

# Notices

Federal Register

Vol. 91, No. 78

Thursday, April 23, 2026

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

## DEPARTMENT OF AGRICULTURE

### Animal and Plant Health Inspection Service

[Docket No. APHIS–2026–0595]

#### Notice of Request for Extension of Approval of an Information Collection; Spongy Moth Identification Worksheet and Checklist

**AGENCY:** Animal and Plant Health Inspection Service, USDA.

**ACTION:** Extension of approval of an information collection; comment request.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request an extension of approval of an information collection associated with the spongy moth program.

**DATES:** We will consider all comments that we receive on or before June 22, 2026.

**ADDRESSES:** You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to [www.regulations.gov](http://www.regulations.gov). Enter APHIS–2026–0595 in the Search field. Select the Documents tab, then select the Comment button in the list of documents.

- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2026–0595, Regulatory Analysis and Development, PPD, APHIS, 5601 Sunnyside Ave., #AP760, Beltsville, MD 20705.

Supporting documents and any comments we receive on this docket may be viewed at [regulations.gov](http://regulations.gov) or in our reading room, which is located in Room 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to

help you, please call (202) 799–7039 before coming.

**FOR FURTHER INFORMATION CONTACT:** For information on the spongy moth program, contact Mr. David Gruchot, Assistant National Policy, Biocontrol, and Forest, Wood and Rangeland Pests and Emergency Domestic Programs, PPQ, APHIS, 1001 East Touhy Ave., Suite 187, Des Plaines, IL 60018; (847) 699–2421. For more information on the information collection reporting process, contact Ms. Sheniqua Harris, APHIS' Paperwork Reduction Act Coordinator, at (301) 851–2528 or email [APHIS.PRA@usda.gov](mailto:APHIS.PRA@usda.gov).

#### SUPPLEMENTARY INFORMATION:

*Title:* Spongy Moth Identification Worksheet and Checklist.

*OMB Control Number:* 0579–0104.

*Type of Request:* Extension of approval of an information collection.

*Abstract:* Under the Plant Protection Act (7 U.S.C. 7701 *et seq.*), the U.S. Department of Agriculture (USDA), either independently or in cooperation with the States, is authorized to carry out operations or measures to detect, eradicate, suppress, control, prevent, or retard the spread of plant pests new to the United States or not widely distributed throughout the United States. The USDA's Animal and Plant Health Inspection Service (APHIS) is the delegated authority to carry out this mission.

As part of the mission, APHIS' Plant Protection and Quarantine (PPQ) program engages in detection surveys to monitor for the presence of, among other things, the Spongy moth (formerly known as gypsy moth<sup>1</sup>) and the flighted spongy moth complex. The spongy moth is one of the most destructive pests of fruit and ornamental trees as well as hardwood forests. First introduced into the United States in Medford, MA, in 1869, the spongy moth has gradually spread to infest the entire northeastern portion of the country. The spongy moth regulations can be found in 7 CFR 301.45 through 301.45–12.

Heavily infested spongy moth areas are inundated with actively crawling larvae that cover trees, fences, vehicles, and houses during their search for food. Entire areas may be stripped of all foliage, often resulting in heavy damage

to trees. The damage can have long-lasting effects, depriving wildlife of food and shelter, and severely limiting the recreational value of forested areas.

The flighted spongy moth complex is an exotic strain of spongy moth that is closely related to the spongy moth already established in the United States. While the flighted spongy moth has been introduced into the United States on several occasions, it is currently not established in the United States. However, due to behavioral differences, the flighted spongy moth complex is considered to pose an even greater threat to trees and forested areas than the spongy moth.

Unlike the flightless spongy moth female adult, flighted spongy moth complex female adults are capable of strong directed flight between mating and egg deposition, significantly increasing its ability to spread over a much greater area and become widely established within a short time. In addition, flighted spongy moth larvae feed on a much wider variety of hosts, allowing them to exploit more areas and cause more damage than the European spongy moth.

To determine the presence and extent of a European spongy moth or a flighted spongy moth complex infestation, APHIS sets traps in high-risk areas to collect specimens. Once an infestation is identified, control and eradication work (usually involving State cooperation) is initiated to eliminate the moths.

APHIS personnel, with assistance from State/local agriculture personnel, check traps for the presence of spongy moths. If a suspicious moth is found in the trap, it is sent to APHIS laboratories so that it can be correctly identified through DNA analysis. DNA analysis is the only way to accurately identify these insects because the European spongy moth and the flighted spongy moth are strains of the same species, and they cannot be visually distinguished from each other.

The PPQ official or State/local collaborator submitting the moth for analysis must complete a specimen for determination worksheet, which accompanies the insect to the laboratory. The worksheet enables Federal and State/local regulatory officials to identify and track specific specimens through the DNA identification tests that are conducted.

<sup>1</sup> Formerly gypsy moth, see <https://www.aphis.usda.gov/news/agency-announcements/aphis-announces-new-common-names-regulated-lymantria-moths>.

In addition, the information provided by the spongy moth identification worksheets is vital to APHIS' ability to monitor, detect, and eradicate spongy moth infestations.

The spongy moth regulations (§ 301.45–4(a)) also require the inspection of outdoor household articles that are to be moved from a spongy moth quarantined area to a non-quarantined area to ensure that they are free of all life stages of spongy moth. Individuals may use a self-inspection checklist, which is completed and signed by the person who performed the inspection, and kept in the vehicle used to move the outdoor household articles in the event that USDA or State/Local officials request it during the movement of the articles. In addition, it is recommended that individuals maintain a copy of the signed checklist for at least 5 years.

We are asking the Office of Management and Budget (OMB) to approve these information collection activities, as described, for an additional 3 years. APHIS has revised the title of the information collection to reflect the common name of regulated *Lymantria* moths.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; e.g., permitting electronic submission of responses.

*Estimate of burden:* The public burden for this collection of information is estimated to average 0.362 hours per response.

*Respondents:* Individuals who complete the self-inspection checklist and State and local cooperators.

*Estimated annual number of respondents:* 2,500,100.

*Estimated annual number of responses per respondent:* 3.

*Estimated annual number of responses:* 7,500,250.

*Estimated total annual burden on respondents:* 2,711,543 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 20th day of April 2026.

**Sarah Helming,**

*Acting Administrator, Animal and Plant Health Inspection Service.*

## DEPARTMENT OF AGRICULTURE

### Forest Service

#### National Forests and Grasslands in Texas; Oil and Gas Leasing Availability Analysis Environmental Impact Statement; Revised

**AGENCY:** Forest Service, Agriculture (USDA).

**ACTION:** Notice; revised.

**SUMMARY:** A previous notice for this project was published in 2019 (84 FR 44843) when the National Forests and Grasslands in Texas (NFGT) was also preparing for forest plan revision; however, the need for the project, expected relationship to the forest plan, and responsible official have changed since that publication. This notice is revising the previous Notice of Intent to announce that the USDA Natural Resources and Environment (NRE) Under Secretary proposes to prepare the EIS for Oil and Gas Leasing Availability and issue the project decision. The proposed action and alternatives will identify lands that would be made available for future oil and gas leasing, any additional stipulations applied to oil and gas activities on those lands, and if the decision would require an amendment to the 1996 NFGT Revised Land and Resource Management Plan (forest plan). The Planning, Administrative Reviews, and Litigation System identification number for the project is 56882.

**DATES:** Comments concerning the scope of the analysis must be received by April 28, 2026. The environmental impact statement is expected in spring or summer 2026. A schedule for the decision-making process and additional information about the project can be found here: <https://www.fs.usda.gov/r08/texas/projects/56882>.

**ADDRESSES:**

### Written Comments

Send written comments to Oil and Gas Leasing Availability, National Forests and Grasslands in Texas, 2221 N Raguet Street, Lufkin, Texas 75904. Comments may also be submitted electronically through the project website: <https://cara.fs2c.usda.gov/Public/CommentInput?Project=56882> or by facsimile at 936–639–8588.

Written public comments will be accepted by 11:59 p.m. Eastern Standard Time on April 28, 2026. Comments submitted after this date may not be included in the analysis.

#### FOR FURTHER INFORMATION CONTACT:

Juanita Garcia at [juanita.garcia@usda.gov](mailto:juanita.garcia@usda.gov) or 936–639–8504.

Individuals who use telecommunication devices for the hearing-impaired may call 711 to reach the Telecommunications Relay Service, 24 hours a day, every day of the year, including holidays.

#### SUPPLEMENTARY INFORMATION:

##### Purpose and Need for Action

The purpose of this project is to determine which NFS lands in Texas, where the surface and mineral rights are both federal, would be open to oil and gas development subject to standard terms and conditions, open to oil and gas development with constraints in lease stipulations, and which are closed to leasing by law and management direction. This determination enables the NFGT to respond to the BLM regarding expressions of interest to lease federal minerals under NFS lands in Texas, as federally mandated by the Mineral Leasing Act of 1920, the Mineral Leasing Act for Acquired Lands of 1947, the Mining and Minerals Policy Act of 1970, the Energy Security Act of 1980 and Federal Onshore Oil and Gas Leasing Reform Act of 1987, with procedural direction in 36 CFR 228 Subpart E. These laws state that NFS lands shall be made available for oil and gas leasing unless closure is necessary due to the inability to protect a sensitive resource through constraints. Because of advancements in technology and environmental changes since the 1996 forest plan, there is a need to reevaluate the previous oil and gas leasing analysis to fulfill these congressional mandates while complying with the forest plan and other laws and regulations.

The most recent leasing availability analysis was incorporated into the 1996 forest plan, but new information and changed circumstances related to natural resource conditions, oil and gas technology, and agency priorities warrant a new analysis and decision. Such an evaluation is also necessary to
