

participate in the ACS online and states that a paper questionnaire will be sent in a few weeks to those unable to respond online. The second mailing is a letter that reminds respondents to complete the survey online, thanks them if they have already done so, and informs them that a paper questionnaire will be sent at a later date if the Census Bureau does not receive their response. In a third mailing, the paper questionnaire package is sent only to those sample addresses that have not completed the online questionnaire within two and a half weeks. The fourth mailing is a postcard that reminds respondents to respond and informs them that an interviewer may contact them if they do not complete the survey. A fifth mailing is a letter sent to respondents who have not completed the survey within five weeks. This letter provides a due date and reminds the respondents to complete their survey to be removed from future contact. The Census Bureau will ask those who fill out the survey online to provide an email address, which will be used to send an email reminder to households that started but did not complete the online form. The email reminder asks them to log back in to finish responding to the survey. If the Census Bureau does not receive a response, the address may be selected for nonresponse follow-up data collection. An additional mailing is sent to this sub-sample of addresses to encourage respondents to complete the survey online to avoid an in-person interview. During nonresponse follow-up interviews are collected by a trained Census Bureau interviewer via telephone or personal visit using computer-assisted interviewing technology.

Some addresses are deemed unmaillable because the address is incomplete or directs mail only to a post office box. The Census Bureau currently collects data for these housing units using both online and computer-assisted personal interviewing. A small sample of respondents from the nonresponse follow-up data collection interview are recontacted for quality assurance purposes.

PRCS Contact Strategies for Housing Units

The Census Bureau sends up to five mailings to a Puerto Rico address selected to be in the sample for the Puerto Rico Community Survey, following a similar methodology as used for the ACS. The first mailing includes an invitation to participate in the PRCS online. The second and fourth mailings serve as a reminder to respond to the survey. The third mailing includes the

paper questionnaire. A fifth mailing is a letter sent to respondents who have not completed the survey within five weeks. This letter provides a due date and reminds the respondents to complete their survey to be removed from future contact. The Census Bureau will ask those who fill out the PRCS online to provide an email address, which will be used to send an email reminder to households that started but did not complete the online form. The reminder asks them to log back in to finish responding to the survey. If the Census Bureau does not receive a response, the address may be selected for nonresponse follow-up data collection. A small sample of respondents from the nonresponse follow-up data collection interview are recontacted for quality assurance purposes.

ACS/PRCS Contact Strategy for Group Quarters

The Census Bureau collects data for group quarters through personal interview, online, or by paper. The Census Bureau first obtains information about the group quarters facility by allowing the group quarters contact to upload the roster of residents online or by conducting a personal visit interview with a group quarters contact. Once the interviewer obtains the roster of residents, they randomly select residents for person-level interviews. For each sampled resident, a Census Bureau interviewer collects the survey data via a computer-assisted personal interviewing instrument. Interviewers also have the option to distribute a paper questionnaire to residents for self-response. Interviewers may also offer residents in some group quarters facilities (such as college dorms) the option to self-respond to the survey online. A small sample of respondents are recontacted for quality assurance purposes.

Statistics produced from the American Community Survey may include a combination of data collected on the survey from respondents as well

as administrative data from other sources.
