

Frame.” The List Sampling Frame is a database of names and addresses, with control data, that contains the components values from which these samples can be drawn.

Need and Use of the Information: The List Sampling Frame Surveys are used to develop and maintain a complete list of possible farm operations. Data from criteria surveys are used to provide control data for new records on the list sampling frame. This information is utilized to define the size of operation, define sample populations and establish eligibility for the Census of Agriculture. New names and addresses of potential farms are obtained on a regular basis from growers association, other government agencies and various outside sources. The goal is to produce for each State a relatively complete, current, and unduplicated list of names for statistical sampling for agricultural operation surveys and the Census of Agriculture. This information is used to develop efficient sample designs, which allows NASS the ability to draw reduced sample sizes from the originally large universe populations.

Description of Respondents: Farms.

Number of Respondents: 164,000.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 40,219.
