l. The existing project consists of: (1) The 1,093-foot-long, 15-foot-high Pawtucket Dam; (2) a 720-acre impoundment with a normal maximum water surface elevation of 92.2 feet National Geodetic Vertical Datum of 1929 (NGVD); (3) the 5.5-mile-long Northern and Pawtucket Canal System that includes several small dams and gatehouses; (4) generating facilities, including: (a) One powerhouse facility located on the mainstem of the Merrimack River (E.L. Field Powerhouse), with a total authorized installed capacity of 15.012 MW and a 440-foot-long tailrace to the Merrimack River; and (b) four power stations located along the canal system (Hamilton Power Station, Assets Power Station, Bridge Street Power Station, and John Street Power Station), with a total combined authorized capacity of 5.152 MW; (5) an approximately 2-mile-long, 13.8-kilovolt submarine transmission line that connects the project generating facilities to the regional electric grid; (6) upstream and downstream fish passage facilities; (7) a visitor center; and (8) appurtenant facilities.

The project bypasses approximately two miles of the Merrimack River, including a 0.7-mile-long bypassed reach from the Pawtucket Dam to the E.L. Field Powerhouse tailrace and an approximately 1.3-mile-long bypassed reach from the E.L. Field Powerhouse tailrace to the confluence of the Merrimack and Concord Rivers.

The current license requires Boott to release an instantaneous minimum flow of 1,990 cfs or inflow, whichever is less,

downstream of the project. Boott provides the minimum flow through spillage over the Pawtucket Dam, discharge from the project turbines, and the fish passage facilities.

In the relicense application, Boott proposes to decommission the four power stations located along the Lowell downtown canal system (Hamilton Power Station, Assets Power Station, Bridge Street Power Station, and John Street Power Station). In addition, Boott proposes to remove the canal system from the project boundary, except for a 2,200-foot-long section of the Northern Canal; and a 1,600-foot-long portion of the Pawtucket Canal.

Boott proposes to continue to operate the project in run-of-river mode using an automatic pond level control system. Boott proposes to provide a minimum flow of 500 cfs to the bypassed reach via the Pawtucket Dam fish ladder during the fish passage season (typically May 1-July 15), and 100 cfs outside of the fish passage season. Boott also proposes to replace the existing fish lift at the E.L. Field Powerhouse with a fish ladder to pass migratory fish from the E.L. Field Powerhouse tailrace to the bypassed reach, which would provide fish with access to the existing fish ladder in the bypassed reach that is used to pass fish over the Pawtucket Dam. Boott proposes to continue to operate the gates at the Guard Lock and Gates facility to provide flows to the Lowell downtown canal system. Boott proposes to continue to maintain canal structures and facilities, canal water levels, and flows in line with current agreements with NPS and other stakeholders. Finally, Boott proposes to develop several plans, including a fishway operation and management plan, a gaging plan, a recreation access and facilities management plan, a historic properties management plan, and a decommissioning plan for each of the four downtown power stations.
