

approach (e.g., question or scenario-based software) that is consistent with the MMUCC Guideline and the statewide database's validation rules. The program will require that crash data is validated at the point records are added to the central State crash repository.

The State electronic data collection program requires that NHTSA make electronic State crash data publicly available. See Public Law 117–58, 24108(d)(4)(B). Consistent with Federal Privacy Law, 23 U.S.C. 403(e), 49 U.S.C. 30183, and U.S. Department of Transportation policy, NHTSA will withhold from public disclosure any information in the State motor vehicle crash data that would lead to the identification of individuals involved in a motor vehicle crash.

Request for Information

The agency is interested in information that would help develop and implement a successful State electronic data collection program. This includes information about States' existing capacity to collect, store, and transfer crash data from the State level to NHTSA; interest in moving to an electronic data collection framework; making State crash data accessible to the public; identifying potential barriers; describing the infrastructural needs to transition to an electronic data transfer protocol; and adoption of electronic crash reporting by law enforcement agencies. The information will support the development and implementation of the State electronic data collection program by taking into consideration the States' experiences and operational capacity. NHTSA has a general understanding of how data collection and information technology protocols work based on NHTSA's assessment of State traffic records systems, current State electronic data transfer, and FARS operations. However, NHTSA hereby seeks further information based on the below questions. This list is not exhaustive, and we encourage commenters to provide any further information that they believe is relevant to inform the agency as it seeks to implement a successful State electronic data collection grant program.

Data Standardization and Modernization of Information Technology

(1) What are the State's current methodologies for collecting and standardizing statewide crash data electronically in a central repository?

(2) NHTSA relies on MMUCC to establish a standardized data set. What

steps are required for the State to meet this standardization?

(a) Please provide an estimated timeline to implement MMUCC standardization.

(b) What would it cost the State to move toward this data standardization?

(3) If the State does not have a centralized statewide crash data repository, describe what the State will need to establish the infrastructure; processes and procedures; information technology requirement; and training, to support this data modernization effort?

(4) Explain what the State will need to establish the infrastructure; processes and procedures; information technology requirement; and training to implement an electronic data transfer protocol.

(5) How long would it take for the State to establish a centralized statewide crash data repository and to implement an electronic data transfer protocol?

(6) What are the State's estimated costs associated with establishing a centralized statewide crash repository to support an electronic data transfer protocol?

(7) Explain the challenges associated with establishing a centralized statewide crash repository that supports an electronic data transfer protocol. Elaborate on the State's needs to overcome those challenges.

Law Enforcement Electronic Crash Reporting

(8) What percentage or number of the State's law enforcement agencies collect motor vehicle traffic crash information using an electronic crash report/records management system?

(a) Are all law enforcement agencies in the State collecting motor vehicle traffic crash information via an electronic crash report/records management system using the same application?

(b) For law enforcement agencies collecting motor vehicle traffic crash information using an electronic crash report/records management system, what application is used?

(9) What percentage or number of law enforcement agencies solely use paper crash reports in the crash reporting process?

(a) If so, are these paper reports coded into the centralized statewide crash repository?

(b) Describe any law enforcement's reservations for participating in electronic crash reporting to document motor vehicle traffic crash information?

(c) Specify the needs and costs for law enforcement agencies to adopt electronic-crash reporting to document motor vehicle traffic crash information?

Data Management

(10) Does the State have a conceptual or notional design of how the data would flow into a centralized statewide crash data repository? If so, please elaborate.

(11) If the State currently participates in NHTSA EDT protocol, does the State have written operating procedures for managing the data flow? If so, please submit the data flow or the operational structure.

(12) Does the State, in its crash data, distinguish between crash types between self-reported and police reported crashes?

(13) Does the State include variables to identify State-reportable vs. non-reportable crashes?

Data Accessibility to the Public

(14) Please provide recommendations on the format types for publicly available State crash data.

(15) What State products and services that include State crash data does the State find are most helpful to the public?

(16) Please advise if the State is interested in modernizing and standardizing its State crash system?

This notice is for information purposes only. The agency will review and consider information provided in response to this notice as it implements the State electronic data collection grant program, but will not respond to comments.
