RIN 1219–AB91

Safety Improvement Technologies for Mobile Equipment at Surface Mines, and for Belt Conveyors at Surface and Underground Mines

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for information.

SUMMARY: Mining safety could be substantially improved by preventing accidents that involve mobile equipment at surface coal mines and metal and nonmetal mines and belt conveyors at surface and underground mines. The Mine Safety and Health Administration (MSHA) is taking a number of actions related to mobile equipment and belt conveyors to improve miners' safety, including providing technical assistance, conducting awareness campaigns, and developing best practices and training materials. MSHA is also considering the role of engineering controls that would increase the use of seatbelts, enhance equipment operators' ability to see all areas near the machine, warn equipment operators of potential collision hazards, prevent equipment operators from driving over a highwall or dump point, and help prevent entanglement hazards related to working near moving or re-energized belt conveyors. MSHA is seeking information and data on engineering controls that could reduce the risk of accidents and improve miner safety. MSHA is also seeking suggestions from stakeholders on: Best practices, training materials, policies and procedures, innovative technologies, and any other information they may have to improve safety in and around mobile equipment, and working near and around belt conveyors.

MSHA will hold stakeholder meetings to provide the mining community an opportunity to discuss and share information about the issues raised in this notice. A separate notice announcing stakeholder meetings will be published in the **Federal Register** at a later date.
