II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, NRC Form 748, “National Source Tracking System Report.” The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on December 11, 2025, 90 FR 57490.

1. *The title of the information collection:* NRC Form 748, “National Source Tracking System Report.”
2. *OMB approval number:* 3150–0202.
3. *Type of submission:* Extension.
4. *The form number, if applicable:* NRC Form 748.
5. *How often the collection is required or requested:* On occasion (at completion of a transaction, and at inventory reconciliation).
6. *Who will be required or asked to respond:* Licensees that manufacture, receive, transfer, disassemble, or dispose of nationally tracked sources.
7. *The estimated number of annual responses:* 17,825.
8. *The estimated number of annual respondents:* 977.
9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 2,181.

10. *Abstract:* The NRC’s National Source Tracking System (NSTS) is a secure, centralized database used to track the life cycle of certain high-risk sealed radioactive sources. Licensees are required to report key transactions involving these nationally tracked sources, including manufacture, transfer, receipt, disassembly, and disposal. These reporting requirements, first established in 2006 and fully implemented in subsequent years, support a comprehensive radioactive source control program for radioactive materials of greatest concern. Information collected through the NSTS is mandatory and plays a critical role in enhancing the NRC’s and Agreement States’ ability to track sources from manufacture through final disposition. The NSTS strengthens regulatory oversight by supporting inspections and investigations, enabling timely communication with other government agencies, and verifying the legitimate ownership and use of these sources.

II. Background

Accelerated Decommissioning Partners Crystal River Unit 3, LLC (ADP CR3, licensee) is currently the licensed operator responsible for decommissioning of Crystal River Unit 3 Nuclear Generating Plant (CR3). Prior to ADP CR3, Duke Energy Florida (DEF) held the licensed authority for CR3. The Facility Operating License No. DPR-72, provides, among other things, that the facility is subject to all rules, regulations, and orders of the NRC now or hereafter in effect. The facility is located in Citrus County, Florida.

By letter dated February 20, 2013, pursuant to paragraphs 50.82(a)(1)(i)-(ii) of title 10 of the *Code of Federal Regulations* (10 CFR), DEF formally notified the NRC that it had determined to permanently cease power operations at CR3 and that it had permanently removed fuel from the reactor vessel. In this letter, DEF explained that CR3 had been safely shutdown since September 26, 2009, and that all fuel had been permanently removed from the CR3 reactor vessel as of May 28, 2011, and had been placed in the CR3 spent fuel pool for temporary storage.

DEF described its proposed decommissioning activities and schedule in its Post-Shutdown Decommissioning Activities Report (PSDAR) submitted on December 2, 2013. At that time, DEF decided to place the facility in long-term storage (*i.e.*, the SAFSTOR decommissioning option). SAFSTOR is a decommissioning method in which a nuclear facility is placed and maintained in a condition
