Abstract of Information Available

Based on the information available, human remains representing, at least, three individuals have been reasonably identified. No associated funerary objects are present. In 1875, human remains representing a minimum of one individual were removed from San Miguel Island, California, by Captain A.W. Chase. James Terry sold the human remains to the American Museum of Natural History in 1891, and they were accessioned that year. In 1924, human remains representing a minimum of two individuals were purchased from Felix von Luschan with funding from Felix Warburg and accessioned by the Museum. Handwritten notes on the crania of each individual indicate that they were removed from Santa Rosa Island, California. Biological information for the remains of one individual suggests

they may date to the Mission Period. These remains from San Miguel Island and Santa Rosa Island are affiliated with the Santa Ynez Band of Chumash Mission Indians of the Santa Ynez Reservation.

While it no longer does so, in the past, the Museum applied potentially hazardous pesticides to items in the collections. Museum records do not list specific objects treated or which of several chemicals used were applied to a particular item. Therefore, those handling this material should follow the advice of industrial hygienists or medical personnel with specialized training in occupational health or with potentially hazardous substances.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice
