k. This application has been accepted, but is not ready for environmental analysis.

The Council on Environmental Quality (CEQ) issued a final rule on April 20, 2022, revising the regulations under 40 CFR parts 1502, 1507, and 1508 that Federal agencies use to implement the National Environmental Policy Act (NEPA) (*see* National Environmental Policy Act Implementing Regulations Revisions, 87 FR 23453–70). The final rule became effective on May 20, 2022. Commission staff intends to conduct its NEPA review in accordance with CEQ's new regulations.

l. *Project Description*: The existing Taftsville Project consists of: (1) an existing 220-foot-long by 16-foot-high concrete gravity dam; (2) a 194-foot-long spillway section with a crest elevation of 637.12 feet National Geodetic Vertical Datum of 1929 (NGVD 29), topped with 18-inch wooden flashboards; (3) a 4,600-foot-long, 20.5-acre impoundment at normal water surface elevation 638.6 feet NGVD 29; (4) a powerhouse containing one 0.5-megawatt vertical Kaplan generating unit, with a minimum hydraulic capacity of 95 cubic feet per second (cfs) and maximum hydraulic capacity of 370 cfs; (5) a 200-foot-long tailrace section; (6) a 40-foot-long transmission line, connecting the powerhouse to the Distribution Substation; (7) the Distribution Substation and Transmission West Substation; and (8) appurtenant facilities. Approximately 290 feet of the Ottauquechee River, between Taftsville Dam and the tailrace channel, are bypassed during normal operations. The project generates 1,038 megawatt-hours annually.

GMP proposes no modifications to the existing project facilities. GMP proposes to: (1) continue to operate the project in run-of-river mode, where outflow approximates inflow; (2) provide a 15 cfs minimum flow to the bypassed reach via spillage over the crest of the spillway; (3) seasonally install wooden flashboards; and (4) maintain recreation facilities, as it has under the current license. GMP proposes the following

modifications: (1) use no more than 10% of inflow to refill the impoundment after maintenance drawdowns; (2) consult with resource agencies prior to conducting maintenance and unplanned drawdowns and repair work; (3) restrict the removal of trees greater than or equal to 3 inches in diameter at breast height in the project boundary to the period of November 1 through March 31 for protection of the northern-long-eared bat; and (4) update the historic properties management plan to address and mitigate project effects on historic properties.
