

The overall result is an increase in the capital and O&M costs.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for the Manufacture of Amino/Phenolic Resins (40 CFR part 63, subpart OOO) were proposed on December 14, 1998; promulgated on January 20, 2000; and amended on: April 20, 2006; October 8, 2014; October 15, 2018; and November 19, 2020. These regulations apply to both existing facilities and new facilities that manufacture amino/phenolic resins with HAP emissions points that include: (1) reactor batch process vents; (2) nonreactor batch process vents; (3) continuous process vents; (4) equipment leaks; (5) wastewater; (6) storage vessels; and (7) heat exchangers. New facilities include those that commenced construction, or modification, or reconstruction after the date of the proposal. This information is being collected to assure compliance with 40 CFR part 63, subpart OOO.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to

maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance and are required of all affected facilities subject to NESHAP.

Form Numbers: None.

Respondents/affected entities:

Amino/phenolic resin manufacturing facilities.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart OOO).

Estimated number of respondents: 19 (total).

Frequency of response: Initially, quarterly, semiannually, and annually.

Total estimated burden: 23,300 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$6,240,000 (per year), which includes \$3,050,000 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is no change in burden from the most recently approved ICR as currently identified in the OMB Inventory of Approved Burdens. This is due to two considerations: (1) these regulations have not changed over the past three years and are not anticipated to change over the next three years; and (2) the growth rate for this industry is either very low or non-existent, so there is no significant change in the overall burden. There is a slight increase in labor costs, which is wholly due to the use of updated labor rates. This ICR also increases the capital/startup and O&M costs from 2014 \$ to 2024 \$ using the CEPCI CE Index.
