part 221 does impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995. These requirements have been approved by OMB and assigned OMB Control Number 0704–0559, Application for Surrogate Association for DoD Self-Service (DS) Logon.

Executive Order 13132, ''Federalism''

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct effects on the States, the relationship between the National Government and the states, or the distribution of power and responsibilities among the various levels of government. This final rule will not impose such substantial direct effects.

List of Subjects in 32 CFR Part 221

Identity management, Identification cards, Logon credentials.

■ Accordingly, 32 CFR part 221 is added to read as follows:

PART 221—DOD IDENTITY MANAGEMENT

Sec.

Authority: 10 U.S.C. 1044a.

§ 221.1 Purpose.

(a) The purpose of the overall part is to implement policy, assign responsibilities, and provide procedures for DoD personnel identification.

(b) This part establishes implementation guidelines for DoD Self-Service (DS) Logon Program.

§ 221.2 Applicability.

This part applies to:

(a) The Office of the Secretary of Defense, the Military Departments (including the Coast Guard at all times, including when it is a Service in the Department of Homeland Security, by agreement with that Department), the Office of the Chairman of the Joint Chiefs of Staff and the Joint Staff, the Combatant Commands, the Office of the Inspector General of the Department of Defense, the Defense Agencies, the DoD Field Activities, and all other organizational entities within the DoD (referred to collectively in this part as the ''DoD Components'').

(b) The Commissioned Corps of the U.S. Public Health Service (USPHS), under agreement with the Department of Health and Human Services, and the National Oceanic and Atmospheric Administration (NOAA), under agreement with the Department of Commerce.

§ 221.3 Definitions.

Unless otherwise noted, the following terms and their definitions are for the purposes of this part:

Beneficiary. Individuals affiliated with the DoD and any of the uniformed Services identified in § 221.2 Applicability, that may be eligible for benefits or entitlements.

Certified copy. A copy of a document that is certified as a true original and:

(1) Conveys the appropriate seal or markings of the issuer;

(2) Has a means to validate the authenticity of the document by a reference or source number;

(3) Is a notarized legal document or other document approved by a judge advocate, member of any of the armed forces, or other eligible person in accordance with 10 U.S.C. 1044a; or

(4) Has the appropriate certificate of authentication by a U.S. Consular Officer in the foreign country of issuance which attests to the authenticity of the signature and seal.

DoD beneficiary (DB). Beneficiaries who qualify for DoD benefits or entitlements who may be credentialed in accordance with National Institute of Science and Technology Special Publication 800–63–2, ''Electronic Authentication Guideline'' (available at *http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-63-2.pdf*). This population may include widows, widowers, and eligible former spouses.

Dependent. An individual whose relationship to the sponsor leads to entitlement to benefits and privileges.

DS Logon credential. A username and password to allow Service members, beneficiaries, and other individuals affiliated with the DoD secure access to self-service websites.

DS Logon credential holder. A Service member, beneficiary, and other individual affiliated with the DoD who has applied for and received a DS Logon credential.

Former member. An individual who is eligible for, or entitled to, retired pay for non-regular service in accordance with 31 U.S.C. chapter 1223, but who has been discharged from the Service and who maintains no military affiliation.

Former spouse. An individual who was married to a uniformed services member for at least 20 years, and the member had at least 20 years of service creditable toward retirement, and the marriage overlapped as follows:

(1) Twenty years marriage, 20 years creditable service for retirement, and 20 years overlap between the marriage and the service (referred to as 20/20/20). The benefits eligibility begins on the date of divorce;

(2) Twenty years marriage, 20 years creditable service for retirement, and 15 years overlap between the marriage and the service (referred to as 20/20/15). The benefits eligibility begins on the date of divorce; or

(3) A spouse whose marriage was terminated from a uniformed Service member who has their eligibility to receive retired pay terminated as a result of misconduct based on Service-documented abuse of the spouse and has 10 years of marriage, 20 years of creditable service for retirement, 10 years of overlap between the marriage and the service (referred to as 10/20/10). The benefits eligibility begins on the date of divorce.

Legal guardian (LG). The terms ''guardian'' and ''conservator'' are used synonymously. Some States may limit the authority of a guardian to specific types of health care decisions; a court may also impose limitations on the health care decisions.

Surrogate. A person who has been delegated authority, either by an eligible individual who is at least 18 years of age and mentally competent to consent or by a court of competent jurisdiction in the United States (or possession of the United States), to act on behalf of the eligible individual in a specific role.

Widow. The female spouse of a deceased member of the uniformed services.

Widower. The male spouse of a deceased member of the uniformed services.

§ 221.4 Policy.

In accordance with DoD Instruction 1000.25, ''DoD Personnel Identity Protection (PIP) Program'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/100025p.pdf*), DoD Instruction 1341.02, ''Defense Enrollment Eligibility Reporting System (DEERS) Procedures'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/134102p.pdf*), Office of Management and Budget M–04–04, ''E-Authentication Guidance for Federal Agencies'' (available at *www.whitehouse.gov/sites/default/files/omb/memoranda/fy04/m04-04.pdf*) and 32 CFR part 310, it is DoD policy that DoD will provide a secure means of authentication to PII and personal health information (PHI) for all beneficiaries and other individuals with a continuing affiliation with DoD.

§ 221.5 Responsibilities.

(a) The Under Secretary of Defense for Personnel and Readiness (USD(P&R)) oversees implementation of the procedures within this part.

(b) Under the authority, direction, and control of the USD(P&R), and in addition to the responsibilities in paragraph (c) of this section, the Director, DoDHRA, through the Director, DMDC:

(1) Approves the addition or elimination of population categories for DS Logon eligibility.

(2) Develops and fields the required Defense Enrollment Eligibility Reporting System (DEERS) and RAPIDS infrastructure and all elements of field support required to support the management of the DS Logon credential including, but not limited to, issuance, storage, maintenance, and customer service.

(3) Obtains and distributes DS Logon credentials, and provides a secure means for delivery.

(c) The DoD Component heads:

(1) Comply with this part and distribute this guidance to applicable stakeholders.

(2) Provide manpower for issuance of DS Logon credentials and instruction for use to all eligible individuals who are requesting a DS Logon credential in conjunction with the issuance of a DoD identification (ID) card or who are applying for a DS Logon credential as a surrogate, when responsible for a DoD ID card site(s).

(d) The Secretaries of the Military Departments, in addition to the responsibilities in paragraph (c) of this section, and the heads of the non-DoD uniformed services:

(1) Comply with this part and distribute this guidance to applicable stakeholders.

(2) Provide manpower for issuance of DS Logon credentials and instruction for use to all eligible individuals who are requesting a DS Logon credential in conjunction with the issuance of a DoD ID card or who are applying for a DS Logon credential as a surrogate.

(3) Ensure all Active Duty, National Guard and Reserve, and Commissioned Corps members of their uniformed services obtain a DS Logon credential when separating from active duty or from the uniformed service.

§ 221.6 Procedures.

(a) *General.* A DS Logon credential will be made available to all beneficiaries that are eligible for DoD-related benefits or entitlements to facilitate secure authentication to critical websites. This includes members of the uniformed services, veterans with a continuing affiliation to the DoD, spouses, dependent children aged 18 and over, and other eligible individuals identified in paragraph (b) of this section.

(b) *Overview.* Only one DS Logon credential may exist for an individual, regardless of the number of affiliations an individual may have to the DoD.

(1) *Eligibility.* Beneficiaries of DoD-related benefits or entitlements and other individuals with a continuing affiliation with the DoD may be eligible for a DS Logon credential. Eligible populations include:

(i) Veterans, including former members, retirees, Medal of Honor

recipients, disabled American veterans, and other veterans with a continuing affiliation to the DoD.

(ii) Eligible retired DoD civilian employees in accordance with DoD Instruction 1330.17, ''DoD Commissary Program'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/133017p.pdf*), and DoD Instruction 1330.21, ''Armed Services Exchange Regulations'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/133021p.pdf*).

(iii) Eligible dependents in accordance with Volume 2 of DoD Manual 1000.13, ''DoD Identification (ID) Cards: Benefits for Members of the Uniformed Services, Their Dependents, and Other Eligible Individuals'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/100013_vol2.pdf*), including spouses, dependent children aged 18 or older, and dependent parents.

(iv) DBs, including eligible widows, widowers, and former spouses, in accordance with Volume 2 of DoD Manual 1000.13.

(v) Surrogates, as described in paragraph (d) of this section.

(vi) Other populations as determined by the Director, DMDC.

(2) [Reserved].

(c) *Lifecycle*—(1) *Application.* Eligible individuals, as identified in paragraph (b)(1) of this section, may apply for a DS Logon credential:

(i) *Online.* Individuals with internet access may apply for a sponsor or dependent DS Logon by submitting a:

(A) *My Access Center website request.* This type of request supports the provisioning of a Basic DS Logon credential. The My Access Center website can be accessed at *https://myaccess.dmdc.osd.mil/*.

(B) *CAC request.* Individuals with a CAC, a computer with internet access and a CAC reader may apply for either a sponsor or a dependent DS Logon credential via the My Access Center website or any application that has implemented DS Logon.

(*1*) A sponsor DS Logon credential is provisioned immediately upon request. This type of request supports the provisioning of a Premium DS Logon credential.

(*2*) A request for a DS Logon credential on behalf of a dependent generates an activation letter with an activation code that is mailed to the sponsor at his or her home address in DEERS. Once complete, this type of request supports the provisioning of a Premium DS Logon credential.

(C) *Request using a Defense Finance and Accounting Services (DFAS) myPay account.* Eligible individuals may apply for a sponsor or dependent DS Logon credential using a DFAS myPay personal identification number via the My Access Center website. A request for a DS Logon credential generates an activation letter with an activation code that is mailed to the sponsor at his or her home address in DEERS. Once complete, this type of request supports the provisioning of a Premium DS Logon credential.

(ii) *Via remote proofing.* Eligible individuals with an existing DEERS record may apply for a sponsor or dependent DS Logon credential using remote proofing via the My Access Center website. Individuals requesting a DS Logon credential via remote proofing must correctly answer a number of system-generated questions. Once remote proofing is completed, a Premium DS Logon credential is provisioned immediately.

(iii) *Via in-person proofing.* Eligible individuals may apply for a sponsor or dependent DS Logon credential using in-person proofing. In-person proofing is performed at Department of Veterans Affairs regional offices where the DS access station application is implemented, and at DoD ID card sites when a DS Logon credential is requested either in conjunction with DoD ID card issuance or during initial enrollment of a surrogate. Once in-person proofing is completed, a Premium DS Logon credential is provisioned immediately. Individuals requesting a DS Logon credential via in-person proofing must present:

(A) *Identity documents.* DS Logon credential applicants must satisfy the identity verification criteria in paragraph 4a of Volume 1 of DoD Manual 1000.13, ''DoD Identification (ID) Cards: ID Card Life-Cycle'' (available at *http://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/100013_vol1.pdf*), by presenting two forms of government-issued ID, one of which must contain a photograph. The requirement for the primary ID to have a photo cannot be waived. Identity documents must be original or a certified copy. All documentation not in English must have a certified English translation.

(B) *Proof of address.* DS Logon credential applicants must present proof of address, if address on the presented ID is different than the address in DEERS.

(C) *DD Form 214, ''Certificate of Release or Discharge from Active Duty.''* DS Logon credential applicants must present a DD Form 214 if a veteran who was separated before 1982. If separated from the Reserve Component, a DS Logon credential applicant may present a Reserve Component separation document in lieu of a DD Form 214.

(2) *Use.* DS Logon credential holders may use their DS Logon credential at the My Access Center website and any other DoD self-service website that accepts DS Logon.

(3) *Maintenance.* DS Logon credential holders may use the My Access Center website to maintain and update their DS Logon credential and manage their personal settings. The DS Logon credential holder may:

(i) Activate or deactivate an account.

(ii) Reset password.

(iii) Update challenge questions and answers.

(iv) Upgrade from a Basic DS Logon to a Premium DS Logon credential.

(v) Select or update preferred sponsor, if a dependent of two sponsors.

(vi) Manage personal and advanced security settings.

(vii) Manage contact information.

(viii) Manage relationships and access granting.

(ix) Manage the DS Logon credential using additional capabilities as implemented by the Director, DMDC.

(4) *Decommissioning.* DS Logon credentials may be decommissioned by the DS Logon credential holder, via self-service; by an operator, at the request of the DS Logon credential holder; or by the system, when the credential holder no longer has an affiliation to the DoD or is identified as deceased in DEERS.

(5) *Reactivation.* DS Logon credentials may be reactivated if the person is living and still eligible for the credential.

(d) *Associations.* DS Logon supports several types of associations, including DEERS-identified family relationships and operator-initiated and -approved surrogates.

(1) *Family.* Individuals are connected to one another based on their family relationship information in DEERS. A family relationship must exist in DEERS before the relationship can exist in DS Logon.

(i) *Multiple sponsors.* An individual has only one DS Logon credential, regardless of the number of sponsors the individual has (*e.g.,* a dependent child whose parents are both Service members).

(ii) *Transferring families.* If an individual has a second family in DEERS, the individual can move their DS Logon credential to the second family. This changes the assignment of the DS Logon credential from the first family to the second family and removes any granted permissions from the first family.

(2) *Surrogacy.* Surrogacy is a feature that allows an individual who may not be affiliated with the DoD and who may not be related to the DS Logon credential holder or eligible individual by a DoD-recognized family relationship to be granted access to a DS Logon credential holder's or an eligible individual's information. A surrogate may be established as the custodian of a deceased Service member's unmarried minor child(ren) who is under 18, who is at least 18 but under 23 and attending school full-time, or who is incapacitated. A surrogate may also be established as the agent of an incapacitated dependent (*e.g.,* spouse, parent) or of a wounded, ill, or incapacitated Service member.

(i) *Eligibility.* An operator must first establish an identity in DEERS before establishing the surrogacy association in DS Logon. To establish a surrogate association, the surrogate must present to an operator for approval:

(A) A completed and signed DD Form 3005, ''Application for Surrogate Association for DoD Self-Service (DS) Logon.''

(B) Any additional eligibility documents required by the DD Form 3005 which describe the scope of the surrogate's authority.

(C) Proof of identity, in accordance with the requirements for in-person proofing in paragraph (c)(1)(iii) of this section.

(ii) *Types of surrogates*—(A) *Financial agent (FA).* An eligible individual names an FA to assist with specific financial matters.

(B) *Legal agent (LA).* An eligible individual names an LA to assist with legal matters.

(C) *Caregiver (CG).* An eligible individual names a CG to assist with general health care requirements (example, viewing general health-care related information, scheduling appointments, refilling prescriptions, and tracking medical expenses), but does not make health care decisions.

(D) *Health care agent (HA).* An eligible individual (the patient) names an HA in a durable power of attorney for health care documents to make health care decisions.

(E) *Legal guardian (LG).* An LG is appointed by a court of competent jurisdiction in the United States (or jurisdiction of the United States) to make legal decisions for an eligible individual.

(F) *Special guardian (SG).* An SG is appointed by a court of competent jurisdiction in the United States (or jurisdiction of the United States) for the specific purpose of making health care-related decisions for an eligible individual.

(e) *Permissions.* A sponsor, a sponsor's spouse, and a sponsor's dependent over the age of 18 can manage who has access to their information (*i.e.,* who has access to view and edit their information and who is eligible to act on their behalf). The provisions of this section may be superseded by order of a court of competent jurisdiction.

(1) *Sponsor access.* Sponsors will automatically have access to the information of all dependents under the age of 18.

(2) *Spousal access*—(i) *Automatic.* A sponsor's spouse will automatically have access to the information of all dependent children under the age of 18 whose relationship to the sponsor began on or after the date of marriage of the sponsor and sponsor's spouse.

(ii) *Sponsor-granted.* The sponsor may grant the sponsor's spouse access to the information of dependent children under the age of 18 whose relationship to the sponsor began before the date of marriage of the sponsor and the sponsor's spouse.

(3) *Granted access.* A sponsor, a sponsor's spouse, and a sponsor's dependent over the age of 18 may grant access to their information via the My Access Center website in accordance with paragraph (c)(3) of this section. Surrogate access to the information of a sponsor, a sponsor's spouse, and a sponsor's dependent (regardless of age) must be granted via in-person proofing, including the submission of eligibility documents to an operator for approval in accordance with paragraph (d)(2) of this section.

(i) *Access granting by a sponsor.* Sponsors may grant their spouse access to the sponsor's information and the information of any sponsor's dependents under the age of 18. Access to the sponsor's information and the information of any sponsor's dependents under the age of 18 may not be granted to any other sponsor's dependent, unless that dependent has been identified as a surrogate.

(ii) *Access granting by a spouse.* Spouses may grant the sponsor access to the spouse's information. Access to the spouse's information may not be granted to any other sponsor's dependent, unless that sponsor's dependent has been identified as a surrogate.

(iii) *Access granting by a dependent over 18.* A sponsor's dependent over the age of 18 may grant the sponsor and the sponsor's spouse access to the dependent's information. Access to the information of a sponsor's dependent over the age of 18 may not be granted to any other sponsor's dependent, unless that sponsor's dependent has been identified as a surrogate.

Dated: November 19, 2018.

Coast Guard

33 CFR Part 117

[Docket No. USCG–2016–0257]

RIN 1625–AA09

Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is modifying the operating regulation that governs the DELAIR Memorial Railroad Bridge across the Delaware River, mile 104.6, at Pennsauken Township, NJ. This modified regulation will allow the bridge to be remotely operated from the Conrail South Jersey dispatch center in Mount Laurel, NJ, instead of being operated by an on-site bridge tender. This regulation will not change the operating schedule of the bridge.

DATES: This rule is effective December 24, 2018.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov*. Type USCG–2016–0257 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rulemaking.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Mr. Hal R. Pitts, Fifth Coast Guard District (dpb); telephone (757) 398–6222, email *Hal.R.Pitts@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
OMB Office of Management and Budget
NPRM Notice of Proposed Rulemaking (Advance, Supplemental)
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On April 12, 2017, we published a document in the **Federal Register** entitled, ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' announcing a temporary deviation from the regulations, with request for comments (see 82 FR 17562). This temporary deviation commenced at 8 a.m. on April 24, 2017, and concluded at 7:59 a.m. on October 21, 2017. The comment period closed on August 17, 2017. The purpose of the deviation was to test the newly installed remote operation system of the DELAIR Memorial Railroad Bridge across the Delaware River, mile 104.6, at Pennsauken Township, NJ, owned and operated by Conrail Shared Assets. The installation of the remote operation system did not change the operational schedule of the bridge.

On June 30, 2017, we published a notice of proposed rulemaking (NPRM) entitled, ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' (see 82 FR 29800). This proposed regulation would allow the bridge to be remotely operated from the Conrail South Jersey dispatch center in Mount Laurel, NJ, instead of being operated by an on-site bridge tender. This proposed regulation would not change the operating schedule of the bridge. The original comment period closed on August 18, 2017.

During the initial temporary deviation performed from 8 a.m. on April 24, 2017, through 7:59 a.m. on October 21, 2017, the bridge owner identified deficiencies in the remote operation center procedures, bridge to vessel communications, and equipment redundancy. Comments concerning these deficiencies were submitted to the docket and provided to the Coast Guard and bridge owner by representatives from the Mariners' Advisory Committee for the Bay and River Delaware.

On October 18, 2017, we published a document in the **Federal Register** entitled, ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' announcing a second temporary deviation from the regulations, with request for comments (see 82 FR 48419). This temporary deviation commenced at 8 a.m. on October 21, 2017, and concluded at 7:59 a.m. on April 19, 2018. This document included a request for comments and related material to reach the Coast Guard on or before January 15, 2018.

On December 6, 2017, we published a notice of proposed rulemaking; reopening of comment period; entitled ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' in the **Federal Register** (see 82 FR 57561). This document included a request for comments and related material to reach the Coast Guard on or before January 15, 2018.

On January 22, 2018, we published a notice of temporary deviation from regulations; reopening comment period; entitled ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' in the **Federal Register** (see 83 FR 2909). This document included a request for comments and related material to reach the Coast Guard on or before March 2, 2018.

On February 15, 2018, we published a notice of proposed rulemaking; reopening comment period; entitled ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' in the **Federal Register** (see 83 FR 6821). This document included a request for comments and related material to reach the Coast Guard on or before March 2, 2018.

The Coast Guard reviewed 26 comments posted to the docket and six reports with supporting documentation submitted by the bridge owner during the initial and second temporary deviation periods concerning the remote operation system of the DELAIR Memorial Railroad Bridge. Through this review, the Coast Guard found that further testing and evaluation of the remote operation system of the bridge was necessary before making a decision on the proposed regulation.

On April 26, 2018, we published a document in the **Federal Register** entitled, ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' announcing a third temporary deviation from the regulations, with request for comments (see 83 FR 18226). This temporary deviation commenced at 8 a.m. on April 19, 2018, and concluded at 7:59 a.m. on October 16, 2018. This document included a request for comments and related material to reach the Coast Guard on or before August 17, 2018.

On May 4, 2018, we published a notice of proposed rulemaking; reopening comment period; entitled ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' in the **Federal Register** (see 83 FR 19659). This document included a request for comments and related material to reach the Coast Guard on or before August 17, 2018.

On October 17, 2018, we published a document in the **Federal Register** entitled, ''Drawbridge Operation Regulation; Delaware River, Pennsauken Township, NJ'' announcing a temporary deviation from the regulations (see 83 FR 52319). This document was published to allow the DELAIR Memorial Railroad Bridge across the Delaware River, mile 104.6, at Pennsauken Township, NJ, to continue to be remotely operated from the Conrail South Jersey dispatch center in Mount Laurel, NJ, instead of being operated by an on-site bridge tender, to allow sufficient time for the Coast Guard to conduct an evaluation of the proposed rulemaking. This temporary deviation commenced at 8 a.m. on October 16, 2018, and is scheduled to conclude at 7:59 a.m. on December 15, 2018.

In total the Coast Guard received 26 comments posted to the docket and eight reports with supporting documentation submitted by the bridge owner on this rule. No comments were received during the third temporary deviation between April 19, 2018, and October 16, 2018.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority 33 U.S.C. 499.

The DELAIR Memorial Railroad Bridge across the Delaware River, mile 104.6, at Pennsauken Township, NJ, owned and operated by Conrail Shared Assets, has a vertical clearance of 49 feet above mean high water in the closed-to-navigation position. There is a daily average of 28 New Jersey Transit trains and eight Conrail freight trains that cross the bridge and a daily average of three bridge openings that allow one or more vessels to transit through the bridge during each opening. The bridge is normally maintained in the closed position due to the average daily number of trains crossing the bridge. The operating schedule is published in 33 CFR 117.716. This current operating schedule has been in effect since 1984 and will not change with the implementation of remote operation of the bridge. However, within this modified operating regulation, section 117.716 has been restructured to clearly distinguish the remote operation of the DELAIR Memorial Railroad Bridge. This modified operating regulation allows the bridge to be operated remotely from the bridge owner's South Jersey dispatch center in Mount Laurel, NJ.

The Delaware River is used by a variety of vessels, including deep draft commercial vessels, tug and barge traffic, recreational vessels, and public vessels, including military vessels of various sizes. The three-year average number of bridge openings and maximum number of bridge openings by month and overall for 2013 through 2015, as drawn from the data contained in the bridge tender logs, is presented below.

Month	Average openings	Maximum openings
January	73	88
February	54	56
March	80	94
April	55	68
May	60	67
June	60	71
July	122	162
August	112	138
September	143	201
October	109	117
November	100	116
December	100	122
Monthly	89	201
Daily	3	7

The bridge owner and the maritime community have been working together since 2013 in an effort to incorporate sensors and other technologies into the bridge and the Conrail South Jersey dispatch center to allow for the safe and effective remote operation of the bridge.

IV. Discussion of Comments and Changes to the Final Rule

During the initial and second temporary deviation periods between April 24, 2017, and April 19, 2018, 26 comments were received, including three duplicate comments, one process comment, and two comments not related to this rule. No comments were received during the third temporary deviation period between April 19, 2018, and October 16, 2018.

Comments were received from six professional mariners between December 7, 2017, and January 11, 2018, during the second temporary deviation period. These comments expressed concerns associated with the remote operation center's (1) failure to provide timely replies to mariner's requests for a bridge opening, (2) failure to follow established communications protocols, (3) unprofessional responses to mariner's requests and a perception of ineffectual management and a cultural bias against the needs of maritime transportation. These comments were in response to the deficiencies observed during the second temporary deviation period and were observed and reported during the first temporary deviation period, along with corrective actions taken by the bridge owner. Following a review of these comments, the bridge owner acknowledged the recurring deficiencies in the remote operation of the bridge related to human performance factors and management, and reported that additional corrective actions were taken. The Coast Guard found that the bridge owner's actions taken to address the comments received from professional mariners have been satisfactory, given the bridge was operated safely and effectively during the third temporary deviation, which included 681 bridge openings, without further comment from any mariners.

During the first temporary deviation period, comments were received from the Brotherhood of Maintenance of Way Employees Division of the International Brotherhood of Teamsters that: (1) Questioned the remote operation center's capability to safely and effectively operate the bridge, (2) indicated that bridge tenders were currently performing on-site bridge maintenance, inspection and repair functions that would no longer be performed at the required frequencies, and (3) reported multiple remote operation system failure conditions as defined in the notice of proposed rulemaking. The bridge owner advised the Coast Guard that on-site bridge tenders were not responsible for performing on-site bridge maintenance, inspection or repairs functions and that those functions would continue to be performed by qualified personnel. In reviewing the other two comments above in conjunction with the details concerning the remote operation of the bridge during the second and third temporary deviation periods, the Coast Guard has found that the remote operation center is capable of safely and effectively controlling the bridge and early remote operation system failures have been overcome by the bridge owner's corrective actions.

The Delaware Riverkeeper Network submitted comments during the first temporary deviation period indicating that: (1) They were opposed to the regulation based on increased potential for negative environmental impacts to local and regional communities, (2) human oversight via an on-site bridge tender should not be replaced by a remote device, (3) the provision for qualified personnel to return and operate the bridge within 60 minutes was not considered an adequate response time, and (4) they believed that the proposed rule was a significant regulatory action based on increased potential for negative environmental impacts. The Coast Guard reviewed these comments and found that there is no evidence to support that remote operation of the bridge increases the potential for negative environmental impacts and is not likely to have an adverse effect to the environment in a material way, therefore the proposed rule is not a significant regulatory action. The Coast Guard also found that the remote operation system does not replace human oversight, and the 60-minute response time was tested throughout the three temporary deviation periods resulting in effective restoration of the remote operation system of the bridge and no adverse impact on navigation.

12 comments expressed concerns associated with general safety and security of the bridge and the potential inability of remote operation center operators to safely operate the bridge. The Coast Guard found that: (1) Although the on-site bridge tender's duties only include operation of the bridge, the bridge owner's implementation of additional safety and security technologies, in conjunction with the remote operation center's capabilities in providing visibility of the bridge and waterway to the remote operation center operator, adequately addressed the general safety and security related comments. Additionally, the bridge operated safely and effectively during the three temporary deviation periods, which included 2,597 bridge openings.

The Coast Guard finds that the comments received do not require any changes in the regulatory text as presented in the NPRM.

V. Discussion of Final Rule

This operating regulation allows the bridge to be operated remotely from the bridge owner's South Jersey dispatch center in Mount Laurel, NJ. The remote operation system includes eight camera views (four marine and four rail), two forward-looking infrared equipped camera views (marine), marine radar, a dedicated telephone line for bridge operations, radio telephone on VHF–FM channels 13 and 16, and an automated identification system (AIS) transmitter to provide bridge status. The AIS transmitter is installed on the New Jersey side of the bridge at the bridge and land intersection in approximate position 39°58′50.52″ N (39.9807), 75°03′58.75″ W (−75.06632). The AIS transmitter is assigned maritime mobile service identity (MMSI) number 993663001 and provides the status of the bridge (open/closed/inoperative) via the name transmitted by the private aids to navigation as DELAIR BRG–OPEN (fully open and locked position, channel light green), DELAIR BRG–CLOSED (other than fully open, not inoperative), or DELAIR BRG–INOP (other than fully open, inoperative). The AIS transmitter transmits the bridge status every two minutes and upon a change in bridge status.

The remote operation system is designed to provide greater or equal visibility of the waterway and bridge and in signals (communications) via sound and visual signals and radio telephone (voice) via VHF–FM channels 13 and 16 compared to the on-site bridge tender. The remote operation system also incorporates real-time bridge status via AIS signal to aid mariners in voyage planning and navigational decision-making, a dedicated telephone line (856) 231–2301 for bridge operations, and push-to-talk (PTT) capability on VHF–FM channel 13.

The signals for the remote operation center or on-site bridge tender to respond to a sound signal for a bridge opening include: (1) When the draw can be opened immediately—a sound signal of one prolonged blast followed by one short blast and illumination of a fixed white light not more than 30 seconds after the requesting signal, and (2) when the draw cannot be opened immediately—five short blasts sounded in rapid succession and illumination of a fixed red light not more 30 seconds after the vessel's opening signal. The signals for the remote operation center or on-site bridge tender to respond to a visual signal for a bridge opening include: (1) When the draw can be opened immediately—illumination of a fixed white light not more than 30 seconds after the requesting signal, and (2) when the draw cannot be opened immediately—illumination of a fixed red light not more 30 seconds after the vessel's opening signal. The fixed white light will remain illuminated until the bridge reaches the fully open position. The fixed white and red lights will be positioned on the east (New Jersey) bridge abutment adjacent to the navigation span.

Vessels that require an opening shall continue to request an opening via the methods defined in 33 CFR 117.15(b) through (d) (sound or visual signals or radio telephone (VHF–FM) voice communications), via telephone at (856) 231–2301, or via push-to-talk (PTT) on VHF–FM channel 13. Vessels may push the PTT button five times while on VHF–FM channel 13 to request an opening.

The remote operation system will be considered in a failed condition and qualified personnel will return and operate the bridge within 60 minutes if any of the following conditions are found: (1) The remote operation system becomes incapable of safely and effectively operating the bridge from the remote operation center, (2) visibility of the waterway or bridge is degraded to less than equal that of an on-site bridge tender (all eight camera views are required), (3) signals (communications) via sound or visual signals or radio telephone (voice) via VHF–FM channels 13 or 16 become inoperative, or (4) AIS becomes inoperative.

VI. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive Orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive Orders, and we discuss First Amendment rights of protesters.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, it has not been reviewed by the Office of Management and Budget (OMB) and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the fact that the operating schedule published in 33 CFR 117.716 will not change with the remote operation of the bridge and the remote operation of the bridge is not likely to have an adverse effect to the environment.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received zero comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the bridge may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule calls for no new collection of information under the Paperwork

Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Government

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble. The Coast Guard received zero comments concerning the above Act.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guides the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have made a determination that this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule simply promulgates the operating regulations or procedures for drawbridges. This action is categorically excluded from further review, under figure 2–1, paragraph (32)(e), of the Instruction.

A Record of Environmental Consideration and a Memorandum for the Record are not required for this rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 117

Bridges.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 117 as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

■ 1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 33 CFR 1.05–1; Department of Homeland Security Delegation No. 0170.1.

■ 2. Revise § 117.716 to read as follows:

§ 117.716 Delaware River.

(a) The following apply to all drawbridges across the Delaware River:

(1) The draws of railroad bridges need not be opened when there is a train in the bridge block approaching the bridge with the intention of crossing or within five minutes of the known time of the passage of a scheduled passenger train.

(2) The opening of a bridge may not be delayed more than five minutes for a highway bridge or 10 minutes for a railroad bridge after the signal to open is given.

(3) The owners of drawbridges shall provide and keep in good legible condition two board gages painted white with black figures not less than six inches high to indicate the vertical clearance under the closed draw at all stages of the tide. The gages shall be so placed on the bridge that they are plainly visible to operators of vessels approaching the bridge either up or downstream.

(b) The draw of the Conrail Memorial Railroad Bridge, mile 104.6, at Pennsauken Township, NJ shall be operated as follows:

(1) The bridge will be remotely operated from the Conrail South Jersey dispatch center in Mount Laurel, NJ, unless the remote operation system is in a failed condition.

(2) An AIS transmitter has been installed on the New Jersey side of the bridge at the bridge and land intersection in approximate position 39°58′50.52″ N (39.9807), 75°03′58.75″ (−75.06632). The AIS transmitter is assigned maritime mobile service identity (MMSI) number 993663001. The status of the bridge (open/closed/inoperative) will be provided via the name transmitted by the AIS private aids to navigation as DELAIR BRG–OPEN (fully open and locked position, channel light green), DELAIR BRG–CLOSED (other than fully open, not inoperative), or DELAIR BRG–INOP (other than fully open, inoperative). The AIS transmitter will transmit the bridge status every two minutes and upon a change in the bridge status.

(3) The remote operation system will be considered in a failed condition and qualified personnel will return and operate the bridge within 60 minutes if any of the following conditions are found:

(i) The remote operation system becomes incapable of safely and effectively operating the bridge from the remote operation center; or

(ii) Visibility of the waterway or bridge is degraded to less than equal that of an on-site bridge tender; or

(iii) Signals (communications) via sound or visual signals or radio telephone (voice) via VHF–FM channels 13 or 16 become inoperative; or

(iv) AIS becomes inoperative.

(4) Vessels that require an opening shall continue to request an opening via the methods defined in § 117.15(b) through (d) (sound or visual signals or radio telephone (VHF–FM) voice communications), via telephone at (856) 231–2301, or via push-to-talk (PTT) on VHF–FM channel 13. Vessels may push the PTT button five times while on VHF–FM channel 13 to request an opening.

(5) The signals for the remote operation center or on-site bridge tender to respond to a sound signal for a bridge opening include:

(i) When the draw can be opened immediately—a sound signal of one prolonged blast followed by one short blast and illumination of a fixed white light not more than 30 seconds after the requesting signal; or

(ii) When the draw cannot be opened immediately—five short blasts sounded in rapid succession and illumination of a fixed red light not more 30 seconds after the vessel's opening signal.

(6) The signals for the remote operation center or on-site bridge tender to respond to a visual signal for a bridge opening include:

(i) When the draw can be opened immediately—illumination of a fixed white light not more than 30 seconds after the requesting signal; or

(ii) When the draw cannot be opened immediately—illumination of a fixed red light not more 30 seconds after the vessel's opening signal.

(7) The fixed white light will remain illuminated until the bridge reaches the fully open position. The fixed white and red lights will be positioned on the east (New Jersey) bridge abutment adjacent to the navigation span.

Dated: November 14, 2018.

G.G. Stump,

Captain, U.S. Coast Guard, Acting Commander, Fifth Coast Guard District.

[FR Doc. 2018–25544 Filed 11–21–18; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2018–1010]

Drawbridge Operation Regulation; Three Mile Slough, Rio Vista, CA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the California Route 160 Drawbridge across Three Mile Slough, mile 0.1, near Rio Vista, CA. The deviation is necessary to conduct preventative maintenance. This deviation allows the bridge to remain in the closed-to-navigation position.

DATES: This deviation is effective from 7 a.m. on November 26, 2018, through 4 p.m. on November 27, 2018.

ADDRESSES: The docket for this deviation, USCG–2018–1010, is available at *http://www.regulations.gov*. Type the docket number in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Carl T. Hausner, Chief, Bridge Section, Eleventh Coast Guard District; telephone 510–437–3516, email *Carl.T.Hausner@uscg.mil*.

SUPPLEMENTARY INFORMATION: The California Department of Transportation has requested a temporary change to the operation of the California Route 160 Drawbridge over Three Mile Slough, mile 0.1, near Rio Vista, CA The drawbridge navigation span provides a vertical clearance of 12 feet above Mean High Water in the closed-to-navigation position. The draw opens on signal as required by 33 CFR 117.5. Navigation on the waterway is commercial and recreational.

The drawspan will be secured in the closed-to-navigation position from 7 a.m. on November 26, 2018, through 4 p.m. on November 27, 2018, to allow the bridge owner to perform necessary preventative maintenance and non-destructive testing on the bridge's lift span gear box. This temporary deviation has been coordinated with the waterway users. No objections to the proposed temporary deviation were raised.

Vessels able to pass through the bridge in the closed position may do so at anytime. The bridge will not be able to open for emergencies. The Sacramento River and San Joaquin River can be used as alternate routes for vessels unable to pass through the bridge in the closed position. The Coast Guard will also inform the users of the waterway through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessel operators can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: November 15, 2018.

Carl T. Hausner,

District Bridge Chief, Eleventh Coast Guard District.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2018–1030]

RIN 1625–AA00

Safety Zones; Pipeline Construction, Tennessee River Miles 465 to 466, Chattanooga, TN

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for all navigable waters of the Tennessee River from mile marker (MM) 465 to MM 466. This safety zone is necessary to protect persons, property, and the marine environment from potential hazards associated with the construction of an underground pipeline. Entry of vessels or persons into this zone is prohibited unless authorized by the Captain of the Port Sector Ohio Valley or a designated representative.

DATES: This rule is effective without actual notice from November 23, 2018 through 7:30 p.m. on January 25, 2019. For the purposes of enforcement, actual notice will be used from November 19, 2018, through November 23, 2018.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* type USCG–2018–1030 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Nicholas Jones, Marine Safety Detachment Nashville, U.S. Coast Guard; telephone 615–736–5421, email *MSDNashville@uscg.mil*.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Ohio Valley
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(3)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. We must establish this safety zone by November 19, 2018, and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule. On November 1, 2018, Reynolds Construction, LLC notified Marine Safety Detachment Nashville that their underwater pipeline construction operations at mile marker 465.2 of the Tennessee River would be ready to commence on November 19,

2018. Reynolds Construction estimates that the work will take 10 weeks, excluding November 22–25, December 8–9, December 22–25, and December 29–January 1.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making it effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be contrary to the public interest because immediate action is needed to respond to potential safety hazards associated with the underwater pipeline construction.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The Captain of the Port Sector Ohio Valley (COTP) has determined that potential hazards associated with the underwater blasting and pipeline construction will be a safety concern for anyone on a one-mile stretch of the Tennessee River. This rule is necessary to protect persons, vessels, and the marine environment during the construction operations.

IV. Discussion of the Rule

This rule establishes a temporary safety zone from mile marker (MM) 465 to MM 466 on the Tennessee River in Chattanooga, TN from 6:30 a.m. on November 19, 2018, through 7:30 p.m. on January 25, 2019. The safety zone will be enforced from 6:30 a.m. through 7:30 p.m. each day, excluding November 22–25, December 8–9, December 22–25, and December 29–January 1. A safety vessel will coordinate all vessel traffic during the enforcement periods. The COTP may terminate enforcement of this rule if the work is finished earlier. The duration of the safety zone is intended to protect persons, vessels, and the marine environment during the construction operations.

No vessel or person is permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of Sector Ohio Valley, U.S. Coast Guard. They may be contacted on VHF Channel 13 or 16, or at 1–800–253–7465. All persons and vessels permitted to enter this safety zone must transit at their slowest safe speed and comply with all directions issued by the COTP or the designated representative. The COTP or a designated representative will inform the public of the enforcement times and dates for this safety zone through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs), as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, it has not been reviewed by the Office of Management and Budget, and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. This safety zone prohibits transit on a one-mile stretch of the Tennessee River for about 13 hours, on workdays only, during a ten-week period. The rule also allows vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the temporary safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In

particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule prohibits transit on a one-mile stretch of the Tennessee River for about 13 hours on workdays only during a ten-week period. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 01. A Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the U.S. Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.2.

■ 2. Add § 165.35T08–1030 to read as follows:

§ 165.35T08–1030 Safety Zone; Pipeline Construction, Tennessee River, Miles 465 to 466, Chattanooga, TN.

(a) *Location.* The following area is a safety zone: All navigable waters of the Tennessee River from mile marker (MM) 465.0 to MM 466.0, Chattanooga, TN.

(b) *Effective period.* This section is effective without actual notice from November 23, 2018 through 7:30 p.m. on January 25, 2019. For the purposes of enforcement, actual notice will be used from November 19, 2018 through November 23, 2018.

(c) *Enforcement periods.* This section will be enforced each day during the effective period from 6:30 a.m. through 7:30 p.m., excluding November 22–25, December 8–9, December 22–25, and December 29–January 1. The Captain of the Port Sector Ohio Valley (COTP) may terminate enforcement of this section if the work is finished earlier.

(d) *Regulations.* (1) In accordance with the general regulations in § 165.23 of this part, entry into this area is prohibited unless authorized by the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of Sector Ohio Valley, U.S. Coast Guard.

(2) Persons or vessels requiring entry into or passage through the area must request permission from the COTP or a designated representative. U.S. Coast Guard Sector Ohio Valley may be contacted on VHF Channel 13 or 16, or at 1–800–253–7465.

(3) A designated safety vessel will coordinate all vessel traffic during the enforcement of this safety zone. All persons and vessels permitted to enter this safety zone must transit at their slowest safe speed and comply with all directions issued by the COTP or the designated representative.

(e) *Information broadcasts.* The COTP or a designated representative will inform the public of the enforcement times and dates for this safety zone through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs), as appropriate.

Dated: November 19, 2018.

M.B. Zamperini,

Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

[FR Doc. 2018–25536 Filed 11–21–18; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG- 2018–1022]

Safety Zone; Lower Mississippi River, Mile Markers 94 to 95 Above Head of Passes, New Orleans, LA

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a safety zone for a fireworks display located between mile marker (MM) 94 and (MM) 95, above Head of Passes. This action is needed to provide for the safety of life on navigable waterways during this event.

DATES: The regulations in 33 CFR 165.845 will be enforced from 8:15 p.m. through 9:15 p.m. on December 29, 2018.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email Lieutenant Commander Benjamin Morgan, Sector New Orleans, U.S. Coast Guard; telephone 504–365–2281, email *Benjamin.P.Morgan@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zone located in 33 CFR 165.845 for the fireworks display from 8:15 p.m. through 9:15 p.m. on December 29, 2018. This action is being taken to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Eighth Coast Guard District, § 165.845, specifies the location of the regulated area between mile markers 94 and 95 above Head of Passes on the Lower Mississippi River. If you are the operator of a vessel in the regulated area you must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notice of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the local notice to mariners and marine information broadcasts.

Dated: November 16, 2018.

K.M. Luttrell,

Captain, U.S. Coast Guard, Captain of the Port Sector New Orleans.

[FR Doc. 2018–25434 Filed 11–21–18; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R08–OAR–2016–0585; FRL–9986–14–Region 8]

Approval and Promulgation of Air Quality Implementation Plans; State of Utah; Logan Nonattainment Area Fine Particulate Matter State Implementation Plan for Attainment of 2006 24-Hour Fine Particulate Matter National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing approval of the emissions inventory, modeled attainment demonstration, determination for Major Stationary Source Reasonably Available Control Technology (RACT), determination for On-Road Mobile Sources Reasonably Available Control Measures (RACM), determination for Cache County Inspection and Maintenance (I/M) Program as additional reasonable measures, determination for Off-Road Mobile Sources RACM, and the 2015 Motor Vehicle Emission Budgets (MVEB) portions of the attainment plan submitted by Utah on December 16, 2014, to address Clean Air Act (CAA or the Act) requirements for the 2006 24-hour fine particulate matter ($PM_{2.5}$) national ambient air quality standards (NAAQS) in the Logan, Utah (UT)—Idaho (ID) Moderate $PM_{2.5}$ nonattainment area. These actions are being taken under section 110 of the CAA.

DATES: This final rule is effective on December 24, 2018.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R08–OAR–2016–0585. All documents in the docket are listed on the *http://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *http://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Crystal Ostigaard, Air Program, U.S. EPA, Region 8, Mailcode 8P–AR, 1595 Wynkoop Street, Denver, Colorado 80202–1129, (303) 312–6602, *ostigaard.crystal@epa.gov*.

SUPPLEMENTARY INFORMATION: Throughout this document ''we,'' means the EPA.

I. Background

On October 17, 2006 (71 FR 61144), the Environmental Protection Agency (EPA) revised the level of the 24-hour fine particulate matter ($PM_{2.5}$) National Ambient Air Quality Standard (NAAQS), lowering the primary and secondary standards from the 1997 standard of 65 micrograms per cubic meter ($\mu g/m^3$) to 35 $\mu g/m^3$. On November 13, 2009 (74 FR 58688), the EPA designated three nonattainment areas in Utah for the 24-hour $PM_{2.5}$ NAAQS of 35 $\mu g/m^3$. These are the Salt Lake City, Utah (UT); Provo, UT; and Logan, UT-Idaho (ID) nonattainment areas. The State of Utah submitted the Logan, UT-ID Moderate $PM_{2.5}$ state implementation plan (SIP) on December 16, 2014, to address the requirements under part D of title I of the Clean Air Act (CAA) for the Logan UT-ID $PM_{2.5}$ nonattainment area.

On December 4, 2017 (82 FR 57183), the EPA proposed to approve portions of the December 16, 2014 Logan, UT-ID Moderate $PM_{2.5}$ SIP submittal. Specifically, we proposed to approve:

- The 2010 base year and 2015 projection year emissions inventories;
- The modeled attainment demonstration;
- The RACM/RACT and additional reasonable measure determinations for on-road mobile, including the Cache County I/M Program, off-road mobile, and major stationary sources; and
- The direct $PM_{2.5}$, nitrogen oxides (NO_X) and volatile organic compound (VOC) MVEBs for 2015 and the MVEB trading mechanism.

Our proposal provides details on the EPA's evaluation of these portions of the State's submittal.

II. Response to Comments

The EPA received seven public comments on the proposed action. After reviewing the comments received, the EPA has determined that the comments, with the exception of a portion of one comment, fall outside the scope of our proposed action or fail to identify any material issue necessitating a response.

A portion of one comment (EPA–R08–OAR–2016–0585–0017) generally alleges that the EPA lacks actual measurements of what agriculture emits in the form of $PM_{2.5}$, and that agriculture is not a major emitter of $PM_{2.5}$. The comment states that the data used to develop ''the inventory'' was based on erroneous emission factors published by ''CPA'' [1] for cattle feed yards, feed mills, grain elevators, and dust from farmers' field operations; however, according to the comment, there ''has never been any actual PM–2.5 emission data taken on agricultural tillage equipment using EPA approved PM–2.5 samplers.'' The comment also alleges that ''wildfire emissions were not added to the data.''

Assuming that the comment is intended to refer to the emissions inventories that Utah prepared and submitted for the Logan, UT-ID Moderate $PM_{2.5}$ SIP and that the EPA proposed to approve, we respond as follows. The comment alleges the use of ''erroneous'' emission factors without identifying any specific error in the emission factors. Under the SIP Requirements Rule, Utah was not required to run tests on agricultural tillage equipment to develop emissions inventories; instead the requirements for emissions inventories are set forth in 40 CFR 51.1008. *See* Fine Particulate Matter National Ambient Air Quality Standards: State Implementation Plan Requirements, 81 FR 58010, 58027–33 (Aug. 24, 2016). The comment does not indicate any way in which the inventories fail to meet those requirements. Finally, for the purposes of $PM_{2.5}$ nonattainment areas such as the Logan, UT-ID area, wildfire emissions are generally accounted for through the EPA's Exceptional Events Rule,[2] not through emissions inventories.

III. Final Action

For the reasons stated in our proposal, the EPA is finalizing approval of portions of Utah's SIP found at R307–110–10, Section IX Control Measures for Area and Point Sources, Part A, Fine Particulate Matter for the Logan, UT-ID nonattainment area and at SIP Subsection IX.A.23: Control Measures for Area and Point Sources, Fine Particulate Matter for the Logan, UT-ID nonattainment area. Specifically, we are approving the following portions of the Logan, UT-ID Moderate $PM_{2.5}$ SIP submitted by the State on December 16, 2014:

- The 2010 base year and 2015 projection year emissions inventories;
- The modeled attainment demonstration;
- The RACM/RACT and additional reasonable measure demonstrations for on-road mobile, including the Cache

[1] The comment does not define this acronym, but we assume the comment intended to refer to EPA.

[2] 40 CFR 50.14.

County I/M Program, off-road mobile and major stationary sources; and

• The direct $PM_{2.5}$, nitrogen oxides (NO_X) and VOC MVEBs for 2015 and the MVEB trading mechanism.

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of the approval of portions of the Logan, UT-ID $PM_{2.5}$ Moderate SIP submitted by the State of Utah as discussed in the proposed rule. The EPA has made, and will continue to make, these materials generally available through *www.regulations.gov* and at the EPA Region 8 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by the EPA for inclusion in the state implementation plan, have been incorporated by reference by the EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of the EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[3]

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this final action:

• Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);

• is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;

• does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);

• is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

• does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);

• does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

• is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

• is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

• is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

• does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 22, 2019. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Ammonia, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Particulate matter, Reporting and recordkeeping requirements, Sulfur dioxide, Volatile organic compounds.

Dated: November 16, 2018.

Douglas Benevento,

Regional Administrator, EPA, Region 8.

40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart TT—Utah

■ 2. Section 52.2320 is amended by:

■ a. Revising the entry for ''R307–110–10'' in the table in paragraph (c); and

■ b. Adding the entry, in numerical order, ''Section IX.A.23. Fine Particulate Matter, $PM_{2.5}$ SIP for the Logan, UT–ID Nonattainment Area'' in the table in paragraph (e).

The revision and addition reads as follows:

§ 52.2320 Identification of plan.

Proposed Rules

Federal Register
Vol. 83, No. 226
Friday, November 23, 2018

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Rural Business-Cooperative Service

Rural Housing Service

Rural Utilities Service

Farm Service Agency

7 CFR Part 1970

RIN 0572–AC44

Rural Development Environmental Regulation for Rural Infrastructure Projects

AGENCY: Rural Business-Cooperative Service, Rural Housing Service, Rural Utilities Service, Farm Service Agency, USDA.

ACTION: Proposed rule.

SUMMARY: The United States Department of Agriculture (USDA) Rural Development (RD), comprised of the Rural Business-Cooperative Service (RBS), Rural Housing Service (RHS), and Rural Utilities Service (RUS), hereafter referred to as the Agency, proposes amending the Agency's Environmental Policies and Procedures regulation to allow the Agency Administrators limited flexibility to obligate federal funds for infrastructure projects prior to completion of the environmental review while ensuring full compliance with National Environmental Policy Act (NEPA) procedures prior to project construction and disbursement of funding. The proposed change will allow RD to more fully meet the Administration's goals to speed the initiation of infrastructure projects and encourage planned community economic development without additional cost to taxpayers or change to environmental review requirements.

DATE: Electronic and written comments must be received on or before December 24, 2018.

ADDRESSES: Submit your comments on this rule by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and, in the lower ''Search Regulations and Federal Actions'' box, select ''Rural Utilities Service'' from the agency drop-down menu, then click on ''Submit.'' In the Docket ID column, select RUS–18–AGENCY–0005 to submit or view public comments and to view supporting and related materials available electronically. Information on using *Regulations.gov*, including instructions for accessing documents, submitting comments, and viewing the docket after the close of the comment period, is available through the site's ''User Tips'' link.
- *Postal Mail/Commercial Delivery:* Please send your comment addressed to Michele Brooks, Rural Development Innovation Center, Regulations Team Lead, U.S. Department of Agriculture, 1400 Independence Ave. SW, Stop 1522, Room 1562, Washington, DC 20250. Please state that your comment refers to Docket No. RUS–18–AGENCY–0005.

Other Information: Additional information about Rural Development and its programs is available on the internet at *https://www.usda.gov/topics/rural*.

FOR FURTHER INFORMATION CONTACT: Kellie McGinness Kubena, Director, Engineering and Environmental Staff, Rural Utilities Service, USDA Rural Development, 1400 Independence Ave. SW, Mail Stop 1571, Room 2242, Washington, DC 20250–1571, Phone: 202–720–1649.

SUPPLEMENTARY INFORMATION: In the rules section of this issue of the **Federal Register**, Rural Development is concurrently publishing this action as a direct final rule without prior proposal because the Agency views this as a non-controversial action and anticipates no adverse comments. The language in the direct final rule will also serve as the language for this proposed rule. See the **SUPPLEMENTARY INFORMATION** provided in the direct final rule for the applicable **SUPPLEMENTARY INFORMATION** on this action. If no adverse comments are received in response to the direct final rule, no further action will be taken on this proposed rule and the action will become effective at the time specified in the direct final rule. If the Agency receives adverse comments, a timely document will be published withdrawing the direct final rule and all public comments received will be addressed in a subsequent final rule based on this action.

Dated: November 9, 2018.

Anne C. Hazlett,

Assistant to the Secretary, Rural Development.

Bill Northey,

Under Secretary, Farm Production and Conservation.

BILLING CODE P

NATIONAL CREDIT UNION ADMINISTRATION

12 CFR Parts 704 and 713

RIN 3133–AE87

Fidelity Bonds

AGENCY: National Credit Union Administration (NCUA).

ACTION: Proposed rule.

SUMMARY: The NCUA Board (Board) is seeking comment on a proposed rule that would amend its regulations regarding fidelity bonds under Part 704 for corporate credit unions and under Part 713 for natural person credit unions. The proposed rule would accomplish four objectives. First, it would strengthen a board of directors' oversight of a credit union's fidelity bond coverage. Second, it would ensure that there is an adequate period to discover and file fidelity bond claims following a credit union's liquidation. Third, it would codify a 2017 NCUA Office of General Counsel legal opinion that permits a natural person credit union's fidelity bond to include coverage for certain credit union service organizations (CUSOs). Fourth, it would clarify the documents subject to Board approval and require that all bond forms receive Board approval every ten years.

DATES: Comments must be received on or before January 22, 2019.

ADDRESSES: You may submit comments by any of the following methods (Please send comments by one method only):

- *NCUA website: http://www.ncua.gov/news/proposed_regs/proposed_regs.html*. Follow the instructions for submitting comments.

• *Email:* Address to *regcomments@ncua.gov*. Include ''[Your name] Comments on Notice of Proposed Rulemaking (Fidelity Bonds)'' in the email subject line.

• *Fax:* (703) 518–6319. Use the subject line described above for email.

• *Mail:* Address to Gerard Poliquin, Secretary of the Board, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428.

• *Hand Delivery/Courier:* Same as mail address.

SUPPLEMENTARY INFORMATION:

I. Introduction

a. Background and Legal Authority

The Federal Credit Union Act (FCU Act) requires that certain credit union employees and appointed and elected officials be subject to fidelity bond coverage.[1] The FCU Act directs the Board to promulgate regulations concerning both the amount and character of fidelity bond coverage and to approve bond forms.[2] The pertinent portion of the FCU Act provides:

> The Board is . . . directed to require that every person appointed or elected by any Federal credit union to any position requiring the receipt, payment, or custody of money or other personal property owned by a Federal credit union or in its custody or control as collateral or otherwise, give bond in a corporate surety company holding a certificate of authority from the Secretary of Treasury . . . as an acceptable surety on Federal bonds. Any such bond or bonds shall be in a form approved by the Board with a view to providing surety coverage to the Federal credit union with reference to loss by reason of acts of fraud or dishonesty including forgery, theft, embezzlement, wrongful abstraction, or misapplication on the part of the person, directly or through connivance with others, and such other surety coverages as the Board may determine to be reasonably appropriate. Any such bond or bonds shall be in such an amount in relation to the . . . assets of the Federal credit union as the Board may from time to time prescribe by regulation[.] [3]

Parts 704 and 713 of the NCUA's regulations implement the requirements of the FCU Act regarding fidelity bonds.[4] Parts 704 and 713 reiterate the statutory requirement that certain credit union employees and appointed and elected officials are subject to fidelity bond coverage. The parts also establish the requirements for a fidelity bond, the acceptable bond forms, and the minimum permissible coverage. Both parts require a credit union's board of directors to review annually its fidelity bond coverage to ensure it is adequate in relation to the potential risks facing the credit union and the minimum requirements set by the Board. Part 713 is made applicable to all federally insured, state-chartered credit unions (FISCUs) through § 741.201 of the NCUA's regulations.[5]

Part 704 was recently revised to amend the provision that determines the maximum amount a credit union may pay for a covered loss, or deductible, before the fidelity bond insurer makes a payment. The NCUA restricts the deductible a corporate credit union may pay to limit the potential losses to it if there is a covered claim. The maximum deductible allowed is a percentage of a corporate credit union's capital based on its leverage ratio. For example, if a corporate credit union has a greater than 2.25 leverage ratio then it may have a maximum deductible that is 15 percent of its tier 1 capital. The recent final rule updated this provision to reference tier 1 capital instead of core capital.[6] Part 713, however, has not been substantively revised since 2005 when the NCUA issued a final rule modernizing Part 713.[7]

b. Regulatory Reform Task Force

In August 2017, the Board published and sought comment on the NCUA's regulatory reform agenda (Agenda).[8] The Agenda identifies those regulations the Board intends to amend or repeal because they are outdated, ineffective, or excessively burdensome. This is consistent with the spirit of Executive Order 13777.[9] Although the NCUA, as an independent agency, is not required to comply with Executive Order 13777, the Board has chosen to comply with it in spirit and has reviewed all of the NCUA's regulations to that end. One of the items in the Agenda is related to the NCUA's regulations on fidelity bonds. The Agenda supports exploring ways to implement the requirements of the FCU Act in this context in the least costly way possible. The Agenda further notes that while the FCU Act mandates fidelity bond coverage, the NCUA's objective should be to allow a credit union to make a business decision based on its own circumstances and needs. This would effectively reduce the NCUA's involvement in a credit union's operational decisions while remaining consistent with the FCU Act.

c. The 2017 Legal Opinion

As discussed above, Part 713 establishes the minimum requirements for a fidelity bond for a natural person credit union. One such requirement under Part 713 is that fidelity bonds be purchased in an ''individual policy.'' [10] The ''individual policy'' provision was intended to prevent multiple credit unions from being insured under one fidelity bond policy. The Board prohibited such joint coverage because the loss suffered by one or two of the joint policyholders could reduce the amount of available coverage for the other policyholders to below the required minimum amount.[11] Before 2017, the NCUA's Office of General Counsel (OGC) had issued legal opinions stating that a credit union may not include one or more CUSOs or other parties as additional insureds under its fidelity bond because of the ''individual policy'' limitation.[12] It came to OGC's attention, however, that some bond issuers may have been interpreting their policies to permit the issuance of bonds that covered credit unions and their

[1] 12 U.S.C. 1761a, 1761b, and 1766.

[2] The FCU Act also grants the Board the powers to require such other surety coverage as the Board may determine to be reasonably appropriate; to approve a blanket bond in lieu of individual bonds; and to approve bond coverage in excess of minimum surety coverage.

CUSOs, despite OGC's opinions to the contrary. This prompted OGC to review the regulation and approved bond forms. As a result of that review, OGC issued another legal opinion in September 2017 that rescinded and replaced all previous legal opinions that addressed the ''individual policy'' requirement.[13] The 2017 opinion concluded that the ''individual policy'' requirement of § 713.3(a) of the NCUA's regulations generally prohibits joint coverage under fidelity bonds, but does not prohibit a credit union from purchasing a fidelity bond that covers both the credit union and certain of its CUSOs, as discussed more fully below.

II. Proposed Rule

OGC's review of Part 713 extended beyond the issue of joint coverage and revealed several inconsistencies between the regulation and approved bond forms. The review also revealed several outdated provisions the Board now seeks to update to ensure the safe and sound operation of credit unions and to protect the National Credit Union Share Insurance Fund (NCUSIF). The Board believes that many of the concerns identified by OGC, as discussed more fully below, are also relevant for corporate credit unions. Therefore, where appropriate, the Board is also proposing amendments to the NCUA's corporate credit union regulations under Part 704. The specific details of the proposed amendments are discussed below.

III. Section-by-Section Analysis

Part 704

In general, Part 704 applies to all federally insured corporate credit unions. Section 704.18 provides the fidelity bond requirements for such credit unions. Proposed changes to the specific subparagraphs of § 704.18 are discussed below.

Sec. 704.18 Fidelity Bond Coverage

18(a)

The proposed rule would not make any changes to paragraph (a).

18(b)

The proposed rule would amend current § 704.18(b) by dividing paragraph (b) into two subparts. Current paragraph (b) would remain unchanged and be designated paragraph (b)(1). The proposed rule would add a new paragraph as (b)(2). Proposed paragraph (b)(2) would require that a corporate credit union's board of directors and supervisory committee must review all applications for purchase or renewal of its fidelity bond coverage. After review, the corporate credit union's board must pass a resolution approving the purchase or renewal of fidelity bond coverage and delegate one member of the board, who is not an employee of the corporate credit union, to sign the purchase or renewal agreement and all attachments. No board members may be a signatory on consecutive purchase or renewal agreements for the same fidelity bond coverage policy. This proposed amendment is identical to proposed changes to Part 713 for natural person credit unions. For additional background, see the discussion below for proposed changes to § 713.2(b).

18(c)

The proposed rule would make significant revisions to current § 704.18(c). In the proposed rule, § 704.18(c) is split into five new subparagraphs, each of which is described in more detail below.

18(c)(1)

The proposed rule would state that a corporate credit union's fidelity bond coverage must be purchased from a company holding a certificate of authority from the Secretary of the Treasury. This is not a substantive change from the current requirements and has only been amended to reflect the comparable language in Part 713.

18(c)(2)

Proposed § 704.18(c)(2) would state that fidelity bonds must provide coverage for the fraud and dishonesty of all employees, directors, officers, and supervisory and credit committee members. This is not a substantive change from the current requirements.

18(c)(3)

The proposed rule would substantively amend the requirements for a corporate credit union's approved bond forms. The revised requirements reflect the changes proposed for natural person credit unions in Part 713. The proposed rule would require the Board to approve all bond forms before a corporate credit union may use them. In addition, a credit union may not use any bond form that has been amended since receiving Board approval or any rider, endorsement, renewal, or other document that limits coverage of approved bond forms without first receiving approval from the Board. As would be required under proposed Part 713, approval of all bond forms expires 10 years after the date the Board approved or reapproved use of the bond form. Any currently approved bond forms would expire on January 1, 2029. For additional background, see the discussion below for proposed changes to § 713.4.

18(c)(4)

The proposed rule would add a new § 704.18(c)(4) to ensure there is an adequate discovery period, the period to discover and file a claim, following a corporate credit union's liquidation. The revised requirements reflect the changes proposed for natural person credit unions in Part 713. The proposed rule would require fidelity bonds to include an option for the liquidating agent to purchase coverage in the event of an involuntary liquidation that extends the discovery period for a covered loss for at least two years after liquidation. In the case of a voluntary liquidation, fidelity bonds would be required to remain in effect, or provide that the discovery period is extended, for at least four months after the final distribution of assets. For additional background, see the discussion below for proposed changes to §§ 713.3(a)(3) and (4).

18(c)(5)

The proposed rule would require corporate credit union bonds to include a provision requiring written notification by surety to the NCUA when a credit union's bond is terminated or when the coverage of an employee, director, officer, supervisory or credit committee member has been terminated. The NCUA also must be notified in writing by surety if a deductible is increased above permissible limits. This is not a substantive change from the current requirements.

18(d)–18(f)

The proposed rule would not make any changes to paragraphs (d), (e), and (f).

Part 713

In general, Part 713 applies to all federally insured natural person credit unions and provides the fidelity bond requirements for them. Proposed changes to the specific subsections of Part 713 are discussed below.

Sec. 713.1 What is the scope of this section?

The proposed rule would retain most of the current § 713.1 without change, with the following exceptions. The proposed rule would add the words ''federally insured'' before the words ''credit union'' to more precisely describe which credit unions are subject to the section. The current rule uses the

[13] OGC Legal Op. 17–0959 (Sept. 26, 2017).

term ''credit union'' and ''federal credit union'' interchangeably to mean ''federal credit union.'' As discussed in the background section, the requirements in Part 713 are applicable to both federal credit unions and FISCUs.[14] For clarity, the proposed rule would cross reference the requirement in Part 741 that FISCUs must comply with Part 713 and would refer to federally insured credit unions (FICUs) throughout the rule instead of federal credit unions. The Board does not intend any substantive changes by this amendment and only intends to increase the clarity and internal consistency of Part 713.

The proposed rule would also include a cross reference for corporate credit unions and would state that corporate credit unions must comply with § 704.18 instead of Part 713.

Sec. 713.2 What are the responsibilities of a federally insured credit union's board of directors under this section?

2(a)

The proposed rule would amend current § 713.2 by dividing the section into two subparagraphs. Current § 713.2 would become paragraph (a). The proposed rule would retain most of the current § 713.2 without change, with the following exception. For consistency with the rest of Part 713, the term ''Federal credit union'' would be revised to ''federally insured credit union.''

2(b)

The proposed rule would add a new paragraph (b) to § 713.2. Proposed paragraph (b) increases a board of directors' oversight responsibility of its FICU's fidelity bond coverage. Specifically, the Board is proposing to require a FICU's board, and, if applicable, a FICU's supervisory committee, to review all applications for purchase or renewal of bond coverage and to pass a board resolution approving the purchase or renewal. The proposed rule would also require a FICU's board to delegate one board member, who is not an employee of the FICU, to sign the attestation for bond purchase or renewal. This proposal would prohibit the same board member from signing the attestation for renewal in consecutive years.

The Board notes the current rule already requires a FICU's board to annually review its fidelity bond and other insurance coverage to ensure it is adequate. The proposed rule would take that review a step further and require a FICU's board, and, if applicable, its supervisory committee, to review all applications for purchase or renewal of fidelity bond coverage. The Board believes this change will help ensure the board is addressing the adequacy of the coverage at all stages, rather than at an annual point in time that may be retrospective, and require additional steps by the FICU to remedy a deficiency.

The Board is also proposing to require a FICU's supervisory committee to conduct a review of all applications for purchase or renewal of fidelity coverage, in addition to the board. The Board believes this is a function within the responsibilities of a FICU's supervisory committee and will add an additional layer of review. For FISCUs operating without a supervisory committee, its board should implement controls or establish procedures for conducting their own analysis of the FISCU's fidelity bond coverage, as opposed to relying on recommendations from the FISCU's officers.

As noted, the proposed rule would also require a FICU's board to, after conducting its review, pass a resolution approving the purchase or renewal of fidelity coverage and designating a member of the board, who is not an employee of the FICU, to sign applications for purchase, bond renewals, and any accompanying attestations. Also as mentioned, the Board is proposing to require that the member of the board acting as signatory rotate each time the FICU purchases or renews fidelity coverage. The purpose of these requirements is to address the issue of rescission of fidelity coverage when the signatory to the application to purchase or renew coverage is knowledgeable of fraudulent activity. If the signatory to the application for purchase or renewal is knowledgeable of fraudulent activity, the bond issuer may void the policy and not make a payout when losses are discovered. The NCUA believes that a non-employee board member, who would not be involved in the day-to-day operations of a FICU, is less likely to be responsible for a fraudulent activity than an employee. The NCUA also believes that rotating signatories would reduce the potential for the signatory to be knowledgeable of the fraudulent activity.

In the case where the NCUA is a liquidating agent of a FICU, the NCUSIF would suffer losses due to the fidelity bond being voided. In recent years, the NCUSIF has sustained increased losses due to voided fidelity bond coverage. Before 2010, bond rescission was not a material concern for the NCUA. Since 2010, however, the NCUA has had at least three claims denied due to rescinded fidelity bond coverage and the NCUA is concerned that the frequency of rescinded coverage will continue to increase. As of June 2018, the NCUSIF has already lost in excess of $10 million from fidelity bonds that were voided due to the signatory being aware of the fraudulent activities and litigation related to denied claims is ongoing and may result in additional expenses.

The Board believes the proposed changes are only a minimal increase in regulatory burden as the FICU's board is already required to annually review its fidelity bond coverage, but would meaningfully mitigate the risk to the NCUSIF associated with fidelity bond coverage rescission. The Board notes that this proposed requirement is also advantageous to individual FICUs, as this will help prevent them from losing coverage absent involuntary liquidation.

Sec. 713.3 What bond coverage must a federally insured credit union have?

The proposed rule would amend current § 713.3 by renumbering and revising the section. Current § 713.3 would become paragraph (a), current paragraphs (a) and (b) would be renumbered as paragraphs (a)(1) and (a)(2), and two new subparagraphs would be added as (a)(3) and (a)(4). Finally, a new paragraph (b) would also be added.

3(a)(2)

Current paragraph (b) of § 713.3 states that, at a minimum, a credit union's fidelity bond coverage must include fidelity bonds that cover fraud and dishonesty. The proposed rule would remove the redundant phrase ''[i]nclude fidelity bonds that'' in current paragraph (b). The proposed rule would read ''At a minimum, your bond coverage must: . . . Cover fraud and dishonesty by all employees, directors, officers, supervisory committee members, and credit committee members;''. The change is non-substantive and only intended to remove the unnecessary language and clarify the requirement.

3(a)(3)

The proposed rule would add a new paragraph (a)(3) to § 713.3. Proposed paragraph (a)(3) would require a FICU to have fidelity bond coverage that includes an option for the liquidating agent to purchase coverage that extends

[14] Part 713 is applicable to all FISCUs through § 741.201 of the NCUA's regulations, which states that any credit union which makes application for share insurance must have the minimum fidelity bond coverage stated in Part 713 in order for its application to be approved and for such share insurance coverage to continue.

the discovery period, the period to discover and file a claim, for at least two years after liquidation. Fidelity bonds mitigate the risk presented by fraudulent and other dishonest acts to the NCUSIF and have served as a significant source of recovery in liquidations caused by fraud. However, the NCUA, as liquidating agent, can only file a claim if it discovers the loss during the contractual period permitted for filling a claim. Historically, it had been standard for fidelity bonds to permit a reasonable period for discovery and filing a claim following a FICU's involuntary liquidation. The NCUA has identified approximately $1 million in claims paid to the NCUSIF that were identified during an extended discovery period from 2006 to 2013. Since then, however, insurers have removed standard discovery coverage provisions from fidelity bond contracts. Currently, most fidelity bonds provide that the bond's coverage terminates immediately upon a credit union's liquidation and that the ability to purchase an additional period to discover loss is at the *sole discretion of the insurer*.

Under such contracts, the NCUA, as liquidating agent, would not have authority to extend the discovery period following a FICU's closure. There are some instances when liquidation occurs unexpectedly and there is insufficient time to discover a claim before liquidation, or where there is a covered loss, but it is unknown with the specificity required for filing a claim. In such a case, even if the liquidating agent subsequently discovers a covered loss, the fidelity bond issuer may deny the claim. If this happens when the NCUA is liquidating agent, the NCUA would either be forced into litigation to receive payment for the covered loss or not recover for the loss. In either situation, the NCUSIF bears additional losses than if the fidelity bond permitted a reasonable period of discovery. In addition to reducing losses to the NCUSIF, any funds recovered due to an extended discovery period may also be available to pay the failed FICU's creditors and uninsured depositors.[15]

In an attempt to address this gap in coverage, it has been the NCUA's practice to provide notice that there may be a potential claim before a liquidation. This informal solution, however, lacks legal clarity and results in unnecessary risk that an insurer may deny a claim following an involuntary liquidation. The proposed rule would provide the NCUA with an explicit right to extend the discovery period, which should prevent unnecessary losses to the NCUSIF due to contract technicalities.

The proposed rule would require that fidelity bond coverage provide a discovery period of *two years* because the FCU Act provides members with 18 months after the appointment of a liquidating agent to claim their insured accounts.[16] Therefore, the Board is providing six months to discover and make a claim for fidelity bond coverage following the end of the 18-month statutory period for unclaimed accounts. Further, in the Board's experience, most liquidations are resolved within two years. The Board considers two years a reasonable period to resolve the FICU's affairs, discover any losses from fraudulent or dishonest acts, and file a claim under the fidelity bond. The Board does not expect this proposed requirement to result in any additional cost or burden on FICUs. The liquidating agent would bear the cost of any extension of a discovery period following an involuntary liquidation.

3(a)(4)

The Board is also proposing to add a new paragraph (a)(4) to § 713.3 to include a requirement that, for voluntary liquidations, a FICU's fidelity bond coverage remain in effect, or provide that the discovery period is extended, for at least four months after the final distribution of assets. The Board notes that this is currently required for federal credit unions in Part 710, the NCUA's voluntary liquidation regulations, and that this proposed change only reflects that requirement, and does not impose an additional burden for federal credit unions.[17] This requirement would represent a new burden, however, for FISCUs. The Board believes that this requirement would impose only a minor burden for FISCUs, and would be beneficial to its members, as any recovery following a voluntary termination would flow through to members.

3(b)

The Board is proposing to amend § 713.3 to allow a FICU to have a fidelity bond that covers both it and certain of its CUSOs, as more fully discussed below. Section 713.3 requires that a bond, at a minimum, must be purchased in ''an individual policy.'' [18] The NCUA added this section to Part 713 in a 1999 final rule in response to a commenter who pointed out that there had been instances of FICUs jointly purchasing fidelity bonds with each other.[19] The commenter was concerned that a loss caused by one or two of the joint policyholders could reduce the amount of available coverage for the other policyholders to below the required minimum amount. In addressing this comment, the Board provided in § 713.3 that a FICU must purchase its own individual policy.[20] The regulation did not, however, define ''individual policy.''

Since inclusion of this provision in the NCUA's regulations, OGC has issued two public legal opinions interpreting the meaning of ''individual policy'' and opining on the type of coverage that is prohibited under § 713.3(a).[21] A 2014 OGC legal opinion states that a FICU may not include one or more of its CUSOs or other parties as additional insureds under its fidelity bond.[22] In a 2004 legal opinion, OGC opined that a CUSO that provides management services for multiple credit unions could not purchase a single fidelity bond with each credit union named as an insured.[23] In both letters, OGC explained the purpose of the individual policy requirement is to avoid diluting the individual credit union's coverage.

As noted above, OGC issued a third legal opinion on the ''individual policy'' requirement in 2017 (2017 legal opinion). The 2017 legal opinion rescinded and replaced the previous two opinions and expanded the permissibility for certain joint coverage provisions under the ''individual policy'' requirement. OGC and the NCUA's Office of Examination and Insurance determined this broader interpretation was both within the NCUA's legal authority under the FCU Act and a safe and sound practice for FICUs. For clarity and ease of reference, the Board now seeks to incorporate the 2017 legal opinion into Part 713.

The Board, therefore, is proposing to amend § 713.3 to permit a FICU to have a fidelity bond that also covers its CUSO(s). This is permissible if the FICU owns greater than 50 percent of a CUSO it wishes to cover, or a covered CUSO is organized by the FICU for the purpose of handling certain of its business transactions and composed exclusively of its employees. The 50 percent threshold reflects the standard for accounting consolidation under generally accepted accounting principles, or GAAP. A FICU would

[23] OGC Legal Op. 04–0744 (Sep. 21, 2004).

directly benefit from any fidelity bond insurance proceeds collected by a consolidated CUSO.[24] This proposed rule, however, would not eliminate the prohibition against joint coverage of entities not majority owned by the FICU, such as other credit unions or non-majority-owned CUSOs. The Board believes this amendment will provide greater flexibility to FICUs without affecting safety and soundness.[25]

Sec. 713.4 What bond forms may a federally insured credit union use?

The current rule provides that the NCUA will maintain a current list of bond forms approved by the Board for use by FICUs. The rule also states that a FICU must obtain the approval of the Board before it can use any other basic bond form or any rider or endorsement that limits coverage of an approved bond form. The Board is proposing to amend § 713.4 to make several changes to reflect the practices of the NCUA, clarify the list of documents that must have Board approval, and address the expiration and continuing review of approved bond forms. Any questions regarding the NCUA's approval of fidelity bond forms can be directed to the NCUA's OGC, (703) 518–6540, or the Office of Examination and Insurance, (703) 518–6360.

4(a)

Current § 713.4(a) states that a current listing of basic bond forms that may be used without prior Board approval is on the NCUA's website. The Board is proposing to clarify this requirement by dividing paragraph (a) into two paragraphs. Proposed paragraph (a) would explicitly state that ''the NCUA Board must approve all bond forms before federally insured credit unions may use them.''

4(b)

Proposed paragraph (b) would state that approved bond forms are listed on the NCUA's website and may be used by a FICU without further NCUA approval. If a FICU is unable to access the NCUA's website, it can get a current listing of approved bond forms by contacting the NCUA's Office of Public and Congressional Affairs. The proposed rule would rewrite this provision for clarity, but would not make any substantive changes.

4(c)

Current paragraph (b), renumbered as paragraph (c), sets forth which fidelity bonds and fidelity bond documents require Board approval. The proposed rule also would set forth which fidelity bonds and fidelity bond documents require Board approval, but would rewrite this provision for clarity. The proposed rule states in paragraph (c) that ''Credit unions may not use any of the following without first receiving approval from the NCUA Board.'' No substantive changes are intended by this revision, and the revision is only intended to clarify the Board's expectation for FICUs.

4(c)(1)

The Board is clarifying that any bond form that has been amended or changed since the Board approved it requires new approval from the Board. The Board notes that this policy is the current practice whereby bond issuers submit amended bond forms to the Board for approval under current § 713.4(b)(1). This proposed change is only intended to make the regulation clearer with respect to this requirement.

4(c)(2)

Current § 713.4(b)(2) requires any rider or endorsement that limits coverage of approved basic bond forms to be approved by the Board. The proposed rule would clarify the list of documents that must receive Board approval. The Board is proposing to state explicitly that renewal forms (and any other document) that limit the coverage of approved bond forms must also receive Board approval. The Board is clarifying the list of documents subject to approval because the Board is aware of instances where the renewal or continuation of coverage forms included language affecting the bond coverage, including language that limited the bond coverage. As such, it is the Board's belief that the renewal form is an extension of the bond form and thus this is not an additional burden but further clarification of what constitutes the bond form.

4(d)

The Board is proposing to add a new paragraph (d) to sunset its approval on all bond forms ten years after the form is approved. The impetus for this provision is the discovery that Board approved-bond forms were being interpreted in a way that was contrary to the NCUA's understanding of how the bond forms would be used. In addition, a review of previously approved bond forms, as part of issuing the 2017 legal opinion, revealed several instances of outdated provisions, additions that had not been approved by the Board, and some forms that contained provisions that were contrary to the FCU Act and Part 713 of the NCUA's regulations. To avoid instances of this in the future, the Board is proposing to sunset its approval of a bond form after a period of ten years. This ten-year period will begin on the date the Board approves a bond form. The Board notes, however, that the ten-year period will not toll or start over when a bond carrier submits a revision to an approved bond. For example, if the Board approves a bond form on January 1, 2020, and that bond form is subsequently amended and approved by the Board on January 1, 2021, then the bond form will still expire on January 1, 2030, ten years from the date the Board issued its initial approval.

The Board believes this ten-year sunset provision will provide a definitive date at which an approved bond form will be reviewed by the Board to determine if it is still in compliance with the NCUA's regulations. While this provision will require expired bond forms to be resubmitted to the Board, having a clear date upon which the Board's approval will sunset will help all interested parties prepare to resubmit the bond form to ensure continuity in coverage and operations. The Board also notes that should it determine, upon re-review, that a bond form does not comply with the NCUA's regulations, the Board would not require FICUs with coverage under that bond to seek new coverage. In these situations, the Board would require FICUs to seek new coverage under an approved bond form after its current coverage expires per the terms of the contract between the FICU and the bond issuer.

With respect to bond forms that the Board has approved before 2019, the Board is proposing to allow its approval on these forms to continue until January 1, 2029. The Board believes this date for sunset of its approval will provide all currently approved bonds with at least ten years before they must be submitted for review and re-approval. The Board believes this will achieve the goal of ensuring all approved bond forms comply with the NCUA's regulations without imposing unnecessary burden on FICUs or bond issuers.

[24] As discussed in the 2017 legal opinion, the NCUA has previously approved certain nominee provisions that included limited joint coverage. For example, a nominee provision may state that a loss sustained by any ''nominee'' organized by the insured for the purpose of handling certain of its business transactions and composed exclusively of its employees shall be deemed to be loss sustained by the insured.

[25] Note, the proposal is not making a comparable amendment to Part 704. Corporate credit unions are not required to purchase fidelity bonds subject to an individual policy requirement. Therefore, the proposed amendment to clarify the individual policy requirement is only applicable to natural person credit unions.

In addition to including a sunset provision, the Board is also proposing to clarify its right and ability to review a bond form at any time. The Board notes that if it does undertake a review of an approved bond form during the ten-year period, this will not re-start or toll the expiration period and the Board's approval of that form will still sunset ten years from the date the Board issued its original approval.

Sec. 713.5–§ 713.7

As discussed above, the proposed rule would use the term federally insured credit union instead of federal credit union in each of §§ 713.5, 713.6, and 713.7 for consistency and clarity.

IV. Request for Comment

The Board invites comment on all aspects of this proposed rulemaking. In particular, the Board seeks comment on whether FICUs anticipate any increase in compliance burden under the proposed rule.

V. Regulatory Procedures

a. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA) applies to rulemakings in which an agency by rule creates a new paperwork burden on regulated entities or modifies an existing burden. For purposes of the PRA, a paperwork burden may take the form of a reporting, disclosure, or recordkeeping requirement, each referred to as an information collection. The NCUA may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

A proposed change to Part 713 would require NCUA approval on all bond forms expired after a period of 10 years from the date of NCUA approval or reapproved of its use. The bond company would be required to seek NCUA approval before a bond form may be used by a FICU. The information collection burden associated with this proposed new requirements is minimal, only affecting an estimated two entities annually; for an increase of two hours to the currently approved OMB control number 3133–0170.

Title of Information Collection: Fidelity Bond and Insurance Coverage for Federal Credit Unions, 12 CFR part 713.

OMB Control Number: 3133–0170.

Estimated Number of Respondents: 10.

Estimated Annual Frequency of Response: 1.

Estimated Total Annual Reponses: 10.

Estimated Hours per Response: 1.

Estimated Total Annual Burden Hours: 10.

Affected Public: Private Sector: Not-for-profit institutions; Businesses and other for-profits.

The NCUA invites comments on: (a) Whether the collections of information are necessary for the proper performance of the agencies' functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the information collections, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the information collections on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

All comments are a matter of public record. Comments regarding the information collection requirements of this rule should be sent to (1) Dawn Wolfgang, NCUA PRA Clearance Officer, National Credit Union Administration, 1775 Duke Street, Suite 5080, Alexandria, Virginia 22314, or Fax No. 703–519–8572, or Email at *PRAcomments@ncua.gov* and the (2) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for NCUA, New Executive Office Building, Room 10235, Washington, DC 20503, or email at *OIRA_Submission@OMB.EOP.gov*.

b. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires that, in connection with a notice of proposed rulemaking, an agency prepare and make available for public comment an initial regulatory flexibility analysis that describes the impact of a proposed rule on small entities. A regulatory flexibility analysis is not required, however, if the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities (defined for purposes of the RFA to include credit unions with assets less than $100 million) and publishes its certification and a short, explanatory statement in the **Federal Register** together with the rule.

The Board does not believe that the proposed rule would have a significant economic impact on a substantial number of small entities. Any increased costs for the bond insurer to resubmit their forms every ten years would be spread out among all FICUs and the cost to each FICU would be negligible. Additionally, the proposed requirement that boards, and if applicable, supervisory committees, must approve purchases and renewals would impose no direct cost on FICUs. Accordingly, the NCUA certifies that the proposed rule will not have a significant economic impact on a substantial number of small FICUs.

c. Executive Order 13132

Executive Order 13132 encourages independent regulatory agencies to consider the impact of their actions on state and local interests. The NCUA, an independent regulatory agency as defined in 44 U.S.C. 3502(5), voluntarily complies with the executive order to adhere to fundamental federalism principles. This proposed rule will not have a direct effect on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. The NCUA has therefore determined that this proposed rule does not constitute a policy that has federalism implications for purposes of the executive order.

d. Assessment of Federal Regulations and Policies on Families

The NCUA has determined that this proposed rule would not affect family well-being within the meaning of § 654 of the Treasury and General Government Appropriations Act, 1999, Public Law 105–277, 112 Stat. 2681 (1998).

List of Subjects in 12 CFR Parts 704 and 713

Bonds, Credit unions, Insurance.

By the National Credit Union Administration Board on November 15, 2018.

Gerard Poliquin,

Secretary of the Board.

For the reasons discussed above, the NCUA is proposing to amend 12 CFR parts 704 and 713 as follows:

PART 704—CORPORATE CREDIT UNIONS

■ 1. The authority citation for part 704 is revised to read as follows:

Authority: 12 U.S.C. 1762, 1766(a), 1772a, 1781, 1789, and 1795e.

■ 2. Section 704.18 is amended by revising paragraphs (b) and (c) to read as follows:

§ 704.18 Fidelity bond coverage.

* * * * *

(b) *Review of bond coverage.* (1) The board of directors of each corporate credit union shall, at least annually, carefully review the bond coverage in force to determine its adequacy in relation to risk exposure and to the minimum requirements in this section.

(2) The board of directors and the supervisory committee of each corporate credit union must review all applications for purchase or renewal of its fidelity bond coverage. After review, the credit union's board must pass a resolution approving the purchase or renewal of fidelity bond coverage and delegate one member of the board, who is not an employee of the credit union, to sign the purchase or renewal agreement and all attachments. Provided, however, that no board members may be a signatory on consecutive purchase or renewal agreements for the same fidelity bond coverage policy.

(c) *Minimum coverage; approved forms.* (1) The fidelity bond coverage must be purchased from a company holding a certificate of authority from the Secretary of the Treasury.

(2) Fidelity bonds must provide coverage for the fraud and dishonesty of all employees, directors, officers, and supervisory and credit committee members.

(3) The NCUA Board must approve all bond forms before a corporate credit union may use them. Corporate credit unions may not use any bond form that has been amended since the time the NCUA Board approved the form or any rider, endorsement, renewal, or other document that limits coverage of approved bond forms without receiving approval from the NCUA Board. Approval on all bond forms expires 10 years after the date the NCUA Board approved or reapproved use of the bond form; provided, however, that any bond forms approved before 2019 will expire on January 1, 2029 and an NCUA Board-approved amendment to a bond form does not toll or cause the 10-year period to restart. The NCUA reserves the right to review a bond form at any point after its approval.

(4) Fidelity bonds must include an option for the liquidating agent to purchase coverage in the event of an involuntary liquidation that extends the discovery period for a covered loss for at least two years after liquidation. In the case of a voluntary liquidation, fidelity bonds must remain in effect, or provide that the discovery period is extended, for at least four months after the final distribution of assets.

(5) Notwithstanding the foregoing, all bonds must include a provision, in a form approved by the NCUA Board, requiring written notification by surety to NCUA:

(i) When the fidelity bond of a credit union is terminated in its entirety;

(ii) When fidelity bond coverage is terminated, by issuance of a written notice, on an employee, director, officer, supervisory or credit committee member; or

(iii) When a deductible is increased above permissible limits. Said notification shall be sent to NCUA and shall include a brief statement of cause for termination or increase.

* * * * *

PART 713—FIDELITY BOND AND INSURANCE COVERAGE FOR FEDERALLY INSURED CREDIT UNIONS

■ 3. The authority citation for Part 713 continues to read as follows:

Authority: 12 U.S.C. 1761a, 1761b, 1766(a), 1766(h), 1789(a)(11).

■ 4. The heading for part 713 is revised as set forth above.

■ 5. Revise § 713.1 to read as follows:

§ 713.1 What is the scope of this section?

This section provides the requirements for fidelity bonds for federally insured credit union employees and officials and for other insurance coverage for losses such as theft, holdup, vandalism, etc., caused by persons outside the credit union. Federally insured, state-chartered credit unions are required by § 741.201 of this chapter to comply with the fidelity bond coverage requirements of this part. Corporate credit unions must comply with § 704.18 of this chapter in lieu of this part.

■ 6. Revise § 713.2 to read as follows:

§ 713.2 What are the responsibilities of a federally insured credit union's board of directors under this section?

(a) The board of directors of each federally insured credit union must at least annually review its fidelity and other insurance coverage to ensure that it is adequate in relation to the potential risks facing the federally insured credit union and the minimum requirements set by the NCUA Board; and

(b) The board of directors, and, if applicable, the supervisory committee of each federally insured credit union, must review all applications for purchase or renewal of its fidelity bond coverage. After review, the federally insured credit union's board must pass a resolution approving the purchase or renewal of fidelity bond coverage and delegate one member of the board, who is not an employee of the federally insured credit union, to sign the purchase or renewal agreement and all attachments; provided, however, that no board members may be a signatory on consecutive purchase or renewal agreements for the same fidelity bond coverage policy.

■ 7. Revise § 713.3 to read as follows:

§ 713.3 What bond coverage must a federally insured credit union have?

(a) At a minimum, your bond coverage must:

(1) Be purchased in an individual policy from a company holding a certificate of authority from the Secretary of the Treasury;

(2) Cover fraud and dishonesty by all employees, directors, officers, supervisory committee members, and credit committee members;

(3) Include an option for the liquidating agent to purchase coverage in the event of an involuntary liquidation that extends the discovery period for a covered loss for at least two years after liquidation; and

(4) In the case of a voluntary liquidation, remain in effect, or provide that the discovery period is extended, for at least four months after the final distribution of assets, as required in § 710.2(c) of this chapter.

(b) The requirement in paragraph (a) of this section does not prohibit a federally insured credit union from having a fidelity bond that also covers its credit union service organization (CUSO(s)), provided the federally insured credit union owns more than 50 percent of the CUSO(s) or the CUSO(s) is organized by the federally insured credit union for the purpose of handling certain of its business transactions and composed exclusively of the federally insured credit union's employees.

■ 8. Revise § 713.4 to read as follows:

§ 713.4 What bond forms may a federally insured credit union use?

(a) The NCUA Board must approve all bond forms before federally insured credit unions may use them.

(b) Bond forms the NCUA Board has approved for use by federally insured credit union are listed on the NCUA's website, *http://www.ncua.gov,* and may be used by federally insured credit unions without further NCUA approval. If you are unable to access the NCUA's website, you can obtain a current listing of approved bond forms by contacting the NCUA's Office of Public and Congressional Affairs.

(c) Federally insured credit union unions may not use any of the following without first receiving approval from the NCUA Board:

(1) Any bond form that has been amended or changed since the time the NCUA Board approved the form; and

(2) Any rider, endorsement, renewal, or other document that limits coverage of approved bond forms.

(d) Approval on all bond forms expires after a period of 10 years from the date the NCUA Board approved or reapproved use of the bond form. Provided, however, that:

(1) Any bond forms approved before 2019 will expire on January 1, 2029.

(2) An NCUA Board-approved amendment to a bond form does not toll or cause the 10-year period to restart; and

(3) The NCUA reserves the right to review a bond form at any point after its approval.

§ 713.5 [AMENDED]

■ 9. Section 713.5 is amended by:

■ a. In paragraphs (a) and (b) remove the word ''federal'' before the words ''credit union's'' and add in its place the words ''federally insured'' each place they appear.

■ b. In paragraph (c) add the words ''federally insured'' before the words ''credit union,'' ''credit unions,'' or ''credit union's'' each place they appear.

■ c. In paragraph (e) remove the word ''your'' and add in its place the words ''a federally insured credit union's''.

§ 713.6 [AMENDED]

■ 10. In § 713.6 remove the word ''federal'' before the words ''credit union's'' or ''credit unions'' and add the words ''federally insured'' before the words ''credit union's,'' ''credit unions,'' and ''credit union'' each place they appear.

■ 11. Revise § 713.7 to read as follows:

§ 713.7 May the NCUA Board require a federally insured credit union to secure additional insurance coverage?

The NCUA Board may require additional coverage when the NCUA Board determines that a federally insured credit union's current coverage is inadequate. The federally insured credit union must purchase this additional coverage within 30 days.

BILLING CODE 7535–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2018–0963; Product Identifier 2018–NM–135–AD]

RIN 2120–AA64

Airworthiness Directives; Dassault Aviation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Dassault Aviation Model FAN JET FALCON, and FAN JET FALCON SERIES C, D, E, F, and G airplanes. This proposed AD was prompted by a determination that new or more restrictive airworthiness limitations and maintenance requirements are necessary. This proposed AD would require revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations and maintenance requirements. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by January 7, 2019.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Dassault Falcon Jet Corporation, Teterboro Airport, P.O. Box 2000, South Hackensack, NJ 07606; telephone 201–440–6700; internet *http://www.dassaultfalcon.com*. You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0963; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Tom Rodriguez, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3226.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2018–0963; Product Identifier 2018–NM–135–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this NPRM. We will consider all comments received by the closing date and may amend this NPRM because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this NPRM.

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2018–0193, dated September 3, 2018 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for certain Dassault Aviation Model FAN JET FALCON and FAN JET FALCON SERIES C, D, E, F, and G airplanes. The MCAI states:

> In June 1988, the Federal Aviation Administration sponsored a conference of ageing aircraft, during which the decision was taken to pay particular attention to those. The ATA [Air Transport Association] and the AIA [Aerospace Industries Association] committed themselves to identify and to set up procedures to ensure continued structural integrity on ageing aircraft. Prompted by these actions, Dassault developed the SSIP [Supplemental Structural Inspection Program], aiming to guarantee the

airworthiness of the Fan Jet Falcon aeroplane which reach and exceed half of the Limit of Validity. The airworthiness limitations and certification maintenance instructions for the affected Fan Jet Falcon aeroplanes, which are approved by EASA, are currently defined and published in the ALS [airworthiness limitations section]. These instructions have been identified as mandatory for continued airworthiness.

Failure to accomplish these instructions could result in an unsafe condition.

Previously, EASA issued AD 2008–0221 to require accomplishment of the maintenance tasks, and implementation of the airworthiness limitations, as specified in ALS at Revision 7.

Since that [EASA] AD was issued, Dassault issued ALS Revisions 8 and 9, which introduced new and more restrictive maintenance requirements and/or airworthiness limitations.

For the reason described above, this [EASA] AD takes over the requirements for Fan Jet Falcon aeroplanes from EASA AD 2008–0221 and requires accomplishment of the actions specified in the ALS.

Once new [EASA] ADs have been published for all the types addressed by EASA AD 2008–0221, EASA plans to cancel that AD.

The unsafe condition is fatigue cracking and damage in principal structural elements; such fatigue cracking and damage could result in reduced structural integrity of the airplane. Because we determined that a separate FAA AD should be issued for each airplane model due to different ALS requirements, we did not issue an AD that corresponded to EASA AD 2008–0221. You may examine the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0963.

Related Service Information Under 1 CFR Part 51

Dassault has issued Chapter 5–40, Airworthiness Limitations, DMD 44729, Revision 9, dated November 29, 2017, of the Dassault Aviation Falcon 20 Maintenance Manual. This service information includes life limits for certain airframe components, and describes airworthiness limitations for safe life limits and certification maintenance requirements. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed Requirements of This NPRM

This proposed AD would require revising the existing maintenance or inspection program, as applicable, to include new or more restrictive airworthiness limitations and maintenance requirements.

This proposed AD would require revisions to certain operator maintenance documents to include new actions (*e.g.,* inspections). Compliance with these actions is required by 14 CFR 91.403(c). For airplanes that have been previously modified, altered, or repaired in the areas addressed by this proposed AD, the operator may not be able to accomplish the actions described in the revisions. In this situation, to comply with 14 CFR 91.403(c), the operator must request approval for an alternative method of compliance according to paragraph (i)(1) of this proposed AD.

Differences Between This Proposed AD and the MCAI or Service Information

The MCAI specifies that if there are findings from the ALS inspection tasks, corrective actions must be accomplished in accordance with Dassault maintenance documentation. However, this proposed AD would not include those requirements. Operators of U.S.-registered airplanes are required by general airworthiness and operational regulations to maintain their airplanes using methods that are acceptable to the FAA. We consider those methods to be adequate to replace parts, perform maintenance tasks, and address any corrective actions necessitated by the findings of the ALS inspections specified in this proposed AD.

Costs of Compliance

We estimate that this proposed AD affects 61 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

We have determined that revising the existing maintenance or inspection program takes an average of 90 work-hours per operator, although we recognize that this number may vary from operator to operator. In the past, we have estimated that this action takes 1 work-hour per airplane. Since operators incorporate maintenance or inspection program changes for their affected fleet, we have determined that a per-operator estimate is more accurate than a per-airplane estimate. Therefore, we estimate the total cost per operator to be $7,650 (90 work-hours × $85 per work-hour).

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This proposed AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes and associated appliances to the Director of the System Oversight Division.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities

under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Dassault Aviation: Docket No. FAA–2018–0963; Product Identifier 2018–NM–135–AD.

(a) Comments Due Date

We must receive comments by January 7, 2019.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Dassault Aviation Model FAN JET FALCON, and FAN JET FALCON SERIES C, D, E, F, and G airplanes, certificated in any category, all serial numbers, on which the Dassault Fan Jet Falcon Supplemental Structural Inspection Program (Dassault Service Bulletin (SB) 730), has been embodied into the airplane's maintenance program.

(d) Subject

Air Transport Association (ATA) of America Code 05, Time Limits/Maintenance Checks.

(e) Reason

This AD was prompted by a determination that new or more restrictive airworthiness limitations and maintenance requirements are necessary. We are issuing this AD to address, among other things, fatigue cracking and damage in principal structural elements; such fatigue cracking and damage could result in reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Maintenance or Inspection Program Revision

Within 90 days after the effective date of this AD, revise the existing maintenance or inspection program, as applicable, to incorporate the airworthiness limitations specified in Chapter 5–40, Airworthiness Limitations, DMD 44729, Revision 9, dated November 29, 2017, of the Dassault Aviation Falcon 20 Maintenance Manual. The initial compliance time for accomplishing the actions is at the applicable time specified in Chapter 5–40, Airworthiness Limitations, DMD 44729, Revision 9, dated November 29, 2017, of the Dassault Aviation Falcon 20 Maintenance Manual; or within 90 days after the effective date of this AD; whichever occurs later. Where the threshold column in the table in paragraph B, Mandatory Maintenance Operations, of Chapter 5–40, Airworthiness Limitations, DMD 44729, Revision 9, dated November 29, 2017, of the Dassault Aviation Falcon 20 Maintenance Manual specifies a compliance time in years, those compliance times start from the date of issuance of the original airworthiness certificate or date of issuance of the original export certificate of airworthiness.

(h) No Alternative Actions or Intervals

After accomplishing the revision required by paragraph (g) of this AD, no alternative actions (*e.g.,* inspections) or intervals may be used unless the actions and intervals are approved as an alternative method of compliance (AMOC) in accordance with the procedures specified in paragraph (i)(1) of this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Section, send it to the attention of the person identified in paragraph (j)(2) of this AD. Information may be emailed to: *9–ANM–116–AMOC–REQUESTS@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or European Aviation Safety Agency (EASA); or Dassault Aviation's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(j) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA AD 2018–0193, dated September 3, 2018, for related information. This MCAI may be found in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0963.

(2) For more information about this AD, contact Tom Rodriguez, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3226.

(3) For service information identified in this AD, contact Dassault Falcon Jet Corporation, Teterboro Airport, P.O. Box 2000, South Hackensack, NJ 07606; telephone 201–440–6700; internet *http://www.dassaultfalcon.com*. You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

Issued in Des Moines, Washington, on November 8, 2018.

Chris Spangenberg,

Acting Director, System Oversight Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2018–0962; Product Identifier 2018–NM–125–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for all Airbus SAS Model A350–941 airplanes. This proposed AD was prompted by reports of an overheat failure mode of the hydraulic engine-driven pump (EDP), and a determination that the affected EDP needs to be replaced with an improved EDP. This proposed AD would require replacement of a certain EDP with an improved EDP. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by January 7, 2019.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

• *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Airbus SAS, Airworthiness Office—EAL, Rond-Point Emile Dewoitine No: 2, 31700 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 45 80; email *continued-airworthiness.a350@airbus.com;* internet *http://www.airbus.com.* You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

Examining the AD Docket

You may examine the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0962; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Kathleen Arrigotti, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3218.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2018–0962; Product Identifier 2018–NM–125–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this NPRM. We will consider all comments received by the closing date and may amend this NPRM because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this NPRM.

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2018–0178, dated August 23, 2018 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus SAS Model A350–941 airplanes. The MCAI states:

> In the Airbus A350 design, the hydraulic fluid cooling system is located in the fuel tanks. Recently, an overheat failure mode of the hydraulic EDP was found, which may cause a fast temperature rise of the hydraulic fluid.
>
> This condition, if not detected and corrected, combined with an inoperative fuel tank inerting system, could lead to an uncontrolled overheat of the hydraulic fluid, possibly resulting in ignition of the fuel-air mixture in the affected fuel tank.
>
> To address this potential unsafe condition, Airbus issued a Major Event Revision (MER) of the A350 Master Minimum Equipment List (MMEL) that incorporates restrictions to avoid an uncontrolled overheat of the hydraulic system. Consequently, EASA issued Emergency AD 2017–0154–E to require implementation of these dispatch restrictions.
>
> After EASA AD 2017–0154–E was issued, following further investigation, Airbus issued another MER of the A350 MMEL that expanded the number of restricted MMEL items. At the same time, Airbus revised Flight Operation Transmission (FOT) 999.0068/17, to inform all operators accordingly. Consequently, EASA issued AD 2017–0180, retaining the requirements of EASA Emergency AD 2017–0154–E, which was superseded, and requiring implementation of the new Airbus A350 MMEL MER and, consequently, restrictions for aeroplane dispatch.
>
> After EASA AD 2017–0180 was issued, Airbus developed HMCA [Hydraulic Monitoring and Control Application] SW [software] S4.2, embodied in production through Airbus mod 112090, and introduced in service through Airbus SB [service bulletin] A350–29–P012. Consequently, EASA issued AD 2017–0200 [which corresponds to FAA AD 2018–19–19, Amendment 39–19419 (83 FR 48203, September 24, 2018)], retaining the requirements of EASA AD 2017–0180, which was superseded, and requiring modification of the aeroplane by installing HMCA SW S4.2.
>
> Since EASA AD 2017–0200 was issued, it was determined that the affected part need to be replaced with improved EDP. Consequently, Airbus issued the SB [Service Bulletin A350–29–P013, dated March 12, 2018] to provide instructions to replace the affected parts with improved EDP, having P/N [part number] 53098–06, which are embodied in production through Airbus mod 112192.
>
> For the reasons described above, this [EASA] AD retains the requirement of EASA AD 2017–0200, which is superseded, and requires replacement of each affected parts with improved EDP.

You may examine the MCAI in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0962.

Related Service Information Under 1 CFR Part 51

Airbus SAS has issued Service Bulletin A350–29–P013, dated March 12, 2018. This service information describes procedures for replacing a certain EDP with an improved EDP. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed Requirements of This NPRM

This proposed AD would require accomplishing the actions specified in the service information described previously, except as discussed under ''Differences Between this Proposed AD and the MCAI.''

Differences Between This Proposed AD and the MCAI

This NPRM does not propose to supersede AD 2018–19–19. Rather, we have determined that a stand-alone AD would be more appropriate to address the changes in the MCAI. This proposed AD would require replacing the EDP with an improved EDP.

The MCAI specifies a modification to install HMCA SW S4.2 on certain airplanes. This proposed AD would not require this modification, since the modification is required by AD 2018–19–19. Additionally, the MCAI prohibits installing software prior to HMCA SW S4.2. This proposed AD would not include that prohibition since it has already been prohibited by AD 2018–19–19.

The MCAI specifies changes to the Airbus MMEL to incorporate dispatch restrictions. However, the FAA MMEL is already updated to incorporate these, and all current and future U.S. operators are already required to use the FAA MMEL, so this proposed AD would not

require changes to the MMEL as specified in the MCAI.

Further, the MCAI notes that, after completing the modification by installing HMCA SW S4.2 and replacing the EDP with an improved EDP, Airbus A350 MMEL Minor Change V29ME1732522, dated January 3, 2018, and Airbus A350 MMEL Major Change V29ME1734973, dated January 30, 2018, can be implemented for that airplane, and those changes remove certain restrictions for that airplane. For U.S. registered aircraft, no provisions for relief are to be added to the MMEL with incorporation of this proposed AD. The FAA-approved MMEL currently contains more restrictive operational limitations, and we will update it when relief is justified.

Explanation of Compliance Time

In most ADs, we adopt a compliance time allowing a specified amount of time after the AD's effective date. In this case, however, we are using a fixed compliance date in this proposed AD. The MCAI requires operators of all Airbus SAS Model A350–941 airplanes to replace affected EDPs with improved EDPs to address an identified unsafe condition in a specified amount of time (within 17 months after the MCAI's effective date of September 6, 2018, or February 6, 2020). That compliance time is based on risk analysis requirements, including reports of fuel pump overheats and failures. To support this risk analysis, and to provide for coordinated implementation of EASA's regulations and this proposed AD, we are using the same compliance target in this proposed AD.

Costs of Compliance

We estimate that this proposed AD affects 11 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 25 work-hours × $85 per hour = $2,125	Up to $224,400	Up to $226,525	Up to $2,491,775.

According to the manufacturer, some or all of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all known costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This proposed AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes to the Director of the System Oversight Division.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus SAS: Docket No. FAA–2018–0962; Product Identifier 2018–NM–125–AD.

(a) Comments Due Date

We must receive comments by January 7, 2019.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus SAS Model A350–941 airplanes, certificated in any category, all serial numbers.

(d) Subject

Air Transport Association (ATA) of America Code 29, Hydraulic power.

(e) Reason

This AD was prompted by reports of an overheat failure mode of the hydraulic engine-driven pump (EDP), and a determination that the affected EDP needs to be replaced with an improved EDP. We are issuing this AD to address the overheat failure mode of the hydraulic EDP, which may cause a fast temperature rise of the hydraulic fluid, and, if combined with an inoperative fuel tank inerting system, could lead to an uncontrolled overheat of the hydraulic fluid, possibly resulting in ignition of the fuel-air mixture of the affected tank.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Action

Before February 6, 2020, replace each EDP having part number (P/N) 53098–04 with an improved EDP, having P/N 53098–06, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A350–29–P013, dated March 12, 2018.

(h) Parts Installation Prohibition

At the applicable time specified in paragraph (h)(1) or (h)(2) of this AD: No person may install an EDP having P/N 53098–04 on any airplane.

(1) For airplanes that, as of the effective date of this AD, have any EDP having P/N 53098–04 installed: After modification of the airplane as specified by paragraph (g) of this AD.

(2) For airplanes that, as of the effective date of this AD, are post-Modification 112192 and do not have any EDP having P/N 53098–04 installed: As of the effective date of this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Section, send it to the attention of the person identified in paragraph (j)(2) of this AD. Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or the European Aviation Safety Agency (EASA); or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* If any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA AD 2018–0178, dated August 23, 2018, for related information. This MCAI may be found in the AD docket on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0962.

(2) For more information about this AD, contact Kathleen Arrigotti, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3218.

(3) For service information identified in this AD, contact Airbus SAS, Airworthiness Office—EAL, Rond-Point Emile Dewoitine No: 2, 31700 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 45 80; email *continued-airworthiness.a350@airbus.com;* internet *http://www.airbus.com*. You may view this service information at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

Issued in Des Moines, Washington, on November 8, 2018.

Chris Spangenberg,

Acting Director, System Oversight Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 35

[Docket No. RM19–5–000]

Public Utility Transmission Rate Changes To Address Accumulated Deferred Income Taxes

AGENCY: Federal Energy Regulatory Commission, Department of Energy.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Energy Regulatory Commission (Commission) is proposing to require all public utility transmission providers with transmission rates under an Open Access Transmission Tariff (OATT), a transmission owner tariff, or a rate schedule to revise those rates to account for changes caused by the Tax Cuts and Jobs Act of 2017 (Tax Cuts and Jobs Act). Specifically, for transmission formula rates, the Commission is proposing to require that public utilities deduct excess accumulated deferred income taxes (ADIT) from or add deficient ADIT to their rate bases and adjust their income tax allowances by amortized excess or deficient ADIT. The Commission is also proposing to require all public utilities with transmission formula rates to incorporate a new permanent worksheet into their transmission formula rates that will annually track ADIT information. Additionally, the Commission is proposing to require all public utilities with transmission stated rates to determine the amount of excess and deferred income tax caused by the Tax Cuts and Jobs Act's reduction to the federal corporate income tax rate and return or recover this amount to or from customers.

DATES: Comments are due December 24, 2018.

ADDRESSES: Comments, identified by docket number, may be filed electronically at *http://www.ferc.gov* in acceptable native applications and print-to-PDF, but not in scanned or picture format. For those unable to file electronically, comments may be filed by mail or hand-delivery to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426. The Comment Procedures Section of this document contains more detailed filing procedures.

FOR FURTHER INFORMATION CONTACT:

Noah Lichtenstein (Technical Information), Office of Energy Market Regulation, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502–8696, *noah.lichtenstein@ferc.gov*.

Joshua Walters (Legal Information), Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502–6098, *joshua.walters@ferc.gov*.

SUPPLEMENTARY INFORMATION:

Table of Contents

1. In this Notice of Proposed Rulemaking (Proposed Rule), we are proposing to require all public utility transmission providers with transmission rates under an Open Access Transmission Tariff (OATT), a transmission owner tariff, or a rate schedule to revise those rates to account for changes caused by the Tax Cuts and Jobs Act of 2017 (Tax Cuts and Jobs Act).[1] These proposed reforms are designed to address the effects of the Tax Cuts and Jobs Act on the Accumulated Deferred Income Taxes (ADIT) reflected in all transmission rates under an OATT, a transmission owner tariff, or a rate schedule of public utility transmission providers. The proposed reforms are intended to ensure that ratepayers receive the benefits of the Tax Cuts and Jobs Act, and that the public utility transmission formula and stated rates are just and reasonable and not unduly discriminatory or preferential following the enactment of the Tax Cuts and Jobs Act. The proposed reforms are also intended to ensure that transmission formula and stated rates meet the Commission's tax normalization requirements such that the income tax component of those rates is calculated as though the taxable income were recognized in the same period and amount by the Internal Revenue Service (IRS) and the Commission.[2]

2. The proposed reforms generally fall into three categories and apply to public utilities with transmission formula rates and stated rates in different ways. First, we propose to require all public utilities with transmission formula rates to include a mechanism in their formula rates to deduct any excess ADIT from or add any deficient ADIT to their rate bases. This will ensure that rate base continues to be treated in a manner similar to that prior to the Tax Cuts and Jobs Act (*i.e.,* that rate base neutrality is preserved). As for public utilities with transmission stated rates, we do not propose any new requirements regarding rate base neutrality.

3. Second, we propose to require all public utilities with transmission formula rates to include a mechanism in their formula rates that decreases or increases their income tax allowances by any amortized excess or deficient ADIT, respectively. This reform will help to ensure that public utilities with transmission formula rates return excess ADIT to or recover deficient ADIT from ratepayers. As a result, ratepayers who contributed to excess ADIT balances will receive the benefit of the Tax Cuts and Jobs Act.

4. With regard to public utility transmission providers with stated rates, we are proposing to require these entities to determine the excess and deficient ADIT caused by the Tax Cuts and Jobs Act based on the ADIT amounts approved in their last rate case and then to return this amount to or recover this amount from customers. This reform is intended to increase the likelihood that those customers who contributed to the related ADIT accounts receive the benefits of the Tax Cuts and Jobs Act.

5. Third, we propose to require all public utilities with transmission formula rates to incorporate a new permanent worksheet into their transmission formula rate that will annually track information related to excess or deficient ADIT. We believe that this reform will increase the transparency surrounding the

[1] An Act to provide for reconciliation pursuant to titles II and V of the concurrent resolution on the budget for fiscal year 2018, Pub. L. 115–97, 131 Stat. 2054 (2017) (Tax Cuts and Jobs Act). In proposing this new requirement, the Commission relies on existing Commission regulations relating to tax normalization for public utilities as those regulations apply to public utilities with transmission formula or stated rates. *See* 18 CFR 35.24. In this Proposed Rule, the Commission does not propose any generic reforms as to non-public utilities or the non-transmission rates of public utilities. While any conclusions that the Commission makes in this proceeding may be relevant to such rates, they will be addressed on a case-by-case basis. Furthermore, to the extent any entity believes that the Tax Cuts and Jobs Act renders any existing Commission-jurisdictional rate unjust and unreasonable, that entity may submit a complaint to the Commission.

[2] In this Proposed Rule, the Commission refers to comments filed in response to the Notice of Inquiry issued March 15, 2018. *Inquiry Regarding the Effect of the Tax Cuts and Jobs Act on Commission-Jurisdictional Rates,* FERC Stats. & Regs. ¶ 35,582 (2018) (NOI). A list of commenters in that proceeding and the abbreviated names used in this Proposed Rule appears in Appendix A. Any comments to this Proposed Rule should be filed in this proceeding, Docket No. RM19–5–000.

adjustment of rate bases and income tax allowances to account for excess or deficient ADIT by public utilities with transmission formula rates. We do not propose any additional worksheets for public utilities with transmission stated rates because we believe that existing regulations require sufficient transparency.

6. We seek comments on these proposed reforms and areas for further comment within 30 days after publication of this Proposed Rule in the **Federal Register**.

I. Background

A. Tax Cuts and Jobs Act

7. On December 22, 2017, the President signed into law the Tax Cuts and Jobs Act. The Tax Cuts and Jobs Act, among other things, reduced the federal corporate income tax rate from 35 percent to 21 percent, effective January 1, 2018. This means that, beginning January 1, 2018, companies subject to the Commission's jurisdiction will compute income taxes owed to the IRS based on a 21 percent tax rate. The tax rate reduction will result in less corporate income tax expense going forward.[3]

8. Importantly, the tax rate reduction will also result in a reduction in ADIT liabilities and ADIT assets on the books of rate-regulated companies. ADIT balances are accumulated on the regulated books and records of public utilities based on the requirements of the Uniform System of Accounts. ADIT arises from timing differences between the method of computing taxable income for reporting to the IRS and the method of computing income for regulatory accounting and ratemaking purposes.[4] As a result of the Tax Cuts and Jobs Act reducing the federal corporate income tax rate from 35 percent to 21 percent, a portion of an ADIT liability that was collected from customers will no longer be due from public utilities to the IRS and is considered excess ADIT, which must be returned to customers in a cost of service ratemaking context. Additionally, for public utilities that have an ADIT asset, the Tax Cuts and Jobs Act will result in a reduction to that ADIT asset, and public utilities may seek to reflect in rates a portion of such reductions. Public utilities are required to adjust their ADIT assets and ADIT liabilities for the effect of the change in tax rates in the period that the change is enacted.[5]

B. Overview of Public Utility Transmission Rates

9. The Commission is responsible for ensuring that the rates, terms and conditions of service for wholesale sales and transmission of electric energy in interstate commerce are just, reasonable, and not unduly discriminatory or preferential. With respect to the transmission of electric energy in interstate commerce, most jurisdictional entities are subject to cost of service regulation. Cost of service regulation seeks to allow public utilities the opportunity to (1) recover operating costs, including income taxes, (2) recover the cost of capital investments, and (3) earn a just and reasonable return on investments.[6] Public utilities have calculated their cost of service-based transmission rates predominately by using formula rates or stated rates. These rates are contained in numerous agreements, including a public utility's OATT, a regional transmission operator's or independent system operator's OATT, coordination agreements, and wholesale distribution agreements. In this Proposed Rule, we focus on all public utilities with transmission formula or stated rates that are contained in an OATT, a transmission owner tariff, or a rate schedule.

10. When a public utility uses stated rates, if the public utility seeks to change its rate, it files a rate case at the Commission to establish the cost of service revenue requirement, allocate costs to various customer groups, and calculate rates. As an alternative, the Commission permits public utilities to establish rates through formulas, in which the Commission accepts the public utility's cost of service calculation methodologies and input sources and allows the public utility to update those inputs every year.

11. Public utilities must seek changes to their transmission stated rates or formula rates through filings with the Commission under section 205 of the Federal Power Act (FPA),[7] while the Commission and third parties can challenge a rate in a proceeding initiated under section 206 of the FPA.[8]

C. Order No. 144 and 18 CFR 35.24

12. The purpose of tax normalization is to match the tax effects of costs and revenues with the recovery in rates of those same costs and revenues.[9] As noted above, timing differences may exist between the method of computing taxable income for reporting to the IRS and the method of computing income for regulatory accounting and ratemaking purposes. The tax effects of these differences are placed in a deferred tax account to be used in later periods when the differences reverse.[10]

13. The Commission established this policy of tax normalization in Order No. 144 where it required use of ''the provision for deferred taxes [(*i.e.,* ADIT)] as a mechanism for setting the tax allowance at the level of current tax cost.'' [11] In keeping with this normalization policy, and as relevant to the Tax Cuts and Jobs Act's reduction of the federal corporate income tax rate, the Commission in Order No. 144 also required adjustments in the ADIT of public utilities' cost of service when excessive or deficient ADIT has been created as a result of changes in tax rates.[12] Furthermore, the Commission required ''a rate applicant to compute the income tax component in its cost of service by making provision for any excess or deficiency in its deferred tax reserves resulting . . . from tax rate changes.''[13] The Commission required that such provision be consistent with a Commission-approved ratemaking method made specifically applicable to the rate applicant.[14] Where no ratemaking method has been made specifically applicable, the Commission required the rate applicant to advance some method in its next rate case.[15] The Commission stated that it would determine the appropriateness of any proposed method on a case-by-case basis, but as the issue is resolved in a number of cases, a method with wide applicability may be adopted.[16] The Commission codified the requirements

of Order No. 144 in its regulations in 18 CFR 35.24.[17]

D. Notice of Inquiry

14. Following the enactment of the Tax Cuts and Jobs Act, the Commission issued the NOI seeking comments on, among other things, whether, and if so, how, the Commission should address the effects of the Tax Cuts and Jobs Act on ADIT.[18] The Commission noted that the Tax Cuts and Jobs Act's reduction to the federal corporate income tax rate would potentially create excess or deficient ADIT on the books of public utilities.[19] As relevant to the reforms proposed in this Proposed Rule, the Commission sought comments on the preservation of rate base neutrality and how public utilities should make related adjustments to their rate bases for excess and deficient ADIT.[20] The Commission also sought comment on how public utilities should adjust their income allowances to return or recover excess or deficient ADIT, respectively,[21] as well as the method used to return or recover excess or deficient protected and unprotected ADIT.[22] Finally, the Commission sought comment on whether it should require public utilities to provide to the Commission, on a one-time basis, additional information to show the computation of excess or deficient ADIT and the corresponding return of excess ADIT to customers or recovery of deficient ADIT from customers. If so, the Commission also sought comments on what types of information public utilities should provide.[23]

II. Discussion

15. Since the issuance of Order No. 144, the landscape of public utility transmission rates has changed dramatically; that is, the vast majority of public utilities now use formula rates rather than stated rates. As described above, unlike stated rates, which are updated only through a rate case initiated by a FPA section 205 application by the public utility or an FPA section 206 action by the Commission or a complaining third party, inputs to formula rates are updated annually to derive a charge assessed to customers. Thus, a rate case no longer remains the appropriate vehicle for formula rates to reflect excess or deficient ADIT in a public utility's cost of transmission service, as contemplated by Order No. 144. The public utility's transmission formula rate should include provisions that accurately reflect excess or deficient ADIT in a public utility's cost of transmission service during the annual updates of the rest of the revenue requirement.

16. Following the NOI, we have determined that this near-industry-wide transition from stated to formula rates has caused a gap in the transmission formula rates of public utilities such that many, if not most, of those rates do not contain provisions to fully reflect any excess or deficient ADIT following a change in tax rates, as required by Order No. 144 and the Commission's regulations in 18 CFR 35.24. Two components are necessary to maintain an accurate cost of service following a change in income tax rates, such as that caused by the Tax Cuts and Jobs Act: (1) Preservation of rate base neutrality through the removal of excess ADIT from or addition of deficient ADIT to rate base; and (2) the return of excess ADIT to or recovery of deficient ADIT from ratepayers.[24]

17. A review of public utility transmission formula rates suggests that only some transmission formula rates contain the first component, while even fewer contain the second. Consequently, as discussed in greater detail below, we propose to require public utilities with transmission formula rates to revise those rates to include these two components. Additionally, to provide greater transparency, we propose to require all public utilities with transmission formula rates to incorporate a new permanent worksheet into their transmission formula rates that will annually track ADIT information related to these two components.

18. Regarding public utilities with transmission stated rates, we propose maintaining Order No. 144's requirement that such public utilities reflect any adjustments made to their ADIT balances as a result of the Tax Cuts and Jobs Act (and any future tax changes) in their next rate case. However, to increase the likelihood that those customers who contributed to the related ADIT accounts receive the benefit of the Tax Cuts and Jobs Act, we propose to require public utilities with transmission stated rates to (1) determine any excess or deficient ADIT caused by the Tax Cuts and Jobs Act and (2) return or recover this amount to or from customers. We believe that the Commission's existing regulations already require all of the information necessary to support the changes proposed herein to reflect the effects of the Tax Cuts and Jobs Act on a transmission stated rate. Therefore, we propose not to require any additional worksheets.

19. The Commission generally does not permit single-issue ratemaking. However, similar to the Commission's actions following the Tax Cuts and Jobs Act,[25] given the limited scope of the reforms proposed here, we propose that compliance filings made in response to this Proposed Rule's final requirements may be considered on a single-issue basis.[26]

A. Ensuring Rate Base Neutrality

1. NOI

20. In the NOI, the Commission sought comment on how to ensure that rate base continues to be treated in a manner similar to that prior to the Tax Cuts and Jobs Act (*i.e.,* how to preserve rate base neutrality), until excess and deficient ADIT have been fully returned or recovered in a just and reasonable manner. The Commission also sought comment on whether, and if so how, public utilities should make adjustments to rate base to reflect excess and deficient ADIT. The Commission asked that commenters address both formula rates and stated rates.[27]

[17] Originally promulgated as part of Order 144, the regulatory text was redesignated as 18 CFR 35.25 in Order No. 144–A. *See* Order No. 144–A, FERC Stats. & Regs. ¶ 30,340 at 30,140. In Order No. 545, the Commission again redesignated the regulatory text to its present designation as 18 CFR 35.24. *See Streamlining Electric Power Regulation,* Order No. 545, FERC Stats. & Regs. ¶ 30,955, at 30,713 (1992) (cross-referenced at 61 FERC ¶ 61,207).

[18] NOI, FERC Stats. & Regs. ¶ 35,582.

[19] *Id.* P 13.

[20] *Id.* PP 14–15.

[21] *Id.* P 21.

[22] *Id.* PP 17, 19. In the NOI, the Commission referred to ''plant-based'' and ''non-plant based'' ADIT. We agree with commenters' recommendation to follow the IRS terminology of ''protected'' and ''unprotected'' ADIT instead of ''plant-based'' and ''non-plant based'' presented in the NOI. The IRS terms for ''protected'' and ''unprotected'' are directly associated with the IRS' normalization protections to ensure a tax payer maintains the benefit of accelerated depreciation over the life of the related asset. Accordingly, we have changed the terms used in this Proposed Rule to better mirror IRS terminology.

[23] *Id.* P 23.

[24] *Id.* P 13. While the Tax Cuts and Jobs Act decreased the federal corporate income tax rate, the reforms proposed in this Proposed Rule are also meant to ensure that transmission formula rates reflect the effects of tax increases, as well.

[27] NOI, FERC Stats. & Regs. ¶ 35,582 at PP 14–15.

2. Comments

21. Numerous public utilities and other commenters assert that, in order to preserve rate base neutrality, unamortized balances of excess ADIT must continue to be treated as an offset to (*i.e.,* a deduction from) rate base until those balances are flowed back in their entirety to customers.[28] These commenters generally note that, following the passage of the Tax Cuts and Jobs Act, public utilities transferred excess ADIT to Account 254 (Other Regulatory Liabilities) or Account 182.3 (Other Regulatory Assets), as appropriate.[29] Accordingly, these commenters state that, just as the ADIT balances were deducted from or added to rate base, as appropriate, the corresponding amounts recorded in Accounts 254 and 182.3 should be deducted from or added to rate base. While generally agreeing that rate base adjustments are necessary, several commenters assert that there is no ''one-size fits all'' solution.[30]

22. Regarding public utilities with formula rates, several commenters support the addition of a line item to formula rates for rate base adjustments reflecting excess or deficient ADIT recorded in Accounts 254 and 182.3.[31] Many of these commenters suggest that the Commission permit public utilities to make single-issue FPA section 205 filings to make the appropriate changes to their formula rates.[32] EEI suggests that the Commission should permit utilities with formula rates requiring adjustments to address these during their next true-up annual informational filing.[33]

23. Alternatively, APPA and AMP, and Indicated Customers suggest that any excess or deficient ADIT resulting from the implementation of the Tax Cuts and Jobs Act be recorded to the same ADIT accounts (*e.g.,* Accounts 190, 281, 282, and 283) where the original entries for the regulatory assets and regulatory liabilities were established.[34] APPA and AMP state that by keeping the excess or deficient ADIT in sub-accounts within the original ADIT accounts, it will be more transparent and easier to track as the balances are flowed back.[35] As another alternative, the Oklahoma Attorney General asserts that the Commission should consider requiring that the line item currently used to offset rate base with ADIT include both ADIT balances in traditional ADIT-related accounts and those excess ADIT balances in other accounts identified by the Commission.[36]

24. Other commenters note that such a line item adjustment may not be necessary in all cases.[37] Specifically, these commenters assert that certain formula rates (*e.g.,* certain MISO Attachment O, AEP, Exelon, and Eversource formula rates) already provide for the inclusion of excess ADIT in rate base and that the balances in Accounts 254 and 182.3 will naturally flow into rate base without any modification.[38]

25. Regarding public utilities with stated rates, commenters generally agree that adjustments are not necessary to preserve rate base neutrality with respect to stated rates.[39] National Grid and Avangrid state that, under cost-of-service, both ADIT balances and regulatory liability balances should be deducted from rate base in calculating the stated rate.[40] Avangrid asserts that rate base neutrality issues are not raised with transmission stated rates because these rates assume the same amount of ADIT deduction to rate base without regard to how the companies adjusted their books and records.[41]

3. Proposed Requirements

a. Formula Rates

26. We propose to require all public utilities with transmission formula rates to include a mechanism in their formula rates which deducts any excess ADIT from or adds any deficient ADIT to their rate bases under 18 CFR 35.24. As described above, the Commission's regulations in 18 CFR 35.24 require public utilities to reflect any excess or deficient ADIT as a result of any changes in tax rates in their next rate case. As a result of the Tax Cuts and Jobs Act's reduction of the federal corporate income tax from 35 percent to 21 percent, public utilities have collected excess funds for their ADIT liabilities and have not collected sufficient funds for any ADIT assets. To preserve rate base neutrality by accurately matching the tax allowance with the current tax cost as required by Commission regulations, public utilities with transmission formula rates must include provisions in their formula rates to adjust their ADIT for excess or deficient ADIT.[42] We believe our proposal will ensure that public utilities with transmission formula rates will adjust their ADIT for any excess or deficient ADIT caused by the Tax Cuts and Jobs Act or any future changes to tax rates which may give rise to excess or deficient ADIT.

27. While we are proposing to require public utilities with transmission formula rates to include a mechanism to adjust rate base for any excess or deficient ADIT, we are not proposing to prescribe a specific adjustment mechanism which applies to all public utilities with transmission formula

rates. We agree with commenters to the NOI that prescribing a one-size-fits-all approach, such as adding a line item, is not appropriate and that the Commission should instead allow public utilities to propose any necessary changes to their formula rates on an individual basis. Recent filings and comments submitted in the NOI suggest that multiple approaches to modify rate base may be just and reasonable. For example, as noted by MISO Transmission Owners,[43] the Commission accepted proposals by ITC Companies and Ameren in which those companies did not revise their formula rates to modify their adjustments to rate base by adding a new line item for rate base.[44] Instead, those companies demonstrated that, while not visible in their formula rates, their adjustments to rate base were modified by any excess or deficient ADIT prior to their input to the formula rates. Accordingly, we also propose that public utilities with transmission formula rates may demonstrate that their formula rates already meet the proposed ADIT adjustment requirements described in this Proposed Rule.

28. We are not persuaded by commenters to the NOI who suggest that excess or deficient ADIT amounts should be recorded to the same ADIT accounts where the original entries for the regulatory assets and regulatory liabilities were established. The Commission previously issued guidance on this topic, finding that public utilities are required to record a regulatory asset (Account 182.3) associated with deficient ADIT or regulatory liability (Account 254) associated with excess ADIT.[45] As a result, we do not propose any changes to that specific accounting guidance.

b. Stated Rates

29. We do not propose any new requirements regarding rate base neutrality for public utilities with transmission stated rates. As noted by commenters to the NOI, stated rates are calculated based in large part on company data submitted, and projections made, at the time of the last rate case. Thus, while ADIT balances may have changed as a result of the Tax Cuts and Jobs Act, so too will many other aspects of the cost of service and calculations that underlie the stated rate, making it difficult to re-evaluate ADIT and its effect on rate base following a change in tax rates without fully evaluating a public utility's entire cost of service and rates.[46] We believe that the revisions we are proposing below, related to the return or recovery of excess or deficient ADIT, will adequately address the effects of the Tax Cuts and Jobs Act on ADIT and will avoid such complications. Therefore, we do not propose to require adjustments to the rate bases of public utilities with transmission stated rates prior to their next rate case on a generic basis.

B. Return or Recovery of Excess or Deficient ADIT

1. NOI

30. In the NOI, the Commission asked commenters to address how public utilities with stated or formula rates should adjust their income tax allowance such that the allowance would be decreased or increased by the amortization of excess or deficient ADIT, respectively.[47] Additionally, the Commission asked commenters how the Average Rate Assumption Method, and alternatively, the Reverse South Georgia Method or South Georgia Method, as appropriate, will be implemented in the amortization of protected excess or deficient ADIT and how quickly to amortize unprotected excess or deficient ADIT.[48]

2. Comments

31. Commenters generally support adjusting public utilities' income tax allowances by the amortization of excess or deficient ADIT. Many commenters suggest adding a line item or several line items to public utility transmission formula rates to make this adjustment,[49] with some transmission owners noting that they have already submitted or now propose to submit such revisions.[50] MISO Transmission Owners note that the Commission accepted such a proposal by ITC Great Plains.[51] National Grid suggests that adjustments to income tax allowances could also be made through the weighted cost of capital.[52]

32. Commenters also support revisions to transmission stated rates to reflect income tax allowance adjustments for the amortization of excess or deficient ADIT.[53] TAPS states that, to address these adjustments, it supports an approach similar to utility-specific investigations the Commission opened with respect to the change in the federal corporate income tax rate.[54] However, TAPS expresses concern that stated rate customers will find it challenging to verify their utilities' calculation and asserts that, thus, the Commission should encourage utilities to work with customers toward a mutually acceptable solution and require those utilities to file the return mechanism, including detailed documentation and worksheets so that the calculation of excess ADIT can be validated.[55]

33. Some commenters caution the Commission against mandating that public utilities adopt a single method to adjust their formula rates' income tax allowances. Instead, these commenters suggest that the Commission recognize public utilities' specific circumstances by evaluating proposed modifications on a case-by-case basis or recognizing that some formula rates already adjust the income tax allowance by the amortization of excess or deficient ADIT and, therefore, would not require revision.[56] Indicated Transmission Owners argue that the Commission should make any evaluations on a single-issue basis.[57] The Oklahoma Attorney General suggests that the Commission could use ongoing proceedings, such as the show cause proceedings initiated against public utilities whose formula rates would not automatically adjust to reflect the lower federal corporate income tax rate of 21

percent, to revise formula rates such that the income tax allowance is adjusted by the amortization of excess or deficient ADIT.[58]

34. Consumer Advocates are concerned that absent Commission intervention, jurisdictional entities may begin to amortize their excess ADIT, thereby denying customers the full benefit of the Tax Cuts and Jobs Act. Consumer Advocates argue that to the extent any protected ADIT balances have been amortized to date, the Commission should require such excess protected ADIT amortization credits to be reversed and the liability balance restored to that of the implementation date of the Tax Cuts and Jobs Act.[59]

35. Regarding protected excess or deficient ADIT, commenters agree that the Commission has no need to change its existing regulations or precedent or depart from the Tax Cuts and Jobs Act's normalization provisions.[60] Regarding unprotected excess or deficient ADIT, commenters agree that the Commission should adopt a case-by-case approach for determining how quickly excess or deficient unprotected ADIT should be flowed back to or recovered from customers.[61]

3. Proposed Requirements

a. Formula Rates

36. We propose to require all public utilities with transmission formula rates to include a mechanism in their formula rates which decreases or increases their income tax allowances by any amortized excess or deficient ADIT, respectively, under 18 CFR 35.24. Such a mechanism is necessary because, as described above, the Tax Cuts and Jobs Act's reduction of the federal corporate income tax rate from 35 percent to 21 percent means public utilities have collected from customers funds in excess of what is due to the IRS for ADIT liabilities and, conversely for ADIT assets, funds from customers insufficient to satisfy IRS tax obligations. Similar to the proposed rate base adjustment requirements, these proposed income tax allowance adjustment requirements are intended to satisfy Order No. 144's requirement that the income tax allowance match the current tax cost and reflect the effects of any future changes to tax rates that may give rise to excess or deficient ADIT.

37. Similar to comments regarding adjustments to rate base, we agree with commenters to the NOI that prescribing a one-size-fits-all approach is not appropriate and that the public utilities with transmission formula rates should instead be allowed to propose any necessary changes to their rates on an individual basis. Accordingly, we do not propose that all public utilities with transmission formula rates must use a single method to adjust their income tax allowances for any amortized excess or deficient ADIT. Many public utilities with transmission formula rates use different formats of rate templates or formulas, and a single, prescriptive method, such as the requirement of a single line item, may not fully capture or transparently convey the amortization of excess or deficient ADIT. Additionally, recent filings by public utilities that proposed revisions to their formula rate templates to reflect changes in income tax rates by, among other things, incorporating mechanisms to return excess ADIT demonstrate that company-specific variations are necessary.[62]

38. Regarding the period over which the amortization of excess or deficient ADIT must occur, we believe that public utilities should follow the guidance provided in the Tax Cuts and Jobs Act, where available. As noted by commenters to the NOI, the Tax Cuts and Jobs Act provides a method of general applicability and requires public utilities to return excess protected ADIT[63] no more rapidly than over the life of the underlying asset using the Average Rate Assumption Method, or, where a public utility's books and underlying records do not contain the vintage account data necessary, it must use an alternative method.[64] In contrast, the Tax Cuts and Jobs Act does not specify what method public utilities must use for excess or deficient unprotected ADIT. We agree with commenters to the NOI that, because such a determination depends on the specific facts and circumstances for each public utility, a case-by-case approach to amortizing excess or deficient unprotected ADIT remains appropriate.

39. Consumer Advocates are concerned that a portion of the amounts allowable to be returned to customers under the Average Rate Assumption Method schedule would not be refunded due to the fact that any proposed tariff provisions to return excess ADIT as a result of this Proposed Rule will not be effective until after January 1, 2018. We acknowledge that in applying a tax normalization method (*e.g.,* the Average Rate Assumption Method), public utilities are required to develop a schedule removing ADIT from rate base and returning it to customers, effective January 1, 2018, using the fastest allowable method to return the excess ADIT under the IRS' normalization requirements. However, these requirements represent only the fastest allowable return schedule and do not remove a public utility's obligation to return the excess ADIT. Any amounts allowed to be returned under the Average Rate Assumption Method schedule prior to the effective date of proposed tariff provisions made in compliance with the Proposed Rule should still be refunded to customers. In other words, the full regulatory liability for excess ADIT should be captured in rates, beginning on the effective date of any proposed tariff provision. We do not believe that any specific reforms are necessary to accomplish this because public utilities should not amortize an excess ADIT regulatory liability for accounting purposes until it is included in ratemaking.[65]

[63] While the Tax Cuts and Jobs Act does not mention deficient protected ADIT specifically, we expect that public utilities will recover such deficient ADIT in the same manner prescribed for excess protected ADIT.

[64] Tax Cuts and Jobs Act, Sec. 13001(b)(6)(A), 131 Stat. at 2099. If a public utility must use an alternative method, Commission precedent provides that the public utility should use the Reverse South Georgia Method for excess ADIT or the South Georgia Method for deficient ADIT. *See Memphis Light, Gas and Water Div.* v. *FERC,* 707 F.2d at 569.

[65] The description of Account 182.3 (Other regulatory assets) states, ''The amounts recorded in this account are generally to be charged,

Continued

b. Stated Rates

40. We propose to require all public utilities with transmission stated rates to (1) determine the excess and deficient income tax caused by the Tax Cuts and Jobs Act's reduction to the federal corporate income tax rate and (2) return this amount to or recover this amount from customers under 18 CFR 35.24. We also propose for public utilities with transmission stated rates to calculate this excess or deficient ADIT using the ADIT approved in their last rate cases. We believe calculating excess or deficient ADIT in this manner will allow public utilities with transmission stated rates to preserve their costs of service as accepted in their last rate case. We are not seeking to propose a specific way for public utilities with transmission stated rates to return or recover the excess or deficient income taxes to ratepayers; rather, we will evaluate each proposal on an individual basis. We believe the proposed reforms will increase the likelihood that those customers who contributed to the related ADIT accounts receive the benefit of the Tax Cuts and Jobs Act.

41. TAPS expresses concern that the customers of public utilities with transmission stated rates will lack sufficient information to evaluate any proposals to return or recover excess or deficient ADIT, respectively. We note that the Commission's regulations require public utilities filing changes to transmission rates to identify the effect of tax changes on those rates.[66] Accordingly, we expect that public utilities with stated rates would include in their compliance filings resulting from this Proposed Rule supporting information necessary to identify, at minimum, the following: (1) How any ADIT accounts were re-measured and the excess or deficient ADIT contained therein; (2) the accounting of any excess or deficient amounts in Accounts 182.3 and 254; (3) whether the excess or deficient ADIT is protected or unprotected; (4) the accounts to which the excess or deficient ADIT will be amortized; and (5) the amortization period of the excess or deficient ADIT to be returned or recovered through the rates.

42. Finally, as noted above, public utilities with transmission stated rates must conform to the Tax Cuts and Jobs Act's requirements regarding the period over which the amortization of protected excess or deficient ADIT must occur. We will continue to analyze the appropriate amortization period for unprotected ADIT on a case-by-case basis.

C. Support for Excess and Deficient ADIT Calculation and Amortization

1. NOI

43. In the NOI, the Commission sought comment on whether it should require public utilities to provide to the Commission, on a one-time basis, additional information, such as supporting worksheets, to show the computation of excess or deficient ADIT and the corresponding flow-back of excess ADIT to customers or recovery of deficient ADIT from customers. The Commission asked commenters to address what types of information public utilities already record for ADIT-related accounting and whether balances and amortization of regulatory liability and asset accounts, computation of excess and deficient ADIT, delineation between protected and non-protected ADIT, and a description of the allocation method used to determine the transmission-related portion of excess or deficient ADIT would be appropriate to include in a supporting worksheet.[67]

2. Comments

44. Commenters were split regarding the requirement to provide additional worksheets. Some commenters assert that the Commission should not require any additional worksheets at this time.[68] These commenters generally assert that the implementation of general worksheet requirements would be burdensome on the industry.[69] They assert that any data should only be required to be submitted on a company by company basis, as necessary, rather than require a one-time proceeding for the purpose of all public utilities providing the data showing whether and how ADIT balances were re-measured.[70] Certain commenters assert that the Commission should not require additional worksheets as transmission formula rates and associated protocols already include mechanisms to provide details to customers.[71] Avangrid similarly states that the formula rate processes should be used to provide the level of transparency to verify the flowback of excess ADIT ultimately prescribed by the Commission. EEI states that if the Commission does require additional supporting information as part of EEI's proposed show cause orders, the Commission should first provide its proposed financial template, in a rulemaking, to allow for review by public utilities and stakeholders. EEI adds that this would reduce the burden on individual public utilities and the Commission and would be similar to the approach leading up to the Gas Tax Final Rule.[72]

45. Other commenters, however, assert that the Commission should require electric public utilities to provide a one-time filing of additional information to provide transparency regarding excess and deficient ADIT, and how rates will be impacted by any changes.[73] APPA and AMP urge the Commission to require that supporting information be filed regarding excess or deficient ADIT, but not be limited to only ADIT-related material. They assert that public utilities should also describe, with supporting schedules, any current or projected effects on their books associated with the Tax Cuts and Jobs Act's changes to bonus depreciation, or any other potential rate-related impacts.[74] APPA and AMP further state that for public utilities with transmission formula rates, the utilities should provide as part of their annual updates, calculations showing excess ADIT amortization amounts that should be flowed back to customers in the applicable rate period. Consumer Advocates state that in addition to requiring a detailed worksheet identifying all book tax timing differences that comprise deferred tax liability balances, the Commission should evaluate the build-up of net operating losses as deferred tax assets. They assert that such balances should not automatically be inserted as an addition to regulated rate base.[75] New York Transco states that each public utility should be permitted to compile and present this additional information in the manner it deems most efficient and useful for stakeholders. New York

concurrently with the recovery of the amounts in rates. . .'' (emphasis added). 18 CFR part 101, Account 182.3 (Other Regulatory Assets).

[74] APPA and AMP NOI Comments at 17–18.

[75] Consumer Advocates NOI Comments at 10–11.

Transco states that if stakeholders desire additional information, any interested party can seek that information consistent with the formula rate implementation protocols that address information sharing. While not objecting to the provision of additional information, National Grid states that the Commission should not impose this requirement until after December 2018 as the additional information will not be meaningful until after companies have set the final rate change balance after the filing of their fiscal year 2018 federal corporate income tax returns.[76]

3. Proposed Requirements

a. Formula Rates

46. We propose to require all public utilities with transmission formula rates to incorporate a new permanent worksheet into their transmission formula rates that will annually track information related to excess or deficient ADIT under 18 CFR 35.24. We believe that this reform is necessary to provide interested parties adequate transparency regarding how public utilities with transmission formula rates adjust their rate bases and income tax allowances to account for excess or deficient ADIT. We also believe that requiring public utilities with transmission formula rates to provide this information on an annual basis rather than a one-time basis will better allow interested parties to follow excess or deficient ADIT as it is included in an annual revenue requirement and provide transparency as to any future changes in tax rates. We also believe that updating the proposed worksheet annually will better align with the nature of the vast majority of formula rates where calculation methodologies and input sources are accepted prior to those inputs being populated. Consequently, we do not propose that any worksheet be populated when submitted to the Commission for compliance, only that the function of the worksheet be clear.

47. Similar to other reforms proposed in this Proposed Rule, we do not propose a pro forma worksheet that must be adopted by all public utilities with transmission formula rates; rather, we propose requiring general categories of information that each excess or deficient ADIT tracking worksheet must contain. We propose that each excess or deficient ADIT worksheet must, at minimum, include the following: (1) How any ADIT accounts were re-measured and the excess or deficient ADIT contained therein; (2) the accounting of any excess or deficient amounts in Accounts 182.3 and 254; (3) whether the excess or deficient ADIT is protected or unprotected; (4) the accounts to which the excess or deficient ADIT are amortized; and (5) the amortization period of the excess or deficient ADIT being returned or recovered through the rates. Because we do not propose to define the form any worksheet or worksheets must take, only the information it must contain, we propose evaluating such worksheet or worksheets on an individual basis. We also request comments on whether we should consider additional guiding principles to those described above.

48. We disagree with commenters to the NOI that argue that providing such information is overly burdensome for the industry. Public utilities with transmission formula rates will already have gathered the information we propose to require in the worksheets to re-measure their ADIT balances and develop amortization schedules following the Tax Cuts and Jobs Act's reduction of the federal corporate income tax rate. Further, the Commission has already accepted worksheets that convey information similar to the proposed requirements outlined above.[77]

49. We also disagree with commenters to the NOI that public utilities' existing formula rate protocols should preclude the Commission from proposing an excess or deficient ADIT worksheet. While the Commission established that formula rate protocols should allow for the provision of any information necessary to understand the inputs to the rate in order to provide sufficient transparency to interested parties, the Commission has since required public utilities to revise their formula rates to include greater detail where it has deemed that certain inputs to the rate are complex enough to warrant prior understanding of their effect.[78] As related to excess and deficient ADIT, we believe the proposed worksheet will allow interested parties to ensure they are receiving the benefits of the Tax Cuts and Jobs Act, as well as to track over time any changes in the rate effects of the tax change as, for example, assets are sold or retired.

b. Stated Rates

50. As described above in the proposal for return of excess ADIT or recovery of deficient ADIT, we believe that the Commission's existing regulations require public utilities with transmission stated rates to provide sufficient support for any proposed tax-related changes. As a result, we do not propose any additional information requirements for public utilities with transmission stated rates.

III. Proposed Compliance Procedures

51. We propose to require each public utility with transmission stated or formula rates to submit a compliance filing within 90 days of the effective date of any subsequent final rule in this proceeding to revise its transmission formula or stated rates, as necessary, to demonstrate that it meets the requirements set forth in any subsequent final rule.

52. Some public utilities with transmission formula rates may already have mechanisms in place in their rates that address the issues and concerns addressed by any subsequent final rule. Where these provisions would be modified by any subsequent final rule, the public utility must either comply with any subsequent final rule or demonstrate that these previously approved variations continue to be consistent with or superior to the requirements of any subsequent final rule.

53. The Commission will assess whether each compliance filing satisfies the proposed requirements stated above and issue additional orders as necessary to ensure that each public utility with transmission stated or formula rates meets the requirements of the subsequent final rule.

IV. Information Collection Statement

54. The collection of information contained in this Proposed Rule is subject to review by the Office of Management and Budget (OMB) regulations under section 3507(d) of the Paperwork Reduction Act of 1995 (PRA).[79] OMB's regulations require approval of certain informational collection requirements imposed by an agency.[80] Upon approval of a collection(s) of information, OMB will assign an OMB control number and an expiration date. Respondents subject to the filing requirements will not be

[76] National Grid NOI Comments at 16.

[77] *See, e.g., Arizona Public Service Company,* Docket No. ER18–975–001 (May 22, 2018) (delegated order).

[78] *See, e.g., Midcontinent Indep. Sys. Operator, Inc.,* 153 FERC ¶ 61,374 at P 14 (directing certain transmission companies to revise their transmission formula rates to include worksheets to ensure appropriate transparency). The Commission has also regularly required certain revisions to new formula rates to provide greater transparency. *See, e.g., Xcel Energy Sw. Transmission Co., LLC,* 149 FERC ¶ 61,182 (2014); *Xcel Energy Transmission Dev. Co., LLC,* 149 FERC ¶ 61,181 (2014); *Transource Wisconsin, LLC,* 149 FERC ¶ 61,180 (2014); *Transource Kansas, LLC,* 151 FERC ¶ 61,010 (2015).

[79] 44 U.S.C. 3507(d).

[80] 5 CFR 1320.11.

penalized for failing to respond to these collections of information unless the collections of information display a valid OMB control number.

55. The reforms proposed in this Proposed Rule address public utilities that have transmission formula rates and transmission stated rates. The reforms related to transmission formula rates represent new requirements for these entities under the Commission's regulations in 18 CFR 35.24, which we believe are necessary because of the dramatic changes in the rate structure of the electric transmission industry since this provision was originally promulgated in 1981.[81] These new requirements would require each public utility with a transmission formula rate to revise its rate so that any excess or deficient ADIT is properly reflected in its revenue requirement following a change in tax rates, such as those established by the Tax Cuts and Jobs Act. Additionally, each public utility with a transmission formula rate would be required to incorporate a new permanent worksheet into its transmission formula rate to increase transparency.

56. The reforms required by this Proposed Rule will require each public utility with stated rates to calculate the excess and deficient ADIT caused by the Tax Cuts and Jobs Act and to return to or recover from customers those amounts. This reform is intended to increase the likelihood that customers who contributed to the excess ADIT balance timely receive the benefits of the Tax Cuts and Jobs Act.

57. The reforms proposed in this Proposed Rule would require compliance filings with the Commission by each public utility with transmission stated or formula rates to allow the Commission the opportunity to determine whether each such public utility met the requirements detailed in this Proposed Rule.

58. We anticipate the reforms proposed in this Proposed Rule, once implemented, would not significantly change currently existing burdens on an ongoing basis. With regard to those public utilities with transmission stated or formula rates that believe that they already comply with the reforms proposed in this Proposed Rule, they could demonstrate their compliance in the filing required 90 days after the effective date of the final revision in this proceeding. We will submit the proposed reporting requirements to OMB for its review and approval under section 3507(d) of the Paperwork Reduction Act.[82]

59. While we expect the adoption of the reforms proposed in this Proposed Rule to provide significant benefits, the Commission understands that implementation can be a complex and costly endeavor. We solicit comments on the accuracy of provided burden and cost estimates and any suggested methods for minimizing the respondents' burdens.

60. *Burden Estimate and Information Collection Costs:* We believe that the burden estimates below are representative of the average burden on respondents. The estimated burden and cost for the requirements contained in this Proposed Rule follow.

RM19–5–000 NOPR

[Public utility transmission rate changes to address accumulated deferred income taxes]

	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden and cost per response[83]	Total annual burden hours and total annual cost	Cost per respondent ($)
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)	(5) ÷ (1)
Revising formula rates so that excess ADIT is deducted and/or deficient ADIT is added to rate base (one-time)[84].	106	1	106	8 hours; $736	848 hours; $78,016	$736
Revising formula rates so that any excess and/or deficient ADIT is amortized (one-time).	106	1	106	8 hours; $736	848 hours; $78,016	736
Revising transmission stated rates to return or recover excess or deficient ADIT (one-time).	31	1	31	15 hours; $1,380 ..	465 hours; $42,780	1,380
Requiring public utilities with transmission formula rates to incorporate a new permanent worksheet that will annually track ADIT information (one-time).	106	1	106	40 hours; $3,680 ..	4,240 hours; $390,080 ...	3,680
Total (Stated Rates)[85]	.....	.....	31	.....	465 hours; $42,780.	
Total (Formula Rates)[86]	.....	.....	318	.....	5,936 hours; $546,112.	
Total	.....	.....	349	.....	6,532 hours; $588,892.	

Cost to Comply: We have projected the total cost of compliance as follows:[87]

- *Year 1:* $546,112 ($5,152/utility) for public utilities with transmission formula rates; $42,780 ($1,380/utility) for public utilities with transmission stated rates.
- *Year 2:* $0.

[81] *See* discussion *infra* Section II.E.

[82] 44 U.S.C. 3507(d).

[83] The loaded hourly wage figure (includes benefits) is based on the average of the occupational categories for 2017 found on the Bureau of Labor Statistics website (*http://www.bls.gov/oes/current/naics2_22.htm*):

Accountant (Occupation Code: 13–2011): $56.59.

Management (Occupation Code: 11–0000): $94.28.

Legal (Occupation Code: 23–0000): $143.68.

Office and Administrative Support (Occupation Code: 43–0000): $41.34.

These various occupational categories' wage figures are averaged and weighted equally as follows: ($94.28/hour + $61.55/hour + $66.90/hour + $143.68/hour) ÷ 4 = $91.60/hour. The resulting wage figure is rounded to $92.00/hour for use in calculating wage figures in the NOPR in Docket No. RM19–5–000.

[84] One-time burdens apply in Year One only. There will be no subsequent burden in Years 2 and beyond.

[85] Total for Public Utilities with Transmission Stated Rates.

[86] Total for Public Utilities with Transmission Formula Rates.

[87] For a public utility transmission provider with transmission formula rates, the costs for Year 1 would consist of filing proposed changes to its transmission formula rates, including the addition of a new permanent worksheet, with the Commission within 90 days of the effective date of the final revision plus initial implementation. The Commission does not expect any ongoing costs beyond the initial compliance in Year 1. For a public utility transmission provider with transmission stated rates, the costs for Year 1 would consist of filing proposed changes to its transmission stated rates that allow it to return to or recover from customers any excess or deficient ADIT caused by the Tax Cuts and Jobs Act with the Commission within 90 days of the effective date of the final revision plus initial implementation.

After Year 1, the reforms proposed in this Proposed Rule, once implemented, would not significantly change existing burdens on an ongoing basis.

Title: FERC–516, Electric Rate Schedules and Tariff Filings.

Action: Proposed revisions to an information collection.

OMB Control No.: 1902–0096.

Respondents for this Proposal: Businesses or other for profit and/or not-for-profit institutions.

Frequency of Information: One-time during year one.

Necessity of Information: The Federal Energy Regulatory Commission makes this Proposed Rule to ensure that (1) rate base neutrality is preserved following enactment of the Tax Cuts and Jobs Act; (2) the reduction in ADIT on the books of rate-regulated companies that was collected from customers but is no longer payable to the IRS due to the Tax Cuts and Jobs Act is returned to or recovered from ratepayers consistent with general ratemaking principles; and (3) there is increased transparency for the process of excess and deficient ADIT calculation and amortization.

Internal Review: We have reviewed the proposed changes and have determined that such changes are necessary. These requirements conform to the Commission's need for efficient information collection, communication, and management within the energy industry. We have specific, objective support for the burden estimates associated with the information collection requirements.

61. Interested persons may obtain information on the reporting requirements by contacting the following: Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426 [Attention: Ellen Brown, Office of the Executive Director], email: *DataClearance@ferc.gov,* phone: (202) 502–8663, fax: (202) 273–0873. Comments concerning the collection of information and the associated burden estimate(s), may also be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 [Attention: Desk Officer for the Federal Energy Regulatory Commission, phone: (202) 395–0710, fax: (202) 395–7285]. Due to security concerns, comments should be sent electronically to the following email address: *oira_submission@omb.eop.gov*. Comments submitted to OMB should include FERC–516 and OMB Control No. 1902–0096.

V. Environmental Analysis

62. We are required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[88] The actions proposed to be taken in this Proposed Rule fall within the categorical exclusion under section 380.4(a)(15) of the Commission's regulations. This section provides a categorical exemption for approval of actions under sections 205 and 206 of the FPA relating to the filing of schedules containing all rates and charges for the transmission or sale of electric energy subject to the Commission's jurisdiction, plus the classification, practices, contracts and regulations that affect rates, charges, classification, and services.[89] The revisions proposed in this Proposed Rule fall within the categorical exemptions provided in the Commission's regulations, and as a result neither an Environmental Impact Statement nor an Environmental Assessment is required.

VI. Regulatory Flexibility Act Certification

63. The Regulatory Flexibility Act of 1980 (RFA)[90] generally requires a description and analysis of proposed rules that will have significant economic impact on a substantial number of small entities. The RFA does not mandate any particular outcome in a rulemaking. It only requires consideration of alternatives that are less burdensome to small entities and an agency explanation of why alternatives were rejected.

64. The Small Business Administration (SBA) revised its size standards (effective January 22, 2014) for electric utilities from a standard based on megawatt hours to a standard based on the number of employees, including affiliates. Under SBA's standards, some transmission owners will fall under the following category and associated size threshold: Electric bulk power transmission and control, at 500 employees.[91]

65. We estimate that the total number of public utility transmission providers with formula rates that would have to develop revisions to their formula rates, including the addition of a new permanent worksheet, and make compliance filings in response to this Proposed Rule is 106. Of these, we estimate that approximately 43 percent are small entities (approximately 46 entities). We estimate the average total cost to each of these entities will be $5,152 in Year 1 and $0 in subsequent years. In addition, we estimate that the total number of public utility transmission providers with stated rates that will have to calculate the excess and deficient income tax to return to or recover from customers is 31. Of these, we estimate that approximately 43 percent are small entities (approximately 13 entities). We estimate the average total cost to each of these entities will be between $1,380 in Year One and $0 in subsequent years. According to SBA guidance, the determination of significance of impact ''should be seen as relative to the size of the business, the size of the competitor's business, and the impact the regulation has on larger competitors.'' [92] We do not consider the estimated burden to be a significant economic impact. As a result, we certify that the revisions proposed in this Proposed Rule will not have a significant economic impact on a substantial number of small entities.

VII. Comment Procedures

66. We invite interested persons to submit comments on the matters and issues proposed in this notice to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due December 24, 2018. Comments must refer to Docket No. RM19–5–000, and must include the commenter's name, the organization they represent, if applicable, and their address in their comments.

67. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's website at *http://www.ferc.gov*. The Commission accepts most standard word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

68. Commenters that are not able to file comments electronically must send an original of their comments to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC, 20426.

69. All comments will be placed in the Commission's public files and may

be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

VIII. Document Availability

70. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) and in the Commission's Public Reference Room during normal business hours (8:30 a.m. to 5:00 p.m. Eastern time) at 888 First Street NE, Room 2A, Washington, DC 20426.

71. From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

72. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at 202–502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov*.

By direction of the Commission. Commissioner McIntyre is not voting on this order.

Issued: November 15, 2018.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

Note: Appendix A will not be published in the **Federal Register**.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 20

[REG–106706–18]

RIN 1545–B072

Estate and Gift Taxes; Difference in the Basic Exclusion Amount

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking and notification of public hearing.

SUMMARY: This document contains proposed regulations addressing the effect of recent legislative changes to the basic exclusion amount used in computing Federal gift and estate taxes. The proposed regulations will affect donors of gifts made after 2017 and the estates of decedents dying after 2017.

DATES: Written and electronic comments must be received by February 21, 2019. Outlines of topics to be discussed at the public hearing scheduled for March 13, 2019, must be received by February 21, 2019. If no outlines of topics are received by February 21, 2019, the hearing will be cancelled.

ADDRESSES: Send submissions to: CC:PA:LPD:PR (REG–106706–18), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044. Submissions also may be hand delivered Monday through Friday between the hours of 8 a.m. and 5 p.m. to: CC:PA:LPD:PR (REG–106706–18), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW, Washington, DC 20224, or sent electronically via the Federal eRulemaking portal at *http://www.regulations.gov* (IRS REG–106706–18). The public hearing will be held in the Auditorium, Internal Revenue Service Building, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, Deborah S. Ryan, (202) 317–6859; concerning submissions of comments, the hearing, and/or to be placed on the building access list to attend the hearing, Regina L. Johnson at (202) 317–6901 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

I. Overview

In computing the amount of Federal gift tax to be paid on a gift or the amount of Federal estate tax to be paid at death, the gift and estate tax provisions of the Internal Revenue Code (Code) apply a unified rate schedule to the taxpayer's cumulative taxable gifts and taxable estate on death to arrive at a net tentative tax. The net tentative tax then is reduced by a credit based on the applicable exclusion amount (AEA), which is the sum of the basic exclusion amount (BEA) within the meaning of section 2010(c)(3) of the Code and, if applicable, the deceased spousal unused exclusion (DSUE) amount within the meaning of section 2010(c)(4). In certain cases, the AEA also includes a restored exclusion amount pursuant to Notice 2017–15, 2017–6 I.R.B. 783. Prior to January 1, 2018, for estates of decedents dying and gifts made beginning in 2011, section 2010(c)(3) provided a BEA of $5 million, indexed for inflation after 2011. The credit is applied first against the gift tax, on a cumulative basis, as taxable gifts are made. To the extent that any credit remains at death, it is applied against the estate tax.

This document contains proposed regulations to amend the Estate Tax Regulations (26 CFR part 20) under section 2010(c)(3) of the Code. The proposed regulations would update § 20.2010–1 to conform to statutory changes to the determination of the BEA enacted on December 22, 2017, by sections 11002 and 11061 of the Tax Cuts and Jobs Act, Public Law 115–97, 131 Stat. 2504 (2017) (TCJA).

II. Federal Gift Tax Computation Generally

The Federal gift tax is imposed by section 2501 of the Code on an individual's transfers by gift during each calendar year. The gift tax is determined under a seven-step computation required under sections 2502 and 2505 using the rate schedule set forth in section 2001(c) as in effect for the calendar year in which the gifts are made.

First, section 2502(a)(1) requires the determination of a tentative tax (that is, a tax unreduced by a credit amount) on the sum of all taxable gifts, whether made in the current year or in one or more prior periods (Step 1).

Second, section 2502(a)(2) requires the determination of a tentative tax on the sum of the taxable gifts made in all prior periods (Step 2).

Third, section 2502(a) requires the tentative tax determined in Step 2 to be subtracted from the tentative tax determined in Step 1 to arrive at the net tentative gift tax on the gifts made in the current year (Step 3).

Fourth, section 2505(a)(1) requires the determination of a credit equal to the applicable credit amount within the meaning of section 2010(c). The applicable credit amount is the tentative tax on the AEA determined as if the donor had died on the last day of the current calendar year. The AEA is the sum of the BEA as in effect for the year in which the gift was made, any DSUE amount as of the date of the gift as computed pursuant to § 25.2505–2, and any restored exclusion amount as of the date of the gift as computed pursuant to Notice 2017–15 (Step 4).

Fifth, section 2505(a)(2) and the flush language at the end of section 2505(a) require the determination of the sum of the amounts allowable as a credit to offset the gift tax on gifts made by the donor in all preceding calendar periods. For purposes of this determination, the allowable credit for each preceding calendar period is the tentative tax, computed at the tax rates in effect for the current period, on the AEA for such prior period, but not exceeding the tentative tax on the gifts actually made during such prior period. Section 2505(c). (Step 5).

Sixth, section 2505(a) requires that the total credit allowable for prior periods determined in Step 5 be subtracted from the credit for the current period determined in Step 4. (Step 6).

Finally, section 2505(a) requires that the credit amount determined in Step 6 be subtracted from the net tentative gift tax determined in Step 3 (Step 7).

III. Federal Estate Tax Computation Generally

The Federal estate tax is imposed by section 2001(a) on the transfer of a decedent's taxable estate at death. The estate tax is determined under a five-step computation required under sections 2001 and 2010 using the same rate schedule used for gift tax purposes (thus referred to as the unified rate schedule) as in effect at the decedent's death.

First, section 2001(b)(1) requires the determination of a tentative tax (again, a tax unreduced by a credit amount) on the sum of the taxable estate and the adjusted taxable gifts, defined as all taxable gifts made after 1976 other than those included in the gross estate (Step 1).

Second, section 2001(b)(2) and (g) require the determination of a hypothetical gift tax (a gift tax reduced, but not to below zero, by the credit amounts allowable in the years of the gifts) on all post-1976 taxable gifts, whether or not included in the gross estate. The credit amount allowable for each year during which a gift was made is the tentative tax, computed using the tax rates in effect at the decedent's death, on the AEA for that year, but not exceeding the tentative tax on the gifts made during that year. Section 2505(c). The AEA is the sum of the BEA as in effect for the year in which the gift was made, any DSUE amount as of the date of the gift as computed pursuant to § 25.2505–2, and any restored exclusion amount as of the date of the gift as computed pursuant to Notice 2017–15. This hypothetical gift tax is referred to as the gift tax payable (Step 2).

Third, section 2001(b) requires the gift tax payable determined in Step 2 to be subtracted from the tentative tax determined in Step 1 to arrive at the net tentative estate tax (Step 3).

Fourth, section 2010(a) and (c) require the determination of a credit equal to the tentative tax on the AEA as in effect on the date of the decedent's death. This credit may not exceed the net tentative estate tax. Section 2010(d). (Step 4).

Finally, section 2010(a) requires that the credit amount determined in Step 4 be subtracted from the net tentative estate tax determined in Step 3. (Step 5).

IV. TCJA Amendments

Section 11061 of the TCJA amended section 2010(c)(3) to provide that, for decedents dying and gifts made after December 31, 2017, and before January 1, 2026, the BEA is increased by $5 million to $10 million as adjusted for inflation (increased BEA). On January 1, 2026, the BEA will revert to $5 million. Thus, an individual or the individual's estate may utilize the increased BEA to shelter from gift and estate taxes an additional $5 million of transfers made during the eight-year period beginning on January 1, 2018, and ending on December 31, 2025 (increased BEA period).

In addition, section 11002 of the TCJA amended section 1(f)(3) of the Code to base the determination of annual cost-of-living adjustments, including those for gift and estate tax purposes, on the Chained Consumer Price Index for All Urban Consumers for all taxable years beginning after December 31, 2017. Section 11002 of the TCJA also made conforming changes in sections 2010(c)(3)(B)(ii), 2032A(a)(3)(B), and 2503(b)(2)(B).

Section 11061 of the TCJA also added section 2001(g)(2) to the Code, which, in addition to the necessary or appropriate regulatory authority granted in section 2010(c)(6) for purposes of section 2010(c), directs the Secretary to prescribe such regulations as may be necessary or appropriate to carry out section 2001 with respect to any difference between the BEA applicable at the time of the decedent's death and the BEA applicable with respect to any gifts made by the decedent.

V. Summary of Concerns Raised by Changes in BEA

1. In General

Given the cumulative nature of the gift and estate tax computations and the differing manner in which the credit is applied against these two taxes, commenters have raised two questions regarding a potential for inconsistent tax treatment or double taxation of transfers resulting from the temporary nature of the increased BEA. First, in cases in which a taxpayer exhausted his or her BEA and paid gift tax on a pre-2018 gift, and then either makes an additional gift or dies during the increased BEA period, will the increased BEA be absorbed by the pre-2018 gift on which gift tax was paid so as to deny the taxpayer the full benefit of the increased BEA during the increased BEA period? Second, in cases in which a taxpayer

made a gift during the increased BEA period that was fully sheltered from gift tax by the increased BEA but makes a gift or dies after the increased BEA period has ended, will the gift that was exempt from gift tax when made during the increased BEA period have the effect of increasing the gift or estate tax on the later transfer (in effect, subjecting the earlier gift to tax even though it was exempt from gift tax when made)?

As discussed in the remainder of this Background section, the Treasury Department and the IRS have analyzed the statutorily required steps for determining Federal gift and estate taxes in the context of several different situations that could occur either during the increased BEA period as a result of an increase in the BEA, or thereafter as a result of a decrease in the BEA. Only in the last situation discussed below was a potential problem identified, and a change intended to correct that problem is proposed in this notice of proposed rulemaking. This preamble, however, also includes a brief explanation of the reason why no potential problem is believed to exist in any of the first three situations discussed below. For the sake of simplicity, the following discussion assumes that, as may be the more usual case, the AEA includes no DSUE or restored exclusion amount and thus, refers only to the BEA.

2. Effect of Increase in BEA on Gift Tax

The first situation considered is whether, for gift tax purposes, the increased BEA available during the increased BEA period is reduced by pre-2018 gifts on which gift tax actually was paid. This issue arises for donors, who made both pre-2018 gifts exceeding the then-applicable BEA, thus making gifts that incurred a gift tax liability, and additional gifts during the increased BEA period. The concern raised is whether the gift tax computation will apply the increased BEA to the pre-2018 gifts, thus reducing the BEA otherwise available to shelter gifts made during the increased BEA period and, in effect, allocating credit to a gift on which gift tax in fact was paid.

Step 3 of the gift tax determination requires the tentative tax on all gifts from prior periods to be subtracted from the tentative tax on the donor's cumulative gifts (including the current gift). The gifts from prior periods include the pre-2018 gifts on which gift tax was paid. In this way, the full amount of the gift tax liability on the pre-2018 gifts is removed from the current year gift tax computation, regardless of whether that liability was sheltered from gift tax by the BEA and/or was satisfied by a gift tax payment. Steps 4 through 6 of the gift tax determination then require, in effect, that the BEA for the current year be reduced by the BEA allowable in prior periods against the gifts that were made by the donor in those prior periods. The increased BEA was not available in the years when the pre-2018 gifts were made and thus, was not allowable against those gifts. Accordingly, the gift tax determination appropriately reduces the increased BEA only by the amount of BEA allowable against prior period gifts, thereby ensuring that the increased BEA is not reduced by a prior gift on which gift tax in fact was paid.

3. Effect of Increase in BEA on Estate Tax

The second situation considered is whether, for estate tax purposes, the increased BEA available during the increased BEA period is reduced by pre-2018 gifts on which gift tax actually was paid. This issue arises in the context of estates of decedents who both made pre-2018 gifts exceeding the then allowable BEA, thus making gifts that incurred a gift tax liability, and die during the increased BEA period. The concern raised is whether the estate tax computation will apply the increased BEA to the pre-2018 gifts, thus reducing the BEA otherwise available against the estate tax during the increased BEA period and, in effect, allocating credit to a gift on which gift tax in fact was paid.

Step 3 of the estate tax determination requires that the hypothetical gift tax on the decedent's post-1976 taxable gifts be subtracted from the tentative tax on the sum of the taxable estate and adjusted taxable gifts. The post-1976 taxable gifts include the pre-2018 gifts on which gift tax was paid. In this way, the full amount of the gift tax liability on the pre-2018 gifts is removed from the estate tax computation, regardless of whether that liability was sheltered from gift tax by the BEA and/or was satisfied by a gift tax payment. Step 4 of the estate tax determination then requires that a credit on the amount of the BEA for the year of the decedent's death be subtracted from the net tentative estate tax. As a result, the only time that the increased BEA enters into the computation of the estate tax is when the credit on the amount of BEA allowable in the year of the decedent's death is netted against the tentative estate tax, which in turn already has been reduced by the hypothetical gift tax on the full amount of all post-1976 taxable gifts (whether or not gift tax was paid). Thus, the increased BEA is not reduced by the portion of any prior gift on which gift tax was paid, and the full amount of the increased BEA is available to compute the credit against the estate tax.

4. Effect of Decrease in BEA on Gift Tax

The third situation considered is whether the gift tax on a gift made after the increased BEA period is inflated by a theoretical gift tax on a gift made during the increased BEA period that was sheltered from gift tax when made. If so, this would effectively reverse the benefit of the increased BEA available for gifts made during the increased BEA period. This issue arises in the case of donors who both made one or more gifts during the increased BEA period that were sheltered from gift tax by the increased BEA in effect during those years, and made a post-2025 gift. The concern raised is whether the gift tax determination on the post-2025 gift will treat the gifts made during the increased BEA period as gifts not sheltered from gift tax by the credit on the BEA, given that the post-2025 gift tax determination is based on the BEA then in effect, rather than on the increased BEA.

Just as in the first situation considered in part V(2) of this Background section, Step 3 of the gift tax determination directs that the tentative tax on gifts from prior periods be subtracted from the tentative tax on the donor's cumulative gifts (including the current gift). The gift tax from prior periods includes the gift tax attributable to the gifts made during the increased BEA period. In this way, the full amount of the gift tax liability on the increased BEA period gifts is removed from the computation, regardless of whether that liability was sheltered from gift tax by the BEA or was satisfied by a gift tax payment. All that remains is the tentative gift tax on the donor's current gift. Steps 4 through 6 of the gift tax determination then require that the credit based on the BEA for the current year be reduced by such credits allowable in prior periods. Even if the sum of the credits allowable for prior periods exceeds the credit based on the BEA in the current (post-2025) year, the tax on the current gift cannot exceed the tentative tax on that gift and thus will not be improperly inflated. The gift tax determination anticipates and avoids this situation, but no credit will be available against the tentative tax on the post-2025 gift.

5. Effect of Decrease in BEA on Estate Tax

The fourth situation considered is whether, for estate tax purposes, a gift made during the increased BEA period that was sheltered from gift tax by the increased BEA inflates a post-2025 estate tax liability. This will be the case

if the estate tax computation fails to treat such gifts as sheltered from gift tax, in effect reversing the benefit of the increased BEA available for those gifts. This issue arises in the case of estates of decedents who both made gifts during the increased BEA period that were sheltered from gift tax by the increased BEA in effect during those years, and die after 2025. The concern raised is whether the estate tax computation treats the gifts made during the increased BEA period as post-1976 taxable gifts not sheltered from gift tax by the credit on the BEA, given that the post-2025 estate tax computation is based on the BEA in effect at the decedent's death rather than the BEA in effect on the date of the gifts.

In this case, the statutory requirements for the computation of the estate tax, in effect, retroactively eliminate the benefit of the increased BEA that was available for gifts made during the increased BEA period. This can be illustrated by the following examples.

Example 1. Individual A made a gift of $11 million in 2018, when the BEA was $10 million. A dies in 2026, when the BEA is $5 million, with a taxable estate of $4 million. Based on a literal application of section 2001(b), the estate tax would be approximately $3,600,000, which is equal to a 40 percent estate tax on $9 million (specifically, the $9 million being the sum of the $4 million taxable estate and $5 million of the 2018 gift sheltered from gift tax by the increased BEA). This in effect would impose estate tax on the portion of the 2018 gift that was sheltered from gift tax by the increased BEA allowable at that time.

Example 2. The facts are the same as in *Example 1,* but A dies in 2026 with no taxable estate. Based on a literal application of section 2001(b), A's estate tax is approximately $2 million, which is equal to a 40 percent tax on $5 million. Five million dollars is the amount by which, after taking into account the $1 million portion of the 2018 gift on which gift tax was paid, the 2018 gift exceeded the BEA at death. This, in effect, would impose estate tax on the portion of the 2018 gift that was sheltered from the gift tax by the excess of the 2018 BEA over the 2026 BEA.

This problem occurs as a result of the interplay between Steps 2 and 4 of the estate tax determination, and the differing amounts of BEA taken into account in those steps. Step 2 determines the credit against gift taxes payable on all post-1976 taxable gifts, whether or not included in the gross estate, using the BEA amounts allowable on the dates of the gifts but determined using date of death tax rates. Step 3 subtracts gift tax payable from the tentative tax on the sum of the taxable estate and the adjusted taxable gifts. The result is the net tentative estate tax. Step 4 determines a credit based on the BEA as in effect on the date of the decedent's death. Step 5 then reduces the net tentative estate tax by the credit determined in Step 4. If the credit amount applied at Step 5 is less than that allowable for the decedent's post-1976 taxable gifts at Step 2, the effect is to increase the estate tax by the difference between those two credit amounts. In this circumstance, the statutory requirements have the effect of imposing an estate tax on gifts made during the increased BEA period that were sheltered from gift tax by the increased BEA in effect when the gifts were made.

Explanation of Provisions

To implement the TCJA changes to the BEA under section 2010(c)(3), the proposed regulations would amend § 20.2010–1 to provide that, in the case of decedents dying or gifts made after December 31, 2017, and before January 1, 2026, the increased BEA is $10 million. The proposed regulations also would conform the rules of § 20.2010–1 to the changes made by the TCJA regarding the cost of living adjustment.

Pursuant to section 2001(g)(2), the proposed regulations also would amend § 20.2010–1 to provide a special rule in cases where the portion of the credit as of the decedent's date of death that is based on the BEA is less than the sum of the credit amounts attributable to the BEA allowable in computing gift tax payable within the meaning of section 2001(b)(2). In that case, the portion of the credit against the net tentative estate tax that is attributable to the BEA would be based upon the greater of those two credit amounts. In the view of the Treasury Department and the IRS, the most administrable solution would be to adjust the amount of the credit in Step 4 of the estate tax determination required to be applied against the net tentative estate tax. Specifically, if the total amount allowable as a credit, to the extent based solely on the BEA, in computing the gift tax payable on the decedent's post-1976 taxable gifts, whether or not included in the gross estate, exceeds the credit amount, again to the extent based solely on the BEA in effect at the date of death, the Step 4 credit would be based on the larger amount of BEA. As modified, Step 4 of the estate tax determination therefore would require the determination of a credit equal to the tentative tax on the AEA as in effect on the date of the decedent's death, where the BEA included in that AEA is the larger of (i) the BEA as in effect on the date of the decedent's death under section 2010(c)(3), or (ii) the total amount of the BEA allowable in determining Step 2 of the estate tax computation (that is, the gift tax payable).

For example, if a decedent had made cumulative post-1976 taxable gifts of $9 million, all of which were sheltered from gift tax by a BEA of $10 million applicable on the dates of the gifts, and if the decedent died after 2025 when the BEA was $5 million, the credit to be applied in computing the estate tax is that based upon the $9 million of BEA that was used to compute gift tax payable.

The proposed regulations ensure that a decedent's estate is not inappropriately taxed with respect to gifts made during the increased BEA period. Congress' grant of regulatory authority in section 2001(g)(2) to address situations in which differences exist between the BEA applicable to a decedent's gifts and the BEA applicable to the decedent's estate clearly permits the Secretary to address the situation in which a gift is made during the increased BEA period and the decedent dies after the increased BEA period ends.

Commenters have noted that this problem is similar to that involving the application of the AEA addressed in the DSUE regulations. Section 20.2010–3(b). The DSUE amount generally is what remains of a decedent's BEA that can be used to offset the gift and/or estate tax liability of the decedent's surviving spouse. At any given time, however, a surviving spouse may use only the DSUE amount from his or her last deceased spouse—thus, only until the death of any subsequent spouse. Without those regulations, if a DSUE amount was used to shelter a surviving spouse's gifts from gift tax before the death of a subsequent spouse, and if the surviving spouse also survived the subsequent spouse, those gifts would have had the effect of absorbing the DSUE amount available to the surviving spouse at death, effectively resulting in a taking back of the DSUE amount that had been allocated to the earlier gifts. The DSUE regulations resolve this problem by providing that the DSUE amount available at the surviving spouse's death is the sum of the DSUE amount from that spouse's last deceased spouse, and any DSUE amounts from other deceased spouses that were ''applied to one or more taxable gifts'' of the surviving spouse.

Proposed Effective Date

The amendment to § 20.2010–1 is proposed to be effective on and after the date of publication of a Treasury decision adopting these rules as final regulations in the **Federal Register**.

Special Analyses

These proposed regulations are not subject to review under section 6(b) of Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Treasury Department and the Office of Management and Budget regarding review of tax regulations.

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that these proposed regulations will not have a significant economic impact on a substantial number of small entities. These proposed regulations apply to donors of gifts made after 2017 and to the estates of decedents dying after 2017, and implement an increase in the amount that is excluded from gift and estate tax. Neither an individual nor the estate of a deceased individual is a small entity within the meaning of 5 U.S.C. 601(6). Accordingly, a regulatory flexibility analysis is not required.

Pursuant to section 7805(f) of the Internal Revenue Code, this regulation has been submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any written or electronic comments that are submitted timely (in the manner described under the **ADDRESSES** heading) to the IRS. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. All comments will be available at *http://www.regulations.gov,* or upon request. A public hearing on these proposed regulations has been scheduled for March 13, 2019, beginning at 10 a.m. in the Auditorium, Internal Revenue Building, 1111 Constitution Avenue NW, Washington, DC 20224. Due to building security procedures, visitors must enter the Constitution Avenue entrance. In addition, all visitors must present photo identification to enter the building. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 30 minutes before the hearing starts. For information about having your name placed on the building access list to attend the hearing, see the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to present oral comments at the hearing must submit comments by February 21, 2019, and submit an outline of the topics to be discussed and the time devoted to each topic by February 21, 2019.

A period of 10 minutes will be allotted to each person for making comments. Copies of the agenda will be available free of charge at the hearing.

Drafting Information

The principal author of these proposed regulations is Deborah S. Ryan, Office of the Associate Chief Counsel (Passthroughs and Special Industries). Other personnel from the Treasury Department and the IRS participated in their development.

Statement of Availability of IRS Documents

Notice 2017–15 is published in the Internal Revenue Bulletin (or Cumulative Bulletin) and is available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *http://www.irs.gov*.

List of Subjects in 26 CFR Part 20

Estate taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 20 is proposed to be amended as follows:

PART 20—ESTATE TAX; ESTATES OF DECEDENTS DYING AFTER AUGUST 16, 1954

■ **Par. 1.** The authority citation for part 20 is amended by revising the entry for § 20.2010–1 to read in part as follows:

Authority: 26 U.S.C. 7805.

* * * * *

Section 20.2010–1 also issued under 26 U.S.C. 2001(g)(2) and 26 U.S.C. 2010(c)(6).

* * * * *

■ **Par. 2.** Section 20.2010–1 is amended by:

■ 1. Redesignating paragraphs (c) through (e) as paragraphs (d) through (f) respectively;

■ 2. Adding a new paragraph (c); and

■ 3. Revising newly redesignated paragraphs (e)(3) and (f).

The addition and revisions read as follows:

§ 20.2010–1 Unified credit against estate tax; in general.

* * * * *

(c) *Special rule in the case of a difference between the basic exclusion amount applicable to gifts and that applicable at the donor's date of death*—(1) *Rule.* Changes in the basic exclusion amount that occur between the date of a donor's gift and the date of the donor's death may cause the basic exclusion amount allowable on the date of a gift to exceed that allowable on the date of death. If the total of the amounts allowable as a credit in computing the gift tax payable on the decedent's post-1976 gifts, within the meaning of section 2001(b)(2), to the extent such credits are based solely on the basic exclusion amount as defined and adjusted in section 2010(c)(3), exceeds the credit allowable within the meaning of section 2010(a) in computing the estate tax, again only to the extent such credit is based solely on such basic exclusion amount, in each case by applying the tax rates in effect at the decedent's death, then the portion of the credit allowable in computing the estate tax on the decedent's taxable estate that is attributable to the basic exclusion amount is the sum of the amounts attributable to the basic exclusion amount allowable as a credit in computing the gift tax payable on the decedent's post-1976 gifts. The amount allowable as a credit in computing gift tax payable for any year may not exceed the tentative tax on the gifts made during that year, and the amount allowable as a credit in computing the estate tax may not exceed the net tentative tax on the taxable estate. Sections 2505(c) and 2010(d).

(2) *Example.* Individual A (never married) made cumulative post-1976 taxable gifts of $9 million, all of which were sheltered from gift tax by the cumulative total of $10 million in basic exclusion amount allowable on the dates of the gifts. A dies after 2025 and the basic exclusion amount on A's date of death is $5 million. A was not eligible for any restored exclusion amount pursuant to Notice 2017–15. Because the total of the amounts allowable as a credit in computing the gift tax payable on A's post-1976 gifts (based on the $9 million basic exclusion amount used to determine those credits) exceeds the credit based on the $5 million basic exclusion amount applicable on the decedent's date of death, under paragraph (c)(1) of this section, the credit to be applied for purposes of computing the estate tax is based on a basic exclusion amount of $9 million, the amount used to determine the credits allowable in computing the gift tax payable on the post-1976 gifts made by A.

* * * * *

(e) * * *

(3) *Basic exclusion amount.* Except to the extent provided in paragraph (e)(3)(iii) of this section, the basic exclusion amount is the sum of the

amounts described in paragraphs (e)(3)(i) and (ii) of this section.

(i) For any decedent dying in calendar year 2011 or thereafter, $5,000,000; and

(ii) For any decedent dying after calendar year 2011, $5,000,000 multiplied by the cost-of-living adjustment determined under section 1(f)(3) for the calendar year of decedent's death by substituting ''calendar year 2010'' for ''calendar year 2016'' in section 1(f)(3)(A)(ii) and rounded to the nearest multiple of $10,000.

(iii) In the case of the estates of decedents dying after December 31, 2017, and before January 1, 2026, paragraphs (e)(3)(i) and (ii) of this section will be applied by substituting ''$10,000,000'' for ''$5,000,000.''

(f) *Applicability dates*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to the estates of decedents dying after June 11, 2015. For the rules applicable to estates of decedents dying after December 31, 2010, and before June 12, 2015, see § 20.2010–1T, as contained in 26 CFR part 20, revised as of April 1, 2015.

(2) *Exceptions.* Paragraph (c) of this section applies to estates of decedents dying on and after the date of publication of a Treasury decision adopting these rules as final regulations. Paragraph (e)(3) of this section applies to the estates of decedents dying after December 31, 2017.

§ 20.2010–3 [Amended]

■ **Par. 3.** Section 20.2010–3 is amended by removing ''§ 20.2010–1(d)(5)'' wherever it appears and adding in its place ''§ 20.2010–1(e)(5)''.

Kirsten Wielobob,

Deputy Commissioner for Service and Enforcement.

Air Plan Approval; Missouri; Emissions Inventory for the Missouri Jackson County and Jefferson County 2010 Sulfur Dioxide National Ambient Air Quality Standard Nonattainment Areas

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve two submissions from the Missouri Department of Natural Resources (MoDNR) revising the State Implementation Plan (SIP) for the State of Missouri. The SIP revision submissions address the Clean Air Act (CAA) section 172 requirement to submit a base year emissions inventory for Missouri's partial Jackson County and partial Jefferson County nonattainment areas of the 2010 1-hour Sulfur Dioxide (SO_2) National Ambient Air Quality Standard (NAAQS).

DATES: Comments must be received on or before December 24, 2018.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–R07–OAR–2018–0700 to *https://www.regulations.gov*. Follow the online instructions for submitting comments.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received will be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Written Comments'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Tracey Casburn, Environmental Protection Agency, Air Planning and Development Branch, 11201 Renner Boulevard, Lenexa, Kansas 66219, by telephone at (913) 551–7016, or by email at *casburn.tracey@epa.gov*.

SUPPLEMENTARY INFORMATION: Throughout this document ''we,'' ''us,'' and ''our'' refer to the EPA.

Table of Contents

I. Written Comments

Submit your comments, identified by Docket ID No. EPA–R07–OAR–2018–0700, at *https://www.regulations.gov*. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets*.

II. Background Information

On June 22, 2010, the EPA promulgated a new 1-hour primary SO_2 NAAQS of 75 parts per billion (ppb). *See* 75 FR 35520, codified at 40 CFR 50.17(a)–(b). On August 5, 2013, the EPA finalized designations for the 2010 SO_2 NAAQS, including the partial Jackson County and partial Jefferson County nonattainment areas in the State of Missouri. *See* 78 FR 47191, codified at 40 CFR part 81, subpart C. These area designations were effective October 4, 2013. Section 191 of the CAA directs states to submit SIP revisions for areas designated as nonattainment for the SO_2 NAAQS to the EPA within 18 months of the effective date of the designation (*i.e.,* no later than April 4, 2015). Submittal of the state's nonattainment plan SIP revision submissions is discussed in more detail in the ''Have the requirements for approval of a SIP revision been met?'' section of this document.

CAA section 172(c)(3) requires states to develop and submit a comprehensive, accurate, current emissions inventory for all areas designated as nonattainment. An emissions inventory is an estimation of actual emissions of air pollutants in an area that provides data for a variety of air quality planning tasks including establishing baseline emission levels, calculating Federally required emission reduction targets, emission inputs into air quality simulation models, and for tracking emissions over time. The EPA's April 2014 guidance document ''Guidance for 1-Hour SO_2 Nonattainment Area SIP Submissions'' (April 2014 guidance) recommends that the state develop an accurate emissions inventory of current emissions for all sources of SO_2 (*i.e.,* point, area and mobile sources) within the nonattainment area as well as any sources located outside the nonattainment area which may affect attainment in the area.[1]

[1] See page 8 of the April 2014 guidance.

The EPA has reviewed the state's emission inventory SIP revision submissions and is proposing to approve the SIP revision submissions pursuant to sections 110, 191(a), and 172(c)(3) of the CAA.

III. Have the requirements for approval of a SIP revision been met?

The baseline emissions inventory for the Jackson County SO_2 nonattainment area was included in MoDNR's October 2015 SIP revision submission ''Nonattainment Area Plan for the 2010 1-Hour Sulfur Dioxide National Ambient Air Quality Standard—Jackson County Sulfur Dioxide Nonattainment Area'' which met the public notice requirements for a SIP revision submission in accordance with 40 CFR 51.102.[2] The MoDNR provided public notice of the SIP revision submission from March 22, 2015 to July 2, 2015, and held a public hearing on June 25, 2015. The MoDNR received oral comments from three sources during the hearing and written comments from three sources prior to the close of the public comment period.[3]

The baseline emissions inventory for the Jefferson County SO_2 nonattainment area was included in MoDNR's June 2015 SIP revision submission ''Nonattainment Area Plan for the 2010 1-Hour Sulfur Dioxide National Ambient Air Quality Standard—Jefferson County Sulfur Dioxide Nonattainment Area'' which met the public notice requirements for a SIP revision submission in accordance with 40 CFR 51.102.[4] The MoDNR provided public notice of the SIP revision submission from March 26, 2015 to May 7, 2015, and held a public hearing on April 30, 2015. The MoDNR received oral comments from seven sources during the hearing and written comments from three sources prior to the close of the public comment period.[5]

None of the comments the state received were directly related to the baseline year emissions inventories, therefore no changes were made to the baseline emmisions inventories prior to submitting the SIP revision submissions to the EPA. The emissions inventory SIP revision submissions meet the procedural requirements for SIP submittals in the CAA, including section 110 and implementing regulations.

IV. What is the EPA's analysis of the SIP revision submissions?

The baseline emissions inventory in both SIP revision submissions was taken from the 2011 National Emissions Inventory (NEI) database. The MoDNR developed a comprehensive statewide emissions inventory for 2011 as required by the EPA's Air Emissions Reporting Requirements (AERR) rule. See 73 FR 76539 codified at 40 CFR 51.1–51.50. The inventory was submitted to the NEI through the EPA's Emission Inventory System (EIS). The 2011 baseline emissions inventory in both SIP revision submissions included point, area (or nonpoint), and mobile emissions sources of SO_2 in accordance with the EPA's April 2014 Guidance. Both 2011 baseline emissions SIP revision submissions were county wide (*i.e.,* not limited to the partial county nonattainment boundary) and SO_2 emissions data was reported in tons per year (tpy).[6]

TABLE 1—COUNTY WIDE 2011 BASELINE SO_2 EMISSIONS

[Tpy]

Emission category	Jackson County	Jefferson County
Point Source	27,513	43,713
Area (Nonpoint) Source	92	51
Mobile Source	92	27

V. What action is the EPA taking?

The EPA is proposing to approve the two SIP revision submissions from the MoDNR addressing the CAA section 172(c)(3) requirement to submit a base year emissions inventory for Missouri's partial Jackson County and partial Jefferson County nonattainment areas of the 2010 1-hour SO_2 NAAQS. The EPA proposes that these emission inventory SIP revision submissions were submitted in accordance with sections 110, 191(a), and 172(c)(3) of the CAA. Final rulemaking will occur after consideration of any comments.

VI. Statutory and Executive Order Reviews

Under the Clean Air Act (CAA), the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866.
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of the National Technology Transfer and Advancement Act (NTTA) because this rulemaking does not involve technical standards; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian

[2] The MoDNR withdrew the ''Nonattainment Area Plan for the 2010 1-Hour Sulfur Dioxide National Ambient Air Quality Standard—Jackson County Sulfur Dioxide Nonattainment Area'' SIP submission, except the EI, from the EPA's consideration on June 11, 2018.

[3] The Sierra Club submitted letters from 78 citizens.

[4] The MoDNR withdrew the National Ambient Air Quality Standard—Jefferson County Sulfur Dioxide Nonattainment Area'' SIP submission, except the EI, from the EPA's consideration on March 30, 2018.

[5] The Sierra Club submitted postcards and signatures from 240 citizens.

[6] The MoDNR developed separate model input inventories based on 2012 emissions that included sources inside of and outside of the nonattainment areas. Nonpoint and mobile sources emissions were considered part of the background in the modeling scenarios.

country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Emissions Inventory, Incorporation by reference, Sulfur oxides.

Dated: November 16, 2018.

James B. Gulliford,

Regional Administrator, Region 7.

For the reasons stated in the preamble, the EPA proposes to amend part 52 as set forth below:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et. seq.*

Subpart—AA Missouri

■ 2. Amend the table in § 52.1320, paragraph (e) by adding new entries ''(76)'' and ''(77)'' in numerical order to read as follows:

§ 52.1320 Identification of Plan.

Air Quality Designation for the 2010 Sulfur Dioxide (SO_2) Primary National Ambient Air Quality Standard; Arkansas; Redesignation of the Independence County Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: On April 20, 2018, the State of Arkansas (AR), through the Arkansas Department of Environmental Quality (ADEQ) submitted a request for the Environmental Protection Agency (EPA) to assess new available information and redesignate the Independence County, AR unclassifiable area (hereinafter referred to as the ''County'' or ''Area'') for the 2010 sulfur dioxide (SO_2) primary national ambient air quality standard (NAAQS) to attainment/unclassifiable. The EPA is proposing that it now has sufficient information to determine that the Area is attaining the 2010 SO_2 primary NAAQS, and, therefore, is proposing to approve the State's request and redesignate the Area to attainment/unclassifiable for the 2010 primary SO_2 NAAQS.

DATES: Comments must be received on or before December 24, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R06–OAR–2018–0624 at *https://www.regulations.gov*. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets*.

FOR FURTHER INFORMATION CONTACT: Mr. Ruben Casso, (214) 665–6763, *casso.ruben@epa.gov*. To inspect the hard copy materials, please schedule an appointment with Mr. Casso.

SUPPLEMENTARY INFORMATION: Throughout this document ''we,'' ''us,'' or ''our'' means the EPA.

I. Background

The Clean Air Act (CAA or Act) establishes a process for air quality management through the establishment and implementation of the NAAQS. After the promulgation of a new or revised NAAQS, EPA is required to designate all areas of the country, pursuant to section 107(d)(1) of the CAA. For the 2010 SO_2 primary NAAQS, designations were based on the EPA's application of the nationwide analytical approach to, and technical assessment of, the weight of evidence for each area, including but not limited to available air quality monitoring data and air quality modeling results. The EPA issued updated designations guidance through a March 20, 2015, memorandum from Stephen D. Page, Director, U.S. EPA, Office of Air Quality Planning and Standards, to Air Division Directors, U.S. EPA Regions 1–10 titled, ''Updated Guidance for Area Designations for the 2010 Primary Sulfur Dioxide National Ambient Air Quality Standard,'' which contains the factors the EPA intends to evaluate in determining the appropriate designations and associated boundaries, including: (1) Air quality

characterization via ambient monitoring or dispersion modeling results; (2) emissions-related data; (3) meteorology; (4) geography and topography; and (5) jurisdictional boundaries. The guidance also references the EPA's non-binding Monitoring Technical Assistance Document (Monitoring TAD) and Modeling Technical Assistance Document (Modeling TAD),[1] which contain scientifically sound recommendations on how air agencies should conduct such monitoring or modeling.

Entergy Corporation Independence Steam Electric Station (Independence Station). Independence Station is located in northeastern Arkansas in the eastern portion of Independence County, approximately 5 kilometers (km) southeast of Newark, Arkansas. Independence Station is a large Electrical Generating Unit that was included in the list of facilities to be designated pursuant to a March 2, 2015 Consent Decree.[2] There is one other major emitter of SO_2 in Independence County.[3] The Future Fuel Corporation facility (Future Fuel) located approximately 12 km to the west-northwest of Independence Station.

Independence County was designated unclassifiable on July 12, 2016.[4] The unclassifiable designation was based on the information the state of Arkansas and the Sierra Club provided to the EPA. Specifically, the designation and associated boundaries were based on the EPA's evaluation of the State's air dispersion modeling analysis, as well as the additional modeling analysis submitted by Sierra Club for the area surrounding Independence Station. In summary, the EPA's evaluation of the state's modeling supported the need for refined emission estimates for the Future Fuel facility to accurately assess potential maximum impacts in Independence County. Both ADEQ's and Sierra Club's previous modeling provided to the EPA in 2015 and 2016 were premised on several factors that were not consistent with recommendations in the Modeling TAD and were unreliable for determining whether the area was or was not meeting the 2010 SO_2 NAAQS. After careful evaluation of the State's recommendation, all timely comments and information received, the EPA concluded that it could not determine whether the area around the Independence Station was meeting or not meeting the 2010 SO_2 primary NAAQS and designated that area unclassifiable in July 2016. The boundaries for this designation were the jurisdictional boundaries of Independence County, based upon the State's recommendation, its submitted analysis and our concurrence on the State's reasoning.

Detailed rationale, analyses, and other information supporting our original designation for this area can be found in the final action's technical support document for Arkansas.[5] This document, along with all other supporting materials for the original 2010 SO_2 primary NAAQS designation for Independence County, can be found at *www.regulations.gov* in Docket ID EPA–HQ–OAR–2014–0464. The technical support document for this proposed action is included in the docket for this action (Docket EPA–R06–OAR–2018–0624).[6]

II. What are the criteria for redesignating an area from unclassifiable to attainment/unclassifiable?

Section 107(d)(3)(A) provides that the Administrator may notify the Governor of any state that the designation of an area should be revised ''on the basis of air quality data, planning and control considerations, or any other air quality-related considerations the Administrator deems appropriate.'' The Act further provides in section 107(d)(3)(D) that even if the Administrator has not notified a state Governor that a designation should be revised, the Governor of any state may, on the Governor's own motion, submit a request to revise the designation of any area, and the Administrator must approve or deny the request.

When approving or denying a request to redesignate an area, the EPA bases its decision on the air quality data for the area as well as the considerations provided under section 107(d)(3)(A).[7] The EPA defines an attainment/unclassifiable area[8] as: An area for which available information does not indicate that the area violates the NAAQS or contributes to ambient air quality in a nearby area that does not meet the NAAQS or an area for which the EPA has determined the available information indicates the area meets the NAAQS and does not indicate the area contributes to ambient air quality in a nearby area that does not meet the NAAQS. We are proposing to find that Independence County would fall under the second definition.

III. What is EPA's rationale for proposing to redesignate the area?

Independence County was designated unclassifiable by the EPA on July 12, 2016. As discussed previously, modeling results provided by Arkansas and Sierra Club in 2015 and 2016 were not refined enough to make a clear determination of the area's attainment status. Since that designation, the EPA has worked with ADEQ and the two facilities in refining the modeling approaches and inputs resulting in modeling that is acceptable for assessing whether the area is attaining or not attaining the 1-hour SO_2 NAAQS. Specifically, ADEQ and the facilities have made refinements in the modeling including: Revising Future Fuel's emissions estimates to vary emissions based on coal usage, using more accurate stack parameters and utilizing a meteorological approach which employs the EPA-generated Weather Research and Forecasting (WRF) meteorological modeling and the Mesoscale Model InterFace (MMIF) program to generate representative meteorological data for the Independence County area. The original modeling used 2012–2014 meteorological data from the Little Rock area which is over 70 miles from Future Fuel and Independence Station, so ADEQ wished to use the new 2013–2015 WRF based data to better represent the local meteorology in Independence County. EPA worked with ADEQ to review the meteorological modeling results within the region and at

[1] ''Sulfur Dioxide ($S0_2$) National Ambient Air Quality Standards Designations Modeling Technical Assistance Document''. August 2016 draft *https://www.epa.gov/sites/production/files/2016-0706/documents/areadesignso2modelingtad.pdf*. Note. the EPA released earlier drafts of this document in May and 2013 and February 2016.

[2] See Sierra Club et al. v. McCarthy, Civil Action No. 3:13–cv–3953–SI (N.D. Cal.), and 79 FR 31325 (June 2, 2014).

[3] Sources over 100 tons per year emissions of SO_2 using EPA's 2014 National Emission Inventory.

[4] 2010 SO_2 primary NAAQS Round 2 Designations for Arkansas were signed on June 30, 2016, and can be found at 81 FR 45039, July 12, 2016.

[5] Final AR SO_2 designation TSD can be found at *www.regulations.gov;* Docket EPA–HQ–OAR–2014–0464–0410).

[6] See ''Independence Redesignation TSD.pdf''.

[7] While CAA section 107(d)(3)(E) also lists specific requirements for redesignations, those requirements only apply to redesignations of nonattainment areas to attainment and, therefore, are not applicable in the context of a redesignation of an area from unclassifiable to attainment/unclassifiable.

[8] Historically, the EPA has designated most areas that do not meet the definition of nonattainment as ''unclassifiable/attainment.'' EPA has reversed the order of the label to be ''attainment/unclassifiable'' to better convey the definition of the designation category and so that the category is more easily distinguished from the separate unclassifiable category. *See, e.g.,* 83 FR 1098, 1099 (January 9, 2018) and 83 FRN 25776, 25778 (June 4, 2018). EPA reserves the ''attainment'' category for when EPA redesignates a nonattainment area that has attained the relevant NAAQS and has an approved maintenance plan.

surrounding meteorological stations to assess whether the meteorological model was performing adequately. EPA also assessed whether the use of the WRF data with 12 km grid resolution was acceptable for simulating the meteorological data for Independence County. EPA determined model was acceptable to simulate the meteorological parameters in Independence County and EPA approved the use of the WRF/MMIF meteorological data for use in AERMOD [9] modeling of Independence County.[10] This approval is included in the docket for this action (Docket EPA–R06–OAR–2018–0624). ADEQ submitted an updated analysis and letter signed by Governor Asa Hutchinson on April 20, 2018 requesting that the EPA redesignate Independence County, Arkansas as attainment/unclassifiable for the 1-hour SO_2 primary NAAQS.

According to the EPA's guidance on redesignations, SO_2 nonattainment areas using modeling to demonstrate attainment for a redesignation request would be expected to use maximum allowable emissions.[11] However, these statements derive from the requirements of CAA section 107(d)(3)(E), which do not pertain to the redesignation of unclassifiable areas. For redesignations of unclassifiable areas, the necessary analysis is equivalent to what would be required in a designation in the first instance since we have not found the area to be attainment or nonattainment. In this first instance, the goal is to establish existing ambient air quality. As such, it is appropriate to use actual emissions for estimating existing air quality. The EPA's acceptance of modeling using actual emissions [12] in this instance should not be construed to define what would be needed for a demonstration of attainment and maintenance for purposes of a redesignation of a nonattainment area to attainment.

The EPA has reviewed the modeling provided by the state with their redesignation request and finds that it comports with the EPA's, current Modeling TAD [13] and the EPA's Guideline on Air Quality Models (40 CFR part 51 Appendix W) and is acceptable for assessing the attainment status of Independence County, Arkansas. The state's modeling indicates that the predicted maximum Design Value at any receptor in the modeling domain is 159.6 μg/m^3, or 60.92 parts per billion (ppb).[14] The EPA's review confirms the modeling results appropriately characterize the air quality in Independence County, Arkansas and that predicted ambient SO_2 concentrations are below the 2010 SO_2 primary NAAQS of 196.4 μg/m^3, or 75 ppb.

IV. Proposed Action

The EPA is proposing to approve Arkansas' April 20, 2018, request to change the EPA's previous designation and redesignate Independence County from unclassifiable to attainment/unclassifiable for the 2010 SO_2 primary NAAQS. The EPA has reviewed the modeling provided by the state with its redesignation request and finds that it comports with the EPA's, current Modeling TAD and the EPA's Guideline on Air Quality Models (40 CFR part 51 Appendix W) and is acceptable for assessing the attainment status of Independence County, Arkansas. If finalized, approval of the redesignation request would change the legal designation for the Area, found at 40 CFR part 81, from unclassifiable to attainment/unclassifiable for the 2010 SO_2 primary NAAQS.

V. Statutory and Executive Order Reviews

Under the CAA, redesignation of an area to attainment/unclassifiable is an action that affects the status of a geographical area and does not impose any additional regulatory requirements on sources beyond those imposed by state law. A redesignation to attainment/unclassifiable does not in and of itself create any new requirements. Accordingly, this proposed action merely proposes to redesignate an area to attainment/unclassifiable and does not impose additional requirements. For that reason, this proposed action:

- Is exempt from review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because it is exempt under Executive Order 12866;
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is not subject to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104–4);
- is not subject because it does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it does not establish an environmental standard intended to mitigate health or safety risks;
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because this action does not involve technical standards;
- will not have disproportionate human health or environmental effects under Executive Order 12898 (59 FR 7629, February 16, 1994); and
- does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000) because no tribal lands are located within the Area and the redesignation does not create new requirements. The EPA notes this proposed action will not impose substantial direct costs on Tribal governments or preempt Tribal law.

List of Subjects in 40 CFR Part 81

Environmental protection, Air pollution control, National parks, Wilderness areas.

Authority: 42 U.S.C. 7401 *et seq.*

[Docket No. NHTSA–2018–0092]

RIN 2127–AL99

Pilot Program for Collaborative Research on Motor Vehicles With High or Full Driving Automation; Extension of Comment Period

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Advance notice of proposed rulemaking (ANPRM); extension of comment period.

SUMMARY: In response to a request from the public, NHTSA is announcing a two-week extension of the comment period on the ANPRM on a Pilot Program for Collaborative Research on Motor Vehicles with High or Full Driving Automation. The comment period for the ANPRM was originally scheduled to end on November 26, 2018. It will now end on December 10, 2018.

DATES: The comment period for the ANPRM published on October 10, 2018 at 83 FR 50872 is extended. Written comments on the ANPRM must be received on or before December 10, 2018 in order to be considered timely.

ADDRESSES: Comments must be submitted by one of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery or Courier:* U.S. Department of Transportation, West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m. Eastern time, Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

Regardless of how you submit your comments, they must include the docket number identified in the heading of this notice.

Note that all comments received, including any personal information provided, will be posted without change to *http://www.regulations.gov*. Please see the ''Privacy Act'' heading below.

You may call the Docket Management Facility at 202–366–9324.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* or the street address listed above. We will continue to file relevant information in the docket as it becomes available.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its decision-making process. DOT posts these comments, without edit, including any personal information the commenter provides, to *http://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy*. Anyone can search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.).

FOR FURTHER INFORMATION CONTACT: For research and pilot program issues: Dee Williams, Office of Vehicle Safety Research, 202–366–8537, *Dee.Williams@dot.gov,* National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

For legal issues: Stephen Wood, Assistant Chief Counsel, Vehicle Rulemaking and Harmonization, Office of Chief Counsel, 202–366–2992, *Steve.Wood@dot.gov,* at the same address.

SUPPLEMENTARY INFORMATION: On October 10, 2018, NHTSA published an ANPRM to obtain public comments on the factors and structure that are appropriate for the Agency to consider in designing a national pilot program that will enable the Agency to facilitate, monitor and learn from the testing and development of the emerging advanced vehicle safety technologies and to assure the safety of those activities. The ANPRM stated that the closing date for comments is November 26, 2018.

On November 16, 2018, NHTSA received a request from the Uber Technologies, Inc. for a two-week extension of the comment period. The request can be found in the docket for the ANPRM listed above under **ADDRESSES**. NHTSA has considered this request and believes that a 14-day extension beyond the original due date is desirable to provide additional time for the public to comment on the complex and novel questions in the ANPRM. This is to notify the public that NHTSA is extending the comment period on the ANPRM, and allowing it to remain open until December 10, 2018.

Issued in Washington, DC, pursuant to authority delegated in 49 CFR 1.81 and 1.95.

Heidi Renate King,

Deputy Administrator.

DEPARTMENT OF AGRICULTURE

Agency Information Collection Activities: Extension of Approved Collection; Comment Request; Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

November 19, 2018.

AGENCY: Animal and Plant Health Inspection Service, Department of Agriculture.

ACTION: 30-Day notice of submission of information collection approval from the Office of Management and Budget and request for comments.

SUMMARY: As part of a Federal Government-wide effort to streamline the process to seek feedback from the public on service delivery, the Department of Agriculture (USDA), Animal and Plant Health Inspection Service (APHIS) has submitted a Generic Information Collection Request (Generic ICR): ''Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery'' to OMB for approval under the Paperwork Reduction Act (PRA).

DATES: Comments must be submitted December 24, 2018.

ADDRESSES: Written comments may be submitted to the Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602.

FOR FURTHER INFORMATION CONTACT: To request additional information, please contact Ruth Brown (202) 720–8958.

SUPPLEMENTARY INFORMATION:

Title: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

Abstract: The information collection activity will garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

Feedback collected under this generic clearance will provide useful information, but it will not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: The target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

The Agency received one comment in response to the 60-day notice published in the **Federal Register** of August 22, 2018 (83 FR 42459).

Animal and Plant Health Inspection Service—0579–0377

Current Actions: Extension of Currently Approved Information Collection.

Type of Review: Extension.

Affected Public: Individuals and Households; Businesses and Organizations; State, Local or Tribal governments; and foreign federal governments.

Average Expected Annual Number of Activities: 29.

Respondents: 70,000.

Annual Responses: 70,000.

Frequency of Response: Once per request.

Average Minutes per Response: 0.25.

Burden Hours: 17,500.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid Office of Management and Budget control number.

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

November 19, 2018.

The Department of Agriculture has submitted the following information collection requirement(s) to Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological

collection techniques or other forms of information technology.

Comments regarding this information collection received by December 24, 2018 will be considered. Written comments should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, 725—17th Street NW, Washington, DC 20502. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Copies of the submission(s) may be obtained by calling (202) 720–8958.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Utilities Service

Title: Advance of Loan Funds and Budgetary Control and Related Burdens.

OMB Control Number: 0572–0015.

Summary of Collection: The Rural Utilities Service (RUS) is authorized by the Rural Electrification Act (RE Act) of 1936, as amended, ''to make loans in several States and territories of the United States for rural electrification and for the purpose of furnishing and improving electric and telephone service in rural areas and to assist electric borrowers to implement demand side management, energy conservation programs, and on-grid and off-grid renewable energy systems.'' Borrowers will provide the agency with information that supports the use of the funds as well as identify the type of projects for which they will use the funds.

Need and use of the Information: RUS electric borrowers will submit RUS form 595 and 219. Form 595, Financial Requirement & Expenditure Statement, to request an advance of loan funds remaining for an existing approved loan and to report on the expenditure of previously advanced loan funds. Form 219, Inventory of Work Orders, serves as a connecting line and provides an audit trail that verifies the evidence supporting the propriety of expenditures for construction of retirement projects that supports the advance of funds. The information collected will ensure that loan funds are expended and advanced for RUS approved budget process and amounts. Failure to collect proper information could result in improper determinations of eligibility or improper use of funds.

Description of Respondents: Not-for-profit institutions; Business or other for-profit.

Number of Respondents: 574.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 13,959.

Rural Utility Service

Title: 7 CFR 1773, Policy on Audits of RUS Borrowers.

OMB Control Number: 0572–0095.

Summary of Collection: Under the authority of the Rural Electrification Act of 1936 (ACT), as amended 7 U.S.C. 901 *et seq.,* the Administrator is authorized and empowered to make loans under certain specified circumstances for rural electrification and the furnishing of electric energy to persons in rural areas and for the purpose of furnishing and improving telephone service in rural areas. RUS, in representing the Federal Government as Mortgagee, relies on the information provided by the borrowers in their financial statements to make lending decisions as to borrowers' credit worthiness and to assure that loan funds are approved, advanced and disbursed for proper Act purposes. Borrowers are required to furnish a full and complete report of their financial condition, operations and cash flows, in form and substance satisfactory to RUS.

Need and Use of the Information: RUS will collect information to evaluate borrowers' financial performance, determine whether current loans are at financial risk, and determine the credit worthiness of future losses. If information is not collected, it would delay RUS' analysis of the borrowers' financial strength, thereby adversely impacting current lending decisions.

Description of Respondents: Not-for-profit institutions; Business or other for-profit.

Number of Respondents: 1,300.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 14,439.

Rural Utility Service.

Title: Substantially Underserved Trust Areas (SUTA), 7 CFR 1700, Subpart D.

OMB Control Number: 0572–0147.

Summary of Collection: The 2008 Farm Bill (P.L. 110–246) authorized the Substantially Underserved Trust Area (SUTA) initiative. The SUTA initiative identifies the need and improves the availability of Rural Utility Service (RUS) programs to reach trust areas. The initiative gives the Secretary of Agriculture certain discretionary authorities relating to financial assistance terms and conditions that can enhance the financing possibilities in areas that are underserved by certain RUS electric, water and waste, and telecom and broadband programs.

Need and use of the Information: RUS provides loan, loan guarantee and grant programs for rural electric, water and waste, and telecommunications and broadband infrastructure. Eligible applicants notify RUS in writing, at the time of application, that it seeks consideration under the requirements of 7 CFR 1700, subpart D. The data covered by this collection are those materials necessary to allow the agency to determine applicant and community eligibility, and an explanation and documentation of the high need for the benefits of the SUTA provisions. Without this information RUS would not be able to make a prudent loan decision.

Description of Respondents: State, Local or Tribal Government.

Number of Respondents: 1.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 30.

Rural Utility Service.

Title: The Rural Alaska Village Grant (RAVG) Program; 7 CFR part 1784.

OMB Control Number: 0572–0150.

Summary of Collection: The Rural Alaska Village Grant (RAVG) Program is authorized under (Section 3061 of the Consolidated Farm and Rural Development Act (CONACT), (7 U.S.C. 1926(d)), as amended. Governing regulations are codified in 7 CFR part 1784. Under the RAVG program, the Secretary may make grants to the State of Alaska for the benefit of rural or Native Villages in Alaska to provide for the development and construction of water and wastewater systems to improve the health and sanitation conditions in those villages. To be eligible to receive a grant under the RAVG program, the project must provide 25 percent in matching funds from the State of Alaska. The matching funds must come from non-Federal sources.

Need and use of the Information: The Rural Utilities Service (RUS) will collect information using several forms. RUS state and field offices collect the information from applicants, grantees, and consultants. The collected information is used to determine applicant eligibility and project feasibility. RUS also uses the information to ensure that grantees

operate on a sound basis and use the grants funds for authorized purposes.

Description of Respondents: Not-for-profit institutions; State, Local or Tribal Government.

Number of Respondents: 25.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 469.

Kimble Brown,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–15–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

November 19, 2018.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by December 24, 2018 will be considered. Written comments should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, 725 17th Street NW, Washington, DC 20502. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Copies of the submission(s) may be obtained by calling (202) 720–8958.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Animal and Plant Health Inspection Service

Title: Contract Pilot and Aircraft Acceptance.

OMB Control Number: 0579–0298.

Summary of Collection: The Plant Protection Act (7 U.S.C. 7701 *et seq.*) authorizes the Secretary of Agriculture, either independently or in cooperation with States, to carry out operations or measures to detect, eradicate, suppress, control, prevent, or retard the spread of plant pests and noxious weeds that are new to or not widely distributed within the United States. This authority has been delegated to the Administrator, Animal and Plant Health Inspection Service (APHIS). APHIS carries out this program primarily by treating infested lands by aerial spraying of pesticides from aircraft.

Need and Use of the Information: Contract Pilot and Aircraft Acceptance Form (PPQ–816) and SIT Pilot and Aircraft Cheek-In Sheet (PPQ Form 818) are used by the Plant Protection and Quarantine personnel who are involved with contracts for aerial application services for emergency pest outbreaks. The forms are used to document that the pilot and aircraft meet contract specifications. If APHIS did not collect this information or collected it less frequently, APHIS would not be able to verify if APHIS contracts for aerial application services met specifications.

Description of Respondents: Businesses.

Number of Respondents: 15.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 8.

Animal and Plant Health Inspection Service

[Docket No. APHIS–2018–0072]

Notice of Request for an Extension of Approval of an Information Collection; Nomination Request Form; Animal Disease Training

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request an extension of approval of an information collection associated with training related to animal diseases.

DATES: We will consider all comments that we receive on or before January 22, 2019.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2018-0072*.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2018–0072, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road, Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at *http://www.regulations.gov/#!docketDetail;D=APHIS-2018-0072* or in our reading room, which is located in room 1141 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: For information on training related to animal diseases, contact Ms. Alicia D. Love, Program Specialist, Professional Development Services Branch, VS, APHIS, 4700 River Road, Unit 27, Riverdale, MD 20737; (301) 851–3425. For more detailed information on the information collection, contact Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851–2483.

SUPPLEMENTARY INFORMATION:

Title: Nomination Request Form; Animal Disease Training.

OMB Control Number: 0579–0353.

Type of Request: Extension of approval of an information collection.

Abstract: Under the Animal Health Protection Act (7 U.S.C. 8301 *et seq.*), the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture is authorized, among other things, to protect the health of U.S. livestock and poultry populations by preventing the introduction and interstate spread of serious diseases and pests of livestock and by eradicating such diseases from the United States

when feasible. In connection with this mission, APHIS' Veterinary Services (VS) program provides vital animal disease training to State, Tribal, international, university, and industry personnel.

Individuals who wish to attend animal disease-related training must submit a Nomination Request Form (VS Form 1–5) to VS to help the program coordinate courses and select participants. VS develops rosters with course participants' names and contact information to notify them of future training courses and to encourage contact among participants throughout their careers.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; *e.g.,* permitting electronic submission of responses.

Estimate of Burden: The public burden for this collection of information is estimated to average 0.33 hours per response.

Respondents: State, Tribal, international, university, and industry personnel.

Estimated Annual Number of Respondents: 350.

Estimated Annual Number of Responses per Respondent: 1.

Estimated Annual Number of Responses: 350.

Estimated Total Annual Burden on Respondents: 116 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 15th day of November 2018.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Notice of Intent To Request To Conduct a New Information Collection

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 this notice announces the intention of the National Agricultural Statistics Service (NASS) to seek approval to conduct a new information collection to gather economic data from a sample of homeowners, golf courses, sod producers, turfgrass service providers, and commercial businesses with turfgrass in New Jersey.

DATES: Comments on this notice must be received by January 22, 2019 to be assured of consideration.

ADDRESSES: You may submit comments, identified by docket number 0535–NEW, by any of the following methods:

- *Email: omboffi cer@nass.usda.gov.* Include docket number above in the subject line of the message.
- *E-fax:* (855) 838–6382.
- *Mail:* Mail any paper, disk, or CD–ROM submissions to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW, Washington, DC 20250–2024.
- *Hand Delivery/Courier:* Hand deliver to: David Hancock, NASS Clearance Officer, U.S. Department of Agriculture, Room 5336 South Building, 1400 Independence Avenue SW, Washington, DC 20250–2024.

FOR FURTHER INFORMATION CONTACT: Kevin L. Barnes, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, (202) 720–4333. Copies of this information collection and related instructions can be obtained without charge from David Hancock, NASS—OMB Clearance Officer, at (202) 690–2388 or at *omboffi cer@nass.usda.gov.*

SUPPLEMENTARY INFORMATION:

Title: Turfgrass Economic Survey.

OMB Control Number: 0535–NEW.

Type of Request: Intent to seek approval to conduct a new information collection for a period of three years.

Abstract: The primary objective of the National Agricultural Statistics Service (NASS) is to collect, prepare and issue State and national estimates of crop and livestock production, prices, and disposition; as well as economic statistics, environmental statistics related to agriculture and also to conduct the Census of Agriculture.

The Turfgrass Economic Survey program will collect economic information from a sample of homeowners, golf courses, sod producers, turfgrass service providers, and commercial businesses with turfgrass in New Jersey. The results of the data collection will track the turfgrass industry's contribution to the New Jersey economy. All questionnaires included in this information collection will be voluntary. This project is conducted as a cooperative effort with Rutgers University. Funding for this survey is being provided by Rutgers University.

Authority: These data will be collected under authority of 7 U.S.C. 2204(a). Individually identifiable data collected under this authority are governed by Section 1770 of the Food Security Act of 1985 as amended, 7 U.S.C. 2276, which requires USDA to afford strict confidentiality to non-aggregated data provided by respondents. This Notice is submitted in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–113, 44 U.S.C. 3501, *et seq.*) and Office of Management and Budget regulations at 5 CFR part 1320.

NASS also complies with OMB Implementation Guidance, ''Implementation Guidance for Title V of the E-Government Act, Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA),'' **Federal Register**, Vol. 72, No. 115, June 15, 2007, p. 33362.

Estimate of Burden: Public reporting burden for this information collection is based on similar surveys with expected response time of 45 minutes. The estimated sample size will be approximately 1,400. The frequency of data collection for the different surveys is annual. Estimated number of responses per respondent is 1. Publicity materials and instruction sheets will account for approximately 5 minutes of additional burden per respondent. Respondents who refuse to complete a survey will be allotted 2 minutes of burden per attempt to collect the data.

Respondents: Homeowners, golf courses, sod producers, turfgrass service

providers, and commercial businesses with turfgrass in New Jersey.

Estimated Number of Respondents: 1,400.

Estimated Total Annual Burden on Respondents: 1,200 hours.

Comments: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, through the use of appropriate automated, electronic, mechanical, technological, or other forms of information technology collection methods.

All responses to this notice will become a matter of public record and be summarized in the request for OMB approval.

Signed at Washington, DC, November 08, 2018

Kevin L. Barnes,

Associate Administrator.

BILLING CODE 3410–20–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B–75–2018]

Foreign-Trade Zone (FTZ) 87—Lake Charles, Louisiana, Notification of Proposed Production Activity, Driftwood LNG, LLC (Liquified Natural Gas Processing), Sulphur, Louisiana

The Lake Charles Harbor and Terminal District, grantee of FTZ 87, submitted a notification of proposed production activity to the FTZ Board on behalf of Driftwood LNG, LLC (Driftwood LNG), located in Sulphur, Louisiana. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on November 16, 2018.

The Driftwood LNG facility is located within Subzone 87G. The facility (currently proposed for construction) will be used for liquified natural gas processing. Pursuant to 15 CFR 400.14(b), FTZ activity would be limited to the specific foreign-status material and specific finished products described in the submitted notification and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt Driftwood LNG from customs duty payments on the foreign-status gaseous natural gas (duty-free) used in export production. On its domestic sales, for the foreign-status gaseous natural gas, Driftwood LNG would be able to choose the duty rates during customs entry procedures that apply to: Liquified natural gas and stabilized condensate by-product (duty rates are duty-free and 10 cents/barrel, respectively). Driftwood LNG would be able to avoid duty on the foreign-status material which becomes scrap/waste. Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

The request indicates that gaseous natural gas is subject to special duties under Section 301 of the Trade Act of 1974 (Section 301), depending on the country of origin. The applicable Section 301 decisions require subject merchandise to be admitted to FTZs in privileged foreign status (19 CFR 146.41).

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is January 2, 2019.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230–0002, and in the ''Reading Room'' section of the Board's website, which is accessible via *www.trade.gov/ftz.*

For further information, contact Diane Finver at *Diane.Finver@trade.gov* or (202) 482–1367.

Dated: November 16, 2018.

Elizabeth Whiteman,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B–74–2018]

Foreign-Trade Zone (FTZ) 18—San Jose, California; Notification of Proposed Production Activity; Bloom Energy Corporation (Commercial Fuel Cells and Related Subassemblies), Sunnyvale and Mountain View, California

The City of San Jose, California, grantee of FTZ 18, submitted a notification of proposed production activity to the FTZ Board on behalf of Bloom Energy Corporation (Bloom), located at sites in Sunnyvale and Mountain View, California. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on November 15, 2018.

The Bloom facility is located within Subzone 18I. The facility is used for the production of commercial fuel cells and related subassemblies. Pursuant to 15 CFR 400.14(b), FTZ activity would be limited to the specific foreign-status materials and components and specific finished products described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt Bloom from customs duty payments on the foreign-status components used in export production. On its domestic sales, for the foreign-status materials/components noted below, Bloom would be able to choose the duty rates during customs entry procedures that apply to: Piping manifolds; water distribution modules; fuel processing units; fuel cell power modules (DC generators); nickel iron alloy fuel cell power module enclosures (housings); power inverters; and, energy storage and distribution modules (duty rates range from duty-free to 3.8%). Bloom would be able to avoid duty on foreign-status components which become scrap/waste. Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

The components and materials sourced from abroad include: Glass powder; ceramic substrates; plastic labels; plastic containers with sleeves; plastic enclosure bags; plastic cable ties; rubber grommets; adhesives; cardboard boxes; textile paper filters; zirconia alumina shaping stones; ceramic heat plating; glass fiber insulation jackets; nickel alloy wire probes; alloy steel adapters; stainless steel tubing; stainless steel coated tubing; stainless steel

spacers; stainless steel pipes; stainless steel flanges; stainless steel pipe fixtures; stainless steel clamps; stainless steel screws; stainless steel washers; stainless steel cable; stainless steel spacers; nickel plates; nickel mesh; chromium alloy powder; iron and steel flexible tubing with fittings; cooling fans; prototype compressors; axial fan motors; fan cable connectors; fan mount rubber gaskets; aluminum plate-fin heat exchangers; heat exchange units; water filtering machinery; stainless steel weldments; filtering equipment; gas filtering canisters; gas filtering canister brackets; hoists; aluminum screens with frames; stainless steel valves; solenoid valves; inlet/outlet manifolds; housing units for fuel cells; iron/nickel alloy and ceramic fuel cell dielectrics; dielectric transformers for inverters; transformers 1kVA power handling capacity; power inverters; fuel cell control units; rectifier and static converter power cards; rectifier and static converter circuit boards; rectifier and static converter mounting brackets; mixed alloy rectifier and static converter casings; static converters; holding magnets; electric capacitors; electric capacitor caps; programmable controllers; printed circuit boards; electrical contactors; electrical terminators; electrical fuses; printed circuit boards; contactors; electrical controller backplanes and handles; multimodal switchboard antennas; multimodal switchboard mounting switches; internal frames for multimodal switchboards; electrical controllers; diodes; cables for telemetry equipment; electrical conductors fitted with connectors; electrical conductors for telecommunication; copper electrical conductors; cables with fitted connectors; plastic insulating fittings; thermocouples; probe wires; electrical thermocouple assemblies; thermocouple assembly terminals; gas flow meters; transducers; electricity meters; programmable load boxes; fuel cell output (harmonics, temperature and luminosity) measuring devices; mass flow controllers; power conditioning systems regulating power control in fuel cell; mixed alloy interconnecting plates; and, chromium iron interconnect plates (duty rates range from duty-free to 8.5%). The request indicates that textile paper filters will be admitted to the zone in privileged foreign status (19 CFR 146.41), thereby precluding inverted tariff benefits on such items. The request also indicates that certain materials/components are subject to special duties under Section 232 of the Trade Expansion Act of 1962 (Section 232) and Section 301 of the Trade Act of 1974 (Section 301), depending on the country of origin. The applicable Section 232 and Section 301 decisions require subject merchandise to be admitted to FTZs in privileged foreign status (19 CFR 146.41).

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is January 2, 2019.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230–0002, and in the ''Reading Room'' section of the Board's website, which is accessible via *www.trade.gov/ftz.*

For further information, contact Diane Finver at *Diane.Finver@trade.gov* or (202) 482–1367.

Dated: November 16, 2018.

Elizabeth Whiteman,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–580–870]

Notice of Commencement of a Compliance Proceeding Pursuant to Section 129 of the Uruguay Round Agreements Act

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: Applicable November 23, 2018.

SUMMARY: The Department of Commerce (Commerce) is commencing a proceeding to gather information, analyze record evidence, and consider the determinations which would be necessary to bring its measures into conformity with the recommendations and rulings of the Dispute Settlement Body (DSB) of the World Trade Organization (WTO) in *United States—Antidumping Measures on Certain Oil Country Tubular Goods from Korea* (*WTO/DS488*). This dispute concerns the final determination issued in the antidumping duty (AD) investigation of certain oil country tubular goods (OCTG) from the Republic of Korea (Korea).

FOR FURTHER INFORMATION CONTACT: Erin Kearney, AD/CVD Operations Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0167.

SUPPLEMENTARY INFORMATION:

Background

On February 9, 2018, the United States informed the DSB that the United States intends to implement the DSB's recommendations and rulings in *WTO/DS488,* pursuant to section 129 of the Uruguay Round Agreements Act (URAA), 19 U.S.C. 3538. The AD investigation at issue is:

Case No.	Full title	FR cite/publication date
A–580–870	Certain Oil Country Tubular Goods from the Republic of Korea: Final Determination of Sales at Less Than Fair Value and Negative Final Determination of Critical Circumstances.	79 FR 41983 (July 18, 2014).

Commencement of Section 129 Proceeding

In accordance with section 129(b)(1) of the URAA, Commerce consulted with the Office of the United States Trade Representative, and on November 7, 2018, pursuant to those consultations, opened a segment in the AD investigation at issue to commence administrative action to comply with the DSB's recommendations and rulings. The segment will consist of a separate administrative record with its own administrative protective order. In accordance with 19 CFR 351.305(b), interested parties may request access to business proprietary information in this segment of the proceeding in which they are participating. For this Section 129 segment, we may request additional information and we may conduct verification of such information. Consistent with section 129(d) of the URAA, Commerce intends to make a preliminary determination in this Section 129 segment, intends to provide interested parties with an opportunity to provide written comments on the preliminary determination, and may hold a hearing.

Filing Requirements & Letter of Appearance

In accordance with Commerce's regulations, all submissions to Commerce must be filed electronically using Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). An electronically filed document must be received successfully in its entirety by the time and date it is due. Documents exempted from the electronic submission requirements must be filed manually (*i.e.,* in paper form) with Enforcement and Compliance's APO/Dockets Unit, Room 18022, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, and stamped with the date and time of receipt by the applicable deadlines.[1]

Pursuant to 19 CFR 351.103(d)(l), to be included on the public service list for the Section 129 determination for the aforementioned proceeding, all interested parties, including parties that were part of the public service list in the underlying investigation and any parties otherwise notified of Commerce's commencement of this Section 129 proceeding, must file a letter of appearance. The letter of appearance must be filed separately from any other document (with the exception of an application for administrative protective order (APO) access; parties applying for and granted APO access would automatically be on the public service list). Parties wishing to enter an appearance or submit information with regard to this proceeding must upload their filing(s) to each relevant case number. Additionally, for each submission made in ACCESS, parties must select ''S 129–SEC 129'' as the segment and enter ''DS488'' in the segment specific information field.

Submission of Factual Information

Unless notified otherwise, the administrative record is closed for submitting new factual information. At this time, Commerce does not intend to seek new factual information in addition to information already on the record of the investigation. If Commerce determines that additional factual information is necessary, it will notify the parties.

Factual information is defined in 19 CFR 351.102(b)(21) as: (i) Evidence submitted in response to questionnaires; (ii) evidence submitted in support of allegations; (iii) publicly available information to value factors under 19 CFR 351.408(c) or to measure the adequacy of remuneration under 19 CFR 351.511(a)(2); (iv) evidence placed on the record by Commerce; and (v) evidence other than factual information described in (i)–(iv). The regulation requires any party, when submitting factual information, to specify under which subsection of 19 CFR 351.102(b)(21) the information is being submitted and, if the information is submitted to rebut, clarify, or correct factual information already on the record, to provide an explanation identifying the information already on the record that the factual information seeks to rebut, clarify, or correct. Time limits for the submission of factual information are addressed in 19 CFR 351.301, which provides specific time limits based on the type of factual information being submitted. Parties should review the regulations prior to submitting factual information in this segment.

Extension of Time Limits Regulation

Parties may request an extension of time limits before the expiration of a time limit established under Part 351, or as otherwise specified by the Secretary. In general, an extension request will be considered untimely if it is filed after the expiration of the time limit established under Part 351 expires. For submissions that are due from multiple parties simultaneously, an extension request will be considered untimely if it is filed after 10:00 a.m. Eastern Time on the due date. Under certain circumstances, we may elect to specify a different time limit by which extension requests will be considered untimely for submissions which are due from multiple parties simultaneously. In such a case, we will inform parties in the letter or memorandum setting forth the deadline (including a specified time) by which extension requests must be filed to be considered timely. An extension request must be made in a separate, stand-alone submission; under limited circumstances we will grant untimely-filed requests for the extension of time limits. *Review Extension of Time Limits; Final Rule,* 78 FR 57790 (September 20, 2013), available at *http://www.gpo.gov/fdsys/pkg/FR-2013-09-20/html/2013-22853.htm* prior to submitting factual information in this segment.

Certification Requirements

Any party submitting factual information in an AD or countervailing duty (CVD) proceeding must certify to the accuracy and completeness of that information.[2] Parties are hereby reminded that revised certification requirements are in effect for company/government officials, as well as their representatives. Investigations initiated on the basis of petitions filed on or after August 16, 2013, and other segments of any AD or CVD proceedings initiated on or after August 16, 2013, should use the formats for the revised certifications provided at the end of the *Final Rule*.[3] Commerce intends to reject factual submissions if the submitting party does not comply with the applicable revised certification requirements.

Notification to Interested Parties

Interested parties must submit applications for disclosure under APO in accordance with 19 CFR 351.305. On January 22, 2008, Commerce published *Antidumping and Countervailing Duty Proceedings: Documents Submission Procedures; APO Procedures,* 73 FR 3634 (January 22, 2008). Parties wishing to participate in this proceeding should ensure that they meet the requirements of these procedures (*e.g.,* the filing of letters of appearance as discussed at 19 CFR 351.103(d)).

This notice is published in accordance with section 129(b)(1) of the URAA.

Dated: November 15, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–533–857]

Certain Oil Country Tubular Goods From India: Notice of Correction to the Amended Final Determination and Amendment of the Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is correcting the amended final antidumping duty determination and order for certain oil country tubular

goods (OCTG) from India with respect to the ''all-others'' companies.

DATES: March 26, 2017.

FOR FURTHER INFORMATION CONTACT: Andrew Huston, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4261.

SUPPLEMENTARY INFORMATION: On July 18, 2014, Commerce published its final determination of sales at LTFV and final negative determination of critical circumstances in this proceeding.[1] As part of the *Final Determination,* Commerce calculated an all-others rate of 5.79 percent.[2] A summary of that determination and resulting litigation can be found in the *Amended Final Determination,* which was published in the **Federal Register** on April 12, 2017.[3] Subsequently, Commerce issued an *Amended Order,* which was published in the **Federal Register** on June 20, 2017.[4] Commerce then published a correction to the *Amended Final Determination* and to the *Amended Order* on July 28, 2017.[5] Commerce is now issuing a second correction to the *Amended Final Determination* and to the *Amended Order* as they concern the rate for all other producers and exporters. The rates for the two mandatory respondents remain unchanged.

In June 2018, U.S. Steel sought to enforce the final judgment of the United States Court of International Trade (CIT) that is referenced in the *Amended Final Determination.*[6] Specifically, U.S. Steel requested that the Court require Commerce to recalculate the all-others rate consistent with the revised weighted-average dumping margins reflected in the *Amended Final Determination* and *Amended Order.*[7] On October 17, 2018, the CIT granted, in part, U.S. Steel's motion for enforcement of judgment in *U.S. Steel II,* and ordered Commerce to issue a revised notice, recalculating the all-others rate.[8]

On October 17, 2018, the CIT granted, in part, plaintiff U.S. Steel's motion to enforce the Court's March 16, 2017, order sustaining the remand redetermination by Commerce pertaining to the less-than-fair-value (LTFV) investigation of OCTG from India. Accordingly, Commerce is issuing this notice to correct its earlier amended final determination and amended antidumping duty order with respect to the all-others rate.

Correction to the Amended Final Determination

We are correcting the *Amended Final Determination* to reflect the recalculated all-others rate. The relevant text of the *Amended Final Determination* should have appeared as follows:

Amended Final Determination

Because there is now a final court decision, Commerce is amending the *Final Determination* with respect to GVN single entity (comprised of GVN Fuels Limited, Maharashtra Seamless Limited and Jindal Pipes Limited),[9] Jindal SAW, Limited, and the ''all-others'' companies. The revised weighted-average dumping margins for the period July 1, 2012, through June 30, 2013, are as follows:

Exporter or producer	Estimated weighted-average dumping margins (percent)	Cash deposit rate (percent) [10]
GVN Fuels Limited, Maharashtra Seamless Limited and Jindal Pipes Limited (collectively, GVN or GVN single entity)	1.07 (*de minimis*)	0.00
Jindal SAW, Limited	11.24	0.00
All-Others	11.24 [11]	0.60 [12]

Amended Cash Deposit Rates

Neither the GVN single entity nor Jindal SAW, Limited have a superseding cash deposit rate (*e.g.,* from a subsequent administrative review) and, therefore, Commerce will issue revised cash deposit instructions to U.S. Customs and Border Protection. The revised cash deposit rates are indicated above, and effective March 26, 2017.

The all-others cash deposit rate, effective March 26, 2017, will be 0.60 percent, the weighted average all-others dumping margin adjusted by the rate of export subsidies determined for all-other producers and exporters in the companion CVD investigation.

Correction to the Amended Order

We are correcting the *Amended Order* to reflect the recalculated all-others rate. The relevant text of the *Amended Order* should have appeared as follows:

Estimated Weighted-Average Dumping Margins

The estimated weighted-average dumping margins are as follows:

Exporter or producer	Estimated weighted-average dumping margins (percent)	Cash deposit rate (percent) [13]
Jindal SAW, Limited	11.24	0.00
All-Others	11.24	0.60

[1] *See Final Determination of Sales at Less Than Fair Value and Final Negative Determination of Critical Circumstances: Certain Oil Country Tubular Good from India,* 79 FR 41981 (July 18, 2014) (*Final Determination*), and accompanying issues and decision memorandum (IDM).

[2] *Id.,* 79 FR at 41982.

[3] *See Certain Oil Country Tubular Goods from India: Notice of Court Decision Not in Harmony with Final Determination of Sales at Less Than Fair Value and Final Negative Determination of Critical Circumstances and Notice of Amended Final Determination,* 82 FR 17631 (April 12, 2017) (*Amended Final Determination*).

[4] *See Certain Oil Country Tubular Goods from India: Amendment of Antidumping Duty Order,* 82 FR 28045 (June 20, 2017) (*Amended Order*).

[5] *See Certain Oil Country Tubular Goods from India: Notice of Correction to Amended Final Determination and Amendment of Antidumping Duty Order,* 82 FR 35182 (July 28, 2017) (*Correction to Amended Final Determination* and *Amendment of the Order*).

[6] *See Amended Final Determination,* 82 FR at 17631 (citing *United States Steel Corp.* v. *United States,* 219 F. Supp. 3d 1300 (CIT 2017) (*U.S. Steel II*)).

[7] *See Amended Order; see also Correction to Amended Final Determination* and *Amendment of the Order.*

[8] *See United States Steel Corp.* v. *United States,* Consol. Ct. No. 14–00263, Slip Op. 18–139 (CIT October 17, 2018) (*U.S. Steel Enforcement Order*).

[9] *See Final Determination,* 79 FR at 41982, and accompanying IDM at Comment 9.

[10] Cash deposit rates are lower than estimated weighted-average dumping margins due to offsets for export subsidies.

[11] The all-others weighted-average dumping margin is based on the rate calculated for Jindal SAW, the only above *de minimis* rate calculated in this proceeding.

[12] *See* Memorandum, ''Calculation of Export Subsidy Rate for All Others,'' dated concurrently with this notice.

[13] Cash deposit rates are lower than estimated weighted-average dumping margins due to offsets for export subsidies.

This correction to the *Amended Final Determination* and to the *Amended Order* is issued and published in accordance with sections 735(d), 736(a), and 777(i) of the Tariff Act of 1930, as amended.

Dated: November 19, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

[FR Doc. 2018–25516 Filed 11–21–18; 8:45 am]

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XG533

Determination of Overfishing or an Overfished Condition

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: This action serves as a notice that NMFS, on behalf of the Secretary of Commerce (Secretary), has found that the following stocks are subject to overfishing or overfished. Gulf of Mexico gray snapper is now subject to overfishing. Thorny skate is still overfished. NMFS, on behalf of the Secretary, notifies the appropriate regional fishery management council (Council) whenever it determines that overfishing is occurring, a stock is in an overfished condition or a stock is approaching an overfished condition.

FOR FURTHER INFORMATION CONTACT: Regina Spallone, (301) 427–8568.

SUPPLEMENTARY INFORMATION: Pursuant to section 304(e)(2) of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1854(e)(2), NMFS, on behalf of the Secretary, must notify Councils, and publish in the **Federal Register**, whenever it determines that a stock or stock complex is subject to overfishing, overfished, or approaching an overfished condition.

NMFS has determined that the Gulf of Mexico stock of gray snapper is now subject to overfishing. The most recent benchmark assessment for this stock was finalized in 2018, using data through 2015. The assessment supports a determination that the stock is subject to overfishing because the current estimate of fishing mortality ($F_{2013–2015}$), 0.138, is greater than the maximum fishing mortality threshold (MFMT), 0.115. NMFS has informed the Gulf of Mexico Fishery Management Council (Gulf Council) that it must prepare and implement a plan amendment or proposed regulations to end overfishing immediately and prevent overfishing from occurring in the fishery. The Gulf Council has already started working on a fishery management plan amendment to address the results of this stock assessment.

NMFS has determined that thorny skate is still overfished. A stock status update was completed for this stock in 2018, using data through 2017. The update supports a determination that the stock remains overfished because the three-year average biomass index ($B_{2015–2017}$), 0.285kg/tow, is below the biomass threshold, 2.06 kg/tow. Thorny skate is currently in year 15 of a 25-year rebuilding plan that was implemented in 2003. NMFS continues to work with the New England Fishery Management Council to rebuild this stock.

Dated: November 19, 2018.

Karen H. Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Coastal and Estuarine Land Conservation, Planning, Protection, or Restoration.

OMB Control Number: 0648–0459.

Form Number(s): None.

Type of Request: Regular (extension of a currently approved information collection).

Number of Respondents: 51.

Average Hours per Response:: CELCP Plans, 120 hours to develop, 35 hours to revise or update; project application and checklist, 20 hours; semi-annual and annual reporting, 5 hours each.

Burden Hours: 1,410.

Needs and Uses: This request is for extension of a currently approved information collection.

NOAA has, or is given, authority under the Coastal Zone Management Act (CZMA), annual appropriations or other authorities, to issue funds to coastal states, localities or other recipients for planning, conservation, acquisition, protection, restoration, or construction projects. The required information enables NOAA to implement the CELCP, under its current or future authorization, and facilitate the review of similar projects under different, but related, authorities.

This includes projects funded through:

- The Coastal and Estuarine Land Conservation Program (CZMA Section 307A) to protect important coastal and estuarine areas that have significant conservation, recreation, ecological, historical, or aesthetic values, or that are threatened by conversion, and procedures for eligible applicants who choose to participate in the program to use when developing state conservation plans, proposing or soliciting projects under this program, applying for funds, and carrying out projects under this program in a manner that is consistent with the purposes of the program pursuant to program guidelines which can be found on NOAA's website at: *www.coast.noaa.gov/czm/landconservation/* or may be obtained upon request via the contact information listed above;
- the National Estuarine Research Reserve System (CZMA Section 315) Land Acquisition and Construction program;
- the Coastal Zone Management Program's low-cost acquisition and construction program (CZMA Section 306A); or the
- Fish and Wildlife Coordination Act.

Affected Public: State, local or tribal government; not-for-profit institutions.

Frequency: One time and semi-annually.

Respondent's Obligation: Required to obtain or retain benefits.

This information collection request may be viewed at *reginfo.gov.* Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_Submission@omb.eop.gov* or fax to (202) 395–5806.

Dated: November 19, 2018.

Sarah Brabson,

NOAA PRA Clearance Officer.

RIN 0648–XG600

Fisheries of the Northeastern United States; Atlantic Surfclam and Ocean Quahog Fisheries; Notice That Vendor Will Provide 2019 Cage Tags

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of vendor to provide fishing year 2019 cage tags.

SUMMARY: NMFS informs surfclam and ocean quahog individual transferable quota (ITQ) allocation holders that they will be required to purchase their fishing year 2019 (January 1, 2019—December 31, 2019) cage tags from the National Band and Tag Company. The intent of this notice is to comply with regulations for the Atlantic surfclam and ocean quahog fisheries and to promote efficient distribution of cage tags.

FOR FURTHER INFORMATION CONTACT: Aimee Ahles, Fishery Management Specialist, (978) 281–9373; fax (978) 281–9161.

SUPPLEMENTARY INFORMATION: The Federal Atlantic surfclam and ocean quahog fishery regulations at 50 CFR 648.77(b) authorize the Regional Administrator of the Greater Atlantic Region, NMFS, to specify in the **Federal Register** a vendor from whom cage tags, required under the Atlantic Surfclam and Ocean Quahog Fishery Management Plan (FMP), shall be purchased. Notice is hereby given that National Band and Tag Company of Newport, Kentucky, is the authorized vendor of cage tags required for the fishing year 2019 Federal surfclam and ocean quahog fisheries. Detailed instructions for purchasing these cage tags will be provided in a letter to ITQ allocation holders in these fisheries from NMFS within the next several weeks.

AUTHORITY: 16 U.S.C. 1801 *et seq.*

Dated: November 19, 2018.

Karen H. Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

RIN 0648–XG602

Nominations to the Marine Fisheries Advisory Committee

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for nominations.

SUMMARY: Nominations are being sought for appointment by the Secretary of Commerce to fill vacancies on the Marine Fisheries Advisory Committee (MAFAC or Committee). MAFAC is the only Federal advisory committee with the responsibility to advise the Secretary of Commerce (Secretary) on all matters concerning living marine resources that are the responsibility of the Department of Commerce. The Committee makes recommendations to the Secretary to assist in the development and implementation of Departmental regulations, policies, and programs critical to the mission and goals of NMFS. Nominations are encouraged from all interested parties involved with or representing interests affected by NMFS actions in managing living marine resources. Nominees should possess demonstrable expertise in a field related to the management of living marine resources and be able to fulfill the time commitments required for two annual meetings and year round subcommittee work. Individuals serve for a term of three years for no more than two consecutive terms if re-appointed. NMFS is seeking qualified nominees to fill current vacancies.

DATES: Nominations must be postmarked or have an email date stamp on or before December 24, 2018.

ADDRESSES: Nominations should be sent to Heidi Lovett, MAFAC Assistant Director, NMFS Office of Policy, 14th Floor, 1315 East-West Highway, Silver Spring, MD 20910 or email: *heidi.lovett@noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Heidi Lovett, MAFAC Assistant Director; (301) 427–8034; email: *heidi.lovett@noaa.gov.*

SUPPLEMENTARY INFORMATION: The MAFAC was approved by the Secretary on December 28, 1970, and subsequently chartered under the Federal Advisory Committee Act, 5 U.S.C. App. 2, on February 17, 1971. The Committee meets twice a year with supplementary subcommittee meetings as determined necessary by the Committee Chair and Subcommittee Chairs. No less than 15 and no more than 21 individuals may serve on the Committee. Membership is comprised of highly qualified, diverse individuals representing commercial, recreational, subsistence, and aquaculture fisheries interests; seafood industry; environmental organizations; academic institutions; tribal and consumer groups; and other living marine resource interest groups from a balance of U.S. geographical regions, including the Western Pacific and Caribbean.

A MAFAC member cannot be a Federal employee, member of a Regional Fishery Management Council, registered Federal lobbyist, state employee, or agent of a foreign principal. Selected candidates must pass a security check and submit a financial disclosure form. Membership is voluntary, and except for reimbursable travel and related expenses, service is without pay.

Each nomination submission should include the nominee's name, a cover letter describing the nominee's qualifications and interest in serving on the Committee, curriculum vitae or resume of the nominee, and no more than three supporting letters describing the nominee's qualifications and interest in serving on the Committee. Self-nominations are acceptable. The following contact information should accompany each nominee's submission: Name, address, telephone number, fax number, and email address (if available).

Nominations should be sent to Heidi Lovett (see **ADDRESSES**) and must be received by December 24, 2018. The full text of the Committee Charter and its current membership can be viewed at the NMFS' web page at *www.fisheries.noaa.gov/topic/partners#marine-fisheries-advisory-committee.*

Dated: November 19, 2018.

Jennifer Lukens,

Director for the Office of Policy, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

United States Patent and Trademark Office

[Docket No.: PTO–P–2018–0065]

Grant of Interim Extension of the Term of U.S. Patent No. 8,311,629; OPTIMIZER® Smart Implantable Pulse Generator

AGENCY: United States Patent and Trademark Office, Commerce.

ACTION: Notice of interim patent term extension.

SUMMARY: The United States Patent and Trademark Office has issued an order granting interim extension for a one-year interim extension of the term of U.S. Patent No. 8,311,629.

FOR FURTHER INFORMATION CONTACT: Mary C. Till by telephone at (571) 272–7755; by mail marked to her attention and addressed to the Commissioner for Patents, Mail Stop Hatch-Waxman PTE, P.O. Box 1450, Alexandria, VA 22313–1450; by fax marked to her attention at (571) 273–7755; or by email to *Mary.Till@uspto.gov.*

SUPPLEMENTARY INFORMATION: Section 156 of Title 35, United States Code, generally provides that the term of a patent may be extended for a period of up to five years if the patent claims a product, or a method of making or using a product, that has been subject to certain defined regulatory review, and that the patent may be extended for interim periods of up to one year if the regulatory review is anticipated to extend beyond the expiration date of the patent.

On October 26, 2018, Impulse Dynamic N.V., the patent owner of record, timely filed an application under 35 U.S.C. 156(d)(5) for an interim extension of the term of U.S. Patent No. 8,311,629. The patent claims the medical device, the OPTIMIZER Smart Implantable Pulse Generator. The application for patent term extension indicates that a Premarket Approval Application (PMA) P180036 was submitted to the Food and Drug Administration (FDA) on September 5, 2018.

Review of the patent term extension application indicates that, except for permission to market or use the product commercially, the subject patent would be eligible for an extension of the patent term under 35 U.S.C. 156, and that the patent should be extended for one year as required by 35 U.S.C. 156(d)(5)(B). Because the regulatory review period will continue beyond the original expiration date of the patent, November 16, 2018, interim extension of the patent term under 35 U.S.C. 156(d)(5) is appropriate.

An interim extension under 35 U.S.C. 156(d)(5) of the term of U.S. Patent No. 8,311,629 is granted for a period of one year from the original expiration date of the patent.

Dated: November 15, 2018.

Robert Bahr,

Deputy Commissioner for Patent Examination Policy, United States Patent and Trademark Office.

[FR Doc. 2018–25539 Filed 11–21–18; 8:45 am]

BILLING CODE 3510–16–P

DEPARTMENT OF DEFENSE

Department of the Army

Army Education Advisory Subcommittee Meeting Notice

AGENCY: Department of the Army, DoD.

ACTION: Notice of open subcommittee meeting.

SUMMARY: The Department of the Army is publishing this notice to announce the following Federal advisory committee meeting of the Defense Language Institute Foreign Language Center Board of Visitors, a subcommittee of the Army Education Advisory Committee. This meeting is open to the public.

DATES: The Defense Language Institute Foreign Language Center (DLIFLC) Board of Visitors Subcommittee will meet from 8:00 a.m. to 5:00 p.m. on December 12 and 13, 2018.

ADDRESSES: Defense Language Institute Foreign Language Center, Building 326, Weckerling Center, Presidio of Monterey, CA 93944.

FOR FURTHER INFORMATION CONTACT: Mr. Detlev Kesten, the Alternate Designated Federal Officer for the subcommittee, in writing at Defense Language Institute Foreign Language Center, ATFL–APAS–AA, Bldg. 614, Presidio of Monterey, CA 93944, by email at *Detlev.kesten@dliflc.edu,* or by telephone at (831) 242–6670.

SUPPLEMENTARY INFORMATION: The subcommittee meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of

1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150.

Purpose of the Meeting: The purpose of the meeting is to provide the subcommittee with briefings and information focusing on the Institute's plan for its students to achieve higher proficiency scores on the Defense Language Proficiency Test (DLPT), to include updates on curriculum and faculty development efforts.

Proposed Agenda: December 12—The subcommittee will receive briefings associated with DLIFLC's higher proficiency goals and the Institute's actions in supporting said goal. The subcommittee will complete administrative procedures and appointment requirements. December 13—The subcommittee will have time to discuss and compile observations pertaining to agenda items. General deliberations leading to provisional findings will be referred to the Army Education Advisory Committee for deliberation by the Committee under the open-meeting rules.

Public Accessibility to the Meeting: Pursuant to 5 U.S.C. 552b, as amended, and 41 CFR 102–3.140 through 102–3.165, and subject to the availability of space, this meeting is open to the public. Seating is on a first to arrive basis. Attendees are requested to submit their name, affiliation, and daytime phone number seven business days prior to the meeting to Mr. Kesten, via electronic mail, the preferred mode of submission, at the address listed in the **FOR FURTHER INFORMATION CONTACT** section. Because the meeting of the subcommittee will be held in a Federal Government facility on a military base, security screening is required. A photo ID is required to enter base. Please note that security and gate guards have the right to inspect vehicles and persons seeking to enter and exit the installation. Weckerling Center is fully handicap accessible. Wheelchair access is available on the right side of the main entrance of the building. For additional information about public access procedures, contact Mr. Kesten, the subcommittee's Alternate Designated Federal Officer, at the email address or telephone number listed in the **FOR FURTHER INFORMATION CONTACT** section.

Written Comments or Statements: Pursuant to 41 CFR 102–3.105(j) and 102–3.140 and section 10(a)(3) of the Federal Advisory Committee Act, the public or interested organizations may submit written comments or statements to the subcommittee, in response to the stated agenda of the open meeting or in regard to the subcommittee's mission in general. Written comments or statements should be submitted to Mr. Kesten, the subcommittee Alternate Designated Federal Officer, via electronic mail, the preferred mode of submission, at the address listed in the **FOR FURTHER INFORMATION CONTACT** section. Each page of the comment or statement must include the author's name, title or affiliation, address, and daytime phone number. The Alternate Designated Federal Official will review all submitted written comments or statements and provide them to members of the subcommittee for their consideration. Written comments or statements being submitted in response to the agenda set forth in this notice must be received by the Alternate Designated Federal Official at least seven business days prior to the meeting to be considered by the subcommittee. Written comments or statements received after this date may not be provided to the subcommittee until its next meeting.

Pursuant to 41 CFR 102–3.140d, the Committee is not obligated to allow a member of the public to speak or otherwise address the Committee during the meeting. Members of the public will be permitted to make verbal comments during the Committee meeting only at the time and in the manner described below. If a member of the public is interested in making a verbal comment at the open meeting, that individual must submit a request, with a brief statement of the subject matter to be addressed by the comment, at least seven business days in advance to the subcommittee's Alternate Designated Federal Official, via electronic mail, the preferred mode of submission, at the address listed in the **FOR FURTHER INFORMATION CONTACT** section. The Alternate Designated Federal Official will log each request, in the order received, and in consultation with the Subcommittee Chair, determine whether the subject matter of each comment is relevant to the Subcommittee's mission and/or the topics to be addressed in this public meeting. A 15-minute period near the end of the meeting will be available for verbal public comments. Members of the public who have requested to make a verbal comment and whose comments have been deemed relevant under the process described above, will be allotted no more than three minutes during the period, and will be invited to speak in the order in which their requests were received by the Alternate Designated Federal Official.

Brenda S. Bowen,

Army Federal Register Liaison Officer.

BILLING CODE 5001–03–P

DEPARTMENT OF DEFENSE

Department of the Army

Expeditionary Technology Search (xTechSearch) II Prize Competition Announcement

AGENCY: Department of the Army, DoD.

ACTION: Announcement of competition.

SUMMARY: Under the provisions of applicable laws and regulations, the Assistant Secretary of the Army for Acquisition, Logistics and Technology (ASA(ALT)) is announcing the second cohort of the Army Expeditionary Technology Search—xTechSearch II Prize Competition—for the Army to enhance engagements with the entrepreneurial funded community, small businesses, and other non-traditional defense partners. The xTechSearch program will provide an opportunity for businesses to pitch novel technology solutions, either a new application for an existing technology or an entirely new technology concept, to the Army.

DATES:

1. December 31, 2018 at 12:59PM PST. Deadline for submission of White Papers to the xTechSearch competition. Submissions received after the deadline will not be considered.

2. February 25–March 8, 2019. Semifinalists—Up to 60 participants conduct technology pitches to xTechSearch panels.

3. March 26–28, 2019. Up to 25 finalists featured at the Association of the United States Army Global Force Symposium and Exposition in Huntsville, AL.

4. October 2019. Capstone Demonstration with Army subject matter experts and Leadership.

ADDRESSES: Proposals must be submitted at Challenge.gov: *https://challenge.gov/a/buzz/challenge/88/ideas/top.*

FOR FURTHER INFORMATION CONTACT: Ms. Jennifer Smith, Deputy Director for Laboratory Management (ASA(ALT)) Office of the Deputy Assistant Secretary of the Army, Research and Technology, (703) 697–0685 or via Email at: *usarmy.pentagon.hqda-asa-alt.mbx.xtechsearch@mail.mil.*

SUPPLEMENTARY INFORMATION:

Eligibility: The entities allowed to participate in this competition are small businesses as defined in 13 CFR part 121. To qualify, the participating entity must fall within the size standard by North American Industry Classification System code 541713, 541714, and 541715.

There may be only one submission per business. In addition, each entity:

- Shall be incorporated in and maintain a primary place of business in the United States;
- May not be a Federal entity or Federal employee acting within the scope of their employment.
- Sole proprietors may participate in xTechSearch if the individual is a citizen or permanent resident of the United States and the business is registered in the United States.
- Foreign companies may participate in xTechSearch by establishing a US domestic business relationship (*e.g.,* wholly owned US subsidiary) or partner with a US based company.
- Companies that have previously participated in the xTechSearch competition are eligible to participate for new technology concepts or improvements to prior submitted proposals.

Registered participants shall be required to agree to assume any and all risks and waive claims against the Federal Government and its related entities, except in the case of willful misconduct, for any injury, death, damage, or loss of property, revenue, or profits, whether direct, indirect, or consequential, arising from their participation in a prize competition, whether the injury, death, damage, or loss arises through negligence or otherwise.

Participants shall be required to obtain liability insurance or demonstrate financial responsibility, in amounts determined by the Army, for claims by—

- Third parties for death, bodily injury, or property damage, or loss resulting from an activity carried out in connection with participation in a prize competition, with the Federal Government named as an additional insured under the registered participant's insurance policy and registered participants agreeing to indemnify the Federal Government against third party claims for damages arising from or related to prize competition activities; and

The Federal Government for damage or loss to Government property resulting from such an activity.

Prizes will be offered under 15 U.S.C. Section 3719 (Prize competitions).

- The total prize pool is $2.18M.

Evaluation Criteria and Process

Phase I: Concept White Paper Contest

The Phase I proposal must be a white paper describing the novel technology concept, innovative application concept and integration with one or more of the Army's technology focus areas. The proposal must be submitted via the Challenge.gov portal as a single searchable PDF file containing:

- Title.
- Author(s).
- *Army Technology Focus Area:* Choose from the eight (8) Technology Focus Area(s):
  - Long Range Precision Fires.
  - Next Generation Combat Vehicle.
  - Future Vertical Lift.
  - Network with hardware, software, and infrastructure.
  - Air and Missile Defense.
  - Soldier Lethality.
  - Medical Technologies.
  - Military Engineering Technologies.
- *Keyword(s):* Provide up to ten (10) keywords that describe the technology.
- *Abstract:* Provide an abstract (up to 250 words).
- *White Paper:* Technology proposal concept, no greater than 1000 words (not including title, author(s), keywords, abstract, company bio, graphs, figures or images). The word limit on the White Paper submission will be strictly enforced.
- *List of prior SBIR awards in the past 5 years:* Include Date award received, Funding organization, Phase of awards, and Topic Title awarded.
- *Company Biography (Optional):* Company background information, up to 1 page.

Contestants' concept papers will be reviewed by a panel of subject matter experts who will select the contestants to be invited to the xTechSearch Technology Pitch Forums. Companies selected by the panel will receive a prize of $4,000 and an invitation to Phase II: xTechSearch Technology Pitches.

Concept White Papers will be ranked using the following Scoring Criteria:

- Potential for Impact/ Revolutionizing the Army—50%.
- Scientific and Engineering Viability—50%.

Phase II: xTechSearch Technology Pitches

- Up to sixty (60) selected contestant semi-finalists will be invited to complete an in-person venture style pitch to a panel of Army subject matter experts and judges at locations across the United States.
- Companies will pitch their technology and a proposed live proof-of-concept demonstration for Phase III (15 minute pitch followed by 10 minutes for questions and answers).
- Up to twenty five (25) semifinalists selected by the judge panel will receive a prize of $10,000 and be invited to display an exhibit and make a formal public oral presentation of their proposal at the 2019 AUSA Global Force Symposium and Exposition Innovators' Corner in Huntsville, AL.
- Scoring Criteria:
  - Potential for Impact/ Revolutionizing the Army—40%.
  - Scientific and Engineering Viability—40%.
  - Proof-of-Concept Demonstration Plan—10%.
  - Team Ability—10%.

Phase III: AUSA Innovators' Corner

- The AUSA Innovators' Corner phase provides up to twenty five (25) xTechSearch semifinalists to be featured at the AUSA Innovators' Corner at the AUSA Global Force meeting, 26–28 March 2019 in Huntsville, AL. The finalists will leverage Army-sponsored exhibit space to engage with Department of Defense (DoD) customers, Army leadership, industry partners, and academia.
- Up to twelve (12) Phase III prize winner finalists will be announced at AUSA and provided a prize of $120,000 and 6 months to demonstrate proof-of-concept for their xTechSearch technology at the Phase IV: xTechSearch Capstone Demonstration.

Phase IV: xTechSearch Finale Demonstration—October 2019

- Each Phase III finalist will demonstrate proof-of-concept for their technology solution to Army subject matter experts and DoD leadership at the AUSA Annual Meeting and Exposition, October 2019, Washington DC. A single grand-prize winner will be selected for the technology concept with the greatest potential for impact and to revolutionize the Army.
- The winner of the Finale Demonstration will be awarded a prize of $250,000.

Authority: 15 U.S.C. Section 3719; Pub. L. 96–480, Section 24, as added Pub. L. 111–358, title I, Section 105a, Jan. 4, 2011 Stat. 3989.

BILLING CODE 5001–03–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID DOD–2018–OS–0048]

Submission for OMB Review; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness, DoD.

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by December 24, 2018.

ADDRESSES: Comments and recommendations on the proposed information collection should be emailed to Ms. Jasmeet Seehra, DoD Desk Officer, at *oira_submission@omb.eop.gov.* Please identify the proposed information collection by DoD Desk Officer, Docket ID number, and title of the information collection.

FOR FURTHER INFORMATION CONTACT: Fred Licari, 571–372–0493, or *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: DoD Enterprise-Wide Contractor Manpower Reporting Application (ECMRA); OMB Control Number 0704–0491.

Type of Request: Revision.

Number of Respondents: 5,582.

Responses per Respondent: 4.

Annual Responses: 22,328.

Average Burden per Response: 5 minutes.

Annual Burden Hours: 1,860.667.

Needs and Uses: The information collection requirement is necessary to achieve the collection of direct labor hours and associated costs in order to meet the requirements set for the DoD by section 2330a of Title 10, United States Code. Furthermore, ECMRA collections enable DoD organizations to understand the extent of contracted support, the associated level of effort in achieving mission, the reliance on contracted services necessary to facilitate their workforce planning process, and to support statutory requirements set forth in sections 115a, 129a, 235, 2461, and 2463 of Title 10, United States Code.

Affected Public: Businesses or other for-profit.

Frequency: Annually.

Respondent's Obligation: Mandatory.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DoD Clearance Officer: Mr. Frederick Licari.

Requests for copies of the information collection proposal should be sent to Mr. Licari at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: November 16, 2018.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DATES: Consideration will be given to all comments received by December 24, 2018.

ADDRESSES: Comments and recommendations on the proposed information collection should be emailed to Ms. Cortney Higgins, DoD Desk Officer, at *oira_submission@omb.eop.gov.* Please identify the proposed information collection by DoD Desk Officer, Docket ID number, and title of the information collection.

FOR FURTHER INFORMATION CONTACT: Fred Licari, 571–372–0493, or *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: TRICARE Select Survey of Civilian Providers; OMB Control Number 0720–0031.

Type of Request: Revision.

Number of Respondents: 20,000.

Responses per Respondent: 1.

Annual Responses: 20,000.

Average Burden per Response: 5 minutes.

Annual Burden Hours: 1,667.

Needs and Uses: As mandated by Congress, the information collection requirement is necessary to determine how many providers are aware of the TRICARE health benefits program, and specifically accept new TRICARE Select patients in each market area. The original requirement is outlined in Section 711 Fiscal Year (FY) 2015 National Defense Authorization Act (NDAA) (Pub. L. 110–181) and was reaffirmed in Section 721 FY12 NDAA (Pub. L. 112–81). Section 712 of FY15 NDAA extended the requirement to conduct the survey from 2017 through 2020. Surveys of civilian physician and non-physician behavioral health care providers will be conducted in a number of locations in the United States each year. Respondents include civilian physicians (M.D.s & D.O.s) and non-physician behavioral health providers (clinical psychologists, clinical social workers and other TRICARE authorized behavioral health providers). The locations surveyed will include areas where the TRICARE Prime benefit is offered (known as TRICARE PRIME Service Areas) and geographic areas where TRICARE Prime is not offered. Respondents will be contacted by mail with a telephone follow-up to complete the survey.

Affected Public: Individuals or households.

Frequency: Annually.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Cortney Higgins.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DoD Clearance Officer: Mr. Frederick Licari.

Requests for copies of the information collection proposal should be sent to Mr. Licari at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: November 16, 2018.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD–2018–OS–0092]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness (OUSD (P&R)), Federal Voting Assistance Program (FVAP), DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Office of the Under Secretary of Defense for Personnel and Readiness announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Federal Voting Assistance Program, ATTN: Sarah Gooch, 4800 Mark Center Drive, Mailbox 10, Alexandria, Virginia 22350–5000 or call 703–588–1584.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Federal Post Card Application (FPCA), Standard Form 76 (SF–76); OMB Control Number 0704–0503.

Needs and Uses: The Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA), 52 U.S.C. 203, requires the Presidential designee (Secretary of Defense) to prescribe official forms, containing an absentee voter registration application, an absentee ballot request application and a backup ballot for use by the States to permit absent uniformed services voters and overseas voters to participate in general, special, primary and runoff elections for Federal office. The authority for the States to collect personal information comes from UOCAVA. The burden for collecting this information resides in the States. The Federal government neither collects nor retains any personal information associated with these forms.

The collected information will be used by election officials to process uniformed service members, spouses and overseas citizens who submit their information to register to vote, receive an absentee ballot or cast a write-in ballot. The collected information will be retained by election officials to provide election materials, including absentee ballots, to the uniformed services, their eligible family members and overseas voters during the form's eligibility period provided by State law. No information from the Federal Post Card Application (FPCA) is collected or retained by the Federal government.

Affected Public: Individuals or Households.

Annual Burden Hours: 300,000.

Number of Respondents: 1,200,000.

Responses per Respondent: 1.

Annual Responses: 1,200,000.

Average Burden per Response: 15 minutes.

Frequency: On occasion.

The applicant is required to update and resubmit the information annually, whenever they change their mailing address or as otherwise required by State law. If the information is not submitted annually or whenever they change their mailing address, the applicant may not receive ballots for elections for Federal office in that calendar year.

Dated: November 16, 2018.

Aaron T. Siegel,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID DOD–2018–OS–0065]

Submission for OMB Review; Comment Request

AGENCY: Office of the Under Secretary of Defense for Acquisition and Sustainment, DoD.

ACTION: 30-day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by December 24, 2018.

ADDRESSES: Comments and recommendations on the proposed information collection should be emailed to Ms. Jasmeet Seehra, DoD Desk Officer, at *oira_submission@omb.eop.gov.* Please identify the proposed information collection by DoD Desk Officer, Docket ID number, and title of the information collection.

FOR FURTHER INFORMATION CONTACT: Fred Licari, 571–372–0493, or *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Defense Logistics Agency Child and Youth Program; DLA Forms 1849, 1849–1, 1849–2, 1849–3, 1849–4, 1855, 1855–1, 1855–1A, 1855–1B, 1855–1C, 1855–1D (Parts I and II), 1855–1E, 1855–1F; OMB Control Number 0704–XXXX.

Type Request: Existing collection in use without an OMB Control Number.

Number of Respondents: 860.

Responses per Respondent: 14,017.

Annual Responses: 12,055.

Average Burden per Response: .08 hours.

Annual Burden Hours: 964.4.

Needs and Uses: The Department of Defense (DoD) requires the information in the proposed collection in support of Defense Logistics Agency (DLA) Child and Youth Programs (CYPs). This collection includes fourteen (14) DLA forms, some of which are used by all of the collection respondents and some of which are used under specific circumstances. The information collected is used for program planning, management, and health and safety purposes. More specifically, the information in the proposed collection allows CYP staff to provide safe, developmentally appropriate day care services and to ensure proper, effective response in the event of an emergency. Respondents include patrons enrolling their children in a CYP; these patrons may include active duty military, DoD civilian employees, or DoD contractors.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: Ms. Jasmeet Seehra.

SUPPLEMENTARY INFORMATION:

Title: Associated Form; and OMB Number: Defense Sexual Assault Incident Database (DSAID); DD Forms 2965, 2910, and 2910–1; OMB Control Number 0704–0482.

Type of Request: Extension with change.

Number of Respondents: 730.

Responses per Respondent: 1.

Annual Responses: 730.

Average Burden per Response: 2.44 hours.

Annual Burden Hours: 1,780.

Needs and Uses: The information collection requirement is necessary to centralize case-level sexual assault data involving a member of the Armed Forces, in a manner consistent with

statute and DoD regulations for Restricted and Unrestricted reporting, as well as to facilitate reports to Congress on claims of retaliation in connection with an Unrestricted Report of sexual assault made by or against a member of the Armed Forces. Records may also be used as a management tool for statistical analysis, tracking, reporting, evaluating program effectiveness, conducting research, and case and business management. De-identified data may also be used to respond to mandated reporting requirements.

Affected Public: Individuals or Households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD–2018–OS–0093]

Proposed Collection; Comment Request

AGENCY: Under Secretary of Defense for Acquisition and Sustainment, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Logistics Agency (DLA) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal e-Rulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Defense Logistics Agency Headquarters (DLA), ATTN: Ms. Nina Beshai, J62BK Information Operations, 8725 John Kingman Road, Fort Belvoir, VA 22060–6221, or call (571) 767–9810.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: DLA Police Center Records; DLA Form 635; OMB Control Number 0704–0514.

Needs and Uses: The DLA Police Center (POLC) system houses data of civilian and military personnel of DLA, contractor employees, and other persons who have committed or are suspected of having committed any criminal act (felony or misdemeanor), as well as any violations of laws, regulations, or ethical standards on DLA-controlled activities or facilities. The information is used by DLA police officers, DLA installation support offices, and the DLA Office of General Counsel (OGC) to monitor progress of cases and to develop non-personal statistic data on crime and criminal investigative support for the future. DLA OGC also uses data to review cases, determine appropriate legal action, and coordinate on all available remedies. Information is released to DLA managers who use the information to determine actions required to correct the causes of loss and to take appropriate action against DLA employees or contractors in cases of their involvement. Records are also used by DLA police to monitor the progress of incidents, identify crime-conducive conditions, and prepare crime vulnerability assessments.

Affected Public: Individuals or households; federal government.

Annual Burden Hours: 1,000 hours.

Number of Respondents: 2,000.

Responses per Respondent: 1.

Annual Responses: 2,000.

Average Burden per Response: 30 minutes.

Frequency: On occasion.

Dated: November 19, 2018.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2018–ICCD–0081]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; International Resource Information System (IRIS)

AGENCY: Office of Postsecondary Education (OPE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing an extension of an existing information collection.

DATES: Interested persons are invited to submit comments on or before December 24, 2018.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2018–ICCD–0081. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 550 12th Street SW, PCP, Room 9086, Washington, DC 20202–0023.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Sara Starke, 202–453–7681.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: International Resource Information System (IRIS).

OMB Control Number: 1840–0759.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: Federal Government, Individuals or Households; Private Sector.

Total Estimated Number of Annual Responses: 6,596.

Total Estimated Number of Annual Burden Hours: 35,712.

Abstract: The International Resource Information System (IRIS) is an online performance reporting system for International and Foreign Language Education (IFLE) grantees. IFLE grantees are institutions of higher education, organizations and individuals funded under Title VI of the Higher Education Act of 1965, as amended (HEA) and/or the Mutual Educational and Cultural Exchange Act (Fulbright-Hays Act). Grantees under these programs enter budget and performance measure data for interim, annual and final performance reports via IRIS, as well as submit International Travel Approval Requests and Grant Activation Requests.

Dated: November 19, 2018.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

International Energy Agency Meetings

AGENCY: Department of Energy.

ACTION: Notice of meetings.

SUMMARY: The Industry Advisory Board (IAB) to the International Energy Agency (IEA) will meet on November 27–29, 2018.

DATES: November 27–29, 2018.

ADDRESS: French Ministry for the Ecological and Inclusive Transition, Tour Séquoia, Place Carpeaux, La Défense, Paris, France; UIC–P Conference Centre, 16 rue Jean Rey, 75015, Paris, France.

FOR FURTHER INFORMATION CONTACT: Thomas Reilly, Assistant General Counsel for International and National Security Programs, Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–5000.

SUPPLEMENTARY INFORMATION: In accordance with section 252(c)(1)(A)(i) of the Energy Policy and Conservation Act (42 U.S.C. 6272(c)(1)(A)(i)) (EPCA), the following notice of meetings is provided:

A meeting involving members of the Industry Advisory Board (IAB) to the International Energy Agency (IEA) in connection with a workshop meeting of the IEA's Standing Group on Emergency Questions (SEQ) will be held at the French Ministry for the Ecological and Inclusive Transition, Tour Séquoia, Place Carpeaux, La Défense, Paris, France, on November 27, 2018. The purpose of the workshop meeting, which is a follow up from the workshop meeting held on September 18–19, 2018, is to discuss relevant key issues in order to establish a basis for drafting a proposal for possible improvements to the emergency oil stockholding requirement.

The agenda of the meeting is under the control of the IEA. It is expected that the IEA will adopt the following agenda:

Draft Agenda of the IEA's Workshop on the Review of the IEA Emergency Oil Stockholding Requirement

—Introduction by the Chairman
—Presentation by Secretariat:
—Overview of key considerations taken when developing different approaches
—Presentation and opportunity for clarification
—Overview of each approach option presented in background paper, followed by opportunity to ask questions for clarification

Discussion of Option 1

—Open floor discussion moderated by Chairman

Discussion of Option 2

—Open floor discussion moderated by Chairman

Discussion of Option 3

—Open floor discussion moderated by Chairman

Session 3—Reaching conclusion on the proposal for the SEQ and the GB

Wrap-Up and Next Steps

As provided in section 252(c)(1)(A)(ii) of the Energy Policy and Conservation Act (42 U.S.C. 6272(c)(1)(A)(ii)), Representatives of the Directorate-General for Competition of the European Commission and representatives of members of the IEA Group of Reporting Companies may attend the meeting as observers. The meeting will also be open to representatives of the Secretary of Energy, the Secretary of State, the Attorney General, and the Federal Trade Commission severally, to any United States Government employee designated by the Secretary of Energy, and to the representatives of Committees of the Congress.

A meeting of the Industry Advisory Board (IAB) to the International Energy Agency (IEA) will be held at the French Ministry for the Ecological and Inclusive Transition, Tour Séquoia, Place Carpeaux, La Défense, Paris, France, commencing at 9:30 a.m. on November 28, 2018. The purpose of this notice is to permit attendance by representatives of U.S. company members of the IAB at a meeting of the IEA's Standing Group on Emergency Questions (SEQ), which is scheduled to be held at the same location and time. The IAB will also hold a preparatory meeting among company representatives at the same location at 8:30 a.m. on November 28. The agenda for this preparatory meeting is to review the agenda for the SEQ meeting.

The agenda of the SEQ meeting is under the control of the SEQ. It is expected that the SEQ will adopt the following agenda:

Draft Agenda of the 155th Meeting of the SEQ

Closed SEQ Session—IEA Member Countries Only

1. Adoption of the Agenda
2. Approval of the Summary Record of the 154th Meeting
3. Status of Compliance with IEP Agreement Stockholding Obligations—Presentation by the Secretariat
4. The Future of Petrochemicals; IEA Report
5. Industry Advisory Board Update
6. Update on the Ministerial Mandates/Oil Stockholding System Review
7. Mid-term Review of the Slovak Republic

Open SEQ Session—Open to Association Countries

8. ERR of Ireland—Presentation by the Secretariat
9. ASEAN+6 Report—Presentation by the Secretariat
10. Mid-term Review of Hungary—Presentation by the Administration
11. Outreach—Presentation by the Secretariat
12. Oral Reports by Administrations:
Turkey; Stockholding obligation update:
Japan; Hokkaido black-out:
Belgium; Nuclear power plants:
The Netherlands; L-cal gas production:
Germany, Switzerland and France; stock releases due to low water level in Rhine
13. Input from Standing Groups & Committees for the 2019 IEA Ministerial
14. Other Business:
—ERR Programme
Schedule of upcoming SEQ & SOM Meetings:
—19–21 March 2019
—25–27 June 2019
—22–24 October 2019

Representatives of the Directorate-General for Competition of the European Commission and representatives of members of the IEA Group of Reporting Companies may attend the meeting as observers. The meeting will also be open to representatives of the Secretary of Energy, the Secretary of State, the Attorney General, and the Federal Trade Commission severally, to any United States Government employee designated by the Secretary of Energy, and to the representatives of Committees of the Congress.

A meeting of the Industry Advisory Board (IAB) to the International Energy Agency (IEA) will be held in the UIC–P Conference Centre, 16 rue Jean Rey, 75015, Paris, France, on November 29, 2018, commencing at 09:30 a.m. The purpose of this notice is to permit attendance by representatives of U.S. company members of the IAB at a joint meeting of the IEA's Standing Group on Emergency Questions (SEQ) and the IEA's Standing Group on the Oil Market (SOM), which is scheduled to be held at the same location and time.

The agenda of the meeting is under the control of the SEQ and the SOM. It is expected that the SEQ and the SOM will adopt the following agenda:

Draft Agenda of the Joint Session of the SEQ and the SOM

Start Meeting/Introduction

15. Adoption of the Agenda
16. Approval of Summary Record of 27 June 2018

17. Reports on Recent Oil Market and Policy Developments in IEA Countries
18. Update on the Current Oil Market Situation: Followed by Q&A
19. Presentation: ''Update on the implementation of the International Maritime Organisation's 2020 fuel specifications'' followed by Q&A
20. Presentation: On ''substitute Producer Economies'' followed by Q&A
21. Presentation: Long term oil market outlook—Chevron, followed by Q&A
22. Presentation: ''Uncertainty and Prosperity: A View from Unipec,'' followed by Q&A
23. Presentation: ''World Energy Investment 2018'' followed by Q&A
24. Presentation: ''Russian oil perspective'' followed by Q&A
25. Other Business:
—Tentative schedule of the next SOM meeting: 21 March 2019, Location TBC

Representatives of the Directorate-General for Competition of the European Commission and representatives of members of the IEA Group of Reporting Companies may attend the meeting as observers. The meeting will also be open to representatives of the Secretary of Energy, the Secretary of State, the Attorney General, and the Federal Trade Commission severally, to any United States Government employee designated by the Secretary of Energy, and to the representatives of Committees of the Congress.

Signed in Washington, DC, November 16, 2018.

Thomas Reilly,

Assistant General Counsel for International and National Security Programs.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. OR19–7–000]

CITGO Petroleum Corporation v. Colonial Pipeline Company; Notice of Complaint

Take notice that on November 15, 2018, pursuant to sections 13(1), 15(1) and 15(7) of the Interstate Commerce Act (ICA),[1] Rules 211 and 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure,[2] and sections 343.2, 343.3, and 385.206 of the Commission's Procedural Rules Applicable to Oil Pipeline proceedings,[3] CITGO Petroleum Corporation (Complainant) filed a formal complaint against Colonial Pipeline Company (Respondent) alleging that the Respondent's untarriffed increase of a product loss allocation rate is unlawful under sections 6, 13, and 15 of the ICA, as more fully explained in the complaint.

The Complainant states that a copy of the complaint was served on the contacts for the Respondent listed on the Commission's list of Corporate Officials.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. The Respondent's answer and all interventions, or protests must be filed on or before the comment date. The Respondent's answer, motions to intervene, and protests must be served on the Complainant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the website that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: 5 p.m. Eastern Time on December 5, 2018.

Dated: November 15, 2018.

Kimberly D. Bose,

Secretary.

Federal Energy Regulatory Commission

[Project No. 2972–027]

City of Woonsocket; Notice of Application Tendered for Filing With the Commission and Soliciting Additional Study Requests and Establishing Procedural Schedule for Relicensing and a Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Subsequent Minor License.

b. *Project No.:* 2972–027.

c. *Date filed:* November 1, 2018.

d. *Applicant:* City of Woonsocket, Rhode Island (City).

e. *Name of Project:* Woonsocket Falls Project.

f. *Location:* On the Blackstone River in the City of Woonsocket, Providence County, Rhode Island. The project diverts water from the impoundment created by the U.S. Army Corps of Engineers' (Corps) Woonsocket Falls Dam; however, there are no federal or tribal lands within the project boundary.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. Michael Debroisse, City of Woonsocket, Engineering, 169 Main Street, Woonsocket, RI 02895; (401) 767–9213.

i. *FERC Contact:* Patrick Crile, (202) 502–8042 or *Patrick.Crile@ferc.gov.*

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See* 94 FERC ¶ 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. Deadline for filing additional study requests and requests for cooperating agency status: December 31, 2018.

The Commission strongly encourages electronic filing. Please file additional study requests and requests for cooperating agency status using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. The first page of any filing should include docket number P–2972–027.

m. The application is not ready for environmental analysis at this time.

n. The City electronically filed the application with the Commission after the close of business on October 31, 2018. Pursuant to 18 CFR 385.2001(a)(2), any document received after regular business hours is considered filed on the next regular business day. By this notice, the requirement under 18 CFR 16.20(c) to file the subsequent license application at least 24 months before the expiration of the existing license (*i.e.,* no later than October 31, 2018) is waived.

o. The Woonsocket Falls Project utilizes water from the impoundment created by the Corps' Woonsocket Falls Dam, and consists of: (1) A 14-foot-wide, 20.5-foot-high concrete intake structure located about 60 feet upstream of the Woonsocket Falls Dam and fitted with a 12-foot-wide, 18-foot-high steel trash rack having 3.5-inch clear bar spacing; (2) a 275-foot long, 12-foot-wide, 10-foot-high concrete penstock; (3) a 65-foot-long, 25-foot-wide, 20-foot-high concrete powerhouse containing one adjustable blade turbine-generator unit with an authorized capacity of 1,200 kilowatts; (4) a 50-foot-long, 12.5-foot-diameter steel draft tube; (5) an approximately 50-foot-long, 20-foot-wide, 15-foot-deep tailrace; (6) a 35-foot-long 4.16 kilovolt (kV) generator lead line, a 4.16/13.8-kV step-up transformer, a 1,200-foot-long, and a 13.8-kV transmission line connecting the project generator to the regional grid; and (7) appurtenant facilities.

The project bypasses approximately 360 feet of the Blackstone River and there is currently no required minimum instream flow for the bypassed reach. However, the City operates the project in a run-of-river (ROR) mode and voluntarily maintains a minimum flow of 20 cubic feet per second (cfs) over the crest of the dam to the bypassed reach using an automatic pond level controller. The Woonsocket Falls project has an average annual generation of approximately 4,580 megawatt-hours.

The City proposes to: (1) Continue operating the project in a ROR mode; (2) provide a year-round minimum flow of 20 cfs into the bypassed reach; (3) provide upstream eel passage at the project; and (4) implement targeted nighttime turbine shutdowns to facilitate downstream eel passage.

p. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support. A copy is also available for inspection and reproduction at the address in item h above.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

q. Procedural schedule and final amendments: The application will be processed according to the following preliminary schedule. Revisions to the schedule will be made as appropriate.

Issue Deficiency Letter (if necessary)	January 2019.
Request Additional Information	January 2019.
Issue Acceptance Letter	April 2019.
Issue Scoping Document 1 for comments	May 2019.
Request Additional Information (if necessary)	July 2019.
Issue Scoping Document 2	August 2019.
Issue Notice of Ready for Environmental Analysis	August 2019.
Issue Notice of Availability of Environmental Assessment	February 2020.

Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: November 15, 2018.

Kimberly D. Bose,

Secretary.

[FR Doc. 2018–25472 Filed 11–21–18; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 1235–017]

City of Radford; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR part 380, the Office of Energy Projects has reviewed the application for a subsequent license for the Municipal Hydroelectric Project, located on the Little River, near the City of Radford, in Montgomery and Pulaski Counties, Virginia, and has prepared an Environmental Assessment (EA) for the project.

The EA contains staff's analysis of the potential environmental impacts of the project and concludes that licensing the project, with appropriate environmental protective measures, would not constitute a major federal action that would significantly affect the quality of the human environment.

A copy of the EA is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY).

You may also register online at *http://www.ferc.gov/docs-filing/*

esubscription.asp to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Any comments should be filed within 30 days from the date of this notice.

The Commission strongly encourages electronic filing. Please file comments using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support. In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. The first page of any filing should include docket number P–1235–017.

For further information, contact Allyson Conner at (202) 502–6082 or by email at *allyson.conner@ferc.gov.*

Dated: November 15, 2018.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP15–521–000]

Notice of Availability of the Draft Environmental Impact Statement for the Proposed Gulf LNG Liquefaction Project: Gulf LNG Liquefaction Company, LLC; Gulf LNG Energy, LLC; Gulf LNG Pipeline, LLC

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared a draft environmental impact statement (EIS) for the Gulf LNG Liquefaction Project, proposed by Gulf LNG Liquefaction Company, LLC; Gulf LNG Energy, LLC; and Gulf LNG Pipeline, LLC (GLP) (collectively referred to as Gulf LNG) in the above-referenced docket. Gulf LNG requests authorization pursuant to sections 3(a) and 7 of the *Natural Gas Act* (NGA) to construct and operate onshore liquefied natural gas (LNG) liquefaction and associated facilities to allow export of LNG, and to construct, own, operate, and maintain new interconnection and metering facilities for the existing Gulf LNG Pipeline in Jackson County, Mississippi. The proposed actions are referred to as the Gulf LNG Liquefaction Project (Project) and consist of the Gulf LNG Terminal Expansion (Terminal Expansion) and the GLP Pipeline Modifications.

The draft EIS assesses the potential environmental effects of construction and operation of the Gulf LNG Liquefaction Project in accordance with the requirements of the National Environmental Policy Act (NEPA). The FERC staff concludes that approval of the proposed Project, with the mitigation measures recommended in the EIS, would have some adverse environmental impacts; however, these impacts would be avoided or reduced to less-than-significant levels.

U.S. Army Corps of Engineers; U.S. Coast Guard; U.S. Department of Energy, Office of Fossil Energy; the U.S. Department of Transportation's Pipeline and Hazardous Materials Safety Administration; U.S. Fish and Wildlife Service; National Oceanic and Atmospheric Administration, National Marine Fisheries Service; and U.S. Environmental Protection Agency participated as cooperating agencies in the preparation of the EIS. In addition, the Mississippi Office of the Secretary of State has jurisdiction over the wetland mitigation property and, therefore, is assisting us as a cooperating agency. Cooperating agencies have jurisdiction by law or special expertise with respect to resources potentially affected by the proposal and participate in the NEPA analysis. Although the cooperating agencies provided input to the conclusions and recommendations presented in the draft EIS, the agencies will present their own conclusions and recommendations in their respective Records of Decision for the Project.

The draft EIS addresses the potential environmental effects of the construction and operation of the following proposed facilities:

- Feed gas pre-treatment facilities, including a mercury removal system, an acid gas removal system (to remove carbon dioxide and hydrogen sulfide), a molecular sieve dehydration system (to remove water), and a heavy hydrocarbon removal system (to remove natural gas liquids);
- two separate propane precooled mixed refrigerant liquefaction trains that liquefy natural gas, each with a nominal liquefaction capacity of 5 million metric tons per year (mtpy) and a maximum capacity of more than 5.4 mtpy of LNG;
- liquefaction facility utilities and associated systems, including two gas-fired turbine compressors per liquefaction train;
- storage facilities for condensate, ammonia and refrigerants;
- utilities systems, including instrument, plant air, and nitrogen;
- a truck loading/unloading facility to unload refrigerants and to load condensate produced during the gas liquefaction process;
- four flares (including one spare flare) in a single flare tower to incinerate excess gases associated with maintenance, startup/shutdown, and upset conditions during an emergency;
- two supply docks (North and South Supply Docks) designed to receive barges transporting materials and large equipment during construction, with one dock retained for use during operation;
- new in-tank LNG loading pumps in the existing LNG storage tanks to transfer LNG through the existing transfer lines to LNG marine carriers;
- new spill impoundment systems designed to contain LNG, refrigerants and other hazardous fluids;
- minor changes to piping at the existing berthing facility to permit bi-directional flow;
- a new concrete storm surge protection wall that connects to the existing storm surge protection wall near the southwest corner of the Terminal Expansion site and extends along the southern border of the Terminal Expansion site;
- a new earthen berm extending from the northeastern to the southeastern boundaries of the Terminal Expansion site, between the Terminal Expansion and the Bayou Casotte Dredged Material Management Site, and connecting to the new segments of the storm surge protection wall;
- six off-site construction support areas for use as staging and laydown areas, contractor yards, and parking;
- modifications to the existing metering stations at the existing Gulfstream Pipeline Company and Destin Pipeline Company interconnection facilities; [1] and
- modifications to the existing Gulf LNG Pipeline at the existing Terminal to provide a connection to the inlet of the LNG liquefaction pre-treatment facilities.

The Commission mailed a copy of the *Notice of Availability* to federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American tribes;

[1] Additionally, Transcontinental Gas Pipe Line Company, LLC (Transco) would construct modifications to the existing Transco/Florida Gas Transmission Company, LLC Interconnect. FERC would review this project under Transco's blanket certificate.

potentially affected landowners and other interested individuals and groups; and newspapers and libraries in the Project area. The draft EIS is only available in electronic format. It may be viewed and downloaded from the FERC's website (*www.ferc.gov*), on the Environmental Documents page (*https://www.ferc.gov/industries/gas/enviro/eis.asp*). In addition, the draft EIS may be accessed by using the eLibrary link on the FERC's website. Click on the eLibrary link (*https://www.ferc.gov/docs-filing/elibrary.asp*), click on General Search, and enter the docket number in the ''Docket Number'' field, excluding the last three digits (*i.e.* CP15–521–000). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

Any person wishing to comment on the draft EIS may do so. Your comments should focus on draft EIS's disclosure and discussion of potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. To ensure consideration of your comments on the proposal in the final EIS, it is important that the Commission receive your comments on or before 5:00 p.m. Eastern Time on January 7, 2019.

For your convenience, there are four methods you can use to submit your comments to the Commission. The Commission will provide equal consideration to all comments received, whether filed in written form or provided verbally. The Commission encourages electronic filing of comments and has staff available to assist you at (866) 208–3676 or *FercOnlineSupport@ferc.gov.* Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the eComment feature on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. This is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the eFiling feature on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''*eRegister.*'' If you are filing a comment on a particular project, please select ''Comment on a Filing'' as the filing type; or

(3) You can file a paper copy of your comments by mailing them to the following address. Be sure to reference the project docket number (CP15–521–000) with your submission: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426.

(4) In lieu of sending written or electronic comments, the Commission invites you to attend a public comment session its staff will conduct in the Project area to receive comments on the draft EIS, scheduled as follows:

Date and time	Location
Tuesday, December 18, 2018, 4:00–8:00 p.m. local time.	Pelican Landing Convention Center, 6217 Mississippi Highway 613, Moss Point, MS 39563, 228–474–1406.

The primary goal of this comment session is to have you identify the specific environmental issues and concerns with the draft EIS. Individual verbal comments will be taken on a one-on-one basis with a court reporter. This format is designed to receive the maximum amount of verbal comments, in a convenient way during the timeframe allotted.

The comment session is scheduled from 4:00 p.m. to 8:00 p.m. local time. You may arrive at any time after 4:00 p.m. There will not be a formal presentation by Commission staff when the session opens. If you wish to speak, the Commission staff will hand out numbers in the order of your arrival. Comments will be taken until 8:00 p.m. However, if no additional numbers have been handed out and all individuals who wish to provide comments have had an opportunity to do so, staff may conclude the session at 7:30 p.m. Please see appendix 1 for additional information on the session format and conduct.[2]

Your verbal comments will be recorded by the court reporter (with FERC staff or representative present) and become part of the public record for this proceeding. Transcripts will be publicly available on FERC's eLibrary system (see below for instructions on using eLibrary). If a significant number of people are interested in providing verbal comments in the one-on-one settings, a time limit of 5 minutes may be implemented for each commentor.

It is important to note that verbal comments hold the same weight as written or electronically submitted comments. Although there will not be a formal presentation, Commission staff will be available throughout the comment session to answer your questions about the environmental review process.

Any person seeking to become a party to the proceeding must file a motion to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR part 385.214). Motions to intervene are more fully described at *http://www.ferc.gov/resources/guides/how-to/intervene.asp.* Only intervenors have the right to seek rehearing or judicial review of the Commission's decision. The Commission grants affected landowners and others with environmental concerns intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which no other party can adequately represent. Simply filing environmental comments will not give you intervenor status, but you do not need intervenor status to have your comments considered.

Questions?

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website (*www.ferc.gov*) using the eLibrary link. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription that allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the

[2] The appendices referenced in this notice will not appear in the **Federal Register**. Copies of the appendices were sent to all those receiving this notice in the mail and are available at *www.ferc.gov* using the link called ''eLibrary'' or from the Commission's Public Reference Room, 888 First Street NE, Washington, DC 20426, or call (202) 502–8371. For instructions on connecting to eLibrary, refer to the last page of this notice.

documents. Go to *www.ferc.gov/docs-filing/esubscription.asp.*

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2018–0690, FRL–9986–88–OLEM]

Agency Information Collection Activities; Proposed Collection; Comment Request; General Hazardous Waste Facility Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit the information collection request (ICR), General Hazardous Waste Facility (EPA ICR No. 1571.12, OMB Control No. 2050–0120) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (PRA). Before doing so, the EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through April 30, 2019. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before January 22, 2019.

ADDRESSES: Submit your comments, referencing by Docket ID No. EPA–HQ–OLEM–2018–0690, online using *www.regulations.gov* (our preferred method), by email to *rcra-docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Peggy Vyas, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 703–308–5477; fax number: 703–308–8433; email address: *vyas.peggy@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, the EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, the EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: Section 3004 of the Resource Conservation and Recovery Act (RCRA), as amended, requires the EPA to develop standards for hazardous waste treatment, storage, and disposal facilities (TSDFs) as may be necessary to protect human health and the environment. Subsections 3004(a)(1), (3), (4), (5), and (6) specify that these standards include, but not be limited to, the following requirements:

- Maintaining records of all hazardous wastes identified or listed under subtitle C that are treated, stored, or disposed of, and the manner in which such wastes were treated, stored, or disposed of;
- Operating methods, techniques, and practices for treatment, storage, or disposal of hazardous waste;
- Location, design, and construction of such hazardous waste treatment, disposal, or storage facilities;
- Contingency plans for effective action to minimize unanticipated damage from any treatment, storage, or disposal of any such hazardous waste; and
- Maintaining or operating such facilities and requiring such additional qualifications as to ownership, continuity of operation, training for personnel, and financial responsibility as may be necessary or desirable.

The regulations implementing these requirements are codified in 40 CFR parts 264 and 265. The collection of this information enables the EPA to properly determine whether owners/operators or hazardous waste treatment, storage, and disposal facilities meet the requirements of Section 3004(a) of RCRA.

Form Numbers: None.

Respondents/affected entities: Business and other for-profit, as well as State, Local, and Tribal governments.

Respondent's obligation to respond: Mandatory (RCRA section 3004).

Estimated number of respondents: 1,872.

Frequency of response: On occasion.

Total estimated burden: 672,417 hours per year. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $41,749,044 (per year), includes $533,425 annualized capital or operation & maintenance costs and $41,225,619 annualized labor costs.

Changes in estimates: The burden hours are likely to stay substantially the same.

Dated: November 12, 2018.

Barnes Johnson,

Director, Office of Resource Conservation and Recovery.

Agency Information Collection Activities; Proposed Collection; Comment Request; Generator Standards Applicable to Laboratories Owned by Eligible Academic Entities.

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit the information collection request (ICR), Generator Standards Applicable to Laboratories Owned by Eligible Academic Entities (EPA ICR No. 2317.04, OMB Control No. 2050–0204) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*). Before doing so, the EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through April 30, 2019. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before January 22, 2019.

ADDRESSES: Submit your comments, referencing by Docket ID No. EPA–HQ–OLEM–2018–0692, online using *www.regulations.gov* (our preferred method), by email to *rcra-docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Kristen Fitzgerald, (mail code 5304P), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 703–308–8286; fax number: 703–308–0514; email address: *fitzgerald.kristen@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, the EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, the EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: Subpart K within 40 CFR Part 262 provides a flexible and protective set of regulations that address the specific nature of hazardous waste generation and accumulation in laboratories owned by colleges and universities, including teaching hospitals and non-profit research institutes that are either owned by or formally affiliated with a college or university. In addition, eligible academic entities have the discretion to determine the most appropriate and effective method of compliance with these requirements—by allowing them the choice of either managing their hazardous wastes in accordance with the alternative regulations as set forth in Subpart K, or remaining subject to the existing generator regulations.

Form Numbers: None.

Respondents/affected entities: Business and other for-profit, as well as State, Local, and Tribal governments.

Respondent's obligation to respond: Required to obtain or retain a benefit (Sections 2002, 3001, 3002, 3004 of RCRA).

Estimated number of respondents: 132.

Frequency of response: On occasion.

Total estimated burden: 35,813 hours per year. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $1,806,663 (per year), which includes $1,667,976 in annualized labor and $138,687 in annualized capital or operation & maintenance costs.

Changes in estimates: The burden hours are likely to stay substantially the same.

Dated: November 12, 2018.

Barnes Johnson,

Director, Office of Resource Conservation and Recovery.

Proposed Information Collection Request; Comment Request; Distribution of Offsite Consequence Analysis Information Under Section 112(r)(7)(H) of the Clean Air Act (CAA), as Amended—EPA No. 1981.07, OMB Control Number 2050–0172

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency is planning to submit an information collection request (ICR), Distribution of Offsite Consequence Analysis Information under Section 112(r)(7)(H) of the Clean Air Act (CAA), as amended—EPA No. 1981.07, OMB Control Number 2050–0172 to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through May 31, 2019. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before January 22, 2019.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA–HQ–OAR–2003–0073 referencing the Docket ID numbers provided for each item in the text, online using *www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460 and (2) OMB via email to *oira_submission@omb.eop.gov.* Address comments to OMB Desk Officer for EPA.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Wendy Hoffman, Office of Emergency Management, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–8794; email address: *hoffman.wendy@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: This ICR is the renewal of the ICR developed for the final rule, *Accidental Release Prevention Requirements; Risk Management Programs Under the Clean Air Act Section 112(r)(7); Distribution of Off-Site Consequence Analysis Information.* CAA section 112(r)(7) required EPA to promulgate reasonable regulations and appropriate guidance to provide for the prevention and detection of accidental releases and for responses to such releases. The regulations include requirements for submittal of a risk management plan (RMP) to EPA. The RMP includes information on offsite consequence analyses (OCA) as well as other elements of the risk management program.

On August 5, 1999, the President signed the Chemical Safety Information, Site Security, and Fuels Regulatory Relief Act (CSISSFRRA). The Act required the President to promulgate regulations on the distribution of OCA information (CAA section 112(r)(7)(H)(ii)). The President delegated to EPA and the Department of Justice (DOJ) the responsibility to promulgate regulations to govern the dissemination of OCA information to the public. The final rule was published on August 4, 2000 (65 FR 48108). The regulations imposed minimal information and recordkeeping requirements.

In accordance with the final rule, the federal government established 55 reading rooms at federal facilities geographically distributed across the United States and its territories. At these reading rooms, members of the public are able to read, but not mechanically copy or remove paper copies of OCA information for up to 10 stationary sources per calendar month. At these reading rooms, the members of the

public may also have access to OCA information that the Local Emergency Planning Committee (LEPC) in whose jurisdiction the person lives or works is authorized to provide.

The final rule also authorizes and encourages state and local government officials to have access to OCA information for their official use, and to provide members of the public with read-only access to OCA sections of RMPs for sources located within the jurisdiction of the LEPC where the person lives or works and for any other stationary sources with vulnerability zones extending into the LEPC's jurisdiction.

EPA also established a Vulnerable Zone Indicator System (VZIS) that informs any person located in any state whether an address specified by that person might be within the vulnerable zone of one or more stationary sources, according to the data reported in RMPs. The VZIS is available on the internet. Members of the public who do not have access to the internet are able to obtain the same information by regular mail request to the EPA.

Form numbers: None.

Respondents/affected entities: State and local agencies and the public.

Respondent's obligation to respond: Required to obtain or retain a benefit (40 CFR 1400).

Estimated number of respondents: 860 (total).

Frequency of response: As necessary.

Total estimated burden: 1,500 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $46,865 (per year), includes $620 annualized capital or operation & maintenance costs.

The Agency is requesting comments on the burden and costs estimated in the current ICR. EPA will revise the burden and costs, if necessary, prior to submitting the package to OMB for approval for this information collection.

Dated: November 14, 2018.

Reggie Cheatham,

Director, Office of Emergency Management.

FEDERAL DEPOSIT INSURANCE CORPORATION

Sunshine Act Meeting

Pursuant to the provisions of the ''Government in the Sunshine Act'' (5 U.S.C. 552b), notice is hereby given that at 10:29 a.m. on Tuesday, November 20, 2018, the Board of Directors of the Federal Deposit Insurance Corporation met in closed session to consider matters related to the Corporation's supervision, corporate, and resolution activities.

In calling the meeting, the Board determined, on motion of Director Martin J. Gruenberg, seconded by Director Mick Mulvaney (Acting Director, Consumer Financial Protection Bureau), and concurred in by Director Joseph M. Otting (Comptroller of the Currency), and Chairman Jelena McWilliams, that Corporation business required its consideration of the matters which were to be the subject of this meeting on less than seven days' notice to the public; that no earlier notice of the meeting was practicable; that the public interest did not require consideration of the matters in a meeting open to public observation; and that the matters could be considered in a closed meeting by authority of subsections (c)(2), (c)(4), (c)(6), (c)(8), (c)(9)(A)(ii), and (c)(9)(B) of the ''Government in the Sunshine Act'' (5 U.S.C. 552b(c)(2), (c)(4), (c)(6), (c)(8), (c)(9)(A)(ii), and (c)(9)(B).

Dated: November 20, 2018.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities: Submission for OMB Review; Comment Request (OMB No. 3064–0072)

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comment.

SUMMARY: The FDIC, as part of its obligations under the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to take this opportunity to comment on the renewal of the existing information collection described below (3064–0072). On August 16, 2018, the FDIC requested comment for 60 days on a proposal to renew the information collection described below. No comments were received. The FDIC hereby gives notice of its plan to submit to OMB a request to approve the renewal of this collection, and again invites comment on this renewal.

DATES: Comments must be submitted on or before December 24, 2018.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- *https://www.FDIC.gov/regulations/laws/federal.*
- *Email: comments@fdic.gov.* Include the name and number of the collection in the subject line of the message.
- *Mail:* Jennifer Jones (202–898–6768), Counsel, MB–3105, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street building (located on F Street), on business days between 7:00 a.m. and 5:00 p.m.

All comments should refer to the relevant OMB control number. A copy of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Jennifer Jones, Counsel, 202–898–6768, *jennjones@fdic.gov,* MB–3105, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

SUPPLEMENTARY INFORMATION: On August 16, 2018, the FDIC requested comment for 60 days on a proposal to renew the information collection described below. No comments were received. The FDIC hereby gives notice of its plan to submit to OMB a request to approve the renewal of this collection, and again invites comment on this renewal.

Proposal to renew the following currently approved collection of information:

1. *Title:* Acquisition Services Information Requirements.

OMB Number: 3064–0072.

Form Number: 3700/55 (Solicitation/Award); 1600/04 (Background Investigation Questionnaire for Contractor Personnel and Subcontractors); 1600/07 (Background Investigation Questionnaire for Contractors); 3700/12 (Integrity and Fitness Representations and Certifications); 3700/44 (Leasing Representations and Certifications); 3700/57 (Past Performance Questionnaire); 3700/04A (Contractor Representations and Certifications); and 3700/59 (Fair Inclusion of Minorities and Women).

Affected Public: Vendors of goods and services.

Total Hourly Burden							7,830

General Description of Collection:

This is a collection of information involving submission of information and various forms by contractors who desire to do business with the FDIC in connection with contract proposals submitted in response to FDIC solicitations.

In order to obtain competitive proposals and contracts from vendors interested in providing goods or services to the FDIC, the FDIC uses the Solicitation/Award request (Form 3700/55). This form is used in connection with a request for proposal and a request for price quotations.

In anticipation of a particular contract solicitation, the FDIC may first conduct market research to narrow down the list of potential contractors. This is done through a request for information (RFI). Following the RFI process, potential firms may be notified if they are to be included in the next phase of the acquisition process.

The FDIC Background Investigation Questionnaire for Contractor Personnel and Subcontractors (Form 1600/04), Background Investigation Questionnaire for Contractors (Form1600/07), Integrity and Fitness Representations and Certifications (Form 3700/12), and Leasing Representations and Certifications (Form 3700/44) are a result of the implementation of 12 CFR part 366. The FDIC adopted 12 CFR part 366 pursuant to Section 12(f)(3) and (4) of the Federal Deposit Insurance Act, 12 U.S.C. 1822(f)(3) and (4), and the rulemaking authority of the FDIC found at 12 U.S.C. 1819. Pursuant to those sections and consistent with the goals and purposes of titles 18 and 41 of the U.S. Code, the rule establishes the minimum standards of integrity and fitness that contractors, subcontractors, and employees of contractors and subcontractors must meet if they perform any service or function on behalf of the FDIC. This rule includes regulations governing conflicts of interest, ethical responsibility, and use of confidential information in accordance with 1822(f)(3); and the prohibitions and the submission of information in accordance with 1822(f)(4). This rule applies to a person who submits an offer to perform or performs, directly or indirectly, a contractual service or function on behalf of the FDIC.

In addition, the evaluation of an offeror's past performance under formal contracting procedures is a mandatory technical evaluation criterion in the FDIC's standard solicitation document. In support of the evaluation of the past performance criterion, the FDIC Past Performance Questionnaire (Form 3700/57) was developed to be submitted by other government agencies or commercial businesses who are doing business, or have done business, with the contractor that the FDIC is evaluating.

The FDIC Contractor Representations and Certifications form (Form 3700/4A) must be completed by any offeror that responds to a solicitation for an award over $100,000.

Finally, in connection with a contract proposal, the FDIC seeks a commitment from an FDIC contractor to ensure, to the maximum extent possible consistent with applicable law, the fair inclusion of minorities and women in its workforce and the workforces of its applicable subcontractors. The commitment is asserted by the FDIC Fair Inclusion of Minorities and Women form (Form 3700/59), which is a contract clause implementing Section 342(c)(2) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5452). The clause asserts the FDIC's right to request documentation from the contractor that demonstrates the contractor's good faith effort to include minorities and women in its workforce and subcontractors' workforces.

The annual burden for this information collection is estimated to be 7,830 hours. This represents an increase of 5,496 hours from the current burden estimate of 2,334 hours. This increase is not due to any new requirements imposed by the FDIC. Rather, it is due to FDIC's reassessment of the burden hours associated with the contracting

process and to better account for the burdens associated with requests for proposals and price quotations as well as RFIs.

Request for Comment

Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. All comments will become a matter of public record.

Dated at Washington, DC, on November 19, 2018.

- *Mail:* Manny Cabeza (202–898–3767), Counsel, MB–3007, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street building (located on F Street), on business days between 7:00 a.m. and 5:00 p.m.

All comments should refer to the relevant OMB control number. A copy of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Manny Cabeza, Counsel, 202–898–3767, *mcabeza@fdic.gov,* MB–3007, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

SUPPLEMENTARY INFORMATION: Proposal to renew the following currently approved collection of information:

1. *Title:* Notices Required of Government Securities Dealers or Brokers.

OMB Number: 3064–0093.

Form Number: G–FIN; G–FINW; G–FIN4 & G–FIN5.

Affected Public: Insured state nonmember banks acting as government securities brokers and dealers.

Burden Estimate:

SUMMARY OF ANNUAL BURDEN

Information collection description	Type of burden	Obligation to respond	Estimated number of respondents	Estimated frequency of responses	Estimated time per response	Estimated annual burden (hours)
Notice by Financial Institutions of Government Securities Broker or Government Securities Dealer Activities (G–FIN).	Reporting	Mandatory	1	On Occasion	1 hour	1
Notice By Financial Institutions of Termination of Activities as a Government Securities Broker of Government Securities Dealer (G–FINW).	Reporting	Mandatory	1	On Occasion	15 minutes	.25
Disclosure Form for Person Associated with a Financial Institution Securities Broker or Dealer (G–FIN–4).	Reporting	Mandatory	1	On Occasion	2 hours	2
Uniform Termination Notice for Persons Associated With a Financial Institution Government Securities Broker of Dealer (G–FIN–5).	Reporting	Mandatory	5	On Occasion	2 hours	10

Total Estimated Annual Burden: 13.25 hours.

General Description of Collection

The Government Securities Act of 1986 requires all financial institutions acting as government securities brokers and dealers to notify their Federal regulatory agencies of their broker-dealer activities, unless exempted from the notice requirements by Treasury Department regulation.

The Form G–FIN and Form G–FINW are used by insured State nonmember banks that are government securities brokers or dealers to notify the FDIC of their status or that they have ceased to function as a government securities broker or dealer.

The Form G–FIN–4 is used by associated persons of insured State nonmember banks that are government securities brokers or dealers to provide certain information to the bank and to the FDIC concerning employment, residence, and statutory disqualification.

The Form G–FIN–5 is used by insured State nonmember banks that are government securities brokers or dealers to notify the FDIC that an associated person is no longer associated with the

government securities broker or dealer function of the bank.

There is no change in the method or substance of the collection. The overall reduction in burden hours (from 17 hours to 13.25 hours) is the result of economic fluctuation. In particular, the number of respondents has decreased from 17 to 8 while the hours per response and frequency of responses have remained the same.

Request for Comment

Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. All comments will become a matter of public record.

Dated at Washington, DC, on November 19, 2018.

BILLING CODE 6714–01–P

FEDERAL DEPOSIT INSURANCE CORPORATION

Sunshine Act Meeting

Pursuant to the provisions of the ''Government in the Sunshine Act'' (5 U.S.C. 552b), notice is hereby given that the Federal Deposit Insurance Corporation's Board of Directors met in open session at 10:00 a.m. on Tuesday, November 20, 2018, to consider the following matters:

Summary Agenda

Disposition of minutes of previous Board of Directors' Meetings.

Memorandum and resolution re: Regulatory Capital Rule: Capital Simplification for Qualifying Community Banking Organizations.

Memorandum and resolution re: Notice of Proposed Rulemaking to Increase the Appraisal Threshold for Residential Real Estate Transactions, Implement the Residential Rural Exemption, and Require Appropriate Appraisal Review.

Memorandum and resolution re: Final Rule on Transferred OTS Regulations Regarding Fiduciary Powers of State Savings Associations and Consent Requirements for the Exercise of Trust Powers.

Memorandum and resolution re: Final Rule to Revise the FDIC's Regulations Concerning Inflation-Adjusted Maximum Civil Money Penalty Amounts.

Report of actions taken pursuant to authority delegated by the Board of Directors.

Discussion Agenda

Memorandum and resolution re: Notice of Proposed Rulemaking on Proposed Changes to Applicability Thresholds for Regulatory Capital Requirements and Liquidity Requirements.

In calling the meeting, the Board determined, on motion of Director Martin J. Gruenberg, seconded by Director Mick Mulvaney (Acting Director, Consumer Financial Protection Bureau), concurred in by Director Joseph Otting (Comptroller of the Currency), and Chairman Jelena McWilliams, that Corporation business required its consideration of the matters on less than seven days' notice to the public; and that no earlier notice of the meeting than that previously provided on November 14, 2018, was practicable.

The meeting was held in the Board Room located on the sixth floor of the FDIC Building located at 550 17th Street NW, Washington, DC.

Dated: November 20, 2018

Federal Deposit Insurance Corporation.

BILLING CODE P

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities: Proposed Collection Renewal; Comment Request (OMB No. 3064–0117; –0145; and –0152)

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comment.

SUMMARY: The FDIC, as part of its obligations under the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to take this opportunity to comment on the renewal of the existing information collections described below.

DATES: Comments must be submitted on or before January 22, 2019.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- *https://www.FDIC.gov/regulations/laws/federal.*
- *Email: comments@fdic.gov.* Include the name and number of the collection in the subject line of the message.
- *Mail:* Manny Cabeza (202–898–3767), Counsel, MB–3007, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street NW building (located on F Street), on business days between 7:00 a.m. and 5:00 p.m.

All comments should refer to the relevant OMB control number. A copy of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Manny Cabeza, Counsel, 202–898–3767, *mcabeza@fdic.gov,* MB–3007, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

SUPPLEMENTARY INFORMATION:

Proposal To Renew the Following Currently Approved Collections of Information

1. *Title:* Multi-to-Stock Conversion of State Savings Banks.

OMB Number: 3064–0117.

Form Number: None.

Affected Public: Insured state savings associations.

Burden Estimate:

SUMMARY OF ANNUAL BURDEN

	Type of burden	Obligation to respond	Estimated number of respondents	Estimated frequency of responses	Estimated time per response (hours)	Frequency of response	Total annual estimated burden (hours)
Multi-to-Stock Conversion of State Savings Bank.	Reporting	Mandatory	5	1	250 hours	On Occasion	1,250.
Total Hourly Burden							1,250 hours.

General Description of Collection

State savings associations must file a notice of intent to convert to stock form, and provide the FDIC with copies of documents filed with state and federal banking and/or securities regulators in connection with any proposed mutual-to-stock conversion.

There is no change in the method or substance of the collection. The overall reduction in burden hours is the result of economic fluctuation. In particular, the number of respondents has decreased while the hours per response and frequency of responses have remained the same.

2. *Title:* Notice Regarding Unauthorized Access to Customer Information.

OMB Number: 3064–0145.

Form Number: None.

Affected Public: Insured state nonmember banks.

Burden Estimate:

SUMMARY OF ANNUAL BURDEN

	Type of burden	Estimated number of respondents	Estimated time per response (hours)	Frequency of response	Total estimated annual burden hours
Implementation (One Time):					
Develop Policies and Procedures for Response Program.	Recordkeeping	2	24	1	48
Ongoing:					
Notice Regarding Unauthorized Access to Customer Information.	Third Party Disclosure	315	36 hours	On Occasion	11,340
Total Estimated Annual Burden.					11,388

General Description of Collection:

The Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice describes the federal banking agencies' expectations regarding a response program, including customer notification procedures, that a financial institution should develop and apply under the circumstances described in the *Guidance* to address unauthorized access to or use of customer information that could result in substantial harm or inconvenience to a customer. The *Guidance* advises financial institutions when and how they might: (1) Develop notices to customers; (2) in certain circumstances defined in the *Guidance,* determine which customers should receive the notices and (3) send the notices to customers.

There is no change in the method or substance of the information collection. With respect to the third party disclosure requirements associated with providing notices regarding unauthorized access to customer information, the FDIC revised its estimate of the response time from 29 hours per response to 36 hours per response. The agency also revised its estimate of the number of annual respondents from 80 to 315 to reflect current industry trend data.

3. *Title:* Identity Theft Red Flags.

OMB Number: 3064–0152.

Form Number: None.

Affected Public: Insured state nonmember banks.

Burden Estimate:

SUMMARY OF ANNUAL BURDEN

	Type of burden	Obligation to respond	Estimated number of respondents	Estimated frequency of responses	Estimated time per response (hours)	Frequency of response	Total annual estimated burden (hours)
FACT Act Sections 114 and 315—Establish policies and Procedures.	Recordkeeping	Mandatory	3,575	1	16	On Occasion	57,200
FACT Act Section 315—Establish policies and Procedures.	Third-Party Disclosure.	Mandatory	3,575	1	4	On Occasion	14,300
Total Hourly Burden							71, 500

General Description of Collection

The regulation containing this information collection requirement is 12 CFR part 334, which implements sections 114 and 315 of the Fair and Accurate Credit Transactions Act of 2003 (FACT Act), Public Law 108–159 (2003).

FACT Act Section 114: Section 114 requires the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency and the FDIC (the Agencies) to jointly propose guidelines for financial institutions and creditors identifying patterns, practices, and specific forms of activity that indicate the possible existence of identity theft. In addition, each financial institution and creditor is required to establish reasonable policies and procedures to address the risk of identity theft that incorporate the guidelines. Credit card and debit card issuers must develop policies and procedures to assess the validity of a request for a change of address under certain circumstances. The information collections pursuant to section 114 require each financial institution and creditor to create an Identity Theft Prevention Program and report to the board of directors, a committee thereof, or senior management at least annually on compliance with the proposed regulations. In addition, staff must be trained to carry out the program. Each credit and debit card issuer is required to establish policies and procedures to assess the validity of a change of address request. The card issuer must notify the cardholder or use another means to assess the validity of the change of address.

FACT Act Section 315: Section 315 requires the Agencies to issue regulations providing guidance regarding reasonable policies and procedures that a user of consumer reports must employ when such a user receives a notice of address discrepancy from a consumer reporting agencies. Part 334 provides such guidance. Each user of consumer reports must develop reasonable policies and procedures that it will follow when it receives a notice of address discrepancy from a consumer reporting agency. A user of consumer reports must furnish an address that the user has reasonably confirmed to be accurate to the consumer reporting agency from which it receives a notice of address discrepancy.

There is no change in the method or substance of the information collection. The total estimated annual burden hours have increased because of the inclusion of the agency's estimate of third-party disclosure burden associated with the notices required by Section 315 of the FACT Act which were previously not included because the agencies had taken the position that the entities covered by the regulation were already furnishing addresses that they had reasonably confirmed to be accurate to consumer reporting agencies from which they receive a notice of address discrepancy as a usual and customary business practice. The above burden estimate now includes burden for the third-party disclosure requirements associated with Section 315 which resulted in an increase in estimated annual burden of 14, 300 hours. This increase was offset, in part, by a reduction in the estimated number of respondents from 4, 017 to 3,575 which resulted in a decrease in the estimated annual burden for the recordkeeping requirement associated with Sections 114 and 315 from 64, 272 hour to 57,200 hours. The net effect of the revision is an increase in estimated annual burden from 64,272 hours to 71,500 hours.

Request for Comment

Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. All comments will become a matter of public record.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Submission for OMB Review; Comment Request

Title: Phase II Evaluation Activities for Implementing a Next Generation Evaluation Agenda for the Chafee Foster Care Independence Program—Extension

OMB No.: 0970–0489.

Description: The Administration for Children and Families (ACF), Office of Planning Research and Evaluation (OPRE) is proposing an extension of a currently approved information collection (OMB no. 1970–0489). The information collection activities are part of the Phase II Evaluation Activities for Implementing a Next Generation Evaluation Agenda for the Chafee Foster Care Independence Program (now known as the Chafee Foster Care Program for the Successful Transition to Adulthood). The purpose of the extension is to continue the ongoing information collection, which consists of site visits by staff from the Urban Institute and Chapin Hall at the University of Chicago to conduct formative evaluations of programs serving transition-age foster youth. The evaluations include preliminary visits to discuss the evaluation process with program administrators and site visits to each program to speak with program leaders, partners and key stakeholders, front-line staff, and participants. These formative evaluations will determine programs' readiness for more rigorous evaluation in the future. The activities and products from this project will help

ACF to fulfill the ongoing legislative mandate for program evaluation specified in the Foster Care Independence Act of 1999.

Respondents: Semi-structured interviews will be held with program leaders, partners and stakeholders, and front-line staff as well as young adults being served by the programs.

ANNUAL BURDEN ESTIMATES

Instrument	Total number of respondents	Annual number of respondents	Number of responses per respondent	Average burden hours per response	Annual burden hours
Outreach email for discussion with program administrators and staff	16	8	1	8	64
Outreach email for Focus Group Recruiters	12	6	1	8	48
Discussion Guide for program leaders	48	24	4	1	96
Discussion Guide for program partners and stakeholders	60	30	2	1	60
Discussion Guide for program front-line staff	104	52	1	1	52
Focus Group Guide for program participants	160	80	1	2	160
Compilation and Submission of Administrative Data Files	48	24	2	12	576

Estimated Total Annual Burden Hours: 1,056.

Additional Information: Copies of the proposed collection may be obtained by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 330 C Street SW, Washington, DC 20201, Attn: OPRE Reports Clearance Officer. All requests should be identified by the title of the information collection. Email address: *OPREinfocollection@acf.hhs.gov.*

OMB Comment: OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, Email: *OIRA_SUBMISSION@OMB.EOP.GOV*, Attn: Desk Officer for the Administration for Children and Families.

Mary B. Jones,

ACF/OPRE Certifying Officer.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–N–1262]

Approval of Product Under Voucher: Rare Pediatric Disease Priority Review Voucher

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of approval of a product redeeming a priority review voucher. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Food and Drug Administration Safety and Innovation Act (FDASIA), authorizes FDA to award priority review vouchers to sponsors of approved rare pediatric disease product applications that meet certain criteria. FDA is required to publish notice of the issuance of vouchers as well as the approval of products redeeming a voucher. FDA has determined that AJOVY (fremanezumab-vfrm), approved September 14, 2018, meets the redemption criteria.

FOR FURTHER INFORMATION CONTACT: Althea Cuff, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 301–796–4061, Fax: 301–796–9858, email: *althea.cuff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under section 529 of the FD&C Act (21 U.S.C. 360ff), which was added by FDASIA, FDA will report the issuance of rare pediatric disease priority review vouchers and the approval of products for which a voucher was redeemed. FDA has determined that AJOVY (fremanezumab-vfrm), approved September 14, 2018, meets the redemption criteria.

For further information about the Rare Pediatric Disease Priority Review Voucher Program and for a link to the full text of section 529 of the FD&C Act, go to *https://www.fda.gov/ForIndustry/DevelopingProductsforRareDiseasesConditions/RarePediatricDiseasePriorityVoucherProgram/default.htm.* For further information about AJOVY (fremanezumab-vfrm) go to the ''*Drugs@FDA*'' website at *https://www.accessdata.fda.gov/scripts/cder/daf/.*

Dated: November 16, 2018.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Notice of Request for Information; A Notice by the Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria

AGENCY: Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: The Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria (Advisory Council) requests information from the general public and stakeholders related to efforts and strategies to combat Antibiotic Resistance (AR). Given the evolution of AR and the long-term nature of the problem, the Secretary of Health and Human Services (HHS) tasked the Advisory Council with identifying significant areas that have emerged since the release of the National Action Plan (NAP) for Combatting Antibiotic-Resistant Bacteria (CARB) in 2015. To aid in the process of developing its response to the Secretary's task, the Advisory Council has posted this Request for Information (RFI) to hear from a wide range of stakeholders and sectors relevant to the overall CARB effort. This RFI offers the opportunity for the public, including interested individuals, organizations, associations, industries, and others, to provide their input on new priority

areas within each of the five goals of the NAP that should be considered by the United States Government (USG) for 2020–2025.

Responses to the RFI must be received by 11:59 p.m. on January 7, 2019 to be considered. The questions in the RFI are available through an online form on the Advisory Council's web page at *www.hhs.gov/ash/carb.* Individuals unable to submit their answers using the online platform should send an email to *CARB@hhs.gov,* indicating ''RFI Response'' in the subject line, along with the corresponding goal number(s) for which they are responding.

DATES AND TIMES: Comments must be received by 11:59 p.m. on January 7, 2019 to be considered.

ADDRESSES: Individuals are encouraged to submit their responses through one of the following methods. Utilization of the online form available on *www.hhs.gov/ash/carb* is the preferred method of submission. Should you choose to send in your responses via email, please be sure to include ''RFI Response'' along with the corresponding goal number(s) in the subject line. Responses should not include information of a confidential nature, such as sensitive personal information or proprietary information. Responses to this notice are not offers and cannot be accepted by the federal government to form a binding contract or issue a grant. Please be aware that your comments will not be posted publicly, however they may be made available to the public, in part or in full, subject to applicable laws and regulations.

- *Online Form: www.hhs.gov/ash/carb.* Online submissions will receive an automatic confirmation acknowledging receipt of your response, but you will not receive individualized feedback on any suggestions.
- *Email: CARB@hhs.gov.* Please indicate ''RFI Response'' and the corresponding goal number(s) in the subject line of your email.
- All submissions will receive an electronic confirmation acknowledging receipt of your response, but you will not receive individualized feedback on any suggestions.

FOR FURTHER INFORMATION CONTACT: Dr. Jomana Musmar, Acting Designated Federal Officer, Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria, Office of the Assistant Secretary for Health, U.S. Department of Health and Human Services, Room 715H, Hubert H. Humphrey Building, 200 Independence Avenue SW, Washington, DC 20201. Phone: (202) 690–5566; email: *CARB@hhs.gov.*

SUPPLEMENTARY INFORMATION: Under Executive Order 13676, dated September 18, 2014, authority was given to the Secretary of Health and Human Services (HHS) to establish the Advisory Council, in consultation with the Secretaries of Defense and Agriculture. Activities of the Advisory Council are governed by the provisions of Public Law 92–463, as amended (5 U.S.C. App.), which sets forth standards for the formation and use of federal advisory committees.

The Advisory Council will provide advice, information, and recommendations to the Secretary of HHS regarding programs and policies intended to support and evaluate the implementation of Executive Order 13676, including the National Strategy for CARB and the Action Plan (NAP). The Advisory Council shall function solely for advisory purposes.

In carrying out its mission, the Advisory Council will provide advice, information, and recommendations to the Secretary regarding programs and policies intended to preserve the effectiveness of antibiotics by optimizing their use; advance research to develop improved methods for combating AR and conducting antibiotic stewardship; strengthen surveillance of antibiotic-resistant bacterial infections; prevent the transmission of antibiotic-resistant bacterial infections; advance the development of rapid point-of-care and agricultural diagnostics; further research on new treatments for bacterial infections; develop alternatives to antibiotics for agricultural purposes; maximize the dissemination of up-to-date information on the appropriate and proper use of antibiotics to the general public and human and animal healthcare providers; and improve international coordination of efforts to combat AR.

Background: Antibiotic Resistance (AR) poses a significant threat to our Nation's public health, economy, and national security. The Centers for Disease Control and Prevention (CDC) estimates that every year more than two million people in the United States (U.S.) contract infections that are resistant to antibiotics, and at least 23,000 people die as a result. The United States exceeds $20 billion in direct health care costs, and loses $35 billion in indirect costs due to loss of productivity associated with antibiotic-resistant infections. By 2050, drug-resistant bacterial infections worldwide are estimated to result in greater than 10 million deaths yearly and cost up to $100 trillion in losses to the world economy. Drug-resistant infections also complicate the U.S. medical response to chemical, biological, radiological, or nuclear emergencies, and the global spread of AR makes our deployed service members particularly vulnerable.

In response to the AR threat, the USG developed the National Strategy for Combating Antibiotic-Resistant Bacteria (CARB) in 2014. The Strategy takes a One Health approach to combating antibiotic resistance based on the persistence of AR within our global environment and the recognition that integrated multi-sectoral action is needed to prevent the emergence and spread of AR. In 2015, the U.S. government issued the corresponding National Action Plan (NAP) for CARB, providing a five-year roadmap (2015–2020) to guide the Nation in implementing the following five goals outlined in the Strategy:

1. Slow the emergence of resistant bacteria and prevent the spread of resistant infections;
2. Strengthen national One Health surveillance efforts to combat resistance;
3. Advance development and use of rapid and innovative diagnostic tests for identification and characterization of resistant bacteria;
4. Accelerate basic and applied research and development for new antibiotics and other therapeutics, including vaccines; and
5. Improve international collaboration and capacities for antibiotic resistance prevention, surveillance, control and antibiotic research and development.

The U.S. government has made meaningful progress towards these goals; however, since the issuance of the NAP in 2015, the domestic and international landscape has changed with continued unparalleled advancement and innovation in technology and the life sciences. Additional action is needed and opportunities exist to continue this progress beyond 2020. As such, the U.S. Government will issue a second iteration of the NAP that will guide action on AR for the period of 2020–2025. The development of this draft will involve the U.S. Government's careful consideration of progress to date on the current NAP, including barriers to progress in certain areas and new developments across sectors, at home and abroad.

Request for Information: To inform the Advisory Council's deliberation on recommended priorities to consider in the USG's process of developing the next NAP (2020–2025), please review the five goals in the current NAP, and provide the following information:

- In the context of the existing five goals, on what new priorities should the

federal government focus in the next NAP for CARB—that are not already included in the current plan—and why are they the most important? Your response can cover a range of priority areas for human, animal, and environmental health, including surveillance, research and development, stewardship practices, infection prevention and control practices, and/or other areas for consideration.

In preparing your response, please be sure to:

○ Consider how your response fits into the existing One Health paradigm, and how your proposed priority should be further pursued by the U.S. Government;

○ Provide an answer that is feasible and actionable by the U.S. Government;

○ Limit your responses to no more than two priorities for each of the five goals (a maximum of 10 can be submitted);

○ Summarize your response for each priority area in 250 words or less, including its scientific justification;

○ Indicate whether your response is relevant domestically, internationally, or both;

○ Indicate the domain(s) to which your response applies—human, animal, and/or environmental health;

○ Include citations to support your response (references must be in the form of an active link or citation; we will not accept attachments. Peer-reviewed citations and journal links are highly encouraged.

Response to this RFI is voluntary. Responders are free to address any or all of the goals listed in the NAP. Please note that the USG will not pay for response preparation or for the use of any information contained in the response. The answers provided in this RFI must not include any confidential or proprietary data. Responses to this notice are not offers and cannot be accepted by the USG to form a binding contract or issue a grant. Please be aware that your comments will not be posted publicly, however, they may be made available to the public, in part or in full, subject to applicable laws and regulations.

More information can be found at *www.hhs.gov/ash/carb.*

Dated: November 13, 2018.

Jomana F. Musmar,

Acting Designated Federal Officer, Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria Committee Manager.

BILLING CODE 4150–44–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria

AGENCY: Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the Department of Health and Human Services (HHS) is hereby giving notice that a meeting is scheduled to be held for the Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria (Advisory Council). The meeting will be open to the public; a public comment session will be held during the meeting. Pre-registration is required for members of the public who wish to attend the meeting and who wish to participate in the public comment session. Individuals who wish to attend the meeting and/or send in their public comment via email should send an email to *CARB@hhs.gov.* Registration information is available on the website *http://www.hhs.gov/ash/carb/* and must be completed by January 23, 2019; all in-person attendees must pre-register by this date. Additional information about registering for the meeting and providing public comment can be obtained at *http://www.hhs.gov/ash/carb/* on the Meetings page.

DATES: The meeting is scheduled to be held on January 30, 2019, from 9:00 a.m. to 5:00 p.m. and January 31, 2019, from 9:00 a.m. to 5:00 p.m. ET (times are tentative and subject to change). The confirmed times and agenda items for the meeting will be posted on the website for the Advisory Council at *http://www.hhs.gov/ash/carb/* when this information becomes available. Pre-registration for attending the meeting in person is required to be completed no later than January 23, 2019; public attendance at the meeting is limited to the available space.

ADDRESSES: U.S. Department of Health and Human Services, Hubert H. Humphrey Building, Great Hall, 200 Independence Avenue SW, Washington, DC 20201.

The meeting can also be accessed through a live webcast on the day of the meeting. For more information, visit *http://www.hhs.gov/ash/carb/.*

FOR FURTHER INFORMATION CONTACT: Dr. Jomana Musmar, Acting Designated Federal Officer, Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria, Office of the Assistant Secretary for Health, U.S. Department of Health and Human Services, Room 715H, Hubert H. Humphrey Building, 200 Independence Avenue SW, Washington, DC 20201. Phone: (202) 690–5566; email: *CARB@hhs.gov.*

SUPPLEMENTARY INFORMATION: Under Executive Order 13676, dated September 18, 2014, authority was given to the Secretary of HHS to establish the Advisory Council, in consultation with the Secretaries of Defense and Agriculture. Activities of the Advisory Council are governed by the provisions of Public Law 92–463, as amended (5 U.S.C. App.), which sets forth standards for the formation and use of federal advisory committees.

The Advisory Council will provide advice, information, and recommendations to the Secretary of HHS regarding programs and policies intended to support and evaluate the implementation of Executive Order 13676, including the National Strategy for Combating Antibiotic-Resistant Bacteria and the National Action Plan for Combating Antibiotic-Resistant Bacteria. The Advisory Council shall function solely for advisory purposes.

In carrying out its mission, the Advisory Council will provide advice, information, and recommendations to the Secretary regarding programs and policies intended to preserve the effectiveness of antibiotics by optimizing their use; advance research to develop improved methods for combating antibiotic resistance and conducting antibiotic stewardship; strengthen surveillance of antibiotic-resistant bacterial infections; prevent the transmission of antibiotic-resistant bacterial infections; advance the development of rapid point-of-care and agricultural diagnostics; further research on new treatments for bacterial infections; develop alternatives to antibiotics for agricultural purposes; maximize the dissemination of up-to-date information on the appropriate and proper use of antibiotics to the general public and human and animal healthcare providers; and improve international coordination of efforts to combat antibiotic resistance.

The public meeting will be dedicated to hosting stakeholders to explore priority areas that have emerged since the original National Action Plan on Combating Antibiotic Resistant Bacteria was launched in 2015. The meeting agenda will be posted on the Advisory Council website at *http://www.hhs.gov/ash/carb/* when it has been finalized. All agenda items are tentative and subject to change.

Public attendance at the meeting is limited to the available space. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Advisory Council at the address/telephone number listed above at least one week prior to the meeting. For those unable to attend in person, a live webcast will be available. More information on registration and accessing the webcast can be found at *http://www.hhs.gov/ash/carb/.*

Members of the public will have the opportunity to provide comments prior to the Advisory Council meeting by emailing *CARB@hhs.gov.* Public comments should be sent in by midnight January 23, 2019, and should be limited to no more than one page. All public comments received prior to January 23, 2019, will be provided to Advisory Council members; comments are limited to five minutes per speaker.

Dated: November 16, 2018.

Tammy R. Beckham,

Acting Director, National Vaccine Program Office.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute on Drug Abuse; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute on Drug Abuse Special Emphasis Panel; NIDA Research Education Program for Clinical Researchers and Clinicians (R25).

Date: November 27, 2018.

Time: 10:00 a.m. to 12:30 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Neuroscience Center, 6001 Executive Boulevard, Rockville, MD 20852 (Telephone Conference Call).

Contact Person: Julia Berzhanskaya, Ph.D., Scientific Review Officer, Office of Extramural Policy and Review, Division of Extramural Research, National Institute on Drug Abuse, NIH, DHHS, 6001 Executive Boulevard, Room 4234, MSC 9550, Bethesda, MD 20892, 301–827–5840, *julia.berzhanskaya@nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: National Institute on Drug Abuse Special Emphasis Panel; Multi-Site Studies for System-Level Implementation of Substance Use Prevention and Treatment Services (R01; R34).

Date: November 27, 2018.

Time: 1:00 p.m. to 4:30 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Neuroscience Center, 6001 Executive Boulevard, Rockville, MD 20852 (Telephone Conference Call).

Contact Person: Julia Berzhanskaya, Ph.D., Scientific Review Officer, Office of Extramural Policy and Review, Division of Extramural Research, National Institute on Drug Abuse, NIH, DHHS, 6001 Executive Boulevard, Room 4234, MSC 9550, Bethesda, MD 20892, 301–827–5840, *julia.berzhanskaya@nih.gov.*

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

Name of Committee: National Institute on Drug Abuse Special Emphasis Panel; Workshops on the Use of Adolescent Brain Cognitive Development (ABCD) Data (R25 Clinical Trial Not Allowed).

Date: November 29, 2018.

Time: 10:00 a.m. to 11:30 a.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Neuroscience Center, 6001 Executive Boulevard, Rockville, MD 20852 (Telephone Conference Call).

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning the opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer at (240) 276–1243.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Substance Abuse Prevention and Treatment Block Grant Synar Report Format, FFY 2020–2022—(OMB No. 0930–0222)—Extension

Section 1926 of the Public Health Service Act [42 U.S.C. 300x–26] stipulates that Substance Abuse Prevention and Treatment Block Grant (SABG) funding agreements for alcohol and drug abuse programs for fiscal year 1994 and subsequent fiscal years require states to have in effect a law stating that it is unlawful for any manufacturer, retailer, or distributor of tobacco products to sell or distribute any such product to any individual under the age of 18. This section further requires that states conduct annual, random, unannounced inspections to ensure compliance with the law; that the state submit annually a report describing the results of the inspections, the activities carried out by the state to enforce the required law, the success the state has achieved in reducing the availability of tobacco products to individuals under the age of 18, and the strategies to be utilized by the state for enforcing such law during the fiscal year for which the grant is sought.

Before making an award to a state under the SABG, the Secretary must make a determination that the state has maintained compliance with these requirements. If a determination is made that the state is not in compliance, penalties shall be applied. Penalties ranged from 10 percent of the Block Grant in applicable year 1 (FFY 1997 SABG Applications) to 40 percent in applicable year 4 (FFY 2000 SABG Applications) and subsequent years. Respondents include the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, Palau, Micronesia, and the Marshall Islands. Red Lake Indian Tribe is not subject to tobacco requirements.

Regulations that implement this legislation are at 45 CFR 96.130, are approved by OMB under control number 0930–0163, and require that each state submit an annual Synar report to the Secretary describing their progress in complying with section 1926 of the PHS Act. The Synar report, due December 31 following the fiscal year for which the state is reporting, describes the results of the inspections and the activities carried out by the state to enforce the required law; the success the state has achieved in reducing the availability of tobacco products to individuals under the age of 18; and the strategies to be utilized by the state for enforcing such law during the fiscal year for which the grant is sought. SAMHSA's Center for Substance Abuse Prevention will request an extension of OMB approval of the current report format associated with section 1926 (42 U.S.C. 300x–26) to 2022. Extending OMB approval of the current report format will continue to facilitate consistent, credible, and efficient monitoring of Synar compliance across the states.

ANNUAL REPORTING BURDEN

45 CFR citation	Number of respondents [1]	Responses per respondents	Total number of responses	Hours per response	Total hour burden
Annual Report (Section 1—States and Territories) 96.130(e)(1–3)	59	1	59	15	885
State Plan (Section II—States and Territories) 96.130(e)(4,5)96.130(g)	59	1	59	3	177
Total	59		118		1,062

BILLING CODE 4162–20–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Submission for OMB Review; Comment Request

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer at (240) 276–1243.

Project: Minority AIDS Initiative-Management Reporting Tools (MAI–MRTs)—(OMB No. 0930–0357)—Revision

The Substance Abuse and Mental Health Services Administration (SAMHSA), Center for Substance Abuse Prevention (CSAP) is requesting from the Office of Management and Budget (OMB) approval for the revision of Minority AIDS Initiative (MAI) monitoring tools, which includes both youth and adult questionnaires as well as the quarterly progress report. This revision includes the inclusion of new cohorts, substantial revisions to the youth and adult questionnaires, updates to the data used to estimate response rates and expected numbers of participants by service duration (see Table 1 below).

The cohorts of grantees funded by the MAI and included in this clearance request are:

- Capacity Building Initiative (CBI) 2015
- Capacity Building Initiative (CBI) 2016
- Capacity Building Initiative (CBI) 2017
- Capacity Building Initiative (CBI) 2018
- Prevention Navigators 2017
- Secretary's Minority AIDS Initiative Fund (SMAIF) 2018

The target population for the MAI grantees will be at-risk minority adolescents and young adults. All MAI grantees are expected to report their monitoring data using SAMHSA's Strategic Prevention Framework (SPF) to target minority populations, as well as other high risk groups residing in communities of color with high prevalence of Substance Abuse and HIV/AIDS. The primary objectives of the monitoring tools include:

- Assess the success of the MAI in reducing risk factors and increasing protective factors associated with the transmission of the Human Immunodeficiency Virus (HIV), Hepatitis C Virus (HCV), and other sexually-transmitted diseases (STD).
- Measure the effectiveness of evidence-based programs and infrastructure development activities such as: Outreach and training, mobilization of key stakeholders, substance abuse and HIV/AIDS counseling and education, testing, referrals to appropriate medical treatment and/or other intervention strategies (*i.e.,* cultural enrichment activities, educational and vocational resources, social marketing campaigns, and computer-based curricula).
- Investigate intervention types and features that yield the best outcomes for specific population groups.
- Assess the extent to which access to health care was enhanced for population groups and individuals vulnerable to behavioral health disparities residing in communities targeted by funded interventions.
- Assess the process of adopting and implementing the SPF with the target populations.

Revisions to the monitoring tools include the following:

Quarterly Progress Report (QPR)

- Removed Numbers Served, HIV Testing, VH Testing, VH Vaccination, and Referrals for Services Not Funded by MAI funds from the Implementation Section. These data will be collected via the participant level
- Added opioid items to lists for targeted outcome measures, name of direct services list, indirect services—environmental strategy list and environmental strategy purpose
- Added Promising Approaches and Innovations Section (2 questions)
- Added upload screen for Final Evaluation Report (for closeout grantees only) tool

The following two tools have been added to this data collection, but were approved under OMB No. 0930–0347 with the exception of the new items listed below. Questions removed were non-essential.

Adult Questionnaire

- Aligned questions with the Center for Substance Abuse Treatment (CSAT)/ Center for Mental Health Service (CMHS) tools & the Rapid HIV Hepatitis Form, where possible
- Removed some demographic questions related to language, education, employment status, health, military details, and relationship status
- Removed some knowledge & attitude questions about peer behavior & how they feel about it, sex refusal skills, & HIV knowledge
- Removed some behavior questions related to other tobacco products, electronic vapor products, synthetic marijuana, mental health, and experience with alcohol use
- Added opioid drug questions
- Added questions to capture details on the intervention and the referrals to

the record management section (completed by grantee staff)

Youth Questionnaire

In addition to all items listed above, on the youth questionnaire, SAMHSA also removed non-essential questions related to:

- Interest in school & feelings about ethnic identity
- Relationships with parents or guardians
- Friend substance abuse and sexual behavior
- Exposure to prevention education messages

The following two tools have been deleted from this data collection:

- Indirect Service Outcomes (ISO)
- HIV Testing Retrospective Reporting Tool

Revision made per the 60-day comment period:

(1) Ask about cigarettes and other tobacco products separately. (See questions 26 in the adult questionnaire and 23 in the youth questionnaire for the revisions)

(2) Include brand examples in the help text of the questionnaires to clarify what types of vapor products may be included. (See question 24 in the youth questionnaire and question 27 in the adult questionnaire for the revisions)

TABLE 1—ESTIMATES OF ANNUALIZED HOUR BURDEN

Type of respondent activity	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
Quarterly Progress Report	155	4	620	4	2,480
Adult questionnaire	12,000	2	24,000	.20	4,800
Youth questionnaire	3,000	2	6,000	.20	600
Total	15,155		30,620		7,880

Written comments and recommendations concerning the proposed information collection should be sent by December 24, 2018 to the SAMHSA Desk Officer at the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB). To ensure timely receipt of comments, and to avoid potential delays in OMB's receipt and processing of mail sent through the U.S. Postal Service, commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@omb.eop.gov.* Although commenters are encouraged to send their comments via email, commenters may also fax their comments to: 202–395–7285. Commenters may also mail them to: Office of Management and Budget, Office of Information and Regulatory Affairs, New Executive Office Building, Room 10102, Washington, DC 20503.

Summer King,

Statistician.

BILLING CODE 4162–20–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2018–0279]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number: 1625–0044

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval for reinstatement, without change, of the following collection of information: 1625–0044, Outer Continental Shelf Activities—Title 33 CFR Subchapter N. Our ICR describes the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: Comments must reach the Coast Guard and OIRA on or before December 24, 2018.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2018–0279] to the Coast Guard using the Federal eRulemaking Portal at *https://www.regulations.gov.* Alternatively, you may submit comments to OIRA using one of the following means:

(1) *Email: dhsdeskofficer@omb.eop.gov.*

(2) *Mail:* OIRA, 725 17th Street NW, Washington, DC 20503, attention Desk Officer for the Coast Guard.

A copy of the ICR is available through the docket on the internet at *https://www.regulations.gov.* Additionally, copies are available from: Commandant (CG–612), Attn: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr Ave. SE, Stop 7710, Washington, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine

whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, [USCG–2018–0279], and must be received by December 24, 2018.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *https://www.regulations.gov* and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *https://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

OIRA posts its decisions on ICRs online at *https://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0044.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (83 FR 45645, September 10, 2018) required by 44 U.S.C. 3506(c)(2). That Notice elicited no comments. Accordingly, no changes have been made to the Collections.

Information Collection Request

Title: Outer Continental Shelf Activities—Title 33 CFR Subchapter N.

OMB Control Number: 1625–0044.

Summary: The Outer Continental Shelf Lands Act, as amended, authorizes the Coast Guard to promulgate and enforce regulations promoting the safety of life and property on OCS facilities. These regulations are located in 33 CFR chapter I subchapter N.

Need: The information is needed to ensure compliance with the safety regulations related to OCS activities. The regulations contain reporting and recordkeeping requirements for annual inspections of fixed OCS facilities, employee citizenship records, station bills, and emergency evacuation plans.

Forms: CG–5432, Fixed OCS Facility Inspection Report.

Respondents: Operators of facilities and vessels engaged in activities on the OCS.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 8,441 hours to 9,582 hours a year due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: November 15, 2018.

James D. Roppel,

U.S. Coast Guard, Acting Chief, Office of Information Management.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2018–0002; Internal Agency Docket No. FEMA–B–1861]

Proposed Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: Comments are requested on proposed flood hazard determinations, which may include additions or modifications of any Base Flood Elevation (BFE), base flood depth, Special Flood Hazard Area (SFHA) boundary or zone designation, or regulatory floodway on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports for the communities listed in the table below. The purpose of this notice is to seek general information and comment regarding the preliminary FIRM, and where applicable, the FIS report that the Federal Emergency Management Agency (FEMA) has provided to the affected communities. The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report, once effective, will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings.

DATES: Comments are to be submitted on or before February 21, 2019.

ADDRESSES: The Preliminary FIRM, and where applicable, the FIS report for each community are available for inspection at both the online location *https://www.fema.gov/preliminaryfloodhazarddata* and the respective Community Map Repository address listed in the tables below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

You may submit comments, identified by Docket No. FEMA–B–1861, to Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov.*

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: FEMA proposes to make flood hazard determinations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are used to meet the floodplain management requirements of the NFIP and are used to calculate the appropriate flood insurance premium

rates for new buildings built after the FIRM and FIS report become effective.

The communities affected by the flood hazard determinations are provided in the tables below. Any request for reconsideration of the revised flood hazard information shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations also will be considered before the FIRM and FIS report become effective.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP only may be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information regarding the SRP process can be found online at *https://www.floodsrp.org/pdfs/srp_overview.pdf.*

The watersheds and/or communities affected are listed in the tables below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location *https://www.fema.gov/preliminaryfloodhazarddata* and the respective Community Map Repository address listed in the tables. For communities with multiple ongoing Preliminary studies, the studies can be identified by the unique project number and Preliminary FIRM date listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2018–0002; Internal Agency Docket No. FEMA–B–1866]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The

FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Federal Regulations. The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will be finalized on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Insurance and Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Internal Agency Docket No. FEMA–4400–DR; Docket ID FEMA–2018–0001]

Georgia; Amendment No. 5 to Notice of a Major Disaster Declaration

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice amends the notice of a major disaster declaration for the State of Georgia (FEMA–4400–DR), dated October 14, 2018, and related determinations.

DATES: This amendment was issued November 7, 2018.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW, Washington, DC 20472, (202) 646–2833.

SUPPLEMENTARY INFORMATION: The notice of a major disaster declaration for the State of Georgia is hereby amended to

include the following areas among those areas determined to have been adversely affected by the event declared a major disaster by the President in his declaration of October 14, 2018.

Montgomery and Telfair Counties for Public Assistance.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

Federal Emergency Management Agency

[Docket ID FEMA–2018–0002; Internal Agency Docket No. FEMA–B–1864]

Proposed Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: Comments are requested on proposed flood hazard determinations, which may include additions or modifications of any Base Flood Elevation (BFE), base flood depth, Special Flood Hazard Area (SFHA) boundary or zone designation, or regulatory floodway on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports for the communities listed in the table below. The purpose of this notice is to seek general information and comment regarding the preliminary FIRM, and where applicable, the FIS report that the Federal Emergency Management Agency (FEMA) has provided to the affected communities. The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report, once effective, will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings.

DATES: Comments are to be submitted on or before February 21, 2019.

ADDRESSES: The Preliminary FIRM, and where applicable, the FIS report for each community are available for inspection at both the online location *https://www.fema.gov/preliminaryfloodhazarddata* and the respective Community Map Repository address listed in the tables below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

You may submit comments, identified by Docket No. FEMA–B–1864, to Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov.*

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov*; or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: FEMA proposes to make flood hazard determinations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or

pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are used to meet the floodplain management requirements of the NFIP and are used to calculate the appropriate flood insurance premium rates for new buildings built after the FIRM and FIS report become effective.

The communities affected by the flood hazard determinations are provided in the tables below. Any request for reconsideration of the revised flood hazard information shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations also will be considered before the FIRM and FIS report become effective.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP only may be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information regarding the SRP process can be found online at *https://www.floodsrp.org/pdfs/srp_overview.pdf.*

The watersheds and/or communities affected are listed in the tables below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location *https://www.fema.gov/preliminaryfloodhazarddata* and the respective Community Map Repository address listed in the tables. For communities with multiple ongoing Preliminary studies, the studies can be identified by the unique project number and Preliminary FIRM date listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Federal Emergency Management Agency

[Internal Agency Docket No. FEMA–4400–DR; Docket ID FEMA–2018–0001]

Georgia; Amendment No. 6 to Notice of a Major Disaster Declaration

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice amends the notice of a major disaster declaration for the State of Georgia (FEMA–4400–DR), dated October 14, 2018, and related determinations.

DATES: This amendment was issued November 15, 2018.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency

Management Agency, 500 C Street SW, Washington, DC 20472, (202) 646–2833.

SUPPLEMENTARY INFORMATION: The notice of a major disaster declaration for the State of Georgia is hereby amended to include the following areas among those areas determined to have been adversely affected by the event declared a major disaster by the President in his declaration of October 14, 2018.

Hancock and Tattnall Counties for Public Assistance.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households in Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050 Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

Brock Long,

Administrator, Federal Emergency Management Agency.

BILLING CODE 9111–11–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2018–0002; Internal Agency Docket No. FEMA–B–1863]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Federal Regulations. The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will be finalized on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Insurance and Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Map Information eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS–2018–0065]

Notice of the President's National Infrastructure Advisory Council Meeting

AGENCY: National Protection and Programs Directorate, DHS.

ACTION: Announcement of meeting; request for comments.

SUMMARY: The National Protection and Programs Directorate (NPPD) announces a public meeting of the President's National Infrastructure Advisory Council (NIAC). To facilitate public participation, NPPD invites public comment on the agenda items to be considered by the NIAC at the meeting, a draft report on catastrophic power outages, and the associated briefing materials for the report.

DATES:

Meeting Registration: Individual registration to attend the meeting in person must be received no later than 5 p.m. EST on December 5, 2018.

Written Comments: Written comments must be received no later than 12 p.m. EST on December 12, 2018.

Meeting: The meeting will be held on Thursday, December 13, 2018 from 10 a.m.–1 p.m. EST.

ADDRESSES: The NIAC meeting will be held at the Eisenhower Executive Office Building, 1650 Pennsylvania Ave. NW, Washington, DC 20502.

Public Comments: Written comments may be submitted on the issues to be considered by the NIAC as described in the **SUPPLEMENTARY INFORMATION** section below and the briefing materials for the meeting. The draft report and associated briefing materials will be made publicly available at *https://www.dhs.gov/national-infrastructure-advisory-council* on Friday, December 7, 2018.

Comments identified by docket number ''DHS–2018–0065'' may be submitted by any of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting written comments.
- *Email: NIAC@hq.dhs.gov.* Include docket number DHS–2018–0065 in the subject line of the message.
- *Fax:* 703–235–9707, ATTN: Ginger K. Norris.
- *Mail:* Ginger K. Norris, Designated Federal Officer, National Infrastructure Advisory Council, National Protection and Programs Directorate, Department of Homeland Security, 245 Murray Lane, Mail Stop 0612, Arlington, VA 20598–0612.

Instructions: All submissions received must include the agency name and docket number for this notice. All written comments received will be posted without alteration at *www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments and additional information on participating in the upcoming NIAC meeting, see the ''PUBLIC PARTICIPATION'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket and comments received by the NIAC, go to *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Ginger K. Norris, 202–441–5885, *ginger.norris@hq.dhs.gov.*

SUPPLEMENTARY INFORMATION: The NIAC is established under Section 10 of E.O. 13231 issued on October 16, 2001. Notice of this meeting is given under the Federal Advisory Committee Act, 5 U.S.C. Appendix (Pub. L. 92–463). The NIAC shall provide the President, through the Secretary of Homeland Security, with advice on the security and resilience of the Nation's critical infrastructure sectors.

The NIAC will meet in an open meeting on December 13, 2018 to

receive remarks from DHS leadership and other senior Federal officials regarding their report on Catastrophic Power Outages. Additionally, the NIAC will deliberate and vote on their final recommendations for this current report as tasked by the National Security Council.

Agenda

I. Opening of Meeting

II. Roll Call of Members

Meeting Registration Information

Due to limited seating, requests to attend in person will be accepted and processed in the order in which they are received. Individuals may register to attend the NIAC meeting by sending an email to *NIAC@hq.dhs.gov.* For those who cannot attend in person, the meeting's proceedings will also be available via webcast at *www.whitehouse.gov/live.*

Public Comment

While this meeting is open to the public, participation in NIAC deliberations are limited to council members. A public comment period will be held during the meeting from approximately 10:30 a.m.–10:45 a.m. EST. Speakers who wish to comment on the draft catastrophic power outage report must register in advance and can do so by emailing *NIAC@hq.dhs.gov* no later than Wednesday, December 12, 2018, at 5 p.m. EST. Speakers are requested to limit their comments to three minutes. Please note that the public comment period may end before the time indicated, following the last call for comments.

Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact *NIAC@hq.dhs.gov* as soon as possible.

Dated: November 16, 2018.

Ginger K. Norris,

Designated Federal Officer, National Infrastructure Advisory Council, National Protection and Programs Directorate, Department of Homeland Security.

BILLING CODE 9110–9P–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–6128–N–01]

Notice of Certain Operating Cost Adjustment Factors for 2019

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice.

SUMMARY: This notice establishes operating cost adjustment factors (OCAFs) for project-based assistance contracts issued under Section 8 of the United States Housing Act of 1937 and renewed under the Multifamily Assisted Housing Reform and Affordability Act of 1997 (MAHRA) for eligible multifamily housing projects having an anniversary date on or after February 11, 2019. OCAFs are annual factors used to adjust Section 8 rents renewed under section 515 or section 524 of MAHRA.

DATES: *Applicability Date:* February 11, 2019.

FOR FURTHER INFORMATION CONTACT: Carissa Janis, Program Analyst, Office of Asset Management and Portfolio Oversight, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; telephone number 202–402–2487 (this is not a toll-free number). Hearing- or speech-impaired individuals may access this number through TTY by calling the toll-free Federal Relay Service at 800–877–8339.

SUPPLEMENTARY INFORMATION:

I. OCAFs

Section 514(e)(2) and section 524(c)(1) of MAHRA (42 U.S.C. 1437f note) require HUD to establish guidelines for the development of OCAFs for rent adjustments. Sections 524(a)(4)(C)(i), 524(b)(1)(A), and 524(b)(3)(A) of MAHRA, all of which prescribe the use of the OCAF in the calculation of renewal rents, contain similar language. HUD has therefore used a single methodology for establishing OCAFs, which vary among states and territories.

MAHRA gives HUD broad discretion in setting OCAFs, referring, for example, in sections 524(a)(4)(C)(i), 524(b)(1)(A), 524(b)(3)(A) and 524(c)(1) simply to ''an operating cost adjustment factor established by the Secretary.'' The sole limitation to this grant of authority is a specific requirement in each of the foregoing provisions that application of an OCAF ''shall not result in a negative adjustment.'' Contract rents are adjusted by applying the OCAF to that portion of the rent attributable to operating expenses exclusive of debt service.

The OCAFs provided in this notice are applicable to eligible projects having a contract anniversary date of February 11, 2019 or after and were calculated using the same method as those published in HUD's 2018 OCAF notice published on November 2, 2017 (82 FR 50888). Specifically, OCAFs are calculated as the sum of weighted component cost changes for wages, employee benefits, property taxes, insurance, supplies and equipment, fuel oil, electricity, natural gas, and water/sewer/trash using publicly available indices. The weights used in the OCAF calculations for each of the nine cost component groupings are set using current percentages attributable to each of the nine expense categories. These weights are calculated in the same manner as in the November 2, 2017 notice. Average expense proportions were calculated using three years of audited Annual Financial Statements from projects covered by OCAFs. The expenditure percentages for these nine categories have been found to be very stable over time but using three years of data increases their stability. The nine cost component weights were calculated at the state level, which is the lowest level of geographical aggregation with enough projects to permit statistical analysis. These data were not available for the Western Pacific Islands, so data for Hawaii were used as the best available indicator of OCAFs for these areas.

The best current price data sources for the nine cost categories were used in calculating annual change factors. State-level data for fuel oil, electricity, and natural gas from Department of Energy surveys are relatively current and continue to be used. Data on changes in employee benefits, insurance, property taxes, and water/sewer/trash costs are only available at the national level. The data sources for the nine cost indicators selected used were as follows:

- *Labor Costs:* First quarter, 2018 Bureau of Labor Statistics (BLS) ECI, Private Industry Wages and Salaries, All Workers (Series ID CIU2020000000000I) at the national level and Private Industry Benefits, All Workers (Series ID CIU2030000000000I) at the national level.

• *Property Taxes:* Census Quarterly Summary of State and Local Government Tax Revenue—Table 1 *http://www2.census.gov/govs/qtax/20172018/q1t1.xlshttp://www2.census.gov/govs/qtax/2017/q1t1.xls.* 12-month property taxes are computed as the total of four quarters of tax receipts for the period from April through March. Total 12-month taxes are then divided by the number of occupied housing units to arrive at average 12-month tax per housing unit. The number of occupied housing units is taken from the estimates program at the Bureau of the Census. *http://www.census.gov/housing/hvs/data/histtab8.xlsx.*

• *Goods, Supplies, Equipment:* May 2017 to May 2018 Bureau of Labor Statistics (BLS) Consumer Price Index, All Items Less Food, Energy and Shelter (Series ID CUUR0000SA0L12E) at the national level.

• *Insurance:* May 2017 to May 2018 Bureau of Labor Statistic (BLS) Consumer Price Index, Tenants and Household Insurance Index (Series ID CUUR0000SEHD) at the national level.

• *Fuel Oil:* October 2017–March 2018 U.S. Weekly Heating Oil and Propane Prices report. Average weekly residential heating oil prices in cents per gallon excluding taxes for the period from October 2, 2017 through the week of March 26, 2018 are compared to the average from October 3, 2016 through the week of March 27, 2017. For the States with insufficient fuel oil consumption to have separate estimates, the relevant regional Petroleum Administration for Defense Districts (PADD) change between these two periods is used; if there is no regional PADD estimate, the U.S. change between these two periods is used. *http://www.eia.gov/dnav/pet/pet_pri_wfr_a_EPD2F_prs_dpgal_w.htm.*

• *Electricity:* Energy Information Agency, February 2018 ''Electric Power Monthly'' report, Table 5.6.B. *http://www.eia.gov/electricity/monthly/epm_table_grapher.cfm?t=epmt_5_06_b.*

• *Natural Gas:* Energy Information Agency, Natural Gas, Residential Energy Price, 2016–2017 annual prices in dollars per 1,000 cubic feet at the state level. Due to EIA data quality standards several states were missing data for one or two months in 2017; in these cases, data for these missing months were estimated using data from the surrounding months in 2017 and the relationship between that same month and the surrounding months in 2016. *http://www.eia.gov/dnav/ng/ng_pri_sum_a_EPG0_PRS_DMcf_a.htm.*

• *Water and Sewer:* May 2017 to May 2018 Consumer Price Index, All Urban Consumers, Water and Sewer and Trash Collection Services (Series ID CUUR0000SEHG) at the national level.

The sum of the nine cost component percentage weights equals 100 percent of operating costs for purposes of OCAF calculations. To calculate the OCAFs, state-level cost component weights developed from AFS data are multiplied by the selected inflation factors. For instance, if wages in Virginia comprised 50 percent of total operating cost expenses and increased by 4 percent from 2017 to 2018 the wage increase component of the Virginia OCAF for 2019 would be 2.0 percent (50% * 4%). This 2.0 percent would then be added to the increases for the other eight expense categories to calculate the 2019 OCAF for Virginia. For states where the calculated OCAF is less than zero, the OCAF is floored at zero. The OCAFs for 2019 are included as an Appendix to this Notice.

II. MAHRA OCAF Procedures

Sections 514 and 515 of MAHRA, as amended, created the Mark-to-Market program to reduce the cost of federal housing assistance, to enhance HUD's administration of such assistance, and to ensure the continued affordability of units in certain multifamily housing projects. Section 524 of MAHRA authorizes renewal of Section 8 project-based assistance contracts for projects without restructuring plans under the Mark-to-Market program, including projects that are not eligible for a restructuring plan and those for which the owner does not request such a plan. Renewals must be at rents not exceeding comparable market rents except for certain projects. As an example, for Section 8 Moderate Rehabilitation projects, other than single room occupancy projects (SROs) under the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11301 *et seq.*), that are eligible for renewal under section 524(b)(3) of MAHRA, the renewal rents are required to be set at the lesser of: (1) The existing rents under the expiring contract, as adjusted by the OCAF; (2) fair market rents (less any amounts allowed for tenant-purchased utilities); or (3) comparable market rents for the market area.

III. Findings and Certifications

Environmental Impact

This notice sets forth rate determinations and related external administrative requirements and procedures that do not constitute a development decision affecting the physical condition of specific project areas or building sites. Accordingly, under 24 CFR 50.19(c)(6), this notice is categorically excluded from environmental review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321).

Paperwork Reduction Act

This notice does not impact the information collection requirements already submitted to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). In accordance with the Paperwork Reduction Act, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection displays a currently valid OMB control number.

Catalog of Federal Domestic Assistance Number

The Catalog of Federal Domestic Assistance Number for this program is 14.195.

Dated: November 14, 2018.

Brian D. Montgomery,

Assistant Secretary for Housing, Federal Housing Commissioner.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–HQ–ES–2018–N145; MO# 300030113; OMB Control Number 1018–0119]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Policy for Evaluation of Conservation Efforts When Making Listing Decisions (PECE)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the U.S. Fish and Wildlife Service, are proposing to renew an information collection with revisions.

DATES: Interested persons are invited to submit comments on or before December 24, 2018.

ADDRESSES: Send written comments on this information collection request (ICR) to the Office of Management and Budget's Desk Officer for the Department of the Interior by email at *OIRA_Submission@omb.eop.gov;* or via facsimile to (202) 395–5806. Please provide a copy of your comments to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS: BPHC, 5275 Leesburg Pike, Falls Church, VA 22041–3803 (mail); or by email to *Info_Coll@fws.gov.* Please reference OMB Control Number 1018–0119 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Madonna L. Baucum, Service Information Collection Clearance Officer, by email at *Info_Coll@fws.gov,* or by telephone at (703) 358–2503. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on February 28, 2018 (83 FR 8698). The following comments were received:

Comment 1: Letter dated April 30, 2018, from Myles P. Culhane, Assistant General Counsel, Occidental Petroleum Corporation. Received via email on April 30, 2018.

Occidental Petroleum Corporation provided comments on whether PECE is necessary to the proper functions of the Service, whether we will use the information in a timely manner, and how to enhance the information being collected. They stated that PECE is very important to encourage voluntary conservation efforts prior to listing decisions such that listing may not be necessary. They offered three suggestions to improve information collection in the context of specific listing decisions:

(1) Ensure that we are collecting the right types of information by considering what will be useful in predicting future conservation actions and results, and articulating the factors we think will inform such predictions,

(2) Ensure that we have the ability to update our listing decisions up until the last minute regarding current information about conservation efforts, and

(3) Ensure that PECE analyses are cumulative and include all qualifying conservation efforts together rather than in isolation.

FWS Response to Comment 1: The Service appreciates this comment and does consider the best available scientific and commercial information received through the public comment period, information solicitation, or other means related to conservation efforts when making listing determinations. The Service maintains that in every proposed or final listing decision, we articulate the species' needs, the threats to the species and its response to those threats, and any actions that may ameliorate or exacerbate those threats. Each particular situation is unique, but in the Service's final PECE, we articulated the non-exhaustive list of criteria that we would use to evaluate each conservation effort that did not have a track record of implementation or effectiveness. The Service is required to consider best available scientific and commercial information in making listing decisions, including information on conservation efforts that do not have a track record of implementation or effectiveness. The Service evaluates the certainty of implementation and effectiveness by considering the criteria in the PECE, and those efforts that meet the PECE standard of sufficiently certain to be implemented and effective are then evaluated in the status assessment for the species. The Service understands that stakeholders want a transparent and flexible process, and the Service is open to communication and collaboration with these stakeholders which will encourage conservation of species.

Comment 2: Letter dated April 27, 2018, from Steve Wright, General Manager, Public Utility District No. 1 of Chelan County, WA. Received via email on May, 7, 2018.

Chelan Public Utility District No. 1 commented that it finds PECE useful because it encourages aggregation of information about conservation efforts, which can provide notice to permit applicants and other entities possibly affected by a listing, both of the listing and the efforts. It can also encourage entities to participate in conservation efforts, which can be meaningful for species. It finds that encouraging conservation efforts is consistent with the ESA and benefits species.

FWS Response to Comment 2: The Service appreciates the District's comments about the utility and benefits of PECE.

We are again soliciting comments on the proposed ICR that is described below. We are especially interested in public comment addressing the following issues: (1) Is the collection necessary to the proper functions of the Service; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Service enhance the quality, utility, and clarity of the

information to be collected; and (5) how might the Service minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Section 4 of the Endangered Species Act (ESA; 16 U.S.C. 1531 *et seq.*) outlines the process by which we can list a species as a threatened species or an endangered species. When we consider whether to list a species, the ESA requires us to take into account the efforts made by any State or any political subdivision of a State to protect such species. We also take into account the efforts made by other entities. States or other entities often formalize conservation efforts in conservation agreements, conservation plans, management plans, or similar documents. The conservation efforts recommended or described in such documents could prevent some species from becoming so imperiled that they meet the definition of a threatened species or an endangered species under the ESA.

The Policy for Evaluation of Conservation Efforts When Making Listing Decisions (PECE) (68 FR 15100, March 28, 2003) encourages the development of conservation agreements or plans and provides certainty about the standard that an individual conservation effort must meet in order for us to consider whether it is likely to make a difference in a species' status. PECE applies to ''formalized conservation efforts'' that have not been implemented or have been implemented but have not yet demonstrated if they are effective at the time of a listing decision.

Under PECE, formalized conservation efforts are defined as conservation efforts (specific actions, activities, or programs designed to eliminate or reduce threats or otherwise improve the status of a species) identified in a conservation agreement, conservation plan, management plan, or similar document. To assist us in evaluating a formalized conservation effort under PECE, we collect information such as conservation plans, monitoring results, and progress reports. The development of any agreement or plan is voluntary. There is no requirement that the individual conservation efforts included in such documents be designed to meet the standard in PECE. The PECE policy is posted on our Candidate Conservation website at *http://www.fws.gov/endangered/esa-library/pdf/PECE-final.pdf.*

We are not reporting an increase in burden with this renewal, although we revised the collection to include burden for individuals, businesses, and not-for-profit organizations who may develop agreements/plans or may agree to implement certain conservation efforts identified in a State agreement or plan. Previously, we reported all burden estimates as government, although it was possible to receive submissions from individuals and private sector respondents. This submission breaks their burden out separately, with a placeholder of one submission for each category, to account for the rare occasion that we may receive a submission from these additional respondent categories.

Title of Collection: Policy for Evaluation of Conservation Efforts When Making Listing Decisions (PECE).

OMB Control Number: 1018–0119.

Form Number: None.

Type of Review: Revision of a currently approved collection.

Respondents/Affected Public: Primarily State, local, or Tribal governments. However, individuals, businesses, and not-for-profit organizations could develop agreements/plans or may agree to implement certain conservation efforts identified in a State agreement or plan.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: None.

Activity	Estimated number of annual respondents	Average number of submissions each	Estimated number of annual responses	Completion time per response (hours)	Estimated annual burden hours
PECE—Reporting					
Individuals	1	1	1	120	120
Private Sector	1	1	1	120	120
Government	5	1	5	120	600
PECE—Monitoring					
Individuals	1	1	1	600	600
Private Sector	1	1	1	600	600
Government	5	1	5	600	3,000
PECE—Development of Conservation Plan/Agreement (One-Time Burden)					
Individuals	1	1	1	2,000	2,000
Private Sector	1	1	1	2,000	2,000
Government	2	1	2	2,000	4,000
Totals	18	.....	18	.....	13,040

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Dated: November 16, 2018.

Madonna Baucum,

Information Collection Clearance Officer, U.S. Fish and Wildlife Service.

[FR Doc. 2018–25454 Filed 11–21–18; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Geological Survey

[GX19EE000101100]

Public Meeting of the National Geospatial Advisory Committee

AGENCY: U.S. Geological Survey, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the U.S. Geological Survey (USGS) is publishing this notice to announce that a Federal Advisory Committee meeting of the National Geospatial Advisory Committee will take place.

DATES: The meeting will be held on Thursday, December 6, 2018 from 1:00 p.m. to 4:30 p.m. (Eastern Standard Time).

ADDRESSES: The meeting will be held via web conference and teleconference. Send your comments to Group Federal Officer by email to *gs-faca-mail@usgs.gov.*

FOR FURTHER INFORMATION CONTACT: Mr. John Mahoney, Federal Geographic Data Committee, U.S. Geological Survey, 909 First Avenue, Suite 800, Seattle, WA 98104; by email at *jmahoney@usgs.gov;* or by telephone at (206) 220–4621.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552B, as amended), and 41 CFR 102–3.140 and 102–3.150.

Purpose of the Meeting: The National Geospatial Advisory Committee (NGAC) provides advice and recommendations related to management of Federal and national geospatial programs, the development of the National Spatial Data Infrastructure (NSDI), and the implementation of Office of Management and Budget Circular A–16. The NGAC reviews and comments on geospatial policy and management issues and provides a forum to convey views representative of non-federal stakeholders in the geospatial community. The NGAC meeting is one of the primary ways that the FGDC collaborates with its broad network of partners. Additional information about the NGAC meeting is available at: *www.fgdc.gov/ngac.*

Agenda Topics:

—FGDC Update

—Geospatial Data as Services

—Cultural and Historical Geospatial Resources

—Geospatial Infrastructure

—NSDI Strategic Plan

—Landsat Advisory Group

Meeting Accessibility/Special Accommodations: The webinar meeting is open to the public from 1:00 p.m. to 4:30 p.m. on December 6, 2018. Members of the public wishing to attend the meeting should contact Ms. Lucia Foulkes by email at *lfoulkes@usgs.gov* to register no later than Monday, December 3, 2018. Webinar/conference line instructions will be provided to registered attendees prior to the meeting. Individuals requiring special accommodations to access the public meeting should contact Ms. Lucia Foulkes at the email stated above or by telephone at 703–648–4142 no later than Friday, November 30, 2018 so that appropriate arrangements can be made.

Public Disclosure of Comments: Time will be allowed at the meeting for any individual or organization wishing to make formal oral comments. To allow for full consideration of information by the NGAC members at the meeting, written comments must be provided to Ms. Lucia Foulkes, Federal Geographic Data Committee, U.S. Geological Survey, 12201 Sunrise Valley Drive, MS–590, Reston, VA 20192; by email at *lfoulkes@usgs.gov;* or by telephone at 703–648–4142, no later than Monday, December 3, 2018. Any written comments received will be provided to the NGAC members.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

James Sayer,

Federal Advisory Committee, GPO, Information Management and Delivery, USGS.

BILLING CODE 4338–11–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[190A2100DD/AAKC001030/A0A501010.999900 253G; OMB Control Number 1076–NEW]

Agency Information Collection Activities; Human Capital Management Strengths and Needs Assessment

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Indian Education (BIE) are proposing a new information collection to gain an understanding of processes and practices within BIE schools.

DATES: Interested persons are invited to submit comments on or before January 22, 2019.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to The Bureau of Indian Education, 1011 Indian School Road NW, Suite 332, Albuquerque, NM 87104; or by email to Veronica Lane, *Veronica.Lane@bie.edu.* Please reference OMB Control Number 1076–NEW in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Veronica Lane by email at *Veronica.Lane@bie.edu,* or by telephone at 505–563–5279.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed ICR that is described below. We are especially interested in public comment addressing the following

issues: (1) Is the collection necessary to the proper functions of the BIE; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the BIE enhance the quality, utility, and clarity of the information to be collected; and (5) how might the BIE minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The purpose of the Human Capital Management Strengths and Needs Assessment process is to gain an understanding of processes and practices within BIE schools in five areas including: Hiring, retention, staff support and development, learning environment, school culture and community engagement. Information will be collected from school staff members, residential staff members, school board members, and parents through online surveys. The goal of collecting this information is to capture the perspective of stakeholders when considering a school's strengths and areas of improvement in relation to human capital functions. The BIE will use the information collected from this process to provide targeted individualized support to schools and to inform institutional change and improvement in areas including but not limited to hiring, professional development, and retention.

Title of Collection: Human Capital Management Strengths and Needs Assessment.

OMB Control Number: 1076–NEW.

Form Number: None.

Type of Review: New.

Respondents/Affected Public: School staff, residential staff, parents, and school board members affiliated with Bureau-funded schools.

Total Estimated Number of Annual Respondents: 380.

Total Estimated Number of Annual Responses: 380.

Estimated Completion Time per Response: Varies from 10 to 40 minutes depending on role of respondent.

Total Estimated Number of Annual Burden Hours: 148 hours.

Respondent's Obligation: Required to Obtain a Benefit.

Frequency of Collection: Annually.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Elizabeth K. Appel,

Director, Office of Regulatory Affairs and Collaborative Action, Indian Affairs.

Proposed Finding Against Federal Acknowledgment of the Southern Sierra Miwuk Nation

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: The Department of the Interior (Department) gives notice that the Assistant Secretary–Indian Affairs (AS–IA) proposes to determine that the petitioner, Southern Sierra Miwuk Nation (SSM), is not an Indian Tribe within the meaning of Federal law. This notice is based on a determination that SSM does not meet one of the seven mandatory criteria for a government-to-government relationship with the United States. This proposed finding is based on only one criterion.

DATES: Comments on this proposed finding (PF) are due on or before May 22, 2019. We must receive any request for a technical assistance meeting by January 22, 2019. *See* the **SUPPLEMENTARY INFORMATION** section of this notice for more information about these dates.

ADDRESSES: Please address comments on the PF or requests for a copy of the report to the Department of the Interior, Office of the Assistant Secretary–Indian Affairs, Attn: Office of Federal Acknowledgment, 1849 C Street NW, MS–4071 MIB, Washington, DC 20240. Parties who make comments on the PF must also provide a copy of their comments to the petitioner.

FOR FURTHER INFORMATION CONTACT: R. Lee Fleming, Director, Office of Federal Acknowledgment (OFA), (202) 513–7650.

SUPPLEMENTARY INFORMATION: Pursuant to 25 CFR 83.10(h), the Department gives notice that the AS–IA proposes to determine that the Southern Sierra Miwuk Nation (SSM, Petitioner #82), c/o William H. Leonard, 4630 Ben Hur Road, Mariposa, California 95338, is not an Indian Tribe within the meaning of the Federal law. This notice is based on a preliminary finding that the petitioner fails to satisfy one of the seven mandatory criteria for acknowledgement set forth in 25 CFR 83.7(a) through (g), and thus, does not meet the requirements for a government-to-government relationship with the United States.

The Department received a letter of intent from the petitioner under the name ''American Indian Council of Mariposa County'' (AICMC) on April 24, 1982, and designated it Petitioner #82. The petitioner submitted a narrative and partial documentation on April 19, 1984. The Department replied with an ''obvious deficiency'' (OD) review letter on May 1, 1985. The petitioner responded with documentation on December 12, 1986. At the request of the petitioner, the Department sent a second OD review letter on April 11, 1988. The Department received the petitioner's response on January 16, 1998. The Department then placed Petitioner #82 on the ''Ready, Waiting for Active Consideration'' list.

Active consideration began on November 1, 2010, after which the Department asked for an updated membership list and any other materials within 60 days (70 FR 16514). The petitioner requested an ''extension of time to submit documentation,'' and the Department received the petitioner's submission on February 8, 2011, containing documentation, meeting minutes, membership list, articles, newspapers, and governing documents.

During review of Petitioner #82's documented petition, OFA identified technical issues with the petitioner's membership files that needed to be resolved in order to complete the review for the PF. For this reason, the AS–IA extended the original due date for issuance of the PF, from November 1, 2011 to April 30, 2012. During further review, additional technical issues with the petitioner's membership vital records arose, and the AS–IA found good cause to suspend the issuance of the PF under 83.10(g).

On July 31, 2015, the Department issued a final rule that revised the acknowledgment regulations and provided the petitioner the opportunity to choose to complete the evaluation either under the revised 2015 regulations or under the 1994 regulations (80 FR 37862–37895). Petitioner #82 decided to continue with the review of its petition under the 1994 regulations. Active consideration resumed, with the AS–IA ultimately extending the deadline for this PF to November 16, 2018.

Criterion 83.7(b) requires that ''a predominant portion of the petitioning group comprises a distinct community and has existed as a community from historical times until the present.'' Section 83.1 defines ''Community'' as: Any group of people which can demonstrate that consistent interactions and significant social relationships exist within its membership and that its members are differentiated from and identified as distinct from nonmembers.. *Community* must be understood in the context of the history, geography, culture and social organization of the group.'' The definition of ''the present'' is tailored to each petitioner's unique history. For this petitioner, ''the present'' is defined as 1982 (the year when the petitioner submitted its Letter of Intent) to 2011 (the year when the petitioner submitted supplemental membership information).

Evidence in the record shows involvement by some members of the petitioner in group activities, but not by a predominant portion of the membership. Events sponsored by the formal organization are attended by some of the petitioner's members, but also by non-Indians and non-Miwok Indians (some of whom may be closely related to the petitioner but who are enrolled in federally recognized Tribes). Participation in these activities appears to include some members from various families, but it is unclear to what extent this participation represents a cross-section of the entire membership. The record contains very little information regarding how often members interact with each other outside of the functions organized by the group's leadership. The materials and interviews contained few descriptions of members from multiple families socializing at birthday parties, baby showers, graduations, anniversaries, or other events not sponsored by the group's governing body. There is also little to no discussion in the interviews or in any of the documents in the record of members informally looking after each other's children, taking in other members if they were rendered homeless, helping other members to secure employment, or aiding other members in times of sickness or financial hardship.

The evidence in the record is insufficient to demonstrate that Petitioner #82 meets the criterion 83.7(b), one of the seven mandatory criteria of the regulations for a determination that the petitioning group is an Indian Tribe. In accordance with the regulations, the failure to meet all seven criteria requires a determination that the petitioning group is not an Indian Tribe within the meaning of Federal law. *See* 25 CFR 83.6(d) and 25 CFR 83.10(m). Therefore, the Department proposes to decline to acknowledge Petitioner #82 as an Indian Tribe.

According to the AS–IA OFA; Guidance and Direction Regarding Internal Procedures of May 23, 2008:

> If during the evaluation of a petition on active consideration it becomes apparent that the petitioner fails on one criterion, or more, under the reasonable likelihood of the validity of the facts standard, OFA may prepare a proposed finding or final determination not to acknowledge the group on the failed criterion or criteria alone, setting forth the evidence, reasoning, and analyses that form the basis for the proposed decision. (73 FR 30146–30148)

The burden of providing sufficient evidence under the criteria in the regulations rests with the petitioner (25 CFR 83.5(c)). Because Petitioner #82 has not met criterion § 83.(b) as a distinct community, it is not necessary, at this time, for the Department to make conclusions regarding the other six mandatory criteria.

Additionally, due to the fact that the petitioner fails to meet the requirements of 83.7(b) (''the present''), the Department considers it unnecessary to conduct an analysis whether a predominant portion of the group comprised a distinct community and existed as a community from historical times. If additional evidence is provided after the PF is published, the Department may find it necessary to conduct an analysis of community from historical times to the present.

The PF is based on the evidence currently in the record. Additional evidence may be submitted during the comment period that follows publication of this finding. If new evidence provided during the comment period results in a reversal of this conclusion, the AS–IA will issue an amended PF evaluating all seven criteria. (73 FR 30146–30148)

Publication of this notice of the PF in the **Federal Register** initiates a 180-day comment period during which the petitioner and interested and informed parties may submit arguments and evidence to support or rebut the evidence relied upon in the PF. Comments on the PF should be addressed to both the petitioner and the Federal Government as required by 25 CFR 83.10(i) and as instructed in the **ADDRESSES** section of this notice by the date listed in the **DATES** section of this notice. The regulations, 25 CFR 83.10(k), provide the petitioner a minimum of 60 days to respond to any submissions on the PF received from interested and informed parties during the comment period. After expiration of the comment and response periods described above, the Department will consult with the petitioner and interested parties to determine an equitable timeframe for consideration of written arguments and evidence. The Department will notify the petitioner and interested parties of the date such consideration begins. After consideration of the written arguments and evidence rebutting or supporting the PF and the petitioner's response to the comments of interested parties, the AS–IA will either issue an amended proposed finding or make a final determination regarding the petitioner's status. The Department will publish a summary of this determination in the **Federal Register**.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal information from public review, we cannot guarantee that we will be able to do so.

Dated: November 16, 2018.

Tara Sweeney,

Assistant Secretary, Indian Affairs.

Notice of Availability of Draft Environmental Impact Statement for the Proposed Dairy Syncline Mine and Reclamation Plan, Caribou County, Idaho

AGENCY: Bureau of Land Management, Interior. United States Forest Service, Agriculture.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969 (NEPA), as amended, and the Federal Land Policy Management Act of 1976, as amended, the Bureau of Land Management (BLM) and the Forest Service (USFS) Caribou-Targhee National Forest, have prepared a Draft Environmental Impact Statement (EIS) for the proposed Dairy Syncline Phosphate Mine Project (Project), and by this Notice announce the opening of the comment period.

DATES: To ensure consideration, the Agencies must receive written comments on the Dairy Syncline Mine Project Draft EIS by February 21, 2019. The BLM will announce any future public meetings and any other public involvement activities at least 15 days in advance on our ePlanning website, *https://go.usa.gov/xUjcA.* We may also use other means such as public notices, media news releases, and/or mailings.

ADDRESSES: The public may submit comments related to the Dairy Syncline Mine Project Draft EIS by any of the following methods:

- *website: https://go.usa.gov/xUjcA.*
- *Email: blm_id_dairysynclineeis@blm.gov.*
- *Mail:* Dairy Syncline Mine Draft EIS, c/o Stantec Consulting Services Inc., 3995 South 700 East, Suite 300, Salt Lake City, Utah 84107.

Please reference ''Dairy Syncline Mine Draft EIS'' on all correspondence. CD–ROM and print copies of the Dairy Syncline Mine Draft EIS are available in the BLM Pocatello Field Office at the following address: 4350 Cliffs Drive, Pocatello, ID 83204. In addition, an electronic copy of the Draft EIS is available online at:

- BLM Land Use Planning and NEPA Register: *https://go.usa.gov/xUjcA.*
- Caribou-Targhee National Forest Current and Recent Projects *http://www.fs.usda.gov/projects/ctnf/landmanagement/projects.*

FOR FURTHER INFORMATION CONTACT: Bill Stout, BLM Pocatello Field Office, 4350 Cliffs Drive, Pocatello, ID 83204; phone 208–236–6367; email: *jwstout@blm.gov;* fax 208–478–6376. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 800–877–8339 to contact Mr. Stout. The FRS is available 24 hours a day, 7 days a week, to leave a message or question for Mr. Stout. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The BLM, as the Federal mineral lease administrator, is the lead agency, and the USFS is the co-lead agency for preparation of the Draft EIS, which includes several alternatives. The Idaho Department of Environmental Quality, the Idaho Department of Lands, the U.S. Army Corps of Engineers, and the Idaho Governor's Office of Energy and Mineral Resources are cooperating agencies. J.R. Simplot Company (Simplot) submitted a proposed Mine and Reclamation Plan application for agency consideration to extract phosphate rock from the Dairy Syncline leases (IDI–28115 and IDI–0258) located approximately 14 miles east of Soda Springs, in southeastern Caribou County, Idaho. Simplot submitted its original Dairy Syncline Mine and Reclamation Plan (M&RP) in 2008 and a revised M&RP was submitted in 2013.

The proposal would disturb a total of 2,830 acres as described in the Draft EIS. In one of the alternatives and in order to accommodate the proposed tailings pond, the BLM is considering acceptance of a land donation and offering a land sale, and the USFS is considering a land exchange and acceptance of a land donation. The BLM further describes these two land tenure adjustments in the Draft EIS. The BLM land tenure adjustment would require an amendment to the current Pocatello Resource Management Plan and the land exchange would require a Forest Plan Amendment.

In addition, the BLM and USFS propose seven enlargements (lease modifications) to the existing leases in order to maximize recovery of the leased phosphate resource. Further, eight USFS Special Use Authorizations would be necessary.

The Draft EIS analyzes numerous action alternatives, including an alternate access route, reduced BLM and USFS land tenure adjustments, and an alternative to reduce impacts to water resources. The agency Preferred Alternative is a modified form of the Proposed Action, which includes reducing the size of land tenure adjustments and adopting elements of the selective waste rock handling alternative. The modifications made to the Proposed Action (resulting in the Preferred Alternative) would result in a net gain of Federal land acreage and the fewest impacts to surface and groundwater of all the action alternatives.

A Notice of Intent to prepare this EIS was published in the **Federal Register** on April 13, 2010 (75 FR 18875), initiating a 30-day public scoping period during which the BLM accepted written public comments on the Proposed Action. The scoping process identified concerns involving impacts to water resources and watersheds from potentially elevated levels of selenium and other contaminants in mine waste rock. Other potential effects and/or cumulative effects identified and addressed in the Draft EIS include potential impacts to minerals, paleontology, air quality, climate, soils, vegetation, wildlife, fisheries, grazing, recreation, roadless areas, visual resources, transportation, socioeconomics, tribal treaty rights, and wetlands .

To facilitate an understanding of the project and commenting on the Draft EIS, the lead agencies plan to hold public meetings in Soda Springs, Georgetown, and Pocatello, Idaho. Meetings will be announced as previously described and will be in the open-house format, with displays explaining the Project and a forum for commenting on the Project. Written and electronic comments regarding the Draft EIS should be submitted by February 21, 2019.

The portions of the Project related to USFS decisions are subject to the USFS objection process. Due to the need for a Revised Forest Plan amendment, this proposed Project is subject to the predecisional administrative review process described in 36 CFR 218 subparts A and B and 36 CFR 219 subpart B. Only those who provide comments during this comment period or who have previously submitted specific written comments on the Proposed Action, either during scoping or other designated opportunities for public comment, will be eligible as objectors (see 36 CFR 218.5 (a) and 219.53 (a)).

Before including your phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time.

While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authorities: 42 U.S.C. 4321 *et seq.;* 40 CFR 1500 through 1508; 43 CFR 46; 43 U.S.C. 1701; 43 CFR 3590.

Peter J. Ditton,

State Director, Idaho Bureau of Land Management (Acting).

Mel Bolling,

Forest Supervisor, Caribou-Targhee National Forest.

Na Hoa Pili O Kaloko-Honokohau National Historical Park Advisory Commission Notice of Public Meeting

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the National Park Service (NPS) is hereby giving notice that the Na Hoa Pili O Kaloko-Honokohau National Historical Park Advisory Commission (Commission) will meet as indicated below.

DATES: The Commission will meet on Friday, December 7, 2018, from 9:30 a.m. to 2:30 p.m., with a public comment period at 1:00 p.m. (Hawaii Standard Time).

ADDRESSES: The meeting will be held at the Kaloko-Honokohau National Historical Park Kaloko Picnic area. The Kaloko-Honokohau National Historical Park is located in Kailua Kona, Hawaii 96740.

FOR FURTHER INFORMATION CONTACT: Jeff Zimpfer, Environmental Protection Specialist, Kaloko-Honokohau National Historical Park, 73–4786 Kanalani Street, #14, Kailua Kona, Hawaii 96740, telephone (808) 329–6881, ext. 1500, or email *jeff_zimpfer@nps.gov.*

SUPPLEMENTARY INFORMATION: The park was established by section 505(a) of Public Law 95–625, November 10, 1978, and the Commission was established by section 505(f) of that same law. The Commission was re-established by Title VII, Subtitle E, section 7401 of Public Law 111–11, the Omnibus Public Land Management Act of 2009, March 30, 2009. The Commission's current termination date is December 31, 2018.

The purpose of the Commission is to advise the Director of the National Park Service with respect to the historical, archeological, cultural, and interpretive programs of the park. The Commission is to afford particular emphasis to the quality of traditional native Hawaiian cultural practices demonstrated in the park.

Agenda: The Commission meeting will discuss the following:

1. Approval of Agenda
2. Chairman's Report
3. Superintendent's Report
4. Subcommittee Reports
5. Commission Recommendations

a. In absence of the Commission, what cultural center activities should the NPS and the community focus on in the short-term, medium term, and long-term to carry out the mission of the Park?

b. In the absence of the Commission, how should the NPS engage with the community for insights, feedback, and suggestions to ensure the park's mission is fulfilled as detailed in the park's enabling legislation?

6. Public Comments

All meetings are open to the public. Interested persons may make oral/written presentations to the Commission or file written statements. Such requests should be made to the Superintendent at least seven days prior to the meetings.

Public Disclosure of Information: Before including your address, telephone number, email address, or other personal identifying information in your comments, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. Appendix 2.

Gateway National Recreation Area Fort Hancock 21st Century Advisory Committee Notice of Public Meeting

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the National Park Service (NPS) is hereby giving notice that the Gateway National Recreation Area Fort Hancock 21st Century Advisory Committee will meet as indicated below.

DATES: The meeting will take place on Friday, December 7, 2018 from 9:00 a.m. until 3:00 p.m., with a public comment period at 11:30 a.m. (Eastern).

ADDRESSES: The meeting will be held at the Northeast Fisheries Science Center James J. Howard Marine Sciences Laboratory, 74 Magruder Road, Sandy Hook Highlands, New Jersey 07732.

FOR FURTHER INFORMATION CONTACT: Daphne Yun, Acting Public Affairs Officer, Gateway National Recreation Area, 210 New York Avenue, Staten Island, New York 10305, or by telephone (718) 815–3651, or by email *daphne_yun@nps.gov.*

SUPPLEMENTARY INFORMATION: The Committee was established on April 18, 2012, by authority of the Secretary of the Interior (Secretary) under 54 U.S.C. 100906, and is regulated by the Federal Advisory Committee Act. The Committee provides advice to the Secretary, through the Director of the National Park Service, on matters relating to the Fort Hancock Historic District of Gateway National Recreation Area. All meetings are open to the public.

Purpose of the Meeting: The agenda will include an update on the leasing program, and a general park update.

The Committee website, *https://www.forthancock21.org,* includes summaries from all prior meetings. Interested persons may present, either orally or through written comments, information for the Committee to consider during the public meeting. Written comments will be accepted prior to, during, or after the meeting.

Due to time constraints during the meeting, the Committee is not able to read written public comments submitted into the record. Individuals or groups requesting to make oral comments at the public Committee meeting will be limited to no more than five minutes per speaker. All comments will be made part of the public record and will be electronically distributed to all Committee members.

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your written comments, you should be aware that your entire comment including your personal identifying information will be publicly available. While you can ask us in your comment to withhold your personal identifying information

from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. Appendix 2.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–NRSS–BRD–; PPWONRADB0PPMRSNR1Y.NM0000]; OMB Control Number 1024–0275]

Agency Information Collection Activities; Using Web and Mobile-Based Applications During NPS Citizen Science Events

AGENCY: National Park Service, Interior.

ACTION: Notice of information collection request; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the National Park Service (NPS) are proposing to renew an information collection with revisions.

DATES: Interested persons are invited to submit comments on or before January 22, 2019.

ADDRESSES: Send your comments on this Information Collection Request (ICR) by mail to Phadrea Ponds, Acting, Information Collection Clearance Officer, National Park Service, 1201 Oakridge Drive, Fort Collins, CO 80525 (mail); or *phadrea_ponds@nps.gov* (email). Please reference Information Collection Request 1024– 0275 in the subject line.

FOR FURTHER INFORMATION CONTACT: To request additional information about this IC, contact Kriston Barnes, Natural Resource Stewardship and Science Directorate, National Park Service, 1201 Oakridge Dr., Suite 200, Fort Collins, CO 80525 (mail); *kriston_barnes@nps.gov* (email); or: 970–658–6013 (phone).

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed information collection request (ICR) that is described below. We are especially interested in public comment addressing the following issues: (1) Is the collection necessary to the proper functions of the NPS; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the NPS enhance the quality, utility, and clarity of the information to be collected; and (5) how might the NPS minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this IC. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The NPS is authorized by the National Park Service Protection Interpretation and research in System (54 U.S.C. 100701) to collect this information. The NPS is requesting approval to use mobile and web-based applications (*e.g.,* iNaturalist, eBird, etc) as a means to collect natural history observational information from park visitors during citizen science events. The information will be used to substantiate the occurrence of plant, wildlife and invertebrate species within NPS units during these events. By using citizen science applications, this information will be immediately available to all parks and others interested in species identification and advancing the knowledge of the natural world. Using mobile and web-based applications will enable parks to increase the number of natural history observation records that will contribute to greater understanding of the biodiversity within the park systems.

Title of Collection: Using web and mobile-based applications during NPS Citizen Science events.

OMB Control Number: 1024–0275.

Form Number: None.

Type of Review: Revision of a currently approved collection.

Respondents/Affected Public: General public, individual households, and non-federal scientists.

Total Estimated Number of Annual Respondents: 5,000.

Total Estimated Number of Annual Responses: 2,500 (2,000 public and 500 non-federal scientists.

Estimated Completion Time per Response: 50 minutes.

Total Estimated Number of Annual Burden Hours: 2,083 hours.

Respondent's Obligation: Voluntary.

Frequency of Collection: One time.

Total Estimated Annual Non-Hour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq*).

Phadrea D. Ponds,

Acting, NPS Information Collections Clearance Officer, National Park Service.

ACTION: Notice of information collection request; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the National Park Service (NPS) are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before January 22, 2019.

ADDRESSES: Send comments on this Information Collection Request (ICR) to Phadrea D. Ponds, Information Collection Clearance Officer, National Park Service, 1201 Oakridge Drive, Fort Collins, CO 80525; or by email to *phadrea_ponds@nps.gov.* Please reference OMB Control Number 1024–0276 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Patty Henry by email at *patty_henry@nps.gov,* or by telephone at 202–354–2216.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the

general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed information collection request (ICR) that is described below. We are especially interested in public comment addressing the following issues: (1) Is the collection necessary to the proper functions of the NPS, (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the NPS enhance the quality, utility, and clarity of the information to be collected; and (5) how might the NPS minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The NPS is authorized by Historic Sites Act of 1935 (54 U.S.C. 320101 *et seq.*); 36 CFR part 65; the National Historic Preservation Act of 1966 (54 U.S.C. 300101 *et seq.*) to collect this information on behalf of the Secretary of the Interior. In accordance with the law and 36 CFR part 65, private citizens, businesses, and organizations; Federal agencies (FPO); State and local public agencies; State Historic Preservation Officers (SHPOs); territories; and Indian tribes (THPO) may submit nominations for National Historic Landmark (NHL) designation.

All interested parties must inquire by letter or email about the eligibility of properties to be considered for NHL designation. The inquiry will include the name and location of property, brief historical summary of property, and brief description of property. If determined eligible for consideration the respondent will use NPS Form 10–934 (National Historic Landmarks Nomination Form) to nominate a property. The form is used to collect the following information: (1) Name and location of property; (2) significance data related to the property; (3) any withholding of sensitive information; (4) geographical data; (5) significance statement and discussion about the property; (6) property description and statement of integrity; (7) major bibliographic references; and (8) name, organization, address, phone number, and email of the person completing the form.

Title of Collection: National Historic Landmarks Nomination Form.

OMB Control Number: 1024–0276.

Form Number: NPS Form 10–934.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Private individuals; state, tribal and local governments; businesses; educational institutions; and nonprofit organizations

Total Estimated Number of Annual Respondents: 30.

Total Estimated Number of Annual Responses: 10,320.

Estimated Completion Time per Response: Varies from 239 hours to 520 hours, depending on respondent and/or activity.

Total Estimated Number of Annual Burden Hours: 10,320.

Respondent's Obligation: Required to obtain or retain benefits.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: None.

Requirement	Annual number of responses	Total annual burden hours
Letter of Inquiry:		
Individuals	3	6
Private Sector	7	14
Government	10	20
Nominations	30	10,320
Totals	50	10,360

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Phadrea D. Ponds,

Acting, NPS Information Collection Clearance Officer, National Park Service.

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

[RR03042000, 18XR0680A1, RX.18786000.1501100; OMB Control Number 1006–0015]

Agency Information Collection Activities; Diversions, Return Flow, and Consumptive Use of Colorado River Water in the Lower Colorado River Basin

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Reclamation (Reclamation), are proposing to renew an information collection with revisions.

DATES: Interested persons are invited to submit comments on or before January 22, 2019.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Mr. Paul Matuska, Bureau of Reclamation, Boulder Canyon Operations Office, Water Accounting and Verification Group, LC–4200, P.O. Box 61470, Boulder City, NV 89006; or by email to *pmatuska@usbr.gov.* Please reference OMB Control Number 1006–0015 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about

this ICR, contact Paul Matuska by email at *pmatuska@usbr.gov,* or by telephone at 702–293–8164.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed ICR that is described below. We are especially interested in public comment addressing the following issues: (1) Is the collection necessary to the proper functions of Reclamation; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might Reclamation enhance the quality, utility, and clarity of the information to be collected; and (5) how might Reclamation minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The Bureau of Reclamation delivers Colorado River water to water users for diversion and beneficial consumptive use in the States of Arizona, California, and Nevada. The Consolidated Decree of the United States Supreme Court in the case of *Arizona* v. *California, et al.,* entered March 27, 2006 (547 U.S. 150 (2006)), requires the Secretary of the Interior to prepare and maintain complete, detailed, and accurate records of diversions of water, return flow, and consumptive use and make these records available at least annually. The information collected ensures that a State or a water user within a State does not exceed its authorized use of Colorado River water. Water users are obligated by provisions in their water delivery contracts to provide Reclamation information on diversions and return flows. Reclamation determines the consumptive use by subtracting return flow from diversions or by other engineering means.

Title of Collection: Diversions, Return Flow, and Consumptive Use of Colorado River Water in the Lower Colorado River Basin.

OMB Control Number: 1006–0015.

Form Number: LC–2A, LC–2B, Custom Forms.

Type of Review: Revision of a currently approved collection.

Respondents/Affected Public: The respondents will include the Lower Basin States (Arizona, California, and Nevada), local and tribal entities, water districts, and individuals that use Colorado River water.

Total Estimated Number of Annual Respondents: 53.

Total Estimated Number of Annual Responses: 306.

Estimated Completion Time per Response: See table.

Total Estimated Number of Annual Burden Hours: 51 hours.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: Monthly, annually, or otherwise as stipulated by the entity's water delivery contract with the Secretary of the Interior.

Total Estimated Annual Non-hour Burden Cost: 0.

Monthly/annual	Form No.	Number of respondents	Minutes/ response	Number responses/ respondent	Total hours/ year	Total responses/ year

BILLING CODE 4332–90–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1053]

Certain Two-Way Radio Equipment and Systems, Related Software and Components Thereof; Commission Decision To Affirm-in-Part, Modify-in-Part, Reverse-in-Part, and Strike Certain Portions of a Final Initial Determination Finding a Violation of Section 337; Issuance of Limited Exclusion Order and Cease and Desist Orders; and Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to affirm-in-part, modify-in-part, reverse-in-part, and strike certain portions of a final initial determination (''ID'') of the presiding administrative law judge (''ALJ''). Accordingly, the Commission has determined that a violation of section 337 has occurred in the above-captioned investigation, and has issued a limited exclusion order directed against infringing two-way radio products and cease and desist orders directed against two domestic respondents found in violation. The Commission has terminated the investigation.

FOR FURTHER INFORMATION CONTACT: Clint Gerdine, Esq., Office of the General Counsel, U.S. International

Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–2310. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on May 3, 2017, based on a complaint filed on behalf of Motorola Solutions, Inc. (''Motorola'') of Chicago, Illinois. 82 FR 20635–36. The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, by reason of infringement of certain claims of U.S. Patent Nos.: 8,116,284 (''the '284 patent''); 7,369,869 (''the '869 patent''); 7,729,701 (''the '701 patent''); 8,279,991 (''the '991 patent''); 9,099,972 (''the '972 patent''); 8,032,169 (''the '169 patent''); and 6,591,111 (''the '111 patent''). The Commission's Notice of Investigation named as respondents Hytera Communications Corp. Ltd. of Shenzhen, China; Hytera America, Inc. (''Hytera America'') of Miramar, Florida; and Hytera Communications America (West), Inc. (''Hytera Communications America'') of Irvine, California (collectively, ''Hytera''). The Office of Unfair Import Investigations is not participating in the investigation. *Id.*

On September 18, 2017, the Commission issued notice of its determination not to review an ID (Order No. 10) terminating the investigation as to: (1) Claims 2, 5, 10, and 16 of the '284 patent; (2) claims 2–3, 8, 12, 14–15, 20, 22–24, and 30 of the '169 patent; (3) claims 5, 8, 11–14, 18, and 22 of the '869 patent; (4) claims 3, 5, 8–10, 15, and 17–18 of the '701 patent; (5) claim 3 of the '972 patent; and (6) claims 3–5, 8–10, and 14 of the '111 patent. On October 17, 2017, the Commission issued notice of its determination not to review an ID (Order No. 16) terminating the investigation as to claim 10 of the '869 patent. On November 14, 2017, the Commission issued notice of its determination not to review an ID (Order No. 19) terminating the investigation as to: (1) Claims 1, 4, 12, and 18 of the '284 patent; (2) claims 4, 13, 16, and 25 of the '169 patent; (3) claims 3–4, 9, 19–20, and 23–24 of the '869 patent; (4) claims 2, 4, and 14 of the '701 patent; (5) claims 4 and 8 of the '972 patent; (6) claims 6 and 12 of the '111 patent; and (7) claim 19 of the '991 patent for the purposes of satisfying the technical prong of the domestic industry requirement.

On December 4, 2017, the Commission issued notice of its determination not to review an ID (Order No. 21) terminating the investigation as to claims 5 and 18 of the '169 patent. On January 3, 2018, the Commission issued notice of its determination not to review an ID (Order No. 23) terminating the investigation as to: (1) The '111 and '169 patents; (2) claims 2 and 7 of the '869 patent; and (3) claims 7–8 and 19 of the '284 patent. On the same date, the Commission issued notice of its determination not to review an ID (Order No. 24) terminating the investigation as to claim 1 of the '701 patent. On February 6, 2018, the Commission issued notice of its determination not to review an ID (Order No. 31) terminating the investigation as to the following patent claims: (1) Claim 13 of the '701 patent; (2) claim 6 of the '284 patent; and (3) claim 1 of the '972 patent. On February 26, 2018, the Commission issued notice of its determination not to review an ID (Order No. 40) terminating the investigation as to the '972 patent.

On January 26, 2018, the ALJ issued Order No. 38 which granted Motorola's motion *in limine* to preclude Hytera's licensing defense. On May 18, 2018, the ALJ issued Order No. 47, which granted-in-part Motorola's motion to strike certain portions of Hytera's expert testimony at the evidentiary hearing. On July 3, 2018, the ALJ issued her final ID and recommended determination (''RD'') on remedy and bonding in one document. The ID finds that Hytera's accused products infringe claims 1, 6, 17, and 21 of the '869 patent; claims 1 and 11 of the '701 patent; and claims 7–8 of the '991 patent. The ID also finds that Hytera's accused legacy products literally infringe claims 9 and 13–15 of the '284 patent and that Hytera's accused redesigned products infringe these claims under the doctrine of equivalents. The ID also finds that Hytera induced infringement of and contributorily infringed all of the claims of the asserted patents. As part of the ID's finding of indirect infringement, the ID applied an adverse inference against Hytera for certain of its witnesses' invocation of their Fifth Amendment right against self-incrimination. The ID also finds that Motorola satisfies the domestic industry requirement with respect to the '869, '701, and '991 patents, but that its domestic products do not satisfy the technical prong of the domestic industry requirement with respect to the '284 patent. Accordingly, the ID finds a violation of section 337 with respect to the '869, '701, and '991 patents. The RD recommended the issuance of limited exclusion orders directed against Hytera's infringing products and cease and desist orders directed against two domestic Hytera respondents.

On July 17, 2018, Motorola and Hytera petitioned for review of the final ID. Hytera's petition for review included a petition for review of Order Nos. 38 and 47. On July 25, 2018, Motorola and Hytera each filed a response in opposition to the other party's petition for review. On August 6 and 7, 2018, respectively, Hytera and Motorola filed statements on the public interest. On August 10, 2018, the Commission received statements on the public interest from interested non-parties.

On September 4, 2018, the Commission issued notice of its determination to review the following: (1) Order No. 38's finding that Hytera's licensing defense is precluded; (2) Order No. 47's finding that certain expert testimony from Hytera at the evidentiary hearing is stricken; (3) the ID's finding that Hytera's accused redesigned products infringe claims 9 and 13–15 of the '284 patent under the doctrine of equivalents; (4) the ID's application of an adverse inference against Hytera as part of the finding of indirect infringement; and (5) the ID's finding that insufficient record evidence exists to make a conclusive determination as to whether any redesigned products infringe the '701 patent and ID's lack of an express finding on this issue with respect to the '869 or '991 patent. The Commission determined not to review the remainder of the final ID. The determinations made in the final ID that were not reviewed became final determinations of the Commission by operation of rule. *See* 19 CFR 210.43(h)(2). The Commission also (1) requested the parties to respond to certain questions concerning the issues under review; and (2) requested written submissions on the issues of remedy, the public interest, and bonding from the parties, interested government agencies, and interested non-parties, including requesting the parties to respond to certain questions concerning the public interest. 83 FR 45679–81 (Sept. 10, 2018).

On September 18 and 25, 2018, respectively, complainant and respondents each filed a brief and a reply brief on all issues for which the Commission requested written submissions. The Commission also received written submissions on the public interest from interested non-parties on September 18, 2018.

Having reviewed the record in this investigation, including the final ID and the parties' written submissions, the Commission has determined to affirm-in-part, reverse-in-part, modify-in-part, and strike certain portions of the final ID's findings under review. Specifically, the Commission has: (1) Reversed the ID's finding that Hytera's accused redesigned products infringe claims 9 and 13–15 of the '284 patent under the doctrine of equivalents; (2) struck the first and second sentences of the fourth paragraph on page 8 in Order No. 38, and struck the third sentence of this paragraph ''There is no analysis'' and substituted ''There is no analysis in Dr. Akl's Report,'' and struck the second sentence of the first full paragraph on page 9 of Order No. 38; (3) affirmed Order No. 47 and supplemented and clarified its reasoning; (4) took no position on the ID's drawing of an adverse inference against Hytera as part of its finding of indirect infringement; and (5) found that Hytera's redesigned products do not infringe the '701, '869, or '991 patents. Accordingly, the Commission has found that there is a violation of section 337 with respect to the '991, '869, and '701 patents.

Having found a violation of section 337 as to these patents, the Commission has made its determination on the issues of remedy, the public interest, and bonding. The Commission has determined that the appropriate form of relief is (1) a limited exclusion order prohibiting the unlicensed entry of two-way radio equipment and systems, related software and components thereof that infringe one or more of claims 1, 6, 17, and 21 of the '869 patent; claims 1 and 11 of the '701 patent; and claims 7–8 of the '991 patent, which are manufactured abroad by or on behalf of, or are imported by or on behalf of, Hytera, or any of its affiliated companies, parents, subsidiaries, or other related business entities, or their successors or assigns; and (2) cease and desist orders prohibiting Hytera America or Hytera Communications America from conducting any of the following activities in the United States: Importing, selling, marketing, advertising, distributing, offering for sale, transferring (except for exportation), and soliciting U.S. agents or distributors for two-way radio equipment and systems, related software and components thereof that infringe one or more of claims 1, 6, 17, and 21 of the '869 patent; claims 1 and 11 of the '701 patent; and claims 7–8 of the '991 patent.

The Commission further determined that the public interest factors enumerated in section 337(d)(1) and (f)(1) (19 U.S.C. 1337(d)(1), (f)(1)) do not preclude issuance of the limited exclusion order or cease and desist orders. Finally, the Commission determined that a bond of 44 percent of the entered value of the covered products is required to permit temporary importation during the period of Presidential review (19 U.S.C. 1337(j)). The Commission has also issued an opinion explaining the basis for the Commission's action. The Commission's order and opinion were delivered to the President and to the United States Trade Representative on the day of their issuance. The investigation is terminated.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in part 210 of the Commission's Rules of Practice and Procedure, 19 CFR part 210.

By order of the Commission.

Issued: November 16, 2018.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. TA–131–044 and TPA–105–005]

U.S.-EU Trade Agreement: Advice on the Probable Economic Effect of Providing Duty-Free Treatment for Currently Dutiable Imports; Institution of Investigation and Scheduling of Hearing

AGENCY: United States International Trade Commission.

ACTION: Notice of investigation and scheduling of a public hearing.

SUMMARY: Following receipt on November 9, 2018, of a request from the United States Trade Representative (USTR) for a report containing advice and an assessment, the Commission instituted Investigation Nos. TA–131–044 and TPA–105–005, *U.S.-EU Trade Agreement: Advice on the Probable Economic Effect of Providing Duty-free Treatment for Currently Dutiable Imports.*

DATES: December 6, 2018: Deadline for filing requests to appear at the public hearing.

December 10, 2018: Deadline for filing prehearing briefs and statements.

December 18, 2018: Public hearing.

January 4, 2019: Deadline for filing post-hearing briefs and submissions.

January 4, 2019: Deadline for filing all other written statements.

March 19, 2019: Transmittal of Commission report to the USTR.

ADDRESSES: All Commission offices, including the Commission's hearing rooms, are located in the U.S. International Trade Commission Building, 500 E Street SW, Washington, DC. All written submissions should be addressed to the Secretary, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Project Leader Diana Friedman (202–205–3433 or *diana.friedman@usitc.gov*) or Deputy Project Leader Mary Roop (202–708–2277 or *mary.roop@usitc.gov*) for information specific to this investigation. For information on the legal aspects of this investigation, contact William Gearhart of the Commission's Office of the General Counsel (202–205–3091 or *william.gearhart@usitc.gov*). The media should contact Margaret O'Laughlin, Office of External Relations (202–205–1819 or *margaret.olaughlin@usitc.gov*). Hearing-impaired individuals may obtain information on this matter by contacting the Commission's TDD terminal at 202–205–1810. General information concerning the Commission may also be obtained by accessing its website (*https://www.usitc.gov*). Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000.

SUPPLEMENTARY INFORMATION:

Background: In his letter of November 8, 2018, the USTR requested that the Commission provide certain advice under section 131 of the Trade Act of 1974 (19 U.S.C. 2151) and an assessment under section 105(a)(2)(B)(i)(III) of the Bipartisan Congressional Trade Priorities and Accountability Act of 2015 (19 U.S.C. 4204(a)(2)(B)(i)(III)) with respect to the effects of providing duty-free treatment for imports of products from the EU.

More specifically, the USTR, under authority delegated by the President and

pursuant to section 131 of the Trade Act of 1974, requested that the Commission provide a report containing its advice as to the probable economic effect of providing duty-free treatment for imports of currently dutiable products from the EU on (i) industries in the United States producing like or directly competitive products, and (ii) consumers. The USTR asked that the Commission's analysis consider each article in chapters 1 through 97 of the *Harmonized Tariff Schedule of the United States* (HTS) for which U.S. tariffs will remain, taking into account implementation of U.S. commitments in the World Trade Organization. The USTR asked that the advice be based on the HTS in effect during 2018 and trade data for 2017.

In addition, the USTR requested that the Commission prepare an assessment, as described in section 105(a)(2)(B)(i)(III) of the Bipartisan Congressional Trade Priorities and Accountability Act of 2015, of the probable economic effects of eliminating tariffs on imports from the EU of those agricultural products described in the list attached to the USTR's request letter on (i) industries in the United States producing the products concerned, and (ii) the U.S. economy as a whole. The USTR's request letter and list of agricultural products are posted on the Commission's website at *https://www.usitc.gov.*

For the purposes of these analyses, the USTR requested that the Commission assume that the United Kingdom will no longer be a Member State of the EU. The USTR indicated that those sections of the Commission's report that relate to the advice and assessment of probable economic effects will be classified. The USTR also indicated that he considers the Commission's report to be an interagency memorandum that will contain pre-decisional advice and be subject to the deliberative process privilege. As requested, the Commission will provide its report to USTR as soon as possible, which is March 19, 2019.

Public Hearing: A public hearing in connection with this investigation will be held at the U.S. International Trade Commission Building, 500 E Street SW, Washington, DC, beginning at 9:30 a.m. on Tuesday, December 18, 2018. Requests to appear at the public hearing should be filed with the Secretary no later than 5:15 p.m., Thursday, December 6, 2018, in accordance with the requirements in the ''Written Submissions'' section below. All prehearing briefs and statements should be filed not later than 5:15 p.m., Monday, December 10, 2018, and all post-hearing briefs and statements should be filed not later than 5:15 p.m., Friday, January 4, 2019. For further information, call 202–205–2000.

Written Submissions: In lieu of or in addition to participating in the hearing, interested parties are invited to file written submissions concerning this investigation. All written submissions should be addressed to the Secretary, and should be received not later than 5:15 p.m., January 4, 2019. All written submissions must conform to the provisions of section 201.8 of the Commission's *Rules of Practice and Procedure* (19 CFR 201.8). Section 201.8 and the Commission's Handbook on Filing Procedures require that interested parties file documents electronically on or before the filing deadline and submit eight (8) true paper copies by 12:00 p.m. Eastern Time on the next business day. In the event that confidential treatment of a document is requested, interested parties must file, at the same time as the eight paper copies, at least four (4) additional true paper copies in which the confidential information must be deleted (see the following paragraphs for further information regarding confidential business information). Persons with questions regarding electronic filing should contact the Office of the Secretary, Docket Services Division (202–205–1802).

Confidential Business Information: Any submissions that contain confidential business information must also conform to the requirements of section 201.6 of the Commission's *Rules of Practice and Procedure* (19 CFR 201.6). Section 201.6 of the rules requires that the cover of the document and the individual pages be clearly marked as to whether they are the ''confidential'' or ''non-confidential'' version, and that the confidential business information is clearly identified by means of brackets. All written submissions, except for confidential business information, will be made available for inspection by interested parties.

The Commission may include some or all of the confidential business information submitted in the course of this investigation in the report it sends to the USTR. Additionally, all information, including confidential business information, submitted in this investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel (a) for cybersecurity purposes or (b) in monitoring user activity on U.S. government classified networks. The Commission will not otherwise disclose any confidential business information in a way that would reveal the operations of the firm supplying the information.

Summaries of Written Submissions: Persons wishing to have a summary of their position included in the report should include a summary with their written submission and should mark the summary as having been provided for that purpose. The summary should be clearly marked as ''summary'' at the top of the page. The summary may not exceed 500 words, should be in MS Word format or a format that can be easily converted to MS Word, and should not include any confidential business information. The summary will be published as provided if it meets these requirements and is germane to the subject matter of the investigation. The Commission will list the name of the organization furnishing the summary and will include a link to the Commission's Electronic Document Information System (EDIS) where the full written submission can be found.

By order of the Commission.
Issued: November 20, 2018.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2018–25677 Filed 11–21–18; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF LABOR

Employment and Training Administration

Notice of the Federal Unemployment Tax Act (FUTA) Credit Reduction Applicable in 2018

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice.

SUMMARY: Sections 3302(c)(2)(A) and 3302(d)(3) of the FUTA provide that employers in a State that has outstanding advances under Title XII of the Social Security Act on January 1 of two or more consecutive years are subject to a reduction in credits otherwise available against the FUTA tax for the calendar year in which the most recent such January 1 occurs, if advances remain on November 10 of that year. Further, Section 3302(c)(2)(C) of FUTA provides for an additional credit reduction for a year if a State has outstanding advances on five or more

consecutive January firsts and has a balance on November 10 for such years. Section 3302(c)(2)(C) also provides for waiver of this additional credit reduction and substitution of the credit reduction provided in Section 3302(c)(2)(B) if a state meets certain conditions.

California and the United States Virgin Islands were potentially liable for the additional credit reduction under Section 3302(c)(2)(C) of FUTA and applied for the available waiver. It has been determined that each one met all of the criteria of the section necessary to qualify for the waiver of the additional credit reduction. Further, the additional credit reduction of Section 3302(c)(2)(B) is zero for California and the Virgin Islands for 2018. California repaid its outstanding advances prior to November 10, 2018; hence there will be no FUTA credit reduction for the State's employers. Employers in the Virgin Islands will have no additional credit reduction applied for calendar year 2018. However, as a result of having outstanding advances on each January 1 of 2010 through 2018 as well as on November 10, 2018, employers in the Virgin Islands are subject to a FUTA credit reduction of 2.4 percent in 2018.

Molly E. Conway,

Acting Assistant Secretary, Employment and Training Administration.

BILLING CODE 4510–FW–P

LEGAL SERVICES CORPORATION

Request for Letters of Intent To Apply for 2019 Pro Bono Innovation Fund Grants

AGENCY: Legal Services Corporation.

ACTION: Notice.

SUMMARY: The Legal Services Corporation (LSC) issues this Notice describing the conditions for submitting a Letters of Intent (LOI) to Apply for 2019 Pro Bono Innovation Fund grants. This notice and application information are posted at *www.lsc.gov/pbifgrants.*

DATES: Letters of Intent must be submitted by Wednesday, January 23, 2019 by 11:59 p.m. Eastern Time.

ADDRESSES: Letters of Intent must be submitted electronically through *http://lscgrants.lsc.gov.*

FOR FURTHER INFORMATION CONTACT: For more information about current Pro Bono Innovation Fund projects, please contact Mytrang Nguyen, Program Counsel, (202) 295–1564 or *nguyenm@lsc.gov.* For general questions about the Pro Bono Innovation Fund application process, please email *probonoinnovation@lsc.gov.* For technical questions or issues with the LSC Grants online application system, please email *techsupport@lsc.gov.*

SUPPLEMENTARY INFORMATION: The Legal Services Corporation (LSC) issues this Notice describing the conditions for submitting a Letter of Intent to Apply (LOI) for 2019 Pro Bono Innovation Fund grants. This notice and application information are posted at *www.lsc.gov/pbifgrants.*

I. Introduction

Since 2014, Congress has provided an annual appropriation to LSC ''for a Pro Bono Innovation Fund.'' *See, e.g.,* Consolidated Appropriations Act, 2017, Public Law 115–31, 131 Stat. 135 (2017). LSC requested these funds for grants to ''develop, test, and replicate innovative pro bono efforts that can enable LSC grantees to expand clients' access to high quality legal assistance.'' LSC Budget Request, Fiscal Year 2014 at 26 (2013). The grants must involve innovations that are either ''new ideas'' or ''new applications of existing best practices.'' *Id.* Each grant would ''either serve as a model for other legal services providers to follow or effectively replicate a prior innovation. *Id.* The Senate Appropriations Committee explained that these funds ''will support innovative projects that promote and enhance pro bono initiatives throughout the Nation,'' and the House Appropriations Committee directed LSC ''to increase the involvement of private attorneys in the delivery of legal services to [LSC-eligible] clients.'' Senate Report 114–239 at 123 (2016), House Report 113–448 at 85 (2014).

LSC sought these funds based on the 2012 recommendation of the LSC Pro Bono Task Force. Since its inception, the Pro Bono Innovation Fund has advanced LSC's goal of increasing the quantity and quality of legal services by funding projects that more efficiently and effectively involve pro bono volunteers in serving the critical unmet legal needs of LSC-eligible clients. In 2017, LSC built on these successes by creating three funding categories to better focus on innovations serving unmet and well-defined client needs (Project Grants), on building comprehensive and effective pro bono programs through new applications of existing best practices (Transformation Grants), and on providing continued development support for the most promising innovations (Sustainability Grants).

II. Funding Opportunities Information

A. Eligible Applicants

To be eligible for the Pro Bono Innovation Fund's Project, Sustainability, and Transformation grants, Applicants must be current grantees of LSC Basic Field-General, Basic Field-Migrant, or Basic Field-Native American grants. In addition, Sustainability Grant Applicants must also be a former or current Pro Bono Innovation Fund grantee from the FY17 grant making cycle.

B. Pro Bono Innovation Fund Purpose and Key Goals

Pro Bono Innovation Fund grants develop, test, and replicate innovative pro bono efforts that can enable LSC grantees to use pro bono volunteers to serve larger numbers of low-income clients and improve the quality and effectiveness of the services provided. The key goals of the Pro Bono Innovation Fund are to:

1. Address gaps in the delivery of legal services to low-income people;
2. Engage more lawyers and other volunteers in pro bono service;
3. Develop, test, and replicate innovative pro bono efforts.

C. Funding Opportunities

1. Project Grants

The goal of Pro Bono Innovation Fund *Project Grants* is to leverage volunteers to meet a critical, unmet and well-defined client need. Consistent with the key goals of the Pro Bono Innovation Fund, applicants are encouraged to focus on engaging volunteers to increase free civil legal aid for low-income Americans by proposing new, replicable ideas. Applicants are strongly encouraged to research prior successful Pro Bono Innovation Fund projects and Sustainability Grants to replicate, adapt, or create enhancements to prior effective pro bono projects. LSC will be particularly receptive to applications that propose to replicate projects LSC has previously funded with ''Sustainability'' Grants. Our Sustainability Grants have included:

- Community-based partnerships, like the Medical-Legal Partnership of Community Legal Aid, Inc. (MA) or the school-based clinic of Legal Aid of West Virginia, Inc., that work with law firms to provide legal services where clients are located;
- Court-based partnerships, like those at Legal Action of Wisconsin, Inc., and Legal Services Law Line of Vermont, Inc., that use pro bono volunteers to provide same-day, in-court representation and legal assistance;

• An ''emeritus'' project at The Legal Aid Society of Cleveland (LASC) that provides transitioning and retired attorneys with varied and substantive opportunities to support the LASC's advocates and clients;

• A neighborhood-based project at Legal Aid of Western Missouri that engages transactional attorneys to assist clients in distressed and underserved communities.

Project Grants can be either 18 or 24 months.

2. Transformation Grants

The goal of Pro Bono Innovation Fund *Transformation Grants* is to support LSC grantees in comprehensive assessment and restructuring of pro bono programs through new applications of existing best practices in pro bono delivery. Each *Transformation Grant* will support a rigorous and extensive assessment of an LSC grantee's pro bono program, the identification of best practices in pro bono delivery that are best suited to that grantee's needs and circumstances, and the development and implementation of short- and long-term improvements to organizational policies, management, and operations. *Transformation Grants* are 24 months and targeted towards LSC grantees whose leadership is committed to restructuring an entire pro bono program and incorporating pro bono best practices into core, high-priority client services with an urgency to create a high-impact pro bono program. This funding opportunity is open to all LSC grantees, but is primarily intended for LSC grantees who have been unsuccessful applying for *Project Grants* or who have never applied for a Pro Bono Innovation Fund grant in the past.

3. Sustainability Grants

Pro Bono Innovation Fund *Sustainability Grants* are available to current or former Pro Bono Innovation Fund grantees who were funded in FY 2017. The goal of *Sustainability Grants* is to support further development of the most promising and replicable Pro Bono Innovation Fund projects with an additional 24 months of funding so grantees can leverage new sources of revenue for the project, collect meaningful data to demonstrate the project's results and outcomes for clients and volunteers, and quantify the return on LSC's investment of Pro Bono Innovation Fund dollars. Applicants for *Sustainability Grants* will be required to propose an ambitious match requirement, tied to realistic goals that reduce the Pro Bono Innovation Fund contribution to the project over the grant term.

D. Available Funds for FY 2019

The availability of funds for Pro Bono Innovation Fund grants for FY 2019 depends on LSC's appropriation. LSC is currently operating under a Continuing Resolution for FY 2019 which funds the federal government through December 7, 2018. The Continuing Resolution maintains funding at $410 million. Pro Bono Innovation Fund grant decisions for FY 2019 will be made in the summer of 2019. LSC anticipates knowing the total amount available for Pro Bono Innovation Fund grants before August.

In FY 2018, LSC received an appropriation of $4.5 million, of which $4.25 million was available for direct grants to support Pro Bono Innovation Fund projects. In 2018, fifteen Pro Bono Innovation Fund applications received funding with a median funding amount of $293,650. There is no maximum amount for Pro Bono Innovation Fund requests that are within the total funding available.

LSC will not designate fixed or estimated amounts for the three different funding categories and will make grant awards for the three categories within the total amount of funding available.

E. Project and Grant Term

Pro Bono Innovation Fund grant awards will cover an 18- to 24-month period. Applicants for *Project Grants* can apply for either an 18- or a 24-month grant. Applicants for *Transformation Grants* and *Sustainability Grants* apply for a 24-month grant only. Applicants' proposals should cover the full term for which a grant award is requested. The grant term is expected to commence on October 1, 2019.

III. Grant Application Process and Letter of Intent To Apply Instructions

A. Pro Bono Innovation Fund Grant Application Process

LSC is committed to reviewing all Pro Bono Innovation Fund grant applications in a timely and thorough manner. Applicants must first submit a Letter of Intent (LOI) to Apply for Funding to LSC by January 23, 2019 to be considered for a grant. After review by LSC Staff, LSC's President makes the final decision on which applicants will be asked to submit a detailed, full application due to LSC in April. Applicants will be notified of invitations to full application by February 2019. Once LSC has received a full application from a selected applicant, the application will undergo a rigorous review by LSC staff and external subject matter experts. LSC's President makes the final decision on funding for the Pro Bono Innovation Fund.

B. Late or Incomplete Applications

LSC may consider an LOI after the deadline, but only if the Applicant has submitted an email to *probonoinnovation@lsc.gov* explaining the circumstances that caused the delay prior to the applicable deadline. Communication with LSC staff, including assigned Program Liaisons, is not a substitute for sending an explanatory email to *probonoinnovation@lsc.gov.* At its discretion, LSC may consider incomplete applications. LSC will determine the admissibility of late or incomplete applications on a case-by-case basis.

C. Letters of Intent To Apply for Funding Requirements and Format

The LOI should succinctly summarize the information requested for the category of funding the applicant seeks. A complete LOI consists of: (1) A narrative that responds to the questions for the funding category; and (2) a budget form. Applicants must submit the LOI electronically using the LSC Grants online system found at *http://lscgrants.lsc.gov.* The system will be live for applicants in mid-December 2018.

The LOI narrative should be a Word or PDF document submitted in the LSC Grants system. *The narrative must not exceed 5 double-spaced pages or approximately 1,300 words in Times New Roman, 12-point font.* The LOI narrative must be paginated. The budget form is an online form that is submitted in LSC Grants. Applicants who do not follow the above formatting requirements for the *Narrative* submission may be subject to scoring penalties.

Applicants may submit multiple LOIs under the same or different funding category. If applying for multiple grants, applicants should submit a separate LOI in LSC Grants for each funding request.

1. Project Grants

The LOI Narrative for *Project Grants* should respond to the following questions.

a. *Project Description.* Please provide a brief description of the proposed project that includes:

• The specific client need and challenge or opportunity in the pro bono delivery system that the project will address.

• The goals and objectives of the project, the activities that make up the project, and how those activities will

link to and achieve the stated goals and objectives.

• Strong indication of volunteer interest in and support for the project.

• The expected impact of the project. This should include a brief explanation of the changes and outcomes that will be created as a result of the project.

• The proposed strategies that are innovative or the best practices being replicated, including a brief discussion of how these strategies or best practices were identified.

b. *Project Staff, Organizational Capacity, and Project Partners.* Please briefly identify and describe the project team and project partners including:

• The qualifications and relevant experience of the proposed project team, any proposed partner organizations, and your organization.

• The role of your organization's executive management in the design and implementation of the project.

c. *Budget and Timeline.* Please state whether you are proposing an 18- or 24-month project and provide the following information about the estimated project costs:

• Estimated total project cost. This includes the estimate for the Pro Bono Innovation Fund requested amount and other in-kind or cash contributions to support the project. Your narrative should provide a breakdown of the major project expenses including, but not limited to, personnel, project expenses, contracts or sub-grants, etc., and how each expense supports the project design.

• For expenses related to personnel, please indicate how many and which positions will be fully or partially funded by the proposed grant.

• A list of any anticipated contributions, both in-kind and monetary, from all partners involved in the project.

• A list of key partners who will receive Pro Bono Innovation Fund funding, including their roles and the estimated dollar amount or percent of budget assigned to each partner.

2. Transformation Grants

The LOI Narrative for *Transformation Grants* should respond to the following questions.

a. *Transformation Strategy:* Please explain why you are seeking a Transformation Grant for your pro bono program. In your response, please include:

• An honest assessment of the challenges with your organization's current pro bono efforts that inhibit your ability to test, develop, and replicate innovations, and the reasons for them.

• At least three specific and important improvements to your organization's pro bono program that you would like to achieve in the first year of a two-year Transformation Grant.

b. *Guiding Coalition:* Please describe the core team who would be responsible for the pro bono transformation effort in your organization. In your response, please state:

• The qualifications and relevant experience of each proposed team member.

• Whether a majority of your executive and senior managers agree that your organization's pro bono program needs significant improvements.

• The role your organization's executive director and/or senior managers would play in a pro bono transformation effort.

c. *Budget.* Please describe what you would like the *Transformation Grant* to fund over the 24-month grant period. In your response, please include the following information about the anticipated costs associated with a transformation effort for your pro bono program:

• The estimated total cost and a clear description of what the grant will fund. Your narrative should provide a breakdown of the major expenses including, but not limited to, personnel, project expenses, contracts or sub-grants, etc., and how each expense supports the transformation effort to improve your pro bono program.

• For expenses related to personnel, please indicate how many and which positions will be fully or partially funded by the proposed grant.

• For contracts, please describe whether you intend to use consultants, implement new technology systems, conduct business process analysis, etc. and how this supports improvements to you pro bono program.

3. Sustainability Grants

The LOI Narrative for *Sustainability Grants* should respond to the following questions.

a. *Justification for Sustaining the Pro Bono Innovation Project.* Please describe why you are seeking a Sustainability Grant. In your response, please discuss the following:

• The impact of the Pro Bono Innovation Fund project to date, supported by data and analysis as to whether the goals of the project were achieved.

• Evidence of ongoing client need and how you intend to make the project part of your core legal services.

• The level of engagement of pro bono volunteers/private bar and the best practices in pro bono delivery that can be replicated by others.

• How ongoing program evaluation and data collection will be incorporated into the project.

b. *Project Staff and Management Support.* Please briefly identify and describe the project team and project partners. In your response, please include the following:

• The project staff that will be responsible for the sustainability phase of the project. Please include any additional staff, descriptions of new responsibilities for existing project staff and/or organizational changes that will be made.

• The role of your organization's executive management in the decision to seek this Sustainability Grant and recent examples of your organization's track record turning ''new'' or special projects into core legal services.

c. *Budget and Match Requirement.* Please describe what you would like the *Sustainability Grant* to fund. In your response, please be sure to provide the following information:

• Estimated total project cost. This includes the estimate for the Pro Bono Innovation Fund requested amount and other in-kind or cash contributions to support the project. Your narrative should provide a breakdown of the major project expenses including, but not limited to, personnel, project expenses, etc., and how each expense supports the project design.

• A narrative proposing an ambitious match requirement that reduces the Pro Bono Innovation Fund contribution to the project for the grant term. LSC is not setting a specific percentage of required match for Sustainability Grant applicants, but will assess the two-year budget from the applicant's previously funded project with the grant amount proposed in the Sustainability LOI. LSC's expectation is that applicants will propose a meaningful shift from Pro Bono Innovation Fund support to other sources of support during the grant term.

• A narrative discussing the potential sources of funding that have been or will be cultivated. If the project has already received new financial support, please provide the source and amount committed and further describe the plans for ensuring continued financial support.

Dated: November 19, 2018.

Mark F. Freedman,

Senior Associate General Counsel.

OFFICE OF MANAGEMENT AND BUDGET

Cost Accounting Standards Board Meeting Agenda

AGENCY: Cost Accounting Standards Board, Office of Federal Procurement Policy, Office of Management and Budget.

ACTION: Notice of agenda for closed Cost Accounting Standards Board meetings.

SUMMARY: The Office of Federal Procurement Policy (OFPP), Cost Accounting Standards Board (CAS Board) is publishing this notice to advise the public of planned meetings on November 27, 2018 and January 24, 2019. The notice is published pursuant to section 820(a) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2017, which requires the CAS Board to publish agendas of its meetings in the **Federal Register**. The meetings are closed to the public.

DATES: November 27, 2018 and January 24, 2019.

ADDRESSES: New Executive Office Building, 725 17th Street NW, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Raymond Wong, Staff Director, Cost Accounting Standards Board (telephone: 202–395–6805; email: *rwong@omb.eop.gov*).

SUPPLEMENTARY INFORMATION: Section 820 amended section 1501(d) of title 41 of the United States Code to require that the CAS Board meet at least quarterly and publish a notice of its meetings, including the meeting agenda, in the **Federal Register**. The CAS Board has scheduled meetings for Tuesday, November 27, 2018 and Thursday, January 24, 2019. The list of agenda items for both meetings is set forth below. In light of the complexity of the issues to be discussed, and the proximity of the two meetings, the CAS Board expects to use the same agenda for both sessions and is issuing this notice to provide public awareness for both meetings. Additional notices will be published to announce further CAS Board meetings in FY 2019 and beyond. The CAS Board will discuss its accomplishments and activities for FY 2019 in its annual report to Congress, which will be transmitted after the end of the fiscal year, in accordance with section 820(e).

Planned Agenda for CAS Board Meetings on November 27, 2018 and January 24, 2019

1. *Review of Advanced Notice of Proposed Rulemaking (ANPR) for Pension Adjustments for Extraordinary Events.* The CAS Board intends to continue its review of the ANPR addressing Cost Accounting Standard (CAS) 412 Composition and Measurement of Pension Costs and CAS 413, Pension Adjustments for Extraordinary Events. The ANPR is the second step of a four-step process the CAS Board uses when it is considering a rulemaking. As the Board previously announced, this initiative is intended to address revisions to the treatment of extraordinary pension adjustments in a defined benefit pension plan (*i.e.,* plan terminations, plan curtailments, and segment closings). The CAS Board issued a final rule on December 27, 2011 to harmonize CAS with the Pension Protection Act (PPA). The PPA was enacted by Congress to help ensure that promised pension obligations would be adequately funded to pay workers their promised retirement benefits. As part of the PPA, Congress instructed the CAS Board to ''harmonize'' its standards for measuring pension costs with the PPA to avoid undue hardship on contractors that could arise from the faster funding required by the PPA. The final rule did not reconcile the PPA requirements with respect to the CAS pension segment closing adjustment requirements and other extraordinary events. The ANPR, supported by a dedicated interagency working group, examines these extraordinary events. The CAS Board contemplates it will also issue a Staff Discussion Paper (SDP), the first step of the four-step process, addressing fact-finding that was made by the working group and public outreach conducted subsequent to the issuance of the 2011 final rule to help inform the CAS Board in its deliberations.

2. *Conformance of CAS to Generally Accepted Accounting Principles (GAAP).* Section 820 requires the CAS Board to review and conform CAS, where practicable, to GAAP. The Board intends to discuss development of an SDP addressing conformance of CAS 404, Capitalization of Tangible Assets, and CAS 411, Accounting for Acquisition Costs of Material, to GAAP. This is the second SDP addressing CAS–GAAP conformance and will build on the first SDP (under final review for publication and public comment) that (i) lays out a proposed conceptual framework and guiding principles to prioritize the evaluation of whether and to what extent CAS may be conformed to GAAP and (ii) presents an initial comparison of CAS 408, Accounting for Costs of Compensated Personal Absence, and CAS 409, Cost Accounting Standard Depreciation of Tangible Capital Assets, for public comment. The Board intends to receive and review public comment on the first SDP before publishing the second SDP.

3. *CAS Applicability Thresholds.* The Advisory Panel on Streamlining and Codifying Acquisition Regulations, established by section 809 of the FY 2016 NDAA (the Panel), has issued a recommendation addressing potential increases in the CAS applicability thresholds. The recommendation appears in volume 2 of the 809 Panel's report, issued in June 2018. The Board will continue its discussion of the Panel's recommendation.

4. *Review of Section 809 Panel Recommendation on Defense Cost Accounting Standards Board (Defense CAS Board).* The Board will discuss the analysis and recommendation made by the Panel (in volume 2 of its report) to repeal the provisions in section 820 of the FY 2017 NDAA that created the Defense CAS Board. See section 820(b), which amends title 10 by adding a new section 190.

Lesley A. Field,

Deputy Administrator.

BILLING CODE 3110–01–P

NATIONAL SCIENCE FOUNDATION

Business and Operations Advisory Committee; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science Foundation (NSF) announces the following meeting:

Name and Committee Code: Business and Operations Advisory Committee (9556).

Date and Time: December 12, 2018; 1:00 p.m. to 5:15 p.m. (EST).

December 13, 2018; 8:00 a.m. to 12:00 p.m. (EST).

Place: National Science Foundation, 2415 Eisenhower Avenue, Alexandria, Virginia, 22314; Room E 2030.

Type of Meeting: Open.

Contact Person: Joan Miller, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA, 22314; (703) 292–8200.

Purpose of Meeting: To provide advice concerning issues related to the oversight, integrity, development and enhancement of NSF's business operations.

Agenda

Wednesday, December 12, 2018; 1:00 p.m.–5:15 p.m.

Welcome/Introductions; BFA/OIRM/OLPA/Budget Updates; Results from the 2018 Federal Employee Viewpoint Survey; Facilities Subcommittees Updates; CFO Office of the Future.

Thursday, December 13, 2018; 8:00 a.m.–12:00 p.m.

Renewing NSF; Renewing NSF—Partnerships Pillar; Meeting with Drs. Córdova and Crim; Committee Business/Wrap Up.

Dated: November 16, 2018.

Crystal Robinson,

Committee Management Officer.

[FR Doc. 2018–25451 Filed 11–21–18; 8:45 am]

BILLING CODE 7555–01–P

NATIONAL SCIENCE FOUNDATION

Sunshine Act Meetings

The National Science Board (NSB), pursuant to NSF regulations (45 CFR part 614), the National Science Foundation Act, as amended, (42 U.S.C. 1862n–5), and the Government in the Sunshine Act (5 U.S.C. 552b), hereby gives notice of the scheduling of meetings for the transaction of NSB business as follows:

TIME AND DATE: Wednesday, November 28, 2018 from 8:00 a.m. to 5:00 p.m. and Thursday, November 29, 2018, from 8:15 a.m. to 1:45 p.m. EST.

PLACE: These meetings will be held at the NSF headquarters, 2415 Eisenhower Avenue, Alexandria, VA 22314. Meetings are held in the boardroom on the 2nd floor. The public may observe public meetings held in the boardroom. All visitors must contact the Board Office (call 703–292–7000 or send an email to *nationalsciencebrd@nsf.gov*) at least 24 hours prior to the meeting and provide your name and organizational affiliation. Visitors must report to the NSF visitor's desk in the building lobby to receive a visitor's badge.

STATUS: Some of these meetings will be open to the public. Others will be closed to the public. See full description below.

MATTERS TO BE CONSIDERED:

Wednesday, November 28, 2018

Plenary Board meeting

Open Session: 8:00–9:15 a.m.

- NSB Chair's Opening Remarks Introduction of new NSB members
- NSF Director's Remarks
- Summary of DC Meetings
- NSB Vision Project Discussion/Decision

Committee on Strategy (CS)

Open Session: 9:15–10:45 a.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- FY 2019 Budget Request Update
- Directorate for Mathematical and Physical Sciences Portfolio Review
- NSB Vision Project

Committee on Oversight (CO)

Open Session: 11:00 a.m.–12:15 p.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- Merit Review Report Update
- Report on Status of OIG Semiannual Report and NSF Management Response
- Inspector General's Update
- Chief Financial Officer's Update
- Responsible Conduct of Research
- Reducing Administrative Burdens on Research

Committee on Strategy (CS)

Closed Session: 1:15–1:30 p.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- FY 2020 Budget Submission Update

Committee on Awards and Facilities (A&F)

Closed Session: 1:30–3:20 p.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- Action Item: Sacramento Peak Observatory
- Update on Astronomy Facility Transitions
- Information Item: International Ocean Discovery Program (IODP)
- Information Item: Antarctic Infrastructure Modernization for Science (AIMS)
- Chief Officer for Research Facilities Report

Committee on Awards and Facilities (A&F)

Open Session: 3:30–4:00 p.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- CY 2018–2019 Schedule of Planned Action and Information Items
- Status of the National Ecological Observatory Network (NEON)
- Discussion and Vote on the A&F Action Approval Process Policy Document

Plenary Board

Open Session: 4:00–5:00 p.m.

- White House Office of Science and Technology Policy Briefing

MATTERS TO BE DISCUSSED:

Thursday, November 29, 2018

Committee on National Science and Engineering Policy (SEP)

Open Session: 8:15–9:20 a.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- Update on Future Indicators Project
- Update on *Science and Engineering Indicators (SEI)* Thematic Reports and Roadmap
- Discussion of Draft *SEI 2018* Policy Companion
- Discussion of Future Policy Topics

Committee on External Engagement (EE)

Open Session: 9:20–10:00 a.m.

- Committee Chair's Opening Remarks
- Approval of Prior Minutes
- NSB One-page Resources
- NSB Congressional Home District Office Meetings
- NSB Alumni Network Pilot Project

Task Force on the Skilled Technical Workforce (STW)

Open Session: 10:00–10:45 a.m.

- Chair's Opening Remarks
- Approval of Prior Minutes
- NSB/SBE National Center for Science and Engineering Statistics STW Data Update
- Discussion of Task Force Progress and Next Steps

Plenary Board

Closed Session: 11:00–11:15 a.m.

- Chair's Opening Remarks
- Director's Remarks
- Approval of Prior Minutes
- Closed Committee Reports
- Vote: Sacramento Peak Record of Decision

Plenary Board (Executive)

Closed Session: 11:15 a.m.–12:00 p.m.

- Chair's Opening Remarks
- Approval of Prior Minutes
- Director's Remarks
- Board Member Award Review
- Honorary Award Recommendations

Plenary Board

Open Session: 1:15–1:45 p.m.

- Chair's Opening Remarks
- Director's Remarks
- Approval of Prior Minutes
- Open Committee Reports
- Vote: OIG Semiannual Report and Management Response
- Chair's Closing Remarks

Meeting Adjourns: 1:45 p.m.

MEETINGS THAT ARE OPEN TO THE PUBLIC:

Wednesday, November 28, 2018

8:00–9:15 a.m. Plenary NSB Introduction
9:15–10:45 a.m. Committee on Strategy (CS)
11:00 a.m.–12:15 p.m. Committee on Oversight (CO)
3:30–4:00 p.m. Committee on Awards & Facilities (A&F)
4:00–5:00 p.m. Plenary

Thursday, November 29, 2018

8:15–9:20 a.m. Committee on Science and Engineering Policy (SEP)
9:20–10:00 a.m. Committee on External Engagement (EE)
10:00–10:45 a.m. Task Force on Skilled Technical Workforce (STW)
1:15–1:45 p.m. Plenary

MEETINGS THAT ARE CLOSED TO THE PUBLIC:

Wednesday, November 28, 2018

1:15–1:30 p.m. Committee on Strategy (CS)
1:30–3:20 p.m. (A&F)

Thursday, November 29, 2018

11:00–11:15 a.m. Plenary
11:15 a.m.–12:00 p.m. Plenary Executive

CONTACT PERSONS FOR MORE INFORMATION: The NSB Office contact is Brad Gutierrez, *bgutierr@nsf.gov,* 703–292–7000. The NSB Public Affairs contact is Nadine Lymn, *nlymn@nsf.gov,* 703–292–2490.

SUPPLEMENTARY INFORMATION: Public meetings and public portions of meetings held in the 2nd floor boardroom will be webcast. To view these meetings, go to: *http://www.tvworldwide.com/events/nsf/180717* and follow the instructions. The public may observe public meetings held in the boardroom. The address is 2415 Eisenhower Avenue, Alexandria, VA, 22314.

Please refer to the NSB website for additional information. You will find any updated meeting information and schedule updates (time, place, subject matter, or status of meeting) at *https://www.nsf.gov/nsb/meetings/notices.jsp#sunshine.*

The NSB will continue its program to provide some flexibility around meeting times. After the first meeting of each day, actual meeting start and end times will be allowed to vary by no more than 15 minutes in either direction. As an example, if a 10:00 meeting finishes at 10:45, the meeting scheduled to begin at 11:00 may begin at 10:45 instead. Similarly, the 10:00 meeting may be allowed to run over by as much as 15 minutes if the Chair decides the extra time is warranted. The next meeting would start no later than 11:15. Arrive at the NSB boardroom or check the webcast 15 minutes before the scheduled start time of the meeting you wish to observe.

Chris Blair,

Executive Assistant to the National Science Board Office.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 72–1051–ISFSI; ASLBP No. 19–959–01–ISFSI–BD01]

Establishment of Atomic Safety and Licensing Board: Interim Storage Partners LLC

Pursuant to delegation by the Commission, *see* 37 FR 28,710 (Dec. 29, 1972), and the Commission's regulations, *see, e.g.,* 10 CFR 2.104, 2.105, 2.300, 2.309, 2.313, 2.318, 2.321, notice is hereby given that an Atomic Safety and Licensing Board (Board) is being established to preside over the following proceeding:

Interim Storage Partners LLC

(WCS Consolidated Interim Storage Facility)

This proceeding involves an application from Interim Storage Partners LLC for a license to construct and operate a Consolidated Interim Storage Facility on its approximately 14,900-acre site in western Andrews County, Texas. In response to a notice published in the **Federal Register** announcing the opportunity to request a hearing, *see* 83 FR 44,070 (Aug. 29, 2018), multiple requests for hearing have been filed.

The Board is comprised of the following Administrative Judges:

- Paul S. Ryerson, Chairman, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.
- Nicholas G. Trikouros, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.
- Dr. Gary S. Arnold, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

All correspondence, documents, and other materials shall be filed in accordance with the NRC E-Filing rule. *See* 10 CFR 2.302.

Dated: November 16, 2018, in Rockville, Maryland.

Edward R. Hawkens,

Chief Administrative Judge, Atomic Safety and Licensing Board Panel.

[Docket Nos. CP2018–58; MC2019–18 and CP2019–18; MC2019–19 and CP2019–19; MC2019–20 and CP2019–20; and MC2019–21 and CP2019–21]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing recent Postal Service filings for the Commission's consideration concerning negotiated service agreements. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* November 26, 2018 (Comment due date applies to CP2018–58; MC2019–18 and CP2019–18; MC2019–19 and CP2019–19; MC2019–20 and CP2019–20); November 27, 2018 (Comment due date applies to MC2019–21 and CP2019–21).

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3007.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3010, and 39 CFR part 3020, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* CP2018–58; *Filing Title:* USPS Notice of Amendment to Priority Mail Express, Priority Mail & First-Class Package Service Contract 27, Filed Under Seal; *Filing Acceptance Date:* November 16, 2018; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3020.30 *et seq.,* and 39 CFR 3015.5; *Public Representative:* Christopher C. Mohr; *Comments Due:* November 26, 2018.

2. *Docket No(s).:* MC2019–18 and CP2019–18; *Filing Title:* USPS Request to Add Priority Mail Contract 475 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* November 16, 2018; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3020.30 *et seq.,* and 39 CFR 3015.5; *Public Representative:* Kenneth R. Moeller; *Comments Due:* November 26, 2018.

3. *Docket No(s).:* MC2019–19 and CP2019–19; *Filing Title:* USPS Request to Add Priority Mail Contract 476 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* November 16, 2018; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3020.30 *et seq.,* and 39 CFR 3015.5; *Public Representative:* Kenneth R. Moeller; *Comments Due:* November 26, 2018.

4. *Docket No(s).:* MC2019–20 and CP2019–20; *Filing Title:* USPS Request to Add Priority Mail Contract 477 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* November 16, 2018; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3020.30 *et seq.,* and 39 CFR 3015.5; *Public Representative:* Lawrence Fenster; *Comments Due:* November 26, 2018.

5. *Docket No(s).:* MC2019–21 and CP2019–21; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & First-Class Package Service Contract 46 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* November 16, 2018; *Filing Authority:* 39 U.S.C.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–84611; File No. SR–NSCC–2018–010]

Self-Regulatory Organizations; National Securities Clearing Corporation; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Enhance the Mutual Fund Profile Service To Provide for the Transmission of Event Notifications Through a New Feature Called MF Info Xchange

November 16, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 13, 2018, National Securities Clearing Corporation (''NSCC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared by the clearing agency. NSCC filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act [3] and Rule 19b–4(f)(4) thereunder.[4] The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of modifications to NSCC's Rules & Procedures (''Rules'') in order to reflect proposed enhancements to NSCC's Mutual Fund Services.[5] The proposed rule change would enhance the Mutual Fund Profile Service (''MFPS'') [6] of NSCC to provide for the delivery and receipt of event notifications relating to funds and pooled investment entities through a new feature called MF Info Xchange, as described in greater detail below.

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the clearing agency included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The clearing agency has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The proposed rule change consists of modifications to the Rules in order to reflect proposed enhancements to NSCC's Mutual Fund Services. The proposed rule change would enhance MFPS to provide for the delivery and receipt of event notifications relating to funds and pooled investment entities through a new feature called MF Info Xchange, as described in greater detail below.

(i) Background

In 1996, NSCC launched MFPS, providing participating Members with an automated method of transmitting and receiving daily price and rate information pertaining to funds and other pooled investment entities (collectively referred hereto as ''Funds'') through a centralized and standardized facility.[7] In 1998, NSCC implemented three new databases as part of MFPS, (i) the participant profile database, (ii) the security issue profile database and (iii) the distribution declaration information profile database,[8] through which NSCC offers the Funds industry a centralized repository for prospectus and operational information relating to Fund securities, Fund distributions and Fund processing capabilities.

MF Info Xchange would be a new feature of MFPS that would facilitate communication of event notifications among Funds, their principal underwriters or other entities authorized to process transactions on behalf of Funds, that are Members, Mutual Fund/Insurance Services Members, Investment Manager/Agent Members, TPP Members, TPA Members, Data Services Only Members and Fund Members (''data providers''), on the one hand, and the distribution partners of the Funds, such as broker-dealers and banks that are NSCC Members [9] and other third parties identified by the data providers to receive event notifications (''data receivers''), on the other hand. On a daily basis, data providers and data receivers exchange a number of event notifications via email, fax and phone call outside of NSCC relating to events affecting the Funds. Such event notifications include corporate actions, such as Fund name changes, mergers, acquisitions and closures, and other events, such as expense ratio changes and benchmark changes. These event notifications are not standardized across the industry, and data receivers do not currently have an efficient standardized method to view and manage past and upcoming Fund events.

The mutual fund industry has requested that NSCC deliver a data sharing solution for participants in the Fund industry to exchange such event notifications, and create standardization to the event notification process. The current event notification process is inconsistent among data providers and data receivers, with data providers sending event notifications using various methods without standardized formats across the industry. The existing methods of sending event notifications are often time consuming manual processes that add risk and complexity by increasing the chance of manual errors and leaving event notifications open to interpretation because of the lack of standardized formats. MF Info Xchange has been developed with the active participation of an industry working group to streamline the delivery and receipt of various types of Fund event notifications to provide a standardized method of sending event notifications.

Data providers using MF Info Xchange would be able to submit event notifications for distribution, using data entry, uploads and other input mechanisms, modify previously submitted event notifications, view upcoming and past notifications and manage distribution lists. Upon receipt of the event notification data through MF Info Xchange, NSCC would create a unique ID associated with the event relating to the notification, and track corrections and updates to the same event using the same event ID. NSCC would also store the data in a data repository for retrieval by NSCC Members. In addition, NSCC would distribute the event notifications via email to a defined distribution list provided by the data providers. Data providers could also indicate the NSCC Members on the distribution list that could be given access to the event notifications on the data repository. Such NSCC Members that have subscribed to MF Info Xchange would have access to the data repository to retrieve the event notifications and

[9] For purposes of this filing, ''NSCC Members'' shall mean Members and Limited Members.

updates to those event notifications from a centralized location.

NSCC Members would be able to use MF Info Xchange to transmit event notifications for certain predefined event types. Upon the initial launch, Fund mergers/acquisitions and Fund closures would be the only event types for which event notifications could be sent using MF Info Xchange. NSCC would announce by Important Notice posted on its website any enhancements of MF Info Xchange that result in new event types available for event notifications. Given the limited number of Fund event types available for event notifications upon the launch of MF Info Xchange, NSCC would not charge fees initially for the use of MF Info Xchange. NSCC would file with the Commission an appropriate rule change proposal to implement any fees for MF Info Xchange if NSCC adds a fee for the feature.

(ii) Proposed Rule Changes

The proposed rule change would amend Rule 52 to state that NSCC would provide MF Info Xchange to enable data providers that are Members, Mutual Fund/Insurance Services Members, Investment Manager/Agent Members, TPP Members, TPA Members, Data Services Only Members and Fund Members to transmit event notifications relating to Funds to other NSCC Members and to other third parties identified by the data providers to receive the event notifications, or to otherwise supply and provide access to event notifications directly to or from NSCC through a data repository. The proposed rule change would provide that NSCC may determine from time to time, and would announce by Important Notice, which types of event notifications may be transmitted using MF Info Xchange. The proposed rule change would provide that NSCC would not be responsible for the completeness or accuracy of any event notifications transmitted using MF Info Xchange nor for any errors, omissions or delays that may occur relating to the event notifications.

(iii) Implementation Timeframe

NSCC expects to implement MF Info Xchange on November 29, 2018. As proposed, a legend would be added to Rule 52 stating there are changes that became effective upon filing with the Commission but have not yet been implemented. The proposed legend also would include a date on which such changes would be implemented and the file number of this proposal, and state that, once this proposal is implemented, the legend would automatically be removed from Rule 52.

2. Statutory Basis

Section 17A(b)(3)(F) of the Act [10] requires, in part, that the Rules be designed to foster cooperation and coordination with persons engaged in the clearance and settlement of securities transactions. NSCC believes that the proposed rule change would enhance the ability of data providers to send, and for data receivers to access and retrieve, Fund event notification data in a standardized format and in a centralized location. Currently, there is not an industry-wide structured method of providing such event notification data, and data providers send, and data receivers receive, such event notifications in an inefficient and non-standardized manner across the industry. NSCC believes that the proposed rule change would provide the Fund industry a more efficient and streamlined method for data providers to communicate Fund event notification data to data receivers. As such, NSCC believes that the proposed rule change would foster cooperation and coordination among persons engaged in the clearance and settlement of securities, consistent with the requirements of Section 17A(b)(3)(F) of the Act.[11]

In addition, the proposed rule change is designed to be consistent with Rule 17Ad–22(e)(21) promulgated under the Act.[12] Rule 17Ad–22(e)(21) requires NSCC to, inter alia, establish, implement, maintain and enforce written policies and procedures reasonably designed to be efficient and effective in meeting the requirements of its participants and the markets it serves. The proposed rule change would streamline the Fund event notifications process, which would enhance (i) efficiency in making such event notifications by reducing reliance on emails, faxes and phone calls for event notifications, which are inconsistent and a time consuming manual process, and (ii) effectiveness in making such event notifications by providing a standardized format to send such event notifications, which NSCC believes would reduce errors in the event notification process that occur as a result of the current inconsistent and unstructured event notification process. Therefore, by establishing a more efficient and effective process for data providers to deliver, and data receivers to receive, Fund event notifications, NSCC believes that the proposed change is consistent with the requirements of Rule 17Ad–22(e)(21), promulgated under the Act.[13]

(B) Clearing Agency's Statement on Burden on Competition

NSCC does not believe that the proposed rule change would have any adverse impact, or impose any burden, on competition because the proposed rule change would add an optional feature to NSCC's services that would provide data providers the ability to send event notification data in a standardized format. As an optional feature available for subscription with no additional fees, the proposed rule change would not disproportionally impact any NSCC participants.

Moreover, because the proposed rule change would allow data providers to more effectively communicate Fund event notifications, NSCC believes the proposed rule change would have a positive effect on competition among Fund industry participants. The proposed feature would provide data providers with a more efficient method of distributing event notifications to parties that need to see such information in order to facilitate the trading and processing of Fund securities. NSCC believes this would enhance competition among Funds and Fund participants by allowing parties to distribute such information more quickly and in a more streamlined manner.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

NSCC has not received or solicited any written comments relating to this proposal. NSCC will notify the Commission of any written comments received by NSCC.

III. Date of Effectiveness of the Proposed Rule Change, and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [14] and paragraph (f) of Rule 19b–4 thereunder.[15] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of

investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NSCC–2018–010 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–NSCC–2018–010. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of NSCC and on DTCC's website (*http://dtcc.com/legal/sec-rule-filings.aspx*). All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NSCC–2018–010 and should be submitted on or before December 14, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–84612; File No. SR–BOX–2018–35]

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Permit Up to Ten Expiration Months for Long-Term Options on the SPDR® S&P® 500 Exchange-Traded Fund Shares (''SPY'')

November 16, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 16, 2018, BOX Exchange LLC (''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend BOX Rule 5070 (Long-term Options Contracts) to permit up to ten (10) expiration months for long-term options on SPY. The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's internet website at *http://boxoptions.com.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend BOX Rule 5070 (Long-term Options Contracts) to permit up to ten (10) long-term options (''LEAPS'') expiration months for options on SPY.[3] BOX Rule 5070 currently provides that the Exchange may list LEAPS that expire from twelve (12) to one hundred eighty (180) months from the time they are listed; and there may be up to six (6) expiration months.[4] The Exchange believes the proposal will add liquidity to the SPY options market by allowing market participants to hedge risks relating to SPY positions over a longer time period with a known and limited cost. This is a filing that is based on a proposal recently submitted by Nasdaq PHLX LLC (''Phlx'').[5]

The SPY options market today is characterized by its tremendous daily and annual liquidity. As a consequence, the Exchange believes that the listing of additional SPY LEAPS expiration months would be well received by investors. This proposal to expand the number of permitted SPY long-term expiration months would not apply to LEAPS on any other class of stock or Exchange-Traded Fund Shares.[6]

Finally, BOX Rule 5070(a) currently states that there may be ''up to six (6) additional expiration months.'' Because the rule does not specify which expiration months the six months are in addition to, and thus is ambiguous, the Exchange proposes to delete the word ''additional.'' As amended, the rule would clearly and simply provide that the Exchange may list six expiration months having from twelve (12) to one

[16] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] In contrast to Rule 5070, Exchange Rule 6090(b)(1)(i), which applies to index options, permits the Exchange to list LEAPS on any class of index options, adding up to ten expiration months. The Exchange seeks to list ten expiration months of LEAPS on SPY, just as it now may list ten LEAPS expiration months on index options, in order to provide investors with a wider choice of investments.

[4] Strike price interval, bid/ask differential and continuity rules shall not apply to such options series until the time to expiration is less than nine (9) months. *See* BOX Rule 5070(a).

[5] *See* Securities Exchange Act Release No. 34–84449 (October 18, 2018), 83 FR 53699 (SR–Phlx–2018–64).

[6] Historically, SPY is the largest and most actively traded ETF in the United States as measured by its assets under management and the value of shares traded.

hundred eighty (180) months from the time they are listed until expiration.[7]

2. Statutory Basis

The Exchange believes that the proposal is consistent with the requirements of Section 6(b) of the Securities Exchange Act of 1934 (the ''Act''),[8] in general, and Section 6(b)(5) of the Act,[9] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest by offering market participants additional LEAPS on SPY options for their investment and risk management purposes. The proposal is intended simply to provide additional trading opportunities, thereby facilitating transactions in options and contributing to the protection of investors and the maintenance of fair and orderly markets.[10] The proposed rule change seeks to fulfill the needs of market participants, particularly portfolio managers and other institutional customers, by providing protection from long-term market moves and by offering an alternative to hedging portfolios with futures positions or off-exchange customized derivatives instruments.

The Exchange believes that additional expiration months for SPY LEAPS does not represent a proliferation of expiration months, but is instead a very modest expansion of LEAPS options. Significantly, the proposal would feature new LEAPS expiration months in only a single class of options that are very liquid and heavily traded, as discussed above. Additionally, the Exchange notes by way of precedent that ten expiration months are already permitted for index LEAPS options. Further, the Exchange has the necessary systems capacity to support the new SPY expiration months.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposal merely provides investors additional investment and risk management opportunities by providing flexibility to the Exchange to list additional long term options expiration series, expanding the number of SPY LEAPS offered on the Exchange from six expiration months to ten expiration months. As indicated above, the Exchange notes that this filing is based on a proposal recently submitted by Phlx.[11]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[12] and Rule 19b–4(f)(6) thereunder.[13]

A proposed rule change filed under Rule 19b–4(f)(6)[14] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[15] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative upon filing, to coincide with the effective date of Phlx's proposed rule change on which the proposal is partially based.[16] The Exchange's proposal would clarify ambiguous rule text and would conform the Exchange's rules relating to the permitted number of SPY LEAPS expiration months to those of Phlx. Accordingly, the Commission believes that the proposal raises no new or novel regulatory issues, and waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. The Commission therefore waives the 30-day operative delay and designates the proposal operative upon filing.[17]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–BOX–2018–35 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–BOX–2018–35. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official

[7] The Exchange notes other exchanges have amended their rulebook to also clarify this language. *See* Securities Exchange Act Release No. 34–80769 (May 25, 2017), 82 FR 25472 (SR–Phlx–2017–41).

Extension:

Rules 400–404 of Regulation Crowdfunding (Intermediaries); SEC File No. 270–774, OMB Control No. 3235–0727

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (''PRA'') (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the collection of information provided for Rule 17Ab2–1 (17 CFR 240.17Ab2–1) and Form CA–1: Registration of Clearing Agencies (17 CFR 249b.200) under the Securities Exchange Act of 1934 (''Exchange Act'') (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

The collections of information required under Rules 400 through 404 is mandatory for all funding portals. Form Funding Portal helps ensure that the Commission can make information about funding portals transparent and easily accessible to the investing public, including issuers and obligated persons who engage funding portals; investors who may purchase securities through offerings on funding portals; and other regulators. Further, the information provided on Form Funding Portal expands the amount of publicly available information about funding portals, including disciplinary history. Consequently, the rules and forms allows issuers and the investing public, as well as others, to become more fully informed about funding portals in a more efficient manner.

Rule 400 requires each person applying for registration with the Commission as a funding portal to file electronically with the Commission Form Funding Portal. Rule 400(a) requires a funding portal to become a member of a national securities association registered under Section 15A of the Exchange Act. Rule 400(b) requires a funding portal to file an amendment to Form Funding Portal if any information previously submitted on Form Funding Portal becomes inaccurate for any reason. Rule 400(c) provides that a funding portal can succeed to the business of a predecessor funding portal upon the successor filing a registration on Form Funding Portal and the predecessor filing a withdrawal on Form Funding Portal.

Rule 400(d) requires a funding portal to promptly file a withdrawal of registration on Form Funding Portal upon ceasing to operate as a funding portal. Rule 400(e) states that duplicate originals of the applications and reports provided for in this section must be filed with surveillance personnel designated by any registered national securities association of which the funding portal is a member. Rule 400(f) requires a nonresident funding portal to: (1) Obtain a written consent and power of attorney appointing an agent for service of process in the United States; (2) furnish the Commission with the name and address of its agent for services of process on Schedule C of Form Funding Portal; (3) certify that it can, as a matter of law, and will provide the Commission and any registered national securities association of which it becomes a member with prompt access to its books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission and any registered national securities association of which it becomes a member; and (4) provide the Commission with an opinion of counsel and certify on Schedule C on Form Funding Portal that the firm can, as a matter of law, provide the Commission and registered national securities association of which it becomes a member with prompt access to its books and records and can, as a matter of law, submit to onsite inspection and examination by the Commission and any registered national securities association of which it becomes a member.[1]

Rule 403(a) requires a funding portal to implement written policies and procedures reasonably designed to achieve compliance with the federal securities laws and the rules and regulations thereunder relating to its business as a funding portal. Rule 403(b) provides that a funding portal must comply with privacy rules. Rule 404 requires all registered funding portals to maintain certain books and records relating to their funding portal activities, for not less than five years, the first two in an easily accessible place. Rule 404(e) requires funding portals to furnish promptly to the Commission, its representatives, and the registered national securities association of which the funding portal is a member true, correct, complete and current copies of such records of the funding portal that are requested by the representatives of the Commission and the registered national securities association.

The Commission staff estimates that annualized industry burden would be 17,554.35 hours to comply with Rules 400–404. The Commission staff estimates that the costs associated with complying with Rules 400–404 are estimated to be approximately a total amount of $308,729.

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Charles Riddle, Acting Director/Chief Information Officer, Securities and

[18] 17 CFR 200.30–3(a)(12).

[1] Exchange Act Section 3(h)(1)(C) permits us to impose, as part of our authority to exempt funding portals from broker registration, ''such other requirements under [the Exchange Act] as the Commission determines appropriate.''

Exchange Commission, c/o Candace Kenner, 100 F Street NE, Washington, DC 20549, or send an email to: *PRA_Mailbox@sec.gov.*

Dated: November 19, 2018.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Securities Exchange Act of 1934 Release No. 84614/November 16, 2018]

In the Matter of the BOX Exchange LLC Regarding a Suspension of and Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change To Amend the Fee Schedule on the BOX Market LLC Options Facility To Establish BOX Connectivity Fees for Participants and Non-Participants Who Connect to the BOX Network (File No. SR–BOX–2018–24); Order Granting Petition for Review and Scheduling Filing of Statements

This matter comes before the Securities and Exchange Commission (''Commission'') on petition to review the temporary suspension and institution of proceedings, through delegated authority, of the BOX Exchange LLC (f/k/a BOX Options Exchange LLC) (the ''Exchange'') proposed rule change to amend the fee schedule on the BOX Market LLC (''BOX'') options facility to establish certain connectivity fees and reclassify its high speed vendor feed connection as a port fee.

On July 27, 2018, the Commission issued a notice of filing of the proposed rule change filed with the Commission pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Exchange Act'') [1] and Rule 19b–4 [2] thereunder.[3] On September 17, 2018, the Division of Trading and Markets (''Division''), pursuant to delegated authority,[4] issued an order temporarily suspending the proposed rule change pursuant to Section 19(b)(3)(C) of the Exchange Act [5] and simultaneously instituting proceedings under Section 19(b)(2)(B) of the Exchange Act [6] to determine whether to approve or disapprove the proposed rule change (''Order Instituting Proceedings'').[7] On October 17, 2018, the Commission received one comment letter on the proposed rule change, supporting the decision to suspend and institute proceedings on the proposed fee changes.[8]

On September 19, 2018, pursuant to Rule 430 of the Commission Rules of Practice,[9] the Exchange filed a notice of intention to petition for review of the Order Instituting Proceedings. Pursuant to Rule 431(e) of the Commission Rules of Practice,[10] a notice of intention to petition for review results in an automatic stay of the action by delegated authority. On September 26, 2018, the Exchange filed a petition for review of the Order Instituting Proceedings.

Pursuant to Rule 431 of the Commission Rules of Practice,[11] the Exchange's petition for review of the Order Instituting Proceedings is granted. Further, the Commission hereby establishes that any party to the action or other person may file a written statement in support of or in opposition to the Order Instituting Proceedings on or before December 10, 2018.

Further, the Commission finds that it is in the public interest to lift the stay during the pendency of the Commission's review. The Commission believes the continued suspension of the proposed rule change while the Commission conducts proceedings to consider the Exchange's proposal will allow the Commission to further consider the proposed fees' consistency with the Exchange Act without the risk of allowing a fee that is potentially inconsistent with the Exchange Act to remain in effect. The Commission also does not believe that lifting the stay precludes meaningful review of the Order Instituting Proceedings.

For the reasons stated above, it is hereby:

Ordered that the Exchange's petition for review of the Division's action, by delegated authority, to temporarily suspend the proposed rule change and simultaneously institute proceedings to determine whether to approve or disapprove the proposed rule change be granted; and

It is further ordered that any party or other person may file a statement in support of or in opposition to the action made pursuant to delegated authority on or before December 10, 2018; and

It is further ordered that the automatic stay of delegated action pursuant to Commission Rule of Practice 431(e) [12] is hereby discontinued.

The order temporarily suspending such proposed rule change and instituting proceedings to determine whether to approve or disapprove such proposed rule change shall remain in effect.

By the Commission.

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Submission for OMB Review; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736.

Extension:

Form N–8A; SEC File No. 270–135, OMB Control No. 3235–0175

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (the ''Commission'') has submitted to the Office of Management and Budget (''OMB'') a request for extension of the previously approved collection of information discussed below.

The Investment Company Act of 1940 (''Investment Company Act'') (15 U.S.C. 80a–1 *et seq.*) requires investment companies to register with the Commission before they conduct any business in interstate commerce. Section 8(a) of the Investment Company Act provides that an investment company shall be deemed to be registered upon receipt by the Commission of a notification of registration in such form as the Commission prescribes. Form N–8A (17 CFR 274.10) is the form for notification of registration that the Commission has adopted under section 8(a). The purpose of such notification of registration provided on Form N–8A is to notify the Commission of the existence of investment companies required to be registered under the Investment

[5] 15 U.S.C. 78s(b)(3)(C).

[6] 15 U.S.C. 78s(b)(2)(B).

[7] *See* Securities Exchange Act Release No. 84168 (September 17, 2018), 83 FR 47947 (September 21, 2018).

[8] *See* letter to Brent J. Fields, Secretary, Commission, from Theodore R. Lazo, Managing Director and Associate General Counsel, and Ellen Greene, Managing Director, Financial Services Operations, Securities Industry and Financial Markets Association, dated October 15, 2018.

[9] 17 CFR 201.430.

[10] 17 CFR 201.431(e).

[11] 17 CFR 201.431.

[12] 17 CFR 201.431(e).

Company Act and to enable the Commission to administer the provisions of the Investment Company Act with respect to those companies. After an investment company has filed its notification of registration under section 8(a), the company is then subject to the provisions of the Investment Company Act which govern certain aspects of its organization and activities, such as the composition of its board of directors and the issuance of senior securities. Form N–8A requires an investment company to provide its name, state of organization, form of organization, classification, the name and address of each investment adviser of the investment company, the current value of its total assets, and certain other information readily available to the investment company. If the investment company is filing a registration statement as required by Section 8(b) of the Investment Company Act concurrently with its notification of registration, Form N–8A requires only that the registrant file the cover page (giving its name, address, and agent for service of process) and sign the form in order to effect registration.

Based on recent filings of notifications of registration on Form N–8A, we estimate that about 96 investment companies file such notifications each year. An investment company must only file a notification of registration on Form N–8A once. The currently approved average hour burden per investment company of preparing and filing a notification of registration on Form N–8A is one hour. Based on the Commission staff's experience with the requirements of Form N–8A and with disclosure documents generally—and considering that investment companies that are filing notifications of registration on Form N–8A simultaneously with the registration statement under the Investment Company Act are only required by Form N–8A to file a signed cover page—we continue to believe that this estimate is appropriate. Therefore, we estimate that the total annual hour burden to prepare and file notifications of registration on Form N–8A is 96 hours. The currently approved cost burden of Form N–8A is $449. We continue to believe that this estimate is appropriate. Therefore, we estimate that the total annual cost burden to associated with preparing and filing notifications of registration on Form N–8A is about $43,104.

Estimates of average burden hours and costs are made solely for the purposes of the Paperwork Reduction Act, and are not derived from a comprehensive or even representative survey or study of the costs of Commission rules and forms. Compliance with the collection of information requirements of Form N–8A is mandatory. Responses to the collection of information will not be kept confidential. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The public may view the background documentation for this information collection at the following website, *www.reginfo.gov.* Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: *Lindsay.M.Abate@omb.eop.gov* ; and (ii) Charles Riddle, Acting Director/Chief Information Officer, Securities and Exchange Commission, c/o Candace Kenner, 100 F Street NE, Washington, DC 20549 or send an email to: *PRA_Mailbox@sec.gov.* Comments must be submitted to OMB within 30 days of this notice.

Dated: November 19, 2018.

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–84610; File No. SR–Phlx–2018–59]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Order Approving a Proposed Rule Change To Amend Rules 1000, 1064, and 1069 To Allow for the Snapshot Functionality of the Floor-Based Management System To Be Used for All Orders

November 16, 2018.

I. Introduction

On September 18, 2018, Nasdaq PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to allow the Snapshot functionality of the Floor-Based Management System (''FBMS'') to be used for all orders on the trading floor. The proposed rule change was published for comment in the **Federal Register** on October 2, 2018.[3] The Commission received no comment letters on the proposed rule change. This order approves the proposed rule change.

II. Description of the Proposed Rule Change

The ''Snapshot'' functionality of the FBMS allows a Floor Broker, Registered Options Trader (''ROT''), or Specialist to ''provisionally execute'' [4] a trade in the trading crowd and capture and record the market conditions that exist at the time of the provisional execution.[5] Once the member triggers the Snapshot, the member has up to 30 seconds to use the information recorded on the Snapshot for purposes of entering the terms of the provisionally-executed trade into FBMS and submitting the trade to the Trading System.[6] Once submitted, the Trading System will only execute the trade if it is consistent with the applicable priority and trade-through rules based upon the prevailing market as reflected on the Snapshot at the time of the provisional execution. The Trading System will reject a trade that is subject to a Snapshot if it would violate trade-though or priority rules.[7]

Currently, the ''Snapshot'' feature of the FBMS may only be used to provisionally execute certain types of orders in the trading crowd. Specifically, Floor Brokers, Specialists, and ROTS may only use Snapshot to provisionally execute multi-leg orders and simple orders in options on Exchange Traded Funds (''ETFs'') that are included in the Options Penny Pilot.[8] The Exchange proposes to expand the use of the Snapshot functionality to all orders on the trading floor, subject to the current procedures for and the limitations on the use of Snapshot.[9] The Exchange believes that

[3] *See* Securities Exchange Act Release No. 84290 (September 26, 2018), 83 FR 49596 (''Notice'').

[4] A ''provisional execution'' occurs in the trading crowd when either (1) the participants to a trade reach a verbal agreement in the trading crowd as to the terms of the trade; or (ii) a member announces that he is crossing an order in accordance with Phlx Rule 1064(a). *See* Phlx Rule 1069(a)(i)(A). *See also* Notice, *supra* note 3, at 49596–97 n.5.

[9] *See* Notice, *supra* note 3, at 49596–97. The procedures and limitations regarding the current

Continued

its proposed expansion of the use of Snapshot will make the functionality simpler, more consistent, and more useful in a greater number of circumstances than it is currently.[10] To effectuate these changes, the Exchange proposes several modifications to Phlx Rules 1000, 1064, and 1069.[11]

The Exchange represents that it does not anticipate that the use of Snapshot to provisionally execute *all* orders, rather than just multi-leg or simple orders in options on ETFs that are included in the Options Penny Pilot, will materially increase the risk that Snapshot will be overused or abused relative to its current use.[12] Therefore, the Exchange proposes to utilize the same methods it currently uses to surveil its members' use of the Snapshot functionality and represents that if Surveillance detects a significant uptick in improper usage, the Exchange will evaluate whether additional controls are necessary.[13]

Finally, the Exchange notes that it expects to make Snapshot available for all orders before the end of the fourth quarter of 2018 and represents that it will notify its members via an Options Trader Alert, to be posted on the Exchange's website, at least seven calendar days prior to the date when Snapshot will be available for expanded use.[14]

III. Discussion and Commission Findings

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[15] In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act,[16] which requires, among other things, that the rules of a national securities exchange be designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities and, in general, to protect investors and the public interest, and not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Commission notes that use of the Snapshot functionality for certain orders is one of the current exceptions set forth in Phlx Rule 1000(f), and allows Floor Brokers, ROTS, and Specialists to provisionally execute, in the options trading crowd (as opposed to through FBMS), multi-leg orders and simple orders in options on ETFs that are included in the Options Penny Pilot.[17] According to the Exchange, Snapshot promotes just and equitable principles of trade and serves the interests of investors and the public by increasing the likelihood that investors will be able to execute their orders and do so in line with their expectations.[18] The Exchange further represents that Snapshot is designed to mitigate the risk that the Trading System will reject a trade due to a change in market conditions that occurs between the time when the parties to a trade negotiate a valid trade on the trading floor and the time when the Trading System receives the trade. The Exchange believes that expanding the availability of Snapshot to all orders will broaden the scope of these protections to the benefit of investors and will make the exchange's trading floor more competitive with other trading venues because it will make the trading floor operate more efficiently.[19]

Further, the Exchange represents that the proposal is consistent with Rule 611 of Regulation NMS, which requires the Exchange to establish policies and procedures that are reasonably designed to prevent trade-throughs of protected quotations. The Exchange notes that although the proposal will change the time of execution of a trade for purposes of verifying compliance with trade-though and priority rules, the current automated compliance verification process will continue to apply and will systematically prevent any violation of the trade-though and priority rules.[20] Finally, as noted above, the Exchange does not believe that the proposal will increase the risk that Snapshot will be used improperly and believes that its existing design controls are sufficient to continue to closely monitor Snapshot usage by its members.[21]

The Commission notes that, at the time Snapshot was adopted, the Exchange adopted several measures to help ensure that Snapshot operates, and is used by members, in a manner that is consistent with the Act and Phlx's rules.[22] The Commission notes that these measures will continue to apply to the expanded application of Snapshot to all orders and should continue to ensure that the Snapshot functionality will be used in a manner that is consistent with the Act and Phlx's Rules. For example, Phlx Rule 1069(a)(i)(B) will continue to prohibit all members from triggering the Snapshot feature for the purpose of obtaining favorable, or avoiding unfavorable, priority or trade-through conditions. In addition, the Exchange represents that its surveillance staff will monitor the expanded use of Snapshot and will evaluate whether additional controls are needed if the Exchange detects a significant uptick in improper usage.[23]

For the foregoing reasons, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Act[24] and the rules and regulations thereunder applicable to national securities exchanges.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[25] that the proposed rule change (SR–Phlx–2018–59) be, and hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[26]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–172, OMB Control No. 3235–0169]

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736.

Extension:
Form N–5.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (the ''Commission'') is soliciting comments on the collection of information summarized below. The Commission

plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

Form N–5 (17 CFR 239.24 and 274.5) is the form used by small business investment companies (''SBICs'') to register their securities under the Securities Act of 1933 (15 U.S.C. 77a *et seq.*) (''Securities Act'') and the Investment Company Act of 1940 (15 U.S.C. 80a–1 *et seq.*) (''Investment Company Act''). Form N–5 is the registration statement form adopted by the Commission for use by an SBIC that has been licensed as such under the Small Business Investment Act of 1958 or which has received the preliminary approval of the Small Business Administration (''SBA'') and has been notified by the SBA that the company may submit a license application Form N–5 is an integrated registration form and may be used as the registration statement under both the Securities Act and the Investment Company Act. The purpose of Form N–5 is to meet the filing and disclosure requirements of both the Securities Act and Investment Company Act, and to provide investors with information sufficient to evaluate an investment in an SBIC. The information that is required to be filed with the Commission permits verification of compliance with securities law requirements and assures the public availability and dissemination of the information.

The Commission did not receive any filings on Form N–5 in the last three years (and in the three years before that, received only one Form N–5 filing). Nevertheless, for purposes of this PRA, we conservatively estimate that at least one Form N–5 will be filed in the next three years, which translates to about 0.333 filings on Form N–5 per year. The currently approved internal burden of Form N–5 is 352 hours per response. We continue to believe this estimate for Form N–5's internal hour burden is appropriate. Therefore, the number of currently approved aggregate burden hours, when calculated using the current estimate for number of filings, is about 117 internal hours per year. The currently approved external cost burden of Form N–5 is $30,000 per filing. We continue to believe this estimate for Form N–5's cost burden is appropriate. Therefore, we estimate that the aggregate cost burden, when calculated using the Commission's estimate of 0.333 filings per year, is about $10,000 in external costs per year.

Estimates of average burden hours and costs are made solely for the purposes of the Paperwork Reduction Act, and are not derived from a comprehensive or even representative survey or study of the costs of Commission rules and forms. Compliance with the collection of information requirements of Form N–5 is mandatory. Responses to the collection of information will not be kept confidential. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Written comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information has practical utility; (b) the accuracy of the Commission's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

Please direct your written comments to Charles Riddle, Acting Director/Chief Information Officer, Securities and Exchange Commission, C/O Candace Kenner, 100 F Street NE, Washington, DC 20549; or send an email to: *PRA_Mailbox@sec.gov.*

Dated: November 16, 2018.

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–84613; File No. SR–MIAX–2018–36]

Self-Regulatory Organizations; Miami International Securities Exchange, LLC; Notice of Filing of a Proposed Rule Change To Amend Exchange Rule 518, Complex Orders

November 16, 2018.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 9, 2018, Miami International Securities Exchange, LLC (''MIAX Options'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend Exchange Rule 518, Complex Orders [sic]

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings/* at MIAX Options' principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Exchange Rule 518, Complex Orders, to (i) adopt a new Simple Market Auction or Timer (''SMAT'') Event (defined below); (ii) amend the Response Time Interval and Defined Time Period for Complex Auctions (each defined below); (iii) adopt a new Complex Liquidity Exposure Process (''cLEP''); (iv) make minor changes to the Complex MIAX Options Price Collar Protection; and (v) clarify that the Calendar Spread Variance (''CSV'') price protection applies only to strategies in American-style option[3] classes.

Specifically, the Exchange proposes to amend subsection (a)(16), to adopt a new Simple Market Auction or Timer (SMAT) Event. A SMAT Event is

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The term ''American-style option'' means an option contract that, subject to the provisions of Rule 700 (relating to the cutoff time for exercise instructions) and to the Rules of the Clearing Corporation, can be exercised on any business day prior to its expiration date and on its expiration date. *See* Exchange Rule 100.

defined as any one of the following; a PRIME Auction (pursuant to Rule 515A),[4] a Route Timer (pursuant to Rule 529),[5] or a liquidity refresh pause (pursuant to Rule 515(c)(2).[6] The Exchange now proposes to adopt new rule text to add the liquidity exposure process timer (pursuant to proposed Rule 515(c)(2)(i)) as a SMAT Event. The liquidity exposure process timer, which is not to exceed three (3) seconds, is engaged as part of the liquidity exposure process for orders in Proprietary Products[7] that would be posted, managed, or would trade at a price more aggressive than the order's protected price. If a SMAT Event exists during free trading for an option component of a complex strategy, trading in the complex strategy will be suspended.[8] The Exchange also proposes to correct an internal cross reference in subsection (a)(16)(iii) from Rule 515(c)(2) to Rule 515(c)(3) to reflect the new citation under a currently pending proposed rule change. The purpose of adding the liquidity exposure process timer as a SMAT Event is to enhance the continuity, trade-through protection, and orderliness in the simple market and to protect complex order components from being executed at prices that could improve following a SMAT Event.

Additionally, the Exchange proposes to amend subsection (d)(3) which describes the Response Time Interval of a Complex Auction, which is a single-sided auction. The Exchange offers Complex Auction functionality as described in Exchange Rule 518[9] and also a cPRIME process, which is unaffected by this proposal, as described in Exchange Rule 515A.12.

Currently, Rule 518(d)(3) provides that the Response Time Interval means the period of time during which responses to the Request for Responses (''RFR'') message may be entered. The Rule further provides that the Exchange determines the duration of the Response Time Interval, which shall not exceed 500 milliseconds, and communicates it to Members via Regulatory Circular.[10] The Exchange now proposes to adopt new rule text to state that, ''the end of the trading session will also serve as the end of the Response Time Interval for a Complex Auction still in progress.'' In connection with this proposed change the Exchange proposes to amend subsection (d)(2) to remove the reference to the Defined Time Period for a Complex Auction. The Defined Time Period represents the period of time preceding the end of a trading session during which a Complex Auction will not be initiated. Currently, the Defined Time Period is 2,000 milliseconds[11] while the duration of a Complex Auction is just 200 milliseconds. The Exchange believes that removing this restriction will allow for increased price improvement opportunities. The Exchange also proposes to amend subsection (c)(2)(i) to remove the restriction that a cAOA order[12] received during the Defined Time Period will not initiate a new Complex Auction. Under the current rules there is no opportunity at all for price improvement via a Complex Auction when there is less than two seconds left in the trading session. The Exchange believes that removing the Defined Time Period and allowing the end of the trading session to serve as the end of the Response Time Interval in the limited instance that a Complex Auction is initiated with less than 200 milliseconds left in the trading session will allow for more opportunities for price improvement via the auction process. The Exchange warrants that is has the System capability to conduct auctions and execute transactions in a timely fashion at any time during the trading session.

The Exchange also proposes to adopt new subsection (e) to describe a Complex Liquidity Exposure Process (''cLEP'') for complex orders and complex eQuotes that would violate their Complex MIAX Price Collar (''MPC'') price . The MPC price protection feature is an Exchange-wide mechanism under which a complex order or complex eQuote to sell will not be displayed or executed at a price that is lower than the opposite side cNBBO[13] bid at the time the MPC is assigned by the System[14] (*i.e.,* upon receipt or upon opening) by more than a specific dollar amount expressed in $0.01 increments (the ''MPC Setting''), and under which a complex order or eQuote to buy will not be displayed or executed at a price that is higher than the opposite side cNBBO offer at the time the MPC is assigned by the System by more than the MPC Setting (each the ''MPC Price'').[15] The MPC Price is established (i) upon receipt of the complex order or eQuote during free trading, or (ii) if the complex order or eQuote is not received during free trading, at the opening (or reopening following a halt) of trading in the complex strategy; or (iii) upon evaluation of the Strategy Book by the System when a wide market condition, as described in Interpretations and Policies .05(e)(1) of this Rule, no longer exists.[16] Once established the MPC Price will not change during the life of the complex order or eQuote.[17] If the MPC Price is priced less aggressively than the limit price of the complex order or eQuote (*i.e.,* the MPC Price is less than the complex order or eQuote's bid price

[4] The MIAX Price Improvement Mechanism (''PRIME'') is a process by which a Member may electronically submit for execution (''Auction'') an order it represents as agent (''Agency Order'') against principal interest, and/or an Agency Order against solicited interest. *See* Exchange Rule 515A.

[5] The Exchange may automatically route orders to other exchanges under certain circumstances (''Routing Services''). In connection with such services, one of two Route Mechanisms, Immediate Routing or the Route Timer, will be used when a Public Customer order is received and/or reevaluated that is both routable and marketable against the opposite side ABBO upon receipt and the Exchange's disseminated market is not equal to the opposite side ABBO, or is equal to the opposite side ABBO and of insufficient size to satisfy the order. For those initiating Public Customer orders that are routable, but do not meet the additional criteria for Immediate Routing, the System will implement a Route Timer not to exceed one second (the duration of the Timer will be announced to Members through a Regulatory Circular), in order to allow Market Makers and other participants an opportunity to interact with the initiating order. *See* Exchange Rule 529.

[6] The System will pause the market for a time period not to exceed one second to allow additional orders or quotes refreshing the liquidity at the MBBO to be received (''liquidity refresh pause'') when at the time of receipt or reevaluation of the initiating order by the System: (A) Either the initiating order is a limit order whose limit price crosses the NBBO or the initiating order is a market order, and the limit order or market order could only be partially executed; (B) a Market Maker quote was all or part of the MBBO when the MBBO is alone at the NBBO; and (C) and the Market Maker quote was exhausted. *See* Exchange Rule 515(c)(2).

[7] The term ''Proprietary Product'' means a class of options that is listed exclusively on the Exchange and any of its affiliates. *See* proposed Exchange Rule 100.

[8] *See* Exchange Rule 518, Interpretations and Policies .05(e)(2)(i).

[9] Certain option classes, as determined by the Exchange and communicated to Members via Regulatory Circular, will be eligible to participate in a Complex Auction (an ''eligible class''). Upon evaluation as set forth in subparagraph (c)(5) of Rule 518, the Exchange may determine to automatically submit a Complex Auction-eligible order into a Complex Auction. Upon entry into the System or upon evaluation of a complex order resting at the top of the Strategy Book, Complex Auction-eligible orders may be subject to an automated request for responses (''RFR''). *See* Exchange Rule 518(d).

[10] The Exchange notes that the Response Time Interval is currently set to 200 milliseconds. *See* MIAX Regulatory Circular 2016–46.

[11] *See* MIAX Regulatory Circular 2016–63.

[12] A ''Complex Auction-on-Arrival'' or ''cAOA'' order is a complex order designated to be placed into a Complex Auction upon receipt or upon evaluation . *See* Exchange Rule 518(b)(2).

[13] The term cNBBO means the Complex National Best Bid or Offer and is calculated using the National Best Bid or Offer (''NBBO'') for each component of a complex strategy to establish the best net bid and offer for a complex strategy. *See* Exchange Rule 518(a)(2).

[14] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[15] *See* Exchange Rule 518.05(f).

[16] *See* Exchange Rule 518.05(f)(3).

[17] *See* Exchange Rule 518.05(f)(4).

for a buy, or the MPC Price is greater than the complex order or eQuote's offer price for a sell), or if the complex order is a market order, the complex order or eQuote will be displayed and/or executed up to its MPC Price. Any unexecuted portion of such a complex order or eQuote: (A) Will be cancelled if it would otherwise be displayed or executed at a price that is outside the MPC Price; and (B) may be subject to the managed interest process described in Rule 518(c)(4).[18] If the MPC Price is priced more aggressively than the limit price of the complex order or eQuote (*i.e.,* the MPC Price is greater than the complex order or eQuote's bid price for a buy, or the MPC Price is less than the complex order or eQuote's offer price for a sell), the complex order or eQuote will be displayed and/or executed up to its limit price. Any unexecuted portion of such a complex order will be submitted, if eligible, to the managed interest process described in Rule 518(c)(4), or placed on the Strategy Book at its limit price. Any unexecuted portion of such a complex eQuote will be cancelled.[19]

The Exchange now proposes to initiate a Complex Liquidity Exposure Auction (''cLEP Auction'') whenever a complex order or complex eQuote would violate its MPC Price. To begin the cLEP Auction, the System will first broadcast a liquidity exposure message to all subscribers of the Exchange's data feeds. The liquidity exposure message will include the symbol, side of the market, auction start price (MPC Price), quantity of matched contracts, and the imbalance quantity. The inclusion of the quantity of matched contracts at the price included in the RFR message is intended to inform participants considering submitting an RFR Response the number of contracts for which there is matched interest, and the purposes of including the imbalance quantity in the RFR message is to inform such participants of the number of contracts that do not have matched interest.

The System will initiate a Response Time Interval, as determined by the Exchange and communicated via Regulatory Circular which shall be no less than 100 milliseconds and no more than 5,000 milliseconds.[20] The Exchange recently surveyed its Members and established that Members' Systems could submit auction responses in 100 milliseconds or less on average.[21] At the conclusion of the Complex Liquidity Exposure Auction if the resulting trade price is less aggressive than the MPC Price, liquidity will be handled in accordance to Exchange Rule 518(c)(2), Execution of Complex Orders and Quotes. Orders and quotes executed in a cLEP Auction will be allocated in accordance with the Complex Auction allocation procedures described in Exchange Rule 518(d)(7), Allocation at the Conclusion of a Complex Auction.

At the conclusion of a cLEP Auction the System will calculate the next potential MPC Price using the auction start price plus (minus) the next MPC increment for buy (sell) orders. Liquidity with an original price equal to or less aggressive than the new MPC Price is no longer subject to the MPC price protection. Liquidity with an original price more aggressive than the new MPC Price (or market order liquidity) is subject to the MPC price protection feature using the new MPC Price.

The current rule provides that if the MPC Price is priced less aggressively than the limit price of the complex order or eQuote (*i.e.,* the MPC Price is less than the complex order or eQuote's bid price for a buy, or the MPC Price is greater than the complex order or eQuote's offer price for a sell), or if the complex order is a market order, the complex order or eQuote will be displayed and/or executed up to its MPC Price. Any unexecuted portion of such a complex order or eQuote: (A) Will be cancelled if it would otherwise be displayed or executed at a price that is outside the MPC Price, and (B) may be subject to the managed interest process described in 518(c)(4).[22]

The Exchange now proposes to amend subsection(f)(6)(A) to provide that any unexecuted portion of such a complex order or eQuote will be subject to the cLEP as described in proposed subsection (e). The Exchange believes it to be in the best interest of the Member to seek liquidity via the Complex Liquidity Exposure Process as described above, rather than cancel any unexecuted portion of the order.

The examples below demonstrate an order subject to the Complex Liquidity Exposure Process.

Example 1

MPC: $0.25

The Exchange has one order resting on its Strategy Book:[23] +1 component A, −1 component B:

Order 1 is to sell 10 at $1.90
MBBO component A: 4.00(10) × 5.00(10)
MBBO component B: 2.00(10) × 2.50(10)
NBBO component A: 4.05(10) × 4.15(10)
NBBO component B: 2.30(10) × 2.40(10)
cMBBO: 1.50 (10) × 3.00 (10)
cNBBO: 1.65 (10) × 1.85 (10)

The Exchange receives a new order (Order 2) to buy 20 at $2.25.

Order 2 buys 10 from Order 1 at $1.90 and initiates the Complex Liquidity Exposure Process: Order 2 reprices to its protected price of $2.10 (cNBO of 1.85 + 0.25) and is posted at that price on the Complex Order Book and the Complex Liquidity Exposure Process Timer begins.

During the cLEP Auction the Exchange receives a new order (Order 3) to sell 10 at $2.10. This order locks the current same side Book Price of $2.10 and Order 3 sells 10 to Order 2 at $2.10, filling Order 2 and ending the Liquidity Exposure Process.

Example 2

MPC: $0.25

The Exchange has one order resting on its book in Strategy +1 component A, −1 component B:

Order 1 is to sell 10 at $1.90
MBBO component A: 4.00(10) × 5.00(10)
MBBO component B: 2.00(10) × 2.50(10)
NBBO component A: 4.05(10) × 4.15(10)
NBBO component B: 2.30(10) × 2.40(10)
cMBBO: 1.50 (10) × 3.00 (10)
cNBBO: 1.65 (10) × 1.85 (10)

The Exchange receives a new order (Order 2) to buy 20 at $2.25.

Order 2 buys 10 from Order 1 at $1.90 and initiates the Complex Liquidity Exposure Process: Order 2 reprices to its protected price of $2.10 (cNBO of 1.85 + 0.25) and is posted at that price on the Strategy Book and the Complex Liquidity Exposure Process Timer begins.

No new liquidity arrives during the Liquidity Exposure Process. At the end of the timer, Order 2 reprices to its limit of $2.25 and is posted at that price on the Strategy Book, ending the Liquidity Exposure Process.

The Exchange also proposes to make minor technical changes to Interpretations and Policies .05 of Exchange Rule 518 to reflect the proposed changes described above. Specifically, the Exchange proposes to remove subparagraph (f)(4) that provides that once established, the MPC

[18] *See* Exchange Rule 518.05(f)(6).

[19] *See* Exchange Rule 518.05(f)(7).

[20] The Exchange notes that the current duration of a cPRIME Auction is 100 milliseconds and the current duration of a Complex Auction is 200 milliseconds.

[21] *See* Securities Exchange Release No.80940 (June 15, 2017), 82 FR 28369 (June 21, 2017) (SR–MIAX–2017–16).

[22] *See* Exchange Rule 518.05(f)(6).

[23] The term ''Strategy Book'' is the Exchange's electronic book of complex orders and complex quotes. *See* Exchange Rule 518(a)(17).

Price will not change during the life of the complex order or eQuote. As described above the MPC Price for certain liquidities will be subject to a re-evaluation process and may change as a result of such re-evaluation. Also, the Exchange proposes to amend subparagraph (6)(A) to remove the provision that any unexecuted portion of such a complex order or eQuote will be cancelled if it would otherwise be displayed or executed at a price that is outside the MPC Price, and to state instead that it will be subject to the cLEP as described in subsection (e) of this Rule. Additionally, as a result of the removal of paragraph (4) it is necessary to renumber the remaining paragraphs for consistency within the numbering hierarchy of the Exchange's rules. Therefore current paragraph (5) will be renumbered as new paragraph (4); current paragraph (6) will be renumbered as new paragraph (5); and current paragraph (7) will be renumbered as new paragraph (6).

Finally, the Exchange proposes to amend subsection (b) of Interpretations and Policies .05 to adopt new rule text stating that the Calendar Spread Variance (''CSV'') price protection applies only to strategies in American-style option classes. A Calendar Spread is a complex strategy consisting of the purchase of one call (put) option and the sale of another call (put) option overlying the same security that have different expirations but the same strike price. The CSV establishes a minimum trading price limit for Calendar Spreads. The maximum possible value of a Calendar Spread is unlimited, thus there is no maximum price protection for Calendar Spreads. The minimum possible trading price limit of a Calendar Spread is zero minus the pre-set value of $.10. This ensures that the Strategy doesn't trade more than $.10 away from its intrinsic value. (On a basic level the price of an American-style option is comprised of two components; intrinsic value and time value. If the strike price of a call option is $5.00 and the stock is priced at $6.00, there is $1.00 of intrinsic value in the price of the call option, anything above $1.00 represents the time value component.) An American-style option must be worth at least as much as its intrinsic value because the holder of the option can realize the intrinsic value by immediately exercising the option. In a Calendar Spread strategy comprised of American-style options, ceteris paribus, the far month should be worth more than the near month due to its having a greater time to expiration and therefore a higher time value. As European-style options [24] may only be exercised on their expiration date, the relationship between the stock price, option price, and option strike price that exists for American-style options does not exist for European-style options. Therefore the CSV price protection would be ineffective and will not be available for strategies comprised of European-style options.

2. Statutory Basis

The Exchange believes that its proposed rule change is consistent with Section 6(b) of the Act [25] in general, and furthers the objectives of Section 6(b)(5) of the Act [26] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes its proposal to include the liquidity exposure timer as a SMAT Event promotes just and equitable principles of trade, removes impediments to and perfects the mechanisms of a free and open market and a national market system and, in general, protects investors and the public interest. SMAT Events represent temporary interruptions of free trading in one or more components of a complex strategy. The temporary suspension of trading in complex orders during a SMAT Event is intended to enhance continuity, trade-through protection, and orderliness in the simple market and to protect complex order components from being executed at prices that could improve following a SMAT Event. Once a SMAT Event is concluded or resolved, the System will re-evaluate the Strategy Book.[27]

The Exchange believes that its proposal to eliminate the Defined Time Period to allow Complex Auctions [28] to occur throughout the trading session removes impediments to and perfects the mechanism of a free and open market and a national market system and, in general, protects investors and the public interest by removing an unnecessary barrier which prevented Complex Auctions from occurring with less than two seconds left in the trading session. The current duration of a Complex Auction duration is just 200 milliseconds. The Exchange believes it is in the best interest of the investor to allow for opportunities for price improvement throughout the entire trading session. In the event that a Member initiates a Complex Auction without enough time for Members to respond, the initiating Member is no worse off under the proposed rule than the Member would have been under the current rule which prevents the Member from even attempting to initiate a Complex Auction with less than two seconds left in the trading session.

The Exchange also believes its proposal to adopt a Complex Liquidity Exposure Process promotes just and equitable principles of trade and removes impediments to and perfects the mechanisms of a free and open market and a national market system and, in general, protects investors and the public interest. The Complex Liquidity Exposure Process provides an additional opportunity for price discovery for those orders that would trade through their MPC Price. The Exchange believes its proposal promotes just and equitable principles of trade as it is in the best interest of the Member to seek liquidity for the unexecuted portion of the order which exceeds the order's MPC Price rather than to simply cancel the unexecuted portion back to the Member.[29]

The Exchange also believes that its proposal to amend Interpretations and Policies .05(f) to reflect the changes resulting from the introduction of the Complex Liquidity Exposure Process promotes just and equitable principles of trade, and removes impediments to and perfects the mechanisms of a free and open market and a national market system and, in general, protects investors and the public interest by clearly describing the operation of the Exchange's functionality in the Exchange's rules. The Exchange believes it is in the interest of investors and the public to accurately describe the behavior of the Exchange's System in its

[24] The term ''European-style option'' means an option contract that, subject to the provisions of Rule 700 (relating to the cutoff time for exercise instructions) and to the Rules of the Clearing Corporation, can be exercised only on its expiration date. *See* Exchange Rule 100.

[25] 15 U.S.C. 78f(b).

[26] 15 U.S.C. 78f(b)(5).

[27] *See* Exchange Rule 518, Interpretations and Policies .05(f)(2)(i).

[28] Complex Auctions are described in Exchange Rule 518(d) and are separate and distinct from cPRIME Auctions which are described in Interpretations and Policies .12 of Exchange Rule 515A, MIAX Price Improvement Mechanism (''PRIME'') and PRIME Solicitation Mechanism.

[29] The Exchange notes that Members who believe that an execution has occurred at an erroneous price may avail themselves of the protections provided in Exchange Rule 521, Nullification and Adjustment of Options Transactions Including Obvious Errors.

rules as this information may be used by investors to make decisions concerning the submission of their orders. Further, the Exchange's proposal to make non-substantive changes to re-number certain paragraphs for internal consistency within the rule benefits investors and the public interest by providing clarity and accuracy in the Exchange's rules.

Finally, the Exchange believes its proposal to clarify that the Calendar Spread Variance (CSV) price protection is available only for American-style options promotes just and equitable principles of trade, and removes impediments to and perfects the mechanisms of a free and open market and a national market system and, in general, and protects investors and the public interest by providing clarity and precision in the Exchange's rules. The Exchange believes it is in the interest of investors and the public to accurately describe the behavior of the Exchange's System in its rules as this information may be used by investors to make decisions concerning the submission of their orders. Transparency and clarity are consistent with the Act because it removes impediments to and helps perfect the mechanism of a free and open market and a national market system, and, in general, protects investors and the public interest by accurately describing the behavior of the Exchange's System. In particular, the Exchange believes that the proposed rule change will provide greater clarity to Members and the public regarding the Exchange's Rules, and it is in the public interest for rules to be accurate and concise so as to eliminate the potential for confusion.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange does not believe the proposed rule change will impose any burden on inter-market competition. The Exchange's proposal seeks to enhance complex order trading on the Exchange, and may potentially enhance competition among the various markets for complex order execution, potentially resulting in more active complex order trading on all exchanges.

Additionally, the Exchange does not believe the proposed rule change will impose any burden on intra-market competition as the Rules apply equally to all Members of the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MIAX–2018–36 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–MIAX–2018–36. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–MIAX–2018–36, and should be submitted on or before December 14, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[30]

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736.

Extension:

Form 8–A; SEC File No. 270–054; OMB Control No. 3235–0056.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

Form 8–A (17 CFR 249.208a) is a registration statement used to register a class of securities under Section 12(b) or Section 12(g) of the Securities Exchange Act of 1934 (15 U.S.C. 78*l*(b) and 78*l*(g)) (''Exchange Act''). Section 12(a) (15 U.S.C. 78*l*(a)) of the Exchange Act makes it unlawful for any member, broker, or dealer to effect any transaction in any security (other than an exempted security) on a national securities exchange unless such security has been registered under the Exchange Act (15 U.S.C. 78a *et seq.*). Exchange

[30] 17 CFR 200.30–3(a)(12).

Act Section 12(b) establishes the registration procedures. Exchange Act Section 12(g) requires an issuer that is not a bank or bank holding company to register a class of equity securities (other than exempted securities) within 120 days after its fiscal year end if, on the last day of its fiscal year, the issuer has total assets of more than $10 million and the class of equity securities is ''held of record'' by either (i) 2,000 persons, or (ii) 500 persons who are not accredited investors. An issuer that is a bank or a bank holding company, must register a class of equity securities (other than exempted securities) within 120 days after the last day of its first fiscal year ended after the effective date of the JOBS Act if, on the last day of its fiscal year, the issuer has total assets of more than $10 million and the class of equity securities is ''held of record'' by 2,000 or more persons. Form 8–A takes approximately 3 hours to prepare and is filed by approximately 871 respondents for a total annual reporting burden of 2,613 hours (3 hours per response x 871 responses).

Written comments are invited on: (a) Whether this collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden imposed by the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number.

Please direct your written comment to Charles Riddle, Acting Director/Chief Information Officer, Securities and Exchange Commission, c/o Candace Kenner, 100 F Street NE, Washington, DC 20549 or send an email to: *PRA_Mailbox@sec.gov.*

Dated: November 19, 2018.

Eduardo A. Aleman,

Assistant Secretary.

SMALL BUSINESS ADMINISTRATION

Data Collection Available for Public Comments

ACTION: 60-Day notice and request for comments.

SUMMARY: The Small Business Administration (SBA) intends to request approval, from the Office of Management and Budget (OMB) for the collection of information described below. The Paperwork Reduction Act (PRA) requires federal agencies to publish a notice in the **Federal Register** concerning each proposed collection of information before submission to OMB, and to allow 60 days for public comment in response to the notice. This notice complies with that requirement.

DATES: Submit comments on or before January 22, 2019.

ADDRESSES: Send all comments to Dena Moglia, Office of Entrepreneurial Development, Small Business Administration, 409 3rd Street SW, 6th Floor, Washington, DC 20416.

FOR FURTHER INFORMATION CONTACT: Dena Moglia, Senior Management & Program Analyst, 202–205–7034, *dena.moglia@sba.gov,* Curtis B. Rich, Management Analyst, 202–205–7030 *curtis.rich@sba.gov.*

SUPPLEMENTARY INFORMATION: In accordance with regulations and policy, the Small Business Development Centers (SBDC's) must provide SBA semi-annual financial and programmatic reports-outlining expenditures and accomplishments. The information collected will be used to monitor the progress of the program.

Summary of Information Collection

Title: ''Federal Cash Transaction Report; Financial Status Report Program Income Report Narrative Program Report''.

Description of Respondents: SBDC Directors.

Form Number: 2113.

Annual Responses: 126.

Annual Burden: 7,308.

SUPPLEMENTARY INFORMATION: In October 2014, a new cohort of sites was added to the Regional Innovation Clusters (RIC) initiative, which was originally started in October 1, 2010 by the Small Business Administration (SBA)'s Office of Entrepreneurial Development. Through this initiative, organizations in 11 communities across the U.S. have been selected to provide industry-specific assistance to small businesses, and to develop industry relationships and supply chains within their regions. Clusters—geographically concentrated groups of interconnected businesses, suppliers, service providers, and associated institutions in a particular industry or field—act as a networking hub to convene a number of resources to help navigate the funding, procurement, and supply-chain opportunities in a specific industry.

SBA is conducting an evaluation of the Regional Innovation Clusters initiative to determine how the clusters have developed, the type and volume of services they provided to small businesses, client perceptions of the program, and the various outcomes related to their existence, including collaboration among firms, innovation, and small business growth. Small business growth will be compared to the overall growth of firms in those same regions and industries. This evaluation will also include lessons learned and success stories. SBA proposes the use of three instruments for data collection and analysis of three distinct populations. These instruments are: (1) Small Business Survey, (2) Large Organization Survey and (3) Cluster Administrator Survey. In addition, SBA plans to interview each of the 11 cluster administrators several times a year regarding program impact and successes or challenges, and to obtain clarifications on information provided in quarterly reports. Each of the proposed surveys will be administered electronically and will contain both open- and close-ended questions. The information collected and analyzed from these instruments will contribute to monitoring performance metrics and program goals, as well as recommendations on improving program practices.

BILLING CODE 4710–31–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36237]

Tulsa-Sapulpa Union Railway Company, L.L.C.—Lease Renewal Exemption With Interchange Commitment—Union Pacific Railroad Company

Tulsa-Sapulpa Union Railway Company, L.L.C. (TSU), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1150.41 to renew its lease of approximately 12.86 miles of railroad line owned by Union Pacific Railroad Company (UP), located in Tulsa County, Okla. (the Line). The Line, known as the Jenks Industrial Lead, extends from milepost 136.40 near the Kimberly Clark facility in Jenks, Okla., to the end of UP's ownership at milepost 149.26 and the connection with UP's trackage rights over BNSF Railway Company in Tulsa, Okla.

TSU states that it and UP previously executed a lease agreement regarding the Line in 2001.[1] TSU states that the new lease agreement, dated as of December 21, 2018, has an initial five-year term that may be extended by TSU for an additional 15 years.

TSU certifies that its projected annual revenues from this transaction will not result in its becoming a Class I or Class II rail carrier and will not exceed $5 million. As required under 49 CFR 1150.43(h)(1), TSU has disclosed in its verified notice that the lease renewal agreement contains an interchange commitment that charges TSU an asset use fee for carloads that originate or terminate on the Line that are not interchanged to UP.[2] TSU has provided additional information regarding the interchange commitment as required by 49 CFR 1150.43(h).

TSU states in its verified notice that it intends to consummate the proposed lease renewal on or shortly after December 21, 2018. The earliest this transaction may be consummated is December 7, 2018 (30 days after the verified notice was filed).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed no later than November 30, 2018 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36237, must be filed with the Surface Transportation Board, 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on TSU's representative, Audrey L. Brodrick, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606–3208.

According to TSU, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic reporting under 49 CFR 1105.8(b).

Board decisions and notices are available on our website at *www.stb.gov.*

Decided: November 19, 2018.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Aretha Laws-Byrum,

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36250]

R.J. Corman Railroad Group, LLC and R.J. Corman Railroad Company, LLC—Acquisition of Control Exemption—Nashville and Western Railroad Corp. and Nashville & Eastern Railroad Corp.

R.J. Corman Railroad Group, LLC (RJCG), a noncarrier holding company, and its wholly owned subsidiary, R.J. Corman Railroad Company, LLC (RJCR), have jointly filed a verified notice of exemption pursuant to 49 CFR 1180.2(d)(2) to acquire control of two Class III railroads, Nashville and Western Railroad Corp. (NWRR) and Nashville & Eastern Railroad Corp. (NERR). NWRR and NERR are currently controlled by William J. Drunsic.[1]

RJCG and RJCR currently control 12 Class III railroads.[2] RJCG and RJCR state

[1] *Tulsa-Sapulpa Union Ry.—Lease & Operation Exemption—Union Pac. R.R.,* FD 33974 (STB served Dec. 26, 2000, corrected Feb. 12, 2001).

[2] TSU submitted under seal a copy of the lease renewal agreement with its verified notice of exemption.

[1] *See William J. Drunsic—Continuance in Control Exemption—Nashville & W. R.R.,* FD 33910 (STB served Aug. 4, 2000).

[2] Two of the 12, R.J. Corman Railroad Property, LLC, and R.J. Corman Railroad Company/Ashland,

that NWRR operates a 28-mile line owned by the Cheatham County Rail Authority extending between Tennessee Central milepost 205.76 at Nashville, Tenn., and Tennessee Central milepost 185 at Ashland City, Tenn. RJCG and RJCR state that NERR operates rail lines owned by the Nashville and Eastern Railroad Authority totaling approximately 130.2 miles, extending between (1) milepost 0.35 at Nashville and milepost 110.5 at Monterey, Tenn., (2) milepost 189.5 at Vine Hill, Tenn., and 194.1 at Southern Junction, Tenn., (3) milepost NX 0.00 at Carthage Junction, Tenn., and milepost NX 7.56 at Carthage, Tenn., and (4) milepost 0.1 at Donelson, Tenn., and milepost 8.0 at Old Hickory, Tenn.

RJCG and RJCR have signed a Plan of Merger and Sale and Purchase of Equity Interests (Agreement) [3] with NWRR and NERR by which RJCG and RJCR will acquire control of NWRR and NERR through the purchase of 100% of their issued and outstanding stock.[4]

The earliest the transaction could be consummated is December 9, 2018, the effective date of the exemption (30 days after the verified notice was filed). RJCG and RJCR state that the transaction is scheduled to be finalized during the first quarter of 2019.

RJCG and RJCR certify that: (i) NWRR and NERR do not connect with each other or any of the RJC Railroads; (ii) the proposed transaction is not part of a series of anticipated transactions that would connect some or all of these railroads; and (iii) the transaction does not involve a Class I carrier. Therefore, the transaction is exempt from the requirements of 49 U.S.C. 11323. *See* 49 CFR 1180.2(d)(2).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Section 11326(c), however, does not provide for the labor protection for transactions under sections 11324 and 11325 that involve only Class III rail carriers. Therefore, because this transaction involves only Class III rail carriers, the Board may not impose labor protective conditions for this transaction.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the transaction. Petitions to stay must be filed no later than November 30, 2018 (at least seven days before the exemption becomes effective).

An original and ten copies of all pleadings, referring to Docket No. FD 36250, must be filed with the Surface Transportation Board, 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on David R. Irvin, Esq., Moynahan, Irvin & Mooney P.S.C., 110 N Main Street, Nicholasville, KY 40356.

Board decisions and notices are available on our website at *www.stb.gov.*

Decided: November 19, 2018.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

BILLING CODE P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36243]

Watco Holdings, Inc.—Continuance in Control Exemption—Ithaca Central Railroad, LLC

Watco Holdings Inc. (Watco), a noncarrier, has filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to continue in control of Ithaca Central Railroad, LLC (ICR), upon ICR's becoming a Class III rail carrier. Watco owns, indirectly, 100% of the issued and outstanding stock of ICR.

This transaction is related to a verified notice of exemption filed concurrently in *Ithaca Central Railroad, LLC—Lease & Operation Exemption—Norfolk Southern Railway,* Docket No. FD 36238, by which ICR seeks Board approval to lease from Norfolk Southern Railway Company (NSR) and operate approximately 48.8 miles of rail line between milepost 272.2 in Sayre, Pa. and milepost 321.0 in Lansing, N.Y.

The transaction may be consummated on or after December 8, 2018, the effective date of the exemption (30 days after the verified notice of exemption was filed).

According to the verified notice of exemption, Watco currently controls indirectly 38 Class III railroads and one Class II railroad, collectively operating in 25 states. For a complete list of these rail carriers and the states in which they operate, see the November 8, 2018 verified notice of exemption at pages 4–11. The verified notice is available on the Board's website at *www.stb.gov.*

Watco represents that: (1) The rail line to be operated by ICR does not connect with any of the rail lines operated by railroads in the Watco corporate family; (2) this transaction is not part of a series of anticipated transactions that would connect ICR with any railroad in the Watco corporate family; and (3) the transaction does not involve a Class I rail carrier. The proposed transaction is therefore exempt from the prior approval requirements of 49 U.S.C. 11323 pursuant to 49 CFR 1180.2(d)(2). Watco states that the purpose of the transaction is to reduce overhead expenses and coordinate billing, maintenance, mechanical and personnel policies and procedures of its rail carrier subsidiaries, and thereby improve the overall efficiency of rail service provided by the railroads in the Watco corporate family.

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Because the transaction involves the control of one Class II and one or more Class III rail carriers, the transaction is subject to the labor protection requirements of 49 U.S.C. 11326(b) and *Wisconsin Central Ltd.—Acquisition Exemption—Lines of Union Pacific Railroad,* 2 S.T.B. 218 (1997).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than November 30, 2018 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36243, must be filed with the Surface Transportation Board, 395 E Street SW, Washington, DC 20423–0001. In addition, one copy of each pleading must be served on Karl Morell & Associates, 440 1st Street NW, Suite 440, Washington, DC 20001.

LLC, are non-operating carriers. The other 10 operating railroads include R.J. Corman Railroad Company/Western Ohio Line, Inc., R.J. Corman Railroad Company/Pennsylvania Lines, Inc., R.J. Corman Railroad Company/Allentown Lines, Inc., R.J. Corman Railroad Company/Bardstown Line, Inc., R.J. Corman Railroad Company/Cleveland Line, Inc., R.J. Corman Railroad Company/Carolina Lines, LLC, R.J. Corman Railroad Company/Central Kentucky Lines, LLC, R.J. Corman Railroad Company/Texas Lines, LLC, R.J. Corman Railroad Company/Tennessee Terminal, LLC, and R.J. Corman Railroad Company/Memphis Line, Inc., (collectively, RJC Railroads).

[3] An unredacted copy of the Agreement was filed concurrently under seal, along with a motion for protective order, which will be addressed in a separate decision.

[4] RJCG and RJCR indicate that they will purchase the stock of NERR through the creation of a holding company, RJCN, Inc., and its wholly owned entity, RJCMS, Inc., which will be merged into NERR simultaneously, with NERR as the surviving entity. RJCG and RJCR will purchase the stock of NWRR by merging NWRR with newly created entity RJCWMS, Inc., which will be the surviving entity with the name reverting to NWRR.

According to Watco, this action is categorically excluded from environmental review under 49 CFR 1105.6(c).

Board decisions and notices are available on our website at *www.stb.gov.*

Decided: November 19, 2018.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Raina Contee,

Clearance Clerk.

[FR Doc. 2018–25549 Filed 11–21–18; 8:45 am]

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36238]

Ithaca Central Railroad, LLC—Lease and Operation Exemption—Norfolk Southern Railway Company

Ithaca Central Railroad LLC (ICR), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to lease from Norfolk Southern Railway Company (NSR) and operate approximately 48.8 miles of rail line, extending from milepost 272.2 in Sayre, Pa., to milepost 321.0 in Lansing, N.Y.

This transaction is related to a concurrently filed verified notice of exemption in *Watco Holdings, Inc.—Continuance in Control Exemption—Ithaca Central Railroad,* Docket No. FD 36243, in which Watco Holdings, Inc., seeks to continue in control of ICR upon ICR's becoming a Class III rail carrier.

ICR states that it will shortly enter into an agreement to lease the rail line from NSR and that ICR will be the operator of the leased line. ICR further states that the proposed agreement between ICR and NSR does not contain any provision that prohibits ICR from interchanging traffic with a third party or limits ICR's ability to do so.

ICR certifies that its projected annual revenues as a result of this transaction will not result in ICR's becoming a Class II or Class I rail carrier. ICR further certifies that the projected annual revenue of ICR will not exceed $5 million.

The transaction may be consummated on or after December 8, 2018, the effective date of the exemption (30 days after the verified notice was filed).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than November 30, 2018 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36238, must be filed with the Surface Transportation Board, 395 E Street SW, Washington, DC 20423–0001. In addition, one copy of each pleading must be served on Karl Morell & Associates, 440 1st Street NW, Suite 440, Washington, DC 20001.

According to ICR, this action is excluded from environmental review under 49 CFR 1105.6(c) and from historic reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available on our website at *www.stb.gov.*

Decided: November 19, 2018.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket Nos. FMCSA–2014–0214; FMCSA–2014–0215]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for five individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have ''no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV.'' The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were applicable on the dates stated in the discussions below and will expire on the dates stated in the discussions below. Comments must be received on or before December 24, 2018.

ADDRESSES: You may submit comments identified by the Federal Docket Management System (FDMS) Docket Nos. FMCSA–2014–0214; FMCSA–2014–0215 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal Holidays.
- *Fax:* 1–202–493–2251.

To avoid duplication, please use only one of these four methods. See the ''Public Participation'' portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, 202–366–4001, *fmcsamedical@dot.gov,* FMCSA, Department of Transportation, 1200 New Jersey Avenue SE, Room W64–224, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m., ET, Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket numbers for this notice (Docket Nos. FMCSA–2014–0214; FMCSA–2014–0215), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *http://www.regulations.gov,* put the docket number, FMCSA–2014–0214; FMCSA–2014–0215, in the keyword box, and click ''Search.'' When the new screen appears, click on the ''Comment Now!'' button and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an

individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

FMCSA will consider all comments and material received during the comment period.

B. Viewing Documents and Comments

To view comments, as well as any documents mentioned in this notice as being available in the docket, go to *http://www.regulations.gov.* Insert the docket number, FMCSA–2014–0214; FMCSA–2014–0215, in the keyword box, and click ''Search.'' Next, click the ''Open Docket Folder'' button and choose the document to review. If you do not have access to the internet, you may view the docket online by visiting the Docket Management Facility in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays.

C. Privacy Act

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

II. Background

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption for up to five years if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statute also allows the Agency to renew exemptions at the end of the five-year period. FMCSA grants exemptions from the FMCSRs for a two-year period to align with the maximum duration of a driver's medical certification.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria to assist Medical Examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce. [49 CFR part 391, APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. Epilepsy: § 391.41(b)(8), paragraphs 3, 4, and 5.]

The five individuals listed in this notice have requested renewal of their exemptions from the epilepsy and seizure disorders prohibition in 49 CFR 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable two-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315, FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315, each of the five applicants has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition. The five drivers in this notice remain in good standing with the Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous two-year exemption period. In addition, for Commercial Driver's License (CDL) holders, the Commercial Driver's License Information System (CDLIS) and the Motor Carrier Management Information System (MCMIS) are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency (SDLA). These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each renewal applicant for a period of two years is likely to achieve a level of safety equal to that existing without the exemption.

As of October 24, 2018, and in accordance with 49 U.S.C. 31136(e) and 31315, the following individual has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers: Jeffrey M. Phillips (SC).

This driver was included in docket number FMCSA–2014–0214. The exemption is applicable as of October 24, 2018, and will expire on October 24, 2020.

As of October 15, 2018, and in accordance with 49 U.S.C. 31136(e) and 31315, the following four individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Thomas Avery, Jr. (NY)
Philip Stewart (CA)
Alan T. VonLintel (KS)
Keith T. White (PA)

The drivers were included in docket number FMCSA–2014–0215. Their exemptions are applicable as of October 15, 2018, and will expire on October 15, 2020.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) Each driver must remain seizure-free and maintain a stable treatment during the two-year exemption period; (2) each driver must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified Medical Examiner, as defined by 49 CFR 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315.

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or

regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based on its evaluation of the five exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the epilepsy and seizure disorders prohibition in 49 CFR 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315, each exemption will be valid for two years unless revoked earlier by FMCSA.

Issued on: November 1, 2018.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2018–0102 (Notice No. 2018–19)]

Hazardous Materials: Information Collection Activities

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, PHMSA invites comments on this information collection pertaining to hazardous materials transportation for which PHMSA intends to request renewal from the Office of Management and Budget.

DATES: Interested persons are invited to submit comments on or before January 22, 2019.

ADDRESSES: You may submit comments identified by the Docket No. PHMSA–2018–0102 (Notice No. 2018–19) by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Management System; U.S. Department of Transportation, West Building, Ground Floor, Room W12–140, Routing Symbol M–30, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* To the Docket Management System; Room W12–140 on the ground floor of the West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the agency name and Docket Number (PHMSA–2018–0102) for this notice at the beginning of the comment. To avoid duplication, please use only one of these four methods. All comments received will be posted without change to the Federal Docket Management System (FDMS) and will include any personal information you provide.

Requests for a copy of an information collection should be directed to Steven Andrews or Shelby Geller, Standards and Rulemaking Division, (202) 366–8553, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

Docket: For access to the dockets to read background documents or comments received, go to *http://www.regulations.gov* or DOT's Docket Operations Office (see **ADDRESSES**).

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

FOR FURTHER INFORMATION CONTACT: Steven Andrews or Shelby Geller, Standards and Rulemaking Division, (202) 366–8553, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

SUPPLEMENTARY INFORMATION: Section 1320.8 (d), title 5, Code of Federal Regulations (CFR) requires PHMSA to provide interested members of the public and affected agencies an opportunity to comment on information collection and recordkeeping requests. This notice identifies information collection request that PHMSA will be submitting to the Office of Management and Budget (OMB) for renewal and extension. This information collection is contained in 49 CFR 171.6 of the Hazardous Materials Regulations (HMR; 49 CFR parts 171–180). PHMSA has revised burden estimates, where appropriate, to reflect current reporting levels or adjustments based on changes in proposed or final rules published since this information collection was last approved. The following is provided for this information collection: (1) Title of the information collection, including former title if a change is being made; (2) OMB control number; (3) summary of the information collection activity; (4) description of affected public; (5) estimate of total annual reporting and recordkeeping burden; and (6) frequency of collection. PHMSA will request a 3-year term of approval for this information collection activity and will publish a notice in the **Federal Register** upon OMB's approval.

PHMSA requests comments on the following information collection:

Title: Flammable Hazardous Materials by Rail Transportation.

OMB Control Number: 2137–0628.

Summary: This OMB control number is used for information and recordkeeping requirements pertaining to the sampling and testing certification, routing analysis, and incident reporting for flammable liquids by rail transportation. Rail carriers, shippers, PHMSA's Office of Hazardous Materials Safety (OHMS), the Federal Railroad Administration (FRA), and the Association of American Railroads (AAR) may use this information to ensure that rail tank cars transporting flammable liquids are properly classified, ensure trains are routed appropriately, and collect all relevant incident data. This OMB control number is being offered for renewal includes the following information collections and associated burden hours:

Information collection	Respondents	Responses	Hours per response	Total hours
Sampling and Testing Plan Burden for Subsequent Year Revision	1,804	1,804	10	18,040
Routing—Collection by Segment for Class II Railroads	10	10	40	400
Routing—Collection by Segment for Class III Railroads	160	160	40	6,400
Routing Analysis Burden for Class II Railroads	10	50	16	800
Routing Analysis Burden for Class III Railroads	160	320	8	2,560
Routing Security Analysis Burden for Class II Railroads	10	40	12	480
Routing Security Analysis Burden for Class III Railroads	64	32	4	128

Information collection	Respondents	Responses	Hours per response	Total hours
Tank Car Retrofit Burden	50	50	0.5	25
Crude Oil Incident Reporting	15	15	2	30

Affected Public: Shippers and carriers of petroleum liquids by rail.

Annual Reporting and Recordkeeping Burden:

Number of Respondents: 2,283.

Total Annual Responses: 2,481.

Total Annual Burden Hours: 28,863.

Frequency of Collection: On occasion.

Issued in Washington, DC, on November 19, 2018.

William S. Schoonover,

Associate Administrator for Hazard Materials Safety, Pipeline and Hazardous Materials Safety Administration.

BILLING CODE 4910–60–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. DOT–OST–2018–0190]

Advisory Committee on Aviation Consumer Protection Matters; Subcommittee on In-Flight Sexual Misconduct

AGENCY: Office of the Secretary (''OST''), Department of Transportation (''DOT'').

ACTION: Notice of reestablishment and first meeting of the Aviation Consumer Protection Advisory Committee.

SUMMARY: The Department of Transportation (''Department'') has reestablished the Aviation Consumer Protection Advisory Committee (''ACPAC'' or ''Committee''), formerly known as the Advisory Committee on Aviation Consumer Protection, as a Federal advisory committee. The Department has also established a National In-Flight Sexual Misconduct Task Force (''Task Force'') as an ACPAC Subcommittee. The Task Force will develop recommendations for the ACPAC's consideration on best practices and protocols for air carriers relating to training, reporting, and data collection of sexual assault onboard commercial aircraft. The Department anticipates the first meeting of the ACPAC will be held on January 16, 2019. The meeting will be held in the Media Center (located on the lobby level of the West Building) at the U.S. Department of Transportation Headquarters,1200 New Jersey Ave, SE, Washington, DC 20590. Three topics will be discussed at that meeting—(1) establishment of the Task Force (including the tasks to be carried out by the Task Force); (2) transparency of airline ancillary service fees; and (3) involuntary changes to travel itineraries.

DATES: The first meeting of the reestablished ACPAC will be held on January 16, 2019, from 9:00 a.m. to 4:00 p.m. Eastern Time.

FOR FURTHER INFORMATION CONTACT: To register to attend the meeting, please contact Stuart Hindman, Senior Attorney, Office of Aviation Enforcement and Proceedings, by email at *stuart.hindman@dot.gov,* or by telephone at 202–366–9342; or Zeenat Iqbal, Senior Attorney, Office of Aviation Enforcement and Proceedings, by email at *zeenat.iqbal@dot.gov,* or by telephone at 202–366–9893. Attendance is open to the public up to the room's capacity of 100 attendees. Since space is limited and access to the DOT headquarters building is controlled for security purposes, any member of the general public who plans to attend this meeting must notify the registration contact identified no later than Wednesday, January 2, 2019.

SUPPLEMENTARY INFORMATION:

Background

On May 24, 2012, the Department established an advisory committee on aviation consumer protection, known as the Advisory Committee on Aviation Consumer Protection, as mandated by section 411 of the FAA Modernization and Reform Act of 2012 (Pub. L. 112–95, 126 Stat. 11 (2012)) (2012 FAA Act) and the Federal Advisory Committee Act (FACA), as amended. The original Committee held nine meetings and examined a broad range of issues affecting consumers. The Committee has contributed significantly to the Department's aviation consumer protection program as it provides a forum for stakeholders, including representatives of airlines, airports and consumers, to discuss important consumer issues.

The statutory termination date for the Committee was originally established by the 2012 FAA Act as September 30, 2015, but has been extended several times, most recently by the FAA Reauthorization Act of 2018 (Pub. L. No: 115–254) (2018 FAA Act) to the current termination date of September 30, 2023.

The Department has updated the Committee's charter to clarify that the Committee's work should concern aviation consumer protection issues that fall within the current statutory authority of the Department and establish a subcommittee to be called the ''National In-Flight Sexual Misconduct Task Force.''

Appointment of New Members

The Secretary has appointed four new members to the Committee. The appointed members are: (1) Patricia Vercelli, General Counsel, Airlines for America, as the airline representative; (2) Mario Rodriguez, Executive Director of the Indianapolis Airport Authority, as the airport operator representative; (3) Pete K. Rahn, Maryland Secretary of Transportation, as the State or local government representative; and (4) Frances Smith, Adjunct Fellow, Competitive Enterprise Institute, as the consumer representative. Mr. Rahn will serve as the Chair of the Committee. The Department chose the Committee members based on two main criteria: (1) Representativeness (does the individual represent one of the four groups mentioned above); and (2) expertise (does the individual bring essential knowledge, expertise, or experience regarding consumer protection).

National In-Flight Sexual Misconduct Task Force Subcommittee

Recent reports of increased incidents of sexual assault and misconduct onboard aircraft have highlighted concerns regarding the response to such incidents. The Joint Explanatory Statement of the 2018 Consolidated Appropriations Act requested that the Department establish a Task Force to provide recommendations in this area. In addition, the Task Force is mandated by the 2018 FAA Act. Accordingly, a Task Force has been established as a subcommittee under the ACPAC to consider best practices and protocols for air carriers relating to training, reporting, and data collection of sexual misconduct by passengers onboard commercial aircraft. The Task Force will include representatives from the Department of Transportation, Department of Justice (including the Federal Bureau of Investigations, Office of Victims of Crime and Office on Violence Against Women), Department of Health and Human Services, national organizations which specialize in providing services to sexual assault

victims, national consumer protection organizations, national travel organizations, labor organizations representing flight attendants and pilots, State and local law enforcement agencies, airports, and air carriers. As a subcommittee, the Task Force will report its recommendations to the ACPAC for deliberation and not provide its recommendations directly to the Department. The Task Force's report of its findings and recommendations to the ACPAC will be released to the public.

ACPAC Administrative Matters; Upcoming Meeting; and Topics

The first meeting of the reestablished ACPAC will take place at the Department's headquarters in Washington, DC on January 16, 2019. During the first meeting, the Department will announce the members of the Task Force and there will be a discussion of the duties of the Task Force members. In addition, two other topics—the transparency of airline ancillary service fees and involuntary changes to itineraries—will be discussed. The Joint Explanatory Statement of the 2018 Consolidated Appropriations Act requests that the Department work in collaboration with industry, consumers and other stakeholders to establish guidelines on transparency of airline ancillary fees. In addition, the 2018 FAA Act mandates that the Department review and make recommendations with regard to air carriers' handling of involuntary changes to passengers' travel itineraries, and that the Department may consult with the Committee for this purpose. Accordingly, the Committee will discuss these issues during the meeting.

The Department's Office of Aviation Enforcement and Proceedings, within the Office of the General Counsel, will provide appropriate funding, logistics, administrative, and technical support for the Committee. The Department's subject matter experts will also provide support to the Committee.

Viewing Documents

You may view any documents mentioned in this preamble as being available in the docket at *http://www.regulations.gov.* After entering the docket number, click the link to ''Open Docket Folder'' and choose the document to review. If you do not have access to the internet, you may view the docket online by visiting the Docket Management Facility in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., E.T., Monday through Friday, except Federal holidays.

Dated: November 8, 2018.

Steven G. Bradbury,

General Counsel.

Office of Foreign Assets Control

Notice of OFAC Sanctions Action

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of this person are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: See **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: *OFAC:* Associate Director for Global Targeting, tel.: 202–622–2420; Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490; Assistant Director for Licensing, tel.: 202–622–2480; Assistant Director for Regulatory Affairs, tel. 202–622–4855; or the Department of the Treasury's Office of the General Counsel: Office of the Chief Counsel (Foreign Assets Control), tel.: 202–622–2410.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The Specially Designated Nationals and Blocked Persons List and additional information concerning OFAC sanctions programs are available on OFAC's website (*www.treasury.gov/ofac*).

Notice of OFAC Action(s)

On November 19, 2018, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following person is blocked under the relevant sanctions authority listed below.

Individual

1. BADI, Salah (a.k.a. BADI, Omal Salem Salah; a.k.a. BADI, Saladin; a.k.a. BADI, Salah Edine Omar; a.k.a. BADI, Salahdin; a.k.a. BADI, Salah-Eddin; a.k.a. BADI, Salahidin), Tripoli, Libya; DOB 23 May 1957; POB Misrata, Libya; nationality Libya; Gender Male (individual) [LIBYA3].

Designated pursuant to Section 1(a)(v) of Executive Order 13726 of April 19, 2016, ''Blocking Property and Suspending Entry Into the United States of Persons Contributing to the Situation in Libya'' (E.O. 13726) for being a leader of an entity that has, or whose members have, engaged in actions or policies that threaten the peace, security, or stability of Libya, including through the supply of arms or related materiel.

Dated: November 19, 2018.

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

Advisory Committee on Women Veterans, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act that the Advisory Committee on Women Veterans will meet on December 18–20, 2018, at VA Central Office, 810 Vermont Avenue NW, G.V. Sonny Montgomery Veterans Conference Room 230, Washington, DC 20420. The meetings will be held:

Date	Time
Tuesday, December 18, 2018.	8:30 a.m. to 4:00 p.m.
Wednesday, December 19, 2018.	8:30 a.m. to 2:15 p.m.
Thursday, December 20, 2018.	8:30 a.m. to 4:00 p.m.

The meetings are open to the public.

The purpose of the Committee is to advise the Secretary of Veterans Affairs regarding the needs of women Veterans with respect to health care, rehabilitation, compensation, outreach, and other programs and activities administered by VA designed to meet such needs. The Committee makes recommendations to the Secretary regarding such programs and activities.

The agenda will include updates from the Veterans Health Administration, the Veterans Benefits Administration, and Staff Offices, as well as briefings on other issues impacting women Veterans.

No time will be allocated at this meeting for receiving oral presentations from the public. Interested parties should provide written comments for review by the Committee to Ms. Shannon L. Middleton, VA Center for Women Veterans (00W), 810 Vermont Avenue NW, Washington, DC 20420, or email at *00W@mail.va.gov,* or fax to (202) 273–7092. Because the meeting is being held in a government building, a photo I.D. must be presented at the Guard's Desk as a part of the screening process. Due to an increase in security protocols, you should allow an additional 30 minutes before the meeting begins. Any member of the public who wishes to attend the meeting or wants additional information should contact Ms. Middleton at (202) 461–6193.

Dated: November 19, 2018.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

[FR Doc. 2018–25542 Filed 11–21–18; 8:45 am]

BILLING CODE P

DEPARTMENT OF VETERANS AFFAIRS

Advisory Committee on the Readjustment of Veterans; Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act that the Advisory Committee on the Readjustment of Veterans will have a closed meeting at the Department of Veterans Affairs Vet Center 721 at 9504 IH 35, North, San Antonio, Texas 78233. The meetings will be held on December 5 and 6, 2018. Sessions are open to the public, except when the Committee is conducting tours of VA facilities, participating in offsite events, participating in workgroup sessions, and conducting official Administrative business. Tours of the VA facilities are closed, to protect Veterans' privacy and personal information.

The purpose of the Committee is to advise the Department of Veterans Affairs (VA) regarding the provision by VA of benefits and services to assist Veterans in the readjustment to civilian life. In carrying out this duty, the Committee shall take into account the needs of Veterans who served in combat theaters of operation. The Committee assembles, reviews, and assesses information relating to the needs of Veterans readjusting to civilian life and the effectiveness of VA services in assisting Veterans in that readjustment.

On Wednesday, December 5, 2018, the Committee will hold a closed session at the San Antonio, TX Vet Center from 8:00 a.m. to 4:30 p.m., while members tour the facility, and meet with key Vet Center staff as well as a panel of individuals who use Vet Center services. The meeting will focus on Veteran experience, and members will solicit information from key staff from various VA entities across San Antonio, and have strategic discussion about what they learned from the interactions. Because the issues discussed will most likely include information learned during the tour and in conversation with service users, to protect their privacy the session will be closed.

On December 6, the Committee will convene an open session from 8:00 a.m. to 10:00 a.m., when they will receive an update from VA Readjustment Counseling Service and Mental Health leadership regarding collective efforts in suicide prevention, and then will engage in strategic discussions formulating conclusions and recommendations for the 20th annual report to Congress. The meeting will adjourn at 10:00 a.m.

This field visit is closed to the public in accordance with 5 U.S.C. 552b (c) (6). Exemption 6 permits the Committee to close a meeting that is likely to disclose information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy, which will most likely be the case throughout this field visit.

The agenda will include time for Executive Sessions, where the committee will focus on the annual operations plan for 2019/2020, and no time will be allotted for receiving oral comments from the public; however, the committee will accept written comments from interested parties on issues outlined in the meeting agenda or other issues regarding the readjustment of Veterans. Parties should contact Ms. Sherry Moravy, via email at *10RCSAction@va.gov,* or by mail at Department of Veterans Affairs, Readjustment Counseling Service (10RCS), 810 Vermont Avenue, Washington, DC 20420. Any member of the public seeking additional information should contact Ms. Moravy to the email address noted above.

Dated: November 19, 2018.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rules and interim final rule.

SUMMARY: This major final rule addresses changes to the Medicare physician fee schedule (PFS) and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule also finalizes policies included in the interim final rule with comment period in ''Medicare Program; CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstance Policy for the Transition Year'' that address the extreme and uncontrollable circumstances MIPS eligible clinicians faced as a result of widespread catastrophic events affecting a region or locale in CY 2017, such as Hurricanes Irma, Harvey and Maria. In addition, this final rule addresses a subset of the changes to the Medicare Shared Savings Program for Accountable Care Organizations (ACOs) proposed in the August 2018 proposed rule ''Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success''. This final rule also addresses certain other revisions designed to update program policies under the Shared Savings Program.

The interim final rule implements amendments made by the SUPPORT for Patients and Communities Act to the Medicare telehealth provisions in the Social Security Act and regarding permissible telehealth originating sites for purposes of treatment of a substance use disorder or a co-occurring mental health disorder for telehealth services furnished on or after July 1, 2019 to an individual with a substance use disorder diagnosis.

DATES: *Effective Dates:* These regulations are effective on January 1, 2019, except for the following:

- Revisions to §§ 414.1415(b)(2) and (3), and 414.1420(b), (c)(2), and (3), which are effective January 1, 2020; and
- Amendments to Part 425, which are effective on December 31, 2018.

Applicability Date: The following provisions related to Section II.I. of this final rule, Evaluation and Management Services, are applicable beginning January 1, 2021: Implementation of a blended payment rate for E/M visits levels 2–4; Payment to adjust the base E/M visit rate(s) upward to account for visit complexity associated with non-procedural specialty care and primary care; Payment to adjust the base visit rate(s) upward to account for the additional resource costs when practitioners need to spend significantly more time with particular patients; and Flexible documentation requirements related to Medical Decision Making, Time or Current E/M visit documentation framework. The amendment to the definition of ''low-volume criteria'' at § 414.1305 is applicable at the start of the first Merit-based Incentive Payment System (MIPS) determination period for CY 2018 MIPS performance period.

Comment date: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on December 31, 2018.

ADDRESSES: In commenting, please refer to file code CMS–1693–IFC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov*. Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address *only:* Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1693–IFC, P.O. Box 8010, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address *only:* Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1693–IFC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

Jamie Hermansen, (410) 786–2064, for any physician payment issues not identified below.

Lindsey Baldwin, (410) 786–1694, and Emily Yoder, (410) 786–1804, for issues related to evaluation and management (E/M) payment, communication technology-based services and telehealth services.

Lindsey Baldwin, (410) 786–1694, for issues related to sections 2001(a) and 2005 of the SUPPORT for Patients and Communities Act.

Kathy Bryant, (410) 786–3448, for issues related to global surgery data collection.

Isadora Gil, (410) 786–4532, for issues related to payment rates for nonexcepted items and services furnished by nonexcepted off-campus provider-based departments of a hospital, and work relative value units (RVUs).

Ann Marshall, (410) 786–3059, for issues related to E/M documentation guidelines.

Geri Mondowney, (410) 786–1172, for issues related to potentially misvalued services, geographic price cost indices (GPCIs), and malpractice RVUs.

Donta Henson, (410) 786–1947, for issues related to geographic price cost indices (GPCIs).

Tourette Jackson, (410) 786–4735, for issues related to malpractice RVUs.

Patrick Sartini, (410) 786–9252, for issues related to radiologist assistants.

Michael Soracoe, (410) 786–6312, for issues related to practice expense, work RVUs, impacts, and conversion factor.

Pamela West, (410) 786–2302, for issues related to therapy services.

Edmund Kasaitis, (410) 786–0477, for issues related to reduction of wholesale acquisition cost (WAC)-based payment.

Marcie O'Reilly, (410) 786–9764, for issues related to the Potential Model for Radiation Therapy.

Sarah Harding, (410) 786–4001, or Craig Dobyski, (410) 786–4584, for issues related to aggregate reporting of applicable information for clinical laboratory fee schedule.

Amy Gruber, (410) 786–1542, or Glenn McGuirk, (410) 786–5723, for issues related to the ambulance fee schedule.

Corinne Axelrod, (410) 786–5620, for issues related to care management services and communication technology-based services in Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs).

JoAnna Baldwin, (410) 786–7205, or Sarah Fulton, (410) 786–2749, for issues related to appropriate use criteria for advanced diagnostic imaging services.

Fiona Larbi, (410) 786–7224, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality Measures.

Matthew Edgar, (410) 786–0698, for issues related to the physician self-referral law.

Molly MacHarris, (410) 786–4461, for inquiries related to Merit-based Incentive Payment System (MIPS).

Benjamin Chin, (410) 786–0679, for inquiries related to Alternative Payment Models (APMs).

David Koppel, (303) 844–2883, or Elizabeth LeBreton (202) 615–3816 for issues related to the Medicaid Promoting Interoperability Program.

Elizabeth November, (410) 786–8084, for inquiries related to the Medicare Shared Savings Program [Pathways to Success].

Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

A. Purpose

This major final rule makes payment and policy changes under the Medicare PFS and implements certain provisions of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) and the SUPPORT for Patients and Communities Act (Pub. L. 115–271, October 24, 2018) related to Medicare Part B payment, and except as specified otherwise, applicable to services furnished in CY 2019. This final rule also revises certain policies under the Medicare Shared Savings Program.

1. Summary of the Major Provisions

The statute requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: Work; practice expense (PE); and malpractice (MP) expense. In addition, the statute requires that we establish by regulation each year's payment amounts for all physicians' services paid under the PFS, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas. In this major final rule, we establish RVUs for CY 2019 for the PFS, and other Medicare Part B payment policies, to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule includes discussions regarding:

- Potentially Misvalued Codes.
- Communication Technology-Based Services.
- Provisions Expanding Telehealth Services for the Treatment of Opioid Use Disorder and Other Substance Use Disorders under the SUPPORT Act.
- Valuation of New, Revised, and Misvalued Codes.
- Payment Rates under the PFS for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Provider-Based Departments of a Hospital.
- Evaluation & Management (E/M) Visits.

- Therapy Services.
- Part B Drugs: Application of an Add-on Percentage for Certain Wholesale Acquisition Cost (WAC)-based Payments.
- Potential Model for Radiation Therapy.
- Clinical Laboratory Fee Schedule.
- Ambulance Fee Schedule—Provisions in the Bipartisan Budget Act of 2018.
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs).
- Appropriate Use Criteria for Advanced Diagnostic Imaging Services.
- Medicaid Promoting Interoperability Program Requirements for Eligible Professionals.
- Medicare Shared Savings Program Quality Measures.
- Physician Self-Referral Law.
- Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes.
- CY 2019 Updates to the Quality Payment Program (including the extreme and uncontrollable circumstances MIPS eligible clinicians faced as a result of widespread catastrophic events affecting a region or locale in CY 2017).
- Comments in response to the Request for Information on Promoting Interoperability and Electronic Healthcare Information Exchange through Possible Revisions to the CMS Patient Health and Safety Requirements for Hospitals and Other Medicare- and Medicaid-Participating Providers and Suppliers.
- Comments in response to the Request for Information on Price Transparency: Improving Beneficiary Access to Provider and Supplier Charge Information.

This rule also finalizes certain provisions from the ''Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success'' proposed rule that appeared in the August 17, 2018 **Federal Register** (83 FR 41786). Under the Medicare Shared Savings Program, providers of services and suppliers that participate in an ACO continue to receive traditional Medicare fee-for-service (FFS) payments under Parts A and B, but the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements. ACOs participating under a two-sided shared savings and shared losses model of the program may also be responsible for repaying shared losses if the Parts A and B FFS expenditures for their assigned beneficiaries exceed the ACO's historical benchmark. The revised policies for ACOs participating in the Medicare Shared Savings Program will ensure continuity of program participation for ACOs whose agreement periods expire on December 31, 2018 by allowing these ACOs the opportunity to elect a voluntary 6-month extension of their current agreement periods; supporting coordination of care across settings and strengthening beneficiary engagement; providing relief for ACOs impacted by extreme and uncontrollable circumstance in performance year 2018 and subsequent years; and promoting interoperable electronic health record technology among ACO providers/suppliers. We plan to address the remaining proposals from the August 2018 proposed rule (83 FR 41786) in a forthcoming second final rule.

2. Summary of Costs and Benefits

We have determined that this major final rule is economically significant. For a detailed discussion of the economic impacts, see section VII. of this final rule.

B. Determination of Practice Expense (PE) Relative Value Units (RVUs)

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the Five-Year Review of Work Relative Value Units under the PFS and Proposed Changes to the Practice Expense Methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

Comment: Several commenters requested that CMS include pharmacists as active qualified health care providers for purposes of calculating physician PE direct costs. The commenters stated that pharmacists need to be included in the calculation of direct PE expenses as an element of the clinical labor variable relating to physicians' services. The commenter stated that pharmacists are key members of the healthcare team supporting the advent of digital medicine and telehealth services and suggested that pharmacists should be recognized as staff included in practice expense inputs.

Response: The direct PE input database contains the service-level costs in clinical labor based on the typical service furnished to Medicare beneficiaries. When these resource costs are typically incurred in furnishing services, we do not have any standing policies that would prohibit the inclusion of the costs in the direct PE input database used to develop PE RVUs for individual services, to the extent that inclusion of such costs would not lead to duplicative payments. Therefore, we welcome more detailed information regarding the typical clinical labor costs involving pharmacists for particular PFS services. We note, however, that in the case of many PFS services, especially care management services, certain elements of the services could be provided by clinicians other than the billing professionals, which could include services provided by pharmacists. As such, we encourage interested stakeholders to provide information through the RUC process or directly to us by February 10th prior to annual rulemaking about the inclusion of additional clinical labor costs for specific services described by HCPCS codes for which payment is made under the PFS, as opposed to clinical labor costs that may be typical only under certain circumstances.

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA's SMS. The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file called ''CY 2019 PFS Final Rule PE/HR'' on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

Comment: Several commenters recommended that it was time to consider a new nationwide all specialty PE/HR survey, given the amount of time that has passed since the last survey was conducted. The commenters stated that the practice of medicine has significantly and substantially evolved in the past decade and that many specialties have had extensive changes in physician employment models during that time. The commenters stated that continued use of the outdated PPIS survey leads to an inappropriate and inaccurate distortion of the PE RVUs for current practice.

Response: We have previously identified several concerns regarding the underlying data used in determining PE RVUs in the CY 2014 PFS final rule with comment period (78 FR 74246 through 74247). While we continue to believe that the PPIS survey data are the best data currently available, we continue to seek the best broad based, auditable, routinely updated source of information regarding PE costs. To that end, we have engaged a contractor, the RAND Corporation, to explore the feasibility of updating the data used in the development of PE RVUs.

Comment: One commenter requested that CMS consider studying indirect PE associated with emergency departments including Emergency Medical Treatment & Labor Act (EMTALA)-mandated uncompensated care. The commenter stated that emergency physicians are not able to schedule their patients and therefore cannot maximize the use of staff and resources, and that there are costs associated with being open and having to pay shift differentials over nights, weekends, and holidays.

Response: We will take the information under consideration for future rulemaking.

For CY 2019, we have incorporated the available utilization data for two new specialties, each of which became a recognized Medicare specialty during 2017. These specialties are Hospitalists and Advanced Heart Failure and Transplant Cardiology. We proposed to use proxy PE/HR values for these new specialties, as there are no PPIS data for these specialties, by crosswalking the PE/HR as follows from specialties that furnish similar services in the Medicare claims data:

- Hospitalists from Emergency Medicine, and
- Advanced Heart Failure and Transplant Cardiology from Cardiology.

These updates are reflected in the ''CY 2019 PFS Final Rule PE/HR'' file available on the CMS website under the supporting data files for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

The following is a summary of the public comments we received on our proposal to use proxy PE/HR values for these two new specialties.

Comment: One commenter stated that they supported the CMS proposal to crosswalk the Advanced Heart Failure and Transplant specialty to the cardiology PPIS data.

Response: We appreciate the support from the commenter for our proposal.

Comment: A few commenters wrote to detail their concerns with the current PE/HR assigned to home PT/INR monitoring services. Commenters stated that these services are provided by entities that are enrolled in Medicare as independent testing facilities because there is no other specialty category that currently describes these suppliers; however, home PT/INR monitoring services are fundamentally different in nature. Commenters stated that home PT/INR monitoring services tend to be

more therapeutic than diagnostic in nature, typically utilize different staffing types, and have a different ratio of direct to indirect costs. The commenters encouraged CMS to consider home PT/INR monitoring as a distinct specialty from independent testing facilities and to survey suppliers to determine accurate indirect cost factors for these services, while using either the Pathology or All Physicians specialty as a proxy for PE/HR in the meantime. One commenter suggested that CMS should consider holding payments harmless for home PT/INR monitoring services while additional analysis is completed.

Response: We welcome suggestions from interested parties regarding new indirect PE surveys and the use of PE/HR proxies that could be considered for future rulemaking. Interested parties may wish to submit a physician specialty designation request per the instructions found in Pub. 100–04, Medicare Claims Processing Manual, Chapter 26, Section 10.8 (available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c26.pdf*). This section of the Medicare Claims Processing Manual includes the criteria that CMS uses to evaluate physician specialty designation requests.

After consideration of the public comments, we are finalizing our proposal to use proxy PE/HR values for Hospitalists and Advanced Heart Failure and Transplant Cardiology as described above.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion (see section II.B.2.b of this final rule). The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).
- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.
- Next, we incorporated the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: Facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

Comment: One commenter stated that it was not clear why the PE change would differ so greatly between the office and facility settings for CPT code 37227 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed). The commenter stated that the facility PE RVU for this CPT code was proposed to decrease by 4.8 percent while the non-facility PE RVU was proposed to decrease by 10.6 percent, and the commenter could not understand how these payment rates were determined.

Response: As detailed above, the methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. It is not unusual for facility and nonfacility RVUs for a CPT code to change at different rates from year to year, as the direct costs associated with the facility and nonfacility settings are typically distinct from one another. For a more detailed description of the PE RVU methodology, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69630 through 69643) and the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746).

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: A professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be

furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file called ''Calculation of PE RVUs under Methodology for Selected Codes'' which is available on our website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* This file contains a table that illustrates the calculation of PE RVUs as described in this final rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to a RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we instead use the expected specialty that we identify on a list developed based on medical review and input from expert stakeholders. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other stakeholders on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, ''always therapy'' services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 59283) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

For CY 2019, we proposed to add 28 additional codes that we identified as low volume services to the list of codes for which we assign the expected specialty. Based on our own medical review and input from the RUC and from specialty societies, we proposed to assign the expected specialty for each code as indicated in Table 1. For each of these codes, only the professional component (reported with the –26 modifier) is nationally priced. The global and technical components are priced by the Medicare Administrative Contractors (MACs) which establish RVUs and payment amounts for these services. The list of codes that we proposed to add is displayed in Table 1.

TABLE 1—NEW ADDITIONS TO EXPECTED SPECIALTY LIST FOR LOW VOLUME SERVICES

CPT code	Modifier	Short descriptor	Expected specialty	2017 utilization
70557	26	Mri brain w/o dye	Diagnostic Radiology	126
70558	26	Mri brain w/dye	Diagnostic Radiology	32
74235	26	Remove esophagus obstruction	Gastroenterology	10
74301	26	X-rays at surgery add-on	Diagnostic Radiology	73
74355	26	X-ray guide intestinal tube	Diagnostic Radiology	11
74445	26	X-ray exam of penis	Urology	26
74742	26	X-ray fallopian tube	Diagnostic Radiology	5
74775	26	X-ray exam of perineum	Diagnostic Radiology	80
75801	26	Lymph vessel x-ray arm/leg	Diagnostic Radiology	114
75803	26	Lymph vessel x-ray arms/leg	Diagnostic Radiology	41
75805	26	Lymph vessel x-ray trunk	Diagnostic Radiology	50
75810	26	Vein x-ray spleen/liver	Diagnostic Radiology	46

TABLE 1—NEW ADDITIONS TO EXPECTED SPECIALTY LIST FOR LOW VOLUME SERVICES—Continued

CPT code	Modifier	Short descriptor	Expected specialty	2017 utilization
76941	26	Echo guide for transfusion	Obstetrics/Gynecology	15
76945	26	Echo guide villus sampling	Obstetrics/Gynecology	31
76975	26	Gi endoscopic ultrasound	Gastroenterology	49
78282	26	Gi protein loss exam	Diagnostic Radiology	8
79300	26	Nuclr rx interstit colloid	Diagnostic Radiology	2
86327	26	Immunoelectrophoresis assay	Pathology	24
87164	26	Dark field examination	Pathology	30
88371	26	Protein western blot tissue	Pathology	2
93532	26	R & l heart cath congenital	Cardiology	28
93533	26	R & l heart cath congenital	Cardiology	36
93561	26	Cardiac output measurement	Cardiology	28
93562	26	Card output measure subsq	Cardiology	38
93616	26	Esophageal recording	Cardiology	38
93624	26	Electrophysiologic study	Cardiology	51
95966	26	Meg evoked single	Neurology	72
95967	26	Meg evoked each addl	Neurology	61

The complete list of expected specialty assignments for individual low volume services, including the assignments for the codes identified in Table 1, is available on our website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

The following is a summary of the public comments we received on our proposal to update the list of expected specialty assignments for low volume services.

Comment: Several commenters supported the continued use of service-level overrides for low volume codes, and stated that they agreed with the addition of the proposed 28 codes to the list of expected specialties.

Response: We appreciate the support from the commenters.

Comment: Several commenters stated that CPT code 22857 (Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), single interspace, lumbar) was missing from the proposed list. These commenters requested that CMS include CPT code 22857 in the low utilization category and permanently assign it to the orthopaedic surgery specialty to maintain payment stability and minimize annual fluctuations.

Response: We agree with the commenters that CPT code 22857 qualifies as a low volume code, with an annual Medicare utilization of roughly 20 services. We agree with the commenters that assigning this code to the orthopaedic surgery specialty will help to maintain payment stability, and we are finalizing the addition of CPT code 22857 to the low volume services list.

Comment: One commenter stated that several of the proposed low volume services would be more accurately assigned to different expected specialties based on their practice patterns. The commenter stated that CPT codes 70557 and 70558 are intraoperative exams and are most often performed by neurosurgeons and that CPT code 74235 is a diagnostic radiology code rather than a gastroenterology code. The commenter stated that CPT code 75810 should be assigned to interventional radiology rather than diagnostic radiology, and that CPT codes 78282 and 79300 should be assigned to nuclear medicine rather than diagnostic radiology.

Response: We agree that these codes would be more accurately assigned to the expected specialties described by the commenter based on an examination of the claims data. We are finalizing changes in expected specialty to these six codes as described by the commenter.

Comment: One commenter stated that there are four codes that are still not included in the proposed CY 2019 low volume override list and recommended that the following low volume procedures be added to the override list with the indicated specialty assignment:

- Cardiac Surgery: CPT code 35812, and
- Thoracic Surgery: CPT codes 32654, 33025 and 33251

Response: We agree with the inclusion of CPT codes 32654 and 33251. These are services with very low annual utilization, and we are finalizing their addition to the low volume services list with the expected specialty as described by the commenter. We note that CPT code 33251 is already on the low volume services list with an expected specialty of Cardiac Surgery; we are finalizing a change to the Thoracic Surgery specialty as requested by the commenter. We are not finalizing the addition of CPT code 35812 to the list, as it does not appear to be a current CPT code. We are also not finalizing the addition of CPT code 33025 to the list, as the code had a utilization of more than 5,000 services in the most recent year of claims data, and this would not qualify as a low volume service under the criteria that we have previously finalized through rulemaking.

Comment: One commenter stated that the appropriate low volume overrides were not applied to a series of congenital/pediatric cardiac surgery codes. The commenter stated that each of these operations can only be performed by congenital heart surgeons classified as either cardiac or thoracic surgeons, and that they believe the malpractice RVUs had been improperly decreased as a result of the low volume service overrides not being applied.

Response: Each of the CPT codes identified by the commenter was already present on the low volume services list with an expected specialty assignment of either Cardiac Surgery or Thoracic Surgery. The shifts in malpractice RVUs identified by the commenter were a result of proposed policies associated with E/M visits. We refer readers to section II.I. of this final rule for additional details on these policies.

After consideration of the public comments, we are finalizing the addition of the proposed 28 codes to the low volume services list, with the expected specialty as proposed except where modified in response to comments. We are also finalizing the addition of CPT codes 32654 and 33251 to the list with an expected specialty of Thoracic Surgery as detailed previously.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: Indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: Indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(*Note:* For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file called ''Calculation of PE RVUs under Methodology for Selected Codes'', the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

The following is a summary of the public comments we received on the indirect practice cost indices.

Comment: Many commenters stated that they were opposed to the proposed significant shifts in the indirect practice cost indices at the specialty level. Commenters stated that the creation of a separate PE/HR rate for the E/M visits resulted in large unintended effects on specialties given the way that indirect PE is allocated, and that this was inconsistent with CMS' intent to maintain stability in payment. One commenter stated that the proposal to create a separate PE/HR rate for the E/M visits was based on statistically unsound methodology, had opaque analytics, and was not resource-based. Many commenters stated that the effects of the proposed changes to the indirect practice cost indices had not been sufficiently detailed in the proposed rule to allow for proper feedback from commenters. Commenters expressed concern that a reduction in payment due to shifts in the indirect PE allocation could affect patient access to critical services, such as but not limited to CPT codes 96360 (intravenous infusion, hydration; initial, 31 minutes to 1 hour), 96372 (therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular), 96374 (therapeutic, prophylactic or diagnostic injection IV push, single or initial substance/drug), 96375 (therapeutic, prophylactic or diagnostic injection; each additional sequential IV push of a new substance/drug), and HCPCS code G0416 (Surgical pathology, gross and microscopic examinations, for prostate needle biopsy, any method). A few commenters stated that the proposed indirect practice cost indices ignored statutory requirements that payments under the PFS must be resource based and failed to meet the transparency requirements of the Protecting Access to Medicare Act of 2014 (PAMA). Commenters urged CMS not to finalize the proposed changes to the indirect practice cost indices.

Response: The proposed changes in the indirect practice cost indices identified by the commenters were a result of proposed policies associated with E/M visits, and specifically the proposal to establish a separate specialty for E/M visits. We refer readers to section II.I. of this final rule for additional discussion of these policies.

Comment: One commenter stated that the level of detail in the CY 2019 PFS proposed rule was insufficient to comment on several aspects of the proposed changes in coding and payment related to office/outpatient E/M visits, which was a departure from past rules. The commenter specifically stated that there was insufficient information to model how the proposed changes in the office/outpatient E/M visit codes affected the indirect practice cost indices for all other services. Similarly, the commenter suggested that not enough information was provided to simulate the PFS ratesetting in a way that would isolate the impact of the proposed multiple procedure payment reduction (MPPR), in the proposed rates and associated estimates of specialty-level impact. The commenter requested that CMS provide additional technical information and files going forward to enable the commenter to better model proposed and future policies.

Response: We agree with commenters regarding the importance of transparency and the need for detailed

information about proposed policies so that public commenters can provide a full and informed response. We also understand that there is merit to providing as much information as possible that would allow for complete reproduction of our proposed and final ratesetting methodologies. We also understand that the proposals related to office/outpatient E/M visits are of great importance to the medical community and represent a significant portion of spending under the PFS. We do not agree with the commenter that the level of detail provided in the proposed rule, including the data provided as publicly available download files, was insufficient for public comment due to the extensive documentation associated with the E/M policy proposals, or that it represented a departure from past practice. Over several years, we have invested significant resources in improving the transparency of the data we use in developing proposed and final PFS rates. We intend to maintain a focus on increasing transparency, and believe the commenters' concerns will help us understand the kind of information that can be most helpful to stakeholders interested in the underlying data sets. While we are not finalizing the MPPR element of the E/M proposal, we appreciate the commenter's interest in the use of code-level assumptions regarding proposed payment adjustments that are reflected in the discounts in the setup file, as discussed in section II.B.2.(5)(e) of this final rule.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the proposed aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS budget neutrality. (See ''Specialties excluded from ratesetting calculation'' later in this final rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

Comment: We received many comments regarding the ongoing decrease in the technical component of CPT code 76881 (Ultrasound, complete joint (*i.e.,* joint space and peri-articular soft tissue structures) real-time with image documentation). Commenters stated that this procedure is essential for making appropriate diagnosis and managing patients with various rheumatologic conditions and musculoskeletal disorders. Commenters stated that cutting the reimbursement for the code would not only result in poor patient care but also increase total costs through the use of more expensive MRI procedures. Commenters also disagreed with the RUC's recommended direct PE inputs for CPT code 76881 from the CY 2018 rule cycle, citing concerns with the RUC's use of workforce data, and urged CMS not to make further reductions in payment.

Response: The comments regarding CPT code 76881 are out of scope, as we did not make any proposals involving this code for CY 2019. The reductions in payment described by the commenters for CPT code 76881 were finalized as part of the CY 2018 PFS final rule (82 FR 53058–53059), and are continuing to be phased in over time as part of the transition policy described above. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

• *Specialties excluded from ratesetting calculation:* For the purposes of calculating the PE RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 2.

TABLE 2—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty code	Specialty description
49	Ambulatory surgical center.
50	Nurse practitioner.
51	Medical supply company with certified orthotist.
52	Medical supply company with certified prosthetist.
53	Medical supply company with certified prosthetist-orthotist.
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist.
56	Individual certified prosthetist.
57	Individual certified prosthetist-orthotist.
58	Medical supply company with registered pharmacist.
59	Ambulance service supplier, *e.g.,* private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies.
61	Voluntary health or charitable agencies.
73	Mass immunization roster biller.
74	Radiation therapy centers.
87	All other suppliers (*e.g.,* drug and department stores).
88	Unknown supplier/provider specialty.

TABLE 2—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION—Continued

Specialty code	Specialty description
89	Certified clinical nurse specialist.
96	Optician.
97	Physician assistant.
A0	Hospital.
A1	SNF.
A2	Intermediate care nursing facility.
A3	Nursing facility, other.
A4	HHA.
A5	Pharmacy.
A6	Medical supply company with respiratory therapist.
A7	Department store.
B2	Pedorthic personnel.
B3	Medical supply company with pedorthic personnel.

• *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

• *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

• *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

• *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 3 details the manner in which the modifiers are applied.

TABLE 3—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES

Modifier	Description	Volume adjustment	Time adjustment
80, 81, 82	Assistant at Surgery	16%	Intraoperative portion.
AS	Assistant at Surgery—Physician Assistant.	14% (85% * 16%)	Intraoperative portion.
50 or LT and RT	Bilateral Surgery	150%	150% of work time.
51	Multiple Procedure	50%	Intraoperative portion.
52	Reduced Services	50%	50%.
53	Discontinued Procedure	50%	50%.
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims.	Preoperative + Intraoperative portion.
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims.	Postoperative portion.
62	Co-surgeons	62.5%	50%.
66	Team Surgeons	33%	33%.

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

• *Work RVUs:* The setup file contains the work RVUs from this final rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

(1/(minutes per year * usage)) * price * ((interest rate/(1 − (1/((1 + interest rate) ^ life of equipment)))) + maintenance)

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.

usage = variable, see discussion in this final rule.

price = price of the particular piece of equipment.

life of equipment = useful life of the particular piece of equipment.

maintenance = factor for maintenance; 0.05.

interest rate = variable, see discussion in this final rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Stakeholders have often suggested that particular equipment items are used less frequently than 50 percent of the time in the typical setting and that CMS should reduce the equipment utilization rate based on these recommendations. We appreciate and share stakeholders' interest in using the most accurate assumption regarding the equipment utilization rate for particular equipment items. However, we believe that absent robust, objective, auditable data regarding the use of particular items, the 50 percent assumption is the most appropriate within the relative value system. We welcome the submission of data that would support an alternative rate.

Comment: A few commenters stated that equipment time associated with payment for diagnostic imaging services is not aligned with practice. The commenters disagreed with the CMS statement that certain highly technical equipment is less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff, and stated that the CMS analysis of equipment time is not accurate based on their experience with imaging centers. Commenters stated that there are non-imaging functions that are required by CMS for payment, such as documentation requirements and the need for enrollment in Medicare by professionals, which add to their administrative burden and increase costs yet are underrepresented in the PE methodology. Commenters stated that they disagreed with how CMS defined room time as inconsistent with how imaging centers actually function, and indicated a preference for assigning equipment time based on the total technologist time.

Response: We disagree with the commenters regarding the equipment time assigned to highly technical equipment. We continue to believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure and are typically available for other patients even when one member of clinical staff may be occupied with a preservice or postservice task related to the procedure. For a more detailed description of this topic, we refer readers to the CY 2015 PFS final rule with comment period (79 FR 67639 through 67640).

Maintenance: This factor for maintenance was finalized in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We do not believe that voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we do not believe that we have sufficient information at present to propose a variable maintenance factor for equipment cost per minute pricing. We continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

Comment: A commenter stated that they continue to believe that maintenance costs for imaging equipment are much higher than the current 5 percent assumption. The commenter stated that they were hopeful that the market-based research into equipment and supply pricing would result in a broad range, systematic data collection methodology that could be applied to collecting information on equipment maintenance costs.

Response: As detailed above, we continue to believe that the current 5 percent maintenance factor likely understates the true cost of maintaining some equipment and overstates the maintenance costs for other equipment. We continue at this time to lack publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining maintenance factor. With regards to the market-based study, the StrategyGen contractors were tasked with updating the commercial pricing of supplies and equipment, and did not include an investigation of equipment maintenance rates as part of their research.

Interest Rate: In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). We did not propose any changes to these interest rates for CY 2019. The interest rates are listed in Table 4.

TABLE 4—SBA MAXIMUM INTEREST RATES

Price	Useful life (years)	Interest rate (%)
<$25K	<7	7.50
$25K to $50K	<7	6.50
>$50K	<7	5.50
<$25K	7+	8.00
$25K to $50K	7+	7.00
>$50K	7+	6.00

3. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2019 direct PE input database, which is available on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640–67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database

instead of only including the number of clinical labor minutes for the preservice, service, and postservice periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for ''Availability of prior images confirmed'', 2 minutes for ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'', 2 minutes for ''Review examination with interpreting MD'', and 1 minute for ''Exam documents scanned into PACS.'' Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.'' In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, ''Technologist QCs images in PACS, checking for all images, reformats, and dose page.'' These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values.

We also finalized standard times for clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902) at 4 minutes for ''Accession specimen/prepare for examination'', 0.5 minutes for ''Assemble and deliver slides with paperwork to pathologists'', 0.5 minutes for ''Assemble other light microscopy slides, open nerve biopsy slides, and clinical history, and present to pathologist to prepare clinical pathologic interpretation'', 1 minute for ''Clean room/equipment following procedure'', 1 minute for ''Dispose of remaining specimens, spent chemicals/other consumables, and hazardous waste'', and 1 minute for ''Prepare, pack and transport specimens and records for in-house storage and external storage (where applicable).'' We do not believe these activities would be dependent on number of blocks or batch size, and we believe that these values accurately reflect the typical time it takes to perform these clinical labor tasks.

Historically, the RUC has submitted a ''PE worksheet'' that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC's development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC's use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did for CY 2018, to facilitate rulemaking for CY 2019, we are continuing to display two versions of the Labor Task Detail public use file: one version with the old listing of clinical labor tasks, and one with the same tasks cross-walked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the ''Prepare room, equipment and supplies'' (CA013) clinical labor activity were split into 2 minutes for the ''Prepare room, equipment and supplies'' activity and 1 minute for the ''Confirm order, protocol exam'' (CA014) activity. These RUC-reviewed codes do not currently have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets.

As a result, we proposed to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity wherever we observed this pattern in the RUC-recommended direct PE inputs. If we had received RUC recommendations for codes that currently include clinical labor time for the ''Confirm order, protocol exam'' clinical labor task, we would have left the RUC-recommended clinical labor times unchanged, but there were no such codes reviewed for CY 2019. We note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being used in the calculation of PE RVUs.

The following is a summary of the public comments we received on our proposal to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity wherever we observed the aforementioned pattern in the RUC-recommended direct PE inputs.

Comment: Several commenters supported CMS' proposal and requested that these clinical labor refinements should be finalized wherever the refinement had been proposed. These commenters noted that there was no change in the total clinical labor direct costs in these situations and urged CMS to finalize the proposal.

Response: We appreciate the support for the proposal from the commenters.

Comment: Other commenters disagreed with the proposal. Commenters stated that the standard clinical labor time for the CA013 ''Prepare room, equipment and supplies'' activity has always been 2 minutes, and that the occasional assignment of additional clinical labor time in individual procedures has not changed this standard.

Response: We agree with the commenters that the standard clinical labor time for the CA013 activity code is 2 minutes. We noted in the proposed rule that 3 minutes has often traditionally been assigned for this clinical labor activity, and our proposal was intended to reflect this common practice pattern. In our table of direct PE refinements, we listed many of these clinical labor refinements using the refinement code ''L1: Refined time to standard for this clinical labor task.'' This was the incorrect refinement code to use in these situations, and we acknowledge that this was a technical error. The direct PE refinements would have more accurately employed the general refinement code ''G1: See preamble text'' instead. We wish to clarify that although we agree that the standard clinical labor time for the CA013 activity is 2 minutes, we continue to believe that 2 minutes would not be typical for many of the codes currently under discussion.

Comment: Commenters explained that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes. In the old version of the PE worksheet, there was a clinical labor task named ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist.'' Commenters stated that this clinical labor task was split into two of the new clinical labor activity codes: CA007 (''Review patient clinical extant information and questionnaire'') in the preservice period, and CA014 (''Confirm order, protocol exam'') in the service period. Commenters stated that the same clinical labor from the old PE worksheet is now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. The commenters stated that they recognized that the proposal had no effect on the total clinical labor direct costs, but urged CMS not to finalize anyway due to concerns over inaccuracy and long term effects on the direct practice expense inputs across the PFS.

Response: We agree with the commenters that in situations where a CPT code under review had the old clinical labor task ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'' on a prior version of the PE worksheet, and where that old clinical labor task was divided into the new CA007 and CA014 activity codes as described by the commenters, we will not finalize our proposed refinements to maintain 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity, as we agree that the old clinical labor task is adequately accounted for by being divided into the new activity codes. In these cases, we will finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code.

However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include the old clinical labor task ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'' on a prior version of the PE worksheet. We also noted that several of the reviewed codes that contained the CA014 clinical labor activity code for ''Confirm order, protocol exam'' did not contain any clinical labor for the CA007 activity (''Review patient clinical extant information and questionnaire''). In these situations, we believe that it is more accurate to finalize our direct PE refinements to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity as proposed, since the rationale provided by the commenters does not appear to be the case. These codes do not appear to be an instance where the old clinical labor task was split into two new clinical labor activities. We do not understand how time assigned to an old clinical labor task could be divided between the CA007 and CA014 activity codes, as the commenters suggested, in situations where the code under review does not contain any clinical labor for the CA007 activity. We continue to believe that in these cases the 3 total minutes of clinical staff time would be more accurately described by the CA013 ''Prepare room, equipment and supplies'' activity code, as these codes do not currently have clinical labor time assigned for the CA014 ''Confirm order, protocol exam'' clinical labor activity.

After consideration of the public comments, we are finalizing our proposal for the reviewed codes that did not include the old clinical labor task described above and do not contain any clinical labor for the CA007 clinical labor activity. We are therefore finalizing our proposal for CPT codes 27369, 38792, 76870, 77012, 77021, 92273, and 92274. We are not finalizing our proposal for the reviewed codes where we were able to determine that the old clinical labor task had been divided into the CA007 and CA014 activity codes as described by the commenters. We are therefore finalizing the RUC-recommended CA013 and CA014 clinical labor for CPT codes 76978, 76981, and 76982.

b. Equipment Recommendations for Scope Systems

During our routine reviews of direct PE input recommendations, we have regularly found unexplained inconsistencies involving the use of scopes and the video systems associated with them. Some of the scopes include video systems bundled into the equipment item, some of them include scope accessories as part of their price, and some of them are standalone scopes with no other equipment included. It is not always clear which equipment items related to scopes fall into which of these categories. We have also frequently found anomalies in the equipment recommendations, with equipment items that consist of a scope and video system bundle recommended, along with a separate scope video system. Based on our review, the variations do not appear to be consistent with the different code descriptions.

To promote appropriate relativity among the services and facilitate the transparency of our review process, during the review of the recommended direct PE inputs for the CY 2017 PFS proposed rule, we developed a structure that separates the scope, the associated video system, and any scope accessories that might be typical as distinct equipment items for each code. Under this approach, we proposed standalone prices for each scope, and separate prices for the video systems and accessories that are used with scopes.

(1) Scope Equipment

Beginning in the CY 2017 proposed rule (81 FR 46176 through 46177), we proposed standardizing refinements to the way scopes have been defined in the direct PE input database. We believe that there are four general types of scopes: Non-video scopes; flexible

scopes; semi-rigid scopes, and rigid scopes. Flexible scopes, semi-rigid scopes, and rigid scopes would typically be paired with one of the scope video systems, while the non-video scopes would not. The flexible scopes can be further divided into diagnostic (or non-channeled) and therapeutic (or channeled) scopes. We proposed to identify for each anatomical application: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. We proposed to classify the existing scopes in our direct PE database under this classification system, to improve the transparency of our review process and improve appropriate relativity among the services. We planned to propose input prices for these equipment items through future rulemaking.

We proposed these changes only for the reviewed codes for CY 2017 that made use of scopes, along with updated prices for the equipment items related to scopes utilized by these services. We did not propose to apply these policies to codes with inputs reviewed prior to CY 2017. We also solicited comment on this separate pricing structure for scopes, scope video systems, and scope accessories, which we could consider proposing to apply to other codes in future rulemaking. We did not finalize price increases for a series of other scopes and scope accessories, as the invoices submitted for these components indicated that they are different forms of equipment with different product IDs and different prices. We did not receive any data to indicate that the equipment on the newly submitted invoices was more typical in its use than the equipment that we were currently using for pricing.

We did not make further changes to existing scope equipment in CY 2017 to allow the RUC's PE Subcommittee the opportunity to provide feedback. However, we believed there was some miscommunication on this point, as the RUC's PE Subcommittee workgroup that was created to address scope systems stated that no further action was required following the finalization of our proposal. Therefore, we made further proposals in CY 2018 (82 FR 33961 through 33962) to continue clarifying scope equipment inputs, and sought comments regarding the new set of scope proposals. We considered creating a single scope equipment code for each of the five categories detailed in this rule: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. Under the current classification system, there are many different scopes in each category depending on the medical specialty furnishing the service and the part of the body affected. We stated our belief that the variation between these scopes was not significant enough to warrant maintaining these distinctions, and we believed that creating and pricing a single scope equipment code for each category would help provide additional clarity. We sought public comment on the merits of this potential scope organization, as well as any pricing information regarding these five new scope categories.

After considering the comments on the CY 2018 PFS proposed rule, we did not finalize our proposal to create and price a single scope equipment code for each of the five categories previously identified. Instead, we supported the recommendation from the commenters to create scope equipment codes on a per-specialty basis for six categories of scopes as applicable, including the addition of a new sixth category of multi-channeled flexible video scopes. Our goal is to create an administratively simple scheme that will be easier to maintain and help to reduce administrative burden. We look forward to receiving detailed recommendations from expert stakeholders regarding the scope equipment items that would be typically required for each scope category, as well as the proper pricing for each scope.

(2) Scope Video System

We proposed in the CY 2017 PFS proposed rule (81 FR 46176 through 46177) to define the scope video system as including: (1) A monitor; (2) a processor; (3) a form of digital capture; (4) a cart; and (5) a printer. We believe that these equipment components represent the typical case for a scope video system. Our model for this system was the ''video system, endoscopy (processor, digital capture, monitor, printer, cart)'' equipment item (ES031), which we proposed to re-price as part of this separate pricing approach. We obtained current pricing invoices for the endoscopy video system as part of our investigation of these issues involving scopes, which we proposed to use for this re-pricing. In response to comments, we finalized the addition of a digital capture device to the endoscopy video system (ES031) in the CY 2017 PFS final rule (81 FR 80188). We finalized our proposal to price the system at $33,391, based on component prices of $9,000 for the processor, $18,346 for the digital capture device, $2,000 for the monitor, $2,295 for the printer, and $1,750 for the cart. In the CY 2018 PFS final rule (82 FR 52991 through 52993), we outlined, but did not finalize, a proposal to add an LED light source into the cost of the scope video system (ES031), which would remove the need for a separate light source in these procedures. We also described a proposal to increase the price of the scope video system by $1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.). With the addition of the LED light (equipment code EQ382 at a price of $1,915), the updated total price of the scope video system would be set at $36,306. We did not finalize this updated pricing to the scope video system in CY 2018, and indicated our intention to address these changes in CY 2019 to incorporate feedback from expert stakeholders.

(3) Scope Accessories

We understand that there may be other accessories associated with the use of scopes. We finalized a proposal in the CY 2017 PFS final rule (81 FR 80188) to separately price any scope accessories outside the use of the scope video system, and individually evaluate their inclusion or exclusion as direct PE inputs for particular codes as usual under our current policy based on whether they are typically used in furnishing the services described by the particular codes.

(4) Scope Proposals for CY 2019

We understand that the RUC has convened a Scope Equipment Reorganization Workgroup that will be incorporating feedback from expert stakeholders with the intention of making recommendations to us on scope organization and scope pricing. Since the workgroup was not convened in time to submit recommendations for the CY 2019 PFS rulemaking cycle, we proposed to delay proposals for any further changes to scope equipment until CY 2020 so that we can incorporate the feedback from the aforementioned workgroup. However, we proposed to update the price of the scope video system (ES031) from its current price of $33,391 to a price of $36,306 to reflect the addition of the LED light and miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories, as we explained in detail in the CY 2018 PFS final rule (82 FR 52992 through 52993). We also proposed to update the name of the ES031

equipment item from ''video system, endoscopy (processor, digital capture, monitor, printer, cart)'' to ''scope video system (monitor, processor, digital capture, cart, printer, LED light)'' to reflect the fact that the use of the ES031 scope video system is not limited to endoscopy procedures.

The following is a summary of the public comments we received on our proposals involving scopes and scope systems.

Comment: Several commenters supported the decision to delay proposals for any further changes to scope equipment until CY 2020 in order to incorporate the feedback from the RUC's Scope Equipment Reorganization Workgroup. One commenter thanked CMS for adding a scope category for multi-channeled flexible video scopes. A different commenter supported the proposal to increase the price of the scope video system (ES03l) from its current price of $33,391 to a price of $36,306 and also supported the proposed update to the name of the ES03l equipment item since the use of the scope video system is not limited to endoscopy procedures.

Response: We appreciate the support for our proposals from the commenters.

Comment: One commenter stated that they were concerned that the proposed pricing for both the scope video system (ES03l) and the stroboscopy system (ES065) are less than the true cost of the equipment items, and therefore do not accurately reimburse physicians for their direct overhead costs. The commenter stated that they had supplied more recent invoices for these equipment items, which should be taken into consideration for pricing, and reiterated their disagreement with the CMS proposal from the previous calendar year to create single scope equipment categories for all specialties, as scope equipment is not always comparable across specialties. A different commenter supplied invoices for several other scope equipment items and requested that CMS update the prices for these equipment codes and that the new pricing take effect for CY 2019.

Response: We continue to believe that any further changes to scope equipment, including invoice submissions to update scope pricing, should be delayed until CY 2020 so that we can incorporate the feedback from the RUC's Scope Equipment Reorganization Workgroup.

After consideration of the public comments, we are finalizing our scope proposals for CY 2019 without refinement.

c. Balloon Sinus Surgery Kit (SA106) Comment Solicitation

Several stakeholders contacted CMS with regard to the use of the kit, sinus surgery, balloon (maxillary, frontal, or sphenoid) (SA106) supply in CPT codes 31295 (Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (*e.g.,* balloon dilation), transnasal or via canine fossa), 31296 (Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (*e.g.,* balloon dilation)), and 31297 (Nasal/sinus endoscopy, surgical; with dilation of sphenoid sinus ostium (*e.g.,* balloon dilation)). The stakeholders stated that the price of the SA106 supply (currently $2,599.86) had decreased significantly since it was priced through rulemaking for CY 2011 (75 FR 73351 through 75532), and that the Medicare payment for these three CPT codes using the supply no longer seemed to be in proportion to what the kits cost. They also indicated that the same catheter could be used to treat multiple sinuses rather than being a disposable one-time use supply. The stakeholders stated that marketing firms and sales representatives are advertising these CPT codes as a method for generating additional profits due to the payment for the procedures exceeding the resources typically needed to furnish the services, and requested that CMS investigate the use of the SA106 supply in these codes.

When CPT codes 31295 through 31297 were initially reviewed during the CY 2011 and CY 2012 PFS rulemaking cycles (75 FR 73251, and 76 FR 73184 through 73186, respectively), we expressed our reservations about the pricing and the typical quantity of this supply item used in furnishing these services. The RUC recommended for the CY 2012 rulemaking cycle that CMS remove the balloon sinus surgery kit from each of these codes and implement separately billable alpha-numeric HCPCS codes to allow practitioners to be paid the cost of the disposable kits per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. (For a discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251)). We stated at the time that since the balloon sinus surgery kits can be used when furnishing more than one service to the same beneficiary on the same day, we believed that it would be appropriate to include 0.5 balloon sinus surgery kits for each of the three codes, and we have maintained this 0.5 supply quantity when CPT codes 31295–31297 were recently reviewed again in CY 2018.

In light of the additional information supplied by the stakeholders, we solicited comments on two aspects of the use of the balloon sinus surgery kit (SA106) supply. First, we solicited comments on whether the 0.5 supply quantity of the balloon sinus surgery kit in CPT codes 31295–31297 would be typical for these procedures. We are concerned that the same kit can be used when furnishing more than one service to the same beneficiary on the same day, and that even the 0.5 supply quantity may be overstating the resources typically needed to furnish each service. Second, we solicited comments on the pricing of the balloon sinus surgery kit, given that we have received letters stating that the price has decreased since the initial pricing in the CY 2011 final rule. See Table 5 for the current component pricing of the balloon sinus surgery kit.

TABLE 5—BALLOON SINUS SURGERY KIT (SA106) PRICE

Supply components	Quantity	Unit	Price
kit, sinus surgery, balloon (maxillary, frontal, or sphenoid)		kit	$2,599.86
Sinus Guide Catheter	1	item	444.00
Sinus Balloon Catheter	1	item	820.80
Sinus Illumination System (100 cm lighted guidewire)	1	item	454.80
Light Guide Cable (8 ft)	1	item	514.80
ACMI/Stryker Adaptor	1	item	42.00
Sinus Guide Catheter Handle	1	item	66.00
Sinus Irrigation Catheter (22 cm)	1	item	150.00
Sinus Balloon Catheter Inflation Device	1	item	89.46
Extension Tubing (High Pressure) (20 in)	1	item	18.00

We are interested in any information regarding possible changes in the pricing for this kit or its individual components since the initial pricing we adopted in CY 2011. The following is a summary of the public comments we received on our comment solicitation regarding the balloon sinus surgery kit supply.

Comment: Several commenters stated that the variability inherent in the underlying patient anatomy makes it extremely difficult to reliably assign a fixed number of sinuses that can be dilated per balloon or establish a supply quantity that would constitute the typical case. These commenters urged CMS to create a separate HCPCS code for the balloon sinus surgery kit that would be billable based on the number of balloons used per patient.

Response: As we stated in the proposed rule, we continue to believe that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to maintain appropriate relativity while pricing high cost disposable supply items. For a discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251).

Comment: One commenter provided extensive information regarding the pricing and composition of the balloon sinus surgery kit. This commenter stated that the components of the supply kit have changed from those listed in Table 5, and that there are multiple different types of this kit available for purchase. The commenter stated that the total cost of the balloon sinus surgery kit varies by sinus dilated, whether navigation is used, and by manufacturer, with the average price of a basic kit costing $2,204 and the average price of the kit used for navigation costing $2,850, not including the navigation device itself. The commenter stated that the kit components should not be individually priced and that invoices could be made available upon request.

With regards to the number of sinus dilation procedures that typically can be performed per balloon, the commenter repeated that the variability inherent in the underlying patient anatomy makes it extremely difficult to assign a fixed number of sinuses that can be dilated per balloon. The commenter also urged CMS to consider a shift away from the current supply methodology and instead create a separate HCPCS code for the balloon sinus surgery kit which would be billable based on the number of balloons used per patient. The commenter stated that should CMS elect to preserve the current policy of assigning a fixed number of sinus dilations per kit, they recommended maintaining the current supply quantity that allows one kit for every two sinuses, as they were unable to find compelling evidence to support a more appropriate supply amount.

Response: We are particularly interested in the feedback suggesting that there may be multiple types of balloon sinus surgery kits that have different prices, and we would be interested in further information, including invoice submissions, on this subject for future rulemaking.

After consideration of the public comments, we are not finalizing any changes to the balloon sinus surgery kit (SA106) supply for CY 2019, outside of the market-based supply and equipment pricing update to the supply cost. We do not believe that we have sufficient information to finalize any other changes to the supply cost or supply quantity in the associated CPT codes at this point in time.

d. Technical Corrections to Direct PE Input Database and Supporting Files

Subsequent to the publication of the CY 2018 PFS final rule, stakeholders alerted us to several clerical inconsistencies in the direct PE database. We proposed to correct these inconsistencies as described below and reflected in the CY 2019 final direct PE input database displayed on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

For CY 2019, we proposed to address the following inconsistencies:

- The RUC alerted us that there are 165 CPT codes billed with an office E/M code more than 50 percent of the time in the nonfacility setting that have more minimum multi-specialty visit supply packs (SA048) than post-operative visits included in the code's global period. This indicates that either the inclusion of office E/M services was not accounted for in the code's global period when these codes were initially reviewed by the PE Subcommittee, or that the PE Subcommittee initially approved a minimum multi-specialty visit supply pack for these codes without considering the resulting overlap of supplies between SA048 and the E/M supply pack (SA047). The RUC regarded these overlapping supply packs as a duplication, due to the fact that the quantity of the SA048 supply exceeded the number of postoperative visits, and requested that CMS remove the appropriate number of supply item SA048 from 165 codes. After reviewing the quantity of the SA048 supply pack included for the codes in question, we proposed to refine the quantity of minimum multi-specialty visit packs as displayed in Table 6.

TABLE 6—PROPOSED REFINEMENTS—MINIMUM MULTISPECIALTY VISIT PACK (SA048)

TABLE 6—PROPOSED REFINEMENTS—MINIMUM MULTISPECIALTY VISIT PACK (SA048)—Continued

CPT code	Number of post-op office visits	CY 2018 nonfacility quantity of minimum visit pack (SA048)	Proposed CY 2019 nonfacility quantity of minimum visit pack (SA048)
93303	0	1	0
94667	0	1	0
95044	0	0.028	0
95870	0	1	0
95921	0	1	0
95922	0	1	0
95924	0	1	0
95972	0	1	1
96904	0	1	1

In general, we proposed to align the number of minimum multi-specialty visit packs with the number of post-operative office visits included in these codes. We did not propose any supply pack quantity refinements for CPT codes 11100, 95974, or 95978 since they are being deleted for CY 2019. We also did not propose any supply pack quantity refinements for CPT codes 45300, 46500, 57150, 57160, 58100, 64405, 95970, or HCPCS code G0268 since these codes were reviewed by the RUC this year and their previous direct PE inputs will be superseded by the new direct PE inputs we establish through this rulemaking process for CY 2019.

Comment: One commenter stated that they supported this effort as it serves to remedy any discrepancies/errors that may be in the PFS related to postoperative visits and the required multi-specialty packs needed to render those visits.

Response: We appreciate the support for our proposal from the commenter.

Comment: One commenter stated that removal of the SA048 supply pack was inappropriate for CPT code 43200 (Esophagoscopy, flexible, transoral; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)) as it is required for the esophagoscopy procedure and the supply is included in the other codes in the family (CPT codes 43201–43233) as well as for the other GI endoscopy code families. The commenter requested that CMS not remove the SA048 supply from CPT code 43200.

Response: After reviewing the supply inputs for the group of codes identified by the commenter, we agree that it would not be consistent to remove the SA048 multi-specialty pack from CPT code 43200 while retaining the supply pack in CPT codes 43201–43233. As a result, we are not finalizing the removal of the SA048 multi-specialty pack from CPT code 43200. However, we note that many of the CPT codes in this range also contain SA048 supply packs without having any postoperative office visits included in their global periods. We believe that it may be more accurate to achieve consistency within this range of CPT codes by removing the SA048 supply pack from all of these codes, as opposed to adding the SA048 supply pack to CPT code 43200. In regard to this topic, stakeholders can always provide data to us if they believe the code is not bundled/valued/etc. correctly.

After consideration of the public comments, we are finalizing our proposal to align the number of minimum multi-specialty visit packs with the number of post-operative office visits included in these CPT codes listed in Table 6, with the exception of CPT code 43200 as detailed above.

A stakeholder notified us regarding a potential rank order anomaly in the direct PE inputs established for the Shaving of Epidermal or Dermal Lesions code family through PFS rulemaking for CY 2013. Three of these CPT codes describe benign shave removal of increasing lesion sizes: CPT code 11310 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 0.5 cm or less), CPT code 11311 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 0.6 to 1.0 cm), and CPT code 11312 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 1.1 to 2.0 cm). Each of these codes has a progressively higher work RVU corresponding to the increasing lesion diameter, and the recommended direct PE inputs also increase progressively from CPT codes 11310 to 11311 to 11312. However, the nonfacility PE RVU we established for CPT code 11311 is lower than the nonfacility PE RVU for CPT code 11310, which the stakeholder suggested may represent a rank order anomaly.

We reviewed the direct PE inputs for CPT code 11311 and found that there were clerical inconsistencies in the data entry that resulted in the assignment of the lower nonfacility PE RVU for CPT code 11311. We proposed to revise the direct PE inputs to reflect the ones previously finalized through rulemaking for CPT code 11311.

Comment: One commenter agreed that a significant clerical error occurred after the RUC recommended its valuation of CPT code 11311 and its final acceptance by CMS. The commenter recommended that the direct PE inputs of CPT code 11310 be replicated for CPT code 11311 and submitted a table with recommended values.

Response: After reviewing this information, we found that the direct PE inputs requested by the commenter mostly, but do not entirely, match the direct PE inputs that CMS finalized through rulemaking for CY 2013. The commenter requested the inclusion of an additional SB007 (drape, sterile barrier 16in x 29in) supply and a SB011 (drape, sterile, fenestrated 16in x 29in) supply while leaving out a SK075 (skin marking pen, sterile (Skin Skribe)) supply, 3 SM022 (sanitizing cloth-wipe (surface, instruments, equipment)) supplies, and 4 SL463 (Aluminum Chloride 70%) supplies. Since we proposed to revise the direct PE inputs to match the ones previously finalized through rulemaking for CPT code 11311, we are not finalizing these five changes to the direct PE inputs requested by the commenter. In all other respects, the direct PE inputs recommended by the commenter matched the direct PE inputs previously finalized through

rulemaking. We are therefore finalizing our proposal to revise the direct PE inputs to reflect the ones previously finalized in CY 2013 for CPT code 11311.

• In CY 2018, we inadvertently assigned too many minutes of clinical labor time for the ''Obtain vital signs'' task to three therapy codes, given that these codes are typically billed in multiple units and in conjunction with other therapy codes for the same patient on the same day, and we do not believe that it would be typical for clinical staff to obtain vital signs for each time a code is reported. The codes are: CPT code 97124 (Therapeutic procedure, 1 or more areas, each 15 minutes; massage, including effleurage, petrissage and/or tapotement (stroking, compression, percussion)); CPT code 97750 (Physical performance test or measurement (*e.g.,* musculoskeletal, functional capacity), with written report, each 15 minutes); and CPT code 97755 (Assistive technology assessment (*e.g.,* to restore, augment or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility), direct one-on-one contact, with written report, each 15 minutes).

Therefore, we proposed to refine the ''Obtain vital signs'' clinical labor task for these three codes back to their previous times of 1 minute for CPT codes 97124 and 97750 and to 3 minutes for CPT code 97755. We also proposed to refine the equipment time for the table, mat, hi-lo, 6 x 8 platform (EF028) for CPT code 97124 to reflect the change in the clinical labor time.

Comment: Several commenters agreed with the CMS rationale for refining the clinical labor task times for each of these codes.

Response: We appreciate the support for our proposal from the commenters.

Comment: One commenter opposed the CMS proposal to refine the equipment time for the table, mat, hi-lo, 6 x 8 platform (EF028) for CPT code 97124 to reflect the change in the clinical labor time.

Response: We continue to believe that changes in clinical labor time should be matched with corresponding changes in equipment time. Since the commenter did not supply a rationale as to why the EF028 equipment time should not match the change in clinical labor time, we are finalizing our proposal to refine the ''Obtain vital signs'' clinical labor task for these three codes back to their previous times of 1 minute for CPT codes 97124 and 97750 and to 3 minutes for CPT code 97755.

We received a letter from a commenter alerting us to an anomaly in the direct PE inputs for CPT code 52000 (Cystourethroscopy (separate procedure)). The commenter stated that the inclusion of an endoscope disinfector, rigid or fiberoptic, w-cart equipment item (ES005) was inadvertently overlooked in the recommendations for CPT code 52000 when it was reviewed during PFS rulemaking for CY 2017, and that the equipment would be necessary for endoscope sterilization. The commenter requested that this piece of equipment should be added to the direct PE inputs for CPT code 52000.

After reviewing the direct PE inputs for this code, we agreed with the commenter and we proposed to add the endoscope disinfector (ES005) to CPT code 52000, and to add 22 minutes of equipment time for that item to match the equipment time of the other non-scope items included in this code.

Comment: One commenter supported the CMS proposal to add an endoscope disinfector to CPT code 52000 and to add 22 minutes of equipment time to match the equipment time of the other non-scope items included in the code. This commenter requested that this addition apply to all endoscopic urologic procedures that do not already include the endoscope disinfector.

Response: We do not agree that the endoscope disinfector should be added to all endoscopic urologic procedures that lacked the equipment, as the addition of this equipment to CPT code 52000 is a technical correction to address a specific anomaly with the recommendations for CPT code 52000 and not the implementation of a new policy. After consideration of the public comments, we are finalizing the addition of 22 minutes of equipment time for the endoscope disinfector (ES005) to CPT code 52000 as proposed.

The following is a summary of the public comments we received on additional technical corrections to the direct PE input database and supporting files.

Comment: A commenter stated that they had reviewed the CY 2019 Proposed Rule physician work time file and discovered an issue with 13 CPT codes that had incorrect work times. The commenter stated that these were technical errors in which the current work time values did not match what CMS had finalized through rulemaking, and the commenter requested that these services be corrected in the CY 2019 CMS work time file for the CY 2019 Final Rule.

Response: We agree with the commenter that some of these CPT codes are subject to technical corrections, while disagreeing with the commenter with regards to other CPT codes, as described in more detail below.

Listed in order, the commenter identified these issues:

Comment: For CPT code 15220 (Full thickness graft, free, including direct closure of donor site, scalp, arms, and/or legs; 20 sq cm or less), the commenter stated that their records showed CMS missing 15 min of positioning time from the Harvard study.

Response: We are not finalizing a change in the work time of this code at this time, as we were unable to verify the positioning time of CPT code 15220 as originally measured by the Harvard study.

Comment: For CPT code 22558 (Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); lumbar), the commenter stated that the CMS work time file accidentally double counted postoperative visit time in the immediate postoperative time field.

Response: We agree with the commenter that this is subject to a technical correction, and we are finalizing an immediate postservice work time of 25 minutes for CPT code 22558.

Comment: For CPT code 43760 (Change of gastrostomy tube, percutaneous, without imaging or endoscopic guidance), the commenter stated that the code is being deleted for CY 2019 and should not appear in the work time file.

Response: We agree with the commenter, and we are finalizing the removal of this code from the work time file.

Comment: For CPT codes 61645 (Percutaneous arterial transluminal mechanical thrombectomy and/or infusion for thrombolysis, intracranial, any method, including diagnostic angiography, fluoroscopic guidance, catheter placement, and intraprocedural pharmacological thrombolytic injection(s)) and 61650 (Endovascular intracranial prolonged administration of pharmacologic agent(s) other than for thrombolysis, arterial, including catheter placement, diagnostic angiography, and imaging guidance; initial vascular territory), the commenter stated that CMS incorrectly applied 23 hour stay rule for these codes even though the RUC recommended these services as typically inpatient. The commenter stated that there are now available data to see that these CPT codes are done on an inpatient basis 98 percent and 86 percent of the time respectively.

Response: We do not believe that the work times of these codes are subject to

a technical correction, as the work times finalized for these codes in the CY 2017 PFS final rule (81 FR 80307–08) were based on a disagreement in policy with the commenter and not a technical error.

Comment: For CPT code 91200 (Liver elastography, mechanically induced shear wave (*e.g.,* vibration), without imaging, with interpretation and report), the commenter stated that the RUC recommended 5 minutes of immediate postservice work time, not 3 minutes, and that CMS had finalized the code without a time refinement. The commenter stated that the immediate postservice work time for CPT code 91200 should be 5 minutes in accordance with the RUC recommendations.

Response: We investigated the RUC recommendations from the April 2015 RUC meeting when CPT code 91200 was reviewed, and we found that the RUC recommended an immediate postservice work time of 3 minutes on the code family's cover sheet and the accompanying summary spreadsheet. Although the RUC may have intended to recommend an immediate postservice work time of 5 minutes for this code, we proposed and finalized an immediate postservice work time of 3 minutes for CPT code 91200 without receiving any comments on the issue. Therefore we are not finalizing any changes to the work time of CPT code 91200 at this time, which will remain 3 minutes.

Comment: For CPT codes 93281 (Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system), 93284 (Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system), and 93286 (Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead pacemaker system), the commenter stated that CMS has the wrong intraservice work times, despite the CY 2018 final rule indicating no time refinement for these codes.

Response: After reviewing the work times for these codes, we agree with the commenter and we are finalizing a technical correction to the intraservice work times as recommended.

Comment: For CPT code 97166 (Occupational therapy evaluation, moderate complexity), the commenter stated that the HCPAC recommended 15 min of immediate postservice work time, not 10 minutes, and that CMS had finalized the code without a time refinement.

Response: We investigated the RUC recommendations from the October 2015 RUC meeting when CPT code 97166 was reviewed, and we found that the HCPAC recommendations contained two different values for the immediately postservice work time. The written recommendations stated that the immediate postservice work time was recommended at 15 minutes, while the data on the summary spreadsheet stated that the immediate postservice work time was recommended at 10 minutes. Although there were two conflicting HCPAC recommendations for this code, we finalized in the CY 2017 PFS final rule (81 FR 80331) an immediate postservice work time of 10 minutes for CPT code 97166 without receiving any comments on the issue. Therefore we are not finalizing any changes to the work time of CPT code 97166 at this time.

Comment: For CPT code 33866 (Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion (List separately in addition to code for primary procedure)), the commenter stated that the RUC recommendation was rescinded and that the code should be removed from the work time file.

Response: We disagree with the commenter, and we are not finalizing the removal of CPT code 33866 from the work time file; we refer readers to the code valuation section of this final rule for additional details regarding CPT code 33866.

Comment: For CPT code 96X11 (Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed), the commenter stated that the code is not being created for CY 2019 by the CPT Editorial Panel and should be removed from the work time file.

Response: We agree with the commenter and we are finalizing the removal of this code from the work time file.

Comment: For HCPCS code G0281 (Electrical stimulation, (unattended), to one or more areas, for chronic stage iii and stage iv pressure ulcers, arterial ulcers, diabetic ulcers, and venous stasis ulcers not demonstrating measurable signs of healing after 30 days of conventional care, as part of a therapy plan of care), the commenter stated that their records show an intraservice time for this code of 11 minutes and not 7 minutes as currently listed in the work time file.

Response: We disagree with the commenter. As we stated in the CY 2003 PFS final rule with comment period (67 FR 80014), the work, practice expense, and malpractice values G0281 are based on a crosswalk to CPT code 97014 (Application of a modality to 1 or more areas; electrical stimulation (unattended)), and the intraservice work time of CPT code 97014 remains 7 minutes.

Comment: Many commenters raised concerns about the use of the portable X-ray machine (EF041) equipment in CPT code 71045 (Radiologic examination, chest; single view). Commenters stated that the use of the portable X-ray machine in CPT code 71045 understated the price of the equipment typically used in the service, and that the default equipment utilization rate of 50 percent did not reflect the experience of portable X-ray suppliers. Commenters supplied an invoice for a Digital Radiography portable X-ray machine, which they stated would be typical for use in this procedure, along with data on the equipment utilization rate that suggested a utilization rate significantly lower than 50 percent would be typical. Commenters requested modifying the direct PE inputs for CPT code 71045 to include the use of the Digital Radiography portable X-ray machine at a distinctive utilization rate of approximately 22 percent, or alternatively, to use the same equipment as the other three codes in the Chest X-Ray code family (CPT codes 71046–71048) as direct PE inputs for CPT code 71045.

Response: We agree with the commenters and we are finalizing the replacement of the 9 minutes of equipment time for the portable X-ray machine (EF041) with 9 minutes of equipment time for a basic radiology room (EL012) for CPT code 71045. The equipment cost per minute of the basic radiology room (48.4 cents) is nearly identical to the equipment cost per

minute of the proposed Digital Radiography portable X-ray machine (46.0 cents), and we believe that it would better serve the interests of relativity for CPT code 71045 to match the same equipment inputs as the rest of the Chest X-Ray code family. We previously updated the PE RVU of this code in the July 2018 Quarterly Update (CMS Change Request 10644) based on the same information previously supplied by the commenters, and due to a technical error, this update to the direct PE inputs of CPT code 71045 was not included in the CY 2019 PFS proposed rule. We are finalizing this technical correction to the direct PE inputs of CPT code 71045 for CY 2019.

Comment: One commenter stated that there was a typographical error in Attachment B of the proposed rule, which resulted in the misstatement of the total RVUs for CPT code 48554 (Transplantation of pancreatic allograft). The commenter recommended that we include 74.81 total RVUs for CPT code 48554 to correct the error of 73.70 total RVUs.

Response: We do not agree with the commenter that there was a typographical error in Addendum B for CPT code 48554, which appears to sum its component parts of the work RVU (37.80), PE RVU (27.72), and malpractice RVU (9.29) to the correct total RVU of 74.81.

We also received comments regarding a variety of subjects about which we did not make proposals for CY 2019. These included comments regarding: The level of physician supervision for CPT code 99091, the 7 percent reduction to the technical component of computed radiography services not performed using digital radiography, a request to migrate the RUC recommended RVU assignment of CPT code 77387 to HCPCS code G6017, a request that CMS not finalize the proposed changes in payment for the revascularization codes (CPT codes 37225–37231) that were a byproduct of the E/M proposals and the supply/equipment pricing update, a request that CMS should assign direct cost inputs and PE RVUs to several disposable negative pressure wound therapy codes (CPT codes 97607–97608), a disagreement with previous reductions in the payment rate for HCPCS code G0416 from past calendar years, a request for clarification regarding the facility PE RVUs for CPT code 99153, a request for CMS to provide additional reimbursement stability for vascular access services by increasing the work RVUs and direct PE inputs for these codes (CPT codes 36901–36909), and a request for CMS to study the possible effect of tariffs on the cost of imaging equipment manufactured overseas. These comments are considered out of scope for the CY 2019 PFS final rule, as we did not make any proposals on these issues in the CY 2019 PFS Proposed Rule. We will take the feedback from the commenters under consideration for future rulemaking.

After consideration of the public comments, we are finalizing technical corrections to the direct PE input database and supporting files as described above.

e. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. For CY 2019, we proposed the following price updates for existing direct PE inputs.

We proposed to update the price of four supplies and one equipment item in response to the public submission of invoices. As these pricing updates were each part of the formal review for a code family, we proposed that the new pricing take effect for CY 2019 for these items instead of being phased in over 4 years. For the details of these proposed price updates, please refer to section II.H. of this final rule, Table 15: Invoices Received for Existing Direct PE Inputs.

(1) Market-Based Supply and Equipment Pricing Update

Section 220(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

As part of our authority under section 1848(c)(2)(M) of the Act, as added by PAMA, we initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the PFS direct PE inputs (DPEI) for supply and equipment pricing for CY 2019. These supply and equipment prices were last systematically developed in 2004–2005. StrategyGen has submitted a report with updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. This report is available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

The StrategyGen team of researchers, attorneys, physicians, and health policy experts conducted a market research study of the supply and equipment items currently used in the PFS direct PE input database. Resources and methodologies included field surveys, aggregate databases, vendor resources, market scans, market analysis, physician substantiation, and statistical analysis to estimate and validate current prices for medical equipment and medical supplies. StrategyGen conducted secondary market research on each of the 2,072 DPEI medical equipment and supply items that CMS identified from the current DPEI. The primary and secondary resources StrategyGen used to gather price data and other information were:

- Telephone surveys with vendors for top priority items (Vendor Survey).
- Physician panel validation of market research results, prioritized by total spending (Physician Panel).
- The General Services Administration system (GSA).
- An aggregate health system buyers database with discounted prices (Buyers).
- Publicly available vendor resources, that is, Amazon Business, Cardinal Health (Vendors).
- **Federal Register**, current DPEI data, historical proposed and final rules prior to FY 2018, and other resources; that is, AMA RUC reports (References).

StrategyGen prioritized the equipment and supply research based on current share of PE RVUs attributable by item provided by CMS. StrategyGen developed the preliminary Recommended Price (RP) methodology based on the following rules in hierarchical order considering both data representativeness and reliability.

1. If the market share, as well as the sample size, for the top three commercial products were available, the weighted average price (weighted by percent market share) was the reported RP. Commercial price, as a weighted average of market share, represents a more robust estimate for each piece of

equipment and a more precise reference for the RP.

2. If StrategyGen did not have market share for commercial products, then they used a weighted average (weighted by sample size) of the commercial price and GSA price for the RP. The impact of the GSA price may be nominal in some of these cases since it is proportionate to the commercial samples sizes.

3. Otherwise, if single price points existed from alternate supplier sites, the RP was the weighted average of the commercial price and the GSA price.

4. Finally, if no data were available for commercial products, the GSA average price was used as the RP; and when StrategyGen could find no market research for a particular piece of equipment or supply item, the current CMS prices were used as the RP.

After reviewing the StrategyGen report, we proposed to adopt the updated direct PE input prices for supplies and equipment as recommended by StrategyGen. For the reasons subsequently discussed, the GSA price was not incorporated into the calculation for the StrategyGen recommended prices printed in the proposed rule. The proposed recommended price was developed as follows:

Recommended CMS Price: The StrategyGen proposed recommended price was the researched-commercial price, when available. If not, the StrategyGen proposed recommended price was the current CMS price.

StrategyGen found that despite technological advancements, the average commercial price for medical equipment and supplies has remained relatively consistent with the current CMS price. Specifically, preliminary data indicate that there was no statistically significant difference between the estimated commercial prices and the current CMS prices for both equipment and supplies. This cumulative stable pricing for medical equipment and supplies appears similar to the pricing impacts of non-medical technology advancements where some historically high-priced equipment (that is, desktop PCs) has been increasingly substituted with current technology (that is, laptops and tablets) at similar or lower price points. However, while there were no statistically significant differences in pricing at the aggregate level, medical specialties will experience increases or decreases in their Medicare payments if CMS were to adopt the pricing updates recommended by StrategyGen. At the service level, there may be large shifts in PE RVUs for individual codes that happened to contain supplies and/or equipment with major changes in pricing, although we note that codes with a sizable PE RVU decrease would be limited by the requirement to phase in significant reductions in RVUs, as required by section 1848(c)(7) of the Act. The phase-in requirement limits the maximum RVU reduction for codes that are not new or revised to 19 percent in any individual calendar year.

We believe that it is important to make use of the most current information available for supply and equipment pricing instead of continuing to rely on pricing information that is more than a decade old. Given the potentially significant changes in payment that would occur, both for specific services and more broadly at the specialty level, we proposed to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. This approach is consistent with how we have previously incorporated significant new data into the calculation of PE RVUs, such as the 4-year transition period finalized in CY 2007 PFS final rule with comment period when changing to the ''bottom-up'' PE methodology (71 FR 69641). This transition period will not only ease the shift to the updated supply and equipment pricing, but will also allow interested parties an opportunity to review and respond to the new pricing information associated with their services.

We proposed to implement this phase-in over 4 years so that supply and equipment values transition smoothly from the prices we currently include to the final updated prices in CY 2022. We proposed to implement this pricing transition such that one quarter of the difference between the current price and the fully phased in price is implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the proposed transition from the current to the fully-implemented new pricing is provided in Table 7.

TABLE 7—EXAMPLE OF DIRECT PE PRICING TRANSITION

Current Price	$100	
Final Price	200	
Year 1 (CY 2019) Price	125	¼ difference between $100 and $200.
Year 2 (CY 2020) Price	150	⅓ difference between $125 and $200.
Year 3 (CY 2021) Price	175	½ difference between $150 and $200.
Final (CY 2022) Price	200	

For new supply and equipment codes for which we establish prices during the transition years (CYs 2019, 2020 and 2021) based on the public submission of invoices, we proposed to fully implement those prices with no transition since there are no current prices for these supply and equipment items. These new supply and equipment codes would immediately be priced at their newly established values. We also proposed that, for existing supply and equipment codes, when we establish prices based on invoices that are submitted as part of a revaluation or comprehensive review of a code or code family, they will be fully implemented for the year they are adopted without being phased in over the 4-year pricing transition. The formal review process for a HCPCS code includes a review of pricing of the supplies and equipment included in the code. When we find that the price on the submitted invoice is typical for the item in question, we believe it would be appropriate to finalize the new pricing immediately along with any other revisions we adopt for the code valuation.

For existing supply and equipment codes that are not part of a comprehensive review and valuation of a code family and for which we establish prices based on invoices submitted by the public, we proposed to implement the established invoice price as the updated price and to phase in the new price over the remaining years of the proposed 4-year pricing transition. During the proposed transition period, where price changes for supplies and

equipment are adopted without a formal review of the HCPCS codes that include them (as is the case for the many updated prices we proposed to phase in over the 4-year transition period), we believe it is important to include them in the remaining transition toward the updated price. We also proposed to phase in any updated pricing we establish during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, such as sterile gloves (SB024) or exam tables (EF023), even if invoices are provided as part of the formal review of a code family. We would implement the new prices for any such supplies and equipment over the remaining years of the proposed 4-year transition period. Our proposal was intended to minimize any potential disruptive effects during the proposed transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply and equipment items (meaning that these items are included in 100 or more codes).

We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer time frame will allow more opportunities for public comment and submission of additional, applicable data. We welcomed feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration. We were particularly interested in comments regarding the supply and equipment pricing for CPT codes 95165 and 95004 that are frequently used by the Allergy/Immunology specialty. The Allergy/Immunology specialty was disproportionately affected by the updated pricing, even with a 4-year phase-in. The direct PE costs for CPT code 95165 would go down from $8.43 to $8.17 as a result of the updated supply and equipment pricing information. This would result in the PE RVU for CPT code 96165 to decrease from 0.30 to 0.26. We are seeking feedback on the supply and equipment pricing for the affected codes typically performed by this specialty and whether the direct PE inputs should be reviewed along with the pricing. The full report from the contractor, including the updated supply and equipment pricing that we proposed to be implemented over the proposed 4-year transition period, will be made available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

The following is a summary of the public comments we received on our proposals associated with the market research study to update the PFS direct PE inputs for supply and equipment pricing.

Comment: Many commenters were concerned with the transparency of the data used to calculate medical equipment and supply prices. The commenters were particularly concerned about the use of a subscription-based benchmark database as a source for pricing data. The commenters stated that without identification of the database and access to the precise data used in determining the pricing update, they would have no systematic way to evaluate pricing accuracy. In addition, these commenters were concerned that small physician practices are not well represented in benchmark databases, with the consequence that the proposed repricing did not reflect the typical price paid by smaller stakeholders. Commenters stated a general concern that any methodology that more heavily weighs larger physician groups, group purchasing organizations (GPOs), or even hospital contract pricing would result in pricing that is significantly depressed compared to the pricing that can be obtained by an individual practitioner. The commenters asserted that this has the potential to pressure the financial viability of smaller physician practices and to force lower cost non-facility procedures into hospital outpatient or inpatient sites of service.

Response: As to whether there is sufficient transparency to enable others to replicate and validate the proposed pricing, the StrategyGen contractors carried out a market research plan designed to estimate the typical discounted prices that physicians and other providers normally pay. The proprietary database of buyer reported pricing is one of the few sources of typical discounted price data available. Other potential sources of typical discounted pricing were other proprietary databases and the publicly available GSA pricing. For each item priced, the analysis from the contractors included research on as many as five current sources of prices: (1) A proprietary database of buyer reported pricing, (2) Prices reported by GSA, (3) Amazon Business, (4) Cardinal Healthcare, and (5) Vendors' and manufacturers' catalogs.

The proprietary database of buyer reported pricing offers three advantages: (1) It represents discounted prices as opposed to retail pricing, (2) It has the largest sample sizes to represent a wider range of pricing as opposed to single invoices, and (3) The database provides variety with respect to the purchaser's geographic location, purchasing method, procedure volume and other purchasing arrangements. We initially assumed that GSA also represents typical discounted pricing across regions with smaller sample sizes, but subsequently rejected GSA data because we did not believe that its prices were typically representative of commercially available pricing. As a result, GSA data were *not* used to calculate the StrategyGen recommended prices included in the proposed rule. Amazon Business and Cardinal Healthcare represent typical retail pricing, with smaller sample sizes. In addition, the StrategyGen contractors utilized vendors' and manufacturers' catalogs to identify publicly available pricing. Table 8 summarizes sources of online pricing and characteristics of each source:

TABLE 8—MARKET-BASED SUPPLY AND EQUIPMENT PRICING UPDATE DATA SOURCES

Source of pricing data	Discounted pricing	Sample size	Variety (that is, geography, purchasing arrangement, etc.)
Buyers database	Actual discounts	Largest	National footprint.
GSA	Wholesale price	3–5	Government purchasers only.
Amazon Business (on-line)	Retail price	3–5	National footprint.
Cardinal Healthcare (on-line)	Retail price	3–5	National footprint.
Catalogs (on-line)	Retail price	3–5	National footprint.

The Buyers database provides the most accurate market pricing estimates that include market discounts for a range of buyer organizations. Its larger sample sizes provide more confidence that the proposed pricing is not skewed toward higher or lower pricing but toward the actual market price paid by purchasers.

The StrategyGen contractors chose not to include invoice research in the market research plan as there is already an existing process to modify Direct Practice Expense Input (DPEI) prices based on invoices. Additionally, the contractors determined that providing specific models and other identifying data with the researched prices would offer a broader and more consistent source of pricing data. We do not agree with the commenters that the updated supply and equipment prices will pressure the financial viability of smaller physician practices, as we believe that the larger sample sizes obtained by StrategyGen's research provide more accurate and more consistent pricing of actual market conditions than the single invoices that we have traditionally been reliant upon for pricing.

As to whether the proposed pricing is representative of prices available to small physician practices and non-facility practitioners generally, one of the objectives of the primary market research was to understand what kind of discounts are available to small physician practices similar to discounted pricing available to large health systems under GPOs. The market research plan included a series of questions to vendors designed to illuminate typical discounts they offer to large and small providers other than GPOs. This market research indicates that there are a variety of discount purchasing options available. Vendors indicated that both volume and timing can influence pricing discounts. Approximately 80 percent of respondents indicated that timing has some impact on the price of equipment, and about half of respondents indicated that timing had some impact on the price of supplies. Discussions with other subject matter experts also indicated that timing of purchase is an important factor in pricing. For example, the end of the sales cycle can drive discounts. Less than 10 percent of vendors indicated that these timing discounts may not be available to smaller practices outside of a GPO. The vendor research also indicated that other factors beyond ''size and timing'' influence discounted pricing, such as service agreements and bundled purchases.

Research indicates that service agreements often include discounts for equipment and supplies. For example, longer term service agreements generally result in larger discounts. However, some vendors indicated that the effect of service agreements was to reduce the size of the discounts, negatively impacting providers. This may be a difference in service agreement strategies across different vendors. Regardless, only 3 percent of respondents indicated that the availability of service agreement discounts was dependent on a GPO.

The vendors identified other factors that impact pricing decisions including:

- Market demand and competitive pricing;
- Contract renewal;
- Customer history and contract history; and
- Vendor considerations independent of the purchaser such as manufacturer and sales incentives, revenue goals, and new product releases.

In conclusion, while volume purchasing and GPOs can drive down prices for many large providers, these are not the only drivers of discounts for providers. A number of additional factors applicable to large, small, and non-facility practices may result in discounts for the buying organizations. We believe that the pricing update required looking at a broad range of data that was collected from different sources, which included pricing data from both large and small organizations. We note that not all private practices are small in nature, and we do not agree that it would be more accurate to obtain prices only from small practices as opposed to the broader data collection undertaken by the StrategyGen contractor.

Comment: Some commenters were concerned that the researched GSA price was incorporated into the recommended commercial price. These commenters expressed concern as to how the GSA price fit into the calculation of new recommended prices.

Response: We want to clarify how the GSA price was used in developing the new recommended DPEI prices for equipment and supplies. We regret the confusion on this issue, which was due to a technical error in the drafting of the language in the proposed rule. We wish to clarify that the GSA price was *not* used to calculate the StrategyGen recommended prices printed in the proposed rule. Our use of the GSA website to research supply and equipment pricing was found to have a number of limitations. Only suppliers that meet stringent qualifications and that complete a lengthy and detailed application process are eligible to participate in GSA Advantage, GSA's online shopping and ordering system. These requirements sharply curtail the number and type of suppliers whose products may be accessed on the GSA Advantage website. In addition, only products that are purchased by federal agencies or other qualified government entities are listed on the GSA Advantage website, which has the effect of eliminating a number of medical supplies and equipment that are reflected in the CMS DPEI codes. This limitation was especially acute when researching bundled codes for equipment rooms and lanes, and supply packs, kits, and trays. The GSA website does not record comparable bundled purchasing of medical equipment or supplies, so no GSA pricing could be recovered for products included in the bundled codes organized as rooms, lanes, packs, kits or trays. Finally, the prices listed on the GSA Advantage website are required to be the supplier's best offer, which may often be lower than prices that are available to non-governmental purchasers.

For these reasons, the GSA price was not incorporated into the calculation for the StrategyGen recommended prices printed in the proposed rule. The final recommended price for CY 2019 was the commercially researched price, if available. Otherwise the current CY 2018 CMS price remained in place as the CY 2019 CMS price.

Comment: Several commenters were concerned with the methodology used by StrategyGen to conduct market research to determine an updated price for medical equipment and supplies. There were significant concerns with the use of market research to supplement the current AMA/Specialty Society RVS Update Committee (RUC) process. A number of commenters stated that CMS should only use invoices supplied by the specialty society via the RUC process, and should not finalize the updated prices researched by the StrategyGen contractor.

Response: We determined that the most effective way to update the DPEI for CY 2019 was through comprehensive market research. The current RUC process has resulted in updates to many of the equipment and supply codes, but many of the prices in the CY 2018 DPEI are over a decade old, and a significant number date back to research conducted 15 years ago. Therefore, we requested a market research plan from the StrategyGen contractor designed to research current pricing to estimate the typical discounted prices that physicians and other providers normally pay.

The comprehensive market research plan to update DPEI equipment and supplies was designed to supplement the AMA RUC process, not replace it. The current RUC process, while indispensable, does not provide for comprehensive pricing updates. Under the current process, physicians and other providers voluntarily submit invoices for items to RUC for consideration, and after review, the RUC submits these invoices to us. This process results in inherent biases due to the limited number of items represented by submitted invoices and due to the voluntary selection of reported invoices.

The StrategyGen market research plan examined up to five online sources of current prices for each item of equipment or supply researched, including: (1) A proprietary database of buyer reported pricing, (2) Prices offered on GSA (*Note:* This data was subsequently excluded from the recommended 2019 CMS prices), (3) Amazon Business, (4) Cardinal Healthcare, and (5) Vendors' and manufacturers' catalogs. Each of these sources contains nationally reported vendor and buyer pricing data. The research plan also included vendor interviews to clarify the variety of discount programs available to physicians and other providers.

The comprehensive research plan for the 2019 DPEI required researching approximately 2,000 supply and equipment codes. Qualitative and potentially quantitative research to include all the specialty societies impacted by the DPEI updates was beyond the resources and time allocated to this update. The market research plan did include a physician panel with specialists and a general practitioner to review the reasonableness of the researched data. In addition, the regulatory process remains available to all specialty societies to comment on the recommended prices. We encouraged interested stakeholders to continue to provide feedback on supply and equipment pricing, including the submission of invoices, throughout the 4-year pricing transition.

Comment: Several commenters stated that there is an inherent bias to prioritizing the medical equipment and supplies based on spending and code utilization. These commenters stated that any attempt to accurately price items in the supply and equipment list should devote equal effort to each item of equipment or supply and should not devote additional attention to the most utilized codes. These commenters stated that using utilization data as the primary driver for identifying supply and equipment items to review suggests that there may have been specific intent to lower the cost of high utilization items, perhaps to the detriment of pricing accuracy. In addition, there was concern that some underutilized codes were not researched.

Response: To control for potential research bias, the StrategyGen market research team used an identical online methodology to research commercial pricing data for each of the supply and equipment codes, regardless of the code's prioritization. The prioritization of high-utilization supply and equipment codes was not designed to reduce prices for these codes.

The prioritization of supply and equipment codes was designed to facilitate understanding and validation of the researched commercial prices for these items. Surveying other market entities, including vendors, as opposed to buyers, was used to more precisely identify the range of commercial pricing and factors impacting those prices. For example, additional priority research included a physician panel that reviewed the researched commercial prices for reasonableness. The prioritization of research for certain codes did not change the recommended commercial prices.

In addition, limited time and resources required prioritizing the codes based on use. We recognize that a few medical supply and equipment codes do not have updated recommended prices, and we continue to welcome the submission of updated pricing information from stakeholders for these and other codes.

Comment: Many commenters were supportive of the proposal to use a 4-year pricing transition. Commenters agreed with using the transition period as an opportunity for specialty societies and other stakeholders to continue to evaluate the new pricing and submit invoices and other pricing data as needed. Commenters who disagreed with the use of the 4-year pricing transition also requested that CMS not finalize the proposal. One commenter stated that CMS should phase in the new prices for equipment and supplies during a shorter transition period than the proposed 4-year transition, and suggested a 2-year transition instead.

Response: Our proposal was intended to minimize any potential disruptive effects during the proposed transition period, and we continue to believe that implementing the proposed updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer time frame will allow more opportunities for public comment and submission of additional, applicable data.

Comment: Several commenters stated that CMS should consider delaying implementation of this proposal until there could be a more thorough and adequate review of the inputs and give medical societies and/or practices more time to gather invoices in order to determine if the proposed pricing is accurate. Some commenters similarly requested that the 4-year pricing transition should begin in CY 2020 to provide stakeholders with additional time to evaluate the approach used by StrategyGen. A few commenters stated that they would prefer a delay of more than 1 year before implementation began.

Response: We disagree with the commenters that delaying the implementation of the pricing updates for a year or longer would lead to more accurate pricing. We believe that our proposal to update the pricing of direct PE inputs for supplies and equipment over a 4 year-transition already allows many opportunities for public comment and the submission of additional, applicable data. We welcomed feedback from commenters on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration, and many commenters provided detailed feedback regarding the pricing of individual supply and equipment items. We note that we received feedback from commenters on approximately 65 individual supply and equipment codes, which is roughly 3 percent of the total number of items we proposed to update. We also note that commenters did not identify an alternative source for pricing information outside of the sources employed by the StrategyGen contractors, with commenters largely suggesting that we should continue to rely on invoice submissions included along with the review of individual codes via the RUC process.

We continue to believe that a delay in implementation would be unlikely to result in more accurate pricing information. Therefore, we are finalizing the 4-year pricing transition, beginning in CY 2019. We look forward to working with commenters over the 4-year transition for assistance in identifying individual supply and equipment codes that may require additional research into their pricing. As a reminder, to be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th

deadline used for consideration of RUC recommendations. However, we would consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices for the following year.

Comment: Many commenters addressed the proper pricing of some multi-component items, including supply kits, packs, and trays as well as some items of equipment. Several commenters noted some of the proposed prices for supply and equipment items that contain multiple components may not accurately reflect all the components, while other commenters noted that some of the components could be improperly priced. Commenters expressed concerns that some equipment may not possess precise components that are necessary for a specific procedure.

Response: Using the information provided by these commenters, the StrategyGen contractors re-examined the pricing of the multi-component supply and equipment items that had been identified. In some instances, the additional research confirmed some commenters' concerns, as the contractors found that a limited set of these multi-item supply and equipment kits required further clarification of components. For example, an item within a kit, pack, or tray may have had an updated component, resulting in a mispriced item within that kit. To further clarify the prices of these kits, the kits were broken into their most basic components and priced individually. The total price of the kit was determined by adding the specific item prices together. If one of the items within a kit was misidentified, it resulted in an incorrect price of the entire kit.

For example, a review of the recommended price for the ''Antigens, multi'' (SH007) supply code identified the need to add pricing data for additional antigens and to refine the unit of measurement used in calculating the price. For SH007, additional antigens were added and data analyzed for 1 milliliter vials of two allergy antigens. The first antigen is an allergy antigen for pollen and mites and contains antigens for Timothy, Birch, Ragweed, Cocklebur, MarshElde, and the mites Dermatophagoides pteronyssinus and Dermatophagoides farina. The second antigen is an allergy antigen for mold and cats and contains antigens for Alternaria, Helminth, Hormoden, Penicillium, and Fel d1. To determine the price of the allergy antigen, the StrategyGen contractor researched each component of the antigen separately and averaged the price of the separate vials as the recommended price to arrive at an updated recommended price of $8.96.

In instances related to equipment, an item may have been improperly priced because a specific component was omitted but the items priced could perform the requisite task. An example of this occurred in the pricing of the ''SRS System, SBRT'' (ER083) equipment item where the equipment priced would retrofit a system to perform SBRT procedures, but pricing did not include the linear accelerator. When re-examining this specific medical equipment, we ensured it was a linear accelerator with SBRT capabilities and arrived at an updated recommended price of $2,973,721.83.

We reexamined the recommended price of each multi-component item cited by a commenter. Table 9 at the conclusion of this section lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing.

Comment: Several commenters questioned the prices of certain supply codes based on their conclusion that the quantity of the items priced was inaccurate. Depending on the type of supply, a number of different units of measurement are used to set prices for DPEI supply codes. Commenters stated that StrategyGen had used the incorrect unit of measurement in their recommended prices, and identified specific supply codes where they believed these errors had taken place.

Response: In each instance in which a commenter questioned the accuracy of a DPEI code's recommended price based on a concern about the unit quantity of the item priced, the StrategyGen contractor conducted further research of the item and its price with special attention to ensuring that the recommended price was based on the clarified unit of measure. The price assigned to a given code may be for a single item, a kit, a tray, or it may be based on a per test or per ml basis. For example, the price for the SG055 supply is for a single sterile 4in x 4in gauze sponge; whereas the price for SG056 is for a tray/pack of 10 sterile 4in x 4in gauze sponges. In other situations, such as the ''Embedding Mold'' (SL060) supply, the price for a package of multiple molds was reported instead of the price of a single embedding mold. After consideration of comments received and additional price research, we have updated the recommended prices for a number of relevant supply codes identified by the commenters. Table 9 at the conclusion of this section lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing.

Comment: Several commenters addressed the subject of the proper pricing for certain items of medical supply and equipment. These commenters requested these specific CMS codes be reviewed again to ensure the correct items were being researched and priced accordingly.

Response: Based on the commenters' requests, the StrategyGen contractor conducted an extensive examination of the pricing of any supply or equipment items that any commenter identified as requiring additional review. Invoices submitted by multiple commenters were greatly appreciated and ensured that medical equipment and supplies were re-examined and clarified. Multiple researchers reviewed these specified supply and equipment codes for accuracy and proper pricing. In most cases, the contractor also reached out to a team of nurses and their physician panel to further validate the accuracy of the data and pricing information. In some cases, the pricing for individual items needed further clarification due to a lack of information or due to significant variation in packaged items. An example of such clarification occurred with the ''Covered Stent (Viabahn, Gore)'' (SD254) supply, which encompasses a wide range of stents, with varying sizes and other qualities. In other cases, such as the ''Patient Worn Telemetry System'' (EQ340) equipment, an inpatient unit was originally priced as opposed to an outpatient unit. After an extensive review and validation process, we updated our recommended prices for a number of supply and equipment codes. Table 9 at the conclusion of this section lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing.

Comment: Several commenters expressed concerns with the proposed prices for individual supply and equipment codes, and recommended that the price of these codes remain unchanged until additional research can be conducted.

Response: The StrategyGen contractor investigated the accuracy of components or features included in an item by researching the identity of the item based on the description contained in the item's supply or equipment code, as well as the identity of any item's prices

in submitted invoices. Additional research into approximately half a dozen supply/equipment codes failed to produce reliable product data sufficient to calculate a recommended price. To price these equipment and supply items accurately, we believe additional information is required. Therefore, we will continue to use the current CMS price for these supply and equipment items pending additional research and analysis. We welcome the submission of updated pricing information regarding these supply and equipment items through submission of valid invoices from commenters and other stakeholders. These supply and equipment codes are also listed in Table 9 at the conclusion of this section.

Comment: A few commenters stated that CMS should ensure that the direct practice expenses for HCPCS codes G6001–G6015 are applied consistent with the directives of the Patient Access and Medicare Protection Act (PAMPA) (Pub. L. 114–115) and the Bipartisan Budget Act (BBA) of 2018 (Pub. L. 115–123). Commenters stated that Congress established via statute that the direct PE inputs for these radiation treatment delivery services furnished in CY 2017, CY 2018, and CY 2019 shall be the same as such inputs as established for these services in CY 2016. These commenters stated that the proposed changes to the PE RVUs for HCPCS codes G6001–G6015 were directly opposed to current law, and that CMS should revisit its analysis to ensure that the direct PE inputs are consistent with those used in 2016 as required by Congress.

Response: We disagree with the commenters that the proposed direct PE inputs for HCPCS codes G6001–G6015 were not applied consistent with the directives established in the PAMPA and the BBA. The statute at section 1848(b)(11) of the Act (as added by the PAMPA and amended) specifies that the code definitions, work RVUs, and direct inputs for the practice expense RVUs for these services shall be the same as such definitions, units, and inputs for such services for the fee schedule established for services furnished in CY 2016. We did not propose to change the code definitions, work relative value units, or direct practice expense inputs from those established for CY 2016. We proposed to update the pricing of those same supply and equipment inputs as part of the market-based study of commercial pricing undertaken by the contractor, which was not a subject addressed by the statutory provisions concerning HCPCS codes G6001–G6015. We did not propose changes to the direct practice expense inputs for these services. We simply proposed to update pricing for these inputs; and to adopt the same prices for these supplies and equipment across the PFS for all codes that include them. We note that we estimate that the overall effect of incorporating the new prices in calculating the payment rates for these services results in higher overall RVUs for these services, on the whole, than the potential alternative of relying exclusively on pricing from prior years.

After consideration of the public comments, we are finalizing our proposals associated with the market research study to update the PFS direct PE inputs for supply and equipment pricing. We continue to believe that implementing the proposed updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. We continue to welcome feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration. However, while we are adopting most of the prices for supplies and equipment as recommended by StrategyGen and included in the proposed rule, in response to the initial feedback provided by the commenters, we are finalizing changes to the proposed pricing of approximately 60 supply and equipment codes as detailed in Table 9:

TABLE 9—SUPPLY AND EQUIPMENT PRICES UPDATED IN RESPONSE TO COMMENTS

Supply/ equipment code	Description	CY 2018 price	Proposed CY 2019 price	Final CY 2019 price
ED033	treatment planning system, IMRT (Corvus w-Peregrine 3D Monte Carlo)	$350,545.000	$157,392.835	$197,247.000

SL498	Kappa Probe Cocktail	0.095	0.070	0.910

The updated supply and equipment pricing as it will be implemented over the 4-year transition period will be made available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

To maintain relativity between the clinical labor, supplies, and equipment portions of the PE methodology, we believe that the rates for the clinical labor staff should also be updated along with the updated pricing for supplies and equipment. We solicited public comment regarding whether to update the clinical labor wages used in developing PE RVUs in future calendar years during the 4-year pricing transition for supplies and equipment, or whether it would be more appropriate to update the clinical labor wages at a later date following the conclusion of the transition for supplies and equipment, for example, to avoid other potentially large shifts in PE RVUs during the 4-year pricing transition period.

The following is a summary of the public comments we received on our comment solicitation regarding whether to update of the rates for the clinical labor staff types during the 4-year pricing transition for supplies and equipment.

Comment: Most commenters were supportive of the idea of updating the clinical labor wages during the 4-year pricing transition for supplies and equipment. Several commenters requested that the updated pricing for clinical labor should continue to be based on Bureau of Labor Statistics wage data and remain open for public comment from interested commenters through the rulemaking process. One commenter supported updating the prices for the clinical labor staff types and stated that they had convened an expert physician panel that suggested that the clinical labor costs for radiation therapists and nurses are up to 33 percent higher than what is currently included in the CMS database. A few commenters did not support updating clinical labor wages during the 4-year pricing transition for supplies and equipment, in one case stating that the clinical labor pricing should be updated after the pricing transition for supplies and equipment was complete, and in another case stating that CMS should not make any changes to clinical labor costs for the foreseeable future.

Response: We will take this information into account for future rulemaking on the subject of whether or not to update the clinical labor wages used in future calendar years alongside the 4-year pricing transition for supplies and equipment.

(2) Breast Biopsy Software (EQ370)

Following the publication of the CY 2018 PFS final rule, a stakeholder contacted us and requested that we update the price for the Breast Biopsy software (EQ370) equipment. This equipment item currently lacks a price in the direct PE database, and when an invoice for the Breast Biopsy software was first submitted during CY 2014 PFS rulemaking, we stated that this item served clinical functions similar to other items already included in the Magnetic Resonance (MR) room equipment package (EL008) included in the same CPT codes under review. Therefore, we did not create new direct PE inputs for this equipment item (78 FR 74344

through 74345). The stakeholder suggested that this software is used to subtract the imaging raw data series from the MRI Scanner, reformat the images in multiple planes to allow accurate targeting of the lesion to be biopsied, identify the location of a fiducial marker on the patient's skin, and then target the location of the enhancing lesion to be biopsied. The stakeholder requested that EQ370 be renamed as ''Breast MRI computer aided detection and biopsy guidance software'' and added to existing CPT codes 19085 (Biopsy, breast, with placement of breast localization device(s) (*e.g.,* clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance), 19086 (Biopsy, breast, with placement of breast localization device(s) (*e.g.,* clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; each additional lesion, including magnetic resonance guidance), 19287 (Placement of breast localization device(s) (*e.g.,* clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including magnetic resonance guidance), and 19288 (Placement of breast localization device(s) (*e.g.,* clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including magnetic resonance guidance), as well as adding the equipment to two newly created MR breast codes with CAD, CPT codes 77048 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral) and 77049 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral). The stakeholder supplied an invoice with a purchase price of $52,275 for the equipment.

After reviewing the use of the Breast Biopsy software (EQ370) equipment in these six codes, we did not propose to update the price or add the software to these procedures. As we stated in the CY 2014 PFS final rule with comment period (78 FR 74345), we continue to believe that equipment item EQ370 serves clinical functions similar to other items already included in the MR room equipment package (EL008), and that it would be duplicative to include this Breast Biopsy software as a separate direct PE input. We also note that the RUC recommendations for the new CPT codes 77048 and 77049 do not include EQ370 in the recommended equipment for these procedures, and we do not have any reason to believe that the inclusion of additional Breast Biopsy software beyond what is already contained in the MR room equipment package would be typical. However, we will update the name of the EQ370 equipment item from ''Breast Biopsy software'' to the requested ''Breast MRI computer aided detection and biopsy guidance software'' to help better describe the equipment in question.

The following is a summary of the public comments we received on our proposal not to update the price of the Breast Biopsy software or add the software to the listed procedures.

Comment: Several commenters stated that CAD or biopsy software is not part of any standard MRI room package available for purchase, and that these are different equipment items sold by different vendors. One commenter requested that CMS clarify the equipment items that make up the MR room (EL008) in order to verify whether or not legitimate duplication exists with the Breast Biopsy software. Another commenter stated that the new CAD Software equipment (ED058) in CPT codes 77048 and 77049 is actually synonymous with the ''breast biopsy software'' (EQ370). This commenter stated that there had been a lack of consistency in identifying the equipment item between the breast biopsy codes and the MR breast codes, and requested updating the price of the equipment item consistent with the submitted invoices.

Response: In response to the comment requesting that CMS clarify the equipment items that make up the MR room (EL008), we can state that the MR room contains a 1.5T MR Scanner as well as coils, NV array, torso array, shoulder, wrist, extremity, dual array, power injector, and a computer workstation.

After consideration of the public comments, we are finalizing our proposal not to update the price of the Breast Biopsy software (EQ370). However, we note that in light of the information supplied by the commenter that the new CAD Software equipment (ED058) is actually synonymous with the Breast Biopsy software (EQ370), we had already proposed to include this equipment in CPT codes 77048 and 77049. We are finalizing the inclusion of the new CAD Software equipment (ED058) in these procedures, and we are finalizing an update in the price of the CAD Software to $43,308.12. This is based on a submitted invoice from the commenters which contained a price of $52,725 as averaged together with additional invoices for the same CAD Software equipment researched by the StrategyGen contractor. We are also finalizing the replacement of the time assigned to the EQ370 Breast Biopsy software in CPT codes 19085, 19086, 19287, and 19288 with an equal amount of time assigned to the new ED058 CAD Software equipment. Finally, due to the continued confusion and lack of price for the EQ370 equipment item, and due to its redundancy with the new ED058 equipment code, we are deleting EQ370.

(3) Invoice Submission

We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. For CY 2019, we noted that some stakeholders have submitted invoices for new, revised, or potentially misvalued codes after the February 10th deadline established for code valuation recommendations. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we would consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices.

(4) Adjustment to Allocation of Indirect PE for Some Office-Based Services

In the CY 2018 PFS final rule (82 FR 52999 through 53000), we established criteria for identifying the services most affected by the indirect PE allocation anomaly that does not allow for a site of service differential that accurately reflects the relative indirect costs involved in furnishing services in nonfacility settings. We also finalized a modification in the PE methodology for allocating indirect PE RVUs to better reflect the relative indirect PE resources involved in furnishing these services. The methodology, as described, is based on the difference between the ratio of indirect PE to work RVUs for each of the codes meeting eligibility criteria and the ratio of indirect PE to work RVU for the most commonly reported visit code. We refer readers to the CY 2018 PFS final

rule (82 FR 52999 through 53000) for a discussion of our process for selecting services subject to the revised methodology, as well as a description of the methodology, which we began implementing for CY 2018 as the first year of a 4-year transition. For CY 2019, we proposed to continue with the second year of the transition of this adjustment to the standard process for allocating indirect PE.

We received no comments specific to our proposal to continue with the 2nd year of the transition to the standard process for allocating indirect PE. Therefore, we are finalizing our proposal to proceed with the second year of implementing an alternative methodology for the allocation of indirect PE for some office-based services.

C. Determination of Malpractice Relative Value Units (RVUs)

1. Overview

Section 1848(c) of the Act requires that the payment amount for each service paid under the PFS be composed of three components: Work; PE; and malpractice (MP) expense. As required by section 1848(c)(2)(C)(iii) of the Act, beginning in CY 2000, MP RVUs are resource-based. Section 1848(c)(2)(B)(i) of the Act also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. In the CY 2015 PFS final rule with comment period, we implemented the third review and update of MP RVUs. For a comprehensive discussion of the third review and update of MP RVUs see the CY 2015 PFS proposed rule (79 FR 40349 through 40355) and final rule with comment period (79 FR 67591 through 67596).

To determine MP RVUs for individual PFS services, our MP methodology is composed of three factors: (1) Specialty-level risk factors derived from data on specialty-specific MP premiums paid by practitioners; (2) service level risk factors derived from Medicare claims data of the weighted average risk factors of the specialties that furnish each service; and (3) an intensity/complexity of service adjustment to the service level risk factor based on either the higher of the work RVU or clinical labor RVU. Prior to CY 2016, MP RVUs were only updated once every 5 years, except in the case of new and revised codes.

In the CY 2016 PFS final rule with comment period (80 FR 70906 through 70910), we finalized a policy to begin conducting annual MP RVU updates to reflect changes in the mix of practitioners providing services (using Medicare claims data), and to adjust MP RVUs for risk, intensity and complexity (using the work RVU or clinical labor RVU). We also finalized a policy to modify the specialty mix assignment methodology (for both MP and PE RVU calculations) to use an average of the 3 most recent years of data instead of a single year of data. Under this approach, for new and revised codes, we generally assign a specialty risk factor to individual codes based on the same utilization assumptions we make regarding the specialty mix we use for calculating PE RVUs and for PFS budget neutrality. We continue to use the work RVU or clinical labor RVU to adjust the MP RVU for each code for intensity and complexity. In finalizing this policy, we stated that the specialty-specific risk factors would continue to be updated through notice and comment rulemaking every 5 years using updated premium data, but would remain unchanged between the 5-year reviews.

In CY 2017, we finalized the 8th GPCI update, which reflected updated MP premium data. We did not propose to use the updated MP premium data to propose updates for CY 2017 to the specialty risk factors used in the calculation of MP RVUs because it was inconsistent with the policy we previously finalized in the CY 2016 PFS final rule with comment period. That is, we indicated that the specialty-specific risk factors would continue to be updated through notice and comment rulemaking every 5 years using updated premium data, but would remain unchanged between the 5-year reviews. However, we solicited comment on whether we should consider doing so, perhaps as early as for CY 2018, prior to the fourth review and update of MP RVUs that must occur no later than CY 2020. After consideration of the comments received, we stated in the CY 2017 PFS final rule that we would consider the possibility of using the updated MP data to update the specialty risk factors used in the calculation of the MP RVUs prior to the next 5-year update in future rulemaking (81 FR 80191 through 80192).

In the CY 2018 PFS proposed rule, we proposed to use the updated MP data to update the specialty risk factors used in calculation of the MP RVUs prior to the next 5-year update (CY 2020). However, in the CY 2018 PFS final rule (82 FR 53000 through 53006), after consideration of the comments received and some differences we observed in the descriptions on the raw rate filings as compared to how those data were categorized to conform with the CMS specialties, we did not finalize our proposal to use the updated MP data. We are required to review, and if necessary, adjust the MP RVUs by CY 2020. We appreciate the feedback provided by commenters in response to the CY 2018 PFS proposed rule.

In the CY 2019 PFS proposed rule, we solicited additional comment regarding the next MP RVU update which must occur by CY 2020. Specifically, we solicited comment on how we might improve the way that specialties in the state-level raw rate filings data are crosswalked for categorization into CMS specialty codes, which are used to develop the specialty-level risk factors and the MP RVUs.

We received a few comments in response to the comment solicitation, and we appreciate the commenters' feedback and input. We will consider the suggestions and information received for future rulemaking, and in particular for the CY 2020 statutorily required update to MP RVUs.

D. Modernizing Medicare Physician Payment by Recognizing Communication Technology-Based Services

The health care community uses the term ''telehealth'' broadly to refer to medical services furnished via communication technology. Under current PFS payment rules, Medicare routinely pays for many of these kinds of services. This includes some kinds of remote patient monitoring (either as separate services or as parts of bundled services), interpretations of diagnostic tests when furnished remotely and, under conditions specified in section 1834(m) of the Act, services that would otherwise be furnished in person but are instead furnished via real-time, interactive communication technology. Over the past several years, we have also established several PFS policies to explicitly pay for non-face-to-face services included as part of ongoing care management.

Although all of the kinds of services stated above might be called ''telehealth'' by patients, other payers and health care providers, we have generally used the term ''Medicare telehealth services'' to refer to the subset of services defined in section 1834(m) of the Act. Section 1834(m) of the Act defines Medicare telehealth services and specifies the payment amounts and circumstances under which Medicare makes payment for a discrete set of services, all of which must ordinarily be furnished in-person, when they are instead furnished using interactive, real-time telecommunication technology. Section 1834(m)(4)(F)(i) of the Act enumerates certain Medicare telehealth services and section 1834(m)(4)(F)(ii) of the Act allows the Secretary to specify

additional Medicare telehealth services using an annual process to add or delete services from the Medicare telehealth list. Section 1834(m)(4)(C) of the Act limits the scope of Medicare telehealth services for which payment may be made to those furnished to a beneficiary who is located in certain types of originating sites in certain, mostly rural, areas. Section 1834(m)(1) of the Act permits only physicians and certain other types of practitioners to furnish and be paid for Medicare telehealth services. Although section 1834(m)(4)(F)(ii) of the Act grants the Secretary the authority to add services to, and delete services from, the list of telehealth services based on the established annual process, it does not provide any authority to change the limitations relating to geography, patient setting, or type of furnishing practitioner because these requirements are specified in statute. However, we note that sections 50302, 50324, and 50325 of the Bipartisan Budget Act of 2018 (BBA 18) (Pub. L. 115–123) have modified or removed the limitations relating to geography and patient setting for certain telehealth services, including for certain home dialysis end-stage renal disease-related services, services furnished by practitioners in certain Accountable Care Organizations, and acute stroke-related services, respectively.

In the CY 2018 PFS proposed rule (82 FR 53012), we solicited information from the public regarding ways that we might further expand access to telehealth services within the current statutory authority and pay appropriately for services that take full advantage of communication technologies. Commenters were very supportive of CMS expanding access to these kinds of services. Many commenters noted that Medicare payment for telehealth services is restricted by statute, but encouraged CMS to recognize and support technological developments in healthcare.

We believe that the provisions in section 1834(m) of the Act apply particularly to the kinds of professional services explicitly enumerated in the statutory provisions, like professional consultations, office visits, and office psychiatry services. Generally, the services we have added to the telehealth list are similar to these kinds of services. As has long been the case, certain other kinds of services that are furnished remotely using communications technology are not considered ''Medicare telehealth services'' and are not subject to the restrictions articulated in section 1834(m) of the Act. This is true for services that were routinely paid separately prior to the enactment of the provisions in section 1834(m) of the Act and do not usually include patient interaction (such as remote interpretation of diagnostic imaging tests), and for services that were not discretely defined or separately paid for at the time of enactment and that do include patient interaction (such as chronic care management services).

As we considered the concerns expressed by commenters about the statutory restrictions on Medicare telehealth services, we recognized that the concerns were not limited to the barriers to payment for remotely furnished services like those described by the office visit codes. The commenters also expressed concerns pertaining to the limitations on appropriate payment for evolving physicians' services that are inherently furnished via communication technology, especially as technology and its uses have evolved in the decades since the Medicare telehealth services statutory provision was enacted.

In recent years, we have sought to recognize significant changes in health care practice, especially innovations in the active management and ongoing care of chronically ill patients, and have relied on the medical community to identify and define discrete physicians' services through the CPT Editorial Panel (82 FR 53163). In response to our comment solicitation on Medicare telehealth services in the CY 2018 PFS proposed rule (82 FR 53012), commenters provided many suggestions for how CMS could expand access to telehealth services within the current statutory authority and pay appropriately for services that take full advantage of communication technologies, such as waiving portions of the statutory restrictions using demonstration authority. After considering those comments we recognized that concerns regarding the provisions in section 1834(m) of the Act may have been limiting the degree to which the medical community developed coding for new kinds of services that inherently utilize communication technology. We have come to believe that section 1834(m) of the Act does not apply to all kinds of physicians' services whereby a medical professional interacts with a patient via remote communication technology. Instead, we believe that section 1834(m) of the Act applies to a discrete set of physicians' services that ordinarily involve, and are defined, coded, and paid for as if they were furnished during an in-person encounter between a patient and a health care professional.

For CY 2019, we aimed to increase access for Medicare beneficiaries to physicians' services that are routinely furnished via communication technology by clearly recognizing a discrete set of services that are defined by and inherently involve the use of communication technology. Accordingly, we made several proposals for modernizing Medicare physician payment for communication technology-based services, described below. These services will not be subject to the limitations on Medicare telehealth services in section 1834(m) of the Act because, as we have explained, we do not consider them to be Medicare telehealth services; instead, they will be paid under the PFS like other physicians' services. Additionally, we note that in furnishing these services, practitioners need to comply with any applicable privacy and security laws, including the HIPAA Privacy Rule.

1. Brief Communication Technology-Based Service, *e.g.* Virtual Check-In (HCPCS Code G2012)

The traditional office visit codes describe a broad range of physicians' services. Historically, we have considered any routine non-face-to-face communication that takes place before or after an in-person visit to be bundled into the payment for the visit itself. In recent years, we have recognized payment disparities that arise when the amount of non-face-to-face work for certain kinds of patients is disproportionately higher than for others, and created coding and separate payment to recognize care management services such as chronic care management and behavioral health integration services (81 FR 80226). We now recognize that advances in communication technology have changed patients' and practitioners' expectations regarding the quantity and quality of information that can be conveyed via communication technology. From the ubiquity of synchronous, audio/video applications to the increased use of patient-facing health portals, a broader range of services can be furnished by health care professionals via communication technology as compared to 20 years ago.

Among these services are the kinds of brief check-in services furnished using communication technology that are used to evaluate whether or not an office visit or other service is warranted. When these kinds of check-in services are furnished prior to an office visit, then we would currently consider them to be bundled into the payment for the resulting visit, such as through an evaluation and management (E/M) visit

code. However, in cases where the check-in service does not lead to an office visit, then there is no office visit with which the check-in service can be bundled. To the extent that these kinds of check-ins become more effective at addressing patient concerns and needs using evolving technology, we believe that the overall payment implications of considering the services to be broadly bundled becomes more problematic. This is especially true in a resource-based relative value payment system. Effectively, the better practitioners are in leveraging technology to furnish effective check-ins that mitigate the need for potentially unnecessary office visits, the fewer billable services they furnish. Given the evolving technological landscape, we believe this creates incentives that are inconsistent with current trends in medical practice and potentially undermines payment accuracy.

Therefore, we proposed to pay separately, beginning January 1, 2019, for a newly defined type of physicians' service furnished using communication technology. We stated this service would be billable when a physician or other qualified health care professional has a brief non-face-to-face check-in with a patient via communication technology, to assess whether the patient's condition necessitates an office visit. We understand that the kind of communication technology used to furnish these kinds of services has broadened over time and has enhanced the capacity for medical professionals to care for patients. We solicited comment on what types of communication technology are utilized by physicians or other qualified health care professionals in furnishing these services, including whether audio-only telephone interactions are sufficient compared to interactions that are enhanced with video or other kinds of data transmission.

The following discussion summarizes particular definitions and billing rules for these services, as proposed, and more detailed comments we received regarding these aspects of the proposal. Our responses below include information regarding the service definitions and billing requirements applicable for CY 2019.

Comment: Many commenters supported the proposal to pay for these kinds of services. Many commenters offered specific suggestions regarding the service definitions and associated billing rules, which we describe in detail below. Several commenters urged CMS to take a cautious approach in paying for these services, given concerns these commenters stated regarding potential overutilization, while some noted that potential overutilization would be mitigated by Medicare's requirements for the visit to be reasonable and medically necessary/appropriate. Specific aspects of these comments are detailed below.

Response: Based on the broad support for the proposal, we are creating coding and finalizing our proposal to make separate payment for this service. We note that in the proposed rule we referred to this service as HCPCS code GVCI1, which was a placeholder code. The code will be described as HCPCS code G2012 (Brief communication technology-based service, *e.g.* virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion).

We appreciate commenters' concerns regarding the potential for overutilization of these services. We plan to monitor utilization with the intention of determining whether changes, such as a frequency limitation on the use of this code, are warranted. We would consider proposing such changes in future rulemaking. We note that, like all other physicians' services billed under the PFS, each of these services must be medically reasonable and necessary to be paid by Medicare.

Comment: Many commenters suggested that we not be overly prescriptive regarding the types of communication technology that are utilized by physicians or other qualified health care professionals in furnishing these services. The commenters noted that technology is evolving at a rapid pace and would require us to have to update our policies frequently. Several commenters suggested that we permit the use of email and Electronic Health Record (EHR) patient portals to qualify. A few commenters stated that audio-visual communication is ideal. Others acknowledged that not all patients have the same level of connectivity and therefore recommended allowing audio-only communication.

Response: We are persuaded by the comments advising us not to be overly prescriptive about the technology that is used, and are finalizing allowing audio-only real-time telephone interactions in addition to synchronous, two-way audio interactions that are enhanced with video or other kinds of data transmission. We note that telephone calls that involve only clinical staff could not be billed using HCPCS code G2012 since the code explicitly describes (and requires) direct interaction between the patient and the billing practitioner.

We further proposed that in instances when the brief communication technology-based service originates from a related E/M service provided within the previous 7 days by the same physician or other qualified health care professional, that this service would be considered bundled into that previous E/M service and would not be separately billable, which is consistent with code descriptor language for CPT code 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion), on which this service is partially modeled. We proposed that in instances when the brief communication technology-based service leads to an E/M service with the same physician or other qualified health care professional, this service would be considered bundled into the pre- or post-visit time of the associated E/M service, and therefore, would not be separately billable. We also noted that this service could be used as part of a treatment regimen for opioid use disorders and other substance use disorders to assess whether the patient's condition requires an office visit.

We proposed pricing this distinct service at a rate lower than current E/M in-person visits to reflect the low work time and intensity and to account for the resource costs and efficiencies associated with the use of communication technology. We expect that these services will be initiated by the patient, especially since many beneficiaries would be financially liable for sharing in the cost of these services. For the same reason, we believe it is important for patients to consent to receiving these services. Therefore, we specifically solicited comment on whether we should require, for example, verbal consent that will be noted in the medical record for each service.

Comment: Many commenters stated that it would be burdensome to obtain consent from the patient prior to each occurrence of this service. Some commenters suggested that the patient be informed through the use of a service agreement which could be signed once and kept on file. Several commenters

expressed concern about the cost to beneficiaries, especially since they may have previously received this service without financial liability, and therefore recommended requiring verbal consent that is documented in the medical record.

Response: We understand the potential burden regarding obtaining consent for each occurrence of this service. However, we are persuaded by those commenters who suggest that unexpected cost to beneficiaries would be particularly problematic. We note that under our current policy for several types of care management services, verbal consent is required to be obtained and documented in the medical record. The consent policy was implemented, in part, based on feedback we received from practitioners reporting the care management services, to alleviate burdens of alternative approaches, such as requirements for written consent or completion of particular forms. Consequently, we believe the same requirement could be applied here, without imposition of significant burden. We are finalizing requiring verbal consent that is noted in the medical record for each billed service.

We also proposed that this service can only be furnished for established patients because we believe that the practitioner needs to have an existing relationship with the patient, and therefore, basic knowledge of the patient's medical condition and needs, in order to perform this service.

Comment: Many commenters were supportive of our proposal to limit this service to established patients, while several commenters noted that there would be instances when it would be appropriate to bill this service for new patients. MedPAC noted particular concern regarding potential increases in volume that are not related to ongoing, informed patient care. A few commenters requested that CMS clarify that established patients include those patients who have been seen by a practitioner within the same group practice.

Response: After considering the comments, we are finalizing our proposal to limit this service to established patients, given the concern expressed by commenters regarding the degree to which these services can be furnished without familiarity and experience with individual patients, and in light of MedPAC's concerns regarding increases in utilization that are not related to ongoing, informed patient care. In response to the request for clarification about what constitutes an established patient, we defer to CPT's definition of this term. CPT defines an established patient as one who has received professional services from the physician or qualified health care professional or another physician or qualified health care professional of the exact same specialty and subspecialty who belongs to the same group practice, within the past 3 years. We also emphasize that payment for this service would not preclude a physician or other qualified health care professional from having communication via phone or other modalities with any patient, new or existing, for a variety of reasons. We believe that much of the pre- and post-work associated with, and included in the valuation of existing in-person services that are paid under the PFS can include some types of interactions with patients that are not in-person.

We did not propose to apply a frequency limit on the use of this code by the same practitioner with the same patient, but we want to ensure that this code is appropriately utilized for circumstances when a patient needs a brief non-face-to-face check-in to assess whether an office visit is necessary. We solicited comment on whether it would be clinically appropriate to apply a frequency limitation on the use of this code by the same practitioner with the same patient, and on what would be a reasonable frequency limitation.

Comment: Many commenters were opposed to creating a frequency limitation, suggesting we wait and monitor utilization. Others noted that it could be clinically appropriate to utilize this service multiple times in a week. A few commenters stated that this service could be utilized in behavioral health treatment, and cited an example of assessing suicidal risk, in which case they suggested the frequency should not be limited since routine virtual check-ins would be clinically warranted in some cases. Some commenters suggested a frequency limit of three times per week whereas others suggested a limit of once per week.

Response: After considering these comments, we are not implementing a frequency limitation for CY 2019. However, we plan to monitor utilization with the intention of determining whether such a limitation is warranted. In that case, we would consider proposing a limitation in future rulemaking. We note that, like all other physicians' services billed under the PFS, each of these services must be medically reasonable and necessary to be paid by Medicare.

We also solicited comment on the timeframes under which this service would be separately billable compared to when it would be bundled. We believe the general construct of bundling the services that lead directly to a billable visit is important, but we are concerned that establishing strict timeframes may create unintended consequences regarding scheduling of care. For example, we do not want to bundle only the services that occur within 24 hours of a visit only to see a significant number of visits occurring at 25 hours after the initial service. In order to mitigate these incentives, we solicited comment on whether we should consider broadening the window of time and/or circumstances in which this service should be bundled into the subsequent related visit. We noted that these services, like any other physicians' service, must be medically reasonable and necessary in order to be paid by Medicare.

Comment: Several commenters suggested that we remove the language in the code descriptor that states ''or soonest available appointment.'' A few commenters suggested we extend the timeframe to 48 hours following the virtual check-in, while others suggested it would be reasonable to expand the limit to 14 days before and 72 hours after the service. Several commenters stated concerns that it might be difficult to document that a subsequent visit was not the ''soonest available appointment.'' Several commenters expressed concern about the potential for overutilization of this code.

Response: We agree with commenters that urged caution regarding overutilization of this service and believe that the language stating, 'or soonest available appointment' in the code description may serve to reduce potential perverse payment incentives to delay seeing patients to ensure payment for this code. We appreciate the concerns regarding potential difficulty in proving that a particular visit was not the ''soonest available.'' We agree that in each individual case, it might be challenging to prove whether or not other appointments were available prior to the visit, especially since beneficiary convenience is also presumably a factor for when appointments are scheduled. However, we believe that, as written, the code description could help to guard against the potential for abuse that would be present if we instead adopted a purely time-based window for bundling of this service. We also believe that ''soonest available appointment'' might allow for clinically appropriate flexibility. Therefore, after consideration of the public comments, we are finalizing the code descriptor for HCPCS code G2012 as proposed. However, we plan to monitor this service with the intention of determining whether changes are

necessary to the timeframes under which this service would be separately billable compared to when it would be bundled. We would consider any such changes in future rulemaking.

We solicited comment on how clinicians could best document the medical necessity of this service, consistent with documentation requirements necessary to demonstrate the medical necessity of any service under the PFS.

Comment: A few commenters stated that documentation for this service should be consistent with the requirements for an in-person encounter and requested appropriate documentation requirements to ensure that the check-in is fully incorporated into the individual's medical history. Other commenters urged us not to be overly prescriptive.

Response: We appreciate the commenters' input. We do not want to impose undue administrative burden likely to discourage appropriate provision of these services, and are therefore not requiring any service-specific documentation requirements for this service. We note again that these services, like any other physicians' service, must be medically reasonable and necessary in order to be paid by Medicare.

Comment: Several commenters stated that the proposed payment rate would be inadequate for modalities that are both audio- and visual-capable, whereas others stated that the proposed valuation was appropriate. One commenter suggested we create a second code for a virtual check-in that only utilizes synchronous audio/video technology, with a higher reimbursement rate associated with the increased complexity of technology.

Response: As discussed in section II.H of this final rule, we are finalizing the valuation for HCPCS code G2012 as proposed. We believe this valuation reflects the work time and intensity of the service relative to other PFS services and accounts for the resource costs and efficiencies associated with the use of communication technology. We recognize that the valuation of this service is relatively modest, especially compared to in-person services, however, we believe that the proposed valuation accurately reflects the resources involved in furnishing this service. We plan to monitor the utilization of this code and note that we routinely address recommended changes in values for codes paid under the PFS.

Comment: A few commenters requested that CMS allow licensed physical therapists to furnish these services. Additionally, a few commenters requested that we allow other clinical staff, such as registered nurses, to furnish this service.

Response: We are finalizing maintaining this code as part of the set of codes that is only reportable by those that can furnish E/M services. We believe this is appropriate since the service describes a check-in directly with the billing practitioner to assess whether an office visit is needed. We agree that similar check-ins provided by nurses and other clinical staff can be important aspects of coordinated patient care. We note that these kinds of non-face-to-face services by other medical professionals and clinical staff continue to be included in the RVUs for other codes, including those that describe E/M visits, and for procedures with global periods. We also note that non-face-to-face services provided by clinical staff can be explicitly and separately paid for as part of several care management services, many of which we have introduced over the past several years. However, this service is meant to describe, and account for the resources involved, when the billing practitioner directly furnishes the virtual check-in.

Comment: Several commenters requested that CMS waive the beneficiary co-payment for this service.

Response: We appreciate the commenters' request; however, we do not have the statutory authority to make specific changes to the requirements regarding beneficiary cost sharing for this service.

In summary, we are creating coding and finalizing our proposal to make separate payment for brief communication technology-based services. The code will be described as G2012 (Brief communication technology-based service, *e.g.* virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion). We are finalizing allowing real-time audio-only telephone interactions in addition to synchronous, two-way audio interactions that are enhanced with video or other kinds of data transmission. We are finalizing our proposal to limit this service to established patients.

We are finalizing that if the service originates from a related E/M service provided within the previous 7 days by the same physician or other qualified health care professional, that this service would be considered bundled into that previous E/M service and would not be separately billable. In instances when the service leads to an E/M service with the same physician or other qualified health care professional, we are finalizing that this service would be considered bundled into the pre- or post-visit time of the associated E/M service, and therefore, would not be separately billable. We plan to monitor this service with the intention of determining whether changes are necessary to the timeframes under which this service would be separately billable compared to when it would be bundled. We would consider any such changes in future rulemaking.

We are finalizing requiring verbal consent from beneficiaries that is noted in the medical record for each service. We are not implementing a frequency limitation for CY 2019, however, we plan to monitor utilization with the intention of determining whether such a limitation is warranted. In that case, we would consider that for future rulemaking.

We are finalizing the valuation for HCPCS code G2012 as proposed. We will monitor the utilization of this code and consider any potential adjustments to billing rules or valuation for this service through future rulemaking. We note that cost sharing for these services will apply.

For details related to developing utilization estimates for this service, see section VII. of this final rule, Regulatory Impact Analysis. For additional details related to valuation of this service, see section II.H. of this final rule, Valuation of Specific Codes.

2. Remote Evaluation of Pre-Recorded Patient Information (HCPCS Code G2010)

Stakeholders have requested that CMS make separate Medicare payment when a physician uses recorded video and/or images captured by a patient in order to evaluate a patient's condition. These services involve what is referred to under section 1834(m) of the Act as ''store-and-forward'' communication technology that provides for the ''asynchronous transmission of health care information.'' We noted in the proposed rule that we believe these services involve pre-recorded patient-generated still or video images. Other types of patient-generated information, such as information from heart rate monitors or other devices that collect patient health marker data, could potentially be reported with CPT codes that describe remote patient monitoring (83 FR 35724). Under section 1834(m) of

the Act, payment for telehealth services furnished using such store-and-forward technology is permitted only under federal telemedicine demonstration programs conducted in Alaska or Hawaii, and these telehealth services remain subject to the other statutory restrictions governing Medicare telehealth services. However, much like the brief communication technology-based service (''virtual check-in service'') that we are finalizing in this rule as described previously, this remote evaluation service would not be a substitute for an in-person service currently separately payable under the PFS. As such, this remote evaluation service is distinct from the telehealth services described under section 1834(m) of the Act. Effective January 1, 2019, we proposed to create specific coding that describes the remote professional evaluation of patient-transmitted information conducted via pre-recorded ''store and forward'' video or image technology. Because this service would not be considered a Medicare telehealth service, it would not be subject to the geographic and other restrictions on telehealth services under section 1834(m) of the Act; and the proposed valuation reflects the resource costs associated with furnishing services utilizing communication technology.

Also like the virtual check-in service we are finalizing as described previously, this service would be used to determine whether or not an office visit or other service is warranted. When the remote evaluation of pre-recorded patient-submitted images and/or video results in an in-person E/M office visit with the same physician or qualified health care professional, we proposed that this remote service will be considered bundled into that office visit and therefore not be separately billable. We further proposed that in instances when the remote service originates from a related E/M service provided within the previous 7 days by the same physician or qualified health care professional that this service will be considered bundled into that previous E/M service and not be separately billable. In summary, we proposed this service to be a stand-alone service that could be separately billed to the extent that there is no resulting E/M office visit and there is no related E/M office visit within the previous 7 days of the remote service being furnished. We believe the coding and separate payment for this service is consistent with the progression of technology and its impact on the practice of medicine in recent years, and would result in increased access to services for Medicare beneficiaries. We note that in the proposed rule we referred to this service as HCPCS code GRAS1, which was a placeholder code. The code for this service is G2010 (Remote evaluation of recorded video and/or images submitted by an established patient (*e.g.,* store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment). We solicited comment as to whether these services should be limited to established patients; or whether there are certain cases, like dermatological or ophthalmological services, where it might be appropriate for a new patient to receive these services. For example, when a patient seeks care for a specific skin condition from a dermatologist with whom she does not have a prior relationship, and part of the inquiry is an assessment of whether the patient needs an in-person visit, the patient could share, and the dermatologist could remotely evaluate, pre-recorded information. We also noted that this service is distinct from the virtual check-in service described previously in that this service involves the practitioner's evaluation of a patient-generated still or video image transmitted by the patient, and the subsequent communication of the practitioner's response to the patient; while the virtual check-in service describes a service that occurs in real time and does not involve the asynchronous transmission of any recorded image.

The following discussion summarizes particular definitions and billing rules we proposed for this service and the more detailed comments we received regarding these aspects of the proposal. Our responses below include information regarding the service definitions and billing requirements applicable for 2019. We additionally address comments we received regarding whether these services should be limited to established patients; or whether there are certain cases, like dermatological or ophthalmological services, where it might be appropriate for a new patient to receive these services.

Comment: Several commenters were supportive of the proposal to pay for these kinds of services. Several commenters urged CMS to take a cautious approach in paying for these services, given concerns these commenters expressed regarding potential overutilization.

Response: We appreciate the many thoughtful comments regarding this proposal. Based on our review of the comments received, especially the broad support for the proposal, we are creating coding and finalizing our proposal to make separate payment for this service. The code will be described as G2010 (Remote evaluation of recorded video and/or images submitted by an established patient (*e.g.,* store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment).

We appreciate commenters' concerns regarding the potential for overutilization of these services. We plan to monitor utilization. We note that, like all other physicians' services billed under the PFS, each of these services must be medically reasonable and necessary to be paid by Medicare.

Comment: Many commenters supported allowing this service to be furnished to new patients, noting that an established relationship is not required for the practitioner to remotely evaluate an image or video to consider whether an office visit or other service is warranted, particularly in dermatology and ophthalmology. One commenter stated that allowing new patients to receive this service would also be of value in urology, as it would provide a way to assess patients with conditions such as hematuria (that is, blood in the urine) in a timely manner. The AMA and other commenters urged CMS to limit these services to established patients. The AMA also suggested that, at some point before a physician or practitioner furnishes a virtual service, the clinician (or another clinician with whom the furnishing clinician has a cross-coverage agreement in place) should conduct a face-to-face examination (either in-person or via telehealth) with the patient, noting that the existence of a valid patient-physician relationship ensures that the treating physician or qualified health professional meets a threshold standard of care, enhances care coordination/continuity of care, and ensures that patients are afforded advance notice of when the relationship is being established and that such a patient-initiated service may result in out-of-pocket expenses including deductibles and co-insurance, and additionally serves to minimize the potential for program integrity concerns.

Response: We are persuaded by comments urging us to permit separate

payment for these services only for established patients. Since this service is furnished directly by the billing practitioner, we believe it should be furnished in the context of an existing patient-clinician relationship. Therefore, we are finalizing the reporting and billing of HCPCS code G2010 only for established patients.

Comment: Many commenters stated that it would be burdensome to obtain consent from the patient prior to each occurrence of this service. Some commenters suggested that the patient could be informed through the use of a service agreement which could be signed once and kept on file. Several commenters expressed concern about the cost to beneficiaries and therefore recommended requiring verbal consent that is documented in the medical record.

Response: As noted previously regarding HCPCS code G2012, we believe it is important for patients to consent to receive these services, especially since many beneficiaries would be financially liable for sharing in the cost of these services. We understand the potential burden regarding obtaining consent for each occurrence of this service. However, we are persuaded by those commenters who suggest that unexpected cost to beneficiaries would be particularly problematic. We are finalizing requiring beneficiary consent that could be verbal or written, including electronic confirmation that is noted in the medical record for each billed service for HCPCS code G2010.

We acknowledge that verbal consent could be obtained using more than one communication modality, especially since this service is initiated by the patient and involves submission of an image or video. Therefore, we do not intend to include the word ''verbal'' in the descriptor for the code that describes this services, since ''verbal'' could imply written or electronic consent.

Comment: Several commenters stated that the proposed payment rate is too low, citing that it is below market compared to the rate many asynchronous telemedicine companies pay their contracted/employed physician staff, and noted that new patients in particular require more resources, whereas others stated that the proposed valuation was appropriate. One commenter suggested that CMS should encourage clinicians to recommend that patients have virtual or in-person visits if the clinician has concerns about the quality of the pre-recorded patient information, such as still or video images.

Response: As discussed in section II.H. of this final rule, we are finalizing the valuation for HCPCS code G2010 as proposed. As stated previously regarding the valuation of the brief communication technology-based service code, HCPCS code G2012, we believe that the proposed valuation accurately reflects the resources involved in furnishing this service. We will monitor the utilization of this code and consider any potential adjustments to billing rules or valuation for this service through future rulemaking.

Comment: A few commenters requested that CMS clarify that the ''verbal follow-up'' that occurs after the billing practitioner evaluates the images or video submitted by the patient may take place via any mode of communication, including secure text messaging, phone call, or live/asynchronous video chat, so as not to restrict a clinician's interaction with patients. One commenter suggested that CMS should encourage clinicians to recommend that patients have a face-to-face visit (in-person or via telehealth) if the clinician has concerns about the quality of the pre-recorded patient information, such as still or video images.

Response: We are finalizing that the follow-up could take place via phone call, audio/video communication, secure text messaging, email, or patient portal communication and note that accordingly, we do not intend to include the word ''verbal'' in the code descriptor. We note that any such communications must be compliant with HIPAA and other relevant laws. Additionally, we agree that in instances in which the quality of the pre-recorded information submitted by a patient is insufficient for the clinician to assess whether an office visit or other medical service is warranted, the clinician could not fully furnish a remote evaluation service and, therefore, could not bill for the service. We anticipate that in such a circumstance, the clinician would attempt other methods of communication with the patient to either obtain sufficient images to enable a remote evaluation service or suggest other appropriate alternatives.

Comment: Several commenters suggested that we remove the language in the code descriptor for this service that states ''or soonest available appointment,'' and stated that it might be difficult to document that a subsequent visit was not the ''soonest available appointment.''

Response: As noted previously regarding similar comments on HCPCS code G2012, we appreciate the concerns regarding potential difficulty in proving that a particular visit was not the ''soonest available.'' We agree that in each individual case, it might be challenging to prove whether or not other appointments were available prior to the visit, especially since beneficiary convenience is also presumably a factor in when appointments are scheduled. However, we believe that, as written, the code description would guard against the potential for abuse that would be present if we instead adopted a purely time-based window for bundling of this service. Therefore, in response to the comments, we are finalizing retaining this language in the code descriptor for HCPCS code G2010 as proposed. However, we plan to monitor this service with the intention of determining if changes are necessary to the timeframes under which this service would be separately billable compared to when it would be bundled. We would consider any such changes in future rulemaking.

Comment: A few commenters suggested that CMS consider inclusion of email/messaging or questionnaires/assessments that do not include an image or other visual item in the scope of this code.

Response: The scope of this service is limited to the evaluation of pre-recorded video and/or images. We note that there is separate coding under the PFS for several types of formal assessments, such as CPT code 96160 (Administration of patient-focused health risk assessment instrument (*e.g.,* health hazard appraisal) with scoring and documentation, per standardized instrument), many of which can be reported when the form is completed by the patient and submitted using remote communication technology for subsequent evaluation by the clinician. Additionally, behavioral health assessments are included in coding and payment for the behavioral health integration services that were finalized for separate payment beginning in CY 2017.

In summary, we are creating coding and finalizing our proposal to make separate payment for remote evaluation of recorded video and/or images submitted by the patient. The code will be described as G2010 (Remote evaluation of recorded video and/or images submitted by an established patient (*e.g.,* store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment). We are finalizing that

HCPCS code G2010 may be billed only for established patients. We are finalizing that the follow-up with the patient could take place via phone call, audio/video communication, secure text messaging, email, or patient portal communication.

When the review of the patient-submitted image and/or video results in an in-person E/M office visit with the same physician or qualified health care professional, we are finalizing that this remote service will be considered bundled into that office visit and therefore will not be separately billable. We are further finalizing that in instances when the remote service originates from a related E/M service provided within the previous 7 days by the same physician or qualified health care professional that this service will be considered bundled into that previous E/M service and also will not be separately billable.

We are finalizing requiring beneficiary consent that could be verbal or written, including electronic confirmation that is noted in the medical record for each billed service for HCPCS code G2010.

We are finalizing the valuation for HCPCS code G2010 as proposed. We will monitor utilization of this code and consider any potential adjustments to billing rules or valuation of this service through future rulemaking. We note that cost sharing for these services will apply.

For details related to our utilization estimates for this service, see section VII. of this final rule, Regulatory Impact Analysis. For further discussion related to valuation of this service, please see the section II.H. of this final rule, Valuation of Specific Codes.

3. Interprofessional Internet Consultation (CPT Codes 99451, 99452, 99446, 99447, 99448, and 99449)

As part of our standard rulemaking process, we received recommendations from the RUC to assist in establishing values for six CPT codes that describe interprofessional consultations. In 2013, CMS received recommendations from the RUC for CPT codes 99446 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5–10 minutes of medical consultative discussion and review), 99447 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 11–20 minutes of medical consultative discussion and review), 99448 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 21–30 minutes of medical consultative discussion and review), and 99449 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 31 minutes or more of medical consultative discussion and review). CMS declined to adopt these codes for separate payment, stating in the CY 2014 PFS final rule with comment period that these kinds of services are considered bundled (78 FR 74343). For CY 2019, the CPT Editorial Panel created two new codes to describe additional consultative services, including a code describing the work of the treating physician when initiating a consult, and the RUC recommended valuation for new codes, CPT codes 99452 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes) and 99451 (Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time). The RUC also reaffirmed their prior recommendations for the existing CPT codes. The six codes describe assessment and management services conducted through telephone, internet, or electronic health record consultations furnished when a patient's treating physician or other qualified healthcare professional requests the opinion and/or treatment advice of a consulting physician or qualified healthcare professional with specific specialty expertise to assist with the diagnosis and/or management of the patient's problem without the need for the patient's face-to-face contact with the consulting physician or qualified healthcare professional. Currently, the resource costs associated with seeking or providing such a consultation are considered bundled, which in practical terms means that specialist input is often sought through scheduling a separate visit for the patient when a phone or internet-based interaction between the treating practitioner and the consulting practitioner would have been sufficient. We believe that proposing payment for these interprofessional consultations performed via communications technology such as telephone or internet is consistent with our ongoing efforts to recognize and reflect medical practice trends in primary care and patient-centered care management within the PFS.

Beginning in the CY 2012 PFS proposed rule (76 FR 42793), we have recognized the changing focus in medical practice toward managing patients' chronic conditions, many of which particularly challenge the Medicare population, including heart disease, diabetes, respiratory disease, breast cancer, allergies, Alzheimer's disease, and factors associated with obesity. We have expressed concerns that the current E/M coding does not adequately reflect the changes that have occurred in medical practice, and the activities and resource costs associated with the treatment of these complex patients in the primary care setting. In the years since 2012, we have acknowledged the shift in medical practice away from an episodic treatment-based approach to one that involves comprehensive patient-centered care management, and have taken steps through rulemaking to better reflect that approach in payment under the PFS. In CY 2013, we established new codes to pay separately for transitional care management (TCM) services. Next, we finalized new coding and separate payment beginning in CY 2015 for chronic care management (CCM) services provided by clinical staff (81 FR 80226). In the CY 2017 PFS final rule, we established separate payment for complex CCM services, an add-on code to the visit during which CCM is initiated to reflect the work of the billing practitioner in assessing the beneficiary and establishing the CCM care plan, and established separate payment for Behavioral Health Integration (BHI) services (81 FR 80226 through 80227).

As part of this shift in medical practice, and with the proliferation of team-based approaches to care that are often facilitated by electronic medical record technology, we believe that making separate payment for interprofessional consultations undertaken for the benefit of treating a patient will contribute to payment accuracy for primary care and care management services. We proposed

separate payment for these services, discussed in section II.H. of this final rule, Valuation of Specific Codes.

Although we proposed to make separate payment for these services because we believe they describe resource costs directly associated with seeking a consultation for the benefit of the beneficiary, we do have concerns about how these services can be distinguished from activities undertaken for the benefit of the practitioner, such as information shared as a professional courtesy or as continuing education. We do not believe that those examples will constitute a service directly attributable to a single Medicare beneficiary, and therefore neither the Medicare program nor the beneficiary should be responsible for those costs. We therefore solicited comment on our assumption that these are separately identifiable services, and the extent to which they can be distinguished from similar services that are nonetheless primarily for the benefit of the practitioner. We noted that there are program integrity concerns around making separate payment for these interprofessional consultation services, including around CMS's or its contractors' ability to evaluate whether an interprofessional consultation is reasonable and necessary under the particular circumstances. As the beneficiary would be liable for any cost sharing associated with these services, we also sought comment on the necessity of requiring patient consent for these, and whether than consent should be written or verbal. We solicited comment on how best to minimize potential program integrity issues, and noted we were particularly interested in information on whether these types of services are paid separately by private payers and if so, what controls or limitations private payers have put in place to ensure these services are billed appropriately.

The following is a summary of the comments we received regarding how best to minimize potential program integrity issues.

Comment: Almost all commenters were very supportive of CMS proposing separate payment for these services. Commenters pointed out that these are discrete physician services undertaken for the benefit of the patient, and easily distinguished from consultations undertaken for the edification of the practitioner. One commenter stated as medical care moves toward more comprehensive patient-centered care management, frequent consultation with multiple specialists is necessary. Under the current model this means separate visits for the patients that are costly and inconvenient. Internet-based consultations between the treating practitioner and the consulting specialists provide appropriate, convenient and cost effective alternatives. Commenters were clear that, by not making separate payment for these services, CMS would not be accurately paying for the work of both the treating and consulting physicians in a consultative scenario.

Many commenters provided helpful responses to CMS' request for information on how to minimize program integrity concerns for these services. A few commenters provided suggestions as to how CMS could verify the medical necessity of the consultation, including verifying that the treating and consulting physician were of different medical specialties, requiring patient identifiers and documentation of how the interaction improved patient care, defining a time period under which an E/M visit and an Interprofessional Consultation cannot both be billed for the same diagnosis, and creating frequency limitations on billing. Others suggested that the treating physician must document that they acted on the recommendation of the consulting physician prior to billing for CPT code 99452. Commenters had a number of suggestions for items that CMS should require, including that Interprofessional Consultations should consist of focused questions that are answerable solely from information in the EMR; that they be answered in 3 business days; and that the consulting physician should restate the question in their response, provide recommendations for evaluation, management, and/or ongoing monitoring, provide a rationale for recommendations, and provide recommendations for contingencies. Other commenters suggested that CMS could make separate payment contingent upon whether the underlying condition was urgent or related to critical care and that the consultation helped avoid transfer or interruption of care or that internal expertise was sought and was not available. Many commenters also encouraged CMS to avoid imposing overly restrictive documentation requirements. One commenter stated that, due to potential program integrity concerns, these services should be subject to the Medicare telehealth restrictions on beneficiary location and site of service. Another commenter recommended that CMS delay implementation until the program integrity concerns have been addressed. Other commenters encouraged CMS to monitor utilization for abuse.

Response: We thank commenters for their support and additional information on the ways in which these services are distinct physician services. We note that because these services are inherently non face-to-face (the patient need not be present in order for the service to be furnished in its entirety), they would not be considered as potential Medicare telehealth services under section 1834(m) of the Act. We appreciate the wealth of information and suggestions from commenters; however, we also agree with the many commenters who pointed out that adding many additional billing requirements may inhibit uptake for these services. As we note below, we are requiring documentation of verbal patient consent to receive these services, and are adopting existing CPT prefatory language. We plan to monitor utilization of these services and will consider making refinements to billing rules, documentation requirements or claims edits, including those suggested by commenters, through future rulemaking as necessary.

Comment: Many commenters suggested that CMS limit or eliminate beneficiary cost sharing for these services to obviate the question of patient consent entirely.

Response: Under current statute, we do not have the authority to change the requirements for the beneficiary cost sharing for these services.

Additionally, since these codes describe services that are furnished without the beneficiary being present, we proposed to require the treating practitioner to obtain verbal beneficiary consent in advance of these services, which would be documented by the treating practitioner in the patient's medical record, similar to the conditions of payment associated with separately billable care management services under the PFS. Obtaining advance beneficiary consent includes ensuring that the patient is aware of applicable cost sharing.

The following is a summary of the comments we received regarding whether to require the treating practitioner to obtain verbal beneficiary consent in advance of these services, which would be documented by the treating practitioner in the medical record similar to the conditions of payment associated with the care management services under the PFS, as well as comments on other aspects of this proposal.

Comment: Many commenters stated that verbal patient consent was an appropriate safeguard against unnecessary utilization, while others disagreed, stating that the requirement

to obtain consent may cause unnecessary burden in cases where the patient is unresponsive or the need for the interprofessional consultation is urgent such as in a critical care or emergency setting. Other commenters stated that a single blanket patient consent to receive interprofessional consultation services would be preferable to minimize the need to obtain consent for each of what may be multiple consultations. One commenter questioned whether the consulting physician would need to verify that the beneficiary had consented, given that only the treating physician is in contact with the beneficiary.

Response: We understand the potential burden regarding obtaining consent. However, we believe that it is important for beneficiaries to consent to the service and thus be notified of their cost-sharing obligations. We note that under our current policy for several care management services, consent is required to be documented in the medical record. That policy was implemented, in part, based on feedback we received from practitioners reporting the care management services, to alleviate burdens of alternative approaches. Consequently, we believe the same requirement could be applied here, without imposition of significant burden.

We are finalizing that the patient's verbal consent is required, and that consent must be noted in the medical record for each service, consistent with the policy we are finalizing for the brief communication technology-based services (HCPCS code G2012) as noted above, as well as with the patient consent policies in place for care management services, under the PFS.

Comment: Commenters requested that CMS clarify whether billing for these services is limited to physicians or if other healthcare practitioners, such as nurses or physical therapists, may bill for these services as well.

Response: We appreciate commenters' request for clarification. We believe that billing of these services should be limited to those practitioners that can independently bill Medicare for E/M visits, as interprofessional consultations are primarily for the ongoing evaluation and management of the patient, including collaborative medical decision making among practitioners. We are therefore not finalizing any expansion of these services beyond their current scope.

Comment: A few commenters requested that CMS adopt CPT prefatory language for these services as is CMS' longstanding practice when adopting most new CPT coding.

Response: We agree with the commenters and confirm that we will be adopting existing CPT prefatory language regarding these services.

In summary, we are finalizing separate payment for CPT codes 99451, 99452, 99446, 99447, 99448, and 99449 describing Interprofessional consultations. We are finalizing a policy to require the patient's verbal consent that is noted in the medical record for each interprofessional consultation service. We note that cost sharing will apply for these services. These interprofessional services may be billed only by practitioners that can bill Medicare independently for E/M services.

For further discussion related to the valuation of these services, please see section II.H. of this final rule, Valuation of Specific Codes.

4. Medicare Telehealth Services Under Section 1834(m) of the Act

a. Billing and Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in this rule and in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. For further details, see the full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006).

b. Adding Services to the List of Medicare Telehealth Services

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services in accordance with section 1834(m)(4)(F)(ii) of the Act. This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us. Under this process, we assign any submitted request to add to the list of telehealth services to one of the following two categories:

- *Category 1:* Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the list of telehealth services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.
- *Category 2:* Services that are not similar to those on the current list of telehealth services. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

The list of telehealth services, including the proposed additions described later in this section, is included in the Downloads section to this proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

Historically, requests to add services to the list of Medicare telehealth services had to be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. However, for CY 2019 and onward, we intend to accept requests through February 10, consistent with the deadline for our receipt of code valuation recommendations from the RUC. To be

considered during PFS rulemaking for CY 2020, requests to add services to the list of Medicare telehealth services must be submitted and received by February 10, 2019. Each request to add a service to the list of Medicare telehealth services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the list of Medicare telehealth services, requesters should be advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the list of Medicare telehealth services, including where to mail these requests, see our website at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.*

c. Submitted Requests To Add Services to the List of Telehealth Services for CY 2019

Under our current policy, we add services to the telehealth list on a Category 1 basis when we determine that they are similar to services on the existing telehealth list for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the telehealth list that resemble those services already on this list.

We received several requests in CY 2017 to add various services as Medicare telehealth services effective for CY 2019. The following presents a discussion of these requests, and our proposals for additions to the CY 2019 telehealth list. Of the requests received, we found that two services were sufficiently similar to services currently on the telehealth list to be added on a Category 1 basis. Therefore, we proposed to add the following services to the telehealth list on a Category 1 basis for CY 2019:

- HCPCS codes G0513 and G0514 (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; first 30 minutes (list separately in addition to code for preventive service) and (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (list separately in addition to code G0513 for additional 30 minutes of preventive service).

We found that the services described by HCPCS codes G0513 and G0514 are sufficiently similar to office visits currently on the telehealth list. We believe that all the components of this service can be furnished via interactive telecommunications technology. Additionally, we believe that adding these services to the telehealth list will make it administratively easier for practitioners who report these services in connection with a preventive service that is furnished via telehealth, as both the base code and the add-on code would be reported with the telehealth place of service.

We also received requests to add services to the telehealth list that do not meet our criteria for Medicare telehealth services. We did not propose to add to the Medicare telehealth services list the following procedures for chronic care remote physiologic monitoring, interprofessional internet consultation, and initial hospital care; or to change the requirements for subsequent hospital care or subsequent nursing facility care, for the reasons noted in the paragraphs that follow.

(1) Chronic Care Remote Physiologic Monitoring (CPT Codes 99453, 99454, and 99457)

- CPT code 99453 (Remote monitoring of physiologic parameter(s) (*e.g.,* weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment).
- CPT code 99454 (Remote monitoring of physiologic parameter(s) (*e.g.,* weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days).
- CPT code 99457 (Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month).

In the CY 2016 PFS final rule with comment period (80 FR 71064), we responded to a request to add CPT code 99490 (Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored) to the Medicare telehealth list. We discussed that the services described by CPT code 99490 can be furnished without the beneficiary's face-to-face presence and using any number of non-face-to-face means of communication. We stated that it was therefore unnecessary to add that service to the list of Medicare telehealth services. Similarly, CPT codes 99453, 99454, and 99457 describe services that are inherently non face-to-face. As discussed in section II.H. of this final rule, Valuation of Specific Codes, we instead proposed to adopt CPT codes 99453, 99454, and 99457 for payment under the PFS. Because these codes describe services that are inherently non face-to-face, we do not consider them Medicare telehealth services under section 1834(m) of the Act; therefore, we did not propose to add them to the list of Medicare telehealth services.

(2) Interprofessional Internet Consultation (CPT Codes 99451and 99452)

- CPT code 99452 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes).
- CPT code 99451 (Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time).

As discussed in section II.H. of this final rule, Valuation of Specific Codes, we proposed to adopt CPT codes 99452 and 99451 for payment under the PFS as these are distinct services furnished via communication technology. Because these codes describe services that are inherently non face-to-face, we do not consider them as Medicare telehealth services under section 1834(m) of the Act; therefore we did not propose to add them to the list of Medicare telehealth services for CY 2019.

(3) Initial Hospital Care Services (CPT Codes 99221–99223)

- CPT code 99221 (Initial hospital care, per day, for the evaluation and

management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity.)

- CPT code 99222 (Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity.)
- CPT code 99223 (Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity.)

We have previously considered requests to add these codes to the telehealth list. As we stated in the CY 2011 PFS final rule with comment period (75 FR 73315), while initial inpatient consultation services are currently on the list of approved telehealth services, there are no services on the current list of telehealth services that resemble initial hospital care for an acutely ill patient by the admitting practitioner who has ongoing responsibility for the patient's treatment during the course of the hospital stay. Therefore, consistent with prior rulemaking, we did not propose that initial hospital care services be added to the Medicare telehealth services list on a category 1 basis.

The initial hospital care codes describe the first visit of the hospitalized patient by the admitting practitioner who may or may not have seen the patient in the decision-making phase regarding hospitalization. Based on the description of the services for these codes, we believed it is critical that the initial hospital visit by the admitting practitioner be conducted in person to ensure that the practitioner with ongoing treatment responsibility comprehensively assesses the patient's condition upon admission to the hospital through a thorough in-person examination. Additionally, the requester submitted no additional research or evidence that the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient; therefore, we also did not propose adding initial hospital care services to the Medicare telehealth services list on a Category 2 basis.

We noted that Medicare beneficiaries who are being treated in the hospital setting can receive reasonable and necessary E/M services using other HCPCS codes that are currently on the Medicare telehealth list, including those for subsequent hospital care, initial and follow-up telehealth inpatient and emergency department consultations, as well as initial and follow-up critical care telehealth consultations.

Therefore, we did not propose to add the initial hospital care services to the list of Medicare telehealth services for CY 2019.

(4) Subsequent Hospital Care Services (CPT Codes 99231–99233)

- CPT code 99231 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.).
- CPT code 99232 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; an expanded problem focused examination; medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the bedside and on the patient's hospital floor or unit.).
- CPT code 99233 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; a detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.).

CPT codes 99231–99233 are currently on the list of Medicare telehealth services, but can only be billed via telehealth once every 3 days. The requester requested that we remove the frequency limitation. We stated in the CY 2011 PFS final rule with comment period (75 FR 73316) that, although we still believed the potential acuity of hospital inpatients is greater than those patients likely to receive Medicare telehealth services that were on the list at that time, we also believed that it would be appropriate to permit some subsequent hospital care services to be furnished through telehealth in order to ensure that hospitalized patients have frequent encounters with their admitting practitioner. We also noted that we continue to believe that the majority of these visits should be in-person to facilitate the comprehensive, coordinated, and personal care that medically volatile, acutely ill patients require on an ongoing basis. Because of our concerns regarding the potential acuity of hospital inpatients, we finalized the addition of CPT codes 99231–99233 to the list of Medicare telehealth services, but limited the provision of these subsequent hospital care services through telehealth to once every 3 days. We continue to believe that admitting practitioners should continue to make appropriate in-person visits to all patients who need such care during their hospitalization. Our concerns and position on the provision of subsequent hospital care services via telehealth have not changed. Therefore, we did not propose to remove the frequency limitation on these codes.

(5) Subsequent Nursing Facility Care Services (CPT Codes 99307–99310)

- CPT code 99307 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 10 minutes are spent at the bedside and on the patient's facility floor or unit.).
- CPT code 99308 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; an expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.).
- CPT code 99309 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; a detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient has developed a significant complication or a significant new problem. Typically, 25 minutes are spent at the bedside and on the patient's facility floor or unit.).
- CPT code 99310 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A comprehensive interval history; a comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 35 minutes are spent at the bedside and on the patient's facility floor or unit.).

CPT codes 99307–99310 are currently on the list of Medicare telehealth services, but can only be billed via telehealth once every 30 days. The requester requested that we remove the frequency limitation when these services are provided for psychiatric care. We stated in the CY 2011 PFS final rule with comment period (75 FR 73317) that we believed it would be appropriate to permit some subsequent nursing facility care services to be furnished through telehealth to ensure that complex nursing facility patients have frequent encounters with their admitting practitioner, but because of our concerns regarding the potential acuity and complexity of SNF inpatients, we limited the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. Since these codes are used to report care for patients with a variety of diagnoses, including psychiatric diagnoses, we do not think it would be appropriate to remove the frequency limitation only for certain diagnoses. The services described by these CPT codes are essentially the same service, regardless of the patient's diagnosis. We also continue to have concerns regarding the potential acuity and complexity of SNF inpatients, and therefore, we did not propose to remove the frequency limitation for subsequent nursing facility care services in CY 2019.

In summary, we proposed to add the following codes to the list of Medicare telehealth services beginning in CY 2019 on a category 1 basis:

- HCPCS code G0513 (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; first 30 minutes (list separately in addition to code for preventive service).
- HCPCS code G0514 (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (list separately in addition to code G0513 for additional 30 minutes of preventive service).

Comment: Commenters were unanimously supportive of our proposal to add HCPCS codes G0513 and G0514 to the Medicare telehealth list. A few commenters noted they were disappointed that we did not propose to add the initial hospital care codes to the telehealth list and that we did not propose to lift the frequency limitation on the subsequent hospital care and subsequent nursing facility care codes.

Response: We are finalizing adding HCPCS codes G0513 and G0514 to the Medicare telehealth list. We are not adding the initial hospital care codes to the telehealth list and we are not removing the frequency limitations on the subsequent hospital care and subsequent nursing facility care codes for the reasons noted above.

Comment: Several commenters suggested that CMS conduct a pilot or demonstration program to evaluate the clinical benefit of physical therapists, occupational therapists, and speech-language pathologists furnishing telehealth services to Medicare beneficiaries in states that permit such services, noting that this would improve beneficiary access to therapy services, and help to inform policymakers as they consider whether to recognize such healthcare professionals as authorized providers of telehealth under the Social Security Act.

Response: While we did not include any proposals on this topic in the proposed rule, we reiterate our commitment to expanding access to telehealth services consistent with statutory authority, and paying appropriately for services that maximize telecommunications technology. Regarding the possibility of a model or demonstration, we will consider the comments as we develop new models through the Center for Medicare and Medicaid Innovation. We note that we would need to determine whether such a model or demonstration would meet the statutory requirements, which generally require that the test be expected to reduce Medicare expenditures and preserve or enhance the quality of care for beneficiaries.

5. Expanding the Use of Telehealth Under the Bipartisan Budget Act of 2018

a. Expanding Access to Home Dialysis Therapy Under the Bipartisan Budget Act of 2018

Section 50302 of the BBA of 2018 amended sections 1881(b)(3) and 1834(m) of the Act to allow an individual determined to have end-stage renal disease receiving home dialysis to choose to receive certain monthly end-stage renal disease-related (ESRD-related) clinical assessments via telehealth on or after January 1, 2019.

The new section 1881(b)(3)(B)(ii) of the Act requires that such an individual must receive a face-to-face visit, without the use of telehealth, at least monthly in the case of the initial 3 months of home dialysis and at least once every 3 consecutive months after the initial 3 months.

As added by section 50302(b)(1) of the BBA of 2018, subclauses (IX) and (X) of section 1834(m)(4)(C)(ii) of the Act include a renal dialysis facility and the home of an individual as telehealth originating sites but only for the purposes of the monthly ESRD-related clinical assessments furnished through telehealth provided under section 1881(b)(3)(B) of the Act. Section 50302(b)(1) of the BBA of 2018, also added a new section 1834(m)(5) of the Act which provides that the geographic requirements for telehealth services under section 1834(m)(4)(C)(i) of the Act do not apply to telehealth services furnished on or after January 1, 2019 for purposes of the monthly ESRD-related clinical assessments where the originating site is a hospital-based or critical access hospital-based renal dialysis center, a renal dialysis facility, or the home of an individual. Section 50302(b)(2) of the BBA of 2018 amended section 1834(m)(2)(B)(ii) of the Act to require that no originating site facility fee is to be paid if the home of the individual is the originating site.

Our current regulation at § 410.78 specifies the conditions that must be met in order for Medicare Part B to pay for covered telehealth services included on the telehealth list when furnished by an interactive telecommunications system. In accordance with the new subclauses (IX) and (X) of section 1834(m)(4)(C)(ii) of the Act, we proposed to revise our regulation at § 410.78(b)(3) to add a renal dialysis facility and the home of an individual as Medicare telehealth originating sites, but only for purposes of the home dialysis monthly ESRD-related clinical assessment in section 1881(b)(3)(B) of the Act. We proposed to amend § 414.65(b)(3) to reflect the requirement in section 1834(m)(2)(B)(ii) of the Act that there is no originating site facility fee paid when the originating site for these services is the patient's home. Additionally, we proposed to add new § 410.78(b)(4)(iv)(A), to reflect the provision in section 1834(m)(5) of the Act, added by section 50302 of the BBA of 2018, specifying that the geographic requirements described in section 1834(m)(4)(C)(i) of the Act do not apply with respect to telehealth services furnished on or after January 1, 2019, in originating sites that are hospital-based or critical access hospital-based renal dialysis centers, renal dialysis facilities, or the patient's home, respectively under sections 1834(m)(4)(C)(ii)(VI), (IX) and (X) of the Act, for purposes of section 1881(b)(3)(B) of the Act.

Commenters supported our proposals to revise the regulation text at §§ 410.78 and 414.65 to implement the requirements of section 50302 of the BBA of 2018 for expanding access to home dialysis therapy through telehealth. We are finalizing these regulation text changes as proposed.

b. Expanding the Use of Telehealth for Individuals With Stroke Under the Bipartisan Budget Act of 2018

Section 50325 of the BBA of 2018 amended section 1834(m) of the Act by adding a new paragraph (6) that provides special rules for telehealth services furnished on or after January 1, 2019, for purposes of diagnosis, evaluation, or treatment of symptoms of an acute stroke (acute stroke telehealth services), as determined by the Secretary. Specifically, section 1834(m)(6)(A) of the Act removes the restrictions on the geographic locations and the types of originating sites where acute stroke telehealth services can be furnished. Section 1834(m)(6)(B) of the Act specifies that acute stroke telehealth services can be furnished in any hospital, critical access hospital, mobile stroke units (as defined by the Secretary), or any other site determined appropriate by the Secretary, in addition to the current eligible telehealth originating sites. Section 1834(m)(6)(C) of the Act limits payment of an originating site facility fee to acute stroke telehealth services furnished in sites that meet the usual telehealth restrictions under section 1834(m)(4)(C) of the Act.

To implement these requirements, we proposed to create a new modifier that would be used to identify acute stroke telehealth services. The practitioner and, as appropriate, the originating site, would append this modifier when clinically appropriate to the HCPCS code when billing for an acute stroke telehealth service or an originating site facility fee, respectively. We note that section 50325 of the BBA of 2018 did not amend section 1834(m)(4)(F) of the Act, which limits the scope of telehealth services to those on the Medicare telehealth list. Practitioners would be responsible for assessing whether it would be clinically appropriate to use this modifier with codes from the Medicare telehealth list. By billing with this modifier, practitioners would be indicating that the codes billed were used to furnish telehealth services for diagnosis, evaluation, or treatment of symptoms of an acute stroke. We believe that the adoption of a service level modifier is the least administratively burdensome means of implementing this provision for practitioners, while also allowing CMS to easily track and analyze utilization of these services.

In accordance with section 1834(m)(6)(B) of the Act, as added by section 50325 of the BBA of 2018, we also proposed to revise § 410.78(b)(3) to add mobile stroke unit as a permissible originating site for acute stroke telehealth services. We proposed to define a mobile stroke unit as a mobile unit that furnishes services to diagnose, evaluate, and/or treat symptoms of an acute stroke and solicited comment on this definition, as well as additional information on how these units are used in current medical practice. We therefore proposed that mobile stroke units and the current eligible telehealth originating sites, which include hospitals and critical access hospitals as specified in section 1834(m)(6)(B) of the Act, but excluding renal dialysis facilities and patient homes because they are only allowable originating sites for purposes of home dialysis monthly ESRD-related clinical assessments in section 1881(b)(3)(B) of the Act, would be permissible originating sites for acute stroke telehealth services.

We also solicited comment on other possible appropriate originating sites for telehealth services furnished for the diagnosis, evaluation, or treatment of symptoms of an acute stroke. Any additional sites would be adopted through future rulemaking. As required under section 1834(m)(6)(C) of the Act, the originating site facility fee would not apply in instances where the originating site does not meet the originating site type and geographic requirements under section 1834(m)(4)(C) of the Act. Additionally, we proposed to add § 410.78 (b)(4)(iv)(B) to specify that the requirements in section 1834(m)(4)(C) of the Act do not apply with respect to telehealth services furnished on or after January 1, 2019, for purposes of diagnosis, evaluation, or treatment of symptoms of an acute stroke.

Comment: Commenters supported the expansions to Medicare telehealth. The majority of commenters agreed with our proposed definition of a mobile stroke unit. However, the AMA suggested that CMS specify in the definition that a mobile stroke unit must include a computed tomographic (CT) scanner and a telehealth (audio and video) connection or an in-person physician who is able to interpret the CT scan and prescribe an intravenous thrombolysis and also have a qualified health

professional who is able to administer an intravenous thrombolysis if the physician interpreting the CT scan and prescribing the treatment does so via telehealth. The AMA also suggested that CMS add as an originating site Emergency Medical Service (EMS) transports equipped with a telehealth connection to stroke specialists in order to provide faster national access to patients who require an accurate stroke diagnosis and decision about eligibility for intravenous or endovascular therapy, and to determine where to take them (such as a primary stroke or comprehensive stroke center). One commenter urged CMS to distinguish between a mobile stroke unit and a standard ambulance that is equipped with telemedicine capability and to establish separate payment for each, noting that a telemedicine consult on a mobile stroke unit may involve much greater complexity and critical care treatment than on a standard ambulance that is equipped with telemedicine capability. Another commenter recommended that CMS require specially trained paramedics who can evaluate an acute ischemic stroke patient based on national standards.

Response: We are finalizing the changes to the regulation text and the definition of a mobile stroke unit as proposed without modification. We believe that clinicians are in the best position to make decisions about what equipment and professional support are required in furnishing these services. We plan to monitor utilization of these services and will consider making refinements, including those suggested by commenters, through future rulemaking as necessary. We would welcome additional information to help us understand the merits of the commenters' suggestions, including those regarding specific equipment and staffing requirements for mobile stroke units.

In summary, we are finalizing a new modifier that will be used to identify acute stroke telehealth services. The practitioner and, as appropriate, the originating site, will append this modifier to the HCPCS code as clinically appropriate when billing for an acute stroke telehealth service or an originating site facility fee, respectively. We are finalizing the regulation text changes at §§ 410.78 and 414.65 as proposed to implement the requirements of section 50325 of the BBA of 2018 for acute stroke telehealth services. Mobile stroke units, with the definition as proposed, and the current eligible telehealth originating sites, which include hospitals and critical access hospitals, but exclude renal dialysis facilities and patient homes because they are originating sites only for purposes of home dialysis monthly ESRD-related clinical assessments in section 1881(b)(3)(B) of the Act, will be permissible originating sites for acute stroke telehealth services.

6. Requirements of the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act

a. Expanding Medicare Telehealth Services for the Treatment of Opioid Use Disorder and Other Substance Use Disorders—Interim Final Rule With Comment Period

Section 2001(a) of the SUPPORT for Patients and Communities Act (Pub. L. 115–271, October 24, 2018) (the SUPPORT Act) makes several revisions to section 1834(m) of the Act. First, it removes the originating site geographic requirements under section 1834(m)(4)(C)(i) for telehealth services furnished on or after July 1, 2019 for the purpose of treating individuals diagnosed with a substance use disorder or a co-occurring mental health disorder, as determined by the Secretary, at an originating site described in section 1834(m)(4)(C)(ii) of the Act, other than an originating site described in subclause (IX) of section 1834(m)(4)(C)(ii) of the Act. The site described in subclause (IX) of section 1834(m)(4)(C)(ii) of the Act is a renal dialysis facility, which is only an allowable originating site for purposes of home dialysis monthly ESRD-related clinical assessments in section 1881(b)(3)(B) of the Act. It also adds the home of an individual as a permissible originating site for these telehealth services. Section 2001(a) of the SUPPORT Act for Patients and Communities Act additionally amends section 1834(m) of the Act to require that no originating site facility fee will be paid in instances when the individual's home is the originating site. Section 2001(b) of the SUPPORT for Patients and Communities Act grants the Secretary specific authority to implement the amendments made by section 2001(a) through an interim final rule.

Under the authority of section 2001(b) of the SUPPORT for Patients and Communities Act, we are issuing an interim final rule with comment period to implement the requirements of section 2001(a) of the SUPPORT for Patients and Communities Act. In accordance with section 1834(m)(2)(B)(ii)(X) of the Act, as amended by section 2001(a) of the SUPPORT for Patients and Communities Act, we are revising § 410.78(b)(3) on an interim final basis, by adding § 410.78(b)(3)(xii), which adds the home of an individual as a permissible originating site for telehealth services furnished on or after July 1, 2019 to individuals with a substance use disorder diagnosis for purposes of treatment of a substance use disorder or a co-occurring mental health disorder. We are amending § 414.65(b)(3) on an interim final basis to reflect the requirement in section 1834(m)(2)(B)(ii) of the Act that there is no originating site facility fee paid when the originating site for these services is the individual's home. Additionally, we are adding § 410.78(b)(4)(iv)(C) on an interim final basis to specify that the geographic requirements in section 1834(m)(4)(C)(i) of the Act do not apply for telehealth services furnished on or after July 1, 2019, to individuals with a substance use disorder diagnosis for purposes of treatment of a substance use disorder or a co-occurring mental health disorder at an originating site other than a renal dialysis facility.

We note that section 2001 of the SUPPORT for Patients and Communities Act did not amend section 1834(m)(4)(F) of the Act, which limits the scope of telehealth services to those on the Medicare telehealth list. Practitioners would be responsible for assessing whether individuals have a substance use disorder diagnosis and whether it would be clinically appropriate to furnish telehealth services for the treatment of the individual's substance use disorder or a co-occurring mental health disorder. By billing codes on the Medicare telehealth list with the telehealth place of service code, practitioners would be indicating that the codes billed were used to furnish telehealth services to individuals with a substance use disorder diagnosis for the purpose of treating the substance use disorder or a co-occurring mental health disorder. We note that we may issue additional subregulatory guidance in the future for billing these telehealth services.

We note that there is a 60-day period following publication of this interim final rule for the public to comment on these interim final amendments to our regulations. We invite public comment on our policies to implement section 2001 of the SUPPORT for Patients and Communities Act.

b. Medicare Payment for Certain Services Furnished by Opioid Treatment Programs (OTPs)—Request for Information

Section 2005 of the SUPPORT Act establishes a new Medicare benefit category for opioid use disorder treatment services furnished by OTPs under Medicare Part B, beginning on or after January 1, 2020. This provision requires that opioid use disorder treatment services would include FDA-approved opioid agonist and antagonist treatment medications, the dispensing and administration of such medications (if applicable), substance use disorder counseling, individual and group therapy, toxicology testing, and other services determined appropriate (but in no event to include meals and transportation). The provision defines OTPs as those that enroll in Medicare and are certified by the Substance Abuse and Mental Health Services Administration (SAMHSA), accredited by a SAMHSA-approved entity, and meeting additional conditions as the Secretary finds necessary to ensure the health and safety of individuals being furnished services under these programs and the effective and efficient furnishing of such services.

We note that there is a 60-day period for the public to comment on the provisions of the interim final rule described previously to implement section 2001 of the SUPPORT for Patients and Communities Act. During that same comment period, we are requesting information regarding services furnished by OTPs, payments for these services, and additional conditions for Medicare participation for OTPs that stakeholders believe may be useful for us to consider for future rulemaking to implement this new Medicare benefit category.

7. Modifying § 414.65 Regarding List of Telehealth Services

In the CY 2015 PFS final rule with comment period, we finalized a proposal to change our regulation at § 410.78(b) by deleting the description of the individual services for which Medicare payment can be made when furnished via telehealth, noting that we revised § 410.78(f) to indicate that a list of Medicare telehealth codes and descriptors is available on the CMS website (79 FR 67602). In accordance with that change, we proposed a technical revision to also delete the description of individual services and exceptions for Medicare payment for telehealth services in § 414.65, by amending § 414.65(a) to note that Medicare payment for telehealth services is addressed in § 410.78 and by deleting § 414.65(a)(1).

Comment: Commenters were supportive of CMS making a technical revision to delete the description of individual services and exceptions for Medicare payment for telehealth services in § 414.65.

Response: We are finalizing the technical revision to § 414.65 as proposed.

8. Comment Solicitation on Creating a Bundled Episode of Care for Management and Counseling Treatment for Substance Use Disorders

There is an evidence base that suggests that routine counseling, either associated with medication assisted treatment (MAT) or on its own, can increase the effectiveness of treatment for substance use disorders (SUDs). According to a study in the *Journal of Substance Abuse Treatment,*[1] patients treated with a combination of web-based counseling as part of a substance abuse treatment program demonstrated increased treatment adherence and satisfaction. The federal guidelines for opioid treatment programs describe that MAT and wrap-around psychosocial and support services can include the following services: Physical exam and assessment; psychosocial assessment; treatment planning; counseling; medication management; drug administration; comprehensive care management and supportive services; care coordination; management of care transitions; individual and family support services; and health promotion (*https://store.samhsa.gov/shin/content/PEP15-FEDGUIDEOTP/PEP15-FEDGUIDEOTP.pdf*). Creating separate payment for a bundled episode of care for components of MAT such as management and counseling treatment for substance use disorders (SUD), including opioid use disorder, treatment planning, and medication management or observing drug dosing for treatment of SUDs under the PFS could provide opportunities to better leverage services furnished with communication technology while expanding access to treatment for SUDs.

We also believe making separate payment for a bundled episode of care for management and counseling for SUDs could be effective in preventing the need for more acute services. For example, according to the *Healthcare Cost and Utilization Project,*[2] Medicare pays for one-third of opioid-related hospital stays, and Medicare has seen the largest annual increase in the number of these stays over the past 2 decades. We believe that separate payment for a bundled episode of care could help avoid such hospital admissions by supporting access to management and counseling services that could be important in preventing hospital admissions and other acute care events.

As indicated earlier, we considered whether it would be appropriate to develop a separate bundled payment for an episode of care for treatment of SUDs. We solicited public comment on whether such a bundled episode-based payment would be beneficial to improve access, quality and efficiency for SUD treatment. Further, we solicited public comment on developing coding and payment for a bundled episode of care for treatment for SUDs that could include overall treatment management, any necessary counseling, and components of a MAT program such as treatment planning, medication management, and observation of drug dosing. Specifically, we solicited public comments related to what assumptions we might make about the typical number of counseling sessions as well as the duration of the service period, which types of practitioners could furnish these services, and what components of MAT could be included in the bundled episode of care. We were interested in stakeholder feedback regarding how to define and value this bundle and what conditions of payment should be attached. Additionally, we solicited comment on whether the concept of a global period, similar to the currently existing global periods for surgical procedures, might be applicable to treatment for SUDs.

We also solicited comment on whether the counseling portion and other MAT components could also be provided by qualified practitioners ''incident to'' the services of the billing physician who will administer or prescribe any necessary medications and manage the overall care, as well as supervise any other counselors participating in the treatment, similar to the structure of the Behavioral Health Integration codes which include

Kidorf, ''A randomized trial of Web based videoconferencing for substance abuse counseling,'' *Journal of Substance Abuse Treatment,* Volume 46, Issue 1, 2014, Pages 36–42, *http://www.sciencedirect.com/science/article/pii/S0740547213001876.*

[2] Pamela L. Owens, Ph.D., Marguerite L. Barrett, M.S., Audrey J. Weiss, Ph.D., Raynard E. Washington, Ph.D., and Richard Kronick, Ph.D. ''Hospital Inpatient Utilization Related to Opioid Overuse Among Adults 1993–2012,'' Statistical Brief #177. Healthcare Cost and Utilization Project (HCUP). July 2014. Agency for Healthcare Research and Quality, Rockville, MD, *https://www.hcup-us.ahrq.gov/reports/statbriefs/sb177-Hospitalizations-for-Opioid-Overuse.jsp.*

services provided by other members of the care team under the direction of the billing practitioner on an ''incident to'' basis (81 FR 80231). We welcomed comments on potentially creating a bundled episode of care for management and counseling treatment for SUDs, which we will consider for future rulemaking.

Comment: We received several comments with detailed information on this topic. Some commenters expressed concern that the format of a bundled episode of care may fail to take into account the wide variability in patient needs for treatment of SUDs, especially given the chronic nature of SUDs, which like other chronic diseases, typically involves ongoing treatment without a definitive end point. Some commenters additionally noted that a global period would not lend itself to treatment of SUDs, because the treatment is not an acute intervention like surgery; rather, patients with SUDs may require increasing and decreasing access to care, depending on their progress in treatment.

Response: We thank the commenters for all of the information submitted and will consider this feedback for future rulemaking. We agree with commenters and understand that there is wide variability in patient needs for treatment of SUDs, and that unlike surgical global periods, ongoing treatment is often necessary in the treatment of SUDs. While we do not necessarily believe these characteristics preclude payment bundles and/or global periods, we do understand they would need to be taken into account. We reiterate that our intention as we consider these issues for future rulemaking is to increase access to necessary care, and that any potential bundled payment would be developed in consideration of these comments.

We note that there is a 60-day period for the public to comment on the interim final telehealth policies and revisions to our regulations we are adopting to implement statutory amendments to section 1834(m) of the Act that expand access to telehealth services used to treat substance use disorders. During that same comment period, we are requesting additional information from stakeholders and the public that we might consider for future rulemaking regarding payment structure and amounts for SUD treatment that account for ongoing treatment and wide variability in patient needs for treatment of SUDs while improving access to necessary care.

Additionally, we invited public comment and suggestions for regulatory and subregulatory changes to help prevent opioid use disorder and improve access to treatment under the Medicare program. We solicited comment on methods for identifying non-opioid alternatives for pain treatment and management, along with identifying barriers that may inhibit access to these non-opioid alternatives including barriers related to payment or coverage. Consistent with our ''Patients Over Paperwork'' Initiative, we were interested in suggestions to improve existing requirements to more effectively address the opioid epidemic.

Comment: We received several comments with detailed information on this topic.

Response: We thank the commenters for all of the information submitted and will consider this for future rulemaking.

9. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001 through December 31, 2002, at $20.00. For telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The originating site facility fee for telehealth services furnished in CY 2018 is $25.76. The MEI increase for 2019 is 1.5 percent and is based on the most recent historical update of the MEI through 2018Q2 (2.0 percent), and the most recent historical multifactor productivity adjustment (MFP) through calendar year 2017 (0.5 percent). Therefore, for CY 2019, the payment amount for HCPCS code Q3014 (Telehealth originating site facility fee) is 80 percent of the lesser of the actual charge or $26.15. The Medicare telehealth originating site facility fee and the MEI increase by the applicable time period is shown in Table 10.

TABLE 10—THE MEDICARE TELEHEALTH ORIGINATING SITE FACILITY FEE

Time period	MEI increase	Facility fee
10/01/2001–12/31/2002	N/A	$20.00
01/01/2003–12/31/2003	3.0	20.60
01/01/2004–12/31/2004	2.9	21.20
01/01/2005–12/31/2005	3.1	21.86
01/01/2006–12/31/2006	2.8	22.47
01/01/2007–12/31/2007	2.1	22.94
01/01/2008–12/31/2008	1.8	23.35
01/01/2009–12/31/2009	1.6	23.72
01/01/2010–12/31/2010	1.2	24.00
01/01/2011–12/31/2011	0.4	24.10
01/01/2012–12/31/2012	0.6	24.24
01/01/2013–12/31/2013	0.8	24.43
01/01/2014–12/31/2014	0.8	24.63
01/01/2015–12/31/2015	0.8	24.83
01/01/2016–12/31/2016	1.1	25.10
01/01/2017–12/31/2017	1.2	25.40
01/01/2018–12/31/2018	1.4	25.76
01/01/2019–12/31/2019	1.5	26.15

E. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.H. of this final rule, Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the RUC, MedPAC, and other stakeholders. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by law. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section

1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (*http://www.medpac.gov/docs/default-source/reports/Mar06_Ch03.pdf?sfvrsn=0*), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, ''When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.'' We believe services can also become overvalued when PE declines. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE rises.

As MedPAC noted in its March 2009 Report to Congress (*http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf*), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well.

Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed approximately 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the CY 2012 PFS final rule with comment period (76 FR 73055 through 73958), we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the CY 2013 PFS final rule with comment period, we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called ''Harvard-valued codes''). In CY 2009 (73 FR 38589), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review (76 FR 32410), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least $10,000,000 as

potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time).

In the CY 2016 PFS final rule with comment period, we finalized for review a list of potentially misvalued services, which included eight codes in the neurostimulators analysis-programming family (CPT codes 95970–95982). We also finalized as potentially misvalued 103 codes identified through our screen of high expenditure services across specialties.

In the CY 2017 PFS final rule, we finalized for review a list of potentially misvalued services, which included eight codes in the end-stage renal disease home dialysis family (CPT codes 90963–90970). We also finalized as potentially misvalued 19 codes identified through our screen for 0-day global services that are typically billed with an evaluation and management (E/M) service with modifier 25.

In the CY 2018 PFS final rule, we finalized arthrodesis of sacroiliac joint (CPT code 27279) as potentially misvalued. Through the use of comment solicitations with regard to specific codes, we also examined the valuations of other services, in addition to, new potentially misvalued code screens (82 FR 53017 through 53018).

3. CY 2019 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67606 through 67608), we modified this process whereby the public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: Technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

We received one submission that nominated several high-volume codes for review under the potentially misvalued code initiative. In its request, the submitter noted a systemic overvaluation of work RVUs in certain procedures and tests based ''on a number of Government Accountability Office (GAO) and the Medicare Payment Advisory Commission (MedPAC) reports, media reports regarding time inflation of specific services, and the January 19, 2017 Urban Institute report for CMS.'' The submitter suggested that the times CMS assumes in estimating work RVUs are inaccurate for procedures, especially due to substantial overestimates of preservice and postservice time, including follow-up inpatient and outpatient visits that do not take place. According to the submitter, the time estimates for tests and some other procedures are primarily overstated as part of the intraservice time. Furthermore, the submitter stated that previous RUC reviews of these services did not result in reductions in valuation that adequately reflected reductions in surveyed times.

Based on these analyses, the submitter requested that the codes listed in Table 11 be prioritized for review under the potentially misvalued code initiative.

TABLE 11—PUBLIC NOMINATIONS DUE TO OVERVALUATION

CPT code	Short description
27130	Total hip arthroplasty.
27447	Total knee arthroplasty.
43239	Egd biopsy single/multiple.
45385	Colonoscopy w/lesion removal.
70450	CT head w/o contrast.
93000	Electrocardiogram complete.
93306	Tte w/doppler complete.

Another submitter requested that CPT codes 92992 (Atrial septectomy or septostomy; transvenous method, balloon (*e.g.,* Rashkind type) (includes cardiac catheterization)) and 92993 (Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)) be reviewed under the potentially misvalued code initiative in order to establish national RVU values for these services under the MPFS. These codes are currently priced by the Medicare Administrative Contractors (MACs).

We received several comments with regard to the nomination of several high-volume codes for review under the potentially misvalued code initiative.

Comment: One commenter stated that specific details of the nomination of the seven high-volume codes were not provided in the CY 2019 PFS proposed rule. Several other commenters, including the RUC, expressed concern that the source of the nomination of the seven high-volume codes and its entire nomination letter was not made available. These commenters requested that CMS provide greater transparency and publicly provide all nomination requests identifying potentially misvalued codes.

Response: We believe that we summarized the contents of the public nomination letter and provided the rationale in the CY 2019 PFS proposed rule with enough detail for commenters to comment substantively and provide supporting documentation or data to rebut the suggestion that these codes are potentially misvalued. We recognize the importance of transparency and note that under the public nomination process that was established in CY 2012 rulemaking, the first opportunity for the public to nominate codes was during the 60-day comment period for the CY

2012 final rule with comment period; therefore, public nominations were received via submission to *www.regulations.gov*. In the CY 2015 final rule with comment period (79 FR 67606 through 67608), we finalized a modified process for identifying potentially misvalued codes (fully effective in CY 2017), where we established a new deadline of February 10th for receipt of public nominations for potentially misvalued codes to be considered for inclusion in the proposed rule. Although stakeholders often include public nominations of misvalued codes for consideration in a subsequent year's rulemaking as part of their comments on a current year's proposed rule, the public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation to CMS by February 10th of each year. In the future, public nominations that CMS receives by the February 10th deadline will be made available in the form of a public use file with the proposed rule, in the downloads section on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/*. We remind submitters that any information that might be considered proprietary or confidential should not be included. Additionally, we have included the submission that nominated these high-volume codes for review as potentially misvalued as a public use file for the CY 2019 PFS final rule.

Comment: One commenter stated that because CMS did not include these publicly nominated codes in Table 13 of the proposed rule, it does not appear that CMS has agreed with the commenter on the need to revisit these codes. Another commenter stated that CMS did not provide guidance on whether these nominated codes would be considered for revaluation or retained at their current value.

Response: We clarify that the codes for which we received public nominations as potentially misvalued were not included in Table 13 of the proposed rule because that table contains a list of codes for which we proposed work RVUs for CY 2019 (the list does not include codes for which we received nominations discussed in the proposed rule for consideration as potentially misvalued). As previously indicated, in the proposed rule we publish the list of codes nominated as potentially misvalued, which allows the public the opportunity to comment on these codes; then, in the final rule, we finalize our list of potentially misvalued codes. No new valuations were proposed for these codes in the CY 2019 PFS proposed rule. Any revaluation of these codes would be proposed in future rulemaking.

Comment: One commenter stated that the codes in Table 8 in the proposed rule and their respective code families should be prioritized for review as potentially misvalued. The commenter suggested revisiting two recent efforts funded by CMS, reports by Urban Institute and RAND Corporation (*https://www.urban.org/sites/default/files/publication/87771/2001123-collecting-empirical-physician-time-data-piloting-approach-for-validating-work-relative-value-units_1.pdf*, and, *https://www.rand.org/content/dam/rand/pubs/research_reports/RR600/RR662/RAND_RR662.pdf*), for prioritization of codes for review to expand the misvalued codes initiative list. The commenter referenced a June 2018 MedPAC report that stated that CMS' review of potentially misvalued codes has not addressed services that account for a substantial share of fee schedule spending and is hampered by the lack of current, accurate, and objective data on clinician work time and practice expenses. Consequently, according to the MedPAC report, work RVUs for procedures, imaging, and tests are systemically overvalued relative to other services, such as ambulatory evaluation and management (E/M) services.

Response: We appreciate the commenters' recommendations for expanding the misvalued codes list. We will consider whether to address these suggestions in future rulemaking.

Comment: One commenter recommended that additional research be conducted on the analytic products available that could be used to create transparency into the RUC process and allow for greater external participation in misvalued cost evaluation. The commenter also stated that CMS should reconsider reliance on the RUC altogether given the inherent conflicts of interest in the RUC-based process.

Response: We acknowledge that the RUC provides critically important information that factors into our review process. However, our review of recommended work RVUs and time inputs is also informed by review of various alternate sources of information, in addition to the RUC. Examples of these alternate sources of information include information provided by other public commenters, Medicare claims data, comparative databases, medical literature, as well as consultation with other physicians and healthcare professionals within CMS and the federal government. We also reiterate that we continue to be open to reviewing additional and supplemental sources of data furnished by stakeholders, and providing such information to CMS is not limited to the public nomination process for potentially misvalued codes. We encourage stakeholders to continue to provide such information for our consideration in establishing work RVUs.

Comment: One commenter stated concerns with CMS' use of a non-relative measuring approach for the seven codes nominated for review when generally the RUC-valued and CMS-approved codes are based on the concept of relativity. The commenter stated that using such an inconsistent approach on select codes will potentially cause disruption and instability in code valuations. The commenter also stated that determining reimbursement in value-based care delivery models must rely on the carefully cultivated RUC process for fairness and accountability.

Response: We are unclear about the commenter's claim that CMS is using a non-relative measuring approach for the seven high volume codes that have been nominated as potentially misvalued. We did not propose a valuation for the nominated codes, nor did we propose to use a non-relative measuring approach. Rather, as part of our statutory obligation to identify and review potentially misvalued codes, we implemented an annual process whereby the public can nominate potentially misvalued codes with supporting documentation; we then publish the list of nominated codes and the public has the opportunity to comment on these nominations. We continue to maintain that adjustments to work RVUs should be based on the resources involved with each procedure or service, and reiterate that our review of work RVUs and time inputs utilizes information from various resources, including the RUC. We continue to seek information on the best sources of objective, routinely-updated, auditable, and robust data regarding the resource costs of furnishing PFS services.

Comment: Several commenters stated that CPT codes 27130 and 27447 should not be considered potentially misvalued and do not warrant any further action because the current valuation for the codes was established after review by the RUC and CMS in 2013, and since that time there are no new data to indicate a change in the work of performing the procedure or the number of post-operative follow up visits. Another commenter stated that CMS should not subject professions to code

valuations and analysis so frequently, and that doing so calls into question the validity of the RUC process in the first place.

Response: We do not agree that recent review of a code should preclude it from being considered as potentially misvalued, nor that it calls into question the validity of the RUC process. We have a responsibility to identify and review potentially misvalued codes, and believe there is value in consistent and routine review of high-volume services, particularly considering that a minor adjustment to the work RVU of a high-volume code may have a significant dollar impact. We also note that review of high-volume services does not need to be predicated on the suspicion of overvaluation.

Comment: One commenter stated that if CMS decides to reexamine these nominated codes in the future, then the agency should provide ample opportunity for public comments, and in the event of such review, CMS should consider supplemental sources of information, including hospital anesthesia time in addition to any RUC recommendations in order to support accurate valuations of these procedures.

Response: Any revaluations of these codes would be undertaken through notice and comment rulemaking. Notice and comment rulemaking provides for an open process whereby we welcome input from all interested parties, and we encourage commenters to provide feedback including supplemental sources of information regarding potentially misvalued codes, as well as input on our annual proposed valuations.

Comment: One commenter disagreed that CPT codes 43239 and 45385 are misvalued and stated that while the Urban Institute report provides insights into potential flaws in the RUC survey process, it should not be considered proof that these codes are overvalued. The commenter stated that these code valuations were recently revised, and the RUC survey responses from gastroenterologists informed revisions to the work RVUs for both services. The commenter stated that for CPT code 43239, CMS finalized work RVUs that were less than the RUC's recommended work RVUs, and for CPT code 45385, CMS finalized the RUC-recommended work RVUs, which were lower than the work RVUs prior to reevaluation. Therefore, the commenter stated that CMS should reject the nominations of these codes as potentially misvalued.

Response: We note that the nomination referenced the Urban Institute report as only one of the sources regarding the issue of time inflation of specific services. Additionally, as previously indicated, we do not agree that recent review of a code should preclude it from being considered as potentially misvalued. We believe there is value in consistent and routine review of high-volume services, particularly considering that a minor adjustment to the work RVU of a high-volume code may have a significant dollar impact. Therefore, we do not agree that we should reject nominations of these codes as potentially misvalued because they were previously reviewed and refinements were made.

Comment: A few commenters stated that the current work RVU valuation of 0.85 for CPT code 70450 is inadequate. The commenters stated that the level of effort associated with CPT code 70450 increased between the time the code was originally valued and the 2012 survey, and this increase continued through 2016. The commenters stated that over time, advances in technology led to many more images being created than existed historically. The commenters also stated that volume acquisitions, a CT scan technique that allows for multiple two-dimensional images, has resulted in thinner reconstructions and effortless multiplanar reformats, and other technological advancements have increased the amount of professional work associated with interpreting a non-contrast head CT and should be considered in the work RVU. The commenters expressed concern that the nomination by a single entity threatens the integrity of how physician services are valued generally.

Response: We disagree with the commenter that a nomination by a single entity threatens the integrity of how physician services are valued generally, and reiterate that a public nomination process was established through rulemaking as a way for the public and stakeholders to nominate potentially misvalued codes for consideration. Any future proposed valuations of specific codes are open for public comment, and we encourage stakeholders to submit data that would indicate that the current valuation is insufficient.

Comment: One commenter stated that with regard to CPT code 70450, the times prior to survey were CMS/other times and were not subdivided into pre-service, intra-service, and post-service categories. Therefore, the commenter stated that drawing comparisons between prior RUC database times and the surveyed times is invalid because the source of the prior RUC database times are unknown and completely different from the surveyed times. The commenter also stated that selecting as potentially misvalued only certain CPT codes that have undergone the RUC process with validated surveys is not a rational approach because if the times assumed based on the RUC approved survey data are invalid for these codes, they should be invalid for the entire fee schedule so that consistent methodology is applied to all CPT codes.

Response: We typically rely on RUC survey values because we believe they are the closest to accurate values, as they are the best data available in some cases. Although we do not agree that we should not consider comparisons of RUC database times to the newly surveyed times as described by the commenter, on a case-by-case basis we can consider the existence of previous inaccuracies. However, we also note that previous valuations established based on those inaccuracies would also indicate that the payments would have been inaccurate as well. The goal of the identification and review of potentially misvalued services is to facilitate accurate payment for PFS services. We also disagree with the commenter's characterization that selecting codes that have undergone the RUC process with validated surveys is not rational, and note that just because a code has been reviewed by the RUC does not preclude it from being identified and/or publically nominated as potentially misvalued.

Comment: With regard to CPT codes 93000 and 93306, one commenter stated that while the Urban Institute report concludes that the intraservice time to interpret an electrocardiogram is 6 seconds, practitioners who furnish the service do not believe it is possible to completely interpret a study so quickly. The commenter expressed concern about the large emphasis placed on service time by CMS and some stakeholders when it comes to valuation. The commenter suggested that frequent reviews of long-established mature services like electrocardiography and echocardiography will produce two outcomes—the inputs will remain the same or circumstances at some point will align such that it appears they take less time, which will open the window for payers to try to reduce payment for services that have not actually changed, and eventually these reductive re-valuations produce underpayment. A few commenters stated that CPT code 93306 was recently reviewed and valued in CY 2018. One commenter stated that the current valuation is reflective of numerous accreditation body requirements that were implemented since the service was last valued in 2007, which increased the

work required per study. The commenter stated that the Urban Institute report should not be considered proof that the CPT code is overvalued, and given the recent RUC review of this service, CMS' acceptance of the RUC recommendation, and no change in the physician work of performing the service in the past year, this code should not be included in the potentially misvalued codes list.

Response: We reiterate that it is our practice to consider all elements of the relative work when we are reviewing and determining work RVU valuations. Additionally, our review of recommended work RVUs and time inputs generally includes review of various sources such as information provided by the RUC, and other public commenters, medical literature, and comparative databases. As previously stated, we believe there is great value in consistent and routine review of high-volume services. Additionally, as previously indicated, we do not agree that recent review of a code should preclude it from being considered as potentially misvalued, and therefore, do not agree that CMS should not include a code in the list of potentially misvalued services because it was previously reviewed.

Comment: One commenter disagreed that the time allocated to CPT code 93306 is overstated. The commenter stated that the Intersocietal Accreditation Commission for Echocardiography Guidelines regarding time standards indicated that more time is necessary from patient encounter to departure than is stipulated in the CMS time file. The commenter also stated there is more and more information being gathered with the introduction of technology that is labor and time intensive. The commenter suggested that if anything is revised, CMS times should be increased, not decreased.

Response: We reiterate that we are interested in receiving resource-based data from stakeholders and not just the RUC and we encourage stakeholders to submit data that would indicate that the current valuations are insufficient.

Although we appreciate the comments that were received regarding the seven high-volume codes, we believe that the nominator presented some concerns that have merit, such as the observation that in many cases time is reduced substantially but the work RVU only minimally, which results in an implied increase in the intensity of work that does not appear to be valid, and ultimately creates work intensity anomalies that are difficult to defend, and further review of these high-volume codes is the best way to determine the validity of the concerns articulated by the submitter. Therefore, we are adding CPT codes 27130, 27447, 43239, 45385, 70450, 93000, and 93306 to the list of potentially misvalued codes and anticipate reviewing recommendations from the RUC and other stakeholders. We reiterate that we do not believe that the inclusion of a code on a potentially misvalued code list necessarily means that a particular code is misvalued. Instead, the list is intended to prioritize codes to be reviewed under the misvalued code initiative.

In addition to comments on the nomination of the seven high-volume codes, we also received comments on the nomination of two contractor-priced codes for review under the potentially misvalued code initiative.

Comment: We received a few comments with regard to CPT codes 92992 and 92993, which were requested for review under the potentially misvalued code initiative in order to establish national RVU values for these services under the PFS. One of the commenters, the RUC, stated that these contractor-priced services, which are typically performed on children, would be discussed at the October 2018 Relativity Assessment Workgroup meeting.

Response: We appreciate the information from the RUC on their plans to discuss these codes. Given the plans by the RUC to consider CPT codes 92992 and 92993 we will wait for the RUC's review and will not add these codes to the list of potentially misvalued codes.

b. Update on the Global Surgery Data Collection

Payment for postoperative care is currently bundled within 10 or 90 days after many surgical procedures. Historically, we have not collected data on how many postoperative visits are actually performed during the global period. Section 523 of the MACRA added a new paragraph 1848(c)(8) to the Act, and section 1848(c)(8)(B) required CMS to use notice and comment rulemaking to implement a process to collect data on the number and level of postoperative visits and use these data to assess the accuracy of global surgical package valuation. In the CY 2017 PFS final rule, we adopted a policy to collect postoperative visit data. Beginning July 1, 2017, we required practitioners in groups with 10 or more practitioners in nine states (Florida, Kentucky, Louisiana, Nevada, New Jersey, North Dakota, Ohio, Oregon, and Rhode Island) to use the no-pay CPT code 99024 (Postoperative follow-up visit, normally included in the surgical package, to indicate that an E/M service was performed during a postoperative period for a reason(s) related to the original procedure) to report postoperative visits. Practitioners who only practice in groups with fewer than 10 practitioners are exempted from required reporting, but are encouraged to report if feasible. The 293 procedures for which reporting is required are those furnished by more than 100 practitioners, and either are nationally furnished more than 10,000 times annually or have more than $10 million in annual allowed charges. A list of the procedures for which reporting is required is updated annually to reflect any coding changes and is posted on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Global-Surgery-Data-Collection-.html*.

In these nine states, from July 1, 2017 through December 31, 2017, there were 990,581 postoperative visits reported using CPT code 99024. Of the 32,573 practitioners who furnished at least one of the 293 procedures during this period and who, based on Tax Identification Numbers in claims data, were likely to meet the practice size threshold, only 45 percent reported one or more visit using CPT code 99024 during this 6-month period. The share of practitioners who reported any CPT code 99024 claims varied by specialty. Among surgical oncology, hand surgery, and orthopedic surgeons, reporting rates were 92, 90, and 87 percent, respectively. In contrast, the reporting rate for emergency medicine physicians was 4 percent.

Among 10-day global procedures performed from July 1, 2017 through December 31, 2017, where it is possible to clearly match postoperative visits to specific procedures, only 4 percent had one or more matched visit reported with CPT code 99024. The percentage of 10-day global procedures with a matched visit reported with CPT code 99024 varied by specialty. Among procedures with 10-day global periods performed by hand surgeons, critical care, and obstetrics/gynecology, 44, 36, and 23 percent, respectively, of procedures had a matched visit reported using CPT code 99024. In contrast, less than 5 percent of 10-day global procedures performed by many other specialties had a matched visit reported using CPT code 99024. Among 90-day global procedures performed from July 1, 2017 through December 31, 2017, where it is possible to clearly match postoperative visits to specific procedures, 67 percent had one or more matched visits reported using CPT code 99024.

In the CY 2019 PFS proposed rule, we suggested one potential explanation for

these findings is that many practitioners are not consistently reporting postoperative visits using CPT code 99024. We sought comment on how to encourage reporting to ensure the validity of the data without imposing undue burden. Specifically, we sought comment on whether we need to do more to make practitioners aware of their obligation and whether we should consider implementing an enforcement mechanism.

We sought comment on several other issues. Given the very small number of postoperative visits reported using CPT code 99024 during 10-day global periods, we sought comment on whether or not it might be reasonable to assume that many visits included in the valuation of 10-day global packages are not being furnished, or whether there are alternative explanations for what could be a significant level of underreporting of postoperative visits. Alternatively, we sought comment on whether it is possible that some or all of the postoperative visits are occurring after the global period ends and are, therefore, reported and paid separately.

We sought comment on whether we should consider requiring use of modifiers -54 and -55 in cases where the surgeon does not expect to perform the postoperative visits, regardless of whether or not the transfer of care is formalized. We also sought comment on the best approach to 10-day global codes for which the preliminary data suggest that postoperative visits are rarely performed by the practitioner reporting the global code and whether we should consider changing the global period and reviewing the code valuation.

The following is a summary of the comments we received on collecting data on global surgery and reporting.

Comment: The majority of commenters, including the RUC, noted that more time was needed for physicians to become aware of reporting and prepare for reporting. Moreover, they opposed implementing an enforcement mechanism, but supported more efforts by CMS to make physicians aware of the requirement. A few commenters objected to reporting and noted that CMS had complied with the statute. MedPAC, which supported converting all 10- and 90-day global codes to 0-day global codes and revaluing these codes as 0-day codes, suggested that these findings are consistent with the OIG's three studies that showed post-operative visits were not occurring at the rate that we estimated. MedPAC noted support for converting all codes with 10- and 90-day global periods to 0-day global codes and revaluing these codes as 0-day codes, most other commenters were opposed to creating 0-day global services out of 10-day global services. Of those who commented on reporting of post-operative visits, most suggested that improving reporting of these visits is essential if the data is to be used to improve the accuracy of the existing codes.

Response: We will evaluate the public comments received and consider whether to propose action at a future date. For the comment calling for additional efforts to make physicians aware of the requirement, we sent a letter describing the requirement to practitioners who are required to report in the 9 affected states and we plan to send another such letter to these practitioners. We will also consider other actions to make sure affected practitioners are aware of the requirement.

F. Radiologist Assistants

In accordance with § 410.32(b)(3), except as otherwise provided, all diagnostic X-ray and other diagnostic tests covered under section 1861(s)(3) of the Act and payable under the PFS must be furnished under at least a general level of physician supervision as defined in paragraph (b)(3)(i) of that regulation. In addition, some of these tests require either direct or personal supervision as defined in paragraphs (b)(3)(ii) or (iii) of § 410.32, respectively. We list the required minimum physician supervision level for each diagnostic X-ray and other diagnostic test service along with the codes and relative values for these services in the PFS Relative Value File, which is posted on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Relative-Value-Files.html.* For most diagnostic imaging procedures, this required physician supervision level applies only to the technical component (TC) of the procedure.

In response to the Request for Information on CMS Flexibilities and Efficiencies (RFI) that was issued in the CY 2018 PFS proposed rule (82 FR 34172 through 34173), many commenters recommended that we revise the physician supervision requirements at § 410.32(b) for diagnostic tests with a focus on those that are typically furnished by a radiologist assistant (RA) under the supervision of a physician. Specifically, the commenters stated that all diagnostic tests, when performed by RAs, can be furnished under direct supervision rather than personal supervision of a physician, and that we should revise the Medicare supervision requirements so that when RAs conduct diagnostic imaging tests that would otherwise require personal supervision, they only need to do so under direct supervision. In addition to increasing efficiency, stakeholders suggested that the current supervision requirements for certain diagnostic imaging services unduly restrict RAs from conducting tests that they are permitted to do under current law in many states.

After consideration of these comments on the RFI, as well as information provided by stakeholders, we proposed to revise our regulations to specify that all diagnostic imaging tests may be furnished under the direct supervision of a physician when performed by an RA in accordance with state law and state scope of practice rules. Stakeholders representing the radiology community have provided us with information showing that the RA designation includes registered radiologist assistants (RRAs) who are certified by The American Registry of Radiologic Technologists, and radiology practitioner assistants (RPAs) who are certified by the Certification Board for Radiology Practitioner Assistants. We proposed to revise our regulation at § 410.32 to add a new paragraph (b)(4) to state that diagnostic tests performed by an RRA or an RPA require only a direct level of physician supervision, when permitted by state law and state scope of practice regulations. We noted that for diagnostic imaging tests requiring a general level of physician supervision, this proposal would not change the level of physician supervision to direct supervision. Otherwise, the diagnostic imaging tests must be performed as specified elsewhere under § 410.32(b). We based this proposal on recommendations from the practitioner community that included specific recommendations on how to implement the change. Representatives of the practitioner community submitted information on the education and clinical experience of RAs, which we took into consideration in determining whether the proposal would pose a significant risk to patient safety, and we determined that it would not. In addition, we considered information provided by stakeholders that indicated that 28 states have statutes or regulations that recognize RAs, and these states have general or direct supervision requirements for RAs.

Comment: Many commenters supported our proposed changes to the regulations and stated that they agreed that diagnostic tests performed by RAs be performed under at most direct supervision rather than personal

supervision where permitted by state law and state scope of practice regulations. According to these commenters, the change would allow for greater efficiency, improved patient access, more dedicated time with patients, increased quality of care, and increased patient satisfaction.

Response: We appreciate the comments received in support of this proposal. As discussed in the proposed rule, for diagnostic imaging tests requiring a general level of physician supervision, we are not changing the level of physician supervision to direct supervision. Otherwise, the diagnostic imaging tests must be performed as specified elsewhere under § 410.32(b). In order to provide further clarity, we are modifying the regulation to clarify that diagnostic tests performed by an RRA who is certified and registered by the American Registry of Radiologic Technologists or an RPA who is certified by the Certification Board for Radiology Practitioner Assistants, and that would otherwise require a personal level of supervision as specified in § 410.32(b)(3), may be furnished under a direct level of physician supervision to the extent permitted by state law and state scope of practice regulations.

Comment: Many commenters requested that CMS ensure that the proposed policy be effective January 1, 2019 by providing any necessary administrative guidance. Many commenters requested that CMS clarify in its final regulation that all services within the RA scope of practice, including procedures, may be performed under direct supervision.

Response: In implementing these changes to the regulation, we will be updating guidance contained in Pub. 100–04, Medicare Claims Processing Manual, Chapter 23 (available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/internet-Only-Manuals-IOMs-Items/Pub100_23.html*). Medicare supervision rules are only directly applicable to diagnostic tests, not procedures. We note that for procedures provided by auxiliary personnel (such as a radiologist assistant) incident to the services of the billing physician or practitioner, Medicare generally requires direct supervision in accordance with the regulation at § 410.26(b)(5).

Comment: One commenter suggested that CMS require verbal assurances to patients as to the credentials of the health care professional conducting the procedure, when the procedure is performed by an RA. The commenter stated that requiring this verbal assurance will minimize confusion about who the physician is when there are multiple individuals furnishing the procedure.

Response: We believe such a requirement would be unwarranted and overly restrictive. We do not generally require practitioners to provide such assurances to Medicare beneficiaries, nor did we propose such a requirement in the proposed rule.

Comment: Several commenters suggested that CMS should operationalize the proposal starting January 1, 2019 by using a radiologist supervision indicator to recognize the RA under direct supervision rather than personal supervision when they provide Medicare services under their state scope of practice. These commenters requested the creation of a new supervision indicator that would be applied to specific codes and would indicate that the procedure may be performed under the direct supervision of a radiologist when performed by an RRA who is certified by The American Registry of Radiologic Technologists, and an RPA who is certified by the Certification Board for Radiology Practitioner Assistants.

Response: Our approach to effectuating this policy change was based on recommendations we received from the practitioner community. Under this approach, we allow for direct supervision for tests performed in part by an RA, which avoids the need to identify which CPT codes would be appropriate for inclusion under a new indicator. We believe our approach offers the most flexibility, ease of implementation, and subsequently reduces burden for billing practitioners and radiologist assistants.

After consideration of the public comments received, we are finalizing, with refinements for further clarity, our proposed revisions to § 410.32, by adding a new paragraph (b)(4) that states that diagnostic tests that are performed by a registered radiologist assistant (RRA) who is certified and registered by the American Registry of Radiologic Technologists or a radiology practitioner assistant (RPA) who is certified by the Certification Board for Radiology Practitioner Assistants, and that would otherwise require a personal level of supervision as specified in paragraph (3), may be furnished under a direct level of physician supervision to the extent permitted by state law and state scope of practice regulations.

G. Payment Rates Under the Medicare PFS for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Provider-Based Departments of a Hospital

1. Background

Sections 1833(t)(1)(B)(v) and (t)(21) of the Act require that certain items and services furnished by certain off-campus provider-based departments (PBDs) (collectively referenced here as nonexcepted items and services furnished by nonexcepted off-campus PBDs) shall not be considered covered outpatient department (OPD) services for purposes of payment under the Hospital Outpatient Prospective Payment System (OPPS), and payment for those nonexcepted items and services furnished on or after January 1, 2017 shall be made under the applicable payment system under Medicare Part B if the requirements for such payment are otherwise met. These requirements were enacted in section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74, enacted November 2, 2015).

In the CY 2017 OPPS/Ambulatory Surgical Center (ASC) final rule with comment period (81 FR 79699 through 79719), we established several policies and provisions to define the scope of nonexcepted items and services in nonexcepted off-campus PBDs. We also finalized the PFS as the applicable payment system for most nonexcepted items and services furnished by nonexcepted off-campus PBDs. At the same time, we issued an interim final rule with comment period (81 FR 79720 through 79729) in which we established payment policies under the PFS for nonexcepted items and services furnished on or after January 1, 2017. In the following paragraphs, we summarize the policies that we adopted for CY 2017 and CY 2018. We also summarize proposals for CY 2019, respond to public comments, and finalize payment policies for CY 2019. For issues related to the excepted status of off-campus PBDs or the excepted status of items and services, please see the CY 2019 OPPS/ASC final rule.

2. Payment Mechanism

In establishing the PFS as the applicable payment system for most nonexcepted items and services in nonexcepted off-campus PBDs under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, we recognized that there was no technological capability, at least in the near term, to allow off-campus PBDs to bill under the PFS for those nonexcepted items and services. Off-campus PBDs bill under the OPPS for their services on an institutional claim,

while physicians and other suppliers bill under the PFS on a practitioner claim. The two systems that process these different types of claims, the Fiscal Intermediary Standard System (FISS) and the Multi-Carrier System (MCS) system, respectively, were not designed to accept or process claims of a different type. To permit an off-campus PBD to bill directly under a different payment system than the OPPS would have required significant changes to these complex systems as well as other systems involved in the processing of Medicare Part B claims. Consequently, we proposed and finalized a policy for CY 2017 and CY 2018 in which nonexcepted off-campus PBDs continue to bill for nonexcepted items and services on the institutional claim utilizing a new claim line modifier ''PN'' to indicate that an item or service is a nonexcepted item or service.

We implemented requirements under section 1833(t)(1)(B) of the Act for CY 2017 and CY 2018 by applying an overall downward scaling factor, called the PFS Relativity Adjuster to payments for nonexcepted items and services furnished in nonexcepted off-campus PBDs. The PFS Relativity Adjuster generally reflects the average (weighted by claim line volume times rate) of the site-specific rate under the PFS compared to the rate under the OPPS (weighted by claim line volume times rate) for nonexcepted items and services furnished in nonexcepted off-campus PBDs. As we have discussed extensively in prior rulemaking (81 FR 97920 through 97929 and 82 FR 53021), we established a new set of site-specific payment rates under the PFS that reflect the relative resource cost of furnishing the technical component (TC) of services furnished in nonexcepted off-campus PBDs. For the majority of HCPCS codes, these rates are based on either (1) the difference between the PFS nonfacility payment rate and the PFS facility rate, (2) the TC, or (3) in instances where payment would have been made only to the facility or to the physician, the full nonfacility rate. The PFS Relativity Adjuster refers to the percentage of the OPPS payment amount paid under the PFS for a nonexcepted item or service to the nonexcepted off-campus PBD.

To operationalize the PFS Relativity Adjuster as a mechanism to pay for nonexcepted items and services furnished by nonexcepted off-campus PBDs, we adopted the packaging payment rates and multiple procedure payment reduction (MPPR) percentage that applies under the OPPS. We also incorporated the claims processing logic that is used for payments under the OPPS for comprehensive Ambulatory Payment Classifications (C–APCs), conditionally and unconditionally packaged items and services, and major procedures. As we noted in the CY 2017 PFS final rule (82 FR 53024), we believe that this maintains the integrity of the cost-specific relativity of current payments under the OPPS compared with those under the PFS.

In CY 2017, we implemented a PFS Relativity Adjuster of 50 percent of the OPPS rate for nonexcepted items and services furnished in nonexcepted off-campus PBDs. For a detailed explanation of how we developed the PFS Relativity Adjuster of 50 percent for CY 2017, including assumptions and exclusions, we refer readers to the CY 2017 OPPS/ASC interim final rule with comment period (81 FR 79720 through 79729). Beginning for CY 2018, we adopted a PFS Relativity Adjuster of 40 percent of the OPPS rate. For a detailed explanation of how we developed the PFS Relativity Adjuster of 40 percent, we refer readers to the CY 2018 PFS final rule (82 FR 53019 through 53042). A brief overview of the general approach we took for CY 2018 and how it differs from the proposal for CY 2019 appears in this section.

3. The PFS Relativity Adjuster

The PFS Relativity Adjuster reflects the overall relativity of the applicable payment rate for nonexcepted items and services furnished in nonexcepted off-campus PBDs under the PFS compared with the rate under the OPPS. To develop the PFS Relativity Adjuster for CY 2017, we did not have all of the claims data needed to identify the mix of items and services that would be billed using the ''PN'' modifier. Instead, we analyzed hospital outpatient claims data from January 1 through August 25, 2016, that contained the ''PO'' modifier, which was a new mandatory reporting requirement for CY 2016 for claims that were billed by an off-campus department of a hospital. We limited our analysis to those claims billed on the 13X Type of Bill because those claims were used for Medicare Part B billing under the OPPS. We then identified the 25 most frequently billed major codes that were billed by claim line; that is, items and services that were separately payable or conditionally packaged. Specifically, we restricted our analysis to codes with OPPS status indicators (SI) ''J1'', ''J2'', ''Q1'', ''Q2'', ''Q3'', ''S'', ''T'', or ''V''. The most frequently billed service with the ''PO'' modifier in CY 2016 was described by HCPCS code G0463 (Hospital outpatient clinic visit for the assessment and management of a patient), which, in CY 2016, was paid under APC 5012 at a rate of $102.12; the total number of claim lines for this service was approximately 6.7 million as of August 2016. Under the PFS, there are 10 CPT codes describing different levels of office visits for new and established payments. We compared the payment rate under OPPS for HCPCS code G0463 ($102.12) to the average of the difference between the nonfacility and facility rates for CPT code 99213 (Level III office visit for an established patient) and CPT code 99214 (Level IV office visit for an established patient) in CY 2016 and found that the relative payment difference was approximately 22 percent. We did not include HCPCS code G0463 in our calculation of the PFS Relativity Adjuster for CY 2017 because we were concerned that there was no single, directly comparable code under the PFS. As we stated in the CY 2017 PFS final rule (81 FR 79723), we wanted to mitigate the risk of underestimating the overall relativity between the PFS and OPPS rates. From the remaining top 24 most frequently billed codes, we excluded HCPCS code 36591 (Collection of blood specimen from a completely implantable venous access device) because, under PFS policies, the service was only separately payable under the PFS when no other code was on the claim. We also removed HCPCS code G0009 (Administration of Pneumococcal Vaccine) because there was no payment for this code under the PFS. For the remaining top 22 codes furnished with the ''PO'' modifier in CY 2016, the average (weighted by claim line volume times rate) of the nonfacility payment rate estimate for the PFS compared to the estimate for the OPPS was 45 percent. We indicated that, because of our inability to estimate the effect of the packaging difference between the OPPS and the PFS, we would assume a 5 percentage point adjustment upward from the calculated amount of 45 percent; therefore, we established the PFS Relativity Adjuster of 50 percent for CY 2017.

In establishing the PFS Relativity Adjuster for CY 2018, we still did not have claims data for items and services furnished reported with a ''PN'' modifier. However, we updated the list of the 25 most frequently billed HCPCS codes using an entire year (CY 2016) of claims data for services submitted with a ''PO'' modifier and we updated the corresponding utilization weights for the codes used in the analysis. The order and composition of the top 25 separately payable HCPCS codes, based on the full year of claims from CY 2016

submitted with the ''PO'' modifier, changed minimally from the codes we used in our original analysis for the CY 2017 OPPS/ASC interim final rule with comment period. For a detailed list of the HCPCS codes we used in calculating the CY 2017 PFS Relativity Adjuster and the CY 2018 PFS Relativity Adjuster, we refer readers to the CY 2018 PFS final rule (82 FR 53030 through 53031). As noted earlier, in establishing the PFS Relativity Adjuster of 50 percent for CY 2017, we did not include in the weighted average code comparison, the relative rate for the most frequently billed service furnished in off-campus PBDs, HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient), in part to ensure that we were not underestimating the overall relativity between the PFS and the OPPS. In contrast, in the CY 2018 PFS final rule, we stated that our objective for CY 2018 was to ensure that we did not overestimate the appropriate overall payment relativity, and that the payment made to nonexcepted off-campus PBDs better aligned with the services that are most frequently furnished in the setting. Therefore, in addition to using updated claims data, we revised the PFS Relativity Adjuster to incorporate the relative payment rate for HCPCS code G0463 into our analysis. We followed all other exclusions and assumptions that were made in calculating the CY 2017 PFS Relativity Adjuster. Our analysis resulted in a 35 percent relative difference in payment rates. Similar to our stated rationale in the CY 2017 PFS final rule, we increased the PFS Relativity Adjuster to 40 percent, acknowledging the difficulty of estimating the effect of the packaging differences between the OPPS and the PFS.

4. Payment Policies for CY 2019

In prior rulemaking, we stated our expectation that our general approach of adjusting OPPS payments using a single scaling factor, the PFS Relativity Adjuster, would continue to be an appropriate payment mechanism to implement provisions of section 603 of the Bipartisan Budget Act of 2015, and would remain in place until we are able to establish code-specific reductions that represent the TC of services furnished under the PFS or until we are able to implement system changes needed to enable nonexcepted off-campus PBDs to bill for nonexcepted items and services under the PFS directly (82 FR 53029). As we continue to explore alternative options related to requirements under section 1833(t)(21)(C) of the Act, we believed that this overall approach is still appropriate, and we are finalizing our proposal to continue to allow nonexcepted off-campus PBDs to bill for nonexcepted items and services on an institutional claim using a ''PN'' modifier until we identify a workable alternative mechanism to improve payment accuracy.

We made several adjustments to our methodology for calculating the PFS Relativity Adjuster for CY 2019. Most importantly, we had access to a full year of claims data from CY 2017 for services submitted with the ''PN'' modifier. Incorporating these data allows us to improve the accuracy of the PFS Relativity Adjuster by accounting for the specific mix of nonexcepted items and services furnished in nonexcepted off-campus PBDs. In analyzing the CY 2017 claims data, we identified just under 2,000 unique OPPS HCPCS/OPPS status indicator (SI) code pairs reported in CY 2017 with status indicators ''J1'', ''J2'', ''Q1'', ''Q2'', ''Q3'', ''S'', ''T'', or ''V''. The data reinforce our previous observation that the single most frequently reported service furnished in nonexcepted off-campus PBDs is HCPCS code G0463. Approximately half of all claim lines for separately payable or conditionally packaged services furnished by nonexcepted off-campus PBDs included HCPCS code G0463 in CY 2017, representing over 30 percent of total Medicare payments for separately payable or conditionally packaged services. The top 30 HCPCS/SI code combinations accounted for over 80 percent of all claim lines and approximately 70 percent of Medicare payments for services that are separately billable or conditionally packaged. In contrast with prior analyses, we also looked at claims units, which reflect HCPCS/SI code combinations that are billed more than once on a claim line. Certain HCPCS codes are much more frequently billed in multiple units than others. The largest differences between the number of claim lines and the number of claims units are for injections and immunizations, which are not typically separately payable or conditionally packaged under the OPPS. For instance, HCPCS code Q9967 (Low osmolar contrast material, 300–399 mg/ml iodine concentration, per ml) was reported in 12,268 claim lines, but 1,168,393 times (claims units) in the aggregate. HCPCS code Q9967 has an OPPS status indicator of ''N'', meaning that there is no separate payment under OPPS (items and services are packaged into APC rates). To calculate the PFS Relativity Adjuster using the full range of claims data submitted with a ''PN'' modifier in CY 2017, we first established site-specific rates under the PFS that reflect the TC of items and services furnished by nonexcepted off-campus PBDs in CY 2017. These HCPCS-level rates reflect our best current estimate of the amount that would have been paid for the service in the office setting under the PFS for practice expenses (PEs) not associated with the professional component (PC) of the service. As discussed in prior rulemaking (81 FR 79720 through 79729), we believe the most appropriate code-level comparison would reflect the TC of each HCPCS code under the PFS. However, we do not currently calculate a separate TC rate for all HCPCS codes under the PFS—only for those for which the PC and TC of the service are distinct and can be separately billed by two different practitioners or other suppliers under the PFS. For most of the remainder of services that do not have a separately payable TC under the PFS, we estimated the site-specific rate as (1) the difference between the PFS nonfacility rate and the PFS facility rate, or (2) in instances where payment would have been made only to the facility or only to the physician, the full nonfacility rate. As with the PFS rates that we developed when calculating the PFS Relativity Adjuster for CY 2017 and CY 2018, there were large code-level differences between the applicable PFS rate and the OPPS rate.

In calculating the proposed PFS Relativity Adjuster for CY 2019, we employed the same fundamental methodology that we used to calculate the PFS Relativity Adjuster for CY 2017 and CY 2018. We began by limiting our analysis to the items and services billed in CY 2017 with a ''PN'' modifier that are separately payable or conditionally packaged under the OPPS (status indicator = ''J1'', ''J2'', ''Q1'', ''Q2'', ''Q3'', ''S'', ''T'', or ''V'') and compared the rates for these codes under the OPPS with the site-specific rates under the PFS. Next, we imputed PFS rates for a limited number of items and services that are separately payable or conditionally packaged under the OPPS but are contractor priced under the PFS. We also imputed PFS rates for some HCPCS codes that are not separately payable under the OPPS (SI = ''N''), but are separately payable under the PFS. This includes items and services with an indicator status of ''X'' under the PFS, which are statutorily excluded from payment under the PFS, but may be paid under a different fee schedule, such as the Clinical Lab Fee Schedule (CLFS). We summed the HCPCS-level

rates under the PFS across all nonexcepted items and services, weighted by the number of HCPCS code claims units for each service. Next, we calculated the sum of the HCPCS-level OPPS rate for items and services that are separately payable or conditionally packaged, also weighted by the number of HCPCS code claims units. We compared the weighted sum of the site-specific PFS rate with the weighted sum of the OPPS rate for items and services reported in CY 2017 and we found that our updated analysis supports maintaining a PFS Relativity Adjuster of 40 percent. In view of this analysis, we proposed to continue applying a PFS Relativity Adjuster of 40 percent for CY 2019. Moreover, we proposed to maintain this PFS Relativity Adjuster for future years until updated data or other considerations indicate that an alternative adjuster or a change to our approach is warranted, which we will then propose through notice and comment rulemaking. We discuss some of our ongoing data analyses and future plans regarding implementation of section 603 of the Bipartisan Budget Act of 2015 in this section.

Comment: Several commenters were disappointed that CMS did not provide the same level of detail regarding the data and methodology used in calculating the PFS Relativity Adjuster for CY 2019 as we had in prior rulemaking (CY 2017 and CY 2018). In particular, these commenters noted that we had previously included specific HCPCS codes that comprised the top 25 reported, the number of claims lines for each HCPCS code, and the associated PFS payment rates we used to estimate the appropriate adjuster. Some commenters maintained that the lack of specific HCPCS codes and associated PFS payment rates prevented them from replicating our analysis and commenting on the merits of maintaining the 40 percent PFS Relativity Adjuster.

Response: We understand and appreciate commenters' interest in replicating our analysis using the full set of claims data and PFS payment rates we used to conduct our analysis. However, we do not agree that commenters were not able to conduct their own analysis for purposes of evaluating our proposal. The principal data sources in the analysis are the OPPS CY 2017 rates, the CY 2017 PFS rates, and institutional claims data for items and services furnished in CY 2017 that included the ''PN'' modifier, which are publicly available resources. We did not receive specific inquiries indicating that commenters tried to reproduce our results using these data sources (or other data sources), nor did we receive any specific alternatives for consideration. As we noted in the proposed rule, the methodological aspects of our proposed PFS Relativity Adjuster calculation for CY 2019 differ from the calculation for CY 2017 and CY 2018 by the following two adjustments: (1) Development of site specific technical-equivalent rates under the PFS for all HCPCS codes reported on a claim with the ''PN'' modifier in CY 2017; and (2) the addition of OPPS SI ''N'' claims data to the PFS component of the PFS Relativity Adjuster equation to reflect items and services that are packaged under OPPS but paid separately under the PFS. We imputed certain PFS rates, such as for codes that are contractor priced under the PFS, because those would be paid at the contractor price if the claim had been submitted in a freestanding office. We remind commenters that adding PFS rates to the analysis, where such rates would not have otherwise been included, has the effect of increasing the PFS Relativity Adjuster since the aggregate PFS payment amount increases relative to the aggregate OPPS payment amount. Nonetheless, we appreciate the commenters' interest in validating the results of our analysis. For the convenience of commenters wishing to conduct analysis of differences in payment rates between off-campus PBDs and freestanding offices for similar services, we are providing a public use file (PUF), available on the CMS website under the ''downloads'' section for this final rule containing the CY 2017 PFS technical-equivalent payment rates for all HCPCS codes reported on an institutional claim with the ''PN'' modifier, as well as the OPPS payment rate and the number of claims units by OPPS SI (see *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched*).

Comment: Commenters posed specific questions about our PFS Relativity Adjuster calculations and requested that CMS provide additional detail about the calendar year we used for OPPS and PFS rates, the specific HCPCS codes for which we imputed PFS rates, our rationale for weighting the data using claims units instead of claims lines, and if our analysis accounted for the more extensive packaging that occurs under the OPPS compared with the PFS.

Response: Although we addressed much, if not all, of the information requested by these commenters in the discussion of our methodology in the proposed rule, we provide the following summary, along with additional detail on specific aspects of our analysis to respond explicitly to commenters' questions. We began our analysis to identify the proposed CY 2019 PFS Relativity Adjuster by examining a full year of claims data for services furnished in CY 2017 that were reported on an institutional claim form and appended with the ''PN'' modifier. Because claims processed through the institutional setting are adjudicated based on the OPPS SI, our unit of analysis was the number of claims units at the HCPCS/SI code level. We used claim units instead of claim lines because this metric accounts for instances when a HCPCS code is reported multiple times on the same claim line. We made this methodological change in formulating our proposal for CY 2019 in large part to address commenters' concerns from prior years that our calculations may underrepresent PFS payment for HCPCS codes that would have been paid multiple times under the PFS if they were reported separately. For the majority of HCPCS/SI code combinations that were reported with the ''PN'' modifier, there is little difference between the number of claim lines and claim units. However, because more units are separately paid under the PFS than under the OPPS, using claims units rather than claims lines yielded a slightly higher PFS Relativity Adjuster.

For CY 2019, our proposed PFS Relativity Adjuster was based on all HCPCS codes that were submitted on an institutional claim form in CY 2017, appended with the ''PN'' modifier in order to improve the accuracy of the overall payment comparison using the best data available regarding the actual mix of services furnished in nonexcepted off-campus PBDs. In contrast, for CYs 2017 and 2018, we used only a subset of claims from CY 2016 because of known limitations regarding the data available at the time. In particular, the data from CY 2016 were based on claims that were appended with the ''PO'' modifier, which was a new reporting requirement for CY 2016. Although the ''PO'' modifier allowed us to distinguish items and services furnished in off-campus PBDs in CY 2016, it did not allow us to distinguish between excepted and nonexcepted off-campus PBDs. The ''PN'' modifier, which was a new reporting requirement for CY 2017, allows us to make the distinction between excepted and nonexcepted off-campus PBDs.

In updating our analysis for calculating the proposed PFS Relativity Adjuster for CY 2019 to include all HCPCS codes that were reported on an institutional claim with the ''PN'' modifier, we also extended to all HCPCS

codes our earlier logic with regard to calculating the site specific rates that represent the technical-equivalent of the resource costs of furnishing a service under the PFS. This amount, as we discussed in the proposed rule, generally reflected: (1) The difference between the PFS nonfacility payment rate and the PFS facility rate; (2) the TC; or (3) in instances where payment would have been made only to the facility or only to the physician, the full nonfacility rate. Applying the same logic to the fuller range of HCPCS codes, we developed site specific rates for all HCPCS codes that are nationally priced under the PFS and we referred to them as the technical-equivalent rates.

To continue with our analysis, we combined the CY 2017 OPPS rates at the HCPCS code level with the CY 2017 claims data representing nonexcepted items and services furnished in nonexcepted off-campus PBDs. Next, we added the technical-equivalent PFS rates for each HCPCS code, calculated using the approach described above. For both the OPPS and the PFS portions of the PFS Relativity Adjuster calculations, we weighted our analysis of HCPCS/SI code combinations by the number of claims units. For the OPPS component of the calculation, we restricted our analysis to HCPCS/SI code combinations that had OPPS SI indicators ''J1'', ''J2'', ''Q1'', ''Q2'', ''Q3'', ''S'', ''T'', or ''V'', which are separately payable or conditionally packaged codes under the OPPS. We multiplied the number of claims units for each HCPCS/SI code combination by the OPPS rate for each HCPCS/SI code combination and summed across the weighted rates. To calculate the PFS component of the PFS Relativity Adjuster, we used the same OPPS/SI code combinations, but we also included claims for HCPCS codes with OPPS SI ''N'', which indicates that, under the OPPS, payment for these services is packaged into payment for other services. We multiplied the number of claims units for each HCPCS/SI code combination by the technical-equivalent PFS rate for each HCPCS code and summed across the HCPCS/SI code combinations. We believe that adding weighted rates for HCPCS codes with OPPS SI ''N'' to the PFS allows us to better adjust, although imprecisely, for the packaging under the OPPS of nonexcepted items and services for which separate payment would typically be made under the PFS in the office setting. Although we did not conduct code-level analysis to estimate packaging under the OPPS, we believe that the combination of using the full range of claims data for nonexcepted items and services furnished in nonexcepted off-campus PBDs, using claim units rather than claim lines to weight rates on both the OPPS and PFS, and adding PFS rates for HCPCS codes with OPPS status indicator ''N'' is an improved approach to the PFS Relativity Adjuster that better accounts for OPPS packaging policies.

To increase the precision of our analysis, we imputed payment rates under the PFS for certain HCPCS codes for which payment is based on rates other than national PFS pricing. For services that are contractor-priced under the PFS, as indicated by a PFS status indicator of ''C'', we applied the national median allowed charge for these services in CY 2017. For a limited number of other services, where appropriate, we incorporated rates from the applicable fee schedule under which the service may have been paid if furnished in a freestanding office. For instance, HCPCS codes with a PFS status indicator of either ''X'' (service is statutorily excluded for payment under PFS) or ''E'' (service is excluded from payment under PFS by regulation), may be paid under the CLFS or the National Limitation Amount (NLA). The imputed values that we used, both from contractor priced codes and other fee schedules, are included in the data file that will be posted with this final rule, available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

Although there remains a certain level of imprecision inherent in our analysis, we believe the margin of error is relatively small and would likely affect the PFS and OPPS amounts similarly. For instance, we did not take into account the several MPPRs that would reduce payment on the PFS side when multiple codes are billed together. In many cases, these codes are packaged under the OPPS, so not including the PFS MPPRs in our analysis has the effect of increasing the PFS component of the calculation by a marginal amount. Likewise, we recognize that because of existing packaging rules under the OPPS, there is likely to be underreporting of codes on institutional claims for which the hospital does not receive separate payment, but for which the practitioner might receive separate payment if furnished in a freestanding office and reported on a professional claim form. This would effectively reduce the PFS Relativity Adjuster, but only to the extent hospitals are not appropriately reporting furnished items and services.

Comment: Many commenters expressed that the appropriate point of comparison for PFS technical-equivalent rates is the full nonfacility rate rather than the difference between the nonfacility rate and the facility rate. The commenters stated that since hospitals, like freestanding offices, incur both direct and indirect costs when services are furnished in nonexcepted off-campus PBDs, the difference between the nonfacility rate and the facility rate does not appropriately account for indirect costs incurred by the facility.

Response: We believe the commenters misunderstood the methodology for allocating direct and indirect costs as part of the PFS ratesetting process. Under the PFS algorithm for allocating indirect costs, nonfacility PFS rates include indirect PE that is directly related to the resources associated with the professional portion of the service alone. In other words, this is the indirect PE that is also paid by Medicare to professionals like physicians when they report services in the hospital setting. In addition to these indirect PE RVUs, nonfacility PFS rates include indirect PE RVUs allocated based on the direct PE inputs. We believe these indirect costs, those associated with provision of the technical aspects of the service alone, are analogous to those incurred by facilities when professionals furnish services there. To be clear, even when the total nonfacility rates are reduced by the facility rates, there are remaining PE RVUs that result from both direct inputs and indirect allocations under the established PFS methodology. We agree with the commenters that nonexcepted off-campus PBDs incur indirect costs, but we believe our calculation for the technical-equivalent PFS rates includes the relative resource costs of indirect expenses involved in furnishing the services. We also note that CMS makes corresponding payments under the PFS at the facility rate for nonexcepted items and services furnished in nonexcepted off-campus PBD settings, meaning that CMS is already paying for some of the indirect expenses associated with the PCs of the service. If CMS were to use the full nonfacility PE RVUs as the basis for comparing PFS rates to OPPS rates, we would effectively be paying twice for a portion of indirect costs, once under the PFS for the PC of services and again through the PFS Relativity Adjusted payment under the OPPS to off-campus PBDs for the facility part of the same service.

We recognize that the process of allocating indirect costs under the PFS is built on assumptions about

organizational practices and healthcare payment structures that may not fully reflect the current health care delivery environment, especially where physicians and other professionals are paid under salaried arrangements by institutions such as hospitals. Under the current PFS payment methodology, we assume that indirect costs associated with professional services furnished in institutions like hospital PBDs are incurred by the individual practitioners and not by the institutions. We may consider this issue for future rulemaking.

Comment: A commenter requested that CMS clarify how, in calculating the PFS Relativity Adjuster, CMS treated codes that are valued under the PFS only in a facility setting. Because these HCPCS codes do not have PE inputs reflecting the specific costs of furnishing a service in a freestanding office, the commenter stated concern that these codes may have been incorrectly incorporated in the analysis at a PFS payment rate of zero.

Response: We appreciate the commenter's concern and the opportunity to clarify the way we treated services not priced in the nonfacility setting in calculating the PFS Relativity Adjuster. Because there are no PFS payment rates for these services in the nonfacility setting, we incorporated the OPPS rate as the technical equivalent rate under the PFS.

Comment: Several commenters were opposed to our proposal to maintain the PFS Relativity Adjuster at 40 percent, citing both the lack of transparency in our methodology and prior analyses provided by the American Hospital Association (AHA) in earlier notice and comment rulemaking, suggesting that a 65 percent PFS Relativity Adjuster would appropriately incorporate into the Adjuster the additional packaging that occurs under the OPPS. Two commenters urged CMS to implement a 75 percent PFS Relativity Adjuster for CY 2019, although no specific rationale was given.

Response: We accounted for packaging under the OPPS by including PFS payment rates for HCPCS codes that were reported with OPPS SI ''N''. Our analysis does not support a PFS Relativity Adjuster of 65 or 75 percent, but rather indicates that a PFS Relativity Adjuster of 40 percent appropriately accounts for packaging of services under the OPPS. For additional discussion of the challenges related to incorporating the effect of packaging into the PFS Relativity Adjuster, we refer readers to the CY 2018 PFS final rule (82 FR 53024 through 53022).

Comment: A commenter stated that CMS has not provided sufficient justification for continuation of a reduction in payment of 60 percent for nonexcepted items and services furnished in nonexcepted off campus PBDs. Commenters noted that the first 2017 claims from the initial period of implementation of this policy are only now being incorporated into CMS claims files. The commenter indicated that there is an insufficient volume of claims to determine the impact this policy is having on beneficiary access to services in the PBD setting, particularly at the 40 percent Relativity Adjuster. The commenter stated that CMS should, at minimum, restore the 50 percent PFS Relativity Adjuster that was in place for CY 2017.

Response: We appreciate the commenter's suggestions, but we do not agree that there is insufficient data to support the PFS Relativity Adjuster of 40 percent. We have no reason to believe that the CY 2017 claims data are not as robust as any other claims based analysis and, to the extent that we recognize, acknowledge, and try to account for difference in payment policies between the PFS and OPPS, we believe our analysis demonstrates that a PFS Relativity Adjuster of 40 percent is appropriate.

Comment: Several commenters supported the 40 percent PFS Relativity Adjuster for CY 2019 and future years because this will provide stability for clinicians practicing in these settings and not disrupt patient access to care. One commenter cited the importance of making gradual changes to site neutrality policies to ensure alignment with other rapid changes in Medicare and the private sector regarding provider payment, including the movement to value-based purchasing and alternative payment systems.

Response: We agree with the commenter that there is value in the stability of maintaining the PFS Relativity Adjuster at 40 percent, particularly to the extent that this enables continuity of care for beneficiaries. We appreciate the support from commenters.

Comment: Some commenters, rather than opposing any particular PFS Relativity Adjuster, expressed disappointment that CMS did not propose to make broader changes to implement site-neutrality under section 603 of the Bipartisan Budget Act of 2015. Commenters were displeased that CMS is continuing to implement the requirements of the legislation using a single scaling factor applied to payment rates under the OPPS. Instead, they stated CMS should revise the applicable payment rates to appropriately reimburse for services provided by off-campus PBDs. Commenters did not provide specific suggestions for implementing alternative policies, but several commenters noted that a single overall scaling factor was intended by CMS to be an interim, not a long term policy solution. A few commenters suggested that the PFS Relativity Adjuster as a mechanism for implementing section 603 of the Bipartisan Budget Act of 2015 is not consistent with the requirement under that section to pay for nonexcepted items and services under the applicable payment system because this approach is still fundamentally based on OPPS payment rates. Other commenters stated that nonexcepted off-campus PBDs differ from one another in the mix of services furnished and the beneficiary population and that CMS payment policies should reflect those variances.

Despite concerns about the appropriateness of the PFS Relativity Adjuster for implementing requirements under section 603 of the Bipartisan Budget Act of 2015, several of the same commenters pointed out that there are significant advantages of continuing to allow hospitals to bill for items and services furnished in nonexcepted PBDs using the institutional claim form. In particular, they stated, this allows PBDs to properly use cost reporting procedures and to accurately reconcile the cost report to hospital ledgers for all services and departments and to correctly allow revenue for nonexcepted PBDs to flow through the Provider Statistical and Reimbursement (PS&R) report.

Response: We previously expressed interest in exploring how hospitals might report and receive payment for nonexcepted items and services furnished in nonexcepted off-campus PBDs using the standard PFS payment rates based on HCPCS-specific RVUs. However, CMS does not currently develop as part of the PFS ratesetting process separate payment rates for the technical aspects of the full range of nonexcepted items and services furnished in nonexcepted off-campus PBDs specifically for services for which there are not separately valued PCs and TCs. As such, we do not have a consistent way for nonexcepted off-campus PBDs and the professionals who furnish services in those settings to bill for the respective portions of the services for which they incurred costs. Additionally, while the statute was amended to change the nature and payment of nonexcepted items and services furnished in nonexcepted off-campus PBDs, the amendments did not

alter the status of non-excepted off-campus PBDs as parts of hospitals. Nonexcepted off-campus PBDs are still required to follow all reporting and regulatory policies consistent with hospital settings.

We continue to explore options that would allow hospitals to report nonexcepted items and services on an institutional claim form but receive payments that more directly reflect the technical aspect of services under the PFS. In general, we believe there may be additional utility, especially in the context of improving price transparency for Medicare beneficiaries, in establishing and displaying a set of payment rates, recalculated annually as part of the annual PFS rulemaking cycle, that reflect the relative resource costs of the technical aspects of furnishing PFS services.

Along with this final rule, we are including the technical-equivalent rates that we developed specifically for calculating the PFS Relativity Adjuster for CY 2019, which is the current mechanism for implementing the PFS as the applicable payment system for nonexcepted items and services furnished in nonexcepted off-campus PBDs. This information is being made available under the downloads section for this final rule on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

Comment: Several commenters supported our ongoing efforts to implement site neutral payments in the context of section 603 of the Bipartisan Budget Act of 2015. Several commenters indicated their support for additional policies that would equalize payment across freestanding offices and hospital PBDs, both on-campus and off-campus.

Response: We recognize that this is a topic of great interest to many commenters and we welcome the range of perspectives and ideas posed by commenters.

Comment: Some commenters disagreed with our view that the amendments under section 603 of the Bipartisan Budget Act of 2015 were intended to produce site neutral payments between freestanding offices and off-campus PBDs with the goal of removing incentives for hospitals to purchase physician offices. These commenters noted that hospital PBDs face higher costs than freestanding offices, such as those associated with regulatory requirements, and reducing payment to nonexcepted off-campus PBDs threatens the viability of hospitals that serve a vital role in providing services to rural and underserved communities in these off-campus settings. We received several comment letters from Medicare beneficiaries expressing concern about reduced payments to their community's major medical hospital offsite locations. The commenters stated that without the hospital's offsite locations community members would be forced to drive unreasonable distances to seek basic and immediate care.

Response: We understand the commenters' concerns, especially with regard to maintaining access to appropriate care. CMS continues to evaluate data regarding beneficiary access to care to identify possible issues. We also agree that hospitals face additional regulatory and operational costs not generally incurred by physician offices, and that OPDs of a hospital function as an important and integral part of the Medicare care delivery infrastructure. However, many off-campus PBDs are similar to physician's offices and do not necessarily have the same operational costs as the main hospital. We believe that the amendments made to the statute by section 603 of the Bipartisan Budget Act of 2015 were intended to reduce Medicare payment incentives for hospitals to purchase physician offices, convert them to off-campus PBDs, and bill under the OPPS for items and services furnished there.

Comment: Several commenters opposed our inclusion of the proposal related to payment for nonexcepted off-campus PBDs under the CY 2019 PFS rule instead of the CY 2019 OPPS/ASC rule. They suggested that proposals related to the payment rate for nonexcepted items and services furnished in nonexcepted off-campus PBDs are inseparable from proposals and comment solicitations in the OPPS/ASC rule related to service line expansions and other payment policies related to implementation of the amendments under section 603 of the Bipartisan Budget Act of 2015. Some commenters suggested that, for purposes of administrative simplification, the discussion of any changes to site-of-service payments regarding PBDs of a hospital should be fully maintained within a single rule and recommended this be included in the OPPS rule. Some commenters expressed concern that the PFS and OPPS proposed rules were not released at the same time and that this presents challenges for them in reconciling and preparing their comments on each rule.

Response: We appreciate commenters' concerns about responding to two separate rules for policies associated with payment for nonexcepted items and services furnished in nonexcepted off-campus PBDs. However, we note that in finalizing the PFS as the applicable payment system for most nonexcepted items and services, proposals related to the implementation of payment rates under the PFS fall reasonably under the purview of PFS rulemaking, while proposals related to the applicability of those rates are more appropriately addressed in OPPS/ASC rulemaking. We will consider these concerns for future rulemaking.

We believe that our proposal to maintain the PFS Relativity Adjuster at 40 percent for CY 2019 and for future years reflects an analysis that accounts for many of the concerns expressed by commenters regarding the PFS Relativity Adjuster in prior rules. Therefore, we are finalizing the proposal to maintain the PFS Relativity Adjuster at 40 percent for CY 2019 and beyond until there is an appropriate reason and process for implementing an alternative to our current policy, at which time we will make a proposal through notice and comment rulemaking.

5. Policies Related to Supervision, Beneficiary Cost-Sharing, and Geographic Adjustments

In the CY 2018 PFS final rule (81FR 53019 through 53031), we finalized policies related to supervision rules, beneficiary cost sharing, and geographic adjustments. We finalized that supervision rules in nonexcepted off-campus PBDs that furnish nonexcepted items and services are the same as those that apply for hospitals, in general. We also finalized that all beneficiary cost sharing rules that apply under the PFS in accordance with sections 1848(g) and 1866(a)(2)(A) of the Act continue to apply when payment is made under the PFS for nonexcepted items and services furnished by nonexcepted off-campus PBDs, regardless of cost sharing obligations under the OPPS. Lastly, we finalized the policy to apply the same geographic adjustments used under the OPPS to nonexcepted items and services furnished in nonexcepted off-campus PBDs. We are maintaining these policies for CY 2019, as finalized in the CY 2018 PFS final rule.

6. Partial Hospitalization

a. Partial Hospitalization Services

Partial hospitalization programs (PHPs) are intensive outpatient psychiatric day treatment programs furnished to patients as an alternative to inpatient psychiatric hospitalization, or as a stepdown to shorten an inpatient stay and transition a patient to a less intensive level of care. Section

1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital, to its outpatients, or by a community mental health center (CMHC). In the CY 2017 OPPS/ASC proposed rule (81 FR 45690), in the discussion of the proposed implementation of section 603 of Bipartisan Budget Act of 2015, we noted that because CMHCs also furnish PHP services and are ineligible to be provider-based to a hospital, a nonexcepted off-campus PBD would be eligible for PHP payment if the entity enrolls and bills as a CMHC for payment under the OPPS. We further noted that a hospital may choose to enroll a nonexcepted off-campus PBD as a CMHC, provided it meets all Medicare requirements and conditions of participation.

In response to that rule, commenters expressed concern that without a clear payment mechanism for PHP services furnished by nonexcepted off-campus PBDs, access to partial hospitalization services would be limited, and pointed out the critical role PHPs play in the continuum of mental health care. Many commenters noted that the Congress did not intend for partial hospitalization services to no longer be paid for by Medicare when such services are furnished by nonexcepted off-campus PBDs. Several commenters disagreed with the notion of enrolling as a CMHC in order to receive payment for PHP services. The commenters stated that hospital-based PHPs and CMHCs are inherently different in structure, operation, and payment, and noted that the conditions of participation for hospital departments and CMHCs are different. Several commenters requested that CMS find a mechanism to pay hospital-based PHPs in nonexcepted off-campus PBDs.

We agreed with the commenters' concerns and adopted payment for partial hospitalization items and services furnished by nonexcepted off-campus PBDs under the PFS in the CY 2017 OPPS/ASC final rule with comment period and interim final rule with comment period (81 FR 79715, 79717, and 79727). When billed in accordance with the CY 2017 PFS final rule, these partial hospitalization services are paid at the CMHC per diem rate for APC 5853, for providing three or more partial hospitalization services per day (81 FR 79727).

In the CY 2017 OPPS/ASC proposed rule (81 FR 45681), and the CY 2017 OPPS/ASC final rule with comment period/interim final rule with comment period (81 FR 79717 and 79727), we noted that when a beneficiary receives outpatient services in an off-campus department of a hospital, the total Medicare payment for those services is generally higher than when those same services are provided in a physician's office. Similarly, when partial hospitalization services are provided in a hospital-based PHP, Medicare pays more than when those same services are provided by a CMHC. Our rationale for adopting the CMHC per diem rate for APC 5853 as the PFS payment amount for nonexcepted off-campus PBDs providing PHP services is because CMHCs are freestanding entities that are not part of a hospital, but they provide the same PHP services as hospital-based PHPs (81 FR 79727). This is similar to the differences between freestanding entities paid under the PFS that furnish other services also provided by hospital-based entities. Similar to other entities currently paid for their TC services under the PFS, we believe CMHCs would typically have lower cost structures than hospital-based PHPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security. We believe that paying for nonexcepted hospital-based partial hospitalization services at the lower CMHC per diem rate aligns with section 603 of Bipartisan Budget Act of 2015, while also preserving access to PHP services. In addition, nonexcepted off-campus PBDs will not be required to enroll as CMHCs in order to bill and be paid for providing partial hospitalization services. However, a nonexcepted off-campus PBD that wishes to provide PHP services may still enroll as a CMHC if it chooses to do so and meets the relevant requirements. Finally, we recognize that because hospital-based PHPs are providing partial hospitalization services in the hospital outpatient setting, they can offer benefits that CMHCs do not have, such as an easier patient transition to and from inpatient care, and easier sharing of health information between the PHP and the inpatient staff.

In the CY 2018 PFS final rule, we did not require these PHPs to enroll as CMHCs but instead we continued to pay nonexcepted off-campus PBDs providing PHP items and services under the PFS. Further, in that CY 2018 PFS final rule (82 FR 53025 to 53026), we continued to adopt the CMHC per diem rate for APC 5853 as the PFS payment amount for nonexcepted off-campus PBDs providing three or more PHP services per day in CY 2018.

For CY 2019, we proposed to continue to identify the PFS as the applicable payment system for PHP services furnished by nonexcepted off-campus PBDs, and proposed to continue to set the PFS payment rate for these PHP services as the per diem rate that will be paid to a CMHC in CY 2019. We further proposed to maintain these policies for future years until updated data or other considerations indicate that a change to our approach is warranted, which we will then propose through notice and comment rulemaking.

We received no comments on our PHP proposals for CY 2019 and future years, and are finalizing our policies as proposed.

7. Future Years

We continue to believe the amendments made by section 603 of the Bipartisan Budget Act of 2015 were intended to reduce the Medicare payment incentive for hospitals to purchase physician offices, convert them to off-campus PBDs, and bill under the OPPS for items and services they furnish there. Therefore, we continue to believe the payment policy under this provision should ultimately equalize payment rates between nonexcepted off-campus PBDs and physician offices to the greatest extent possible, while allowing nonexcepted off-campus PBDs to bill in a straightforward way for services they furnish.

In developing our proposal for CY 2019 as described previously, we incorporated all HCPCS codes that appeared in CY 2017 claims data from nonexcepted off-campus PBDs. We also expanded the number of site specific, technical-equivalent rates for nonexcepted items and services furnished in nonexcepted off-campus PBDs, in order to ensure that Medicare payment to hospitals billing for nonexcepted items and services furnished by nonexcepted off-campus PBDs reflects the relative resources involved in furnishing the items and services. We recognize that for certain specialties, service lines, and nonexcepted off-campus PBDs, total Medicare payments for the same services might be either higher or lower when furnished by a nonexcepted off-campus PBD rather than in a physician office.

We intend to continue to examine the claims data in order to assess whether a different PFS Relativity Adjuster is warranted and also to consider whether additional adjustments to the methodology are appropriate. In particular, we are monitoring claims for shifts in the mix of services furnished in nonexcepted off-campus PBDs that may affect the relativity between the PFS and OPPS. An increase over time in the share of nonexcepted items and services with lower technical-equivalent rates under the PFS compared with APC rates

under the OPPS might result in a lower PFS Relativity Adjuster, for example. We will also carefully assess annual payment policy updates to the PFS and OPPS, respectively, to identify changes in overall relativity resulting from any new or modified policies, such as expanded packaging under the OPPS or an increase in the number of HCPCS codes with global periods under the PFS. As part of these ongoing efforts, we are also analyzing PFS claims data to identify patterns of services furnished together on the same day. We anticipate that this will ultimately allow us to make refinements to the PFS Relativity Adjuster to better account for the more extensive packaging of services under the OPPS and the potential underreporting of services that are not separately payable under the OPPS but are paid separately under the PFS.

Another dimension of our ongoing efforts to improve implementation of section 603 of the Bipartisan Budget Act of 2015 is the development and refinement of a new set of payment rates under the PFS that reflect the relative resource costs of furnishing the TC of items and services furnished in nonexcepted off-campus PBDs. Although we believe that our site-specific HCPCS code-level rates reflect the best available estimate of the amount that would have been paid for the service in the office setting under the PFS for practice expenses not associated with the PC of the service, for the majority of HCPCS codes there is no established methodology for separately valuing the resource costs incurred by a provider while furnishing a service from those incurred exclusively by the facility in which the service is furnished. We continue to explore alternatives to our current estimates that would better reflect the TC of services furnished in nonexcepted off-campus PBDs. We are broadly interested in stakeholder feedback and recommendations for ways in which CMS can improve pricing and transparency with regard to the differences in the payment rates across sites of service.

We expect that our continued analyses of claims data and our ongoing exploration of systems changes that are needed to allow nonexcepted off-campus PBDs to bill directly for the TC portion of nonexcepted items and services may lead us to consider a different approach for implementing section 603 of the Bipartisan Budget Act of 2015. On the whole, however, we believe that a PFS Relativity Adjuster for CY 2019 of 40 percent advances efforts to equalize payment rates in the aggregate between physician offices and nonexcepted off-campus PBDs. Maintaining our policy of applying an overall scaling factor to OPPS payments allows hospitals to continue billing through a facility claim form and permits continued use of the packaging rules and cost report-based relative payment rate determinations for nonexcepted services.

H. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010 and CY 2015. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.E. of this final rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period, we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule, the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period, we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period, and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values. For CY 2017, we did not identify any new codes that described such wholly new services. Therefore, we did not establish any code values on an interim final basis.

For CY 2018, we generally proposed the RUC-recommended work RVUs for new, revised, and potentially misvalued codes. We proposed these values based on our understanding that the RUC generally considers the kinds of concerns we historically raised regarding appropriate valuation of work RVUs. However, during our review of these recommended values, we identified some concerns similar to those we recognized in prior years. Given the relative nature of the PFS and our obligation to ensure that the RVUs reflect relative resource use, we included descriptions of potential alternative approaches we might have taken in developing work RVUs that differed from the RUC-recommended values. We sought comment on both the RUC-recommended values, as well as the alternatives considered. Several commenters generally supported the proposed use of the RUC-recommended work RVUs, without refinement. Other commenters expressed concern about the effect of the misvalued code reviews on particular specialties and settings and disappointment with our proposed

approach for valuing codes for CY 2018. A detailed summary of the comments and our responses can be found in the CY 2018 PFS final rule (82 FR 53033–53035).

We clarified in response to commenters that we are not relinquishing our obligation to independently establish appropriate RVUs for services paid under the PFS. We will continue to thoroughly review and consider information we receive from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the federal government as part of our process for establishing valuations. Although generally proposing the RUC-recommended work RVUs for new, revised, and potentially misvalued codes was our approach for CY 2018, we note that we also included alternative values where we believed there was a possible opportunity for increased precision. We also clarified that as part of our obligation to establish RVUs for the PFS, we annually make an independent assessment of the available recommendations, supporting documentation, and other available information from the RUC and other commenters to determine the appropriate valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we propose those values as recommended. Additionally, we will continue to engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conducted a review that included the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally included, but had not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assessed the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we used in the building block approach may have included preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We used the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. The statute specifically defines the work component as the resources in time and intensity required in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refined the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an evaluation and management (E/M) service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjusted the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we removed 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also removed a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we did not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to

our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes used the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believed that such changes in time were already accounted for in the RUC's recommendation, then we did not make such adjustments. Likewise, we did not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We used the ratios to identify potential work RVUs and considered these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we have believed that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277) we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule, we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes is one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommend work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

Following the publication of the CY 2019 PFS proposed rule, we received several comments noting that there was some confusion in the terminology between ''reference services'' and ''crosswalks.'' Commenters stated that ''reference services'' are services indicated by the specialty society or the RUC as a good comparator that demonstrates relativity using magnitude estimation as requiring similar physician work, time, intensity and complexity. ''Key reference services'' are the top two services selected by the survey respondents as most similar to the code being surveyed. By contrast, ''crosswalks'' are services that have similar or exact intraservice time and require the same physician work (that is, have the same work RVU), and the term ''crosswalk'' should only be used when making a comparison to a CPT code with the identical work RVU. The commenters noted that these terms were used interchangeably in the proposed rule when they have distinct and separate meanings.

In response to the commenters, we would like to clarify that the terms ''reference services'', ''key reference services'', and ''crosswalks'' as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate stakeholder feedback, we will seek to limit the use of the term, ''crosswalk,'' to those cases where we are making a comparison to a CPT code with the identical work RVU.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the final valuation considered for specific codes. Table 13 contains a list of codes for which we are finalizing work RVUs; this includes all codes for which we received RUC recommendations by February 10, 2018. The finalized work RVUs, work time and other payment information for all CY 2019 payable codes are available on the CMS website under downloads for the CY 2019 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*). Table 13 also contains the CPT code descriptors for all new, revised, and potentially misvalued codes discussed in this section.

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 14 details our refinements of the RUC's direct PE recommendations at the code-specific level. In this final rule, we address several refinements that are common across codes, and refinements to particular codes are addressed in the portions of this section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.30 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also note that nearly half of the refinements listed in Table 14 result in changes under the $0.30 threshold and are unlikely to result in a change to the RVUs.

We also note that the finalized direct PE inputs for CY 2019 are displayed in the CY 2019 direct PE input database, available on the CMS website under the downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*. The inputs displayed there have been used in developing the final CY 2019 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this final rule, Determination of Practice

Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. Some recommendations, however, include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2019, we received invoices for several new supply and equipment items. Tables 14 and 15 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this final rule, we encouraged stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encouraged stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 14 and 15 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address proposed code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the public use files for the PFS proposed and final rules for each year display the services subject to the MPPR lists on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services. We also include a list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap for the upcoming calendar year. The public use files for CY 2019 are available on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261–74263). For more information regarding the history of the OPPS cap, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659–69662).

4. Valuation of Specific Codes for CY 2019

(1) Fine Needle Aspiration (CPT Codes 10021, 10004, 10005, 10006, 10007, 10008, 10009, 10010, 10011, 10012, 76492, 77002 and 77021)

CPT code 10021 was identified as part of the OPPS cap payment proposal in CY 2014 (78 FR 74246–74248), and it was reviewed by the RUC for direct PE inputs only as part of the CY 2016 rule cycle. Afterwards, CPT codes 10021 and 10022 were referred to the CPT Editorial Panel to consider adding additional clarifying language to the code descriptors and to include bundled imaging guidance due to the fact that imaging had become typical with these services. In June 2017, the CPT Editorial Panel deleted CPT code 10022, revised CPT code 10021, and created nine new codes to describe fine needle aspiration procedures with and without imaging guidance. These ten codes were surveyed and reviewed for the October 2017 and January 2018 RUC meetings. Several imaging services were also reviewed along with the rest of the code family, although only CPT code 77021 was subject to a new survey.

For CY 2019, we proposed the RUC-recommended work RVU for seven of the ten codes in this family. Specifically, we proposed a work RVU of 0.80 for CPT code 10004 (Fine needle aspiration biopsy; without imaging guidance; each additional lesion), a work RVU of 1.00 for CPT code 10006 (Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion), a work RVU of 1.81 for CPT code 10007 (Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion), a work RVU of 1.18 for CPT code 10008 (Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion), and a work RVU of

1.65 for CPT code 10010 (Fine needle aspiration biopsy, including CT guidance; each additional lesion). We also proposed to assign the recommended contractor-priced status to CPT codes 10011 (Fine needle aspiration biopsy, including MR guidance; first lesion) and 10012 (Fine needle aspiration biopsy, including MR guidance; each additional lesion) due to low utilization until these services are more widely utilized. In addition, we proposed the recommended work RVU of 1.50 for CPT code 77021 (Magnetic resonance guidance for needle placement (*e.g.,* for biopsy, fine needle aspiration biopsy, injection, or placement of localization device) radiological supervision and interpretation), as well as proposed to reaffirm the current work RVUs of 0.67 for CPT code 76942 (Ultrasonic guidance for needle placement (*e.g.,* biopsy, fine needle aspiration biopsy, injection, localization device), imaging supervision and interpretation) and 0.54 for 77002 (Fluoroscopic guidance for needle placement (*e.g.,* biopsy, fine needle aspiration biopsy, injection, localization device)).

We disagreed with the RUC-recommended work RVU of 1.20 for CPT code 10021 (Fine needle aspiration biopsy; without imaging guidance; first lesion) and proposed a work RVU of 1.03 based on a direct crosswalk to CPT code 36440 (Push transfusion, blood, 2 years or younger). CPT code 36440 is a recently reviewed code with the same intraservice time of 15 minutes and 2 additional minutes of total time. In reviewing CPT code 10021, we noted that the recommended intraservice time is decreasing from 17 minutes to 15 minutes (12 percent reduction), and the recommended total time is decreasing from 48 minutes to 33 minutes (32 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.27 to 1.20, which is a reduction of just over 5 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 10021, we believed that it was more accurate to propose a work RVU of 1.03 based on a crosswalk to CPT code 36440 to account for these decreases in the surveyed work time.

We disagreed with the RUC-recommended work RVU of 1.63 for CPT code 10005 (Fine needle aspiration biopsy, including ultrasound guidance; first lesion) and proposed a work RVU of 1.46. Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 10021 and 10005 is equivalent to the recommended interval of 0.43 RVUs. Therefore, we proposed a work RVU of 1.46 for CPT code 10005, based on the recommended interval of 0.43 additional RVUs above our proposed work RVU of 1.03 for CPT code 10021. The proposed increment of 0.43 RVUs above CPT code 10021 was also based on the use of two crosswalk codes: CPT code 99225 (Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of 3 key components); and CPT code 99232 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of 3 key components). Both of these codes have the same intraservice time and 1 additional minute of total time as compared with CPT code 10005, and both crosswalk codes share a work RVU of 1.39.

We disagreed with the RUC-recommended work RVU of 2.43 for CPT code 10009 (Fine needle aspiration biopsy, including CT guidance; first lesion) and we proposed a work RVU of 2.26. Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 10021 and 10009 is equivalent to the recommended interval of 1.23 RVUs. Therefore, we proposed a work RVU of 2.26 for CPT code 10009, based on the recommended interval of 1.23 additional RVUs above our proposed work RVU of 1.03 for CPT code 10021. The proposed use of the recommended increment from CPT code 10021 was also based on the use of a crosswalk to CPT code 74263 (Computed tomographic (CT) colonography, screening, including image postprocessing), another CT procedure with 38 minutes of intraservice time and 50 minutes of total time at a work RVU of 2.28.

We noted that the recommended work pool is increasing by approximately 20 percent for the Fine Needle Aspiration family as a whole, while the recommended work time pool for the same codes is only increasing by about 2 percent. Since time is defined as one of the two components of work, we believed that this indicated a discrepancy in the recommended work values. We do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and therefore, we do not believe that it would serve the interests of relativity to propose the recommended work values for all of the codes in this family. We believe that, generally speaking, the recoding of a family of services should maintain the same total work pool, as the services themselves are not changing, only the coding structure under which they are being reported. We also noted that through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular servicers. For example, a practitioner will not be carrying out the full preservice work twice for CPT codes 10022 and 76942, but preservice times were assigned to both of the codes under the old coding. We believe the new coding assigns more accurate work times and thus reflects efficiencies in resource costs that existed regardless of how the services were previously reported.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes for CPT code 77021. This code did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also noted that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Fine Needle Aspiration family of codes.

Comment: Several commenters disagreed with the CMS statement in the proposed rule that the RUC-recommended work pool was increasing by approximately 20 percent for this family of codes. Commenters stated that the work pool based on the RUC-recommended values would actually decrease by 15 percent and that the CMS work valuations were based on a flawed methodology that did not account for the associated savings with bundling the image guidance codes. One of the commenters supplied a table with data to support the claim that the work

pool based on the RUC-recommended values would decrease by 15 percent rather than increasing by 20 percent.

Response: We disagree with the commenters that the work pool would decrease by 15 percent if we were to finalize the RUC recommendations. We investigated the data in the table submitted by the commenters, and we believe that there are several methodological flaws in the analysis it contains. First, there are a number of 0.00 work RVUs listed in the ''RUC Recommended RVUs'' column for the new codes, which results in an incorrect amount of ''New/Rev Total RVUs'' when multiplied by the utilization for the new codes. As an example, CPT code 10005 has approximately 135,000 services that are counted as having a work RVU of 0.00 in this table instead of the RUC-recommended work RVU of 1.63, which undercounts the total number of RVUs by a wide margin. Second, the values in the ''Total Source RVUs'' include the ratios from the utilization crosswalk (listed on the table as ''Percent''). We do not understand why these ratios would be used to calculate the total source RVUs, as this side of the work pool comparison is calculated from the utilization of the source codes times the work RVUs of the source codes. Third, the imaging guidance codes are not fully included in both sides of the comparison on this table, with their work RVUs included in the source RVU total but not in the new/revised RVU total. This uneven comparison results in an inaccurate tally of the work pools from before and after the coding revisions take place.

In the interest of providing transparency, we are including Table 12 with our work pool comparison for the Fine Needle Aspiration code family.

TABLE 12—FINE NEEDLE ASPIRATION WORK POOL COMPARISON

HCPCS code	Utilization source	Utilization destination	Work RVU source	Work pool source	Work RVU destination	Work pool destination	Work pool RVU change	Work pool % change
10021	23,755	21,380	1.27	30,169	1.20	25,655	−4,513	−15
10004	0	2,376	0.00	0	0.80	1,900	1,900	
10005	0	270,753	0.00	0	1.63	441,327	441,327	
10006	0	30,621	0.00	0	1.00	30,621	30,621	
10007	0	6,857	0.00	0	1.81	12,411	12,411	
10008	0	873	0.00	0	1.18	1,030	1,030	
10009	0	60,665	0.00	0	2.43	147,416	147,416	
10010	0	6,831	0.00	0	1.65	11,271	11,271	
10011	0	83	0.00	0	C	0	0

10022	186,455	0	1.27	236,798	0.00	0	−236,798	−100
76942	558,081	488,321	0.67	373,914	0.67	327,175	−46,739	−13
7694226	641,346	561,178	0.67	429,702	0.67	375,989	−53,713	−13
76942TC	8,588	7,515	0.00	0	0.00	0	0	
77002	311,280	308,790	0.54	168,091	0.54	166,746	−1,345	−1
7700226	180,964	179,516	0.54	97,721	0.54	96,939	−782	−1
77002TC	7,936	7,873	0.00	0	0.00	0	0	
77012	9,343	7,792	1.16	10,838	1.50	11,688	850	8
7701226	194,611	162,306	1.16	225,749	1.50	243,458	17,710	8
77012TC	469	391	0.00	0	0.00	0	0	
77021	1,481	1,432	1.50	2,222	1.50	2,148	−73	−3
7702126	1,038	1,004	1.50	1,557	1.50	1,506	−51	−3
77021TC	67	65	0.00	0	0.00	0	0	
Totals	2,125,414	2,126,622		1,576,760		1,897,282	320,523	20

We continue to believe that the RUC-recommended work pool is increasing by approximately 20 percent for the Fine Needle Aspiration family as a whole, and that this percentage increase suggests that CPT codes 10021, 10005, and 10009 are more accurately valued at the CMS proposed work RVUs.

Comment: Several commenters disagreed that this code family will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular services. Commenters stated that there is no overlap between the current descriptions of work for the bundled codes, and that CPT code 10022 is never performed on the same patient without an image guidance code and the image guidance codes are never performed on the same patient without a corresponding procedure code. The commenters stated that any associated reduction in payment would be due to other factors, not due to the code bundling.

Response: We disagree with the commenters that there would be no savings achieved via elimination of duplicative assumptions of the resources involved in furnishing particular services. As we stated in the proposed rule, a practitioner will not be carrying out the full preservice work twice for CPT codes 10022 and 76942, but preservice times were assigned to both of the codes under the old coding. In similar fashion, these codes both separately include immediate postservice work time for dictating a report in their clinical vignettes. This is an example of how savings are achieved via elimination of duplicative assumptions of resources, as the practitioner will only dictate a single report in the newly created CPT code 10005 that bundles these two services together. We continue to believe that the new coding assigns more accurate work times and thus reflects efficiencies in resource costs that existed regardless of how the services were previously reported.

Comment: One commenter stated that while it may be true mathematically that the work pool for this family of codes was increasing by 20 percent, using this observation as the sole basis to implement work value relies on incorrect assumptions which do not adhere to current relativity-based RUC methodologies. The commenter stated that the rationale proposed by CMS incorrectly implies that the decrease in time as reflected in survey values must equate to a one to one or linear decrease in the valuation of work RVUs and fails to recognize changes in intensity that have taken place over time.

Response: We disagree with the commenter that our analysis of changes in the work pool for this family of codes was the sole basis for the proposed refinements to the work RVUs. While

this was an important factor in our analysis of the work valuation of individual codes, we also detailed in the proposed rule our use of time ratios, increments, and crosswalk codes as part of our larger methodology to determine work RVUs. We specifically stated that we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, but rather that we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. We do consider changes in intensity that have taken place over time as part of our analysis of work valuation, as demonstrated by the fact that we proposed the RUC-recommended work RVUs for seven of the ten codes in this family.

Comment: One commenter disagreed that the work pool for a family of revised codes should be similar before and after the valuation of the new codes. The commenter stated that by separating different modalities into their own codes, the appropriate time and intensity differences for these services were more accurately reflected in the recommended RVUs, and the work pool appropriately expanded to reflect these differences. The commenter cited the example of CPT code 10022 being unable to account for different patients receiving a biopsy using ultrasound or CT technology.

Response: We agree with the commenter that the work pool for a revised code family does not always need to be similar before and after the valuation of the new codes. However, the commenter did not address our rationale for why we believe that an increase in the work pool would be inaccurate for this particular family of codes, which was based on the observation that the RUC-recommended work pool was increasing by approximately 20 percent while the RUC-recommended work time pool for the same codes was only increasing by about 2 percent. In a situation where prior coding was unable to account for newer and more complex forms of treatment, we would expect the work time pool to expand alongside the work pool, since these more complex and intensive procedures would take more time to furnish.

Comment: A few commenters stated that since CMS changed the multiple procedure indicator from ''0'' to ''2'' for all Fine Needle Aspiration biopsy initial lesion codes for CY 2019, the commenter believes that using XXX global codes as references was incorrect. The commenter instead recommended that CMS review similar minor procedures that have a 0-day global designation, which suggested that a higher work RVU could have been supported.

Response: We continue to believe that codes should generally be compared to codes with the same global period. Codes with a 0-day global period bundle other services that take place on the same day as the procedure into the valuation of the code, whereas such bundling is not included in codes with an XXX global period. We do not agree that it would have been more accurate to use codes with a 0-day global period as references for the codes in this family.

Comment: Many commenters disagreed with the proposed work RVU of 1.03 for CPT code 10021 and stated that CMS should finalize the RUC-recommended work RVU of 1.20. Commenters stated that this service has a new coding structure as compared to the past, and that the prior review was last carried out in 1995 when physician work time was evaluated with much less rigor. Commenters stated that the old time values were also based on a crosswalk and not a survey, and that therefore the drop in work time did not warrant a proportional change in work RVU as the previous times were inaccurate.

Response: We agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times, and it also would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times used in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we want to reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of prior work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters stated the CMS rationale for the proposed work RVU for CPT code 10021 incorrectly implies that the decreased time reflected in survey values should have a one-to-one decrease in value, or a linear decrease in the valuation of work RVUs. Commenters stated that CMS incorrectly assumed that there are no differences in how work was valued in 1995 and how it is valued now.

Response: We do not agree with the commenters' characterization of our statements, and believe it misinterprets our view on this matter. We specifically stated in the CY 2019 PFS proposed rule that we were not implying that the decrease in time as reflected in survey values must necessarily equate to a one-to-one or linear decrease in the valuation of work RVUs, both generally speaking and with regards to this particular CPT code (83 FR 35747). We recognize that intensity for any given procedure may change over several years or within the intraservice period. Nevertheless, since the two components of work are time and intensity, we believe that absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has specifically increased or the reduction in time occurs disproportionally in the less-intensive portions of the procedure, significant decreases in time should generally be reflected as decreases to work RVUs.

Comment: Several commenters disagreed with the use of CPT code 36440 as a crosswalk for the work RVU of CPT code 10021. Commenters stated that there were differences in site of service, patient population, and utilization between these two codes, which made CPT code 36440 a poor choice to use for work valuation. One commenter stated that CPT code 36440 is used to report a push transfusion of blood through an already established

access in a vessel, and does not carry the same risk and intensity as CPT code 10021, which involves accessing a lesion in the neck multiple times to aspirate biopsy specimens. Commenters supplied a chart depicting several comparator codes for 10021 that they stated were more appropriate choices for a crosswalk.

Response: We disagree with the commenters that CPT code 36440 is an inappropriate choice for a crosswalk code. While it is true that this code is typically performed on an inpatient basis and the patient population comprises neonates instead of adults, we note that these factors suggest that the patient population for CPT code 36440 is likely sicker and more complex than the patient population for CPT code 10021. These differences would, if anything, be grounds for a lower work RVU for CPT code 10021, not a higher work RVU. We continue to believe that CPT code 36440 is an appropriate choice for a crosswalk due to the highly similar work times and intensity as compared to CPT code 10021. As for the other comparator codes provided by the commenters, we do not agree that they would be more appropriate choices for a crosswalk as we believe that they have a higher intensity than the service described by CPT code 10021. In more general terms, we continue to believe that the nature of the PFS relative value system necessarily involves comparisons of all services to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

Comment: Many commenters disagreed with the proposed work RVU of 1.46 for CPT code 10005 and stated that CMS should finalize the RUC-recommended work RVU of 1.63. Commenters stated that CMS should use valid methods of evaluating services, such as survey data and magnitude estimation, instead of relying on an incremental difference in work RVUs between CPT codes 10021 and 10005.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We further note that we did not rely solely on an increment for our proposed work RVU for CPT code 10005, supporting our proposed valuation with the use of two reference codes: CPT codes 99225 and 99232. Both of these codes have the same intraservice time and 1 additional minute of total time as compared with CPT code 10005, and both reference codes share a work RVU of 1.39.

Comment: One commenter stated that they did not object to the CMS designation of 0.43 RVUs as the increment over CPT code 10021 for adding ultrasound guidance; however, the commenter objected to the assumption that the work value for CPT code 36440 offers an acceptable baseline.

Response: We continue to believe that a crosswalk to the work RVU of CPT code 36440 produces the most accurate valuation for baseline CPT code 10021.

Comment: Commenters disagreed with the proposed work RVU of 2.26 for CPT code 10009 and stated that CMS should finalize the RUC-recommended work RVU of 2.43. Commenters provided similar comments for CPT code 10009 as they provided for CPT code 10005, suggesting that the use of an incremental methodology was inaccurate and that CMS should use more valid methods of evaluating services, such as survey data and magnitude estimation.

Response: We continue to disagree with the commenters that the use of an increment is a less valid methodology for valuing services. As detailed in the response to the comment summary above for CPT code 10005, we believe the use of an incremental difference is appropriate, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. We further note that we did not rely solely on an increment for our proposed work RVU for CPT code 10009, supporting our proposed valuation with the use of a reference to CPT code 74263.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for CPT codes 77012 and 77021, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We address this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT codes 77012 and 77021, we are finalizing these clinical labor refinements as proposed.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for all of the codes in the Fine Needle Aspiration family as proposed.

(2) Biopsy of Nail (CPT Code 11755)

CPT code 11755 (Biopsy of nail unit (*e.g.,* plate, bed, matrix, hyponychium, proximal and lateral nail folds) (separate procedure)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, the HCPAC recommended a work RVU of 1.25 based on the survey median value.

We disagreed with the recommended value and proposed a work RVU of 1.08 for CPT code 11755 based on the survey 25th percentile value. We noted that the recommended intraservice time for CPT code 11755 is decreasing from 25 minutes to 15 minutes (40 percent reduction), and the recommended total time for CPT code 11755 is decreasing from 55 minutes to 39 minutes (29 percent reduction); however, the recommended work RVU is only decreasing from 1.31 to 1.25, which is a reduction of less than 5 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 11755, we believed that it would be more accurate to propose the survey 25th percentile work RVU than the survey median to account for these decreases in the surveyed work time.

The proposed work RVU of 1.08 is also based on a crosswalk to CPT code 11042 (Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less), which has a work RVU of 1.01, the same intraservice time of 15 minutes, and a similar total time of 36 minutes. We also noted that, generally speaking, working with extremities like nails tends to be less intensive in clinical terms than other services, especially as compared to surgical procedures. We believe that

this further supports our proposal of a work RVU of 1.08 for CPT code 11755.

We proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 11755.

Comment: A few commenters stated that section 1848(c)(7) of the Act, as amended by section 220(e) of the Protecting Access to Medicare Act of 2014 (PAMA), specifies that for services that are not described by new and revised codes, if the total RVU for a service would be decreased by 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments must be phased in over a 2-year period. These commenters stated that, according to this requirement, CPT code 11755 should be subject to the phase-in for CY 2019.

Response: We agree that CPT code 11755 should be subject to the phase-in for CY 2019. Due to a technical error, we inadvertently neglected to apply the phase-in to the total RVU of this code in the facility setting for the proposed rule, and we are correcting this for the final rule.

Comment: Many commenters disagreed with the proposed work RVU of 1.08 for CPT code 11755 and stated that CMS should finalize the RUC-recommended work RVU of 1.25. Commenters urged CMS to view the survey and the HCPAC's recommendation for the survey median work value of 1.25 apart from the current work time and work RVU because the primary specialty that currently performs the service was not included in the prior survey conducted in 1993.

Response: We disagree with the commenters that the current work time and work RVU for CPT code 11755 should be viewed separately from the new recommended values. We do not pay differentially for services on the basis of specialty, and a change in the dominant specialty since the time of the last survey is not a reason to disregard the current work time and work RVUs in developing proposed work RVUs.

Comment: Commenters compared the proposed work RVU of CPT code 11755 to the work valuation of the top key reference service, CPT code 11730 (Avulsion of nail plate, partial or complete, simple; single). Commenters stated that the increment of work between CPT code 11730 of 1.05 and the CMS proposed value for CPT code 11755 of 1.08 was only 0.03 RVUs, which was not enough to account for the additional work involved in CPT code 11755 given that the latter code also had 50 percent more intraservice time. Commenters also expressed concerns with the CMS reference to CPT code 11042 at a work RVU of 1.01, stating that it required less physician work time and a less refined technique. Commenters stated that the service described by CPT code 11755 was more intense to perform because the physician has to be extremely careful not to accidentally hit the patient's bone while taking the biopsy. Commenters stated that the nail plate is typically difficult to remove during the process of the biopsy performed in the service described by CPT code 11755, and that the biopsy must be performed with extreme care to avoid injury to the surgeon or extension of the incision to the underlying bone, which carries the potential for an osteomyelitis and significant post-operative pain. Commenters again urged CMS to finalize the RUC-recommended values for this code.

Response: After reviewing the additional information about the risks inherent in the service provided by the commenters, we agree that it would be more accurate to finalize the RUC-recommended work RVU of 1.25 for CPT code 11755 to reflect the intensity of the procedure.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the basic instrument pack (EQ137) equipment, we removed the clinical labor for the CA024, CA027, CA029, and CA035 clinical labor activities in accordance with our standard equipment time formula for surgical instrument packs. For the other three equipment items, we removed the clinical labor for the CA027 and CA035 clinical labor activity codes in accordance with our standard equipment time formula for non-highly technical equipment.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 1.25 for CPT code 11755. We are finalizing the direct PE inputs for this code as proposed.

(3) Skin Biopsy (CPT Codes 11102, 11103, 11104, 11105, 11106, and 11107)

In CY 2016, CPT codes 11100 (Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion) and 11101 (Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; each separate/additional lesion) were identified as potentially misvalued using a high expenditure services screen across specialties with Medicare allowed charges of $10 million or more. Prior to the January 2016 RUC meeting, the specialty society notified the RUC that its survey data displayed a bimodal distribution of responses with more outliers than usual. The RUC referred CPT codes 11100 and 11101 to the CPT Editorial Panel. In February 2017, the CPT Editorial Panel deleted these two codes and created six new codes for primary and additional biopsy based on the thickness of the sample and the technique utilized.

For CY 2019, we proposed the RUC-recommended work RVUs for five of the six codes in the family. We proposed a work RVU of 0.66 for CPT code 11102 (Tangential biopsy of skin, (*e.g.,* shave, scoop, saucerize, curette), single lesion), a work RVU of 0.83 for CPT code 11104 (Punch biopsy of skin, (including simple closure when performed), single lesion), a work RVU of 0.45 for CPT code 11105 (Punch biopsy of skin, (including simple closure when performed), each separate/additional lesion), a work RVU of 1.01 for CPT code 11106 (Incisional biopsy of skin (*e.g.,* wedge), (including simple closure when performed), single lesion), and a work RVU of 0.54 for CPT code 11107 (Incisional biopsy of skin (*e.g.,* wedge), (including simple closure when performed), each separate/additional lesion).

For CPT code 11103 (Tangential biopsy of skin, (*e.g.,* shave, scoop, saucerize, curette), each separate/additional lesion), we disagreed with the RUC-recommended work RVU of 0.38 and proposed a work RVU of 0.29. When we compared the RUC-recommended work RVU of 0.38 to other add-on codes in the RUC database, we found that CPT code 11103 would have the second-highest work RVU for any code with 7 minutes or less of total time, with the recommended work RVU noticeably higher than other related add-on codes, and we did not agree that the tangential biopsy service being performed should have an anomalously high work value in comparison to other similar add-on codes. Our proposed work RVU of 0.29 was based on a crosswalk to CPT code 11201 (Removal of skin tags, multiple fibrocutaneous tags, any area; each additional 10 lesions, or part thereof), a clinically related add-on procedure with 5 minutes of intraservice and total time as opposed to the surveyed 6 minutes for

CPT code 11103. We also noted that the intraservice time ratio between CPT code 11103 and the recommended reference code, CPT code 11732 (Avulsion of nail plate, partial or complete, simple; each additional nail plate), was 75 percent (6 minutes divided by 8 minutes). This 75 percent ratio when applied to the work RVU of CPT code 11732 also produced a work RVU of 0.29 (0.38 * 0.75 = 0.29). Finally, we also supported the proposed work RVU through a crosswalk to CPT code 33508 (Endoscopy, surgical, including video-assisted harvest of vein(s) for coronary artery bypass procedure), which has a higher intraservice time of 10 minutes but a similar work RVU of 0.31. We believed that our proposed work RVU of 0.29 for CPT code 11103 better serves the interests of relativity, as well as better fitting with the other recommended work RVUs within this family of codes.

For the direct PE inputs, we proposed to remove the 2 minutes of clinical labor time for the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) activity for CPT codes 11102, 11104, and 11106. These codes are typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing home care instructions given that this task would typically be done during the same day E/M service. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

We proposed to refine the quantity of the ''gown, staff, impervious'' (SB024) and the ''mask, surgical, with face shield'' (SB034) supplies from 2 to 1 for CPT codes 11102, 11104, and 11106. We proposed to remove one gown and one surgical mask from these codes as duplicative since these supplies are also included within the surgical instrument cleaning pack (SA043). We also proposed to remove all of the supplies in the three add-on procedures (CPT codes 11103, 11105, and 11107) that were not contained in the previous add-on procedure for this family, CPT code 11101. We do not believe that the use of these supplies would be typical for the ''each additional lesion'' add-on codes, as these supplies are all included in the base codes and are not currently utilized in CPT code 11101. We noted that the recommended direct PE costs for the three new add-on codes represent an increase of approximately 500 percent from the direct PE costs for CPT code 11101, and believe that this is largely due to the addition of these new supplies.

The following is a summary of the public comments we received on our proposals involving the Skin Biopsy family of codes.

Comment: Many commenters disagreed with the proposed work RVU of 0.29 for CPT code 11103 and stated that CMS should finalize the RUC-recommended work RVU of 0.38. Commenters disagreed that CPT code 11103 would have the second-highest work RVU for any code with 7 minutes or less of total time, stating that the total number of add-on codes with RUC total time of 7 minutes or less is 18. Commenters stated that only five of these services have total time of 6 or 7 minutes and the rest were lower, thus the majority of the work RVUs among these services were lower and not comparable. Commenters stressed that the RUC-recommended work RVU of 0.38 for CPT code 11103 was appropriate since the service is performed on a separate site than the base code and there is additional physician work to transition to a different site. Commenters stated that the RUC's direct crosswalk to CPT code 11732 (Avulsion of nail plate, partial or complete, simple; each additional nail plate), which describes procedures with significant physician effort in removing a nail plate with its anesthesia and hemostasis challenges, was a much better comparator to CPT code 11103 which involves the biopsy of a vascular tumor, typically on the face. Commenters stated that the proposed crosswalk to CPT code 11201 at a work RVU of 0.29 was too low to maintain relativity within the family of codes. One commenter stated that the type of skin biopsies performed in CPT code 11103 can result in the detection of carcinoma, melanoma, sarcoma/lymphoma, and other dangerous pathologies, and that making these diagnoses can save lives and ultimately decrease Medicare spending.

Response: After reviewing the additional information provided by the commenters, we agree that it would be more accurate to finalize the RUC-recommended work RVU of 0.38 for CPT code 11103 as the proposed work RVU was too low to maintain relativity within the family of codes.

Comment: Commenters disagreed with many of the refinements made by CMS to the direct PE inputs for this family of codes. Commenters stated that it was not appropriate to only include equipment and supply items in the new biopsy add-on codes that were included in the old add-on code (CPT code 11101) because the old codes were not specific enough to accurately distinguish between the three types of biopsies. Commenters cited as an example the fact that the predecessor CPT code 11101 did not include supply items that are necessary for the performance of the incisional biopsy.

Response: We appreciate the feedback from the commenters clarifying some of the differences between the predecessor code and the newly created add-on codes. We evaluated these differences on an individual case-by-case basis when determining whether or not to finalize the proposed refinements to the direct PE inputs.

Comment: Several commenters disagreed with the proposed refinements to the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) clinical labor time. Commenters stated that home care instructions furnished in an E/M visit do not typically include wound care instructions, and that this instruction would be above and beyond instructions proved during an E/M visit in which no procedure is performed.

Response: We disagree with the commenters that wound care instructions would not be provided during the same day E/M visit. We continue to believe that it would be duplicative to assign clinical labor time for this task given the fact that a same day E/M visit is typical for these services. We believe that these instructions would be provided during the same day E/M visit.

Comment: Several commenters disagreed with the CMS proposal to refine the quantity of the ''gown, staff, impervious'' (SB024) and the ''mask, surgical, with face shield'' (SB034) supplies from 2 to 1 for CPT codes 11102, 11104, and 11106 since these supplies are also included within the surgical instrument cleaning pack (SA043). Commenters stated that the SA043 instrument cleaning pack is used in the dirty instrument room as part of the instrument cleaning and sterilization process and therefore cannot be used during a patient procedure as the instrument cleaning occurs after the procedure has been completed. Commenters stated that the personal protective equipment used during the patient procedure is considered contaminated after the procedure is concluded, and that personal protective equipment must be removed and disposed of prior to leaving the procedure room. As a result, these supplies were not duplicative and should not be removed.

Response: We disagree with the commenter and we continue to believe that the impervious staff gown and the surgical mask with face shield would be duplicative supplies given that they are also contained within the instrument cleaning pack. We do not believe that it

would be typical to remove the staff gown and face shield used during a procedure and put on new items afterwards for the purposes of cleaning instruments.

Comment: Commenters also disagreed with the CMS proposal to remove all of the supplies in the three add-on procedures (CPT codes 11103, 11105, and 11107) that were not contained in the previous add-on procedure for this family, CPT code 11101. For the ''drape, sterile, fenestrated 16in x 29in'' (SB011) supply, commenters stated that draping the new body site with a new sterile disposable drape was clinically indicated and would be typically done rather than take a drape used on one body site and then reposition it to a new body site for a new procedure. Commenters made the same claim for the sterile gloves (SB024) supply. For the ''needle, OSHA compliant (SafetyGlide)'' (SC080) and the ''scalpel, safety, surgical, with blade (#10–20)'' (SF047) supplies, commenters stated that the add-on represented a completely new body site and completely new skin lesion which would not allow the needle or scalpel to be un-sheathed and then reused at a separate body site out of fear of contamination. For the ''dressing, 12–7mm (Gelfoam)'' (SG033), ''dressing, 3in x 4in (Telfa, Release)'' (SG035), and ''gauze, sterile 4in x 4in (10 pack uou)'' (SG056) supplies, commenters stated that the add-on procedure is a second biopsy of a completely different body location and that these dressings/gauze pads would not be retained and then used on the second procedure out of fear of contamination. For the ''tape, surgical paper 1in (Micropore)'' (SG079) supply, commenters stated that the quantity of this supply in the base code was sufficient for one lesion, but not more than one lesion due to the simple fact that two lesions required more surgical tape than one lesion. Finally, for the ''swab, patient prep, 1.5 ml (chloraprep)'' (SJ081) supply, commenters stated that the process of skin prep starts with the center of the lesion and moves outward in concentric circles to avoid bringing pathogens back into the field. Commenters stated that the prep sponge cannot be reused on a separate area of skin as it will contaminate that area by transporting pathogens from the last concentric circle of the prior area, and that the supply quantity in the base code contained an amount insufficient to prep more than one area. Commenters requested CMS not to finalize the proposal to remove these supplies from the add-on codes.

Response: After considering the new information provided by the commenters regarding the clinical use of these supplies, we will not finalize our proposal to remove these supplies from the three add-on procedures (CPT codes 11103, 11105, and 11107). We will restore the RUC-recommended supplies for these three codes.

Comment: Several commenters disagreed with the refinements to the equipment time in CPT codes 11102, 11104, and 11106. The commenters stated that the removal of 2 minutes of equipment time was not appropriate and that equipment time needs to match clinical staff time.

Response: We agree with the commenter that changes in clinical labor time should be matched with corresponding changes in equipment time. However, since we continue to believe that the clinical labor to the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) clinical labor time should be removed as duplicative with the same day E/M visit, we also continue to believe that the equipment times are accurate as proposed.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs for all of the codes in the Skin Biopsy family. We are finalizing the direct PE inputs as proposed, with the exception of the supplies from the three add-on procedures (CPT codes 11103, 11105, and 11107) as detailed above.

(4) Injection Tendon Origin-Insertion (CPT Code 20551)

CPT code 20551 (Injection(s); single tendon origin/insertion) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.75 for CPT code 20551.

We proposed to maintain the current work RVU for many of the CPT codes identified as potentially misvalued on the screen of 0-day global services reported with an E/M visit 50 percent of the time or more. We noted that regardless of the proposed work valuations for individual codes, which may or may not retain the same work RVU, we continue to have reservations about the valuation of 0-day global services that are typically billed with a separate E/M service with the use of Modifier 25 (indicating that a significant and separately identifiable E/M service was provided on the same day). As we stated in the CY 2017 PFS final rule (81 FR 80204), we continue to believe that the routine billing of separate E/M services in conjunction with a particular code may indicate a possible problem with the valuation of the code bundle, which is intended to include all the routine care associated with the service. We will continue to consider additional ways to address the appropriate valuation for these services.

For the direct PE inputs, we proposed to remove the clinical labor time for the ''Provide education/obtain consent'' (CA011) and the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) activities for CPT code 20551. This code is typically billed with a same day E/M service, and we believe that it will be duplicative to assign clinical labor time for obtaining consent or reviewing home care instructions given that these tasks will typically be done during the same day E/M service. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 20551.

Comment: A few commenters supported our proposal to maintain the current work RVU for this code, as recommended by the RUC.

Response: We appreciate the support for our proposal from the commenters.

Comment: Several commenters disagreed with the proposed direct PE refinements to CPT code 20551. Commenters stated that they did not agree that the clinical labor taking place in activity codes CA011 and CA035 were duplicative and that the RUC is careful to remove any duplication with E/M visits. Commenters stated that the home care instructions in activity code CA035 refer directly to the tendon injection and may include discussion of care for the affected area and home restrictions. Commenters stated that this injection is more involved and invasive than a vaccination such as the ones taking place in CPT codes 90470 and 90471, which were allowed 3 minutes for ''F/u on physician's discussion w/ patient/parent & obtain actual consent signature'' and an additional 3 minutes for home care instructions and recording vaccine information.

Response: For the CA011 clinical labor activity, we agree with the commenters that there would be a need for some additional time to obtain consent for the injection, but we do not agree that it would be typical to require the full 3 minutes because we believe there would be some overlap with the same day E/M visit. In similar fashion, we believe that there would also be some overlap with the same-day E/M

visit for the home care instructions described in activity code CA035. We also note that there is 1 minute of clinical labor time assigned to the ''Check dressings & wound/home care instructions/coordinate office visits/ prescriptions'' clinical labor task for CPT code 90471 referenced by the commenters. As a result, we are finalizing the assignment of 1 minute of clinical labor time to both of the CA011 and CA035 activities for CPT code 20551. We are also finalizing an increase of 1 minute in the equipment time for the exam table (EF023) to a total of 15 minutes, in accordance with our standard time formula for non-highly technical equipment.

After consideration of the public comments, we are finalizing our proposal to maintain the current work RVU for CPT code 20551. We are finalizing the direct PE inputs with the refinements detailed above.

(5) Structural Allograft (CPT Codes 20932, 20933, and 20934)

In February 2017, the CPT Editorial Panel created three new codes to describe allografts. These codes were designated as add-on codes and revised to more accurately describe the structural allograft procedures they represent. For CY 2019, we proposed the RUC-recommended work RVUs for all three codes. We proposed a work RVU of 13.01 for CPT code 20932 (Allograft, includes templating, cutting, placement and internal fixation when performed; osteoarticular, including articular surface and contiguous bone), a work RVU of 11.94 for CPT code 20933 (Allograft, includes templating, cutting, placement and internal fixation when performed; hemicortical intercalary, partial (*i.e.,* hemicylindrical)), and a work RVU of 13.00 for CPT code 20934 (Allograft, includes templating, cutting, placement and internal fixation when performed; intercalary, complete (*i.e.,* cylindrical)).

These three new codes are all facility-only procedures with no recommended direct PE inputs.

We did not receive any comments on our proposals involving the Structural Allograft family of codes. Therefore we are finalizing the work RVUs for the codes in this family as proposed.

(6) Knee Arthrography Injection (CPT Code 27369)

CPT code 27370 (Injection of contrast for knee arthrography) repeatedly appeared on high volume growth screens between 2008 and 2016, and the RUC expressed concern that the high volume growth for this procedure was likely due to its being reported incorrectly as arthrocentesis or aspiration. In June 2017, the CPT Editorial Panel deleted CPT code 27370 and replaced it with a new code, 27369, to report injection procedure for knee arthrography or enhanced CT/MRI knee arthrography.

The RUC recommended a work RVU of 0.96 for CPT code 27369, which is identical to the work RVU for CPT code 27370 (Injection of contrast for knee arthrography). The RUC's recommendation is based on key reference service, CPT code 23350 (Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography), with identical intraservice time (15 minutes) and total time (28 minutes) as the new CPT code and a work RVU of 1.00. The RUC notes that its recommendation is lower than the 25th percentile from the survey results, but that the work described by the service should be valued identically with the CPT code being replaced. We disagreed with the RUC's recommended work RVU for CPT code 27369. Both the total (28 minutes) and intraservice (15 minutes) times for the new CPT code are considerably lower than the deleted CPT code 27370. Based on the reduced times and the projected work RVU from the reverse building block methodology (0.60 work RVUs), we believe this CPT code should be valued at 0.77 work RVUs, supported by a crosswalk to CPT code 29075 (Application, cast; elbow to finger (short arm)), with total time of 27 minutes and intraservice time of 15 minutes. Therefore, we proposed a work RVU of 0.77 for CPT code 27369.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes. The predecessor code for 27369, CPT code 27370, did not have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also noted that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished.

We proposed to remove the clinical labor time for the ''Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue'' (CA032) activity. CPT code 27369 does not include a PACS workstation among the recommended equipment, and the predecessor code 27370 did not previously include time for this clinical labor activity. We believe that data entry activities such as this task would be classified as indirect PE, as they are considered administrative activities and are not individually allocable to a particular patient for a particular service. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 27369.

Comment: We received one comment regarding our proposed work RVU for CPT code 27369 of 0.77 RVUs. The commenter disagreed with CMS's reference to CPT code 27370, which is being deleted, as a basis for evaluating whether the RUC's proposed work RVU for this CPT code (0.96) adequately accounts for the large reduction in time between the deleted code, CPT code 27370 and the new code, CPT code 27369. The commenter noted that it is particularly inappropriate for CMS to value codes on the basis of time differences when the comparison code had not been previously surveyed by the RUC. The commenter urged CMS to finalize the RUC-recommended work RVU for CPT code 27369 of 0.96.

Response: We use several parameters to review the work RVU for codes including, where applicable, refining the work RVUs in direct proportion to either total time or intraservice time based on the best available information regarding the time resources involved in furnishing particular services. We note that the reason the CPT Editorial Panel was asked to review the code was to prevent incorrect reporting of the code, not to reflect a fundamentally different service. The work involved in furnishing the service described by CPT code 27369 is not fundamentally different from the work involved in furnishing the service described by the deleted code. In such cases we do not believe it is inappropriate to compare the survey times for the new code to the existing time for the code that it is intended to replace as one of several parameters we consider in our review. We are finalizing a work RVU for CPT code 27369 of 0.77 as proposed.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for CPT code 27369, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-

recommended direct PE inputs for clinical labor.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT code 27369, we are finalizing these clinical labor refinements as proposed.

Comment: One commenter agreed with the proposed CMS refinement to the CA032 clinical labor activity.

Response: We appreciate the support for our proposal from the commenter.

After consideration of the public comments, we are finalizing the direct PE inputs for CPT code 27369 as proposed.

(7) Application of Long Arm Splint (CPT Code 29105)

CPT code 29105 (Application of long arm splint (shoulder to hand)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.80 for CPT code 29105. For the direct PE inputs, we proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 29105.

Comment: Some commenters expressed support for our proposal to accept the RUC-recommended work RVU for this code.

Response: We appreciate the support for our proposal from the commenters.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the five equipment items utilized in CPT code 29105, we removed the clinical labor for the CA035 clinical labor activity code in accordance with our standard equipment time formula for non-highly technical equipment.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT code 29105 as proposed.

(8) Strapping Lower Extremity (CPT Codes 29540 and 29550)

CPT codes 29540 (Strapping; ankle and/or foot) and 29550 (Strapping; toes) were identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the HCPAC-recommended work RVU of 0.39 for CPT code 29540 and the HCPAC-recommended work RVU of 0.25 for CPT code 29550.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Provide education/obtain consent'' (CA011) activity from 3 minutes to 2 minutes for both codes, as this is the standard clinical labor time assigned for patient education and consent. We also proposed to remove the 2 minutes of clinical labor time for the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) activity for both codes. CPT codes 29540 and 29550 are both typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing home care instructions given that this task would typically be done during the same day E/M service. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Strapping Lower Extremity family of codes.

Comment: A few commenters supported our proposal to accept the HCPAC-recommended work RVUs.

Response: We appreciate the support for our proposal from the commenters.

Comment: Several commenters disagreed with the proposed direct PE refinements to CPT codes 29540 and 29550. Commenters stated that CMS mistakenly cited a standard for this activity of 2 minutes, however there is no set standard for CA011, and that 3 minutes is needed for clinical staff to perform this clinical activity.

Response: We disagree with the commenters that 3 minutes would be typically needed for the clinical staff to provide education and obtain consent in these procedures. We have typically assigned 2 minutes for this clinical labor activity unless we had a specific rationale for a higher amount of clinical labor time, and we continue to believe that this standard amount of clinical labor time would be the most accurate value for CPT codes 29540 and 29550.

Comment: Several commenters disagreed that the clinical labor for home care instructions and coordinating visits/prescriptions would be duplicative with the same day E/M office visit in these services. Commenters stated that these home care instructions directly pertain to the strapping procedure and would not be provided during an evaluation of the patient. Commenters stated that the strappings do not work unless left alone and taken care of in a specific manner, and that this important information is included in the home care instructions that the patient receives from clinical staff.

Response: We disagree with the commenters and we continue to believe that this clinical labor would be duplicative with the same day E/M visit. We believe that this clinical labor would take place during the same day E/M visit. Due to the way patients typically present in these procedures, we do not believe that the patients would typically need additional home care instructions above and beyond the E/M visit. We also note that these strapping procedures are frequently repeated for the same patient multiple times, and there would not be a need for repeated home care instructions for subsequent strapping procedures for the same patient. Any home care instructions taking place outside of the same day E/M visit would only be needed the first time that these procedures are performed on a patient, and as a result they would not be typical. As a result, we continue to believe that this clinical labor would not be typical.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the two equipment items utilized in these CPT codes, we removed the clinical labor for the CA035 clinical labor activity code in accordance with our standard equipment time formula for non-highly technical equipment.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT codes 29540 and 29550 as proposed.

(9) Bronchoscopy (CPT Codes 31623 and 31624)

CPT code 31623 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with

brushing or protected brushings) was identified on a high growth screen of services with total Medicare utilization of 10,000 or more that have increased by at least 100 percent from 2009 through 2014. CPT code 31624 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage) was also included for review as part of the same family of codes. For CY 2019, we proposed the RUC-recommended work RVU of 2.63 for CPT codes 31623 and 31624.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Complete post-procedure diagnostic forms, lab and x-ray requisitions'' (CA027) activity from 4 minutes to 2 minutes for CPT codes 31623 and 31624. Two minutes is the standard time, as well as the current time for this clinical labor activity, and we have no reason to believe that the time to perform this task has increased since the codes were last reviewed. We did not receive any explanation in the recommendations as to why the time for this activity would be doubling over the current values. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Bronchoscopy family of codes.

Comment: Several commenters disagreed with the proposal to refine the clinical labor time for the ''Complete post-procedure diagnostic forms, lab and x-ray requisitions'' (CA027) activity from 4 minutes to 2 minutes for CPT codes 31623 and 31624. Commenters stated that there is no standard for the CA027 clinical labor activity and that the CMS logic to conform to such a standard lacks merit. Commenters also stated that these services require verification of samples, and completion of several lab forms and clearly requires more than the standard time for completing forms.

Response: We disagree with the commenters. While it is true that we have not formalized 2 minutes as a standard through rulemaking for this clinical labor activity code, we have typically assigned 2 minutes for the CA027 activity across a wide variety of codes. Out of the 168 HCPCS codes that have clinical labor time for the CA027 clinical labor activity in our database, 64 codes have 2 minutes of assigned clinical labor time while only 9 codes have 4 minutes of assigned clinical labor time, which indicates that 2 minutes is far more typical for this activity. More importantly, commenters did not address our statement that 2 minutes is the current time for this clinical labor activity, and we had no reason to believe that the time to perform this task has increased since the codes were last reviewed. As a result, we are finalizing our refinement to 2 minutes of clinical labor time for the CA027 activity.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT codes 31623 and 31624 as proposed.

(10) Pulmonary Wireless Pressure Sensor Services (CPT Codes 33289 and 93264)

In September 2017, the CPT Editorial Panel created a code to describe pulmonary wireless sensor implantation and another code for remote care management of patients with an implantable, wireless pulmonary artery pressure sensor monitor. For CY 2019, we proposed the RUC-recommended work RVU of 6.00 for CPT code 33289 (Transcatheter implantation of wireless pulmonary artery pressure sensor for long term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed), and the RUC-recommended work RVU of 0.70 for CPT code 93264 (Remote monitoring of a wireless pulmonary artery pressure sensor for up to 30 days including at least weekly downloads of pulmonary artery pressure recordings, interpretation(s), trend analysis, and report(s) by a physician or other qualified health care professional).

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Pulmonary Wireless Pressure Sensor Services family of codes.

Comment: Commenters were supportive of our proposal of the RUC-recommended work RVUs.

Response: We thank commenters for their support.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs for CPT codes 33289 and 93264 as proposed.

(11) Cardiac Event Recorder Procedures (CPT Codes 33285 and 33286)

In February 2017, the CPT Editorial Panel created two new codes replacing cardiac event recorder codes to reflect new technology. For CY 2019, we proposed the RUC-recommended work RVU of 1.53 for CPT code 33285 (Insertion, subcutaneous cardiac rhythm monitor, including programming) and the RUC-recommended work RVU of 1.50 for CPT code 33286 (Removal, subcutaneous cardiac rhythm monitor).

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Cardiac Event Recorder Procedures family of codes.

Comment: Commenters were supportive of our proposal of the RUC-recommended work RVUs.

Response: We thank commenters for their support.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs and direct PE inputs for CPT codes 33285 and 33286 as proposed.

(12) Aortoventriculoplasty With Pulmonary Autograft (CPT Code 33440)

In September 2017, the CPT Editorial Panel created one new code to combine the efforts of aortic valve and root replacement with subvalvular left ventricular outflow tract enlargement to allow for an unobstructed left ventricular outflow tract.

For CY 2019, we proposed the RUC-recommended work RVU of 64.00 for CPT code 33440 (Replacement, aortic valve; by translocation of autologous pulmonary valve and transventricular aortic annulus enlargement of the left ventricular outflow tract with valved conduit replacement of pulmonary valve (Ross-Konno procedure)). When this code is re-reviewed in a few years as part of the new technology screen, we look forward to receiving new recommendations on the whole family, including the related Ross and Konno procedures (CPT codes 33413 and 33412 respectively) that were used as references for CPT code 33440.

For the direct PE inputs, we proposed to refine the preservice clinical labor times to match our standards for 90-day global procedures. We proposed to refine the clinical labor time for the ''Coordinate pre-surgery services (including test results)'' (CA002) activity from 25 minutes to 20 minutes, to refine the clinical labor time for the ''Schedule space and equipment in facility'' (CA003) activity from 12 minutes to 8 minutes, and to refine the clinical labor time for the ''Provide pre-service education/obtain consent'' (CA004) activity from 26 minutes to 20 minutes. We also proposed to add 15 minutes of clinical labor time for the ''Perform regulatory mandated quality assurance activity (pre-service)'' (CA008) activity. We agreed with the recommendation that the total preservice clinical labor

time for CPT code 33440 is unchanged from the two reference codes at 75 minutes. However, we believed that the clinical labor associated with additional coordination between multiple specialties prior to patient arrival is more accurately described through the use of the CA008 activity code than by distributing this 15 minutes amongst the other preservice clinical labor activities. We previously established standard preservice times for 90-day global procedures, and did not want to propose clinical labor times above those standards for CPT code 33440. We also noted that there is no effect on the total clinical labor direct costs in this situation, since the same 15 minutes of preservice clinical labor time is still being furnished.

The following is a summary of the public comments we received on our proposals involving CPT code 33440.

Comment: A few commenters stated that they had no objections to the CMS proposal to refine the preservice clinical labor times for the direct PE inputs for code 33440 to match the 90-day global procedure standards and to add 15 minutes of clinical labor time to clinical labor activity code CA008. The commenters stated that they believed the RUC-recommended allocation of the preservice activities was appropriate, whereas activity code CA008 was not an accurate description of the additional work being done, and hoped that CMS would not use the allocation of time to CA008 as a way to reduce the preservice time in future rulemaking.

Response: We appreciate the feedback on our proposed direct PE refinements from the commenters.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for CPT code 33440 as proposed.

(13) Hemi-Aortic Arch Replacement (CPT Code 33866)

At the September 2017 CPT Editorial Panel meeting, the Panel created one new add-on code to report hemi-aortic arch graft replacement. For CY 2019, we proposed the RUC-recommended work RVU of 19.74 for CPT code 33866 (Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion). CPT code 33866 is a facility-only procedure with no recommended direct PE inputs.

The following is a summary of the public comments we received on our proposals involving CPT code 33866.

Comment: We received several comments, including comments from the RUC. The RUC noted in its comment letter that at the April 2018 RUC meeting, the specialty societies determined that the family of services encompassing CPT code 33866 should be submitted to the CPT Editorial Panel for the following revisions: (1) To develop distinct codes for ascending aortic report for dissection and ascending aortic repair for other ascending aortic disease such as aneurysms and congenital anomalies. The specialties noted that there is a difference in the work associated with these procedures and now there is sufficient volume to allow for more accurate capture of the work and outcomes data for these distinct patient populations, which was not the case when the code was first developed, (2) Revise the descriptor for transverse arch code, CPT code 33870, to further clarify the difference in work between the new add on code, CPT code 33866, and (3) Revise the guidelines to provide additional instructions on the appropriate use of these codes. The RUC further noted that the specialty societies had already submitted a new coding proposal for consideration at the May 2018 CPT Editorial Panel for CPT 2020, which the RUC supported. Following the April 2018 RUC meeting, the RUC rescinded its interim value recommendation (work RVU of 19.74) to us for CPT code 33866 for CY 2019. One commenter noted, that although the RUC rescinded the interim work RVU of 19.74 due to a specialty societies' recommendation to submit the family of services to the CPT Editorial Panel, they encouraged CMS to consider using the work RVU of 19.74 as an interim value until the code can be re-surveyed and reviewed by the RUC. The commenter further noted that using the RUC-recommended value would allow physicians to be paid for the service in CY 2019, decreasing the burden of reporting a carrier-priced service to both the carriers and providers.

Response: While we recognize that the RUC rescinded its work RVU recommendation, we note that we proposed the RUC-recommended work RVU for valuation in CY 2019. We also want to remind commenters that we no longer establish interim valuations on a routine basis, and we are not convinced that establishing an interim valuation for CPT code 33866 is necessary. We will review any new coding that the CPT Editorial Panel provides for 2020, and will review any recommendations we receive timely from the RUC or other stakeholders for valuation through CY 2020 rulemaking.

After consideration of the public comments received, we are finalizing the RUC-recommended work RVUs for CPT code 33866 as proposed.

(14) Leadless Pacemaker Procedures (CPT Codes 33274 and 33275)

At the September 2017 CPT Editorial Panel meeting, the Panel replaced the five leadless pacemaker services, Category III codes, with the addition of two new CPT codes to report transcatheter leadless pacemaker procedures and revised five codes to include evaluation and interrogation services of leadless pacemaker systems.

For CPT code 33274 (Transcatheter insertion or replacement of permanent leadless pacemaker, right ventricular, including imaging guidance (*e.g.,* fluoroscopy, venous ultrasound, ventriculography, femoral venography) and device evaluation (*e.g.,* interrogation or programming), when performed), we disagreed with the recommended work RVU of 8.77 and we proposed a work RVU of 7.80 based on a direct crosswalk to one of the top reference codes selected by the RUC survey participants, CPT code 33207 (Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular). This code has the same 60 minutes of intraservice time as CPT code 33274 and an additional 61 minutes of total time at a work RVU of 7.80. In our review of CPT code 33274, we noted that this reference code had an additional inpatient hospital visit of CPT code 99232 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of 3 key components) and a full instead of a half discharge visit of CPT code 99238 (Hospital discharge day management; 30 minutes or less) included in its 90-day global period. The combined work RVU of these two visits would be equal to 2.03. However, the recommended work RVU for CPT code 33274 was 0.97 work RVUs higher than CPT code 33207, despite having fewer of these visits and significantly less surveyed total time. While we acknowledge that CPT code 33274 is a more intense procedure than CPT code 33207, we do not believe that it should be valued almost a full RVU higher than the reference code given the fewer visits in the global period and the lower surveyed work time.

Therefore, we proposed to crosswalk CPT code 33274 to CPT code 33207 at the same work RVU of 7.80. The proposed work RVU was also supported through a reference crosswalk to CPT code 38542 (Dissection, deep jugular node(s)), which has 60 minutes of intraservice time, 198 minutes of total time, and a work RVU of 7.95. We believe that our proposed work RVU of

7.80 is a more accurate valuation for CPT code 33274, while still recognizing the greater intensity of this procedure in comparison to its reference code.

For CPT code 33275 (Transcatheter removal of permanent leadless pacemaker, right ventricular), we disagreed with the RUC-recommended work RVU of 9.56 and we proposed a work RVU of 8.59. Although we disagreed with the RUC-recommended work RVU, we concurred that the relative difference in work between CPT codes 33274 and 33275 is equivalent to the recommended interval of 0.79 RVUs. Therefore, we proposed a work RVU of 8.59 for CPT code 33275, based on the recommended interval of 0.79 additional RVUs above our proposed work RVU of 7.80 for CPT code 33274. We also noted that our proposed work RVU for CPT code 33275 situates it approximately halfway between the two reference codes from the survey, with CPT code 33270 (Insertion or replacement of permanent subcutaneous implantable defibrillator system, with subcutaneous electrode, including defibrillation threshold evaluation, induction of arrhythmia, evaluation of sensing for arrhythmia termination, and programming or reprogramming of sensing or therapeutic parameters, when performed) having an intraservice time of 90 minutes and a work RVU of 9.10, and CPT code 33207 having an intraservice time of 60 minutes and a work RVU of 7.80. CPT code 33275 has a surveyed intraservice time of 75 minutes and nearly splits the difference between them at our proposed work RVU of 8.59.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Leadless Pacemaker Procedures family of codes.

Comment: One commenter recommended that CMS adopt the RUC-recommended RVUs for both codes due to the newness of the procedures. The commenter stated that there might not be sufficient evidence or rationale for CMS to disagree with the RUC-recommended values, and again cited the newness of these procedures.

Response: We disagree with the commenter that the newness of a procedure would provide a sufficient rationale for finalizing the RUC-recommended work RVU for a new CPT code without any further consideration. Establishing valuations for newly created CPT codes is a routine part of maintaining the PFS, and we have historically valued new services since the inception of the resource-based relative value system. We also believe that RUC surveys are less likely to be representative of practitioners when evaluating new services, due to the fact that practitioners are not yet sufficiently experienced with the services to provide accurate evaluations, which is why we have been supportive of the RUC's policy to resurvey new services a few years after their creation when typical practice patterns have been more firmly established.

Comment: Many commenters disagreed with the proposed work RVUs for CPT codes 33274 and 33275 and stated that CMS should instead finalize the RUC-recommended work RVUs for these services. Commenters stated that CMS provided no qualitative or quantitative rationale to support their assumption that the difference in time between CPT codes 33274 and the top key reference from the survey (CPT code 33207) completely reflects the difference in intensity. Commenters stated that patients receiving leadless pacemakers are more complex and have more comorbidities and contraindications than transvenous patients, with more significant groin complications and more commonly present tamponade. Commenters stated that there were other issues that make CPT code 33274 more challenging, including: (1) Capture thresholds tend to change more than with transvenous devices; (2) There is a higher risk for complications including embolization and groin complications, which are not associated with tranvenous implants; and (3) Patients undergoing leadless pacemaker procedures are more likely to have chronic atrial fibrillation and poor venous access. Commenters emphasized that they believed the leadless pacemaker procedure described by CPT code 33274 was more intensive than the CMS crosswalk to CPT code 33207.

Response: We disagree with the commenters' assertion that we provided no qualitative or quantitative rationale to support our choice of a crosswalk to CPT code 33207. We stated in the proposed rule that in our review of CPT code 33274, we noted that this reference code had an additional inpatient hospital visit of CPT code 99232 and a full, instead of a half, discharge visit of CPT code 99238 included in its 90-day global period. We acknowledged that CPT code 33274 is a more intense procedure than CPT code 33207; however, we did not believe that it should be valued almost a full RVU higher than the reference code. We also supported the proposed work RVU through the use of a reference code, CPT code 38542, which was not addressed by the commenters.

We also disagree with the commenters that CPT code 33274 has so much additional intensity and complexity as compared to key reference CPT code 33207 that they should be valued at the same work RVU of 8.77. We note that the RUC's research panel selected preservice package 3, ''a straightforward patient and a difficult procedure'' for CPT code 33274. We believe this indicates that the patient population for CPT code 33274 would not be unusually difficult or complex as suggested by the commenters. We further note that the summary of recommendations for CPT code 33274 states that these patients are typically sent home from the facility the next day. In contrast, reference CPT code 33207 includes a full hospital inpatient day of post procedure care associated with CPT code 99322, as well as a full discharge visit instead of half of a discharge visit. We believe that this further suggests that the patient population for CPT code 33274 would not be more difficult or complex than the patient population for CPT code 33207. As we stated in the proposed rule, we continue to acknowledge that CPT code 33274 is a more intense procedure than CPT code 33207, but we do not believe that it should be valued almost a full RVU higher than the reference code given the fewer visits in the global period and the lower surveyed work time.

Comment: Commenters stated that CMS should use valid methods of evaluating services, such as survey data and magnitude estimation, instead of relying on an incremental difference in work RVUs between CPT codes 33274 and 33275.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We further note that we did not rely solely on an increment for our proposed work RVU for CPT code 33275, supporting our proposed valuation by noting that the CMS work RVU of 8.59 situated the code approximately halfway between the two reference codes from the survey, with CPT code 33270 having an intraservice time of 90 minutes and a work RVU of 9.10, and CPT code 33207 having an intraservice

time of 60 minutes and a work RVU of 7.80.

Comment: Several commenters stated that while these procedures described in CPT code 33275 will be rare, these patients will still have the elevated risk factors mentioned in discussion of CPT code 33274 and warranted the additional work indicated by survey respondents at the 25th percentile of the survey.

Response: We continue to believe that the patients in CPT code 33274 would not be more difficult or complex than the patients in CPT code 33207 for the reasons detailed above. We continue to believe that the relative difference in work between CPT codes 33274 and 33275 is equivalent to the recommended interval of 0.79 RVUs.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Leadless Pacemaker Procedures family as proposed.

(15) PICC Line Procedures (CPT Codes 36568, 36569, 36572, 36573, and 36584)

In CY 2016, CPT code 36569 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; age 5 years or older) was identified as potentially misvalued using a high expenditure services screen across specialties with Medicare allowed charges of $10 million or more. CPT code 36569 is typically reported with CPT codes 76937 (Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent real-time ultrasound visualization of vascular needle entry, with permanent recording and reporting) and 77001 (Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal) and was referred to the CPT Editorial Panel to have the two common imaging codes bundled into the code. In September 2017, the CPT Editorial Panel revised CPT codes 36568 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age), 36569 and 36584 (Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the replacement) and created two new CPT codes to specify the insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion.

For CY 2019, we proposed the RUC-recommended work RVU for two of the CPT codes in the family. We proposed the RUC-recommended work RVU of 2.11 for CPT code 36568 and the RUC-recommended work RVU of 1.90 for CPT code 36569.

For CPT code 36572 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; younger than 5 years of age), we disagreed with the RUC-recommended work RVU of 2.00 and proposed a work RVU of 1.82 based on a direct crosswalk to CPT code 50435 (Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (*e.g.,* ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation). CPT code 50435 is a recently reviewed code that also includes radiological supervision and interpretation with similar intraservice and total time values. In our review of CPT code 36572, we were concerned about the possibility that the recommended work RVU of 2.00 could create a rank order anomaly in terms of intensity with the other codes in the family. We noted that the recommended intraservice time for CPT code 36572 as compared to CPT code 36568, the most similar code in the family, is decreasing from 38 minutes to 22 minutes (42 percent), and the recommended total time is decreasing from 71 minutes to 51 minutes (38 percent); however, the recommended work RVU is only decreasing from 2.11 to 2.00, which is a reduction of just over 5 percent. We also noted that CPT code 36572 has a lower recommended intraservice time and total time as compared to CPT code 36569, yet has a higher recommended work RVU. Although we did not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs.

In the case of CPT code 36572, we believed that it would be more accurate to propose a work RVU of 1.82 based on a crosswalk to CPT code 50435 to better fit with the recommended work RVUs for CPT codes 36568 and 36569. The proposed work valuation was also based on the use of three additional crosswalk codes: CPT code 32554 (Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance), CPT code 43198 (Esophagoscopy, flexible, transnasal; with biopsy, single or multiple), and CPT code 64644 (Chemodenervation of one extremity; 5 or more muscles). All of these codes were recently reviewed with similar intensity, intraservice time, and total time values, and all three of them share a work RVU of 1.82.

For CPT code 36573 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; age 5 years or older), we disagreed with the RUC-recommended work RVU of 1.90 and proposed a work RVU of 1.70 based on maintaining the current work RVU of CPT code 36569. In our review of CPT code 36573, we were again concerned about the possibility that the recommended work RVU of 1.90 could create a rank order anomaly in terms of intensity with the other codes in the family. We noted that the recommended intraservice time for CPT code 36573 as compared to CPT code 36569, the most similar code in the family, was decreasing from 27 minutes to 15 minutes (45 percent), and the recommended total time was decreasing from 60 minutes to 40 minutes (33 percent); however, the RUC-recommended work RVU was exactly the same for these two codes at 1.90. Although we did not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs.

In the case of CPT code 36573, we believed that it would be more accurate to propose a work RVU of 1.70 based on maintaining the current work RVU of CPT code 36569. These two CPT codes describe the same procedure done with (CPT code 36573) and without (CPT code 35659) imaging guidance and radiological supervision and interpretation. Because the inclusion of the imaging described by CPT code 36573 has now become the typical case for this service, we believe that it is more accurate to maintain the current work RVU of 1.70 as opposed to

increasing the work RVU to 1.90, especially considering that the new surveyed work time for CPT code 36573 is lower than the current work time for CPT code 36569. The proposed work RVU of 1.70 was also based on a crosswalk to CPT code 36556 (Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older). This is a recently reviewed code with the same 15 minutes of intraservice time and the same 40 minutes of total time with a work RVU of 1.75.

For CPT code 36584, we disagreed with the RUC-recommended work RVU of 1.47 and proposed a work RVU of 1.20 based on maintaining the current work RVU. We noted that the recommended intraservice time for CPT code 36584 was decreasing from 15 minutes to 12 minutes (20 percent reduction), and the recommended total time was decreasing from 45 minutes to 34 minutes (25 percent reduction); however, the recommended work RVU was increasing from 1.20 to 1.47, an increase of approximately 23 percent. Although we did not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believed that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. We were especially concerned when the recommended work RVU is increasing despite survey results indicating that the work time is decreasing due to a combination of improving technology and greater efficiencies in practice patterns.

In the case of CPT code 36584, we believed that it would be more accurate to propose a work RVU of 1.20 based on maintaining the current work RVU for the code. Because the inclusion of the imaging has now become the typical case for this service, we believed that it was more accurate to maintain the current work RVU of 1.20 as opposed to increasing the work RVU to 1.47, especially considering that the new surveyed work time for CPT code 36584 was decreasing from the current work time. The proposed work RVU of 1.20 was also based on a crosswalk to CPT code 40490 (Biopsy of lip), which has the same total time of 34 minutes and slightly higher intraservice time at a work RVU of 1.22.

We noted that the RUC-recommended work pool was increasing by approximately 68 percent for the PICC Line Procedures family as a whole, while the RUC-recommended work time pool for the same codes was only increasing by about 22 percent. Since time is defined as one of the two components of work, we believe that this indicated a discrepancy in the recommended work values. We do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and therefore, we did not believe that it would serve the interests of relativity to propose the RUC-recommended work values for all of the codes in this family. We believe that, generally speaking, the recoding of a family of services should maintain the same total work pool, as the services themselves are not changing, only the coding structure under which they are being reported. We also noted that, through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular servicers. For example, a practitioner would not be carrying out the full preservice work three times for CPT codes 36568, 76937, and 77001, but preservice times were assigned to all of the codes under the old coding. We believed the new coding assigns more accurate work times and thus reflects efficiencies in resource costs that existed but were not reflected in the services as they were previously reported.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity from 4 minutes to 2 minutes for CPT codes 36572 and 36573. We noted that the two reference codes for the two new codes, CPT codes 36568 and 36569, currently have 2 minutes assigned for this activity, and CPT code 36584 also has a recommended 2 minutes assigned to this same activity. We did not agree that the patient positioning would take twice as long for CPT codes 36572 and 36573 as compared to the rest of the family, and therefore proposed to refine both of them to the same 2 minutes of clinical labor time. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the PICC Line Procedures family of codes.

Comment: One commenter stated that CMS believes it is not accurate to ''increase'' work RVUs when survey results indicate that work time is ''decreasing'' due to improving technology and greater efficiencies in practice patterns. The commenter disagreed that the difference between the current codes (without imaging guidance) and the new bundled codes (with imaging guidance) could be characterized as an ''increase'' or a ''decrease,'' as it was inappropriate simply to compare the RVUs of the bundled codes to the existing codes, because the bundled codes include imaging services that involve significantly more intense physician work than PICC line insertion without imaging guidance.

Response: We disagree with the commenter that it is methodologically inappropriate to characterize changes in surveyed work time as ''increases'' or ''decreases''. As we stated in the proposed rule, we do not believe that the revised coding of the services in this family has changed the services themselves or resulted in an increase in their intensity, only changed in the way in which they will be reported under the new coding. CPT code 36572 is a new code resulting from the bundling together of CPT code 36568 with imaging guidance. The same services that were previously reported through a combination of CPT codes 36568 and 76397 will now be reported under CPT code 36572. We believe that it is highly relevant to note how the recommended work times for CPT code 36572 compare to the recommended work times for CPT code 36568, which includes noting that the intraservice time is decreasing from 38 minutes to 22 minutes (42 percent), and the recommended total time is decreasing from 71 minutes to 51 minutes (38 percent). We also do not agree that it is inappropriate to compare the RVUs of the bundled codes to the existing codes, as all of these procedures describe clinically similar procedures that together comprise a family of codes. In more general terms, we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes with clinically similar services are sometimes stronger comparator codes, we do not agree that codes must both include imaging guidance or not include imaging guidance to be used as a crosswalk.

Comment: Several commenters disagreed that the recoding of the services in the PICC line code family had only resulted in a change in the way that services will be reported, and stated that that the imaging-related services now bundled into CPT codes 36572, 36573, and 36584 are significantly more intense than PICC line insertion standing alone. One commenter stated that valuing a code using imaging guidance the same or less than the same code without imaging guidance is

specious and treats the use of imaging guidance as a negative work component when in fact there is additional work required in using imaging guidance. Commenters stated that the RUC-recommended values already reflect efficiencies in radiology work, and that the efficiency of radiologists should not diminish the RUC's recognition that their work is significantly more intense in these procedures.

Response: We disagree with the commenters that the addition of imaging guidance has made CPT codes 36572, 36573, and 36584 significantly more intense than the non-imaging guidance version of these procedures. While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We believe that if these procedures were significantly more intensive to perform, this would be reflected in the surveyed work times associated with these codes. However, the surveyed work times are instead decreasing in all three cases in comparison to the current non-imaging guidance version of the same services. As we stated in the proposed rule, we believe that the work times for these services are decreasing due to a combination of improving technology and greater efficiencies in practice patterns. Based on the RUC-recommended utilization crosswalk for these services, which has 90 to 95 percent of the utilization expected to be reported under the new codes that include imaging guidance, we believe that the use of imaging guidance has become typical for these services and does not represent a dramatic increase in intensity.

Comment: Many commenters disagreed with the proposed work RVU of 1.82 for CPT code 36572 and stated that CMS should finalize the RUC-recommended work RVU of 2.00. Commenters stated that the CMS use of a crosswalk to CPT code 50435 was unsupported on a clinical basis, with significant differences in work intensity and patient population. Commenters stated that CPT code 36572 involves establishing new deep venous access on a pediatric patient while ensuring maximum sterile barrier technique so as to prevent a hospital acquired infection, whereas CPT code 50435 involves the exchange of an existing catheter in an adult who understands the procedure involved and has had previous catheter exchanges to maintain patency. One commenter stated that the RUC crosswalk to CPT code 19283 (Placement of breast localization device(s) (*e.g.,* clip, metallic pellet, wire/needle, radioactive seeds)) was a more accurate choice because this service also uses imaging guidance to obtain de novo percutaneous access to a target and perform an intervention. Commenters stated that the crosswalk code would frequently be less intense than CPT code 36572.

Response: We disagree with the commenters that the work involved in CPT code 50435 would be less clinically intense than the work in CPT code 36572. We believe that the exchange of a nephrostomy catheter taking place in CPT code 50435 is more difficult than the placement of a breast localization device as in the RUC crosswalk to CPT code 19283, percutaneous; first lesion, including stereotactic guidance). We also disagree with the commenters that the crosswalk we identified lacks clinical similarity to CPT code 36572. Both the reviewed code and the crosswalk to CPT code 50435 involve the percutaneous placement of a catheter in a deep structure; we believe that this crosswalk code is more clinically similar than the RUC's choice of a crosswalk to CPT code 19283, which does not involve catheter placement at all.

Commenter: Several commenters disagreed that the RUC-recommended work RVU of 2.00 for CPT code 36572 would create a rank order anomaly within the family of codes. Commenters stated that since CPT code 36568 requires more physician time to complete than CPT code 36572 (38 versus 22 minutes intra-service time), the recommended work RVU of 2.00 for CPT code 36572 maintains the proper rank order within this family of services considering differences in patient population and differences in clinical intensity of work.

Response: The commenters did not address the concerns we expressed regarding a potential rank order anomaly within the family. We noted in the proposed rule that CPT code 36572 had a lower recommended intraservice time and total time as compared to CPT code 36569 (not CPT code 36568), yet had a higher recommended work RVU. We continue to believe that this creates the potential for a rank order anomaly within the family, and we do not believe that this discrepancy can be justified by differences in patient population and differences in clinical intensity of work.

Comment: Several commenters disagreed with the CMS statement that the reduced intraservice and total times in CPT code 36572 as compared to CPT code 36568 should result in a lower work value. Commenters stated that this was a simplistic comparison based on time, and that these were two technically different procedures, involving different patient populations and different service intensity. Commenters stated that each step in the non-image guided CPT code 36568 takes longer, though involves more periods of low intensity intraservice work as compared to CPT code 36572, where each procedural step is performed sequentially without the less intense intraservice work of the non-image guided CPT code 36568.

Response: We disagree with the commenters that the reductions in intraservice and total work time in CPT code 36572 as compared to CPT code 36568 should not result in a lower work value. Although we do not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we continue to believe that, since the two components of work are time and intensity, significant decreases in time should typically be reflected in decreases to work RVUs. We disagree that this is a simplistic comparison, and chose a crosswalk to CPT code 50435 to better fit with the recommended work RVUs for CPT codes 36568 and 36569.

We also do not agree that CPT codes 36568 and 36572 have significantly different patient populations and different service intensity. As we stated in the proposed rule, we do not believe that the revised coding of the services in this family has changed the services themselves or resulted in an increase in their intensity, only changed in the way in which they will be reported under the new coding. CPT code 36572 is a new code resulting from the bundling together of CPT code 36568 with imaging guidance. The same services that were previously reported through a combination of CPT codes 36568 and 76397 will now be reported under CPT code 36572. Given that 90 percent of the services that were formerly reported using CPT code 36568 will now be reported using CPT code 36572, we do not agree that these codes represent significantly different patient populations.

Comment: Many commenters disagreed with the proposed work RVU of 1.70 for CPT code 36573 and stated that CMS should finalize the RUC-recommended work RVU of 1.90. Commenters stated that CMS should not use a code value that is no longer in existence as the service (CPT code 36569) itself has been revised and is currently under review in this family. Commenters stated that the reference was therefore not valid to the old work RVU.

Response: We disagree with the commenters that it is somehow invalid to use a crosswalk to the current work RVU for CPT code 36569. It is not accurate to state that this code is no longer in existence, as it is being revised for CY 2019, not deleted. The RUC frequently recommends maintaining the current work RVU for reviewed codes rather than using a new work RVU from survey results when it believes that there is appropriate rationale to do so. Given that CPT code 36573 is a new code resulting from the bundling together of CPT code 36569 with imaging guidance, and that the use of imaging guidance has become typical in the performance of this service, we believe that it is appropriate to maintain the same work RVU for these services when they are reported under the new coding, especially in light of the fact that the surveyed intraservice work time for CPT code 36573 remains the same 15 minutes as the current intraservice work time for CPT code 36569.

Comment: Several commenters stated that CPT code 36573 involves a different patient population than CPT code 36569, as the patient population for CPT code 36573 does not have peripheral venous access present that can be used to obtain central venous access. Commenters stated that there is no evidence for a rank order anomaly within the codes in the family considering the differences in intensity and patient population.

Response: As we stated previously with regard to CPT codes 36568 and 36572, we also do not agree that CPT codes 36569 and 36573 have significantly different patient populations and different service intensity. As we stated in the proposed rule, we do not believe that the revised coding of the services in this family has changed the services themselves or resulted in an increase in their intensity, only changed in the way in which they will be reported under the new coding. CPT code 36573 is a new code resulting from the bundling together of CPT code 36569 with imaging guidance. The same services that were previously reported through a combination of CPT codes 36569 and 76397 will now be reported under CPT code 36573. Given that 95 percent of the services that were formerly reported using CPT code 36569 are expected to be reported using CPT code 36573, we do not agree that these codes represent noticeably different patient populations.

Comment: Several commenters disagreed with our use of CPT code 36556 as a reference code. Commenters stated that CPT code 36556 describes line placement in a larger and more central vein such as the internal jugular vein with known anatomical landmarks and a shorter distance between access and where the tip terminates centrally while CPT code 36573 describes access into a smaller vein without anatomic landmarks. Commenters stated that although imaging is inherent to CPT code 36573, the catheter is longer and there is a need to navigate the catheter through these peripheral and central veins for adequate placement, all of which would require more work.

Response: We disagree with the commenters that CPT code 36556 would not be an accurate reference code for CPT code 36573. CPT code 36556 describes the insertion of non-tunneled centrally inserted central venous catheter whereas CPT code 36573 describes the insertion of a peripherally inserted central venous catheter (PICC). We believe that these two codes, which both describe the insertion of central venous catheters, are highly similar to one another on a clinical basis and also from the perspective of work time, as they share the identical intraservice work time and total work time. Moreover, after further consideration, we are not able to identify any other more appropriate reference code for CPT code 36573 than CPT code 36556.

Comment: Many commenters disagreed with the proposed work RVU of 1.20 for CPT code 36584 and stated that CMS should finalize the RUC-recommended work RVU of 1.47. Commenters stated that CMS was completely dismissing the additional work that was bundled in with CPT code 36584 as part of the imaging guidance. Commenters stated that the RUC agreed that the recommended work RVU of 1.47 involves less time but involves a significant increase in intensity, and that the work RVU should not remain at the current work RVU of 1.20 as CPT code 36584 is now a bundled service.

Response: We disagree with the commenters that the bundling of a service or the addition of imaging guidance must necessarily increase the intensity of the service or the work RVU. As we stated above, while the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We believe that if CPT code 36584 had become significantly more intensive to perform, this would be reflected in the surveyed work times associated with the code. However, the surveyed intraservice work time and total work time for CPT code 36584 are both decreasing from their current values. As we stated in the proposed rule, we believe that these work times are decreasing due to a combination of improving technology and greater efficiencies in practice patterns, and we believe that the use of imaging guidance has become now typical for CPT code 36584 and does not represent a dramatic increase in intensity.

Comment: Several commenters disagreed with the proposal to refine the clinical labor time for the ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity from 4 minutes to 2 minutes for CPT codes 36572 and 36573. Commenters stated that this additional clinical labor time would be typical since it included positioning of the patient as well as positioning the two forms of imaging equipment which are being bundled into the code (fluoroscopy and ultrasound). Commenters stated that the equipment needs to be positioned in a manner that is specific to the procedure and the chosen extremity, and that it takes approximately 2 additional minutes to position the patient and the equipment for those codes which are imaging-guided as opposed to those procedures which are not. Commenters stated that this difference applies to the two new placement codes (CPT code 36572 and 36573) but not to the replacement code (CPT code 36584) as the equipment is limited to fluoroscopy and the positioning is slightly simpler as the site already contains a PICC line.

Response: After consideration of the new information provided by the commenters regarding the need for additional positioning time, we are not finalizing our proposed refinement to the CA016 clinical labor time. Due to this change in clinical labor time, we are also not finalizing any changes to the RUC-recommended equipment times.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the PICC Line Procedures family as proposed. After considering public comments, we are not finalizing our proposed direct PE refinements, and we are instead finalizing the RUC-recommended direct PE inputs for all five codes.

(16) Biopsy or Excision of Inguinofemoral Node(s) (CPT Code 38531)

In September 2017, the CPT Editorial Panel created a new code to describe biopsy or excision of inguinofemoral node(s). A parenthetical was added to CPT codes 56630 (Vulvectomy, radical, partial) and 56633 (Vulvectomy, radical, complete) to instruct separate reporting of CPT code 38531 with radical

vulvectomy. This service was previously reported with unlisted codes.

CPT code 38531 (Biopsy or excision of lymph node(s); open, inguinofemoral node(s)) is a new CPT code describing a lymph node biopsy without complete lymphadenectomy. The RUC recommended a work RVU of 6.74 for CPT code 38531, with 223 minutes of total time and 65 minutes of intraservice time. We proposed the RUC-recommended work RVU of 6.74 for CPT code 38531. However, we were concerned that this CPT code is described as having a 10-day global period. The two CPT codes that are often reported together with this code, CPT codes 56630 and 56633, are both 90-day global codes. In addition, CPT code 38531 has a discharge visit and two follow up visits in the global period. This is consistent with the number of postoperative visits typically associated with 90-day global codes. Therefore, we proposed to assign a 90-day global indicator for CPT code 38531 rather than the 10-day global time period reflected in the RUC recommendation.

We did not propose any direct PE refinements for this code family.

Comment: Several commenters thanked us for proposing the RUC-recommended work RVU of 6.74 for CPT code 38531.

Response: We appreciate the support from commenters.

Comment: Several stakeholders disagreed with CMS's proposal to change the global status of this code from a 10-day global code to a 90-day global code. They maintained that there are no claims data available to assess how often CPT code 38531 will be billed together with CPT codes 56630 or 56633. Commenters also noted that there is no necessary direct correlation between the two codes (CPT code 56630 and CPT code 56633) having a 90-day global period and the new code having a 90-day global period.

Response: We agree with commenters that when two or more closely related CPT codes are billed together, there is no requirement for them to share the same global period. However, the amount of post service time and the number of visits in CPT code 38531 are consistent with other 90-day global codes. We continue to believe that CPT code 38531 should have a 90-day global period and we are finalizing that change as proposed.

Comment: A few commenters pointed out that CMS has the opportunity to review the global periods for new codes directly after CPT Editorial Panel meetings, and that CMS should have provided input regarding the code's global period at that time.

Response: While some of our staff have the opportunity to review global periods for new or modified CPT codes immediately after the CPT Editorial Panel meeting, the Agency does not systematically review or provide feedback on components of a CPT code, including global period, until we fully consider and address the code as part of the annual PFS notice-and-comment rulemaking process.

After consideration of the public comments, we are finalizing a work RVU of 6.74 for CPT code 38531 as proposed.

(17) Radioactive Tracer (CPT Code 38792)

CPT code 38792 (Injection procedure; radioactive tracer for identification of sentinel node) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. For CY 2019, we proposed the RUC-recommended work RVU of 0.65 for CPT code 38792.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes. CPT code 38792, as well as its alternate reference code, CPT code 78300 (Bone and/or joint imaging; limited area), did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 38792.

Comment: A commenter stated that they appreciated and supported our proposal to adopt the RUC-recommended work RVU of 0.65. The commenter also stated that they agreed with and supported the changes CMS proposed in clinical labor time and the standardized equipment time formulas.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT code 38792 as proposed.

(18) Percutaneous Change of G-Tube (CPT Code 43760)

CPT code 43760 (Change of gastrostomy tube, percutaneous, without imaging or endoscopic guidance) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. It was surveyed for the April 2017 RUC meeting and recommendations for work and direct PE inputs were submitted to CMS. However, the RUC also noted that because the data for CPT code 43760 were bimodal, it might be appropriate to consider changes in the CPT descriptors to better differentiate physician work. In September 2017, the CPT Editorial Panel deleted CPT code 43760 and will use two new CPT codes, CPT codes 43762 and 43763, which describe replacement of gastrostomy tube, with and without revision of gastrostomy tract, respectively. (See discussion of these codes below.) Therefore, we did not propose work or direct PE values for CPT code 43760.

Due to the impending deletion of CPT code 43760, we received no comments on this code.

(19) Gastrostomy Tube Replacement (CPT Codes 43762 and 43763)

In September 2017, the CPT Editorial Panel created two new codes that describe replacement of gastrostomy tube, with and without revision of gastrostomy tract, respectively. These two new codes were surveyed for the January 2018 RUC meeting and recommendations for work and direct PE inputs were submitted to CMS.

We proposed a work RVU of 0.75 for CPT code 43762 (Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; not requiring revision of gastrostomy tract.) and a work RVU of 1.41 for CPT code 43763 (Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; requiring revision of gastrostomy tract.), consistent with the RUC's recommendations for these new CPT codes.

For the direct PE inputs, we proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the codes in the Gastrostomy Tube Replacement code family.

Comment: Several commenters stated that they appreciated CMS proposing the RUC-recommended work RVU for CPT codes 43762 and 43763.

Response: We appreciate the support for our proposals from the commenters.

Comment: One commenter stated that CMS did not indicate what amount of service period time was added to the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the four equipment items where we made time refinements, we added the clinical labor for the CA029 clinical labor activity in accordance with our standard equipment time formula for non-highly technical equipment.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for the codes in the as Gastrostomy Tube Replacement code family as proposed.

(20) Diagnostic Proctosigmoidoscopy—Rigid (CPT Code 45300)

CPT code 45300 (Proctosigmoidoscopy, rigid; diagnostic, with or without collection of specimen(s) by brushing or washing (separate procedure)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years, with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.80 for CPT code 45300.

For the direct PE inputs, we proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 45300.

Comment: Commenters were supportive of our proposal of the RUC-recommended work RVUs.

Response: We thank commenters for their support.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the four equipment items where we made time refinements, we removed the clinical labor for the CA035 clinical labor activity in accordance with our standard equipment time formula for non-highly technical equipment.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT code 45300 as proposed.

(21) Hemorrhoid Injection (CPT Code 46500)

CPT code 46500 (Injection of sclerosing solution, hemorrhoids) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes.

For CPT code 46500, we disagreed with the RUC-recommended work RVU of 2.00 and we proposed a work RVU of 1.74 based on a direct crosswalk to CPT code 68811 (Probing of nasolacrimal duct, with or without irrigation; requiring general anesthesia). This crosswalk code is another recently-reviewed 10-day global code with the same 10 minutes of intraservice time and slightly higher total time. When CPT code 46500 was previously reviewed as described in the CY 2016 PFS final rule with comment period (80 FR 70963), we finalized a proposal to reduce the work RVU from 1.69 to 1.42, which reduced the work RVU by the same ratio as the reduction in the total work time. In light of the additional evidence provided by this new survey, we agree that the work RVU should be increased from the current value of 1.42. However, we believe that our proposed work RVU of 1.74 based on a crosswalk to CPT code 68811 is more accurate than the RUC-recommended work RVU of 2.00.

In the most recent survey of CPT code 46500, the intraservice work time remained unchanged at 10 minutes while the total time increased by only 2 minutes, increasing from 59 minutes to 61 minutes (3 percent). However, the RUC-recommended work RVU is increasing from 1.42 to 2.00, an increase of 41 percent, and also an increase of 19 percent over the historic value of 1.69 for CPT code 46500. Although we did not imply that the increase in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, minimal increases in surveyed work time typically should not be reflected in disproportionately large increases to work RVUs. In the case of CPT code 46500, we believe that our crosswalk to CPT code 68811 at a work RVU of 1.74 more accurately maintains relativity with other 10-day global codes on the PFS. We also noted that the 3 percent increase in surveyed work time for CPT code 46500 matches a 3 percent increase in the historic work RVU of the code, from 1.69 to 1.74. Therefore, we proposed a work RVU of 1.74 for CPT code 46500 based on the aforementioned crosswalk.

For the direct PE inputs, we proposed to remove 10 minutes of clinical labor time for the ''Assist physician or other qualified healthcare professional—directly related to physician work time (100%)'' (CA018) activity. This clinical labor time is listed twice in the recommendations along with a statement that although the clinical labor has not changed from prior reviews, time for both clinical staff members was inadvertently not included in the previous spreadsheets. We appreciated this notification in the recommendations, and therefore, we requested more information about why the clinical labor associated with this additional staff member was left out for previous reviews. We were particularly interested in knowing what activities the additional staff member would be undertaking during the procedure. We proposed to remove the clinical labor associated with this additional clinical staff member pending the receipt of additional information. We also proposed to remove 1 impervious staff gown (SB027), 1 surgical mask with face shield (SB034), and 1 pair of shoe covers (SB039) pending more information about the additional clinical staff member.

We proposed to remove the clinical labor time for the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) activity. CPT code 46500 is typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing home care instructions given that this task would typically be done during the same day E/M service. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 46500.

Comment: Many commenters disagreed with the proposed work RVU

of 1.74 for CPT code 46500 and stated that CMS should finalize the RUC-recommended work RVU of 2.00. Commenters stated that they disagreed with CMS calculating intraservice time ratios to account for changes in work time, and that CPT code 46500 possesses a negative IWPUT, which makes the use of time ratios particularly inappropriate.

Response: We disagree with the commenters and continue to believe that the use of time ratios is one of several reasonable methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values do not account for information that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. (As an example, CPT codes 38222, 54231, 55870, 75573, and 78814 all share identical CY 2019 work times with 15 minutes of preservice time, 30 minutes of intraservice time, and 15 minutes of postservice time; however these codes have respective CY 2019 work RVUs of 1.44, 2.04, 2.58, 2.55, and 2.20.) Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology, we direct readers to the CY 2017 PFS final rule (81 FR 80272 through 80277). We also note that in the case of CPT code 46500, we derived our proposed work RVU of 1.74 by using a direct crosswalk to CPT code 68811 and not a time ratio.

Comment: Several commenters stated that the RUC compared CPT code 46500 to the two key reference services: CPT code 46221 (Hemorrhoidectomy, internal, by rubber band ligation(s)) and CPT code 46930 (Destruction of internal hemorrhoid(s) by thermal energy (*e.g.,* infrared coagulation, cautery, radiofrequency)). Commenters stated that the RUC-recommended work RVU of 2.00 places the value correctly between the key reference services and results in similar procedure intensity, whereas the CMS crosswalk to CPT code 68811 was not well aligned with the top two key reference services due to having a lower intensity.

Response: We disagree with the commenters that our crosswalk to CPT code 68811 would be less accurate for work valuation than the two key references chosen by the survey respondents. We note, for example, that CPT code 46221 has 50 percent more intraservice time than CPT code 46500, and CPT code 46930 has 50 percent less intraservice time than CPT code 46500, whereas the CMS crosswalk to CPT code 68811 shares the same 10 minutes of intraservice time as CPT code 46500. We believe that this closer match in the work time values makes CPT code 68811 a more appropriate choice for a crosswalk code. We also note that at the RUC meeting when CPT code 46500 was under review, the specialty presenters stated that the work RVU had not changed from the historical value of 1.69 before the recommendation was changed to the final value of 2.00. As we stated in the proposed rule, the 3 percent increase in surveyed work time for CPT code 46500 matches a 3 percent increase in the historic work RVU of the code, from 1.69 to 1.74. We continue to believe that this is the most accurate value to finalize for CPT code 46500.

Comment: Several commenters compared CPT code 46500 to CPT code 68810 (Probing of nasolacrimal duct, with or without irrigation) and noted that these codes have the same intraservice work time but the comparison code includes a lower level follow-up visit and therefore correctly has a lower work RVU. Commenters stated that CPT code 46500 includes a follow-up office visit with an anoscopy to determine the effectiveness of the treatment and to monitor for infection or sepsis which adds work to the visit. Commenters stated that the proposed CMS crosswalk to CPT code 68811 includes an even lower level office visit (CPT code 99211) than the office visit in CPT code 68810, which indicated that it was an inappropriate choice for a crosswalk.

Response: We continue to disagree with the commenters that the CMS crosswalk to CPT code 68811 would provide an inappropriate work valuation for CPT code 46500 based on the differences in postoperative work and work time. We would like to clarify again that we used CPT code 68811 as our crosswalk, not CPT code 68810, and we do not understand the comparisons to CPT code 68810 suggested by the commenters. Regarding our crosswalk code, while it is true that CPT code 68811 does not contain a level three (CPT code 99213) office visit in its global period like CPT code 46500, the code does include half of a discharge visit (CPT code 99238) in its global period, which is missing from the reviewed code. Under the building block methodology, the combined work RVU and the work time of a half discharge visit (CPT code 99238) and a level 1 office visit (CPT code 99211) would equal 0.82 RVUs and 26 minutes. This is approximately equal to the level 3 office visit (CPT code 99213 with 0.97 work RVUs and 23 minutes of work time) in the global period of CPT code 46500. As a result, we do not agree with the commenters that CPT code 46500 has a significantly greater amount of postservice work and postservice work time than our crosswalk code.

Comment: Several commenters responded to our request for more information about why the clinical labor associated with the additional staff member was left out of previous reviews and what activities the additional staff member would be undertaking during the procedure. Commenters stated that two clinical staff are needed to assist the physician during the intraservice portion of the service: one staff person is handling suction and holding the retractor while the surgeon identifies and injects anesthetic and sclerosant into the poles of the hemorrhoids, and the second staff person is handing supplies (syringes, gauze) and taking soiled supplies away. The commenters stated that one staff person will assist with tasks such as irrigation, suction, etc. and one circulating staff person will hand syringes, sponges, etc. to the physician.

Response: We appreciate the additional feedback from the commenters regarding what activities the additional staff member would be undertaking during the procedure, although we note that we did not receive a response regarding why the clinical labor associated with this additional staff member was left out of previous reviews. After reviewing the

additional information supplied by the commenters, we are not finalizing our proposal to remove the clinical labor time for the ''Assist physician or other qualified healthcare professional'' (CA018) activity or the proposal to remove 1 impervious staff gown (SB027), 1 surgical mask with face shield (SB034), and 1 pair of shoe covers (SB039). We are finalizing the RUC-recommended values for these direct PE inputs.

Comment: Several commenters disagreed with the proposal to remove the clinical labor time for the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) activity. Commenters stated that this clinical activity was not duplicative with the same day E/M office visit, as the home care instructions directly pertain to the procedure and would not be provided during an evaluation of the patient.

Response: We disagree with the commenters that home care instructions would not be provided during the same day E/M visit. The commenters did not provide a rationale to explain why home care instructions would not be provided during the same day E/M visit, which also directly pertains to the procedure. We continue to believe that it would be duplicative to assign clinical labor time for this task, as we believe that the home care instructions would be furnished during the same day E/M visit.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the anoscope with light source (ES002) equipment, we removed the clinical labor for the CA029 and CA035 clinical labor activities in accordance with our standard equipment time formula for scopes.

After consideration of the public comments, we are finalizing the work RVU for CPT code 46500 as proposed. We are finalizing the RUC-recommended direct PE inputs for this code, with the exception of our refinement to the CA035 clinical labor activity and standard equipment time refinements as detailed above.

(22) Removal of Intraperitoneal Catheter (CPT Code 49422)

In October 2016, CPT code 49422 (Removal of tunneled intraperitoneal catheter) was identified as a site of service anomaly because Medicare data from 2012–2014 indicated that it was performed less than 50 percent of the time in the inpatient setting, yet it included inpatient hospital E/M services within the 10-day global period. The code was resurveyed using a 0-day global period for the April 2017 RUC meeting. For CY 2019, we proposed the RUC-recommended work RVU of 4.00 for CPT code 49422.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving CPT code 49422.

Comment: Commenters were supportive of our proposal of the RUC-recommended work RVUs. Commenters also supported the change in global period to a 0-day global.

Response: We thank commenters for their support.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU and direct PE inputs for CPT code 49422 as proposed.

(23) Dilation of Urinary Tract (CPT Codes 50436, 50437, 52334, and 74485)

In October 2014, the CPT Editorial Panel deleted 6 codes and created 12 new codes to describe genitourinary catheter procedures and bundle inherent imaging services. In January 2015, the specialty societies indicated that CPT code 50395 (Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous), which was identified as part of the family, would be referred to the CPT Editorial Panel to clear up any confusion with overlap in physician work with CPT code 50432 (Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (*e.g.,* ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation). In September 2017, the CPT Editorial Panel deleted CPT code 50395 and created 2 new codes to report dilation of existing tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance (*e.g.,* ultrasound and/or fluoroscopy), all associated radiological supervision and interpretation, as well as post procedure tube placement when performed.

The specialty society surveyed the new CPT code 50436 (Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (*e.g.,* ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed), and the RUC recommended a total time of 70 minutes, intraservice time of 30 minutes, and a work RVU of 3.37. The RUC indicated that its recommended work RVU for this CPT code is identical to the work RVU of the CPT code being deleted, even though imaging guidance CPT code 74485 has now been bundled into the valuation of the CPT code. The RUC provided two key reference CPT codes to support its recommendation: CPT code 50694 (Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (*e.g.,* ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter) with total time of 111 minutes, intraservice time of 62 minutes, and a work RVU of 5.25; and CPT code 50695 (Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (*e.g.,* ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, with separate nephrostomy catheter), with total time of 124 minutes and intraservice time of 75 minutes, and a work RVU of 6.80. To further support its recommendation, the RUC also referenced CPT code 52287 (Cystourethroscopy, with injection(s) for chemodenervation of the bladder) with total time of 58 minutes, intraservice time of 21 minutes, and a work RVU of 3.37.

We disagreed with the RUC that the work RVU for this CPT code should be the same as the CPT code being deleted. Survey respondents indicated that the total time for completing the service described by the new CPT code is nearly 30 minutes less than the existing CPT code, even though imaging guidance was described as part of the procedure. We also noted that the reference CPT codes both have substantially higher total and intraservice times than CPT code 50436. We considered a number of parameters to arrive at our proposed work RVU of 2.78, supported by a crosswalk to CPT code 31646 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with therapeutic aspiration of tracheobronchial tree, subsequent, same hospital stay). We examined the intraservice time ratio for the new CPT code in relation to the combination of CPT codes that the service represents and found that this would support a work RVU of 2.55. We also calculated the intraservice time ratio for the new CPT code in relation to each of the two

reference CPT codes. For the comparison with CPT code 50694, the intraservice time ratio is 2.54, while the comparison with the second reference CPT code 50695 yields an intraservice time ratio of 2.72. We took the highest of these three values, 2.72, and found a corresponding crosswalk that we believe appropriately values the service described by the new CPT code. Therefore, we proposed a work RVU of 2.78 for CPT code 50436.

The specialty society also surveyed the new CPT code 50437 (Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (*e.g.,* ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system) and the RUC recommended a total time of 100 minutes, an intraservice time of 60 minutes, and a work RVU of 5.44. The recommended intraservice time of 60 minutes reflects the 75th percentile of survey results, rather than the median survey time, which is typically used for determining the intraservice time for new CPT codes. The RUC justified the use of the higher intraservice time because they believe the time better represents the additional time needed to introduce the guidewire into the renal pelvis and/or ureter, above and beyond the work involved in performing CPT code 50436. The RUC compared this CPT code to CPT code 52235 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; MEDIUM bladder tumor(s) (2.0 to 5.0 cm)), with total time of 94 minutes, intraservice time of 45 minutes, and a work RVU of 5.44. The RUC also cited as support the second key reference CPT code 50694 (Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (*e.g.,* ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter) with total time 111 minutes, intraservice time 62 minutes, and a work RVU of 5.25.

We did not agree with the RUC's recommended work RVU because we believed that the intraservice time for this CPT code should reflect the survey median rather than the 75th percentile. There is no indication that the additional work of imaging guidance was systematically excluded by survey respondents when estimating the time needed to furnish the service. Therefore, we proposed to reduce the intraservice time for CPT code 50437 from the RUC-recommended 60 minutes to the survey median time of 45 minutes. We noted that this is still 15 minutes more than the intraservice time for CPT code 50436, primarily for the provider to introduce the guidewire into the renal pelvis and/or ureter. We welcomed comments about the amount of time needed to furnish this procedure.

With the revised intraservice time of 45 minutes and a total time of 85 minutes, we believed that the RUC-recommended work RVU for this CPT code is overstated. When we applied the increment between the RUC-recommended values for between CPT codes 50436 and 50437 (2.07 work RVUs) in addition to our proposed work RVU for CPT code 50436, we estimated that this CPT code was more accurately represented by a work RVU of 4.83. This value is supported by a crosswalk to CPT code 36902 (Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty), which has an intraservice time of 40 minutes and a total time of 86 minutes. We believed that CPT code 36902 describes a service that is similar to the new CPT code 50437) and therefore provides a reasonable crosswalk. We proposed a work RVU of 4.83 for CPT code 50437.

We proposed the RUC-recommended work RVU of 3.37 for CPT code 52334 (Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde) and the RUC-recommended work RVU of 0.83 for CPT code 74485 (Dilation of ureter(s) or urethra, radiological supervision and interpretation).

For the direct PE inputs, we proposed to remove the clinical labor time for the ''Confirm availability of prior images/studies'' (CA006) activity for CPT code 52334. This code does not currently include this clinical labor time, and unlike the two new codes in the family (CPT codes 50436 and 50437), CPT code 52334 does not include imaging guidance in its code descriptor. When CPT code 52334 is performed with imaging guidance, it would be billed together with a separate imaging code that already includes clinical labor time for confirming the availability of prior images. As a result, we believed that it would be duplicative to include this clinical labor time in CPT code 52334.

The following is a summary of the public comments we received on our proposals involving the Dilation of Urinary Tract family of codes.

Comment: Several commenters responded to our proposals regarding work RVUs for this family of codes. In general, commenters expressed support for our proposed work RVU of 3.37 for CPT code 52334 and 0.83 for CPT code 74485.

Response: We are finalizing the work RVUs for each of these codes as proposed.

Comment: Several commenters did not support our proposals regarding the work RVU for CPT codes 50436 and 50437. The RUC and other commenters stated that CMS misunderstood the RUC's summary of results (SOR) and the purpose of the reference codes and the code comparisons as part of their review process. They suggested that our rejection of the RUC recommendation for CPT code 50436 was based on a mistake about the codes that the RUC cited as reference codes.

Response: We consider a variety of documents and data during our review of the RUC's recommended work RVU for a code. The two reference codes cited in the excel summary work RVU spreadsheet for CPT code 50436 were CPT codes 50694 and 50695, while the two reference codes cited in the SOR were CPT codes 52287 52214. In other words, there was an inconsistency in the documentation. We believe that any of the four reference codes cited in the documentation and/or data are valid points of comparison for evaluating whether the RUC's recommended work RVUs are appropriate.

Comment: Some commenters did not agree with CMS's use of intraservice time ratios as a factor in determining whether a CPT code is appropriately valued. The commenters maintained that CMS's use of these parameters is inappropriate and demonstrates our prioritization of time-related factors above the intensity and complexity of the service.

Response: We routinely use intraservice time ratios to determine whether a recommended work RVU for a new CPT code adequately reflects efficiencies gained when codes are bundled and/or providers become more efficient at furnishing services and we disagree with commenters that time

ratios are an inappropriate metric. We identify a crosswalk for the purpose of establishing the work RVU by comparing the survey code to other codes in the PFS with similar intraservice and total times and also by considering the intensity among codes with similar times. We disagree that this means we are prioritizing time parameters over other factors that are relevant in considering a code's value.

Comment: Commenters disagreed with CMS's proposed work RVU of 2.78 for CPT code 50436, citing CMS's inappropriate use of time parameters in comparing this code with the deleted CPT code 50395.

Response: Even after taking into consideration the bundling of the deleted code, CPT 50395, with CPT code 74485, we believe that there are efficiencies in the work that are not adequately reflected in the RUC-recommended work RVU for this new code, CPT 50436. We examined a number of parameters in seeking an appropriate crosswalk code for CPT 50436, including the intraservice time ratio for this new code in relation to the combination of CPT codes that the service represents and the intraservice time ratio for the new code in relation to each of the RUC's two reference codes. Our crosswalk, CPT code 31646, reflects the work RVU (2.78) corresponding to the most appropriate, and the highest, work RVU (2.72) associated with these calculations. Our identification of a crosswalk code is not dictated by the time parameter calculations alone, but rather is based on a combination of the time parameters and our understanding of the intensity involved in furnishing the service. If we had been looking only at time parameters, we might have chosen a CPT code with a work RVU closest to the lowest of the time parameter calculations (2.54). We continue to believe that the most appropriate crosswalk is CPT code 31646, and we are finalizing our proposed work RVU of 2.78 for CPT code 50436.

Comment: As with CPT code 50436, commenters suggested that CMS mistook the codes included in the SOR as the codes that the RUC cited as reference codes.

Response: As we indicated in our response to this comment for CPT code 50436, we consider all documentation and data provided by the RUC in our assessment of the work RVU for a code. The reference and comparison CPT codes cited in the SOR did not match those in the summary work RVU spreadsheet.

Comment: Several commenters disagreed with our method of proposing a work RVU based on the incremental differences in the RUC-recommended work RVU between codes. Commenters stated that this erroneously considers all time components as having equal intensity.

Response: We generally apply this methodology where we agree with, and seek to maintain the relativity between two codes reflected in the RUC recommendations, but we disagree with the RUC-recommended work RVU for one or both of the codes. We also considered, as an alternative, whether it would be more appropriate to use proportional increments rather than absolute differences between two RUC-recommended work RVUs. Under that scenario, we would have proposed a work RVU of 4.49 for CPT code 50437 [(2.78 * 5.44)/3.37 = 4.49]. However, since our general approach involves applying the absolute difference in work RVUs, our proposed value for CPT code 50437 was 4.83 work RVUs. We thank the commenter for pointing out our calculation error, due to which our proposed work RVU should have been 4.85 instead of 4.83. We continue to believe that relative difference in the RUC's recommendations for work RVUs between codes is a useful and appropriate tool for determining work RVUs for CPT codes, and we are finalizing a work RVU of 4.85 for CPT code 50437 based on a comparison with CPT code 36902, which has a work RVU of 4.83.

Comment: Several commenters disagreed with the proposal to remove the clinical labor time for the ''Confirm availability of prior images/studies'' (CA006) activity for CPT code 52334. Commenters stated that the equivalent of the CA006 clinical labor activity did not exist when this service was last reviewed by the Practice Expense subcommittee in 2002, and that many surgical procedures and other types of services that do not have imaging bundled involve the physician reviewing images and studies before performing the service. Commenters stated that this review is not duplicative with image-guidance codes as it instead involves reviewing distinct previous studies.

Response: We continue to believe that this clinical labor time should be removed because it is duplicative, as CPT code 52334 would be billed together with a separate imaging code that already includes clinical labor time for confirming the availability of prior images when it is performed with imaging guidance. We believe that the commenters may be conflating the absence of the CA006 clinical labor activity when CPT code 52334 was previously reviewed with the lack of any clinical labor for reviewing images that did not exist previously in this specific code. There were hundreds of procedures that included clinical labor for reviewing images prior to the creation of the CA006 clinical labor code, and CPT code 52334 was not one of them. Similarly, while we agree that there are many services that do not have bundled imaging and nonetheless include the physician reviewing images and studies before performing the service, this does not explain why CPT code 52334 would require clinical labor time for confirming the availability of prior images and studies when the service did not include this clinical labor time previously. We continue to believe that the inclusion of this clinical labor time would be duplicative for this service.

Comment: One commenter requested that CPT code 52334 be added to the phase-in list for codes with significant PE RVU reductions.

Response: Section 1848(c)(7) of the Act, as added by section 220(e) of the PAMA, specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased-in over a 2-year period. We proposed to exempt CPT code 52334 from the phase-in due to the fact that it is part of the same family of codes that included new CPT codes 50436 and 50437. We have previously finalized this policy through rulemaking, stating that significant coding revisions within a family of codes can change the relationships among codes to the extent that it changes the way that all services in the group are reported, even if some individual codes retain the same number or, in some cases, the same descriptor. Excluding codes from the phase-in when there are significant revisions to the code family also helps to maintain the appropriate rank order among codes in the family, avoiding years for which RVU changes for some codes in a family are in transition while others were fully implemented. For additional information regarding the phase-in of significant RVU reductions, we direct readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70929).

(24) Transurethral Destruction of Prostate Tissue (CPT Codes 53850, 53852, and 53854)

In September 2017, the CPT Editorial Panel created a new code (CPT code

53854) to report transurethral destruction of prostate tissue by radiofrequency-generated water vapor thermotherapy. CPT codes 53850 (Transurethral destruction of prostate tissue; by microwave thermotherapy) and 53852 (Transurethral destruction of prostate tissue; by radiofrequency thermotherapy) were also included for review as part of the same family of codes.

For CPT code 53850 (Transurethral destruction of prostate tissue; by microwave thermotherapy), the RUC recommended a work RVU of 5.42, supported by a direct crosswalk to CPT code 33272 (Removal of subcutaneous implantable defibrillator electrode) with a total time of 151 minutes, intraservice time of 45 minutes, and a work RVU of 5.42. The RUC indicated that a work RVU of 5.42 accurately reflects the lowest value of the three CPT codes in this family. We proposed the work RVU of 5.42 for CPT code 53850, as recommended by the RUC.

The RUC recommended a work RVU of 5.93 for CPT code 53852 (Transurethral destruction of prostate tissue; by radiofrequency thermotherapy) and for CPT code 53854 (Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy). We proposed the RUC-recommended work RVU of 5.93 for CPT code 53852.

CPT code 53854 is a service reflecting the use of a new technology, ''radiofrequency generated water vapor thermotherapy,'' as distinct from CPT code 53852, which describes destruction of tissue by ''radiofrequency thermotherapy.'' The RUC indicated that this CPT code is the most intense of the three CPT codes in this family, thereby justifying a work RVU identical to that of CPT code 53852, despite lower intraservice and total times. The RUC stated that 15 minutes of post service time is appropriate due to greater occurrence of post-procedure hematuria necessitating a longer monitoring time. However, the post-service monitoring time for this CPT code, 15 minutes, is identical to that for CPT code 53852. We did not agree with the explanation provided by the RUC for recommending a work RVU identical to that of CPT code 53852, given that the total time is 5 minutes lower, and the post service times are identical. Both the intraservice time ratio between this new CPT code and CPT code 53852 (4.94) and the total time ratio between the two CPT codes (5.72) suggest that the RUC-recommended work RVU of 5.93 overestimates the work involved in furnishing this service. We reviewed other 90-day global CPT codes with similar times and identified CPT code 24071 (Excision, tumor, soft tissue of upper arm or elbow area, subcutaneous; 3 cm or greater) with a total time of 183 minutes, intraservice time of 45 minutes, and a work RVU of 5.70 as an appropriate crosswalk. We believed that this would be a better reflection of the work involved in furnishing CPT code 53854, and therefore, we proposed a work RVU of 5.70 for this CPT code. We welcomed comments about the time and intensity required to furnish this new service. Since this CPT code reflects the use of a new technology, it will be reviewed again in 3 years.

For the direct PE inputs, we proposed to add a new supply (SA128: ''kit, Rezum delivery device''), a new equipment item (EQ389: ''generator, water thermotherapy procedure''), and proposed to update the price of two supplies (SA036: ''kit, transurethral microwave thermotherapy'' and SA037: ''kit, transurethral needle ablation (TUNA)'') after reviewing invoices that we received. We noted that these invoices were submitted along with additional information listing the vendor discount for these supplies and equipment. We appreciated the inclusion of the discounted prices on these invoices, and we encouraged other invoice submissions to provide the discounted price as well, where available. Based on market research on supply and equipment pricing carried out by our contractors, we believe that a vendor discount of 10–15 percent is common on many supplies and equipment. Since we are obligated by statute to establish RVUs for each service as required based on the resource inputs required to furnish the typical case of a service, we have concerns that relying on invoices for supply and equipment pricing absent these vendor discounts may overestimate the resource cost of some services. We encouraged the submission of additional invoices that include the discounted price of supplies and equipment to more accurately assess the market cost of these resources.

The following is a summary of the public comments we received on our proposals involving the Transurethral Destruction of Prostate Tissue family of codes.

Comment: Several commenters expressed support for our proposed work RVU of 5.42 for CPT code 53850 and 5.93 for CPT code 53852, which reflect the RUC's recommendations for these two codes.

Response: We appreciate the commenters' support and we are finalizing a work RVU of 5.42 for CPT code 53850 and a work RVU of 5.93 for CPT code 53852.

Comment: A commenter pointed out that there is an error in our description of the RUC's time components for this code. We stated that there was less post service time for CPT code 53854 than for CPT code 53852 when, in fact, both codes have a post service time of 15 minutes. The intraservice time between the two codes differs by 5 minutes, with CPT code 53854 having 5 fewer minutes than CPT code 53852.

Response: We thank the commenter for informing us of the error. We note, however, that this does not affect our proposal which is based on a comparison of both intraservice and total time ratios.

Comment: Several commenters, ranging from device manufacturers and professional associations, disagreed with our proposed value of 5.70 for CPT code 53854 instead of the RUC-recommended work RVU of 5.93. Commenters stated that the work involved in furnishing the service described by CPT code 53854 is the most intense of the three CPT codes in this family because of the added risk of bleeding, urinary retention and damage to the external urinary sphincter with resultant incontinence of urine if not performed properly. Commenters also urged CMS to approach the time results from the survey for this code with caution, as few practitioners are likely to have had much experience with the new technology described by this service.

Response: In our proposal, we requested additional information from stakeholders about the time and intensity required to furnish this service because we were not convinced that the work involved in furnishing the service described by CPT code 53854 is more intense than the work involved in furnishing CPT code 53852, which the RUC used as a reference code in developing their recommendation. We were convinced by commenters, however, that the additional risk in furnishing this service supports a higher work RVU than what we proposed. Therefore, we are finalizing a work RVU of 5.93 for this CPT code, as recommended by the RUC.

Comment: One commenter stated that both CPT codes should be subject to the phase-in for CY 2019 because they will decrease more than 20 percent and are not new or revised codes. The commenter urged CMS to add CPT codes 52380 and 52382 to the list of codes subject to the phase-in.

Response: Section 1848(c)(7) of the Act, as added by section 220(e) of the PAMA, specifies that for services that

are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased-in over a 2-year period. We proposed to exempt CPT codes 52380 and 52382 from the phase-in of significant RVU reductions required by section 1848(b)(11) of the Act because these codes are part of the same family of codes that included new CPT code 53854. We have previously finalized this policy through rulemaking, stating that significant coding revisions within a family of codes can change the relationships among codes to the extent that it changes the way that all services in the group are reported, even if some individual codes retain the same number or, in some cases, the same descriptor. Excluding codes from the phase-in when there are significant revisions to the code family also helps to maintain the appropriate rank order among codes in the family, avoiding years for which RVU changes for some codes in a family are in transition while others were fully implemented. For additional information regarding the phase-in of significant RVU reductions, we direct readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70929).

Comment: One commenter stated that they were concerned about substantial reductions in billable staff time and supply costs associated with CPT codes 53850 and 53852. The commenter stated that reductions in billable staff time will require treating physicians to minimize non-procedural time which may include: Comfort control protocols; patient expectation management; patient post-procedure instructions; and recommended best practices for follow-up care. The commenter stated that they were concerned that the proposed supply costs are not in line with actual pricing or with actual cost increases for manufacturing of the product, and indicated that significant reductions in reimbursement will limit patient access to a therapy with demonstrated safety, effectiveness, and cost efficacy.

Response: We appreciate the feedback from the commenter, and we are sensitive to the need for accurate payment under the PFS to ensure that beneficiaries maintain access to care. However, we note that we proposed the RUC-recommended direct PE inputs for this family of codes without refinement, and the decreases in clinical staff time for these procedures were almost entirely due to shorter surveyed intraservice work times and the removal of office visits in the postoperative portion of the global period as identified by the RUC. We agree with the RUC that fewer follow-up office visits and shorter intraservice times are now typical for these procedures, and we do not believe that the resulting decreases in clinical labor time will create barriers to accessing care. With regard to changes in the proposed supply costs, we direct readers to our discussion of the market-based supply and equipment pricing update in section II.B. of this final rule. We encourage stakeholders to continue to provide feedback concerning accurate supply and equipment pricing.

After consideration of the comments, we are finalizing the RUC-recommended work RVUs and direct PE inputs for the three codes in the Transurethral Destruction of Prostate Tissue family of codes.

(25) Vaginal Treatments (CPT Codes 57150 and 57160)

CPT codes 57150 (Irrigation of vagina and/or application of medicament for treatment of bacterial, parasitic, or fungoid disease) and 57160 (Fitting and insertion of pessary or other intravaginal support device) were identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.50 for CPT code 57150 and the RUC-recommended work RVU of 0.89 for CPT code 57160.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Vaginal Treatments family of codes.

Comment: Commenters were supportive of our proposal of the RUC-recommended work RVUs.

Response: We thank commenters for their support.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs and direct PE inputs for CPT codes 57150 and 57160 as proposed.

(26) Biopsy of Uterus Lining (CPT Codes 58100 and 58110)

CPT code 58100 (Endometrial sampling (biopsy) with or without endocervical sampling (biopsy), without cervical dilation, any method) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. CPT code 58110 (Endometrial sampling (biopsy) performed in conjunction with colposcopy) was also included for review as part of the same family of codes. For CY 2019, we proposed the RUC-recommended work RVU of 1.21 for CPT code 58100 and the RUC-recommended work RVU of 0.77 for CPT code 58110.

For the direct PE inputs, we proposed to remove the clinical labor time for the ''Review/read post-procedure x-ray, lab and pathology reports'' (CA028) activity for CPT code 58100. This code is typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing reports given that this task would typically be done during the same day E/M service. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Biopsy of Uterus Lining family of codes.

Comment: Several commenters stated that they appreciated that CMS proposed the RUC-recommended work RVU of 1.21 for CPT code 58100 and the RUC-recommended work RVU of 0.77 for CPT code 58110.

Response: We appreciate the support for our proposals from the commenters.

Comment: Several commenters disagreed with the CMS proposal to remove the clinical labor time for the ''Review/read post-procedure x-ray, lab and pathology reports'' (CA028) activity for CPT code 58100. Commenters stated that this clinical labor activity was not duplicative, as CA028 is designed specifically for post-procedure activity during the postservice of the service period which would not overlap with activities in the E/M office visit, which typically occur prior to the procedure and are listed as a preservice clinical labor activity. Commenters stated that the clinical description of the service for CPT code 58100 clearly notes that the E/M service is done the day before the service and that the patient returns for the biopsy.

Response: We disagree with the commenters' statements about the timing of the E/M office visit. The same day billing data indicates that CPT code 58100 is typically billed with an E/M office visit on the same day (59 percent of the time), and it therefore seems clear that the E/M office visit typically takes place during the day of the procedure,

not the day before. We do not understand how the claims analysis fits with the statement from the commenters that the E/M service happens the day before the procedure, especially since CPT code 58100 has a 0-day global period that does not include preoperative care that takes place the day before the procedure. We continue to believe that it would be duplicative to assign clinical labor time for reviewing reports given that this task would typically be done during the same day E/M service. We believe that this clinical labor would be carried out during the same day E/M visit.

After consideration of the public comments, we are finalizing the work RVUs and the direct PE inputs for the codes in the Biopsy of Uterus Lining family of codes as proposed.

(27) Injection Greater Occipital Nerve (CPT Code 64405)

CPT code 64405 (Injection, anesthetic agent; greater occipital nerve) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.94 for CPT code 64405.

For the direct PE inputs, we proposed to refine the equipment time for the exam table (EF023) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 64405.

Comment: Some commenters expressed support for our proposal to accept the RUC-recommended work RVU for this code.

Response: We appreciate the support from the commenters for our proposals.

After consideration of the public comments, we are finalizing the work RVU and the direct PE inputs for CPT code 64405 as proposed.

(28) Injection Digital Nerves (CPT Code 64455)

CPT code 64455 (Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (*e.g.,* Morton's neuroma)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.75 for CPT code 64455.

For the direct PE inputs, we proposed to refine the equipment time for the exam table (EF023) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 64455.

Comment: Several commenters supported the CMS proposal of the RUC-recommended work RVU of 0.75.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing the work RVU and the direct PE inputs for CPT code 64455 as proposed.

(29) Removal of Foreign Body—Eye (CPT Codes 65205 and 65210)

CPT codes 65205 (Removal of foreign body, external eye; conjunctival superficial) and 65210 (Removal of foreign body, external eye; conjunctival embedded (includes concretions), subconjunctival, or scleral nonperforating) were identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000.

For CY 2019, we proposed the RUC-recommended work RVU of 0.49 for CPT code 65205. We noted that the recommendations for this code included a statement that the work required to perform CPT code 65205 and the procedure itself had not fundamentally changed since the time of the last review. However, due to the fact that the surveyed intraservice time had decreased from 5 minutes to 3 minutes, the work RVU was lowered from the current value of 0.71 to the recommended work RVU of 0.49, based on a direct crosswalk to CPT code 68200 (Subconjunctival injection). We noted that this recommendation appears to have been developed under a methodology similar to our ongoing use of time ratios as one of several methods used to evaluate work. We used time ratios to identify potential work RVUs and considered these work RVUs as potential options relative to the values developed through other options. As we have stated in past rulemaking (such as 82 FR 53032–53033), we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in newly valued work RVUs, as indeed it does not in the case of CPT code 65205 here. Instead, we believed that, since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. We appreciate that the RUC-recommended work RVU for CPT code 65205 has taken these changes in work time into account, and we support the use of similar methodologies, where appropriate, in future work valuations.

For CPT code 65210, we disagreed with the RUC-recommended work RVU of 0.75 and we proposed a work RVU of 0.61 based on a direct crosswalk to CPT code 92511 (Nasopharyngoscopy with endoscope). This crosswalk code has the same intraservice time of 5 minutes and 4 additional minutes of total time as compared to CPT code 65210. We noted that the recommended intraservice time for CPT code 65210 is decreasing from 13 minutes to 5 minutes (62 percent reduction), and the recommended total time for CPT code 65210 is decreasing from 25 minutes to 13 minutes (48 percent reduction); however, the RUC-recommended work RVU is only decreasing from 0.84 to 0.75, which is a reduction of about 11 percent. As we noted earlier, we do not believe that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, and we did not propose a linear decrease in the work valuation based on these time ratios. However, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs, and we do not believe that the recommended work RVU of 0.75 appropriately reflects these decreases in surveyed work time.

Our proposed work RVU of 0.61 is also based on a crosswalk to CPT code 51700 (Bladder irrigation, simple, lavage and/or instillation), another recently reviewed code with higher time values and a work RVU of 0.60. We also noted that two injection codes (CPT codes 20551 and 64455) were reviewed at the same RUC meeting as CPT code 65210, each of which shared the same intraservice time of 5 minutes and had a higher total time of 21 minutes. Both of these codes had a RUC-recommended work RVU of 0.75, which we proposed without refinement for CY 2019. Due to the fact that CPT code 65210 has a lower total time and a lower intensity than both of these injection procedures, we did not agree that CPT code 65210 should be valued at the same work RVU of 0.75. We believe that our proposed work RVU of 0.61 based on a crosswalk to CPT code 92511 is a more accurate value for this code.

For the direct PE inputs, we noted that the RUC-recommended equipment time for the screening lane (EL006)

equipment in CPT codes 65205 and 65210 was equal to the total work time in addition to the clinical labor time needed to set up and clean the equipment. We disagreed that the screening lane would typically be in use for the total work time, given that this includes the preservice evaluation time and the immediate postservice time. Although we did not currently propose to refine the equipment time for the screening lane in these two codes, we solicited comments on whether the use of the intraservice work time would be more typical than the total work time for CPT codes 65205 and 65210.

The following is a summary of the public comments we received on our proposals involving the Removal of Foreign Body—Eye family of codes.

Comment: Commenters agreed with the CMS proposal of the RUC-recommended work RVU for CPT code 65205.

Response: We appreciate the support for our proposal from the commenters.

Comment: Several commenters disagreed with our statement that the RUC-recommended work RVU for CPT code 65205 appeared to have been developed under a methodology similar to the use of time ratios. Commenters stated that time ratios were not used in arriving at the value of 0.49 for CPT code 65205, and that the recommended work RVU was based instead on a crosswalk to the second key reference code from the survey, CPT code 68200, which requires the same total time to perform and shares identical intensity and complexity.

Response: We appreciate the additional information provided by the commenters regarding the methodology behind the recommended work RVU for CPT code 65205. As we noted in the proposed rule, this recommendation appeared to have been developed under a methodology similar to our ongoing use of time ratios; we did not state that the recommendation was explicitly based on the use of a time ratio.

Comment: Many commenters disagreed with the proposed work RVU of 0.61 for CPT code 65210 and stated that CMS should finalize the RUC-recommended work RVU of 0.75. Commenters stated that CMS should not use intraservice time ratios for work valuation as this methodology ignored the work estimates present in the survey data and the RUC review of those work estimates. Commenters stated that the RUC-recommended work values consider intensity and complexity of the work, while CMS substituted an arbitrary determination of work values based on time and a subjective estimate of intensity and complexity based on an unknown and clinically uninformed opinion.

Response: We disagree with the commenters and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. (As an example, CPT codes 38222, 54231, 55870, 75573, and 78814 all share identical CY 2019 work times with 15 minutes of preservice time, 30 minutes of intraservice time, and 15 minutes of postservice time; however these codes have respective CY 2019 work RVUs of 1.44, 2.04, 2.58, 2.55, and 2.20.) Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277). We also note that in the case of CPT code 65210, we derived our proposed work RVU of 0.61 by using a direct crosswalk to CPT code 92511 and not a time ratio.

Comment: Several commenters noted that CPT code 65210 had never been surveyed and was based on Harvard time which contributed to the median survey intraservice time of 5 minutes being less than half of the current value of 13 minutes. Commenters stated that Harvard times should be not be used for any sort of time comparison, especially when the code was not originally surveyed by Harvard, and any comparisons with these work times were inappropriate.

Response: We agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times, and it also would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times used in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we want to reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of current work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 final rule (81 FR 80273 through 80274).

Comment: Several commenters stated that the procedure described by CPT code 65210 has not fundamentally changed, and therefore the RUC had recommended a work RVU at the 25th percentile in accordance with the recent survey. One commenter stated that the

intensity of the procedure was also unchanged. Commenters stated that the crosswalk and reference codes chosen by CMS were clearly not as intense as the removal of an embedded foreign body described by CPT code 65210, in which an incision into ocular tissue is required.

Response: We disagree with the commenters that CPT code 65210 has not fundamentally changed. We note for example that the surveyed work times have decreased drastically from the prior valuation, and similarly, the intensity of the service as measured by the survey more than doubled. These factors do not comport with the statement from the commenters that intensity of this service is unchanged. We also note that the RUC-recommended work RVU of 0.75 was a decrease from the current work RVU of 0.84, which also does not appear to reflect the idea that the intensity of the service has not changed. We similarly disagree with the commenters that our crosswalk and reference codes are not as intense as CPT code 65210. CPT code 92511 in particular describes a nasopharyngoscopy with endoscope that requires removing secretions and dried mucus blocking passage to the nasopharynx with suction and/or forceps. We disagree with the commenters that this procedure would be less intensive than the removal of a foreign body as described in CPT code 65210.

Comment: Several commenters disagreed with the CMS comparison of CPT code 65210 to two injection codes (CPT codes 20551 and 64455) which were reviewed at the same RUC meeting as CPT code 65210. Commenters stated that the two referenced codes both have a lower intensity than CPT code 65210 and therefore they were not appropriate references for work valuation. Commenters stated that CPT code 65210 has a lower total time and a higher intensity than both of these injection procedures, justifying the recommended work RVU of 0.75.

Response: We disagree with the commenters that CPT code 65210 would typically have a higher intensity than CPT codes 20551 and 64455. These codes both describe injection procedures, with CPT code 20551 describing an injection into the tendon and CPT code 64455 describing an injection into the plantar common digital nerve. We do not agree that the removal of a foreign body from the eye as described in CPT code 65210 would have such greater intensity that it warrants a work RVU of 0.75 (to match CPT codes 20551 and 64455) despite having approximately 40 percent less total work time.

Comment: Several commenters stated in response to the CMS comment solicitation that the screening lane (EL006) equipment would typically be in use for the total work time of CPT codes 65205 and 65210. Commenters stated that the screening lane is the ophthalmic equivalent of an exam room in the non-facility setting which would be needed for the total time of the procedure. Commenters stated that this equipment time represented the total time taken by the physician to perform the service in the screening lane (which would be not be available for use by another patient during the time of the procedure), plus the time inputs for the technician work as listed above.

Response: We appreciate the additional information provided by the commenters regarding the use of the screening lane (EL006) equipment.

After consideration of the public comments, we are finalizing the work RVUs and the direct PE inputs for the codes in the Removal of Foreign Body—Eye family of codes as proposed.

(30) Injection—Eye (CPT Codes 67500, 67505, and 67515)

CPT code 67515 (Injection of medication or other substance into Tenon's capsule) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. CPT codes 67500 (Retrobulbar injection; medication (separate procedure, does not include supply of medication)) and 67505 (Retrobulbar injection; alcohol) were also included for review as part of the same family of codes. For CY 2019, we proposed the RUC-recommended work RVU of 1.18 for CPT code 67500.

For CPT code 67505, we disagreed with the RUC-recommended work RVU of 1.18 and we proposed a work RVU of 0.94 based on a direct crosswalk to CPT code 31575 (Laryngoscopy, flexible; diagnostic). This is a recently reviewed code with the same intraservice time of 5 minutes and 2 fewer minutes of total time as compared to CPT code 67505. We disagreed with the recommendation to propose the same work RVU of 1.18 for both CPT code 67500 and 67505 for several reasons. We noted that the current work RVU of 1.44 for CPT code 67500 is higher than the current work RVU of 1.27 for CPT code 67505, while the current work time of CPT code 67500 is less than the current work time for CPT code 67505. This supported the view that CPT code 67500 should be valued higher than CPT code 67505 due to its greater intensity, which we also found to be supportable on clinical grounds. The typical patient for CPT code 67505 has already lost their sight, and there is less of a concern about accidental blindness as compared to CPT code 67500. At the recommended identical work RVUs, CPT code 67500 has almost triple the intensity of CPT code 67505. Similarly, the intensity does not match our clinical understanding of the complexity and difficulty of the two procedures.

We also noted that the surveyed total time for CPT code 67505 was 7 minutes less than the surveyed time for CPT code 67500, approximately 21 percent lower. If we were to take the total time ratio between the two codes, it would produce a suggested work RVU of 0.93 (26 minutes divided by 33 minutes times a work RVU of 1.18). This time ratio suggested a work RVU almost identical to the 0.94 value that we determined via a crosswalk to CPT code 31575. Based on the preceding rationale, we proposed a work RVU of 0.94 for CPT code 67505.

For CPT code 67515, we disagreed with the RUC-recommended work RVU of 0.84 and we proposed a work RVU of 0.75 based on a crosswalk to CPT code 64450 (Injection, anesthetic agent; other peripheral nerve or branch). The recommended work RVU is based on a direct crosswalk to CPT code 65222 (Removal of foreign body, external eye; corneal, with slit lamp) at a work RVU of 0.84. However, the recommended crosswalk code has more than double the intraservice time of CPT code 67515 at 7 minutes, and we believe that it would be more accurate to use a crosswalk to a code with a more similar intraservice time such as CPT code 64450, which is another type of injection procedure. The proposed work RVU of 0.75 is also based on the use of the intraservice time ratio with the first code in the family, CPT code 67500. The intraservice time ratio between these codes is 0.60 (3 minutes divided by 5 minutes), which yields a suggested work RVU of 0.71 when multiplied by the recommended work RVU of 1.18 for CPT code 67500. We believe that this provides further rationale for our proposed work RVU of 0.75 for CPT code 67515.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Injection—Eye family of codes.

Comment: Commenters were supportive of the CMS proposal of the RUC-recommended work RVU of 1.18 for CPT code 67500.

Response: We appreciate the support for our proposal from the commenters.

Comment: Many commenters disagreed with the proposed work RVU of 0.94 for CPT code 67505 and stated that CMS should finalize the RUC-recommended work RVU of 1.18. Commenters were confused by the CMS statement that, at the recommended identical work RVUs, CPT code 67500 has almost triple the intensity of CPT code 67505. Commenters stated that the RUC recommendation for CPT code 67505 has less total time and slightly higher intensity than CPT code 67500.

Response: We agree with the commenters that this was an inaccurate statement; we intended to state that the current intensity of CPT code 67500 prior to review is almost triple the current intensity of CPT code 67505. We regret any resulting confusion on this subject.

Comment: Several commenters disagreed with the use of a time ratio analysis to support the CMS proposed work value. Commenters stated that time ratios do not adequately account for intensity and complexity of work, which can only be addressed through the survey and the RUC process.

Response: We disagree with the commenters and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. (As an example, CPT codes 38222, 54231, 55870, 75573, and 78814 all share identical CY 2019 work times with 15 minutes of preservice time, 30 minutes of intraservice time, and 15 minutes of postservice time; however these codes have respective CY 2019 work RVUs of 1.44, 2.04, 2.58, 2.55, and 2.20.) Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277). We also note that in the case of CPT code 65210, we derived our proposed work RVU of 0.61 by using a direct crosswalk to CPT code 31575 and not a time ratio.

Comment: Several commenters stated that while it was true that the current work value for CPT code 67500 is higher than that of CPT code 67505, the survey 25th percentiles indicated that the physician work of CPT code 67505 (work RVU = 1.30) is higher than that of CPT code 67500 (work RVU = 1.18). Commenters stated that the reason for performing surveys is to adjust for changes in physician work that have occurred since the prior survey, and that it was inappropriate to put more weight on old data than on the most recent data. Commenters also disagreed with the proposed work RVU on clinical grounds, stating that CPT code 67505 has a higher intensity than CPT code 67500, not because of potential vision loss, but because of the risk of death if the absolute alcohol is injected accidentally into the optic nerve sheath. Commenters stated that the alcohol injection involved in CPT code 67505 is typically very painful, even after a local anesthetic injection, and carries with it the risk of death which therefore makes it a high-intensity procedure for both patient and physician.

Response: We appreciate the additional clinical details involving CPT code 67505 from the commenters. After reviewing the information provided by the commenters, we are not finalizing our proposed work RVU of 0.94 for CPT code 67505, and we are finalizing the RUC-recommended work RVU of 1.18 instead due to the additional risks carried by the procedure.

Comment: Many commenters disagreed with the proposed work RVU of 0.75 for CPT code 67515 and stated that CMS should finalize the RUC-recommended work RVU of 0.84. Commenters disagreed with the CMS crosswalk to CPT code 64450 and stated that the intensity of an injection adjacent to the eye in which the physician is unable to see the needle tip is clearly greater than that of an injection into a peripheral nerve as in the code for the CMS proposed crosswalk. Commenters stated that the use of a time ratio methodology for CPT code 67515 was particularly inappropriate due to changes in the RUC survey methodology since the last survey for this service was performed, and that increases in the intensity of CPT code 67515 should not be of concern due to the 0-day global period and short intraservice work time.

Response: We continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs, as described in more detail in our response to the comments for CPT code 67505 above. We also disagree with the commenters on their objections on clinical grounds concerning our crosswalk to CPT code 64450. CPT code 64450 describes the injection of an anesthetic agent into a peripheral nerve or branch, and the practitioner performing this service also cannot see a needle tip when injecting into a peripheral nerve. In other words, this is the same situation as that described in CPT code 67515: The practitioner performing the service is unable to see the needle tip in both cases. We continue to note that the RUC-recommended crosswalk code (CPT code 65222) has more than double the intraservice time of CPT code 67515 at 7 minutes, and we continue to believe that it would be more accurate to use a crosswalk to a code with a similar intraservice time such as CPT code 64450.

After consideration of the public comments, we are finalizing the work RVUs for CPT codes 67500 and 67515 as proposed. We are finalizing the RUC-recommended work RVU of 1.18 for CPT code 67505. We are also finalizing the direct PE inputs for all three codes as proposed.

(31) X-Ray Spine (CPT Codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120)

CPT codes 72020 (Radiologic examination, spine, single view, specify level) and 72072 (Radiologic examination, spine; thoracic, 3 views) were identified on a screen of CMS or

Other source codes with Medicare utilization greater than 100,000 services annually. The code family was expanded to include ten additional CPT codes to be reviewed together as a group: CPT codes 72040 (Radiologic examination, spine, cervical; 2 or 3 views), 72050 (Radiologic examination, spine, cervical; 4 or 5 views), 72052 (Radiologic examination, spine, cervical; 6 or more views), 72070 (Radiologic examination, spine; thoracic, 2 views), 72074 (Radiologic examination, spine; thoracic, minimum of 4 views), 72080 (Radiologic examination, spine; thoracolumbar junction, minimum of 2 views), 72100 (Radiologic examination, spine, lumbosacral; 2 or 3 views), 72110 (Radiologic examination, spine, lumbosacral; minimum of 4 views), 72114 (Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views), and 72120 (Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views).

The radiologic examination procedures described by CPT codes 72020 (Radiologic examination, spine, single view, specify level), 72040 (Radiologic examination, spine, cervical; 2 or 3 views), 72050 (Radiologic examination, spine, cervical; 4 or 5 views), 72052 (Radiologic examination, spine, cervical; 6 or more views), 72070 (Radiologic examination, spine; thoracic, 2 views), 72072 (Radiologic examination, spine; thoracic, 3 views), 72074 (Radiologic examination, spine; thoracic, minimum of 4 views), 72080 (Radiologic examination, spine; thoracolumbar junction, minimum of 2 views), 72100 (Radiologic examination, spine, lumbosacral; 2 or 3 views), 72110 (Radiologic examination, spine, lumbosacral; minimum of 4 views), 72114 (Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views), 72120 (Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views), 72200 (Radiologic examination, sacroiliac joints; less than 3 views), 72202 (Radiologic examination, sacroiliac joints; 3 or more views), 72220 (Radiologic examination, sacrum and coccyx, minimum of 2 views), 73070 (Radiologic examination, elbow; 2 views), 73080 (Radiologic examination, elbow; complete, minimum of 3 views), 73090 (Radiologic examination; forearm, 2 views), 73650 (Radiologic examination; calcaneus, minimum of 2 views), and 73660 (Radiologic examination; toe(s), minimum of 2 views) were all identified as potentially misvalued through a screen for CPT codes with high utilization.

With approval from the RUC Research Subcommittee, the specialty societies responsible for reviewing these CPT codes did not conduct surveys, but instead employed a ''crosswalk methodology,'' in which they derived physician work and time components for CPT codes by comparing them to similar CPT codes. We recognize that a substantial amount of time and effort is involved in conducting surveys of potentially misvalued CPT codes; however, we had concerns about the quality of the underlying data used to value these CPT codes. The descriptors and other information on which the recommendations are based have themselves not been surveyed, in several instances, since 1995. Without the benefit of a survey or other external source of data about these CPT codes, there is no information that would allow us to detect any potential improvements in efficiency of furnishing the service or evaluate whether changes in practice patterns have affected time and intensity. We are not categorically opposed to changes in the RUC process or methodology that might reduce the burden of conducting surveys, but without the benefit of any additional data, through surveys or otherwise, we were not convinced that there was a basis for evaluating the RUC's recommendations for work RVUs for each of these CPT codes.

Since all 20 of the CPT codes in this group have very similar intraservice (from 3–5 minutes) and total (ranging from 5–8 minutes) times, we proposed to use an alternative approach to the valuation of work RVUs for these CPT codes. We calculated the utilization-weighted average RUC-recommended work RVU for the 20 CPT codes. The result of this calculation was a work RVU of 0.23, which we proposed to apply uniformly to each CPT code: 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, 72120, 72200, 72202, 72220, 73070, 73080, 73090, 73650, and 73660. We recognized that the proposed work RVU for some of these CPT codes might be somewhat lower at the code level than the RUC's recommendation, while the proposed work RVU for other CPT codes might be slightly higher than the RUC's recommended value. We nevertheless believe that the alternative, accepting the RUC's recommendation for each separate CPT code implied a level of precision about the time and intensity of the CPT codes that we had no way to validate.

For the direct PE inputs, we proposed to add a patient gown (SB026) supply to CPT code 72120. We noted that all of the other codes in the family that included clinical labor time for the ''Greet patient, provide gowning, ensure appropriate medical records are available'' (CA009) task included a patient gown, and we proposed to add the patient gown to match the other codes in the family. We believed that the exclusion of the patient gown for CPT code 72120 was most likely due to a clerical error in the recommendations. We also proposed to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

In our review of the clinical labor time recommended for the ''Perform procedure/service—NOT directly related to physician work time'' (CA021) task, we noted that the standard convention for this family of codes seemed to be 3 minutes of clinical labor time per view being conducted. For example, CPT code 72020 with a single view had 3 minutes of recommended clinical labor time for this activity, while CPT code 72070 with two views had 6 minutes. However, we also noted that for the codes with 2–3 views such as CPT codes 72040 and 72100, the recommended clinical labor time of 9 minutes appears to assume that 3 views would always be typical for the procedure. The same pattern occurred for codes with 4–5 views, which have a recommended clinical labor time of 15 minutes (assuming 5 views is typical), and for codes with 6 or more views, which have a recommended clinical labor time of 21 minutes (assuming 7 views is typical).

We did not propose to refine the clinical labor times for this task as we did not have data available to know how many views would be typical for these CPT codes. However, we noted that the intraservice clinical labor time has not changed in roughly 2 decades for these X-ray services, including during this most recent review, and we believed that improving technology during this span of time may have resulted in greater efficiencies in the procedures. We continue to be interested in data sources regarding the intraservice clinical labor times for services such as these that do not match the physician intraservice time, and we welcomed any comments that may be able to provide additional details for the 12 codes under review in this family.

The following is a summary of the public comments we received on our proposals involving the X-Ray Spine family of codes.

Comment: A number of commenters disagreed with our proposal to apply an identical work RVU, calculated as the utilization-weighted average RUC-recommended work RVU for each of the 20 CPT codes, to each of the CPT codes in this group. Commenters defended the crosswalk methodology, stating that it is the best approach for valuing work RVUs for codes in which the service times are very low and therefore difficult to survey. The commenters noted that the specialty societies have tried to survey codes such as this in the past with results that yielded substantial inconsistencies.

Response: We share the commenters' concerns about the validity of surveying services with very low intraservice and total time, but we have even more substantial concerns about a methodology that introduces no new information about the work involved in furnishing these CPT codes and then states their accuracy to the hundredth of a work RVU. Survey data from the specialty societies is often the only data source available to us that reflects the experiences of a cross-section of providers. We remind stakeholders that we welcome additional information or data from all sources to assist us in making proposals and finalizing values.

Comment: In response to our proposal, the RUC offered to survey each code in the expanded family of X-ray codes to which CMS applied the weighted average methodology and provide survey based recommendations for CY 2020.

Response: We appreciate the recognition on the part of the RUC of our serious concerns about the crosswalk methodology and the integrity of the resulting RUC recommended work RVUs. We welcome the submission of any additional data or information that would allow us to consider these codes for review at a future time. Commenters raised concerns that assigning a single weighted average work RVU across this broad family of x-ray codes inadequately reflects meaningful differences among the codes, including the number of views and the complexity of positioning for some x-ray services. In response to commenters' concerns, we are instead maintaining the CY 2018 work RVUs for each CPT code as follows: Work RVU of 0.15 for CPT code 72020, 0.22 for CPT 72040, 0.31 for CPT code 72050, 0.36 for CPT code 72052, 0.22 for CPT code 72070, 0.22 for CPT code 72072, 0.22 for CPT code 72074, 0.22 for CPT code 72080, 0.22 for CPT code 72100, 0.31 for CPT code 72110, 0.32 for CPT code 72114, and 0.22 for CPT code 72120.

Comment: Several commenters indicated that it was inappropriate for CMS to value the practice expense portion of the 20 CPT codes identically because the resources required to furnish each of the services differ in accordance with the number of X-rays or views and other factors.

Response: We did not propose to value the practice expense portion of these codes identically. The proposal regarding the weighted average for these codes refers to the work component of RVUs only.

Comment: One commenter stated that they appreciated and agreed with adding a patient gown (SB026) supply to CPT code 72120.

Response: We appreciate the support for our proposal from the commenter.

Comment: Several commenters stated that they would like to provide clarity on the typical number of films obtained for the X-ray spine codes and the rationale for the number of minutes and assumed number of views that would be typical. Commenters stated that a minimum of 3 views would be needed in order to adequately assess the cervical spine as described by CPT code 72040. Commenters stated that the open mouth odontoid view helps in the assessment of the atlanto-occipital joint, and that the AP and lateral views of the vertebral bodies are required to assess the alignment of the vertebral bodies in two planes, the disc spaces, the spinal canal, fractures, and widening of different joints. Commenters provided a similar level of clinical detail regarding the typical number of views required for CPT codes 72050 and 72052.

Response: We appreciate the detailed information provided by the commenters in response to our request for data sources regarding the intraservice clinical labor times in those services that do not match the physician intraservice time.

After consideration of the public comments, we are maintaining the CY 2018 work RVUs for the codes in the X-Ray Spine family of codes. We are finalizing the direct PE inputs for these codes as proposed.

(32) X-Ray Sacrum (CPT Codes 72200, 72202, and 72220)

CPT code 72220 (Radiologic examination, sacrum and coccyx, minimum of 2 views) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT codes 72200 (Radiologic examination, sacroiliac joints; less than 3 views) and 72202 (Radiologic examination, sacroiliac joints; 3 or more views) were also included for review as part of the same family of codes. See (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120) for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we proposed to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the X-Ray Sacrum family of codes.

Comment: Comments regarding our proposed work RVU for this family of codes were similar to those discussed in (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120).

Response: As discussed above, we are maintaining the CY 2018 work RVUs for each code in this family as follows: Work RVU of 0.17 for CPT code 72200, 0.19 for CPT Code 72202, and 0.17 for CPT code 72220.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the basic radiology room (EQ137) equipment, we removed the clinical labor for the CA030 clinical labor activity in accordance with our standard equipment time formula for highly technical equipment.

After consideration of the public comments, we are maintaining the CY 2018 work RVUs for the codes in the X-Ray Sacrum family of codes. We are finalizing the direct PE inputs for these codes as proposed.

(33) X-Ray Elbow-Forearm (CPT Codes 73070, 73080, and 73090)

CPT codes 73070 (Radiologic examination, elbow; 2 views) and 73090 (Radiologic examination; forearm, 2 views) were identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 73080 (Radiologic examination, elbow; complete, minimum of 3 views) was also included for review as part of the same family of codes. See (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120) above for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we proposed to refine the equipment time for the

basic radiology room (EL012) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the X-Ray Elbow-Forearm family of codes.

Comment: Comments regarding our proposed work RVU for this family of codes were similar to those discussed in (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120).

Response: As discussed above, we are maintaining the CY 2018 work RVUs for each code in this family as follows: Work RVU of 0.15 for CPT code 73070, 0.17 for CPT code 73080, 0.17 for CPT code 73090.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the basic radiology room (EQ137) equipment, we removed the clinical labor for the CA030 clinical labor activity in accordance with our standard equipment time formula for highly technical equipment.

After consideration of the public comments, we are maintaining the CY 2018 work RVUs for the codes in the X-Ray Elbow-Forearm family of codes. We are finalizing the direct PE inputs for these codes as proposed.

(34) X-Ray Heel (CPT Code 73650)

CPT code 73650 (Radiologic examination; calcaneus, minimum of 2 views) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. See (31) X-Ray Spine above for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we proposed to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 73650.

Comment: Comments regarding our proposed work RVU for this code were similar to those discussed in (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120).

Response: As discussed above, we are maintaining the CY 2018 work RVU of 0.16 for CPT code 73650.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the basic radiology room (EQ137) equipment, we removed the clinical labor for the CA030 clinical labor activity in accordance with our standard equipment time formula for highly technical equipment.

After consideration of the public comments, we are maintaining the CY 2018 work RVUs for the codes in the X-Ray Heel family of codes. We are finalizing the direct PE inputs for these codes as proposed.

(35) X-Ray Toe (CPT Code 73660)

CPT code 73660 (Radiologic examination; toe(s), minimum of 2 views) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. See (31) X-Ray Spine above for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we proposed to add a patient gown (SB026) supply to CPT code 73660. We noted that the other codes in related X-ray code families that included clinical labor time for the ''Greet patient, provide gowning, ensure appropriate medical records are available'' (CA009) task included a patient gown, and we proposed to add the patient gown to match the other codes in these families. We also proposed to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 73660.

Comment: Comments regarding our proposed work RVU for this code were similar to those discussed in (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120).

Response: As discussed above, we are maintaining the CY 2018 work RVU of 0.13 for CPT code 73660.

Comment: Several commenters stated that the typical patient for this service would not require a patient gown. Commenters stated that this was different than other codes in the family where the patient may need to be rotated lateral and prone for different views.

Response: We appreciate the feedback from the commenters. In light of the information supplied by commenters, we will not finalize our proposal to add a patient gown (SB026) supply to CPT code 73660.

Comment: One commenter stated that CMS did not indicate what amount of service period time was removed from the calculation of the equipment time, and that this made it difficult to determine the accuracy of the refinements. The commenter requested more information about this change.

Response: For the basic radiology room (EQ137) equipment, we removed the clinical labor for the CA030 clinical labor activity in accordance with our standard equipment time formula for highly technical equipment.

After consideration of the public comments, we are maintaining the CY 2018 work RVUs for the codes in the X-Ray Toe family of codes. We are finalizing the direct PE inputs as proposed with the exception of the patient gown (SB026) supply as detailed above.

(36) X-Ray Esophagus (CPT Codes 74210, 74220, and 74230)

CPT code 74220 (Radiologic examination; esophagus) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT codes 74210 (Radiologic examination; pharynx and/or cervical esophagus) and 74230 (Swallowing function, with cineradiography/videoradiography) were also included for review as part of the same family of codes.

We proposed the work RVUs recommended by the RUC for the CPT codes in this family as follows: A work RVU 0.59 for CPT code 74210 (Radiologic examination; pharynx and/or cervical esophagus), a work RVU of 0.67 for CPT code 74220 (Radiologic examination; esophagus), and a work RVU of 0.53 for CPT code 74230 (Swallowing function, with cineradiography/videoradiography).

For the direct PE inputs, we noted that the recommended quantity of the Polibar barium suspension (SH016) supply is increasing from 1 ml to 150 ml for CPT code 74210 and 100 ml are being added to CPT code 74220, which did not previously include this supply. The RUC recommendation states that this supply quantity increase is due to clinical necessity, but does not go into further details about the typical use of the supply. Although we did not propose to refine the quantity of the Polibar barium suspension at this time, we solicited additional comment about the typical use of the supply in these procedures. We also proposed to refine the equipment times for all three codes in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our

proposals involving the X-Ray Esophagus family of codes.

Comment: We received no specific comments regarding our proposals for work RVUs in this family.

Response: As a result, we are finalizing a work RVU of 0.59 for CPT code 74210, a work RVU of 0.67 for CPT code 74220, and a work RVU of 0.53 for CPT code 74230 as proposed.

Comment: Several commenters responded to the comment solicitation about the typical use of the Polibar barium suspension (SH016) supply in these procedures. Commenters stated that the barium suspension quantity listed for CPT code 74210 prior to review was only 1 ml which appeared to be a technical error in mistaking number of milliliters for number of items, as this was an insufficient quantity of barium for the procedure. Commenters stated that CPT code 74220 did not have barium suspension listed as a supply item, which appeared to be an oversight. The commenters described how the patient swallows a small quantity of high density barium to outline the esophagus, followed by multiple subsequent swallows of normal density barium that are assessed under fluoroscopy from different angles to evaluate the esophageal anatomy and mucosa.

Response: We appreciate the additional details provided by the commenters regarding the use of the Polibar barium suspension (SH016) supply, and the clarification that the previous supply quantities in these procedures appear to have been in error.

After consideration of the public comments, we are finalizing the work RVU and the direct PE inputs for the codes in the X-Ray Esophagus family of codes as proposed.

(37) X-Ray Urinary Tract (CPT Code 74420)

CPT code 74420 (Urography, retrograde, with or without KUB) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. We proposed the RUC-recommended work RVU of 0.52 for CPT code 74420 (Urography, retrograde, with or without KUB).

For the direct PE inputs, we proposed to remove the 1 minute of clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity. The clinical labor time recommended for this activity is not included in the reference code, nor is it included in any of the two dozen other X-ray codes that were reviewed at the same RUC meeting. There is also no explanation in the recommended materials as to why this clinical labor time would need to be added. We do not believe that this clinical labor would be typical for CPT code 74420, and we proposed to remove it to match the rest of the X-ray codes. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 74420.

Comment: We received no specific comments regarding our proposal for the work RVU for CPT code 74420.

Response: We are finalizing a work RVU of 0.52 for CPT code 74420.

Comment: Several commenters disagreed with the proposal to remove the 1 minute of clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity. The commenters stated that this service was distinct from the other X-ray services reviewed during this cycle and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT code 74420, we are finalizing these clinical labor refinements as proposed as there is no clinical labor assigned to the ''Review patient clinical extant information and questionnaire'' (CA007) activity. We also note that commenters did not provide a rationale as to what made CPT code 74420 distinct from the other X-ray services reviewed during this cycle and would justify this additional clinical labor time.

After consideration of the public comments, we are finalizing the work RVU and the direct PE inputs for CPT code 74420 as proposed.

(38) Fluoroscopy (CPT Code 76000)

CPT code 76000 (Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 76001 (Fluoroscopy, physician or other qualified health care professional time more than 1 hour, assisting a nonradiologic physician or other qualified health care professional) was also included for review as part of the same family of codes. However, due to the fact that supervision and interpretation services have been increasingly bundled into the underlying procedure codes, the RUC concluded that this practice is rare, if not obsolete, and CPT code 76001 was recommended for deletion by the CPT Editorial Panel for CY 2019.

We proposed the RUC-recommended work RVU of 0.30 for CPT code 76000 (Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time, other than 71023 or 71034 (*e.g.,* cardiac fluoroscopy)). For the direct PE inputs, we proposed to refine the equipment times in accordance with our standard equipment time formulas.

We did not receive specific comments regarding our proposals for CPT code 76000. We are finalizing a work RVU of 0.30 and the direct PE inputs for CPT code 76000 as proposed.

(39) Echo Exam of Eye Thickness (CPT Code 76514)

CPT code 76514 (Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard-valued and CMS/Other source codes.

For CPT code 76514, we disagreed with the RUC-recommended work RVU of 0.17 and we proposed a work RVU of 0.14. We noted that the recommended intraservice time for CPT code 76514 is decreasing from 5 minutes to 3 minutes (40 percent reduction), and the recommended total time for CPT code 76514 is decreasing from 15 minutes to 5 minutes (67 percent reduction); however, the RUC-recommended work RVU is not decreasing at all and remains at 0.17. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs.

We also noted that the RUC recommendations for CPT code 76514 stated that, although the steps in the procedure are unchanged since it was first valued, the workflow has changed. With the advent of smaller and easier to use pachymeters, the technician now typically takes the measurements that used to be taken by the practitioner for CPT code 76514, and the intraservice time was reduced by two minutes to account for the technician performing this service. We believe that this change in workflow indicates that the work RVU for the code should be reduced in some fashion, since some of the work

that was previously done by the practitioner is now typically performed by the technician. We have no reason to believe that there is more intensive cognitive work being performed by the practitioner after these measurements are taken since the recommendations indicated that the steps in the procedure are unchanged since this code was first valued.

Therefore, we proposed a work RVU of 0.14 for CPT code 76514, which is based on taking half of the intraservice time ratio. We considered applying the intraservice time ratio to CPT code 76514, which would reduce the work RVU to 0.10 based on taking the change in intraservice time (from 5 minutes to 3 minutes) and multiplying this ratio of 0.60 times the current work RVU of 0.17. However, we recognized that the minutes shifted to the clinical staff were less intense than the minutes that remained in CPT code 76514, and therefore, we applied half of the intraservice time ratio for a reduction of 0.03 RVUs to arrive at a proposed work RVU of 0.14. We believe that this proposed value more accurately takes into account the changes in workflow that have caused substantial reductions in the surveyed work time for the procedure.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving CPT code 76514.

Comment: Many commenters disagreed with the proposed work RVU of 0.14 for CPT code 76514 and stated that CMS should finalize the RUC-recommended work RVU of 0.17. Commenters stated that using an approach that takes a fraction of the intraservice time ratio in lieu of strong crosswalks and input from the RUC and physicians providing these services is unfounded. Commenters restated the key reference codes chosen by the survey participants and urged CMS to use survey data and supportive relative reference services when valuing services.

Response: We disagree with the commenters and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. (As an example, CPT codes 38222, 54231, 55870, 75573, and 78814 all share identical CY 2019 work times with 15 minutes of preservice time, 30 minutes of intraservice time, and 15 minutes of postservice time; however these codes have respective CY 2019 work RVUs of 1.44, 2.04, 2.58, 2.55, and 2.20.) Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277). We also note that in the case of CPT code 76514, we recognized that the minutes shifted to the clinical staff were less intense than the minutes that remained in CPT code 76514, and therefore, we applied only half of the intraservice time ratio instead of the full ratio.

Comment: Several commenters stated that while it is true that changes in workflow as a result of smaller, portable, easier to use pachymeters now mean that the technician typically takes the measurements that used to be taken by the physician, the remaining 3 minutes of intraservice work time reflect the more intense cognitive work performed by the physician after the measurements are taken. Commenters agreed that the procedure has not fundamentally changed and that maintaining a work RVU of 0.17 was warranted.

Response: We disagree with the commenters and continue to believe that CPT code 76514 does not require more intensive cognitive work being performed by the practitioner after these measurements are taken, since the recommendations indicated that the steps in the procedure are unchanged since this code was first valued. While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique, and we believe that for CPT code 76514 the latter case is true since the same work previously carried out by the practitioner is now being carried out by the technician.

After consideration of the public comments, we are finalizing the work RVU and the direct PE inputs for CPT code 76514 as proposed.

(40) Ultrasound Elastography (CPT Codes 76981, 76982, and 76983)

In September 2017, the CPT Editorial Panel created three new codes describing the use of ultrasound elastography to assess organ parenchyma and focal lesions: CPT codes 76981 (Ultrasound, elastography; parenchyma), 76982 (Ultrasound, elastography; first target lesion) and 76983 (Ultrasound, elastography; each additional target lesion). The most common use of this code set will be for preparing patients with disease of solid organs, like the liver, or lesions within solid organs.

The RUC recommended a work RVU of 0.59 for CPT code 76981 (Ultrasound, elastography; parenchyma (*e.g.,* organ)), a work RVU of 0.59 for CPT code 76982 (Ultrasound, elastography; first target lesion), and a work RVU of 0.50 for add-on CPT code 76983 (Ultrasound, elastography; each additional target lesion). We are proposing the RUC-recommended work RVUs for each of these new CPT codes.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes for CPT codes 76981 and 76982. CPT code 76700 (Ultrasound, abdominal, real time with image documentation; complete), the reference code for these two new codes, did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we do not have any reason to believe that these particular services being furnished by the clinical staff have changed in the new codes, only the way in which this clinical labor time has been presented on the PE

worksheets. We also noted that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished in CPT codes 76981 and 76982. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Ultrasound Elastography family of codes.

Comment: Several commenters expressed support for our proposed work RVUs for each of the three CPT codes in this family.

Response: We appreciate the support of commenters.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for CPT codes 76981 and 76982, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT codes 76981 and 76982, we are not finalizing these clinical labor refinements as proposed, as these codes have the ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'' task in predecessor CPT code 76700 on the old PE worksheet as well as 1 minutes of CA007 clinical labor time. We are instead finalizing the RUC-recommended clinical labor times for CA013 and CA014 for CPT codes 76981 and 76982. We are also not finalizing our refinements to the corresponding equipment times as a result.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the Ultrasound Elastography family of codes as proposed: 0.59 work RVUs for CPT code 76981, 0.59 work RVUs for CPT code 76982, and 0.50 work RVUs for CPT code 76983. We are not finalizing our proposed direct PE inputs and are instead finalizing the RUC-recommended direct PE inputs for these three codes.

(41) Ultrasound Exam—Scrotum (CPT Code 76870)

CPT code 76870 (Ultrasound, scrotum and contents) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. We proposed a work RVU of 0.64 for CPT code 76870 (Ultrasound, scrotum and contents), as recommended by the RUC.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes. CPT code 76870 did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we did not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also noted that there was no effect on the total clinical labor direct costs in these situations since the same 3 minutes of clinical labor time is still being furnished under the CA013 room preparation activity. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 76870.

Comment: We received general support from commenters for our proposed work RVU of 0.64 for CPT code 76870, as recommended by the RUC.

Response: We thank commenters for their support.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for CPT code 76870, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT code 76870, we are finalizing these clinical labor refinements as proposed.

After consideration of the public comments, we are finalizing the work RVU of 0.64 and direct PE inputs for CPT code 76870 as proposed.

(42) Contrast-Enhanced Ultrasound (CPT Codes 76978 and 76979)

In September 2017, the CPT Editorial Panel created two new CPT codes describing the use of intravenous microbubble agents to evaluate suspicious lesions by ultrasound. CPT code 76978 (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion) is a stand-alone procedure for the evaluation of a single target lesion. CPT code 76979 (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection) is an add-on code for the evaluation of each additional lesion.

The two new CPT codes in this family represent a new technology that involves the use of intravenous microbubble agents to evaluate suspicious lesions by ultrasound. The first new CPT code 76978 (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion), is the base code for the new add-on CPT code 76979 (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection). The RUC reviewed the survey results for CPT code 76978 and recommended total time of 30 minutes and intraservice time of 20 minutes. Their recommendation for a work RVU of 1.62 is based neither on the median of the survey results (1.82) nor the 25th percentile of the survey results (1.27). Instead, the RUC-recommended work RVU is based on a crosswalk to CPT code 73719 (Magnetic resonance (*e.g.,* proton) imaging, lower extremity other than joint; with contrast material(s)), which has identical intraservice and total times as the survey CPT code. The RUC also identified a comparison CPT code (CPT code 73222 (Magnetic resonance (*e.g.,* proton) imaging, any joint of upper extremity; with contrast material(s)) with work RVU 1.62 and similar times. For add-on CPT code 76979, the RUC recommended a work RVU of 0.85, which is the 25th percentile of survey results, with total and intraservice times of 15 minutes.

Although we generally agree that, particularly in instances where a CPT code represents a new technology or procedure, there may be reason to deviate from survey metrics, we are confused by the logic behind the RUC's recommendation of a work RVU of 1.62 for CPT code 76978. When we considered the range of existing CPT codes with 30 minutes total time and 20 minutes intraservice time, we noted that a work RVU of 1.62 is among the highest potential crosswalks. We also noted that the RUC agreed with the 25th percentile of survey results for the new add-on CPT code, 76979, and we did not see

why the 25th percentile would not also be appropriate for the base CPT code, 76978. Therefore, we proposed a work RVU of 1.27 for CPT code 76978. We identified two CPT codes with total time of 30 minutes and intraservice time of 20 minutes that bracket the proposed work RVU of 1.27: CPT code 93975 (Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; complete study) has a work RVU of 1.16, and CPT code 72270 (Myelography, 2 or more regions (*e.g.,* lumbar/thoracic, cervical/thoracic, lumbar/cervical, lumbar/thoracic/cervical), radiological supervision and interpretation) has a work RVU of 1.33. We proposed the RUC-recommended work RVU of 0.85 for add-on CPT code 76979.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes for CPT code 76978. CPT codes 76700 (Ultrasound, abdominal, real time with image documentation; complete) and 76705 (Ultrasound, abdominal, real time with image documentation; limited), the reference codes for this new code, did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we did not have any reason to believe that these particular services being furnished by the clinical staff have changed in the new code, only the way in which this clinical labor time has been presented on the PE worksheets. We also noted that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished in CPT code 76978.

We proposed to remove the 50 ml of the phosphate buffered saline (SL180) for CPT codes 76978 and 76979. When these codes were reviewed by the RUC, the conclusion that was reached was to remove this supply and replace it with normal saline. Since the phosphate buffered saline remained in the recommended direct PE inputs, we believe its inclusion may have been a clerical error. We proposed to remove the supply and solicited comments on the phosphate buffered saline or a replacement saline solution. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Contrast-Enhanced Ultrasound family of codes.

Comment: Commenters were supportive of our proposed work RVU of 0.85 for CPT code 76979, as recommended by the RUC.

Response: We thank the commenters for their support of our proposal regarding the work RVU for this CPT code.

Comment: A few commenters expressed opposition to our proposed work RVU of 1.27 for new CPT code 76978. Commenters acknowledged that the code is valued at the high end of the range of values for a given intraservice time. However, they stated, being on the high end of a range of comparison codes is not necessarily in itself a reason to reduce the work RVU. They cite this as an illustration of CMS's discounting the importance of intensity in valuing physician services in favor of considering only time. The same commenters also noted that the new technology used in furnishing the service, Contrast Enhanced Ultrasound (CEUS), requires more technical skill and time than other established ultrasound services.

Response: Our observation that a survey code is on the high end of codes on the PFS with similar intraservice and total times is only one among several factors we consider when we perceive that the code is not properly valued in relation to other similar codes. We agree that there are instances in which valuing a code at the high range of work RVUs for codes with similar times is appropriate. However, on the whole, if a recommended work RVU places the code on the very high end of work RVUs with similar time parameters, we expect that the code would be of notably higher intensity than most other codes with those time parameters. We were not convinced that this was the case with CPT code 76978.

We were, however, persuaded by commenters that the higher technical skill and time involved in using the new technology, CEUS, compared with other established ultrasound services, is better reflected by the RUC's recommended work RVU than our proposed value. Consequently we are finalizing the RUC-recommended work RVU of 1.62 for CPT code 76978.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for CPT code 76978, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT code 76978, we are not finalizing these clinical labor refinements as proposed, as this code has the ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'' task in predecessor CPT code 76700 on the old PE worksheet as well as 1 minutes of CA007 clinical labor time. We are therefore finalizing the RUC-recommended clinical labor times for CA013 and CA014 for CPT code 76978. We are also not finalizing our refinements to the corresponding equipment times as a result.

Comment: Several commenters disagreed with the proposal to remove the 50 ml of the phosphate buffered saline (SL180) for CPT codes 76978 and 76979. Commenters stated that the SL180 supply can be replaced with ''normal saline'', however the change was not made because an appropriate replacement could not be identified. Commenters stated that the SL180 phosphate buffered saline (PBS) had been removed but ''normal saline'' has not replaced it. Commenters agreed that this change was appropriate and urged CMS to add the correct supply item for the appropriate type of saline.

Response: We disagree with the commenters that the ''normal saline'' was not added to these procedures. Both of these CPT codes include the ''sodium chloride 0.9% inj bacteriostatic (30ml uou)'' (SH068) supply which would function as a form of normal saline. We do not believe that it would be typical for these procedures to contain 50 ml of the phosphate buffered saline (SL180) in addition to the ''normal saline'' described by the SH068 supply.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs for both codes in this family as follows: Work RVU of 0.85 for CPT code 76979 and a work RVU of 1.62 for CPT code 76978. We are also finalizing the RUC-recommended direct PE inputs for these codes, with the exception of the refinement to the phosphate buffered saline (SL180) supply as detailed above.

(43) Magnetic Resonance Elastography (CPT Code 76391)

The CPT Editorial Panel created new stand-alone CPT code 76391 describing the use of magnetic resonance elastography for the evaluation of organ parenchymal pathology. This code will most often be used to evaluate patients

with disease of solid organs (for example, cirrhosis of the liver) or pathology within solid organs that manifest with increasing fibrosis or scarring. The goal with magnetic resonance elastography is to evaluate the degree of fibrosis/scarring (that is, stiffness) without having to perform more invasive procedures (for example, biopsy). This technique can be used to characterize the severity of parenchymal disease, follow disease progression, or response to therapy.

The RUC recommended a work RVU for new CPT code 76391 (Magnetic resonance (*e.g.,* vibration) elastography) of 1.29, with 15 minutes of intraservice time and 25 minutes of total time. The recommendation is based on a comparison with two reference CPT codes, CPT code 74183 (Magnetic resonance (*e.g.,* proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences) with total time of 40 minutes, intraservice time of 30 minutes, and a work RVU of 2.20; and CPT code 74181 (Magnetic resonance (*e.g.,* proton) imaging, abdomen; without contrast material(s)), which has a total time of 30 minutes, intraservice time of 20 minutes, and a work RVU of 1.46. The RUC stated that both reference CPT codes have higher work values than the new CPT code, which is justified in both cases by higher intra-service times. They noted that, despite shorter intraservice and total time, CPT code 76391 is slightly more intense to perform due to the evaluation of wave propagation images and quantitative stiffness measures. We did not agree with the RUC's recommended work RVU for this CPT code. Using the RUC's two top reference CPT codes as a point of comparison, the intraservice time ratio in both instances suggests that a work RVU closer to 1.10 would be more appropriate. We recognize that the RUC believes the new CPT code is slightly more intense to furnish, but we are concerned about the relativity of this code in comparison with other imaging procedures that have similar intraservice and total times. Instead of the RUC-recommended work RVU of 1.29 for CPT code 76391, we proposed a work RVU of 1.10, which is based on a direct crosswalk to CPT code 71250 (Computed tomography, thorax; without contrast material). CPT code 71250 has identical intraservice time (15 minutes) and total time (25 minutes) compared to CPT code 76391, and we believe that the work involved in furnishing both services is similar. We note that CPT code 76391 describes a new technology and will be reviewed again by the RUC in 3 years.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity from 6 minutes to 5 minutes, and for the ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity from 4 minutes to 3 minutes. We disagreed that this additional clinical labor time would be typical for these activities, which are already above the standard times for these tasks. In both cases, we proposed to maintain the current time from the reference CPT code 72195 (Magnetic resonance (*e.g.,* proton) imaging, pelvis; without contrast material(s)) for these clinical labor activities. We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 76391.

Comment: A commenter stated that CMS misunderstood the role of reference CPT codes in the RUC's valuation process, and therefore our proposed work RVU for CPT code 76391 is premised on a false time comparison and a methodology that is invalid.

Response: In the materials provided to us, the RUC explicitly compared the two key reference services to CPT 76391 and stated that the higher work values for these codes are justified by higher intraservice times. The RUC did not provide a crosswalk code for CPT 76391. Because of the RUC's justification of the higher work RVUs in the reference services in relation to the higher intraservice times for these codes, and because the RUC did not provide a crosswalk CPT code for us to review, we believe it is an entirely appropriate methodology to calculate the intraservice time ratios using those reference codes. We acknowledged that the survey code is slightly more intense to perform than the reference codes, according to the RUC's SOR, which is why our calculation of intraservice time ratios is only a starting point in our review of the code's recommended work RVU. We considered the intraservice time ratios for both reference codes, which were not identical, and compared these values to other CPT codes in the PFS with similar intraservice and total times. For this particular CPT code 76391, we identified a crosswalk to CPT code 71250, which, as we stated, achieved an overall balance of similar times and similar intensity as the survey code and has a work RVU of 1.10.

Comment: Some commenters stated that our proposed value of 1.10 work RVUs for CPT code 76391 creates a rank order anomaly between an MRI code and CPT code, CPT code 74160.

Response: We do not agree that our proposed work RVU of 1.10 for this code creates a rank order anomaly between an MRI code and CT code because this service is described as being unlike a routine magnetic resonance imaging. This service also involves use of a new technology, which makes it difficult to compare directly to services involving magnetic resonance imaging. We are finalizing a work RVU of 1.10 for CPT code 76391.

Comment: One commenter agreed with the refinements to the direct PE inputs.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing the work RVU of 1.10 and the direct PE inputs for CPT code 76391 as proposed.

(44) Computed Tomography (CT) Scan for Needle Biopsy (CPT Code 77012)

CPT code 77012 (Computed tomography guidance for needle placement (*e.g.,* biopsy, aspiration, injection, localization device), radiological supervision and interpretation) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually.

We proposed the RUC-recommended work RVU of 1.50 for CPT code 77012 (Computed tomography guidance for needle placement (*e.g.,* biopsy, aspiration, injection, localization device), radiological supervision and interpretation).

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes. CPT code 77012 did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we did not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also noted that there is no effect on the total clinical labor direct costs in these situations since the same 3 minutes of clinical labor time is still being furnished under the CA013 room preparation activity.

We proposed to refine the equipment time for the CT room (EL007) to maintain the current time of 9 minutes. CPT code 77012 is a radiological supervision and interpretation

procedure and there has been a longstanding convention in the direct PE inputs, shared by 38 other codes, to assign an equipment time of 9 minutes for the equipment room in these procedures. We do not believe that it would serve the interests of relativity to increase the equipment time for the CT room in CPT code 77012 without also addressing the equipment room time for the other radiological supervision and interpretation procedures. Therefore, we proposed to maintain the current equipment room time of 9 minutes until this group of procedures can be subject to a more comprehensive review. We also proposed to refine the equipment time for the Technologist PACS workstation (ED050) in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving CPT code 77012.

Comment: We received support from a few commenters for our proposed work RVU for CPT code 77012, as recommended by the RUC.

Response: We appreciate commenters' support. We are finalizing a work RVU of 1.50 for CPT code 77012.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for CPT code 77012 CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT code 77012, we are finalizing these clinical labor refinements as proposed.

Comment: Several commenters disagreed with the proposal to refine the equipment time for the CT room (EL007) to maintain the current time of 9 minutes. Commenters stated that the room time is included in CT guidance, as it is in US guidance (such as in CPT code 76942) because that is the room the procedure is performed in. Commenters stated that they agreed with CMS that other RS&I codes use the 9 minutes for room time as a precedent, but this was specific to angiographic rooms and referred to language from 2013 regarding angiographic rooms.

Response: We disagree with the commenters regarding the equipment time for the CT room (EL007) due to the longstanding convention in the direct PE inputs, shared by 38 other codes, to assign an equipment time of 9 minutes for the equipment room in radiological supervision and interpretation procedure. We agree with the commenters that at least some portion of the procedure is performed in the CT room, but we continue to believe that it would not serve the interests of relativity to increase the equipment time for the CT room in CPT code 77012 without also addressing the equipment room time for the other radiological supervision and interpretation procedures in a more comprehensive fashion. We also disagree with the commenters that this policy is specific to angiography rooms, as CPT codes 75989 and 77012 both employ CT rooms and currently utilize the standardized 9 minutes of equipment time for radiological supervision and interpretation procedures.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT code 77012 as proposed.

(45) Dual-Energy X-Ray Absorptiometry (CPT Code 77081)

CPT code 77081 (Dual-energy X-ray absorptiometry (DXA), bone density study, 1 or more sites; appendicular skeleton (peripheral) (*e.g.,* radius, wrist, heel)) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. For CY 2019, we proposed the RUC-recommended work RVU of 0.20 for CPT code 77081.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving CPT code 77081.

Comment: Commenters were supportive of our proposal regarding the work RVU for CPT code 77081.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing the work RVU of 0.20 and direct PE inputs for CPT code 77081 as proposed.

(46) Breast MRI With Computer-Aided Detection (CPT Codes 77046, 77047, 77048, and 77049)

CPT codes 77058 (Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral) and 77059 (Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral) were identified in 2016 on a high expenditure services screen across specialties with Medicare allowed charges of $10 million or more. When preparing to survey these codes, the specialties noted that the clinical indications had changed for these exams. The technology had advanced to make computer-aided detection (CAD) typical and these codes did not parallel the structure of other magnetic resonance imaging (MRI) codes. In June 2017 the CPT Editorial Panel deleted CPT codes 0159T, 77058, and 77059 and created four new CPT codes to report breast MRI with and without contrast (including computer-aided detection).

The RUC recommended a work RVU of 1.45 for CPT code 77046 (Magnetic resonance imaging, breast, without contrast material; unilateral). This recommendation was based on a comparison with CPT codes 74176 (Computed tomography, abdomen and pelvis; without contrast material) and 74177 (Computed tomography, abdomen and pelvis; with contrast material(s)), which both have similar intraservice and total times in relation to CPT code 77046. We disagreed with the RUC's recommended work RVU because we did not believe that the reduction in total time of 15 minutes between the new CPT code 77046 and the deleted CPT code 77058 was adequately reflected in its recommendation. Although total time has decreased by 15 minutes, the only other difference between the two CPT codes is the change in the descriptor from the phrase 'without and/or with contrast material(s)' to 'without contrast material,' suggesting that there is less work involved in the new CPT code than in the deleted CPT code. Instead, we proposed a work RVU of 1.15 for CPT code 77046, which is similar to the total time ratio between the new CPT code and the deleted CPT code. It is also supported by a crosswalk to CPT code 77334 (Treatment devices, design and construction; complex (irregular blocks, special shields, compensators, wedges, molds or casts)). CPT code 77334 has total time of 35 minutes, intraservice time of 30 minutes, and a work RVU of 1.15.

CPT code 77047 (Magnetic resonance imaging, breast, without contrast material; bilateral) describes the same work as CPT code 77046, but reflects a bilateral rather than the unilateral procedure. The RUC recommended a work RVU of 1.60 for CPT code 77047. Since we proposed a different work RVU for the unilateral procedure than the value proposed by the RUC, we believe it is appropriate to recalibrate the work RVU for CPT code 77047 relative to the RUC's recommended difference in work between the two CPT codes. The RUC's recommendation for

the bilateral procedure is 0.15 work RVUs larger than for the unilateral procedure. Therefore, we proposed a work RVU of 1.30 for CPT code 77047.

The RUC recommended a work RVU of 2.10 for CPT code 77048 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral). CPT code 77048 is a new CPT code that bundles the deleted CPT code for unilateral breast MRI without and/or with contrast material(s) with CAD, which was previously reported, in addition to the primary procedure CPT code, as CPT code 0159T (computer aided detection, including computer algorithm analysis of MRI image data for lesion detection/characterization, pharmacokinetic analysis, with further physician review for interpretation, breast MRI). Consistent with our belief that the proposed value for the base CPT code in this series of new CPT codes (CPT code 77046) should be a work RVU of 1.15, we are proposing a work RVU for CPT code 77048 that adds the RUC-recommended difference in RUC-recommended work RVUs between CPT codes 77046 and 77048 (0.65 work RVUs) to the proposed work RVU for CPT code 77046. Therefore, we proposed a work RVU of 1.80 for CPT code 77048.

The last new CPT code in this series, CPT code 77049 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmoacokinetic analysis) when performed; bilateral) describes the same work as CPT code 77048, but reflects a bilateral rather than a unilateral procedure. The RUC recommended a work RVU of 2.30 for this CPT code. Similar to the process for valuing work RVUs for CPT code 77047 and CPT code 77048, we believe that a more appropriate work RVU is calculated by adding the difference in the RUC recommended work RVU for CPT codes 77046 and 77049, to the proposed value for CPT code 77046. Therefore, we proposed a work RVU of 2.00 for CPT code 77049.

For the direct PE inputs, we proposed to refine the clinical labor time for the ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity from 7 minutes to 3 minutes for CPT codes 77046 and 77047, and from 9 minutes to 5 minutes for CPT codes 77048 and 77049. We noted that when the MRI of Lower Extremity codes were reviewed during the previous rule cycle (CPT codes 73718–73720), these codes contained either 3 minutes or 5 minutes of recommended time for this same clinical labor activity. We also noted that the current Breast MRI codes that are being deleted and replaced with these four new codes, CPT codes 77058 and 77059, contain 5 minutes of clinical labor time for this same activity. We had no reason to believe that the new codes would require additional clinical labor time for patient positioning, especially given that the recommended clinical labor times are decreasing in comparison to the reference codes for obtaining patient consent (CA011) and preparing the room (CA013). Therefore, we refined the clinical labor time for the CA016 activity as detailed earlier to maintain relativity with the current clinical labor times in the reference codes, as well as with other recently reviewed MRI procedures.

Included in the recommendations for this code family were five new equipment items: CAD Server (ED057), CAD Software (ED058), CAD Software—Additional User License (ED059), Breast coil (EQ388), and CAD Workstation (CPU + Color Monitor) (ED056). We did not receive any invoices for these five equipment items, and as such we do not have any direct pricing information to use in their valuation. We proposed to use crosswalks to similar equipment items as proxies for three of these new types of equipment until we do have pricing information:

- CAD software (ED058) is crosswalked to flow cytometry analytics software (EQ380).
- Breast coil (EQ388) is crosswalked to Breast biopsy device (coil) (EQ371).
- CAD Workstation (CPU + Color Monitor) (ED056) is crosswalked to Professional PACS workstation (ED053).

We welcomed the submission of invoices with pricing information for these three new equipment items for our consideration to replace the use of these proxies. For the other two equipment items (CAD Server (ED057) and CAD Software—Additional User License (ED059)), we did not propose to establish a price at this time as we believe both of them would constitute forms of indirect PE under our methodology. We do not believe that the CAD Server or Additional User License would be allocated to the use of an individual patient for an individual service, and can be better understood as forms of indirect costs similar to office rent or administrative expenses. We understand that as the PE data age, these issues involving the use of software and other forms of digital tools become more complex. However, the use of new technology does not change the statutory requirement under which indirect PE is assigned on the basis of direct costs that must be individually allocable to a particular patient for a particular service. We look forward to continuing to seek out new data sources to help in updating the PE methodology.

We also proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving the Breast MRI with Computer-Aided Detection (CAD) family of codes.

Comment: A commenter disagreed with our use of deleted CPT code 77058 as a point of reference for considering whether the reduction in work RVU in the new code, CPT code 77046, is commensurate with the reduction in work time between the two codes. The commenter stated that CMS should not compare these new services with the old deleted services, as indicated by the specialty society having demonstrated compelling evidence that the work involved in the breast MRI code family has fundamentally changed.

Response: We disagree that it is inappropriate to use time comparisons with a code that is being deleted as a guide for assessing whether the reduction in work RVU recommended by the RUC is commensurate with the reduction in time based on survey results. The description of the work involved in furnishing CPT code 77046 has not changed substantively from the code being deleted. The compelling evidence that the commenter cites is related to the two new codes, CPT code 77048 and 77049, which are newly bundled with CAD. The main distinction in the description of physician work for this CPT code is that the new code specifies 'without contrast', while the deleted code described the service 'without and/or with contrast.' The change in patient population, also cited by the commenter, actually suggests that the more complex patients will be screened using the advanced technologies, such as is described by CPT code 77048. We recognize that changes in technology and work flow for the work described by CPT code 77046 have affected the work involved in furnishing these services. This is why we use the time ratios as a starting point for code comparisons rather than the end point.

Comment: One commenter stated that our proposed crosswalk code for CPT 77046, CPT code 77334, is inappropriate because of different preservice and intraservice times between the two codes, and because there is more low-

intensity time in CPT code 77334 compared with CPT code 77046. The commenter also indicated that our proposed work RVU for CPT code 77046 would create a rank order anomaly with other MRI codes.

Response: As a matter of principle, we do not agree that a chosen crosswalk for a CPT code is required to be clinically similar or to have identical intraservice and/or total time as the code being valued. However, in this instance, after further consideration, we agree with the commenter that our crosswalk code, CPT 77334, is not a particularly good comparison, in terms of intensity, to CPT 77046. We also agree with the commenter that our proposed work RVU for CPT code 77046 would create an anomaly among other CPT codes involving MRI. We are finalizing a work RVU for CPT code 77046 of 1.45, as recommended by the RUC.

Comment: A commenter disagreed with our use of increments in recalibrating work RVUs for codes that precede or follow a new or revalued CPT code, as was the process underlying our proposed work RVUs for CPT codes 77047, 77048, and 77049.

Response: The recalibration of CPT codes based on incremental difference in the work RVUs recommended by the RUC is an established methodology used by CMS to value the work involved in furnishing a service. There are certain types of code groups, particularly those with clear stepwise changes in intensity, as described by the RUC, for which we believe this is entirely appropriate. We continue to believe that this is an appropriate approach. However, having agreed with the commenter that our proposed work RVU for CPT code 77046 should be finalized at the RUC recommended work RVU of 1.45, we also believe that it is unnecessary to recalibrate the RUC's recommended work RVUs for the remainder of the three codes in the series. Therefore, we are finalizing a work RVU of 1.60 for CPT code 77047, 2.10 for CPT code 77048, and 2.30 for CPT code 77049.

Comment: Several commenters disagreed with the CMS proposal to refine the clinical labor time for the ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity from 7 minutes to 3 minutes for CPT codes 77046 and 77047, and from 9 minutes to 5 minutes for CPT codes 77048 and 77049. Commenters stated that the rationale for this change was likely derived from reference to the lower clinical labor times for this activity associated with lower extremity MRI codes, and that it was an error to treat the clinical labor time for this activity as akin to that for lower extremity MRI. Commenters requested that CMS consider the experience of an 80-year-old patient who needs assistance on and off the table, along with reassurance, added explanation, IV insertion into delicate skin, and other anxiety needs. Commenters stated that another major distinction between breast MRI and extremity MRI is that the patient lies prone on the coil, which requires an awkward process of positioning and causes the need for additional clinical labor time.

Response: We continue to disagree with the commenters that the RUC-recommended clinical labor time would be typical for these procedures. As part of our review, we compared the clinical labor times for the CA016 activity not only to the codes in the MRI of Lower Extremity family, but also to the current Breast MRI codes that are being deleted and replaced with these four new codes. CPT codes 77058 and 77059 contain 5 minutes of clinical labor time for this same activity, and we do not agree that the clinical labor times would be increasing to 7 and 9 minutes in the newly created CPT codes, especially given that commenters did not provide a rationale as to why time would be increasing. We also note that while some patients will have conditions that are more difficult than the typical case, such as the 80-year-old patient described by the commenters, other patients would have conditions that are less difficult than the typical case. We remind the reader that valuation of services under the PFS is based on the typical case and not the most difficult cases that may arise. We further note that the clinical vignette for CPT code 77047 describes a 53-year old female patient, not an 80-year old patient, and was stated to be typical by 96 percent of the survey respondents.

Comment: A commenter stated that in the CMS refinements to the direct PE inputs for these four CPT codes, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor.

Response: We believe that the commenter may have been confused with several of the other code families that included these clinical labor refinements, which we described in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). We did not propose any refinements to the CA014 clinical labor for the codes in this family.

Comment: Several commenters requested that CMS add 5 minutes to CPT codes 77048 and 77049 to account for the time required to obtain vital signs. Commenters stated that to maintain consistency within the codes for MRI with contrast, they requested that new codes for breast MRI with contrast receive an additional two minutes of time for MRI technologist (L047A) bringing the total time for obtain vital signs to 5 minutes.

Response: We proposed in CY 2018 to assign 5 minutes of clinical labor time for all codes that include the ''Obtain vital signs'' task, that included at least 1 minute previously assigned to this task regardless of the date of last review. After considering the comments, we did not finalize our proposal to establish 5 minutes as the new standard for the ''Obtain vital signs'' clinical labor task. As a result, we do not agree with the commenters that the clinical labor time for the CA010 activity should be increased to 5 minutes for CPT codes 77048 and 77049, especially given that we did not make a proposal to do so. We refer readers to the CY 2018 PFS final rule (82 FR 52990–52991) for additional details about last year's proposal on this issue.

Comment: One commenter requested that CMS assign additional clinical labor time for MRI procedures with contrast in order to account for time spent counseling patients. Commenters stated that because of the increased public awareness of the risk relating to gadolinium, additional time is required to explain the benefits and risks of the procedure.

Response: We note that the MRI procedures in this family that are done with contrast (CPT codes 77048 and 77049) already contain more clinical labor than the MRI procedures that are done without contrast (CPT codes 77046 and 77047). Specifically, these procedures already contain two additional minutes for ''Provide education/obtain consent'' (CA011) clinical labor than the non-contrast versions of the procedures, which we believe indicates that the concerns of the commenters have been taken into account.

Comment: Several commenters stated that the lack of invoices for the new equipment items may have been an oversight and enclosed new invoices with their comment letter. Commenters also stated that the CAD Software equipment (ED058) is actually synonymous with the ''breast biopsy software'' (EQ370) equipment, and recognized that in hindsight they should

have been consistent in identifying the equipment item between the breast biopsy codes and the MR breast codes. One commenter disagreed that the CAD Server or Additional User License equipment constituted forms of direct PE, and requested that CMS consider the cost of CAD service contracts and ''C-view'' costs in order to accurately access the calculation of indirect practice expenses.

Response: We appreciate the submission of additional invoices from the commenters to assist in pricing these new equipment items. As we detailed in the Practice Expense portion of this final rule (section II.B. of this final rule), we are finalizing an update in the price of the CAD Software (ED058) equipment to $43,308.12 based on the new invoice submission and additional review by the StrategyGen contractor. We are also finalizing a price of $83,200 for the Breast coil (EQ388) equipment and a price of $12,031.52 for the CAD Workstation (CPU + Color Monitor) (ED056) based on the invoices submitted by the commenters. For the other two equipment items (CAD Server (ED057) and CAD Software—Additional User License (ED059)), we continue to believe that both of them would constitute forms of indirect PE under our methodology. The submitted invoices indicated that the CAD Server was a server type used in a data center while the user license was for a third license above and beyond the two licenses included in the price of the CAD software. As we stated in the proposed rule, we do not believe that these types of equipment would be allocated to the use of an individual patient for an individual service, and can be better understood as forms of indirect costs similar to office rent or administrative expenses.

Comment: Several commenters stated that CMS had overstated the useful life of a breast coil. The commenters stated that a coil will start to display signs of wear, such as cracking of its case, flex spots, exposed wiring, or a degradation of its attenuated field causing a loss in image quality after about three to four years. Commenters stated that a useful life of 5 years would be more appropriate and consistent with the experience of their members.

Response: We appreciate the additional information regarding the useful life of the breast coil equipment from the commenters. Our proposal to use 10 years as the useful life for this new equipment was based on our use of the breast biopsy device (EQ371) equipment as a proxy. We agree with the commenters that it would be more accurate to update the useful life to 5 years in light of this new information.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs for the codes in the Breast MRI with Computer-Aided Detection family of codes. We are finalizing the direct PE inputs as proposed, with the updates to the pricing of the new equipment as detailed above.

(47) Blood Smear Interpretation (CPT Code 85060)

CPT code 85060 (Blood smear, peripheral, interpretation by physician with written report) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. For CY 2019, the RUC recommended a work RVU of 0.45 based on maintaining the current work RVU.

We disagreed with the recommended value and proposed a work RVU of 0.36 for CPT code 85060 based on the total time ratio between the current time of 15 minutes and the recommended time established by the survey of 12 minutes. This ratio equals 80 percent, and 80 percent of the current work RVU of 0.45 equals a work RVU of 0.36. When we reviewed CPT code 85060, we found that the recommended work RVU was higher than nearly all of the other global XXX codes with similar time values, and we do not believe that this blood smear interpretation procedure would have an anomalously high intensity. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 85060, we believe that it would be more accurate to propose the total time ratio at a work RVU of 0.36 to account for these decreases in the surveyed work time.

The proposed work RVU was also based on the use of three crosswalk codes. We directly supported the proposed valuation through a crosswalk to CPT code 95930 (Visual evoked potential (VEP) checkerboard or flash testing, central nervous system except glaucoma, with interpretation and report), which has a work RVU of 0.35 along with 10 minutes of intraservice time and 14 minutes of total time. We also explained the proposed valuation by bracketing it between two other crosswalks, with CPT code 99152 (Moderate sedation services provided by the same physician or other qualified health care professional performing the diagnostic or therapeutic service that the sedation supports; initial 15 minutes of intraservice time, patient age 5 years or older) on the lower end at a work RVU of 0.25 and CPT code 93923 (Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels, or single level study with provocative functional maneuvers) on the higher end at a work RVU of 0.45.

The RUC recommended no direct PE inputs for CPT code 85060 and we proposed none.

The following is a summary of the public comments we received on our proposals involving CPT code 85060.

Comment: Many commenters disagreed with the proposed work RVU of 0.36 for CPT code 85060 and stated that CMS should finalize the RUC-recommended work RVU of 0.45. Commenters stated that a time ratio should not be used because any decrease will result in a large ratio and a corresponding but inappropriate decrease to the physician work RVU. Commenters stated that rather than using time ratios CMS should examine the magnitude estimation between the physician work, time, and intensity. Commenters also stated that the current time was not based on a survey and it was unclear how the time was determined.

Response: We disagree with the commenters and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since the statute explicitly identifies time as one of the two elements of the work RVUs. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual

procedures. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. (As an example, CPT codes 38222, 54231, 55870, 75573, and 78814 all share identical CY 2019 work times with 15 minutes of preservice time, 30 minutes of intraservice time, and 15 minutes of postservice time; however these codes have respective CY 2019 work RVUs of 1.44, 2.04, 2.58, 2.55, and 2.20.) Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

Comment: Several commenters disagreed with our statement that the recommended work value of 0.45 is higher than nearly all of the other global XXX codes with similar time values. Commenters stated that a search of the RUC database contradicted this finding, showing that eleven XXX codes with 12 minutes of intraservice time have values lower than 0.45 and thirteen XXX codes with 12 minutes of intraservice time have values the same or higher than 0.45 RVUs. Commenters stated that none of these services are pathology services and were not comparable, except for CPT code 88388 (Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies (*e.g.,* nucleic acid-based molecular studies)) which has identical work value and intra-service time and was the reference code cited in the RUC recommendation. Commenters also disagreed with the CMS crosswalk to CPT code 95930 due to the fact that it is not a pathology service.

Response: We disagree with the commenters' statement that pathology services are only comparable to other pathology services. Although we agree that the unique nature of pathology and laboratory services can make comparisons across codes more difficult than in other services, we believe the comparison of codes with similar work RVUs across different specialties is important to maintaining the relativity of the PFS. We disagree with the commenters that the crosswalk to CPT code 95930 would be methodologically inappropriate solely on the grounds that it is not a pathology service.

Comment: Several commenters stated that there are a number of variables that must be considered in the evaluation of a blood smear when compared to others, including red blood cell count, size and morphology, platelet morphology and number, white blood cell morphology and the presence of white blood cell precursors. Commenters stated that other services with identical physician work include CPT code 88314 (Special stain including interpretation and report; histochemical stain on frozen tissue block) and CPT code 93923 (Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels). Commenters stated the proposed work value would create significant rank order anomalies within the array of pathology services, as CPT code 85060 has nearly identical work time to CPT code 88314 but would be valued lower at the proposed work RVU.

Response: We appreciate the detailed information about CPT code 85060 provided by the commenters regarding the clinical comparisons to CPT codes 88314 and 93923.

After consideration of the public comments, we are not finalizing our proposed work RVU of 0.36 for CPT code 85060. We are finalizing the RUC-recommended work RVU of 0.45 instead.

(48) Bone Marrow Interpretation (CPT Code 85097)

CPT code 85097 (Bone marrow, smear interpretation) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. For CY 2019, the RUC recommended a work RVU of 1.00 based on a direct crosswalk to CPT code 88121 (Cytopathology, in situ hybridization (*e.g.,* FISH), urinary tract specimen with morphometric analysis, 3–5 molecular probes, each specimen; using computer-assisted technology).

We disagreed with the RUC-recommended value and we proposed a work RVU of 0.94 for CPT code 85097 based on maintaining the current work valuation. We noted that the survey indicated that CPT code 85097 typically takes 25 minutes of work time to perform, down from a previous work time of 30 minutes, and, generally speaking, since the two components of work are time and intensity, we believe that significant decreases in time should be reflected in decreases to work RVUs. For the specific case of CPT code 85097, we supported our proposed work RVU of 0.94 through a crosswalk to CPT code 88361 (Morphometric analysis, tumor immunohistochemistry (*e.g.,* Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer-assisted technology), a recently reviewed code from CY 2018 with the identical time values and a work RVU of 0.95.

We also considered a work RVU of 0.90 based on double the recommended work RVU of 0.45 for CPT code 85060 (Blood smear, peripheral, interpretation by physician with written report). When both of these CPT codes were under review, the explanation was offered that in a peripheral blood smear, typically, the practitioner does not have the approximately 12 precursor cells to review, whereas in an aspirate from the bone marrow, the practitioner is examining all the precursor cells. Additionally, for CPT code 85097, there are more cell types to look at as well as more slides, usually four, whereas with CPT code 85060 the practitioner would typically only look at one slide. Although we did not propose to value CPT code 85097 at twice the work RVU of CPT code 85060, we believe this analysis also supports maintaining the current work RVU of 0.94 as opposed to raising it to 1.00.

For the direct PE inputs, we proposed to remove the clinical labor time for the ''Accession and enter information'' (PA001) and ''File specimen, supplies, and other materials'' (PA008) activities. As we stated previously, information entry and specimen filing tasks are not individually allocable to a particular patient for a particular service and are considered to be forms of indirect PE. Although we agree that these are necessary tasks, under our established methodology we believe that they are more appropriately classified as indirect PE.

The following is a summary of the public comments we received on our proposals involving CPT code 85097.

Comment: Many commenters disagreed with the proposed work RVU of 0.94 for CPT code 85097 and stated that CMS should finalize the RUC-recommended work RVU of 1.00. Commenters stated that the CMS rationale about changes in work time was out of place in this context because the survey respondents indicate that the service requires 25 minutes to perform rather than the current time of 30 minutes, yet CMS proposed to maintain the current work value. The commenters suggested that maintaining the current work RVU of 0.94 was therefore inappropriate. Commenters also stated that the current work time for CPT code 85097 was not based on a survey and that it was unknown how this time was

determined and what it actually represents.

Response: We agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times, and it also would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times used in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we want to reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 final rule (81 FR 80273 through 80274). With regard to the specific case of CPT code 85097, we proposed to maintain the current work RVU rather than decreasing the work RVU due to some of the same concerns about the historical work times for this code raised by the commenters. We believe that the logic provided by the commenters suggests that the decreases in the work time of CPT code 85097 should have been reflected in decreases to the work RVU (as opposed to maintaining the current value), which we do not believe was their intention.

Comment: Several commenters stated that given the total work, time, intensity, and complexity of the patient case, the current work RVU of 0.94 was too low for CPT code 85097. Commenters stated that the RUC chose a crosswalk to CPT code 88121 (Cytopathology, in situ hybridization (*e.g.,* FISH), urinary tract specimen with morphometric analysis, 3–5 molecular probes, each specimen; using computer-assisted technology) specifically because it is a similar pathology code with a value between the current work value of 0.94 and the survey 25th percentile of 1.15. Commenters stated that the CMS reference code (CPT code 88361) was less intense and complex to perform as it involves evaluating a single antibody and determining the percentage of tumor cells that are positive for that antibody, as opposed to the work of CPT code 85097 which involves evaluating all blood cell precursors for quantitative and morphologic abnormalities, as well as evaluating for metastatic tumor cells, evidence of infection, or evidence of lymphoid neoplasms.

Response: We disagree with the commenters that the current work RVU of 0.94 or the work RVU of our reference code of 88361 are too low in comparison to CPT code 85097. All three of the codes under discussion (CPT codes 85097, 88121, and 88361) are clinically similar procedures that involve the practitioner using their eyes to look at staining patterns. We do not agree with the commenters that the RUC's use of CPT code 88121 as a crosswalk would be any more accurate on clinical grounds that the reference code of 88361 that we chose in the proposed rule. Overall, we do not believe that there is a significant difference between these three procedures given their nearly identical work RVUs, intensities, and work times. However, given the decrease in surveyed work time, we continue to believe that it is more appropriate to maintain the current work RVU of 0.94 than to increase it to 1.00 due to our longstanding belief that decreases in work time should typically be not be reflected in increases to the work RVU. We note that we are not proposing to decrease the work RVU for CPT code 85097 despite this decrease in the surveyed work time, only to maintain the current valuation.

Comment: Several commenters responded to the CMS consideration of a work RVU of 0.90 based on double the recommended work RVU of 0.45 for CPT code 85060. Commenters stated that they wished to clarify that this explanation was put forward to a RUC member whom was simply questioning why this service requires twice the time of CPT code 85060. Commenters stated that simply doubling the RUC-recommended work RVU of 0.45 for CPT code 85060 based on the amount of time does not account for the considerably greater intensity and complexity of CPT code 85097 over CPT code 85060 as described elsewhere in their comments.

Response: We appreciate the clarification on this issue from the commenters.

Comment: Several commenters disagreed with the CMS proposal remove the clinical labor time for the ''Accession and enter information'' (PA001) and ''File specimen, supplies, and other materials'' (PA008) activities. Commenters stated that although the descriptions for the PA001 and PA008 clinical labor activities appeared to describe data entry and filing activities, these tasks are very different in the pathology lab. Commenters stated that it is crucial for the performance of these tasks be executed accurately according to rigid patient laboratory protocols, standards, and legal processes associated with specimen/patient care and they should not be considered a form of indirect expense.

Response: Although we agree that the unique nature of pathology and laboratory services can make comparisons across codes more difficult than for other services, we believe the comparison of similar clinical labor activities across different services is important to maintaining the relativity of the direct PE inputs. As we stated in the CY 2017 PFS final rule (81 FR 80324), we agree with the commenters that entering patient data into information systems and filing specimens are important tasks, and we agree that these would take more than zero minutes to perform. However, we continue to believe that these activities are correctly categorized as indirect PE as administrative functions, and therefore, we do not recognize the entry of patient data or the filing of specimens as direct PE inputs, and we do not consider this task as typically performed by clinical labor on a per-service basis.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for CPT code 85097 as proposed.

(49) Fibrinolysins Screen (CPT Code 85390)

CPT code 85390 (Fibrinolysins or coagulopathy screen, interpretation and report) was identified as potentially misvalued on a screen of codes with a negative IWPUT, with 2016 estimated Medicare utilization over 10,000 for

RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. For CY 2019, we are proposing the RUC-recommended work RVU of 0.75 for CPT code 85390. Because this is a work only code, the RUC did not recommend, and we did not propose any direct PE inputs for CPT code 85390.

The following is a summary of the public comments we received on our proposals involving CPT code 85390.

Comment: A commenter expressed support for our proposal to accept the RUC-recommended work RVU for this code.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing our proposal to accept the RUC-recommended work RVU for this code.

(50) Electroretinography (CPT Codes 92273, 92274, and 0509T)

CPT code 92275 (Electroretinography with interpretation and report) was identified in 2016 on a high expenditure services screen across specialties with Medicare allowed charges of $10 million or more. In January 2016, the specialty society noted that they became aware of inappropriate use of CPT code 92275 for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. CPT changes were necessary to ensure that the service for which CPT code 92275 was intended was clearly described, as well as an accurate vignette and work descriptor were developed. In September 2017, the CPT Editorial Panel deleted CPT code 92275 and replaced it with two new codes to describe electroretinography full field and multi focal. A category III code was retained for pattern electroretinography.

For CPT code 92273 (Electroretinography (ERG) with interpretation and report; full field (*e.g.,* ffERG, flash ERG, Ganzfeld ERG)), we disagreed with the recommended work RVU of 0.80 and we instead proposed a work RVU of 0.69 based on a direct crosswalk to CPT code 88172 (Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site). CPT code 88172 is another interpretation procedure with the same 20 minutes of intraservice time, which we believe is a more accurate comparison for CPT code 92273 than the two reference codes chosen by the survey participants due to their significantly higher and lower intraservice times. We noted that the recommended intraservice time for CPT code 92273 as compared to its predecessor CPT code 92275 is decreasing from 45 minutes to 20 minutes (56 percent reduction), and the recommended total time is decreasing from 71 minutes to 22 minutes (69 percent reduction); however, the work RVU is only decreasing from 1.01 to 0.80, which is a reduction of just over 20 percent. Although we did not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 92273, we have reason to believe that the significant drops in surveyed work time as compared to CPT code 92275 are a result of improvements in technology since the predecessor code was reviewed. The older machines used for electroretinography were slower and more cumbersome, and now the same work for the service can be performed in significantly less time. Therefore, we proposed a work RVU of 0.69 based on the direct crosswalk to CPT code 88172, which we believe more accurately accounts for these decreases in surveyed work time.

For CPT code 92274 (Electroretinography (ERG) with interpretation and report; multifocal (mfERG)), we disagreed with the RUC-recommended work RVU of 0.72 and proposed a work RVU of 0.61. We concurred that the relative difference in work between CPT code 92273 and 92274 is equivalent to the recommended interval of 0.08 RVUs. Therefore, we proposed a work RVU of 0.61 for CPT code 92274, based on the recommended interval of 0.08 fewer RVUs below our proposed work RVU of 0.69 for CPT code 92273. The proposed work RVU is also based on the use of two crosswalk codes: CPT code 88387 (Macroscopic examination, dissection, and preparation of tissue for non-microscopic analytical studies; each tissue preparation); and CPT code 92100 (Serial tonometry (separate procedure) with multiple measurements of intraocular pressure over an extended time period with interpretation and report, same day). Both codes share the same 20 minutes of intraservice and 20 minutes of total time, with a work RVU of 0.62 for CPT code 88387 and a work RVU of 0.61 for CPT code 92100.

The recommendations for this code family also include CPT Category III code 0509T (Electroretinography (ERG) with interpretation and report, pattern (PERG)). We typically assign contractor pricing for Category III codes since they are temporary codes assigned to emerging technology and services. However, in cases where there is an unusually high volume of services that will be performed under a Category III code, we have sometimes assigned an active status to the procedure and developed RVUs before a formal CPT code is created. In the case of CPT code 0509T, the recommendations indicate that approximately 80 percent of the services currently reported under CPT code 92275 will be reported under the new Category III code. Since this will involve an estimated 100,000 services for CY 2019, we believe that the interests of relativity would be better served by assigning an active status to CPT code 0509T and creating RVUs through the use of a proxy crosswalk to a similar existing service. Therefore, we proposed to assign an active status to CPT Category III code 0509T for CY 2019, with a work RVU and work time values crosswalked from CPT code 92250 (Fundus photography with interpretation and report). CPT code 92250 is a clinically similar procedure that was recently reviewed during the CY 2017 rule cycle. We proposed a work RVU of 0.40 and work times of 10 minutes of intraservice and 12 minutes of total time for CPT code 0509T based on this crosswalk to CPT code 92250.

For the direct PE inputs, we proposed to remove the preservice clinical labor in the facility setting for CPT codes 92273 and 92274. Both of these codes are diagnostic tests under which the professional (26 modifier) and technical (TC modifier) components will be separately billable, and codes that have these professional and technical components typically will not have direct PE inputs in the facility setting since the technical component is only valued in the nonfacility setting. We also noted on this subject that the predecessor code, CPT code 92275, does not currently include any preservice clinical labor, nor any facility direct PE inputs.

We proposed to remove the clinical labor time for the ''Greet patient, provide gowning, ensure appropriate medical records are available'' (CA009) and the ''Provide education/obtain consent'' (CA011) activities for CPT codes 92273 and 92274. Both of these CPT codes will typically be reported with a same day E/M service, and we believe that these clinical labor tasks will be carried out during the E/M service. We believe that their inclusion in CPT codes 92273 and 92274 would be duplicative. We also proposed to refine the clinical labor time for the

''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes for both codes. The predecessor CPT code 92275 did not previously have clinical labor time assigned for the ''Confirm order, protocol exam'' clinical labor task, and we did not have any reason to believe that the services being furnished by the clinical staff had changed in the new codes, only the way in which this clinical labor time has been presented on the PE worksheets. We also noted that there is no effect on the total clinical labor direct costs in these situations since the same 3 minutes of clinical labor time is still being furnished.

We proposed to refine the clinical labor time for the ''Clean room/equipment by clinical staff'' (CA024) activity from 12 minutes to 8 minutes for CPT codes 92273 and 92274. The recommendations for these codes stated that cleaning is carried out in several steps: The patient is first cleaned for 2 minutes, followed by wires and electrodes being scrubbed carefully with detergent, soaked, and then rinsed with sterile water. We agree with the need for 2 minutes of patient cleaning time and for the cleaning of the wires and electrodes to take place in two different steps. However, our standard clinical labor time for room/equipment cleaning is 3 minutes, and therefore, we proposed a total time of 8 minutes for these codes, based on 2 minutes for patient cleaning and then 3 minutes for each of the two steps of wire and electrode cleaning.

We proposed to refine the clinical labor time for the ''Technologist QC's images in PACS, checking for all images, reformats, and dose page'' (CA030) activity from 10 minutes to 3 minutes for CPT codes 92273 and 92274. We finalized in the CY 2017 PFS final rule (81 FR 80184–80186) a range of appropriate standard minutes for this clinical labor activity, ranging from 2 minutes for simple services up to 5 minutes for highly complex services. We believe that the complexity of the imaging in CPT codes 92273 and 92274 is comparable to the CT and magnetic resonance (MR) codes that have been recently reviewed, such as CPT code 76391 (Magnetic resonance (*e.g.,* vibration) elastography). Therefore, in order to maintain relativity, we proposed the same clinical labor time of 3 minutes for CPT codes 92273 and 92274 that has been recommended for these CT and MR codes. We also proposed to refine the clinical labor time for the ''Review examination with interpreting MD/DO'' (CA031) activity from 5 minutes to 2 minutes for CPT codes 92273 and 92274. We also finalized in the CY 2017 PFS final rule a standard time of 2 minutes for reviewing examinations with the interpreting MD, and we have no reason to believe that these codes would typically require additional clinical labor at more than double the standard time.

We noted that the new equipment item ''Contact lens electrode for mfERG and ffERG'' (EQ391) was listed twice for CPT code 92273 but only a single time for CPT code 92274. We solicited additional information about whether the recommendations intended this equipment item to be listed twice, with one contact intended for each eye, or whether this was a clerical mistake. We are also interested in additional information as to why the contact lens electrode was listed twice for CPT code 92273 but only a single time for CPT code 92274. Finally, we also proposed to refine the equipment times in accordance with our standard equipment time formulas.

We proposed to use the direct PE inputs for CPT code 92274, including the refinements detailed above, as a proxy for CPT Category III code 0509T until it can be separately reviewed by the RUC.

The following is a summary of the public comments we received on our proposals involving the Electroretinography family of codes.

Comment: Many commenters disagreed with the proposed work RVU of 0.69 for CPT code 92273 and stated that CMS should finalize the RUC-recommended work RVU of 0.80. Commenters stated that the RUC-recommended work RVU was based on the survey 25th percentile and CMS should use survey data in establishing the work RVU. Commenters stated that the decrease in intraservice work time of deleted CPT code 92275 from when it was last surveyed in 1995 was due to the fact that the physician no longer participates in the acquisition of the data or performing the test on the patient, which has become the technician's work. Commenters stated that the RUC determined that the physician work is not the same as it was with CPT code 92275 and the recommended decrease in work RVUs appropriately addresses the decrease in physician time to perform this service.

Response: We disagree with the commenters that the RUC-recommended decrease in work RVUs appropriately addresses the decrease in physician time to perform this service. As we stated in the proposed rule, the recommended intraservice time for CPT code 92273 as compared to its predecessor CPT code 92275 is decreasing from 45 minutes to 20 minutes (56 percent reduction), and the recommended total time is decreasing from 71 minutes to 22 minutes (69 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.01 to 0.80, which is a reduction of just over 20 percent. Although we did not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. As a result, we believe that our proposed work RVU of 0.69 more accurately captures the changes in work that have taken place since the previous survey.

Comment: Several commenters stated that while the time required for CPT code 92273 is less than the time required for CPT code 92275, the code it replaced, the intensity and complexity of the work involved in interpreting the test has increased significantly. Commenters stated that the newer machines are easily programmed to produce more images and numbers for interpretation (double or more) than the machines in use in 1995 when the procedure was last valued and that advances in medical knowledge have identified more specific retinal dystrophy diagnoses with specific genotypes that the clinician must consider when interpreting the test. Commenters emphasized that while the machine may be more efficient as stated by CMS, the cognitive work required by the physician interpreting the test has increased significantly.

Response: We disagree with the commenters that all of the efficiencies gained in work time via improved technology would be offset via higher intensity (that is, greater cognitive work on the part of the practitioner). While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. At the RUC-recommended work RVU of 0.80, the intensity of CPT code 92273 would increase by nearly 300 percent, and we do not agree that the cognitive intensity of the procedure would have increased by this amount. We continue to believe that our proposed work RVU of 0.69 more accurately captures the changes in work taking place as a result of greater technological efficiencies in the service.

Comment: Many commenters disagreed with the proposed work RVU of 0.61 for CPT code 92274 and stated that CMS should finalize the RUC-recommended work RVU of 0.72. Commenters stated that CMS should use valid methods of evaluating services, such as survey data and magnitude estimation, instead of relying on an incremental difference in work RVUs between codes 92273 and 92274.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We further note that we did not rely solely on an increment for our proposed work RVU for CPT code 92274, as the proposed work RVU was also based on the use of a reference code (CPT code 88387) and a crosswalk code (CPT code 92100). Both codes share the same 20 minutes of intraservice and 20 minutes of total time, with a work RVU of 0.62 for CPT code 88387 and a work RVU of 0.61 for CPT code 92100.

Comment: Several commenters stated that while there was no predecessor code for direct comparison, the intensity and complexity of the work involved in interpreting the test has increased significantly compared to 1995, when CPT code 92275 was last valued. Commenters restated the same arguments they expressed for CPT code 92273: The new machines used in CPT code 92274 have become more efficient but the cognitive work required by the physician interpreting the test has increased significantly.

Response: As we stated with regard to CPT code 92273, we continue to disagree with the commenters that all of the efficiencies gained in work time via improved technology would be offset via higher intensity (that is, greater cognitive work on the part of the practitioner). At the RUC-recommended work RVU of 0.72, the intensity of CPT code 92274 would also increase by nearly 300 percent, and we do not agree that the cognitive intensity of the procedure would have increased by this amount. We continue to believe that our proposed work RVU of 0.61 more accurately captures the changes in work taking place as a result of greater technological efficiencies in the service.

Comment: Several commenters stated that CPT code 92274 requires more physician work than the crosswalks we identified. Commenters stated that CPT code 88387 is a straightforward manual dissection that does not require interpretation of multiple images and numeric values to arrive at a diagnosis. Commenters stated that CPT code 92100 also requires less physician work, as CPT code 92274 requires interpretation of significantly more data and consideration of many more diagnostic possibilities.

Response: We disagree with the commenters that our reference and crosswalk codes require less work than CPT code 92274. While it is true that CPT code 88387 does not require interpretation of multiple images and numeric values, this is because it is not an imaging service, and it is inappropriate to state that the work of CPT code 88387 is lower than CPT code 92274 based on this criteria. We do not agree that the macroscopic examination, dissection, and preparation of tissue taking place in CPT code 88387 would inherently constitute less work than CPT code 92274. Similarly, we do not agree that the serial tonometry with multiple measurements of intraocular pressure taking place in CPT code 92100 would involve less work than CPT code 92274, especially due to the nearly identical intraservice and total work times shared by these procedures.

Comment: One commenter disagreed with our proposal to assign active pricing to Category III code 0509T. The commenter stated that this code should go through the regular vetting process that other new technology typically follows, including development of appropriate clinical literature that would qualify it for elevation to a full Category I CPT code, and then a RUC survey in order to develop accurate valuation for work and practice expense. The commenter was concerned that CMS would single out and put forward a value for a technology that has not gone through the same scrutiny as other new technologies.

Response: We understand the concerns expressed by the commenter. As we stated in the proposed rule, we typically assign contractor pricing for Category III codes since they are temporary codes assigned to emerging technology and services. However, in cases where there is an unusually high volume of services that will be performed under a Category III code, we have sometimes assigned an active status to the procedure, and in the case of Category III code 0509T the recommendations indicated that approximately 80 percent of the services currently reported under CPT code 92275 will be reported under the new Category III code. Since this will involve an estimated 100,000 services for CY 2019, we continue to believe that the interests of relativity would be better served by assigning an active status to Category III code 0509T and creating RVUs through the use of a proxy crosswalk to a similar existing service. We agree with the commenter that this code should still go through the regular vetting process that other new technology typically follows, and we look forward to receiving recommendations for work and practice expense inputs in the future.

Comment: One commenter stated that many of the proposed changes to the direct PE inputs were made with the intent to standardize inputs. The commenter stated that although the RUC has created many standards, they have always acknowledged that there are and will be exceptions to those standards. The commenter stated that these important diagnostic tests are unusual services that require significant amounts of preservice clinical labor time in whichever setting they are performed, and that the recommended direct PE inputs were carefully prepared based upon documented personal observation and time motion studies. The commenter stated that the predecessor CPT code 92275 had an over-simplified PE spreadsheet with very few data inputs, each comprising substantial amounts of time that are now broken out into separate inputs, and as a result the work required had not changed substantially but there had been additional granularity in the direct PE inputs.

Response: As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and postservice periods for each code. We have stated that we believe this additional level of detail helps to facilitate transparency, allows us to more easily compare clinical labor times across the PFS to maintain relativity, and helps in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years. However, we have always recognized that standards for clinical labor cannot be applied universally due to the differences between individual services, and we have frequently finalized

clinical labor times above the standard values where we believed that there was sufficient reason to establish these values as the typical case. In the case of CPT code 92273 and 92274, we detailed our rationale in the proposed rule for why we believed that some of the RUC-recommended direct PE inputs should be refined to a standard clinical labor time. We also note that we did not propose the standard clinical labor time for all activities, such as the ''Clean room/equipment by clinical staff'' (CA024) activity.

Comment: Several commenters disagreed with the proposal to remove the preservice clinical labor in the facility setting for CPT codes 92273 and 92274. Commenters stated that these procedures, when done in a facility, must be scheduled in the operating room. Commenters stated that these procedures would typically be done in the facility only when it is not clinically appropriate for them to be performed in the clinic, such as for children or the cognitively impaired; and it takes substantial amounts of time for the staff to accomplish this coordination of care for these higher-needs patients.

Response: We recognize that these procedures are rarely performed in the facility setting, with approximately 1 percent of the utilization of predecessor CPT code 92275 taking place in this setting. However, we disagree that these procedures would typically be performed in the operating room when furnished in the facility, and therefore, we do not agree that these procedures would typically require preservice clinical labor for coordination of care. We also noted on this subject that the predecessor code, CPT code 92275, does not currently include any preservice clinical labor, nor any facility direct PE inputs, and we did not receive an explanation from the commenters as to why this was the case. Furthermore, both of these codes are diagnostic tests under which the professional (26 modifier) and technical (TC modifier) components will be separately billable, and codes that have these professional and technical components typically will not have direct PE inputs in the facility setting since the technical component is only valued in the nonfacility setting.

Comment: Several commenters disagreed with the proposal to remove the clinical labor time for the ''Greet patient, provide gowning, ensure appropriate medical records are available'' (CA009) and the ''Provide education/obtain consent'' (CA011) activities for CPT codes 92273 and 92274. Commenters stated that although slightly more than 50 percent of these services are done on the same day as an office visit, the clinical staff time involved is completely divorced from the office visit and the staff performing the test are different from the staff assisting in the office visit. Commenters stated that the machine used for these procedures is housed in a different room, the patient needs to be transported from the ophthalmic exam lane to the ERG room and back, additional instructions are required that are never done during a typical office visit, and the nature of this test requires extra supplies and work in addition to those used for the office visit. Commenters emphasized that these clinical tasks are not duplicative with an E/M, as they represent separate actions by a different technician in a different room.

Response: We disagree with the commenters and continue to believe that this clinical labor would be duplicative with the same day E/M office visit. While it is true that there is a different clinical labor staff type used by CPT codes 92273 and 92274, we are not suggesting that all clinical labor is duplicative with the same day E/M visit, only that clinical labor activities such as greeting and gowning the patient would only be done a single time. We also note that we do not include patient transportation as a form of direct PE, as it is not individually allocable to a single service and would instead be classified as an administrative task under indirect PE. However, we do agree with the commenters that additional instructions would be required for these electroretinography services, and as a result we will restore the 1 minute of clinical labor time for the ''Provide education/obtain consent'' (CA011) activity. We agree that this would not be duplicative with the same day E/M office visit.

Comment: Several commenters stated that in our refinements to the direct PE inputs for CPT codes 92273 and 92274, CMS proposed to remove 1 minute from the CA014 activity code and proposed to add 1 minute to the CA013 activity code. The commenter stated that this refinement was inaccurate and encouraged CMS to modify this proposal by finalizing the RUC-recommended direct PE inputs for clinical labor. One commenter stated that this work is done by a different technician in a different room typically in a busy clinical setting and this work was separate from that being done during the office visit.

Response: We addressed this subject in detail in the PE section of this final rule under the Changes to Direct PE Inputs for Specific Services heading (section II.B.3. of this final rule). For CPT codes 92273 and 92274, we are finalizing these clinical labor refinements as proposed. We also note in response to the one commenter that our refinements to the CA013 and CA014 clinical labor activities were not based on the premise on being duplicative with the same day E/M visit.

Comment: Several commenters disagreed with the proposal to refine the clinical labor time for the ''Clean room/equipment by clinical staff'' (CA024) activity from 12 minutes to 8 minutes for CPT codes 92273 and 92274. Commenters stated that this was the time that the specialty society found when directly shadowing the process to clean the patient and the equipment. Commenters stated that the technician needs to clean the patient's skin, rinse their eyes, and clean around the patient and escort them out. Commenters stated that the expensive and delicate eye electrodes require a significant amount of time to remove and clean the conductive paste and Goniosol without damaging the electrodes, which needs to be performed after each procedure so that the electrodes can be re-used for the next procedure. Commenters emphasized that the equipment cleaning process requires meticulous care and a significant amount of technician time.

Response: We agree with the commenters that these procedures require more time for cleaning the room and equipment than the standard for the CA024 activity. This is the reason we proposed 8 minutes of clinical labor time instead of 3 minutes, almost triple the standard value for this activity code. As we stated in the proposed rule, we agreed with the need for 2 minutes of patient cleaning time and for the cleaning of the wires and electrodes to take place in two different steps. Since our standard clinical labor time for room/equipment cleaning is 3 minutes, we therefore proposed a total time of 8 minutes for these codes, based on 2 minutes for patient cleaning and then 3 minutes for each of the two steps of wire and electrode cleaning. We continue to believe that 8 minutes would be the typical amount of clinical labor used for these procedures.

Comment: Several commenters disagreed with the proposal to refine the clinical labor time for the ''Technologist QC's images in PACS, checking for all images, reformats, and dose page'' (CA030) activity from 10 minutes to 3 minutes for CPT codes 92273 and 92274. Commenters stated that the machine used for the ERG codes is not typically integrated into the clinic's electronic medical record. Commenters stated that this machine requires printing all images created by the testing

machine and uploading them into the EMR for subsequent review by the physician and that it is not unusual for re-printing using a different scale or limits to be necessary. Commenters stated that this clinical labor differed from a typical radiology scenario because the procedure is in fact different from a typical imaging study.

Response: We disagree with the commenters that the full recommended time of 10 minutes would be typical for this clinical labor activity. We do not agree that it would be typical to physically print out all of the images produced by the machine, and note that we do not include additional direct PE inputs for inefficiencies in practice operations. We continue to believe that the complexity of the imaging in CPT codes 92273 and 92274 is comparable to the CT and magnetic resonance (MR) codes, and that in order to maintain relativity, we proposed the same clinical labor time of 3 minutes.

Comment: Several commenters disagreed with the proposal to refine the clinical labor time for the ''Review examination with interpreting MD/DO'' (CA031) activity from 5 minutes to 2 minutes for CPT codes 92273 and 92274. Commenters stated that this input was calculated by direct observation of typical procedures with a stopwatch. Commenters stated that this test is performed in a different room than the office visit, and the technician needs to take time to find the ordering/interpreting physician and review the quality of the gain and results.

Response: We disagree with the commenters that the full recommended time of 5 minutes would be typical for this clinical labor activity. We note again that we do not include additional direct PE inputs for inefficiencies in practice operations, and that we would not increase the clinical labor to include time that the technician needs to find the ordering/interpreting physician. We finalized in the CY 2017 PFS final rule a standard time of 2 minutes for reviewing examinations with the interpreting MD, and we have no reason to believe that these codes would typically require additional clinical labor at more than double the standard time.

Comment: Several commenters responded to the comment solicitation regarding additional information about whether the recommendations for the ''Contact lens electrode for mfERG and ffERG'' (EQ391) equipment intended this equipment item to be listed twice, with one contact intended for each eye, or whether this was a clerical mistake. Commenters stated that this was not an error but was intentional and reflects typical practice. Commenters stated that the test carried out in CPT code 92273 is performed with two contact lenses in place (one in each eye at the same time) in a simultaneous testing fashion. Commenters stated that the test carried out in CPT code 92274 is typically performed sequentially one eye at a time, re-using the same contact lens for each eye. Commenters stated that this discrepancy is primarily due to the dark and light-adaptation needs for the ffERG, which if done sequentially would double the amount of clinical time.

Response: We appreciate the additional information supplied by the commenters in response to our comment solicitation.

Comment: One commenter stated that the highly technical equipment formula should be used for the mfERG and ffERG electrodiagnostic unit (EQ390) equipment item.

Response: We did not propose to classify the EQ390 equipment as highly technical. We note that if we were to use the highly technical equipment formula for the EQ390 equipment, the total equipment time for this item would decrease, and we do not believe that this was what the commenter intended.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the Electroretinography family of codes as proposed. We are also finalizing the direct PE inputs as proposed, with the exception of the CA011 clinical labor activity as described above.

(51) Cardiac Output Measurement (CPT Codes 93561 and 93562)

CPT codes 93561 (Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; with cardiac output measurement) and 93562 (Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; subsequent measurement of cardiac output) were identified as potentially misvalued on a screen of codes with a negative IWPUT, with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. The specialty societies noted that CPT codes 93561 and 93562 are primarily performed in the pediatric population, thus the Medicare utilization for these Harvard-source services is not over 1,000. However, the specialty societies requested and the RUC agreed that these services should be reviewed under this negative IWPUT screen.

For CPT code 93561, we disagreed with the RUC-recommended work RVU of 0.95 and we proposed a work RVU of 0.60 based on a crosswalk to CPT code 77003 (Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinous diagnostic or therapeutic injection procedures (epidural or subarachnoid)). CPT Code 77003 is another recently-reviewed add-on global code with the same 15 minutes of intraservice time and 2 additional minutes of preservice evaluation time. In our review of CPT code 93561, we found that there was a particularly unusual relationship between the surveyed work times and the RUC-recommended work RVU. We noted that the recommended intraservice time for CPT code 93561 was decreasing from 29 minutes to 15 minutes (48 percent reduction), and the recommended total time for CPT code 93561 was decreasing from 78 minutes to 15 minutes (81 percent reduction); however, the recommended work RVU was instead increasing from 0.25 to 0.95, which is an increase of nearly 300 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should typically be reflected in decreases to work RVUs, not increases in valuation. We recognized that CPT code 93561 is an unusual case, as it is shifting from 0-day global status to add-on code status. However, when the work time for a code is going down and the unit of service is being reduced, we would not expect to see an increased work RVU under these circumstances, and especially not such a large work RVU increase. Therefore, we proposed instead to crosswalk CPT code 93561 to CPT code 77003 at a work RVU of 0.60, which we believe is a more accurate valuation in relation to other recently-reviewed add-on codes on the PFS. We believe that this proposed work RVU of 0.60 better preserves relativity with other clinically similar codes with similar surveyed work times.

For CPT code 93562, we disagreed with the recommended work RVU of 0.77 and proposed a work RVU of 0.48 based on the intraservice time ratio with CPT code 93561. We observed a similar pattern taking place with CPT code 93562 as with the first code in the family, noting that the recommended intraservice time was decreasing from 16 minutes to 12 minutes (25 percent reduction), and the recommended total time was decreasing from 44 minutes to

12 minutes (73 percent reduction); however, the RUC-recommended work RVU was instead increasing from 0.01 to 0.77. We recognized that CPT code 93562 is another unusual case, as it is also shifting from 0-day global status to add-on code status, and the current work RVU of 0.01 is a decrease from the code's former valuation of 0.16 following the removal of moderate sedation in the CY 2017 rule cycle. However, when the work time for a code is going down and the unit of service is being reduced, we typically would not expect to see a work RVU increase under these circumstances, and especially not such a large work RVU increase. Therefore, we proposed instead to apply the intraservice time ratio from CPT code 93561, for a ratio of 0.80 (12 minutes divided by 15 minutes) multiplied by the proposed work RVU of 0.60 for CPT code 93561, which results in the proposed work RVU of 0.48 for CPT code 93562. We noted that the RUC-recommended work values also line up according to the same intraservice time ratio, with the recommended work RVU of 0.77 for CPT code 93562 existing in a ratio of 0.81 with the recommended work RVU of 0.95 for CPT code 93561. We believe that this provides further rationale for our proposal to value the work RVU of CPT code 93562 at 80 percent of the work RVU of CPT code 93561.

There are no recommended direct PE inputs for the codes in this family and we did not propose any direct PE inputs.

The following is a summary of the public comments we received on our proposals involving the Cardiac Output Measurement family of codes.

Comment: Commenters stated that there were three intertwined flawed assumptions that CMS considered when proposing values for CPT codes 93561 and 93562, which if finalized would lead to continued misvaluation of these services. Commenters stated that the first of these flawed assumptions was a comparison of the survey data to Harvard data: The current time data for these codes came from the Harvard studies, has zero validity and should not be used to compare to current valid survey data. Commenters stated that the second of these flawed assumptions was a comparison of the recommended physician work RVUs to old work RVUs: The negative intensity of these codes confirmed that this previous methodology in which the current work RVU was derived from is flawed. Commenters stated that the third of these flawed assumptions was the use of an intraservice time ratio: This inaccurately treated all components of the physician time as having identical intensity and is incorrect. Other commenters identified changes in the global period from 0-day to add-on status and changes in the patient population from adult patients to pediatric patients as a rationale for why the increases in valuation were appropriate.

Many commenters disagreed with the proposed work RVU of 0.60 for CPT code 93561 and stated that CMS should finalize the RUC-recommended work RVU of 0.95. Commenters disagreed with the CMS crosswalk to CPT code 77003, stating that it was not a good crosswalk despite having the same intraservice work time. Commenters stated that CPT code 77003 is the imaging guidance code for needle placement for the epidural injection, and that placing a catheter in the heart and lungs of a child is not merely an imaging procedure. Commenters stated that a more appropriate injection procedure comparison would be the actual epidural injection procedure code, CPT code 62320 (Injection(s), of diagnostic or therapeutic substance(s) (*e.g.,* anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, interlaminar epidural or subarachnoid, cervical or thoracic; without imaging guidance) at a work RVU of 1.80 or to the top key reference CPT code 93567 (Injection procedure during cardiac catheterization including imaging supervision, interpretation, and report; for supravalvular aortography) at a work RVU of 0.97.

Many commenters also disagreed with the proposed work RVU of 0.48 for CPT code 93562 and stated that CMS should finalize the RUC-recommended work RVU of 0.77. Commenters stated that using an incremental approach in lieu of strong crosswalks and input from the RUC and physicians providing these services was an unfounded methodology. Commenters stated that CMS should rely on the survey data instead of the use of an increment, and commenters listed the reference codes chosen by the RUC which they stated were more appropriate for valuation.

Response: We appreciate the detailed feedback from the commenters regarding CPT Codes 93561 and 93562. We agree with the commenters that the proposed crosswalk to CPT code 77003 would result in an inappropriately low intensity for CPT code 93561.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 0.95 for CPT code 93561 and the RUC-recommended work RVU of 0.77 for CPT code 93562. We are also finalizing our proposal to have no direct PE inputs for these codes.

(52) Coronary Flow Reserve Measurement (CPT Codes 93571 and 93572)

CPT code 93571 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel) was identified on a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100 percent from 2009 through 2014. CPT code 93572 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel) was also included for review as part of the same family of CPT codes. The RUC recommended a work RVU of 1.50 for CPT code 93571, which is lower than the current work RVU of 1.80. The total time for this service decreased by 5 minutes from 20 minutes to 15 minutes. The RUC's recommendation is based on a crosswalk to CPT code 15136 (Dermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof), which has an identical intraservice and total time as CPT code 93571 of 15 minutes.

We disagreed with the recommended work RVU of 1.50 for this CPT code because we did not believe that a reduction in work RVU from 1.80 to 1.50 was commensurate with the reduction in time for this service of 5 minutes. Using the building block methodology, we believed the work RVU for CPT code 93571 should be 1.35. We believe that a crosswalk to CPT code 61517 (Implantation of brain intracavitary chemotherapy agent (List separately in addition to CPT code for primary procedure)) with a work RVU of 1.38 was more appropriate because it has an identical intraservice and total time (15 minutes) as CPT code 93571, described work that is similar, and was closer to the calculations for intraservice time ratio, total time ratio, and the building block method. Therefore, we proposed a work RVU of 1.38 for CPT code 93571.

We proposed the RUC-recommended work RVU for CPT code 93572 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft)

during coronary angiography including pharmacologically induced stress; each additional vessel) of 1.00.

Both of these codes are facility-only procedures with no recommended direct PE inputs.

The following is a summary of the public comments we received on our proposals involving the Coronary Flow Reserve Measurement family of codes.

Comment: We received several comments regarding our proposed work RVU of 1.38 for CPT 93571. Commenters generally did not agree with the use of time based metrics in our assessment of the work RVU for this code. In particular, they opposed CMS's reduction of work RVUs in proportion to the total reduction in time for furnishing this service. This methodology, they maintain, ignores the fact that the time reduction of 5 minutes in furnishing this service is associated with the low intensity portion of the work.

Response: We do not agree that a reduction in work RVU proportional to the total time decrease for this code, which has essentially only one time parameter since the intraservice time and total time are the same, is not appropriate. We continue to believe that this calculated value of 1.35 (a 75 percent reduction in both time and work RVU) accounts more appropriately for the reduction in time for a service in which the work to perform the service has not changed. We therefore continue to believe that our crosswalk to CPT code 61517 is similar in both work and time to CPT code 93571, and we are finalizing our proposed work RVU for CPT code 93571 of 1.38.

Comment: We received support from commenters regarding our proposed work RVU of 1.00 for CPT code 93572.

Response: We appreciate the support and are finalizing a work RVU of 1.00 for CPT code 93572 as proposed.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the Coronary Flow Reserve Measurement family of codes as proposed.

(53) Peripheral Artery Disease (PAD) Rehabilitation (CPT Code 93668)

During 2017, we issued a national coverage determination (NCD) for Medicare coverage of supervised exercise therapy (SET) for the treatment of peripheral artery disease (PAD). Previously, the service had been assigned noncovered status under the PFS. CPT code 93668 (Peripheral arterial disease (PAD) rehabilitation, per session) was payable before the end of CY 2017, retroactive to the effective date of the NCD (May 25, 2017), and for CY 2018, CMS made payment for Medicare-covered SET for the treatment of PAD, consistent with the NCD, reported with CPT code 93668. We used the most recent RUC-recommended work and direct PE inputs and requested that the RUC review the service, which had not been reviewed since 2001, for direct PE inputs. The RUC did not recommend a work RVU for CPT code 93668 due to the belief that there is no physician work involved in this service. After reviewing this code, we proposed a work RVU of 0.00 for CPT code 93668 and proposed to continue valuing the code for PE only.

The following is a summary of the public comments we received on our proposals involving CPT code 93688.

Comment: Commenters were supportive of our proposal of the RUC-recommended work RVUs and PE inputs.

Response: We thank commenters for their support.

Comment: Several commenters noted that the proposed reductions in payment would impact their ability to perform the service in an office setting and that this would force them to perform the service in a hospital setting. They further noted that this would ultimately increase costs and impact patient satisfaction as well as impact their ability to provide the service to rural and under insured patients.

Response: We appreciate the feedback these commenters provided. We note that we accepted the RUC-recommended work RVU of 0.00 and the RUC-recommended direct PE inputs without refinements for CPT code 93668. We further note that the RUC has generally provided recommendations on work, work time, and direct PE inputs. We do not believe that the work or direct PE inputs assigned to these services are inaccurate. We further note that if commenters believe an additional RUC review would serve to address the issues they identified in our proposal, we would consider this information or recommendations from other interested stakeholders for future rulemaking.

After consideration of the public comments received, we are finalizing the RUC-recommended work RVUs and direct PE inputs for CPT code 93668 as proposed.

(54) Home Sleep Apnea Testing (CPT Codes 95800, 95801, and 95806)

CPT codes 95800 (Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (*e.g.,* by airflow or peripheral arterial tone), and sleep time), 95801 (Sleep study, unattended, simultaneous recording; minimum of heart rate, oxygen saturation, and respiratory analysis (*e.g.,* by airflow or peripheral arterial tone)), and 95806 (Sleep study, unattended, simultaneous recording of, heart rate, oxygen saturation, respiratory airflow, and respiratory effort (*e.g.,* thoracoabdominal movement)) were flagged by the CPT Editorial Panel and reviewed at the October 2014 Relativity Assessment Workgroup meeting. Due to rapid growth in service volume, the RUC recommended that these services be reviewed after 2 more years of Medicare utilization data (2014 and 2015 data). These three codes were surveyed for the April 2017 RUC meeting and new recommendations for work and direct PE inputs were submitted to CMS.

For CPT code 95800, the RUC recommended a work RVU of 1.00 based on the survey 25th percentile value. We disagreed with the recommended value and proposed a work RVU of 0.85 based on a pair of crosswalk codes: CPT code 93281 (Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system) and CPT code 93260 (Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; implantable subcutaneous lead defibrillator system). Both of these codes have a work RVU of 0.85, as well as having the same intraservice time of 15 minutes, similar total times to CPT code 95800, and recent review dates within the last few years.

In reviewing CPT code 95800, we noted that the recommended intraservice time is decreasing from 20 minutes to 15 minutes (25 percent reduction), and the recommended total time is decreasing from 50 minutes to 31 minutes (38 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.05 to 1.00, which is a reduction of less than 5 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 95800, we believe that it would be more accurate to propose a work RVU of 0.85

based on the aforementioned crosswalk codes to account for these decreases in the surveyed work time. We also noted that in this case where the surveyed times are decreasing and the utilization of CPT code 95800 is increasingly significantly (quadrupling in the last 5 years), we had reason to believe that practitioners are becoming more efficient at performing the procedure, which, under the resource-based nature of the RVU system, lends further support for a reduction in the work RVU.

For CPT code 95801, the RUC proposed a work RVU of 1.00 again based on the survey 25th percentile. We disagreed with the recommended value and we proposed a work RVU of 0.85 based on the same pair of crosswalk codes, CPT codes 93281 and 93260. We noted that CPT codes 95800 and 95801 had identical recommended work RVUs and identical recommended survey work times. Given that these two codes also have extremely similar work descriptors, we interpreted this to mean that the two codes could have the same work RVU, and therefore, we proposed the same work RVU of 0.85 for both codes.

For CPT code 95806, the RUC recommended a work RVU of 1.08 based on a crosswalk to CPT code 95819 (Electroencephalogram (EEG); including recording awake and asleep). Although we disagreed with the RUC-recommended work RVU of 1.08, we concurred that the relative difference in work between CPT codes 95800 and 95801 and CPT code 95806 was equivalent to the recommended interval of 0.08 RVUs. Therefore, we proposed a work RVU of 0.93 for CPT code 95806, based on the recommended interval of 0.08 additional RVUs above our proposed work RVU of 0.85 for CPT codes 95800 and 95801. We also noted that CPT code 95806 is experiencing a similar change in the recommended work and time values comparable to CPT code 95800. The recommended intraservice time for CPT code 95806 is decreasing from 25 minutes to 15 minutes (40 percent), and the recommended total time is decreasing from 50 minutes to 31 minutes (38 percent); however, the recommended work RVU is only decreasing from 1.25 to 1.08, which is a reduction of only 14 percent. As we stated for CPT code 95800, we do not believe that decreases in work time must equate to a one-to-one or linear decrease in the valuation of work RVUs, but we do believe that these changes in surveyed work time suggest that practitioners are becoming more efficient at performing the procedure, and that it would be more accurate to maintain the recommended work interval with CPT codes 95800 and 95801 by proposing a work RVU of 0.93 for CPT code 95806.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Home Sleep Apnea Testing family of codes.
