

the Breeding Season Avoidance Alternative, the project would reduce potential for impacts to gnatcatchers by initiating work after the gnatcatcher breeding season, and the pipeline upgrades may not be completed until the following season rendering the pipelines susceptible to leakage with potential for extensive damage to habitat and inhabited property along with additional project costs.

### Our Preliminary Determination

The Service has made a preliminary determination that our proposed issuance of an ESA section 10(a)(1)(B) ITP authorizing take of the federally threatened coastal California gnatcatcher resulting from the applicant's proposed project would individually and cumulatively have a minor effect on the coastal California gnatcatcher and the human environment and may qualify for application of a categorical exclusion pursuant to DOI's NEPA regulations and the DOI Departmental Manual.

### Next Steps

The Service will evaluate the application and comments received to determine whether to issue the requested ITP. We will also conduct an intra-Service consultation pursuant to section 7 of the ESA to evaluate the effects of the proposed take. After considering the preceding and other matters, we will determine whether the permit issuance criteria of section 10(a)(1)(B) of the ESA have been met. If met, the Service will issue the permit to the applicant for incidental take of the gnatcatcher.
