Agenda

The SSC will convene in a facilitated workshop on dynamic reference points. Reference points in fisheries stock assessments and management are an essential tool for understanding the condition of a resource relative to a desired state. Dynamic reference points, unlike static ones, are allowed to change through time in response to non-stationarity in fish population dynamics. While scientific approaches to define dynamic biological reference points exist, the lack of a full understanding of their appropriate application and practical concerns

about this change in key management targets and thresholds has presented challenges to adoption. This workshop aims to develop practical guidelines for integrating dynamic reference points into fisheries stock assessment and management.

Although non-emergency issues not contained on the agenda may come before this Council for discussion, those issues may not be the subject of formal action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency. The public also should be aware that the meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request.
