SUPPLEMENTARY INFORMATION:

I. Background

PBM devices, also known as low level light therapy devices, are intended for use in applications such as aesthetics, dermatology, and other general indications. A PBM device is designed to deliver a non-heating dose of light energy into the body to provide clinical benefit to the patient. This draft guidance document provides FDA’s recommendations on non-clinical testing, clinical studies, and labeling to support premarket submissions for PBM devices. The recommendations reflect current review practices and are intended to promote consistency and facilitate efficient review of these submissions.

This draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on “Photobiomodulation (PBM) Devices—Premarket Notification [510(k)] Submissions.” It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.
