**Abstract:** The Yukon-Kuskokwim  
(YK) Delta Berry Outlook is a data and  
observer driven ecological monitoring  
and modeling framework that forecasts  
changes in berry habitat and abundance  
with environmental change. To create a  
berry monitoring protocol and modeling  
framework we will solicit local  
knowledge of berry distribution and  
abundance from members of YK delta  
communities using a survey instrument.  
This survey is comprised of two parts,  
Part A and Part B. Part A consists of  
propositions that respondents are asked  
to agree or disagree with using a Likert  
scale. Propositions are on the subject of  
timing, abundance, and distribution of  
four types of berries prevalent in the  
region. Part B consists of questions  
concerning the abundance of that year's  
berry harvest.

Personally Identifiable Information  
(PII) will be limited to four elements:  
Names, phone numbers, emails, and the  
name of the village they reside in. This  
PII will be collected so that researchers  
may communicate project results and  
solicit feedback on the project itself for  
evaluation purposes. Statistical analysis

will be performed on the survey  
responses in to ascertain if a consensus  
exists among participants within  
villages and among villages.

The USGS mission is to serve the  
Nation by providing reliable scientific  
information to describe and understand  
the Earth. This project will collect  
information from individuals to better  
understand the abundance, distribution,  
and variability of berry resources in the  
Yukon-Kuskokwim Delta region of  
Alaska. The people of the YK delta hold  
information about the long-term  
distribution and abundance of berries  
that is useful for understanding current  
and future changes to berry habitat that  
has the potential to impact wildlife  
populations of the Yukon Delta region  
and the Yukon Delta National Wildlife  
Refuge.
