

on an SDS for an adhesive containing 1,2-dichloroethane.

IV. Next Steps

EPA will consider comments received on the draft risk evaluation and announce the availability of the final risk evaluation for 1,2-dichloroethane.

Under TSCA section 6, EPA must determine in the final risk evaluation, based on the weight of scientific evidence, whether or not the chemical presents an unreasonable risk to health or the environment under the chemical’s COUs. This includes consideration of risks to potentially exposed or susceptible subpopulations who may be at greater risks than the general population, such as children and workers. TSCA prohibits EPA from considering non-risk factors (e.g., costs/benefits) during risk evaluation.

If EPA determines in its final risk evaluation that a chemical presents an unreasonable risk to health or the environment, the chemical will move to risk management action under TSCA section 6(a) for the relevant COUs. EPA would be required to implement, via regulation, regulatory restrictions on the manufacture (including import), processing, distribution, use or disposal of the chemical to eliminate the identified unreasonable risk. TSCA section 6(a) includes a range of risk management options, including labeling, recordkeeping or notice requirements, actions to reduce human exposure or environmental release, and a ban of the chemical or of certain uses. Like the prioritization and risk evaluation processes, there is an opportunity for public comment on any proposed risk management actions.
