**Abstract:** The regulations at 30 CFR part 250, subpart Q, pertain to decommissioning activities. BSEE uses the information collected under subpart Q primarily for the following reasons:

- To determine the necessity for allowing a well to be temporarily abandoned, the lessee/operator must demonstrate that there is a reason for not permanently plugging the well and that the temporary abandonment will not interfere with fishing, navigation, or other uses of the Outer Continental Shelf (OCS). We use the information and documentation to verify that the lessee/operator is diligently pursuing the final disposition of the well and has performed the temporary plugging of the wellbore.
- To ensure the information submitted in initial decommissioning plans in the Alaska and Pacific OCS Regions will permit BSEE to become involved on the ground floor planning of platform removals anticipated to occur in these OCS regions.
- To ensure that all objects (wellheads, platforms, etc.) installed on the OCS are properly removed using procedures that will protect marine life and the environment during removal operations, and the site cleared so as not to conflict with or harm other uses of the OCS in coordination with other Federal, State, and local government agencies.
- To ensure that decommissioning a pipeline in place will not constitute a hazard to navigation and commercial fishing operations, unduly interfere with other uses of the OCS, such as sand resource areas for coastal restoration projects, or have adverse environmental effects.
- To verify that decommissioning activities comply with approved applications and procedures and are satisfactorily completed.
- To evaluate and approve the adequacy of the equipment, materials, and/or procedures that the lessee or operator plans to use during well modifications and changes in equipment, etc.

- To help BSEE better estimate future decommissioning costs for OCS leases, rights-of-way, and rights of use and easements. BSEE's future decommissioning cost estimates may then be used by the Bureau of Ocean Energy Management (BOEM) to set necessary financial assurance levels to minimize or eliminate the possibility that the government will incur abandonment liability. The information will assist BSEE and BOEM in meeting their stewardship responsibilities and in their roles as regulators.
