Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. Pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), the FCC seeks specific comment on how it might "further reduce the information collection burden for small business concerns with fewer than 25 employees."

Proposed Project

The National Survey of Family Growth (NSFG) (OMB Control No. 0920–0314, Exp. 9/30/2026)—Revision—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Section 306 of the Public Health Service (PHS) Act (42 U.S.C. 242k), as amended, authorizes that the Secretary of Health and Human Services (DHHS), acting through the National Center of Health Statistics (NCHS), shall collect statistics on "family formation, growth, and dissolution," as well as "determinants of health" and "utilization of health care" in the United States. This clearance request is for continued data collection over the next three years (2026–2029).

The National Survey of Family Growth (NSFG) was conducted six times

between 1973 and 2002, and in 2006 moved from a periodically conducted design to a continuous data collection design using in-person interviewing with a self-administered component. This continuous design was used from 2006–2010 and 2011–2019, with breaks as needed to award new contracts for sample design, data collection, and public-use file production. Beginning in 2022, the NSFG moved to a multimode design including both web and in-person data collection. Within the eight-year span (2022–2029), roughly 13,000 households will be screened, with 5,000 participants surveyed annually. Participation in the NSFG is completely voluntary and confidential. The household screening survey is expected to take five minutes on average. Main surveys with one selected respondent from each household are expected to

average 50 minutes for males and 75 minutes for females.

The NSFG program produces descriptive statistics which document factors associated with birth and pregnancy rates, including contraception, infertility, marriage, cohabitation, and sexual activity, in the US household population 15–49 years (15–44 prior to 2015), as well as behaviors that affect the risk of HIV and other sexually transmitted diseases (STD). The survey also disseminates statistics on the medical care associated with contraception, infertility, pregnancy, and related health conditions.

NSFG data users include CDC/NCHS and other programs within CDC and elsewhere in HHS. The NSFG is also used by state and local governments (primarily for benchmarking to national data); private research and action organizations focused on men's and

women's health, child well-being, and marriage and the family; academic researchers in the social and public health sciences; journalists; and many others.

This submission requests approval for a Revision to NSFG data collection for the next three years. The Revision request includes the continued use of survey questionnaires as have been used since January 2026, per the most recent OMB Non-Substantive Change Request approved in September 2025, as well as permission to conduct a small set of methodological studies designed to improve the efficiency and validity of NSFG data collection for the purposes described above.

CDC requests OMB approval for a total estimated annualized burden of 6,471 hours. There is no cost to respondents other than their time to participate.

ESTIMATED ANNUALIZED BURDEN HOURS

Respondents	Form	Number of responses	Responses per respondent	Average burden/response (in hours)
Household member	Household Screener Survey	13,000	1	5/60
Household Female 15–49 years of age	Female Main Survey	2,750	1	75/60
Household Male 15–49 years of age	Male Main Survey	2,250	1	50/60
