Many commenters also recommended that CMS further refine beneficiary-level risk adjustment to account for social risk factors and circumstances that may affect post-acute care use, recovery, and episode spending. Commenters cited factors such as dual eligibility, disability, housing instability, food insecurity, transportation barriers, caregiver availability, home environment, access to outpatient or post-acute care, community resource availability, and beneficiary choice of post-acute care provider. Commenters expressed concern that hospitals treating beneficiaries with greater social needs or barriers to recovery could be disadvantaged if target prices do not adequately account for these factors.

Some commenters recommended separate target prices or protections for dual-eligible beneficiaries, peer grouping, or other safeguards to ensure

that hospitals are not penalized for treating clinically or socially complex patients. A few commenters also recommended that CMS publish information on the performance of the risk adjustment model, including whether the methodology adequately accounts for patient complexity and social risk.

Response: We acknowledge commenters' recommendations to add beneficiary-level risk adjustment factors for additional medical history, clinical complexity, and episode-specific characteristics. We agree that these factors may affect episode spending and recovery after an LEJR procedure. We also note that the proposed CJR–X risk adjustment methodology already includes several variables intended to capture clinical complexity and episode-specific differences, including age group, CJR–X HCC count, prior post-acute care use, disability status as the reason for initial Medicare enrollment, recent medical history based on the 180-day lookback period, and risk adjustment multipliers calculated at the MS–DRG/HCPCS episode type level. In addition, certain differences identified by commenters are already reflected in episode construction or pricing. For example, fracture-related hip replacement episodes are reflected in the MS–DRG structure, and inpatient and outpatient episodes are priced at the applicable MS–DRG/HCPCS episode type level.

We are not adopting additional medical history, clinical complexity, or episode-specific risk adjustment variables at this time. Some recommended factors may already be captured in whole or in part through the proposed variables, episode type, or MS–DRG/HCPCS structure, while others may not be consistently available or reliably measured in standardized Medicare claims data across all CJR–X participants. We also believe that adding factors based on information identified during the episode, or on care decisions made during the episode, could reduce episode-based accountability or create incentives related to coding, documentation, or utilization rather than underlying beneficiary risk. We believe the proposed methodology substantially expands beneficiary-level risk adjustment compared with the original CJR Model while maintaining a clear and administrable approach for a national model.

We also acknowledge commenters' recommendations to add or refine risk adjustment for social risk factors and circumstances that may affect post-acute recovery. We agree that social risk, caregiver support, home environment, transportation barriers, access to post-acute care, and community resources may influence recovery and episode spending. The proposed beneficiary economic risk adjustment factor is intended to account for social risk in a standardized way by identifying beneficiaries who meet at least one of several criteria, including residence in an area with high community deprivation, eligibility for the Part D Low-Income Subsidy, or full Medicaid eligibility. The proposed methodology also includes disability status and prior post-acute care use, which may help capture differences in beneficiary needs and expected resource use.

We are not adopting separate target prices or episode tracks for dual-eligible beneficiaries or other beneficiary subgroups. Dual eligibility is already one component of the proposed beneficiary economic risk adjustment factor, and we believe that incorporating social risk through a standardized beneficiary-level factor is preferable to creating separate target price tracks for specific subgroups. Separate tracks or peer groups could reduce episode volume within pricing cells, increase volatility, and make target prices less stable. We address related comments regarding the safety net hospital definition and safety net hospital adjustment in the applicable sections of this final rule.

We acknowledge commenters' requests that CMS publish information on risk-adjustment model performance. We intend to monitor the performance of the CJR–X risk adjustment methodology as the model is implemented, including whether the methodology adequately accounts for clinical complexity, social risk, episode type, patient mix, and shifts in site of care. We will consider what information can be shared publicly or through model materials in a manner that supports transparency while protecting beneficiary privacy, data security, and the integrity of model operations.

Comment: Some commenters recommended that CMS incorporate additional hospital-level or participant-level risk adjustment factors into the CJR–X pricing methodology. Commenters stated that facility characteristics such as sole community hospital status, Medicare-dependent, small rural hospital status, rurality, teaching hospital status, indirect medical education intensity, academic medical center or tertiary referral center status, trauma-driven or non-elective referral patterns, hospital resources, and prior efficiency may affect LEJR episode spending and financial risk.

Commenters expressed concern that the proposed methodology may not fully account for structural differences among hospitals or the role of hospitals that treat more complex patients, accept referrals from other hospitals, serve as regional tertiary centers, or operate in rural or resource-constrained markets. Commenters stated that, without additional hospital-level adjustment, target prices could be too low for these hospitals, reconciliation results could reflect differences in hospital mission or referral patterns rather than episode performance, and the model could create disincentives to accept complex transfers or higher-risk patients.

Some commenters recommended that CMS add specific participant-level adjusters, such as teaching hospital status, indirect medical education intensity, sole community hospital status, Medicare-dependent, small rural hospital status, or academic medical center status. Some commenters also recommended regional-efficiency or shared-savings adjustments to recognize hospitals or regions that have already achieved lower spending. A couple commenters requested that CMS publish additional information on risk-adjustment coefficients or analyses comparing episode cost distributions across hospital categories, including teaching and non-teaching hospitals.

Response: We acknowledge commenters' recommendations to add hospital-level risk adjustment factors for additional provider characteristics. We agree that hospital characteristics, referral patterns, resource levels, and institutional roles may affect episode performance and financial risk. The proposed CJR–X risk adjustment methodology already includes hospital-level risk adjustment factors for bed size and safety net hospital status, in addition to beneficiary-level and episode-specific factors that account for differences in patient acuity and expected episode spending. We believe these proposed factors substantially expand the risk adjustment methodology compared with the original CJR Model while maintaining a methodology that participants can understand and apply to estimate target prices.

We are not adopting additional participant-level risk adjustment factors for teaching hospital status, indirect medical education intensity, academic medical center or tertiary referral center status, sole community hospital status, Medicare-dependent, small rural hospital status, or rurality at this time. Some of the concerns raised by commenters are more directly addressed through other CJR–X policies. For

example, beneficiary-level risk adjustment and MS–DRG/HCPCS episode type pricing are designed to account for patient and episode complexity, the safety net hospital risk adjustment factor is designed to account for a specific hospital-level social-risk measure, and reduced stop-loss limits provide additional financial protection for certain hospital categories. We address comments on the safety net hospital definition, safety net adjustment, and special designation hospital protections in the applicable sections of this final rule.

We are also concerned that adding multiple additional hospital-level designations to risk adjustment could reduce transparency, increase complexity, and make target prices less comparable across participants. Hospital designations such as teaching status, tertiary referral status, SCH status, or MDH status may reflect important institutional roles, but they do not necessarily provide a more precise or episode-specific measure of expected LEJR episode spending after accounting for beneficiary case mix, episode type, bed size, and safety net status. We believe the proposed methodology better balances payment accuracy, transparency, and administrative feasibility for a nationally expanded model.

We also acknowledge commenters' recommendations for regional-efficiency or shared-savings adjustments for historically efficient hospitals or regions. We address broader concerns about prior efficiency, price ratcheting, and regional benchmarking in the applicable pricing sections of this final rule. We do not believe those recommendations should be addressed by adding a hospital-level risk adjustment factor because they relate to target price sustainability and benchmark design rather than differences in expected episode spending attributable to hospital characteristics.

We acknowledge commenters' requests for additional information on risk-adjustment coefficients and model performance across hospital categories. As proposed, we intend to provide participants with risk adjustment multipliers before the start of the performance year so that participants can estimate episode-level target prices. We will also consider what additional methodological information can be shared through model materials in a way that supports transparency while protecting beneficiary privacy, data security, and the integrity of model operations.

Comment: Many commenters recommended that CMS revise or broaden the proposed definition of ''safety net hospital'' for CJR–X. Commenters stated that defining safety net hospitals based on whether a hospital is in the top quartile in its region for the percentage of FFS LEJR inpatient episodes furnished to dually eligible beneficiaries would be too narrow, unstable, or inconsistent with other CMS approaches. Commenters expressed concern that the proposed definition could fail to identify hospitals that serve large numbers of low-income, Medicaid, uninsured, or otherwise underserved patients across their broader patient population, but that do not have a high proportion of FFS inpatient LEJR episodes furnished to dually eligible beneficiaries.

Commenters raised concerns about several elements of the proposed definition. Some commenters stated that a service line-specific LEJR measure may not reflect a hospital's overall safety net role, and that an inpatient-only measure may not reflect shifts in LEJR procedures to outpatient settings. Some commenters stated that a FFS-only measure may understate safety net status in markets with high Medicare Advantage or integrated dual-eligible enrollment. Commenters also stated that a dual-eligibility-only measure may be affected by state Medicaid eligibility rules or may not capture other indicators of low-income status or social risk.

Commenters recommended alternative criteria. Some commenters recommended Medicare-specific alternatives, including alignment with the TEAM safety net hospital definition, use of all Medicare beneficiaries or all Medicare service lines, Part D Low-Income Subsidy status, or a national rather than regional threshold. Other commenters recommended broader hospital-wide, all-payer, or community-based measures, including DSH patient percentage, Medicaid volume, uncompensated care, all-payer low-income metrics, Area Deprivation Index or other community deprivation measures, state-level low-income care criteria, or other measures intended to capture hospitals that serve low-income, uninsured, Medicaid, or medically underserved populations.

Some commenters stated that hospitals should retain safety net hospital status once they qualify, even if they later fall below the proposed threshold. These commenters stated that retaining safety net status would reduce instability and provide greater predictability for hospitals near the threshold.

Response: We acknowledge commenters' concerns that the proposed CJR–X safety net hospital definition may not identify every hospital that serves a broader safety net role. We also recognize that hospitals may serve low-income, uninsured, Medicaid, Medicare Advantage, or otherwise underserved populations in ways that are not fully reflected by the share of FFS inpatient LEJR episodes furnished to dually eligible beneficiaries.

We are not adopting a broader safety net hospital definition for the initial CJR–X design at this time. We continue to believe that the proposed definition is appropriate for CJR–X because it is directly connected to the population and episode category used in the CJR–X risk adjustment and target price methodology. CJR–X is a LEJR episode model that includes only Medicare FFS episodes for beneficiaries meeting the model's inclusion criteria. For that reason, we believe a definition based on FFS LEJR inpatient episodes furnished to dually eligible beneficiaries is more directly related to expected episode spending under CJR–X than broader hospital-wide or all-payer measures.

We also are not adopting commenters' recommendation to align the CJR–X safety net hospital definition with the TEAM definition at this time. TEAM includes multiple episode categories and uses a broader multi-episode design, while CJR–X includes only LEJR episodes. Although alignment across models can reduce operational differences, we believe the CJR–X definition should be tailored to the CJR–X episode population and pricing methodology. We also believe that using a regional comparison is appropriate because CJR–X target prices are based on regional spending, and the safety net hospital risk adjustment factor is part of that regional pricing framework. In addition, using a regional comparison provides a more nuanced approach than a national threshold because it helps account for regional differences, including differences influenced by state Medicaid eligibility rules and dual-eligibility patterns.

We considered commenters' recommendations to use Medicare-specific alternatives, such as broader Medicare populations, Part D Low-Income Subsidy status, or a national threshold. We also considered recommendations to use broader hospital-wide, all-payer, or community-based measures, such as DSH patient percentage, Medicaid volume, uncompensated care, all-payer low-income metrics, or community deprivation measures. We are not adopting those alternatives at this time

because they would identify safety net status based on measures that may be less directly connected to the LEJR episodes included in CJR–X or to expected CJR–X episode spending. Some of those measures may also introduce additional variation unrelated to CJR–X episode spending, including variation based on payer mix, hospital service mix, uncompensated care policy, and state Medicaid policy.

We recognize commenters' concerns that a binary threshold may create cliff effects or year-to-year changes in safety net hospital status for hospitals near the threshold. We considered more nuanced approaches in the proposed rule, including segmenting hospitals into additional groups based on the share of FFS inpatient LEJR episodes furnished to dually eligible beneficiaries. However, further segmentation would reduce the number of episodes in each group and could create sample size and accuracy concerns.

We are not adopting a policy under which hospitals would retain safety net status for the duration of CJR–X once they qualify. We recognize that such a policy could increase predictability for hospitals near the threshold, but tying safety net status to the applicable baseline period aligns the designation with the data used for CJR–X pricing and risk adjustment and allows the designation to reflect changes in the episode population over time.

We will continue to assess whether the safety net hospital definition appropriately identifies hospitals that face higher expected LEJR episode spending due to the patient populations they serve. We will consider monitoring data, evaluation findings, operational experience, and stakeholder feedback in determining whether future refinements to the safety net hospital definition are warranted.

Comment: Many commenters recommended that CMS revise the proposed safety net hospital risk adjustment policy or adopt additional protections for safety net and other vulnerable hospitals. Commenters stated that a binary safety net hospital adjustment may not adequately reflect the range of financial and operational challenges faced by hospitals that serve high shares of low-income or socially vulnerable beneficiaries. Commenters expressed concern that hospitals just below the proposed safety net threshold may face challenges similar to hospitals just above the threshold, but would not receive the same adjustment.

Commenters recommended that CMS adopt a graduated, tiered, continuous, or non-linear safety net adjustment instead of a binary adjustment. Commenters suggested that the adjustment could increase as the share of low-income, dual-eligible, or socially vulnerable beneficiaries increases, or that CMS could use peer groups based on the share of dual-eligible or low-income beneficiaries. Commenters stated that a graduated approach could reduce cliff effects, better account for hospitals with different levels of social-risk burden, and provide more appropriate support for hospitals that serve vulnerable populations.

Some commenters recommended additional protections for safety net hospitals, near-safety-net hospitals, rural hospitals, sole community hospitals, Medicare-dependent, small rural hospitals, or other resource-constrained hospitals. Commenters suggested policies such as greater risk adjustment, additional monitoring, recalibration of the safety net adjustment, or other safeguards if vulnerable hospitals experience disproportionate repayments, access concerns, or financial instability under CJR–X.

Response: We acknowledge commenters' concerns that a binary safety net hospital risk adjustment may not capture every difference in financial risk or resource constraints among hospitals that serve vulnerable populations. We recognized this concern in the proposed rule and considered a more nuanced approach that would segment hospitals into additional groups based on the share of FFS inpatient LEJR episodes furnished to dually eligible beneficiaries. We also recognized that hospitals just below the proposed threshold may face challenges similar to hospitals just above it.

We are not adopting a graduated, tiered, continuous, or non-linear safety net hospital risk adjustment at this time. We remain concerned that further segmenting hospitals into smaller groups could reduce the number of episodes used to calculate risk adjustment multipliers and could create sample size and accuracy concerns. A more granular safety net adjustment could also increase volatility for hospitals near multiple thresholds and make it more difficult for participants to understand and estimate target prices. We believe the proposed binary safety net hospital risk adjustment provides a clearer and more administrable approach for the initial CJR–X methodology while still adding a hospital-level adjustment that was not part of the original CJR Model methodology.

We recognize commenters' concerns that hospitals near the safety net threshold or hospitals serving vulnerable populations may still face financial and operational challenges under CJR–X. The safety net hospital risk adjustment factor is intended to improve target price accuracy by accounting for a specific hospital-level social-risk measure in the pricing methodology. Other forms of financial protection, including limits on repayment responsibility, are addressed through the reconciliation methodology rather than through the risk adjustment methodology.

We agree that the performance of safety net hospitals and other vulnerable hospitals will be an important issue to evaluate as CJR–X is implemented. We will monitor whether the safety net hospital risk adjustment factor is appropriately accounting for differences in expected episode spending, including whether hospitals near the safety net threshold experience disproportionate repayments or access, quality, or operational concerns. We will consider monitoring data, evaluation findings, operational experience, and stakeholder feedback in determining whether refinements to the safety net hospital risk adjustment methodology are warranted.

Comment: A couple commenters recommended that CMS revise the proposed cap on the final normalization factor adjustment. Commenters stated that retrospective normalization adjustments can materially affect reconciliation target prices and reduce participants' ability to predict performance before reconciliation.

A commenter expressed concern that the normalization factor could offset or exceed the effect of risk adjustment and recommended that CMS cap the normalization factor so that it does not exceed the risk adjustment. Another commenter recommended reducing the proposed limit on the normalization factor adjustment from 5 percent to 3 percent to align with the proposed limit on the retrospective trend factor adjustment.

Response: We acknowledge commenters' concerns about the effect of the final normalization factor on reconciliation target prices and participant predictability. The normalization factor and risk adjustment multipliers work together, but they serve different functions. Risk adjustment multipliers account for differences in beneficiary and hospital-level characteristics that affect expected episode spending, while normalization is intended to ensure that risk adjustment does not increase or decrease target prices overall solely because of the application of the risk adjustment methodology.

We are not adopting a policy to cap the normalization factor so that it does not exceed the risk adjustment. We do not believe that comparison would provide an appropriate limit because normalization is calculated to address the aggregate effect of risk adjustment and case-mix changes, while individual risk adjustment multipliers operate at the episode level. Limiting normalization based on the magnitude of risk adjustment could prevent the methodology from appropriately accounting for differences between the case mix reflected in preliminary target prices and the case mix observed during the performance year.

We are also not reducing the proposed final normalization factor adjustment cap from 5 percent to 3 percent. We recognize that the retrospective trend factor adjustment is capped at 3 percent, but the trend factor and normalization factor serve different purposes. The retrospective trend factor accounts for changes in spending patterns between the baseline and performance year, while the final normalization factor accounts for changes in observed case mix. We continue to believe that a 5 percent cap on the final normalization factor adjustment appropriately balances predictability with the need to account for meaningful case-mix changes during the performance year.

We also note that this approach is consistent with the TEAM methodology, which uses a 5 percent cap on the normalization factor adjustment and a 3 percent cap on the retrospective trend factor adjustment. Maintaining the same caps in CJR–X supports consistency across episode-based payment methodologies while preserving the different functions of the two adjustments.

Comment: A commenter requested that CMS reduce the limit on the normalization factor adjustment to 3% to align with the limit on the trend factor adjustment.

Response: We appreciate the commenter's suggestion to align the limit on the normalization factor adjustment with the limit on the trend adjustment. We note that the normalization factor and trend factor serve different purposes, with the normalization factor accounting for changes in patient case mix between the baseline and performance year and the trend factor accounting for changes in spending patterns between the baseline and performance year. Our goal for capping each adjustment is to strike a balance between predictability of target prices and protecting both CJR–X participants and CMS from significant shifts in patient case mix and spending patterns. We note that in the CJR Extension there was no cap on the retrospective adjustment to either the normalization factor adjustment or the trend factor adjustment. In TEAM, we finalized a 5% limit on the normalization factor. We finalized the 3% limit on the trend factor adjustment to be responsive to comments and consistent with the pattern of BPCI Advanced, which decreased its trend factor adjustment cap in later years of the model. We continue to believe that these caps represent the best way to balance predictability and protection from changes between the baseline and performance years. We also believe that maintaining the same caps in CJR–X as we do in TEAM will minimize unnecessary confusion.

After consideration of the public comments, we are finalizing without modification the proposals at § 512.605 for the definitions of ''age bracket risk adjustment factor'', ''beneficiary economic risk adjustment factor'', ''CJR–X HCC count risk adjustment factor'', ''final normalization factor'', ''prospective normalization factor'', and ''safety net hospital''. We are also finalizing without modification the proposals at § 512.645(a–d) for risk adjusting episodes.

(5) Process for Reconciliation

In the CJR Model, we performed an annual reconciliation calculation to compare CJR Model PY spending for a CJR participant to a reconciliation target price in order to determine if CMS owed the CJR participant a reconciliation payment, or if the CJR participant owed CMS a repayment. This section reviews our proposals for conducting an annual reconciliation process in CJR–X. As was the case in the CJR Model, we proposed to incorporate the participant's quality performance into the reconciliation calculation by adjusting the reconciliation target price for quality based on the CJR–X participant's CQS, which would be constructed from their performance on the proposed quality measures discussed in section X.C.2.e. of this final rule. The proposed quality adjustment is discussed in more detail in section X.C.2.f.(5)(f). of this final rule. We proposed to update the trend factor as discussed in section X.C.2.f.(3)(f). of this final rule and apply episode-level risk adjustment and update the normalization factor as discussed in X.C.2.f.(4). of this final rule. We proposed to calculate the difference between the participant's aggregated reconciliation target price across all episodes and their episode spending to create the raw NPRA. We proposed to apply stop-loss/stop-gain limits to the raw NPRA to determine the CJR–X participant's NPRA. Finally, we proposed to subtract the post-episode spending amount from the NPRA, when applicable, to determine the reconciliation payment or repayment amount.

We refer readers to section X.C.2.d.(3). of this final rule for our definition of related services for our episodes, to section X.C.2.a of this final rule for our definition of performance years, and to section X.C.2.f.(3) of this final rule for our approach to establish preliminary target prices.

(a) Annual Reconciliation

As we did in the CJR Model, we proposed to conduct an annual reconciliation calculation that would compare performance year spending on episodes with a date of discharge from the anchor hospitalization or a date of discharge from the anchor procedure during that PY with reconciliation target prices for those episodes to calculate a reconciliation amount for each CJR–X participant. We would reconcile, on an annual basis, all episodes attributed to a CJR–X participant that end in a given calendar year. We note that we proposed that performance years would be aligned with fiscal years but are finalizing a policy to align performance years with calendar years, as discussed in section X.C.2.a. of this final rule. As we stated in the 2015 CJR final rule that finalized the CJR Model (80 FR 73385) and reiterated in the FY 2025 IPPS/LTCH PPS final rule that finalized TEAM (89 FR 69773), we believe that one annual reconciliation accommodates the need for regular performance feedback while minimizing the administrative burden of more frequent reconciliations.

We sought comment on this proposal at § 512.650 to conduct one reconciliation for each performance year. The following is a summary of the public comments received.

Comment: A commenter recommended that CMS provide quarterly preliminary reconciliation estimates during the performance year while retaining annual reconciliation as the formal payment process. The commenter stated that quarterly visibility would improve cash-flow predictability and help hospitals manage downstream provider relationships. The commenter also stated that interim estimates would support gainsharing arrangements by allowing participants to maintain care coordination incentives throughout the year. The commenter stated their belief that preliminary reconciliation estimates would help hospitals identify

and address performance issues before year-end reconciliation.

Response: We appreciate the commenter's support for an annual reconciliation process and recommendation for quarterly preliminary reconciliation estimates. We recognize the importance of maximizing visibility into participants' performance throughout the year. However, we are concerned that quarterly preliminary reconciliation estimates could not be produced with sufficient claims runout and reliability to provide additional meaningful information to hospitals beyond what we will include in their monthly claims data feeds. We note that the monthly data feed will include both line-level claims data and summary data. Additionally, we anticipate providing quarterly estimates of the trend, normalization, and payment system update factors to help participants better estimate their reconciliation target prices. Given the potential for volatility between preliminary reconciliation estimates and final reconciliation results, we do not plan to provide preliminary reconciliation estimates at this time. However, we believe that the monthly data feeds, in conjunction with the preliminary target prices and quarterly trend, normalization, and update factor estimates, will give participants sufficient, actionable information regarding their performance in the model.

After consideration of the public comment we received, we are finalizing without modification the proposal at § 512.650 to conduct one reconciliation for each performance year.

(b) Timing

We proposed to conduct the annual reconciliation of each CJR–X participant's actual episode payments against the target price(s) roughly 6 months after the end of the performance year, consistent with the 6 months of claims runout we allowed for the reconciliation in the CJR Extension for CJR Model PYs 6 through 8. As we stated in the 2021 CJR 3-Year Extension final rule that finalized the CJR Extension (85 FR 23519) and reiterated in the FY 2025 IPPS final rule that finalized TEAM (89 FR 69773), we believe that 6 months is sufficient time for claims runout given that an internal review of Medicare claims data found that 98.71 percent of IP claims had been received, and 89.96 percent were considered final, by 6 months after the date of service.[605] For HOPD claims, those rates were 98.10 percent and 95.78 percent, respectively. Similar rates were found for all other types of claims, including Carrier, SNF, HH, and DME, indicating that we would have a nearly complete picture of performance year spending by 6 months after the end of the performance year. In the proposed rule, we proposed that CJR–X performance years would align with the fiscal year (October to September) rather than the calendar year, so we proposed to capture claims submitted by April 1st following the end of the performance year and carry out the NPRA calculation as described previously to make a reconciliation payment or hold CJR–X participants responsible for repayment. However, as discussed in section X.C.2.a of this final rule, in response to comments we are finalizing a policy at § 512.630(a) to begin the first performance year of CJR–X on January 1, 2028 and align CJR–X performance years with the calendar year instead of the fiscal year. This change will allow additional time for participants to prepare for the first performance year and will align performance years with TEAM. This shift to a calendar year means that we will capture claims submitted by July 1st following the end of a performance year in order to carry out the NPRA calculation.

Comment: A commenter stated their concern that the CJR–X Model continues to be built on the FFS framework, with providers largely continuing to bill Medicare on a fee-for-service basis followed by an annual retrospective reconciliation some months after the conclusion of the performance year. They noted that this structure creates significant lags between when care is delivered and when performance is recognized.

Response: We acknowledge the commenter's concern that the annual retrospective reconciliation creates a lag between when care is delivered and when reconciliation reports and potential reconciliation payments are received. Although we recognize that the time lag may be a challenging aspect of the model, we note that we will provide monthly claims data feeds that provide timely feedback that can be used by participants to identify cost drivers, identify opportunities for greater care coordination, and gauge their performance in the model.

Comment: A commenter stated their concern that the annual reconciliation timeline could cause charges to be erroneously included in the episode in cases where claims may need to be rebilled after the reconciliation window closes. They expressed particular concern about episodes that occur near the end of the calendar year, when many patients seek to schedule procedures before their annual deductible resets.

Response: We appreciate the commenter's concerns about charges being erroneously included in an episode due to a billing error that was not remediated within the annual reconciliation window. We reiterate our belief that a 6-month window for claims run-out after the end of the performance year strikes the appropriate balance between allowing time for claims to be adjudicated, and corrected as needed, and providing finalized reconciliation results within a reasonable timeframe. We note that 6 months is the minimum amount of claims runout, applying to episodes that end at the end of the performance year. Episodes that end earlier in the performance year will have additional months of claims runout. We also note that, since we are finalizing a policy to align CJR–X episodes with the calendar year rather than the fiscal year as proposed, 90-day episodes that are initiated near the end of a given calendar year will end in the early months of the following performance year, allowing for considerably more than 6 months of claims runout to adjudicate any errors.

After consideration of the public comments received, we are finalizing without modification our proposal at § 512.560(b) to perform reconciliation 6 months after the end of the performance year.

(c) Participants That Experience a Reorganization Event

In the CJR Model, we recognized that there could be CJR participants that experience a reorganization event during a given performance year. We proposed to align CJR–X policies for reorganization events with those of the CJR Model. At proposed § 512.605, we proposed to define a ''reorganization event'' as a merger, consolidation, spin-off or other restructuring that results in a new hospital entity under a given CCN. As a result of such an event, the CJR–X participant may begin billing under a different CCN, or an additional entity could be incorporated into the CJR–X participant's existing CCN, resulting in a new hospital entity. For instance, CJR–X participant A may merge with, or be purchased by, CJR–X participant B and begin billing under CJR–X participant B's CCN. In this case, we proposed to perform separate reconciliation calculations for CJR–X participant A and CJR–X participant B

[605] Chronic Conditions Data Warehouse: Medicare Claims Maturity White Paper *https://www2.ccwdata.org/documents/10280/19002256/medicare-claims-maturity.pdf.*

for those episodes where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the merger or purchase. We proposed to reconcile episodes where the anchor hospitalization admission or the anchor procedure occurred on or after the effective date of the merger or purchase under the new or surviving CCN that applies to the blended entity. We proposed this policy in recognition that the blended entity may have different spending patterns, or a different overall patient case mix, than the two separate entities prior to the merger. In a different instance, if a CJR–X participant merges into or is purchased by a hospital that is excluded from CJR–X participation as specified in proposed § 512.610(b) and begins billing under the CCN of the non-CJR–X participant, we proposed to reconcile episodes for the CJR–X participant where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the merger or purchase. This policy would allow for the CJR–X participant to earn a reconciliation payment or owe a repayment for the episodes that occurred during the portion of the performance year that they were in the model. However, once the CJR–X participant begins to bill under the non-CJR–X participant's CCN, the blended entity would not be considered a CJR–X participant and we would not reconcile episodes where the anchor hospitalization admission or the anchor procedure occurred on or after the effective date of the merger or purchase under the new or surviving CCN that applies to the blended entity.

We sought comment on our proposal at § 512.650(b)(2) for conducting reconciliations for CJR–X participants that experience a reorganization event during a given performance year. We received no comments on this proposal and therefore are finalizing this provision without modification.

(d) Updating Preliminary Target Prices To Create Reconciliation Target Prices

As discussed in sections X.C.2.f.(3)(f). and X.C.2.f.(4). of this final rule, we proposed to apply beneficiary-level risk adjustment and a limited adjustment to the prospective trend factor and normalization factor, as applicable, to increase the accuracy of our reconciliation calculations. At the time of reconciliation, we would apply these adjustments, if applicable, to the preliminary target prices we calculated and communicated to CJR–X participants prior to the applicable performance year, as described in Section X.C.2.f.(5)(d). of this final rule. Additionally, preliminary target prices would be adjusted for geographic wage factor updates, similar to the CJR Model, to convert target prices, which were previously expressed in standardized dollars, into ''real'' or unstandardized amounts. Application of these adjustments to the preliminary target price, in addition to the Composite Quality Score adjustment described in section X.C.2.f.(5)(e). of this final rule, will result in the reconciliation target price. We note that in some cases, the final target price applied to an episode in a given performance year at reconciliation will not change. In addition, in some cases the reconciliation target price will increase from the preliminary target price provided prior to the performance year, potentially benefiting CJR–X participants. For instance, if the prospective trend was 0.98 and the prospective normalization factor were calculated as 0.85, but the realized spending trends and beneficiary case mix during the performance year differed from the values constructed for preliminary target prices, such that the capped retrospective trend adjustment factor was 1.10 and the capped final normalization factor were calculated as 0.87, the reconciliation target price would incorporate these updated factors and therefore be higher than the preliminary target price.

Furthermore, we recognize that due to the availability of data and the timing of when preliminary target prices would be shared with CJR–X participants, the most up-to-date payment data from CMS payment rules, including the Calendar Year OPPS/ASC rule and the Fiscal Year IPPS/LTCH PPS rule would not be captured in the prices. Typically, CMS proposes and finalizes coding or rate changes, as applicable, through established annual payment rules. While we recognize the retrospective trend factor adjustment will take into account realized spending trends during the performance year, given the proposed 3 percent cap, we are concerned the retrospective trend factor adjustment may not capture payment rate changes or other changes, such as ambulatory payment classification (APC) or MS–DRG changes that arise from these payment rules. Therefore, we proposed at § 512.645(g) during reconciliation target price construction to update the preliminary target price to account for updated payment rule changes to reflect episode spending during the performance year. We recognize that accounting for payment rule changes during reconciliation target price construction rather than sharing updated preliminary target prices during the performance year may result in CJR–X participants not having the most updated information during the performance year. We note this methodology differs from TEAM's proposal in section X.A.2.c.(2). of this final rule. We believe this approach is appropriate for CJR–X given the single episode category tested in CJR–X and anticipate fewer coding changes affecting the LEJR episode. We considered but did not propose to update and deliver preliminary target prices to CJR–X participants for each calendar and fiscal year final rule. We believe managing three different preliminary target prices in a given performance year will increase participant burden and pricing methodology complexity. Lastly, we also considered but did not propose removing the 3 percent capping of the retrospective trend factor adjustment. Applying a full retrospective trend factor to reconciliation target prices, rather than capping at 3 percent would account for actual performance year spending and would incorporate payment rule changes not captured in preliminary target prices. However, we recognize that removing the 3 percent cap may introduce target price instability making it more difficult for CJR–X participants to predict reconciliation target prices and assess spending performance in the model.

We sought comment on our proposal at § 512.645(g) to account for payment system changes during the construction of reconciliation target prices.

Comment: A couple of commenters recommended that CMS provide APC, MS–DRG, or other payment-rule update factors during the performance year rather than waiting until reconciliation. The commenters stated that earlier visibility into update factors would improve transparency and financial planning. The commenters stated their belief that hospitals should be able to anticipate how annual payment rule changes will affect target prices while the performance year is underway. The commenters suggested that more actionable information would support care redesign and internal accountability. The commenters requested that CMS align the timing of information sharing with hospitals' operational need to manage performance prospectively.

Response: We appreciate the recommendation to provide additional visibility into payment-rule update factors during the performance year. We recognize that additional information during the performance year could improve participant planning and

understanding of reconciliation target prices. We anticipate providing preliminary update factors, along with quarterly estimates of the trend and normalization factors.

After consideration of the public comments we received, we are finalizing without modification our proposal at § 512.645(g) to account for payment system changes during the construction of reconciliation target prices.

(e) Applying Composite Quality Score to Reconciliation Target Prices

(i) Overview

Similar to the CJR Model, we discuss in section X.C.2.f.(3)(g). of this final rule to include a discount factor for all CJR–X participants that would be incorporated into preliminary target prices. While the CJR Model included a 3.0 percent discount factor (80 FR 73353), we proposed a 2.0 percent discount factor for CJR–X that takes into consideration the opportunity for CJR–X participants to find savings and acknowledges the reductions in LEJR spending since the CJR Model was implemented. We stated in the proposed rule that CJR–X participants that provide high-quality episode care would have the opportunity to reduce the effective discount factor used to calculate their reconciliation target price. As in the CJR Model, we proposed to adjust the discount factor based on the CJR–X participant's composite quality score by categorizing them into one of four categories, specifically ''Excellent,'' ''Good,'' ''Acceptable,'' and ''Below Acceptable,'' for each performance year. Based on where the CJR–X participant is categorized, then they may receive a reduction to their discount factor, no reduction to their discount factor, or no reduction and ineligibility to receive a reconciliation payment.

(ii) Adjusting the Discount Factor

We proposed to incorporate the composite quality score, as described in section X.C.2.e.(6) in this final rule, in the CJR–X pricing methodology by (1) requiring a minimum composite quality score for reconciliation payment eligibility if the CJR–X participant's actual episode payments are less than the reconciliation target price and (2) determining the effective discount factor included in the reconciliation target price experienced by the CJR–X participant in the reconciliation process.

Under this methodology, we proposed CJR–X participants must achieve a minimum composite quality score of >=6.1 to be eligible for a reconciliation payment if actual episode spending were less than the reconciliation target price based on the 2.0 percent maximum discount factor. We proposed at § 512.645(h)(4) that CJR–X participants with ''below acceptable'' quality performance reflected in a composite quality score less than or equal to 6.0 would not be eligible for discount factor reduction nor would they be eligible for a reconciliation payment if actual episode spending were less than the reconciliation target price. We noted in the proposed rule that a level of quality performance that is below acceptable would not affect CJR–X participants' repayment responsibility if actual episode spending exceeded the reconciliation target price. We believed that excessive reductions in utilization that lead to low actual episode spending and that could result from the financial incentives of the model would be limited by a requirement that this minimum level of quality be achieved for reconciliation payments to be made. We noted this policy would encourage CJR–X participants to focus on appropriate reductions or changes in utilization to achieve high quality care in a more efficient manner. Therefore, we stated these CJR–X participants would be ineligible to receive a reconciliation payment if actual episode spending were less than the reconciliation target price.

We proposed at § 512.645(h)(3) that CJR–X participants with an ''acceptable'' composite quality score of greater than or equal to 6.1 and less than or equal to 12.0 would be eligible for a reconciliation payment if actual episode spending were less than the reconciliation target price but would not be eligible for a discount factor reduction. Therefore, acceptable performance would be based on a 2.0 percent discount factor because their quality performance was at the acceptable level established for the model. We stated that these CJR–X participants would be eligible to receive a reconciliation payment if actual episode spending were less than the reconciliation target price.

We proposed at § 512.645(h)(2) that CJR–X participants with a ''good'' composite quality score of greater than or equal to 12.1 and less than or equal to 17.0 would be eligible for a reconciliation payment if actual episode spending were less than the reconciliation target price and would be eligible for a 1.0 percent discount factor that reflects their good quality performance. Thus, we noted that participants achieving this level of quality would either have less repayment responsibility (that is, the reduced discount factor would offset a portion of their repayment responsibility) or receive a higher reconciliation payment (that is, the reduced discount factor would increase the reconciliation payment) at reconciliation than they would have otherwise if the 2.0 discount factor were maintained.

Finally, we proposed at § 512.645(h)(1) CJR–X participants with an ''excellent'' composite score quality score of greater than or equal to 17.1 would be eligible to receive a reconciliation payment if actual episode spending was less than the reconciliation target price and would be eligible for a 0.0 percent discount factor that reflects their excellent performance. Thus, we stated that participants achieving this level of quality would either have less repayment responsibility (that is, the reduced discount factor would offset a portion of their repayment responsibility) or receive a higher reconciliation payment (that is, the reduced discount factor would increase the reconciliation payment) at reconciliation than they would have otherwise if the 2.0 discount factor were maintained.

Under this methodology, the stop-loss and stop-gain limits discussed in section X.C.2.f.(5)(g) of this final rule would not change. We stated in the proposed rule that we believe this approach to quality incentive payments based on the composite quality score could have the effect of increasing the alignment of the financial and quality performance incentives under CJR–X to the potential benefit of CJR–X participants and their collaborators as well as CMS and would be consistent with the original CJR model methodology linking quality and payment.

The CJR–X composite quality score ranges are display in Table X.C–06.

TABLE X.C.-06: RELATIONSHIP OF COMPOSITE QUALITY SCORE ON RECONCILIATION PAYMENT ELIGIBILTY AND DISCOUNT FACTOR

Composite quality score (CQS)	Composite Quality Score Category	Eligible for Reconciliation Payment	Discount Factor
CQS <=6.0	Below acceptable	No	2.0
CQS >=6.1 and <12.0	Acceptable	Yes	2.0
CQS >=12.1 and <=17.0	Good	Yes	1.0
CQS >=17.1	Excellent	Yes	0.0

We sought comment on our proposal at § 512.650(g) to link quality to payment by adjusting the discount factor for reconciliation target prices.

The following is a summary of the public comments received on our proposal to adjust the discount factor based on quality performance, and our responses to these comments:

Comment: A commenter stated that CMS should align CJR–X more closely with the design principles reflected in the Transforming Episode Accountability Model (TEAM) and other recent Innovation Center models, particularly with respect to quality incentives.

Response: We recognize the importance of designing payment methodologies that appropriately encourage high-quality care and acknowledge that TEAM incorporates quality adjustments through a methodology that differs from the approach proposed for CJR–X. However, we note that CJR–X is as an expansion of the CJR Model under section 1115A(c) of the Act. As discussed in section X.C.1.c of this final rule, the Secretary determined that the CJR Model met the statutory requirements for expansion based on evidence that the model reduced Medicare spending while maintaining quality of care, and the CMS Chief Actuary certified that expansion would reduce or not increase net program spending. We believe it is important that CJR–X maintain the core features of the model that were tested and evaluated through the CJR Model and that formed the basis for the Secretary's determination and the Chief Actuary's certification. Adopting a substantially different quality incentive structure that more closely mirrors TEAM could represent a significant departure from the model design that was tested and demonstrated to achieve savings while maintaining quality.

We also believe that adjusting the discount factor based on quality performance is an appropriate and effective mechanism for incorporating quality incentives into CJR–X. This approach directly links a participant's opportunity to earn reconciliation payments to its quality performance while preserving the fundamental retrospective bundled payment methodology that was tested under the CJR Model. By adjusting the discount factor applied to episode spending based on quality performance, the model rewards participants that achieve higher quality outcomes while maintaining a clear relationship between quality performance, financial accountability, and Medicare savings. We believe this approach balances the goals of encouraging high-quality care, maintaining consistency with the tested CJR methodology, preserving operational simplicity for participants, and supporting the continuation of a model design that demonstrated the ability to reduce spending while maintaining quality of care.

Comment: A commenter believed that the CQS should not be used to modify the discount factor, but rather, the CQS should only set a performance threshold that should be achieved to be eligible for payment for a positive net payment reconciliation amount.

Response: We agree that quality performance should be an important consideration in determining whether participants are eligible to receive reconciliation payments under CJR–X. In fact, under the CQS methodology, a CJR–X participant must achieve at least an acceptable CQS in order to be eligible to receive a reconciliation payment. Therefore, the model already incorporates a quality threshold below which CJR–X participants are not eligible to receive reconciliation payments.

However, we continue to believe that adjusting the discount factor based on quality performance, in addition to the quality threshold for receiving a reconciliation payment, is the more appropriate approach for the model. While the quality threshold ensures that participants must achieve a minimum level of quality performance before receiving a reconciliation payment, using the CQS solely as a threshold would create a largely binary quality incentive structure in which CJR–X participants either qualify for a reconciliation payment or do not. Under such an approach, once a CJR–X participant achieved the minimum acceptable quality threshold, there would be limited additional financial incentive to further improve quality performance. In contrast, the proposed methodology creates a more continuous relationship between quality performance and financial outcomes by providing greater financial rewards for higher levels of quality achievement above the minimum threshold. We believe this approach better encourages ongoing quality improvement across the full range of CJR–X participant performance rather than focusing incentives only on attainment of a minimum standard.

In addition, we believe adjusting the discount factor appropriately balances the model's dual goals of improving quality and reducing Medicare spending. By linking the effective discount factor to quality performance, CJR–X participants that achieve stronger quality outcomes retain a greater opportunity to earn reconciliation payments, while CJR–X participants with lower quality performance receive a smaller financial benefit even when spending is below the target price. We believe this approach more directly aligns quality and financial accountability and encourages CJR–X participants to pursue both quality improvement and efficient episode management.

Finally, this methodology is consistent with the quality incentive structure tested and evaluated under the CJR Model, which demonstrated the ability to reduce Medicare spending while maintaining quality of care. We believe preserving this relationship between quality performance and reconciliation outcomes supports continuity with the tested model design that forms the basis for the proposed expansion of CJR–X.

After consideration of the public comments, we are finalizing without modification the proposal at § 512.650(g) to link quality to payment by adjusting the discount factor for reconciliation target prices.

(f) Calculating the Raw Net Payment Reconciliation Amount (NPRA)

Consistent with the original CJR model, after the completion of a performance year, we proposed to retrospectively calculate a CJR–X participant's actual episode performance based on the episode definition. We note that episode spending would be subject to proration for services that extend beyond the episode (as described in section X.C.2.f.(3)(c). of this final rule). We proposed to cap performance year spending at the high-cost outlier cap as described in section X.C.2.f.(3)(e). of this final rule. We proposed to apply the high-cost outlier cap to episodes in the performance year similarly to how we proposed to apply it to baseline episodes, using the 99th percentile for each MS–DRG/HCPCS episode type and region as the maximum. Any performance year episode spending amount above the high-cost outlier cap would be set to the amount of the high-cost outlier cap. Similar to the CJR Model, we would apply geographic wage factors to total capped episode spending to convert the amount from standardized dollars into ''real'' or unstandardized amounts. We then proposed to compare each CJR–X participant's performance year spending to its reconciliation target prices, calculated as discussed in X.C.2.f.(5)(d). of this final rule. We note that, as discussed in section X.C.2.f.(3)(i). of this final rule, a CJR–X participant would have multiple target prices for episodes ending in a given performance year, based on the MS–DRG/HCPCS episode type and the performance year when the episode was initiated. We proposed to determine the applicable reconciliation target price for each episode using the aforementioned criteria, and then determine the raw NPRA by calculating the difference between each CJR–X participant's aggregated performance year spending and its aggregated reconciliation target price for all episodes in the performance year.

We sought comment on our proposal at § 512.650(c)(1) through (c)(5) for calculating the raw NPRA.

Comment: A commenter recommended an alternative method to determining a reconciliation payment or repayment and suggested that CMS implement a risk corridor, with only spending outside the corridor resulting in a reconciliation payment or repayment amount.

Response: We thank the commenter for their recommendation. We recognize the commenter's concern that hospitals operating on tight budgets may experience financial disruption from relatively small reconciliation amounts and that, for hospitals with average episode spending close to the target price, year-to-year variation may not reflect meaningful differences in performance. Given that this deviates from the design of the CJR Model and what we have proposed for CJR–X, we do not believe it would be possible to implement such a policy without assessing its merits. As discussed in section X.C.1. of the proposed rule (91 FR 19671) and reiterated in section X.C.1. of this final rule, the CJR–X payment methodology is designed around comparing episode spending to target prices, subject to quality performance and other payment methodology rules, and the proposed model expansion relies on evaluation findings and actuarial certification that expansion is expected to reduce Medicare spending while maintaining quality. Accordingly, while we acknowledge there may be potential value of a risk corridor as a way to address random variation and reduce administrative burden, we would need to analyze its effects on model incentives and projected Medicare spending before considering whether to propose such a policy through future notice-and-comment rulemaking.

After consideration of the public comment we received, we are finalizing without modification our proposal at § 512.650(c)(1) through (c)(5) for calculating the raw NPRA.

(g) Limitations on NPRA

As we did in the CJR Model, we proposed to include both stop-loss and stop-gain limits on the total amount that a CJR–X participant could owe to CMS as a repayment or receive from CMS as a reconciliation payment. As we stated in the 2015 CJR final rule (80 FR 73398), we acknowledge that CJR–X participants vary with respect to their readiness to function under an episode payment model with regard to their organizational and systems capacity and structure, as well as their beneficiary population served. Conversely, we also note that CJR–X participants may be incentivized to excessively reduce or shift utilization outside of the CJR–X episode, even with the proposed quality requirements discussed in section X.C.2.e. of this final rule. In order to ensure that CJR–X participants would neither be subject to an unmanageable level of risk nor be incentivized to stint on care to achieve savings, we proposed limiting a CJR–X participant's NPRA through the application of symmetrical stop-loss and stop-gain limits, calculated as a percentage of the hospital's aggregate reconciliation target price. We note that the stop-loss limit would not apply to any post-episode spending amount as discussed in section X.C.2.f.(5)(h). of this final rule.

Consistent with the CJR Model, we proposed a stop-loss and stop-gain limit of 20 percent for most CJR–X participants. We believe maintaining consistency with the CJR Model's 20 percent stop-loss and stop-gain limits for most CJR–X participants provides an appropriate balance of financial risk and reward to promote spending reductions with reasonable risk thresholds. However, we also acknowledge that certain groups of CJR–X participants may have lower risk tolerance and less infrastructure and support to achieve efficiencies for high-cost episodes, as we stated in the 2015 CJR final rule (80 FR 73403). Therefore, we proposed to provide additional safeguards to certain categories of CJR–X participants, largely consistent with the CJR Model. We proposed to apply a 5 percent stop-loss for CJR–X participants that are rural hospitals as defined at proposed § 512.605, Medicare-dependent, small rural hospitals (MDH), and sole community hospitals (SCH). We also proposed to apply a 5 percent stop-loss for CJR–X participants that meet the proposed definition of safety net hospitals, as defined at proposed § 512.605. Although we did not apply this additional stop-loss protection to safety net hospitals in the CJR Model, evaluation results indicated that this category of hospital was disproportionately likely to owe repayments to Medicare, as we discuss in section X.C.2.f.(4). of this final rule.

We sought comment on our proposal at § 512.650(c)(6)(i) and (ii) to apply 20 percent stop-loss and stop-gain limits to most CJR–X participants, and our proposal at § 512.650(c)(6)(iii) to apply a 5 percent stop-loss limit to certain categories of CJR–X participants. The following is a summary of the public comments received.

Comment: A commenter supported the continuation of the 20 percent stop-loss and stop-gain methodology from the CJR Extension as the appropriate baseline for participants not otherwise excluded from CJR–X. The commenter stated that, although they believed that rural hospitals, Medicare-dependent, small rural hospitals, sole community hospitals, and safety-net hospitals should be excluded from mandatory participation in CJR–X, the proposed 5 percent stop-loss limit was the appropriate floor of protection for these categories of hospital if they are mandated to participate. A couple of commenters also expressed support for

the proposed 5 percent stop-loss limit for these types of hospitals. A commenter described the lower stop-loss limit as a necessary safeguard for vulnerable provider categories. Another commenter stated their belief that the lower stop-loss limit would provide additional protection beyond risk adjustment for providers who often serve patient populations with higher needs and operate on thin margins.

Response: We appreciate the commenters' support for the proposed stop-loss and stop-gain framework. We continue to believe that this framework, which includes symmetric 20 percent limits for most participants and a lower stop-loss limit for certain categories of hospital, balances financial accountability, protection from excessive losses, and the need to preserve incentives for efficiency.

Comment: Some commenters stated that the proposed 20 percent stop-loss limit for most participants was too high and should be reduced. Commenters stated their belief that the limit could create substantial aggregate financial volatility, especially for hospitals with high case-mix variability, medically complex patients, or patients facing social and access-related barriers. A commenter stated that the proposed 20 percent stop-loss limit was excessively high and could compound target-price concerns related to the rolling annual benchmark and lack of a target price floor. Another commenter questioned whether the proposed stop-loss protections would sufficiently mitigate the financial exposure associated with high-cost, medically complex episodes. A commenter stated their concern that the 20 percent stop-loss level could encourage risk avoidance rather than care redesign.

Response: CMS acknowledges commenters' concerns that a 20 percent stop-loss limit may be too high and could expose some participants to substantial repayment responsibility. CMS understands that downside risk may be especially concerning for hospitals with limited margins, lower episode volume, or less experience managing post-acute care and other episode spending. However, CMS believes that lowering the stop-loss limit for all CJR–X participants could materially reduce the strength of the model's incentives. CJR–X is designed to test whether hospitals can improve coordination across the full lower-extremity joint replacement episode, including discharge planning, post-acute care use, readmissions, complications, and recovery. A broadly lower stop-loss limit would reduce the amount of episode spending for which participants are accountable and could lessen the incentive to make operational investments in care redesign, data analytics, discharge planning, collaboration with post-acute care providers, and monitoring of episode performance.

CMS also believes that the proposed 20 percent limit should be considered in the context of the broader CJR–X payment methodology, which includes not only the aggregate stop-loss policy, but also other design features intended to improve predictability and protect participants from excessive risk, including risk adjustment, low-volume protections, and a high-cost outlier cap. As we stated in the proposed rule, the high-cost outlier cap would prevent participants from being held responsible for catastrophic episode spending amounts that they could not reasonably have been expected to prevent.

Finally, we note that the 20 percent stop-loss limit is an integral part of the CJR Model methodology that was certified by the CMS Chief Actuary to qualify for expansion on the basis that it would not increase Medicare spending. When CMS temporarily waived downside risk for the CJR Model during the PHE, it resulted in significant losses to Medicare due to increased spending on reconciliation payments to participants that was not mitigated by repayments from other participants. Lowering the stop-loss limit for most hospitals (other than those vulnerable hospital categories that receive the 5 percent stop-loss limit) would risk increasing Medicare spending. Although we proposed and are finalizing other, minor modifications to the CJR Model payment methodology (such as additional risk adjustment and caps on both the trend and normalization factors), we note that these factors were determined by the CMS Chief Actuary to be unlikely to increase Medicare spending over time. By contrast, a change to the stop-loss limits would risk increasing Medicare spending over time and we would not be able to maintain certification for expansion.

Comment: Many commenters requested that stop-loss limits be phased in over time, with limits gradually increasing as organizations gain experience with the model. A few commenters requested an option for upside risk only at the beginning of the model. A commenter stated that a phased approach would better support financial stability and align more closely with the gradual downside risk transition used in TEAM. Another commenter requested that CMS use the same multiple risk transition tracks as TEAM. Multiple commenters suggested that CMS implement a lower stop-loss limit such as 5 percent to 10 percent for the first year. A couple of commenters requested that the 5 percent stop-loss limit proposed for special category hospitals be extended to all hospitals during the first year of the model, noting that many hospitals have no prior experience with models such as the Medicare Shared Savings Program, Bundled Payments for Care Improvement Advanced, or the CJR Model. A couple of commenters requested that the phased approach should occur over a period of at least five years, leading to a maximum stop-loss of 10% for most CJR–X participants and 2.5% for special designation hospitals.

Response: We appreciate commenters' concerns regarding the financial risk associated with CJR–X participation and their recommendation that CMS provide a phase-in period before participants are subject to downside risk with a 20 percent stop-loss limit. We recognize that CJR–X participants may vary in their readiness to operate under an episode-based payment model, including differences in organizational capacity, systems, staffing, and experience with care redesign. However, we believe that two-sided financial accountability is an important component of CJR–X because it creates incentives for participants to coordinate care, manage post-acute utilization, and reduce unnecessary spending while maintaining or improving quality of care.

We note that the January 1, 2028 start date, which we are finalizing at § 512.630(a) in response to commenters' requests, would provide more than one year for participants to prepare for CJR–X. We also note that many hospitals are expected to have prior experience with LEJR episodes given that the Innovation Center has tested episode-based payment models for over a decade and many other payers have also adopted the use of episode-based payment arrangements for certain types of care. We also reiterate our concern that providing a phase-in period of lowered or no downside risk would potentially lead to increased Medicare spending during the early years of CJR–X and would not conform to the payment methodology that has been certified for expansion by the CMS Chief Actuary.

Comment: Some commenters recommended stronger financial protections for rural hospitals, safety-net hospitals, hospitals serving dual-eligible beneficiaries, hospitals serving a high number of low-income and uninsured patients, Medicare-dependent, small rural hospitals, and sole community

hospitals. Commenters stated that these hospitals often operate with lower margins, lower volume, fewer capital resources, and treat populations with greater patient complexity. A few commenters stated that these hospitals have less control over post-acute care patterns and community resources, resulting in fewer opportunities to generate savings in an episode-based payment model. A commenter stated that the proposed 5 percent stop-loss for safety net hospitals was insufficient due to documented disparities in post-acute outcomes for dual-eligible beneficiaries. Commenters questioned whether the proposed stop-loss protections would sufficiently mitigate exposure from high-cost or medically complex episodes. Some commenters stated that even a 5 percent repayment obligation could be material for financially vulnerable hospitals. A commenter stated their belief that participation in CJR–X with downside risk in addition to proposed DSH adjustments and a proposed 0.8 percent productivity adjustment to payment rates would represent three separate, significant financial drains on safety net and rural hospitals that already operate on thin or negative margins. Many commenters requested additional safeguards or reduced exposure for special hospital categories.

A commenter expressed concern that the 5 percent stop-loss for rural hospitals would not adequately address the financial accountability consequences for rural CJR–X participants who send their patients to CAH swing beds because there are no qualified SNFs available locally. They note that CAH swing bed stays can cost two to three times more than a standard SNF stay, and they state their belief that rural hospitals in regions dominated by urban peers would face structurally disadvantaged target prices that would not be offset by the lower stop-loss limit. The commenter requested a clear commitment that CMS would monitor CAH swing bed utilization and its associated episode costs for rural CJR–X participants and propose adjustments through notice and comment rulemaking if monitoring reveals that rural participants face systematically unachievable target prices due to post-acute care market structure rather than care delivery choices.

Another commenter similarly requested that CMS closely monitor financial impacts during the initial performance years of the model for safety net and other vulnerable hospitals and establish clear mechanisms for mid-course corrections should unintended consequences arise. They stated their belief that such safeguards would be essential to ensure that participation in the model does not destabilize hospital finances or reduce access to care for Medicare beneficiaries.

A commenter stated that, if SCHs and MDHs are mandated to participate in CJR–X, they should be exempt from downside risk until CMS has collected sufficient data through CJR–X and TEAM to evaluate the impacts of episode-based payments for LEJRs on patient access and quality of care for counties located outside of metropolitan statistical areas and to evaluate the performance of SCHs and MDHs under these models. The commenter noted that very few SCHs or MDHs participated in CJR during its early performance years, and no SCHs or MDHs participated in the CJR Extension. This commenter stated that given the lack of historical experience in CJR for SCHs and MDHs, the closest proxy were likely to be safety net hospitals, which performed worse than non-safety net hospitals on average and tended to have higher rates of patients with fractures, major comorbidities, and unmet non-medical needs.

Response: We appreciate commenters' concerns about the financial exposure of rural hospitals, safety-net hospitals, Medicare-dependent, small rural hospitals, sole community hospitals, and hospitals serving medically or socially complex beneficiaries. We recognize that commenters believe additional protections may be needed for hospitals with limited resources, lower volume, or higher patient complexity. Regarding the concern about the use of CAH swing beds creating a structural disadvantage for rural hospitals, we note that CMS would use standardized payment amounts to calculate target prices and episode spending in CJR–X.

CMS will monitor the spending patterns for these special categories of hospital to determine whether their performance in the model is disproportionately impacted by features of their local market or patient population that lead to costs they could not reasonably be expected to control. While our goal is to account for these factors through risk adjustment, our low volume policy, and protective stop-loss limits, we recognize that we may need to make adjustments to our methodology in the future as we observe how different types of participants are able to perform in the model. Through evaluating the CJR Model, we identified the need for additional protections for safety net hospitals and implemented those protections in TEAM, as well as proposing and finalizing them in the CJR–X Model. We acknowledge that SCHs and MDHs in particular have had limited experience in the CJR Model. We intend to monitor the performance of SCHs and MDHs, along with rural hospitals and safety net hospitals, in CJR–X. As we stated in response to a previous comment, we may also consider the potential viability of a short glide path for new participants to CJR–X and hospitals in special categories including SCHs and MDHs. If we believe such refinements are warranted, we may consider proposing them through notice-and-comment rulemaking.

Comment: Many commenters requested that eligibility for the 5 percent stop-loss protections be expanded to additional types of hospitals. A commenter recommended that CMS expand eligibility for the 5 percent stop-loss to include a broader safety-net definition aligned with TEAM. The commenter stated their belief that the proposed categories may not capture all hospitals that need additional financial protection. A commenter stated their belief that defining safety net hospital status based solely on the share of FFS LEJR inpatient episodes provided to dually eligible beneficiaries is an overly narrow definition that would exclude many hospitals that serve large proportions of low-income and uninsured patients across their full case mix but would not qualify as safety net hospitals under this LEJR-specific definition. The commenter suggested using a definition that incorporates DSH patient percentages or overall dual eligibility across all service lines, rather than a single procedure category volume measure.

Some commenters recommended that CMS add academic medical centers to the categories eligible for special stop-loss protection. Commenters stated that academic medical centers incur mission-based costs related to resident and fellow training, management of transfer-in patients and downstream complications, delivery of highly specialized orthopedic care, and coordination for patients who travel long distances to access tertiary expertise. A commenter stated their belief that these responsibilities are essential to sustaining the national orthopedic workforce and preserving access to complex joint replacement care, but their costs are not adequately reflected in the stop-loss protections. A commenter recommended using teaching hospital designation or the IME adjustment ratio as eligibility criteria for designation as an academic medical center. Commenters requested a stop-

loss threshold at least comparable to the 5 percent protection proposed for rural and safety-net hospitals.

A couple of commenters recommended that CMS apply the rural hospital definition used in the CJR Model for purposes of eligibility for the 5 percent stop-loss limit. They noted that in the CJR Model, rural policies applied to all hospitals that were treated as rural for Medicare payment purposes, while CMS has proposed to limit rural protections for CJR–X participants to those hospitals physically located in rural areas. A commenter stated that rural hospitals often operate with low volume, limited post-acute care infrastructure, workforce shortages, and fewer opportunities to redesign care in ways that produce measurable savings under the model. They stated their belief that these structural constraints make rural hospitals less able to succeed and more vulnerable to losses. They stated their belief that CMS should therefore apply rural protections—specifically protections from downside risk—to all rural hospitals including those treated as rural for Medicare payment purposes, to avoid penalizing providers that simply do not have the scale or market conditions needed to generate savings.

A commenter requested that the reduction in downside financial risk also apply to hospitals with low surgical volume. The commenter noted that for community hospitals with a low volume of joint replacement surgeries, a small number of complex or outlier cases can result in significant financial losses. They requested protections for low volume hospitals to mitigate the impact of case variability.

Response: We appreciate the recommendation to broaden eligibility for the 5 percent stop-loss to additional hospitals, including academic medical centers, more broadly defined safety-net and rural hospitals, and low volume hospitals. We acknowledge commenters' concerns that these hospitals may face financial pressures, serve complex patient populations, or have higher episode spending risk and variability.

While we acknowledge the specific challenges facing academic medical centers, CMS does not believe it would be appropriate to extend the 5 percent stop-loss limit to academic medical centers as a class. Although some academic medical centers may treat clinically complex patients or serve important regional roles, academic medical center status alone does not necessarily indicate the type of financial vulnerability, limited infrastructure, rural access constraints, or disproportionate repayment risk that the 5 percent stop-loss policy is intended to address. Many academic medical centers also have substantial episode volume, specialized clinical resources, established referral networks, and analytic or care management infrastructure that may support their ability to achieve savings in CJR–X. CMS therefore does not believe that academic medical center status is an appropriate categorical proxy for the additional stop-loss protection proposed for more financially vulnerable hospital categories.

In response to commenters who requested we apply the broader safety net hospital definition used in TEAM to apply the 5 percent stop loss protections for safety net hospitals in CJR–X, we refer commenters to sections X.C.2.f.(4) for a more detailed discussion and justification for our proposed safety net hospital definition in the context of risk adjustment. We believe it is appropriate to use a consistent definition of safety net hospital for both risk adjustment and stop-loss protections. Given that CJR–X includes only one episode, as opposed to the 5 episodes in TEAM, the safety net definition based on FFS LEJR inpatient episodes is more directly connected to the population whose episode spending is being risk adjusted. The regional, as opposed to national, comparison in the CJR–X definition is also aligned with the broader CJR–X target pricing methodology, which is based on regional spending. While TEAM's definition serves TEAM's broader multi-episode and track-based design, we continue to believe a more targeted safety net hospital definition is more appropriate for risk adjustment and stop-loss purposes in CJR–X.

In response to commenters who requested that we apply the 5% stop-loss limit to all hospitals that qualify as rural for Medicare payment purposes, we note that this would include hospitals that were reclassified as a rural hospital under § 412.103 or this chapter or is designated a rural referral center (RRC) under § 412.96 of this chapter. CMS recognizes that rural status for Medicare payment purposes may differ from geographic rurality. However, CMS does not believe that hospitals treated as rural only through Medicare payment reclassification should automatically receive the 5 percent stop-loss limit, because the proposed safeguard is intended to address geographic rural access, infrastructure, and market constraints rather than every circumstance in which a hospital may receive rural treatment under another Medicare payment provision. In the final rule finalizing TEAM (89 FR 69796) we stated that, in the context of a mandatory model, we believed that a narrower rural definition based strictly on geographic area could prevent creating an incentive for a hospital to seek rural reclassification given the flexibilities offered to rural hospitals under the model. We believe that the same rural definition is appropriate for CJR–X.

In response to the request for reduced stop-loss for low-volume hospitals that do not meet the proposed criteria for additional stop-loss protections, we note that we proposed and are finalizing a policy of excluding low-volume hospitals from reconciliation for a given performance year if they do not meet a minimum volume threshold during the applicable baseline. We believe that our low-volume policy, discussed in section X.2.f.(3).(h). of this final rule, combined with our high-cost outlier cap, discussed in section X.2.f.(3).(e) of this final rule, provide sufficient protection against case variability for low-volume hospitals that do not meet the criteria for the reduced stop-loss limit.

Comment: A commenter requested that, if CMS is unwilling to provide safety net hospitals an upside-only glide path for performance years 1 through 3, CMS should extend the 5 percent stop-loss for safety net hospitals through performance year 3 and commit, in the final rule, to maintaining it for any hospital whose safety net status lapses solely due to year-to-year variance in the classification test.

Response: We appreciate the commenter's concern about safety net hospitals in CJR–X. We do not believe an upside-only glide path for safety net hospitals is necessary, as discussed in the comment responses in section X.C.1.c. of this final rule. We note that the 5 percent stop-loss protection for safety net hospitals is intended to be an ongoing feature of the model, so it will already extend beyond performance year 3. We acknowledge the commenter's concern that safety net hospital status could change from year to year for hospitals near the threshold, potentially resulting in different stop-loss protections despite similar underlying financial challenges. We recognized this concern in the proposed rule and we refer the commenter to our responses to comments on the proposed binary safety net hospital risk adjustment in section X.C.2.f.(4) of this final rule. As we note in that section, we considered more nuanced approaches but we were concerned that further segmenting hospitals into smaller groups could create sample size and accuracy problems. We also believe that fixing safety net status over multiple years of the model could create different

accuracy concerns by continuing enhanced protection for hospitals whose episode mix no longer meets the proposed safety net definition, while excluding hospitals whose dual-eligible episode share increases in later applicable baseline periods. The proposed approach ties safety net status to the applicable baseline period, aligns the designation with the data used for CJR–X pricing and risk adjustment, and preserves a clear, administrable method for identifying hospitals with the highest relative share of FFS LEJR inpatient episodes furnished to dually eligible beneficiaries in their region.

Comment: A commenter requested that CMS clarify whether special designation hospitals are subject to the same 20 percent stop-gain limit that applies to CJR–X hospitals without a special designation. The commenter noted that the proposed rule did not specifically address stop-gain limits for these hospitals. The commenter supported application of the same 20 percent stop-gain limit for special designation hospitals.

Response: We appreciate the request for clarification regarding stop-gain limits for special designation hospitals. We note that special designation hospitals would be subject to the 20 percent stop-gain limit even though their stop-loss limit would be reduced to 5 percent.

After consideration of the public comments we received, we are finalizing without modification the proposal at § 512.650(c)(6)(i) and (ii) to apply 20 percent stop-loss and stop-gain limits to most CJR–X participants, and our proposal at § 512.650(c)(6)(iii) to apply a 5 percent stop-loss limit to certain categories of CJR–X participants.

(h) CJR–X Participant Responsibility for Increased Post-Episode Payments

As we noted in the 2015 CJR final rule that finalized the post-episode spending policy for the CJR Model (80 FR 73398), while the CJR episode extended 90-days post-discharge from the anchor hospitalization, some hospitals may have had an incentive to withhold or delay medically necessary care until after an episode ended to reduce their actual episode payments. We did not believe this would be likely in the CJR Model, especially given the relatively long episode duration, and we continue to believe that this will not be likely in CJR–X. However, in order to identify and address such inappropriate shifting of care, we proposed to maintain the CJR Model post-episode spending policy in CJR–X. Specifically, we proposed to calculate the total Medicare Parts A and B expenditures in the 30-day period following completion of each episode for all services covered under Medicare Parts A and B for each performance year, regardless of whether the services are included in the episode definition proposed in this final rule (as discussed in section X.C.2.d.(2). and (3). of this final rule). Because we based the episode definition on exclusions, identified by MS–DRGs for readmissions and ICD–10–CM diagnosis codes for Part B services as discussed in section X.C.2.d.(3)(c). of this final rule, and Medicare beneficiaries may typically receive a wide variety of related (and unrelated) services during episodes, there is some potential for CJR–X participants to inappropriately withhold or delay a variety of types of services until the episode concludes regardless of whether the service is included in the episode definition, especially for Part B services where diagnosis coding on claims may be less reliable. This inappropriate shifting could include both those services that are related to the episode (for which the CJR–X participant would bear financial responsibility as they would be included in the actual episode spending calculation) and those that are unrelated (which would not be included in the actual episode spending calculation), because a CJR–X participant engaged in shifting of medically necessary services outside the episode for potential financial benefit may be unlikely to clearly distinguish whether the services were related to the episode or not.

This calculation would include prorated payments for services that extend beyond the episode as discussed in section X.C.2.f.(3)(c). of this final rule. Specifically, we would identify whether the average 30-day post-episode spending for a CJR–X participant in any given performance year is greater than three standard deviations above the regional average 30-day post-episode spending, based on the 30-day post-episode spending for episodes attributed to all CJR–X participants in the same region. Similar to the CJR Model, post-episode spending would be adjusted for geographic wage factors to express spending in ''real'' or unstandardized amounts. We proposed that if the CJR–X participant's average post-episode spending exceeds this threshold, the CJR–X participant would repay Medicare for the amount that exceeds such threshold. Consistent with the CJR Model, this amount would not be subject to the proposed stop-loss limits discussed in section X.C.2.f.5.(g). of this final rule.

We sought comment on our proposal at § 512.650(c)(7) to make CJR–X participants responsible for making repayments to Medicare based on high spending in the 30 days after the end of the episode and for our proposed methodology to calculate the threshold for high post-episode spend. The following is a summary of the public comments received.

Comment: A few commenters stated that they agreed with the intent of the post-episode spending policy to ensure that services are not withheld or delayed until after an episode ends, but they requested that CMS apply the same stop-loss limits used for 90-day episode reconciliation to post-episode spending recoupments. A commenter stated their concern that the policy creates unlimited financial liability without stop-loss protection. Another commenter stated their concern that certain complex cases requiring substantial post-acute care may exceed the proposed threshold, resulting in penalties for care that is clinically appropriate. A commenter referred to the finding in the evaluation contractor's report on safety net hospital experiences in CJR that safety net hospitals faced post-episode spending recoupments at twice the rate of non-safety net hospitals during the CJR Extension. The commenter stated their belief that the disparate impact on safety net hospitals reflects the underlying difficulty hospitals have controlling spending that occurs after the 90-day episode window. In addition to applying stop-loss limits, the commenter also requested that CMS provide operational guidance on how to identify and manage post-episode spending risks before recoupment occurs.

Response: We appreciate commenters' concerns about post-episode spending recoupment and their recommendation to apply stop-loss limits. We acknowledge their concern that CJR–X participants should have predictable limits on financial exposure under the model. However, we do not believe it would be appropriate to apply the episode stop-loss limits to the separate 30-day post-episode spending amount in most cases. The post-episode spending policy serves a different purpose than the stop-loss limit applied to reconciliation of the 90-day episode. Specifically, the post-episode spending calculation is intended to protect beneficiaries and the Medicare Trust Fund by discouraging participants from delaying medically necessary care until after the episode ends. We believe that applying the stop-loss limit to this separate repayment could weaken the policy's effectiveness as a safeguard against stinting on care, inappropriate service delays, or shifting of costs

outside the episode window. We believe the proposed threshold—based on average 30-day post-episode spending that exceeds three standard deviations above the regional average—appropriately limits repayment to unusually high post-episode spending, rather than ordinary variation in post-episode care use.

However, we agree that the potential disparate impact of post-episode spending recoupments on safety net hospitals is of particular concern. Although we proposed and are finalizing a number of changes to the CJR–X pricing and payment methodology to add protections for safety net hospitals, we did not propose to apply stop-loss protections to post-episode recoupments for any group of hospitals. We may consider the possibility of applying stop-loss protections to post-episode spending recoupments for safety net hospitals, and potentially other categories of hospitals such as rural, SCHs, and MDHs, in the future if we see that they are being disproportionately impacted by post-episode spending recoupments in CJR–X.

Regarding the request that CMS provide operational guidance on how to identify and manage post-episode spending risks before recoupment occurs, CMS intends to provide educational materials before the start of CJR–X to support participant readiness and refer participants to prior CJR materials and reports describing successful care transformation strategies, most notably the CJR Drivers of Care Transformation Report (*https://www.cms.gov/priorities/innovation/data-and-reports/2024/cjr-py6-ar-drivers-transformation*). CMS will also be providing monthly claims data feeds to help participants monitor utilization and spending patterns. We believe that participants remain best positioned to determine how to use available CMS data, internal clinical and operational data, care management processes, and relationships with post-acute care providers to monitor beneficiaries and manage episode performance. Approaches used to manage risk during the episode may also help participants identify potential post-episode risks, such as readmissions, post-acute care use, complications, and follow-up needs. CMS will consider whether additional participant education or technical assistance would be useful, while maintaining CJR–X requirements related to beneficiary protections, freedom of choice, privacy, and access to medically necessary care.

After consideration of the public comments we received, we are finalizing without modification our proposal at § 512.650(c)(7) to make CJR–X participants responsible for making repayments to Medicare based on high spending in the 30 days after the end of the episode and our proposed methodology to calculate the threshold for high post-episode spend.

(i) Reconciliation Payments and Repayments

Consistent with the CJR Model, we proposed that after subtracting a CJR–X participant's post-episode spending amount from their NPRA as applicable, as described previously in this section, if the resulting amount is positive, the CJR–X participant for the applicable performance year would receive the amount as a one-time lump sum reconciliation payment from Medicare. If the amount is negative, Medicare would hold the CJR–X participant for the applicable performance year responsible for a one-time lump sum repayment. CMS would collect the one-time lump sum repayment in a manner that is consistent with all relevant federal debt collection laws and regulations.

We sought comment on our proposal at § 512.650(d) to make reconciliation payments to, and collect repayment amounts from CJR–X participants as a one-time, lump sum payment.

Comment: A commenter recommended an alternative method to determining a reconciliation payment or repayment and suggested that CMS implement a risk corridor and only spending outside the corridor would result in reconciliation payment or repayment amount.

Response: We thank the commenter for their recommendation. We recognize the commenter's concern that hospitals operating on tight budgets may experience financial disruption from relatively small reconciliation amounts and that, for hospitals with average episode spending close to the target price, year-to-year variation may not reflect meaningful differences in performance. Given this deviates from the design of the CJR model and what we have proposed for CJR–X, we do not believe it would be possible to implement such a policy without assessing its merits. As discussed in the proposed rule, the CJR–X payment methodology is designed around comparing episode spending to target prices, subject to quality performance and other payment methodology rules, and the proposed model expansion relies on evaluation findings and actuarial certification that expansion is expected to reduce Medicare spending while maintaining quality. Accordingly, while we acknowledge there may be potential value of a risk corridor as a way to address random variation and reduce administrative burden, we would need to analyze its effects on model incentives and projected Medicare spending.

After consideration of the public comments we received, we are finalizing without modification our proposal at § 512.650(d) to make reconciliation payments to, and collect repayment amounts from, CJR–X participants as a one-time, lump sum payment.

g. Appeals Process

(1) Notice of Calculation Error and Reconsideration Request

We believe that it is necessary to have a process by which CJR–X participants may appeal the reconciliation report. Therefore, we proposed at § 512.660(a) to permit CJR–X participants to submit a notice of calculation error regarding the calculations contained within the CJR–X reconciliation report if the CJR–X participant believes an error occurred in calculations due to data quality or other issues, or if the CJR–X participant believes an error occurred in calculations due to misapplication of methodology. We note that the CJR–X participant would still be subject to the same limitations on review as stipulated at § 512.170. We also proposed at § 512.660(b)(1) that if a CJR–X participant believes the CJR–X reconciliation report contains a calculation error, then the CJR–X participant would be required to submit a timely error notice in writing documenting the suspected calculation error within 30 calendar days of issuance of the CJR–X performance report. We also proposed that CMS may specify different requirements for the form, manner, or deadline for submission of the error notice. If the CJR–X participant does not provide such timely error notice in accordance with the timelines and processes specified by CMS, then we proposed at § 512.660(b)(2) that the CJR–X reconciliation report would be deemed final and the CJR–X participant would be precluded from later contesting those elements of the CJR–X reconciliation report for that performance year. Additionally, we proposed that only a CJR–X participant may submit a timely error notice according to the provisions at proposed § 512.660(b)(3).

The proposed 30-day window to review and appeal CMS calculations aligns with the length of time we have finalized for submitting appeals in other mandatory Innovation Center models,

such as TEAM, the Ambulatory Specialty Model, and the Increasing Organ Transplant Access Model.

We proposed at § 512.660(c) that if CMS receives a timely notice of a calculation error, we would issue an initial determination in writing within 30 calendar days to either confirm that there was an error in the calculation or verify that the calculation is correct. We note that CMS would reserve the right to an extension of the time for providing its initial determination upon written notice to the CJR–X participant.

If a CJR–X participant disagrees with and wishes to dispute the results of the initial determination, under § 512.660(d), the CJR–X participant or CMS may request a reconsideration of the initial determination by following the reconsideration review process described in the standard provisions at § 512.190.

We sought comment on our proposed appeals process for CJR–X at § 512.660.

We received no comments on this proposal and therefore are finalizing this provision without modification.

h. Concurrent Participation in Other CMS Models and Initiatives

(1) Background

We stated in the proposed rule that when determining the best strategy for addressing concurrent participation in multiple CMS models or initiatives, we recognize we need to consider how to promote meaningful collaboration between providers and CJR–X participants as the model expands. Historically, the overlap policies of Innovation Center models, including the original CJR (80 FR 73274), were intended to avoid duplicative incentive payments or giving precedence to a single accountable entity. However, what resulted were confusing methodologies or misaligned incentives which were difficult to navigate. Participants from prior models have also cited confusion with identifying all of the model(s) to which a beneficiary may be aligned or attributed.

We noted in the proposed rule that earlier episode-based payment models, such as the original CJR Model (80 FR 73274) in certain circumstances, and BPCI, are examples of this well-meaning but potentially confusing overlap policy. In these models, CMS addressed overlap by implementing a complex calculation and recouping a portion of the pricing discount for providers also participating in certain ACO initiatives. The recoupment was intended to prevent duplicate incentive payments for the same beneficiary's care; however, some participants perceived the resulting recoupment as a financial loss, discouraging providers from participating in both initiatives. We believed it was important to learn from previous episode-based payment model policies, as discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69786), so that CJR–X can implement a sustainable long-term policy to account for interactions with other CMS models and initiatives.

(2) Beneficiary Participation in Multiple CMS Models or Initiatives

We proposed that a beneficiary could be in an episode in CJR–X, as described in section X.C.2.d. of this final rule, by undergoing a procedure at an acute care hospital participating in CJR–X, and be attributed to a provider participating in a total cost of care or shared savings model or program. For example, a beneficiary may be attributed to a provider participating in the Shared Savings Program for an entire performance year, as well as having initiated an episode in CJR–X during the ACO's performance year. We indicated in the proposed rule that each model or program incorporates a reconciliation process, where total included spending during the performance period or episode are calculated, as well as any potential savings achieved by the model or program. We proposed to allow any savings generated on an episode in CJR–X and any contribution to savings in the total cost of care model be retained by each respective participant. We indicated that this would mean the episode spending in CJR–X would be accounted for in the total cost of care model's total expenditures, but CJR–X's reconciliation payment amount or repayment amount would not be included in the total cost of care model's total expenditures. Likewise, the total cost of care model's savings payments or losses would not be included in the episode spending in CJR–X.

We noted in the proposed rule that this approach deviates slightly from the latter years of the CJR Model, where concurrent participation in total cost of care models was permitted, except for the ENHANCED track of the Medicare Shared Savings Program because the ENHANCED track offered greater financial accountability as compared to the BASIC track or predecessor tracks. As we discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69787), by allowing a beneficiary aligned to a total cost of care model participant, such as the Medicare Shared Savings Program or other ACO initiatives, to also initiate a CJR–X episode, we would be eliminating complexities experienced in prior models where it was difficult for participants to know when a beneficiary would trigger an episode and when the episode would be excluded. Furthermore, we noted that this would match the procedure used in newer models such as TEAM, increasing policy design similarity between models. We indicated in the proposed rule that we hope that this uniform decision will increase simplicity. We also believed that allowing concurrent participation for beneficiaries aligned to a total cost of care model who also initiate an episode in CJR–X and allowing both participants to retain savings will have a positive impact on beneficiaries by fostering a cooperative relationship between accountable care and CJR–X participants where all parties have interest in providing coordinated, longitudinal care.

In addition, we stated in the proposed rule that there are other potential benefits to allowing overlap between a beneficiary who is aligned to a total cost of care model and who initiates an episode in CJR–X, such as strengthening the volume of episodes a CJR–X participant is responsible for. We indicated that we know from prior experience that low episode volume creates challenges for participants to generate meaningful savings and manage outlier cases with unusually high episode expenditures. We stated in the proposed rule that allowing CJR–X episodes to trigger despite the beneficiary being aligned to a total cost of care model will increase CJR–X episode volume to mitigate these low volume challenges.

We also acknowledged in the proposed rule that certain ACOs may prefer that their aligned beneficiary population not be included in CJR–X. We stated that since ACOs are accountable for total cost of care, they may prefer to manage their beneficiaries and have full control over all expenditures and beneficiary care instead of sharing that responsibility with a CJR–X participant. However, we believed the benefits of episode-based payment models in combination with ACO models will ultimately improve Medicare beneficiary care, and episode-based payment models will not be disruptive to ACO practices.

However, we proposed that CJR–X would not allow for concurrent participation with TEAM. We discuss in section X.C.2.b.(2)(i). of this final rule not to allow TEAM participants to be CJR–X participants because TEAM and CJR–X both test bundled payments for LEJRs and are running concurrently. If an LEJR episode occurs at an acute care hospital participating in TEAM, we

discussed in section X.C.2.b.(i). of this final rule, that TEAM participants would be excluded from CJR–X participation which means that TEAM supersedes the CJR–X Model and those LEJR procedures will trigger a TEAM episode rather than a CJR–X episode. Further, we proposed at § 512.630(e) that if a beneficiary in a TEAM episode has a LEJR procedure performed at a CJR–X hospital during TEAM's 30-day post-discharge period, then the LEJR procedure will not initiate a CJR–X LEJR episode and the spending from the LEJR procedure will be included in the TEAM episode. We noted in the proposed rule that while this instance would result in the CJR–X participant not being attributed the episode, the episode that would have been triggered in CJR–X in the absence of the overlapping TEAM episode would still remain in the national set of episodes used in the calculation of various CJR–X target price components. We indicated that this is because the national set of LEJR episodes in CJR–X includes all MS–DRG/HCPCS region combinations and therefore all LEJR episodes would need to be retained in the national set. As stated in the proposed rule, we anticipate this occurrence to be rare given TEAM's shorter post-discharge period and the reduced likelihood that a beneficiary would have another procedure performed within such a short time period if not clinically appropriate. Additionally, in section X.A.2.a.(3). of this final rule, we proposed that if a beneficiary in a CJR–X episode has a procedure performed at a TEAM hospital that would initiate a TEAM episode during the CJR–X 90-day post-discharge period, then that procedure would not initiate a TEAM episode and the spending from that procedure would be included in the CJR–X episode. We considered in the proposed rule giving TEAM precedence in this situation and dropping the CJR–X episode to initiate a TEAM episode to support episode volume in TEAM, but we believed it was important to hold the anchoring provider of the initial procedure accountable for spending and care coordination, especially given the investments that hospitals employ to manage a beneficiary's care. We believed this policy would avoid duplicative calculations for the same procedure in a model that is similar in overall design. We also considered in the proposed rule allowing a CJR–X and a non-LEJR TEAM episode to run concurrently. For example, if a beneficiary in a CJR–X episode has a procedure performed at a TEAM hospital during the CJR–X 90-day post-discharge period, then that procedure would initiate a TEAM episode. While we believed this situation would be very rare, we were concerned there could be double payment of savings and may make it difficult to determine which model and hospital were the driver to any realized savings or losses. We were also concerned this situation could make it challenging for the beneficiary to have two accountable episode-based entities potentially providing different guidance on who is managing their care.

We acknowledged in the proposed rule that there may be new models or programs that could have overlap with CJR–X. We stated this could occur because a beneficiary may trigger an episode in CJR–X while being aligned to a new CMS model or program or because a CJR–X participant also participates in another CMS model or program. We indicated that we would plan to assess each new model to determine if the structure of payment and savings calculation would need any additional overlap requirements to account for the new model and would propose a policy in future notice and comment rulemaking, as necessary.

The following is a summary of the public comments received on our proposal to allow concurrent participation in total cost of care models but not allow overlap in TEAM, and our responses to these comments:

Comment: A few commenters supported the CJR–X overlap policy with other models, and with the approach to not allow overlap with TEAM.

Response: We thank the commenters for their support.

Comment: A commenter indicated that CJR–X does not have a primary care referral requirement like TEAM and should consider adopting safeguards to ensure that patients who are already aligned to a provider be ''tucked back in'' to that provider.

Response: We appreciate the commenter's recommendation that CJR–X include additional safeguards to help ensure that beneficiaries who are already aligned with a primary care provider or accountable care relationship are returned to that provider following the LEJR episode.

We acknowledge that CJR–X does not include a primary care referral requirement like the policy included in TEAM. We agree that effective transitions back to a beneficiary's longitudinal care providers, including primary care providers and ACO-affiliated clinicians where applicable, can support continuity of care, reduce fragmentation, and help align episode-based care with broader population health management. We do not believe it is necessary to add a primary care referral requirement to CJR–X at this time given this policy was not included in the CJR Model. However, we will assess TEAM's primary care referral policy as TEAM is implemented, including whether the policy strengthens beneficiary connections to longitudinal care providers or creates unanticipated burden. Based on the data and experience from TEAM and other relevant model monitoring, we may consider whether a similar policy would be appropriate for future rulemaking.

Comment: Many commenters requested clearer and more aligned model overlap rules particularly between CJR–X and TEAM. Some commenters indicated that participation across multiple concurrent models may create operational complexity, duplicative reporting requirements, and the potential for misaligned financial incentives,—particularly for health systems with hospitals participating in different models, such as CJR–X and TEAM. A few commenters supported the alignment of policies shared between CJR–X and TEAM. Several commenters noted that many providers participate in multiple payment models and the varying flexibilities across these models, coupled with the complexity of understanding and tracking their distinctions, may discourage providers from utilizing those flexibilities. A commenter requested CMS provide guidance relative to attribution dispute resolution in connection with CJR–X and reconciliation. Another commenter stated that CMS should align key design elements between CJR–X and TEAM where appropriate to reduce operational burden and facilitate private sector adoption.

Response: We agree that clear overlap rules are important for participant operations and model integrity. For that reason, we proposed specific rules governing how CJR–X interacts with other models, including TEAM. Because CJR–X and TEAM both involve lower extremity joint replacement episodes and test episode-based accountability for similar services, we believe it is important to avoid concurrent participation in both models for the same hospital in a way that could create duplicative episode accountability, overlapping financial incentives, or confusion about which model's payment and quality rules apply. For example, a beneficiary in a CJR–X episode may not initiate a TEAM episode during the CJR–X 90-day post-discharge period. Likewise, a beneficiary in a TEAM episode may not

initiate a CJR–X episode during the TEAM 30-day post-discharge period.

At the same time, we recognize that many providers participate in multiple value-based care initiatives, and we support alignment where feasible. This is why between CJR–X and TEAM we tried to align policies so reduce confusion, especially for health systems that have hospitals that participate in both models. For example, both CJR–X and TEAM rely on existing CMS quality reporting programs to collect quality measure performance rather than have hospitals separately report their measures for each model. Additionally, the CJR–X and TEAM target price methodologies are broadly similar and also follow a similar reconciliation process and timeline. We understand there are also some key differences, namely episode length and how quality performance is assessed, that make each model distinct. There also may be differences in care redesign flexibilities, such as differences between the Medicare payment policies waivers available to each participant. To help participants of each model and the public understand the differences, we anticipate creating resources that will have highlight the similarities and differences between the models. We anticipate these resources could help health systems identify efficiencies that could be employed across their hospitals, agnostic of the specific model participation. We will also be creating public-facing specification documents, in particular, episode and reconciliation specifications, that will address how episodes are constructed, attributed and reconciled to avoid overlap with TEAM. We also anticipate including variables in the monthly data shared with CJR–X participants that would identify whether a potential CJR–X beneficiary may be in a TEAM episode to reduce attribution confusion.

We also believe the CJR–X overlap policy supports private sector adoption by establishing simple, administrable rules for how episode-based payment can operate alongside other models or total-cost-of-care initiatives. Rather than creating complex exclusions or recoupment methodologies when a beneficiary is aligned to another accountable care model, the approach allows CJR–X and population-based models to operate concurrently, with each model applying its own payment methodology.

This approach may make episode-based payment models more attractive and easier to replicate because it reflects how many hospitals, ACOs, and health systems operate in practice: under multiple value-based payment arrangements at the same time. By reducing uncertainty about overlapping accountability and avoiding unnecessary disruption to existing model participation, CJR–X can help providers focus on care redesign, coordination, and episode management rather than on navigating conflicting model rules.

We will continue to consider ways to make overlap policies, beneficiary attribution rules, payment reconciliation rules, reporting expectations, and model flexibilities clear and administrable for participants. We will also monitor participant experience with CJR–X overlap rules and may consider future guidance or notice and comment rulemaking.

Comment: A few commenters requested guidance on how CJR–X collaborator and financial arrangement requirements compare and align with shared savings models, because they believed differences between CJR–X and shared savings models may constrain their ability to deploy consistent strategies across models. A commenter requested clarification on whether CMS will apply any reconciliation limits across models, in particular with the Medicare Shared Savings Program, and clarification on whether unified reporting or data support will be available. Another commenter requested that CMS provide detailed, actionable guidance as promptly as possible, specifically clarifying how CJR–X episodes will interact with the Long-term Enhanced ACO Design (LEAD) Model attribution and financial reconciliation.

Response: We believe the CJR–X overlap policy will support more administrable interaction between CJR–X and other models, including shared savings and total-cost-of-care arrangements, while preserving the distinct payment methodology, participation requirements, and evaluation integrity of each model. CJR–X is an episode-based payment model focused on lower extremity joint replacement episodes, while shared savings and total-cost-of-care models generally assess broader accountability for beneficiary spending and quality over time. For that reason, we believe it is appropriate for CJR–X to maintain model-specific collaborator, gainsharing, beneficiary incentive, reconciliation, and compliance requirements, even as CMS seeks to reduce unnecessary complexity where feasible. We note that CJR–X includes certain requirements for CJR–X participants to include in their financial arrangements but there is no requirement to use a CJR–X specific financial arrangements template when setting up sharing arrangements with CJR–X collaborators. There are no CJR–X requirements that preclude the CJR–X participant from creating financial arrangement template that satisfies both models as long as the template meets all the financial arrangements requirements, as discussed in section X.C.2.i of this final rule. We believe giving the CJR–X participant the flexibility to set up the structure of the financial arrangement may help create operational efficiency if participating in multiple models.

With respect to reconciliation across models, we are not imposing any reconciliation limits, other than the stop-gain and stop-loss limits for CJR–X participants, as described in section X.C.2.f of this final rule. For models that overlap with CJR–X, all included Medicare Parts A and B spending, as discussed in section X.C.2.d.(3)(b) of this final rule, will be included in CJR–X reconciliation but model performance payments will not be included. For example, if a CJR–X beneficiary is also assigned to the Medicare Shared Savings Program, then all the included Medicare Parts A and B spending during the episode will be included in CJR–X, regardless of whether the spending was a result of the CJR–X participant or a provider in the Medicare Shared Savings Program. The CJR–X reconciliation will not include any shared savings or losses that occurred from the Shared Savings Program. A similar process would be used for CJR–X beneficiaries that are aligned with the LEAD model. In that CJR–X would include all included Medicare Parts A & B spending but would not include any payments resulting from a LEAD ACO's shared savings or losses. Likewise, due to timing of when CJR–X performs reconciliation, a CJR–X participant's reconciliation payments or repayment amounts would not be included in the Medicare Shared Savings Program's or LEAD performance year spending calculations. We believe this approach is more transparent and administrable than complex across-model recoupment methodologies, while still allowing CMS to monitor for unintended financial effects and interactions that could affect model integrity.

We also appreciate the request for unified reporting, data support, and detailed operational guidance. We will also be creating public-facing specification documents, in particular, episode and reconciliation specifications, that will address how episodes are constructed, attributed and reconciled. We also anticipate including variables in the monthly data shared

with CJR–X participants that would identify whether a potential CJR–X beneficiary may also be aligned to a shared savings model. We will consider other opportunities to provide greater insight into beneficiary overlap that will support collaboration between CJR–X participants and participants in other models.

Comment: A commenter requested that CMS explicitly address in the final rule how CJR–X episode reconciliation payments and repayments amounts will be treated within ACO REACH's total cost of care calculations. Another commenter stated excluding CJR–X episodes from the ACO REACH total cost of care denominator for aligned ACO participants, or establish a symmetric offset mechanism that prevents dual penalization for the same spending event.

Response: The ACO REACH Model is scheduled to end on December 31, 2026 while the CJR–X Model is scheduled to begin on January 1, 2028. Given there is no overlap between ACO REACH and CJR–X, CJR–X's reconciliation payments and repayment amounts will not affect ACO REACH's total cost of care calculations.

Comment: Many commenters expressed concern about the cumulative impact of overlapping Medicare value-based care initiatives. Commenters stated that simultaneous mandatory models, including TEAM and CJR–X, could create significant operational and clinical confusion, require parallel clinical workflows, and create substantial operational, administrative, and financial burden for hospitals. Some commenters recommended CMS to avoid requiring national, integrated health systems to simultaneously operate multiple episode-based models. A commenter indicated that the operational complexity is compounded for hospitals operating in regions where TEAM is also being implemented.

Response: We thank the commenters for raising concerns about the cumulative impact of overlapping Medicare value-based care initiatives, but we disagree that simultaneous participation in these models is creating compounded administrative, clinical, and financial burden for hospitals, particularly for national or integrated health systems with hospitals participating in different models. Nor do we believe that health systems with hospitals participating in multiple CMS models or initiatives should be exempt from CJR–X participation solely on that basis. Many hospitals and health systems already operate in multiple value-based payment arrangements.

We believe these concerns are mitigated in part because CJR–X and TEAM share many operational and clinical similarities. Both models involve episode-based accountability for lower extremity joint replacement episodes, and the anchor hospitalization or anchor procedure period is generally the same. As a result, health systems with hospitals participating in both models should be able to identify clinical efficiencies that can be used for both models during the anchor hospitalization or anchor procedure phase of care, including patient identification, discharge planning, care coordination, beneficiary engagement, and post-acute care planning. The principal differences between the models relate to the applicable model rules and the time periods after the beneficiary is discharged or the procedure is completed, rather than requiring entirely separate clinical approaches during the anchor hospitalization or anchor procedure period.

We also believe that health systems currently participating in TEAM may be able to leverage the infrastructure they have already developed and replicate many of the same operational processes for their CJR–X hospitals. For example, systems may be able to use similar workflows for episode tracking, care redesign, provider education, beneficiary communication, post-acute coordination, internal monitoring, and compliance oversight. Because CJR–X and TEAM share many features common to episode-based payment models, we do not believe administrative burden should necessarily be compounded in direct proportion to the number of participating hospitals. Rather, many processes may be interchangeable or adaptable across both models.

At the same time, we acknowledge that operating across multiple models requires careful attention to model-specific rules, episode timeframes, payment methodologies, quality requirements, and participant obligations. We will continue to monitor operational experience for hospitals participating in CJR–X, TEAM, and other value-based care initiatives. We may consider this further in future rulemaking.

Comment: Some commenters stated that hospitals already participating in shared savings models or other APMs may already assume substantial accountability for the total cost and quality of care and that concurrent CJR–X participation could create overlapping financial accountability structures, duplicative reporting burdens, conflicting incentives, or require significant staffing and resources. Some commenters recommended extending an exception, like what is offered to TEAM participants, to other APM participants. Other commenters recommended excluding ACO-attributed beneficiaries or allowing voluntary opt-in for hospitals also participating in ACO models.

Response: We appreciate commenters' concerns about potential overlap between CJR–X and other shared savings, accountable care, or alternative payment models. However, we disagree that hospitals participating in ACOs, shared savings models, or other APMs should be categorically excluded from CJR–X, that ACO-attributed beneficiaries should be excluded from CJR–X episodes, or that such hospitals should participate only through a voluntary opt-in. CJR–X is a nationwide expansion of the CJR Model, for which the model has met the statutory criteria for expansion, including certification from the CMS Chief Actuary that nationwide expansion would not result in any increase in net program spending. Excluding broad categories of APM-participating hospitals or ACO-attributed beneficiaries would reduce the reach of the expanded model and would be inconsistent with CMS' desire to hold all eligible acute care hospitals accountable for LEJR episodes nationwide, subject only to the specific exceptions.

We recognize that overlap policies in prior episode-based models created operational complexity, including confusion about when a beneficiary would trigger an episode and whether a payment recoupment would apply. For that reason, we believe the CJR–X overlap policy is a more sustainable overlap approach for CJR–X as LEJR episodes become standard practice across hospitals. Episode spending would be accounted for in the total cost of care model's expenditures, but CJR–X reconciliation payments or repayment amounts would not be included in the total cost of care model's expenditures, and total cost of care model savings or losses would not be included in CJR–X episode spending. We believe this approach reduces the complexity of prior exclusion or recoupment policies while preserving clear accountability under each model.

We also disagree that the TEAM exclusion should be extended to all APM participants. The TEAM exception is based on specific model-design concerns that are unique to TEAM given both models test LEJR episodes. Excluding TEAM participants allows for comparison of the effects of 30-day and

90-day LEJR episodes and avoids subjecting the same hospital to TEAM rules for some TEAM episodes and CJR–X rules for LEJR episodes. Those same concerns do not apply in the same manner to ACOs or other shared savings models, which use a broader total cost of care framework rather than a separate LEJR episode payment methodology.

We further believe that excluding ACO-attributed beneficiaries would undermine CJR–X's care coordination goals. CJR–X is designed to hold the hospital accountable for the LEJR episode because the hospital furnishes the anchor procedure, manages discharge planning, and is well positioned to coordinate care during the 90-day post-discharge period. We also believe that allowing overlap between CJR–X and ACO models creates important synergies rather than conflicting incentives. CJR–X focuses accountability on the acute procedural event, discharge planning, post-acute care, and recovery during the 90-day LEJR episode. ACOs, by contrast, focus on broader population health, longitudinal care management, and total cost of care across a beneficiary's care experience. Allowing both models to operate concurrently, while allowing each model to retain the savings it generates, encourages hospitals, physicians, post-acute care providers, and ACOs to collaborate around shared goals: reducing avoidable spending, improving care coordination, and maintaining or improving quality. For example, a CJR–X participant may choose to partner with an ACO to share care coordination infrastructure, such as care navigators, discharge planning support, or beneficiary follow-up processes. These kinds of arrangements could help reduce duplicative efforts, align communication across providers, and allow each model participant to focus on its comparative role: episode providers on the discrete surgical episode and ACO providers on broader population-level and longitudinal care needs.

Accordingly, we do not agree that a broader APM exception, ACO-attributed beneficiary exclusion, or voluntary opt-in for ACO-participating hospitals would better serve the goals of CJR–X. We believe the overlap policy better balances model simplicity, beneficiary access to coordinated episode care, accountability for LEJR episode spending and quality, and alignment with broader value-based care initiatives.

Comment: A couple of commenters requested CMS to consider removing CJR–X episodes from the Hospital Value-Based Purchasing (HVPB) Program's Medicare Spending Per Beneficiary (MSPB) measure. A commenter believed the implementation of CJR–X has the potential to be a double penalty when combined with HVBP MSPB measure.

Response: We appreciate the commenter's concern regarding CJR–X participation and the HVBP Program's MSBP measure. However, we disagree that CJR–X hospitals should be excluded from the HVBP Program or that CJR–X procedures should be removed from the MSPB measure used in the HVBP Program.

CJR–X and the HVBP Program serve related but distinct purposes. CJR–X is an episode-based payment model focused on improving care coordination, quality, and spending for LEJR episodes that begin with an anchor hospitalization or anchor procedure and continue through the 90-day post-discharge period. The HVBP Program, including the MSPB measure, is a broader hospital quality and efficiency program that evaluates hospital performance under its own statutory and programmatic framework. Removing CJR–X procedures from the MSPB measure would create a special carve-out for one category of hospital care that remains clinically and financially relevant to hospital efficiency and quality performance.

We also do not believe that the interaction between CJR–X and the MSPB measure constitutes an inappropriate double penalty. The fact that the same care episode may be relevant to more than one Medicare payment or quality program does not, by itself, mean that the programs are duplicative or unfair. Hospitals are already accountable across multiple Medicare programs for different dimensions of care, including quality, efficiency, patient outcomes, and episode spending. CJR–X would provide a model-specific reconciliation methodology for LEJR episodes, while the Hospital VBP Program's MSPB measure would continue to assess hospital resource use under the Hospital VBP framework. These are separate methodologies with separate purposes, not duplicate penalties for the same calculation.

We also believe that excluding CJR–X procedures from the MSPB measure could weaken the alignment between CJR–X and broader Medicare value-based purchasing goals. LEJR episodes are high-volume, high-cost procedures with meaningful opportunities to improve discharge planning, post-acute care use, readmissions, complications, and care transitions. These are the same types of efficiency and quality concerns that Medicare value-based purchasing policies are intended to encourage hospitals to address. Removing CJR–X procedures from the MSPB measure could reduce incentives for hospitals to broadly improve efficiency for a clinically important service line. We anticipate that CJR–X will spur hospital improvements, such as increase coordination of care and improve quality, and those improvements may also support hospitals' performance under other Medicare quality and value-based purchasing programs. For example, a hospital that reduces avoidable readmissions, improves discharge planning, and supports clinically appropriate post-acute care during CJR–X episodes may also improve the efficiency of care captured under broader hospital performance measures. We continue to believe that maintaining alignment across CMS programs and initiatives supports a consistent Medicare policy objective: encouraging hospitals to deliver high-quality, coordinated, and efficient care.

Comment: MedPAC indicated that it will be important for the agency to monitor the financial effects of the model's overlap policy, which would result in two different Advanced APMs (CJR–X plus some other Advanced APM, such as an ACO model) holding two sets of providers accountable for spending for a single beneficiary during a single, shared period of time (that is, a 90-day episode in CJR–X, which could also end up being included in the 12-month performance period of another A–APM). They noted in their June 2022 report that when implementing new model overlap policies, performance payments for providers should not be so large that they increase total Medicare spending. If the CJR–X overlap policy results in net increases in Medicare spending, CMS should consider changing the policy.

Response: We thank MedPAC for their recommendation. We agree that monitoring model overlap is important to ensure that concurrent participation supports care coordination and value-based care goals without increasing total Medicare spending. We do not believe overlap between CJR–X and another Advanced APM warrants excluding overlapping beneficiaries or changing the overlap policy at this time. We do not currently have an indication that allowing model overlap for the same beneficiary during the same period of time would result in material losses to Medicare.

We also note that ACOs and CJR–X participants are accountable for different, complementary aspects of care. ACOs retain broader accountability

for population health, longitudinal care management, and upstream clinical decision-making, including care management and referral patterns that may affect whether surgery is recommended as the appropriate course of treatment. CJR–X, by contrast, focuses on the acute procedural episode and the 90-day post-discharge recovery period after the episode is triggered. Maintaining overlap therefore preserves accountability for both the upstream population-based incentives addressed by ACO models and the episode-based care coordination incentives addressed by CJR–X.

At the same time, we recognize MedPAC's concern that performance payments across overlapping models should not be so large that they increase total Medicare spending. We will monitor the financial effects of the CJR–X overlap policy, including whether overlapping model participation results in unexpected increases in Medicare spending or payment interactions that are inconsistent with the goals of CJR–X.

Comment: A commenter requested for CMS to ensure that hospitals will have data available to them that will identify patients who are excluded from initiating TEAM or CJR–X episodes to ensure that this policy can be best understood and implemented by hospitals participating in both models.

Response: We appreciate the commenter's request that CMS make data available to hospitals to help them understand and operationalize the overlap policy between TEAM and CJR–X. We agree that clear and timely data will be important for hospitals that may be affected by a beneficiary that has received care from both a CJR–X and TEAM hospital. We anticipate including in the monthly data provided to hospitals a variable that identifies whether a beneficiary may be excluded from CJR–X due to overlap with TEAM. We believe providing this information will help CJR–X hospitals understand which beneficiaries or episodes are subject to the TEAM exclusion and support hospital implementation, internal tracking, care coordination, and reconciliation review. We will continue to consider whether additional guidance or data elements are needed to support accurate implementation of the CJR–X/TEAM overlap policy.

Comment: A commenter requested that when TEAM concludes CMS must provide a formal, dedicated transition period for hospitals to participate in CJR–X to allow organizations to safely adjust their operations to the distinct regulatory and structural differences between the two models.

Response: We agree that hospitals should have sufficient notice and operational clarity before transitioning from TEAM to CJR–X. It is our intent to include TEAM participants in CJR–X seamlessly after TEAM concludes, provided they meet the CJR–X participant definition, as defined at § 512.605. We do not believe a separate delay or holding period is necessary to accomplish that goal. Rather, we believe that a seamless transition would better support continuity in LEJR episode-based care redesign for hospitals already managing LEJR episodes under TEAM.

We recognize that TEAM and CJR–X are distinct models and that hospitals transitioning from TEAM to CJR–X will need to account for differences in model design, including differences in episode duration, payment methodology, quality requirements, beneficiary notification requirements, and other operational policies. We anticipate providing sufficient notice before TEAM hospitals begin participation in CJR–X and expect to provide guidance or develop resources to help hospitals understand key differences between TEAM and CJR–X. Such guidance or resources may highlight operational issues hospitals should consider as they prepare for CJR–X participation after TEAM concludes.

Comment: A commenter requested that CMS convene a stakeholder working group prior to the final rule to develop a durable policy framework for the interaction of episode-based and population-based payment programs.

Response: We appreciate the commenter's recommendation and we are committed to continued stakeholder engagement on model overlap policies. However, we are generally limited in our ability to convene a stakeholder working group for the purpose of developing or revising final CJR–X policies while the final rule is pending. The Administrative Procedure Act establishes the notice-and-comment process as the mechanism for public input on proposed rulemaking, and CMS must consider comments submitted through that process before issuing a final rule. For that reason, CMS is not convening a pre-final-rule stakeholder working group to develop CJR–X final rule policies outside the public comment process. We believe that notice and comment rulemaking is a valuable and important tool for engaging the public and receiving stakeholder feedback on proposed model policies. We considered comments submitted during this rulemaking cycle, including comments on model overlap, to inform final CJR–X policies. In addition, stakeholder feedback received through this rulemaking helps inform our consideration of future overlap policies between episode-based and population-based models.

Nevertheless, we value stakeholder input and remain committed to engaging stakeholders after publication of the final rule to support implementation and to better understand how overlap policies operate in practice. We believe that ongoing engagement can help ensure that policies governing overlap between episode-based and population-based models are meaningful, operationally clear, and responsive to participant experience. We will also use monitoring, evaluation, and operational experience to assess whether CJR–X overlap policies are functioning as intended.

After consideration of the public comments, we are finalizing without modification the policy at § 512.630(e) that if a beneficiary in a TEAM episode has a LEJR procedure performed at a CJR–X hospital during TEAM's 30-day post-discharge period, then the LEJR procedure will not initiate a CJR–X LEJR episode and the spending from the LEJR procedure will be included in the TEAM episode.

i. Financial Arrangements

(1) Background

We believe certain financial and beneficiary incentives could help a CJR–X participant reach their quality and efficiency goals under the model and benefit both beneficiaries and the Medicare Trust Fund by reducing hospital readmissions, complications, days in acute care, and mortality. We also believe there is value in offering flexibilities to CJR–X participants that could support their performance in CJR–X and enable them to meet beneficiaries' needs. The flexibilities outlined in this section include allowing CJR–X participants to share all or some of their reconciliation payment amount or repayment amount with non-model participants and offering beneficiary incentives to encourage engagement and adherence to recommended treatment throughout recovery.

(2) Overview of CJR–X Financial Arrangements

CJR–X participants may wish to enter into financial arrangements with certain providers and suppliers that support CJR–X activities to share their reconciliation payment amount or repayment amount resulting from participation in CJR–X. We believe that allowing such arrangements to align

financial incentives would support high-quality care, improve health outcomes, and reduce Medicare spending by improving beneficiary care transitions and reducing fragmentation following surgery. We expect that CJR–X participants would identify key providers and suppliers caring for beneficiaries in the surrounding communities with whom to establish partnerships to promote accountability for the quality, cost, and overall care for beneficiaries, including managing and coordinating care; encouraging investment in infrastructure, enabling technologies, and redesigning care processes for high quality and efficient service delivery; and carrying out other obligations or duties under CJR–X.

These providers and suppliers may invest substantial time and other resources in these activities, yet they would not be the direct recipients of any reconciliation payment amounts or responsible for repayment amounts to CMS, as they are not the risk bearing entity and do not directly participate in CJR–X. Therefore, we believe it is possible that a CJR–X participant who may receive a reconciliation payment amount or be responsible for a repayment amount to CMS, may want to enter into financial arrangements with other providers or suppliers to share this reconciliation payment amount or repayment amount with the CJR–X participant. As discussed in section X.C.2.i.(9) of this final rule, CMS has made the determination that the anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)) is available to protect certain remuneration in the form of the sharing arrangement's gainsharing payments and alignment payments and the distribution arrangement's distribution payments in compliance with the requirements established in this final rule and the conditions of the safe harbor for CMS-sponsored model arrangements established at 42 CFR 1001.952(ii).

CMS recognizes that CJR–X participants may seek to enter into relationships with organizations other than those described in the financial arrangements under the CJR–X regulations. For example, CJR–X participants may look to engage organizations that are not providers or suppliers to assist with data analysis, local provider and supplier engagement, care redesign planning and implementation, beneficiary outreach, care coordination and management, monitoring compliance with model terms and conditions, or other model-related activities.

(3) CJR–X Collaborators

As finalized, CJR–X is a two-sided financial risk model, and the CJR–X participant would bear sole financial risk for any repayment amount to CMS in the absence of financial arrangements. However, given the incentive to reduce episode spending to earn a reconciliation payment amount, as described in section X.C.2.f.(5) of this final rule, a CJR–X participant may want to engage in financial arrangements with providers and suppliers or participants in Medicare ACO initiatives who are making contributions to the CJR–X participant's performance in the model. Such arrangements would allow the CJR–X participant to share reconciliation payment amounts or repayment amounts with individuals and entities that have a role in the CJR–X participant's performance in the model. In this final rule, we use the term ''CJR–X collaborator'' to refer to these individuals and entities.

Because CJR–X participants would be accountable for spending and quality during the anchor hospitalization or anchor procedure and the 90-day post-discharge period, as described in section X.C.2.d.(3)(b) of this final rule, providers and suppliers other than the CJR–X participant may furnish services to the beneficiary during the model. As such, for purposes of the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we proposed at § 512.605 to define ''CJR–X collaborator'' as any of the following types of providers and suppliers that are Medicare-enrolled and eligible to participate in Medicare or entities that are participating in a Medicare ACO initiative, may be CJR–X collaborators:

- SNF.
- HHA.
- LTCH.
- IRF.
- Physician.
- Nonphysician practitioner.
- Therapist in a private practice.
- Comprehensive Outpatient Rehabilitation Facility (CORF).
- Provider or supplier of outpatient therapy services.
- Physician Group Practice (PGP).
- Hospital.
- Critical Access Hospital (CAH).
- Non-physician provider group practice (NPPGP).
- Therapy group practice (TGP).
- Medicare ACO.

We sought comment on the proposed definition of ''CJR–X collaborator'' and any additional Medicare-enrolled providers or suppliers that should be included in this definition. For example, we considered Rural Emergency Hospitals (REHs), rural clinics, and Federally Qualified Health Centers (FQHCs) because CJR–X would hold CJR–X participants accountable for cost and quality of care during a 90-day episode, including rural beneficiaries who may receive a LEJR procedure. We anticipate that rural beneficiaries would receive pre- and post-operative care locally through these sites, and allowing these providers to participate in financial arrangements would align incentives across all entities influencing episode outcomes and would encourage better care transitions and follow-up.

The following is a summary of the public comments received on this proposal and our responses.

Comment: Multiple commenters supported CMS' proposed definition of a CJR–X collaborator as a provider or supplier, or a participant in a Medicare ACO initiative, that contributes to a CJR–X participant's performance under the model. Commenters stated that the proposed definition appropriately recognizes the range of clinicians, provider organizations, and post-acute care entities that may contribute to care coordination, episode management, and hospital performance in CJR–X.

Commenters specifically appreciated CMS's proposal to include nonphysician practitioners, such as Certified Registered Nursing Assistants (CRNAs), and nonphysician provider group practices, including CRNA group practices, as eligible CJR–X collaborators. Commenters stated that including CRNAs and CRNA group practices would allow these clinicians and practices to participate more fully in CJR–X activities, enter into financial arrangements with participating hospitals, and engage in gainsharing payments permitted under the model.

Commenters also supported the inclusion of physician group practices (PGPs) as CJR–X collaborators. They stated that PGPs' participation would allow hospitals and physicians to enter into financial arrangements that support CJR–X activities and align incentives among clinicians involved in lower-extremity joint replacement episodes.

In addition, commenters supported CMS' inclusion of other provider and supplier types, such as skilled nursing facilities, home health agencies, and inpatient rehabilitation facilities. Commenters stated that these entities may contribute to a CJR–X participant's performance by supporting care transitions, post-acute care coordination, beneficiary recovery, and episode management.

A commenter also stated that including CRNAs and CRNA group

practices could expand opportunities to participate in a Qualifying Alternative Payment Model (APM). Overall, commenters viewed the proposed collaborator definition as appropriately broad and supportive of gainsharing, care coordination, and shared accountability under CJR–X.

Response: We thank the commenters for their support for the proposed definition of a CJR–X collaborator. CMS agrees that CJR–X participants may need to work with a range of providers, suppliers, and Medicare ACOs to support care coordination, care transitions, post-acute care management, physician alignment, and episode performance under the model. Under the CJR–X collaborator definition, a CJR–X collaborator may include the following Medicare-enrolled providers and suppliers eligible to participate in Medicare, as well as entities participating in a Medicare ACO initiative:

1. Skilled nursing facility;
2. Home health agency;
3. Long-term care hospital;
4. Inpatient rehabilitation facility;
5. Physician;
6. Nonphysician practitioner;
7. Therapist in private practice;
8. Comprehensive outpatient rehabilitation facility;
9. Provider or supplier of outpatient therapy services;
10. Physician group practice;
11. Hospital;
12. Critical access hospital;
13. Nonphysician provider group practice;
14. Therapy group practice; and
15. Medicare Accountable Care Organization.

We believe this definition appropriately includes the types of providers, suppliers, group practices, and Medicare ACO entities that may contribute to a CJR–X participant's performance under the model. These entities may support CJR–X activities, including managing and coordinating care, encouraging investment in infrastructure and redesigned care processes, supporting efficient service delivery, and fulfilling other obligations or duties under the model. We believe the finalized collaborator framework supports financial arrangements that align incentives among CJR–X participants and collaborators while maintaining model safeguards, documentation requirements, and compliance with applicable laws and regulations.

Comment: A commenter supported CMS' inclusion of Medicare ACOs in the CJR–X collaborator list and requested additional guidance on overlapping participation. The commenter specifically asked CMS to clarify whether and how the same physician group may participate both as a CJR–X collaborator and as a participating provider in a Medicare ACO.

Response: We appreciate the commenter's support for including Medicare ACOs in the proposed CJR–X collaborator definition. We recognize the potential for confusion when various Innovation Center models overlap, in this case, the CJR–X Model and the Medicare Share Savings Programs under which an ACO might be enrolled, as well as the financial arrangements available to providers and suppliers. This final rule allows CJR–X participants to enter into financial arrangements with providers, suppliers, and participants in Medicare ACO initiatives that contribute to the CJR–X participant's performance under the definition of CJR–X collaborators.

With respect to the commenter's request for clarification, we clarify that within the CJR–X financial arrangements structure, an ACO can be a CJR–X collaborator but cannot serve as a ''collaboration agent'' or ''downstream collaboration agent.'' The key distinction is that a collaboration agent is defined more narrowly as an individual or entity that is not a CJR–X collaborator and that is a PGP, NPPGP, or TGP member in a distribution arrangement with the same PGP, NPPGP, or TGP. A downstream collaboration agent is defined as an individual who is not a CJR–X collaborator or collaboration agent and who is a PGP, NPPGP, or TGP member in a downstream distribution arrangement.

Comment: Several commenters recommended that CMS expand the proposed definition of a CJR–X collaborator to include additional entities that could support episode management and beneficiary recovery. A commenter requested that CMS include implant manufacturers on the list of eligible collaborators so they can share both upside and downside risk for a CJR–X 90-day episode. Another commenter recommended that CMS expand the proposed definition of ''CJR–X collaborator'' to include providers that furnish functional support services, such as assistance with mobility and custodial care. That commenter stated that these services are important for safe recovery after lower-extremity joint replacement surgery and may help reduce avoidable institutional post-acute care use and overall episode spending in bundled payment models. A third commenter recommended that CMS expand the proposed definition of ''CJR–X collaborator'' to include Rural Emergency Hospitals, Federally Qualified Health Centers, and Rural Health Clinics.

Response: We thank the commenters for their recommendations to expand the types of entities allowed as CJR–X collaborators to include implant manufacturers, providers that furnish functional support services, and Rural Emergency Hospitals, Federally Qualified Health Centers, and Rural Health Clinics. We also note their suggestions to allow greater latitude for new financial arrangements.

We recognize that functional support for patients with limited mobility after surgery may help beneficiaries recover safely and reduce avoidable use of institutional post-acute care and episode spending.

We appreciate the commenter's recommendation to include Rural Emergency Hospitals, federally qualified health centers, and rural health clinics as additional types of organizations that may be CJR–X collaborators. We recognize that these organizations may support access, care coordination, and beneficiary recovery, particularly for beneficiaries in rural or underserved areas.

In future rulemaking, we may consider the commenter's recommendations when determining whether to include additional categories of Medicare-enrolled providers or suppliers in the CJR–X collaborator definition. Any expansion of the CJR–X collaborator definition would need to be consistent with the goals of supporting care coordination and financial alignment while maintaining beneficiary protections, program integrity safeguards, and clear accountability for CJR–X episode performance.

We are finalizing the definition of a CJR–X collaborator as proposed. The CJR–X Model will only allow providers or suppliers certified as Medicare providers or suppliers as defined in 42 CFR 512.605, to be a CJR–X collaborator.

(4) Sharing Arrangements

(a) General

Similar to the original CJR Model (42 CFR 510.500), we are finalizing that certain financial arrangements between a CJR–X participant and a CJR–X collaborator be termed ''sharing arrangements.'' For purposes of the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we proposed that a sharing arrangement would be to share reconciliation payment amounts or

repayment amounts. In this final rule, we define ''sharing arrangement'' as a financial arrangement between a CJR–X participant and a CJR–X collaborator for the sole purpose of making gainsharing payments or alignment payments under CJR–X. Where a payment from a CJR–X participant to a CJR–X collaborator is made pursuant to a sharing arrangement, we define it such that payment is known as a ''gainsharing payment,'' which is discussed in section X.C.2.i.(4)(c) of this final rule. Where a payment from a CJR–X collaborator to a CJR–X participant is made pursuant to a sharing arrangement, we define that payment as an ''alignment payment,'' which is discussed in section X.C.2.i.(4)(c) of this final rule. A CJR–X participant must not make a gainsharing payment or receive an alignment payment except in accordance with a sharing arrangement. In this final rule, we establish that a sharing arrangement must comply with the provisions of section X.C.2.i.(4)(b) of this final rule and all other applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements. In this rule, we are finalizing that the CJR–X participant and CJR–X collaborator must document this agreement in writing and, per monitoring and compliance guidelines (§ 512.670(b)), the written agreement must be made available to CMS upon request.

This final rule finalizes our proposal that the CJR–X participant must develop, maintain, and use a set of written policies for selecting individuals and entities to be CJR–X collaborators. Moreover, the selection criteria cannot be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between, or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, or any individual affiliated with a CJR–X participant, CJR–X collaborator, or collaboration agent. In addition to including quality of care in their selection criteria, CJR–X participants must also consider the selection of CJR–X collaborators based on criteria that include the anticipated contribution to the performance of the CJR–X participant in the model by the potential CJR–X collaborator to ensure that the selection of CJR–X collaborators takes into consideration the likelihood of their future performance.

Finally, we are finalizing that if a CJR–X participant enters into a sharing arrangement, its compliance program must include oversight of sharing arrangements and compliance with the applicable requirements of the model. Requiring oversight of sharing arrangements to be included in the compliance program provides a safeguard for program integrity. We note that CMS will monitor CJR–X participants for compliance, as permitted under § 512.150, especially if we believe the requirement is not being met as indicated through monitoring activities such as documentation requests, interviews, and site visits.

We sought comment on the proposed ''sharing arrangement'' definition at § 512.605, the sharing arrangement proposals at § 512.670(a), and whether additional or different safeguards are needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: Some commenters supported the proposed gainsharing and financial arrangement policies for CJR–X participants. Commenters stated that these policies would provide participant hospitals with additional tools to align incentives with physicians, physician group practices, post-acute care providers, and other care partners involved in lower-extremity joint replacement episodes. They viewed the gainsharing framework as an important mechanism for encouraging collaboration, care redesign, shared accountability, and coordinated episode management.

Commenters appreciated CMS' proposal to allow CJR–X participants to share all or part of reconciliation payments and repayment responsibility with eligible collaborators. Commenters noted that sharing both potential savings and losses could help align hospitals and downstream providers with quality, cost, and care coordination goals. A commenter stated that the gainsharing provisions could offer hospitals additional ways, beyond existing pay-for-performance programs such as the Medicare Shared Savings Program, to encourage physician groups and other partners to participate in collaborative arrangements. Commenters also supported CMS' proposed safeguards for these financial arrangements. Other commenters requested additional guidance regarding compliance of sharing arrangements with applicable fraud and abuse laws and sought clarification as to whether a CJR–X participant may charge a CJR–X collaborator a fee for inclusion on a preferred provider or supplier list.

Response: We thank the commenters for their support of the proposed framework and safeguards for CJR–X financial arrangements. We recognize we did not propose a policy that prohibits a CJR–X participant from charging a CJR–X collaborator a fee for inclusion on their preferred provider or supplier list. However, we may take this policy into consideration in future rulemaking.

We reiterate that CJR–X participants may not limit beneficiary freedom of choice. Beneficiaries retain the right to obtain care from any Medicare-participating provider or supplier, subject to applicable Medicare requirements. CJR–X participants may identify or recommend preferred providers or suppliers only in a manner consistent with applicable law and Medicare beneficiary protections.

Comment: Several commenters supported CMS' proposal to continue the original CJR Model's policy of no physician gainsharing cap. Commenters noted that the original CJR Model eliminated the 50 percent cap on gainsharing payments in later years and applauded CMS for continuing this policy under the new CJR–X Model. Commenters stated that maintaining flexibility in physician gainsharing would support meaningful physician engagement and allow hospitals to structure arrangements that reflect the contributions of physicians and other collaborators to model performance.

Response: We thank commenters for their support for the gainsharing and financial arrangement policies available under CJR–X. We agree that appropriately structured sharing arrangements can help align incentives among CJR–X participants, CJR–X collaborators, collaboration agents, and downstream collaboration agents to support care coordination, physician engagement, post-acute care management, quality improvement, and episode performance.

In this final rule, we are finalizing policies that allow CJR–X participants to enter into sharing arrangements with eligible CJR–X collaborators, as discussed in section X.C.2.i.(3) of this final rule, and to share reconciliation payment amounts through gainsharing payments, as well as to share repayment responsibility through alignment payments, as discussed in section X.C.2.i.(4)(c) of this final rule. We are also finalizing related distribution and downstream distribution arrangements, where applicable, to allow certain CJR–X collaborators to share gainsharing payments with eligible individuals or entities that contribute to CJR–X activities, as discussed in sections X.C.2.i.(5) and X.C.2.i.(6) of this final rule. We believe these arrangements provide important operational flexibility while maintaining safeguards to ensure

that payments are tied solely to quality of care and to activities that support CJR–X beneficiaries and model performance.

We note that CJR–X participants remain accountable for repayment amounts owed to CMS. To ensure that CJR–X participants retain meaningful financial responsibility under the model, we finalized limits on the amount of repayment responsibility that may be shifted to CJR–X collaborators. For a performance year, the aggregate amount of alignment payments a CJR–X participant receives from all CJR–X collaborators may not exceed 50 percent of the CJR–X participant's repayment amount. In addition, the aggregate amount of alignment payments from any CJR–X collaborator that is not a Medicare ACO may not exceed 25 percent of the CJR–X participant's repayment amount, while the aggregate amount from a CJR–X collaborator that is a Medicare ACO may not exceed 50 percent of the CJR–X participant's repayment amount.

To use the gainsharing framework, entities must comply with the CJR–X financial arrangement requirements. Among other requirements, the sharing arrangement must be documented in writing and must identify the purpose and scope of the arrangement, the parties and their obligations, the CJR–X activities to be performed, the financial or economic terms of the arrangement, and the methodology and accounting formula for determining gainsharing and alignment payments. The methodology for gainsharing payments must be based solely on quality of care and the provision of CJR–X activities.

We also finalized safeguards to protect beneficiaries and program integrity. Sharing arrangements may not induce the CJR–X participant, CJR–X collaborator, or their employees, contractors, or subcontractors to reduce or limit medically necessary services. The arrangement also may not restrict a collaborator's ability to make decisions in the best interests of CJR–X beneficiaries, including decisions regarding devices, supplies, and treatments.

CJR–X participants must maintain oversight and documentation of these arrangements. The board or other governing body of the CJR–X participant is responsible for overseeing the participant's model participation, arrangements with CJR–X collaborators, gainsharing and alignment payments, and the use of beneficiary incentives. CJR–X participants must also maintain accurate current and historical collaborator lists, document payments and recoupments, track internal cost savings, track reconciliation payments and repayment amounts, and retain and provide access to required records in accordance with CJR–X requirements and 42 CFR 1001.952(ii).

We have determined that the anti-kickback statute safe harbor for CMS-sponsored models at 42 CFR 1001.952(ii) is available to protect specified remuneration exchanged under CJR–X financial arrangements, including gainsharing payments, alignment payments, distribution payments, and downstream distribution payments, when the arrangements comply with the final CJR–X requirements, applicable model documentation, and all conditions of the safe harbor. Anyone engaging in CJR–X financial arrangements must continue to comply with all applicable laws and regulations, including applicable fraud and abuse laws.

We believe these policies balance commenters' interest in flexibility with the need for accountability, transparency, and beneficiary protections. The gainsharing framework enables CJR–X participants and collaborators to align incentives for quality and care coordination, while repayment caps, written agreement requirements, payment methodology rules, documentation obligations, and safe harbor conditions help ensure that financial arrangements remain tied to CJR–X activities and model goals.

Comment: Some commenters criticized CMS' proposed gainsharing and financial arrangement policies as insufficiently flexible, specific, or comprehensive to support effective collaboration among hospitals participating in the CJR–X Model and other providers and/or suppliers serving Original Medicare beneficiaries. Commenters generally agreed that gainsharing can be useful but stated that the proposed framework may not adequately align hospitals, physicians, post-acute care providers, and other entities that influence episode costs, quality, and beneficiary outcomes.

Some commenters stated that the proposed gainsharing mechanisms would not be strong enough to meaningfully influence independent physician referral patterns, post-acute care decisions, or care standardization across the full 90-day episode. These commenters recommended that CMS enhance the mechanisms hospitals may use to collaborate with independent physicians to support consistent care pathways, referral coordination, and shared accountability for episode performance.

Several commenters raised concerns about the clinical basis for gainsharing payments. They stated that gainsharing should advance patient outcomes, not merely reward the use of lower-cost products or services. They specifically urged CMS to prohibit gainsharing arrangements tied exclusively to the use of lower-cost or less clinically appropriate implantable medical devices. Commenters stated that such arrangements could undermine patient care and increase Medicare spending if they result in higher rates of revisions, reoperations, infections, complications, or other adverse outcomes. At the same time, commenters supported gainsharing arrangements that reward improvements in meaningful clinical outcomes, such as reduced readmissions, complications, infections, revisions, and avoidable spending.

Other commenters focused on post-acute care alignment. They stated that post-acute care providers play a critical role in determining CJR–X episode costs and quality outcomes because their management of beneficiaries' medical needs after discharge affects length of stay, readmissions, functional recovery, utilization patterns, and care coordination. Commenters expressed concern that hospitals would remain financially accountable for total episode performance even though key drivers of that performance may be controlled or influenced by post-acute care providers who do not share in downside risk. They stated that this could limit hospitals' ability to manage episode variation and constrain care redesign efforts. Commenters recommended that CMS consider expanded collaboration models, shared accountability structures, or additional flexibility for hospitals to partner with high-performing post-acute care providers.

A commenter stated that academic medical centers may face particular challenges under the proposed gainsharing framework because they often serve as regional referral hubs for complex patients. The commenter noted that after providing specialized surgical care, academic medical centers frequently return patients to local community providers for recovery, allowing beneficiaries to remain near family, caregivers, and their usual medical teams. Because academic medical centers may not have contractual relationships with all downstream providers in the many communities they serve, the commenter stated that holding these hospitals financially accountable for a 90-day episode would be unfair.

Commenters also stated that the proposed rule lacked sufficient specificity regarding participation by certain clinicians and entities in

gainsharing arrangements. A commenter recommended that CMS define minimum expectations for anesthesiologist participation in gainsharing agreements, governance structures, and performance feedback mechanisms, noting that non-surgeon specialists may play an important role in episode care. Other commenters stated that the proposal appeared primarily focused on direct hospital-physician relationships and did not clearly address whether reconciliation payments could flow through a clinically integrated network to independent physician participants.

Commenters specifically asked CMS to clarify whether clinically integrated networks may serve as intermediaries for distributing reconciliation payments to independent physicians, the conditions under which post-acute care providers may receive distribution payments, and the documentation and oversight requirements that would apply to arrangements mediated by clinically integrated networks.

Several commenters requested additional guidance on permissible gainsharing structures. A commenter recommended that CMS issue this guidance before the model begins, rather than leaving these questions for later comment-and-response cycles.

A commenter recommended that CMS require participating acute care hospitals to enter into mandated shared-savings agreements with the applicable surgeon. The commenter stated that surgeons are central to the episode of care and should not be excluded from performance-based financial incentives. The commenter also stated that requiring surgeon participation in shared-savings arrangements could improve physician engagement and generate greater savings under CJR–X.

Response: We thank commenters for their recommendations on the CJR–X gainsharing framework. We recognize that commenters supported broader or more prescriptive policies on financial arrangements, including expanded mechanisms to influence independent physician and post-acute care decision-making, required shared-savings agreements with surgeons, additional specificity for anesthesiologists and clinically integrated networks, and restrictions on gainsharing tied to the use of lower-cost implantable devices.

We are not modifying the gainsharing framework as requested. We believe the finalized framework appropriately balances flexibility, participant accountability, beneficiary protections, quality safeguards, and program integrity. Under the model, CJR–X participants are accountable for episode spending and quality performance, and the gainsharing policies are intended to give participants flexibility to enter into arrangements with eligible collaborators that contribute to CJR–X activities and model performance. We do not believe it would be appropriate to require all participant hospitals to adopt specific gainsharing structures, to require shared savings arrangements with specific clinician types, or to prescribe a uniform approach to financial alignment across all episodes and markets.

We also believe that participating hospitals are best positioned to determine which collaborators are necessary to support their CJR–X activities, subject to the model's requirements. Hospitals may vary significantly in their clinical staffing models, referral patterns, post-acute care networks, geographic service areas, and existing relationships with physicians and other providers. A mandatory or highly prescriptive gainsharing structure could limit hospitals' ability to design arrangements that fit local care delivery circumstances and could create an operational burden for entities that do not need or cannot support those arrangements.

We agree that gainsharing should support quality and beneficiary care, not inappropriate cost reduction. For that reason, we finalized safeguards that require gainsharing payment methodologies to be tied to quality of care and the provision of CJR–X activities. The framework also prohibits arrangements that induce reductions or limitations in medically necessary services or that restrict a collaborator's ability to make decisions in the best interests of CJR–X beneficiaries, including decisions about devices, supplies, and treatments. These requirements address concerns that gainsharing could be used to reward the use of lower-cost products regardless of their clinical appropriateness.

We also do not require CJR–X participants to enter into shared savings agreements with specific surgeons, anesthesiologists, post-acute care providers, clinically integrated networks, or other entities. Although these providers may play important roles in CJR–X episodes, requiring participation by particular entities could interfere with a participant hospital's ability to structure arrangements based on actual contributions to CJR–X activities and performance. It could also create disputes over eligibility, payment allocation, and participation rights that are better addressed through voluntary written arrangements that satisfy CJR–X requirements and applicable law.

We recognize that post-acute care providers and community-based clinicians may influence episode outcomes, particularly length of stay, readmissions, functional recovery, and care transitions. The CJR–X financial arrangement framework permits participant hospitals to enter into arrangements with eligible collaborators, including certain post-acute care providers, when those entities contribute to model performance. However, we are not expanding the framework to require shared downside risk or shared savings for all such entities. CJR–X participants remain ultimately accountable to CMS for performance under the model, and the finalized repayment caps ensure that hospitals retain meaningful financial responsibility rather than transferring excessive downside risk to collaborators.

We also decline to create separate gainsharing rules for academic medical centers or regional referral centers. We understand that these hospitals may care for complex beneficiaries and discharge patients back to community providers across a broad service area. The model's gainsharing policies are designed to apply consistently nationwide as a mandatory model, while allowing CJR–X participants to establish voluntary arrangements with eligible collaborators. We believe this approach provides flexibility for hospitals with different care delivery patterns without creating special rules that could increase model complexity or lead to inconsistent accountability.

CMS acknowledges the commenter's request that it expressly address the use of clinically integrated networks as intermediaries for distributing reconciliation payments to independent physicians, the circumstances under which post-acute care providers may receive distribution payments, and the oversight obligations and documentation applicable to such arrangements.

After considering the public comments we received, we are finalizing our proposal at § 512.605 on the ''sharing arrangement'' definition and our proposal at § 512.670(a) on general sharing arrangement policies without modification.

(b) Requirements

We are finalizing several requirements for sharing arrangements to help ensure that their sole purpose is to create financial alignment between CJR–X participants and CJR–X collaborators toward the goals of the model while maintaining adequate program integrity safeguards. This final rule establishes

that the sharing arrangement must be in writing, signed by the parties, and entered into before care is furnished to CJR–X beneficiaries. In addition, participation in a sharing arrangement must be voluntary and without penalty for nonparticipation. It is important that providers and suppliers that render items and services to beneficiaries during the episode have the freedom to provide medically necessary items and services to beneficiaries without any requirement to participate in a sharing arrangement to safeguard beneficiary freedom of choice, access to care, and quality of care. The sharing arrangement must set out the mutually agreeable terms for the financial arrangement between the parties to guide and reward model care redesign for future performance toward model goals, rather than reflect the results of model performance years that have already occurred and where the financial outcome of the sharing arrangement terms would be known before signing.

We are finalizing the sharing arrangement to require the CJR–X collaborator and its employees, contractors, and subcontractors to comply with certain requirements that are important for program integrity under the arrangement. We note that the terms contractors and subcontractors include collaboration agents as defined in § 512.670(b)(3). The sharing arrangement must require all of the individuals and entities party to the arrangement to comply with provisions related to access to records and record retention and participation in any evaluation, monitoring, compliance, and enforcement activities performed by CMS or its designees, in accordance with the standard provisions for Innovation Center models at § 512.135, because these individuals and entities all would play a role in model care redesign and be part of financial arrangements under the model as finalized. The sharing arrangement must also require all individuals and entities party to the arrangement who are providers or suppliers to comply with the applicable Medicare provider enrollment requirement at § 424.500, including having a valid and active TIN or NPI, during the term of the sharing arrangement. This requirement is in place to ensure that the individuals and entities have the required enrollment relationship with CMS under the Medicare program, although we note that they are not responsible for complying with requirements that do not apply to them. Finally, the sharing arrangement must require individuals and entities to comply with all other applicable laws and regulations. The sharing arrangement must not pose a risk to beneficiary access, beneficiary freedom of choice, or quality of care so that financial relationships between CJR–X participants and CJR–X collaborators do not negatively impact beneficiary protections under the model. The sharing arrangement as finalized in this rule must require the CJR–X collaborator to have a compliance program that includes oversight of the sharing arrangement and compliance with the requirements of the model, just as we require CJR–X participants to have a compliance program that covers oversight of the sharing arrangement for this purpose as a program integrity safeguard. We sought comment on the anticipated effect of the proposed compliance program requirement for CJR–X collaborators, particularly with regard to individual physicians and nonphysician practitioners, small PGPs, NPPGPs, and TGPs and whether alternative compliance program requirements for all or a subset of CJR–X collaborators should be adopted to mitigate any effect of the proposal that could make participation as a CJR–X collaborator infeasible for any provider, supplier, or other entity on the finalized list of types of CJR–X collaborators.

It is necessary that CJR–X participants have adequate oversight over sharing arrangements to ensure that all arrangements meet the requirements of this section and provide program integrity protections. Therefore, this final rule establishes that the board or other governing body of the CJR–X participant has the responsibility for overseeing the hospital participation in the model, its arrangements with CJR–X collaborators, its payment of gainsharing payments, its receipt of alignment payments, and its use of beneficiary incentives in the model. Additionally, we are requiring that the CJR–X participant and CJR–X collaborator must document this agreement in writing and, as part of the model's monitoring and compliance activities, which must be provided if CMS requests it, as is spelled out in section § 512.670(b)(7) of this final rule.

For purposes of sharing arrangements under the model, we proposed at § 512.605 that the definition of ''CJR–X activities'' refer to activities related to promoting accountability for the quality, cost, and overall care for CJR–X beneficiaries and performance in the model, including managing and coordinating care; encouraging investment in infrastructure and redesigned care processes for high quality and efficient service delivery; or carrying out any other obligation or duty under the model. In addition to the quality of care provided during episodes, we believe the activities that would fall under this definition encompass the totality of activities upon which it would be appropriate for sharing arrangements under the model to be based in order to value the contributions of providers, suppliers, and other entities toward meeting the performance goals of the model. We sought comment on the proposed definition of ''CJR–X activities'' as an inclusive and comprehensive framework for capturing direct care and care redesign that contribute to performance toward model goals.

We are finalizing in this final rule that the written agreement memorializing a sharing arrangement must specify the following parameters of the arrangement:

- The purpose and scope of the sharing arrangement.
- The identities and obligations of the parties, including specified CJR–X activities and other services to be performed by the parties under the sharing arrangement.
- The date of the sharing arrangement.
- Management and staffing information, including type of personnel or contractors that will be primarily responsible for carrying out CJR–X activities.
- The financial or economic terms for payment, including the following:

++ Eligibility criteria for a gainsharing payment.

++ Eligibility criteria for an alignment payment.

++ Frequency of gainsharing or alignment payment.

++ Methodology and accounting formula for determining the amount of a gainsharing payment that is solely based on the quality of care and the provision of CJR–X activities.

++ Methodology and accounting formula for determining the amount of an alignment payment.

Finally, we are requiring that the terms of the sharing arrangement must not induce the CJR–X participant, CJR–X collaborator, or any employees, contractors, or subcontractors of the CJR–X participant or CJR–X collaborator to reduce or limit medically necessary services to any beneficiary or restrict the ability of a CJR–X collaborator to make decisions in the best interests of CJR–X beneficiaries, including the selection of devices, supplies, and treatments. These requirements are intended to ensure that the quality of care for beneficiaries is not negatively affected by sharing arrangements under the model.

We sought comment on the ''CJR activities'' definition and the sharing arrangement requirements at § 512.670.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: A commenter requested further clarification on CMS' proposed treatment of upside and downside risk-sharing under CJR–X financial arrangements. The commenter stated that CMS appears to permit collaborating entities to receive up to 100 percent of reconciliation payments and internal cost savings, while limiting the amount of shared losses they may assume through the proposed cap on alignment payments.

The commenter did not oppose broader flexibility for upside gainsharing but recommended parity between gainsharing and loss-sharing. The commenter stated that participant hospitals and collaborators should be allowed to negotiate arrangements that treat upside and downside risks equally, based on what makes financial and clinical sense for their local markets and patient populations.

The commenter also stated that hospitals may achieve internal cost savings through activities such as bulk purchasing of equipment and materials, but they also incur significant implementation costs under CJR–X. These costs may include investments in advanced data analytics, internal change management, new or revised vendor and supplier agreements, and personnel changes.

The commenter recommended that CMS allow hospitals and collaborators to negotiate more flexible arrangements that share both upside gains and downside losses on an equal basis.

Response: We thank the commenter for requesting clarification on the relationship between upside gainsharing and downside risk-sharing under CJR–X financial arrangements. We recognize the commenter's view that CJR–X participants and CJR–X collaborators should have the flexibility to negotiate arrangements that allocate reconciliation payments, internal cost savings, and repayment responsibilities in ways that reflect local market conditions, patient populations, and the operational investments required to succeed under the model.

We agree that CJR–X participants may need flexibility to share potential upside payments with collaborators who contribute to CJR–X activities and to model performance. Accordingly, we are finalizing policies that permit gainsharing payments, distribution payments, and downstream distribution payments when the applicable CJR–X requirements are met. These policies allow participant hospitals and eligible collaborators to structure voluntary arrangements that support care coordination, quality improvement, episode management, and efficient service delivery.

We are not modifying the cap on alignment payments to allow collaborators to assume 100 percent of a participant hospital's repayment responsibility. We believe it is important for CJR–X participants to retain meaningful financial accountability for performance under the model. Participant hospitals are directly accountable to CMS for CJR–X episode spending, quality performance, reconciliation payments, and repayment amounts. Allowing a participant hospital to transfer all downside risk to collaborators could weaken the hospital's accountability for model performance and reduce the incentive for the hospital to invest in care redesign, internal operations, data analytics, discharge planning, and care coordination.

In this final rule, we are finalizing the alignment payment caps to preserve accountability while still allowing participants and collaborators to share downside risk. For each performance year, the aggregate amount of alignment payments a CJR–X participant receives from all CJR–X collaborators may not exceed 50 percent of the participant's repayment amount. In addition, the aggregate amount of alignment payments from any one CJR–X collaborator that is not a Medicare ACO may not exceed 25 percent of the participant's repayment amount. For a CJR–X collaborator that is a Medicare ACO, the aggregate amount may not exceed 50 percent of the participant's repayment amount.

We believe this approach appropriately balances flexibility and accountability. The finalized policy permits participant hospitals to negotiate voluntary arrangements that share upside and downside risk, while ensuring that hospitals remain responsible for at least a meaningful portion of any repayment owed to CMS. We also believe the cap helps protect collaborators from excessive downside exposure, particularly when a collaborator may influence only part of the episode and may not control all factors that affect total episode spending.

We recognize that CJR–X participants may incur implementation costs under CJR–X, including investments in data analytics, care coordination infrastructure, internal change management, staffing, and vendor or supplier arrangements. The gainsharing framework allows hospitals to account for these investments when structuring financial arrangements, provided those arrangements comply with CJR–X requirements, applicable model documentation, and all applicable laws and regulations. However, we do not believe these implementation costs justify allowing CJR–X participants to shift all repayment responsibility to CJR–X collaborators.

We also note that upside and downside arrangements are not identical from the perspective of program integrity and model accountability. Sharing earned reconciliation payments or internal cost-savings rewards compensates collaborators for their contributions to CJR–X activities and performance. By contrast, transferring repayment responsibility determines how losses owed to CMS are allocated among the participant hospital and its collaborators. Because the participant hospital remains accountable to CMS under the model, we believe it is appropriate to maintain limits on the amount of repayment responsibility that may be shifted through alignment payments.

We believe the finalized gainsharing and alignment payment policies provide sufficient flexibility for participant hospitals and collaborators to negotiate arrangements that reflect local needs while preserving the core CJR–X accountability structure. Participant hospitals may enter into voluntary arrangements with eligible collaborators, but those arrangements must meet the final CJR–X financial arrangement requirements, documentation obligations, program integrity safeguards, and applicable safe harbor conditions.

After considering the public comments we received, we are finalizing the proposal at § 512.670 on the ''CJR activities'' definition and the sharing arrangement requirements without modification.

(c) Gainsharing Payment and Alignment Payment Conditions and Limitations

We are finalizing several conditions and limitations on gainsharing payments and alignment payments, as program integrity protections for payments to and from CJR–X collaborators. We require that gainsharing payments be derived solely from a CJR–X participant's reconciliation payment amounts, internal costs savings, or both; that they be distributed on an annual basis, not more than once per calendar year; that

they not be a loan, advance payment, or payment for referrals or other business; and that they be clearly identified as a gainsharing payment at the time they are paid.

We believe that gainsharing payment eligibility for collaborators should be conditioned on two requirements—(1) quality of care criteria; and (2) the provision of CJR–X activities. With respect to the first requirement, we have determined that to be eligible to receive a gainsharing payment, the collaborator must meet quality of care criteria during the performance year for which the participant earned a reconciliation payment amount that comprises the gainsharing payment. We are finalizing that the quality of care criteria be included in the sharing arrangement and mutually agreed upon by the CJR–X participant and CJR–X collaborator. With regard to the second requirement, to be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a collaborator other than a PGP, NPPGP, or TGP must have directly furnished a billable item or service to a beneficiary during the same performance year for which the participant earned a reconciliation payment amount or repayment amount. For purposes of this requirement, we consider a hospital, CAH, or post-acute care provider to have ''directly furnished'' a billable service if one of these entities billed for an item or service for a CJR–X beneficiary in the performance year for which the CJR–X participant earned a reconciliation payment amount or repayment amount. The phrase ''episode'' refers to all Part A and B items and services described in section X.C.2.d.(3)(b) of this final rule (excluding the items and services described in section X.C.2.d.(3)(c)) of this final rule that are furnished to a beneficiary described in section X.C.2.c of this final rule. During the time period that begins with the beneficiary's admission to an anchor hospitalization or the date of the anchor procedure, as applicable, and ends on the 90th day of either the date of discharge from the anchor hospitalization or the date of service for the anchor procedure. These requirements ensure that there is a required relationship between eligibility for a gainsharing payment and the direct care for CJR–X beneficiaries during an episode for these CJR–X collaborators. We believe the provision of direct care is essential to the implementation of effective care redesign, and the requirement provides a safeguard against payments to CJR–X collaborators other than a PGP, NPPGP, or TGP that are unrelated to direct care for CJR–X beneficiaries during the model's performance year.

We are finalizing similar requirements for PGPs, NPPGPs, and TGPs even though these entities themselves do not directly furnish billable services. To be eligible to receive a gainsharing payment or required to make an alignment payment for a given performance year, a PGP, NPPGP or TGP must have billed for an item or service that was rendered by one or more members of the PGP, NPPGP or TGP to a CJR–X beneficiary during the episode that is attributed to the same performance year for which the CJR–X participant earned a reconciliation payment amount or repayment amount. Like the proposal for CJR–X collaborators that are not PGPs, these proposals also require a link between the CJR–X collaborator, that is the PGP, NPPGP or TGP, and the provision of items and services to beneficiaries during the episode by PGP, NPPGP or TGP members.

Moreover, this final rule establishes that because PGPs, NPPGPs and TGPs might not directly furnish items and services to beneficiaries, in order to be eligible to receive a gainsharing payment or be required to make an alignment payment, for a given performance year the PGP, NPPGP or TGP must have contributed to CJR–X activities and been clinically involved in the care of beneficiaries during an episode that is attributed to the same performance year for which the CJR–X participant earned a reconciliation payment amount or repayment amount that comprises the gainsharing payment.

This final rule establishes that the amount of any gainsharing payments must be determined in accordance with a methodology that is solely based on the quality of care and the provision of CJR–X activities. We considered whether this methodology could substantially, rather than solely, be based on quality of care and the provision of CJR–X activities but ultimately determined that basing the methodology solely on these two elements creates a model safeguard where gainsharing aligns directly with the model goal of quality of care and with CJR–X activities. The gainsharing methodology may consider the amount of such CJR–X activities provided by a CJR–X collaborator relative to other CJR–X collaborators. While we emphasize that financial arrangements may not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among CJR–X participants, any CJR–X collaborator, any collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, or collaboration agent so that their sole purpose is to align the financial incentives of the CJR–X participant and CJR–X collaborators toward the model, we believe that accounting for the relative amount of CJR–X activities by CJR–X collaborators in the determination of gainsharing payments does not undermine this objective. Rather, this requirement allows flexibility in determining gainsharing payments where the amount of a CJR–X collaborator's provision of CJR–X activities (including direct care) to CJR–X beneficiaries during a performance year may contribute to the CJR–X participant's reconciliation payment amount that may be available for a gainsharing payment. Greater contributions of CJR–X activities by one CJR–X collaborator versus another CJR–X collaborator that result in greater differences in the funds available for gainsharing payments may be appropriately valued in the methodology used to make gainsharing payments to those CJR–X collaborators in order to reflect these differences in CJR–X activities among CJR–X collaborators.

However, we do not believe it would be appropriate to allow the selection of CJR–X collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment to take into account the amount of CJR–X activities provided by a potential or actual CJR–X collaborator relative to other potential or actual CJR–X collaborators because these financial relationships are not to be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, or collaboration agent. Specifically, with respect to the selection of CJR–X collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment, we do not believe that the amount of model activities provided by a potential or actual CJR–X collaborator relative to other potential or actual CJR–X collaborators could be taken into consideration by the CJR–X participant without a significant risk that the financial arrangement in those instances could be based directly or indirectly on the volume or value of referrals or business generated by, between or among the parties. Similarly, if the methodology for determining alignment payments was allowed to take

into account the amount of CJR–X activities provided by a CJR–X collaborator relative to other CJR–X collaborators there would be a significant risk that the financial arrangement could directly account for the volume or value of referrals or business generated by, between or among the parties and, therefore, we are finalizing that the methodology for determining alignment payments may not directly take into account the volume or value of referrals or business generated by, between or among the parties.

We also considered whether the methodology for gainsharing payments should be based substantially on quality of care and the provision of CJR–X activities, rather than solely on these two elements, and whether the methodology could take into account the amount of CJR–X activities provided by a CJR–X collaborator relative to other CJR–X collaborators. We were particularly interested in whether this standard would provide sufficient additional flexibility in the gainsharing payment methodology to allow the financial reward for CJR–X collaborators to be commensurate with their level of effort in achieving the model goals. Ultimately, we have determined to follow the CJR Model and TEAM gainsharing methodologies.

We have established that for each performance year, the aggregate amount of all gainsharing payments derived from a reconciliation payment by the CJR–X participant must not exceed the amount of the reconciliation payment. In accordance with the prior discussion, no entity or individual, whether a party to a sharing arrangement or not, may condition the opportunity to make or receive gainsharing payments or to make or receive alignment payments on the volume or value of referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, or collaboration agent. This final rule states that a CJR–X participant must not make a gainsharing payment to a CJR–X collaborator that is subject to any action for noncompliance by CMS or any other Federal or state entity or subject to noncompliance with any other Federal or state laws or regulations, or for the provision of substandard care to beneficiaries or other integrity problems. Finally, the sharing arrangement must require the CJR–X participant to recover any gainsharing payment that contained funds derived from a CMS overpayment on a reconciliation payment amount or was based on the submission of false or fraudulent data. These requirements provide safeguards for program integrity under gainsharing arrangements.

With respect to alignment payments, we finalized that alignment payments from a CJR–X collaborator to a CJR–X participant may be made at any interval agreed upon by both parties. Alignment payments must not be issued, distributed, or paid prior to the calculation by CMS of the repayment amount, and cannot be assessed in the absence of a repayment amount. The CJR–X participant must not receive any amounts under a sharing arrangement from a CJR–X collaborator that are not alignment payments.

We are also establishing certain limitations on alignment payments that are consistent with the CJR Model. For a performance year, the aggregate amount of all alignment payments received by the CJR–X participant from all of the CJR–X participants' CJR–X collaborators must not exceed 50 percent of the repayment amount. Given that the CJR–X participant would be responsible for developing and coordinating care redesign strategies in response to its participation in CJR–X, we believe it is important that the CJR–X participant retain a significant share of its repayment responsibility. In addition, the aggregate amount of all alignment payments from a CJR–X collaborator to the CJR–X participant for a CJR–X collaborator other than an ACO may not exceed 25 percent of the CJR–X participant's repayment amount. The aggregate amount of all alignment payments from a CJR–X collaborator to the CJR–X participant for a CJR–X collaborator that is an ACO may not exceed 50 percent of the CJR–X participant's repayment amount. In this final rule, we are finalizing that all gainsharing payments and any alignment payments must be administered by the CJR–X participant in accordance with GAAP and Government Auditing Standards (The Yellow Book). Additionally, we are finalizing that all gainsharing payments and alignment payments must be made by check, electronic funds transfer, or another traceable cash transaction. We made this proposal to mitigate the administrative burden that the electronic fund transfer (EFT) requirement would place on the financial arrangements between certain CJR–X participants and CJR–X collaborators, especially individual physicians, and nonphysician practitioners and small PGPs, NPPGPs or TGPs, which could discourage participation of those suppliers as CJR–X collaborators.

We sought comment on our proposals at § 512.670(c) on the conditions and restrictions on gainsharing payments, alignment payments, and internal cost savings under the model.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: Multiple commenters recommended that CMS create additional, more consistent opportunities for gainsharing and incentive alignment among clinicians and providers involved in CJR–X episodes. Commenters generally stated that although the proposed collaborator framework allows hospitals to enter into financial arrangements with certain providers and suppliers, it relies too heavily on hospital discretion and may not ensure that the clinicians and post-acute care providers most responsible for episode outcomes are meaningfully included.

Several commenters focused on orthopedic surgeons. Commenters stated that orthopedic surgeons are central to the care team for lower-extremity joint replacement episodes and make many of the clinical decisions that influence both quality and cost. They cited decisions on implant selection, length of stay, post-acute discharge planning, follow-up cadence, and overall episode management. Commenters stated that because surgeons have substantial influence over these clinical and operational factors, they should be able to share in the savings generated by participants in the CJR–X Model.

Some commenters recommended that CMS require participating acute care hospitals to enter into shared savings agreements with the applicable surgeon. They stated that CJR–X savings could be higher if physicians were uniformly included in the hospital's financial arrangements. These commenters also expressed concern that, without such a requirement, hospitals could exclude the providers most directly involved in the episode of care from performance-based financial incentives.

Other commenters recommended that CMS provide stronger incentives for CJR–X participating hospitals to use the collaborator policies to engage individual surgeons and physician group practices. Commenters stated that surgeons and physician group practices should have consistent opportunities to participate in gainsharing arrangements and to help manage the CJR–X episode, rather than relying on variable hospital-specific decisions about whether and how to share savings.

Commenters also recommend expanding gainsharing opportunities beyond surgeons. Some commenters stated that CMS should require written agreements that set minimum expectations for including specialists in gainsharing arrangements. They recommended transparent methodologies and clear distribution rules for shared savings, so clinicians who contribute to episode performance understand how they may participate and how payments will be calculated.

Several commenters identified anesthesiologists and other non-surgeon specialists as clinicians who should be included in CJR–X governance and incentive structures. Commenters stated that these clinicians contribute to perioperative care coordination, patient optimization, complication prevention, pain management, and care redesign. They recommended that hospital governing bodies ensure a minimum level of representation for anesthesiologists and other non-surgeon specialists to enable meaningful participation in model implementation and decision-making.

Commenters also raised broader concerns about accountability and misaligned incentives. They noted that CJR–X holds hospitals financially accountable for episode performance, yet many episode outcomes depend on clinicians and providers outside the hospital's direct control. Commenters recommended that CMS align model incentives across all clinicians who contribute to episode performance and reduce reliance on variable, institution-specific arrangements.

A commenter raised concerns about post-acute care providers and beneficiary access. The commenter stated that hospitals may choose to collaborate only with selected preferred post-acute care providers and exclude others, including long-term care hospitals, inpatient rehabilitation facilities, and outpatient rehabilitation providers. The commenter stated that this could reduce access to appropriate post-acute care and interfere with Medicare beneficiaries' freedom to choose their providers. The commenter recommended that CMS clarify that CJR–X participants may not limit beneficiary access to specific post-acute care providers or restrict beneficiaries' ability to choose any Medicare-participating provider.

Response: We thank the commenters for their recommendations on additional opportunities to advance gainsharing and align incentives among providers involved in CJR–X episodes. We recognize that orthopedic surgeons, physician group practices, anesthesiologists, other non-surgeon specialists, and post-acute care providers may each contribute to episode quality, care coordination, beneficiary recovery, and total episode spending.

We agree that appropriately structured financial arrangements can support collaboration across the episode. Accordingly, we are finalizing policies that permit CJR–X participants to enter into financial arrangements with eligible CJR–X collaborators, make gainsharing payments, and share repayment responsibility through alignment payments, provided all CJR–X requirements set forth in this final rule are met. These policies provide participant hospitals with flexibility to engage clinicians and other providers who contribute to CJR–X activities and to model performance.

We do not require CJR–X participants to enter into gainsharing agreements with specific provider types, such as orthopedic surgeons, anesthesiologists, non-surgeon specialists, physician group practices, or post-acute care providers. We believe that CJR–X participants are best positioned to determine which collaborators are needed to support their CJR–X activities, given local care delivery patterns, staffing models, referral relationships, patient populations, and existing care coordination infrastructure. Requiring uniform gainsharing agreements for specific provider types could limit participants' flexibility and create operational complexity in markets where such arrangements may not reflect actual contributions to CJR–X performance.

We also decline to require minimum representation of specific clinician types on hospital governing bodies. While we recognize the important role of anesthesiologists and other specialists in perioperative care coordination and care redesign, hospital governance structures and clinical operations vary. We believe CJR–X participants should retain flexibility to determine the best way to engage clinicians in CJR–X implementation, subject to the model's oversight, documentation, and compliance requirements.

We reiterate that gainsharing payment methodologies must be based solely on quality of care and the provision of CJR–X activities. Arrangements may not induce reductions or limitations in medically necessary services or restrict a collaborator's ability to make decisions in the best interests of CJR–X beneficiaries. Sharing arrangements must be in writing and must identify the parties and their obligations, describe the CJR–X activities to be performed, set forth the financial or economic terms, and specify the methodology for determining gainsharing and alignment payments.

We also acknowledge concerns about access to post-acute care and beneficiaries' freedom of choice. The CJR–X collaborator framework does not permit a participant hospital to limit a beneficiary's choice of Medicare-participating providers or suppliers. CJR–X participants may identify preferred providers or enter into collaborator arrangements, but they must comply with beneficiary protections, including freedom of choice, access to medically necessary care, and applicable Medicare requirements.

We believe the finalized framework balances commenters' requests for broader incentive alignment with the need for flexibility, beneficiary protection, and program integrity. The model allows participants to engage eligible clinicians and providers through voluntary financial arrangements, preserves hospital accountability for CJR–X performance, and avoids a one-size-fits-all gainsharing requirement across all provider types.

Comment: A commenter recommended that CMS limit the maximum repayment amount a CJR–X participating hospital may require an individual CJR–X collaborator to contribute, ensuring that the amount is proportional to the collaborator's potential upside payment under the distribution arrangement. The commenter supported CMS limiting the share of repayments that hospitals may require from physician collaborators but stated that any downside repayment responsibility should correspond to the collaborator's share of savings.

Response: We thank the commenter for the recommendation to limit repayment responsibility for individual CJR–X collaborators. We understand the commenter's concern that a collaborator's downside repayment responsibility should be proportional to the amount of upside revenue the collaborator is eligible to receive under a sharing or distribution arrangement.

We agree that CJR–X participants should not be permitted to transfer unlimited repayment responsibility to collaborators. Accordingly, in this final rule, we are finalizing caps on alignment payments. For each performance year, the aggregate amount of alignment payments a CJR–X participant receives from all CJR–X collaborators may not exceed 50 percent of the participant's repayment amount. In addition, the aggregate amount of

alignment payments from any one CJR–X collaborator that is not a Medicare ACO may not exceed 25 percent of the participant's repayment amount. For a CJR–X collaborator that is a Medicare ACO, the aggregate amount may not exceed 50 percent of the participant's repayment amount.

We believe these caps appropriately ensure that participant hospitals retain meaningful accountability for repayment amounts owed to CMS while allowing collaborators to share downside responsibility when they voluntarily enter into CJR–X financial arrangements. We are not modifying the policy to require that each collaborator's repayment responsibility be capped at the same percentage as the collaborator's potential upside payment. We believe CJR–X participants and CJR–X collaborators should retain the flexibility to negotiate the specific terms of voluntary arrangements, including the allocation of potential gainsharing and alignment payments, provided the arrangements comply with CJR–X requirements, applicable model documentation, and all applicable laws and regulations.

We also note that CJR–X financial arrangements must be set forth in writing and must describe the financial or economic terms of the arrangement, including the methodologies for determining gainsharing and alignment payments. These requirements are intended to ensure transparency and accountability between the participant hospital and the collaborator. A collaborator may choose whether to enter into such an arrangement based on the terms offered, including the relationship between potential upside payments and downside repayment responsibility.

We believe the finalized caps on alignment payments, written agreement requirements, documentation obligations, and program integrity safeguards appropriately balance flexibility with protection against excessive risk transfer. Participant hospitals remain accountable to CMS for repayment amounts owed under the model, and any sharing of repayment responsibility with collaborators must comply with the final CJR–X financial arrangement requirements.

Comment: A commenter requested guidance on how CJR–X gainsharing payments would interact with Medicare ACO savings distributions when the same beneficiary is attributed to or otherwise involved in both arrangements.

Response: We thank the commenter for requesting guidance on how CJR–X gainsharing payments interact with Medicare ACOs' shared savings distributions for the same beneficiary. CMS recognizes that some providers and suppliers may participate in both CJR–X financial arrangements and Medicare ACO initiatives and that participants may seek clarity on overlapping incentive arrangements.

In this final rule, we finalize the CJR–X financial arrangement policies to permit CJR–X participants to enter into financial arrangements with eligible CJR–X collaborators, including certain Medicare ACO providers, when those entities contribute to the CJR–X participant's performance under the model, and all CJR–X requirements are met. Any gainsharing payment under CJR–X must be made pursuant to a compliant CJR–X sharing arrangement and be based solely on quality of care and the provision of CJR–X activities.

We note that CJR–X gainsharing payments and Medicare ACO shared savings distributions arise under separate payment models and are governed by their respective requirements. Participation in a CJR–X financial arrangement does not relieve any organization of its obligation to comply with Medicare ACO rules, applicable participation agreements, distribution requirements, fraud and abuse laws, and safe harbor conditions.

We have determined that the CMS-sponsored model arrangements safe harbor is available for specified CJR–X financial arrangements, including gainsharing payments, alignment payments, distribution payments, and downstream distribution payments, when all applicable requirements are met. We believe the finalized gainsharing framework provides a clear and flexible pathway for participants and collaborators to align incentives for CJR–X activities while maintaining safeguards against inappropriate reductions in care, excessive risk transfer, and remuneration unrelated to the model. Therefore, we are finalizing the sharing arrangements without the modifications requested by commenters.

After considering the public comments we received, we are finalizing our proposal at § 512.670(c) on the conditions and restrictions on gainsharing payments, alignment payments, and internal cost savings under the model without modification.

(d) Documentation Requirements

To ensure the integrity of the sharing arrangements, we are finalizing in this final rule the documentation requirements that CJR–X participants must meet to engage in financial arrangements. Specifically, the CJR–X participant must—

- Document the sharing arrangement contemporaneously with the establishment of the arrangement;
- Maintain accurate current and historical lists of all CJR–X collaborators, including CJR–X collaborator names and addresses; update such lists on at least a quarterly basis; and publicly report the current and historical lists of CJR–X collaborators on the CJR–X participant's website; and
- Maintain and require each CJR–X collaborator to maintain contemporaneous documentation with respect to the payment or receipt of any gainsharing payment or alignment payment that includes at a minimum the—

++ Nature of the payment (gainsharing payment or alignment payment);

++ Identity of the parties making and receiving the payment;

++ Date of the payment;

++ Amount of the payment;

++ Date and amount of any recoupment of all or a portion of a CJR–X collaborator's gainsharing payment; and

++ Explanation for each recoupment, such as whether the CJR–X collaborator received a gainsharing payment that contained funds derived from a CMS overpayment of a reconciliation payment amount, or was based on the submission of false or fraudulent data.

In addition, we are finalizing the requirement that the CJR–X participant must keep records for all of the following:

- A process for determining and verifying potential and current CJR–X collaborators' eligibility to participate in Medicare if the CJR–X collaborator is a Medicare-enrolled provider or supplier.
- A plan to track internal cost savings.
- Information on the accounting systems used to track internal cost savings.
- A description of current health information technology, including systems to track reconciliation payment amounts, repayment amounts, and internal cost savings.
- A plan to track gainsharing payments and alignment payments.

Finally, this final rule establishes that the CJR–X participant must retain and provide access to, and must require each CJR–X collaborator to retain and provide access to, the required documentation in accordance with § 512.135 and 42 CFR 1001.952(ii).

We sought comment on our proposals on the documentation requirements for sharing arrangements at § 512.670(d). We sought comment about all of the

requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: A commenter recommended that CJR–X participants be permitted to enter into financial arrangements with collaborators and requested that CMS provide a gainsharing template outlining key compliance considerations under applicable laws and regulations. The commenter stated that such a template could help participants structure compliant arrangements.

Response: We thank the commenter for the recommendation regarding financial arrangements with CJR–X collaborators and the request for a gainsharing template. We agree that financial arrangements can support CJR–X objectives when they are structured to align incentives around care coordination, quality improvement, episode management, and efficient service delivery.

We finalized policies that permit CJR–X participants to enter into financial arrangements with eligible CJR–X collaborators, including physician group practices, when the arrangements satisfy the final CJR–X requirements. These arrangements may allow the sharing of reconciliation payment amounts through gainsharing payments and the sharing of repayment responsibility through alignment payments, subject to the model's limits, documentation requirements, beneficiary protections, program integrity safeguards, applicable model documentation, and all applicable laws and regulations.

We do not intend to provide a gainsharing methodology or a financial arrangements template to CJR–X participants. Because CJR–X participants and CJR–X collaborators may differ in organizational structure, clinical operations, local market conditions, legal relationships, and the specific CJR–X activities they perform, a single template may not capture all relevant facts or compliance obligations.

We believe the finalized financial arrangement requirements provide the necessary framework for compliant arrangements while preserving flexibility for participants and collaborators to structure arrangements that reflect their roles in CJR–X activities and in model performance.

After consideration of the public comments, we are finalizing our proposal at § 512.670(d) on the documentation requirements for sharing arrangements without modifications.

(5) Distribution Arrangements

(a) General

Similar to the CJR Model (80 FR 73541), we are finalizing that certain financial arrangements between CJR–X collaborators and other individuals or entities called ''collaboration agents'' be termed ''distribution arrangements.'' In the January 2017 CJR final rule (82 FR 180), we finalized a full replacement of the prior CJR Model regulations to allow for—(1) participant hospitals to enter into sharing arrangements with additional categories of CJR collaborators, including certain ACOs, hospitals, CAHs, NPPGPs and therapy group practices (TGPs); (2) ACOs, PGPs, NPPCGs and TGPs that are CJR collaborators to enter into distribution arrangements with certain entities and individuals; and (3) PGPs, NPPGPs and TGPs that received distribution payments from ACOs to enter into downstream distribution arrangements to share distribution payments with certain of their members. Similarly in CJR–X, a ''collaboration agent'' would be defined as an individual or entity that is not a CJR–X collaborator and that is a PGP, NPPGP, or TGP member that has entered into a distribution arrangement with the same PGP, NPPGP, or TGP, in which he or she is an owner or employee. For purposes of the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we have established that a ''distribution arrangement'' would be defined as a financial arrangement between a CJR–X collaborator that is a PGP, NPPGP, or TGP and a collaboration agent for the sole purpose of sharing a gainsharing payment received by the PGP, NPPGP or TGP. Where a payment from a CJR–X collaborator to a collaboration agent is made pursuant to a CJR–X distribution arrangement, we define that payment as a ''distribution payment.'' A CJR–X collaborator may make a distribution payment only in accordance with a distribution arrangement that complies with the provisions of this model, as finalized, and all other applicable laws and regulations, including fraud and abuse laws.

Just as we finalized the requirements for gainsharing payments, the amount of any distribution arrangements must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities. We considered whether this methodology could substantially, rather than solely, be based on quality of care and the provision of CJR–X activities, but ultimately determined that basing the methodology solely on these two elements creates a model safeguard in which gainsharing aligns directly with the model goal of quality of care and with CJR–X activities.

We sought comment on our definitions for ''collaboration agent,'' ''distribution arrangements,'' and ''distribution payment'' at § 512.605. We also sought comment on our distribution arrangements proposals at § 512.675(a).

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: Some commenters recommended that CMS require, rather than merely permit, distribution arrangements between CJR–X participant hospitals and the surgeons and other physicians who perform procedures that trigger CJR–X episodes. The commenters stated that mandatory physician distribution arrangements should be a standard feature of CJR–X because surgeons and other procedural physicians play a central role in episode performance, care coordination, and cost and quality outcomes.

The commenters also expressed concern that optional distribution arrangements could contribute to forced market consolidation by giving hospitals greater leverage over independent physicians. They suggested that requiring participant hospitals to share financial arrangements with procedural physicians could help support physician alignment without encouraging consolidation that could lead to higher patient prices.

Response: We appreciate the commenters' recommendation that CJR–X require rather than allow distribution arrangements between participant hospitals and the surgeons and other physicians who perform procedures that trigger CJR–X episodes. We recognize the commenters' view that physicians who furnish the episode-triggering procedures play an important role in care coordination, quality, and episode spending, and that financial alignment with those physicians may support model goals.

Under the CJR–X financial arrangement policies, CJR–X participants may enter into sharing arrangements with CJR–X collaborators and certain downstream distribution arrangements, subject to applicable safeguards. These safeguards include written agreements, documentation requirements, limits on gainsharing and alignment payments, compliance with

applicable law, and protections to ensure that financial arrangements are not conditioned on the volume or value of referrals and do not reduce medically necessary care or restrict beneficiary choice.

Mandatory financial arrangements between CJR–X participants and physicians would require consideration of operational feasibility, participant accountability, program integrity, beneficiary protections, and the varied relationships between participant hospitals and physicians across markets. Any CJR–X financial arrangement involving surgeons or other physicians would need to comply with applicable CJR–X financial arrangement requirements, including those for sharing arrangements, distribution arrangements, payment methodologies, documentation, and program integrity safeguards. We may consider the commenters' recommendation in future rulemaking.

Comment: A commenter requested guidance on whether a provider's or entity's participation in an ACO would affect the calculation of internal cost savings available for distribution under CJR–X sharing arrangements. The comment raises an operational clarification issue about whether savings or performance associated with an ACO relationship would change how CJR–X participants calculate and distribute internal cost savings to CJR–X collaborators.

Response: We appreciate the commenter's request for clarification on whether a financial arrangement between a CJR–X participant hospital and an ACO affects the calculation of internal cost savings available for distribution under CJR–X sharing arrangements. Under the CJR–X financial arrangement framework, a sharing arrangement with an ACO would not, by itself, change the participant hospital's calculation of internal cost savings. The CJR–X participant would remain responsible for tracking internal cost savings under the applicable CJR–X methodology and for maintaining documentation of the accounting systems and processes used to track those savings.

Where the ACO relationship matters is not in the basic calculation of internal cost savings, but in the limits and safeguards governing how those savings may be shared. Any gainsharing payment to an ACO would still need to be based solely on quality of care and the provision of CJR–X activities, to comply with the written sharing arrangement, and to avoid duplicate payments or double-counting the same contribution to CJR–X activities. This final rule also includes ACO-specific limits for alignment payments: for a CJR–X collaborator that is an ACO, aggregate alignment payments from that ACO to the participant may not exceed 50 percent of the participant's repayment amount. By comparison, non-ACO collaborators are subject to a lower 25 percent collaborator-specific limit on alignment payments.

Thus, while the ACO arrangement would not independently alter the calculation of internal cost savings, it would affect how any resulting gainsharing or alignment payments may be structured, documented, limited, and distributed under the finalized financial arrangement requirements for CJR–X.

After consideration of the public comments we received, we are finalizing without modification our proposal at § 512.605 on our definitions for ''collaboration agent,'' ''distribution arrangements,'' and ''distribution payment.'' We are also finalizing, without modification, our proposals at § 512.675(a) regarding distribution arrangements policies.

(b) Requirements

We have established several requirements to help ensure that the sole purpose of distribution arrangements is to create financial and CJR–X performance alignment between CJR–X collaborators and collaboration agents. These requirements are spelled out in section X.C.2.i.(4)(b) of this final rule for sharing arrangements and gainsharing payments. We are finalizing that all distribution arrangements must be in writing, signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to CJR–X beneficiaries under the distribution arrangement. Furthermore, we finalized in this rule that participation must be voluntary and without penalty for nonparticipation, and the distribution arrangement must require the collaboration agent to comply with all applicable laws and regulations.

In this final rule, we are finalizing that any distribution payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities. We finalized that the opportunity to make or receive a distribution payment must not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between, or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, or collaboration agent. We have established more flexible standards for the determination of the amount of distribution payments from PGPs, NPPGPs, and TGPs, allowing CJR–X collaborators and collaboration agents to create tailored distribution payments that align with the specific structure of their arrangements.

We note that for distribution payments made by a PGP to PGP members, by NPPGPs to NPPGP members, or TGPs to TGP members, the requirement that the amount of any distribution payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities may be more limiting in how a PGP, NPPGP or TGP pays its members than is allowed under existing law. However, we believe quality of care is an important facet of episode-based payment models, and making this a requirement for distribution payments supports a greater emphasis on quality of care improvement in CJR–X. Further, this is consistent with the BPCI Advanced model's financial arrangements requirements, which stipulated that NPRA Shared Payments and Partner Distribution Payments must meet quality performance targets in order to receive these payments.

We sought comment on this proposal and specifically whether there are additional safeguards or a different standard is needed to allow for greater flexibility in calculating the amount of distribution payments that would avoid program integrity risks and whether additional or different safeguards are reasonable, necessary, or appropriate for the amount of distribution payments from a PGP to its members, a NPPGP to its members or a TGP to its members.

Similar to the requirements for sharing arrangements for CJR–X collaborators that furnish or bill for items and services, we are finalizing that a collaboration agent is eligible to receive a distribution payment only if the collaboration agent furnished or billed for an item or service rendered to a beneficiary during an episode that occurred during the same performance year for which the CJR–X participant accrued the internal cost savings or earned a reconciliation payment amount that comprises the gainsharing payment being distributed. We note that all individuals and entities that fall within our definition of collaboration agent may either directly furnish or bill for items and services rendered to beneficiaries. This ensures that the same required relationship exists between direct care for CJR–X beneficiaries during a performance year and distribution payment eligibility that we

require for gainsharing payment eligibility. We believe this requirement provides a safeguard against payments to collaboration agents that are unrelated to direct care for CJR–X beneficiaries during the performance year.

We further finalized in this final rule that with respect to the distribution of any gainsharing payment received by an ACO, PGP, NPPGP, or TGP, the total amount of all distribution payments in a performance year must not exceed the amount of the gainsharing payment received by the CJR–X collaborator from the CJR–X participant for that performance year. As with gainsharing and alignment payments, we are finalizing the requirement that all distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction. The collaboration agent must retain the ability to make decisions in the best interests of the CJR–X beneficiary, including the selection of devices, supplies, and treatments. Finally, the distribution arrangement must not induce the collaboration agent to reduce or limit medically necessary items and services for any Medicare beneficiary or reward the provision of items and services that are medically unnecessary.

In this final rule, we are finalizing that the CJR–X collaborator must maintain contemporaneous documentation regarding distribution arrangements in accordance with § 512.675(b), including—

- The relevant written agreements;
- The date and amount of any distribution payment(s);
- The identity of each collaboration agent that received a distribution payment; and
- A description of the methodology and accounting formula for determining the amount of any distribution payment.

We are finalizing that the CJR–X collaborator may not enter into a distribution arrangement with any individual or entity that has a sharing arrangement with the same CJR–X participant, which is a continuation of the CJR Model policy in the 2015 final rule (80 FR 73427). This framework establishes separate limitations on the total amount of gainsharing payment and distribution payment to PGPs, NPPGPs, TGPs, physicians, and nonphysician practitioners that are solely based on quality of care and the provision of CJR–X activities are not exceeded in absolute dollars by a PGP, NPPGP, TGP, physician, or nonphysician practitioner's participation in both a sharing arrangement and distribution arrangement for the care of the same CJR–X beneficiaries during the performance year. Allowing both types of arrangements for the same individual or entity for care of the same beneficiary during the performance year could also allow for duplicate counting of the individual or entity's same contribution toward model goals and provision of CJR–X activities in the methodologies for both gainsharing and distribution payments, leading to financial gain for the individual or entity that is disproportionate to the contribution toward model goals and provision of CJR–X activities by that individual or entity. However, we recognize there could be instances where an individual or entity could have distribution arrangements with multiple CJR–X collaborators. For example, a physician may practice with and have reassigned their Medicare billing rights to multiple PGPs, and those PGPs may each be CJR–X collaborators. We sought comment on whether an individual or entity should have distribution arrangements with multiple CJR–X collaborators, and whether additional program integrity safeguards should be established in those scenarios. Finally, in this final rule, we establish that the CJR–X collaborator must retain and provide access to the required documentation for monitoring and compliance purposes.

We sought comment on the requirements for distribution arrangements under CJR–X at § 512.675(b).

We received no comments on this proposal and therefore are finalizing this provision without modification.

(6) Downstream Distribution Arrangements

(a) General

In this final rule, we are finalizing that CJR–X allows for certain financial arrangements within an ACO between a PGP and its members. Specifically, we establish that certain financial arrangements between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant, and another individual termed ''downstream collaboration agent'' be termed a ''downstream distribution arrangement.'' We define a ''downstream distribution arrangement'' as a financial arrangement between a collaboration agent that is both a PGP, NPPGP, or TGP, and an ACO participant and a downstream collaboration agent for the sole purpose of sharing a distribution payment received by the PGP, NPPGP, or TGP. We are finalizing the definition of a ''downstream collaboration agent'' as an individual who is not a CJR–X collaborator or a collaboration agent and who is a PGP member, a NPPGP member, or a TGP member that has entered into a downstream distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a collaboration agent. Where a payment from a collaboration agent to a downstream collaboration agent is made pursuant to a downstream distribution arrangement, we define that payment as a ''downstream distribution payment.'' A collaboration agent may only make a downstream distribution payment in accordance with a downstream distribution arrangement that complies with the requirements of this section and all other applicable laws and regulations, including the fraud and abuse laws.

We sought comment on the definitions at § 512.605 for ''downstream collaboration agent,'' ''downstream distribution arrangement,'' and ''downstream distribution payment.''

We received no comments on this proposal and therefore are finalizing this provision without modifications.

(b) Requirements

To help ensure that the sole purpose of downstream distribution arrangements is to create financial alignment between collaboration agents that are PGPs, NPPGPs, or TGPs which are also ACO participants and downstream collaboration agents and to meet the quality and efficiency goals of CJR–X, in this final rule we are finalizing that all downstream distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and entered into before care is furnished to CJR–X beneficiaries under the downstream distribution arrangement. Furthermore, in this final rule we establish that participation must be voluntary and without penalty for nonparticipation, and the downstream distribution arrangement must require the downstream collaboration agent to comply with all applicable laws and regulations.

Just like with gainsharing and distribution payments, we are finalizing that the opportunity to make or receive a downstream distribution payment must not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with

a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent. We have established that the amount of any downstream distribution payments from an NPPGP to an NPPGP member or from a TGP to a TGP member must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities and that may take into account the amount of such CJR–X activities provided by a downstream collaboration agent relative to other downstream collaboration agents. We believe that the amount of a downstream collaboration agent's provision of CJR–X activities (including direct care) to CJR–X beneficiaries during episodes may contribute to the CJR–X participant's internal cost savings and reconciliation payment amount that may be available for making a gainsharing payment to the CJR–X collaborator that is then shared through a distribution payment to the collaboration agent with which the downstream collaboration agent has a downstream distribution arrangement. Greater contributions of CJR–X activities by one downstream collaboration agent versus another downstream collaboration agent that result in different contributions to the distribution payment made to the collaboration agent with which the downstream collaboration agents both have a downstream distribution arrangement may be appropriately valued in the methodology used to make downstream distribution payments to those downstream collaboration agents.

Similar to the finalized requirements for distribution arrangements for those CJR–X collaborators that are PGPs, we are finalizing that a downstream collaboration agent is eligible to receive a downstream distribution payment only if the PGP billed for an item or service furnished by the downstream collaboration agent to a CJR–X beneficiary during an episode that was attributed to the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount that comprise the gainsharing payment from which the ACO made the distribution payment to the PGP that is an ACO participant. This requirement ensures that the same required relationship exists between direct care for CJR–X beneficiaries during episodes and downstream distribution payment eligibility as we require for gainsharing and distribution payment eligibility. We believe this requirement provides a safeguard against payments to downstream collaboration agents that are unrelated to direct care for CJR–X beneficiaries during episodes.

Furthermore, we are finalizing that the total amount of all downstream distribution payments made to downstream collaboration agents must not exceed the distribution payment received by the collaboration agent (that is, the PGP, NPPGP, or TGP that is an ACO participant) from the ACO that is a CJR–X collaborator. Like gainsharing, alignment, and distribution payments, we have established that all downstream distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction. The downstream collaboration agent must retain the ability to make decisions in the patient's best interest, including the selection of devices, supplies, and treatments. The distribution arrangement must not induce a downstream collaboration agent to reduce or limit medically necessary items and services for any Medicare beneficiary or reward the provision of items and services that are medically unnecessary.

This final rule establishes that the PGP, NPPGP, or TGP engaging in financial arrangements must maintain contemporaneous documentation regarding downstream distribution arrangements in accordance with § 512.680(b)(12), including all of the following:

- The relevant written agreements.
- The date and amount of any downstream distribution payment(s).
- The identity of each downstream collaboration agent that received a downstream distribution payment.
- A description of the methodology and accounting formula for determining the amount of any downstream distribution payment.

In this final rule, we are finalizing that the PGP, NPPGP, or TGP may not enter into a downstream distribution arrangement with any PGP, NPPGP, or TGP member who has a sharing arrangement with a CJR–X participant or distribution arrangement with the ACO that the PGP, NPPGP, or TGP is a participant in. This requirement ensures that the separate limitations on the total amount of gainsharing payment, distribution payment, and downstream distribution payment to PGP, NPPGP, or TGP members that are solely based on quality of care and the provision of CJR–X activities are not exceeded in absolute dollars by a PGP, NPPGP, or TGP member's participation in more than one type of arrangement for the care of the same CJR–X beneficiaries during episodes. Allowing more than one arrangement for the same PGP, NPPGP, or TGP member to care for the same CJR–X beneficiaries during episodes could also lead to duplicate counting of the PGP, NPPGP, or TGP member's effort in CJR–X activities across methodologies for different payments. Finally, this rule establishes that the PGP, NPPGP, or TGP must retain and provide access to, and must require downstream collaboration agents to retain and provide access to, the required documentation in accordance with § 512.680(b)(14). We sought comment on the requirements for downstream distribution arrangements at § 512.680.

We received no comments on this proposal and therefore are finalizing this provision without modifications.

(7) Beneficiary Incentives

We believe it is necessary and appropriate to provide additional flexibilities to CJR–X participants to increase access to tools that could improve the quality of care for CJR–X beneficiaries and meet other goals of the model. CJR–X participants may choose to provide in-kind patient engagement incentives to CJR–X beneficiaries in an episode, which may include, but would not be limited to, items of technology, subject to the conditions discussed below, which are broadly consistent with those that appeared in the CJR Model at 42 CFR 510.515.

As discussed in section X.C.2.i.(9) of this final rule, we have made a determination that the anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)) is available to protect the beneficiary incentives when the incentives are offered in compliance with the requirements established in the final rule and the conditions for use of the anti-kickback statute safe harbor set out at 42 CFR 1001.952(ii).

As stated previously, CJR–X participants may choose to provide in-kind engagement incentives, which may include but are not limited to items of technology, to CJR–X beneficiaries in an episode, subject to the conditions stipulated in this final rule. The incentive must be provided directly by the CJR–X participant or by an agent of the CJR–X participant, under the participant's direction and control, to the CJR–X beneficiary during an episode. Additionally, the item or service provided must be reasonably connected to the CJR–X beneficiary's medical care, and be a preventive care item or service or an item of service that advances a clinical goal, as described in section X.C.2.i.(7)(b) of this final rule, by engaging the CJR–X beneficiary in better managing their own health.

We sought comment on the proposed conditions for CJR–X beneficiary incentives, as outlined in § 512.685. Specifically, we sought comment on whether these proposed conditions are reasonable, and whether additional conditions are appropriate to further engage CJR–X beneficiaries in their own healthcare management while preventing fraud or abuse.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: A commenter responded to CMS's request for comments on proposed requirements for beneficiary engagement incentives involving technology by outlining safeguards the commenter believed should apply to recovery-at-home or home-based post-acute care arrangements. The commenter stated that participating hospitals would already be licensed and subject to the Original Medicare conditions of participation and should be required to apply for and obtain CMS approval before operating under any waivers.

The commenter stated that recovery-at-home requires rigorous documentation comparable to that of traditional facility-based care, including documentation of patient eligibility, daily in-person or telehealth evaluations, and home safety assessments. The commenter asserted that these requirements would create verification trails and support regulatory compliance and high-quality care.

The commenter recommended that organizations offering beneficiary incentives submit monthly data to CMS and remain subject to Medicare payment, billing, quality, and cost-reporting requirements comparable to those for traditional skilled nursing facilities. The commenter also recommended that CMS require programs to track functional and recovery outcomes, including mobility gains, falls, escalations, therapy completion, and return-to-community outcomes.

Response: We appreciate the commenters' recommendations on beneficiary engagement incentives and broader suggestions for safeguards related to recovery-at-home services after lower-extremity joint replacement. We recognize the commenter's view that home-based recovery arrangements may require clear documentation, patient eligibility standards, home safety assessments, outcome tracking, and oversight to ensure high-quality care and regulatory compliance.

The requirements applicable to beneficiary engagement incentives in CJR–X are intended to ensure that beneficiary engagement incentives are connected to medical care, advance a clinical goal, and are not used to induce beneficiaries to receive medically unnecessary services or to restrict beneficiary choice.

CMS may consider the commenter's recommendations on documentation, data submission, and outcome measurement as it evaluates the requirements for technology-related beneficiary engagement incentives and related beneficiary protections in future rulemaking.

Comment: A commenter supported CMS's proposed policies for beneficiary incentives intended to promote beneficiary engagement and adherence. The commenter requested that CMS provide additional guidance explaining how these beneficiary incentive flexibilities would operate under CJR–X and how they may differ from similar flexibilities available in other alternative payment models.

Response: We appreciate the commenter's support for the proposed CJR–X beneficiary engagement incentive policies. We also acknowledge the commenter's request for additional guidance on how these flexibilities would apply under CJR–X and how they may differ from beneficiary engagement incentives available in other Innovation Center models.

Beneficiary engagement incentives are set on a model-by-model basis and may vary by the model's statutory authority, tested care delivery approach, beneficiary population, participant type, payment methodology, overlap rules, and program integrity risks.

After consideration of the public comments we received, we are finalizing our proposal at § 512.685 on the requirements for CJR–X beneficiary incentives without modifications.

(a) Technology Provided to a CJR–X Beneficiary

In some cases, items or services involving technology may be useful as beneficiary engagement incentives to advance a clinical goal of CJR–X by engaging a CJR–X beneficiary in managing their health during the 90 days following discharge from the anchor hospitalization or anchor procedure. However, we believe specific enhanced safeguards are necessary for these items and services to prevent abuse, and our proposals are consistent with the CJR Model policies (80 FR 73437). Specifically, we are finalizing the requirement that items or services involving technology provided to a beneficiary may not exceed $1,000 in retail value for any CJR–X beneficiary in any episode (per episode), and that items or services involving technology provided to a CJR–X beneficiary must be the minimum necessary to advance a clinical goal as discussed in this section for a CJR–X beneficiary in an episode. CMS considers these additional requirements for items of technology exceeding $75 in retail value an additional safeguard against misuse of these items as beneficiary engagement incentives. Specifically, items of technology exceeding $75 in retail value remain the property of the CJR–X participant and must be retrieved from the CJR–X beneficiary at the end of the episode. The CJR–X participant must document all retrieval attempts, including the ultimate date of retrieval. We understand that CJR–X participants may not always be able to retrieve these items after the episode ends, such as when a CJR–X beneficiary dies or moves to another geographic area. Therefore, in cases when the item of technology cannot be retrieved, the CJR–X participant must determine why the item was not retrievable and, if it was determined that the item was used inappropriately (for example, if it was sold), prevent future beneficiary incentives for that particular CJR–X beneficiary. Following this process, documentation of diligent, good faith attempts to retrieve the technology will satisfy the retrieval requirement. We recognize this requirement may increase CJR–X participant burden to document attempts at retrieval and sought comment on whether the value threshold should be raised or if there are other ways to demonstrate attempts at retrieval that may be less burdensome for the CJR–X participant.

We sought comment on our proposed CJR–X requirements at § 512.685 regarding beneficiary engagement incentives that involve technology. We welcomed comment on additional or alternative program integrity safeguards for this type of beneficiary engagement incentive, including whether the financial thresholds proposed in this section are reasonable, necessary, and appropriate.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: A commenter supported CMS' proposal to allow beneficiary engagement incentives of up to $1,000 in in-kind items or services involving technology for any one CJR–X beneficiary during any one episode. The commenter stated this would provide CJR–X participants with the operational flexibility needed to manage episodes effectively across the care continuum.

The commenter viewed the incentives as supportive of care coordination and episode management under the model.

Response: We appreciate the commenter's view that the proposed beneficiary engagement incentives, including the ability to offer up to $1,000 in in-kind items or services involving technology, will provide CJR–X participants with operational flexibility to manage episodes effectively across the care continuum.

After consideration of the public comments we received, we are finalizing our proposal at § 512.685 for beneficiary engagement incentives that involve technology in CJR–X, without modifications.

(b) Clinical Goals of CJR–X

As discussed in section X.C.2.d. of this final rule, the ''episodes'' are broadly defined to include most Part A and Part B items and services furnished during episodes of care that extend 90 days following discharge from the anchor hospitalization or anchor procedure that begins the episode. Therefore, we believe that in-kind beneficiary engagement incentives may appropriately be provided to manage acute conditions arising from episodes, as well as chronic conditions if the condition is likely to have been affected by care during the episode or when substantial services are likely to be provided for the chronic condition during the episode. We are finalizing the flexibility that allows CJR–X participants to offer in-kind beneficiary engagement incentives, where such incentives must be closely related to the provision of high-quality care and advance a clinical goal for a CJR–X beneficiary and should not serve as inducements for CJR–X beneficiaries to seek care from the CJR–X participants or other specific suppliers and providers. This outline is similar to the beneficiary incentive guidelines outlined previously in the CJR Model (80 FR 73553). This final rule is finalizing the requirements that beneficiary incentives must advance one of the following clinical goals of CJR–X:

- Beneficiary adherence to drug regimens.
- Beneficiary adherence to a care plan.
- Reduction of readmissions and complications resulting from treatment during the episode.
- Management of chronic diseases and conditions that may be affected by treatment for the CJR–X clinical condition.

We sought comments on our proposals regarding clinical goals when offering beneficiary engagement incentives at § 512.685.

We received no comments and therefore are finalizing this provision without any modifications.

(c) Documentation of Beneficiary Engagement Incentives

As a safeguard against misuse of beneficiary engagement incentives under CJR–X, we are finalizing the requirements that CJR–X participants must maintain documentation of items and services furnished as beneficiary engagement incentives that exceed $25 in retail value, including items of technology, and to require that the documentation established contemporaneously with the provision of the items and services must include at least the following:

- The date the incentive is provided.
- The incentive and estimated value of the item or service.
- The identity of the beneficiary to whom the item or service was provided.

In this final rule, we are finalizing that when a CJR–X participant or one of its collaborators provides items of technology exceeding $75 in retail value, they are required to retrieve it from the beneficiary at the end of an episode and document all attempts to retrieve the technology item received by the beneficiary. In instances where the item of technology is not able to be retrieved, the CJR–X participant must determine why it is not retrievable, and if the item was misappropriated (if it was sold, for example), then further steps must be taken to ensure that that particular CJR–X beneficiary does not receive further beneficiary incentives. Following this process of documented, diligent, good faith attempts to retrieve items of technology will be deemed by CMS to meet the retrieval requirement. This outline is similar to the beneficiary incentive guidelines previously set forth in the CJR Model (80 FR 73553).

Finally, we are finalizing the requirement that the CJR–X participant must retain and provide access to the required documentation related to beneficiary incentives in accordance with § 512.135.

We sought comment on our proposed documentation requirements for beneficiary engagement incentives under CJR–X at § 512.685(d).

We received no comments on this proposal and therefore are finalizing this provision without modification.

(8) Enforcement Authority

OIG authority is not limited or restricted by the provisions of the model, including the authority to audit, evaluate, investigate, or inspect the CJR–X participant, CJR–X collaborators, collaboration agents, downstream collaboration agents, or any other person or entity or their records, data, or information, without limitations. Additionally, no model provisions limit or restrict the authority of any other Government Agency to do the same.

The enforcement authority for CJR–X, as finalized in this final rule, is in accordance with the standard provisions applicable to all Innovation Center models at § 512.160.

(9) Fraud and Abuse Waiver and OIG Safe Harbor Authority

Under section 1115A(d)(1) of the Act, the Secretary may waive such requirements of Titles XI and XVIII and of sections 1902(a)(1), 1902(a)(13), 1903(m)(2)(A)(iii) of the Act, and certain provisions of section 1934 of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act.

In the CJR 2015 final rule (80 FR 73325), the model was delayed by 3 months to allow for adequate time to prepare for hospital participation. Under the authority described in the previous paragraph, HHS Office of Inspector General (OIG) and CMS jointly issued Notice of Waivers of Certain Fraud and Abuse Laws in Connection with the Comprehensive Care for Joint Replacement Model on November 16, 2015. On December 5, 2017, the OIG and CMS jointly issued new waivers that superseded the original waivers issued in 2015 for certain arrangements permitted under the CJR Model (hereinafter ''CJR 2017 notice''), effective January 1, 2018.[606] The CJR 2017 notice set forth the specific conditions that must be met by CJR Model participants to qualify for a waiver. The waivers in the CJR 2017 notice protected specific financial arrangements that were entered into pursuant only to the CJR Model and described in the regulations governing the CJR Model at 42 CFR part 510, as amended from time to time.[607] The waivers in the CJR 2017 notice did not apply to other arrangements that may be entered into by participant hospitals and other entities or individuals and were not applicable outside of the CJR Model. These notices waived section 1128A(a)(5) of the Act (relating to the beneficiary inducements civil monetary

[606] The CJR 2017 Notice is available at: *https://www.cms.gov/medicare/fraud-and-abuse/physicianselfreferral/downloads/2017-cjr-model-waivers.pdf.*

[607] *See* 80 FR 73274 (November 24, 2015), as amended by 82 FR180 (January 3, 2017) and 82 FR 57066 (December 1, 2017).

penalty (CMP) law), sections 1128B(b)(l) and (2) of the Act (relating to the Federal anti-kickback statute), and section 1877(a) of the Act (relating to the Federal physician self-referral law) under section 1115A(d)(1) of the Act with respect to specified arrangements permitted under the CJR Model.

For this model and consistent with the authority under section 1115A(d)(1) of the Act, the Secretary may consider issuing waivers of certain fraud and abuse provisions in sections 1128A, 1128B, and 1877 of the Act. No fraud or abuse waivers are being issued in this final rule; fraud and abuse waivers, if any, would be set forth in separately issued documentation. Any such waiver would apply solely to CJR–X and could differ in scope or design from waivers granted for other programs or models. Thus, notwithstanding any provision of this final rule, CJR–X participants, CJR–X collaborators, collaboration agents, and downstream collaboration agents must comply with all applicable laws and regulations, except as explicitly provided in any such separately documented waiver issued pursuant to section 1115A(d)(1) of the Act specifically for CJR–X.

At § 512.690(a), we proposed to make the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements available to protect remuneration furnished in CJR–X in the form of the sharing arrangement's gainsharing payments and alignment payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and proposed § 512.670, in the form of the distribution arrangement's distribution payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and proposed § 512.675, and in the form of the downstream distribution arrangement's distribution payments provided that all of the financial arrangements associated with such payment meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and proposed § 512.680. Additionally, at § 512.690(b), we proposed to make the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) available to protect CJR–X beneficiary incentives that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and 512.685. We sought comments on our proposals at § 512.690 that the Federal anti-kickback safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) and CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) be made available to CJR–X participants and CJR–X collaborators, collaboration agents, and downstream collaboration agents.

Independent of any potential waivers of the fraud and abuse provisions described previously, in this final rule, CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(1) and 42 CFR 1001.952(ii)(2)) are available to protect remuneration exchanged pursuant to certain financial arrangements and patient incentives that may be permitted under this final rule. Specifically, in this final rule, CMS has determined that the CMS-sponsored model safe harbor is available in CJR–X to protect the following financial arrangements and incentives: the sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments, the downstream distribution arrangement's downstream distribution payments, and CJR–X beneficiary incentives.

The following is a summary of the public comments received on this proposal and our responses to those comments.

Comment: Some commenters urged CMS to provide stronger legal and operational support for gainsharing and other financial arrangements under CJR–X. Commenters stated that meaningful collaboration among participant hospitals, physician group practices, post-acute care providers, and other CJR–X collaborators would depend on the ability to enter into financial arrangements that align incentives, support care coordination, and promote continuity of care throughout the episode.

Commenters expressed concern that the proposed rule may potentially implicate fraud and abuse laws but CMS did not state that it would issue waivers of laws such as the physician self-referral law, the Federal anti-kickback statute, and the beneficiary inducements CMP Law. Commenters stated that waivers similar to those issued under the original CJR Model would provide participants and collaborators with greater certainty and flexibility in implementing gainsharing arrangements.

Some commenters also raised concerns that CMS's expected reliance on the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements and patient incentives may be insufficient, as there is no parallel exception under the physician self-referral law. They stated that the absence of clear fraud and abuse waivers could create uncertainty for hospitals, collaborators, and physician group practices and limit their ability to participate meaningfully in CJR–X financial arrangements.

Commenters further stated that waivers would be necessary to support beneficiary incentives and to avoid confusion about whether incentives offered as part of CJR–X could implicate the beneficiary inducements CMP law. A commenter questioned whether the proposal may result in confusion about the legality of beneficiary incentives.

Commenters recommended that CMS issue applicable fraud and abuse waivers in separate documentation or otherwise provide clear protection for financial arrangements and patient incentives under CJR–X. They stated that these protections would be important for aligning physicians, supporting participation by physician group practices, enabling collaboration with post-acute care providers, and achieving the model's goals of coordinated care and reduced spending. A commenter requested that CMS make significant changes to the model expansion's design features or provide sufficient infrastructure and technical support with respect to the financial arrangements and patient incentives.

Response: We thank commenters for raising concerns about protections for CJR–X financial arrangements and beneficiary incentives relating to fraud and abuse laws. We recognize the desire for CJR–X participants, CJR–X collaborators, collaboration agents, and downstream collaboration agents to obtain additional assurances and guidance with regard to financial arrangements that support care coordination, physician alignment, post-acute care collaboration, and episode management under CJR–X.

As discussed above and in the proposed rule (91 FR 19713), we acknowledge that the CJR Model included fraud and abuse waivers issued by CMS and the OIG under section 1115A(d)(1) of the Act. Those waivers preceded regulatory changes later made by OIG and CMS in 2020, and protected specified arrangements permitted under the CJR Model regulations, including certain arrangements involving gainsharing payments, alignment payments, and beneficiary incentives, provided all waiver conditions were met. In December 2020, CMS and OIG issued final rules in conjunction with two broad federal initiatives: the CMS Patients over Paperwork initiative and the Department of Health and Human Services' Regulatory Sprint to Coordinated Care. These final rules resulted in two significant regulatory

actions. First, the CMS final rule established exceptions to the physician self-referral law for certain compensation arrangements between or among physicians, providers, and suppliers that facilitate value-based health care delivery and payment. Second, the OIG final rule amended the safe harbors to the Federal anti-kickback statute to accommodate certain value-based arrangements and issued the CMS-sponsored model arrangements and CMS-sponsored model patient incentives safe harbor.

Given the 2020 regulatory changes, we are finalizing an approach to the specified financial arrangements and beneficiary incentives in CJR–X that is different but comparable to the CJR 2017 notice. We have determined that the CMS-sponsored model safe harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives safe harbor at 42 CFR 1001.952(ii) is available to protect remuneration exchanged pursuant to CJR–X financial arrangements and beneficiary incentives, provided that all applicable safe harbor conditions and CJR–X Model requirements are met. Under the finalized CJR–X policies, the CMS-sponsored model safe harbor applies to specified remuneration exchanged under CJR–X sharing arrangements, distribution arrangements, and downstream distribution arrangements, including gainsharing payments, alignment payments, distribution payments, and downstream distribution payments, when the arrangement complies with the CJR–X regulations, the CMS-sponsored model safe harbor, and any applicable model documentation. The CMS-sponsored model patient incentives safe harbor also applies to CJR–X beneficiary incentives that satisfy the finalized CJR–X requirements and the safe harbor conditions.

In contrast, the exceptions to the physician self-referral law, including the exceptions in § 411.357(aa) for value-based arrangements, do not require CMS to make a determination that they are available to parties that are participating in a particular model. We remind parties that, in order to avoid the physician self-referral law's referral and billing prohibitions, all requirements of an applicable exception must be satisfied.

We believe the availability of the of the CMS-sponsored model safe harbor and the physician self-referral law's exceptions for compensation arrangements that facilitate value-based health care delivery and payment (as well as any other exceptions to the physician self-referral law that may be applicable to a particular financial arrangement), provides CJR–X participants and collaborators with the same core operational protections as the fraud and abuse waivers in the CJR Model. Accordingly, we do not believe that separate fraud and abuse waivers are necessary for CJR–X.

Comment: A couple of commenters supported CMS' proposed protections for financial arrangements under CJR–X. Commenters stated that these protections would provide CJR–X participants with the operational flexibility needed to manage episodes across the care continuum expected that many arrangements between participants and downstream care providers would fall within the OIG safe harbor for CMS-sponsored model arrangements.

Response: We thank the commenters for their support for the protections available to CJR–X participants entering into financial arrangements as part of their implementation of the model.

Comment: A commenter stated that the proposed CJR–X collaborator framework would create substantial compliance and operational complexity. The commenter recommended that CMS provide additional guidance and model documentation to support consistent implementation and reduce uncertainty for participants and collaborators.

Response: We thank the commenter for sharing their concerns about compliance and operational complexity under the CJR–X collaborator framework. As discussed above, we value commenters' recommendations and we intend to provide learning and implementation support for CJR–X participants before the model begins. We anticipate engaging CJR–X participants before the model start date and sharing resources to help participants prepare for implementation. We will continue to make updated model resources publicly available, including the CJR–X Model-specific web page, frequently asked questions, fact sheets, and other implementation materials.

Comment: A commenter recommended that CMS consider engaging with OIG to expand the scope of the CMS-sponsored model arrangements safe harbor to include financial arrangements between hospitals and downstream care providers serving non-Medicare populations. The commenter stated that broader safe harbor protection would strengthen incentives for downstream providers to participate in collaborative care relationships with CJR–X hospitals, particularly when Medicare patients represent a small share of a downstream provider's patient population.

Response: We thank the commenter for raising the possibility of broader safe harbor protection for financial arrangements involving downstream care providers and non-Medicare populations. We recognize that downstream providers may serve mixed patient populations and that broader multi-payer alignment could, in some circumstances, support consistent care redesign across a provider's patient panel. However, the commenter's recommendation to expand safe harbor protections to financial arrangements across non-Medicare populations falls outside of the scope of this rulemaking.

After consideration of the public comments we received, we are finalizing without modifications our proposal at § 512.690 that the Federal anti-kickback safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) and CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) be made available to CJR–X participants and CJR–X collaborators, collaboration agents, and downstream collaboration agents.

j. Waivers of Medicare Program Requirements

(1) Overview

We believe it is necessary and appropriate to provide flexibilities to hospitals participating in CJR–X, as well as other providers and suppliers that provide services to beneficiaries in episodes. The purpose of such flexibilities is to support better, more coordinated care for beneficiaries and improved financial efficiencies for Medicare, providers, suppliers, and beneficiaries. The CJR Model eased the rules around the 3-Day SNF Rule and telehealth to allow for easier discharge to less intensive settings and avoid drops in quality of care via unplanned readmissions. For CJR–X, similar flexibilities will use the CMS waiver authority under section 1115A of the Act, which affords broad authority for the Secretary to waive statutory Medicare program requirements as necessary to carry out the provisions of section 1115A of the Act. affords broad authority for the Secretary to waive statutory Medicare program requirements as necessary to carry out the provisions of section 1115A of the Act.

As stated in section X.C.1.c. of this final rule, our previous and current efforts in testing episode-based-payment models have led us to believe that the greatest improvements in episode quality and efficiency are incentivized

when entities bear financial responsibility for total Medicare episode spending. We believe that holding CJR–X participants financially accountable for excess episode spending above the reconciliation target price increases incentives to coordinate care throughout the episode and reduce over-utilization of services. We also recognize that waivers of certain program rules may be appropriate to offer flexibility to Medicare providers and suppliers furnishing services to CJR–X beneficiaries. For example, Medicare requires a prior 3-day inpatient hospital stay to cover a skilled nursing facility (SNF) stay. By waiving this requirement, beneficiaries can be discharged to a SNF or swing bed after a shorter inpatient hospital stay, when clinically appropriate. This type of waiver has been implemented in many previous and existing CMS initiatives, including the CJR Model and TEAM. We believe adopting these waivers for CJR–X is appropriate.

Specific program rules for waivers that will be available to CJR–X participants are included in the sections that follow. These waivers, as finalized in this final rule, will apply to services furnished to a CJR–X beneficiary during an episode, even if the episode is later canceled as described in section X.C.2.d.(3)(e) of this final rule. We also are finalizing that if a service is found to have been billed and paid by Medicare under a CJR–X program rule waiver for a beneficiary not in CJR–X at the time the service was furnished, CMS would recover payment for that service from the provider or supplier and require the provider or supplier to repay the beneficiary for any coinsurance previously collected.

We welcomed comments on additional waivers that should be considered under section 1115A of the Act beyond those specifically discussed in this final rule. We were especially interested in comments explaining how such waivers would increase quality of care and reduce unnecessary episode spending in the context of CJR–X.

Comment: Some commenters requested broader waiver flexibility to support care delivery during CJR–X episodes. The commenters stated that CMS should provide robust waiver pathways for circumstances such as post-acute care capacity limits, SNF closures, severe weather, public health events, payer behavior, or beneficiary preference. They recommended that CMS give providers maximum flexibility to place beneficiaries in the clinical setting that best serves short- and long-term recovery goals. The commenters framed these requests as necessary to support efficient episode management and beneficiary-centered discharge planning.

Response: We appreciate the commenters' recommendations for broader waiver flexibility under CJR–X. We recognize the importance of flexibility during disruptions and local post-acute capacity constraints. However, we must evaluate each potential waiver for statutory authority, operational feasibility, Medicare coverage and payment implications, program integrity, and beneficiary protections. While these flexibilities were not included in the proposed rule, these comments may inform CMS' considerations going forward, including in potential future rulemaking.

Comment: Some commenters recommended that CMS waive certain inpatient rehabilitation facility requirements for CJR–X beneficiaries. The commenters referenced the IRF 60 percent rule, the three-hour rule, and the preponderance requirement for therapy. They stated that some post-surgical LEJR patients may clinically warrant IRF-level care but may not tolerate the required therapy intensity immediately after surgery or may not count toward the IRF compliance threshold. They believed that waiver flexibility would allow participants to place beneficiaries in the most clinically appropriate post-acute setting while maintaining accountability for quality and episode spending.

Response: We appreciate the commenters' concerns about access to clinically appropriate post-acute settings during CJR–X episodes. However, CMS did not propose waivers of the IRF 60 percent rule, three-hour rule, or preponderance requirement in the proposed rule. While these flexibilities were not included in the proposed rule, these comments will inform CMS' considerations going forward, including in potential future rulemaking.

Comment: A commenter requested that CMS allow existing surgical or discharge documentation of a beneficiary's post-operative home health needs to satisfy the Medicare home health face-to-face encounter requirement for post-surgical joint replacement patients. The commenter stated that requiring a separate qualifying encounter could create an unnecessary administrative step when the surgeon or attending physician has already documented the beneficiary's need for home health services.

Response: CMS appreciates the commenter's suggestion that CMS allow surgeon or attending physician documentation of post-operative care needs to satisfy the home health face-to-face encounter requirement for post-surgical joint replacement patients. CMS is not adopting this suggestion because this waiver was not proposed in the proposed rule and the face-to-face encounter requirement helps support medical necessity, beneficiary eligibility, documentation integrity, and program integrity before Medicare payment for home health services. Accordingly, CMS is not extending the SNF three-day waiver concept under CJR–X to waive or replace the home health face-to-face encounter requirement.

Comment: Some commenters requested that CMS waive or clarify waiver of the homebound requirement for home health services under CJR–X. The commenters stated that waiving the homebound requirement could provide hospitals with certainty when billing CJR–X home visit codes and could reduce episode spending by helping non-homebound beneficiaries avoid readmissions. They believed flexibility to determine whether home health is appropriate for beneficiaries near homebound status may be consistent with the purpose of model waivers. The commenters viewed this flexibility as a way to support post-acute care decisions and recovery in the home.

Response: We appreciate the commenters' recommendation that CMS waive or clarify waiver of the Medicare homebound requirement under CJR–X. However, we are not adopting this recommendation at this time because we did not introduce such a waiver in the proposed rule and the homebound requirement remains an important eligibility criterion for Medicare-covered home health services. A broader waiver of this requirement could raise coverage, payment, utilization, and program integrity concerns that are beyond the scope of the waivers that were proposed for CJR–X.

Comment: A commenter requested that CMS waive or modify hospital discharge planning requirements to provide hospitals with greater flexibility to guide beneficiaries to appropriate post-acute care options under CJR–X. The commenter stated that existing discharge planning requirements may limit hospitals' ability to coordinate post-hospital services effectively, particularly in connection with the SNF three-day rule waiver. The commenter suggested that additional discharge planning flexibility could support care coordination and appropriate post-acute placement during CJR–X episodes.

Response: We appreciate the commenter's recommendation that we waive certain hospital discharge

planning requirements to allow hospitals greater flexibility in directing beneficiaries to post-acute care options under CJR–X. We are not adopting this recommendation because we did not introduce such a waiver in the proposed rule, and discharge planning requirements help protect beneficiary freedom of choice, access to information, and informed decision-making when beneficiaries select post-hospital services. Accordingly, we are not adopting a waiver that could allow hospitals to restrict beneficiary freedom of choice or introduce concerns around steering.

Comment: A commenter recommended that CMS waive home health initiation-of-care rules so therapy staff could initiate care when both therapy and nursing are ordered. The commenter stated that current requirements can result in rejected referrals and delays when nursing is unavailable, even where therapy could begin timely care. The commenter believed delays in therapy may last days or weeks and could undermine functional recovery after joint replacement. The commenter requested a waiver allowing therapists to initiate episodes of care when an order includes some therapy, not only therapy.

Response: We appreciate the commenter's concern regarding timely access to therapy after discharge. We are not adopting a waiver of home health initiation-of-care requirements because we did not propose such a waiver in the proposed rule, and these requirements help ensure that home health care begins with the appropriate assessment, care planning, discipline involvement, and quality safeguards based on the beneficiary's ordered services and clinical needs. Allowing therapy staff to initiate care when both nursing and therapy are ordered would require broader review of Medicare home health conditions of participation, coverage rules, patient assessment requirements, and program integrity considerations beyond the scope of the waivers proposed for CJR–X.

Comment: A commenter requested that CMS confirm CJR–X waivers are available to any providers treating a beneficiary during an episode, rather than only selected providers in formal relationships with participant hospitals. The commenter referenced preferred providers and CJR–X collaborators as examples of formal relationships. The commenter appeared concerned that limiting waiver availability could reduce care coordination flexibility for downstream providers. The request focused on implementation scope and provider eligibility for waiver use.

Response: We appreciate the request for clarity regarding which providers and suppliers may use CJR–X waivers. In this final rule, we are finalizing program rule waivers that will apply to the care of CJR–X beneficiaries who are in episodes at the time the service is furnished under the waiver, subject to the specific requirements and billing conditions of each waiver. CJR–X collaborator status, preferred-provider relationships, or other formal arrangements with participant hospitals do not, by themselves, determine the scope of every waiver. We intend to provide implementation guidance, as appropriate, regarding which providers and suppliers may furnish or bill services under each waiver and what documentation, billing, and beneficiary protection requirements apply.

Comment: A commenter recommended that CMS waive the multiple procedure payment reduction for therapy services under CJR–X. The commenter stated that MPPR reduces payment for clinically distinct same-day therapy interventions that may be important to recovery after joint replacement. The commenter believed MPPR can disincentivize comprehensive treatment plans, contribute to delayed or fragmented care, and threaten therapy practice sustainability. The commenter framed the waiver as consistent with CJR–X goals of timely intervention, functional recovery, and reduced total episode costs.

Response: We appreciate the commenter's concerns regarding therapy payment policy and beneficiary recovery during CJR–X episodes. We are not adopting a waiver of the multiple procedure payment reduction for therapy services because we did not propose such a waiver in the proposed rule, and such a waiver would raise broader Medicare payment policy, utilization, budgetary, and operational considerations beyond the scope of the waivers proposed for CJR–X. We will consider the commenter's recommendation in future rulemaking as we consider whether additional therapy-related waivers should be addressed under the model.

Comment: A commenter requested that CMS consider a waiver related to home health consolidated billing rules. The commenter connected the request to CMS' proposal to allow separate reporting of certain post-discharge home visits during surgical global periods. The commenter appeared concerned that home health consolidated billing rules could limit access to separately furnished therapy or post-discharge services during a CJR–X episode. The request sought additional billing flexibility for care furnished during the episode.

Response: We appreciate the request to consider home health consolidated billing flexibility. CMS proposed to waive global surgery billing rules to allow separate reporting of certain CJR–X post-discharge home visits during the surgical global period because those visits are intended to support broader episode care coordination rather than duplicate routine post-operative surgical care. CMS did not propose a waiver of home health consolidated billing rules. Such a waiver would require review of Medicare home health payment rules, billing systems, duplicate payment risk, beneficiary protections, and whether the waiver is necessary for the model test.

Comment: A commenter requested CMS to include additional policy waivers to prevent delays in physical therapy during CJR–X episodes. The commenter stated that delays may result from provider availability, referral complexity, administrative burden, prior authorization, payment policies, or physician signature requirements. The commenter believed that delayed physical therapy can impair functional recovery, reduce the benefits of timely treatment, and increase costs for Medicare, patients, and providers. The commenter requested that CMS use waiver authority to ensure therapy is not delayed during transitions after joint replacement.

Response: We appreciate the commenter's emphasis on timely therapy access as part of recovery from LEJR procedures. We proposed CJR–X waivers intended to support care coordination, access, and post-discharge management, including home visits and telehealth flexibilities. However, we did not propose a broad waiver of therapy referral, signature, prior authorization, or payment requirements under CJR–X. We will consider the commenter's recommendation in future rulemaking as we consider whether additional therapy-related waivers should be addressed under the model.

Comment: A commenter recommended that CMS create a home-based swing-bed or ''swing-beds-without-walls'' pathway under CJR–X. The commenter stated that hospitals could furnish skilled-level post-acute recovery services in a beneficiary's home when clinically appropriate, particularly in areas with limited SNF capacity or inpatient bed shortages. The commenter suggested waiving certain hospital swing bed requirements so that nursing visits, therapy, medication management, remote monitoring, telehealth check-ins, virtual physician

supervision, and escalation protocols could be delivered in the home. The commenter believed the hospital would remain financially and clinically accountable for the full CJR–X episode while supporting safe recovery outside a facility.

Response: We appreciate the commenter's interest in expanding home-based post-acute care options, particularly where facility capacity is limited. We are not considering a separate ''swing-beds-without-walls'' pathway because it would go beyond the targeted CJR–X flexibilities initially proposed in this rule and would require separate review of how such care would be paid for and monitored for beneficiary protection. We proposed several waivers to support care coordination and access during CJR–X episodes, including home-based and post-acute care flexibilities, and invited comment on whether additional waivers could support the model test. We will consider the commenter's recommendation in future rulemaking as we consider whether additional therapy-related waivers should be addressed under the model.

After consideration of the public comments, we are not finalizing any additional waivers under section 1115A of the Act beyond those specifically discussed in this final rule.

(2) Post-Discharge Home Visits

The CJR Model permitted certain post-discharge home visits to encourage CJR participants to select the most appropriate post-acute care settings for beneficiaries. This allowed providers to consider beneficiary choice and location of beneficiary home or place of residence when selecting clinically appropriate lower acuity settings. Consistent with the CJR Model, we believe continuing such regulatory flexibilities for home-based care would support effective episode management.

Early post-discharge periods represent a time of heightened clinical vulnerability for beneficiaries undergoing joint replacement. Complications such as infection, medication-related issues, and mobility limitations frequently arise within the first weeks following discharge and may result in avoidable emergency department visits, readmissions, or use of institutional post-acute care services. We believe that timely, in-person home visits furnished by qualified clinicians may help identify emerging complications, reinforce discharge instructions, support medication reconciliation, and facilitate adherence to rehabilitation plans in the beneficiary's home environment.

We also anticipate that permitting targeted post-discharge home visits would promote safe discharge to home when clinically appropriate, potentially reducing reliance on higher-cost institutional post-acute care settings. Post-acute care spending represents a significant portion of episode spending, so enabling home-based clinical monitoring and care coordination, may lower total episode expenditures.

In the BPCI Advanced and CJR Models (80 FR 73444), we provided a waiver of the ''incident to'' rule. This allowed a physician or nonphysician practitioner participating in care redesign under a participating provider to bill for services furnished to a beneficiary who did not qualify for Medicare coverage of home health services, as set forth under § 409.42, after discharge from an acute care hospital. The ''incident to'' rules set forth in § 410.26(b) require that services and supplies furnished incident to the service of a supervising physician (or other practitioner) must be provided under ''direct supervision,'' as defined at § 410.26(a. Direct supervision denotes the physical or virtual presence of the supervising physician (or other practitioner).

In the BPCI Advanced and CJR Models, the waiver allowed for services that were furnished by licensed clinical staff under ''general supervision'' as defined at § 410.26(a)(3). That is, the service was furnished under the physician's (or other practitioner's) overall direction and control, but the physician's (or other practitioner's) presence was not required during the performance of the service. The licensed clinician must have been allowed by law, regulation, and facility policy to perform or assist in the performance of the specific professional service, but did not individually report that professional service. In addition, the services furnished by the licensed clinical staff must have been billed by the supervising physician (or other practitioner) or model participant that the supervising physician had reassigned their billing rights (in accordance with CMS instructions using a Healthcare Common Procedures Coding System (HCPCS) G-code created for the BPCI Advanced and CJR Models). In the case of the ''incident to'' waiver under BPCI Advanced, the waiver allowed physician and nonphysician practitioners to furnish the services up to 13 home visits during each 90-day clinical episode. In the case of the ''incident to'' waiver under the original CJR Model, the waiver allowed physician and nonphysician practitioners to furnish the services up to 9 home visits during each 90-day clinical episode. This waiver was later modified to apply to anchor procedures in the CJR Extension (86 FR 23552). All other Medicare coverage and payment criteria had to be met for both BPCI Advanced and CJR Models.

We recognize TEAM did not waive the ''incident to'' rule set forth in § 410.26(b)(5) given the low waiver utilization in other CMS models and initiatives. However, we have determined to keep continuity between CJR–X and the CJR Extension to preserve the policies tested as it pertains to model waivers. However, we can monitor utilization and reassess the necessity of this waiver at a later date. We believe this will ensure the integrity of CJR model policies within CJR–X as it expands nationally. Therefore, we proposed to waive the ''incident to'' rule set forth in § 410.26(b)(5), to allow a CJR–X beneficiary who does not qualify for home health services to receive post-discharge visits in his or her home or place of residence any time during the episode. The waiver will not apply to beneficiaries who would qualify for home health services under the Medicare program, as set forth under § 409.42. Therefore, these visits will not be billed for such beneficiaries. Under the finalized waiver, we will allow licensed clinical staff, who may or may not be employed by the hospital, to furnish the service under the general supervision of a physician, who may be either an employee or a contractor of the hospital. We will allow services furnished under the waiver to be billed under the physician fees schedule by the physician or nonphysician practitioner or by the hospital the supervising physician has reassigned his or her benefits. In the latter scenario, we note that the post-discharge home visit services will not be ''hospital services,'' even when furnished by clinical staff of the hospital. We will monitor patterns of utilization of home health services using this waiver under CJR–X to monitor for overutilization or reductions in medically necessary care. Through this monitoring, we can evaluate effectiveness and redetermine the necessity of this waiver.

Under the CJR Model, we allowed up to 9 post-discharge home visits to be billed and paid during each 90-day post-anchor hospitalization or anchor procedure. This limit on the number of visits is based on the average post-acute care LOS of approximately 30 to 45 days for original CJR episodes and the incentives under original CJR to improve efficiency, which may shorten post-acute care stays. Thus, 9 visits represent a home visit on average of

once per week for two-thirds of the 90-day episode duration, the period of time when the typical beneficiary may have concluded post-acute care in an efficient episode. We proposed to adopt the same number of post-discharge home visits in CJR–X. Specifically, we proposed to allow up to 9 post-discharge home visits to be billed and paid during each 90-day post-anchor hospitalization or anchor procedure. We also proposed that the service be billed with a HCPCS code G-code. The G-code would be created before the start of CJR–X and would be specific to CJR–X to allow for a home visit for patient assessment performed by clinical staff for an individual not considered homebound. This G-code would include, but not be limited to patient assessment of clinical status, safety/fall prevention, functional status/ambulation, medication reconciliation/management, compliance with orders/plan of care, performance of activities of daily living, and ensuring CJR–X beneficiary connections to community and other services; for use only in CJR–X. Notably this code may not be billed for a 30-day period covered by a transitional care management code. We proposed the G-code would be paid at approximately $50 under the physician fee schedule. The standard physician fee schedule rate setting methodologies establish relative value units (RVUs) based on the resources required to furnish the typical service. In addition, we proposed to update the values each year to correspond to final values established under the physician fee schedule.

The waiver will not apply with respect to a CJR–X beneficiary who has qualified, or would qualify, for home health services when the visit was furnished. The visits by licensed clinical staff could include patient assessment, monitoring, assessment of functional status and fall risk, review of medications, assessment of adherence with treatment recommendations, patient education, communication and coordination with other treating clinicians, care management to improve beneficiary connections to community and other services, etc. These post-discharge home visits will remove barriers to follow-up care outside of the home with providers and suppliers and allow the CJR–X beneficiary to be treated in his or her home environment or place of residence, where potential safety concerns, such as tripping hazards, could quickly be identified and remediated. Given these occasions for further patient assessment and intervention, we believe that where such post-discharge home visits are furnished, there are opportunities to increase patient-centered care coordination and decrease episode spending, potentially resulting in higher-quality care for beneficiaries and increased episode efficiency which may benefit the beneficiaries, the Medicare Trust Fund, and CJR–X participants.

We also proposed to waive current Medicare billing rules in order to allow the separate reporting of these post-discharge home visits during surgical global periods. The physician fee schedule payment for the surgical procedure includes 90 days of post-operative care furnished by the surgeon. Post-operative follow-up care is not separately billable by the surgeon or, unless there is a transfer of care, by another practitioner. The current construction of the global packages included in physician fee schedule payments reflects a narrow view of surgical follow-up care that does not encompass broader, more comprehensive models of post-operative care, such as an episode payment model CJR–X. We do not believe that the CJR–X post-discharge home visits, which can include nursing assessments for chronic conditions for which care may be affected by the surgery, will replace or substantially duplicate the kind of post-operative visits involved in furnishing post-operative follow-up care for the global surgery procedure under the physician fee schedule. Instead, we anticipate that the work of these post-discharge visits will be similar to the work furnished by the physician coordinating the patient's overall episode care. Therefore, we proposed to waive the global surgery billing rules to allow the surgeon or other practitioners to furnish and bill for the post-discharge home visits during surgical global periods.

We sought comments at § 512.695(c) on the proposed waiver of the ''incident to'' rule to pay for a maximum number of nine post-discharge home visits to beneficiaries who do not qualify for home health services by licensed clinical staff under the general supervision of a physician.

Comment: Some commenters supported the proposed post-discharge home visit waiver and broader home-based recovery flexibilities under CJR–X. The commenters stated that the waiver related to the ''incident to'' requirement could allow nonphysician practitioners, advanced practice providers, and other licensed clinical staff to furnish home visits under more flexible care team models. They believed these flexibilities would improve care coordination, expand access to services in the home, support patient recovery, and help manage episodes more efficiently. Some commenters stated that home-based post-acute care could help address limited post-acute care capacity and allow older adults to recover safely at home when clinically appropriate. A commenter emphasized that modern care teams can use remote monitoring, structured protocols, and real-time physician supervision while maintaining or improving quality. A commenter also supported CMS' proposal to allow separate reporting of certain post-discharge home visits during surgical global periods, especially when the care is part of broader episode management rather than routine post-operative care. Overall, commenters supported the proposed waivers as important to CJR–X success and to protecting beneficiary access to care.

Response: We appreciate the commenters' support for the proposed post-discharge home visit waiver and related home-based recovery flexibilities.

Comment: Some commenters recommended expanding the role of rehabilitation therapists in the home health setting under CJR–X. Specifically, commenters recommended that occupational therapy be treated as a qualifying service for Medicare home health eligibility and that rehabilitation therapists, including occupational therapists, physical therapists, and speech-language pathologists, be permitted to perform home health assessments when both therapy and nursing services are ordered. Commenters stated that these clinicians are well positioned to assess functional, behavioral, and safety needs and would help achieve the goals of CJR–X by improving quality and reducing episode spending.

Response: We acknowledge the commenters' requests to authorize additional provider types, including rehabilitation therapists such as occupational therapists, physical therapists, and speech-language pathologists, to perform certain home health services and assessments under CJR–X. We appreciate the important role these clinicians play in supporting functional recovery and successful transitions to the home setting. However, we did not propose policies to modify Medicare home health qualifying service requirements or home health assessment requirements under CJR–X. Home health eligibility, qualifying service rules, and assessment requirements are separate Medicare coverage and program requirements.

These comments may inform potential future rulemaking.

Comment: A commenter recommended that CMS consider targeted investments or waivers to support interoperability infrastructure. The comment suggested that data exchange and infrastructure support may be important for successful coordination and implementation capacity under CJR–X.

Response: We appreciate the commenter's recommendation regarding interoperability infrastructure. The commenter did not identify a specific Medicare coverage or payment requirement that should be waived for interoperability purposes, so CMS would need additional detail to assess the legal authority, operational feasibility, and relationship to CJR–X Model testing.

Comment: A commenter recommended that integrated at-home post-discharge care become a standard discharge option for appropriate CJR–X beneficiaries. The commenter stated that the right patient population should be selected based on moderate functional impairment, stable medical status, minimal skilled nursing needs, and caregiver availability. The commenter suggested CMS consider using the Activity Measure for Post-Acute Care 6-Clicks basic mobility short form and qualitative assessment by physical therapists, occupational therapists, or case managers. The commenter stated that case managers, admission care coordinators, and the medical team should work together to determine whether a beneficiary is appropriate for post-acute rehabilitation at home.

Response: We appreciate the commenter's recommendation regarding standardized assessment for home-based post-discharge options. We proposed beneficiary notification, discharge planning notice recordkeeping, post-discharge home visit flexibilities, and telehealth flexibilities intended to support beneficiary understanding, care coordination, and appropriate care transitions. However, the proposed rule did not prescribe a specific functional assessment tool or require hospitals to make a particular home-based option a standard discharge pathway. Furthermore, we do not wish to restrict the post-acute care setting that makes the most sense for beneficiaries and their provider teams by creating a standardized discharge option for participants.

After consideration of the public comments we received, we are finalizing § 512.695(c) on the proposed waiver of the ''incident to'' rule to pay for a maximum number of nine post-discharge home visits to beneficiaries who do not qualify for home health services by licensed clinical staff under the general supervision of a physician.

(3) Telehealth

The CJR Model waived certain telehealth service requirements to allow providers and suppliers furnishing services to model beneficiaries to utilize telemedicine for beneficiaries that are not classified as rural and allowed the greatest degree of efficiency and communication between providers and suppliers and beneficiaries by allowing beneficiaries to receive telehealth services at their home or place of residence. We believe similar telehealth waivers will be essential to maximize the opportunity to improve the quality of care and efficiency for episodes of care in CJR–X.

Under section 1834(m) of the Act, Medicare pays for telehealth services furnished by a physician or practitioner under certain conditions even though the physician or practitioner is not in the same location as the beneficiary. The telehealth services must be furnished to a beneficiary located in one of the ten types of originating sites specified in section 1834(m)(4)(C)(ii) of the Act and the site must satisfy at least one of the requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act. Generally, for Medicare payment to be made for telehealth services under the Medicare Physician Fee Schedule several conditions must be met, as set forth under § 410.78(b). Specifically, the service must be on the Medicare list of telehealth services and meet all of the following other requirements for payment:

- The service must be furnished via an interactive telecommunications system.
- The service must be furnished to an eligible telehealth individual.
- The individual receiving the services must be in an eligible originating site.

When all of these conditions are met, Medicare pays a facility fee to the originating site and provides separate payment to the distant site practitioner for the service. Section 1834(m)(4)(F)(i) of the Act defines ''Medicare telehealth services'' to include professional consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when furnished via a telecommunications system. For the list of approved Medicare telehealth services, see the CMS website at *https://www.cms.gov/medicare/coverage/telehealth/list-services.* Under section 1834(m)(4)(F)(ii) of the Act, CMS has an annual process to consider additions to and deletions from the list of telehealth services. We do not include any services as telehealth services when Medicare does not otherwise make a separate payment for them.

In the CJR Model (80 FR 73274) as well as the national COVID–19 public health emergency (PHE) telehealth waiver,[608] and in the most recent Consolidated Appropriations Act, 2026, hospitals were permitted to use telehealth waivers that applied to two provisions:

- CMS waived the geographic site requirements under 1834(m)(4)(C)(i)(I) through (III) of the Act which allowed telehealth services to be furnished to eligible telehealth individuals when they are located at one of the eight originating sites at the time the service is furnished via a telecommunications system but without regard to the site meeting one of the geographic site requirements.
- CMS waived the originating site requirements under section 1834(m)(4)(C)(ii)(I) through (X) of the Act which allowed the eligible telehealth individual to not be in an originating site when the otherwise eligible individual is receiving telehealth services in their home or place of residence.

Specifically, like the telehealth waivers in the CJR Model (80 FR 73448), we proposed to waive the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act that limit telehealth payment to services furnished within specific types of geographic areas or in an entity participating in a federal telemedicine demonstration project approved as of December 31, 2000. Waiver of this requirement will allow beneficiaries located in any region to receive services related to the episode to be furnished via telehealth, as long as all other Medicare requirements for telehealth services are met. Any service on the list of Medicare approved telehealth services and reported on a claim that is not excluded from the proposed episode definition (see section X.C.2.d.(3). of this proposed rule) could be furnished to a CJR–X beneficiary, regardless of the CJR–X beneficiary's geographic location. Under CJR–X, this waiver will support care coordination and increasing timely access to high quality care for all CJR–X beneficiaries, regardless of geography. Additionally, we proposed for CJR–X waiving the originating site

[608] Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020, Public Law 116–123 § 101 (Mar. 6, 2020 *https://www.govinfo.gov/content/pkg/BILLS-116hr748enr/pdf/BILLS-116hr748enr.pdf.*

requirements of section 1834(m)(4)(C)(ii)(I) through (X) of the Act that specify the particular sites at which the eligible telehealth individual must be located at the time the service is furnished via a telecommunications system. Specifically, we proposed to waive the requirement only when telehealth services are being furnished in the CJR–X beneficiary's home or place of residence during the episode. Any service on the list of Medicare approved telehealth services that is not excluded from the proposed episode definition (see section X.C.2.d.(3)(b). of this proposed rule) could be furnished to a CJR–X beneficiary in their home or place of residence, unless the service's HCPCS code descriptor precludes delivering the service in the home or place of residence. For example, subsequent hospital care services could not be furnished to beneficiaries in their home since those beneficiaries will not be inpatients of the hospital. Though these activities are allowed via broad Medicare telehealth waivers, as recently extended under the Consolidated Appropriations Act, 2026, these waivers are not permanent and have been subject to reconsiderations and extensions by Congress. This CJR–X telehealth waiver will guarantee that the telehealth services mentioned in this waiver will continue for CJR–X participants even if the broad Medicare telehealth waivers expire.

The existing set of codes used to report evaluation and management (E/M) visits are extensively categorized and defined by the setting of the service, and the codes describe the services furnished when both the patient and the practitioner are located in that setting. Section 1834(m) of the Act provides for particular conditions under which Medicare can make payment for office visits when a patient is located in a health care setting (the originating sites authorized by statute) and the eligible practitioner is located elsewhere. However, we do not believe that the kinds of E/M services furnished to patients outside of health care settings via real-time, interactive communication technology are accurately described by any existing E/M codes. This will include circumstances when the patient is located in his or her home and the location of the practitioner is unspecified. In order to create a mechanism to report E/M services accurately, the BPCI Advanced and CJR Models (80 FR 73450) created specific sets of HCPCS G-codes to describe the E/M services furnished to the model beneficiaries in their homes via telehealth. Similarly, for CJR–X, we proposed to create a specific set of 4 HCPCS G-codes to describe the E/M services furnished to CJR–X beneficiaries in their homes via telehealth. CMS will specify the precise G-code created for CJR–X and share them to CJR–X participants prior to the first performance year.

Among the existing E/M visit services, we envision these services will be most similar to those described by the office and other outpatient E/M codes. Therefore, we proposed to structure the new codes similarly to the office/outpatient E/M codes but adjusted to reflect the location as the CJR–X beneficiary's residence and the virtual presence of the practitioner. Specifically, we proposed to create a parallel structure and set of descriptors currently used to report office or other outpatient E/M services, see Table X.C–07, for CPT codes CPT codes 99212 through 99215 for established patient visits. For example, the proposed G-code for a level 3 E/M visit for an established patient will be a telehealth visit for the evaluation and management of an established patient in the patient's home, which requires at least 2 of the following 3 key components:

- An expanded problem focused history;
- An expanded problem focused examination;
- Medical decision making of low complexity.

Counseling and coordination of care with other physicians, other qualified health care professionals or agencies are provided consistent with the nature of the problem(s) and the patient's or family's needs or both. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent with the patient or family or both via real-time, audio and video intercommunications technology.

TABLE X.C-07: PROPOSED CJR-X TELEHEALTH WAIVER G-CODE CROSSWALK

CJR-X G-Code (Used for illustrative purposes. Specific G-codes will be created if CJR-X is finalized.)	Short Descriptor	Corresponding Office/Outpatient E/M CPT Code
GXX12	Remote E/M est. pt 10mins	99212
GXX13	Remote E/M est. pt 20mins	99213
GXX14	Remote E/M est. pt 30mins	99214
GXX15	Remote E/M est. pt 40mins	99215

We note that we did not propose a G-code to parallel the level 1 office/outpatient visit for an established patient, since that service does not require the presence of the physician or other qualified health professional.

We proposed to develop payment rates for these new telehealth G-codes for E/M services in the patient's home that are similar to the payment rates for the office/outpatient E/M services, since the codes will describe the work involved in furnishing similar services. Therefore, we proposed to include the resource costs typically incurred when services are furnished via telehealth. In terms of the relative resource costs involved in furnishing these services, we believe that the efficiencies of virtual presentation generally limit resource costs other than those related to the professional time, intensity, and malpractice risk to marginal levels. Therefore, we proposed to adopt work and malpractice (MP) RVUs associated with the corresponding level of office/outpatient codes as the typical service because the practitioner's time and intensity and malpractice liabilities when conducting a visit via telehealth are comparable to the office visit. We would include final RVUs under the CY 2027 Medicare Physician Fee Schedule for PY 1. Additionally, we proposed to update these values each performance year to correspond to final values established under the Medicare Physician Fee Schedule.

We considered whether each level of visit typically would warrant support by auxiliary licensed clinical staff within the context of CJR–X. The cost of such staff and any associated supplies, for example, would be incorporated in the practice expense (PE) RVUs under the

PFS. For the lower level visits, levels 2 and 3 for established visits, we did not believe that the visit would necessarily require auxiliary medical staff to be available in the patient's home. We anticipate these lower level visits would be the most commonly furnished and would serve as a mechanism for the patient to consult quickly with a practitioner for concerns that can be easily described and explained by the patient. We did not propose to include PE RVUs for these services, since we do not believe that virtual visits envisioned for this model typically incur the kinds of costs included in the PE RVUs under the Medicare Physician Fee Schedule. For higher level visits, we typically would anticipate some amount of support from auxiliary clinical staff. For example, wound examination and minor wound debridement would be considered included in an E/M visit and would require licensed clinical staff to be present in the CJR–X beneficiary's home during the telehealth visit in order for the complete service to be furnished. We believe it would be rare for a practitioner to conduct as complex and detailed a service as a level 4 or 5 E/M home visit via telehealth for CJR–X beneficiaries in episodes without licensed clinical staff support in the home.

We have considered support by auxiliary clinical staff to be typical for level 4 or 5 E/M visits furnished to CJR–X beneficiaries in the home via telehealth, however, we did not propose to incorporate these costs through PE RVUs. Given the anticipated complexity of these visits, we would expect to observe level 4 and 5 E/M visits to be reported on the same claim with the same date of service as a home visit or during a period of authorized home health care. If neither of these occurs, we proposed to require the physician to document in the medical record that auxiliary licensed clinical staff were available on site in the patient's home during the visit and if they were not, to document the reason that such a high-level visit would not require such personnel.

We note that because the services described by the proposed G-codes, by definition, are furnished remotely using telecommunications technology, they therefore are paid under the same conditions as in-person physicians' services and they do not require a waiver to the requirements of section 1834(m) of the Act. We also note that because these home telehealth services are E/M services, all other coverage and payment rules regarding E/M services will continue to apply.

Under CJR–X, this proposal to waive the originating site requirements and create new home visit telehealth HCPCS codes will support the greatest efficiency and timely communication between providers and beneficiaries by allowing beneficiaries to receive telehealth services at their places of residence.

With respect to home health services paid under the home health prospective payment system (HH PPS), we emphasize that telehealth visits under this model cannot substitute for in-person home health visits per section 1895(e)(1)(A) of the Act. Furthermore, telehealth services by social workers cannot be furnished for CJR–X beneficiaries who are in a home health episode because medical social services are included as home health services per section 1861(m) of the Act and paid for under the Medicare HH PPS. However, telehealth services permitted under section 1834 of the Act and furnished by physicians or other practitioners, specifically physician assistants, nurse practitioners, clinical nurse specialists, certified nurse midwives, nurse anesthetists, psychologists, and dieticians, can be furnished for CJR–X beneficiaries who are in a home health episode. Finally, sections 1835(a) and 1814(a) of the Act require that the patient has a face-to-face encounter with the certifying physician or an allowed nonphysician practitioner (NPP) working in collaboration with or under the supervision of the certifying physician before the certifying physician certifies that the patient is eligible for home health services. Under § 424.22(a)(1)(v), the face-to-face encounter can be performed up to 90 days prior to the start of home health care or within 30 days after the start of home health care. Section § 424.22(a)(1)(v)(A) also allows a physician, with privileges, who cared for the patient in an acute or post-acute-care setting (from which the patient was directly admitted to home health) or an allowed NPP working in collaboration with or under the supervision of the acute or post-acute care physician to conduct the face-to-face encounter.

Although sections 1835(a) and 1814(a) of the Act allow the face-to-face encounter to be performed via telehealth, we did not propose that the waiver of the telehealth geographic site requirement for telehealth services and the originating site requirement for telehealth services furnished in the CJR–X beneficiary's home or place of residence would apply to the face-to-face encounter required as part of the home health certification when that encounter is furnished via telehealth. In other words, when a face-to-face encounter furnished via telehealth is used to meet the requirement for home health certification, the usual Medicare telehealth rules apply with respect to geography and eligibility of the originating site. We expect that this policy would not limit CJR–X beneficiaries' access to medically necessary home health services because beneficiaries receiving home health services during an episode will have had a face-to- face encounter with either the physician or an allowed NPP during their anchor hospitalization or a physician or allowed NPP during a post-acute facility stay prior to discharge directly to home health services.

Under the finalized waiver of the geographic site requirement and originating site requirement, all telehealth services will be required to be furnished in accordance with all Medicare coverage and payment criteria, and no additional payment would be made to cover set-up costs, technology purchases, training and education, or other related costs. The facility fee paid by Medicare to an originating site for a telehealth service will be waived if there is no facility as an originating site (that is, the service originated in the CJR–X beneficiary's home). Finally, providers and suppliers furnishing a telehealth service to a CJR–X beneficiary in his or her home or place of residence during the episode will not be permitted to bill for telehealth services that were not fully furnished when an inability to provide the intended telehealth service is due to technical issues with telecommunications equipment required for that service. CJR–X beneficiaries will be able to receive services furnished pursuant to the telehealth waivers only during the episode.

We plan to monitor patterns of utilization of telehealth services under CJR–X to monitor for overutilization or reductions in medically necessary care, and significant reductions in face-to-face visits with physicians and NPPs. Though this waiver existed in the CJR Model, the broader Medicare telehealth waivers also covered much of the CJR Model. By including a telehealth waiver specific to CJR–X now and monitoring use, we could gauge effectiveness and guarantee its access even if the broad Medicare telehealth waiver, that were recently extended under the Consolidated Appropriations Act, 2026, expires. We plan to specifically monitor the distribution of new telehealth home visits that we proposed, as we anticipate greater use of lower level visits. Given our concern that auxiliary licensed clinical staff be present for level 4 and

5 visits, we will monitor our proposed requirement that these visits be billed on the same claim with the same date of service as a home nursing visit, during a period authorized home health care, or that the physician document the presence of auxiliary licensed clinical staff in the home or an explanation as to the specific circumstances precluding the need for auxiliary staff for the specific visit.

We sought comment on the proposed waivers with respect to telehealth services and the proposed creation of the home visit telehealth codes at § 512.695(a).

Comment: Many commenters supported including telehealth waivers in CJR–X. The commenters stated that telehealth flexibilities can improve care coordination, support access to services in the home, reduce administrative burden, and help clinicians address issues early in the rehabilitative process. Several commenters noted that similar flexibilities were useful in the CJR Model, other Innovation Center models, and Medicare Shared Savings Program. Some commenters emphasized that telehealth and remote care are now integrated into health care delivery and can help bring appropriate care to beneficiaries in familiar home environments.

Response: We appreciate the commenters' support for CJR–X telehealth flexibilities.

Comment: Some commenters recommended that CMS use existing CPT or E/M telehealth coding practices rather than create new CJR–X-specific G-codes. The commenters stated that the proposed G-codes did not appear clinically different from existing E/M codes on the Medicare telehealth services list. They suggested that existing place-of-service coding and professional telehealth billing guidance could identify telehealth visits furnished in the home. The commenters believed using existing codes would reduce administrative complexity and avoid unnecessary new billing requirements.

Response: We appreciate the recommendation to rely on existing telehealth coding where feasible. CMS proposed CJR–X-specific home visit telehealth G-codes, rather than existing E/M codes, to identify services furnished to CJR–X beneficiaries to allow CMS to monitor utilization under the model and approve the waiver flexibilities. The proposed rule explains that these services would be paid under the same conditions as in-person physician services and that other E/M coverage and payment rules would continue to apply. We recognize the commenters' concern that new codes may create burden and may take them under consideration in future rulemaking.

Comment: A commenter recommended expanding in-home telehealth G-codes to include geriatric assessment and 4Ms-aligned services. The commenter noted the older age profile of the CJR–X population. The commenter appeared to view geriatric assessment as relevant to safe recovery, function, medication management, and home-based care after joint replacement.

Response: We appreciate the recommendation to expand in-home telehealth G-codes include geriatric assessment and services aligned with the 4Ms framework. We recognize that beneficiaries receiving lower extremity joint replacement services may have complex clinical, functional, medication, and home-based care needs during recovery. However, the proposed CJR–X telehealth waiver would allow for E/M telehealth services such as assessments of geriatric aged patients to be furnished to CJR–X beneficiaries in their home or place of residence during an episode.

After consideration of the public comments we received, we are finalizing without modification the proposed waivers with respect to telehealth services and the proposed creation of the home visit telehealth codes at § 512.695(a).

(4) 3-Day SNF Rule

Pursuant to section 1861(i) of the Act, a beneficiary must have a prior inpatient hospital stay of no fewer than 3 consecutive days to be eligible for Medicare coverage of inpatient SNF care. We refer to this as the SNF 3-day rule. We note that the SNF 3-day rule has been waived for Medicare SNF coverage under many Innovation Center initiatives, including the BPCI Advanced and CJR Models (80 FR 73460) and the Medicare Shared Savings Program. Model and program participants that elect to use the waiver can discharge model beneficiaries in fewer than 3 days from an anchor hospital stay or anchor procedure (in the case of the CJR Model) to a SNF, or swing bed where services are covered under Medicare Part A if all other coverage requirements for such services are satisfied.

Because of the potential benefits we see for CJR–X participants, their provider partners, and beneficiaries, we proposed to waive the SNF 3-day rule for coverage of a SNF stay following the anchor hospitalization or anchor procedure under CJR–X. We proposed to use our authority under section 1115A of the Act with respect to certain SNFs that furnish Medicare Part A post-hospital extended care services to beneficiaries included in an episode in CJR–X. All other Medicare rules for coverage and payment of Part A-covered SNF services will continue to apply to CJR–X beneficiaries in all performance years of the model. Further, to ensure protection to CJR–X beneficiary safety and optimize health outcomes, we proposed to require that CJR–X participants may only discharge a CJR–X beneficiary under this proposed waiver of the SNF 3-day rule to a SNF rated an overall of three stars or better by CMS based on information publicly available at the time of hospital discharge from an anchor hospital stay or anchor procedure. However, providers furnishing SNF services under swing bed agreements will not be subject to the star ratings requirement as described later in this section. CMS created a Five-Star Quality Rating System for SNFs to allow SNFs to be compared more easily and to help identify areas of concerning SNF performance. The Nursing Home Compare website gives each SNF an overall rating of between 1 and 5 stars.[609] Those SNFs with 5 stars are considered to have much above average quality, and SNFs with 1 star are considered to have quality much below average. Published SNF ratings include distinct ratings of health inspection, staffing, and quality measures, with ratings for each of the three sources combined to calculate an overall rating. These areas of assessment are all relevant to the quality of SNF care following discharge from the anchor hospitalization or anchor procedure initiating an episode, especially if that discharge occurs after fewer than 3 days in the hospital. Because of the potential greater risks following early inpatient hospital discharge, we believe it is appropriate that all CJR–X beneficiaries discharged from the CJR–X participant to a SNF, or swing bed, in fewer than 3 days be admitted to a SNF that has demonstrated that it can provide quality care to patients with significant unresolved post-surgical symptoms and problems. We believe such a SNF will need to provide care of at least average overall quality, which will be represented by an overall SNF 3-star or better rating.

Thus, the CJR–X participant must discharge the CJR–X beneficiary to a SNF that is qualified under the SNF 3-

[609] Find & Compare Providers near you. Medicare.gov. *https://www.medicare.gov/care-compare/?redirect=true&providerType=NursingHome.*

day rule waiver. We proposed that to be qualified under the SNF 3-day rule waiver a SNF must be included in the most recent calendar year quarter Five-Star Quality Rating System listing for SNFs on the Nursing Home Compare website for the date of the CJR–X beneficiary's admission to the SNF. The qualified SNF must be rated an overall 3 stars or better for at least 7 of the 12 months based on a review of the most recent rolling 12 months of overall star ratings, unless providers furnishing SNF services are doing so under swing bed agreements We proposed to post on the CMS website the list of qualified SNFs in advance of the calendar quarter.

We recognize that there may be instances where a CJR–X participant would like to use the 3-day SNF rule waiver, but the CJR–X beneficiary receives inpatient post-acute care through swing bed arrangements in a hospital or Critical Access Hospital (CAH), as designated in § 485.606 of this chapter, which is not subject to the Five-Star Quality Rating System. For example, a CJR–X beneficiary located in a rural area may wish to receive post-acute care closer to their home but there are no qualified SNFs in their area. The CJR Model (80 FR 73459) did not allow for exceptions to the star-rating requirements in the 3-day SNF waiver out of a concern for balancing the needs of participant flexibilities and beneficiary protections. However, in TEAM we finalized a policy allowing hospitals with swing beds arrangements to make use of the 3-day SNF waiver (90 FR 37130). Similar to TEAM, we proposed allowing CJR–X participants to use the 3-day SNF rule waiver for hospitals and CAHs operating under swing bed agreements to support CJR–X beneficiary freedom of choice and provide greater flexibility to increase access and capacity. We also proposed that, for purposes of the SNF 3-day rule waiver, providers furnishing SNF services under swing bed arrangements will be treated as SNFs. However, the requirement to maintain a minimum 3-star rating for at least 7 of the previous 12 months will apply only to providers eligible for inclusion in the CMS Five-Star Quality Rating System. Accordingly, hospitals and Critical Access Hospitals (CAHs) furnishing SNF services under swing bed arrangements will not be subject to the 3-star requirement because they are not included in the Five-Star system. This approach is consistent with the Shared Savings Program's SNF 3-day rule waiver, which similarly permits use of the waiver for hospitals and CAHs furnishing SNF services under swing bed arrangements.

CMS will continue to monitor and audit use of the SNF 3-day rule waiver, including by providers furnishing SNF services under swing bed arrangements, to ensure beneficiary protections are maintained. CMS reserves the right to take remedial action if it identifies concerns related to waiver use or beneficiary outcomes. We also plan to monitor patterns of SNF utilization under the CJR–X, particularly with respect to hospital discharge in fewer than 3 days to a SNF, to ensure that CJR–X beneficiaries are not being discharged prematurely to SNFs and that they are able to exercise their freedom of choice without patient steering.

We sought comment on our proposal at § 512.695(b)(1) through (4) to waive the SNF 3-day stay rule following discharge from the anchor hospitalization or anchor procedures for episodes in CJR–X.

Comment: Some commenters supported the proposed SNF three-day rule waiver for CJR–X. The commenters stated that the waiver would provide meaningful flexibility, support care coordination, reduce administrative burden, and help beneficiaries receive skilled nursing or rehabilitation services without an unnecessary inpatient stay. Some commenters believed the waiver would improve episode management, support recovery, preserve hospital capacity for higher-acuity patients, and lower Medicare costs by allowing care in lower-cost settings when clinically appropriate. The commenters generally viewed the waiver as necessary for the success of CJR–X and for protecting patient access to care.

Response: We appreciate the commenters' support for the proposed SNF three-day rule waiver.

Comment: A commenter recommended that CMS consider waivers to support skilled-level post-acute recovery services in the home, including SNF-at-home approaches and virtual physician involvement in SNF-related care. The commenter referenced a study stating that SNF-at-home models may improve outcomes, reduce rehospitalizations, lower costs, and support clinically appropriate home recovery for beneficiaries who need more than traditional home health but may not require institutional placement. The commenter recommended waiving or modifying requirements such as 24/7 onsite nursing, facility life safety code standards, and certain SNF physician visit or supervision requirements so that remote monitoring, home visits, and virtual physician supervision could support home-based, post-acute care.

Response: We acknowledge the recommendation to explore SNF-at-home approaches for CJR–X beneficiaries. We share the commenter's interest in post-acute capacity, safe home-based recovery, and avoiding unnecessary institutional utilization. Therefore, we are finalizing waivers which support home-based flexibilities, including post-discharge home visits and telehealth waivers. However, the creation of new at-home benefits are a legislative matter and beyond the scope of CJR–X. Additionally, these changes would require program-wide implementation prior to adoption. Should such changes to Medicare coverage be implemented at the program level, we would consider further appropriate action.

Comment: A commenter supported the SNF three-day rule waiver but stated that SNFs may be reluctant to accept beneficiaries who have not had a three-day inpatient stay. The commenter stated that SNFs may not understand the logistics of the waiver, may view billing as complex, and may worry that the waiver will not be honored if the beneficiary's status changes. The commenter recommended additional education and guidance for SNFs regarding use and allowability of the waiver. The commenter also requested that CMS automatically approve a beneficiary's three-day stay waiver without requiring the SNF to submit different billing information.

Response: We appreciate the commenter's concerns regarding SNF understanding of waiver eligibility, billing, and documentation requirements. We recognize the importance of clear operational guidance to support implementation of the waiver and will consider whether additional subregulatory guidance or educational materials may be appropriate. We thank the commenter for this suggestion.

Comment: A commenter strongly supported inclusion of the SNF three-day rule waiver and urged CMS to confirm it as an automatic, universal provision for all CJR–X participants. The commenter mentioned that patients undergoing outpatient joint replacement currently cannot access SNF-level care under Medicare due to not having an inpatient stay. For this reason, the commenter stated that the waiver should not be a discretionary flexibility that may or may not be implemented.

Response: We appreciate the commenter's support for inclusion of the SNF 3-day rule waiver and the comment regarding beneficiaries

undergoing outpatient joint replacement procedures. We note that extending the SNF 3-day rule waiver to beneficiaries receiving outpatient procedures was not proposed and therefore is beyond the scope of this rulemaking. We further note that we do not believe it is necessary or appropriate to automatically apply the SNF 3-day rule waiver to all beneficiaries who may trigger an episode in CJR–X. We continue to believe that episode-based payment models can mitigate incentives to overuse SNF services, while allowing participants flexibility to coordinate post-acute care when warranted. Accordingly, we are finalizing the SNF 3-day rule waiver as proposed. We thank the commenter for this suggestion and may consider it in future rulemaking.

Comment: A commenter expressed concern that the proposed SNF Five Star rating requirement for the three-day rule waiver could create unequal access to flexible post-acute care. The commenter stated that beneficiaries in markets with an adequate supply of three-star SNFs may have more patient-centered options than beneficiaries in markets with limited three-star SNF capacity. The commenter also questioned the star rating methodology, citing variation in how survey standards and guidance are applied across states and surveyors. The commenter believed the proposed structure could disadvantage beneficiaries and hospitals in markets where the rating threshold limits available SNF options.

Response: We appreciate the commenter's concerns about the proposed qualified SNF criteria. We proposed the three-star overall rating requirement as a beneficiary protection to identify SNFs that have demonstrated at least average overall quality based on health inspection, staffing, and quality measure domains. We believe that implementing the three-star overall rating requirement does not limit patient care options as patients are still able to be admitted to a SNF not meeting the three-star requirement after meeting the three-day inpatient stay requirement. Additionally, we believe it is necessary to establish benchmarks for quality to protect beneficiaries from being discharged to low-quality providers under a model where participant hospitals may have financial incentives to limit post-acute care spending. The 3-star standard ensures that financial considerations do not supersede clinical appropriateness. Additionally, we recognize that a SNF's star rating may fluctuate from month to month. However, by requiring that a SNF maintain an overall rating of 3 stars or better for at least 7 of the most recent rolling 12 months, we account for normal variations while still ensuring a baseline of sustained quality over time.

Comment: Some commenters supported allowing use of the SNF three-day rule waiver for swing bed arrangements, particularly in rural communities where no qualified SNF may be available locally. The commenters stated that swing beds can be critical to managing post-acute transitions and preserving access close to a beneficiary's home. They recommended that CMS treat swing bed facilities equitably within the waiver framework and avoid eligibility standards that favor traditional SNFs over rural swing bed capacity. They also requested additional operational clarity on how qualified swing bed facilities would be identified, monitored, and supported under CJR–X.

Response: We appreciate the commenters' support for recognizing swing bed arrangements under the proposed SNF three-day rule waiver. We proposed the waiver for discharges to hospitals and Critical Access Hospitals operating under swing bed agreements to provide greater flexibility in post-acute care in rural areas without qualified local SNF availability. We also proposed that providers furnishing SNF services under swing bed arrangements will be considered SNFs for purposes of the waiver. However, the minimum 3-star quality rating requirement will apply only to providers that are eligible for the CMS Five-Star Quality Rating System. As a result, swing bed hospitals, which are not rated under the Five-Star system, will not be subject to the minimum star-rating requirement. We recognize the commenters' request for operational clarity and anticipate implementation materials, participant guidance, and monitoring activities to help participants understand how the waiver applies.

Comment: Some commenters supported the proposed swing bed flexibility but stated that the proposal did not address any financial accountability concerns for rural participants that use CAH swing beds. The commenters stated that CAH swing beds are reimbursed on a cost basis and can be substantially more expensive than traditional SNF stays. They believed regional target prices may not adequately reflect rural post-acute care market structure when rural hospitals are compared with urban peers that have access to lower-cost SNFs. They recommended that CMS acknowledge the cost differential, monitor CAH swing bed utilization and episode costs, and propose adjustments through notice-and-comment rulemaking if rural participants face systematically unachievable target prices.

Response: We appreciate the commenters' support for the proposed swing bed flexibility and recognize their concern that CAH swing bed use may have different spending implications for rural CJR–X participants than traditional SNF care. We proposed to waive the SNF 3-day rule for CJR–X beneficiaries, including for hospitals and CAHs with swing bed agreements, to support beneficiary choice and care coordination. However, CJR–X participants will remain accountable for episode spending under the proposed pricing and reconciliation methodology. We will monitor SNF utilization patterns, including shorter inpatient stays and potential patient steering, and will consider the commenters' concerns regarding CAH swing bed utilization, rural episode spending, and target price implications as we evaluate the proposed waiver and related monitoring policies.

After consideration of the public comments we received, we are finalizing with modification to our proposal at § 512.695(b)(1) through (4) to waive the SNF 3-day stay rule within 30 days following discharge from the anchor hospitalization or anchor procedures for episodes in CJR–X. The modification of 30 days is to maintain a continuation of the existing waiver policy established by the CJR Model.

(a) Additional Beneficiary Protections Under the SNF 3-Day Stay Rule Waiver

We believed that it was necessary to propose beneficiary protections against financial liability in addition to the beneficiary protections discussed elsewhere in this proposed rule. Specifically, we believed it is important to discern whether a waiver applies to SNF services furnished to a particular beneficiary to ensure compliance with the conditions of the waiver and improve our ability to monitor waivers for misuse.

In considering additional beneficiary protections that may be necessary to ensure proper use of SNF 3-day rule waiver under the CJR–X, we note that there are existing, well-established payment and coverage policies for SNF services based on sections 1861(i), 1862(a)(1), and 1879 of the Act that include protections for beneficiaries from liability for certain non-covered SNF charges. These existing payment and coverage policies for SNF services continue to apply under the CJR–X, including SNF services furnished pursuant to the SNF 3-day waiver. (For example, see section 70 in the Medicare

Claims Processing Manual, Chapter 30—Financial Liability Protections on the CMS website at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c30.pdf;* and Medicare Coverage of Skilled Nursing Facility Care *https://www.medicare.gov/coverage/skilled-nursing-facility-snf-care;* Medicare Benefit Policy Manual, Chapter 8—Coverage of Extended Care (SNF) Services Under Hospital Insurance at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c08pdf.pdf*). In general, CMS requires that the SNF inform a beneficiary in writing about services and fees before the beneficiary is discharged to the SNF (§ 483.10(b)(6)–); the beneficiary cannot be charged by the SNF for items or services that were not requested (§ 483.10.(c)(8)(iii)(A)); a beneficiary cannot be required to request extra services as a condition of continued stay (§ 483.10.(c)(8)(iii)(B)); and the SNF must inform a beneficiary that requests an item or service for which a charge will be made that there will be a charge for the item or service and what the charge will be (§ 483.10.(c)(8)(iii)(C)). (See also section 6 of Medicare Coverage of Skilled Nursing Facility Care at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c06.pdf.*)

As we discussed in the 2015 CJR final rule (80 FR 73454 through 73460), commenters expressed concern regarding the lag between a CJR beneficiary's Medicare coverage or eligibility status change and a CJR–X participant's awareness of that change. There may be cases in which a SNF waiver is used by a CJR–X participant because the CJR–X participant believes that the beneficiary meets the inclusion criteria, based on the information available to the hospital and SNF at the time of the beneficiary's admission to the SNF, but in fact the beneficiary's Medicare coverage has changed and the hospital was unaware of it based on available information. We recognize that despite good faith efforts by CJR–X participants and SNFs to determine a beneficiary's Medicare status for the model, it may occur that a beneficiary is not eligible to be included in the CJR–X at the time the SNF waiver is used. In these cases, we will cover services furnished under the waiver when the information available to the provider at the time the services under the waiver were furnished indicated that the beneficiary was included in the model.

Based on our experience with SNF 3-day rule waiver, including in the CJR Model, we believe there are situations where it would be appropriate to require additional beneficiary financial protections under the SNF 3-day waiver for the CJR–X. Specifically, we are concerned about potential beneficiary financial liability for non-covered Part A SNF services that might be directly related to use of the SNF 3-day waiver under the CJR–X. We are concerned that there could be scenarios where a CJR–X beneficiary could be charged for non-covered SNF services that were a result of a CJR–X participant's inappropriate use of the SNF waiver. Specifically, we are concerned that a CJR–X beneficiary could be charged for non-covered SNF services if a CJR–X participant discharges a CJR–X beneficiary to a SNF that does not meet the quality requirement (3 stars or higher in 7 of the last 12 months), and payment for SNF services is denied for lack of a qualifying inpatient hospital stay. We recognize that requiring a discharge planning notice would help mitigate concerns about CJR–X beneficiaries' potential financial liability for non-covered services. Nevertheless, we are concerned that in this scenario, once the claim is rejected, the CJR–X beneficiary may not be protected from financial liability under existing Medicare rules because the waiver would not be available, and the CJR–X beneficiary would not have had a qualifying inpatient hospital stay. Thus, the CJR–X beneficiary could be charged by the SNF for non-covered SNF services that were a result of an inappropriate attempt to use the waiver. In this scenario, Medicare would deny payment of the SNF claim, and the CJR–X beneficiary could potentially be charged by the SNF for these non-covered SNF services, potentially subjecting such CJR–X beneficiaries to significant financial liability. In this circumstance, we assume the CJR–X participant's intent was to rely upon the SNF 3-day waiver, but the waiver requirements were not met. We believe that in this scenario, the rejection of the claim could easily have been avoided if the hospital had confirmed that the requirements for use of the SNF 3-day waiver were satisfied or if the CJR–X beneficiary had been provided the discharge planning notice and elected to go to a SNF that met the quality requirement.

The CJR Model modifications in the 2016 EPM rule (82 FR 180) addressed beneficiary liability financial concerns for non-covered SNF services related to the waiver by generally placing the risk on the participant hospital and we believe it is appropriate to propose a similar policy for CJR–X. Original CJR participant hospitals were generally held financially responsible for misusing the waiver in situations where waiver requirements are not met, because participant hospitals were required to be aware of the 3-day waiver requirements. Participant hospitals were the entities financially responsible for episode spending under the model and made the decision as to whether it is appropriate to discharge a beneficiary without a 3-day stay. In addition, the requirements for use of the SNF waiver were clearly laid out in the 2015 CJR Final Rule (80 FR 73460). CMS posted on the public website a list of qualifying SNFs (those with a 3-star or higher rating for 7 of the last 12 months). Original CJR participant hospitals were required to consult the published list of SNFs prior to utilizing the SNF 3-day rule waiver.

For participant hospitals that provide a beneficiary with the discharge planning notice, the hospital would not have financial liability for non-covered SNF services that result from inapplicability of the waiver. In other words, when the participant hospital has discharged a beneficiary to a SNF that does not qualify under the conditions of the waiver, and has not provided the required discharge planning notice so that the beneficiary is aware that he or she is accepting financial liability for non-covered SNF services as a result of not having a qualifying inpatient stay, the ultimate responsibility and financial liability for the non-covered SNF stay rests with the participant hospital. For this reason, we proposed to align with the CJR Model policy and require CJR–X participants to keep a record of discharge planning notice distribution to CJR–X beneficiaries. We will monitor CJR–X participants' use of discharge planning notices to assess the potential for their misuse.

To protect CJR–X beneficiaries from being charged for non-covered SNF charges in instances when the waiver was used inappropriately, and similar to the CJR Model (82 FR 558), we proposed to add certain beneficiary protection requirements that would apply for SNF services that would otherwise have been covered except for lack of a qualifying hospital stay. Specifically, we proposed that if a CJR–X participant discharges a CJR–X beneficiary without a qualifying 3-day inpatient stay to a SNF that is not on the published list of SNFs that meet the CJR–X SNF 3-Day Rule waiver quality requirements as of the date of admission to the SNF, the CJR–X participant will be financially liable for the SNF stay if no discharge planning notice is provided to the CJR–X

beneficiary, alerting them of potential financial liability. If the CJR–X participant provides a discharge planning notice then the CJR–X participant will not be financially liable for the cost of the SNF stay and the normal Medicare FFS rules for coverage of SNF services will apply. In cases where the CJR–X participant provides a discharge planning notice and the CJR–X beneficiary chooses to obtain care from a non-qualified SNF without a qualifying inpatient stay, the CJR–X beneficiary assumes financial liability for services furnished (except those that are covered by Medicare Part B during a non-covered inpatient SNF stay).

In the event a CJR–X beneficiary is discharged to a SNF without a qualifying 3-day inpatient stay, but the SNF is not on the qualified list as of the date of admission to the SNF, and the CJR–X participant has failed to provide a discharge planning notice, we proposed that CMS apply the following rules:

- CMS does not make payment to the SNF for such services.
- The SNF must not charge the CJR–X beneficiary for the expenses incurred for such services; and the SNF must return to the CJR–X beneficiary any monies collected for such services.
- The hospital must be responsible for the cost of the uncovered SNF stay.

We sought comment on these proposals at § 512.695(b)(5) to hold the CJR–X participant financially responsible when the waiver of the SNF 3-day rule is used inappropriately. We received no comments on this proposal and therefore are finalizing this provision without modification.

k. Data Sharing

(1) Overview

In the proposed rule, we aimed to incentivize CJR–X participants to engage in care redesign efforts to improve quality of care and reduce Medicare FFS spending for beneficiaries included in the model during the anchor hospitalization or anchor procedure and the 90 days post-discharge from the hospital or hospital outpatient department. We stated these care redesign efforts would require CJR–X participants to work with and coordinate care with other health care providers and suppliers to improve the quality and efficiency of care for Medicare beneficiaries.

We noted in the proposed rule that we have experience with a range of efforts designed to improve care coordination for Medicare beneficiaries, including the BPCI Advanced and CJR Models (80 FR 73274), both of which make certain Medicare data available to participants to better enable them to achieve their goals. For example, both the BPCI Advanced and CJR Model (80 FR 73515) participants were eligible to request to receive beneficiary-identifiable claims data and financial performance data from the baseline period and throughout their tenure in the model to help them better understand the FFS beneficiaries that are receiving services from their providers and help them improve quality of care and conduct care coordination and other care redesign activities to improve patient outcomes or reduce health care for beneficiaries that could have initiated an episode in the model.

Based on our experience with these efforts, as set forth later in this section, we proposed to make certain beneficiary-identifiable claims data and regional aggregate data available to participants in CJR–X regarding Medicare FFS beneficiaries who may initiate an episode and be attributed to them in the model. However, we also expected that CJR–X participants are able to, or will work toward, independently identifying and producing their own data, through electronic health records, health information exchanges, or other means that they believe are necessary to best evaluate the health needs of their patients, improve health outcomes, and produce efficiencies in the provision and use of services.

(2) Beneficiary-Identifiable Claims Data

(a) Legal Authority To Share Beneficiary-Identifiable Data

In the proposed rule we stated that we believe that CJR–X participants may need access to certain Medicare beneficiary-identifiable data for the purposes of evaluating their performance, conducting quality assessment and improvement activities, conducting population-based activities relating to improving health or reducing health care costs, or conducting other health care operations listed in the first or second paragraph of the definition of ''health care operations'' under the HIPAA Privacy Rule, 45 CFR 164.501. We recognized that there are issues and sensitivities surrounding the disclosure of beneficiary-identifiable health information, and that several laws place constraints on sharing individually identifiable health information. For example, section 1106 of the Act generally bars the disclosure of information collected under the Act without consent unless a law (statute or regulation) permits the disclosure. We state that here, the HIPAA Privacy Rule would allow for the proposed disclosure of beneficiary-identifiable health information by CMS because it permits the use and disclosure of such data to carry out treatment, payment, and health care operations, as discussed under 45 CFR 164.506. In the proposed rule, we proposed to make CJR–X participants accountable for quality and cost outcomes for CJR–X beneficiaries during an anchor hospitalization or anchor procedure and during the 30-day post-discharge period. We believed that it is necessary for the purposes of this model to offer CJR–X participants the ability to request and receive summary or raw beneficiary-identifiable claims data for a 3-year baseline period as well as on a monthly basis during the performance year to help CJR–X participants engage in care coordination and quality improvement activities for CJR–X beneficiaries in an episode. We stated that for the 3-year baseline period, CJR–X participants will only receive beneficiary-identifiable claims data for beneficiaries that initiated an episode in their hospital or hospital outpatient department in the 3-year baseline period, and the beneficiary-identifiable claims data shared with the CJR–X participant will be limited to the items and services included in the episode. In other words, the CJR–X participant will not receive beneficiary-identifiable claims data for beneficiaries that were admitted to their hospital or hospital outpatient department and did not initiate an episode in the baseline period. We also stated that nor will the CJR–X participant receive beneficiary-identifiable claims data, for beneficiaries who did initiate an episode in their hospital or hospital outpatient department during the baseline period, for items and services that are not included in an episode, such as a primary care visit five days before the episode or a hospital readmission one day after the episode ends. We proposed applying a similar approach for the beneficiary-identifiable claims data sharing during the performance year. We believed that these data will constitute the minimum information necessary to enable the CJR–X participant to understand spending patterns during the episode, appropriately coordinate care, and target care strategies toward individual beneficiaries furnished care by the CJR–X participant and other providers and suppliers.

We indicated that under the HIPAA Privacy Rule, covered entities (means a health plan, a health care clearinghouse, and a health care provider who transmits any health information in

electronic form in connection with a transaction covered in 45 CFR Subtitle A, Subchapter C) are barred from using or disclosing individually identifiable health information that is ''protected health information'' or PHI in a manner that is not permitted or required under the HIPAA Privacy Rule, without the individual's authorization. We stated that the Medicare FFS program, a ''health plan'' function of the Department, is subject to the HIPAA Privacy Rule limitations on the disclosure of PHI. Hospitals, which will be CJR–X participants, are also covered entities, provided they are ''health care providers'' as defined by 45 CFR 160.103, such as for claims transactions. Since CJR–X participants are hospitals who are covered entities and are the only entity able to request the beneficiary-identifiable data and with whom CMS will share the beneficiary-identifiable data, we believed that the proposed disclosure of the beneficiary claims data for an anchor hospitalization or an anchor procedure plus 30-day post-discharge for episodes included under the CJR–X Model will be permitted by the HIPAA Privacy Rule under the provisions that permit disclosures of PHI for ''health care operations'' purposes. We indicated that under those provisions, a covered entity is permitted to disclose PHI to another covered entity for the recipient's health care operations purposes if both covered entities have or had a relationship with the subject of the PHI to be disclosed, the PHI pertains to that relationship, and the recipient will use the PHI for a ''health care operations'' function that falls within the first two paragraphs of the definition of ''health care operations'' in the HIPAA Privacy Rule (45 CFR 164.506(c)(4)).

We noted that the first paragraph of the definition of health care operations includes ''conducting quality assessment and improvement activities, including outcomes evaluation and development of clinical guidelines'' and ''population-based activities relating to improving health or reducing health costs, protocol development, case management and care coordination'' (45 CFR 164.501).

We stated in the proposed rule that CJR–X participants will be using the data on their patients to evaluate the performance of the CJR–X participant and other providers and suppliers that furnished services to the patient, conduct quality assessment and improvement activities, and conduct population-based activities relating to improved health for their patients. We indicated that when done by or on behalf of a covered entity, these are covered functions and activities that will qualify as ''health care operations'' under the first and second paragraphs of the definition of health care operations at 45 CFR 164.501. Hence, as previously discussed, we believed that this provision was extensive enough to cover the uses we would expect a CJR–X participant to make of the beneficiary-identifiable data and would be permissible under the HIPAA Privacy Rule. Moreover, our proposed disclosures would be made only to HIPAA covered entities, specifically hospitals that are CJR–X participants that have (or had) a relationship with the subject of the information, the information we would disclose would pertain to such relationship, and those disclosures would be for purposes listed in the first two paragraphs of the definition of ''health care operations.''

We stated in the proposed rule that when using or disclosing PHI, or when requesting this information from another covered entity, covered entities must make ''reasonable efforts to limit'' the information that is used, disclosed, or requested to a ''minimum necessary'' to accomplish the intended purpose of the use, disclosure, or request (45 CFR 164.502(b)). We believed that the provision of the proposed data elements, as described in section X.C.2.k.(2)(c). of this proposed rule, would constitute the minimum data necessary to accomplish the CJR–X's model goals of the CJR–X participant.

We noted in the proposed rule that The Privacy Act of 1974 also places limits on agency data disclosures. The Privacy Act applies when the federal government maintains a system of records by which information about individuals is retrieved by use of the individual's personal identifiers (names, Social Security numbers, or any other codes or identifiers that are assigned to the individual). We further indicated that The Privacy Act prohibits disclosure of information from a system of records to any third party without the prior written consent of the individual to whom the records apply (5 U.S.C. 552a(b)).

We stated that ''routine uses'' are an exception to this general principle. A routine use is a disclosure outside of the agency that is compatible with the purpose for which the data was collected. Routine uses are established by means of a publication in the **Federal Register** about the applicable system of records describing to whom the disclosure will be made and the purpose for the disclosure. We stated that for CJR–X, the system of records would be covered in Master Demonstration, Evaluation, and Research Studies (DERS) for the Office of Research, Development and Information (ORDI) system of record (72 FR 19705). We believed that the proposed data disclosures were consistent with the purpose for which the data discussed in the proposed rule was collected and may be disclosed in accordance with the routine uses applicable to those records.

We noted that, as was the case with the CJR Model, in the proposed rule, we proposed to disclose beneficiary-identifiable data to only the hospitals that are bearing risk for episodes and not with their collaborators. As stated in the 2015 CJR final rule (80 FR 73515), we believed that the hospitals that are specifically held financially responsible for an episode should make the determination as to which data are needed to manage care and care processes with their collaborators as well as which data they might want to re-disclose, if any, to their collaborators provided they are in compliance with the HIPAA Privacy Rule.

We stated in the proposed rule that we believe our data sharing proposals are permitted by and are consistent with the authorities and protections available under the aforementioned statutes and regulations. We sought comments on our proposals regarding the authority to share beneficiary-identifiable data with CJR–X participants. We received no comments on this proposal and therefore are finalizing this provision without modification.

(b) Summary and Raw Beneficiary-Identifiable Claims Data Reports

Based on our experience with BPCI Advanced and CJR Model participants, we recognize that CJR–X participants could vary with respect to the kinds of beneficiary-identifiable claims information that would best meet their needs. For example, while many CJR–X participants might have the ability to analyze raw claims data, other CJR–X participants could find it more useful to have a summary of these data. Given this, we proposed to make beneficiary-identifiable claims data for episodes in CJR–X available through two formats, summary and raw, both for the baseline period and on an ongoing monthly basis during their participation in the model as we do for BPCI Advanced and the CJR Model (80 FR 73308). Summary beneficiary-identifiable claims data summarizes the claims data by combining and categorizing claims data to provide a broad view of the CJR–X participant's health care expenditures and utilization. For example, a CJR–X participant may use summary beneficiary-identifiable data to identify total episode spending across all of a

CJR–X participant's episodes in a given performance year. Raw beneficiary-identifiable claims data is unrefined and has not been grouped or combined and includes the specific claims fields, as described in the minimum necessary data section X.C.2.k.(2)(c). of this proposed rule, at the episode level. For example, a CJR–X participant may use raw beneficiary-identifiable data to look at a particular episode to identify the diagnosis code(s) that were associated with a hospital readmission for a CJR–X beneficiary.

First, for CJR–X participants who wish to receive summary Medicare Parts A and B claims data, we proposed offering CJR–X participants that enter into a CJR–X data sharing agreement with CMS, as specified in section X.C.2.k.(6). of this proposed rule, the option to submit a formal data request for summary beneficiary-identifiable claims data that have been aggregated to provide summary-level spending and utilization data on CJR–X beneficiaries who would be in an episode during the baseline period and performance years in accordance with applicable privacy and security laws and established privacy and security protections. Such summary beneficiary-identifiable claims data would provide tools to monitor, understand, and manage utilization and expenditure patterns as well as to develop, target, and implement quality improvement programs and initiatives. For example, if the data provided by CMS to a particular CJR–X participant reflects that, relative to their peers, a certain provider is associated with significantly higher rates of inpatient readmissions than the rates experienced by other beneficiaries with similar care needs, that may be evidence that the CJR–X participant could consider, among other things, the appropriateness of that provider, whether other alternatives might be more appropriate, and whether there exist certain care interventions that could be incorporated post- discharge to lower readmission rates.

Secondly, for CJR–X participants who wish to receive raw Medicare Parts A and B claims data, we proposed to offer CJR–X participants that enter into a CJR–X data sharing agreement with CMS the opportunity to submit a formal data request for raw beneficiary-identifiable claims data for CJR–X beneficiaries who would be in an episode during the baseline period and performance years in accordance with applicable privacy and security laws and established privacy and security protections. These raw beneficiary-identifiable claims data would be much more detailed compared to the summary beneficiary-identifiable claims data and include all beneficiary-identifiable claims for all episodes in CJR–X. In addition, they would include episode summaries, indicators for excluded episodes, diagnosis and procedure codes, and enrollment and dual eligibility information for beneficiaries that initiate episodes in CJR–X. Through analysis, these raw beneficiary-identifiable claims data would provide CJR–X participants with information to improve their ability to coordinate and target care strategies as well as to monitor, understand, and manage utilization and expenditure patterns. Such data would also aid them in developing, targeting, and implementing quality improvement programs and initiatives.

The summary and raw beneficiary-identifiable data would allow CJR–X participants to assess summary and raw data on their relevant CJR–X beneficiary population, giving them the flexibility to utilize the data based on their analytic capacity. Therefore, for both the baseline period and as frequently as a monthly basis during an CJR–X participant's performance year, we proposed to provide CJR–X participants with an opportunity to request summary beneficiary-identifiable claims data and raw beneficiary-identifiable claims data that would meet minimum necessary requirements in 45 CFR 164.502(b) and 164.514(d) and include Medicare Parts A and B beneficiary-identifiable claims data for CJR–X beneficiaries in an episode during the 3-year baseline period and performance year. This means the summary and raw beneficiary-identifiable claims data would encompass the total expenditures and claims for the proposed episodes, including the anchor hospitalization or anchor procedure, and all non-excluded items and services in an episode covered under Medicare Parts A and B within the 30 days after discharge, including hospital care, post- acute care, and physician services for the CJR–X participant's beneficiaries.

We proposed that if a CJR–X participant wishes to receive beneficiary-identifiable claims data, they must submit a formal request for data on an annual basis in a manner form and by a date specified by CMS, indicating if they want summary beneficiary-identifiable data, raw beneficiary-identifiable data, or both, and sign a CJR–X data sharing agreement. To comply with applicable laws and safeguards, we proposed the CJR–X participant must attest that—

- The CJR–X participant is requesting claims data of CJR–X beneficiaries who would be in an episode during the baseline period or performance year as a HIPAA covered entity;
- The CJR–X participant's request reflects the minimum data necessary for the CJR–X participant to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501; and
- The CJR–X participant's use of claims data will be limited to developing processes and engaging in appropriate activities related to coordinating care and improving the quality and efficiency of care and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all CJR–X beneficiaries, in an episode during the baseline period or performance year, and that these data will not be used to reduce, limit or restrict care for specific Medicare beneficiaries.

We proposed that the summary and raw beneficiary-identifiable data would be packaged and sent to a data portal (to which the CJR–X participants must request and be granted access) in a ''flat'' or binary format for the CJR–X participant to retrieve. We also note that, for both the summary and raw beneficiary-identifiable claims data, we would exclude information that is subject to the regulations governing the confidentiality of substance use disorder patient records (42 CFR part 2) from the data shared with a CJR–X participant. We believe our proposal to make data available to CJR–X participants, through the most appropriate means, may be useful to CJR–X participants to determine appropriate ways to increase the coordination of care, improve quality, enhance efficiencies in the delivery system, and otherwise achieve the goals of the proposed model. CJR–X beneficiaries would be informed of CJR–X and the potential sharing of Medicare beneficiary-identifiable claims data through the beneficiary notification, as discussed in section X.C.2.c.(1). of this proposed rule. Further, CMS would make beneficiary-identifiable claims data available to a CJR–X participant for beneficiaries who may be included in episodes, in accordance with applicable privacy and security laws and only in response to the CJR–X participant's request for such data, through the use of an executed CJR–X data sharing agreement with CMS.

We requested comments on this proposal to share beneficiary-identifiable claims data with CJR–X participants at § 512.665(b).

The following is a summary of the public comments received on our

proposal to share summary and raw beneficiary-identifiable claims data reports, and our responses to these comments:

Comment: A commenter noted a drafting error in the proposed rule that referred to TEAM participant rather than the intended CJR–X participant.

Response: We thank the commenter for their diligence in identifying the error and have made corrections in this final rule ensuing the appropriate term was used.

Comment: A commenter supported the sharing of beneficiary-identifiable claims data with CJR–X participants.

Response: We thank the commenter for their support.

Comment: Some commenters requested that CMS provide target price files and methodology documentation prior to implementation so participants can validate episode pricing and identify opportunities for improvement. Some commenters requested access to 180-day lookback information used for HCC risk-adjustment flagging. A few commenters requested utilization reports, quality data, or other data to identify trends and opportunities for quality improvement. A commenter requested recommended CMS include computed risk adjustment factor values and a preliminary per-episode target price in the monthly summary files, with a clear note that the final reconciliation figure may differ. Another commenter requested the summary data be aggregated at the episode-level with beneficiary identifiers.

Response: We thank the commenters for their recommendations. We note that CJR–X participants are eligible to receive summary and raw beneficiary-identifiable and aggregate claims data pursuant to a data request and execution of the CJR–X data sharing agreement. As discussed in section X.C.2.f.(3)(i) of this final rule, we will be sharing with CJR–X participants preliminary target prices prior to the performance year starting in the late November time frame. We understand sharing prices and baseline period data earlier may help CJR–X participants better prepare for model implementation and we will strive to deliver preliminary target prices and baseline period prices as soon as practicable. In addition to preliminary target prices and baseline period data, we anticipate sharing episode and target prices specifications with CJR–X participants prior to performance year 1 starting to further help them understand how episodes and target prices are constructed.

With respect to sharing claims data in the 180-day lookback period, historically we have not shared this information because this claims data encompasses a time period before the beneficiary initiated the episode. However, we see the value in how this information could help the CJR–X participant identify whether beneficiaries entering LEJR episodes had recent post-acute care use, chronic conditions, or utilization patterns that may affect care coordination needs and episode spending. We will take this into consideration as we think about the minimum necessary data being shared with CJR–X participants.

We also want to acknowledge commenters' requests to share utilization reports and other data to help CJR–X participants identify opportunities for care improvements and efficiencies. We anticipate we may share feedback reports to help participants understand spending and utilization metrics. We also anticipate sharing quarterly reports with participants that will help them better estimate their reconciliation target price. For baseline and monthly summary data, we anticipate sharing this data at the hospital-level to help CJR–X participants monitor episode spending trends but we are open to sharing more granular data to support CJR–X participants participation in the model.

We will continue to take commenters' recommendations into consideration as we develop the operational data files and supporting documentation for CJR–X. We note that any preliminary pricing or risk-adjustment information shared during a performance year would not replace the reconciliation target price methodology or final payment calculations under CJR–X.

Comment: A few commenters requested CMS modernize their data delivery systems and use APIs rather than sharing flat files. A commenter recommended that CMS deliver CJR–X data using FHIR, preferably through the Beneficiary Claims Data API, rather than flat files. The commenter stated that standardizing on FHIR would allow vendors and hospitals to reuse existing configurations instead of building bespoke formats for each program.

Response: We appreciate the commenters' recommendations regarding modernization of CMS data delivery methods. We recognize that application programming interfaces (APIs) and interoperability standards such as Fast Healthcare Interoperability Resources (FHIR) may reduce administrative burden, support integration with existing health information technology systems, and allow participants and their vendors to leverage standardized data exchange capabilities across multiple CMS programs.

We note that for models with known beneficiary lists (like some ACO models where the participant already knows which beneficiaries are attributed to them), APIs work particularly well because of the predefined beneficiary population. The participant's system can simply query for updates on known beneficiaries, and CMS can enforce access controls against a stable attribution list. However, episode-based models like CJR–X, the challenge is different because beneficiaries are typically not known in advance. An episode only exists after an anchor hospitalization or procedure occurs. Until that event happens, CMS does not know which beneficiaries will become CJR–X beneficiaries and the hospital does not know which beneficiaries will ultimately trigger an episode. In addition, claims often arrive with processing delays and may be adjusted after submission, while episode attribution may change based on final claim coding and episode construction rules. As a result, we often generates episode-specific files after identifying beneficiaries through claims processing and attribution logic. Flat files are operationally straightforward because we can periodically determine which beneficiaries meet the episode criteria and then distribute a complete data package.

We believe it is important to ensure that data sharing methods reliably support episode identification, attribution, and participant operations before adopting alternative data delivery approaches. We see the benefits of API and FHIR-based data exchange and remain committed to improving data sharing.

Comment: A few commenters acknowledge challenges identifying beneficiaries at the point of care, and expressed the need for more timely data.

Response: We acknowledge the commenters' concerns regarding the operational challenges associated with identifying beneficiaries who may be included in an episode at the point of care. We recognize that episode-based payment models rely on episode attribution methodologies that may depend on claim submission, coding, and other administrative processes that are not always finalized during a beneficiary's hospitalization or procedure. We also acknowledge that hospitals may experience challenges identifying potential episode beneficiaries in real time, particularly when final episode attribution depends on information that becomes available after discharge.

We note that CJR–X is designed to identify episodes using specified MS–DRGs and HCPCS codes, consistent with the CJR Model and other episode-based payment models. While we recognize the value of more timely beneficiary identification, we believe it is important to ensure that episode attribution is accurate and based on complete information. We may consider opportunities to provide more timely preliminary episode identification information, recognizing that such information may be subject to change based on final claims processing and episode attribution methodologies.

Comment: A commenter recommended that hospitals be required to involve physicians in episode management through episode data sharing.

Response: We appreciate the commenter's recommendation regarding physician access to episode data. We agree that physicians play an important role in care coordination, care redesign, and episode management for beneficiaries undergoing lower extremity joint replacement procedures. We recognize that access to relevant episode information may support collaboration among hospitals, physicians, and other providers involved in a beneficiary's care.

Under CJR–X, CMS will share beneficiary-identifiable data with CJR–X participants that have requested such data and have executed a CJR–X data sharing agreement with CMS. We believe this approach appropriately protects beneficiary privacy and ensures accountability for the use and disclosure of beneficiary-identifiable information. However, a CJR–X participant is not precluded from sharing data received under the model with physicians and other downstream recipients involved in CJR–X activities, provided that such disclosures are consistent with applicable law and the requirements of the CJR–X data sharing agreement, as discussed in section X.C.2.k.(6) of this final rule. In particular, a CJR–X participant may share beneficiary-identifiable data with a downstream recipient that is acting as a business associate of the CJR–X participant, provided the participant contractually binds the downstream recipient to the same terms and conditions governing the use, disclosure, safeguarding, and protection of the data that apply to the participant under its data sharing agreement with CMS.

We do not believe it is appropriate to require CJR–X participants to share data with physicians or other downstream recipients. We believe CJR–X participants are best positioned to determine which entities require access to model data to support care coordination, quality improvement, and episode management activities based on their individual organizational structures and care delivery arrangements. Hospitals vary considerably in how they engage physicians and other providers in episode management activities, and a mandatory data-sharing requirement could impose operational burden and require disclosures that may not be necessary in all circumstances. In addition, because beneficiary-identifiable data are subject to privacy, security, and data-use requirements, we believe CJR–X participants should retain discretion to determine whether and with whom such data should be shared, subject to the protections and conditions established in the CJR–X data sharing agreement. We believe this approach appropriately balances care coordination needs, participant flexibility, and beneficiary privacy protections while preserving the ability of CJR–X participants to share data when doing so supports CJR–X activities.

After consideration of the public comments, we are finalizing without modification the proposal to share beneficiary-identifiable claims data with CJR–X participants at § 512.665(b).

(c) Minimum Necessary Data

We proposed CJR–X participants must limit their beneficiary-identifiable data requests, for CJR–X beneficiaries who are in an episode during the baseline period or performance year, to the minimum necessary to accomplish a permitted use of the data. We proposed the minimum necessary Parts A and B data elements may include but are not limited to the following data elements:

- Medicare beneficiary identifier (ID).
- Procedure code.
- Sex.
- Diagnosis code.
- Claim ID.
- The from and through dates of service.
- The provider or supplier ID.
- The claim payment type.
- Date of birth and death, if applicable.
- Tax identification number.
- National provider identifier.

We sought comment on the minimum data necessary beneficiary-identifiable information for CJR–X participants to request beneficiary-identifiable information for purposes of conducting permissible health care operations purposes under this model at § 512.665(c).

The following is a summary of the public comments received on our proposal to share the minimum data necessary for purposes of conducting permissible health care operations purposes under this model, and our responses to these comments:

Comment: A commenter recommended CMS include additional elements to the minimum data necessary that would be shared with CJR–X participants to conduct permissible health care operations. The commenter requested demographic data for patient matching, including person ID, first and last name, date of birth, legal sex, and at least one of the following: address, email, phone, or SSN. They also requested CMS share claims fields including: Paid Amount, Allowed Amount, service line details, standardized amounts, Claim ID, patient ID, adjustment and reversal information, claim type, dates of service, admit and discharge dates, ICD diagnosis and procedure codes, CPT/HCPCS codes and modifiers, NPI for rendering, billing, and prescribing provider. Another commenter requested episode ID to link episodes with claims.

Response: The minimum necessary data elements that we are finalizing in this rule are not intended to be an exhaustive list of every variable CMS may share under CJR–X. We anticipate sharing the minimum necessary data elements, some of which overlap with the commenters request, and other data elements that are similar to the data shared under the CJR model and other episode-based payment models, which includes the minimum necessary claims data regarding beneficiary, provider, item or service codes and dates, and financial details. Similarly, we anticipate sharing an episode ID to help CJR–X participants identify all the expenditures associated with a given episode in the baseline period and performance year. Any beneficiary-identifiable data shared under CJR–X would remain subject to the CJR–X data sharing agreement, applicable privacy and security requirements, and CMS' determination of the minimum data necessary for the permitted purposes. After consideration of the public comments, we are finalizing without modification the proposal at § 512.665(c) to share the minimum data necessary for purposes of conducting permissible health care operations purposes under this model.

(3) Regional Aggregate Data

As discussed in section X.C.2.f.(3). of this proposed rule, we proposed to incorporate regional pricing data when establishing target prices for CJR–X participants, similar to the CJR Model's target prices that are constructed at the

regional level. As indicated in the 2015 CJR Final Rule (80 FR 73510), we finalized our proposal to share regional pricing data with original CJR participants because it was a factor affecting target prices. Given some of the similar features between the CJR Model and CJR–X proposed in this proposed rule, particularly our proposal to incorporate regional pricing data when establishing target prices under the model, we proposed to provide regional aggregate expenditure data available for all Parts A and B claims associated with episodes in CJR–X for the U.S. Census Division in which the CJR–X participant is located, as we similarly provide to hospitals participating in the CJR Model. Specifically, we proposed to provide CJR–X participants with regional aggregate data on the total expenditures during an anchor hospitalization or anchor procedure and the 90-day post-discharge period for all Medicare FFS beneficiaries who would have initiated an episode under our proposed episode definitions in section X.C.2.d. of this final rule during the baseline period and performance years. This data would be provided at the regional level; that is, we proposed to share regional aggregate data with a CJR–X participant for episodes initiated in the U.S. Census Division where the CJR–X participant is located. These regional aggregate data would be in a format similar to the proposed summary beneficiary-identifiable claims data and would provide summary information on the average episode spending for episodes in CJR–X in the U.S. Census Division in which the CJR–X participant is located. However, the regional aggregate data would not be beneficiary-identifiable and would be de-identified in accordance with HIPAA Privacy Rule, 45 CFR 164.514(b). Further, the regional aggregate data would also comply with CMS data sharing requirements, including the CMS cell suppression policy which stipulates that no cell (for example, admissions, discharges, patients, services, etc.) containing a value of 1 to 10 can be reported directly. Given the regional aggregate data is de-identified, we proposed CJR–X participants would not have to submit a request to receive this data and the data would not be subject to the terms and conditions of the CJR–X data sharing agreement.

We sought comments on our proposal at § 512.665(d) to provide these data to CJR–X participants.

The following is a summary of the public comments received on our proposal to share regional data with CJR–X participants, and our responses to these comments:

Comment: A commenter supported the sharing regional aggregate data with CJR–X participants.

Response: We thank the commenter for their support.

After consideration of the public comments we received, we are finalizing without modification the proposal at § 512.665(d) to share regional aggregate data with CJR–X participants.

(4) Timing and Period of Baseline Period Data

We recognize that providing the ability for CJR–X participants to request the summary and raw beneficiary-identifiable claims baseline data and receive regional aggregate baseline data would be important for CJR–X participants to be able to detect unnecessary episode spending, coordinate care, and identify areas for practice transformation, and that early provision of this data, specifically before the ''model start date,'' as defined in § 512.605, could facilitate their efforts to do so. Also, as discussed in section X.C.2.f.(3)(a). of this proposed rule, target prices would be calculated using a CJR–X participant's historical episode spending during their baseline period. Further, we believe that CJR–X participants would view the episode payment model effort as one involving continuous improvement. As a result, changes initially contemplated by a CJR–X participant could be subsequently revised based on updated information and experiences.

Therefore, as with the BPCI Advanced and CJR Models (80 FR 73511), we proposed to make 3-years of baseline period data available to CJR–X participants, who enter into a CJR–X data sharing agreement with CMS, for beneficiaries who would have been included in an episode had the model been implemented during the baseline period, and intend to make these data available upon request prior to the start of each performance year and in accordance with applicable privacy and security laws and established privacy and security protections. We would provide the 3 years of baseline period data for the summary and raw beneficiary-identifiable data and for the regional aggregate data. We believe that 3 years of baseline period data is sufficient to support a CJR–X participant's ability to detect unnecessary episode spending, coordinate care, and identify areas for practice transformation. We believe that if a CJR–X participant has access to baseline period data for the 3-year period for each performance year used to set target prices, then it would be better able to assess its practice patterns, identify cost drivers, and ultimately redesign its care practices to improve efficiency and quality. We considered to propose to make available 4 years of baseline period data, or offering 1 year of baseline period data, but we believe offering 4 years of baseline period data would not be necessary since target prices in CJR–X are constructed from a 3-year baseline period and 1 year of data may not sufficiently help CJR–X participants identify areas to improve beneficiary health and care coordination or reducing health costs.

Therefore, we proposed that the 3-year period utilized for the baseline period match the baseline data used to create CJR–X participants target prices every performance year, and roll forward one year every performance year, as discussed in section X.C.2.f.(3)(a) of this proposed rule. Specifically, we proposed that the baseline period data for the summary and raw beneficiary-identifiable data reports and regional aggregate data report would be shared annually at least 1 month prior to the start of a performance year and available for episodes initiated in the baseline period, as discussed in section X.C.2.f.(3)(a). in this final rule.

We requested comments on these proposals at § 512.665(b)(6)(i) and (d)(1)(i) to share beneficiary-identifiable data and regional aggregate data for a 3-year baseline period at least 1 month prior to the start of a performance year.

The following is a summary of the public comments received on our proposal to share baseline period beneficiary-identifiable and regional aggregate data with CJR–X participants, and our responses to these comments:

Comment: A commenter supported the sharing of baseline period data with CJR–X participants.

Response: We thank the commenter for their support.

Comment: A commenter noted that CMS proposed sharing data and preliminary price targets on November, prior to the start of the PY, but if the performance year started on Oct. 1 then data would be shared after the start of the performance year.

Response: We thank the commenter for their diligence in identifying the error. We have finalized an updated start date for CJR–X, such that the model will start on January 1, 2028, as discussed in section X.C.2.a of this final rule. Given the updated start date and that performance years will now run on a calendar year basis, the original policy still stands in that we will share baseline period and preliminary target prices prior to the performance year and

anticipate it being shared in the month of November before the performance year starts.

Comment: A commenter recommended that CMS provide data for the full baseline period. The commenter stated that full baseline-period data would allow participants to evaluate recent trends and develop implementation strategies.

Response: We are finalizing our policy to provide CJR–X participants with three years of baseline data that mimics the same 3-year baseline period used in target price construction, as discussed in section X.C.2.f.(3)(a) of this final rule. We note that we use a 3-year rolling baseline period for target prices, which means each year the baseline period rolls forward a year. Therefore, before each performance year, we will be sharing baseline period data for the upcoming performance year. We believe sharing the full baseline period of data improves data transparency and allows CJR–X participants to identify opportunities for spending reductions, operational efficiencies, and quality improvement activities.

Comment: Some commenters recommended that CMS provide data at least 60 days before the start of the performance period. A commenter recommended CMS grant hospitals direct and early access to the risk-adjustment model and necessary data to project baseline performance and initiate improvement activities prior to the start of the first performance year, or at least prior to the imposition of downside risk in the second or third year of participation.

Response: We appreciate the commenters' recommendation that CMS provide baseline data and preliminary target prices earlier than November. We note that CJR–X is a two-sided risk model and that all performance years CJR–X participants are subject to two-sided risk and there are no performance years where CMS has waived downside risk. We recognize that participants value advance access to information for planning and operational purposes. However, we believe that releasing these data in November before the start of the January 1 performance year appropriately balances participant planning needs with the need to incorporate the most recent available claims experience and pricing inputs into the target price methodology. Releasing information substantially earlier would require CMS to rely on less complete claims data and could result in pricing information that is less accurate or more likely to change as additional claims are processed. We believe participants benefit from receiving preliminary target prices that reflect the most current available information and provide a reliable basis for financial planning. In addition, participants will have advance notice through this final of the model design, episode definitions, quality measures, and payment methodology well before the release of baseline data and preliminary target prices, allowing them to undertake care redesign and operational planning activities in advance of the performance year. Therefore, we believe that providing baseline data and preliminary target prices in November before the start of the performance year appropriately balances data accuracy, operational feasibility, and participant preparation needs.

After consideration of the public comments we received, we are finalizing without modification our proposal at § 512.665(b)(6)(i) and (d)(1)(i) to share beneficiary-identifiable data and regional aggregate data for a 3-year baseline period at least 1 month prior to the start of a performance year.

(5) Timing and Period of Performance Year Data

The availability of periodically updated raw and summary beneficiary-identifiable claims data and regional aggregate data would assist CJR–X participants to identify areas where they might wish to change their care practice patterns, as well as monitor the effects of any such changes. With respect to these purposes, we have considered what would be the most appropriate period for making updated raw and summary beneficiary-identifiable claims data and regional aggregate data available to CJR–X participants, while complying with the HIPAA Privacy Rule's ''minimum necessary'' provisions, described in 45 CFR 164.502(b) and 164.514(d). We believe that monthly data updates would align with a 90-day post-discharge episode window given the episode's duration and the need to share data in a timely manner and identify areas for care improvement. Accordingly, we proposed to make updated raw and summary beneficiary-identifiable claims data and regional aggregate data available for a given performance year to CJR–X participants upon receipt of a request for such information and execution of a CJR–X data sharing agreement with CMS, that meets CMS's requirements to ensure the applicable HIPAA Privacy Rule conditions for disclosure have been met, as frequently as on a monthly basis during the performance year and continue sharing the claims data for up to 6 months beyond the end of that performance year to capture claims run out. We believe 6 months of claims run out is sufficient given that an internal review of Medicare claims data found that the majority of Medicare claims had been received, and were considered final, by 6 months after the date of service and is also consistent with how we proposed claims run out for the reconciliation process, as described in section X.C.2.f.(5). of this final rule.[610]

To accomplish this for the first performance year of CJR–X, we would propose to provide, upon request and execution of a CJR–X data sharing agreement with CMS, and in accordance with the HIPAA Privacy Rule, beneficiary-identifiable claims data and aggregate regional data from October 1, 2027 to September 30, 2028 on as frequently as a running monthly basis, as claims are available. We would continue sharing beneficiary-identifiable claims data and regional aggregate data for episodes in performance year 1 for an additional 6 months, so until March 31, 2029, to capture claims run out for items and services billed during this time period. These datasets would represent all potential episodes that were initiated in 2026 and capture sufficient amount of time, up to 6 months, for relevant claims to have been processed. We would limit the content of this data set to the minimum data necessary for the CJR–X participant to conduct quality assessment and improvement activities and effectively coordinate care of its patient population. This data sharing process would continue each performance year of CJR–X. We considered to propose extending this period to capture more than 30 days of data or updating on a quarterly frequency. However, we do not believe this would benefit the CJR–X participant since it may create challenges to timely identify potential CJR–X beneficiaries for care coordination efforts. We sought comment on whether we should consider extending the period to capture more than 30 days of data or updating the data on a frequency other than as frequently as monthly.

We sought comments on this proposal at § 512.665(b)(6)(ii) and (d)(1)(ii) to make beneficiary-identifiable data and regional aggregate data available as frequently as a monthly basis and for up to 6 months after a performance year.

The following is a summary of the public comments received on our

[610] Medicare Claims Maturity: CCW White Paper accessed at *https://www2.ccwdata.org/web/guest/white-papers?p_l_back_url=%2Fweb%2Fguest%2Fsearch%3Fq%3Dmedicare%2Bclaims%2Bmaturity* on Jan, 26, 2024.

proposal to share performance year beneficiary-identifiable and regional aggregate data with CJR–X participants, and our responses to these comments:

Comment: Some commenters requested frequent episode-level data feeds during the performance year. Commenters stated that participant organizations need timely reporting to identify operational opportunities, monitor utilization, and intervene before avoidable utilization occurs. Some commenters recommended that CMS establish a minimum data-sharing standard across alternative payment models with data delivered no less frequently than monthly.

Response: We agree that timely access to episode information can assist CJR–X participants in supporting care coordination activities, identifying opportunities for operational improvement, and managing beneficiaries throughout the episode of care. We also understand the commenters' views that more frequent data updates may help participants identify potential issues earlier and support intervention before avoidable utilization occurs.

We are finalizing the policy to share performance year data on a monthly cadence. While we recognize the potential value of more frequent data feeds and greater consistency across CMS alternative payment models, we must also consider the timing of claims availability, attribution accuracy, administrative burden, and operational considerations associated with producing CJR–X participant reports. Since CJR–X episodes span a 90-day post-discharge period and rely on claims-based episode attribution and spending calculations, we believe monthly reporting provides CJR–X participants with recurring opportunities to monitor utilization and identify operational trends while allowing sufficient time for claims submission and processing. We believe this approach balances CJR–X participant needs for actionable information with the accuracy, completeness, and operational feasibility necessary for effective model administration. We will continue to consider stakeholder feedback regarding the frequency, format, and standardization of data sharing across Innovation Center models as we evaluate approaches to support participant operations under CJR–X.

After consideration of the public comments we received, we are finalizing without modification our proposal at § 512.665(b)(6)(ii) and (d)(1)(ii) to make beneficiary-identifiable data and regional aggregate data available as frequently as a monthly basis and for up to 6 months after a performance year.

(6) CJR–X Data Sharing Agreement

We proposed that if a CJR–X participant wishes to retrieve the beneficiary-identifiable data, the CJR–X participant would be required to first complete, sign, and submit—and thereby agree to the terms of—a data sharing agreement with CMS, which we would call the CJR–X data sharing agreement. We proposed to define the ''CJR–X data sharing agreement'' as an agreement between the CJR–X participant and CMS that includes the terms and conditions for any beneficiary-identifiable data being shared with the CJR–X participant under § 512.665. Further, we proposed to require CJR–X participants to comply with all applicable laws and the terms of the CJR–X data sharing agreement as a condition of retrieving the beneficiary-identifiable data. We also proposed that the CJR–X data sharing agreement would include certain protections and limitations on the CJR–X participant's use and further disclosure of the beneficiary-identifiable data and would be provided in a form and manner specified by CMS. Additionally, we proposed that a CJR–X Participant that wishes to retrieve the beneficiary-identifiable data would be required to complete, sign, and submit a signed CJR–X data sharing agreement at least annually. We believe that it is important for the CJR–X Participant to complete and submit a signed CJR–X data sharing agreement at least annually so that CMS has up-to-date information that the CJR–X participant wishes to retrieve the beneficiary-identifiable data and information on the designated data custodian(s). As described in greater detail later in this section, we proposed that a designated data custodian would be the individual(s) that a CJR–X participant would identify as responsible for ensuring compliance with all privacy and security requirements and for notifying CMS of any incidents relating to unauthorized disclosures of beneficiary-identifiable data.

We believe it is important for the CJR–X participant to first complete and submit a signed CJR–X data sharing agreement before it retrieves any beneficiary-identifiable data to help protect the privacy and security of any beneficiary-identifiable data shared by CMS with the CJR–X participant. There are important sensitivities surrounding the sharing of this type of individually identifiable health information, and CMS must ensure to the best of its ability that any beneficiary-identifiable data that it shares with CJR–X participants would be further protected in an appropriate fashion.

We considered an alternative proposal under which CJR–X participants would not need to complete and submit a signed CJR–X data sharing agreement, but we concluded that, if we proceeded with this option, we would not have adequate assurances that the CJR–X participants would appropriately protect the privacy and security of the beneficiary-identifiable data that we proposed to share with them. We also considered an alternative proposal under which the CJR–X participant would need to complete and submit a signed CJR–X data sharing agreement only once for the duration of the CJR–X. However, we concluded that this similarly would not give CMS adequate assurances that the CJR–X participant would protect the privacy and security of the beneficiary-identifiable data from CMS. We concluded that it is critical that we have up-to-date information and designated data custodians, and that requiring the CJR–X participant to submit an CJR–X data sharing agreement at least annually would represent the best means of achieving this goal.

We solicited public comment on our proposal to define ''CJR–X data sharing agreement'' at § 512.605. We also sought comment on our proposal to require, in § 512.665(e)(2), that the CJR–X participant agree to comply with all applicable laws and the terms of the CJR–X data sharing agreement as a condition of retrieving the beneficiary-identifiable data, and on our proposal in § 512.665(e)(1) that the CJR–X participant would need to submit the signed CJR–X data sharing agreement at least annually if the CJR–X participant wishes to retrieve the beneficiary-identifiable data.

The following is a summary of the public comments received on our proposal to require annual submission of a CJR–X data sharing agreement, and our responses to these comments:

Comment: A few commenters requested CMS expand the number data custodians allowed to access the platform where CMS would share beneficiary-identifiable and regional aggregate data. Specifically, commenters suggested CMS should allow sufficient designated data custodians for hospital and business associate needs and should develop bulk multi-CCN retrieval or secure automated data access options that are compatible with HIPAA and data sharing agreement safeguards. A couple of commenters suggested CMS not limit the number of data custodians a hospital may elect or

at least specify an allowance of at least five designees per hospital.

Response: We acknowledge commenters' recommendations to allow sufficient data custodians to support hospital, and business associate needs to access and analyze the data shared by CMS. We do not agree that allowing an unlimited number of data custodians per CJR–X participant would be prudent for program integrity reasons since access to this data includes beneficiary-identifiable data. We believe it is important to maintain appropriate controls on access, use, disclosure, and safeguarding of the data. We have typically allowed two data custodians in other episode-based payment models but recognize that this number may have to increase given the model captures many more hospitals and there is a greater likelihood of health systems having multiple hospitals participating in the model. As we develop the CJR–X data sharing agreement, as discussed in section X.C.2.k.(6) of this final rule, we will take commenters' recommendations into consideration, including whether to increase the number of data custodians and whether there are additional operational options or system enhancements, such as bulk hospital download for health systems/hospitals that share the same data custodians, that could improve the efficiency with which hospitals retrieve their data while maintaining appropriate protections for beneficiary-identifiable information.

After consideration of the public comments we received, we are finalizing without modification the proposals at § 512.665(e)(2), that the CJR–X participant agree to comply with all applicable laws and the terms of the CJR–X data sharing agreement and at § 512.665(e)(1) that the CJR–X participant would need to submit the signed CJR–X data sharing agreement at least annually. We are also finalizing without modification our proposal at § 512.605 the definition for ''CJR–X data sharing agreement''.

(a) Content of CJR–X Data Sharing Agreement

We proposed that, under the CJR–X data sharing agreement, CJR–X participants would agree to certain terms, namely: (1) to comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA Privacy Rule and the requirements of the proposed CJR–X; (2) to comply with additional privacy, security, and breach notification requirements to be specified by CMS in the CJR–X data sharing agreement; (3) to contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the CJR–X participant or performs a similar function for the CJR–X participant, to the same terms and conditions to which the CJR–X participant is itself bound in its data sharing agreement with CMS as a condition of the downstream recipient's receipt of the beneficiary-identifiable data retrieved by the CJR–X participant under the CJR–X; and (4) that if the CJR–X participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the CJR–X data sharing agreement, the CJR–X participant would no longer be eligible to retrieve the beneficiary-identifiable data and may be subject to additional sanctions and penalties available under the law. We believe that these terms for sharing beneficiary-identifiable data with CJR–X participants are appropriate and important, as CMS must ensure to the best of its ability that any beneficiary-identifiable data that it shares with CJR–X participants would be further protected by the CJR–X participant, and any business associates of the CJR–X participant, in an appropriate fashion. We believe that these proposals would allow CMS to accomplish that.

We sought public comment on the additional privacy, security, breach notification, and other requirements that we would include in the CJR–X data sharing agreement. CMS has these types of agreements in place as part of the governing documents of other models tested under section 1115A of the Act and in the Medicare Shared Savings Program. In these agreements, CMS typically requires the identification of data custodian(s) and imposes certain requirements related to administrative, physical, and technical safeguards relating to data storage and transmission; limitations on further use and disclosure of the data; procedures for responding to data incidents and breaches; and data destruction and retention. These provisions would be imposed in addition to any restrictions required by law, such as those provided in the HIPAA Privacy, Security and Breach Notification Rules (45 CFR parts 160 and 164). These provisions would not prohibit the CJR–X participant from making any disclosure of the data otherwise required by law.

We also sought public comment on what disclosures of the beneficiary-identifiable data might be appropriate to permit or prohibit under the CJR–X data sharing agreement. For example, we are considering prohibiting, in the CJR–X data sharing agreement, any further disclosure, not otherwise required by law, of the beneficiary-identifiable data to anyone who is not a ''HIPAA covered entity or business associate'', as defined in 45 CFR 160.103, or to an individual practitioner in a treatment relationship with the CJR–X beneficiary, or that practitioner's business associates. Such a prohibition would be similar to that imposed by CMS in other models tested under section 1115A of the Act in which CMS shares beneficiary-identifiable data with model participants.

We are considering these possibilities because there exist important legal and policy limitations on the sharing of the beneficiary- identifiable data and CMS must carefully consider the ways in which and reasons for which we would provide access to this data for purposes of the CJR–X. We believe that some CJR–X participants may require the assistance of business associates, such as contractors, to perform data analytics or other functions using this beneficiary-identifiable data to support the CJR–X participant's review of their care management and coordination, quality improvement activities, or clinical treatment of CJR–X beneficiaries. We also believe that this beneficiary-identifiable data may be helpful for any HIPAA covered entities who are in a treatment relationship with the CJR–X beneficiary.

We sought public comment on how a CJR–X participant might need to, and want to, disclose the beneficiary-identifiable data to other individuals and entities to accomplish the goals of the CJR–X, in accordance with applicable law.

Under our proposal, the CJR–X data sharing agreement would include other provisions, including requirements regarding data security, retention, destruction, and breach notification. For example, we are considering including, in the CJR–X data sharing agreement, a requirement that the CJR–X participant designate one or more data custodians who would be responsible for ensuring compliance with the privacy, security and breach notification requirements for the data set forth in the CJR–X data sharing agreement; various security requirements like those found in other models tested under section 1115A of the Act, but no less restrictive than those provided in the relevant Privacy Act system of records notices; how and when beneficiary-identifiable data could be retained by the CJR–X-participant or its downstream participants of the beneficiary identifiable data; procedures for notifying CMS of any breach or other

incident relating to the unauthorized disclosure of beneficiary-identifiable data; and provisions relating to destruction of the data. These are only examples and are not the only terms CMS would potentially include in the CJR–X data sharing agreement.

We solicited public comment on this proposal that CMS, by adding § 512.665(e)(1)(ii), would impose certain requirements in the CJR–X data sharing agreement related to privacy, security, data retention, breach notification, and data destruction.

Finally, we proposed, at § 512.665(e)(1)(iv), that the CJR–X data sharing agreement would include a term providing that if the CJR–X participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the CJR–X data sharing agreement, the CJR–X participant would no longer be eligible to retrieve beneficiary-identifiable data under proposed § 512.665(b) and may be subject to additional sanctions and penalties available under law. We also proposed that if CMS determines that one or more grounds for remedial action specified in § 512.665(e)(iv) has taken place, CMS may discontinue the provision of data sharing and reports to the model participant. We proposed that CMS may take remedial action if the model participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the applicable data sharing agreement.

We solicited public comment on this proposal, to prohibit the CJR–X participant from obtaining beneficiary-identifiable data pertaining to the CJR–X if the CJR–X participant fails to comply with applicable laws and regulations, the terms of the CJR–X, or the CJR–X data sharing agreement.

We received no comments on these proposals and therefore are finalizing without modification the proposal at § 512.665(e)(1)(ii) that CMS would impose certain requirements in the CJR–X data sharing agreement related to privacy, security, data retention, breach notification, and data destruction. We are also finalizing without modification our proposal at § 512.665(e)(1)(iv) that if the CJR–X participant improperly misuses or discloses the beneficiary-identifiable data the CJR–X participant would no longer be eligible to retrieve beneficiary-identifiable data and may be subject to additional sanctions and penalties available under law. Lastly, we're also finalizing without modification the proposal at § 512.665(e)(iv) that if CMS determines that one or more grounds for remedial action has taken place then CMS may discontinue the provision of data sharing and reports to the CJR–X participant.

l. Alternative Payment Model Options

(1) Background

As specified in the Quality Payment Program regulations (42 CFR 414.1415), in order to be considered an Advanced APM, an Alternative Payment Model (APM) must—

- Require use of Certified Electronic Health Record Technology (CEHRT);
- Be subject to payment based on quality measures; and
- Require entities to bear financial risk.

We sought to align the design of CJR–X with the Advanced APM criteria in the Quality Payment Program and enable CMS to have the necessary information on eligible clinicians to make the requisite Qualifying APM Participant (QP) determinations. Eligible clinicians, as defined at 42 CFR 414.1305, that are captured on a CMS-maintained list constituting an affiliated practitioner list, as defined at 42 CFR 414.1305, may be eligible to receive benefits for participating in an Advanced APM, including burden reduction and financial incentives. We proposed that the CJR–X participant would be considered the APM entity, as defined at 42 CFR 414.1305, and that the CJR–X participant's affiliated practitioners, as defined at 42 CFR 414.1305, may be assessed for QP determinations depending on whether the CEHRT criteria are met, as established at 42 CFR 414.1425(b)(2). Additionally, we sought to ensure the design of CJR–X meets the Merit-based Incentive Payment System (MIPS) APM criteria and that CMS has the necessary information on MIPS eligible clinicians, as defined in 42 CFR 414.1305, so that they may be eligible for certain scoring benefits under MIPS. We therefore proposed to adopt two different APM options for CJR–X—an ''AAPM option'' would be defined as an option in which CJR–X participants would attest to meeting the CEHRT requirement and in which the CJR–X participant's eligible clinicians may be assessed for QP determinations (as CMS has already determined that CJR–X is an Advanced APM), and a ''non-AAPM option'' would be defined as an option in which CJR–X participants would not meet the CEHRT requirements and in which the CJR–X participant's MIPS eligible clinicians may be assessed for reporting and scoring through the APM Performance Pathway (APP) (as CMS has already determined CJR–X is a MIPS APM).

(2) APM Options

As previously stated, an Advanced APM must require participants to use CEHRT (42 CFR 414.1415(a)), make payments based on quality measures (42 CFR 414.1415(b)) and meet financial risk standards (42 CFR 414.1415(c)). We proposed two APM options in CJR–X: a non-Advanced APM (non-AAPM) option and an Advanced APM (AAPM) option. The non-AAPM option would be for CJR–X participants that do not meet the CEHRT requirements. However, these CJR–X participants may still be considered APM entities in a MIPS APM. The AAPM option would be for CJR–X participants that meet the CEHRT requirement. These CJR–X participants would be considered APM entities in an Advanced APM.

We proposed to require CJR–X participants who wish to participate in the AAPM option to attest to meeting the CEHRT use requirement that meets the CEHRT definition in our regulations at 42 CFR 414.1305 on an annual basis prior to the start of each performance year in a form and manner and by a date specified by CMS. We proposed that the CJR–X participant would be required to retain and provide CMS access to the attestation upon request. We further propose that meeting and attesting to the CEHRT use criteria would be voluntary, and that CMS would assign CJR–X participants who choose not to do so to the non-AAPM option. Lastly, we proposed to require CJR–X participants who wish to participate in the AAPM option to provide their CMS Electronic Health Record (EHR) Certification IDs on an annual basis prior to the end of each performance year in a form and manner and by a date specified by CMS.

We believe that a CJR–X participant's decision to meet and attest to the CEHRT use criteria would not create significant additional administrative burden for the CJR–X participant. Moreover, the choice of whether to meet and attest to the CEHRT use criteria would not otherwise affect the CJR–X participant's requirements or opportunities under the model. However, a CJR–X participant's decision to attest to CEHRT use may affect the ability of its clinicians to qualify as a QP. In other words, if a CJR–X participant chose not to attest to CEHRT use, its clinicians would not be assessed for QPs status.

We sought comment on our proposals for the CJR–X Advanced APM options and the associated requirements at § 512.615. We also sought comment on our proposed definitions for the ''AAPM option'' and ''non-AAPM option'' at § 512.605.

Comment: A couple of commenters supported CMS creating options under CJR–X for participants' eligible clinicians to achieve QP status or participate in MIPS APM.

Response: We thank the commenters for the support.

Comment: A commenter requested clarification on entities eligible for QP determinations, specifically CJR–X collaborators, including those that are certified registered nurse anesthetists (CRNAs), would be considered QPs under the CJR–X Model assuming the CJR–X participant meets CEHRT criteria and assuming the CRNAs furnish services under the CJR–X Model during the performance period.

Response: A CJR–X collaborator, inclusive of CRNAs, that meets the definition of an eligible clinician, as defined at 42 CFR 414.1305, that is listed on a financial arrangement list or clinician engagement list for a CJR–X participant participating in the AAPM Option is eligible to be submitted for QP determinations. Eligibility for QP determinations does not guarantee QP status. To become a QP, eligible clinicians must receive at least 75 percent of Medicare Part B payments or see at least 50 percent of Medicare patients through an Advanced APM Entity during the QP Performance Period (January 1–August 31). Not all eligible clinicians who participate in an Advanced APM will meet the participation thresholds required to achieve QP status. However, some eligible clinicians may meet lower participation thresholds and become Partial QPs. To become a Partial QP, clinicians must receive at least 50 percent of Medicare Part B payments or see at least 35 percent of Medicare patients through an Advanced APM Entity during the QP performance period (January 1–August 31).

Comment: A commenter requested clarification on how CMS would determine QP status for eligible clinicians participating concurrently in other Advanced APMs.

Response: We appreciate the commentor's request for clarification regarding how we determine Qualifying APM Participant (QP) status for eligible clinicians who participate concurrently in more than one Advanced APM, for example CJR–X and the Medicare Shared Savings Program. In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy for QP determinations at § 414.1425. In establishing this methodology, we noted (81 FR 77440) that for models, such as CJR, that provide an Affiliated Practitioner List, as defined at § 414.1305, we would provide an individual QP determination as codified at § 414.1425(b)(2). Through the 2026 QP performance period, to calculate the numerator and denominator of these determinations we identified attribution-eligible beneficiaries, as defined at § 414.1305, where for the sixth criterion the beneficiary had a minimum of one Covered Professional Service during the QP performance period. In the CY 2026 PFS final rule (90 FR 50012), we finalized an update to our methodology at §§ 414.1435 and 414.1305 to perform QP determinations using both an E/M services approach and a Covered Professional Services as defined at § 414.1305. We note that in most cases identifying beneficiaries using Covered Professional Services provides a more beneficial methodology for CJR affiliated practitioners, and we expect this to be the case for CJR–X. When calculating the QP determination for an affiliated practitioner in more than one Advanced APM we calculate the individual eligible clinician score by combining participation across all Advanced APMs to determine whether QP thresholds have been satisfied. In cases where a beneficiary is attributed more than one Advanced APM that beneficiary is counted only once in both the numerator and denominator. In cases where a beneficiary is prospectively attributed to another Advanced APM and would otherwise not be permitted to be attributed to the clinician receiving the calculation, we exclude these beneficiaries from the denominator of our calculation. We also note that for clinicians described in this scenario in addition to an individual calculation they would also be receiving calculations at the APM entity level and we would look to see if, as part of the ACO, the APM Entity group achieved a Threshold Score meeting the QP payment amount threshold or QP patient count threshold. We encourage stakeholders to consult the QPP website (*qpp.cms.gov*) where clinicians may use the QPP portal and lookup tool to view their QP determinations.

After consideration of the public comments we received, we are finalizing without modification the CJR–X Advanced APM options and the associated requirements at § 512.615. We are also finalizing without modification the definitions for ''AAPM option'' and ''non-AAPM option'' at § 512.605.

(3) Financial Arrangements List and Clinician Engagement List

We proposed that each CJR–X participant would be required to submit information about the eligible clinicians or MIPS eligible clinicians who enter into financial arrangements with the CJR–X participant for purposes of supporting the CJR–X participants' cost or quality goals as discussed in section X.C.2.i. of this final rule. Since CJR–X would be an Advanced APM and a MIPS APM, this information would enable CMS to make QP determinations for eligible clinicians or allow for APP reporting and scoring for MIPS eligible clinicians. We proposed that for purposes of CJR–X, the eligible clinicians or MIPS eligible clinicians could be: (1) CJR–X collaborators, as described in section X.C.2.i.(3). of this final rule, engaged in sharing arrangements with a CJR–X participant; (2) PGP, NPPGP, or TGP members who are collaboration agents engaged in distribution arrangements with a PGP, NPPGP, or TGP that is a CJR–X collaborator, as described in section X.C.3.i.(5) of this final rule; or (3) PGP, NPPGP, or TGP members who are downstream collaboration agents engaged in downstream distribution arrangements with a PGP, NPPGP, or TGP that is also an ACO participant in an ACO that is a CJR–X collaborator, as described in section X.C.3.i.(6). of this final rule. The list of physicians and nonphysician practitioners in these three groups that we proposed to require CJR–X participants to submit to CMS would satisfy the criteria to be considered an Affiliated Practitioner List, as defined in 42 CFR 414.1305. We proposed to use the Financial Arrangements list (FAL), submitted by CJR–X participants to CMS, to make determinations regarding which physicians and nonphysician practitioners should receive QP determinations or be reported for the APP based on the services they furnish under CJR–X.

We proposed for the reasons detailed previously that each CJR–X participant with eligible clinicians or MIPS eligible clinicians must submit to CMS a financial arrangements list in a form and manner and by the date specified by CMS on a quarterly basis during each performance year or attest that there are no individuals to report on the financial arrangements list. We believe submission of the financial arrangements list on a quarterly basis would align with the Quality Payment Program's QP determination dates, as

described in 42 CFR 414.1425. We proposed to define the ''financial arrangements list (FAL)'' at § 512.605 as the list of eligible clinicians or MIPS eligible clinicians that have a financial arrangement with the CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent. We proposed the CJR–X participant would be required to retain and provide CMS access to the financial arrangements list upon request. We proposed that the list must include the following information:

- For each CJR–X collaborator who is a physician, nonphysician practitioner, or therapist during the performance year—
  - ++ The name, tax identification number (TIN), and national provider identifier (NPI) of the CJR–X collaborator; and
  - ++ The start date and, if applicable, end date, for the sharing arrangement between the CJR–X participant and the CJR–X collaborator.
- For each collaboration agent who is a physician, nonphysician practitioner, or therapist during the performance year—
  - ++ The name, TIN, and NPI of the collaboration agent and the name and TIN of the CJR–X collaborator with which the collaboration agent has entered into a distribution arrangement; and
  - ++ The start date and, if applicable, end date, for the distribution arrangement between the CJR–X collaborator and the collaboration agent.
- For each downstream collaboration agent who is a physician or nonphysician practitioner, or therapist during the performance year—
  - ++ The name, TIN, and NPI of the downstream collaboration agent and the name and TIN of the collaboration agent; and
  - ++ The start date and, if applicable, end date, for the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.
- If there are no individuals that meet the reporting criteria listed previously for CJR–X collaborators, collaboration agents, or downstream collaboration agents, then the CJR–X participant must attest on a quarterly basis in a form and manner and by a date specified by CMS that there are no individuals to report on the financial arrangements list.

While the proposed submission of the financial arrangements list may create some additional administrative burdens for certain CJR–X participants, we expect that CJR–X participants could modify their contractual relationships with their CJR–X collaborators and, correspondingly, require those CJR–X collaborators to include similar requirements in their contracts with collaboration agents and in the contracts of collaboration agents with downstream collaboration agents.

We also recognize there may be physicians and nonphysician practitioners who would not be listed on the financial arrangements list because they have not entered into a financial arrangement as a CJR–X collaborator, collaboration agent, or downstream collaboration agent, but who may nevertheless participate in CJR activities, as defined at proposed § 512.605, and may be eligible for QP determinations or eligible for APP reporting because they are affiliated with and support the APM Entity. We proposed that, in order to capture these physicians and nonphysician practitioners who are not listed on the CJR–X participant's financial arrangements list for QP determinations or APP reporting, CJR–X participants must also submit to CMS a clinician engagement list in a form and manner and by a date specified by CMS on a quarterly basis every performance year. We proposed to use the clinician engagement list for assessing QP determinations and for APP reporting. The submission of the clinician engagement lists may create some additional administrative burdens for CJR–X participants, but we expect the effort to be worthwhile since some of these QP determinations may result in eligible clinicians receiving burden reduction benefits and financial incentives, and some MIPS eligible clinicians may receive MIPS APM scoring benefits.

We proposed to define the ''clinician engagement list (CEL)'' at § 512.605 as the list of eligible clinicians or MIPS eligible clinicians that participate in CJR–X activities, have a contractual relationship with the CJR–X participant, and who are not listed on the financial arrangements list. We proposed that the CJR–X participant must submit the list to CMS on a quarterly basis during each performance year in a form and manner and by a date specified by CMS or attest that there are no individuals to report on the clinician engagement list. We believe submission of the clinician engagement list on a quarterly basis would align with the Quality Payment Program's QP determination dates, as described in 42 CFR 414.1425. We proposed the CJR–X participant would be required to retain and provide CMS access to the clinician engagement list upon request. We proposed that the clinician engagement list must include the following information:

- For each physician, nonphysician practitioner, or therapist who is not listed on the CJR–X participant's financial arrangements list during the performance year, but who does have a contractual relationship with the CJR–X participant and participates in CJR–X activities during the performance year—
  - ++ The name, TIN, and NPI of the physician, nonphysician practitioner, or therapist; and
  - ++ The start date and, if applicable, end date, for the contractual relationship between the physician, nonphysician practitioner, or therapist and the CJR–X participant.
- We proposed that if there are no individuals that meet the requirements to be reported on the clinician engagement list, then the CJR–X participant must attest on a quarterly basis in a form and manner and by a date specified by CMS that there are no individuals to report on the clinician engagement list.

We sought comments on the proposal to require CJR–X participants to submit a financial arrangements list and clinician engagement list on a quarterly basis or attest that there are no individuals to report. We also sought comments about approaches to information submission, including the content of the lists, and periodicity and method of submission to CMS that would minimize the reporting burden on CJR–X participants while providing CMS with sufficient information about eligible clinicians to facilitate QP determinations and APP reporting to the extent that CJR–X is considered to be an Advanced APM and a MIPS APM.

The following is a summary of the public comments received on the proposed policy for CJR–X participants to submit a financial arrangements list and a clinician engagement list, and our responses to these comments:

Comment: A commenter requested clarification that the clinician engagement list could include clinicians, including CRNAs, who perform CJR–X activities under a CJR–X participant through a 1099 independent contractor locum tenens arrangement.

Response: The clinician engagement list must include eligible clinicians or MIPS eligible clinicians, as defined at 42 CFR 414.1305, that participate in CJR–X activities and have a contractual relationship with the CJR–X participant, and who are not listed on the financial arrangements list. Therefore, if the CNRA is an eligible clinician or MIPS eligible clinician, participates in CJR–X activities, and has a contractual relationship with the CJR–X participant

then they must be listed on the clinician engagement list.

Comment: A commenter requested clarification regarding the financial arrangements list needing to be inclusive of all contractual relationship types to facilitate inclusion of all clinicians participating in CJR–X activities as QPs.

Response: Eligible clinicians or MIPS eligible clinicians, as defined at 42 CFR 414.1305, must have a financial arrangement with the CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent to be listed on the financial arrangements list. A financial arrangement includes a sharing arrangement between the CJR–X participant and CJR–X collaborator, a distribution arrangement between the CJR–X collaborator and collaboration agent, or a downstream distribution arrangement between the collaboration agent and downstream collaboration agent, all defined at § 512.605. Therefore, eligible clinicians must have a financial arrangement to be listed on the financial arrangements list. If an eligible clinician is in a contractual relationship that does not satisfy the requirements for a financial arrangement, then they may not be listed on the financial arrangements list.

Comment: A commenter believed that CMS already had the relevant information collected on the financial arrangements list and clinician engagement list and that CMS should rely on existing data sources to construct the lists rather than requiring hospitals to submit the lists on a quarterly basis.

Response: We acknowledge the reporting burden with submitting quarterly lists, but CMS does not have access to who the CJR–X participant may have financial relationships with, nor does CMS have access to all the contractual relationships a CJR–X participant may have. We are interested in reducing participant burden and will continue to consider ways to improve the process while still ensuring clinicians can be assessed for QP determinations.

After consideration of the public comments, we are finalizing without modification the proposals at § 512.615(b) for CJR–X participants to submit a financial arrangements list and at § 512.615(c) for CJR–X participants to submit a clinician engagement list.

m. Standard Provisions

CJR–X meets the criteria for application of the Standard Provisions for Mandatory Innovation Center Models (42 CFR part 512, subpart A). Unless otherwise specified, all CJR–X participants and CJR–X beneficiaries are subject to the provisions at §§ 512.100 through 512.190, which address the following areas:

- Beneficiary Protections.
- Cooperation in Model Evaluation and Monitoring.
- Audits and Record Retention.
- Rights in Data and Intellectual Property.
- Monitoring and Compliance.
- Remedial Action.
- Innovation Center Model Termination by CMS.
- Limitations on Review.
- Miscellaneous Provisions on Bankruptcy and Other Notifications.
- Reconsideration Review Process.

We recognize the standard provisions were not intended to encompass all the terms and conditions that would apply to each Innovation Center model, because each model embodies unique design features and implementation plans that may require additional, more tailored provisions, including with respect to payment methodology, care delivery and quality measurement, that would continue to be included in each model's governing documentation. Thus, we sought public comment on whether CJR–X should set forth model-specific provisions related to any of the provisions identified previously at §§ 512.100 through 512.190.

Comment: Some commenters recommended that CMS adopt and enforce robust beneficiary protections to preserve beneficiary choice, prevent patient steering, and maintain access to clinically appropriate post-acute care. Commenters stated that financial accountability for episode spending could create incentives for participating hospitals to steer beneficiaries toward lower-cost settings or narrow referrals without sufficient attention to individual clinical needs. Another commenter stated that the level of services provided should depend on a patient's acuity and the discretion of the physician and clinical team. They stated that while some only need informal caregiving from family members or personal caregivers, others may require skilled home care or therapy from nurses or physical therapists. Some commenters recommended that CMS adopt protections similar to those used in TEAM, require clear written notice of beneficiary rights, and provide meaningful complaint, monitoring, and enforcement processes. Commenters also urged CMS to monitor for patient selection, referral narrowing, disparities in access, and improper limitations or stinting on supplies or services. They recommended that CMS explain how beneficiary protections would be monitored and enforced if CJR–X is implemented.

Response: We appreciate the commenters' concerns regarding beneficiary choice, access to medically necessary care, and potential steering in connection with CJR–X and acknowledge the suggestions to standardize messaging and create consistency. We also recognize that episode-based financial accountability could create incentives to reduce episode spending and that safeguards are important to ensure that care recommendations are based on clinical need rather than inappropriate cost savings.

We agree that beneficiary protections to maintain access and freedom of choice are necessary to ensure appropriate care is delivered to Medicare beneficiaries. We believe that the standard provisions for mandatory Innovation Center models at §§ 512.100 through 512.190 are appropriate safeguards. For instance, the beneficiary protections at § 512.120 cover freedom of choice, availability of services, and descriptive model materials and activities.

We have a special interest in ensuring that the CJR–X Model does not interfere with program integrity interests of the Medicare program. For this reason, we monitor for compliance with model requirements as well as other Medicare program rules. When we become aware of noncompliance with these requirements, it is necessary for CMS to have the ability to impose certain administrative remedial actions on a noncompliant model participant (*89 FR 36382*).

The terms of the standard Innovation Center provisions for mandatory models at §§ 512.100 through 512.190 permit CMS to impose one or more administrative remedial actions to address noncompliance by a model participant. We proposed that CJR–X would conform to the standard provisions, which would include taking remedial actions set forth in § 512.160.

Additionally, as discussed in section X.C.2.b.(2), we initially proposed at § 512.610(a)(2) to allow CMS to provide notices of termination that would terminate a CJR–X participant's participation in the model. We inadvertently limited the circumstances under which CMS could issue a notice of termination to those described in § 512.165(b), which applies only when CMS terminates the model itself. To correct this error and allow CMS to appropriately address program integrity concerns in the model, we have inserted a separate provision addressing the notice of termination at § 512.610(c).

This provision preserves CMS's ability, in its sole discretion, to terminate a CJR–X participant from the model, immediately or upon advance notice, if we determine that one or more grounds for remedial action described at § 512.160(a) applies.

CJR–X participants may provide a written notice disputing the termination within 10 calendar days of receiving a notice of termination to request review by CMS. If a participant submits a timely notice of dispute, CMS will respond to the CJR–X participant's request for review within 30 days. If the CJR–X participant fails to provide timely notification to CMS, the termination is deemed final

These processes allowing for termination of participants from CJR–X as a remedial action and for disputing a notice of termination are consistent with the CJR Model and will help ensure appropriate program integrity safeguards.

Should a CJR–X participant be terminated from the CJR–X Model, in alignment with the CJR Model, the participant hospital would remain liable for all repayments generated from episodes of care that ended prior to termination.

Therefore, in addition to the remedial actions at § 512.160(b), we are finalizing at § 512.610(c) that CMS may terminate a CJR–X participant from CJR–X if the CJR–X participant satisfies the grounds for remedial action at § 512.160(a), the CJR–X participant may appeal the termination, in accordance with § 512.610(c)(2), and terminated participants would remain liable for all negative NPRA generated from episodes of care that ended prior to termination.

n. Termination of CJR–X

The general provisions relating to termination of the model by CMS in § 512.165 would apply to CJR–X. Consistent with termination provisions of other Innovation Center models, in the event we terminate CJR–X, we would provide written notice to CJR–X participants specifying the grounds for termination and the effective date of such termination or ending. As provided by section 1115A(d)(2) of the Act, termination of the model under section 1115A(b)(3)(B) of the Act would not be subject to administrative or judicial review.

We received no comments on model termination.

D. Organ Acquisition and Reasonable Cost Payment Policies, and Reimbursement Appeals for Independent Organ Procurement Organizations and Histocompatibility Laboratories

1. Reconciliation of Organ Acquisition Costs for Non-Renal Organs for IOPOs and HCLs

a. Background

(1) Overview

Organ procurement organizations (OPOs)[611] perform or coordinate the procurement, preservation, and transportation of organs from deceased donors, and maintain a system for locating prospective recipients for organ transplantation. To participate in the Medicare program, OPOs must be members of the Organ Procurement and Transplantation Network (OPTN) and must have agreements with hospitals or critical access hospitals in their service areas, to identify potential organ donors. OPOs provide both administrative and medical services that include, but are not limited to, arranging for tissue typing of donated organs; removal of the deceased donor organs (where the physicians are employed by the OPO or are under contract or agreement with the OPO); and perfusion, preservation, and transportation of the procured organs. OPOs may be independent or hospital-based. Hospital-based OPOs (HOPOs) are considered departments of their hospital and report costs for services on their transplant hospital's (TH's) Medicare cost report (MCR). Independent OPOs (IOPOs) file a separate cost report (see 42 CFR 413.420(c)(1)(i)).

Histocompatibility laboratories (HCLs) are specialized clinical laboratories that perform tissue typing and compatibility testing on potential organ donors and recipients. These labs primarily conduct HLA (Human Leukocyte Antigen) typing—identifying tissue markers for organ and tissue transplantation. They perform crossmatching tests to determine compatibility between organ donors and recipients, antibody screening to detect antibodies that could cause transplant rejection, and disease association testing—HLA typing for certain autoimmune and genetic conditions. HCLs play a critical role in organ transplantation programs, ensuring that donated organs are matched appropriately with recipients to minimize rejection risk. HCLs may also be independent or hospital-based. Hospital-based HCLs are considered departments of their hospital and report costs for services on their TH's MCR. Independent HCLs, hereinafter referred to as HCLs, file a separate cost report (see 42 CFR 413.420(c)(1)(i)).

Under section 1861(v)(1)(A), reasonable cost is the necessary cost actually incurred in the efficient delivery of needed health care services to Medicare beneficiaries. Section 413.1(a)(2)(v) identifies OPOs and HCLs as provider types to which part 413 of the regulations apply, making them expressly subject to Medicare's reasonable cost principles, including 42 CFR 413.9 regarding cost related to patient care. Currently, the Medicare program reimburses the reasonable costs related to patient care of allowable kidney acquisition services furnished by IOPOs and HCLs, provided that they have an agreement with the Secretary in accordance with 42 CFR 413.420. Kidney acquisition costs are not paid directly by Medicare to an IOPO or HCL. IOPOs and HCLs are reimbursed for their kidney acquisition services by the THs, subject to later adjustment by Medicare (see 42 CFR 413.420). Medicare currently authorizes reimbursement to designated IOPOs for kidney acquisition costs, under reasonable cost principles[612] in accordance with section 1861(v) of the Act, based on the IOPO's ratio of Medicare usable kidneys to total usable kidneys (see section 1881(b)(2)(A) of the Act). Additionally, Medicare currently authorizes reimbursement to HCLs for the reasonable costs of pre-transplant kidney histocompatibility testing, based on the HCL's ratio of pre-transplant kidney histocompatibility charges to the total of HCL charges for all tests the lab performs, in accordance with section 1861(v) of the Act and 42 CFR 413.420. In accordance with 42 CFR 413.24(f), Medicare requires THs, IOPOs, and HCLs to complete an MCR[613] on an annual basis.

In the FY 2022 IPPS/LTCH PPS final rule with comment period, published in the **Federal Register** (FR) (86 FR 73468 through 73505) December 27, 2021, we clarified and codified certain Medicare organ acquisition payment policies in new subpart L of 42 CFR part 413. In the CY 2023 OPPS proposed rule (87 FR 44769 through 44773), published July 26, 2022, we included a request for

[611] We refer to organ procurement organizations generally as ''OPOs'' throughout, unless differentiation of IOPO is required for cost reporting purposes, for OPOs that file a cost report on the CMS–216–94 (OMB No. 0938–0102).

[612] Id. Section 1138(b)(1)(F) of the Act; 42 CFR 413.1(a)(1)(ii)(A); 413.420(a).

[613] THs complete the hospital cost report, form CMS–2552–10 (OMB No. 0938–0050) and IOPOs and HCLs complete cost report form CMS–216–94 (OMB No. 0938–0102).

information (RFI) and solicited comments that would help to inform potential changes to Medicare's organ acquisition payment policies. In the CY 2023 OPPS final rule (87 FR 72150 through 72159), published November 23, 2022, we clarified and codified certain other Medicare organ acquisition payment policies.

(2) Reimbursement of Organ Acquisition Costs

Medicare's current organ acquisition policy is modeled after the kidney acquisition policy that was implemented for kidney transplants following the Social Security Amendments of 1972 (Pub. L. 92–603) that extended Medicare coverage to individuals with end stage renal disease (ESRD) who required dialysis or transplantation. In July 1973 and July 1974, CMS (then the Bureau of Health Insurance [614] (BHI)) issued Intermediary Letters (ILs) which set forth procedures and policies for Medicare reimbursement for kidney transplants.[615] The IL 73–25 (July 1, 1973) set forth policies for the reimbursement of kidney transplants and dialysis, including policies for hospital reimbursement for the acquisition of a kidney from deceased and living donors for transplant into a Medicare beneficiary. The IL 74–23 (July 1974) addressed questions related to proper treatment for Medicare reimbursement purposes of various costs associated with kidney acquisition and transplant and kidney dialysis services. The IL 74–23 noted that the hospital is expected to acquire the kidney at a reasonably cost-related charge, which the hospital would pay to the organ procurement agency (now called organ procurement organization) and include as a cost to the TH.[616]

The Medicare reimbursement policies for IOPO and HCL kidney acquisition costs were implemented in a final rule (43 FR 58370 through 58372), published December 14, 1978. In that final rule, we noted that HOPOs and hospital-based HCLs included their services in their hospital cost report, and they were reimbursed based upon reasonable cost principles. However, THs had no authority or basis for determining the reasonableness of charges from IOPOs and independent HCLs, and the charges billed by IOPOs and these HCLs were not reviewed by the Medicare contractor to determine reasonableness. As such, the potential existed for Medicare to pay more than reasonable costs for organ acquisition services. In June 1978, Congress passed Public Law 95–292 (the End Stage Renal Disease (ESRD) Program Amendment), which amended section 1881(b)(2)(A) of the Act, and required that reimbursement made under title XVIII for the services of OPOs and HCLs in procuring and furnishing organs for transplantation must not exceed the cost actually incurred by that OPO or HCL, and must be determined in accordance with section 1861(v) of the Act. Section 1861(v) of the Act requires that payments be based upon reasonable costs.[617]

We note that Public Law 95–292 refers to the costs of procuring *organs,* thus including both kidneys and non-renal organs when requiring payments to be made at reasonable cost for the actual costs incurred. The legislative history of Public Law 95–292 indicates that Congress intended for the Secretary to apply already established-principles of cost reimbursement, obtain periodic cost reports, and provide for an intermediary hearing for an IOPO or HCL which disagrees with a cost determination.[618] We believe that the legislative history also indicates that the cost of IOPO or HCL services would continue to be paid by the TH, but that the Secretary would be authorized to institute a system whereby IOPOs and HCLs could be reimbursed directly if such a system seems appropriate.[619]

We implemented section 1881(b)(2)(A) of the Act and this legislative intent by requiring that the Medicare program reimburse only the reasonable cost of IOPO and HCL services for kidney acquisitions.[620] We also required that the contractor establish IOPOs' Standard Acquisition Charge (SAC) and HCL testing rates for kidney acquisitions. In addition, we required the contractor to review IOPOs' and HCLs' kidney acquisition costs and reconcile and settle those costs through the MCR. These measures were implemented to ensure that kidney acquisition costs would be paid on a reasonable cost basis, in accordance with the statute at sections 1881(b)(2)(A) and 1861(v) of the Act. We note that Medicare currently reconciles the organ acquisition costs incurred by HOPOs for all organs they procure, renal and non-renal, as part of the hospital cost report reconciliation.[621] Therefore, our discussion of reasonable cost for organ acquisition and cost reconciliation is focused on IOPOs and HCLs, but not HOPOs.

Over the years, through various rulings and national coverage determinations (NCDs), Medicare added coverage for transplantation of non-renal organs such as heart, liver, lungs, and pancreas. Non-renal organs were covered for transplantation through a CMS Ruling (for heart transplants) and through NCDs (for other non-renal organs),[622] and payment policies were subsequently implemented through notice-and-comment rulemaking.[623] While we modeled our reimbursement for non-renal organ acquisition costs based on existing kidney acquisition policies, we did not address reasonable cost reimbursement and reconciliation of the non-renal organs to IOPOs and HCLs. Non-renal organ acquisition charges are billed to THs, and THs have no basis for determining the reasonableness of the charges from the IOPOs and HCLs, as previously noted, creating opportunity for Medicare to pay more than reasonable cost for these services (43 FR 58370).

Currently IOPOs determine their charges for non-renal organ acquisition costs and those amounts are billed to and paid by THs. THs subsequently include those charges in their organ acquisition costs without the ability for determining reasonableness. We are concerned about reports from our Medicare contractor, discussed in an OIG report,[624] that opportunities and incentives exist for IOPOs to inflate their non-renal SACs and exceed their

[614] To implement the Medicare statute, the Social Security Administration was reorganized and the Bureau of Health Insurance (BHI) was established on July 30, 1965. The BHI then became responsible for the development of health insurance policy before the creation of the Health Care Financing Administration (HCFA), later renamed the Centers for Medicare & Medicaid (CMS). CMS Milestones 1937–2015 (July 2015).

reasonable costs for procurement services. IOPO cost report data for annual cost reporting periods ending in 2024 [625] showed that non-renal organ revenue exceeded non-renal organ acquisition costs by $100 million. OPOs are required to operate as non-profit organizations [626] under Federal statute and to only recover their reasonable costs associated with organ procurement activities. The fundamental principle is that human organs are donated gifts, not commodities for sale. While OPOs can recover their reasonable and necessary operational costs, they cannot profit from the organs themselves.[627]

In accordance with our current requirements at § 413.404(c)(1), for each non-renal organ type, an IOPO is supposed to establish its organ-specific non-renal acquisition charges by estimating the reasonable and necessary organ acquisition costs it expects to incur, divided by the projected number of organs it expects to procure, in its cost reporting period. The existing cost report data enables the Medicare contractor to determine if those acquisition charges the IOPO establishes are higher than what the acquisition charges should have been based on costs actually incurred. When an IOPO establishes a non-renal acquisition charge that is higher than its reasonable costs actually incurred, and the IOPO bills that inflated charge to a TH (or other OPO), that inflated charge is reported by the TH (or other OPO) as an organ acquisition cost on its cost report, Medicare then shares in those inflated costs. To correct this situation and ensure IOPOs and HCLs are held to reasonable costs, similar to HOPOs and hospital-based HCLs, in the 2027 IPPS proposed rule, we proposed to reconcile IOPO and HCL costs for non-renal organs similar to how we reconcile IOPO and HCL kidney costs. We proposed to require that IOPO and HCL non-renal organ acquisition costs be reviewed and analyzed by the Medicare contractor to ensure those costs are reasonable, necessary, related to patient care, and reconciled to payments made by or payable by THs and other OPOs. Without reconciliation, reasonable costs cannot be determined for non-renal organs leading to inflated organ acquisition costs to the THs and inflated costs throughout the transplant ecosystem.

b. Reconciling Non-Renal Organ Acquisition Costs for IOPOs and HCLs

Section 413.420(a)(1) explains that covered services furnished by IOPOs and HCLs in connection with kidney acquisition and transplantation are reimbursed under the principles for determining reasonable cost. As noted previously, section 1881(b)(2)(A) of the Act was amended in 1978 to require that reimbursement for the services of OPOs and HCLs in procuring and furnishing organs for transplantation must not exceed the cost actually incurred by that OPO or HCL. We also noted that HOPOs and hospital-based HCLs are reimbursed under reasonable cost principles for their services through the hospital cost report. Lastly, we noted that over the years, through various rulings and NCDs, Medicare added coverage for transplantation of non-renal organs such as heart, liver, lungs, and pancreas and payment policies were subsequently implemented through notice-and-comment rulemaking. While we modeled our reimbursement for non-renal organ acquisition costs based on existing kidney acquisition policies, we did not address reasonable cost reimbursement and reconciliation of the non-renal organs for IOPOs and HCLs.

In the 2027 IPPS proposed rule, we proposed to hold IOPOs and HCLs to reasonable cost reimbursement for organ acquisition and transplantation services in accordance with section 1861(v) of the Act. We proposed to revise the title of § 413.420 to change ''kidney'' to ''organ'' and to define the acronym IOPOs after independent organ procurement organizations and the acronym HCLs after histocompatibility laboratories. Throughout § 413.420, we also proposed to use the acronym HCL and its permutations in every title, paragraph, or subparagraph where a histocompatibility laboratory or laboratory, and their various permutations, are mentioned. This would revise the regulation text at § 413.420(a)(1), (a)(2), (c) paragraph heading, (c)(1), (c)(1)(ii), (c)(1)(iv), (c)(2), (d)(1) through (d)(4), (e)(1), (e)(1)(i), (e)(2), (e)(2)(ii), and (g).

In addition, we proposed to revise 42 CFR 413.420(a)(1) and to add paragraphs (a)(1)(i) and (ii). Specifically, we proposed to revise § 413.420(a)(1) to specify that covered services furnished by IOPOs and HCLs in connection with organ acquisition and transplantation are reimbursed under the principles for determining reasonable cost as specified in paragraphs (a)(1)(i) and (ii). We also proposed to add § 413.420(a)(1)(i) to specify that kidney acquisition and transplantation services furnished by IOPOs and HCLs are reimbursed under the principles for determining reasonable cost. For non-renal organs, we proposed to add § 413.420(a)(1)(ii) to specify that for non-renal organ acquisition and transplantation services furnished for cost reporting periods beginning on or after October 1, 2027,[628] IOPOs and HCLs are reimbursed under the principles for determining reasonable cost. This included a proposed delay in implementation which would allow time to update the IOPO and HCL cost reporting form CMS–216–94, OMB control number 0938–0102. The delay would also allow IOPOs and HCLs time to prepare and implement the changes from the new policy.

We proposed to revise § 413.420(a)(2) to include OPOs as payors of IOPOs and HCLs and specified that services furnished by IOPOs and HCLs that have an agreement with the Secretary, in accordance with § 413.420(c), are paid directly by the TH or OPO using a kidney SAC (for an IOPO) or contractor-established rates (for an HCL). Under the proposal, we also specified that the reasonable costs of services furnished by IOPOs or HCLs are reimbursed in accordance with the principles contained in §§ 413.60 and 413.64.

Section 413.420(c), which concerns agreements with IOPOs and HCLs, currently specifies that any IOPO or HCL that wishes to have the cost of its pre-transplant services reimbursed under the Medicare program must file an agreement with CMS under which the IOPO or HCL agrees to the following:

- To file a cost report in accordance with § 413.24(f) within 5 months following the close of the period covered by the report.
- To permit CMS to designate a contractor to determine the interim reimbursement rate, payable by the THs for services provided by the IOPO or HCL, and to determine Medicare's reasonable cost based upon the cost report filed by the IOPO or HCL.
- To provide such budget or cost projection information as may be required to establish an initial interim reimbursement rate.
- To pay to CMS amounts that have been paid by CMS to THs and that are determined to be in excess of the

[625] 42 CFR 413.20(b) requires that cost reporting periods are based on the provider's accounting year. In this analysis, 77 percent of IOPOs have a January 1–December 31 accounting year; 11 percent have a July 1–June 30 accounting year; 9 percent have an October 1 to September 30 accounting year; and the remaining 3 percent have a June 1–May 31 accounting year.

[626] 42 U.S.C. 273(b)(1)(A).

[627] Public Law 98–507, National Organ Transplant Act, Section 301.

[628] We realize reconciliation for non-renal organs will require changes to the MCR form CMS–216–94, as well as procedural changes for IOPOs, HCLs and the Medicare contractor. Therefore, in the 2027 IPPS proposed rule, we proposed a 1-year implementation delay.

reasonable cost of the services provided by the IOPO or HCL.

- Not to charge any individual for items or services for which that individual is entitled to have payment made under section 1881 of the Act.

Because of the proposed change to the title of § 413.420, paragraph (c) would apply to both kidney and non-renal organs. We proposed to revise § 413.420(c)(1)(ii) to include OPOs as entities that pay IOPOs and HCLs. We also proposed to revise § 413.420(c)(1)(iv) to specify that the IOPO or HCL agrees to pay to CMS amounts that have been received or are receivable by IOPOs or HCLs from THs and OPOs, and that are in excess of the reasonable costs of the services provided by the IOPO or HCL. This rephrasing to use ''have been received or are receivable'' reflects the accrual basis of accounting required at § 413.24(a) and reflects that the payments are made to IOPOs and HCLs by THs and OPOs.

Section 413.420(d)(1) currently specifies that THs with approved kidney transplant programs pay the IOPO or HCL for their pre-transplantation services on the basis of interim rates established by the contractor for that IOPO or HCL. The authority to allow the contractor to establish the interim rate is described in § 413.420(c)(ii). The interim rate currently described in § 413.420(d)(2) is a kidney SAC or contractor established rates, based on costs associated with procuring a kidney for transplantation, incurred by an IOPO or HCL respectively, during its previous fiscal year. If there is not adequate cost data to determine the initial interim rate, the contractor determines it according to the IOPO's or HCL's estimate of its projected costs for the fiscal year. Section 413.420(d)(3) goes on to specify that payments made by THs on the basis of interim rates are reconciled directly with the IOPO or HCL after the close of its fiscal year, in accordance with § 413.420(e). Lastly, § 413.420(d)(4) currently specifies that information on the interim rate for all IOPOs and HCLs must be disseminated to all THs and contractors.

In accordance with § 413.420(c)(ii), and to ensure that non-renal SACs and non-renal testing rates are an accurate estimate of actual costs, and to increase transparency around non-renal SACs and non-renal testing rates, we further proposed to require the contractor to establish (and adjust if necessary) non-renal SACs. This proposed change also required conforming changes to § 413.420(d)(1). As noted previously, § 413.420(d)(1) specifies that THs with approved kidney transplant programs pay the IOPO or HCL for their pre-transplantation services on the basis of an interim rate established by the contractor for that IOPO or HCL. However, we proposed to revise § 413.420(d)(1) to specify that THs with approved transplant programs and OPOs pay the IOPO or HCL for their pre-transplantation services based on interim rates established by the contractor for that IOPO or HCL as described under proposed paragraphs (d)(1)(i) and (d)(1)(ii). OPOs are also entities that pay IOPOs and HCLs for their pre-transplant services using the interim rates.

We proposed to add § 413.420(d)(1)(i) to specify that THs with approved kidney transplant programs and OPOs pay the IOPO or HCL for their kidney pre-transplantation services, based on interim rates established by the contractor for that IOPO or HCL. In addition, we proposed to add § 413.420(d)(1)(ii) to specify that THs with approved non-renal transplant programs and OPOs pay the IOPO or HCL for their non-renal organ pre-transplantation services furnished for cost reporting periods beginning on or after October 1, 2027, based on interim rates established by the contractor for that IOPO or HCL. The establishment of these interim rates is the first step in preparing for the reconciliation for non-renal organ acquisition costs.

Section 413.420(d)(2) currently provides that the interim rate established by the contractor for an IOPO is a kidney SAC, and the interim rates established for an HCL are contractor established rates, based on costs associated with procuring a kidney for transplantation, and incurred by an IOPO or HCL during its previous fiscal year. If there is not adequate cost data to determine the initial interim rate, the contractor determines it according to the IOPO's or HCL's estimate of its projected costs for the fiscal year. We proposed that the contractor follow the same procedures for establishing, adjusting, and publishing non-renal SACs that are used for establishing, adjusting, and publishing kidney SACs. To implement this proposed change, we proposed to revise § 413.420(d)(2) and to add paragraphs (d)(2)(i) and (ii).

We proposed to revise § 413.420(d)(2) to specify that interim rates are contractor established rates, based on costs associated with procuring an organ for transplantation, incurred by an IOPO or HCL during its previous fiscal year as described under proposed § 413.420(d)(2)(i) and (ii). We also proposed to move language specific to kidney from the existing § 413.420(d)(2) to proposed § 413.420(d)(2)(i) and to specify that the interim rates for kidneys are a contractor established kidney SAC or contractor established rates, associated with procuring kidneys for transplantation, incurred by an IOPO or HCL, respectively, during its previous fiscal year. We proposed that if there is not adequate cost data to determine the initial interim rate, the contractor would determine it according to the IOPO's or HCL's estimate of its projected costs for the fiscal year.

Rates for non-renal organs are currently established by the IOPOs and HCLs in accordance with § 413.404(c)(1) and billed to THs or other OPOs. THs and OPOs pay the rates established by these entities; however, there is no ability for the THs or other OPOs to determine the reasonableness of these rates. We proposed that the contractor establish, adjust (if necessary), and publish the non-renal organ interim rates for IOPOs and HCLs. Our proposal would ensure compliance with reasonable cost principles, result in lower costs throughout the transplant ecosystem, enhance payment accuracy, provide financial protection to OPOs and HCLs for their reasonable costs, increase transparency surrounding costs, and provide robust oversight in response to Congressional and OIG concerns. Therefore, we proposed to add § 413.420(d)(2)(ii) to specify that for services furnished for cost reporting periods beginning on or after October 1, 2027, the interim rates for non-renal organs are contractor established non-renal organ-specific SACs or contractor established rates, based on costs associated with procuring each specific type of non-renal organ for transplantation, incurred by an IOPO or HCL, respectively, during its previous fiscal year. We proposed that if there is not adequate cost data to determine the initial interim rates, the contractor would determine them according to the IOPO's or HCL's estimate of its projected costs for the fiscal year.

Section 413.420(d)(3) currently specifies that payments made by THs based on interim rates are reconciled directly with the IOPO or HCL after the close of its fiscal year, in accordance with § 413.420(e). We proposed to revise § 413.420(d)(3) to specify that payments or amounts payable from THs and OPOs based on interim rates as proposed in § 413.420(d)(2)(i), are reconciled directly with the IOPO or HCL after the close of its fiscal year in accordance with § 413.420(e). Additionally, under § 413.420(d)(3), we proposed to specify that for cost reporting periods beginning on or after October 1, 2027, payments or amounts payable from THs and OPOs based on interim rates as proposed in

§ 413.420(d)(2)(ii), are reconciled directly with the IOPO or HCL after the close of its fiscal year in accordance with § 413.420(e).

We proposed to revise § 413.420(d)(4) to change ''interim rate'' to ''interim rates'' and to specify that when a contractor establishes interim rates for IOPOs and HCLs, it must disseminate those interim rates to all THs, OPOs, and contractors. Our proposed language adds OPOs to the list of entities that would receive the interim rate information since OPOs also pay IOPOs for organs.

We did not propose changes to § 413.420(e)(1) except to use the acronym HCLs instead of ''histocompatibility laboratories'' because the existing language specifies cost reporting requirements that are unchanged, and which apply to IOPOs and HCLs currently and would continue to apply once our proposed changes would be effective.

We did not propose to revise § 413.420(e)(2) except to use the acronym HCL instead of ''histocompatibility laboratory'' as this paragraph applies to the current policy. We proposed to revise § 413.420(e)(2)(i) to add the word ''kidney'' before ''interim rate'' to be clearer that this regulation applies to the existing policy. We also proposed to revise the sentence to reflect the accrual basis of accounting required at § 413.24(a) by specifying that a retroactive adjustment of the amounts received or receivable by the IOPO or HCL under the kidney interim rate is made in accordance with § 413.64(f).

We proposed to revise § 413.420(e)(2)(ii) to add the word ''kidney'' before ''interim reimbursement rate'' to be clearer that this regulation applies to the existing policy. We also proposed to revise the sentence to reflect the accrual basis of accounting required at § 413.24(a), and to include OPOs as entities that pay IOPOs and HCLs. Therefore, we proposed to specify that if the determination of reasonable cost reveals an overpayment or underpayment resulting from the kidney interim reimbursement rates received or receivable by the IOPO or HCL from THs and OPOs, a lump sum adjustment is made directly between the contractor and the IOPO or HCL.

We proposed to add § 413.420(e)(3) to specify that for cost reporting periods beginning on or after October 1, 2027, a cost report submitted by an IOPO or HCL is reviewed by the contractor and new interim reimbursement rates for non-renal organ acquisition costs for the subsequent fiscal year are established by the contractor based upon this review. This proposed language is similar to the existing language at § 413.420(e)(2) except it includes the effective date of the proposed new policy and refers to non-renal organ acquisition costs rather than kidney acquisition costs.

We proposed to add § 413.420(e)(3)(i) to specify that a retroactive adjustment of the amounts received or receivable by the IOPO or HCL under the non-renal organ-specific interim rates is made in accordance with § 413.64(f). This proposed language is similar to the existing language at § 413.420(e)(2)(i) except it refers to the ''non-renal organ-specific interim rates'' rather than the ''interim rate'' to reflect our proposed policy and also refers to amounts ''received or receivable'' to reflect the accrual basis of accounting required at § 413.24(a).

We proposed to add § 413.420(e)(3)(ii) to state that if the determination of reasonable cost reveals an overpayment or underpayment resulting from the non-renal organ-specific interim reimbursement rates received or receivable by the IOPO or HCL from THs and OPOs, a lump sum adjustment is made directly between the contractor and the IOPO or HCL. This proposed language refers to non-renal organ-specific interim reimbursement rates rather than kidney interim reimbursement rates to reflect the proposed policy. It also indicates that payments are received or receivable by IOPOs or HCLs from THs and OPOs to reflect our reconciliation process, which is in accordance with the accrual basis of accounting required at § 413.24(a), and it identifies both THs and OPOs as the entities paying IOPOs and HCLs.

We also proposed changes to § 413.404 to conform to the changes proposed to § 413.420(d), which require the contractor to establish the non-renal organ-specific interim rates, which are the same as the non-renal organ-specific SACs, following the same procedures used for establishing kidney SACs. We also proposed that only the contractor adjust the non-renal SACs if necessary, and that the contractor disseminate the interim rates to all THs, OPOs, and contractors.

As noted previously, we proposed a 1-year delay in implementing our proposed changes. Therefore, we need to indicate when these regulations would be effective. As such, we proposed to change the title of § 413.404(c) to specify that it is for cost reporting periods beginning before October 1, 2027. This proposed change would clarify for readers that all the existing regulatory text under § 413.404(c) is effective for cost reporting periods beginning before October 1, 2027. We also proposed to add new § 413.404(d) with a title that specifies that it is for Independent OPO organ SACs, for cost reporting periods beginning on or after October 1, 2027, and which would incorporate our proposed changes. This new paragraph (d) is for all organs, renal and non-renal.

We proposed to add new § 413.404(d)(1), to state that for each organ type, the contractor establishes the organ-specific SAC based on an estimate of, initial year projected or subsequent years' actual, reasonable and necessary costs that the IOPO expects to incur to procure deceased donor organs during the IOPO's cost reporting period, divided by the initial year projected or subsequent years' actual, number of usable deceased donor organs the IOPO expects to procure. This is modeled after the existing kidney SAC regulations at § 413.404(c)(2)(i), except we proposed to add ''For each organ type,'' at the start of the paragraph, and we replaced kidney SAC with organ-specific SAC and replaced deceased donor kidneys with deceased donor organs.

We also proposed to add § 413.404(d)(1)(i) to specify how the non-renal and kidney SACs would be calculated in their initial year, by modelling after the existing regulation text at § 413.404(c)(2)(ii). We also proposed to add § 413.404(d)(1)(i) to specify how the non-renal and kidney SACs would be calculated in their initial year, by modelling after the existing regulation text at § 413.404(c)(2)(ii). The proposed text added at new § 413.404(d)(1)(i) would specify that for each organ type, the contractor develops the IOPO's initial organ-specific SAC based on the IOPO's budget information.

We also proposed to add § 413.404(d)(1)(ii) to specify how the non-renal and kidney SACs would be calculated in subsequent years, by modelling after the existing regulation text at § 413.404(c)(2)(iii). The proposed § 413.404(d)(1)(ii) would state that for each organ type, the contractor computes the organ-specific SAC for subsequent years using the IOPO's costs related to organ acquisition that were incurred in the prior cost reporting period and dividing those costs by the number of usable deceased donor organs procured during that cost reporting period.

We proposed to add § 413.404(d)(1)(iii), to state that each organ-specific SAC amount is the organ-specific interim payment the TH or other OPO pays to the IOPO, as set forth in § 413.420(d)(2)(i) and (ii). This language would make clear that the

organ-specific SAC is the same as the organ-specific interim payment.

We also proposed to add § 413.404(d)(1)(iv) to provide a listing of allowable organ acquisition costs for the contractor to use when establishing IOPO organ-specific SACs. In the FY 2022 IPPS/LTCH PPS final rule with comment period, we wrote that an IOPO establishes its non-renal SACs based on its costs of procuring organs, similar to procedures followed by THs (86 FR 73478). However, the listing of organ acquisition costs IOPOs may use when developing their deceased donor SACs was omitted when we codified the regulations related to IOPO SACs in the FY 2022 IPPS/LTCH PPS final rule with comment period (86 FR 73478 through 73480). Therefore, we proposed to use the same listing given in § 413.404(b)(3)(ii)(C) for TH deceased donor SACs, except to exclude registry fees, which are costs incurred by THs not OPOs. We proposed to add § 413.404(d)(1)(iv) to specify that costs that may be used to develop the IOPO deceased donor SACs include, but are not limited to the following:

- Costs of organs acquired from other THs or OPOs.
- Costs of transportation as specified in § 413.402(b)(8).
- Surgeons' fees for excising deceased donor organs (limited to $1,250 for kidneys).
- Costs of tissue typing services, including those furnished by independent laboratories.
- Organ preservation and perfusion costs.
- General routine and special care service costs (for example, intensive care unit or critical care unit services related to the donor).
- Operating room and other inpatient ancillary service costs.

We proposed to add § 413.404(d)(1)(v) to require that only the contractor may adjust the organ SACs. This is a proposed change from the existing policy, where the IOPO currently can adjust its non-renal SACs as needed and use that adjusted SAC without contractor approval; we also included the word ''only'' to make it clear that only the contractor may adjust organ SACs. We also proposed that IOPOs may request that the contractor make an adjustment in accordance with § 413.64(e), or the contractor may initiate an adjustment, in accordance with § 413.64(d)(2) or § 413.64(e) as applicable.

While we modelled our proposed regulation text after the existing regulations for IOPO kidney SACs, we did not propose to add a subparagraph (vi), similar to the existing regulation at § 413.404(c)(2)(vi), which currently states that the IOPO cannot use or change its kidney SAC without the contractor's approval. That language is not necessary because proposed subparagraph (v) already makes it clear that only the contractor can adjust the organ SACs, and any SAC the contractor establishes would already be contractor approved.

Finally, we proposed to add § 413.404(d)(2) to state that when an IOPO obtains an organ from another IOPO, the receiving IOPO is responsible for paying the procuring IOPO's SAC. The receiving IOPO uses its SAC for each organ type, and not the procuring IOPO's SAC, when billing the TH receiving the organ. This is the same as the existing requirement at § 413.404(c)(3), and we are continuing this policy without change.

To reconcile Medicare's share of non-renal organ acquisition costs, the contractor would review the MCR to determine if the costs are reasonable. This would entail the contractor's review of all IOPO and HCL organ acquisition costs that IOPOs and HCLs report annually on their MCRs and would ensure that IOPOs' and HCLs' organ acquisition costs are allowable and are reasonable and necessary, in accordance with section 1861(v) of the Act, the regulations, and Provider Reimbursement Manual (PRM), CMS Pub. 15–1 (herein referred to as PRM–1).[629]

In determining Medicare's share of non-renal organ acquisition costs, we proposed that IOPOs and HCLs would follow the same procedures used for kidney reconciliation, which assumes that all usable organs or tests for usable organs intended for transplant are for Medicare beneficiaries, except for usable organs, or tests for usable organs, sent to military hospitals, U.S. Department of Veterans Affairs hospitals, or foreign countries. We believe that even with this limitation, our proposal would rein in excess costs; provide more robust oversight of IOPO and HCL costs; increase payment accuracy, in accordance with reasonable cost principles; and be responsive to Congressional and OIG concerns. Should this proposal be finalized, we would also update the IOPO and HCL cost report form CMS–216–94 to enable reconciliation of costs and revenues for each organ type.

Comments on these proposals are found at the end of this section.

[629] CMS Pub. 15–1 can be found at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Paper-Based-Manuals-Items/CMS021929*.

c. Discussion of OPO Comments in Response to the July 2022 RFI on Non-Renal Organ Acquisition Cost Reconciliation

In the CY 2023 OPPS/ASC proposed rule (87 FR 44769 through 44773), we issued an RFI (hereafter referred to as the ''July 2022 RFI'') and inquired about reconciling non-renal organ acquisition costs, mirroring our current approach for determining Medicare's reimbursement of IOPOs' kidney acquisition costs. We received several comments related to non-renal organ reconciliation and have carefully reviewed each one.

(1) Supportive Comments

We received a few comments in response to the July 2022 RFI from a TH, a patient advocacy group, and a provider of high-cost perfusion services supporting Medicare's non-renal SAC reconciliation. A commenter fully supported Medicare's non-renal reconciliation and wrote that the data show that many OPOs are failing in their organ recovery efforts; this commenter wrote that the current reimbursement policies are insufficient to incentivize productive resource allocation. Several commenters supported additional oversight of IOPO non-renal organ acquisition costs, saying it would strengthen fiscal integrity. A commenter noted that the distinction between how we account for renal versus non-renal organ acquisition costs creates powerful incentives for cost shifting to kidney acquisition cost centers on the MCR. We agree with these commenters and thank them for their support.

(2) Effects on Organ Procurement

Other comments we received in response to the July 2022 RFI were from OPOs, OPO industry groups, or OPO consultants that expressed opposition to Medicare's reconciling non-renal organ acquisition costs. These commenters believed that reconciling non-renal organ acquisition costs would undercut their ability to procure marginal organs, leading to fewer organs and therefore fewer transplants. Specifically, some OPO commenters wrote that the costs of procuring, or attempting to procure, marginal organs that are subsequently found not suitable for transplant would create losses, as there would be no revenue from those organs. As such, these commenters wrote that they may have to scale back efforts to procure marginal organs. However, these commenters seemed to misunderstand Medicare's organ acquisition payment policy, which allows reasonable costs of

procuring or attempting to procure an organ intended for transplant, even if it is subsequently found not suitable for transplant (see our regulations at § 413.412(a)(2) and (d)(2)). Medicare's reconciliation of organ acquisition costs for renal and non-renal organs would make IOPOs whole when total organ acquisition costs exceed total revenue, but this currently only occurs for kidneys.

In contrast to these OPO commenters, multiple other OPO commenters who also opposed Medicare's reconciling non-renal organ acquisition costs (because they were concerned about potential financial swings and the need to have large cash reserves) wrote that their procurement of organs would not be affected by such a policy, as they try to procure every organ, every time. Furthermore, several commenters stated that OPOs are incentivized to procure as many organs as possible through their organ performance metrics, which affect their tier rating. A perfusion provider commented that reconciling non-renal organs would increase organ procurement by removing the financial risk if an organ is procured but subsequently not transplanted. We agree and further assert that Medicare's reconciliation of non-renal organs could *encourage* the pursuit of marginal organs by protecting OPOs from financial losses on their procurement of marginal non-renal organs that are later found unsuitable for transplant, thus reinforcing our goal to support organ procurement and organ transplantation.

(3) Costs for Organ Perfusion

Several commenters were concerned about situations where OPOs expend resources procuring organs that undergo costly interventions (for example, perfusion) but are later declined by THs and determined to be unsuitable for transplantation. A commenter wrote that if Medicare reconciles non-renal organ acquisition costs for IOPOs, those costly interventions would be considered unallowable, and the OPO would bear the cost. We disagree as our regulations at § 413.402(b)(5) allow perfusion costs; as noted previously, costs incurred for organs intended for transplant are allowable even if the organ is subsequently not transplanted (see §§ 413.412(a)(2) and 413.412(d)(2)). Therefore, if an IOPO authorized the perfusion of a non-renal organ intended for transplant that was subsequently not transplanted, those costs would be allowable (if a TH authorized the perfusion, the perfusion costs would belong to that TH and should be directly billed to that hospital). If Medicare reconciled IOPOs' costs for procuring all organs, it could reimburse more since it would cover acquisition costs for all organ types, not just kidneys as under the current policy.

(4) ''Losses'' Due to Nonallowable Costs

Several commenters wrote that they have ''losses'' when procuring kidneys, because in reconciling, the contractor finds some costs that OPOs report on their MCRs to be unallowable. While OPOs can recover their allowable and reasonable operational costs, we cannot reimburse costs that are statutorily or regulatorily prohibited or specified in the PRM–1 as non-allowable or unreasonable. In sections X.D.2. and X.D.3. of the preamble of this final rule, we are clarifying existing policy and finalizing proposals (some with modifications) to codify certain longstanding reasonable cost policies, as well as revising certain other Medicare reasonable cost reimbursement policies, to assist all providers, including OPOs, in understanding what is not allowable under Medicare's reasonable cost principles.

Some commenters wrote that they make up for these monetary ''losses'' they experience when procuring kidneys through the revenue they receive for procuring non-renal organs. A few OPOs and industry groups acknowledged that their non-renal organ SACs result in ''excess'' revenue which they are using to fund non-allowable or unreasonable costs. That excess revenue is a result of inflated non-renal SACs, which are billed to THs or other OPOs, inflating costs throughout the transplant ecosystem. Medicare ends up reimbursing its share of those inflated costs when it reimburses the TH, which violates our reasonable cost principles. We are committed to carefully and responsibly stewarding the tax dollars in the Medicare Trust Fund, and we believe that Medicare's reconciliation of OPOs' non-renal organ acquisition costs would result in Medicare more accurately reimbursing organ acquisition costs.

(5) Burden

IOPOs indicated in comments submitted in response to the July 2022 RFI that they had concerns about the burden for IOPOs if Medicare reconciled IOPOs' costs for non-renal organs. We do not believe Medicare's reconciliation of IOPOs' costs for non-renal organs would impose additional data collection burden to IOPOs, as they already collect the data needed for reconciliation. However, we recognize there may be additional reporting burden to enable the contractor to reconcile non-renal organ acquisition costs.

A few OPOs also commented that there would be additional burden on the contractor if reconciliation of non-renal organs were to become policy. We do not agree that there would be additional burden on the contractor. Burden implies a cost that is not reimbursed. Our contractor would have increased administrative costs if we were to finalize our proposals that the contractor establish, adjust if necessary, and publish non-renal SACs and HCL testing rates, and reconcile IOPO and HCL non-renal organ acquisition costs. However, these increased administrative costs would be offset by the estimated savings of $100 million beginning in FY 2028, the proposed year that the policies would be effective, if the proposal is finalized. See section I.G.13. of Appendix A of this final rule for a discussion of the impacts including burden effects of our proposals.

(6) Financial Concerns

A few commenters to the July 2022 RFI wrote that if non-renal organ acquisition costs are reconciled, they would have to build large financial reserves in case they may have to repay Medicare a share of those excess funds. If IOPOs' SACs more accurately estimate actual, reasonable costs, then we do not anticipate that reconciliation would result in large payments back to Medicare, therefore limiting the need for large financial reserves. We note that SACs can be adjusted during the year if IOPOs believe they are too high or too low. This can help IOPOs avoid owing large sums to Medicare after the year-end reconciliation takes place in cases where the SAC is overestimating costs. If an IOPO's SACs were underestimated, and costs are exceeding revenue, the contractor can also provide a lump sum adjustment during the accounting period; currently this only occurs with the kidney SAC (see 42 CFR 413.420(e)(2)(ii)) but our proposal would also allow it for non-renal organ SACs. Any lump sum adjustment would be accounted for when making a retroactive adjustment at cost report settlement.

Other commenters wrote that Medicare's reconciliation of non-renal organs would have a detrimental effect on the financial viability of IOPOs and cited section 371(b) of the Public Health Service Act (PHSA), which requires OPOs to have accounting and other fiscal procedures (as specified by the Secretary) necessary to assure the fiscal stability of the organization. These IOPOs were concerned about losing ''excess'' revenue. However, we believe that reconciliation is an accounting procedure that helps to ensure the

financial integrity and stability of the IOPO or HCL and would be in accord with the requirements of section 371(b) of the PHSA by providing fiscal stability to the OPO. The reconciliation process for all non-renal organs would also entail the contractor's disseminating the non-renal SACs for each IOPO to THs, OPOs, and other contractors, thereby increasing transparency of organ procurement costs within the transplant community.

Commenters cited high-cost perfusion and transportation expenses that can make accurately estimating a non-renal SAC more difficult, leaving them vulnerable to financial losses. We conducted an analysis of 2024 IOPO MCR data and found that 20 percent of IOPOs had non-renal organ acquisition costs that exceeded their non-renal revenue; these IOPOs would have been made whole by Medicare had reconciliation for non-renal organ acquisition costs been Medicare's policy at that time. We believe that reconciliation would provide a measure of financial security to IOPOs, because it would protect them from losses if their non-renal SACs underestimate non-renal organ acquisition costs. Furthermore, we believe that if Medicare were to reconcile OPOs' costs for non-renal organs, the Medicare Trust Fund's tax dollars would be protected from inappropriate spending on unreasonable or non-allowable costs.

We appreciate the input we received from July 2022 RFI commenters. For the reasons given in this section, we do not find the interested parties' concerns against reconciling IOPOs' non-renal organ acquisition costs to be compelling. We believe that reconciling IOPOs' non-renal organ acquisition costs would ensure that Medicare is paying organ acquisition costs on a reasonable cost basis, without hindering organ procurement. We also believe there is a need for the contractor to provide more robust oversight of IOPOs' non-renal organ acquisition costs and non-renal SACs to ensure that reasonable cost principles are followed, to be responsive to OIG and Congressional concerns, to protect the transplant ecosystem, and to protect the Medicare Trust Fund.

d. Concerns Related to HCLs

Like IOPOs, HCLs are compensated on a reasonable cost basis, and currently Medicare only reconciles their pre-transplant kidney histocompatibility testing costs. Based on our review of HCL MCR data, we have concerns that some HCLs may be over-allocating overhead costs to kidney acquisition cost centers, which increases Medicare's reimbursement. Additionally, a 2018 OIG report identified questionable accounting procedures at a large HCL. This HCL made numerous errors in reporting cost report data, such as reporting some non-reimbursable costs as reimbursable and including costs that were incurred outside of the cost reporting timeframe.[630] A recent internal review of 2022 and 2023 MCR data for HCLs revealed missing data and a lack of transparency in reporting costs. For example, 29 percent of HCLs did not complete worksheet A–1 (''Administrative and General (A&G) Expenses'') of the HCL cost report for their fiscal year ending in 2023; 36 percent had significant unexplained costs reported and labeled as ''Other'' or ''Miscellaneous'' on their worksheet A–3 (''Tissue Typing Laboratory Costs''). Of those providers with significant unexplained costs reported, 30 percent had unexplained amounts that ranged from 19 percent to 33 percent of their total worksheet A–3 costs. Because we pay HCLs based on their reasonable costs, this lack of transparency is concerning and raises many questions about Medicare's payment accuracy on a reasonable cost basis.

In summary, in the proposed rule, we proposed to reconcile IOPOs' and HCLs' organ acquisition costs for non-renal organs, following the same process we currently use to reconcile kidney acquisition costs, and to require the contractor to establish, adjust, if necessary, and disseminate the non-renal interim rates, using the same process followed for kidney interim rates. We proposed a 1-year delay to provide time for us to update the IOPO and HCL cost report, and to provide time for IOPOs and HCLs to prepare for increased reporting of non-renal costs and revenue on their MCRs and greater contractor oversight of their non-renal SACs and HCL testing rates, with an effective date for cost reporting periods beginning on or after October 1, 2027. We believed these proposals, if finalized, would protect the Medicare Trust fund, reduce inappropriate spending, increase compliance with our reasonable cost principles, and protect IOPOs and HCLs from certain financial losses while continuing to support the transplant ecosystem.

Comment: Many OPOs questioned our authority to change OPO payment policies for non-renal organs to a reasonable cost basis. Some commenters said that Public Law 95–292, which amended section 1881 of the Social Security Act (the Act) in June 1978, was for kidneys only. Commenters also cited the Supreme Court's 2024 decision in *Loper Bright Enterprises* v. *Raimondo,* which requires courts to independently assess whether an agency's statutory interpretation represents the best reading of the text. A few commenters asserted that even if there were some ambiguity regarding whether Congress intended for CMS to engage in reasonable cost-based reconciliation with OPOs for non-renal acquisition costs, courts routinely apply the canon of *expressio unius est exclusio alterius,* meaning ''[t]he expression of one thing implies the exclusion of others.'' These commenters said that Congress's targeted reference to ''kidneys'' instead of ''organs'' supports the interpretation that Congress intended the Medicare program to subsidize the cost for kidneys directly to OPOs, not all organs.

A commenter added that if CMS lacks statutory authority to pay OPOs directly for non-renal organ acquisition, then CMS likewise lacks authority to ''reconcile'' those payments or to recover any amounts that exceed actual costs. Commenters noted that CMS's own regulatory history of more than 30 years reflects an implicit recognition of the different statutory scope applicable to non-renal organs. Commenters noted that when CMS later expanded coverage to non-renal organ acquisition costs, it adopted payment policies through notice-and-comment rulemaking without applying reasonable cost reimbursement and reconciliation for non-renal organs.

Response: We disagree with the commenters' position that statutory authority does not exist for Medicare to reimburse OPOs (or HCLs) for their procurement of all organs under Medicare's reasonable cost principles. The commenter asserts that because Public Law 95–292 amended SSA 1881 in June 1978, and its title referenced End Stage Renal Disease patients, Congress' intent was limited to kidneys. However, courts have consistently held that statutory titles are not operative law and cannot override or restrict the substantive provisions of a statute (see *Brotherhood of R.R. Trainmen* v. *Baltimore & Ohio R.R.,* 331 U.S. 519 (1947)). While Public Law 95–292 (1978) was originally enacted to address the End-Stage Renal Disease (ESRD) program, the reasonable cost limitation principle it established was incorporated into the broader Medicare payment framework.

When we later extended Medicare coverage to heart transplants (1987) and

[630] *https://oig.hhs.gov/reports/all/2018/national-institute-of-transplantation-an-independent-histocompatibility-laboratory-did-not-fully-comply-with-medicares-cost-reporting-requirements/.*

other solid organs,[631] we did so without creating a separate, distinct payment standard for non-renal organs. Section 1871 of the Act requires the Secretary to issue regulations necessary to carry out the Medicare program, and mandates notice-and-comment rulemaking for any substantive change in the regulations. Through notice-and-comment rulemaking, non-renal organ acquisition costs were paid to hospitals on a reasonable cost basis. Although we did not implement the reasonable cost reimbursement for IOPO (or HCL) non-renal organ acquisition costs when the coverage for hospital non-renal organ transplants and acquisition costs was added under Medicare, we have always reserved the right to do so. Hospital-based OPOs and hospital-based HCLs have always had their non-renal organ acquisition costs reimbursed and reconciled by Medicare on a reasonable cost basis alongside their associated hospitals. Independent OPOs and independent HCLs, despite performing the identical organ procurement functions as their hospital-based counterparts, have been excluded from this same reconciliation process—an inequity that lacks statutory justification and that CMS's proposal appropriately remedies.

As discussed in the proposed rule, we are bringing consistency and transparency to the organ acquisition payment system by also paying IOPOs and HCLs on a reasonable cost basis for non-renal organ acquisition costs, as we currently do for kidneys. We have the authority under section 1871 of the Act to implement reasonable cost reimbursement for IOPO and HCL non-renal organ acquisition costs through notice-and-comment rulemaking.

The absence of a distinct payment standard for non-renal organ acquisition costs in subsequent legislation strongly supports the conclusion that Congress intended the existing reasonable cost framework—already operative under the Social Security Act—to govern all organ procurement activities, not solely kidney acquisition. Where Congress has not carved out an exception, the default statutory payment standard applies.

Additionally, the National Organ Transplant Act (NOTA) of 1984 [632] established the OPTN and created a unified framework for all solid organ procurement—not just kidneys. The Omnibus Budget Reconciliation Act (OBRA) of 1986 and 1987 [633] extended Medicare coverage to heart, liver, and other non-renal organ transplants and directed that OPO payment rules apply across organ types, reinforcing a unified procurement payment structure. This legislative trajectory supports our position that Congress intended a unified OPO payment framework for all solid organs. We also note that the regulations at 42 CFR parts 486 and 493 govern conditions for coverage for OPOs and laboratory standards for HCLs, respectively, and apply to all organs, not just kidneys. These regulations were promulgated under the authority of the Social Security Act and reflect CMS's longstanding interpretation that OPO and HCL payment rules apply to all organs.

By 1978, there had been several successful organ transplants performed for various organ types. In addition to kidney transplants, in 1966, there was a successful kidney/pancreas transplant; in 1967, there was a successful liver transplant; and in 1968, there was a successful pancreas transplant and a successful heart transplant.[634] Although kidney transplants were the only type of organ transplant recognized by Medicare for payment from the Medicare Trust Fund in 1978 when Public Law 95–292 was enacted, Congress was forward-thinking in their selection and use of the word ''organ'' when legislating. In its Senate Report 95–714,[635] Congress first describes the fiscal problem for the Medicare program for which the legislation was enacted to solve. In the Senate Report, Congress stated that pretransplant services furnished by OPOs and HCLs are reimbursed as inpatient hospital services at the time of transplantation. This policy was effective in providing coverage of pre-transplant services; however, it did not provide the program with adequate fiscal controls. The Senate Report continued to explain the inadequate fiscal control by the Medicare program, using kidneys *as an example,* and stated that when an OPO provided a kidney to a TH, it billed to the hospital directly, and the components of the charge were not subject to the review of the Medicare contractor as are other services provided directly by the hospital. By legislating with precision and intention using the word ''organ,'' Congress intended for all ''organs'' procured by statutorily created and regulated OPOs to be paid under reasonable cost by Medicare, not just kidneys. We believe that Congress's targeted reference to ''organs'' instead of ''kidneys'' supports the interpretation that Congress intended the Medicare program to pay for all organs, not just kidneys, on a reasonable cost basis. If Congress wanted to use the word ''kidney'' in its legislation, it would have done so. In the Public Law 95–292 (92 Stat. 309, June 13, 1978), Congress specifically intended to solve Medicare's ''fiscal problem'' for the procurement of all organs paid under reasonable cost by the Medicare program by legislating with cogent and succinct language that, with respect to payments for services for which payments may be made under part A of Title 18, the amount of such payments (which amounts shall not exceed, in respect to costs in procuring organs, attributable to payments made to an OPO or HCL, the cost incurred by that OPO or laboratory) shall be determined in accordance with section 1861(v).[636] This precise language speaks for itself; payment made under part A of Title 18 with respect to the procurement of organs must be determined in accordance with Medicare's reasonable cost statute and principles. CMS is the steward of the American tax dollars in the Medicare Trust Fund, and we must administer the Trust Fund with the ''fiscal controls'' envisioned and devised by Congress in its specific legislation with respect to OPOs' procurement of all ''organs'' for transplant and ensure that Medicare reimburses OPOs for their reasonable cost to procure them.

Comment: Many commenters stated that OPOs have structured their operations around the existing payment policy for non-renal organs for decades, and that the Administrative Procedures Act requires CMS to provide a reasoned explanation and a more detailed justification when changing policy in the face of serious reliance interests. Some commenters wrote that changing the payment methodology that has been in place for years was arbitrary and capricious. Commenters argued that CMS failed to meet these standards,

[631] 52 FR 33034, September 1, 1987 (heart); 55 FR 8545, March 8, 1990 and 56 FR 15013, April 12, 1991 (liver); 60 FR 6537, February 2, 1995 (lung); 64 FR 41497, July 30, 1999 (pancreas); 66 FR 39828, August 1, 2001 (intestine, with reasonable cost coverage of acquisition costs beginning October 1, 2001). The regulation at 42 CFR 412.2(d)(4) excluded kidney acquisition costs from inpatient prospective payment system and specified that those costs were to be paid on a reasonable cost basis. Heart and liver were added to the regulation at 42 CFR 412.2(d)(4) in 1990 (55 FR 36068). The regulation was relocated to § 412.2(e)(4) in 1994 and lung was added (59 FR 45396); pancreas was added in 1999 (64 FR 41540) and intestine in 2001 (64 FR 39933).

[636] Section 1881(b)(2)(A).

saying that the proposed rule did not include any new Congressional directive, updated factual findings, or a detailed policy justification to explain what changed since CMS decided decades ago not to apply the renal reconciliation model to non-renal organs. Commenters suggested that at a minimum, CMS provide a clear and detailed legal and policy rationale for departing from decades-long practices and adopt meaningful transition protections to preserve the operational stability of OPOs and HCLs.

Response: We acknowledge that the existing non-renal organ acquisition reimbursement framework has been in place for a significant period and that IOPOs have made operational and financial decisions based upon that framework. However, the Administrative Procedure Act (APA) and the Supreme Court's decisions in *Motor Vehicle Manufacturers Association of United States Inc.* v. *State Farm Mutual Automobile Insurance Company,* 463 U.S. 29 (1983) and *Federal Communications Commission* v. *Fox Television Stations, Inc.,* 566 U.S. 502 (2009) do not prohibit agencies from changing course—they require only that the agency provide a reasoned explanation for doing so, acknowledge the change, and, where serious reliance interests exist, provide a more detailed justification. We believe the record in this rulemaking satisfies that standard.

As detailed in the proposed rule (91 FR 19729 to 19730) and in our previous comment response, our proposal to apply reasonable cost reconciliation to non-renal organ acquisition costs is grounded in the Agency's longstanding statutory authority under the Social Security Act to ensure that Medicare payments accurately reflect actual, reasonable costs. The current payment framework, which does not subject non-renal organ acquisition costs to the same reconciliation discipline applied to kidney acquisition, creates the potential for Medicare to pay amounts that exceed the actual costs incurred by IOPOs. Ensuring payment accuracy and maintaining program integrity are core statutory responsibilities of CMS, and the proposed change represents a reasonable and appropriate exercise of that authority. Additionally, as highlighted in the proposed rule, hospital based OPOs and HCLs are already reimbursed on a reasonable cost basis, and this proposal establishes consistency by paying IOPOs and independent HCLs on a reasonable cost basis as well; thereby promoting equitable and uniform treatment across all organ procurement entities participating in the Medicare program.

While our goal is to increase compliance with Medicare's reasonable cost principles, we realize that a change to IOPO payment policy may result in financial and cash flow challenges, administrative and cost reporting burden, and audit exposure, and it may require operational restructuring. As such, in the FY 2027 IPPS/LTCH proposed rule, as part of our detailed rationale and justification for proposing to reconcile non-renal organ acquisition costs, we included an extensive discussion of comments from OPOs on non-renal organ acquisition cost reconciliation from the Request for Information (RFI) that was included in the CY 2023 OPPS/ASC proposed rule (87 FR 44772 and 44773). The RFI sought comments about reconciling non-renal organ acquisition costs, mirroring our current approach for determining Medicare's reimbursement of IOPOs' kidney acquisition costs. In the FY 2027 IPPS/LTCH proposed rule, we addressed RFI comments that expressed concerns about the effects of reconciling non-renal organs on procurement, particularly for organs intended for transplant but which subsequently are not transplanted; we noted that the regulations at §§ 413.412(a)(2) and 413.412(d)(2) allow costs for procuring or attempting to procure organs intended for transplant even if the organ is not subsequently transplanted. This includes costs for high-cost interventions like perfusion. We wrote that our payment policy regarding these costs actually incentivizes procurement of these organs; by removing the potential to incur a financial loss on these organs, we are removing a disincentive to procurement. We also wrote that several IOPOs commented that their procurement efforts would be unaffected by reconciling non-renal organ acquisition costs. Those IOPOs wrote that their organ performance metrics incentivize them to maximize procurement.

We noted that reconciling non-renal organ acquisition costs would ensure that OPOs are protected in situations where they have incurred costs for an organ but receive no revenue for the organ because it is subsequently found unsuitable for transplant, as Medicare would make them whole if their revenue is less than their reasonable costs.

We addressed concerns about ''losses'' incurred due to contractor review of kidney acquisition costs, resulting in disallowance of costs that are not allowable or reasonable, and noted that sections X.D.2. and X.D.3. of the FY 2027 IPPS/LTCH proposed rule included extensive discussion of reasonable cost principles. Those sections of that proposed rule and of this final rule provide detailed explanations about the allowability of certain types of costs, including costs that may have previously resulted in contractor disallowance (for example, some public or professional education costs, and some sponsorships). Many IOPOs already comply with our reasonable cost principles; however, we need *all* IOPOs to understand that Medicare will not cover and pay for certain types of costs that are excessive or unreasonable. Such an understanding will avoid situations where ''losses'' occur because excessive, unreasonable, or non-allowable costs are disallowed by the contractor.

We recognized IOPO concerns about additional reporting burden, though we believe there would be very little additional data needed to reconcile non-renal organ acquisition costs (for example, we would need information about non-renal organs sent to military or Department of Veterans Affairs (VA) hospitals, or to foreign countries). We also addressed concerns about contractor burden, noting that there would be no administrative burden for the Medicare contractor because burden implies a cost that is not reimbursed, and while the Medicare contractor would have additional costs to handle the increased workload, those administrative costs would be absorbed administratively by the Medicare Program.

In our discussion of the July 2022 RFI comments in the FY 2027 IPPS/LTCH proposed rule, we addressed financial concerns related to cash flow and cash reserves, financial viability, and to SAC estimation which are further discussed in separate comments that follow, and provided our reasons why non-renal reconciliation would protect IOPO viability and how adjustments and lump sum payments during the cost reporting period are available. We included findings of an analysis of OPO cost report data for cost reporting periods ending in 2024 and noted the section of the FY 2027 IPPS/LTCH proposed rule where there was a detailed discussion of the impacts and burden effects. In our discussion of the July 2022 RFI comments in the FY2027 IPPS/LTCH proposed rule, we wrote that we believed that reconciling IOPOs' non-renal organ acquisition costs would ensure that Medicare is paying for those costs on a reasonable cost basis without hindering organ procurement. By thoughtfully considering and

responding to the July 2022 RFI comments related to reconciling non-renal organ acquisition costs, we addressed operational concerns related to our proposed reconciliation of non-renal organ acquisition costs in detail. We also provided a history of how organ acquisition costs have been paid and discussed concerns about inflated costs moving from the IOPOs to the THs, which have no ability to determine their reasonableness. As we stated in the FY2027 IPPS/LTCH proposed rule, because Medicare pays THs their organ acquisition costs for all organs on a reasonable cost basis, when an IOPO establishes a non-renal acquisition charge that is higher than its reasonable costs actually incurred, and the IOPO bills that inflated charge to a TH (or other OPO), that inflated charge is reported by the TH (or other OPO) as an organ acquisition cost on its cost report, Medicare then shares in those inflated costs. To correct this situation and ensure IOPOs and HCLs are held to reasonable costs, similar to HOPOs and hospital-based HCLs, we proposed to reconcile IOPO and HCL costs for non-renal organs similar to how we reconcile IOPO and HCL kidney costs. Those concerns date back years, as they were noted in 1978 rulemaking, and more recently, in our July 2022 RFI questions about non-renal organ acquisition cost reconciliation. In making our proposals, we considered both IOPO and HCL reliance interests and have provided detailed explanation of and justification for our proposals.

Comment: We received a few comments about HCL-related issues from hospitals, OPOs, an association, and HCLs. A few commenters supported our proposals. A commenter requested that CMS clarify whether the reasonable cost reconciliation proposal for HCLs only applies to hospital-based HCLs or whether it would also include independent HCLs. Some commenters asked that we develop our proposed changes with direct input from transplant programs, finance teams, OPOs, and Medicare reimbursement experts. Another commenter wrote that changes for HCLs will threaten laboratory readiness and transplant matching capacity.

Response: We thank those commenters who were supportive of our proposals. These proposals were focused on independent HCLs who file the independent OPO/HCL Medicare cost report form CMS–216–94 and do not affect hospital-based HCLs, which are already reimbursed under reasonable costs. We have received input from a variety of stakeholders during the 60-day public comment period and will continue to engage with stakeholders as we effectuate our final policies. We recognize that both IOPOs and HCLs operate in an environment that requires 24/7 availability regardless of testing volume and that our final policies will bring changes to HCL operations and payment; we do not believe that our final policies, which are discussed in later responses, will threaten HCL operational readiness or transplant matching capacity. As discussed in a later response, we have modified the proposed 1-year delay to be a 2-year delay, with implementation for cost reporting periods beginning on or after October 1, 2028. We believe this lengthier delay will allow time for all stakeholders, including HCLs, to prepare. We are also committed to providing educational resources to stakeholders to assist them in understanding the finalized policies. Our final policies are discussed in the comments that follow.

Comment: Multiple commenters emphasized that OPOs are currently navigating an unprecedented convergence of regulatory changes, including ongoing recertification cycles, expanded survey and enforcement protocols, new performance measures, and broader federal modernization initiatives. Some commenters suggested that CMS should evaluate the proposed reimbursement framework in light of this intensifying regulatory environment, cautioning that layering major payment methodology changes on top of existing compliance demands could destabilize OPO operations and undermine their core mission of maximizing organ donation opportunities. A commenter acknowledged CMS's concerns about rising non-renal organ acquisition costs but similarly cautioned that payment changes must not further destabilize organ procurement during a period of substantial operational transition. A commenter wrote that the proposed delay was not sufficient time for the cost reporting forms to be updated to accommodate non-renal reconciliation, and that we did not mention updates to the cost reporting instructions.

Nearly all commenters opposed CMS's proposed 1-year implementation delay to FY 2028 as insufficient. Many commenters urged CMS to delay implementation of contractor-established non-renal SACs and non-renal organ acquisition cost reconciliation until FY 2030. Several commenters requested a phased approach to all the IOPO proposals in the proposed rule, asserting that a single fiscal year is inadequate for IOPOs to conduct the financial modeling necessary to determine reasonable organizational margins and construct secure financial models. Commenters asked that each phase be accompanied by clear sub-regulatory guidance, updated cost report instructions, and meaningful stakeholder engagement. Commenters stressed that OPOs will need sufficient time to develop the infrastructure, processes, and financial capacity necessary to operate under a reconciliation framework without risking operational disruption.

Response: We acknowledge commenters' concerns that the proposed 1-year implementation delay, with changes taking effect for cost reporting periods beginning on or after October 1, 2027, may be insufficient given the operational, financial, and regulatory demands currently facing OPOs. We also recognize that OPOs are simultaneously managing recertification requirements, survey and enforcement activity, performance measures, and other federal modernization initiatives. We agree that the cumulative burden of these changes warrants careful consideration, and we are committed to ensuring that payment methodology reforms do not inadvertently destabilize the organ donation and transplantation system or reduce the availability of life-saving organs.

After careful consideration of the comments received, we are modifying the proposed implementation timeline from a 1-year delay to a 2-year delay so that the finalized policies related to reconciliation of non-renal organ acquisition costs for IOPOs and independent HCLs, and finalized policy with modifications for the Medicare contractor to review (to ensure reasonableness), approve, adjust if necessary, and publish non-renal SACs and HCL testing rates (discussed in the following comment response), will take effect for cost reporting periods beginning on or after October 1, 2028.

We plan to update the IOPO/HCL MCR to accommodate non-renal organ acquisition cost reconciliation, in a forthcoming Paperwork Reduction Act package with the updated cost report forms and instructions that will be published in the **Federal Register** for public comment. We will also issue sub-regulatory guidance to provide OPOs and independent HCLs with the clarity and lead time necessary to adapt their financial models and operational processes. We are modifying the regulation text to be consistent with our final policy. Specifically, we are modifying the regulation text at §§ 413.404(c), 413.404(d), 413.420(a)(1)(ii), 413.420(d)(1)(ii), 413.420(d)(2)(ii), 413.420(d)(3), and

413.420(e)(3) to change the year shown in the text from 2027 to 2028.

Comment: Most commenters opposed our proposal to require the Medicare contractor to establish and adjust, if necessary, IOPO non-renal organ acquisition charges. Commenters wrote that the proposed SAC calculation would create a lag between the SAC rates and actual costs, affecting OPOs' ability to adjust to market conditions in a dynamic clinical environment, particularly for complex donors which often involve significant upfront costs and uncertain outcomes. Multiple IOPOs wrote that they incur costs to maintain operational readiness on a 24/7 basis, regardless of procurement volumes. A commenter noted that independent HCLs maintain highly specialized personnel, accreditation standards, quality systems, and testing capabilities on a 24/7 basis regardless of testing volume; unlike many clinical laboratories, transplant testing demand is unpredictable and frequently time-sensitive. This commenter was concerned that a reimbursement methodology that fails to recognize these readiness costs could undermine the laboratory infrastructure necessary to support timely organ allocation and transplantation.

Several commenters wrote that the SAC proposal would introduce financial risk, fiscal and cash flow instability, and long-term operational uncertainty. Some commenters argued that national average SACs would mask significant regional variation between OPOs and would fail to reflect the actual procurement costs in rural, geographically dispersed, or operationally complex service areas.

A few commenters wrote that CMS was exceeding its authority by undertaking government price setting. Some expressed concerns that Medicare would be dictating the charges levied to non-Medicare payors, who dominate the coverage of non-renal organs and their associated organ acquisition costs. A commenter was concerned that the contractor would have unchecked authority to set rates, reconcile costs, and impose lump sum payment obligations without requiring that contractor staff possess organ procurement expertise or consult with clinical professionals before setting rates or disallowing costs; and there was no formal stakeholder input process before the contractors establish or adjust non-renal SACs and no non-discretionary right of administrative appeal. Another commenter was concerned about inconsistent Medicare contractor practices across service areas affecting SAC establishment. A commenter supported the prudent buyer principle, that reimbursement should reflect reasonable costs and that providers should be expected to manage expenses as a prudent, cost-conscious purchaser would and argued that setting the SAC through the Medicare contractor was inconsistent with the prudent buyer principle.

Some commenters noted that the proposed rule did not clarify whether SACs would be calculated on a total program or a Medicare-only basis, creating fundamental ambiguity regarding the methodology. Several commenters asked that CMS require contractors to consider both prior year costs and a reasonable estimate of projected current-year costs for each non-renal organ type or to allow a margin above the prior year costs, such as the 101 percent of cost that CAHs receive. A commenter recommended that the kidney surgeon fees, which are part of the SAC and which have remained fixed since 1987, be increased. This commenter recommended establishing reasonable fees for non-renal surgeons, stand-by fees, and surgeon travel costs.

Multiple commenters wrote that unlike kidneys, non-renal organs exhibit greater cost variability due to lower case volume, geographic dispersion, donor complexity, transportation logistics, and organ utilization patterns, making cost estimation more difficult. Several commenters suggested that CMS consider an innovation carve-out from the SAC calculation to allow IOPOs to pass through the costs of FDA-approved, clinically validated preservation and transportation technologies with contractor approval, or that CMS carve out high-cost items like perfusion and some transportation, to allow outlier or supplemental payments, or an add-on or adjustment mechanism. A commenter asked CMS to clarify its statement in the proposed rule that if a TH authorizes perfusion services, those services should be directly billed to the TH. Another commenter wrote that CMS acknowledged in the FY 2022 Final Rule that OPOs should develop non-renal SACs ''sufficient to cover'' their procurement costs, and that phrasing contemplated that SAC revenue might exceed actual costs. A commenter noted the uncertainty involved in estimating SACs, and wrote that when actual procurement volumes exceed projections, per-unit costs decrease and SAC revenue appears to ''exceed'' costs; this commenter stated that this reflects the success of procurement efforts, not price-gouging. A commenter wrote that CMS's proposal that the Medicare contractor would publish all SACs for all organs for independent OPOs would not achieve total transparency because organ pricing for hospital-based OPOs would remain opaque.

A few commenters noted that the proposal would require more funding for the Medicare contractors; a commenter asked the cost of the additional Medicare contractor workload, noting that we said it would be offset by the $100 million in estimated savings. Several commenters requested that CMS require Medicare contractors to review and approve SACs and SAC adjustments within a specified timeframe, provide a detailed explanation of the SAC adjustment request process, and establish explicit standards and data requirements for obtaining an adjustment. A commenter requested that contractors be required to make timely lump-sum adjustments during the accounting period rather than relying solely on a one-time post-period adjustment. Another commenter cautioned that frequent mid-year SAC changes would be disruptive to THs, which negotiate payor contracts annually with limited ability to revise rates mid-year, potentially creating financial and operational challenges for transplant centers.

Response: We appreciate these comments regarding non-renal SACs and clarify that we did not propose national non-renal SACs, which we agree would not recognize local differences in procurement costs. We proposed that the contractor would establish non-renal organ SACs for each IOPO, based on that IOPO's prior year actual costs and actual number of usable deceased donor organs; we modeled this process and regulation text after the existing process and regulation text related to the manner in which kidney SACs are established. Kidney SACs are unique to each provider, based on each IOPO's cost report data.

The proposed regulation text at 42 CFR 413.420(e)(3) and 42 CFR 413.404(d)(1) uses the singular in referring to the contractor's establishment of the non-renal SACs (see 91 FR 19733). Since we proposed that the contractor would establish the SAC for each IOPO based on that IOPO's own cost report data, differences in non-renal SACs from one IOPO to another reflect the real-world variation in costs and procurement volumes that occurs between IOPOs. As specified in the proposed rule, the proposed non-renal SAC calculation would, for each organ type, use the provider's total prior year costs divided by the provider's total prior year number of organs procured; it is not a calculation based on Medicare costs and Medicare usable organs. The

charge for procuring an organ should not vary based on payor, and indeed, IOPOs frequently do not know whom the intended organ recipient is at the time of procurement.

We agree with commenters that if the contractor sets the non-renal SACs based solely on prior year actual costs and procurement data, it could limit an IOPO's operational flexibility and create cash-flow issues. We modeled the proposed language on the existing process for establishing kidney SACs. While the existing regulation text for kidney SAC establishment at § 413.404(c)(2) sets forth that the kidney SAC is based on prior year costs and organs procured, the regulation text at § 413.404(c)(iv) allows the Medicare contractor to adjust the SAC as needed for cost changes. Therefore, the prior year costs and utilization are a starting point for determining the SAC. However, through discussions with the Medicare contractor, we note that the process currently used by them in establishing the kidney SAC uses prior year actual costs and number of organs procured, as well as projected budget information, both provided by the IOPO to the contractor.

Based on the comments we received, we agree that each IOPO would be in the best position to estimate its future organ volumes, and the future costs associated with how it plans to operate in the subsequent year similar to what they are currently doing for kidneys. We also believe that each HCL would be in the best position to estimate its future testing costs and volumes associated with how it plans to operate in the subsequent year. Therefore, we are finalizing our proposal with modifications to require that the IOPO would provide the Medicare contractor its reasonable estimate for each organ SAC based upon its prior year costs and organ procurement volumes and its reasonable and documented estimate of its projected costs and organ procurement volumes for the subsequent year, for contractor review (to ensure reasonableness) and approval. For independent HCLs, we are finalizing our proposal with modifications to specify that the HCL would provide the Medicare contractor with its reasonable estimate of its testing rates based on its prior year costs and reasonable and documented estimate of its projected testing costs and volumes for the subsequent year, for contractor review (to ensure reasonableness) and approval.

We believe this modification will allay provider concerns about government ''price-setting,'' of the non-renal SACs; we are not ''price setting'' because the SACs will be devised with the engagement of the IOPOs, based on their historical and reasonable and documented projected costs. Our finalized policy also eliminates IOPO concerns about a lag between rates and actual costs. We believe this modification also addresses IOPOs' concerns about local differences in procurement costs. Furthermore, our modification addresses concerns about failing to uphold the prudent buyer principle, as the IOPO is better able to ensure the costs used in its estimates meet the prudent buyer principle. Additionally, it will enable IOPOs and HCLs to successfully navigate a dynamic clinical environment that must be ready 24/7, regardless of procurement or testing volumes and should not affect procurement decisions, even with complex cases, which can have significant upfront costs. Finalizing our proposal with this modification will also provide IOPOs and HCLs with more flexibility and will better support organ procurement. This final policy allows IOPO and HCL involvement in estimating their non-renal SACs and non-renal testing rates, respectively, and recognizes that at the time of procurement, IOPOs often do not know who the intended recipient is or the recipient's payor status. Our final policy includes a modification to recognize the value of engagement between IOPOs and their contractor. We note that there is one dedicated Medicare contractor with extensive experience with IOPOs and HCLs; therefore, all IOPOs and HCLs should be treated and reviewed with consistency. With our final policy, the SACs and HCL testing rates are not established by the Medicare contractor but are approved by the Medicare contractor with IOPO and HCL, respectively, input and cost projections. The Medicare contractor has access to medical expertise should the contractor have clinical questions related to organ procurement and can also consult the IOPO for more information. Administrative appeal is discussed in section X.D.4. of this final rule.

We are finalizing our proposal that the Medicare contractor will publish non-renal SACs and HCL testing rates used in billing THs and OPOs for transparency. Regarding the comment that hospital-based OPO SACs are not published, creating a disparity in pricing transparency, we disagree. Hospital-based OPOs costs are reported on the THs Medicare cost report. They are held to reasonable cost standards and their cost report is publicly available. The TH's cost report identifies total costs and total usable organs by organ type and an average acquisition charge can easily be computed from this publicly available document. We are finalizing as proposed that the Medicare contractor publish all non-renal IOPO and HCL SACs and testing rates.

We appreciate the comments about including a margin in the SAC calculation, such as 101 percent of cost used by Critical Access Hospitals. However, IOPOs are statutorily required to be reimbursed by Medicare on a reasonable cost basis, which means we cannot reimburse above 100 percent of cost. This is also true for HCL reimbursement. We received a few comments on our proposed listing of allowable costs, that may be included in deceased donor SACs, regarding surgeon's fees for kidney procurement. We may consider kidney surgeon fees, currently capped at $1,250, in future rulemaking. We did not specify surgeon fees for non-renal organs or surgical team travel costs, except that all procurement costs, including surgeon's fees and travel costs, must be reasonable. We are finalizing that listing in § 413.404(d)(1)(iv) as proposed.

We are clarifying that when a TH authorizes high-cost perfusion that is performed by an entity other than the OPO, the perfusion charges are billed directly to the TH and not to the OPO for those services. Additionally, our regulations at §§ 413.412(a)(2) and 413.412(d) allow THs (as well as OPOs) to include as organ acquisition costs those costs incurred that are associated with an organ recovered for transplant (such as perfusion). We appreciate commenters' suggestions about carving out high-cost items from the SAC, making outlier, supplemental, or add-on payments, creating an innovation payment or other adjustments and may consider those comments in future rulemaking.

Regarding the SAC calculation being ''sufficient to cover procurement costs,'' the commenter has not included the full context of what we wrote in the FY 2022 IPPS final rule (86 FR 73479); we stated that the IOPO should have fiscal procedures that include carefully estimating costs for the subsequent year when developing its non-renal SAC, so that ''the non-renal SAC is an average charge sufficient to cover procurement costs of non-renal organs. The SAC should be a reasonable estimate of average costs rather than an inflated estimate of average costs.'' We recognize that the SAC is an average cost for each organ type and an estimated charge based on future projections and therefore may turn out to be higher or lower than a provider's actual costs; however, it should a ''reasonable

estimate.'' We note that rate reviews can adjust the SAC to bring it more in line with costs. Regarding the uncertainty involved in estimating SACs, we recognize that there are instances when actual procurement volumes may exceed projections, decreasing per-unit costs and resulting in SAC revenue that is greater than cost. We agree that in this example, this excess is not due to price-gouging, but we do not believe this example explains all the excess revenue over cost we found in the IOPO cost report data.

As noted in the FY 2027 IPPS proposed rule, the contractor may adjust the SAC if necessary; this would typically be a mid-year review of the SAC to determine how accurate the estimate is. This is also true for HCL testing rates. IOPOs and HCLs may request a review or the contractor may initiate a review at other times in the accounting period in accordance with § 413.64(d)(2) or § 413.64(e) as applicable (see 91 FR 19734). In response to comments related to frequent SAC changes, we are limiting IOPO SAC and HCL testing rate adjustments to occur no more than quarterly. We believe the ability to adjust the SAC or HCL testing rates provides flexibility and is a protection for IOPOs and HCLs, since their initial SACs and testing rates are estimates based upon reasonable projections.

Regarding comments about the need to create reserves to avoid large year end overpayments, the IOPO or HCL should first submit a request to the Medicare contractor to adjust their SAC or rates accordingly. If a rate adjustment occurred because the IOPO SAC or HCL rates were too high, the IOPO or HCL may request to make a lump sum adjustment to Medicare, reducing any year end overpayments due. Likewise, an IOPO or HCL may be eligible to receive a lump adjustment after a rate adjustment has occurred if the IOPO's SAC or the HCL's testing rates were lower than cost, and the IOPO or HCL requests a lump sum adjustment from the Medicare contractor. To alleviate cash-flow concerns and minimize overpayments at cost report year-end, requests to adjust the SAC or testing rates should be made no more than on a quarterly basis. In this final rule, as a result of comments received, we are modifying the proposed regulation text at § 413.420(e)(3)(ii) to specify that if the determination of reasonable cost reveals an overpayment or underpayment resulting from the organ-specific interim reimbursement rates received or receivable by the IOPO or HCL from THs and OPOs, an adjustment to the interim rate may be initiated by the contractor or requested by the IOPO or HCL. If a rate adjustment is made, then an IOPO or HCL may request that a lump sum adjustment be made directly between the contractor and the IOPO or HCL.

If an IOPO or HCL that is eligible for a lump sum adjustment does not request one, the contractor will wait until the cost report is submitted and reviewed by the contractor to reconcile the costs with the IOPO or HCL and reimburse any costs that exceed revenue. The ability to make adjustments to the SAC or rates during the year, and the ability to receive or make lump sum adjustments, allow the IOPO or the HCL to minimize cash-flow concerns and potential overpayments or underpayments at the cost report year-end, thus enhancing their operational flexibility. In accordance with existing regulations at § 413.64(b), the intent is that interim payments (SACs and testing rates) shall approximate actual costs as nearly as is practicable, so that the retroactive adjustment based on actual costs will be as small as possible.

The documentation provided to the Medicare contractor when establishing SACs should clearly explain how the IOPO or HCL arrived at its estimates, including any data or assumptions used about procurement costs and organ volume predictions for the subsequent year. If the estimated SACs or testing rates for the subsequent year differ significantly from the existing non-renal organ SACs or testing rates, the provider should expect more scrutiny from the contractor and therefore, should ensure that the documentation is sufficiently detailed to support its estimate. The most common reason for a delay in the Medicare contractor's approval of SACs or testing rates is lack of documentation. Supporting documentation can include projected costs based on budget, or notable trends, in a format that mimics the actual cost report. Additionally, including financial information and donor information from the prior year, when establishing a subsequent year's SAC may assist in avoiding delays in subsequent SAC approvals.

To request a review and an interim rate adjustment or lump sum adjustment, an IOPO or HCL must follow the procedures given in § 413.64(c)(4). Similar to the process used when establishing the SAC or testing rates at the beginning of the cost period, as a result of comments received, in this final rule we are modifying the proposed regulation text at § 413.404(d)(1)(v) to specify that IOPOs may request that the contractor make an adjustment in accordance with § 413.64(e), or the contractor may initiate an adjustment, in accordance with § 413.64(d)(2) or § 413.64(e), as applicable, but no more than quarterly. Additionally, the IOPO must provide the Medicare contractor with an estimated adjusted SAC based on its actual cost data and its reasonable and documented estimate of costs through the end of its accounting period, to enable the Medicare contractor to review (to ensure reasonableness) and approve the SAC adjustment. We did not receive any detailed comments related to HCL rate-setting, but for consistency in organ acquisition payment policy, we are extending the same benefits to HCLs, to specify that the HCL must provide the Medicare contractor with adjusted rates based on actual cost data and its reasonable and documented estimate of costs through the end of its accounting period, to enable the Medicare contractor to review (to ensure reasonableness) and approve the interim rate adjustment. The Medicare contractor will publish updated SACs and testing rates so that the information is publicly available to other OPOs, THs, and contractors.

Regarding required timeframes for Medicare contractor review and approval of non-renal interim rates or interim rate adjustments, reconciliation, and lump sum adjustments, we understand the importance of timely contractor reviews, and we will keep these comments in mind as we work toward effectuating the final policy with our Medicare contractor.

We disagree with the commenter who wrote that changing the SAC frequently could cause financial or operational challenges to THs. On the contrary, we believe our proposals will more accurately reflect reasonable costs to THs and throughout the transplant ecosystem and provide THs with more transparency about IOPO and HCL pricing. THs are the primary payor of organ procurement services, and the costs they incur should reflect reasonable costs; when those costs fluctuate, rates will change, but to mitigate the frequency we are limiting the change in SACS or rates charged by IOPOs or HCLs, respectively, to no more than 4 times per year. We received no comments from hospitals regarding concerns with SAC or HCL testing rate changes; in fact, several THs supported our proposals. Finally, we acknowledge that the Medicare contractor's workload will increase to review and approve, adjust (if necessary), and publish IOPO non-renal SACs and HCL testing rates; however, this is not an increased burden but an increase in workload that is addressed within their contract. Any changes in costs to the Medicare

Program will be included in the forthcoming Paperwork Reduction Act package with the updated IOPO/HCL forms and instructions.

In summary, we are finalizing our proposal with modifications, to require that the Medicare contractor will approve the non-renal SACs and testing rates at the beginning of the cost reporting period based on the IOPO's or HCL's prior cost reporting year costs and the IOPO's or HCL's reasonable and documented estimate of its costs for the subsequent cost reporting year; the Medicare contractor will review the documentation the IOPO or HCL provides to ensure reasonableness, and approve the reasonable non-renal SACs and testing rates. When an interim rate review occurs during the year, the IOPO or HCL will provide the Medicare contractor its actual cost data and its reasonable and documented estimate of its costs for the remainder of the cost reporting year. The Medicare contractor will review the documentation the IOPO or HCL provides to ensure reasonableness and approve reasonable adjustments to the non-renal SACs or testing rates. Lastly, we are finalizing as proposed that the Medicare contractor will publish the non-renal SACs (including adjusted SACs) and testing rates (including adjusted testing rates) so that the information is available to THs, OPOs and contractors. As noted previously, we have extended the delay in implementation of these policies to FY 2029, for cost reporting periods beginning on or after October 1, 2028, to allow IOPOs and HCLs more time to prepare. To implement this policy with the modifications discussed, we are also modifying the proposed regulation text as follows:

- We are modifying the proposed regulation text at § 413.404(d)(1) to specify that for each organ type, the contractor approves the organ-specific SAC based on submission from the IOPO of an estimate of initial cost reporting year projected costs, divided by the initial cost reporting year projected number of usable deceased donor organs that the IOPO expects to procure. For subsequent cost reporting years, the contractor approves the organ-specific SAC submission from the IOPO based on the prior year's actual, reasonable and necessary costs and the IOPO's reasonable estimate of the costs it expects to incur to procure deceased donor organs during the IOPO's cost reporting period, divided by the subsequent cost reporting year's projected number of usable deceased donor organs the IOPO expects to procure during that cost reporting period.
- We are modifying the proposed regulation text at § 413.404(d)(1)(i) to specify that in the initial year, for each organ type, the contractor approves the IOPO's initial organ-specific SAC, based on the IOPO's budget information.
- We are modifying the proposed regulation text at § 413.404(d)(1)(ii) to specify that in subsequent years, for each organ type, the IOPO must provide the Medicare contractor with its reasonable estimated SAC based upon its prior cost reporting period's costs and organ procurement volumes, and its reasonable and documented estimate of its projected costs and procurement volumes for the subsequent cost reporting period, for contractor review to ensure reasonableness, and approval.
- We are modifying the proposed regulation text at § 413.404(d)(1)(v), to also specify that IOPOs may request that the contractor make an adjustment in accordance with § 413.64(e), or the contractor may initiate an adjustment, in accordance with § 413.64(d)(2) or § 413.64(e), as applicable, but no more than quarterly. Additionally, the IOPO must provide the Medicare contractor with an estimated adjusted SAC based on its actual cost data and its reasonable and documented estimate of costs through the end of its accounting period, to enable the Medicare contractor to review to ensure reasonableness, and approve the adjusted SAC.
- We are modifying the proposed regulation text at § 413.404(d)(2) to specify that when an IOPO obtains an organ from another OPO, the receiving IOPO is responsible for paying the procuring OPO's SAC. The receiving IOPO uses its SAC for each organ type, and the procuring OPO's SAC, when billing the TH receiving the organ. The proposed regulation text included typographical errors, referring to an IOPO instead of an OPO when referencing the entity providing the organ to the IOPO.
- We are modifying the proposed regulation text at § 413.420(a)(2) to specify that services furnished by IOPOs and HCLs, that have an agreement with the Secretary in accordance with § 413.420(c) are paid directly by the TH or OPO using a contractor-approved kidney SAC (for an IOPO) or contractor-approved kidney rates (for an HCL). Effective for cost reporting periods beginning on or after October 1, 2028, services furnished by IOPOs and HCLs, that have an agreement with the Secretary in accordance with § 413.420(c), are paid directly by the TH or OPO using a contractor-approved non-renal organ SAC (for an IOPO) or contractor-approved non-renal rates (for an HCL). (The reasonable costs of services furnished by IOPOs or HCLs are reimbursed in accordance with the principles contained in §§ 413.60 and 413.64.).
- We are modifying the proposed regulation text at § 413.420(c)(1)(ii) to specify that the IOPO or HCL agrees to permit CMS to designate a contractor to approve the interim reimbursement rate, payable by the THs or OPOs for services provided by the IOPO or HCL, and to determine Medicare's reasonable cost based upon the cost report filed by the IOPO or HCL.
- We are modifying the regulation text at § 413.420(c)(1)(iii) to specify that the IOPO or HCL agrees to provide such budget or cost projection information as may be required for the contractor to approve an initial interim rate.
- We are modifying the proposed regulation text at § 413.420(d)(1) and at § 413.420(d)(1)(i) and § 413.420(d)(1)(ii) to change ''established'' to ''approved''.
- We are modifying the proposed regulation text at § 413.420(d)(2) to specify that the interim rates are contractor approved rates, based on costs associated with procuring an organ for transplantation incurred by an IOPO or HCL, respectively, during its previous fiscal year and on the IOPO's or HCL's reasonable and documented estimate of its projected costs in its subsequent fiscal year, as follows.
- We are modifying the proposed regulation text at § 413.420(d)(2)(i) to more accurately reflect the current rate-setting process for kidneys, to specify that the interim rates for kidneys are a contractor approved kidney SAC or contractor approved rates, based on costs associated with procuring kidneys for transplantation, incurred by an IOPO or HCL, respectively, during its previous fiscal year and on the IOPO's or HCL's reasonable and documented estimate of its projected costs in its subsequent fiscal year. If there is not adequate cost data to determine the initial interim rate, the contractor approves it according to the IOPO's or HCL's estimate of its projected costs for the fiscal year.
- We are modifying the proposed regulation text at § 413.420(d)(2)(ii) to specify that for services furnished for cost reporting periods beginning on or after October 1, 2028, the interim rates for non-renal organs are contractor approved non-renal organ-specific SACs or contractor approved rates, based on costs associated with procuring each specific type of non-renal organ for transplantation incurred by an IOPO or HCL, respectively, during its previous fiscal year and on the IOPO's or HCL's reasonable and documented estimate of

its projected costs in its subsequent fiscal year. If there is not adequate cost data to determine the initial interim rates, the contractor approves them according to the IOPO's or HCL's estimate of its projected costs for the fiscal year.

- We are modifying the proposed regulation text at § 413.420(d)(4) to change ''establishes'' to ''approves''.
- We are modifying the title of the regulation text at § 413.420(e)(2) to add the effective date, so that the paragraph title indicates that it is for Audit and adjustment for cost reporting periods beginning before October 1, 2028, and to changed ''established'' to ''approved''.
- We are modifying the proposed regulation text at § 413.420(e)(3), to set forth *Audit and adjustment for cost reporting periods beginning on or after October 1, 2028.* A cost report submitted by an IOPO or HCL is reviewed by the contractor and new interim reimbursement rates for non-renal organ acquisition costs for the subsequent fiscal year are approved by the contractor based upon this review and upon the IOPO's or HCL's reasonable estimate of its costs for organ procurement and testing, respectively, in the subsequent fiscal year.
- We are modifying the proposed regulation text at § 413.420(e)(3)(i) to remove the word ''non-renal'' as this text will apply to all organs.
- We are modifying the proposed regulation text at § 413.420(e)(3)(ii) to specify that if the determination of reasonable cost reveals an overpayment or underpayment resulting from the organ-specific interim reimbursement rates received or receivable by the IOPO or HCL from THs and OPOs, an adjustment to the interim rate may be initiated by the contractor or requested by the IOPO or HCL, but no more than quarterly. If a rate adjustment is made, then an IOPO or HCL may request that a lump sum adjustment be made directly between the contractor and the IOPO or HCL.

Comment: Most commenters requested that CMS not finalize its proposal to reconcile non-renal organ acquisition costs. A few commenters were unclear as to whether the proposed reconciliation of non-renal organs was for all non-renal organs or just for Medicare non-renal organs. Commenters requested more detail on the reconciliation process. Several commenters wrote that a reimbursement model built for kidneys, which have a higher volume of procurements than non-renal organs, may not fit lower-volume non-renal organ procurement, which have greater cost variability. A commenter noted that a small number of complex non-renal cases can materially affect annual costs and utilization.

Several commenters noted that based on OPTN or SRTR data, the majority of non-renal organs are transplanted into non-Medicare beneficiaries. Some commenters wrote that reconciling for all non-renal organs would violate the statutory prohibition of cross-subsidization in section 1861(v)(1)(A) of the Social Security Act, and CMS's longstanding policy that Medicare should only pay for covered services to Medicare beneficiaries and should not subsidize or pay for non-Medicare services. Because non-renal organ transplants are predominantly financed by private, non-Medicare payers, commenters contended that this approach would result in Medicare dictating the pricing structure for services that are largely outside the Medicare program's scope, thereby impermissibly shifting the cost burden to non-Medicare patients and payers. Commenters characterized this as significant regulatory overreach that is contrary to law.

Several commenters expressed concerns that cost report reconciliation takes 2 years from the close of the cost reporting period and that timeframe does not include time for appeals of amounts in dispute. During the appeals process, OPOs must pay the amount in dispute up front, which can create operational cash flow issues which will be magnified if there is no margin or reserves.

Response: As noted previously, we maintain that our authority to reimburse non-renal organ acquisition costs on a reasonable cost basis is grounded in section 1881(b)(2)(A) of the Act, as amended by Public Law 95–292, which references the cost of procuring organs broadly. We interpret this language as encompassing both renal and non-renal organs, consistent with the broader statutory purpose of ensuring that Medicare payments accurately reflect the actual, reasonable costs incurred by OPOs in the procurement of organs for Medicare beneficiaries. We note that the absence of an explicit reconciliation mechanism for non-renal organ acquisition costs has created payment integrity vulnerabilities and has resulted in Medicare paying amounts that do not accurately reflect actual OPO costs. As we described in the proposed rule, when an IOPO establishes a non-renal acquisition charge that is higher than its reasonable costs actually incurred, and the IOPO bills that inflated charge to a TH (or other OPO), that inflated charge is reported by the TH (or other OPO) as an acquisition charge on its cost report. Medicare then shares in those inflated charges when reconciling TH's organ acquisition costs, because we are settling with the TH based on costs which were inflated. The TH has no way to determine the reasonableness of the charges it receives from OPOs or HCLs. Without reconciliation, IOPO non-renal organ acquisition charges would continue to be passed to THs without any mechanism to ensure those charges reflect actual, reasonable cost—resulting in inflated and unverified costs cascading throughout the transplant ecosystem. The absence of a reconciliation requirement for IOPOs and independent HCLs creates a fundamental accountability gap; unlike their hospital-based counterparts, independent IOPOs and HCLs operate without the cost discipline that the annual Medicare cost reporting reconciliation process imposes. As noted previously, hospital-based OPOs and hospital-based HCLs are already held to reasonable cost for their non-renal organ acquisition costs through the annual Medicare cost reporting reconciliation process. There is no principled basis for exempting IOPOs and independent HCLs from the same standard—consistency, cost integrity, and equitable treatment across the transplant ecosystem demand that reconciliation apply uniformly to all OPOs and HCLs.

We recognize that non-renal organs have significantly more cost variability than kidneys and believe that cost variability is a strong argument for reconciling non-renal organs, because as a commenter noted, a small number of complex non-renal cases can materially affect annual costs and utilization. Reconciling non-renal organs will protect IOPOs from potential losses on non-renal organ acquisition costs, including for complex cases where an organ is subsequently not transplanted.

We proposed that the reconciliation process for non-renal organ acquisition costs mirror the process we use for reconciling kidney acquisition costs, which IOPOs and HCLs are already familiar with. Generally, reconciliation compares total revenue to total costs, and if total costs are greater than total revenue, Medicare makes up the difference to make the provider whole. Likewise, if total costs are less than total revenue, the provider pays Medicare the difference.

Following the procedures we currently use for reconciling kidney acquisition costs, the Medicare contractor would first review the IOPO's and the HCL's organ acquisition costs to ensure that they are allowable and reasonable. The contractor would follow the reasonable cost principles set forth

in section 1861(v)(1)(A) of the Act and our regulations (including new or updated regulations related to the reasonable cost provisions described and finalized in sections X.D.2. and X.D.3. of this final rule). We would then determine Medicare's share of the non-renal organ acquisition costs. Our current policy assumes that all usable kidneys are transplanted into Medicare beneficiaries, with the exception of kidneys sent to VA hospitals, to military hospitals without an agreement as described in § 413.202, or to foreign countries. We would apply this same assumption to non-renal organs, assuming that all usable non-renal organs are transplanted into Medicare beneficiaries, with the exception of those sent to VA hospitals, any military hospital, or to foreign countries. We do not have any agreements with military hospitals related to non-renal organs, so none of the non-renal organs sent to a military hospital would be allowable as Medicare organs.

While we agree that the majority of non-renal organs are transplanted into non-Medicare beneficiaries, based on OPTN or SRTR data, we would not consider this proposed method a violation of statute that prohibits cross-subsidization in section 1861(v)(1)(A) of the Social Security Act. Medicare must only pay for covered services to Medicare beneficiaries and must not subsidize or pay for non-Medicare services; however, IOPOs an HCLs are paid primarily by the THs and other OPOs for the services they provide, not by Medicare. The reconciliation process is to ensure Medicare's reasonable cost principles are applied. Additionally, because Medicare is approving IOPO SACs and HCL testing rates under its reasonable cost principles, and because those SACs or testing rates are estimates of actual costs, the only way to make the IOPO or HCL whole when the SAC or HCL testing rate is not a close approximation to cost is by reconciling those costs.

Similar to kidneys, we would calculate a Medicare ratio for each type of non-renal organ, with the numerator being the total usable organs less the usable organs sent to military or VA hospitals or to foreign countries, and the denominator being the total usable non-renal organs. The Medicare ratio for kidneys is used to compute Medicare's share of the allowable organ acquisition costs. For example, if an IOPO procured 200 usable livers, but sent 5 of those usable livers to military or VA hospitals, the liver Medicare Ratio would be (200 − 5)/200, or 0.975000 (97.5000 percent). We apply the Medicare ratio for liver to the total organ acquisition costs for liver, to determine Medicare's share of the organ acquisition costs for liver. We would apply the same methodology, multiplying each organ specific Medicare ratio by its associated total acquisition costs to determine the Medicare share of organ acquisition costs for each organ type.

Next, similar to kidneys, we would reconcile the costs with the revenue. The process requires that we subtract the total payments received or receivable from OPOs and THs for non-renal organs furnished from the Medicare share of the organ acquisition costs. If the costs exceed revenue, Medicare would have a liability to the IOPO; if revenue exceeds costs, the IOPO would have a liability to Medicare, before accounting for sequestration and interim payments such as lump sum adjustments made during the cost reporting period.

The process for HCLs is similar. Currently, Medicare's share of kidney HCL testing costs is calculated on the OPO/HCL Medicare cost report. The HCL calculates a Medicare ratio by dividing its total gross charges for kidney pre-transplant HCL testing by its total gross charges for all HCL testing. This ratio is multiplied by the total HCL costs (called tissue typing laboratory costs on the current IOPO/HCL cost report form) for kidney pre-transplant testing. The result is Medicare's share of the tissue typing laboratory's costs. Any revenue for HCL services furnished to military or VA hospitals or to foreign countries is subtracted from the Medicare HCL kidney acquisition costs and then the total payments received or receivable from OPOs or THs for pre-transplant kidney laboratory services are subtracted, to determine the liability before sequestration or any interim payments are accounted for. If the result is a positive number, it means that the total Medicare HCL testing costs exceeded the total HCL revenue, and Medicare owes the HCL the difference. If the result is a negative number, it means that the total HCL testing costs were less than the total HCL revenue, and the HCL owes Medicare the difference. We would then subtract the sequestration adjustment and account for interim payments before determining a net balance due to the HCL from Medicare, or from Medicare to the HCL. This process would occur for testing costs for each non-renal organ, following the same steps. As noted previously, after considering the comments received, we are finalizing our proposal with a delayed implementation to cost reporting periods beginning on or after October 1, 2028, to allow IOPOs and HCLs time to prepare and to adjust their operations as necessary.

We are finalizing our proposal to reconcile non-renal organ acquisition costs by adopting an approach that is analogous to the methodology long applied to kidney acquisition cost reconciliation and currently applied to HOPOs and hospital-based HCLs. Because THs and OPOs are the primary payors to IOPOs and HCLs for non-renal organ acquisition services, this methodology does not constitute cross-subsidization—the costs being reconciled are costs that Medicare-participating entities are already directly bearing and passing through the transplant ecosystem. Reconciliation simply ensures that those costs are reasonable and verifiable, not that Medicare is assuming costs properly attributable to other payors. Just as we have historically treated all procured kidneys as Medicare kidneys—except those sent to certain military hospitals, to VA hospitals or to foreign countries—we will apply a similar presumptive Medicare attribution methodology to non-renal organs for purposes of Medicare's reasonable cost reconciliation. This approach reflects the practical impossibility of organ-level Medicare/non-Medicare attribution at the time of procurement and is consistent with the methodology that has long governed kidney acquisition cost reconciliation. For HCL testing costs, we will adopt a similar approach, treating all tests for non-renal organs as performed for Medicare beneficiaries, while excluding costs associated with testing for military or VA hospitals, or for foreign countries by offsetting the Medicare share of the HCL costs by the revenue received for those tests.

We believe that this approach represents the most operationally sound method of implementing reasonable cost reconciliation for non-renal organ acquisition costs in a manner that is consistent with Medicare's anti-cross-subsidization principles. CMS will continue to evaluate whether refinements to this methodology are warranted as additional data and operational experience become available.

For the reasons set forth above, and in the responses to comments that follow, we are finalizing our proposal to reconcile non-renal organ acquisition costs following the same procedures used for kidney reconciliation as proposed, effective for cost reporting periods beginning on or after October 1, 2028. In determining Medicare's share of non-renal organ acquisition costs and non-renal HCL testing costs, our final reconciliation policy will consider all

usable non-renal organs to be Medicare usable organs except for those organs provided to military or VA hospitals, or to foreign countries.

Comment: While multiple commenters supported CMS's goals of transparency, accountability, and stewardship, commenters asserted that our proposed policy to reconcile non-renal organ acquisition costs would eliminate operating margins and, when accounting for the 2 percent Medicare sequestration reduction, would result in zero or negative net reimbursement. Many commenters requested that CMS adopt a reimbursement methodology set at 101 or 102 percent of cost, similar to the payment model used for Critical Access Hospitals. Several commenters argued that a zero-margin reimbursement model is inconsistent with the Public Health Service Act (PHSA) requirement at section 371(b)(1)(B) to maintain fiscal stability; a commenter noted that CMS did not acknowledge in the proposed rule that reconciliation to ''break even'' effectively results in a net loss once sequestration is applied. Many commenters said their long-term financial viability would be threatened. A few commenters also noted that IOPOs experience unreimbursed losses on surgical fees for kidneys, further compounding the financial impact; some commenters noted that kidney costs, which are subject to cost-based reimbursement, have increased greatly in a short period of time despite their being reconciled. A commenter was concerned that a zero-margin reimbursement model would negatively impact IOPO's fiscal security, with a few commenters citing OPTN policies or modernization that can result in increased costs. A commenter used the change in the allocation model and the resulting increased transportation and recovery expenses as an example.

Multiple commenters emphasized that operating margins are not discretionary but are essential to sustaining OPO operations. Commenters noted that OPOs have fixed or semi-fixed costs and that OPOs and HCLs must maintain 24/7 operational readiness regardless of donor volume or organ utilization or test volume, without the benefit of diversified revenue streams. A number of commenters cautioned that a zero-margin model would erode capital reserves and inhibit investment in critical areas such as innovation, transportation logistics, organ preservation technologies, referral automation, cybersecurity infrastructure, and donor care centers—all of which require upfront capital that cost-only reimbursement cannot finance. Some commenters further noted that lenders would be unlikely to extend credit to organizations unable to generate a margin, limiting IOPOs' access to capital necessary for infrastructure investment.

Several commenters raised concerns about the operational and mission-related consequences of the proposed methodology. They argued that financial constraints would force IOPOs to divert resources away from mission-critical programs—including donor identification, donor family support, organ preservation, and community outreach—in order to build reserves to manage cost volatility. Commenters also warned that retrospective reconciliation would incentivize a more risk-averse operating model, discouraging the pursuit of medically complex or marginal donors and organs that may ultimately be unsuitable for transplant, thereby reducing the total number of organs recovered and transplants performed.

Commenters highlighted broader systemic risks associated with the proposed approach. Some noted that there is no other instance in healthcare where CMS has eliminated all operating margin and established a reconciliation process applicable to Medicare and all other payers. Some commenters were concerned that prolonged reimbursement delays, retroactive repayment obligations, and reimbursement uncertainty would impair OPOs' ability to make the investments necessary to maximize donation and transplantation and could adversely affect cash flow. Other commenters were concerned that IOPOs would be unable to compete in a competitive healthcare labor market or to respond to supply chain volatility. Some commenters expressed concern that CMS's characterization of IOPOs as non-profits in the proposed rule implied that margins are unnecessary; some commenters clarified that margins are currently reinvested into organizational missions and that operating without a margin would constitute irresponsible governance. A commenter wrote that IOPOs may be compelled to seek revenue from unrelated business activities, jeopardizing their non-profit status. Additionally, commenters noted that IOPOs need reserves to address unpaid receivables from THs and potential hospital bankruptcies.

Finally, commenters raised concerns about the downstream impact on Medicare expenditures and the broader transplant system. A few commenters noted that organ procurement and transplantation reduce long-term Medicare costs by decreasing reliance on expensive treatments for end-stage organ failure and warned that policies discouraging pursuit of complex donors or constraining organ utilization efforts could result in fewer transplants, worse patient outcomes, and higher downstream Medicare costs. Commenters also noted that the financial burden of coordinating imported organs, including absorbing losses due to other OPOs' variable SACs, may lead some IOPOs to discontinue this service, which would shift coordination responsibilities to transplant centers, resulting in duplicative costs and inconsistent service delivery.

Response: We thank the commenters for expressing their concerns. Pursuant to section 1881(b)(2)(A), OPOs are entitled to reimbursement at reasonable cost for organ acquisition, and CMS is charged with ensuring compliance with this requirement. While we agree that kidney costs have increased, we maintain that such increases are the result of factors unrelated to cost-based reimbursement policy; namely rising transportation costs associated with the new organ allocation system and the broader adoption of advanced perfusion and preservation technologies.

Our proposals to hold IOPOs to reasonable costs for non-renal organ procurement means limiting reimbursement to cost. As such, we are unable to reimburse providers above 100 per cent of cost. We agree that sequestration, which originated with Public Law 112–25 and is governed by Congress, affects many providers and further reduces their reimbursements. We recognize that our final policy to reconcile non-renal organ acquisition costs will be a significant change for IOPOs, affecting their finances and operations. That is one reason why we proposed a delay in implementation, and why, after evaluating public comments, we are extending the delay in implementation to cost reporting periods beginning on or after October 1, 2028.

Regarding unreimbursed surgical fees for kidneys, in the FY 2022 IPPS/LTCH rulemaking, we solicited data and information on surgeon's fees for deceased donor kidney retrievals. We did not receive data in the comment responses we received, which are discussed in the FY 2022 IPPS/LTCH final rule (91 FR 73504 and 73504), however, we may consider this topic in future rulemaking. Regarding increased operating costs resulting from OPTN policy changes or modernization efforts, as long as the costs meet the requirements for organ acquisition costs set forth at § 413.402 and are reasonable,

then they would be allowable costs and reimbursable, and therefore would not threaten the IOPO's fiscal security. Reasonable labor costs and reasonable costs incurred to address supply chain volatility, and which meet the definition of organ acquisition costs specified at § 413.402(a) and (b), are allowable costs and can be included in the IOPO's SACs.

We disagree with commenters who wrote that IOPOs do not benefit from diversified revenue streams. While OPOs may only be reimbursed at reasonable cost for solid organs, many OPOs provide other services like tissue recovery, heart valve, bone, cornea and bone marrow that are not impacted by this proposal to reconcile their reasonable costs. OPOs are required to have arrangements to cooperate with tissue banks for the retrieval, processing, preservation, storage, and distribution of tissues as may be appropriate to assure that all usable tissues are obtained from potential donors. IOPOs receive payments for tissue that can, and often do, include a margin. In fact, in the FY 2022 IPPS/LTCH final rule, we indicated that a comment we received on the FY 2022 IPPS/LTCH proposed rule made note of an OPO using tissue revenue to subsidize certain costs (86 FR 73505). Tissue procurement is integrated into OPO operations at initial referral, in interactions with the donor family, and in screening, coordinating tissue procurement, preserving, packaging, storing or shipping tissues. We believe that if an IOPO needs capital for investment, lenders would look at the IOPO's financial viability based on its entire operations, considering both organ and tissue margins. Additionally, many IOPOs have foundations, and those entities can also assist IOPOs with costs such as infrastructure investment. As we frequently see donations to IOPOs from their foundations reported on their cost reports, we believe IOPOs have more financial options than these comments suggest, and that they would still be able to invest in critical areas such as innovation, logistics, new technologies, automation, etc. The reasonable costs of these investments would be allowable (through depreciation for long-term assets, or as allowable expenses) if they are related to organ acquisition. For all of these reasons, we do not believe that an IOPO's access to capital for infrastructure investment would be limited.

Regarding operational and mission-related consequences of non-renal reconciliation, some of the activities commenters cited (such as donor family events and certain types of public education costs) are not allowable by Medicare and must not be funded by taxpayer dollars. Those activities may be funded instead by private donations or by gifts from the IOPO's foundation. However, many IOPOs are able to raise awareness and increase the number of registered donors using effective approaches that are reasonable in cost and allowable. We refer readers to section X.D.2. of this final rule pertaining to reasonable cost provisions, for a more detailed discussion. If an IOPO incurs reasonable organ preservation costs for an organ intended for transplant, even if the organ is subsequently found unsuitable for transplant, such as can occur with complex donors or marginal organs, the cost is allowable (see § 413.412(a)(2) and (d)(2)). In our proposed rule, we proposed to codify a listing of costs used to develop the deceased donor IOPO SACs at § 413.404(d)(1)(iv), and that listing includes perfusion and preservation costs (as previously noted, we are finalizing that proposal as proposed). Therefore, we do not believe that our final policies would hinder procurement from complex or marginal donors. In the FY 2027 IPPS/LTCH proposed rule, we also noted that many commenters to our July 2022 RFI wrote that their organ procurement would be unaffected by non-renal reconciliation as they are incentivized by their organ quality metrics to procure every organ, every time. For these reasons, we do not believe the policies we are finalizing in this rule will hinder mission related activities or that our policies finalized in this final rule will result in a reduction in registrations or procurements.

As noted in a prior comment response, we understand the importance of timely reimbursement of retroactive payment obligations and will keep these comments about contractor timeliness in mind as we work toward effectuating the policy with the Medicare contractor; more importantly, payment is initially made by the TH or other OPO and the accuracy of the SAC ensures the accuracy of the payment at the time service is rendered. We recognize IOPO cash flow concerns and the need for IOPOs to have operating reserves, which is a standard business practice. We have provided flexibility in our final policies, allowing IOPOs to estimate their SACs and SAC adjustments and allowing lump sum payments to address cash flow concerns. Our extending the delay in implementation for an additional year provides more time for IOPOs to build reserves.

The discussion of reasonable cost provisions in section X.D.2. of this final rule will give providers a better understanding of the costs that are not allowable. We agree that non-profit status does not mean that a non-profit entity must have a zero margin, however, we reiterate that section 1881(b)(2)(A) of the Act limits OPO reimbursement for solid organs to reasonable costs. We cannot comment on the business decisions IOPOs choose to pursue regarding other revenue-producing operations, but IOPOs will be responsible for ensuring that they uphold their statutory mission to procure as many organs as possible, and to ensure those operations are in accordance with their conditions for coverage and any OPTN requirements, and do not jeopardize their non-profit status. Regarding unpaid receivables and bankruptcies, IOPOs must have accounting and other fiscal procedures necessary to assure the fiscal stability of the organization (42 U.S.C. 273(b)(1)(B)) and are required to have procedures to obtain payment for non-renal organs provided to transplant centers (42 U.S.C. 273(b)(1)(E)). Maintaining a reserve is an option for addressing issues with accounts receivable or potential TH bankruptcies, but such a policy would be independent of our proposals and likely would be longstanding internal IOPO accounting policy.

We do not anticipate that organ procurements will be reduced, and therefore we do not anticipate negative downstream effects on Medicare expenditures. Finally, we appreciate the comment about the potential for more IOPOs to stop coordinating imported organs because of the burden and the potential losses if the sending OPO's SAC is greater than the receiving OPO's SAC, and the potential for additional costs to transplant centers, and ultimately to the Medicare program. We will monitor for unintended consequences on the transplant ecosystem from both of these scenarios.

Comment: A few commenters wrote that the proposed rule contained uncertainties and omissions that deprived stakeholders of the opportunity to share their views, and that the Administrative Procedures Act requires that stakeholders have a meanigful opportunity to comment. A commenter listed uncertainties and omissions including whether CMS would reconcile all non-renal organs or just those for Medicare patients; a discussion of the organ acquisition costs specific to non-renal organs; the implications of the Medicare contractor mandated non-renal SACs when many

more implicated patients are non-Medicare patients than Medicare patients; providing an opportunity for public comment on the major changes to the cost report; payment for situations in which transplant surgery is cancelled after the intended recipient is brought to the hospital; and how CMS envisions reconciliation when both Medicare and another payor are involved.

Response: We disagree that the proposed rule omitted or was unclear about any of the issues the commenter noted. First, we proposed that in determining Medicare's share of non-renal organ acquisition costs, we would follow the same statutory and regulatory procedures used for kidney reconciliation. We also wrote that we would assume that all usable organs or tests for usable organs intended for transplant are for Medicare beneficiaries, with a few exceptions for usable organs or tests for usable organs sent to military hospitals, VA hospitals, or to foreign countries (see 91 FR 19734). We believe our proposal was clear that we would assume that all non-renal organs were for Medicare beneficiaries with these exceptions.

We also discussed organ acquisition costs applicable to non-renal organs in the proposed rule and we noted that there was not a listing of allowable organ acquisition costs that can be included when calculating the IOPO organ-specific SACs. In the proposed rule, we discussed allowable organ acquisition costs and proposed to codify the same list of organ acquisition costs that we have previously codified for TH deceased donor SACs except that we excluded registry fees, which are not an OPO cost. (See 91 FR 19733 and 19734.) We received a few comments about the surgeon's fees for kidney retrieval included in that listing, but no other comments about the listing, suggesting that OPOs are familiar with these costs. We also note that allowable organ acquisition costs are specified in § 413.402(a) and (b), and costs not related to organ acquisition are specified in § 413.402(d).

Regarding the comments about the implications of the Medicare contractor applying the same SAC to Medicare and non-Medicare organs, the SAC is an average cost for procuring a specific organ type (kidney, heart, lung, liver, pancreas, or intestine). At procurement, OPOs may not know the intended organ recipient or which transplant hospital will receive the organ; therefore, the cost to procure an organ should not vary by the recipient's payor status, and using the same organ-specific SAC for all organs of a given type is appropriate.

Regarding the opportunity to comment on resulting changes to the OPO/HCL cost report, in the proposed rule we noted that these changes would be included in a forthcoming Paperwork Reduction Act (PRA) package (91 FR 19765), and as noted previously in this final rule, that package will include cost reporting forms and instructions. As part of the PRA process, a notice will be published in the **Federal Register** with a 60-day comment period. After reviewing and responding to those comments, another **Federal Register** notice will be published, with an additional 30-day comment period. In this way, the public will have two opportunities to comment on the updates to the OPO/HCL cost report before it is finalized.

Our regulations at § 413.412(a)(2) are clear that OPOs must identify costs associated with recovered and unrecovered organs that were intended for transplant and apportion those costs to the appropriate cost centers by organ type. Therefore, if an IOPO recovers an organ that is intended for transplant but is subsequently not transplanted, the IOPO's reasonable costs to procure that organ are allowable costs. Likewise, if an organ is intended for transplant, and a surgical team arrives to procure the organ from a DCD patient, but the team cannot proceed with procurement, the reasonable cost of the dry run would be an allowable organ acquisition cost. We believe this policy supports OPOs in trying to procure every available organ.

Regarding the question about how reconciliation works when there is a second payor in addition to Medicare, IOPOs are not paid directly by Medicare or other third-party payors but are paid their SAC amounts directly by the entities to which they provide organs: THs or other OPOs. Therefore, the IOPO reconciliation of Medicare organs is unaffected by the presence of a payor in addition to Medicare. For example, if the IOPO sends a TH an organ that is intended for transplant into a Medicare beneficiary where Medicare is the secondary payor, that does not affect the IOPO's reconciliation; it is solely a TH accounting issue, handled in accordance with our regulations at § 413.414. Likewise, if the IOPO sends a TH an organ that is intended for transplant into a Medicare beneficiary where Medicare is the primary payor, and the beneficiary also has a second form of insurance, it does not affect the IOPO's reconciliation.

We believe our proposed rule provided the information stakeholders need to provide comments, and that our proposals were clear and did not omit key information. Therefore, we believe that we have complied with the Administrative Procedures Act's requirement that stakeholders have a meaningful opportunity to comment.

Comment: A few commenters cited possible unintended consequences of our proposals. A commenter wrote there was a risk of cost shifting rather than overall system savings. Another commenter stated that organ and tissue recovery systems are deeply connected and was concerned there may be impacts on tissue processors, transplant partners, and the patients who depend upon tissue transplants if IOPO financial stability is weakened.

A few other commenters expressed concerns that extending reconciliation to non-renal organs would risk for-profit vendors exploiting a ''make-whole'' reimbursement framework by inflating prices for technologies and services that IOPOs must purchase to meet clinical, operational, and regulatory standards. These commenters wrote that applying the prudent buyer standard does not eliminate this vulnerability as the IOPO operating environment constrains their ability to delay purchases, aggregate demand across large networks, or credibly threaten to switch suppliers. The commenter added that there could also be distorted procurement incentives that favor higher-priced reimbursable purchases over cost-effective innovation, and uneven access across regions, where smaller or rural IOPOs may be disproportionately affected by limited vendor competition. A commenter wrote that the proposed rule may unintentionally promote financial relationships that undermine the Agency's conflict-of-interest standards if an IOPO is pushed to eliminate or seek alternative vendor arrangements to support what are currently part of their portfolio of standardized services for transplant centers, such as coordinating imported organs.

Response: We appreciate these comments and agree that some IOPOs may attempt to impermissibly shift non-reimbursable tissue costs to organ acquisition cost centers. We will ensure that the updated IOPO/HCL cost report will include explicit instructions for reporting tissue costs and tissue revenue, and for properly allocating tissue costs, to prevent cost shifting. We agree with commenters that organ recovery and tissue recovery are deeply intertwined, as OPOs may conduct tissue recovery but must work with any tissue bank that a hospital has an agreement with. The Public Health Service (PHS) Act section 371(b)(3)(I) requires that OPOs shall have arrangements to cooperate with tissue

banks for the retrieval, processing, preservation, storage, and distribution of tissues as may be appropriate to assure that all usable tissues are obtained from potential donors. We do not believe that tissue procurement will be adversely affected by our final policies. While IOPOs will be held to reasonable cost reimbursement for all solid organs resulting from our proposals, currently there is no such requirement for their tissue reimbursement. Rather than hindering tissue procurement, we believe that our final policies may incentivize it. We will continue to monitor cost report data related to tissue to identify any unintended consequences related to tissue.

We appreciate the comments about possible vendor cost increases for needed IOPO services and supplies and will monitor cost report data for any unintended consequences. We appreciate that smaller or rural IOPOs may have fewer options for obtaining certain services than larger IOPOs and more challenges in negotiating prices. The prudent buyer standard has been longstanding Medicare policy and has always applied to OPOs because it is a reasonable cost principle. We refer these commenters to the discussion of the prudent buyer standard that is found in section X.D.2.b.(1) that follows. Finally, we agree that IOPOs' providing imported organ coordination services to THs is a valuable service and will monitor for unintended consequences related to those services. No rationale was provided for the commenter's suggestion that our proposal would unintentionally promote financial relationships that undermine the Agency's conflict-of-interest standards. Without more detail, are unable to respond to that portion of the comment.

Comment: A commenter was concerned that the IOPO proposals would introduce financial risk to THs if a Medicare contractor retroactively disallows IOPO costs. This commenter was concerned that THs would face the threat of retroactive payment adjustments, recoupments, and cost report discrepancies, despite already having paid the IOPO in good faith. The commenter requested that CMS implement a good faith safe harbor to shield THs from financial penalties or recoupment during its own reconciliation. This commenter wrote that financial liability for unallowable costs should remain strictly with the OPO that incurred them, rather than being passed through to the hospital.

Response: We thank the commenter for sharing these concerns. The financial liability for unallowable costs incurred by an OPO remains with the OPO. THs will not face retroactive payment adjustments or recoupments of OPO costs after paying OPOs in good faith. As we noted in the proposed rule, THs do not have the ability to determine whether the IOPO's costs are reasonable, which is one of the reasons why we proposed our policy to reconcile IOPO non-renal organ acquisition costs.

Comment: A commenter asserted that IOPOs cannot recover the full reasonable costs associated with organs transplanted at VA transplant centers and if CMS expands cost reconciliation to include all organ types, this same disadvantage will extend beyond renal transplants and affect non-renal organs transplanted at VA transplant centers as well. The commenter asked CMS to clarify how this proposal would affect billing to VA transplant centers and whether IOPOs may bill VA transplant centers using a different SAC that captures final reasonable costs in full.

Response: Our regulations at § 413.404(a)(3) require that IOPOs that provide non-renal organs to a hospital or another entity must bill the receiving entity the appropriate organ specific SAC. Our proposals do not affect this process. If the IOPO's SAC is an accurate estimate of the average cost for the IOPO to procure a certain organ type, we believe the SAC would cover the cost. IOPOs may not use different SACs for different hospitals; the cost to procure an organ should not vary by payor.

Public comments on the impacts of our proposals are discussed in Appendix A, Section I.G.14. of this final rule. Public comments on burden are discussed in Section XII.B.10. of this final rule.

Summary of final policies: For the reasons provided in this final rule we are finalizing our proposal to reconcile non-renal organ acquisition costs following the same procedures used for kidney reconciliation as proposed, effective for cost reporting periods beginning on or after October 1, 2028, for IOPOs and HCLs. In determining Medicare's share of non-renal organ acquisition costs and non-renal HCL testing costs, we are finalizing our proposed policy that all usable non-renal organs are Medicare usable organs except for those organs provided to military or VA hospitals, or to foreign countries. We are finalizing our proposed SAC and HCL testing rates policies with modifications to require that for each organ type, the IOPO must provide the Medicare contractor with its reasonable estimated SAC based upon its prior cost reporting period's costs and organ procurement volumes and its reasonable and documented estimate of its projected costs and organ procurement volumes for the subsequent cost reporting period, for contractor review to ensure reasonableness, and approval. For independent HCLs, we are finalizing our proposal with modifications to specify that the HCL would provide the Medicare contractor with it reasonable estimate of its testing rates based on its prior year costs and reasonable and documented estimate of its projected testing costs and volumes for the subsequent year, for contractor review to ensure reasonableness, and approval.

We are finalizing our proposed IOPO SAC or HCL testing rate adjustment policies with modifications, so that IOPOs or HCLs may request that the contractor make an adjustment in accordance with § 413.64(e), or the contractor may initiate an adjustment, in accordance with § 413.64(d)(2) or § 413.64(e), as applicable, but no more than quarterly. Additionally, the IOPO or HCL must provide the Medicare contractor with an estimated adjusted SAC or testing rates, respectively, based on its actual cost data and its reasonable and documented estimate of costs through the end of its accounting period, to enable the Medicare contractor to review to ensure reasonableness, and approve the adjusted SAC or testing rate, respectively.

We are finalizing our proposed listing of organ acquisition costs that may be included in the IOPO SACs as proposed.

We are finalizing that if the determination of reasonable cost reveals an overpayment or underpayment resulting from the organ-specific interim reimbursement rates received or receivable by the IOPO or HCL from THs and OPOs, an adjustment to the interim rate or may be initiated by the contractor or requested by the IOPO or HCL. If a rate adjustment is made, then an IOPO or HCL may request that a lump sum adjustment be made directly between the contractor and the IOPO or HCL.

We are finalizing our proposal that the Medicare contractor will publish non-renal SACs and HCL testing rates used in billing THs and OPOs for transparency as proposed.

Finally, we are finalizing our proposal to delay implementation of these policies with modification, to extend the delay for an additional year, so that the final policies are effective for cost reporting periods beginning on or after October 1, 2028.

We believe these final policies support organ procurement and the transplant ecosystem, and will increase transparency, accountability,

compliance with reasonable cost principles, and the responsible stewardship of the Medicare Trust Fund.

2. Reasonable Cost Payment Policies

a. Background

Medicare is often required, under section 1814(b) of the Act (for services covered under Part A) and under section 1833(a)(2) of the Act (for services covered under Part B), to pay for services furnished by providers on the basis of reasonable costs as defined in section 1861(v) of the Act, or the provider's customary charges for those services, if lower. Medicare reasonable costs are determined based on the provisions of section 1861(v) of the Act, and existing regulations under 42 CFR part 413. Medicare payments to providers of services must be based on the reasonable cost of services covered under Medicare and related to the care of beneficiaries.[637] Medicare's reasonable cost principles are also set forth in the CMS Pub. 15–1 (herein referred to as PRM–1).[638]

Under Medicare's reasonable cost reimbursement principles, Medicare reimburses providers for actual costs incurred for Medicare-related items and services, excluding unnecessary costs, in the efficient delivery of needed health services. The Medicare ''reasonable cost'' statute at section 1861(v) of the Act allows the Secretary to develop methods for measuring reimbursable costs such that the necessary costs of efficiently delivering covered services to Medicare beneficiaries will not be borne by non-Medicare beneficiaries, and the costs with respect to individuals who are not Medicare beneficiaries will not be borne by Medicare.

Some providers are reimbursed for all or some of their services on a reasonable cost basis such as critical access hospitals (CAHs) reimbursed at 101 percent of their reasonable costs; CAH swing-bed skilled nursing facilities (SNFs) reimbursed at 101 percent of their reasonable costs; rural health clinics (RHCs) reimbursed under the all-inclusive rate up to their payment limit; OPOs and HCLs reimbursed based on their reasonable cost for organ acquisition and tissue typing services; TEFRA hospitals (that is, children's hospitals, cancer hospitals, long term care hospitals classified as extended neoplastic disease care hospitals, and hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) reimbursed for their reasonable costs up to the TEFRA limit.

In general, Medicare makes interim payments to providers through claims processing and additionally, for any pass-through costs such as organ acquisition or nursing and allied health cost, based on estimated costs or predetermined rates. These payments are typically made on a biweekly basis throughout the year, ensuring a steady cash flow to providers until final cost determinations are made. After the cost reporting period ends, providers submit an MCR documenting their actual allowable costs. The contractor reviews the provider's cost report and calculates a settlement by comparing total interim payments made to the provider during the year with the provider's actual allowable reasonable costs as determined from the provider's cost report. It is this process by which Medicare determines a provider's reasonable costs. If interim payments exceed the provider's actual allowable reasonable costs, the provider must pay Medicare for the overpayment. If actual allowable costs exceeded interim payments, Medicare pays the provider the additional amount owed.

b. Reasonable Cost Proposals

Section 1102 of the Act authorizes the Secretary to publish rules and regulations necessary for the efficient administration of the functions with which the Secretary is charged under the Act. Section 1871(a) of the Act also authorizes the Secretary to prescribe such regulations as may be necessary to carry out the administration of the Medicare Program. Additionally, under section 1861(v)(1)(A) of the Act, the Secretary has authority to determine reasonable costs of providing patient care to Medicare beneficiaries. In the proposed rule, we clarified existing policy and proposed to codify certain longstanding Medicare reasonable cost reimbursement policies as well as to change certain other Medicare reasonable cost reimbursement policies.

In addition to the Medicare ''reasonable cost'' statute at section 1861(v) of the Act, part 413 of the regulations establishes Medicare's principles of reasonable cost reimbursement. Under 42 CFR 413.1(a)(2), these regulations in part 413 govern Medicare payment for services provided to beneficiaries by the following provider types: hospitals, CAHs, rural emergency hospitals (REHs), skilled nursing facilities (SNFs), home health agencies (HHAs), ESRD facilities, OPOs, and HCLs.

Section 413.1(a)(2)(v) identifies OPOs as a provider type to which part 413 of the regulations apply, making them expressly subject to Medicare's reasonable cost principles, including 42 CFR 413.9 regarding costs related to patient care. We find it necessary to restate this because certain OPOs have asserted in certain administrative appeals that reasonable cost principles and rules do not apply to them because they do not provide direct patient care. OPOs provide services directly related to patient care by procuring, perfusing, and transporting organs for transplantation into all organ recipients, including Medicare beneficiaries. An OPO must enter into an agreement with CMS, if it seeks payment under Medicare for organ procurement costs. An OPO incurs organ procurement costs for providing THs with organs for transplantation and for which the TH pays the OPO. When a Medicare beneficiary receives an organ transplant, the TH bills Medicare for the transplant and organ acquisition costs. As such, an OPO's organ acquisition costs that are paid by the TH and passed on to Medicare clearly arise under the Medicare statute under section 1861(v) and are governed by the statutory requirements and implementing regulations. As previously stated in section X.D.1.a.(2) of this final rule, Public Law 95–292 required that the amounts of payments to OPOs and HCLs made under title XVIII for procuring organs must not exceed the costs incurred by OPOs and HCLs and must be determined in accordance with section 1861(v) of the Act. Accordingly, OPOs are subject to Medicare's reasonable cost principles, the regulations in part 413, and the reasonable cost payment proposals finalized in this final rule.

The Office of Inspector General (OIG) has issued reports identifying instances in which providers including CAHs, transplant hospitals, and OPOs have claimed unallowable costs on their MCRs.[639] In these reports, the OIG has attributed the costs not meeting

[637] Section 1861(v)(1)(A) of the Act; 42 CFR 413.9.

[638] PRM–1, chapters 21 and 23. CMS Pub. 15–1 can be found at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Paper-Based-Manuals-Items/CMS021929*).

[639] *https://oig.hhs.gov/oas/reports/region9/90800033.pdf; https://oig.hhs.gov/oas/reports/region9/90900087.pdf; https://oig.hhs.gov/oas/reports/region9/90500034A.pdf; https://oig.hhs.gov/reports/all/2011/review-of-select-medicare-conditions-of-participation-and-costs-claimed-at-richards-memorial-hospital-from-october-1-2004-through-september-30-2007/; https://oig.hhs.gov/oas/reports/region9/91102039.pdf; https://oig.hhs.gov/reports/all/2023/medicare-paid-independent-organ-procurement-organizations-over-half-a-million-dollars-for-professional-and-public-education-overhead-costs-that-did-not-meet-medicare-requirements/.*

Medicare requirements to several factors including, the costs were not related to patient care, were not reasonable and necessary, were not adequately documented, and in some cases were unallowable entertainment costs. In its 2023 report, the OIG found that certain OPOs claimed unallowable costs because they misunderstood Medicare's reasonable cost principles and provisions and recommended CMS update applicable Medicare requirements to clarify the allowability of certain overhead costs.[640] In the proposed rule, we proposed the following provisions to address key issues identified by the OIG regarding Medicare's reasonable cost principles and to provide clarity for all providers who seek reimbursement for services under Medicare's reasonable cost provisions.

Comment: Many commenters generally supported our reasonable cost proposals based on the overarching goals of greater fiscal accountability and responsible stewarding of the Medicare Trust Fund, but either opposed or sought clarifications or exceptions to certain provisions of these proposals.

Response: We appreciate commenters' support for our reasonable cost proposals. We provide responses to commenters that either opposed or requested clarifications or exceptions to specific provisions of our reasonable cost proposals in this section.

Comment: A commenter asked whether costs for preparing bids, including unsuccessful bids, and financing the legal, organizational and operational expenses required to expand into other donation service areas (DSAs) would be recognized as ''related to patient care'' under traditional cost reimbursement principles.

Response: We appreciate the commenter's inquiry regarding DSA expansion-related expenses. Costs that are reasonable and necessary for expanding the DSA are generally considered allowable under Medicare cost reporting. This cost may include staffing costs, facility costs, transportation costs, outreach and education, and technology and equipment. Major capital expenditures that meet or exceed certain capitalization thresholds (for example, new facilities or major equipment) must be depreciated over the useful life of the asset rather than expensed in a single cost reporting period. Cost of preparing bids and unsuccessful bids to compete for DSA designation are business development costs which are generally unallowable under Medicare cost reimbursement.

Comment: While a few commenters agreed that 42 CFR 413.9, *Cost related to patient care,* applies to OPOs, some requested that CMS define 'related to patient care' as it applies to meals, education, and travel, to reflect how these items support an OPO's core mission of procuring available organs for transplantation. A few commenters suggested that during the audit process, they have not received clear explanations as to what constitutes ''related to patient care'' for OPOs. The commenters recommended CMS adopt a specific interpretation in regulation and subregulatory guidance, such as the CMS Contractor Hearing Officer's interpretation, related to increasing registered organ donors, coordinating organ donation, organ procurement, preservation, and transportation to transplant hospitals, and providing professional and public education, suggesting this would reduce stakeholder confusion.

Response: We thank the commenters for their feedback regarding our clarification on 42 CFR 413.9, *Cost related to patient care.* We agree that an OPO's mission includes providing education on organ donation, increasing the number of registered organ donors and coordinating the organ donation process and we recognize that the OPOs' mission includes acquiring all available organ for transplant. We are affirming our statement in the FY 2027 IPPS proposed rule, that OPOs provide services directly related to patient care that are encompassed in a multitude of their activities, including procuring, perfusing, and transporting organs for transplantation into all organ recipients, including Medicare beneficiaries. We believe our current statement is sufficient and comprehensive as written, and the addition of further language would be unnecessary.

(1) Prudent Buyer Principles

Medicare's longstanding prudent buyer principles are set forth in the PRM–1, chapter 21, section 2103, issued in 1975. Medicare's prudent buyer principles also coincide with the principles set forth in the regulations at 42 CFR 413.9, Cost related to patient care. Implicit in the policy that payment is determined based on costs that are reasonable is the expectation that the provider will seek to minimize its costs and that its actual costs will not exceed what a prudent and cost-conscious buyer would pay for a given item or service. The prudent and cost-conscious buyer not only refuses to pay more than the going price for an item or service but also seeks to economize by minimizing cost. This is especially so when the buyer is an institution or organization which makes bulk purchases and can, therefore, often gain discounts because of the size of its purchases. In addition, bulk purchase of items or services often gives the buyer leverage in bargaining with suppliers for other items or services. Another way to minimize cost is to obtain free replacements or reduced charges under warranties for medical devices. Any alert and cost-conscious buyer seeks such advantages, and it is expected that Medicare providers of services will also seek them. If costs are determined to exceed the level that prudent buyers incur, the excess costs are not allowable and not reimbursable under Medicare in the absence of clear evidence that the higher costs were unavoidable.

In the proposed rule, we noted that the PRM–1, chapter 21, section 2103 sets forth the following examples of the application of the prudent buyer principle where costs are not reimbursable because the prudent buyer principle has not been applied by the provider:

- Provider A consistently purchases supplies from supplier R and makes no effort to obtain the most advantageous price for its supplies. Supplier W sells identical or equivalent supplies at a lower cost and is also convenient to A. Unless the provider can clearly justify its practice of purchasing supplies from R rather than W, any excess of R's charges over W's charges is excluded from the provider's costs.
- Supplier L supplies drugs to skilled nursing facility B and rents space from B to store the drugs to be used there. The rental paid by L to B for the space would generally constitute an indirect discount on the cost of drugs and must be reflected as a reduction of the cost of drugs supplied.
- Dr. C, a hospital-based radiologist, purchases radiology equipment which he then leases to the provider where he is a staff member. Costs to the provider in this case are higher than if the equipment had been leased through competitive bidding from an outside source. The Medicare contractor reimburses the provider only for those costs which a prudent and cost-conscious buyer would pay. Therefore, those costs which the provider pays for the equipment leased from the staff radiologist which are in excess of costs for equivalent equipment obtained through competitive bidding are denied.
- Provider B purchases cardiac pacemakers or their components for use in replacing malfunctioning or obsolete equipment, without asking the supplier/

[640] *https://oig.hhs.gov/documents/audit/9634/A-09-21-03020-Complete%20Report.pdf.*

manufacturer for full or partial credits or payments available under the terms of the warranty covering the replaced equipment. The credits or payments that could have been obtained must be reflected as a reduction of the cost of the equipment supplied.

Providers may incur costs that are not allowable under Medicare when they fail to apply the prudent buyer principle. Other examples where the prudent buyer principle has not been applied by the provider include, but are not limited to, fees paid to consultants, attorneys, or other professionals that are excessive compared to market rates or for services not directly related to patient care; equipment purchases that are more expensive or sophisticated than necessary for the provider's patient population; and costs for items that are not necessary for patient care or that represent luxury items may be disallowed.

The application of the prudent buyer principle is set forth in PRM 15–1, chapter 21, section 2103 and includes the following examples of methods that contractors [641] may employ for detecting and investigating situations in which costs seem excessive: comparing the prices paid by providers to the prices paid for similar items or services by comparable purchasers, spot-checking, and querying providers about indirect, as well as direct, discounts. We note that in addition to these examples contractors may employ other methods for determining which costs seem excessive, including but not limited to: use of Internal Revenue Service (IRS) Form 990 in comparing reasonableness of executive and employee compensation with those at comparable institutions, use of federal per diem rates in determining the reasonableness of accommodations or meeting spaces for conferences and seminars for patient-care related activities and use of the provider's own records in determining whether costs of certain activities are reasonable and necessary. The geographic location of the provider should also be considered as rates may vary across regions.

In the proposed rule, we stated, we believe the use of IRS Form 990 is appropriate to compare compensation because the information provided is widely recognized in the industry, standardized and publicly available. Additionally, in the proposed rule, we stated, we believe the use of Federal per diem rates are an appropriate method of comparison because they reflect industry norms and are established based on extensive data collection and analysis, account for geographic variations and are transparent. In the proposed rule, we also noted these methods align with Medicare's reasonable cost regulation under § 413.9(c) which provides that actual costs may vary among providers, however, costs must not be substantially out of line with similar institutions in the same area and of comparable size, scope, utilization and other relevant factors. Amounts not related to patient care, or flowing from the provision of luxury items or services are not reimbursable under the program and are not allowable costs.

The PRM–1, chapter 21, section 2103 also provides where a group of institutions has a joint purchasing arrangement which seems to result in participating members getting lower prices because of the advantages gained from bulk purchasing, any potentially eligible providers in the area which do not participate in the group may be called upon to justify any higher prices paid. Also, the manual provides that when most of the costs of a service are reimbursed by Medicare (for example, for a home health agency which treats only Medicare beneficiaries), examine the costs with particular care. In those cases where a contractor notes that a provider pays more than the going price for a supply or service or does not try to realize savings available under warranties for medical devices or other items, in the absence of clear justification for the premium, the contractor excludes excess costs in determining allowable costs under Medicare.

In the proposed rule, we proposed to codify a definition of the prudent buyer in accordance with the principle set forth in PRM–1, section 2103 and that reflects similar terminology used across financial, legal, and insurance fields as well as proposed to codify the application of the prudent buyer principle currently set forth in PRM–1, section 2103. Specifically, in the proposed rule, we proposed to revise section 413.9(b) to add paragraph (b)(3) to specify that the prudent buyer is a person, provider type or entity that purchases items or property with caution, good judgment, and a sensible approach, aiming to make a sound, informed decision that minimizes risk and avoids unnecessary financial loss. This person, provider type or entity thoughtfully evaluates the condition, legal, and financial aspects of a purchase, much like a reasonably prudent person would in a similar situation.

In the proposed rule, we proposed to revise § 413.9(c) to add paragraph (c)(4) to codify the application of the prudent buyer principle to providers to specify that providers are expected to economize by not paying more than the going price for an item or service and seeking to minimize their costs, so that their actual costs will not exceed what a prudent and cost-conscious buyer would pay for a given item or service. If costs are determined to exceed the level that prudent buyers incur, the excess costs are not reimbursable in the absence of clear evidence that the higher costs were unavoidable.

Comment: Many OPOs supported applying a general prudent-buyer standard to OPO overhead administrative expenses; however, most of these OPOs also requested that CMS further clarify the standard. Specifically, these commenters noted the unique challenges of organ procurement, including time constraints, geographical barriers, and higher costs in certain areas, and requested clarification and modification on how the prudent-buyer standard would apply to OPOs. Some commenters noted that the prudent-buyer standard in PRM 15–1 was designed for patient care facilities and that its examples do not reflect OPO activities. A commenter noted that OPOs are obligated to pursue every transplantable organ regardless of cost, leaving little ability to ''shop for the best price''. Another sought clarification on whether quality is factored into the standard, and whether higher costs may be justified by higher quality services or products. A commenter requested CMS develop separate definitions for ''overhead reasonable costs'' and ''recovery reasonable costs'' that set appropriate standards for each. Many commenters requested CMS modify the proposal to adopt objective, published benchmarks for the prudent buyer standard proposed at § 413.9(c)(4), including safe harbors for competitively sourced services, market-rate employment agreements, and mission-critical costs in high-cost labor markets. The commenters stressed the need for uniform enforcement to promote consistent application.

Some commenters stated that without clearer CMS guidance, the prudent-buyer standard could create an uneven playing field, holding OPOs to strict cost limitations while third-party providers face none, potentially driving up costs, reducing efficiency, and discouraging innovation in organ transplantation. A commenter that opposed codifying the provision suggested the prudent buyer standard is already addressed under § 413.9, the term ''prudent'' is too subjective and risks inconsistent enforcement across

[641] (79 FR 49854 at 50199 on August 22, 2014).

Medicare contractors and regions, CMS lacked both the required reasoned explanation under administrative law, and congressional authority to determine the ''best price'' for consulting services, educational costs, executive compensation, or other expenses, and such determinations are outside of the Medicare contractor's core competencies. A few commenters suggested that IRS Form 990, *Return of Organization Exempt From Income Tax,* should not serve as the sole basis for determining reasonable compensation, as it fails to account for employees' specific responsibilities, oversight, and experience. The commenter contended that relying on a single data source reflects a misunderstanding of how executive compensation is determined. A few commenters disagreed with CMS's use of Federal per diem rates as a benchmark for reasonableness, contending that these rates are fixed government limits that do not reflect the actual costs of private, non-profit organizations. They further noted that federal travel and lodging rates are available only to government employees and that Medicare contractors have incorrectly applied these rates to OPO employees.

Response: We appreciate commenters' support for our proposal to codify the prudent buyer standard and acknowledge their requests for clarification and modification. The prudent buyer standard in general is not a new requirement, but rather longstanding policy grounded in Medicare's reasonable cost statute and regulations, which has been applied to all Medicare providers for decades, including OPOs which were statutorily created by Congress and mandated to receive reimbursement on the basis of reasonable cost. Our proposal to codify the prudent buyer standard does not constitute a new policy but we are codifying it in our regulations to ensure that all outside stakeholders are aware of its application.

We disagree with the commenter's assertion that Congress did not grant CMS or Medicare contractors the authority to determine best prices with regard to reasonable costs and the commenter's assertion that evaluating expenses is outside of a Medicare contractor's core competencies. The Medicare contractors do not determine the ''best price'' for any given service or expense; rather, they apply longstanding cost principles under 42 CFR 413.9 to evaluate whether reported costs are reasonable and consistent with what other similarly situated providers incur. This is a well-established and core function of the Medicare contractors' cost report review responsibilities. Furthermore, the prudent buyer standard provides a reasonable framework to ensure Medicare funds are used responsibly and that costs claimed on cost reports are reasonable and necessary. Congress assigned this responsibility to CMS through section 1861(v) of the Act, which CMS codified in regulations throughout 42 CFR part 413.

We appreciate the commenter's support for clear and standardized guidelines regarding administrative costs and executive compensation and consistent application. We note that there is one Medicare contractor responsible for reviewing both OPO and HCL cost reports, which inherently promotes uniformity and consistency in the review process. We also acknowledge OPOs' concerns regarding the applicability of the prudent-buyer examples to them as set forth in PRM–1, section 2103. Here, we provide an additional example of the prudent buyer application:

- OPO A consistently purchases sterile surgical gloves and gowns (required during organ recovery procedures) from Supplier R, at $800 per case. OPO A makes no effort to seek more competitive pricing. Supplier W offers identical gloves and gowns at $575 per case and is equally accessible to OPO A. OPO A cannot justify its preference for Supplier R over Supplier W that offers the identical supplies, therefore, the excess $225 will be deemed an unallowable cost.

We also acknowledge commenters' request that CMS define ''overhead reasonable costs'' and ''recovery reasonable costs'' and set appropriate standards for each. However, we believe this comment is outside the scope of this provision. We recognize the commenters' concerns regarding the possibility for different outcomes between OPOs and third-party providers. We also acknowledge the unique challenges OPOs face including time constraints, geographical barriers, and elevated costs for perfusion and transportation in high-cost or rural areas. We understand that an OPO cannot decline to recover a viable organ solely due to high transportation costs or limited vendor availability in rural areas. We acknowledge that there may be some costs outside of the OPO's control with regard to these unique instances in organ procurement, however, there remains an expectation to attempt to procure competitive pricing when available. As such, it is our intent to apply the prudent buyer standard in a manner that is appropriate for OPOs.

We appreciate the commenters' feedback regarding the use of IRS Form 990 and Federal per diem rates as benchmarks for determining reasonable compensation and travel costs. We are clarifying that the examples set forth in the proposed rule were intended to serve as suggested options for OPOs and Medicare contractors to consider and were not meant to be the sole basis for determining reasonable cost. Additionally, we recognize the limitations commenters identified with respect to both IRS Form 990 data and Federal per diem rates. We understand that non-profit organizations commonly reference per diem rates established by the General Services Administration (GSA) when setting their own per diem rates. However, we acknowledge the concerns raised by commenters regarding the use of both IRS 990 data and Federal per diem rates as benchmarking tools. In response to those concerns, we suggest organizations use a multi-data source approach, and consider a broader range of reference sources, which may include, but are not limited to U.S. Bureau of Labor Statistics Occupational Outlook Handbook, salary survey reports from recognized industry sources, crowdsourced databases by sector, travel cost indexes, as well as GSA data, the IRS Form 990 or use of the IRS high low method for cost comparison. We urge providers to keep Medicare's reasonable cost principles in mind with regard to cost containment when planning expenditures.

Respectfully, we disagree that codifying the prudent buyer principle is unnecessary. We believe codifying this standard for all providers, including OPOs, is necessary because it supports payment accuracy and provides clarity and consistency for both OPOs, other institutional providers and Medicare contractors, which supports consistent policy application.

After consideration of the public comments received, we are finalizing our proposal without modification, to codify at 42 CFR 413.9(b)(3) that the prudent buyer is a person, provider type or entity that purchases items or property with caution, good judgment, and a sensible approach, aiming to make a sound, informed decision that minimizes risk and avoids unnecessary financial loss. This person, provider type or entity thoughtfully evaluates the condition, legal, and financial aspects of a purchase, much like a reasonably prudent person would in a similar situation. Additionally, we are finalizing our proposal without modification to codify at § 413.9(c)(4) the application of the prudent buyer

principle to providers to specify that providers are expected to economize by not paying more than the going price for an item or service and seeking to minimize their costs, so that their actual costs will not exceed what a prudent and cost-conscious buyer would pay for a given item or service. If costs are determined to exceed the level that prudent buyers incur, the excess costs are not reimbursable in the absence of clear evidence that the higher costs were unavoidable.

To address commenters' concerns, we are clarifying that when applying the prudent buyer standard for OPOs, providers and Medicare contractors should consider the unique operational challenges OPOs may encounter in fulfilling their organ procurement requirements. We believe OPOs and Medicare contractors should consider several factors when applying the prudent buyer principle for OPOs. These factors include, but are not limited to, time constraints for procurement; geographic availability of alternative vendors or service providers; efforts made to negotiate pricing; clinical rationale for vendor selection; pre-negotiated contracts with perfusion vendors, transport providers, and procurement teams; periodic market analyses to ensure contract rates remain competitive; and documented cost justifications for high-cost procurements. Regarding quality, CMS is affirming that quality that advances the objective of ensuring all available organs are procured for transplant is an integral component of the prudent buyer standard. OPOs and Medicare contractors should consider the clinical necessity of the service or technology (for example, normothermic regional perfusion or machine perfusion to improve organ viability) when applying the prudent buyer principle.

(2) Entertainment and OPOs' Public Education and Outreach for Organ Donation Awareness

Under section 1861(v)(8) of the Act, costs for entertainment, including tickets to sporting and other entertainment events, must not be included in a provider's costs for Medicare reimbursement purposes because they are not reasonable costs related to patient care. The PRM–1, chapter 21, section 2105.8 sets forth that ''Costs incurred by providers for entertainment, including tickets to sporting or other events, alcoholic beverages, golf outings, ski trips, cruises, professional musicians or other entertainers, are not allowable.'' Additionally, PRM–1, chapter 21, section 2102.3 provides that, ''Costs not related to patient care are costs which are not appropriate or necessary and proper in developing and maintaining the operation of patient care facilities and activities. Costs which are not necessary include costs which usually are not common or accepted occurrences in the field of the provider's activity. Such costs are not allowable in computing reimbursable costs and include, for example: cost of meals sold to visitors; cost of drugs sold to other than patients; cost of operation of a gift shop; cost of alcoholic beverages furnished to employees or to others regardless of how or where furnished, such as cost of alcoholic beverages furnished at a provider picnic or furnished as a fringe benefit; cost of gifts or donations; cost of entertainment, including tickets to sporting and other entertainment events; cost of personal use of motor vehicles; cost of fines or penalties resulting from violations of Federal, State, or local laws; cost of educational expenses for spouses or other dependents of providers of services, their employees or contractors, if they are not active employees of the provider or contractor; cost of meals served to executives that exceed the cost of meals served to ordinary employees due to the use of separate executive dining facilities (capital and capital-related costs), duplicative or additional food service staff (chef, waiters/waitresses, etc.), upgraded or gourmet menus, etc.; and cost of travel incurred in connection with non-patient care related purposes.''

Despite this instruction, some providers continue to include inappropriate expenses for entertainment and sporting activities on their MCRs, and CMS's disallowance of these costs often results in appeals. For example, some OPOs are reporting costs on their OPO/HCL MCR, Form CMS–216–94, (OMB control number 0938–0102), (hereinafter referred to as OPO/HCL MCR), for items such as the sponsorship of professional sports teams, sponsorship of race car drivers at nationally viewed racing events, sponsorship of floats at nationally viewed parades, and costs for musical entertainment and performers at these events. Some of these sponsorships have included items such as, full season tickets to professional basketball games, autographed items, tickets to racing events, entrance to hospitality suites, sponsorship of Indy Car teams and dirt track race cars, rides in an Indy Car, pit lane and garage tours and driver appearances at off-track events. These types of costs are not reasonable costs related to patient care and therefore, are unallowable under Medicare's reasonable cost principles.

Under section 371(b)(3)(B) of the PHSA, OPOs are responsible to ''conduct and participate in systematic efforts, including professional education, to acquire all useable organs from potential donors,'' and ''assist hospitals in establishing and implementing protocols for making routine inquiries about organ donations by potential donors.'' We have recognized the importance of OPOs implementing public education activities to increase organ donation awareness and increase the donor registration. (In the context of OPOs' public education activities, we note that the terms public education, public outreach, and public awareness have the same meaning and may be used interchangeably.) We have historically afforded OPOs the flexibility to allocate educational resources based on their individual donation service area (DSA) needs.[642] Medicare currently recognizes the costs incurred by OPOs for public education regarding organ donation awareness as allowable costs if they are reasonable and necessary and related to patient care. The current OPO/HCL MCR instructions set forth that public education costs are expenses associated with organizing awareness programs designed to inform the ''general public'' of the need for organs and organ transplant services.[643] OPOs include professional and public education costs as OPO overhead costs on their OPO/HCL MCR, and Medicare shares in these costs.

Some OPOs have asserted that their engagement in entertainment and sporting events, such as sponsoring parade floats, purchasing tickets to sporting events, engaging or purchasing tickets for musical entertainers and performers, lodging, food and beverages, and sponsoring professional race car driving events, are types of public education costs that serve to reach large audiences to educate potential donors regarding the benefits of organ donation, and thus recruit candidates for organ donor registries. OPOs' sponsorship costs for these entertainment and

[642] 71 FR 31027, May 31, 2006. CMS defines DSA to mean a geographical area of sufficient size to ensure maximum effectiveness in the procurement and equitable distribution of organs and that either includes an entire metropolitan statistical area or does not include any part of such an area and that meets the standards of 42 CFR 486.302 subpart G. Once an OPO is certified and assigned a geographic service area, organ procurement costs of the OPO are eligible for Medicare and Medicaid payment under section 1138(b)(1)(F) of the Act. (42 CFR 486.302).

[643] PRM–2, chapter 33, section 3304, Worksheet A, line 11.

sporting events, asserted by certain OPOs in reimbursement appeals to be public education events, vary depending upon the event type and additional items the OPO can select for the sponsorship level that may increase the cost to the OPO.

One report indicated that costs to build a float in the Rose Bowl Parade may be in the vicinity of $125,000 to $500,000 per parade event.[644] In one report, the OIG found that an OPO incurred $327,278 of costs related to the 2006 Rose Parade and Rose Bowl, and reported $153,513 costs as public education overhead costs on its OPO/HCL MCR related to the Rose Parade and Rose Bowl.[645] The OIG categorized these costs as unallowable because they were incurred for entertainment and sporting events, in accordance with PRM–1, chapter 21, sections 2102.3 and 2105.8.[646] The unallowable costs identified by OIG included costs for: float design, lodging, receptions, banquets and use of hotel ballroom, chartered buses, shuttles and limousines for parade day, media expenses, such as audiovisual equipment, photography and television coverage, musical performances, and other costs such as food and beverage, public storage and flowers.[647] We have also seen some OPOs reporting sponsorship costs for a race car driver, at an Indy Car event in the hundreds of thousands of dollars per sponsorship. These types of OPO-sponsored entertainment and sporting events far exceed what a cost-conscious buyer, in this case an OPO, should spend for providing targeted public education regarding organ donation within its DSA. The result is OPOs including costs on their OPO/HCL MCR that are in excess than those generally considered necessary for the provision of needed health services, and therefore, unallowable under Medicare's reasonable cost principles and § 413.9, Cost related to patient care. While these entertainment and sporting events may attract wide viewership and occur within the OPO's DSA, such factors do not constitute targeted public education initiatives, measure attendees or focused educational conversations, or demonstrate measurable successes and increases in donor registration.

We are aware of several OPOs conducting successful, cost-effective public education events within their DSAs while observing Medicare's reasonable cost principles and fulfilling their objectives of increasing donor registrations. These public education events have successfully increased the number of registered donors and effectively reached underrepresented groups within their DSA. For example, some OPOs have engaged with local high schools and colleges, Health Occupational Student Associations, and participated in local multicultural outreach events and set up booths at minor league baseball games and events within their communities and demonstrated successful organ donor registration at these engagements.

We believe for OPOs' public education costs to be allowable under Medicare, the costs incurred must be for direct engagement in public outreach and education events for efforts that are more direct and systematic to target populations within their DSAs and where one-on-one activity and conversations can take place to educate and register individuals for organ donation. Specifically, we believe allowable OPO public education costs are for an OPO's community-based and locally focused efforts and effects, that include opportunities to register donors and track the number of registrations obtained during each effort. The OPO staff should be available to answer questions directly about the organ donation process and may provide modest token items and educational materials to individuals to support organ donation awareness (for example, pens, awareness bracelets, buttons, stickers, cups, or electronic and print materials that include the OPO's website address, QR codes linking to donor registration platforms, or information on upcoming community-based organ donation awareness events).

We believe that allowable costs under Medicare for OPO public education initiatives include costs that directly support organ donation and align with Medicare's reasonable cost principles. Examples would include OPOs' participation and engagement in settings that can facilitate direct conversations with individuals regarding organ donation such as, setting up booths at local farmer's markets, health fairs, high school or local college sporting events, partnering with community organizations, faith-based groups, schools and health care facilities, participating in local multicultural festivals, providing education at driver's education programs and at local Department of Motor Vehicles (DMV) and Department of Natural Resources so that individuals can register to become an organ donor while obtaining a driver's license or fishing license.

The 2025 National Survey of Organ Donation Attitudes and Practices: Report of Findings[648] reported that 89.3 percent of people who registered to be organ donors did so at a state DMV or similar State motor vehicle administration office. According to the report, other methods of donor registration include 12.4 percent who had registered through donor drives, 10.3 percent through mobile apps, 11.6 percent through a website, 9.6 percent through the U.S. military and 11.8 percent through some other way. The report also noted that those under age 50 as well as Black, Asian, Hispanic, and other/multiple races were more likely to register through a donor drive, mobile app, or website. Although most organ donors are registered via the DMV, there remain underrepresented groups within OPOs' DSAs whose registration rates could benefit from targeted community-based outreach.[649]

We do not believe that OPOs should incur costs and seek reimbursement from Medicare for engaging in national organ donor awareness campaigns. Health Resources and Services Administration (HRSA) is authorized, on behalf of the Secretary of Health and Human Services, to develop a public awareness program that partners with existing national campaigns to inform the public about organ donation.[650] In the past, HRSA received Federal funding for public awareness of organ donation programs.[651] Additionally, some of HRSA's past public outreach activities have consisted of developing and disseminating consumer-focused materials, including downloadable posters; fact sheets and brochures; radio, print, and television Public Service Announcements; educational videos; paid media advertisements; radio media tours; billboards, wall graphics at major airports, and social media messages.[652] HRSA currently manages ongoing resources such as *Organdonor.gov,* the U.S. government's central resource for comprehensive, trusted information on organ, eye, and tissue donation and uses this website to educate the public, encourage donor registration, and

[652] *https://www.govinfo.gov/content/pkg/CMR-HE20_9000-00192981/pdf/CMR-HE20_9000-00192981.pdf.*

provide access to a library of outreach and educational materials.[653] OPOs are permitted to use HRSA's outreach materials library to access free educational resources for organ donation awareness activities. We believe utilizing these materials may represent more cost-effective methods of increasing awareness than sponsoring national entertainment-oriented events that incur substantial expenditures. Considering the past Federal expenditures and ongoing efforts from HRSA for national public awareness, it seems that an individual OPO's request for reimbursement from Medicare for national-level outreach activities of a similar nature may be duplicative of HRSA's efforts for national awareness purposes.

We are committed to carefully and responsibly stewarding the tax dollars in the Medicare Trust Fund, and do not believe that providers should be claiming unreasonable, non-allowable, or non-reimbursable costs for reimbursement under Medicare on the Medicare cost report. Therefore, in the proposed rule, we proposed to codify existing policy set forth in PRM–1, chapter 21, sections 2102.3 and 2105.8, while also providing greater specificity regarding unallowable entertainment costs for providers, including to specify that such unallowable costs include sponsorship of sporting events, teams or athletes, including race car drivers or motorsports activities, retreats held at spas or luxury resorts, spa services or treatments, and recreational excursions. In the proposed rule, we also proposed to codify the current policy set forth in the OPO/HCL MCR;[654] in doing so, we also proposed to provide greater specificity regarding allowable public education costs for OPOs.

Specifically, we proposed to add § 413.5(c)(10) to specify that costs incurred by providers for entertainment, including costs associated with entertainment activities, or that are entertainment in nature, are not allowable costs. We also proposed to add § 413.5(c)(10)(i) to specify that—(1) paragraph (c)(10) includes costs that OPOs incur to engage in public education to increase awareness of organ donation and increase donor registration; and (2) non-allowable entertainment costs include, but are not limited to the following:

- Tickets, admission fees, or entry to sporting or other events, including national or professional sporting events.
- Sponsorship of sporting events, teams or athletes, including race car drivers or motorsports activities.
- Sponsorship of floats in national parades.
- Concert, theater, or performing arts events, professional musicians or other entertainers.
- Wine tours or alcoholic beverages.
- Retreats held at spas or luxury resorts, spa services or treatments.
- Golf outings, ski trips, cruises and similar recreational excursions.

In the proposed rule, we also proposed to add § 413.5(c)(11) to specify that costs incurred by an OPO to engage in public education within its donation service area to increase awareness of organ donation and increase donor registration are allowable if they are reasonable and do not violate § 413.5(c)(10). We also proposed to amend § 413.402(a) and (d)(2)(v) to cross-reference the policy set forth in § 413.5(c)(11) regarding OPOs' public education costs. We refer readers to section X.D.2.b.(5) for our final policies with respect to our proposals to amend § 413.402(a) and (d)(2)(v).

Additionally, in the proposed rule, we proposed to codify our longstanding policy in PRM–1 chapter 21, section 2102.3 regarding certain unallowable costs incurred by providers for drugs sold to other than patients, fines and penalties, and expenses associated with operating a gift shop. Specifically, we proposed to add § 413.5(c)(17) to specify that costs incurred by providers for drugs sold to other than patients are not related to patient care and are not allowable costs. We proposed to add § 413.5(c)(18) to specify that costs incurred by providers for fines or penalties resulting from Federal, State or local laws are not allowable costs. Lastly, we proposed to add § 413.5(c)(19) to specify that costs incurred by providers for operation of a gift shop are not allowable costs. We refer readers to section X.D.2.b.(6) for our final policies with respect to the proposals pertaining to costs incurred by providers for drugs sold to other than patients, fines and penalties, and operation of a gift shop.

Comment: Several commenters supported CMS's efforts to responsibly fund OPOs' public education and outreach on organ donation awareness. A commenter noted that CMS's proposals pertaining to public outreach, sponsorship and staff training costs, reflected the national priority of eliminating fraud, waste and abuse in healthcare, ensuring taxpayer and beneficiary dollars are being used appropriately and responsibly. Additionally, a few commenters remarked that the disallowance of pure entertainment expenditures is consistent with longstanding Medicare cost principles and raises no operational concern for well-managed OPOs. Lastly, another commenter pointed out that prohibiting activities, such as marketing events and entertainment, as unallowable costs is an important step in protecting the financial integrity of the system.

Response: We thank the commenters for their support.

Comment: Most commenters opposed CMS's proposal to add § 413.5(c)(10) to specify that entertainment-related OPO public education activities on organ donation awareness and registration, including sponsorship of sporting events, are not allowable costs. Many commenters were concerned that under the proposal CMS would broadly disallow the costs for all sponsorships of sports teams and events, as well as the costs for public education activities based on the venue type and audience size rather than on the nature and substance of the OPO public education activities themselves.

A commenter contended that CMS's classification of sporting event sponsorships as 'entertainment' under section 1861(v)(8)(i) of the Act is inconsistent with the statutory text and suggested while the statute prohibits entertainment, including tickets to sporting and other entertainment events, it does not prohibit use of a sporting venue for delivering public education. The commenter concluded that CMS's proposed expansion of ''entertainment'' is not the best reading of the statute under *Loper Bright Enterprises* v. *Raimondo,* 603 U.S. 369, 400 (2024). Additionally, the commenter believed that the term ''entertainment'' in the Medicare statute (42 U.S.C. 1395x(v)(8)) should be interpreted consistently with its definition under the Internal Revenue Code (26 U.S.C. 274(a)(1)(A)), which defines entertainment as activities generally considered to constitute amusement or recreation. The commenter suggested, under the established legal canon that Congress typically assigns the same term the same meaning across statutes, ''entertainment'' should mean activities whose inherent purpose is amusement or recreation not public education provided at a venue that offers entertainment. Additionally, the commenter contended that even if the OPO's sponsorship-based activities have an incidental connection to entertainment, the associated costs should not be deemed unallowable under the primary purpose test applied in prior Agency decisions (the primary

[653] *https://www.organdonor.gov/professionals/outreach-materials.*

[654] PRM–2, chapter 33, section 3304, Worksheet A, line 11.

purpose test from *Piedmont Hospital,* PRRB Hearing Dec. No. 82–D14 (Nov. 13, 1981) and *Rancho Los Amigos,* HCFA Administrator Decision (Jan. 3, 1986).

Response: We appreciate the comments received on our proposal to specify that entertainment-related OPO public education activities on organ donation awareness and registration, including sponsorship of sporting events, are not allowable costs. Although the statutory text at section 1861(v)(8)(i) of the Act designates entertainment as an item unrelated to patient care, including tickets to sporting and other entertainment events, we believe the reference to ''tickets to sporting and other entertainment events'' is illustrative, not exhaustive. The word ''including'' signals a non-limiting list, and the Secretary's authority to define the broader category of ''entertainment'' extends beyond the specific examples provided in the statute.

Regarding the commenter's claim that CMS's interpretation under *Loper Bright* is not the best reading of the statute, and their request that CMS adopt the same meaning of entertainment as what is defined in the Internal Revenue Code, we disagree with the commenter's assertions. We believe our proposal is grounded in Medicare's longstanding authority under 42 U.S.C. 1395x(v)(1)(A) to define and establish principles for Medicare's reasonable cost reimbursement. We also note that the Supreme Court has recognized that ''the meaning of a word cannot be determined in isolation but must be drawn from the context in which it is used.''—*Deal* v. *United States,* 508 U.S. 129, 132 (1993). The Medicare statute and the Internal Revenue Code serve fundamentally different purposes. Moreover, with respect to the term ''entertainment'' itself, the IRS code is directed at entertainment, amusement, or recreation (importantly, not defining entertainment as amusement or recreation). This contrasts with the Medicare statute where Congress uses the one term, entertainment, and includes the example of ''tickets and other sporting events.'' These various formulations of ''entertainment,'' made by Congress in different statutes at different times, sheds little light on what should be considered a reasonable expense in the delivery of healthcare-related services.

Additionally, regarding a commenter's reference to the use of the ''primary purpose'' test as applied by the PRRB when examining the nature and intent of an expenditure in prior Agency decisions, we believe that applying a primary purpose test to our proposal would be inappropriate, subjective and result in an inaccurate policy application. An OPO's public education activities, for Medicare reimbursement purposes, must serve to educate the community regarding organ donation in targeted and meaningful ways, and to sign up as many donors as possible, not to serve as means or venue with respect to an entertainment or sporting event.

Comment: A commenter requested CMS withdraw its proposal, contending the statute was intended to prohibit entertainment consumption, not the use of public venues for targeted donor education. Another commenter suggested that sporting venues can serve as legitimate platforms for public education, citing a CMS Hearing Officer's finding that OPO staff and donor families engaging attendees at staffed sporting venues within their DSA constitutes legitimate public education. The commenters believed that disallowing the costs of public education at all sporting venues would result in missed opportunities for donor registration.

A commenter contended that CMS's categorical prohibition on sponsorship-based public education activities draws arbitrary distinctions unsupported by fact, law, or policy, suggesting that educational activities at larger venues such as stadiums and speedways are functionally identical to those CMS would permit at smaller venues, yet reach larger audiences. Another commenter believed that entertainment costs of a general nature should not be an allowable cost but can be allowable when effectively used for organ donation public education and outreach. Several commenters believed that CMS did not adequately distinguish between permitted ''community outreach'' and disallowed ''entertainment sponsorship,'' particularly in scenarios where OPOs sponsor high-traffic venues and deploy trained staff, donor recipients, and donor families to engage attendees on organ donation and registration. A commenter further emphasized that high-attendance events, such as those at regional colleges or minor league baseball games, especially in non-metropolitan areas, are valuable for building long-term community trust and organ donation awareness, further noting that an event's large scale does not diminish its effectiveness.

Several commenters asked whether CMS's proposal at § 413.5(c)(10)(ii)(B) would apply to sponsorships of locally focused events and teams, including events at universities within their DSA that gain the attention of the OPO's target population yet draw both local and national audiences. A few commenters noted that CMS's own examples of allowable OPO public education activities in the FY 2027 IPPS proposed rule, such as booths at high schools, local colleges, and minor league sporting events, demonstrate that such settings can serve as effective public education vehicles.

A few commenters noted that while their programs are geographically within their DSA, CMS's narrow framing of what qualifies as allowable public education, such as one-on-one engagement, booths, and direct conversations, does not account for programs that are successful, but do not fit CMS's limited examples. The commenters contended that CMS's proposal is focused on the form of expenditure rather than its goal of increasing donor awareness and could potentially disallow costs of activities that serve a public education mission.

Response: We acknowledge the commenters' request to withdraw our proposal and recognize the commenters' assertion that sporting venues can be used to provide public education. We respectfully disagree with the characterization that our proposal reflects arbitrary distinctions that lack basis in fact, law, or policy. We acknowledge the commenters' concern that we did not distinguish between allowable ''community outreach'' and disallowed ''entertainment sponsorship.'' The proposal was not intended to disallow all OPO public education activities at any type of sporting event or venue, rather it seeks to provide a distinction between targeted community-based educational outreach activities where more meaningful individualized conversations can take place with potential organ donors and not large-scale commercial sponsorships of sporting events, athletes, nationally televised parades and sports figures and personalities. We believe that all entertainment costs are unallowable, regardless of the purpose or context in which they are incurred.

We are clarifying that the characterization of entertainment and sponsorship costs as allowable simply because they are associated with public education and community outreach on organ donation does not change their classification. Entertainment and sponsorship remain unallowable and are not subject to exception based on intent or perceived benefit. Additionally, in response to the commenters' concerns surrounding public education activities at sporting

events or high-attendance venues, and events within the OPO's DSA that draw local and national crowds, we are clarifying that entertainment and sporting sponsorship of any kind is not an allowable OPO public education cost.

However, we recognize that opportunities exist for OPOs to conduct focused public education and community outreach at high-traffic venues, including racing venues, national sporting event stadiums, and regional and collegiate venues within their DSA, that attract both local and national audiences. The intent of our proposal was to disallow sponsorships of sports teams, individual athletes and sports figures, race cars, and sponsorship of the venue itself. We do not intend to broadly disallow OPO-staffed, purposeful public education initiatives and activities held at high-traffic or prominent venues, as long as the costs associated with delivering targeted public education is reasonable and does not involve sponsoring the team or venue. OPOs must maintain clear documentation demonstrating that costs claimed as public education are directly tied to organ donation awareness activities and donor registration. Costs associated with sporting event sponsorships, even those with an educational component, must be allocated appropriately on the Medicare cost report, with only the portion directly attributable to legitimate public education being potentially allowable.

Comment: A commenter requested CMS further define and clarify what constitutes a ''national'' parade and believed it would be irresponsible to sponsor a float in the Macy's Thanksgiving Day Parade. Specifically, the commenter sought clarification on whether sponsoring a float in a large-scale regional parade that takes place within the organization's DSA is an allowable cost.

Response: We appreciate the commenter's request for clarification regarding what constitutes a national parade. We agree that sponsoring a float in the Macy's Thanksgiving Day Parade would not be an allowable cost. We similarly believe that sponsorship of a float in the Rose Bowl Parade or of similar scale and nature of the Rose Bowl Parade would not be an allowable cost. After further consideration of comments, we believe that clarification is necessary as our intention was to allow OPOs to participate in small, local community-based types of events. We believe that both large-scale regional and national parades are of a similar scale and nature and therefore, these types of parades, float sponsorships and parade activities are not allowable costs under Medicare's reasonable cost principles. Parade floats, by nature, are primarily for the purpose of entertainment and performative rather than directly supporting the objectives of an OPO's community-based public education activities to educate individuals about organ donation and register organ donors. Additionally, sponsoring floats can involve considerable costs, such as route permitting fees, float construction and decoration, costumes, and equipment rentals. For these reasons, we believe that costs associated with sponsoring a float, whether for a large-scale regional or national parade, are not allowable under Medicare's reasonable cost principles. Accordingly, we are finalizing our proposal with a modification to specify that the sponsorship of floats in large-scale regional and national parades is not an allowable cost under Medicare. We believe this modification is consistent with the intent of our original proposal and is within the scope of the changes we proposed. We believe that an OPO sponsoring a float in a small-scale regional parade within the OPO's DSA may be allowable, provided the costs are reasonable, the activity is geographically targeted, and it offers opportunities for donor engagement and registration tailored to the DSA's specific needs.

Comment: A few OPOs questioned CMS's assertion in the proposed rule that sponsorship events attracting wide viewership within the DSA do not constitute targeted or measurable public education initiatives and a commenter provided examples of how their sponsorship based-public education provided targeted, measurable education and increased organ donation. The OPO credited its sponsorship-based public education activities as a contributing factor in its advancement in CMS's performance measure ratings, citing this progression as evidence of the effectiveness of broad-reach outreach efforts. Additionally, a few commenters provided examples of the benefits experienced through team or game day sponsorships and claimed such events have enabled them to deliver effective public education on organ donation, including but not limited to, in-person presence at games and events, traditional and social media messaging, signage, handouts, public address announcements at games, sharing donor family messages on jumbotrons and use of team mascots at motor vehicles departments. Additionally, a commenter questioned CMS's categorization of sponsorship costs as entertainment because they include items such as tickets to games and hospitality suites. The commenter stated such costs were identified, assigned a fair market value and then adjusted off their Medicare cost report.

Another commenter asserted that CMS's claim that OPO-sponsored sporting events exceed what a ''cost-conscious buyer'' would spend is contradicted by their own experience. Several commenters claimed that leveraging national sponsorships of sports teams and nationally televised parades allows OPOs to reach significantly more viewers than direct engagement, at a marginal cost, and provided statistics such as media impressions to justify their claim. A commenter suggested CMS has not explained how limiting OPOs to supposedly higher-cost, lower-reach outreach activities aligns with its prudent buyer proposal, suggesting CMS's goal is to cut OPO reimbursement rather than promote reasonableness. The commenter further asserted that Congress directed CMS to pay reasonable cost, not reduce payments, and that CMS has provided no evidence that longstanding principles are no longer effective. Lastly, a commenter contended CMS's own prior guidance acknowledged that ''OPOs need the flexibility to decide how they will use their educational resources'' (71 FR 30982, 31027, May 31, 2006), a position that stands in direct conflict with the proposed ''categorical'' prohibition of sponsorships.

Response: We appreciate the examples commenters shared with us regarding benefits experienced through team or game day sponsorships, which they suggest has enabled them to deliver effective public education on organ donation. Additionally, we acknowledge the commenters' assertions that leveraging national sponsorships of sports teams and nationally televised parades, at a marginal cost, allows OPOs to reach significantly more viewers than direct engagement, along with the statistical evidence submitted by a few commenters in support of this claim. We do not believe that our proposal would require OPOs to engage in supposedly higher-cost, lower-reach public education activities, nor do we believe our proposal does not align with our prudent buyer proposal. While we acknowledge that leveraging a professional sports team's social media platform or sponsoring a float in a nationally televised parade may offer a

broad reach, the overall cost structure of such sponsorship arrangements such as naming rights, promotional fees, sponsorship salaries paid to athletes and sports figures, and associated expenses, must be considered unallowable costs under Medicare's reasonable cost principles. These sponsorship arrangements are primarily for the purpose of promotional or sporting activities, rather than directly supporting the objectives of an OPO's community-based public education activities to educate individuals about organ donation and sign up organ donors and are not allowable costs under Medicare's reasonable cost principles. We believe that it is difficult to determine the effectiveness of public education when those efforts are generalized and lack direct interaction or a targeted audience.

We continue to believe that OPOs' systematic identification of donation barriers, paired with targeted public education initiatives, can increase donor registration rates among specific populations. We are also affirming that OPOs should retain meaningful flexibility in determining how to deploy their educational resources. However, that flexibility must operate within Medicare's reasonable cost principles that protect the integrity of federal funding. This final rule seeks to establish those boundaries in a clear and consistent manner, ensuring that public education expenditures remain aligned with the core mission of increasing organ donation rates rather than subsidizing broad commercial entertainment and sporting events and partnerships. By contrast, sponsorship arrangements with major professional sports franchises and large commercial venues involve financial commitments of a fundamentally different scale and nature, which warrants closer scrutiny to ensure that public funds are being used appropriately. As recipients of federal funds, OPOs are held to a standard of fiscal responsibility. Furthermore, we note that Medicare does not dictate or restrict an organization's decision to enter into sponsorship arrangements, or sponsor a sports team; however, such sponsorship or entertainment costs are not allowable under the Medicare program and must not be claimed as reimbursable costs on the Medicare cost report.

We appreciate the commenters' concerns regarding sponsorship costs that include tickets and the commenter that indicated unallowable costs such as tickets to games and hospitality suites were adjusted off their Medicare care report. We are reiterating that providers must ensure that all unallowable costs, such as tickets, alcoholic beverages, box suites, entrance to hospitality suites, pit lane and garage tours, are properly excluded from the Medicare cost report, as including such costs, whether directly or indirectly, may result in inaccurate payment or a future disallowance during cost report reconciliation. Adequate documentation must be maintained to support the proper treatment of these costs, including records demonstrating that unallowable costs have been excluded and that any donations related to allowable costs have been appropriately offset. This documentation must be available for review upon request by CMS in accordance with the regulations at §§ 413.20 and 413.24.

Comment: Several commenters suggested CMS adopt alternative approaches, such as a principles-based framework that allows CMS to articulate targeted accountability mechanisms, and a substance-based test for cost allowability, that evaluates whether an expenditure supports structured educational engagement through factors such as staffed presence, distribution of educational materials, active outreach, and donor registration tracking rather than broadly disallowing costs. A few of the commenters requested that sponsorship fees that enable meaningful donor education be treated differently from fees that simply place an OPO's name on a scoreboard. A commenter urged CMS to set clear expectations for large-scale events rather than broadly disallowing their costs, suggesting measurable requirements, such as branded apparel with donor registration QR codes or tracking one-on-one conversations, and the establishment of allowable marketing materials to promote financial stewardship and consistent compliance.

Response: We appreciate the commenters' suggestion to establish a substance-based test and accountability framework to reach the broad goals of supporting the OPO's mission of increasing organ donation, while increasing fiscal accountability, and maintaining stewardship of the Medicare trust fund. Additionally, we appreciate the examples provided by commenters to help demonstrate impact of the public education activity. We also acknowledge the commenter's request to allow sponsorship fees that allow for meaningful donor education to be treated differently from fees that merely place an OPO's name on a scoreboard. We agree with the commenter that placing an OPO's name on a scoreboard does not constitute meaningful donor engagement and education.

We are affirming our statement and examples provided in the proposed rule that we believe allowable costs under Medicare for OPO public education initiatives include costs that directly support organ donation and align with Medicare's reasonable cost principles. Examples would include OPOs' participation and engagement in settings that can facilitate direct conversations with individuals regarding organ donation and provide opportunities to register donors and track the number of registrations obtained during each effort such as, setting up booths at local farmer's markets, health fairs, high school or local college events, partnering with community organizations, faith-based groups, schools and health care facilities, participating in local multicultural festivals, as well as providing education at driver's education programs and at local Department of Motor Vehicles (DMV) and Department of Natural Resources so that individuals can register to become an organ donor while obtaining a driver's license or fishing license. We believe the OPO staff should be available to discuss, educate and answer questions directly about the organ donation process and may provide modest token items and educational materials to individuals to support organ donation awareness (for example, pens, awareness bracelets, buttons, stickers, cups, or electronic and print materials that include the OPO's website address, QR codes linking to donor registration platforms, or information on upcoming community-based organ donation awareness events) to represent the mission-driven engagement that is consistent with the responsibilities of OPOs and responsible stewardship of the Medicare Trust Fund.

In general, for OPO public education costs to be considered allowable, such costs must not be incurred for entertainment, including sponsorship of sporting events, teams or athletes. CMS expects public education costs to be targeted public education efforts, where OPO staff are present to engage individuals on organ donation awareness and register potential organ donors; these costs must be reasonable and necessary, and must be distinct from entertainment such as tickets, hospitality or team sponsorships. The OPO must provide adequate documentation in accordance with 42 CFR 413.20 and 413.24, to demonstrate that costs of public education activities are directly tied to organ donation awareness activities and donor registration. We believe this

requirement, in addition to the examples we provided, promotes transparency, accountability and fiscal responsibility regarding OPO public education costs.

After consideration of the comments received, we are finalizing our proposal at 42 CFR 413.5(c)(10) to specify, costs incurred by providers for entertainment, including costs associated with entertainment activities, or that are entertainment in nature, are not allowable costs. We are also finalizing our proposal at § 413.5(c)(10)(i) to specify costs as described in § 413.5(c)(10) that OPOs incur to engage in public education to increase awareness of organ donation and increase donor registration are non-allowable costs. Additionally, we are finalizing § 413.5(c)(10)(ii)(C) with a modification to specify costs incurred for sponsorship of floats in large-scale regional and national parades are not allowable costs. With this modification, § 413.5(c)(10)(ii) specifies non-allowable entertainment costs include, but are not limited to the following:

- Tickets, admission fees, or entry to sporting or other events, including national or professional sporting events.
- Sponsorship of sporting events, teams or athletes, including race car drivers or motorsports activities.
- Sponsorship of floats in large-scale regional and national parades.
- Concert, theater, or performing arts events, professional musicians or other entertainers.
- Wine tours or alcoholic beverages.
- Retreats held at spas or luxury resorts, spa services or treatments.
- Golf outings, ski trips, cruises, and similar recreational excursions.

Comment: Regarding our proposal at 42 CFR 413.5(c)(11) pertaining to allowable OPO public education costs within an OPO's DSA, a few commenters noted that allowability of community-based educational outreach within a DSA is appropriate; however, some requested clarification or modification of certain provisions to avoid unintended consequences related to the core activities of OPOs. A commenter supported requirements that strengthen and standardize public education activities within the DSA such as targeted outreach, education, and community partnerships. The commenter indicated that focused DSA engagement fosters public trust, promotes consistent donor awareness, improves authorization rates, and reinforces equitable access to donation opportunities across diverse populations. Additionally, the commenter noted such requirements align with broader system goals of transparency and improved donation outcomes.

Many commenters expressed concern that if CMS's proposal prohibited broad reaching public education activities, such as social media campaigns, the effectiveness of public education programs could be undermined, resulting in fewer donor registrations. Several commenters noted that disinformation and skepticism continue to undermine the donation process despite increased public awareness, urging CMS to continue allowing broad-reaching public education activities. Many commenters noted that CMS's proposal did not account for the nature of digital content and social media, which extends beyond an OPO's DSA or that organ donor registration and family authorization typically require multiple interactions across diverse channels over time. Another commenter suggested that because individuals may learn about organ donation through many channels, the 2025 National Survey of Organ Donation Attitudes and Practices cited by CMS in the FY 2027 IPPS proposed rule, should not be used to dismiss the impact of the Rose Bowl Parade or other entertainment-based awareness campaigns may have on individuals' decisions to register as organ donors.

A commenter suggested CMS's proposal to limit outreach to local, one-on-one engagement, and require donor registration opportunities, on-site OPO staff, and allow for modest giveaways incorrectly assumes face-to-face engagement is the primary driver of donor registration. The commenter cited examples of OPO paid media and social media campaigns that ran alongside increases in donor registration rates. Another commenter supported CMS's goal of funding public education on organ donation but contended that traditional outreach methods, such as farmer's market booths, health fairs, and multicultural festivals, may no longer be sufficient or cost-effective given rising donation after circulatory death (DCD) rates and declining public sentiment toward organ donation. Many commenters claimed broader community engagement strategies, such as billboards, radio campaigns, school-based education, and donor recognition events are allowable costs. These commenters stated that broader reaching engagement is often more cost-effective than one-time events and requested CMS clarify that these costs continue to be allowable Medicare costs.

Response: We appreciate the comments received regarding our proposal at 42 CFR 413.5(c)(11). Additionally, we agree with the commenter's assertion that focused DSA engagement fosters public trust, promotes consistent donor awareness, improves authorization rates, and reinforces equitable access to donation opportunities across diverse populations. We acknowledge commenters' concerns that our proposal could undermine an OPO's public education programs and could result in fewer donor registrations. We appreciate the commenters' detailed feedback regarding our proposal and the examples provided by some OPO's of their broad reaching public education efforts. Additionally, we note that donor recognition events are not, and have never been, allowable organ acquisition costs under Medicare, as discussed further below in this section.

We continue to believe that the OPOs' primary objective should be DSA focused, community-based public education efforts. We believe these targeted engagements are best positioned to address the needs of the local community and are effective to increase donation awareness and donor registration in the OPO's DSA. However, based on commenter's feedback, we recognize that certain broad reaching public education strategies, such as online campaigns, can serve as effective tools for increasing donor registration and awareness, if the costs of such activities align with Medicare's reasonable cost principles and do not serve an entertainment purpose, and that narrowing outreach efforts to local, one-on-one engagement may not reflect the full range of reasonable and effective OPO public education strategies. Accordingly, based on commenters' suggestions, we agree that such activities may include, but are not limited to, community-based events, local school education programs, local driver's education programs, partnerships with driver's license bureaus, workplace outreach initiatives, faith-based outreach programs, radio and social media campaigns and billboards within the DSA. We believe these types of public education activities must not be entertainment related or include sponsorship costs, or salaries paid to sponsor individuals such as public figures, celebrities, or athletes. These activities must be targeted to the OPO's DSA community and designed to increase donor registration awareness within the OPO's DSA. Furthermore, to be allowable, such public education activities must meet Medicare's reasonable cost principles and must be documented in accordance with 42 CFR 413.20 and 413.24.

Comment: A commenter noted that the ''December 2020 Final Rule''

focused on two outcome measures: donation rate and transplantation rate and in that Final Rule, CMS noted that OPOs can adopt policies and practices responsive to the community they serve and have better results. The commenter suggested that this position, and the GAO's benefit-to-cost ratio provided in the Final Rule, implies public education is a means for meeting these goals. The commenter contended that categorially disallowing broad-reaching public education activities risks destabilizing the benefits CMS counted on to justify the December 2020 Final Rule. The commenter requested CMS withdraw its proposal to limit allowable OPO public education to face-to-face interactions only, contending that this limitation contradicts the evidentiary record, conflicts with CMS's own prior guidance, and would eliminate the broad-reach education methods that have demonstrated the greatest effectiveness in supporting organ donation.

Response: Regarding the commenter's concerns specific to the December 2020 Final Rule and the role of public education in supporting donor registration efforts, we acknowledge that the December 2020 Final Rule recognized the importance of public education in driving donor registration. However, we respectfully disagree with the commenter's suggestion that our proposal risks destabilizing the benefits CMS counted on to justify the December 2020 Final Rule and request to withdraw our proposal. Rather, we believe that focusing OPO resources on targeted, DSA public education activities, while allowing certain broad reaching public education activities within the OPO's DSA, will strengthen the effectiveness of donor registration efforts, comport with Medicare's reasonable cost principles, and ensure that public funds are used responsibly and efficiently.

Comment: Several commenters appreciated and supported HRSA's organ donation campaigns and indicated that HRSA alone does not provide sufficient public education, awareness, or donor engagement resources to support nationwide donor registration efforts. These commenters noted that OPOs' complementary national, and local, outreach activities such as high school and driver's education programs and partnerships with driver's license bureaus, workplaces, faith-based outreach, media relations should continue to be recognized as allowable costs. Several commenters urged CMS to preserve flexibility for national initiatives to the extent they are not duplicative of HRSA's existing nationwide donation campaigns, and few commenters suggested CMS establish guardrails to ensure an OPOs national education efforts do not duplicate HRSA's efforts.

Response: We acknowledge and understand the concerns raised by some commenters that HRSA alone does not provide sufficient public education, awareness, or donor engagement resources to support nationwide donor registration efforts. Additionally, we recognize that an OPO's broad reaching, public education activities, when provided in parallel to HRSA's national awareness programs, are critical to supporting donor registration efforts and should be recognized as allowable costs. We agree with commenters that OPO public education and outreach efforts must not duplicate HRSA's efforts and acknowledge their request to establish guardrails to prevent duplication.

To address commenter's concerns regarding the establishment of guardrails, we believe that OPO's must ensure their public education activity is targeted to the OPO's DSA and may consider including details such as DSA-specific demographics, regional statistics and cultural considerations aimed at increasing organ donor registration within its DSA to differentiate its activities from HRSA's efforts. In accordance with 42 CFR 413.20 and 413.24, providers are required to maintain auditable and verifiable information and make information available to the Medicare contractor upon request. As such, we believe it is appropriate to require OPO's to conduct and document a review of HRSA's current social media activities, including content published on HRSA's official channels (for example, *organdonor.gov*, HRSA social media platforms) to ensure the OPO's broad reaching public education activity is targeted to its DSA community, rather than duplicating HRSA's national efforts.

Comment: Many commenters urged CMS to preserve OPO public awareness and education resources for donor families and expressed concern that new limitations on allowable outreach and education costs may limit capacity to educate hospital staff and decrease hospital referrals, limit effectiveness of public education and donor family support, ultimately lessening the number of lifesaving organs that can be recovered. Several commenters requested CMS confirm that the costs of donor family support and outreach activities remain allowable costs, while other commenters requested CMS allow costs of aftercare and bereavement services for families, such as donor family support and outreach, and donor recognition and remembrance events as allowable costs. Some commenters suggested activities such as providing public and professional education and donor family aftercare are explicitly required under federal regulations and contended that it is unreasonable to require OPOs perform such services but not reimburse them. Lastly, several comments reflected donor-family narratives and sentiments regarding their experience with organ donation, rather than specific proposals, and were outside the scope of this rulemaking.

Response: We appreciate the comments regarding the importance of OPO provided education and family support services. We believe that our final policies will continue to allow OPOs to provide public education, awareness and outreach to potential donors and donor families in accordance with existing public education requirements. Additionally, we appreciate the commenters' feedback regarding bereavement and aftercare services and acknowledge the important role these services play in supporting donor families during an incredibly difficult time. However, we respectfully disagree that aftercare and bereavement services are allowable organ acquisition costs under the Medicare program. While we recognize the compassionate intent behind providing bereavement and aftercare services to donor families, these services are provided after the organ procurement process is complete. We believe it would not be an appropriate use of the Medicare trust fund to reimburse such services, as organ acquisition costs. Accordingly, we maintain that bereavement and aftercare services for donor families are not, and have never been, allowable organ acquisition costs under the Medicare program.

After consideration of the comments received, we are modifying our proposal at 42 CFR 413.5(c)(11) to allow the costs of certain broad reaching public education activities within an OPO's DSA. Specifically, costs incurred by an OPO to engage in public education within its DSA, including public education activities designed to reach a broad audience within its DSA, such as but not limited to, billboards, radio advertisements, and social media campaigns, to increase awareness of organ donation and increase donor registration within its DSA are allowable if they are reasonable, and do not violate § 413.5(c)(10).

(3) Activities for Employees and Non-Employees of the Provider

The PRM–1, chapter 21, section 2105.8 sets forth that ''Costs incurred by providers for entertainment, including tickets to sporting or other events, alcoholic beverages, golf outings, ski trips, cruises, professional musicians or other entertainers, are not allowable.'' We continue to believe that these costs are appropriately excluded from allowable costs. However, PRM–1, chapter 21, section 2105.8 also states that ''Costs incurred by providers for purposes of employee morale, specifically, for an annual employee picnic, an annual Christmas or holiday party, an annual employee award ceremony or for sponsorship of employee athletic programs (for example, bowling, softball, basketball teams, etc.), are allowable to the extent that they are reasonable.'' After further consideration, we stated in the proposed rule that we believe that costs incurred by providers for events for their employees and non-employees such as employee picnics, parties, award ceremonies or for the sponsorship of employee athletic programs should not be allowable costs under Medicare, as they are not costs a provider incurs to provide patient care. While we understand the significance of employee events provided by providers for their employees' morale, we stated in the proposed rule that we believe that costs associated with employee and non-employee entertainment do not coincide with Medicare's reasonable cost principles and are not costs related to patient care as required under 42 CFR 413.9.

We noted that there are many cost-effective methods for improving employee morale that do not require entertainment expenses. Flexible work schedules, wellness programs, recognition for achievements, and creating a positive workplace culture are just a few examples of ways to support employees without impacting healthcare resources. (These items are separate from a provider's cost of fringe benefits provided to employees under the PRM–1, chapter 21, section 2144.4 that may be recognized as a provider's costs for Medicare reimbursement purposes. Employee fringe benefits that are part of a formal written policy and considered reasonable compensation (for example, health insurance, retirement plans) are generally allowable costs under Medicare.)

Therefore, in the proposed rule we proposed to change the current policy provided in PRM–1, chapter 21, section 2105.8 to disallow costs incurred by providers for employees or non-employees or anyone for entertainment expenses for employee entertainment activities and employee morale, including but not limited to those set forth in PRM–1, chapter 21, section 2105.8, because they are not related to providing patient care. Specifically, we proposed to add 42 CFR 413.5(c)(12) to specify that costs incurred by providers for anyone for purposes of employee and non-employee entertainment activities and employee morale, which include, but are not limited to, picnics, parties, performers, entertainment, award ceremonies, or the sponsorship of scholarships or athletic programs are not allowable costs.

Comment: Most commenters, the majority of which were OPOs, opposed our proposal to disallow costs for employee morale and engagement activities. These commenters disagreed with CMS's view that costs for employee morale and engagement do not coincide with Medicare's reasonable cost principles and are not costs related to patient care under 42 CFR 413.9. Most commenters suggested employee morale and engagement activities are necessary for recruiting and retaining highly specialized staff. A few commenters believed that retention also directly affects patient outcomes and suggested that experienced staff are essential to maximizing the number of viable organs recovered for transplantation. A commenter suggested CMS's proposed policy change to disallow costs incurred by providers for employee or non-employee entertainment activities that are intended to boost employee morale would be counter-intuitive to CMS's goals of encouraging cohesiveness and collaboration within the organ transplantation system. An OPO commented that costs associated with employee morale should be allowable indirect costs and suggested that retaining experienced staff directly affects the quality and volume of organ procurement. The commenter cited a 2009 *American Journal of Transplantation* study to support its position that such costs should be allowable indirect costs. Another commenter suggested that under § 413.9(b)(1), reasonable costs include both direct and indirect costs, and that employee morale activities, while not directly tied to OPO operations, fall within the existing regulatory framework for allowable indirect costs.

Some commenters acknowledged CMS's examples in the FY 2027 IPPS proposed rule of cost-effective methods for improving employee morale such as flexible work schedules, wellness programs, recognition for achievements and positive workplace culture; however, these commenters suggested that, because OPO employees often encounter unpredictable schedules, long hours, and last-minute travel, traditional flexibility and wellness programs are difficult to implement, and employee engagement activities are a necessary substitute for work-life balance provisions available in other healthcare settings. A few commenters suggested that employee morale initiatives may be more cost-effective than recruiting, onboarding and training new hires. A commenter suggested that CMS has not provided any evidence of OPOs that have engaged in extravagant OPO spending for employee morale activities to justify the proposal to disallow all employee morale related costs, and a few commenters suggested, rather than disallowing all employee morale costs, CMS should use the existing ''substantially out of line'' standard to distinguish excessive or entertainment related costs, as well as provide guidance to the Medicare contractors regarding allowable employee morale costs.

Several commenters supported establishing reasonable guardrails on employee engagement spending but opposed overly restrictive limits, and suggested that effective retention requires ongoing, team-based recognition activities. Some commenters suggested that CMS establish reasonable parameters for allowable employee morale and engagement costs, including consideration of federal per diem principles where appropriate and a few of these commenters suggested parameters are critical under a potential zero-margin reimbursement methodology for OPOs, where limited reimbursement could severely hinder recruitment and retention of clinical and non-clinical staff performing demanding, unpredictable work. The majority of commenters urged CMS to retain its current standard of allowing de minimis or reasonable costs associated with employee engagement, morale, and retention when those costs are modest, mission-related, and consistent with prudent non-profit management.

Response: We appreciate the detailed feedback provided by commenters regarding our proposed disallowance of costs associated with employee morale activities. We acknowledge the commenters' concerns regarding workforce retention, cost effectiveness, and unique operational demands of OPOs. In addition, we agree with the commenters' assertion that such costs are indirect costs of doing business. We

also agree that 42 CFR 413.9(c) provides the regulatory limitations sufficient to address excessive employee morale and engagement costs, and combined with continued Medicare contractor oversight, is the appropriate mechanism for addressing any excessive expenditures associated with employee morale and engagement activities. However, under Medicare reasonable cost reimbursement, we believe that any employee morale and engagement activities must be limited to employees of the provider.

Regarding commenters' request for CMS to set parameters for allowable employee morale and engagement costs, we agree that consideration of federal per diem principles, where appropriate, provides a workable and objective benchmark for determining the allowability of such costs. We recognize that de minimis or modest costs for employee morale activities, such as picnics, parties and award ceremonies, may be allowable costs under section 1861(v)(1)(A) of Act. We believe such costs must be reasonable in amount, and not lavish, extravagant, or substantially out of line with costs incurred by comparable organizations; consistent with prudent nonprofit management; reasonably related to engagement of employees necessary to carry out the provider's mission; and properly documented in accordance with 42 CFR 413.24. Consistent with our proposal in the proposed rule, we continue to believe costs incurred by providers for entertainment or performers are not allowable costs in accordance with section 1861(v)(1)(8) of the Act.

After careful consideration of the comments received, we are finalizing our proposal with modification at 42 CFR 413.5(c)(12) to specify that de minimis or modest costs incurred by providers for employees for purposes of improving employee morale are allowable costs, provided that such costs do not violate the limitations set forth in 42 CFR 413.9(c).

(4) Alcoholic Beverages

The PRM–1, chapter 21, section 2105.8 sets forth that costs incurred by providers for alcoholic beverages are not allowable. Additionally, PRM–1, chapter 21, section 2102.3 sets forth that a provider's ''cost of alcoholic beverages furnished to employees or to others regardless of how or where furnished, such as cost of alcoholic beverages furnished at a provider picnic or furnished as a fringe benefit, are not allowable in computing reimbursable costs.'' Three OIG reports have found that some OPOs have included costs for furnishing alcohol in their MCRs, despite these prohibitions outlined in the PRM–1.[655] We have also seen instances of this in certain reimbursement appeals. A provider's costs to furnish alcohol to anyone are not related to patient care and are not appropriate, necessary, or proper in developing and maintaining the operation of patient care facilities and activities. Therefore, in the proposed rule, we proposed to codify these longstanding provisions into the regulations by adding § 413.5(c)(13) to specify that costs incurred by providers to furnish alcoholic beverages to anyone are not allowable costs.

Comment: All commenters agreed that costs incurred by providers to furnish alcoholic beverages are not allowable costs under Medicare. Some commenters emphasized that alcohol-related incidents involving OPO staff, patients, families, and others should be investigated and that individuals who violate this guidance should be held appropriately accountable. However, a commenter opposed codifying this requirement in regulation, noting that under PRM–1, chapter 21, section 2102.3, these costs are already clearly non-allowable. The commenter believed that CMS's example in the proposed rule does not reflect a widespread issue, and suggested, rather than codifying this requirement, OPOs should strengthen their internal controls to prevent such costs from being inadvertently reported on the Medicare cost report.

Response: We appreciate the commenters' feedback and support of our proposal. We believe that all providers, including OPOs, should strengthen internal controls to prevent unallowable costs from being reported on the cost report; however, we respectfully disagree with the commenter's position that codification of this provision is unnecessary. We believe that while PRM–1, chapter 21, section 2102.3 already identifies these costs as non-allowable, codifying this policy in regulation provides explicit regulatory clarity, promotes uniform compliance across all providers, strengthens CMS's ability to enforce accountability and serves as a proactive measure to deter future occurrences, regardless of their prevalence. After consideration of the public comments we received, we are codifying our proposal as proposed at § 413.5(c)(13), to specify that costs incurred by providers to furnish alcoholic beverages to anyone are not allowable costs.

(5) Professional Education and Travel

(a) Costs for OPO Professional Education

Regarding allowable professional education costs for OPOs, under section 371(b)(3)(B) of the PHSA, OPOs are responsible to ''conduct and participate in systematic efforts, including professional education, to acquire all useable organs from potential donors,'' and ''assist hospitals in establishing and implementing protocols for making routine inquiries about organ donations by potential donors.'' Medicare has recognized the costs incurred by OPOs' for providing professional education for increasing organ donation awareness and acquiring organs for transplantation as allowable costs, if such costs are reasonable, necessary and related to patient care. OPOs include professional education costs as OPO overhead costs on the OPO/HCL MCR, and Medicare shares in these costs. The current guidance regarding allowable professional education costs is set forth in the OPO/HCL MCR and includes, ''costs associated with the education of donor hospital personnel and physicians, including the expenses of meetings, seminars, slide shows, and presentations.'' [656]

In 2023, the OIG reviewed OPOs' expenses and found that Medicare paid for costs incurred for professional and public education activities that did not meet Medicare requirements.[657] The OIG recommended CMS update the applicable requirements to clarify what types of professional and public education costs are unallowable.[658] We note that we discuss public education costs in section X.D.2.b.(2) of the preamble of this final rule. In the proposed rule, we proposed to establish in regulation that the types of professional education provided by OPOs to the clinical staff of hospitals should be focused on organ donation to acquire all usable organs from potential donors in accordance with section 371(b)(3)(B) of the PHSA.

In response to comment in the FY 2022 IPPS/LTCH PPS final rule with comment period, we stated that costs of an OPO-sponsored seminar that does not provide continuing education credits, regardless of whether the seminar is provided to the OPO staff, may be an allowable cost if it relates to

[655] *https://oig.hhs.gov/oas/reports/region9/90800033.pdf; https://oig.hhs.gov/oas/reports/region9/90900087.pdf; https://oig.hhs.gov/documents/audit/9634/A-09-21-03020-Complete%20Report.pdf.*

[657] *https://oig.hhs.gov/reports/all/2023/medicare-paid-independent-organ-procurement-organizations-over-half-a-million-dollars-for-professional-and-public-education-overhead-costs-that-did-not-meet-medicare-requirements/.*

[658] Id.

patient care and meets the requirements at 42 CFR 413.9. (see 86 FR 73476). In the proposed rule we provided additional specificity regarding both the nature of the education offered at OPO-sponsored seminars and the intended audience for such seminars as referenced in our previous statement. In the proposed rule, we stated, OPO-sponsored seminars may include meetings, presentations, and other professional education activities that do not offer continuing education credits, provided to clinical staff such as OPO personnel, donor hospital staff, and physicians and the content is directly related to organ donation and the acquisition of all available organs for transplantation. These costs must meet Medicare's reasonable cost principles and be related to patient care as set forth at § 413.9. Therefore, in accordance with OIG's recommendations regarding clarification of allowable professional education costs, in the proposed rule, we proposed to codify existing policy, with certain modifications to provide greater specificity, set forth in OPO/HCL MCR instructions and requirements under section 371(b)(3)(B) of the PHSA regarding OPO professional education costs.

In the proposed rule, we proposed to add new § 413.9(c)(14)(i) to specify that the costs incurred by OPOs for professional education such as meetings, seminars, and presentations on organ donation to acquire all useable organs from potential donors, where continuing education credits are not given and where the attendee is clinical staff such as OPO staff, donor hospital staff, and physicians, are allowable costs.

Additionally, in response to a comment in the FY 2022 IPPS Final Rule with comment period, (86 FR 73476), we stated, the reasonable cost of an OPO-sponsored seminar that provides continuing education credits, may be an allowable administrative and general cost limited to the OPO staff (as described at § 486.326(b)) if the seminar is related to patient care and meets the requirements at § 413.9. In the proposed rule, we proposed to codify the existing policy regarding allowable costs of OPO-sponsored seminars where continuing education credits are given to the OPO staff. Specifically, we proposed to add new paragraph (c)(14)(ii) to specify, the costs for OPO-sponsored seminars where continuing education credits are given and where the attendee is on the OPO staff are allowable costs to the extent that they are patient care related, reasonable and necessary and we also proposed to add new paragraph (c)(14)(iii) in accordance with existing requirements under § 413.402(d)(2)(v) to specify, that costs incurred by OPOs for OPO-sponsored seminars where continuing education credits are given and where the attendee is not on the OPO staff are not allowable costs. Lastly, we proposed to amend sections 413.402(a) and (d)(2)(v) to cross-reference the policy set forth in § 413.5(c)(14)(iii) regarding OPOs professional education costs.

(b) Costs for Education and Travel

The PRM–1, chapter 21 sets forth that the costs of staff training and education are allowable, provided they are reasonable and related to patient care. Specifically, the PRM–1, chapter 21 section 2128 states that orientation and on-the-job training costs are recognized as normal operating expenses and are therefore allowable. Such training is typically conducted within the provider's own setting; however, if outside instruction is required, those costs are also considered allowable. Additionally, the PRM–1, chapter 21, section 2144.6 provides that the cost of items provided to the employee for the convenience of the provider, such as the cost of provider-paid educational courses, uniforms, and operating day care centers for the children of employees are not classified as fringe benefits and may be included in a provider's allowable cost to the extent they are reasonable and related to patient care. The PRM–1, chapter 21, section 2162.7 D. also specifies that providers are required to maintain continuous safety initiatives and professional and employee training programs aimed at reducing the severity of incidents related to malpractice, comprehensive general liability, and workers' compensation incidents.

Regarding travel costs, the PRM–1, chapter 21, section 2105.6 sets forth that costs incurred by providers in conjunction with employee travel are generally allowable to the extent that they are patient care related and reasonable. However, travel costs incurred in conjunction with non-patient care related employee travel are not allowable. Foreign travel costs are allowable only where the provider can clearly substantiate the reasonableness and patient care relatedness of the travel costs to the satisfaction of the Medicare contractor.

When providers incur costs for their employees or staff to travel to professional education activities, these costs must be for activities related to patient care, reasonable and necessary in accordance with Medicare's reasonable cost principles. In the proposed rule, we clarified that overnight travel costs incurred by a provider on behalf of its employees or staff for activities related to patient care to attend a professional education course, meeting, or similar event should be considered allowable when the event is located more than 50 miles away from the employee's workplace and requires more than 8 hours of attendance. We believe this clarification reflects standard business practices. An 8-hour workday is widely recognized across industries, and many federal agencies define local travel as occurring within a 50-mile radius of an employee's official worksite.[659] We believe providers are expected to minimize travel-related costs to professional education activities by selecting economy or coach class accommodations. Additionally, in the proposed rule we stated that section 1861(v)(8)(iii) of the Act and PRM–1, chapter 21, section 2105.9 also provides that the costs incurred by providers related to employee personal use of provider vehicles are not allowable costs.

Under section 1861(v)(8)(v) of the Act, education expenses for spouses or other dependents of providers of services, their employees or contractors are unrelated to patient care and not allowable. We note a 1998 PRRB decision permitted the provider's cost of an educational seminar that took place on a cruise ship as an allowable educational activity, *McCurry's Home Health, Inc.* v. *Blue Cross & Blue Shield Ass'n/Blue Cross & Blue Shield of Iowa,* (Decision 98–D38, 1998 WL 598425 (H.C.F.A. June 5, 1998)).[660] In *McCurry's Home Health, Inc.,* the Administrator reviewed and overturned the PRRB decision and declared that Medicare, as a prudent purchaser of health care services, was correct to question the reasonableness of the costs. The Administrator also declared that costs incurred by providers for cruises are not costs that are ''common and accepted occurrences in the field of the provider's activity'' within the definition of necessary and proper costs under 42 CFR 413.9. Additionally, the Administrator said that the provider's

[659] *https://www.irs.gov/irm/part1/irm_01-032-001#:~:text=(11)%201.32.,local%20long%2Dterm%20taxable%20travel; https://www.gsa.gov/directives/files?file=2025-07%2FCC050151%20OAS%205770.1B%20Local%20Travel%20Policy%20%28Clearance%29%20%281%29.pdf https://www.transportation.gov/media/1751#:~:text=Local%20Travel:%20DOT%20defines%20local%20travel%20as%20travel%20for%20official%20government%20business%20within%20a.*

[660] *https://www.cms.gov/Regulations-and-Guidance/Review-Boards/PRRBReview/Downloads/1998D038.pdf#:~:text=The%20Provider%20contends%20that%20the,administrative%20functions%20of%20the%20job.*

contention that there were no other seminars in its area or nearby that offered comparable educational information was not sufficient to make costs associated with a 7-day cruise to Alaska for employees based in Kansas City reimbursable, despite the 32 continuing education credits provided by the seminar. The Administrator declared that costs associated with the cruise other than the $350 per attendee in actual costs of the seminar were unreasonable.

We agree that the costs of a cruise, regardless of whether continuing education credits are provided, are not common and accepted occurrences in the field of the provider's activity, are not reasonable and necessary and are not patient care related. We believe that entertainment, travel and vacation type of expenses, are not related to patient care and are not appropriate or allowable as professional educational expenses. Such expenses are not necessary or proper in developing and maintaining the operation of patient care facilities and activities.

In the proposed rule, we proposed to codify the existing policy in PRM–1, chapter 21, sections 2105.6, 2105.9, 2128, 2144.6, and 2162.7 D. with certain modifications to provide greater specificity regarding education and travel costs. Specifically, in the proposed rule we proposed to add new 42 CFR 413.5(c)(15) to specify that costs incurred by providers:

- For employee travel are generally allowable to the extent that they are patient care related, reasonable and necessary. Costs for travel not related to patient care are not allowable costs.
- To conduct, or send its employees or staff to, patient care related professional education refresher programs, seminars and workshops that increase the quality of patient care or operating efficiency of the provider, are generally allowable costs to the extent that they are patient care related, reasonable and necessary.
- For entertainment and vacation travel expenses such as travel on cruises or to resorts or spas, or transportation to entertainment or sporting events, are not allowable costs regardless of whether they are or are not incurred in connection with professional educational seminars or continuing education.
- Related to the personal use of provider vehicles are not allowable costs.

Comment: Many commenters opposed our proposals to codify provisions pertaining to professional education costs at 42 CFR 413.5(c)(14). Most commenters broadly requested that we expand allowable professional education costs to include meetings, seminars, and presentation where continuing education credits are given; and professional education provided to non-clinical staff. A commenter claimed that CMS did not explain its distinction for allowing continuing education events based on a clinical staff member's employment status. Commenters noted that limiting allowable costs to ''W–2 employees'' would exclude mission-critical contracted staff such as medical directors, recovery surgeons, and perfusionists, as well as non-clinical personnel in finance, IT, HR, and compliance who must maintain professional credentials to support OPO operations. The commenters urged CMS to broaden its proposal to permit reimbursement for professional education, including continuing education credits, for both contracted clinical and non-clinical staff whose roles are essential to OPO compliance and mission delivery.

Response: We appreciate the commenters' feedback and acknowledge commenters' requests to expand certain provisions of our proposal pertaining to OPOs' professional education costs. We continue to believe that OPO-sponsored seminars, where the attendee is not an OPO staff member and continuing education units are awarded, are not allowable OPO education costs, as such expenditures represent a benefit of the employer rather than a reimbursable program cost. Accordingly, we do not believe expanding allowable professional education costs to include OPO-sponsored seminars where continuing education credits are given to non-OPO staff attendees would be a prudent use of Medicare funds. To further clarify, the intent of proposed 42 CFR 413.5(c)(14)(i) is to allow costs incurred for OPOs that provide professional education at donor hospitals to acquire all useable organs from potential donors because OPOs work directly with donor hospitals during the organ donation process. In such settings, providing continuing education units (CEUs) to donor hospital employees during training is not a necessary component of an OPO's efforts to increase the number of organs available for transplant. OPOs are not responsible for subsidizing the professional development or credentialing requirements of hospital staff.

We also appreciate the commenters' request to expand allowable professional education costs to include non-OPO administrative staff. We agree with providers that asserted that costs associated with non-OPO staff and contracted staff who directly support the donor hospitals and OPO's operational role should be allowable, as these individuals contribute to the OPO's ability to fulfill its core mission of increasing organ donation. We believe this position appropriately recognizes the collaborative nature of OPO operations while ensuring that allowable costs remain tied to activities that meaningfully advance OPOs' goals while maintaining the integrity of Medicare's reasonable cost principles.

Comment: The majority of commenters either opposed our proposals pertaining to education and travel at proposed 42 CFR 413.5(c)(15) or requested the proposals be clarified or modified. A few commenters expressed concern regarding a 50-mile radius for local travel and the 8-hour attendance requirement for overnight travel reimbursement. The commenters argued this standard is overly restrictive, particularly for OPOs serving large rural service areas where one-way travel for organ procurement to a hospital can exceed four hours; the commenter noted this can pose safety risks and potentially unintended consequences of declining services provided to rural areas. Another commenter noted that heavy traffic, particularly in urban hours, can make same day travel impractical. The commenters recommended CMS clarify that the 8-hour requirement is general guideline rather than a requirement. A commenter suggested allowing for documented exceptions.

Several commenters urged CMS to modify its proposal to expand allowable travel and education expenses to include costs for non-clinical staff as well as non-employees, such as contracted staff that includes medical directors, recovery surgeons, and perfusionists. The commenters noted these individuals would be disadvantaged by the proposed limitation on non-clinical staff and non-employees of the provider. The commenters emphasized that restricting these costs could disincentivize OPOs from maintaining trained and credentialed staff essential to their objectives.

A few commenters opposed codifying the allowability of education and travel costs suggesting that § 413.9 and PRM–1, chapter 21 addresses these topics. A few commenters requested we remove the statement, ''costs for travel not related to patient care are not allowable,'' from proposed § 413.5(c)(15)(i) because it is repetitive. Additionally, the commenter requested CMS remove language from proposed

§ 413.5(c)(15)(iii), ''regardless of whether they are or are not incurred in connection with a professional education seminars or continuing education,'' suggesting that branding such as ''resort'' or ''spa'' should not affect cost allowability. The commenter contended that many legitimate continuing education conferences are held at such venues and that branding alone does not indicate attendees are participating in entertainment or recreation rather than education.

A few commenters expressed concern that CMS's framing of patient care is too narrow for OPOs, which are statutorily required under section 371(b)(3)(B) of the PHSA to conduct professional education and assist hospitals with organ donation protocols. The commenter also cited PRM 15–1, chapter 21, section 2102.3 suggesting costs necessary to develop and maintain OPO operations including travel and education are inherently patient care-related and should be treated as allowable costs. The commenters urged CMS to consider costs that are used to develop and maintain the operation of an OPO, which is not just about an organ donor or an organ recipient, but also donor families, and the external personnel to OPOs that they train to facilitate their efforts on organ donation and transplantation as allowable costs. The commenter urged CMS modify its proposal and allow for costs related to essential education, including travel and attendance costs for educational seminars, about OPO operations even if such education is not directly ''patient care'' focused.

Response: We appreciate the concerns shared by commenters regarding our clarification in the proposed rule pertaining to a 50-mile commute and more than 8 hours of attendance for allowable overnight travel reimbursement. Although we continue to believe this standard is appropriate for such costs to be allowable under Medicare, we acknowledge that in certain scenarios it is appropriate to provide greater flexibility. Therefore, we are clarifying that exceptions are permitted; however, reasons for an exception must be documented and available for inspection upon request, in accordance with 42 CFR 413.20 and 413.24.

We also acknowledge commenters' requests to expand allowable travel and education costs as proposed at § 413.5(c)(15)(i) and (ii) to include non-clinical staff as well as non-employees. We maintain that a providers' allowable travel and education costs must not include non-employees because non-employees must secure travel and education costs from their own employer. We also note that our proposal did not limit such allowable travel and education costs to non-clinical staff. However, we agree that for OPOs, limiting allowable travel and education expenses to an OPO's employees or staff would not accurately reflect the operational realities of the OPO. As such, we believe expanding the scope of allowable expenses to employees and contracted employees and personnel facilitates OPOs' ability to accomplish their mission to maximize organ procurement. We also acknowledge the commenter's request to expand allowable travel and attendance costs to include educational seminars that are not directly related to patient care. However, to align with Medicare's reasonable cost principles and to protect the Medicare trust fund, we maintain that allowable costs must have a clear and demonstrable relationship to patient care. We refer the commenter to the discussion of ''related to patient care'' as it pertains to OPOs in section X.D.2.b. of this rule for further guidance.

CMS continues to believe that costs providers incur to host events, including executive and board meetings, educational or otherwise, at resorts or spas are not allowable under Medicare's reasonable cost principles, or a prudent use of the Medicare trust fund. Regardless of the educational content or intent, the venue selection in such cases introduces an entertainment or luxury component that cannot be justified as a reasonable or necessary cost related to patient care. Providers are encouraged to seek alternative, cost-appropriate venues for educational events, as CMS does not consider it appropriate to subsidize costs that are entertainment-oriented or luxurious in nature. Protecting the integrity of the Medicare trust fund remains a priority, and CMS expects providers to exercise sound fiscal judgment when planning and reporting education-related expenditures. Accordingly, we respectfully disagree with the commenter's suggestion to remove the language ''regardless of whether they are or are not incurred in connection with a professional education seminars or continuing education.''

Regarding commenters' request to remove the statement from the proposed § 413.5(c)(15) ''Costs for travel not related to patient care are not allowable costs;'' we agree it is repetitive and we will remove it from the regulation. We respectfully disagree with the commenter that suggested that codification of allowable professional education and travel expenses for providers at § 413.5(c)(15) is not necessary. We believe codifying a policy specifically pertaining to the allowability of costs providers incur for professional education and travel ensures consistency and uniformity, regulatory clarity and transparency, and supports fiscal accountability and stewardship of the Medicare trust fund. We did not receive any comments pertaining to our proposal to disallow costs associated with the personal use of provider vehicles.

Comment: A commenter requested CMS to confirm that reasonable expenses associated with transporting an intended donor to a donor care unit are allowable organ acquisition costs when the transportation is clinically appropriate and necessary to preserve donation potential, support donor management, or avoid the loss of transplantable organs.

Response: We acknowledge the commenter's request; however, this is outside of the scope of this rulemaking and our proposals. We note that allowable transportation costs are set forth in 42 CFR 413.402(b)(8).

After consideration of the comments received, we are finalizing our proposal at 42 CFR 413.5(c)(14) with certain modifications. Specifically, we are modifying proposed § 413.5(c)(14)(i) to specify that costs incurred by OPOs for professional education such as meetings, seminars, and presentations on organ donation to acquire all useable organs from potential donors where continuing education credits are not given and where the attendee is clinical staff, non-clinical staff, or contracted staff including, but not limited to, OPO staff, donor hospital staff, and physicians whose role is essential to the OPO's objectives are allowable costs. We are finalizing our proposed § 413.5(c)(14)(ii) with a modification, to specify that costs incurred by OPOs for OPO-sponsored seminars where continuing education credits are given and where the attendee is a member of the OPO staff are allowable costs to the extent that they are patient care-related, reasonable and necessary. We are also finalizing our proposed § 413.5(c)(14)(iii), with a modification, to specify that costs incurred by OPOs for OPO-sponsored seminars where continuing education credits are given and where the attendee is not a member of the OPO staff, are not allowable costs, in accordance with § 413.402(d)(2)(v). Additionally, we are finalizing our proposal at 42 CFR 413.5(c)(15) with certain modifications. We are finalizing our proposal at § 413.5(c)(15)(i), with modification, to specify that costs incurred by providers for employee travel are generally allowable to the

extent that they are patient care related, reasonable, and necessary, and to remove the repetitive statement ''costs for travel not related to patient care are not allowable costs.'' We are also finalizing our proposal at § 413.5(c)(15)(ii), with modifications, to specify that costs incurred by a provider to conduct, or send its employees, or staff, including contracted employees to, patient care related professional education refresher programs, seminars and workshops that increase the quality of patient care or operating efficiency of the provider, are generally allowable costs to the extent that they are patient care related, reasonable, and necessary. We are also finalizing § 413.5(c)(15)(iii), as proposed, to specify that costs incurred by providers for entertainment and vacation travel expenses such as travel on cruises or to resorts or spas, or transportation to entertainment or sporting events, are not allowable costs regardless of whether they are or are not incurred in connection with professional educational seminars or continuing education. Additionally, we are finalizing § 413.5(c)(15)(iv), as proposed, to specify that costs incurred by providers related to the personal use of provider vehicles are not allowable costs.

Finally, we received no comments on our proposals to amend § 413.402(a) and § 413.402(d)(2)(v) to cross-reference the proposed policies in § 413.5(c)(11) and § 413.5(c)(14)(iii) regarding OPOs' public and professional education costs, respectively. As such we are finalizing § 413.402(a), as proposed, to specify that costs recognized in § 413.402(b) are allowable costs incurred in the acquisition of organs intended for transplant, including those organs that are subsequently determined unsuitable for transplant and furnished for research from a living donor or a deceased donor by the hospital, or from a deceased donor by an OPO. Additionally, there are administrative and general costs that may be allowable and included on the cost report for an OPO or a TH. Costs incurred by OPOs for public education within its donation service area in accordance with § 413.5(c)(11) and professional education in accordance with § 413.5(c)(14)(iii) are allowable overhead costs and are included on the cost report for an OPO. We are also finalizing § 413.402(d)(2)(v), as proposed, to specify, costs associated with and incurred for OPO-sponsored seminars where continuing education credits are given and where the attendee is not on the OPO's staff (as described at § 486.326(b)). Costs incurred by OPOs for public education within their donation service area in accordance with § 413.5(c)(11) and professional education in accordance with § 413.5(c)(14)(iii) are allowable overhead costs.

(6) Meals Provided to Employees and Non-Personnel

Medicare's longstanding manual provisions regarding the allowability of a provider's costs for meals for its employees/personnel and meals provided to those other than the personnel of the provider are provided in PRM–1, chapter 21, sections 2105.2, 2105.5, and 2145, and meals sold to visitors are provided in section 2102.3. These policies were established decades ago and we believe they require updating to ensure costs are reasonable and necessary and are incurred for patient care activities, in accordance with Medicare's reasonable cost principles.

Section 2105.2 of PRM–1, chapter 21 states that the cost of meals for other than provider personnel is unallowable because it is not related to patient care. We have seen some OPOs assert in reimbursement appeals that meals provided to hospital staff during organ donation and management meetings constituted professional education overhead costs related to patient care and were therefore allowable. In 2023, the OIG reviewed certain OPOs' overhead costs and found some costs for meals were attributable to non-OPO employees. In its review, the OIG sampled 20 professional and public education overhead costs (reported by eight OPOs), totaling $4,637, and found instances where meals were provided to non-OPO employees, with Medicare payments of $1,797.[661] OIG recommended that we clarify whether costs of meals provided to non-OPO employees were allowable.

Additionally, in response to comment in the FY 2022 IPPS/LTCH final rule with comment period (86 FR 73416), we said that meals (excluding alcohol) provided to attendees of OPO-sponsored seminars (without continuing education credits) could be allowable administrative and general costs, provided the seminar related to patient care and met requirements under § 413.9 (86 FR 73476). However, upon further review, we stated in the proposed rule that we believe the cost of meals at OPO-sponsored seminars is a benefit to the seminar attendees, rather than a direct cost necessary for patient care. In the proposed rule, we proposed to change our previous position to better align with Medicare's reasonable cost principles, 42 CFR 413.9 and section 2105.2 of PRM–1, which provides that the costs for meals provided to non-employees of the provider are unallowable costs.

In a PRRB decision, the Board allowed a portion of costs incurred by a provider for refreshments at a community health education event, *McCurry's Home Health, Inc.* v. *Blue Cross & Blue Shield Ass'n/Blue Cross & Blue Shield of Iowa* (Decision 98–D38, 1998 WL 598425 (H.C.F.A. June 5, 1998)).[662] Upon Administrator review of the PRRB decision, the Administrator declared that the provider's costs for refreshments at the educational event were not reasonable costs related to the care of the provider's own patients, citing the provisions of § 413.9. In the proposed rule, we stated that we believe that meals provided to anyone, regardless of whether they are or are not employees or staff of the provider, would represent personal expenses and therefore should not be considered allowable costs directly related to patient care services.

PRM–1, chapter 21, section 2105.5 provides that excess costs for executive or management employee meals—such as separate dining facilities, additional staff, or upgraded menus—are not allowable. However, PRM–1, chapter 21, section 2105.5 sets forth that unrecovered costs for executive or management meals served from common menus in shared employee dining facilities are allowable if otherwise reasonable. Under PRM–1, chapter 21, section 2145, providers may claim reasonable unrecovered costs for employee meals in two circumstances when meals: (1) qualify as a fringe benefit (see PRM–1, chapter 21, section 2144.4E) related to patient care; and (2) are provided solely for the provider's benefit and related to patient care, as outlined in PRM–1, chapter 21, section 2102.2. For example, this includes meals served to personnel who must remain on-call on the premises during mealtime to provide patient care, where the meal cost is not classified as a fringe benefit.

We stated in the proposed rule that we believe the existing manual provisions under PRM–1, chapter 21, sections 2105.2, 2105.5, and 2145 should be revised to better align with Medicare's reasonable cost principles, including § 413.9. As noted, we believe

[661] *https://oig.hhs.gov/reports/all/2023/medicare-paid-independent-organ-procurement-organizations-over-half-a-million-dollars-for-professional-and-public-education-overhead-costs-that-did-not-meet-medicare-requirements/.*

[662] *https://www.cms.gov/Regulations-and-Guidance/Review-Boards/PRRBReview/Downloads/1998D038.pdf.*

that meals provided to employees or staff of the provider would generally be considered a personal benefit to staff rather than a direct cost necessary for patient care under Medicare and therefore should not be considered allowable costs. For the foregoing reasons, in the proposed rule, we proposed to codify certain longstanding policies in PRM–1, chapter 21, section 2102.3 and revise the existing policies in sections PRM–1, chapter 21, sections 2105.2, 2105.5, and 2145.

Specifically, we proposed to add § 413.5(c)(16) to specify that costs incurred by providers for meals sold to visitors and meals for their employees or staff (including executives and management) and non-personnel (including attending physicians) are not allowable costs. We also proposed to specify that the costs of meals and refreshments provided to attendees at educational events, including attendees of OPO-sponsored seminars (with or without continuing education credits) are not allowable costs.

Comment: The majority of commenters opposed our proposal to add § 413.5(c)(16) to specify that costs incurred by providers for meals sold to visitors and meals for their employees or staff, as well as the costs of meals and refreshments provided to attendees at educational events, including attendees of OPO-sponsored seminars (with or without continuing education credits) are not allowable costs. The commenters requested CMS maintain its longstanding policy, or to allow for certain exceptions, or establish limits on allowable costs for meals to ensure fiscal responsibility.

Many commenters contended that meals are a legitimate operational necessity and should be considered allowable costs. The commenters specified that the costs of meals should be allowable for staff, specifically organ procurement coordinators, when they are required to be on call or work extended shifts (12–16 hours), or travel long distances between facilities during the organ procurement process. Many commenters also requested the cost of meals or modest refreshments be allowable costs for employees and non-employees attending educational events, including OPO-sponsored seminars and suggested that providing meals and refreshments encourages employee participation and retention. Several commenters suggested CMS establish guidelines and limitations for allowable meal costs, such as establishing per diem rates based on IRS or GSA rates, cap the costs at the IRS per diem rate or require the provider to link the cost of the meal to an auditable organ donation procedure. Several commenters requested CMS modify its proposal to classify meals as standard business expenses (rather than personal expenses), when meals are provided for the convenience of the employer, or allow costs as de minimis fringe benefits to align CMS policy with IRS guidelines that meals are a business expense and deductible. The commenter noted that CMS already relied on IRS and federal guidance elsewhere in the rulemaking, and stated that categorizing these costs as ''personal expenses'' is inconsistent with established business practice.

A few commenters disagreed with CMS's proposal that the costs of meals provided to staff during professional education events to increase the number of registered donors are not allowable costs related to patient care and suggested the costs should be recognized in accordance with § 413.9. Another commenter framed nutrition as a patient safety issue, for organ procurement coordinators, linking inadequate nutrition to risk of clinical errors during the organ procurement process. A commenter suggested that the proposed codification of meals is unnecessary because existing regulations at § 413.9, and subregulatory guidance at PRM 15–1, chapter 21 guidance already address cost allowability. The commenter reiterated their previous position that most instructions in the PRM 15–1 were developed for hospitals and facilities treating patients and agreed that staff meals, for the general benefit of the staff, are not patient care-related and should remain unallowable.

Response: We thank commenters for their detailed feedback on our proposal. We recognize that meals under certain scenarios, for example when an employee is required to travel away from their primary work location and an overnight stay may be required, such as when completing educational training sessions on patient care-related topics. In this scenario, the employee is without reasonable access to their usual meal arrangements, creating an unavoidable expense directly tied to a legitimate, organization-approved purpose that benefits patient care. For these reasons, we believe it would be appropriate to consider the costs of meals or refreshments for employees, including contracted employees, at educational events pertaining to patient care, including OPO-sponsored seminars (with or without continuing education credits) when overnight stay is required. Meal allowances in these scenarios must be reasonable and necessary and align with 42 CFR 413.9, which requires such costs to be reasonable and not substantially out of line with those incurred by similarly situated organizations.

However, we continue to believe that it is not an appropriate use of the Medicare trust fund to pay providers' costs for meals provided to non-employees attending educational events, including OPO sponsored seminars, regardless of whether continuing education units are provided. While CMS acknowledges concerns regarding employee nutrition, and the nature of some positions that require an employee to work extended hours or be on-call, it is not Medicare's intent to subsidize the personal meal costs of employees while performing their regular job duties. Furthermore, we believe allowing all providers to claim these costs across the full spectrum of Medicare-participating entities would not be an appropriate use of Medicare trust fund dollars. Medicare does not prohibit providers, including OPOs, from paying for employee or non-employee meals for their employees, for example during a lengthy organ procurement process, or for convenience to the provider; however, we believe there are many instances where such costs are not allowable in computing reimbursable costs under Medicare.

Regarding establishing caps, we thank the commenters for their suggestion; however, we believe the allowance for meals should remain a business decision made by the organization. To assist providers in determining whether costs are reasonable and necessary, providers may consider reviewing IRS rates and GSA per diem rates as optional guidelines to assist with substantiating the reasonableness of such expenses. However, as we note in the prudent buyer section X.D.2.b.(1) of this final rule, the use of these rates is not a requirement. For the costs of meals to be allowable under Medicare, such costs must be reasonable and necessary and not substantially out of line in accordance with 42 CFR 413.9. We believe this approach preserves organizational flexibility while providing a transparent and defensible framework for cost reasonableness determinations.

We respectfully disagree with the commenter that suggested codification of provisions pertaining to the allowability of meals is not necessary. We believe codifying a policy specifically pertaining to the allowability of costs for meals ensures consistency and uniformity, regulatory clarity and transparency and supports fiscal accountability and stewardship of the Medicare trust fund.

Based on commenters' concerns, we agree that our broad disallowance of meal costs in the proposed rule was overly expansive. Accordingly, we are revising our proposal to permit, as allowable costs, meals provided to staff during overnight travel for educational or training events related to patient care, as well as de minimis snacks, such as water, coffee, granola bars, crackers, fruit, etc., provided to employees and attendees of professional education events. In accordance with section 1861(v) of the Act and 42 CFR part 413 we believe it is appropriate to modify our proposal to be responsive to commenters' concerns while continuing to protect the Medicare trust fund.

After consideration of the comments received, to address commenters concerns, we are finalizing our proposal at 42 CFR 413.5(c)(16) with certain modifications. We are finalizing our proposal at § 413.5(c)(16)(i), to specify that costs incurred by providers for meals sold to visitors, meals for their employees and staff (including executives and management) and non-personnel (including attending physicians) are not allowable costs. We are also finalizing our proposal at § 413.5(c)(16)(ii), with modifications, to specify that costs incurred by providers for de minimis refreshments provided to attendees at educational events, including attendees of OPO-sponsored seminars (with or without continuing education credits) are allowable costs. Finally, based on comments received, we are adding new § 413.5(c)(16)(iii), to specify that costs incurred by providers for meals for employees and contracted staff, whose role is essential to the provider's objectives, when an employee or contracted staff is required to travel away from their primary work location and an overnight stay is required, such as when completing trainings or education, provided such trainings are patient care related, are allowable costs.

We did not receive any comments pertaining to our proposals to codify longstanding policy pertaining to non-allowable costs for drugs sold to non-patients, fines or penalties, and gift shops. Therefore, we are finalizing our proposals at § 413.5(c)(17) to specify that costs incurred by providers for drugs sold to other than patients are not related to patient care and are not allowable costs. We are also finalizing our proposals at § 413.5(c)(18) to specify that costs incurred by providers for fines or penalties resulting from Federal, State or local laws are not allowable costs. Finally, we are finalizing our proposals at § 413.5(c)(19) to specify that costs incurred by providers for operation of a gift shop are not allowable costs.

Comment: A few commenters requested that CMS ensure the reasonable cost provisions be implemented with adequate transition time and several OPOs requested the implementation of the reasonable cost provisions be delayed until FY 2028, citing some OPOs may need to modify documentation processes to comply with potential changes or expansion of prudent buyer, employee morale, professional education and public education standards or restructure their public education activities. They noted delaying implementation would also recognize commenters' concerns regarding broad, ongoing federal OPO performance and modernization initiatives that are occurring in parallel with this rule.

Response: We appreciate the commenters' concerns regarding potential changes to documentation processes and potential restructuring of OPO public education activities. Regarding our prudent buyer proposal, discussed in section X.D.2.b.(1) of this final rule, we maintain that the final regulation text reflects the codification of our longstanding prudent buyer principle set forth in PRM–1, chapter 21, section 2103. In response to commenters' concerns about the unique challenges of the organ procurement process, we have provided additional clarification regarding the application of the prudent buyer principle for OPOs in section X.D.2.b.(1) of this final rule. Based on this clarification, we do not believe a delayed implementation date for the prudent buyer principle for OPOs is necessary.

Additionally, with respect to our proposal on OPO public education activities, discussed in section X.D.2.b.(2) of this final rule, we maintain that the final regulation text reflects the codification of the disallowance of entertainment costs set forth under section 1861(v)(8) of the Act and longstanding provisions on costs not related to patient care as detailed in PRM–1, sections 2102.3 and 2105.8. We are finalizing our provisions pertaining to OPO public education costs under 42 CFR 413.5(c)(10)(i), (c)(10)(ii), and (c)(11) to be effective with the effective date of this final rule and allowing a 1-year delay in enforcement in response to comments that certain OPOs will need time to update their public education programs to comply with this final rule. We believe this 1-year delay in enforcement with regard to OPO public education provisions in this final rule responds to commenters' concerns while still advancing the goals of fiscal accountability and oversight of the Medicare Program.

Finally, regarding commenters' requests that CMS ensure the reasonable cost provisions are implemented with adequate transition time, we are finalizing our proposals pertaining to employee morale in section X.D.2.b.(3) and meals in section X.D.2.b.(6) of this final rule with modifications. We believe these modifications address commenters' concerns and do not believe a delay in the implementation date is necessary.

3. Clarification and Codification of Cost Allocation Principles

Medicare's reasonable cost reimbursement principles require correct allocation of such costs to arrive at equitable and proper payment for services to Medicare beneficiaries. Medicare regulations at 42 CFR 413.24 require that providers receiving payment on the basis of reimbursable cost provide adequate cost data based on their financial and statistical records which must be capable of verification by qualified auditors, and the cost data must be based on an approved method of cost finding.

Medicare's reasonable cost principles take into account both direct and indirect costs of providers of services. Direct costs are costs that are specifically identifiable and attributable to an individual patient, a particular cost center, or a department.[663] Examples of direct costs are salaries and wages of staff working exclusively in a specific department (for example, a nurse in the ICU), medical supplies used directly in patient care, medications administered to patients, supplies used in specific departments (for example, the operating room or radiology department), CAR–T cell biologics administered to patients, and organs purchased from organ procurement organizations and transplant hospitals for transplant into patients. Indirect costs, on the other hand, are costs that are not chargeable based on actual usage and must be allocated on a basis of a statistical surrogate (for example, square feet, dollar value, FTEs, gross salaries, accumulated cost, and costed requisition). Examples of indirect costs are administration, rent, depreciation, utilities, housekeeping, maintenance, medical records, and employee benefits. Cost finding is the process of recasting the data derived from the accounts ordinarily kept by a provider to ascertain costs of the various types of services furnished to patients by the

[663] PRM–1, chapter 23, section 2302.10.

allocation of direct costs and proration of indirect, or overhead, costs.

Departments within a provider are usually divided into two types: (1) those that produce patient care revenue (for example, routine services and radiology); and (2) those that do not directly generate patient care revenue but are utilized as a service by other departments (for example, administration, laundry and linen, housekeeping and dietary).[664] The two types of departments are commonly referred to as ''revenue-producing cost centers'' and ''nonrevenue-producing cost centers.'' [665] Cost finding employs the computation needed in determining the full costs of departments.

The Step-Down method of cost finding used by providers for cost reporting periods after December 31, 1971, recognizes that services rendered by certain nonrevenue-producing departments or centers are utilized by certain other nonrevenue-producing centers, as well as by the revenue-producing centers.[666] A provider's general service costs (that is, overhead costs) must be properly allocated to all centers which they serve, regardless of whether these centers produce revenue, to ensure costs for services to Medicare beneficiaries are correctly calculated.[667] This allocation process for Medicare cost reporting purposes is made through cost finding using a statistical basis that measures the benefit received by each cost center. The statistical basis must reflect the cause-and-effect relationship between the cost and the activities or services receiving the allocation, that is, the benefit received by each cost center.[668] The statistical measure must demonstrate how costs incurred relate to the consumption of resources.[669]

The Medicare cost report's (MCR's) recommended statistical bases include square footage for facility costs, gross salaries for employee benefits, accumulated costs for administrative and general (A&G) costs, meals served for dietary, and other bases that distribute costs in proportion to the relative benefits received, or resources consumed, by each cost center.[670] When a statistical basis, such as accumulated cost improperly includes costs that receive no benefit or resources, those costs included in the accumulated cost statistic must not be used to allocate cost to a department or cost center.[671] The MCR provides instruction for providers to adjust the accumulated cost statistics accordingly.[672]

Including a statistical cost that does not have a beneficial relationship to A&G expenses being allocated causes an improper distribution of overhead. Section 413.24(b)(1) explains that cost finding is the process of recasting the data derived from the accounts ordinarily kept by a provider to ascertain costs of the various types of services furnished. It is the determination of these costs by the allocation of direct costs and proration of indirect costs. Section 413.24(c) sets forth that adequate cost information must be obtained from the provider's records to support payments made for services furnished to beneficiaries, and that the provider's cost information must be accurate and in sufficient detail to accomplish the purposes for which it is intended. Additionally, § 413.24(d)(6) provides specific requirements for certain purchased services and how including these costs in the accumulated cost statistic when the costs do not relate to services or resource provided by the A&G department may cause an improper distribution of overhead and could result in improper Medicare payment.

Upon review of cost report data of various provider types, we have found that providers are not utilizing the Medicare cost report instructions regarding cost allocation,[673] resulting in providers allocating overhead costs imprecisely which could cause inflated and improper reimbursement from Medicare. A&G costs can be improperly allocated when the statistic, ''accumulated cost,'' is used, resulting in an overinflation of the actual benefit or resources provided to various departments of the provider. As an example, when services are purchased under arrangement, the provider is paying for the complete service from an external entity. The provider's A&G cost center does not support or benefit these external purchases and there is no relationship between the hospital's overhead and the purchased services. Some providers are reporting the amounts paid for purchased services or products and including them in the accumulated cost statistic on their cost report. However, this is not correct. Purchased services are already fully costed by the external entity and directly assigned to the benefiting department. Including them in the accumulated cost statistic improperly allocates the provider's overhead to a cost center that already contains the full purchase price of the service as well as the entity's overhead costs and profit. For example, transplant hospitals that purchase organs from OPOs, and other transplant hospitals for transplantation, place the ''purchase cost'' for organs in the appropriate organ acquisition cost center. If these purchase costs are also included in the accumulated cost statistic used to allocate A&G costs, the overhead A&G are improperly shifted, that is allocated, to the cost center as well. The amounts paid by the transplant hospitals to OPOs or other transplant hospitals for purchased organs has increased significantly over the years. This increases improper allocation of overhead costs. Another example of this is when hospitals purchase CAR T-cell biologicals. The purchase price includes costs for the complete process of extracting and preparing the biological for infusion. Including these direct costs in the accumulated cost statistic would improperly and disproportionately allocate overhead to the CAR T-cell cost center without any relationship between the hospital's overhead and the purchased biological. Including these purchased services, or supplies, in the accumulated cost statistic causes overhead A&G costs to shift and be allocated from the hospital's cost centers that benefit from A&G to the cost reimbursed areas of the hospital without any causal or beneficial relationship. In this regard, including in the accumulated cost statistic the purchased services, supplies, or products that are directly assigned to a department, and that include in the purchase price the full cost from the external entity, including overhead and profit, results in an improper and excessive allocation of overhead to the cost center.

When a provider purchases services through a contract for service or purchases supplies and the amount of direct costs reported and paid to external entities includes the entities' overhead and profit, including these costs in the accumulated cost statistic overinflates the allocation and results in improper Medicare payment to the provider. In accordance with the MCR instructions,[674] if costs in a cost center or department include direct assignment of purchased products, organs, or services, the provider must remove the directly assigned costs (purchased costs) from its allocation statistic to assure a

[673] For example, PRM–2, chapter 40, section 4020 for hospitals.

[674] PRM 15–2, chapter 40, section 4020.

proper allocation of overhead. Purchased services are reported as direct costs and must bypass the step-down allocation process. This process ensures appropriate Medicare payment and ensures that the provider's cost centers do not receive an improper distribution of overhead costs without the overhead cost center providing support or a benefit. These longstanding Medicare cost finding principles are in accordance with § 413.24(c) and (d) and previously have been set forth in the MCR instructions.[675]

Similar issues with overhead allocations may exist for CAHs and some CAHs have requested that CMS clarify the cost allocation rules with more explicit cost reporting instructions. Because CAHs are reimbursed by Medicare at 101 percent of their reasonable costs, they may face undesirable financial consequences if their overhead A&G costs are improperly allocated on their cost reports. This can occur when CAHs improperly allocate their costs to all cost centers or departments of the CAH based on the accumulated cost statistic without any causal or beneficial relationship. A CAH's costs can be shifted if they improperly allocate their costs without a causal relationship, such as to areas that do not benefit or are not serviced by overhead cost centers. This can impact the CAH's reimbursement if an improper allocation of A&G costs reduces the calculation of the CAH's operational costs and overall reimbursement.

We believe that the proper allocation of indirect costs by all providers is important in facilitating appropriate Medicare payment. Inflated A&G costs may inaccurately increase provider payment rates resulting in increased Medicare spending.

As an example, for hospitals, there are longstanding MCR instructions in PRM–2, chapter 40, section 4020 when providers use accumulated costs as a statistic for allocation. These longstanding instructions provide two methods that a provider can use to allocate its costs when adjustments are necessary. In this regard, a provider can use either method or both methods.

The first method to adjust the allocation statistic uses a negative adjustment of either (a) a negative one (−1) in the accumulated cost column to identify the cost center which should be excluded from receiving any allocation of A&G costs; or (b) if some of the costs from that cost center are to receive A&G costs, by reporting in the reconciliation column as a negative adjustment, the amount of accumulated costs that are not to receive A&G costs to assure that only those costs to receive overhead receive the proper allocation. We refer to this method as the Negative Adjustment Method in this section. When direct costs are reported in a cost center or department that includes purchased services or supplies, costs other than the purchased service costs may receive an allocation of A&G costs, and the purchased service costs that are not to receive A&G must be identified and removed from the allocation statistic using the reconciliation column on Worksheet B–1. Including a statistical cost which does not relate to the allocation of A&G expenses causes an improper distribution of overhead.

If there are some costs in A&G that may have a causal relationship to the purchased service cost, a second method to correct improper allocation of overhead is set forth in the MCR instructions and PRM–1, chapter 23, section 2307.B., ''*Direct Assignment of Costs to Provider Components.*'' Under this method, to accommodate additional general service cost centers, the provider must add additional columns (also known as ''components,'' ''fragments,'' or ''subscripts'') to the allocation worksheets, to document the step-down of a broad A&G cost center into more than one cost center and use a more accurate statistic to allocate the costs. We refer to this method as the 'Componentizing' of the A&G costs. In this regard, the provider establishes multiple A&G cost centers to allow for a more granular, accurate allocation to ensure that overhead costs are properly assigned to reimbursable departments. By establishing multiple A&G cost centers, providers can more precisely track and allocate overhead costs based on actual resource consumption. For example, different administrative functions, such as human resources, IT, and facilities management, can be separated and allocated using different statistical bases that better reflect their utilization. Additionally, detailed cost center structures provide clearer documentation of how overhead costs are distributed, ensuring a more granular review for providers, auditors, and industry-interested parties.

For providers that desire to change their cost finding methods, PRM–1, chapter 23, section 2312 instructs providers to request this change from their Medicare contractor. This request must be submitted in writing to their contractor 90 days prior to the end of the cost reporting period to which the request for change applies. Under section 2312, the contractor's determination of a provider's request to change methods will be furnished to the provider in writing and will be considered binding on the provider as of the date of the contractor's written notice. Additionally, under section 2312, where the contractor approves the provider's request to change methods, the provider must use this method for the cost reporting period to which the request applies and for all subsequent cost reporting periods, unless the contractor approves a subsequent request by the provider to change its cost finding methods.

In the proposed rule, we proposed to codify these overhead cost allocation requirements that are set forth generally in existing cost reporting instructions, to ensure that providers' costs of providing services to Medicare beneficiaries are correctly calculated. We believe this will provide additional clarity to providers so that they will correctly allocate overhead costs by ensuring that cost statistics are not used to disproportionately allocate costs resulting in inappropriate maximizing or minimizing reimbursement to providers.

Specifically, in the proposed rule we proposed to add § 413.24(d)(8) to specify that providers must not include a statistical cost which does not relate to the allocation of A&G expenses when it causes an improper distribution of overhead. For example, when a hospital performs organ transplants, it may purchase organs (kidneys, hearts, livers) from outside sources such as OPOs. These purchased organs carry a very high dollar value but have no causal relationship to administrative overhead compared to other hospital services, and these purchased organs include all the OPOs overhead in their cost. During the step-down cost allocation process on the Medicare Cost Report, when purchased organ costs are included in the accumulated cost statistic used to allocate Administrative & General (A&G) costs the allocation disproportionately allocates cost as seen in this Table X.D.-03.

[675] PRM 15–2, chapter 40, section 4020; and section 4095 for Worksheet B–1.

TABLE X.D.-03: ADMINISTRATIVE & GENERAL (A&G) COSTS THE ALLOCATION

Cost Center	Accumulated Costs	% of Total	A&G Allocated
Medical/Surgical Routine Care	$5,000,000	31.25%	$500,000
ICU	$2,000,000	12.50%	$200,000
Organ Acquisition (Purchased Organs)	$8,000,000	50.00%	$800,000
Radiology	$1,000,000	6.25%	$100,000
Total A&G costs to be allocated $1,600,000		100%	$1,600,000

When the purchased organ costs are removed from the accumulated cost statistic (as CMS guidelines instruct), the remaining base is $8,000,000 and the accumulated cost statistic properly reflects the allocation of A&G costs as shown in this Table X.D.-04.

TABLE X.D.-04: ADMINISTRATIVE & GENERAL (A&G) COSTS THE ALLOCATION

Cost Center	Accumulated Costs	% of Total	A&G Allocated
Medical/Surgical Routine Care	$5,000,000	62.50%	$1,000,000
ICU	$2,000,000	25.00%	$400,000
Organ Acquisition (Purchased Organs)	$0 (excluded)	0%	$0
Radiology	$1,000,000	12.50%	$200,000
Total A&G costs to be allocated $1,600,000		100%	$1,600,000

We also proposed to add § 413.24(d)(8)(i) to specify that providers must employ either a Negative Adjustment Method, or a Fragmenting (Componentizing) A&G Method, or both, to adjust the allocation statistic as it relates to accumulated costs to prevent an improper allocation of overhead on the MCR.

We proposed to add § 413.24(d)(8)(ii) to set forth the Negative Adjustment Method for accumulated costs to specify that when direct costs are reported in a cost center or department that includes purchased services or supplies, costs other than the purchased service costs may receive an allocation of A&G costs, and the purchased service costs that are not to receive A&G must be identified and removed. We also proposed to add § 413.24(d)(8)(ii)(A) to instruct that, on the MCR, in any column using accumulated costs as the statistical basis for allocating costs providers must identify any cost center that is not to receive an allocation by entering a negative 1 (−1) on the appropriate line in the accumulated cost column, or by entering the total accumulated cost as a negative amount on the appropriate line in the reconciliation column. For those cost centers using accumulated costs that are to receive partial allocation of costs, we proposed to instruct providers to enter a negative amount for the costs that are to be excluded from the statistic on the appropriate line in the reconciliation column.

We also proposed to add § 413.24(d)(8)(ii)(B) to instruct providers that cost centers that are not to receive an allocation must not have entries in both the reconciliation and accumulated cost columns when the accumulated cost statistic is offset to zero. We also proposed to add § 413.24(d)(8)(ii)(C) to instruct providers that, for those cost centers that are to receive partial allocation of costs for costs other than purchased services, the cost to be excluded from the statistic must be reported as a negative amount on the appropriate line in the reconciliation column. This will result in entries in both the reconciliation column and accumulated cost column simultaneously on the same line where a partial accumulated cost statistic is offset.

In the proposed rule, we proposed to add § 413.24(d)(8)(iii) to set forth the Fragmenting (Componentizing) A&G Method, to specify that when a provider chooses to fragment, or componentize A&G costs, the provider must fragment (that is, subscript), the A&G cost center into two or more cost centers using accurate statistics to allocate its costs and ensure that overhead costs are accurately assigned to departments benefiting from the services provided. When creating multiple A&G cost centers, a provider must track and allocate overhead expenses based on actual resource consumption.

In the proposed rule, we also proposed to add § 413.24(d)(8)(iv) to specify procedures for a provider to request to change its cost finding method. We proposed to add § 413.24(d)(8)(iv)(A) to specify that a provider that wishes to change its cost finding method must submit a request to its contractor, in writing, 90 days prior to the end of the cost reporting period to which the provider's request for change applies. We also proposed to add § 413.24(d)(8)(iv)(B) to specify that the contractor's determination of a provider's request to change methods will be furnished to the provider in writing and will be binding on the provider as of the date of the contractor's written notice. Finally, we proposed to add § 413.24(d)(8)(iv)(C) to specify that when the contractor approves the provider's request to change methods, the provider must use this method for the cost reporting period to which the request applies and for all subsequent cost reporting periods, unless the contractor approves a subsequent request by the provider to change its cost finding methods.

Comment: Several commenters expressed support for CMS's objective to improve cost reporting accuracy and the allocation of A&G overhead costs.

Response: We thank commenters for supporting our objectives to adhere to Medicare's reasonable cost principles and improve cost reporting accuracy with regard to providers' allocation of A&G overhead costs.

Comment: Some commenters asserted that the accumulated cost statistic is a longstanding, simplified, and acceptable method for allocating overhead, and that CMS is departing from it without justification. Some commenters asserted

that the proposal conflicts with the 42 CFR part 413 cost-apportionment principles and Medicare's reasonable cost statute's recognition of both direct and indirect costs actually incurred. Some commenters also expressed that CMS's proposed codification of § 413.24(d)(8), *Improper allocation of overhead prohibited,* and the two methods providers can use to adjust the accumulated cost statistic, the Negative Adjustment Method and the Componentizing Method, represents a new prescriptive policy rather than a clarification of existing rules, is vague and would allow contractors to second guess providers' legitimate cost allocation decisions. A few commenters asserted that the Provider Reimbursement Manual does not reflect the policies CMS proposes to clarify and codify. Several commenters cited an increase in providers' administrative burden, including the burden to track purchased services if the proposals are finalized.

Response: We disagree with commenters' assertions that CMS is departing from using the accumulated cost statistic as a valid and accepted allocation basis under Medicare's longstanding cost-finding principles. We also disagree that the cost allocation principles set forth in our proposed codification of § 413.24(d)(8) are new or vague. Our proposal is designed to prevent cost-shifting, and enforce Medicare's longstanding, fundamental cost-finding requirements, as set forth in § 413.24 and cost reporting instructions, that any statistical basis must reflect a causal and beneficial relationship between the cost center and the overhead being allocated. Additionally, as we discussed in the proposed rule (see 91 FR 19745–46), the allocation principles which we proposed to codify at § 413.24(d)(8) are long-standing and have been set forth collectively in statute, regulations and various sections of the Provider Reimbursement Manual. As we explained in the proposed rule, § 413.24(b)(1) defines cost finding as the allocation of direct costs and proration of indirect costs. Allocable costs are a cost item or group of cost items assigned to one or more objects, processes, or operations based on cost responsibilities, benefits received, or another identifiable metric of application or consumption (commonly referred to as general service costs).[676] Using the accumulated cost statistic has always required the provider to demonstrate a causal and beneficial relationship between the cost and the overhead being allocated.[677] The accumulated cost statistic is not being abolished in this proposal. We remind providers of the longstanding requirement set forth in 42 CFR 413.24(c) which requires that cost data be accurate, verifiable, and in sufficient detail to support Medicare payments. Medicare's reasonable cost statute at 1861(v)(1)(A) of the Act requires that Medicare payments reflect costs that are reasonable and actually incurred in providing services to Medicare beneficiaries, not inflated costs resulting from improper statistical allocations. As we discussed in our proposal, some providers have not been following Medicare's longstanding reasonable cost principles and Medicare's cost report instructions. Our proposal to codify these allocation principles and instructions into the regulations does not convert them into new policy. CMS is simply proposing, through notice and comment rulemaking, to clarify and codify the longstanding statutory reasonable cost principles regarding certain cost reporting instructions into regulatory text to prevent cost shifting and to ensure uniform compliance across all provider types, and greater legal certainty for providers, and contractors. We appreciate commenters' sharing their concerns regarding an increase in administrative burden to providers, however, as previously stated, we proposed to codify into the regulations at new § 413.24(d)(8) longstanding instructions on the proper allocation of overhead costs. We believe these proposals enforce the causal and beneficial relationship of properly proportioning a provider's costs to overhead expense that is fundamental to Medicare's reasonable cost principles. There should be no additional burden to adhere to the longstanding requirement to properly report and allocate costs. We note that our proposal at § 413.24(d)(8)(i) states that providers must use the Negative Adjustment Method or the Fragmenting (componentizing) Method, or both, if needed, to prevent the improper allocation of overhead on the Medicare cost report. We also note that the Negative Adjustment Method, one of the two compliance options provided in proposed § 413.24(d)(8)(i), is a straightforward adjustment already described in existing MCR instructions (PRM–2, Chapter 40, Section 4020). Providers familiar with Worksheet B–1 can implement this method with minimal additional burden beyond current cost reporting practices. We also note that the Componentizing Method is an optional alternative for providers that wish to more granularly allocate A&G costs. It is not mandated for all providers, and providers retain flexibility to choose the method most appropriate for their cost structure. Because program integrity and safeguarding the Medicare Trust Fund is a core CMS responsibility, we believe that the administrative burden of accurate cost reporting is a reasonable and necessary cost of participating in the Medicare program.

Comment: Many commenters disagreed with the proposal that requires providers to remove purchase costs from the accumulated cost statistic used to allocate A&G costs and said that CMS has presented no evidence to show that including purchased services and supplies in the accumulated cost statistic results in improper Medicare payments. Many commenters asserted that hospitals still incur their own A&G costs (contracting, legal, procurement, compliance, accounts payable, etc.) related to purchased services and therefore should not be excluded from the allocation base. Commenters suggested that removing purchase costs from the accumulated cost statistic could require removing nearly half of hospital costs and create a new Worksheet B–1 information collection requiring PRA review. Some commenters asserted that CMS has not considered the possibility that exclusion of purchased services and supplies could increase aggregate Medicare expenditures, while other commenters noted that alternative allocation bases such as square footage, salaries, and FTEs already understate overhead for items such as organ acquisition costs and CAR–T cell therapies, and the overall reimbursement impact may be immaterial. Another commenter asserted that the title of § 413.24(d)(6) indicates that it is only applicable to provider-based entities and departments. This commenter suggested that the title contributes to the misunderstanding of how § 413.24(d)(6) applies to the departments of all hospitals and suggested that we consider re-wording the heading to something like ''Preventing duplication of costs: departments and provider-based entities'' to help providers understand that the section applies to more than just provider-based entities.

Response: We understand commenters' desire to continue to include purchase costs in the accumulated cost statistic, however, in the proposed rule we explained, with an example, how including purchased services and supplies in the

[676] See PRM–1, chapter 23, section 2302.4.

[677] See PRM–1, chapter 23, sections 2302.4, 2306.1, 2307, and 2313.1.

accumulated cost statistic can result in improper Medicare payments. We would like to clarify that we are not requiring all purchased service costs be removed from the accumulated cost statistic. Instead, we are referring to purchased services provided under contract that should be removed from the accumulated cost statistic. The purpose of an accumulated cost statistic is to measure internal resource utilization. Contract services are performed by the external/supplying parties and the purchased contract amount does not represent the hospital's own resource consumption and therefore, the purchase contract amount should not influence how the hospital's overhead costs are distributed. We would also like to clarify that we are not requiring all supplies be removed from the accumulated cost statistic. For supplies, we are referring to supplies such as organs, donor tissue, blood products, and CAR–T, that are acquired on behalf of a patient and passed directly to the payer without markup, including costs that are highly variable and not representative of routine costs reimbursed separately outside of standard DRG/APC rates, and costs the hospital acquires or procures on a case-by-case basis that are not stocked routinely. Inclusions of these types of costs significantly skew CCRs and cost allocation. Our position is based, in part, on the structural logic of the cost allocation methodology. We have reviewed publicly available cost report data from multiple provider types and identified systematic misallocation resulting in inflated Medicare payments. We understand that providers may, in certain circumstances, incur a limited amount of A&G costs related to purchased services (for example, contract management, legal review, procurement, accounts payable processing, etc.), however, the provider's A&G costs related to contract management, legal review, procurement, and accounts payable processing are already captured in the provider's A&G cost center and are allocated to departments that have a genuine causal relationship to those functions. Our proposal does not prevent providers from recovering these administrative costs. Instead, it prevents these administrative costs from being disproportionately amplified by the high dollar value of purchased services or products. The issue is one of proportionality and accuracy. Additionally, the cost report framework under PRM § 4013 is designed to allocate A&G costs based on a proxy that reflects the relative consumption of administrative resources. Including purchased services and supplies in the accumulated cost statistic inflates the statistical base of cost centers that do not meaningfully consume A&G resources on an ongoing operational basis, thereby diluting the allocation to cost centers that do. Our position is that the accumulated cost statistic should reflect costs that are genuinely driven by, and benefit from, the A&G cost center, a standard that purchased services and supplies do not meet to the same degree as direct labor and operational costs. We believe that purchased services and supplies, by definition, represent costs that have already been externally administered by a third-party vendor or contractor. The purchase price paid to an OPO for purchased organs or to a CAR–T manufacturer, for example, already includes that external entity's full overhead and profit. When a hospital includes the full purchase price in its accumulated cost statistic, it is effectively using the external entity's overhead as a lever to pull the hospital's own A&G overhead into the purchased-service cost center which we believe results in a clear and demonstrable double-counting of overhead and is inconsistent with Medicare's reasonable cost principles. We also note that § 413.24(d)(6), *Provider-based entities and departments: Preventing duplication of cost,* already provides specific requirements for purchased services including the requirement that they be removed and separately identified for appropriate cost allocation that does not result in overallocation and improper Medicare payment to the provider. We believe the proposed § 413.24(d)(8) is a logical and consistent extension of the framework that exists in § 413.24(d)(6), not a departure from it.

Regarding commenters' assertions that the proposal could create a new Worksheet B–1 information collection requiring PRA review, we disagree. Negative adjustments and componentizing have been longstanding methods available to providers in the Medicare cost reporting instructions and the Worksheet B–1 so that providers can remove inappropriate costs from the accumulated cost statistic. This is also evidenced by § 413.24(d)(6) regarding the removal of purchased services. The heading for § 413.24(d)(6) is ''Provider-based entities and departments: Preventing duplication of cost,'' however, this section pertains to the removal of duplicated costs for both provider-based entities and departments. We agree with the commenter who suggested that CMS re-word the paragraph heading in § 413.24(d)(6) to assist providers in understanding that § 413.24(d)(6) applies to more than just provider-based entities. The intention of § 413.24(d)(6) is to prompt providers to remove directly assigned costs that already include a share of overhead costs that result in improperly allocated costs to the cost center because including such costs duplicates the directly assigned costs.

Regarding commenters' concerns that exclusion of purchased services and supplies could increase aggregate Medicare expenditures, we believe this assertion is speculative and unsupported by any data. Regarding commenters' concerns that the reimbursement impact is immaterial as a result of the proposals, we believe that appropriate reporting and allocation of costs is important to maintain the integrity of the Medicare trust fund regardless of whether the provider believes their reimbursement impact is immaterial. Additionally, there should be no increased administrative burden to comply with Medicare's longstanding cost reporting instructions in PRM–2 chapter 40 and manual provisions in PRM–1 chapter 23, to appropriately allocate costs. We believe that if there is a material reimbursement impact to providers, then this could signify commensurate material improper payments from Medicare that CMS has an obligation to address in furtherance of program integrity. We reiterate our intended goal of accuracy and integrity of the cost allocation process at the individual provider level.

Comment: Some commenters requested clearer definitions of ''purchased services,'' ''purchased clinical services,'' and ''purchased products,'' and asked whether the proposed policy applies broadly beyond organs and CAR–T cell therapies to other high-cost drugs, biologics, devices, and cell and gene therapies. Some commenters requested a materiality threshold and documentation safe harbor. Some commenters asserted that CAR–T cell therapies and autologous biologics differ from purchased organs because hospitals incur uncompensated collection, storage, processing, shipping, chain-of-custody, and care-coordination costs that are not included in the manufacturer's product price. Commenters also note that autologous cell therapy patient journeys vary and that collection may occur at different sites and settings.

Response: We thank commenters for their request for additional clarity. As stated previously, we are not requiring

all purchased service costs be removed from the accumulated cost statistic. To clarify, we are referring to purchased services provided under contract that should be removed from the accumulated cost statistic. The purpose of the accumulated cost statistic is to measure internal resource utilization. Contract services are performed by the external/supplying entities and the purchased contract amount does not represent the hospital's own resource consumption and therefore, the purchase contract amount should not influence how the hospital's overhead costs are distributed. Certain clinical services or supplies purchased from outside vendors at a high cost that are charged directly to a cost center, thereby increasing that cost center's total costs, and thus its share of overhead, should be excluded or reduced when used as an allocation base. Examples of these services are purchased radiology services, purchased laboratory services, purchased therapy services, purchased dialysis services, anesthesia services, and medical education costs. We would also like to clarify that we are not requiring all supplies be removed from the accumulated cost statistic. However, we are referring to the removal of supplies such as organs, donor tissue, blood products, and CAR–T cell therapies, that are acquired on behalf of a patient and passed directly to the payer without markup, including costs that are highly variable and not representative of routine costs reimbursed separately outside of standard DRG/APC rates, as well as costs the hospital acquires or procures on a case-by-case basis that are not stocked routinely. Inclusions of these types of costs significantly and improperly skew CCRs and cost allocation. As we discussed in the proposed rule, the statistical basis must reflect the cause-and-effect relationship between the cost and the activities or services receiving the allocation, that is, the benefit received by each cost center.[678] Additionally, we remind providers that the statistical measure must demonstrate how costs incurred relate to the consumption of resources.[679]

Regarding commenters who requested a safe harbor threshold, we cannot provide a safe harbor threshold of a specific dollar amount, however, if the cost in question is immaterial (*i.e.,* it would not significantly affect the Medicare cost report outcome), providers may not be required to remove the cost to make the adjustment. However, if the cost in question is material (*i.e.,* it would significantly affect the Medicare cost report outcome), providers are required to remove the cost to make the adjustment.

Comment: Several transplant hospitals commented that the allocation proposal would underpay them by excluding organ acquisition costs from the accumulated cost statistic. They asserted that the proposal failed to recognize their program management, compliance, coordination, and infrastructure costs. Commenters warn that reduced reimbursement could threaten access to transplant services for vulnerable patients. Other commenters asserted that safety-net hospitals may face downstream effects because cost report data affects DSH surveys and community benefit reporting. Commenters urged that any cost-allocation revision be uniform, transparent, and consistent with longstanding Medicare principles.

Response: CMS's proposal does not eliminate reimbursement for transplant program management, coordination, compliance, or infrastructure costs. We also do not believe that our proposal will be a detriment to a hospital's DSH or community benefit reporting. Accurate cost reporting does not reduce legitimate reimbursement. Our proposals are designed to correct inflated cost statistics that produce inaccurate CCRs. Providers are still reimbursed for all reasonable and necessary costs, however, they are not permitted to inflate cost statistics in ways that distort payment calculations for all providers. If cost report data has been improperly inflated, then downstream calculations based on that improperly inflated data have also been inaccurate. Correcting the underlying data improves the integrity of all downstream calculations, including DSH surveys. Administrative and general costs are directly reportable in the appropriate cost centers on the Medicare Cost Report and are reimbursable as reasonable costs under existing Medicare principles. The proposal addresses only the mechanism by which A&G overhead is allocated, not whether transplant-related administrative costs are allowable, or how DSH or a hospital's community benefit is reported. Transplant hospitals can and should report their own A&G costs and allocate accordingly using a statistically valid basis that reflects a causal and beneficial relationship. We maintain that allowable transplant A&G costs remain fully reportable and reimbursable.

Comment: A couple of commenters argued that CMS's proposal is a departure from what the commenters characterize as CMS's longstanding practice of accepting that although ''certain A&G costs might be allocated disproportionately to Medicare or non-Medicare patients,'' any imprecision in cost allocation would be cured by the ''averaging principle'' as articulated by CMS in previous court cases. (*Humana of Aurora* v. *Heckler,* 753 F.2d 1580 (10th Cir. 1985) and *St. James Hosp.* v. *Heckler,* 760 F.2d 1460, 1472 (7th Cir. 1985)). These commenters suggested that the 'averaging principle' means that for every dollar over-allocated to Medicare, another dollar is under-allocated away from Medicare and assert that CMS has never mandated that providers adjust their accumulated cost statistics for costs that receive no benefit or resource from A&G.

Response: CMS disagrees with the commenters' characterization that CMS's prior use of an 'averaging principle' represents a departure from our current proposal and prevents CMS from clarifying and codifying longstanding cost allocation principles. The averaging principle was described by the Agency in Intermediary Letter No. 234 (June 2, 1967) in the context of reasonable cost allocation and is appropriate when all cost centers in the pool have some relationship to the overhead being allocated. The averaging principle, as recognized in *Humana of Aurora* and *St. James Hosp.,* permits reasonable approximations in cost allocation where the statistical basis bears a reasonable relationship to the costs being allocated. The 'averaging principle' does not override the requirement that a causal or beneficial relationship must exist to the overhead being distributed. Our proposal is consistent with the 'averaging principle' and with CMS's longstanding statutory authority to establish cost-finding methodologies that produce accurate and reasonable Medicare payments. Our proposal preserves the accumulated cost statistic and the averaging methodology because it requires that the statistical base accurately reflect the cost centers that actually benefit from A&G overhead. CMS's use of 'averaging principle' in prior, unrelated cases does not prevent CMS from refining policy where necessary and required under the Medicare statute (42 U.S.C. 1395x(v)(1)(A)) to ensure that Medicare payments reflect the actual costs of services rendered to Medicare beneficiaries. Where a specific allocation methodology results in distortions, even if the distortion may ''average out'' across the system, CMS is not required to perpetuate that

[678] PRM–1, chapter 23, section 2307.

[679] PRM–1, chapter 23, section 2306.

distortion. Although *Humana of Aurora* and *St. James Hospital* describe the ''averaging principle,'' neither case holds that CMS is prohibited from clarifying and codifying a cost allocation methodology.

Comment: Some commenters requested that the proposal be applied prospectively, not retroactively or used to reopen settled cost reports.

Response: We appreciate commenters sharing their concerns, however, as previously discussed, these proposals represent the codification of longstanding cost allocation principles as already set forth in the PRM and cost reporting instructions. Our codifications of these provisions do not predetermine whether providers, for past cost reporting periods, have or have not acted consistently with existing regulations and the Provider Reimbursement Manual and cost reporting instructions. Whether an adjustment should be made for any prior cost reporting periods will be determined by reference to the regulations and PRM provisions applicable to those earlier periods, including the regulations governing reopenings.

After careful consideration of the public comments received on our proposed clarification and codification of cost allocation principles, we are finalizing § 413.24(d)(8) as proposed. This section of this final rule clarifies and codifies longstanding Medicare cost-finding principles, as set forth in the Provider Reimbursement Manual and existing Medicare Cost Report instructions, into regulatory text to ensure that providers' costs of providing services to Medicare beneficiaries are correctly calculated and that Medicare payments are accurate and appropriate. Based on a comment received and to provide greater clarity and guidance to providers, we are also revising the paragraph heading of § 413.24(d)(6) ''Provider-based entities and departments: Preventing duplication of cost'' to instead specify ''Preventing duplication of costs: departments and provider-based entities'' to better reflect the instruction in that paragraph on preventing duplication of costs, for both departments and provider-based entities. We believe this change will assist providers in their understanding of the applicability of § 413.24(d)(6). We note that we are revising only the paragraph heading of § 413.24(d)(6) and are not making any other changes to the text of paragraph § 413.24(d)(6).

4. Discretionary CMS Administrator Review of CMS Reviewing Official Determination With Respect to Appeals Under 42 CFR 413.420(g) for Independent Organ Procurement Organizations and Histocompatibility Laboratories

a. Background

Upon receipt of a provider's cost report, the Medicare contractor reviews or audits the cost report, makes any necessary adjustments to the provider's Medicare reimbursement for the cost reporting period, and finally determines the total amount of reimbursement due the provider. This year-end reconciliation of Medicare payment for the provider's cost reporting period constitutes a contractor determination, as defined in 42 CFR 405.1801(a). Under 42 CFR 405.1801(a)(1) and (2), and 405.1803, the contractor must give the provider written notice of the contractor determination for the cost period in a notice of the total amount of program reimbursement (NPR). The NPR is an appealable determination, subject to the jurisdictional and other requirements of the statute and regulations.

Currently, the regulations at § 413.420(g) provide that an Independent Organ Procurement Organization (IOPO) or a Histocompatibility Laboratory (HCL) that is dissatisfied with a Medicare contractor's cost report determination may request a hearing before a contractor hearing officer if the amount in controversy is $1,000 or more, in accordance with the procedures and requirements set forth in 42 CFR 405.1811 through 405.1833. Once the contractor hearing officer decision is issued, an IOPO, HCL is entitled to obtain review by a CMS reviewing official (*see* 42 CFR 405.1801(b), 405.1833, 405.1834(b) and (c)). Section 405.1834 currently specifies that the designated CMS reviewing official reviews a final decision by the contractor hearing officer and then issues a decision on behalf of the Administrator (§ 405.1834(a)). The CMS reviewing official, on behalf of the Administrator, currently has discretion to take own-motion review (that is, review that is not at a request of a party) of a contractor hearing officer decision (§ 405.1834(a), (b)(1)(ii), and (d)). The CMS reviewing official decision may be reopened and revised by a CMS reviewing official in accordance with §§ 405.1885 through 405.1889 (see § 405.1834(f)(1)).

On May 2, 2023, the CMS Administrator issued Standing Order 2023–1, to allow IOPOs and HCLs to request that the Administrator review a CMS reviewing official decision and to confirm that the Administrator can review a CMS reviewing official decision on his or her own motion. In the 2027 IPPS proposed rule, we proposed these regulatory changes to confirm, clarify, and explicitly provide that the Administrator has discretionary authority to review CMS reviewing official decisions and contractor hearing officer decisions for reimbursement appeals for IOPOs and HCLs. We did so for several reasons. Among other things, we proposed these changes to: provide consistency with other Agency administrative review processes; provide clearer notice of this aspect of the administrative review procedures applicable to IOPOs and HCLs; ensure that interested parties can comment; improve the quality of Agency decision making; and so that the Agency may ultimately have clear and publicly available regulations regarding administrative review for IOPOs and HCLs on the books. These proposals are in many respects similar to the CMS proposal to codify the process by which the Administrator may exercise discretionary review when CMS de-certifies an OPO or otherwise takes action that would be subject to appeal under 42 CFR 486.314.[680] We also proposed conforming changes to certain appeals regulations, as well as proposed certain changes to certain other appeals regulations for clarity.

b. Proposals

(1) Proposal for Appeals Available to IOPOs and HCLs

In the 2027 IPPS proposed rule, we proposed to make changes to various regulatory provisions to confirm, clarify, and explicitly provide that a party to a CMS reviewing official decision may request that the Administrator review a CMS reviewing official decision, and that the Administrator may review a CMS reviewing official decision on his or her own motion, consistent with the intent of the Standing Order 2023–01. We believed the proposed changes in the proposed rule would afford an opportunity to IOPOs and HCLs that desire to have CMS reviewing official decisions further reviewed by the Administrator. These proposed changes will also ensure that the regulations explicitly provide that a principal officer of the United States (the CMS Administrator) will have discretionary authority to issue a final decision binding the U.S. Department of Health and Human Services. These proposed changes will also bring the § 413.420(g)

[680] 91 FR 4190, January 30, 2026.

appeals process into greater conformity with other CMS appeals processes that provide for discretionary Administrator review of administrative decisions rendered by Agency tribunals, Agency officials or other individuals. Our proposed changes are within the Secretary's general rulemaking authority under sections 1102 and 1871 of the Act.

Specifically, in the proposed rule we proposed to revise § 405.1801(a) so that it states that Administrator review means review provided for in section 1878(f) of the Act (42 U.S.C. 1395oo(f)) and 42 CFR 405.1875 and 405.1834. This proposed change reflects the changes that would be made to § 405.1834 if the proposed rule is finalized.

In the proposed rule, we also proposed to revise § 405.1803(d)(1)(ii) so that it reflects the fact that a final Agency decision by the Administrator is not just ''as described in § 405.1875(e)(4),'' but also is as described in § 405.1834. This proposed change reflects the changes that would be made to § 405.1834 if this final rule is finalized.

With respect to the required amount in controversy for the right to a contractor hearing for IOPOs and HCLs, in the proposed rule, we proposed to revise § 405.1811(a)(2) and § 405.1811(c)(3) to specify that IOPOs and HCLs are subject to an amount in controversy as set forth in 42 CFR 413.420(g), which is $1,000 or more.

In the proposed rule, we also proposed to revise 42 CFR 405.1813(e)(1) and add new paragraphs (e)(1)(i), (e)(1)(ii), and (e)(1)(iii) to reflect that a contractor hearing decision denying an extension request under this section and dismissing the appeal is final and binding on the provider, unless the dismissal decision is reviewed by a CMS reviewing official in accordance with § 405.1834(b)(2)(i), or the Administrator, or is reopened and revised by the contractor hearing officer(s) in accordance with §§ 405.1885 through 405.1889. We also proposed to revise § 405.1813(e)(2) to specify that the contractor hearing officer(s) promptly sends the decision to the appropriate component of CMS (currently the Center for Medicare).

In the proposed rule, we also proposed to add new § 405.1813(e)(3), (e)(3)(i), and (e)(3)(ii) to reflect that a contractor hearing officer's decision granting an extension request is not subject to immediate review by a CMS reviewing official (as described in § 405.1834(b)(3)), and any decision granting an extension request may be examined during the course of a CMS reviewing official's review of a final jurisdictional dismissal decision or a final hearing decision by the contractor hearing officer(s) (as described in § 405.1834(b)(2)(i) and (ii)) or during the Administrator's review of a CMS reviewing official decision.

In the proposed rule, we also proposed to revise § 405.1814(a)(5) to reflect that final jurisdictional findings and jurisdictional dismissal decisions by the contractor hearing officer(s) are subject to the CMS reviewing official procedure in accordance with §§ 405.1814(d) and 405.1834(b)(2)(i) and (ii), as well as the possibility of review by the Administrator. We also proposed to revise § 405.1814(c)(3) by adding paragraphs (c)(3)(i), (c)(3)(ii) and (c)(3)(iii) to reflect that a jurisdictional dismissal decision by the contractor hearing officer under § 405.1814(c)(2) is final and binding on the parties, unless the decision is reviewed by a CMS reviewing official in accordance with § 405.1834, or is subsequently reviewed by the Administrator in accordance with § 405.1834, or is reopened and revised by the contractor hearing officer in accordance with §§ 405.1885 through 405.1889.

In the proposed rule we also proposed to revise the title of § 405.1814(d) so that it would refer to jurisdictional decisions and include the possibility of Administrator review. We also proposed to revise § 405.1814(d) so that it states that any finding by the contractor hearing officer as to whether he or she has jurisdiction to grant a hearing on a specific matter at issue in an appeal is not subject to further administrative review, except as provided in § 405.1814(d). The revised subsection will also explain that a contractor hearing officer's jurisdictional findings as to specific matters at issue in an appeal may be reviewed solely during the course of the CMS reviewing official review of one of the contractor hearing officer decisions specified in § 405.1834(b)(2), or during the course of the Administrator's review of a CMS reviewing official decision.

Regarding the reviewability of a contractor hearing officer's discovery or disclosure rulings, in the proposed rule we also proposed to revise § 405.1821(d)(2) to specify that to the extent a ruling authorizes discovery or disclosure of a matter for which an objection based on privilege or other protection from disclosure such as case preparation, confidentiality, or undue burden, was made before the contractor hearing officer(s), that portion of the discovery or disclosure ruling may immediately be reviewed by a CMS reviewing official or the Administrator in accordance with § 405.1834. We also proposed to revise § 405.1821(d)(2)(i) to remove the phrase ''the Administrator through'' so it reflects that upon notice to the contractor hearing officer that the provider intends to seek immediate review of a ruling, or that the contractor or other affected nonparty intends to suggest that the CMS reviewing official or the Administrator, take own motion review of the ruling, the contractor hearing officer stays all proceedings affected by the ruling. To conform with this proposal, we also proposed to revise the introductory text of § 405.1821(d)(2)(iii) to delete the words ''Administrator through the,'' so that the first line states ''If the CMS reviewing official or the Administrator''

Regarding the effect of a contractor hearing officer's decision, in the proposed rule we also proposed to amend § 405.1833 by adding paragraphs (a), (a)(1), and (a)(2) so that they reflect that a contractor hearing officer's decision issued in accordance with § 405.1831 is final and binding on all parties to the contractor hearing and on the contractor, unless the contractor hearing officer's decision is reviewed by a CMS reviewing official, or is reviewed by a CMS reviewing official and then is in turn reviewed by the Administrator in accordance with § 405.1834, or is reopened and revised by the contractor hearing officer(s) in accordance with §§ 405.1885 through 405.1889. We also proposed to amend § 405.1833 by adding paragraph (b) to specify that final contractor hearing decisions are subject to the provisions of § 405.1803(d).

In the proposed rule, we also proposed to revise the section heading of § 405.1834 so that it references the possibilities of and procedures for review by the CMS reviewing official and Administrator review of a reviewing official decision. We also proposed to revise § 405.1834(a) so that it no longer states that a review of a contractor hearing officer is conducted ''on behalf of the Administrator'' by a designated CMS reviewing official, and no longer indicates that the CMS reviewing official issues a decision ''on behalf of the Administrator.'' We proposed that § 405.1834(a) states that CMS or a provider that is a party to, and dissatisfied with, a final decision by the contractor hearing officer(s), upon submitting a request that meets the requirements of § 405.1834(c), is entitled to further administrative review of the decision by a CMS reviewing official, and that the decision may be reviewed at the discretion of first a designated CMS reviewing official and discretionary review by the

Administrator. Additionally, we proposed to revise § 405.1834(a) so that it states that the review of a contractor hearing officer's decision is conducted first by a designated CMS reviewing official who considers whether the decision of the contractor hearing officer(s) is consistent with the controlling legal authority (as described in § 405.1834(e)(1)) and the evidence in the record, and that the CMS reviewing official's decision may then be subject to further discretionary review by the Administrator.

We also proposed to revise the general rules in § 405.1834(b)(1)(ii) to specify that the CMS reviewing official exercises this review authority in response to a request from a provider party to the appeal that meets the requirements of § 405.1834(c), or in response to a request from CMS, or may exercise his or her discretion to take own motion review. Additionally, we proposed to revise the general rules in § 405.1834(b)(4) to require the contractor hearing officer(s) to promptly send copies of any decision specified in § 405.1834(b)(2) or (3), or in § 405.1821(d)(2) and the underlying contractor hearing officer's administrative record to the appropriate component of CMS (currently the Center for Medicare). We also proposed to revise § 405.1834(b)(4)(ii) to specify that the appropriate CMS component examines each contractor hearing officer decision that is reviewable under § 405.1834(b)(2) or (3), or § 405.1821(d)(2), along with any review requests and any other submissions made by a party or CMS in accordance with § 405.1834, in order to assist the CMS reviewing official's and the Administrator's exercise of this review authority.

To correct a typographical error in § 405.1834(c) regarding the granting of a provider's request for review by a CMS reviewing official, we proposed to revise § 405.1834(c)(1)(i) to change the word from ''or'' to ''and'' at the end of § 405.1834(c)(1)(i). This proposed revision would reflect that a provider's request for review by a CMS reviewing official is granted if § 405.1834(c)(1)(i) and § 405.1834(c)(1)(ii) are met by requiring that the date of receipt by the appropriate CMS component of the review request is no later than 60 days after the date of receipt by the provider of the contractor hearing officer decision; and the request seeks review of a decision listed in § 405.1834(b)(2), and the provider complies with the requirements of § 405.1834(c)(2).

Regarding a request for immediate review of a contractor hearing officer ruling authorizing discovery or disclosure, we proposed to revise § 405.1834(c)(3) and (c)(3)(i) to specify that a request from a party or CMS for immediate review of a contractor hearing officer ruling authorizing discovery or disclosure in accordance with § 405.1834(b)(3) must be made as soon as practicable after the ruling is made, but in no event later than 5 business days after the date the requesting party or CMS received notice of the ruling.

To reorganize and house the provisions together in § 405.1834(d) for the own motion review of a CMS reviewing official, in the proposed rule, we proposed to revise the paragraph title of § 405.1834(d) so that it states ''Own motion review of a CMS reviewing official.'' We also proposed to revise § 405.1834(d)(1) to reflect that the CMS reviewing official has discretion to take own motion review of a contractor hearing decision (regardless of whether the decision was favorable or unfavorable to the provider) or other reviewable action. We also proposed to add new § 405.1834(d)(4) to specify that if the CMS reviewing official does not notify the parties and the contractor that he or she intends to review the contractor hearing officer decision or other reviewable action within 90 days after the date of the contractor hearing officer's decision, then the Administrator may issue a notice instructing the CMS reviewing official to review the contractor hearing officer decision and issue a decision if the CMS reviewing official fails to do so. Additionally, we proposed to add new § 405.1834(d)(4)(i) to specify that the Administrator shall promptly provide copies of the notice instructing the CMS reviewing official to review the contractor hearing officer decision to the parties, the contractor, and to the appropriate component of CMS. We proposed to add new § 405.1834(d)(4)(ii) to specify that after the CMS reviewing official's receipt of the Administrator's notice (instructing the CMS reviewing official to review the contractor hearing officer decision and issue a decision), the CMS reviewing official must allow the parties a reasonable period to comment on the issues identified by the Administrator for review. Finally, we proposed to add new § 405.1834(d)(5) to specify that if no party requests review of the contractor hearing decision and the CMS reviewing official does not take review on its own motion or at the direction of the Administrator within the time periods specified in § 405.1834(d), the contractor hearing officer decision is final in accordance with § 405.1833.

Regarding the reviewing official's review procedures for contractor hearing officer's decisions, in the proposed rule, we proposed to revise the introductory text in § 405.1834(e)(1) to state ''In reviewing a contractor hearing officer decision specified in paragraph (b)(2) or (b)(3) of this section, the CMS reviewing official must—.'' We also proposed to revise § 405.1834(e)(3) to specify that upon completion of the review of a contractor hearing decision in § 405.1834(b)(2) or § 405.1834(b)(3), the CMS reviewing official issues a written decision that includes findings of fact and conclusions of law on jurisdictional issues and on the merits of each issue under review over which the CMS reviewing official has jurisdiction and affirms, reverses, or modifies the contractor hearing decision or remands the contractor hearing decision to the contractor hearing officer for further proceedings. A copy of the decision must be sent promptly to each party, to the contractor, and to the appropriate component of CMS (currently the Center for Medicare).

To reflect the possibility of Administrator review of a reviewing official's decision, in the proposed rule, we proposed to revise § 405.1834(f) from ''Effect of a decision: Remand'' to ''Effect of a reviewing official's decision, remand, and the possibility of Administrator review.'' We also proposed to revise § 405.1834(f)(1) to specify that a decision of affirmation, reversal, or modification by the CMS reviewing official is final and binding on each party and the contractor except as set forth in § 405.1834(g). The CMS reviewing official's decision may be reopened and revised by the CMS reviewing official in accordance with §§ 405.1885 through 405.1889. Decisions of a CMS reviewing official are subject to the provisions of § 405.1803(d). A decision by a CMS reviewing official remanding an appeal to the contractor hearing officer(s) for further proceedings under § 405.1834(f)(2) is not a final decision.

We also proposed to revise the introductory text of § 405.1834(f)(2) to state ''A remand to the contractor hearing officer(s) by the CMS reviewing official must do all of the following:''

In the proposed rule, we also proposed to add § 405.1834(f)(3) to specify that the CMS reviewing official must promptly send copies of the CMS reviewing official decision, along with any other submissions made by a party or CMS in accordance with the provisions of this section, to the appropriate component of CMS (currently the Center for Medicare) and

to the Administrator c/o the CMS Office of the Attorney Advisor.

In the proposed rule, we also proposed to add new paragraph (g) entitled ''Administrator review of a CMS reviewing official's decision'' to § 405.1834 to further specify and elaborate on the procedures for the Administrator's review of a CMS reviewing official's decision. Specifically, we proposed to add § 405.1834(g)(1) to specify that CMS or any party to a CMS reviewing official decision may request Administrator review of a CMS reviewing official decision in accordance with § 405.1834. No other provider, individual, or entity may request review. The Administrator may grant or deny review of a CMS reviewing official decision at his or her discretion. The Administrator may also review any decision of the CMS reviewing official on his or her own motion (regardless of whether the decision was favorable or unfavorable to the provider). In the proposed rule, we also proposed to add § 405.1834(g)(2) to specify that a party, or CMS may request that the Administrator review a CMS reviewing official decision within 15 days of their receipt of a final CMS reviewing official decision. *See* 42 CFR 405.1801 (defining the term ''date of receipt.''). We also proposed to add § 405.1834(g)(2)(i) to specify that all requests for Administrator review and any other submissions to the Administrator under § 405.1834(g)(2) must be sent to the Office of the Attorney Advisor. The request for review must be in writing, attach a copy of the CMS reviewing official decision for which it seeks review, and include a brief description of all of the following: those aspects of the CMS reviewing official decision with which the requestor is dissatisfied; the reasons for the requestor's dissatisfaction; any argument or record evidence the requestor believes supports its position; and any additional, extra-record evidence relied on by the provider, along with a demonstration that such evidence was improperly excluded in proceedings (as described in § 405.1823).

In the proposed rule, we also proposed to add § 405.1834(g)(2)(ii) to specify that the Administrator must issue a Notice advising the parties of his or her intent to review or to decline to review within 30 days of the Administrator's receipt of a request for review from CMS or any party to the CMS reviewing official's decision. That Notice must be promptly sent to the parties, the contractor, and the appropriate component of CMS. A Notice advising the parties of the Administrator's intent to review must contain a brief statement of the issues under ''review and solicit comments from the parties, the contractor, and CMS. A Notice that the Administrator is declining to review need not set forth the basis for the Administrator's decision to decline review the CMS reviewing official's decision. We also proposed to add § 405.1834(g)(2)(iii) to specify that if the Administrator declines to review the reviewing official decision or the Administrator does not issue a determination regarding review of the reviewing official decision within 30 days of the Administrator's receipt of a request to review, the decision of the CMS reviewing official is final. We also proposed that § 405.1834(g)(2)(iii) specify that upon issuance of a Notice, within 30 days of a request for Administrator review of a CMS reviewing official decision, that the Administrator is declining to review the reviewing official's decision, the CMS reviewing official's decision becomes final in accordance with § 405.1834(f)(1).

In the proposed rule, we also proposed to add § 405.1834(g)(3) to specify that within 45 days of Administrator's receipt of a CMS reviewing official's decision, the Administrator may issue a Notice of Review on his or her own motion. The Notice of Review must be sent to the parties, the contractor, and the appropriate component of CMS. The Notice of Review must contain a brief statement of the issues under review and solicit comments from the parties, contractor, and CMS. If the Administrator does not issue a determination regarding his or her own motion review within 45 days of the Administrator's receipt of a CMS reviewing official's decision, the decision of the CMS reviewing official is final.

In the proposed rule, we also proposed to add § 405.1834(g)(4), (g)(4)(i) and (g)(4)(ii) to set forth that if the Administrator elects to review the CMS reviewing official's decision, the Administrator will set deadlines for the parties and affected nonparties to submit comments; and the Administrator's decision affirming, reversing, or modifying the CMS reviewing official's decision is final and binding on each party and the contractor. A decision remanding an appeal to the CMS reviewing official, or contractor hearing officer(s) is not a final decision. Decisions of the Administrator are subject to the provisions of § 405.1803(d).

In the proposed rule, we also proposed to add § 405.1834(g)(5) to specify that if the Administrator does not issue a written decision that affirms, reverses, modifies or remands the CMS reviewing official's decision within 60 days of the date of issuance of the Notice of Review, the CMS reviewing official's decision becomes final in accordance with § 405.1834(f)(1). We also proposed to add § 405.1834(g)(6) to specify that the Administrator may remand the CMS reviewing official's decision to the CMS reviewing official, to the contractor hearing officer, or to the contractor. A remand by the Administrator must do all of the following: vacate the CMS reviewing official's and/or the contractor hearing officer decisions as to the specific issues remanded; be governed by the same criteria that apply to remands by the Administrator to the Board under § 405.1875(f)(2), and require the entity to which the matter is remanded to take specific actions on remand; and result in the CMS reviewing official, contractor hearing officer(s), or contractor taking the actions required on remand and issuing a new decision.

Comment: Some commenters asserted the Administrator's interpretation of *United States* v. *Arthrex, Inc.,* 594 U.S. 1 (2021) (*Arthrex*) is self-serving and inaccurate, claiming there is no constitutional requirement for extra Administrator review. They opined that the existing Agency review process complies with the Appointments Clause, as confirmed by the Supreme Court in *Arthrex.*

Response: We disagree with the commenters who asserted our proposal was prompted by or reflects a particular interpretation of *Arthrex,* let alone one that is self-serving and inaccurate. We did not mention *Arthrex* in the proposed rule. However, we believe our proposal is consistent with, and is supported by, the framework and spirit of the Supreme Court's decision in *Arthrex,* as well as the Appointments Clause. We also agree with the commenters who asserted that the existing Agency review process complies with the Appointments Clause and the *Arthrex* decision.

The central holding of *Arthrex* was that Congress may not impose statutory restrictions that prevent a principal officer from reviewing adjudicatory decisions that are issued by inferior officers who are also insulated from at-will removal by the Department Head. *See Arthrex,* 594 U.S. at 25–27. No such statutory restriction on review is at issue here. *Arthrex* did not involve a purported or actual regulatory restriction on review by principal officers. Specifically, in *Arthrex,* a statute expressly precluded review by a

superior, principal officer and reserved the sole authority to grant rehearings to the Patent Trial and Appeal Board, which was composed of APJs, who were insulated from at-will removal under 5 U.S.C. 7513. *See Arthrex,* 594 U.S. at 25 (citing 35 U.S.C. 6). The Supreme Court held that in that context, the Constitution ''forbids the enforcement of *statutory* restrictions on the Director that insulate the decisions of APJs from his direction and supervision.'' *Id.* at 27 (emphasis added). The Court contrasted this situation with ''a handful of contemporary officers who are appointed by heads of departments but who nevertheless purportedly exercise final decisionmaking authority,'' noting that the latter scenarios ''involve inferior officers whose decisions a superior executive officer can review or implement a system for reviewing.'' *Id.* at 20. The current appeals process for IOPO and HCL appeals is a creature of regulatory rather than statutory creation. The decisions of the CMS Reviewing Official for example under that procedure derive their authority and significance and binding nature from the regulations, and this from the discretion and delegated authority of the Secretary and Administrator. In this context, agency regulations are not the same as statutes, and delegated administrative authority is not the same as statutory restriction. *See Rodriguez* v. *SSA,* 118 F.4th 1302, 1312–13 (11th Cir. 2024) (''In this context, agency regulations are not the same as statutes, and delegated administrative authority is not the same as statutory restriction''). Moreover, the current regulations do not expressly address the CMS Administrator's discretionary power to review decisions in the IOPO and HCL context.

Our proposal in the proposed rule would make explicit and more clear that the CMS Administrator, a Senate-confirmed principal officer of the United States, will have discretionary authority to issue a final decision binding the U.S. Department of Health and Human Services for reimbursement appeals for IOPOs and HCLs and sets forth a detailed predictable procedure for that potential review. As such, it is certainly in keeping with the spirit of *Arthrex,* even if it is not required by the decision. We also note that *Arthrex* did not require that a principal officer review every decision, only that a statute not prevent a principal officer from doing so. We believe that changing the regulations so that they provide for discretionary Administrator review here will promote the values of democratic accountability (ensuring that all final decisions in IOPO and HCL appeals reflect the views and priorities of the executive branch), as well as the values of predictability and consistency (by eliminating the danger that different reviewing officials and hearing officers may render decisions that are inconsistent). Our proposed codification is being made under the Secretary's statutory rulemaking authority under sections 1102, 1871, and 1878(f) of the Act. By engaging in this notice-and-comment rulemaking, and codifying the Standing Order 2023–1, into the Code of Federal Regulations, the affected parties, including IOPOs and HCLs, will have clear, enforceable, more publicly accessible, published rights. Codifying the right of a party to request Administrator review of a CMS reviewing official decision ensures that affected entities have a formal, legally recognized avenue for appeals. Lastly, our proposal brings the § 413.420(g) appeals process into conformity with other well-established CMS appeals processes that already provide for discretionary Administrator review, by ensuring that the CMS Administrator has clear and codified review authority.

Comment: A few commenters disagreed with our proposal and asserted that the proposal creates a structure in which the Administrator reviews a determination already made in the Administrator's name because the CMS reviewing official issues decisions on behalf of the Administrator. These commenters expressed the concern that an IOPO that prevails before the hearing officer remains exposed to reversal through two successive CMS-controlled stages, with no corresponding right of de novo review in a neutral forum. These commenters asserted that the proposal unfairly vests the Administrator with authority to function as both a party to the dispute and the final adjudicator. These commenters requested that CMS adopt a single layer of Administrator-level oversight above the Hearing Officer, and eliminate the reviewing official level of review, to be consistent with how Administrator review functions in other Medicare cost report appeal contexts. A few commenters requested that CMS clarify the purpose of retaining the reviewing official level of review if the proposal is finalized.

Response: We disagree with the commenters. The CMS reviewing official operates within the CMS organizational structure, however, the reviewing official's decisions are not legally equivalent to decisions of the Administrator. The CMS reviewing official is not the Administrator but is an inferior officer or agency employee exercising delegated authority. Our proposal to codify the discretionary Administrator review of IOPO and HCL reimbursement decisions does not create a circular structure but creates a hierarchical appellate structure that is standard in administrative adjudication. We do not believe that the discretionary Administrator review possibility, with successive agency-level review stages, renders the process unconstitutional or procedurally unfair. Far from being unprecedented, analogous schemes involving multiple levels of administrative review are common across federal agencies and have been consistently upheld.

The commenters' concern that the proposal vests the Administrator with authority to function as both a party to the dispute and the final adjudicator conflates two distinct roles. In administrative adjudication, agencies routinely serve in a dual capacity as both the entity whose determinations are being challenged and the body responsible for adjudicating those challenges. Our proposal is that the Administrator's review would be discretionary; the Administrator would not be a mandatory participant in every reimbursement appeal. We believe that the commenters' proposed remedy to eliminate the CMS reviewing official level would reduce procedural protections for IOPO and HCL reimbursement appeals. A commenter noted in another context, CMS reviewing officials have a significant amount of valuable experience adjudicating IOPO and HCL reimbursement appeals. Moreover, the CMS reviewing official level of review serves important functions, such as providing an intermediate review on contractor hearing officer decisions before they become final and allowing for the correction of errors at the agency level without burdening the Administrator with numerous appeals. The CMS reviewing official level of review would also help to ensure that the factual record is fully developed before the Administrator's discretionary review is sought. Eliminating the CMS reviewing official level of review would overburden the Administrator with routine appeals and could result in fewer cases receiving meaningful review, neither of which serves the interests of IOPOs, HCLs, or the public.

Comment: Some commenters requested that if CMS finalizes this proposal, then the Administrator's own-motion review authority be constrained by objective triggering standards, defined timelines, and substantive criteria because they expressed that unconstrained own-motion review

allows CMS to reopen any settled determination indefinitely. Other commenters requested that CMS establish clear recusal standards and ensure the Administrator's review is limited to questions of law, not de novo factual determinations. Other commenters requested that if the proposal is finalized that CMS establish the scope and standard of Administrator review including whether review will be de novo, deferential to contractor determinations, or limited to identified issues on appeal, and ensure the parties have sufficient opportunity to prepare and submit supporting documentation relevant to an appeal. Other commenters requested that the Administrator's Notice declining a review include a brief explanation to better inform OPOs' understanding of the reasonable cost principles.

Response: While CMS appreciates the commenters' concerns and suggestions, we believe that imposing rigid triggering standards and substantive criteria on the Administrator's own-motion review authority would undermine the very purpose of discretionary review and would be inconsistent with the approach Congress and the Agency have historically taken when establishing and refining and describing administrative appeal regimes in Medicare, Medicaid, Affordable Care Act, and other related contexts. An overly prescriptive criteria would limit the Administrator's ability to address novel or unforeseen legal questions, prevent the correction of errors that fall outside of narrowly defined triggering criteria, and reduce the general flexibility necessary for sound administrative review. While we understand that clarity regarding the Administrator's standard of review is important, we note that the standard of review applicable to the Administrator's discretionary review will be informed by the nature of the issues presented and the existing reimbursement appeals regulatory framework with respect to contractor hearing officer decisions and CMS reviewing official decisions. Consistent with other CMS administrative appeals contexts, the CMS Administrator's discretionary review is generally not intended to function as a full de novo proceeding but rather as a discretionary review of legal and policy questions. With regard to the commenters who requested defined timelines and those who expressed concerns about CMS being able to reopen any settled determination indefinitely, we note that our proposed changes set forth clear and explicit timing deadlines for each stage of review, including timing deadlines applicable to various facets of the CMS Administrator's review and that the more general regulations governing reopening set forth explicit timeframes as well. See example, 42 CFR 405.1885.

With respect to the commenters' request for a recusal process, the Administrator and CMS staff are already subject to existing federal ethics rules and conflict of interest standards that govern agency adjudications. CMS takes seriously the importance of impartiality and procedural integrity in the appeals process. We believe that these existing frameworks provide meaningful protections without the need for additional rule-specific recusal standards. With respect to commenters' requests that CMS limit the Administrator's review to questions of law, we believe that the Administrator's review is generally focused on significant legal and policy questions rather than routine factual disputes, consistent with how Administrator review functions in other Medicare appeals contexts. However, categorically prohibiting the Administrator from reviewing issues of fact could prevent the Administrator from correcting clear factual errors that have significant programmatic consequences. Regarding commenters' concerns that parties have sufficient opportunity to prepare and submit supporting documentation relevant to an appeal, CMS is committed to ensuring that parties have a meaningful opportunity to submit relevant documentation and arguments in connection with any Administrator review proceeding. With respect to commenters' requests that an Administrator's declination of review include an explanation for the declination of review to better inform OPOs' understanding of reasonable cost principles, CMS notes that the discretionary nature of Administrator review means that a declination does not constitute a substantive ruling on the merits, therefore, there is no need to provide a substantive statement on why the Administrator has declined to review a matter. Additionally, we note that the Administrator does not for example include an explanation for the declination of review when a party to a Provider Reimbursement Review Board (PRRB) matter requests the CMS Administrator review a PRRB decision; instead, the Administrator issues a simple notice of their declination to review.

Comment: A couple of commenters opined that the proposed Administrator review timelines and discretionary review criteria could reduce predictability and fairness for OPOs challenging contractor and CMS reviewing official decisions, and could increase legal costs for all parties, as well as increase the risk of reasonable cost disputes for OPOs. These commenters also asserted that the proposal would impose significant harm by adding further delay to an already protracted appeals process and asserted that OPOs are currently experiencing extensive delays, with appeals stretching back more than a decade. These commenters asserted that CMS has not explained why the benefits of this additional review layer justify these costs.

Response: CMS acknowledges the commenters' concern about protracted appeals and remains committed to addressing systemic delays through operational improvements and resource allocation, however, we believe the commenters' concerns are distinct from the legal and procedural questions addressed by this rulemaking. We believe that any delays currently experienced by IOPOs or HCLs are attributable to pre-existing systemic factors that predate this rulemaking and are not a result of our proposed discretionary Administrator review structure.

We believe that delaying or abandoning this rulemaking would not resolve the pre-existing backlog of which the commenters complain and would leave the constitutional and legal deficiencies in the current framework of the Agency's Standing Order unaddressed.

Additionally, we do not believe that the proposal would create new delays because this rulemaking codifies existing framework already established in the Agency's Standing Order 2023–1. IOPOs and HCLs are already operating under a similar review structure under the existing Standing Order. Additionally, codifying the Administrator's discretionary review authority does not mandate that every case undergo Administrator review. Because the Administrator's review is discretionary, many cases will not be subject to this additional layer of review by the Administrator. We believe the commenters' concerns about increased legal costs and delays are speculative, not supported by evidence, and assume that the Administrator's discretionary review will be invoked routinely and broadly. Because the Administrator's review authority is discretionary, additional legal costs may only be incurred in a subset of cases where review is actually sought or initiated. We believe that the Administrator's discretionary review ensures that Medicare's reasonable cost principles are applied consistently across all IOPO

and HCL appeals, reducing the risk of conflicting decisions and promoting long-term predictability. We also believe that the long-term cost savings associated with the Agency's greater policy clarity and consistent application of Medicare's reasonable cost principles are likely to outweigh any increase in legal costs associated with the Administrator's discretionary review.

Comment: A few commenters raised a concern about retroactivity and fundamental fairness because the proposal was proposed to be effective for pending appeals. These commenters said that OPOs that initiated appeals years ago did so under established procedural rules and changing the rules mid-stream disrupts settled expectations and moves the goalposts for providers that have already invested significant time and resources.

Response: We disagree with the commenters who asserted that applying this proposal to pending appeals is unfair or implicates retroactivity. Additionally, we do not believe that CMS has changed the rules mid-stream, disrupted settled expectations, or has moved any ''goalposts.'' The Administrator's review authority was already established under the Standing Order 2023–1, which predates this rulemaking. Accordingly, this rule clarifies and codifies and elaborates upon the Agency's existing practice and framework and does not introduce a new procedural framework. This proposal also clarifies and codifies procedural rules and the process by which decisions are reviewed at the Agency level. This proposal adds a potential avenue for Administrator review; it does not remove any existing right or remedy available to IOPOs or HCLs.

Additionally, this proposal is procedural in nature because it does not create new substantive requirements or obligations for IOPOs or HCLs, alter the legal standards governing reasonable cost determinations, or change the underlying merits of any pending appeal. Moreover, applying procedural changes to pending appeals is a well-established and legally permissible practice in administrative law. Under the Supreme Court's framework in *Landgraf* v. *USI Film Products,* 511 U.S. 244 (1994), a rule has impermissible retroactive effect only if it impairs rights a party possessed when it acted, increases a party's liability for past conduct, or imposes new duties with respect to transactions already completed. *See id.* at 280. But ''[c]hanges in procedural rules may often be applied in suits arising before their enactment without raising concerns about retroactivity.'' *Id.* at 275; *see also see., Combs* v. *Commissioner of Social Security,* 459 F.3d 640, 647 (6th Cir. 2006) (recognizing that ''the Supreme Court in *Landgraf* and *Altmann,* and our court in *Patel,* have recognized that changes to procedural rules generally do not have retroactive effect because procedural rules regulate secondary as opposed to primary conduct'' and that a rule is procedural and not impermissibly retroactive if ''[t]he substantive requirements . . . have not changed, only the way in which the agency goes about determining whether they are present,'' and even if the procedural ''change may be outcome-determinative for some claimants''); *id.* at 649 (also recognizing that ''[an agency] may freely change rules that purely govern the conduct of adjudication, without fear of retroactive effect, if those changes apply only to pending cases.'')

This proposal does none of these things because it does not impair any right IOPOs or HCLs possessed when they filed their appeals; it does not increase liability for any past conduct; and it does not impose new substantive duties on IOPOs or HCLs.

We understand the commenters' argument that IOPOs and HCLs have invested significant time and resources in the existing appeals process, however, this does not constitute a legal bar to this rulemaking. We note that the investment of resources in an ongoing administrative proceeding does not create a vested right in a particular procedural outcome. Accepting the commenters' argument would effectively immunize any pending proceeding from procedural improvements, no matter how legally necessary or administratively beneficial. We believe that we must balance the interests of individual IOPOs and HCLs currently in the appeals process against the broader public interest in a constitutionally sound and legally consistent appeals framework.

Comment: A commenter asserted that CMS has not provided an adequate justification to support how the CMS Administrator has the relevant subject expertise and experience with federal regulations concerning appeals, provider audit and reimbursement matters, Medicare cost report issues, and related subjects at or above the level of the contractor hearing officer or the CMS reviewing official. This commenter opined that past CMS Administrator decisions have reflected misreadings of governing statutes, regulations, and Agency guidance in ways that favored CMS at the expense of a fair and neutral application of the law. This commenter further asserted that the current contractor hearing officer has had a successful career at CMS with positions in several offices including the Director of the Division of Hearings and Decisions in CMS's Office of Hearings, where he has successfully mediated over 2,000 Provider Reimbursement Review Board Medicare provider and Medicare Advantage appeals. The commenter also asserted that the current CMS reviewing official serves as the Chief Hearing Officer and leads the CMS Office of Hearings and has over 25 years' experience in administrative litigation and healthcare law, specializing in adjudicating complex appeals, including reimbursement determinations, compliance matters, and contract disputes.

Response: CMS appreciates the commenter's kind and complimentary words about the experience, expertise, and competence of at least one of the hearing officers and one of the CMS reviewing officials. But the commenter's argument obfuscates the nature and purpose of CMS's proposal to explicitly provide for discretionary CMS Administrator's review in this context. CMS has not done so based on a judgment that any particular Administrator has greater or less technical expertise in Medicare cost accounting or provider reimbursement than any particular contractor hearing officer or CMS reviewing official. Instead, CMS has done so because the Administrator has a different perspective and role as a principal officer of the United States responsible for the overall legal and policy direction of CMS and an official with broad oversight responsibility for the Medicare and Medicaid programs, including the legal and policy frameworks that govern appeals. While we appreciate the commenter highlighting the qualifications of the current contractor hearing officer and the CMS reviewing official, we note that the Administrator brings a different but equally relevant set of qualifications to the review function. The Administrator is responsible for overseeing a $1+ trillion federal program encompassing Medicare, Medicaid, and the Children's Health Insurance Program and the Administrator has broad familiarity with the legal, regulatory, and policy frameworks governing all aspects of CMS operations, including provider reimbursement. Additionally, the Administrator is supported by a team of expert legal and policy staff who can provide technical analysis on complex cost report and reimbursement questions such that the Administrator

need not be a specialist in Medicare cost accounting to exercise meaningful oversight of decisions that raise legal or policy questions. The commenter's opinion that past Administrator decisions have misread governing statutes and regulations in ways that favored CMS do not invalidate the authority of the Administrator to conduct a discretionary review. CMS is committed to ensuring that the Administrator's discretionary review and decisions are conducted in a fair, neutral, and legally sound manner, consistent with applicable statutes, regulations, and Agency manuals and guidance.

Comment: A commenter suggested that CMS implement a nondiscretionary right of administrative appeal for disputes above a material financial threshold.

Response: We disagree with the commenter's suggestion which seems to imply that IOPOs and HCLs with large financial stakes in a dispute should have an automatic, non-waivable right to Administrator-level review, rather than being subject to the Administrator's discretionary review. This approach would transform the Administrator's review from a discretionary oversight mechanism into a mandatory appellate tier, adding significant time, delays and resource burdens to the review process. The Administrator's discretionary review is precisely what makes it constitutionally and administratively appropriate since it preserves the Administrator's ability to focus on cases of genuine legal and policy significance rather than serving as a routine appellate body for only cases above a material, or large, dollar threshold. Although we are aware of the current $1,000 dispute threshold for IOPOs and HCLs to seek the administrative review process, any specific ''material'' dollar threshold could be arbitrary, as we believe there is no principled legal basis for concluding that disputes above a certain dollar amount should automatically warrant Administrator review while those below do not. Additionally, a ''material'' financial threshold could create incentives for parties to artificially inflate the claimed value of disputes to trigger a nondiscretionary review right. Under the proposal, IOPOs and HCLs with significant financial amounts in dispute can request the Administrator to review a decision of the contractor hearing officer or the CMS reviewing official.

After careful consideration of the public comments received on our proposed rule, we are finalizing our proposals pertaining to the Administrator's discretionary review of IOPO and HCL appeals at 42 CFR 405.1801, 405.1803, 405.1811(a)(2), 405.1813(e)(1) and (e)(3), 405.1814, 405.1821, 405.1833 and 405.1834(b), (c), (d), (e) and (f). We acknowledge commenters' request for clarity regarding the proposed timelines for the Administrator to review a CMS reviewing official's decision. Based on public comments received requesting clarity of the proposals, we are finalizing, with modifications, our proposals at §§ 405.1811(c)(3), 405.1813(e)(2), 405.1834(a), 405.1834(g)(2)(ii), (g)(2)(iii) and (g)(3) to provide greater clarity to IOPOs and HCLs, and operational feasibility with respect to the timelines of the Administrator's discretionary review.

Specifically, we are modifying § 405.1811(c)(3) to make a correction because we erroneously included text that was part of § 405.1811(c)(2) in our proposed § 405.1811(c)(3) that read ''unless the provider qualifies for a good cause extension under § 405.1813, the date of receipt by the contractor of the provider's hearing request must be no later than 180 days after the date of receipt by the provider of the final contractor or Secretary determination. An IOPO or histocompatibility laboratory is subject to the amount in controversy requirement specified in § 413.420(g).'' However, we did not propose or intend to propose changes to § 405.1811(c)(2). Instead, we intended to propose that § 405.1811(c)(3) specify (similar to our proposal to § 405.1811(a)(2)) that ''With the exception of an IOPO or histocompatibility laboratory, the amount in controversy (as determined in accordance with § 405.1839) must be at least $1,000 but less than $10,000. An IOPO or histocompatibility laboratory is subject to the amount in controversy requirement specified in § 413.420(g).'' With this modification, we are preserving the original regulation text at § 405.1811(c)(3) to specify the amount in controversy requirement for providers that are not IOPOs or histocompatibility laboratories, as well as the amount in controversy requirement for IOPOs and histocompatibility laboratories.

With regard to § 405.1813(e)(2), in this final rule, we are finalizing § 405.1813(e)(2) with a modification for clarity, transparency and efficiency, to specify that the contractor hearing officer(s) must promptly send the contractor hearing decision to the appropriate component of CMS (currently the Center for Medicare), and the CMS reviewing official (currently the CMS Office of Hearings). Although we did not propose that § 405.1813(e)(2) specify that the contractor hearing officer(s) must promptly send the contractor hearing decision to the CMS reviewing official, we believe that in the interest of clarity, transparency and efficiency, and so that all adjudicators are aware, the contractor hearing officer(s) must promptly send the contractor hearing decision to the appropriate component of CMS (currently the Center for Medicare), as well as to and the CMS reviewing official (currently the CMS Office of Hearings).

We are also making a modification to the regulation text we proposed for § 405.1834(a) to correct a typographical discrepancy in the first sentence to include the word 'then' before ''discretionary review'' that we intended to include in the proposed regulation text. With this modification, we are finalizing that § 405.1834(a) will specify that CMS or a provider that is a party to, and dissatisfied with, a final decision by the contractor hearing officer(s), upon submitting a request that meets the requirements of paragraph (c) of this section, is entitled to further administrative review of the decision by a CMS reviewing official, and the decision may be reviewed at the discretion of first a designated CMS reviewing official and then discretionary review by the Administrator. No other individual, entity, or party has the right to the review. The review is conducted first by a designated CMS reviewing official who considers whether the decision of the contractor hearing officer(s) is consistent with the controlling legal authority (as described in § 405.1834(e)(1) of this subpart) and the evidence in the record, and the CMS reviewing official's decision may then be subject to further discretionary review by the Administrator.

In the proposed rule, we proposed that under § 405.1834(g)(2)(ii) the Administrator must issue a Notice advising the parties of his or her intent to review or to decline to review within 30 days of the Administrator's receipt of a request for review from CMS or any party to the CMS reviewing official's decision. In this final rule, we are finalizing § 405.1834(g)(2)(ii) with a modification, for clarity and efficiency, to specify a 45-day timeframe for the Administrator to issue a Notice advising the parties of his or her intent to review or to decline to review a CMS reviewing official's decision, instead of the 30-day timeframe we proposed.

In the proposed rule, we also proposed that under § 405.1834(g)(2)(iii), if the Administrator

issues a Notice to decline review of the reviewing official's decision or if the Administrator does not issue a determination regarding review of the reviewing official's decision within 30 days of the Administrator's receipt of a request to review, the decision of the CMS reviewing official is final. In this final rule, we are finalizing § 405.1834(g)(2)(iii) with a modification, for clarity and efficiency, to specify that if the Administrator declines to review the reviewing official's decision or the Administrator does not issue a determination regarding review of the reviewing official's decision within 45 days of the Administrator's receipt of a request to review, instead of the 30-day timeframe we proposed, the decision of the CMS reviewing official is final in accordance with § 405.1834(f)(1).

Finally, in the proposed rule, we proposed that under § 405.1834(g)(3), within 45 days of the Administrator's receipt of a CMS reviewing official's decision, the Administrator may issue a Notice of Review on his or her own motion, and that if the Administrator does not issue a determination regarding his or her own motion review within 45 days of the Administrator's receipt of a CMS reviewing official's decision, the decision of the CMS reviewing official is final. In this final rule, we are finalizing § 405.1834(g)(3) with a modification, for clarity and efficiency, to specify that in the absence of a request for the Administrator to review under 405.1834(g)(2), the Administrator may issue a Notice of Review on his or her own motion within 45 days of the Administrator's receipt of a CMS reviewing official's decision.

The Notice of Review must be sent to the parties, the contractor, and the appropriate component of CMS. The Notice of Review must contain a brief statement of the issues under review and solicit comments from the parties, contractor, and CMS. If the Administrator does not issue a determination regarding his or her own motion review within 45 days of the Administrator's receipt of a CMS reviewing official's decision, the decision of the CMS reviewing official is final.

(2) Technical and Conforming Changes at § 413.420(g)

Consistent with the proposals in section X.D.4.b.(1). of the preamble of the proposed rule, we proposed conforming revisions to the current regulations at § 413.420(g) for appeals pertaining to IOPOs and HCLs. Specifically, we proposed to revise § 413.420(g) to reflect that if the amount in controversy is $1,000 or more, any IOPO or histocompatibility laboratory that disagrees with a contractor's cost determination is entitled to a contractor hearing, review of the contractor hearing by a CMS reviewing official, and discretionary Administrator Review of a CMS reviewing official decision, in accordance with the procedures set forth in § 405.1801(b)(2) and §§ 405.1811 through 405.1834.

We did not receive comments on these technical and conforming changes at § 413.420(g).

(3) Effective Dates

In the proposed rule, we proposed that these provisions will apply to administrative appeals that were timely filed with a contractor hearing officer on or after the effective date of this rule, under §§ 405.1811 and 405.1834, and/or that are pending before a contractor hearing officer or a CMS reviewing official on the effective date of the rule. With respect to requests for good cause extensions under § 405.1813 (for contractor hearing officer hearings), IOPOs and HCLs that have not filed a timely request for a contractor hearing and that wish to seek an extension of the time limit for filing an appeal based on good cause, have an additional 60 days after the effective date of this rule to seek an extension without meeting the ''reasonable time'' requirements of § 405.1813 (but must meet all other requirements of that section).

Comment: A few commenters suggested a delayed implementation date for this proposal to commence no sooner than fiscal year 2029.

Response: We appreciate the commenters' request for a delayed implementation date to FY 2029 to allow IOPOs and HCLs sufficient time to prepare, however, we do not believe that a delayed implementation date until FY 2029 is warranted because as noted the proposed changes are primarily procedural and clarifying in nature and do not impose new substantive obligations upon IOPOs or HCLs. Additionally, the changes codify existing practice under the Agency's Standing Order 2023–01, such that the affected parties are already operating under a similar framework of what we proposed. We believe that a delayed implementation would prolong the period of regulatory uncertainty that this rulemaking is designed to resolve and ensuring that the regulations explicitly provide that a principal officer has reviewable authority over inferior officer decisions is a reason to have a prompt implementation period, as we proposed in the proposed rule.

After consideration of the public comments we received, we are finalizing this proposal to apply to administrative appeals that were timely filed with a contractor hearing officer on or after the effective date of this rule, under §§ 405.1811 and 405.1834, and/or that are pending before a contractor hearing officer or a CMS reviewing official on the effective date of this rule. With respect to requests for good cause extensions under § 405.1813 (for contractor hearing officer hearings), IOPOs and HCLs that have not filed a timely request for a contractor hearing and that wish to seek an extension of the time limit for filing an appeal based on good cause, have an additional 60 days after the effective date of this rule to seek an extension without meeting the ''reasonable time'' requirements of § 405.1813 (but must meet all other requirements of that section).

5. Technical Corrections and Clarifications of §§ 412.116(c) and 413.404(b)(3)(ii)(A) and (C)

In the proposed rule, we proposed to make several technical corrections or clarifications to the regulatory text, which are unrelated to any of the other proposals in section X.D. of the preamble of the proposed rule.

We proposed to make a technical correction to § 412.116(c), to change ''kidney'' to ''organ.'' This correction should have been made in our FY 2022 IPPS/LTCH PPS final rule, with comment period (86 FR 73468 through 73505), but was overlooked.

We proposed to make a technical correction to § 413.404(b)(3)(ii)(A) to clarify in the definition of a deceased donor SAC that the deceased donor SAC is an average organ acquisition cost that a TH incurs to procure an organ from a deceased donor. The existing regulation omits the phrase ''organ acquisition.'' This proposed language also mirrors the language that defines the living donor SAC.

We proposed to make a technical correction to § 413.404(b)(3)(ii)(C), which inadvertently omitted registry fees from the costs that transplant hospital may use to develop the deceased donor SAC. In the FY 2022 IPPS/LTCH PPS final rule (86 FR73477 and 73478), we included registry fees in the allowable organ acquisition costs used in developing transplant hospital living donor SACs, but inadvertently omitted registry fees from the allowable acquisition costs used to develop the transplant hospital deceased donor SACs. Registry fees would be incurred by transplant hospitals for every potential transplant recipient on their waitlist. Therefore, we proposed to add § 413.404(b)(3)(ii)(C)(*8*), to the allowable costs used to develop the deceased

donor TH SAC, to include registry fees as specified at § 413.402(b)(6).

We did not receive any comments on these proposed technical corrections and are finalizing them as proposed.

E. Adoption of Health Information Technology Standards and Incorporation by Reference

1. Background

As part of the ''Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability Standards and Prior Authorization for Drugs for Medicare Advantage Organizations, Medicaid Managed Care Plans, State Medicaid Agencies, Children's Health Insurance Program (CHIP) both Agencies and CHIP Managed Care Entities, and Issuers of Qualified Health Plans on the Federally-Facilitated Exchanges'' proposed rule (2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule) (91 FR 19890), ONC proposed to adopt a set of health information technology (IT) standards in section II.J. (91 FR 20001). In order to accelerate the adoption of standards that are important for HHS efforts to advance electronic prior authorization and other use cases, ONC is finalizing these proposals as part of the FY 2027 IPPS/LTCH PPS final rule. For the purposes of this final rule, ONC has only reviewed and responded to comments on the standards proposed for adoption in section II.J. of the 2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule. Specifically, ONC summarizes and responds to comments related to proposals to:

- Adopt updated versions of certain health IT standards and specifications on behalf of HHS related to the interoperability APIs; and
- Adopt updated versions of standards currently adopted in 45 CFR 170.215 and expire the existing versions on January 1, 2028. ONC also offered an alternative proposal to remove and replace standards in 45 CFR 170.215(j), (k), (m), and (n) with the updated version of the standard upon the effective date of a final rule, without providing for a transition period during which multiple versions of each standard will be available for HHS use.

Comments received related to other proposals from the 2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule are still being reviewed and considered and may be the subject of subsequent final rules related to such proposals in the future.

2. Overview

In the 2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule, ONC proposed to adopt standards and implementation specifications in 45 CFR 170.215 for interoperability APIs and related activities on behalf of HHS under the authority in section 3004 of the PHSA (42 U.S.C. 300jj–14) (91 FR 20001). ONC proposed these standards for adoption by HHS as part of a nationwide health IT infrastructure that supports reducing burden and health care costs and improving patient care. ONC proposed to adopt these standards on behalf of HHS in one location within the CFR for use within other HHS programs. These proposals reflected a unified approach across HHS to adopt standards for interoperability API activities. This approach is intended to increase alignment across HHS and reduce regulatory burden for interested parties subject to program requirements that incorporate these standards.

ONC proposed to adopt updated versions of certain standards that the Secretary adopted in the ''Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates; Changes to the FY 2025 IPPS Rates Due to Court Decision; Requirements for Quality Programs; and Other Policy Changes; Health Data, Technology, and Interoperability: Electronic Prescribing, Real-Time Prescription Benefit and Electronic Prior Authorization'' (FY 2026 IPPS/LTCH PPS) final rule for HHS use (90 FR 36536). As part of the FY 2026 IPPS/LTCH PPS final rule, ONC finalized the ''Health Data, Technology, and Interoperability: Electronic Prescribing, Real-Time Prescription Benefit and Electronic Prior Authorization'' (HTI–4) final rule (90 FR 37162 and 37181). ONC proposed to adopt these updated versions (listed in section X.E.7. of the preamble of this final rule) in 45 CFR 170.215. ONC stated that if the adoption of these proposed standards is finalized, they would be indicated for use by CMS subject to any other requirements that are finalized from the 2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule. In addition to these updated versions, ONC proposed to adopt an additional standard in 45 CFR 170.215(k)(3) that supports the exchange of attachment information for prior authorization transactions. Summaries of the standards that ONC proposed to adopt and subsequently incorporate by reference can be found below in section X.E.9. of the preamble of this final rule.

3. Adoption of Standards and Implementation Specifications

The Health Information Technology for Economic and Clinical Health Act (hereinafter referred to as the ''HITECH Act''), Title XIII of Division A and Title IV of Division B of the ''American Recovery and Reinvestment Act of 2009'' (Pub. L. 111–5), was enacted on February 17, 2009). The HITECH Act amended the Public Health Service Act (PHSA) and created ''Title XXX—Health Information Technology and Quality'' to improve health care quality, safety, and efficiency through the promotion of health IT and exchange of EHI. Subsequently, Title IV of the 21st Century Cures Act (Pub. L. 114–255) (Cures Act) amended portions of the HITECH Act by modifying or adding certain provisions to the PHSA relating to health IT.

Section 3001 of the PHSA directs the National Coordinator to perform duties in a manner consistent with the development of a nationwide health IT infrastructure that allows for electronic use and exchange of information.

Section 3004 of the PHSA identifies a process for the adoption of health IT standards, implementation specifications, and certification criteria, and authorizes the Secretary to adopt such standards, implementation specifications, and certification criteria. As specified in section 3004(a)(1) of the PHSA, the Secretary is required, in consultation with representatives of other relevant federal agencies, to jointly review standards, implementation specifications, and certification criteria endorsed by the National Coordinator under section 3001(c) of the PHSA and subsequently determine whether to propose the adoption of any grouping of such standards, implementation specifications, or certification criteria. The Secretary is required to publish all determinations in the **Federal Register**.

Section 3004(b)(3) of the PHSA, which is entitled ''Subsequent Standards Activity,'' provides that the Secretary shall adopt additional standards, implementation specifications, and certification criteria as necessary and consistent with the schedule published by the Health IT Advisory Committee (HITAC). As noted in the ''2015 Edition Health Information Technology (Health IT) Certification Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Certification Program Modifications'' final rule (80 FR 62602), which appeared in the **Federal Register**

on October 16, 2015, ONC considers this provision in the broader context of the HITECH Act and the Cures Act to grant the Secretary the authority and discretion to adopt standards, implementation specifications, and certification criteria that have been recommended by the HITAC and endorsed by the National Coordinator, as well as other appropriate and necessary health IT standards, implementation specifications, and certification criteria (80 FR 62606).

Under the authority outlined in section 3004(b)(3) of the PHSA, the Secretary may adopt standards, implementation specifications, and certification criteria as necessary even if those standards have not been recommended and endorsed through the process established for the HITAC under section 3002(b)(2) and (3) of the PHSA. Moreover, while HHS has traditionally adopted standards and implementation specifications at the same time as adopting certification criteria that reference those standards, the Secretary's authority under section 3004(b)(3) of the PHSA is not limited to adopting standards or implementation specifications at the same time certification criteria are adopted.

Finally, the Cures Act amended the PHSA by adding section 3004(c), which specifies that in adopting and implementing standards under section 3004, the Secretary shall give deference to standards published by standards development organizations (SDOs) and voluntary consensus-based standards bodies.

4. Alignment With Federal Advisory Committee Activities

The HITECH Act established two federal advisory committees, the Health IT Policy Committee (hereinafter referred to as the ''HITPC'') and the Health IT Standards Committee (hereinafter referred to as the ''HITSC''). Each committee was responsible for advising the National Coordinator on different aspects of health IT policy, standards, implementation specifications, and certification criteria.

Section 4003(e) of the Cures Act amended section 3002 of the PHSA and replaced the HITPC and HITSC with one committee, the HITAC. After that change, section 3002(a) of the PHSA now establishes that the HITAC advises and recommends to the National Coordinator standards, implementation specifications, and certification criteria relating to the implementation of a health IT infrastructure, nationally and locally, that advances the electronic access, exchange, and use of health information. The Cures Act specifically directs the HITAC to advise on two areas: (1) a policy framework to advance an interoperable health IT infrastructure (section 3002(b)(1) of the PHSA); and (2) priority target areas for standards, implementation specifications, and certification criteria (section 3002(b)(2) of the PHSA).

For the policy framework, as described in section 3002(b)(1)(A) of the PHSA, the Cures Act tasks the HITAC with providing recommendations to the National Coordinator on a policy framework for adoption by the Secretary consistent with the Federal Health IT Strategic Plan under section 3001(c)(3) of the PHSA. In February of 2018, the HITAC made recommendations to the National Coordinator for the initial policy framework and subsequently published a schedule in the **Federal Register** and an annual report on the work of the HITAC and ONC to implement and evolve that framework.[681] [682] For the priority target areas for standards, implementation specifications, and certification criteria, section 3002(b)(2)(A) of the PHSA identifies that, in general, the HITAC will recommend to the National Coordinator, for purposes of adoption under section 3004 of the PHSA, standards, implementation specifications, and certification criteria and an order of priority for the development, harmonization, and recognition of such standards, specifications, and certification criteria. In October 2019, the HITAC finalized recommendations on priority target areas for standards, implementation specifications, and certification criteria.[683]

5. Interoperability Standards Advisory (ISA)

ONC's ISA supports the identification, assessment, and public awareness of interoperability standards and implementation specifications that can be used by the health care industry to address specific interoperability needs.[684] [685] The ISA is updated on an annual basis based on recommendations received from public comments and subject matter expert feedback. This public comment process reflects ongoing dialogue, debate, and consensus among industry and interested parties when more than one standard or implementation specification could be used to address a specific interoperability need.

The ISA includes the implementation specifications finalized in section X.E.7. of the preamble of this final rule. ONC encourages interested parties to review the ISA to better understand key applications for the implementation specifications it is finalizing in this rule.

6. National Technology Transfer and Advancement Act

The National Technology Transfer and Advancement Act of 1995 (hereinafter referred to as the ''NTTAA'') (Pub. L. 104–113, enacted March 07, 1996; 15 U.S.C. 3701 *et seq.*) and OMB Circular A–119 require the use of, wherever practical, technical standards that are developed or adopted by voluntary consensus standards bodies to carry out policy objectives or activities, with certain exceptions. The NTTAA and OMB Circular A–119 provide exceptions to electing only standards developed or adopted by voluntary consensus bodies, namely when doing so will be inconsistent with applicable law or otherwise impractical. Agencies have the discretion to decline the use of existing voluntary consensus standards if it is determined that such standards are inconsistent with applicable law or otherwise impractical, and instead use a government-unique standard or other standard. In addition to the consideration of voluntary consensus standards, the OMB Circular A–119 recognizes the contributions of standardization activities that take place outside of the voluntary consensus standards process. Therefore, in instances where use of voluntary consensus standards will be inconsistent with applicable law or otherwise impracticable, other standards should be considered that meet the agency's regulatory, procurement or program needs; deliver favorable technical and economic outcomes; and are widely utilized in the marketplace.

7. Proposal To Adopt Standards for Use by HHS

Consistent with sections 3004(b)(3), 3001(b), and 3001(c) of the PHSA, ONC proposed to adopt standards in 45 CFR 170.215(j), (k), (m), and (n) on behalf of the Secretary to support the continued development of a nationwide health IT infrastructure and support ongoing federal alignment of standards for interoperability and health information exchange (91 FR 20002). ONC previously adopted versions of all but one of these standards in the HTI–4 final rule (90 FR 37130). In addition, ONC proposed to adopt an additional standard, the HL7 FHIR® Da Vinci Clinical Data Exchange (CDex) IG [Implementation Guide] in 45 CFR 170.215(k)(3). Specifically, ONC proposed to adopt the following versions of the standards and incorporate them by reference in 45 CFR 170.299(g).

- HL7 FHIR® Da Vinci—Coverage Requirements Discovery IG [Implementation Guide], Version 2.2.1–STU 2.2 (proposed in 45 CFR 170.215(j)(1)(ii)).[686]

ONC previously adopted version 2.0.1–STU 2 of the Coverage Requirements Discovery (CRD) IG in 45 CFR 170.215(j)(1)(i) in the HTI–4 final rule (90 FR 37167). This updated version of the CRD IG includes improvements such as setting clearer expectations for handling failure states, correcting contexts for order-dispatch, clarifying expectations for mandatory hook support, and setting expectations for endpoints and endpoint discovery. This version also includes substantive clarifications, corrections, and enhancements for the Coverage Information FHIR extension, which is a core profile in the IG by which payer systems communicate coverage and prior authorization requirements to provider systems.

- HL7 FHIR® Da Vinci—Documentation Templates and Rules Implementation Guide, Version 2.2.0–STU 2.2 (proposed in 45 CFR 170.215(j)(2)(ii)).[687]

ONC previously adopted version 2.0.1–STU 2 of the Documentation Templates and Rules (DTR) IG in 45 CFR 170.215(j)(2)(i) in the HTI–4 final rule (90 FR 37167). This updated version of the DTR IG includes improvements such as aligning endpoint discovery language with CRD IG requirements, addressing CMS enforcement discretion regarding the use of X12N 278 transaction standard, requiring DTR clients to appropriately manage access to data that is sensitive per policy and regulatory requirements when responding to queries from a DTR application, and streamlining questionnaire retrieval if the CRD workflow is used in combination with the DTR workflow.

- HL7 FHIR® Da Vinci Prior Authorization Support (PAS) FHIR Implementation Guide, Version 2.2.1–STU 2.2 (proposed in 45 CFR 170.215(j)(3)(ii)).[688]

ONC previously adopted version 2.0.1–STU 2 of the PAS IG in 45 CFR 170.215(j)(3)(i) in the HTI–4 final rule (90 FR 37167). This updated version of the PAS IG includes improvements such as clarifying how to cancel an entire prior authorization claim instead of cancelling individual items, addressing concerns about required fields that are specified in the license restricted X12N TRN03 guide (which is referenced within the PAS IG), and updating the guide to be compliant with US Core IG STU 3.1.1, 6.0.1, and 7.0.0. This version also provides new guidance regarding how a provider system can query the payer system for a specific prior authorization submission, and new requirements to support the ''rest-hook'' subscription channel by which payer systems can provide updates on prior authorization submissions.

- HL7 FHIR® CARIN Consumer Directed Payer Data Exchange (CARIN IG for Blue Button®) [Implementation Guide], Version 2.2.0–STU 2.2 (proposed in 45 CFR 170.215(k)(1)(ii)).[689]

ONC previously adopted version 2.0.0–STU 2 of the CARIN IG for Blue Button® in 45 CFR 170.215(k)(1)(i) in the HTI–4 final rule (90 FR 37182). This updated version of the CARIN IG for Blue Button includes improvements such as additional updates to ensure alignment with US Core IG STU 7.0.0 and 6.1.0, updates to certain profiles, updates and refinements to codes identified in the IG, and updates to search parameters.

- HL7 FHIR® Da Vinci Payer Data Exchange (PDex) US Drug Formulary Implementation Guide, Version 2.1.0–STU 2.1 (proposed in 45 CFR 170.215(m)(2)).[690]

ONC previously adopted version 2.0.1–STU 2 of the PDex US Drug Formulary IG in 45 CFR 170.215(m)(1) in the HTI–4 final rule (90 FR 37182). This updated version of the PDex US Drug Formulary IG includes improvements such as updated references to multiple versions of US Core IG, guidance for more granular pharmacy benefits, updates to search parameters, and guidance regarding authentication.

- HL7 FHIR® Da Vinci PDex [Payer Data Exchange] Plan Net Implementation Guide, Version 1.2.0–STU 1.2 (proposed in 45 CFR 170.215(n)(2)).[691]

ONC previously adopted version 1.1.0–STU 1.1 US of the PDex Plan Net IG in 45 CFR 170.215(n)(1) in the HTI–4 final rule (90 FR 37182). This updated version of the PDex Plan Net IG includes improvements such as updates to dependencies to reference multiple versions of the US Core IG, updates to dependencies to reference the HL7 FHIR® Da Vinci—Health Record Exchange (HRex) IG, Version 1.1.0–STU 1.1, updates to search parameters, and the addition of a bulk export operation.

- HL7 FHIR® Da Vinci Clinical Data Exchange (CDex) IG [Implementation Guide], Version 2.1.0–STU 2.1 (proposed in 45 CFR 170.215(k)(3)).[692]

The CDex IG supports requesting and sending attachments for claims and prior authorization transactions, requesting documentation to support payer operations such as claims audits, and exchanging clinical data between referring providers. In section II.H.7. of the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule (91 FR 19995), HHS proposed to adopt the CDex IG as the attachment standard for prior authorization transactions under the required HIPAA Administrative Simplification provisions. ONC separately proposed to adopt this standard in 45 CFR 170.215(k)(3) to make it available for use by other programs; for instance, programs that may wish to incorporate this standard into regulations to align with the HIPAA

Administrative Simplification requirements, if the proposals in section II.H.7. of the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule (91 FR 19995) are finalized.

In summary, ONC requested comment in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule on the CFR citations listed in Table 12 (91 FR 20005), and specifically on the proposal to adopt standards in 45 CFR 170.215(j), (k), (m), and (n) on behalf of the Secretary.

We received public comments on these proposals. The following is a summary of the comments received and our responses.

Comment: Many commenters supported the adoption of the proposed implementation guides, including both the proposals to adopt updated versions of implementation guides previously adopted in the HTI–4 final rule and the additional proposal to adopt the CDex IG. Commenters emphasized the importance of moving to updated versions to avoid locking implementers into outdated versions that do not adequately support interoperability. Commenters noted that versions of these standards adopted in prior rulemaking had been superseded by the publication of subsequent versions and agreed with the importance of adopting current standards to optimize provider experience. Commenters generally supported the utilization of contemporary, FHIR-based standards, which can reduce manual and other cumbersome methods of information exchange when implemented consistently and effectively.

Response: We thank commenters for their support.

Comment: Many commenters specifically expressed support for the proposed adoption of version 2.2.1 of the CRD IG, version 2.2.0 of the DTR IG, and version 2.2.1 of the PAS IG for electronic prior authorization. Commenters supported alignment on these versions as a common target for different entities supporting exchange of information to support electronic prior authorization. A commenter stated that the 2.2 versions have matured substantially from the 2.0 versions and reflect lessons learned that will support more effective interoperability. A commenter stated that the latest versions of these guides have matured sufficiently and they are appropriate for adoption in regulatory mandates. Another commenter noted that the IGs have gone through Connectathon testing, HIPAA exception testing, and operational pilots and deployments, and that the proposed versions represent significant updates and refinements to the versions originally recommended for adoption in the 2024 CMS Interoperability Prior Authorization final rule (89 FR 8945).

Response: We thank commenters for their support.

Comment: Several commenters noted that 2.1 versions of the CRD, DTR, and PAS IGs that support electronic prior authorization are currently available but it is unclear whether implementers would be able to use these versions.

Response: While we recognize that these versions have been published, we note that these too have been superseded by newer 2.2.1 and 2.2.0 versions. We did not propose to adopt the 2.1.0 versions of these IGs because we believe those versions are deficient in ways similar to the 2.0.1 versions of these IGs and would complicate nationwide deployment of electronic prior authorization for similar reasons. We note meaningful and significant improvements across CRD, DTR, and PAS IGs in versions 2.2.1 and 2.2.0 over versions 2.1.0 of these IGs, including better order/appointment context for version 2.2.1 of the CRD IG; improved questionnaire package and response behavior in version 2.2.0 of the DTR IG; and better submission, status, and authorization response automation in version 2.2.1 of the PAS IG.

Also, the National Coordinator for Health Information Technology has not approved version 2.1.0 for use in the ONC Health IT Certification Program, which is necessary for health IT developers to voluntarily utilize newer versions of standards adopted in regulation under the Standards Version Advancement Process (45 CFR 170.405). Thus, while implementers may use these versions as part of development cycles, these versions would not meet requirements to use versions of the standards adopted in 45 CFR 170.215, for instance, as part of requirements for the electronic prior authorization certification criteria in 45 CFR 170.315(g)(31) through (33).

Comment: Several commenters expressed support for the adoption of the CDex IG as the standard for prior authorization attachments, stating that this IG provides flexibility for different types of attachments, can support different scenarios, and complements the PAS IG. A commenter supported the adoption of the CDex IG and efforts to encourage its use but did not support its inclusion in health IT certification criteria for electronic prior authorization at this time.

Response: We thank commenters for their support of the proposed adoption of the CDex IG. We note that we did not propose to incorporate the CDex IG as part of any health IT certification criteria at 45 CFR 170.315 in the CMS Interoperability Standards and Prior Authorization for Drugs proposed rule, and we are not finalizing any requirements related to certification criteria in the policies we are finalizing in this final rule. We will consider this comment if we explore future proposals related to incorporation of the CDex IG within certification criteria in the future.

Comment: Several commenters stated that while the CDex IG can play an important role in supporting standardized transmission of clinical information outside of structured data elements, payers should prioritize use of structured data through questionnaires transmitted under the DTR IG and cautioned that widespread use of CDex could simply replicate current workflows using fax. Commenters also noted that production maturity and testing for this IG lag other IGs for electronic prior authorization transactions, for instance with respect to appropriate file sizes, and that deployment should follow implementation of these other IGs.

Response: We appreciate commenters' input on best practices for how the CDex IG should be used as part of electronic prior authorization workflows. While we are finalizing the adoption of the CDex IG in 45 CFR 170.215, we note that HHS has not yet finalized any related proposals to require its use at this time. However, these comments may inform future policies with respect to utilization of this IG. We also appreciate input on the current maturity of this IG. While we believe the IG is sufficiently advanced to warrant adoption at this time, we will continue to monitor the development of improved versions in the future that have undergone additional testing.

Comment: Several commenters noted that version 2.2.0 of the PDex IG has been approved for publication and recommended it be considered for adoption in the final rule if it is finalized prior to publication of the final rule.

Response: We did not propose to adopt version 2.2.0 of the PDex IG, nor has it been published at the time of the publication of this final rule. We will consider this version for adoption in future rulemaking.

Comment: Regarding the proposal to adopt version 2.1.0 of the PDex US Drug Formulary IG, a commenter stated that this proposal appeared to be in tension with the proposal in section II.F.3. of the 2026 CMS Interoperability

Standards and Prior Authorization for Drugs proposed rule (91 FR 19974 through 19975) to remove the formulary requirement for the Provider Access API and Payer-to-Payer API. The commenter stated that the removal of this functionality from these API requirements would mean that development efforts for this updated version of the IG would not impact provider-facing use cases where it would be most important.

Response: We thank the commenter for their feedback. We disagree that the adoption of this standard would conflict with CMS' proposals in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule. We have proposed to adopt the updated version of the PDex US Drug Formulary in order to continue to advance interoperability by using improved versions of standards and believe this is appropriate, regardless of policies that CMS finalizes around how payers are required to use the IG.

Comment: A commenter stated the PlanNet IG does not fully support real-world use cases today. Another commenter identified implementation gaps within the current version, including discrepancies between the IG's requirement for REST-based access and bulk consumption patterns for provide directory data. A commenter stated that there are open implementation questions regarding version 2.2.0 of the CARIN IG for Blue Button, such as inconsistences with the FHIR core specification and limitations around support for exchange with multiple networks.

Response: We appreciate commenters' feedback on potential improvements for these IGs. While we believe these IGs are appropriate for adoption in order to support continued progress on interoperability of provider directory information, ONC and CMS will continue to monitor and encourage efforts to improve these IGs.

Comment: Multiple commenters recommended that specific standard for trial use (STU) versions should be named in a final rule. However, another commenter recommended that HHS should avoid naming IG versions in regulation and should not rely on a moving set of ''unexpired'' guides as a substitute for clear version control.

Response: We agree with the commenters that stated it is important to name specific versions in regulation to ensure that implementers subject to federal regulations are aligned around common versions of standards that enable interoperability between systems. Furthermore, to require regulated entities to use specific versions of a standard, we must adopt the specific published version in regulation and incorporate it by reference.

Comment: Many commenters recommended that CMS and ONC ensure that standards are tested in real-world settings prior to any compliance dates set for conformance to the standards. A commenter recommended that HHS adopt approaches to testing that go beyond conformance testing to a certain version of a standard and advance approaches that test interoperability between real-world implementations using all permissible versions of a standard.

Response: We agree with commenters on the need for thorough testing across the ecosystem. CMS and ONC continue to collaborate with industry to develop testing opportunities. For instance, at the time of this final rule, we have published Inferno test kits [693] for both provider and payers on version 2.2.1 of the CRD IG, and test kits for the 2.2.0 and 2.2.1 versions of the DTR and PAS IGs, respectively, are under development. We also note that other industry opportunities for testing these IGs are available, including HL7 Connectathons, the CMS Health Technology Ecosystem,[694] and other platforms that allow for partner testing regardless of versions. We believe that these initiatives are informing an increasingly robust testing environment that will support implementers. At the same time, we believe it is necessary to adopt version 2.2.1 of the CRD IG, version 2.2.0 of the DTR IG, and version 2.2.1 of the PAS IG to ensure there is clarity about the ability to use these versions and benefit from the significant improvements that have been made over the previously adopted versions.

Final Decision: After consideration of the public comments we received, we are finalizing our proposals to adopt the standards below in 45 CFR 170.215(j), (k), (m), and (n) on behalf of the Secretary. We have updated the citations where we are adopting these standards in regulation based on the policy we proposed as an alternative proposal (91 FR 20003 through 20004) and that we are finalizing below to replace previously adopted versions in 45 CFR 170.215 where applicable.

- HL7 FHIR® Da Vinci—Coverage Requirements Discovery IG [Implementation Guide], Version 2.2.1–STU 2.2 (adopted in 45 CFR 170.215(j)(1)(i)).[695]
- HL7 FHIR® Da Vinci—Documentation Templates and Rules Implementation Guide, Version 2.2.0–STU 2.2 (adopted in 45 CFR 170.215(j)(2)(i)).[696]
- HL7 FHIR® Da Vinci Prior Authorization Support (PAS) FHIR Implementation Guide, Version 2.2.1–STU 2.2 (adopted in 45 CFR 170.215(j)(3)(i)).[697]
- HL7 FHIR® CARIN Consumer Directed Payer Data Exchange (CARIN IG for Blue Button®) [Implementation Guide], Version 2.2.0—STU 2.2 (adopted in 45 CFR 170.215(k)(1)(i)).[698]
- HL7 FHIR® Da Vinci Payer Data Exchange (PDex) US Drug Formulary Implementation Guide, Version 2.1.0—STU 2.1 (adopted in 45 CFR 170.215(m)(1)).[699]
- HL7 FHIR® Da Vinci Payer PDex [Payer Data Exchange] Plan Net Implementation Guide, Version 1.2.0—STU 1.2 (adopted in 45 CFR 170.215(n)(1)).[700]
- HL7 FHIR® Da Vinci Clinical Data Exchange (CDex) IG [Implementation Guide], Version 2.1.0—STU 2.1 (adopted in 45 CFR 170.215(k)(3)(i)).[701]

With respect to the CARIN IG for Blue Button®, we note that the proposed regulatory text for 45 CFR 170.215(k)(1)(ii) in the CMS Interoperability Standards and Prior Authorization for Drugs proposed rule inadvertently specified the proposed version of the IG as 2.1.2, as opposed to the 2.2.0 version named elsewhere throughout the proposed rule. We clarify that we are finalizing the adoption of version 2.2.0 of the CARIN IG for Blue Button® in this final rule.

8. Expiration Dates for Certain Versions of Adopted Standards

In the CMS Interoperability Standards and Prior Authorization for Drugs proposed rule, ONC also proposed to add an expiration date of January 1, 2028, to corresponding versions of standards currently in 45 CFR 170.215(j), (k), (m), and (n) if the proposals to adopt newer versions of adopted standards and specifications in 45 CFR 170.215(j), (k), (m), and (n) were finalized (91 FR 20003). ONC proposed this expiration date to provide certified health IT developers and other entities required to use these standards with a transition period during which they may update and deploy health IT conformant with either the existing or updated versions of these standards. ONC stated that after the expiration date, only non-expired versions of the relevant standards in 45 CFR 170.215(j), (k), (m), and (n) would be available for use. ONC stated that it believed that a coordinated transition period that establishes a single expiration date across the relevant IGs in 45 CFR 170.215(j), (k), (m), and (n) would create consistency for industry and facilitate interoperability by ensuring that health IT systems leveraging these standards under different HHS programs use the same baseline standards for the same use cases. In addition, ONC stated that it believed a transition period would allow those health IT developers and other entities required to use these standards flexibility to complete development towards the existing standards in 45 CFR 170.215(j), (k), (m), and (n), and to iterate to newer standards.

However, ONC also stated that it believes that this flexibility may lead to more heterogeneity where some deployed health IT uses one standard and other deployed health IT uses newer versions of those standards, thus complicating shared goals with CMS to facilitate a FHIR-based ecosystem for prior authorization, payer to payer exchange, and patient access to coverage information. Therefore, ONC proposed an alternative approach to updating these standards. Specifically, as an alternative to the proposal above, ONC proposed to remove and replace standards in 45 CFR 170.215(j), (k), (m), and (n) with the standards it proposed upon the effective date of a final rule, without providing for a transition period during which multiple versions of each standard would be available for HHS use (91 FR 20003 through 20004).

ONC understands that both certified health IT developers and other health IT developers wish to have a single, baseline standard across use cases as quickly as practicable for purposes of consistency and interoperability. ONC stated that this alternative proposal could help advance this goal, particularly in areas such as electronic prior authorization. For instance, under this alternative proposal, a certified health IT developer with a Health IT Module certified to the ''provider prior authorization API—documentation templates and rules'' criterion for electronic prior authorization in 45 CFR 170.315(g)(32), and currently using the standard in 45 CFR 170.215(j)(2)(i) (which is the DTR IG, Version 2.0.1–STU 2), would need to use the newer version of the standard to remain certified to the criterion in 45 CFR 170.315(g)(32) as of the effective date of a final rule, which ONC proposed to be the DTR IG, Version 2.2.0–STU 2.2.

In summary, in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule (91 FR 20003 through 20005) ONC requested comment on our proposals in the CFR citations listed in Table 12 of the proposed rule, and specifically on the following:

- The proposal to add an expiration date of January 1, 2028, to corresponding standards currently in 45 CFR 170.215(j), (k), (m), and (n) if our proposals to adopt newer versions of these standards are finalized.
- The alternative proposal to remove and replace the standards in 45 CFR 170.215(j), (k), (m), and (n) with the newer versions of the standards, without a transition period for use of multiple versions.

We received public comments on these proposals. The following is a summary of the comments received and our responses.

Comment: Among commenters who addressed these proposals, most supported the proposed expiration date of January 1, 2028 for previously adopted standards, meaning implementers required to use a standard in an applicable section of 170.215 would need to use the proposed updated versions of the standards after this date.

Commenters expressed support for transition periods during which more than one version of an unexpired standard would be available for use. A commenter stated that a defined overlap window between standard versions is important to the safety of a version transition, and that a ''hard cutover'' is unrealistic for managing a transition across a wide range of systems. Another commenter stated that a transition period can help to ensure clinical practices are able to obtain the technical assistance and tools necessary to manage version updates.

Response: We thank commenters for their support of the proposal. We recognize that a transition period that allows for more than one version of a standard can provide implementers at different levels of readiness with needed flexibility, reducing the burden associated with transitions. For this reason, we have pursued approaches to structuring our regulations in a way that can allow for such transition periods. However, we disagree that such transition periods are appropriate in every scenario when moving between two versions of required standards. For instance, allowing implementers to use two versions of the same standard when versions have limited compatibility can have negative consequences such as reduced interoperability that may outweigh the benefits of greater flexibility.

Comment: Several commenters stated that finalizing the proposed expiration date of January 1, 2028 for previously adopted standards would allow payers subject to the requirements in the 2024 CMS Interoperability Standards and Prior Authorization final rule to continue using versions of the IGs that best suit them as they prepare for January 1, 2027 deadlines for establishment of certain payer APIs.

Response: We disagree with the commenters that the proposed expiration date of January 1, 2028 for previously adopted versions would support preparation for the January 1, 2027 compliance date for establishment of certain payer APIs. We note that CMS did not finalize requirements for payer APIs to conform to standards in 45 CFR 170.215(j), (k), (m), and (n), by January 1, 2027 in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule. Rather, in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs Proposed Rule, CMS proposed to require conformance with unexpired versions of these standards by October 1, 2027, through cross-references to sections of 45 CFR 170.215(j), (k), (m), and (n) (91 FR 19908). Therefore, as of January 1, 2027, payers would not be required to conform to standards in 45 CFR 170.215(j), (k), (m), and (n) and would not benefit from having multiple standards available at these citations to meet regulatory requirements on that date.

We further note that if CMS finalizes its proposed compliance date for payers of October 1, 2027, under our proposed expiration date of January 1, 2028, payers would only be able to use previously adopted standards in 45 CFR

170.215(j), (k), (m), and (n) for a period of three months until these versions would no longer be available for use. Therefore, we do not believe that the transition period that would be created under our proposal, or lack thereof, would impact the ability of impacted payers to prepare for October 1, 2027 compliance date for payer APIs to conform to standards in 45 CFR 170.215(j), (k), (m), and (n).

Comment: Several commenters recommended delaying the January 1, 2028 date, with some suggesting January 1, 2029 as an alternative. Commenters stated that the proposed date of January 1, 2028 may not align with industry recommendations regarding the development time necessary for exclusive implementation of a new version of a standard from the time the new version appears in a final rule. Commenters noted that, while it was unclear when the proposals in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule would be finalized, it was unlikely that these proposals would be finalized in time for the recommended period to elapse between a final rule and January 1, 2028. Commenters discussed the minimum amount of time that previously adopted versions should be retained from a final rule finalizing a new version of a standard. Commenters suggested time periods including 24 months, 18 months, and 12 months. A commenter stated that the feasibility of an expiration date of January 1, 2028 would depend on the extent to which subsequent versions of the IGs introduce significant changes and that this date should be evaluated in light of such changes.

Response: We appreciate commenters' concerns about the amount of time between finalizing the proposed standards in 45 CFR 170.215(j), (k), (m), and (n) and the proposed January 1, 2028 expiration date for previously adopted versions. We generally agree that the timeframes commenters suggested are reasonable for upgrading to a newly required version. However, because implementers are still working towards initial deployment of solutions at the time of this final rule, we believe it is most appropriate to focus on the timeframe under which regulated entities will first be required to use updated standards in 45 CFR 170.215(j), (k), (m), and (n).

We note that CMS has proposed that impacted payers would be required to ensure payer APIs conform to an unexpired version of the relevant standards in 45 CFR 170.215(j), (k), (m), and (n), by October 1, 2027 (91 FR 19908). If CMS finalizes this proposed requirement, impacted payers would have 15 months from the effective date of this final rule (October 1, 2026) to our primary proposed date of January 1, 2028 for the expiration of previously adopted versions in 45 CFR 170.215(j), (k), (m), and (n), after which APIs would need to come into compliance with updated versions of the standards. Under our alternative proposal to replace previously adopted versions of the standards in in 45 CFR 170.215(j), (k), (m), and (n) with updated versions upon the effective date of a final rule (91 FR 20003), impacted payers would have 12 months between the effective date of this final rule and the date upon which payer APIs would need to conform to the updated standards we are finalizing in this final rule, if CMS' proposed October 1, 2027 compliance date is finalized.

We believe the periods between finalizing the updated versions of the standards in this final rule and the date by which payer APIs must comply with those updated versions provides an appropriate implementation window. This timeframe is also consistent with the periods recommended by some of the commenters under both our primary and alternative proposals. Although the implementation period under our alternative proposal would be three months shorter than the period under our primary proposal of January 1, 2028, if CMS finalizes its proposed compliance date of October 1, 2027, we believe that a 12-month implementation window before the standards are required to be used remains reasonable. We discuss additional benefits associated with adopting our alternative proposal below.

For discussion of timelines for reporting of electronic prior authorization measures in the Promoting Interoperability Program and the MIPS Promoting Interoperability performance category which may impact health IT developers certifying Health IT Modules to electronic prior authorization certification criteria in 170.315(g)(31) through (33) to support customers required to report on these measures in order to become Meaningful EHR Users, we refer readers to additional discussion below.

Finally, we agree with commenters that it is appropriate to consider the degree of change between versions of a standard when establishing a timeline for required use of an updated version of a standard. We believe that the scale of updates reflected in the proposed versions of IGs in 45 CFR 170.215(j), (k), (m), and (n) are consistent with the expected periods between the publication date of this final rule and the finalized and proposed dates by which regulated entities would be required to use these updated versions.

Comment: Several commenters raised concerns with a transition period that allows for the use of more than one version of a standard. Commenters stated that having entities operating on different versions at different times can cause misalignment in capabilities and functionalities between exchange partners, for instance, if a payer migrates to an updated IG version while a health care provider's system is still on the prior version. A commenter noted that stakeholders are currently implementing different versions of the same IGs we have adopted in 45 CFR 170.215(j), (k), (m), and (n), resulting in fragmentation rather than alignment. A commenter stated that any transition period should condition adoption of updated versions on maintaining compatibility with the existing version for the duration of the transition period.

Response: We agree with commenters that providing for a transition period between standards may present risks under certain circumstances. For instance, when there are significant compatibility issues between versions of a standard, enabling regulated entities to use both versions during the same period can create interoperability challenges. In some scenarios, these interoperability challenges may outweigh the benefits of a transition period that provides implementers with more flexibility. We believe this consideration is relevant with respect to the policies in this final rule, as we are aware of significant compatibility issues between the previously adopted 2.0.1 versions of the CRD, DTR, and PAS IGs, and the 2.2.1 versions of the CRD and PAS IGs, and 2.2.0 version of the DTR IG, that we are finalizing in this final rule. We believe challenges arising from these compatibility issues could be ameliorated by establishing only one version of each IG. Specifically, by adopting the proposed versions of the CRD, DTR, and PAS IGs in 170.215(j)(1)–(3) as the only versions that regulated entities can utilize to meet initial conformance requirements under proposed API requirements for impacted payers and certification criteria requirements for health IT developers, respectively. Regarding maintaining compatibility with previous versions during a transition period, we believe it is important to balance the value of maintaining compatibility with the cost to implementers of maintaining support for multiple versions at the same time.

Comment: A commenter stated that the proposed 2.2.1 versions of the CRD

and PAS IGs and 2.2.0 version of the DTR IG were the appropriate versions of the IGs for industry to align around in 2028. The commenter further stated that those entities required to use the IGs should be encouraged to move towards the CRD and PAS 2.2.1 and DTR 2.2.0 versions as soon as possible. Commenters stated that the January 1, 2028 date would provide a stable target for updating to the new versions for health IT developers and payers that are subject to finalized or proposed requirements related to electronic prior authorization. A commenter stated that requirements to conform to previously adopted 2.0.1 versions of the CRD, DTR, and PAS IGs would result in antiquated functionality and would represent a step back from current progress on developing solutions. Commenters also stated that policies must avoid requiring outdated standards or duplicative translation workflows that could move the industry backward, impose undue administrative burden, or require stakeholders to invest in systems that may soon need to be replaced. Commenters urged CMS to designate a clear baseline version as required and then establish a structured approach to retiring previous versions going forward.

Response: We agree with commenters' support for the 2.2.1 versions of the CRD and PAS IGs and the 2.2.0 version of the DTR IG as the target versions implementers should adopt. We recognize the significant work that industry participants in HL7 have done to update these IGs over the past several years to ensure that there is a workable foundation informed by initial experiences with these specifications. We further agree with commenters who believe that 2028 is an appropriate target for stakeholders implementing electronic prior authorization to coalesce around common standards and achieve interoperability at scale across the industry. We further agree with the comments about the importance of establishing a baseline version, as we believe that focusing on a single baseline version can reduce confusion and additional burden for implementers during the initial deployment of health IT systems to meet requirements. We further agree that a structured approach to retiring versions following establishment of this baseline version is important and intend to work with CMS to monitor subsequent versions of these IGs and determine appropriate timelines for adopting these versions in regulation, while aiming to provide transition periods between versions where feasible.

However, we are concerned that maintaining the 2.0.1 versions of the CRD, DTR, and PAS IGs in 45 CFR 170.215 in the period leading up to 2028, as we proposed, does not align with the goal of ensuring that regulated entities deploy CRD and PAS version 2.2.1 and DTR version 2.2.0 by 2028. Keeping the 2.0.1 versions of these standards in the Program during this period, when regulated entities will be developing and beginning to deploy systems that support electronic prior authorization, may divert attention and resources towards outdated and insufficient standards. Instead, we intend to support industry efforts to build and deploy systems that conform to the updated versions of the IGs, which are better suited to support electronic prior authorization. We agree with the comment characterizing the 2.0.1 versions of the CRD, DTR, and PAS IGs as outdated, and we agree that it is important for standards adoption policies to minimize the degree to which implementers develop systems using standards that have limited utility and longevity. We note that the proposed 2.2.1 versions of the CRD and PAS IGs and 2.2.0 version of the DTR IG address prior version ambiguities, making the automation of prior authorizations more dependable with fewer failed transactions and manual follow-ups.

We further believe that it would be beneficial to focus on a single set of versions as a baseline for initial implementation of the CRD, DTR, and PAS IGs across entities required to use these standards. Aligning industry on CRD and PAS 2.2.1, and DTR 2.2.0, across payer and provider IT systems will improve end-to-end interoperability by aligning handoffs between CRD, DTR, and PAS workflows.

Comment: Several commenters stated that the currently adopted 2.0.1 versions of the CRD, DTR, and PAS IGs should be maintained as an option until January 1, 2028 if health care providers are required to utilize health IT certified to electronic prior authorization criteria to report on Electronic Prior Authorization measures in the CMS Promoting Interoperability program and the MIPS Promoting Interoperability performance category during CY 2027. Enabling health IT developers to certify Health IT Modules to these previously adopted versions during CY 2027 would increase the likelihood that developers are able to provide customers with certified products during CY 2027 to meet program requirements. However, commenters stated that if CMS did not finalize proposals to require the use of specific certified health IT for these measures in CY 2027, they recommended moving directly to the proposed versions (CRD and PAS 2.2.1 and DTR 2.2.0), consistent with the alternative proposal in the proposed rule.

Response: We disagree with commenters that it is necessary to maintain the previously adopted 2.0.1 versions of the CRD, DTR, and PAS IGs until January 1, 2028 to help participants meet requirements in the Medicare Promoting Interoperability Program and MIPS Promoting Interoperability performance category. We note that in section IX.F. of this final rule CMS has finalized its proposal to make the Electronic Prior Authorization measure in the Medicare Promoting Interoperability Program for eligible hospitals and CAHs a bonus measure in CY 2027, and to require that eligible hospitals and CAHs report the measure in 2028 in order to be a meaningful EHR user. We also note that CMS has made similar proposals in the CY 2027 PFS Proposed Rule to make the Electronic Prior Authorization measure in the MIPS Promoting Interoperability performance category a bonus measure in CY 2027 and a measure that eligible clinicians are required to report in 2028 (91 FR 44180 and 44181). We believe that these CMS final and proposed policies will or would (with respect to proposed policies) provide greater flexibility to health IT developers as they deploy certified health IT to customers.

However, we believe it is important that any flexibility during CY 2027 enables health IT developers to work towards deployment of certified products that will most effectively support interoperability and improve provider experience, and that these goals will be best accomplished through use of the 2.2.1 versions of the CRD and PAS IGs and the 2.2.0 version of the DTR IG. While we hope that CMS' bonus policies will incentivize some participants in these programs and their health IT developers to become early implementers of the technology, we are not seeking to encourage health IT developers to certify Health IT Modules to the 2.0.1 versions of the CRD, DTR, and PAS IGs solely to ensure customers can qualify for bonus points proposed under these programs. While allowing a patchwork of previously adopted 2.0.1 and updated 2.2.1/2.2.0 implementations may provide temporary flexibility for developers, it would almost certainly impede electronic prior authorization capabilities for providers and patients by introducing variations in implementation decisions and requiring

more local interpretations. This, we believe, will hinder plans to scale electronic prior authorization nationwide in 2028 and limit the potential benefits of electronic prior authorization for patients and providers. Therefore, we believe our alternative proposal, under which we would replace previously adopted standards upon the effective date of a final rule, will more effectively support our policy goals by ensuring health IT developers do not focus on certifying Health IT Modules to the criteria in 45 CFR 170.315(g)(31) through (33) using previously adopted versions of the standards.

Comment: A commenter supported our alternative proposal, highlighting the benefits of replacing the current CRD, DTR, and PAS IGs with the proposed versions as of the effective date of a final rule. The commenter stated that this approach would ensure immediate focus on updated versions and consolidated focus around the same IG version, rather than multiple versions being available during a transition period. The commenter further stated that this approach would improve implementation consistency and reduce variation among implementations. Another commenter stated that the proposed versions of the CRD, DTR, and PAS IGs are not compatible with the existing adopted versions and include breaking changes between versions.

Response: We appreciate the support for our alternative proposal and agree with the commenter that this approach would help to enable implementers to consolidate around the same versions of the CRD, DTR, and PAS IGs in 45 CFR 170.215(j)(1) through (3) during the initial rollout of these capabilities. As noted in feedback from many commenters, these IGs have evolved rapidly since the prior versions we adopted, with industry collaborating around improvements to ensure they can be effectively implemented in accordance with the timeframes HHS has put forth in different programs to advance electronic prior authorization.

We also agree that the 2.0.1 versions of CRD, DTR, and PAS IGs that we originally adopted still include significant issues as identified by implementers, which industry has rapidly addressed through the CRD and PAS 2.2.1 and DTR 2.2.0 versions we proposed for adoption. As noted by a number of commenters, there are documented compatibility issues between these versions of the CRD, DTR, and PAS IGs. We note that we also received a comment stating that backwards compatibility between versions would help to mitigate any issues during a transition period. However, we agree with those commenters that pointed to compatibility concerns and we invite interested parties to review change logs related to 2.2.1 and 2.2.0 versions of the CRD, DTR, and PAS IGs to understand technical flaws, inconsistencies, and enhancements that were identified in previous versions.[702] [703] [704] For these reasons, we believe our alternative proposal to replace these versions upon the effective date of the final rule is more appropriate in this case than the more typical provision for a transition period between standards versions.

Comment: Several commenters opposed our alternative proposal to replace previously adopted versions of the proposed standards upon the effective date of a final rule. Commenters stated that the alternative proposal, which would not provide for a transition period, would risk accelerating fragmentation by forcing rapid upgrades across trading partners that may not have similar readiness levels. The commenter stated that this alternative would force version switches and pause or restart implementation, delay Prior Authorization API go-live dates, and negatively impact clinician end-users. A commenter recommended that CMS and ONC establish a predictable and coordinated transition schedule rather than immediately replacing versions. The commenter stated that they believed backward compatibility between the versions of the IG would limit interruptions for users due to use of more than one version of the IGs across trading partners.

Response: While we acknowledge the commenters' concerns, we disagree that our alternative proposal would result in significant disruption to end-users as well as fragmentation across implementations. We believe considerations specific to the current state of implementation for the proposed standards and timelines for requirements to use the standards mitigate these concerns. Though we acknowledge that some regulated entities have started to develop solutions with the adopted versions of the standards, we believe the effects described by the commenters will be mitigated by the fact that regulated entities are still in the process of developing solutions and have additional opportunities to update solutions in accordance with the latest standards.

At the time of this final rule, we believe that regulated entities do not yet have well-established implementations in place using the versions of the standards we previously adopted. With respect to the 2.0.1 versions of the CRD, DTR, and PAS IGs, as of the publication of this final rule, no health IT developers have yet completed certification to the criteria in 45 CFR 170.315(g)(31) through (33) using the 2.0.1 versions of the IGs we previously adopted in 45 CFR 170.215(j)(1) through (3).[705] With respect to impacted payers, commenters have noted that many payers have progressed beyond version 2.0.1 and have begun to implement version 2.1 of the CRD, DTR, and PAS IGs as they work on initial implementation of Prior Authorization APIs. We believe the lack of well-established or deployed implementations at this time using the previously adopted 2.0.1 versions of the CRD, DTR, and PAS IGs in 170.215(j) reduces the potential disruption that would result from finalizing policies that require entities to build to updated versions of the standards.

We also believe the flexibility in finalized and proposed timelines for requiring regulated entities to use the proposed standards will reduce the potential disruption and burden of requiring use of the updated versions of the standards without maintaining previous versions. CMS has proposed a compliance date of October 1, 2027, when impacted payers would be required to ensure APIs conform to a version of the standards in 45 CFR 170.215(j), (k), (m), and (n) (91 FR 19908). Prior to this proposed date, APIs established by impacted payers are not required to conform to any version of these standards. Therefore, if CMS finalizes an October 1, 2027 compliance date, impacted payers would have approximately a year from the effective date of this final rule to the date when their APIs would need to come into compliance with an unexpired version of the standards in 45 CFR 170.215(j), (k), (m), and (n). We believe finalizing our alternative proposal will ensure payers focus development efforts in the months leading up to October 1, 2027, on the latest version of the proposed standards, which would be necessary to remain compliant beyond the January 1, 2028 expiration date we originally proposed. We believe this pathway will

[702] See *https://build.fhir.org/ig/HL7/davinci-crd/en/changes.html.*

[703] See *https://build.fhir.org/ig/HL7/davinci-dtr/en/changehistory.html.*

[704] See *https://build.fhir.org/ig/HL7/davinci-pas/en/changelog.html.*

[705] Information on health IT developers that have completed certification to specific criteria under the ONC Health IT Certification Program can be found at *https://chpl.healthit.gov/.*

ensure that payers do not pursue versions of the standards that would expire shortly after the proposed initial compliance date for payer APIs and become obsolete for those purposes. We also believe this pathway will support improved interoperability and effective implementation during the early rollout of these systems.

With respect to health IT developers, as discussed previously, CMS has finalized or proposed policies in the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category to make the Electronic Prior Authorization measures in these programs an optional bonus measure in CY 2027 and required in CY 2028. Under these policies, if remaining proposals are finalized, developers seeking to certify health IT modules to the certification criteria in 45 CFR 170.315(g)(31) through (33) would have until the CY 2028 performance periods for these programs to deploy certified health IT meeting the updated standards before customers are required to report on Electronic Prior Authorization measures in order to become a Meaningful EHR User.

We disagree with the comment that there is backwards compatibility between the versions of the CRD, DTR, and PAS IG that would mitigate interoperability challenges arising from concurrent use of the previously adopted 2.0.1 versions and the updated 2.2.1 versions of the CRD and PAS IGs and 2.2.0 version of the DTR IG. Based on input from other commenters who have raised concerns about compatibility issues, as well as the documented technical flaws, inconsistencies, and enhancements that have been identified between versions,[706] [707] [708] we believe concurrent use would introduce compatibility concerns. We expect standards developers will be able to provide more reliable backwards compatibility between future versions of these IGs, which will reduce the potential challenges associated with providing a transition period between versions.

In light of timelines for required use of these standards and the status of development and deployment activities at the time of the publication of this final rule, we believe finalizing our alternative proposal will not result in significant disruption and will ultimately reduce fragmentation by accelerating regulated entities' ability to coalesce around a common standards baseline. Thus, to better support interoperability and drive consistent movement toward effective implementation of electronic prior authorization and other use cases, we are finalizing our alternative proposal to replace previously adopted versions of standards in 45 CFR 170.215(j), (k), (m), and (n) with the updated versions of the standards we are finalizing upon the effective date of this final rule.

Comment: Several commenters sought further clarification on the meaning of the term ''expire'' with respect to the proposed language. Commenters stated that the definition of these terms was not clear, and the term ''expired'' is also used by HL7 to describe IGs that are available but not actively maintained.

Response: We have used the term ''expire'' for several years with respect to standards adopted in 45 CFR part 170. In the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI–1) final rule, we stated that the term ''expires'' means ''the standard is unavailable for use in the Program, or any other programs that may cite the standard, as of the expiration date'' (89 FR 1214). We appreciate there are other uses of this term with respect to standards development and maintenance. In the context of the regulations in 45 CFR part 170, this term has been used to reflect final policies around transitions between versions of standards and enables ONC to provide clear guidance to implementers about when such a transition will take place without needing to engage in additional notice and comment rulemaking to remove a standard from 45 CFR part 170.

Comment: Commenters urged CMS and ONC to harmonize standards required for programs affecting different entities. Commenters also recommended that CMS and ONC clearly communicate timelines and expectations around transition periods. Commenters urged clarity for industry about what is required at different times. A commenter requested that ONC clarify whether health IT developers seeking certification of their Health IT Modules to certification criteria that reference the proposed versions of the CRD, DTR, and PAS IGs would be required to demonstrate backward compatibility with the payer implementations based on the currently adopted versions of the IGs. A commenter also requested clarification on ONC testing procedures for version 2.2.1 of the PAS IG related to support for multiple versions of US Core.

Response: We appreciate commenters' feedback and share commenters' interest in ensuring alignment between regulatory requirements that impact the same end-users. Through the proposals we are finalizing in this rule, as well as the HTI–4 final rule and the CMS Interoperability Standards and Prior Authorization for Drugs proposed rule, ONC and CMS have sought to ensure standards alignment between different programs under which HHS is advancing electronic prior authorization and other initiatives. Proposals and final policies in these rulemaking actions have aimed to reference a common set of FHIR IGs in 45 CFR 170.215. ONC and CMS will monitor the future development of these IGs and determine when to propose to adopt new versions to ensure that updates to regulatory requirements are updated in concert across programs impacting different implementers that are supporting these activities. We further appreciate the comment regarding communications and will seek to develop additional materials and communications opportunities to reiterate and explain policies finalized in rulemaking.

We clarify that health IT developers seeking certification of their Health IT Modules to certification criteria that reference versions 2.2.0 and 2.2.1 of the CRD, DTR, and PAS IGs will not be required to demonstrate backward compatibility with any version of the IGs preceding the versions established in regulation. Regarding requirements under the ONC Health IT Certification Program, we did not propose any updates to the requirements for the electronic prior authorization certification criteria in 45 CFR 170.315(g)(31) through (33) beyond the proposed standards updates. For further information about testing procedures under the ONC Health IT Certification Program including for version 2.2 of the PAS IG, we invite interested parties to monitor the Certification Program website, paying special attention to the Certification Companion Guides for certification criteria at 45 CFR 170.315(g)(31) through (33) [709] for additional information and educational resources related to the electronic prior authorization certification criteria as part of the Program.

Comment: Several commenters recommended that ONC develop a process to provide notification in advance of an expected version expiration date. Commenters stated that a defined, predictable cadence for updates is necessary for regulated entities to plan implementation cycles and that irregular or ad hoc updates increase uncertainty and costs. A commenter recommended that ONC develop a process by which regulated entities are notified at least 12 months in advance of an expected standards version expiration date, and that a notification process would create transparency and predictability around timelines for advancing to unexpired versions of adopted standards. Several commenters recommended that ONC should base decisions and timelines about adopting new versions on an evaluation of readiness and utilization to ensure that new versions are effectively being used in practice before they are required. A commenter noted that a compliance date of January 1, 2028, overlaps with annual demands on businesses in the fourth quarter, and that entities would prefer compliance dates in the middle of the year.

Response: Generally, we agree with commenters that notification in advance of transitions between versions is important to being able to appropriately plan for updates to systems and allows regulated entities to mitigate potential interoperability challenges and service interruptions. However, several factors compel finalization of our policy to replace the adopted versions of standards at 45 CFR 170.215(j), (k), (m), and (n) with more recent versions without further maintaining the previously adopted versions. For instance, these factors include known deficiencies with versions currently listed at 45 CFR 170.215(j)(1) through (3) and the absence of any Health IT Modules certified to criteria that reference these standards.

ONC and CMS will continue to collaborate with standards development organizations and industry to monitor the development of updated versions of standards that are appropriate for adoption in regulation. We further concur that it is important for HHS to engage in notice and comment rulemaking in a manner that provides implementers with adequate time to effectively deploy updated systems and products subject to regulatory requirements around the use of standards. For instance, we are establishing 2.2.0 and 2.2.1 versions of CRD, DTR, and PAS IGs as the only version of these IGs available for use in certification criteria at 45 CFR 170.315(g)(31) through (33) as of the effective date of this final rule. This is intended to give industry as much time as possible to develop and deploy Health IT Modules conformant with these versions of standards. Regarding evaluating the readiness and utilization of a new version of a standard, we agree that this is an important capability and will continue to work with CMS on such monitoring activities. However, we note that in addition to considering readiness and utilization, we must consider broader timing considerations around introducing new versions of standards to ensure desired versions are introduced through the rulemaking cycle promptly.

We also appreciate commenters' concerns with establishing a January 1 date around standards versions which have compliance implications due to entities' obligations during this time of the year. However, we must balance these considerations with the need to align with other regulatory timelines which are organized around the calendar year that are relevant to these policies. For instance, the performance period for the MIPS Promoting Interoperability performance category and the EHR reporting period for the Promoting Interoperability program are both tied to the calendar year. Contract years for impacted payers, for instance, MA organizations, are also based on the calendar year. Therefore, we believe it is most appropriate to base dates for transition between versions required for compliance in a given period on the calendar year. However, we will continue to consider regulatory approaches that recognize these timing challenges.

Comment: Commenters provided other recommendations with respect to transitions between standards versions. A commenter suggested HHS publish a public crosswalk of breaking changes between versions of a standard to reduce duplicative work by implementers. A commenter noted that management of the transition between versions should clearly articulate compatibility expectations and how long outdated versions should remain available to mitigate uncertainty among end users. A commenter recommended that all documents incorporated by reference are available at a public URL without charge.

Response: We appreciate these suggestions and will consider how we can work in collaboration with standards development organizations on materials that can help implementers understand changes between versions. We also intend to continue to provide information about compatibility expectations when we adopt new versions of required standards. Finally, we note that we continue to seek to ensure the standards we adopt are available free of charge on public websites to the greatest extent possible. We note that all of the standards adopted in this final rule are available in this manner.

Final Decision: After consideration of the public comments received, we are finalizing our alternative proposal to replace previously adopted versions of corresponding standards with the versions we have finalized upon the effective date of this final rule. Specifically, we adopt the following standards at the specified locations and remove the versions currently adopted at those locations:

- HL7 FHIR® Da Vinci—Coverage Requirements Discovery IG [Implementation Guide], Version 2.2.1—STU 2.2 (adopted in 45 CFR 170.215(j)(1)(i)).[710]
- HL7 FHIR® Da Vinci—Documentation Templates and Rules Implementation Guide, Version 2.2.0—STU 2.2 (adopted in 45 CFR 170.215(j)(2)(i)).[711]
- HL7 FHIR® Da Vinci Prior Authorization Support (PAS) FHIR Implementation Guide, Version 2.2.1—STU 2.2 (adopted in 45 CFR 170.215(j)(3)(i)).[712]
- HL7 FHIR® CARIN Consumer Directed Payer Data Exchange (CARIN IG for Blue Button®) [Implementation Guide], Version 2.2.0—STU 2.2 (adopted in 45 CFR 170.215(k)(1)(i)).[713]
- HL7 FHIR® Da Vinci Payer Data Exchange (PDex) US Drug Formulary Implementation Guide, Version 2.1.0—STU 2.1 (adopted in 45 CFR 170.215(m)(1)).[714]
- HL7 FHIR® Da Vinci PDex [Payer Data Exchange] Plan Net Implementation Guide, Version 1.2.0—

STU 1.2 (adopted in 45 CFR 170.215(n)(1)).[715]

While we acknowledge commenters' support for our primary proposal to finalize an expiration date of January 1, 2028, for previously adopted versions of standards, we believe that our alternative proposal is the most effective way to address the interoperability and compatibility concerns also raised by commenters. Replacing these standards with the updated versions upon the effective date of the final rule will ensure that entities required to use these standards develop to a common baseline as they initially deploy systems to meet proposed and finalized requirements. By removing previously adopted versions that would soon become obsolete, we are ensuring that regulated entities focus development efforts on versions of the standards that will effectively support interoperability.

We wish to reiterate that in this final rule, CMS is not addressing the compliance dates proposed in the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule for payer APIs to conform to standards in 45 CFR 170.215(j), (k), (m), and (n). The updated versions of standards we are finalizing in this final rule would only be required for payer APIs if CMS finalizes these proposals in a future 2026 CMS Interoperability Standards and Prior Authorization for Drugs final rule.

9. Incorporation by Reference

The Office of the Federal Register has established requirements for materials (for example, standards and implementation specifications) that agencies propose to incorporate by reference in the CFR (79 FR 66267, 1 CFR 51.5(b)). Specifically, 1 CFR 51.5(b)(2) requires agencies to discuss, in the preamble of a final rule, the ways that the materials they incorporate by reference are reasonably available to interested parties and how interested parties can obtain the materials; and summarize, in the preamble of the final rule, the material they incorporate by reference.

To make the materials ONC intends to incorporate by reference reasonably available, it provides a URL for the standards and implementation specifications. In many cases, these standards and implementation specifications are directly accessible through the URLs provided. In most of these instances, access to the standard or implementation specification can be gained through no-cost (monetary) participation, subscription, or membership with the applicable SDO or custodial organization. Alternatively, a copy of the standards may be viewed for free at the U.S. Department of Health and Human Services, Office of the National Coordinator for Health Information Technology, 330 C Street SW, Washington, DC 20201. Please call (202) 690–7171 in advance to arrange inspection.

The NTTAA and the OMB Circular A–119 require the use of, wherever practical, technical standards that are developed or adopted by voluntary consensus standards bodies to carry out policy objectives or activities, with certain exceptions. The NTTAA and OMB Circular A–119 provide exceptions to selecting only standards developed or adopted by voluntary consensus standards bodies, namely when doing so will be inconsistent with applicable law or otherwise impractical. As discussed in section X.E.5. of this preamble, ONC has followed the NTTAA and OMB Circular A–119 in adopting standards and implementation specifications. Over the years of adopting standards and implementation specifications for certification, ONC has worked with SDOs, such as HL7, to make the standards it proposed to adopt, and subsequently adopt and incorporate by reference in the **Federal Register**, available to interested parties. As described previously, this includes making the standards and implementation specifications available through no-cost memberships and no-cost subscriptions.

As required by 1 CFR 51.5(b), ONC provides summaries of the standards it is adopting and incorporating by reference in the Code of Federal Regulations. ONC also provides relevant information about these standards and implementation specifications throughout the preamble.

Application Programming Interface Standards—45 CFR 170.215

- *HL7 FHIR® Da Vinci—Coverage Requirements Discovery IG [Implementation Guide], Version 2.2.1—STU 2.2, Generated March 27, 2026.*

URL: *https://hl7.org/fhir/us/davinci-crd/2.2.1/en/.*

This is a direct access link.

Summary: The CRD IG defines a workflow to allow payers to provide information about coverage requirements to health care providers through their provider systems at the time treatment decisions are being made. This will ensure that clinicians and administrative staff have the capability to make informed decisions and meet the requirements of the patient's insurance coverage.

- *HL7 FHIR® Da Vinci—Documentation Templates and Rules Implementation Guide, Version 2.2.0—STU 2.2, Generated March 27, 2026.*

URL: *https://hl7.org/fhir/us/davinci-dtr/2.2.0/en/.*

This is a direct access link.

Summary: The DTR IG provides a mechanism for payers to express their documentation requirements computably in a way that allows clinicians and other EHR users to navigate and quickly specify the needed information in a context-specific way. The guide allows rules to be written in a way that supports automatically extracting existing EHR information for review/confirmation and adjusting the information prompted for based on what data is already known or entered to minimize impact on provider time while expediting subsequent payer interactions.

- *HL7 FHIR® Da Vinci Prior Authorization Support (PAS) FHIR Implementation Guide, Version 2.2.1—STU 2.2, Generated March 27, 2026.*

URL: *https://hl7.org/fhir/us/davinci-pas/2.2.1/en/.*

This is a direct access link.

Summary: The PAS IG enables direct submission of prior authorization requests from EHR systems using FHIR. The IG also defines capabilities around the management of prior authorization requests, including checking the status of a previously submitted request, updating a previously submitted request, and canceling a request. Direct submission of prior authorization requests from the EHR can result in faster prior authorization decisions, reducing costs for both providers and payers and improving patient experience.

- *HL7 FHIR® CARIN Consumer Directed Payer Data Exchange (CARIN IG for Blue Button®) [Implementation Guide], Version 2.2.0—STU 2.2, Generated March 27, 2026.*

URL: *https://hl7.org/fhir/us/carin-bb/STU2.2/.*

This is a direct access link.

Summary: The CARIN IG for Blue Button Framework and Common Payer Consumer Data Set (CPCDS) provides a set of resources that payers can display to consumers via a FHIR API. The CARIN IG for Blue Button was defined by the CARIN Alliance to meet the requirements in the 2020 CMS Interoperability and Patient Access final rule for impacted payers to make available claims and encounter data via Patient Access, Provider Access, and Payer-to-Payer APIs. This IG is

[715] Health Level Seven International. Da Vinci PDex [Payer Data Exchange] Plan Net Implementation Guide. Retrieved from *https://hl7.org/fhir/us/davinci-pdex-plan-net/STU1.2/.*

primarily used to exchange financial (claims and encounter) data, with some limited associated clinical data.

• *HL7 FHIR® Da Vinci Payer Data Exchange (PDex) US Drug Formulary Implementation Guide, Version 2.1.0—STU 2.1, Generated February 26, 2025.*

URL: *https://hl7.org/fhir/us/davinci-drug-formulary/STU2.1/.*

This is a direct access link.

Summary: The PDex US Drug Formulary IG defines a FHIR interface to a health insurer's drug formulary information for patients/consumers. The primary use cases for this FHIR interface enable consumers, members, and patients to understand the costs and alternatives for drugs that have been prescribed, and to compare their drug costs across different insurance plans.

• *HL7 FHIR® Da Vinci PDex [Payer Data Exchange] Plan Net Implementation Guide, Version 1.2.0—STU 1.2, Generated February 25, 2025.*

URL: *https://hl7.org/fhir/us/davinci-pdex-plan-net/STU1.2/.*

This is a direct access link.

Summary: The PDex Plan Net IG defines a FHIR interface to access information about a health insurer's insurance plans, their associated networks, and the organizations and providers that participate in these networks. Publication of these data through a standard FHIR API will enable third parties to develop applications through which consumers and providers can query the participants in a payer's network that may provide services that address their health care needs.

• *HL7 FHIR® Da Vinci Clinical Data Exchange (CDex) IG [Implementation Guide], Version 2.1.0—STU 2.1, Generated February 11, 2025.*

URL: *https://hl7.org/fhir/us/davinci-cdex/STU2.1/.*

This is a direct access link.

Summary: The CDex IG helps implementers use FHIR-based interactions to exchange specific clinical data between providers and payers (or other providers). This IG documents the Direct Query, Task-Based, and Attachments transaction approaches for requesting and sending information. Key scenarios this IG can support include requesting and sending attachments for claims and prior authorization transactions, requesting documentation to support payer operations such as claims audits, and exchanging clinical data between referring providers.

Final Decision: We did not receive any comments on these proposals and are incorporating by reference the adopted standards we are finalizing in 45 CFR 170.299.

HL7 FHIR® Da Vinci Payer Data Exchange (PDex) Implementation Guide, Version 2.1.0—STU 2.1, also referenced in the amendatory text of this document, was approved for that location in a previously-published final rule.

XI. MedPAC Recommendations and Publicly Available Files

A. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2026 ''Report to the Congress: Medicare Payment Policy'' and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule. MedPAC recommendations for the IPPS for FY 2027 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC's website at *https://www.medpac.gov.*

B. Publicly Available Files

IPPS-related data are available on the internet for public use. The data can be found on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.* We listed the data files available in the FY 2027 IPPS/LTCH PPS proposed rule (91 FR 19751 through 19753). Commenters interested in discussing any data files used in construction of this final rule should contact Michael Treitel at (410) 786–4552.

XII. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501–3520, we are required to provide notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether an information collection should be approved by OMB, 44 U.S.C. 3506(c)(2)(A) requires that we solicit comment on the following issues:

• The need for information collection and its usefulness in carrying out the proper functions of our agency.

• The accuracy of our estimate of the information collection burden.

• The quality, utility, and clarity of the information to be collected.

• Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the proposed rule, we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs). The following ICRs are listed in the order of appearance within the preamble (see sections II. through XI. of the preamble of this final rule).

B. Collection of Information Requirements

1. ICRs for the Hospital Readmissions Reduction Program

In section V.I. of the preamble of this final rule, we discuss our finalized updates to the Hospital Readmissions Reduction Program. Specifically, in this final rule, we are adopting with modification the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate Following Sepsis Hospitalization measure beginning with an early look for the FY 2028 (applicable period of July 1, 2024 to June 30, 2026) and FY 2029 (applicable period of July 1, 2025 to June 30, 2027) program years. The measure will then be used in the Hospital Readmissions Reduction Program for payment adjustment beginning with the FY 2030 program year (applicable period of July 1, 2026 to June 30, 2028) and subsequent years. Because this measure is calculated using Medicare administrative data (Medicare Fee-for-Service Part A and Part B claims, hospital-submitted Medicare Advantage (MA) claims and MA encounter data) that are already reported to the Medicare program for payment purposes under OMB control number 0938–1197 (expiration date October 31, 2027), and MA Organization-submitted encounter data already collected by CMS under OMB control number 0938–1152 (expiration date July 31, 2027), adopting this measure will not result in any change in information collection burden.

We received no comments on these information collection burden assumptions and therefore are finalizing these assumptions without modification.

2. ICRs for the Hospital Value-Based Purchasing Program

In section V.J. of the preamble of this final rule, we discuss our finalized updates to the Hospital Value-Based Purchasing Program. Specifically, we are modifying the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Myocardial Infarction Hospitalization, Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Heart Failure Hospitalization, Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization, Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Chronic Obstructive Pulmonary Disease Hospitalization, and Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Coronary Artery Bypass Graft Surgery measures beginning with the July 1, 2028—June 30, 2030 performance period, associated with the FY 2032 payment determination. The finalized modifications include adding Medicare Advantage beneficiaries into the patient cohorts and modifying the applicable performance period from a 3-year period to a 2-year period.

The five measures we are modifying currently use data that are collected using Medicare Fee-For-Service claims that hospitals are already submitting to the Medicare program for payment purposes under OMB control number 0938–1197 (expiration date October 31, 2027); therefore, there is no additional information collection burden regarding the modification of the applicable performance period. We also assume no change in burden associated with the modification to add Medicare Advantage beneficiaries into the measure cohorts. As finalized, the measure will use Medicare Advantage encounter data already collected by CMS under OMB control number 0938–1152 (expiration date July 31, 2027) to determine cohort inclusion criteria, complications outcomes, and present on admission comorbidities. We discuss the burden associated with the adoption of these measures under the Hospital Inpatient Quality Reporting Program in section XII.B.4.c. of the preamble of this final rule.

We received no comments on these information collection burden assumptions and therefore are finalizing these assumptions without modification.

3. ICRs for the Hospital-Acquired Condition Reduction Program

OMB has currently approved 28,840 hours of burden and approximately $1.5 million under OMB control number 0938–1352 (expiration date February 28, 2029), accounting for information collection burden experienced by 400 subsection (d) hospitals selected for validation each year in the Hospital-Acquired Condition Reduction Program. We did not finalize any new policies or updates for the Hospital-Acquired Condition Reduction Program in this final rule.

4. ICRs for the Hospital Inpatient Quality Reporting Program

a. Background

Data collection for the Hospital Inpatient Quality Reporting Program is associated with OMB control number 0938–1022 (expiration date December 31, 2028), under which OMB has currently approved 1,351,632 hours of burden at a cost of approximately $73.7 million, accounting for information collection burden experienced by approximately 3,050 IPPS hospitals and 1,500 non-IPPS hospitals for the FY 2028 payment determination. In this final rule, we describe the burden changes regarding collection of information, under OMB control number 0938–1022.

For more detailed information on our finalized policies for the Hospital Inpatient Quality Reporting Program, we refer readers to sections IX.B. and IX.C. of the preamble of this final rule. We are adopting three new measures: (1) the Advance Care Planning electronic clinical quality measures (eCQM) beginning with the CY 2028 reporting period/FY 2030 payment determination; (2) the Hospital Harm-Postoperative Venous Thromboembolism (VTE) eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination; and (3) the Excess Days in Acute Care After Hospitalization for Diabetes measure beginning with the July 1, 2025 through June 30, 2027 performance period, associated with the FY 2029 payment determination. We are also adopting five mortality measures for the July 1, 2024 through June 30, 2026 performance period, associated with the FY 2028 payment determination, through the July 1, 2027 through June 30, 2029 performance period, associated with the FY 2031 payment determination: (1) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Myocardial Infarction (AMI) Hospitalization measure; (2) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Heart Failure (HF) Hospitalization measure; (3) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization measure; (4) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization measure; and (5) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Coronary Artery Bypass Graft (CABG) Surgery measure. We are also modifying three measures beginning with the July 1, 2024 through June 30, 2026 performance period, associated with the FY 2028 payment determination: (1) the Excess Days in Acute Care after Hospitalization for AMI measure; (2) the Excess Days in Acute Care after Hospitalization for HF measure; and (3) the Excess Days in Acute Care after Hospitalization for Pneumonia measure. We are additionally removing three self-selected eCQMs beginning with the CY 2028 reporting period/FY 2030 payment determination: (1) the VTE Prophylaxis eCQM; (2) the Intensive Care Unit VTE Prophylaxis eCQM; and (3) Discharged on Antithrombotic Therapy eCQM. Lastly, we are updating the reporting and submission requirements for the Maternal Morbidity Structural measure beginning with the CY 2026 reporting period/FY 2028 payment determination. None of these measure adoptions, removals, or modifications will affect information collection burden.

We are modifying the reporting and submission requirements for eCQMs to require mandatory reporting of the Malnutrition Care Score eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination, and to require mandatory reporting of Hospital Harm eCQMs after two years of self-selected reporting beginning with the CY 2028 reporting period/FY 2030 payment determination. We discuss the impacts on information collection burden associated with these policies later in this section.

Using the most recent data from the BLS for medical records specialists (SOC 29–2072), entitled, the May 2024 Occupational Employment and Wage Estimates, we are finalizing the use of the median hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $27.53.[716] We believe the industry of ''general medical and surgical hospitals'' is more specific to this program compared to other industries under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead,

[716] U.S. Bureau of Labor Statistics. Occupational Employment and Wage Statistics: General Medical and Surgical Hospitals, Medical Records Specialists. Accessed December 29, 2025. Available at: *https://www.bls.gov/oes/special-requests/oesm24in4.zip.*

including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.53 × 2 = $55.06) to estimate total cost is a reasonably accurate estimation method. Unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of $55.06 per hour throughout the discussion in this section of this rule for the Hospital Inpatient Quality Reporting program. As noted in the FY 2027 IPPS/LTCH PPS proposed rule, although BLS released updated wage rates after the proposed rule appeared in the **Federal Register** and before this final rule will appear in the **Federal Register**, we are maintaining the wage rates used in the proposed rule (91 FR 19754).

In the FY 2026 IPPS/LTCH PPS final rule (90 FR 37192), our burden estimates were based on an assumption of approximately 3,050 IPPS hospitals. For this final rule, based on data from the FY 2026 Hospital Inpatient Quality Reporting Program payment determination, we are maintaining that assumption and estimate that approximately 3,050 IPPS hospitals will report data to the Hospital Inpatient Quality Reporting Program for the CY 2027 reporting period.

b. Information Collection Burden Estimate for the Adoption of Two eCQMs

In sections IX.B.1. and IX.C.3.b. of the preamble of this final rule, we are adopting the Advance Care Planning eCQM and Hospital Harm—Postoperative VTE eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination, respectively, to add to the set of eCQMs from which hospitals may self-select to meet their eCQM reporting requirements. The adoption of these two eCQMs will not affect the information collection burden of submitting eCQMs under the Hospital Inpatient Quality Reporting Program as current policy under OMB control number 0938–1022 requires hospitals to submit data for three self-selected and eight mandatory eCQMs from the eCQM measure set, for a total of 11 eCQMs, for the CY 2028 reporting period/FY 2030 payment determination and subsequent years. In other words, although these new eCQMs will be added to the eCQM measure set, hospitals will not be required to report more than a total of 11 eCQMs for the FY 2030 payment determination and subsequent years. In section IX.C.8.c.(3). of the preamble of this final rule, we discuss the burden associated with modifying eCQM reporting and submission requirements to require mandatory reporting of Hospital Harm eCQMs after two years of self-selected reporting beginning with the CY 2028 reporting period/FY 2030 payment determination.

c. Information Collection Burden Estimate for the Adoption of Six Claims-Based Measures

In sections IX.B.2. and IX.C.3.a. of the preamble of this final rule, we are adopting six claims-based measures. In section IX.C.3.a. of the preamble of this final rule, we are adopting one new claims-based measure: (1) Excess Days in Acute Care After Hospitalization for Diabetes measure beginning with the July 1, 2025 through June 30, 2027 performance period, associated with the FY 2029 payment determination. In section IX.B.2. of the preamble of this final rule, we are adopting five mortality measures beginning with the July 1, 2024 through June 30, 2026 performance period, associated with the FY 2028 payment determination, through the July 1, 2027 through June 30, 2029 performance period, associated with the FY 2031 payment determination: (1) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following AMI Hospitalization measure; (2) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following HF Hospitalization measure; (3) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization measure; (4) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following COPD Hospitalization measure; and (5) Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following CABG Surgery measure.

Because these measures are calculated using Medicare Fee-For-Service claims that are already reported to the Medicare program for payment purposes under OMB control number 0938–1197 (expiration date October 31, 2027) and Medicare Advantage encounter data already collected by CMS under OMB control number 0938–1152 (expiration date July 31, 2027) to determine cohort inclusion criteria, complications outcomes, and present on admission comorbidities, adoption of these measures will not result in a change in burden associated with OMB control number 0938–1022.

d. Information Collection Burden Estimate for the Modification of Three Excess Days in Acute Care After Hospitalization Measures

In section IX.C.5. of the preamble of this final rule, we are modifying three measures beginning with the July 1, 2024 through June 30, 2026 performance period, associated with the FY 2028 payment determination: (1) the Excess Days in Acute Care after Hospitalization for AMI measure; (2) the Excess Days in Acute Care after Hospitalization for HF measure; and (3) the Excess Days in Acute Care after Hospitalization for Pneumonia measure.

This modification will include adding Medicare Advantage beneficiaries to the current cohort of patients and shortening the performance period from 3 years to 2 years. Because these measures will be calculated using Medicare Fee-For-Service claims that are already reported to the Medicare program for payment purposes under OMB control number 0938–1197 and Medicare Advantage encounter data already collected by CMS under OMB control number 0938–1152 to determine cohort inclusion criteria, complications outcomes, and present on admission comorbidities, modifying these measures will not result in a change in burden associated with OMB control number 0938–1022.

e. Information Collection Burden Estimate for the Removal of Three eCQMs

In section IX.C.4. of the preamble of this final rule, we are removing three eCQMs beginning with the CY 2028 reporting period/FY 2030 payment determination: (1) the VTE Prophylaxis eCQM; (2) the Intensive Care Unit VTE eCQM; and (3) Discharged on Antithrombotic Therapy eCQM. Because reporting these eCQMs is not mandatory, but they are instead available in the Hospital Inpatient Quality Reporting Program eCQM measure set for hospitals to self-select to report, removing these eCQMs will not result in a change in burden associated with OMB control number 0938–1022.

f. Information Collection Burden Estimate for the Modification to the Reporting and Submission Requirements for the Maternal Morbidity Structural Measure

In section IX.C.8.d.(1). of the preamble of this final rule, we are modifying the reporting and submission requirements for the Maternal Morbidity Structural measure beginning with the CY 2026 reporting period/FY 2028 payment determination. We note that in

the FY 2027 IPPS/LTCH PPS proposed rule, we erroneously stated that we were proposing to modify this measure beginning with the CY 2027 reporting period/FY 2029 payment determination (91 FR 19755). In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45361 through 45365), we adopted the Maternal Morbidity Structural measure, requiring hospitals to attest ''yes'', ''no'', or ''not applicable'' to one two-part question. The currently approved information collection burden for the Maternal Morbidity Structural measure under OMB control number 0938–1022 is five minutes (0.083 hours) per IPPS hospital annually. We are adding a sub-question to collect the name of the Statewide and/or National Perinatal Quality Improvement Collaborative Program in which the hospital participates. We believe that the currently approved burden of five minutes is adequate for hospitals to both attest to the current two-part question and answer the adopted sub-question and therefore are not finalizing any changes to the currently approved burden estimate.

g. Information Collection Burden Estimate for the Changes to eCQM Reporting and Submission Requirements

In section IX.C.8.c.(2). of the preamble of this final rule, we are modifying the reporting and submission requirements for the Malnutrition Care Score eCQM to require mandatory reporting beginning with the CY 2028 reporting period/FY 2030 payment determination. The Malnutrition Care Score eCQM (previously known as Global Malnutrition Composite Score eCQM) was initially adopted in the FY 2023 IPPS/LTCH PPS final rule into the Hospital Inpatient Quality Reporting Program measure set from which a hospital could self-select beginning with the CY 2024 reporting period/FY 2026 payment determination (87 FR 49239 through 49246).

In section IX.C.8.c.(3). of the preamble of this final rule, we are modifying the reporting and submission requirements for Hospital Harm eCQMs to require mandatory reporting after 2 years of self-selected reporting, beginning with the CY 2028 reporting period/FY 2030 payment determination. In the currently approved eCQM measure set, there are two Hospital Harm eCQMs in the Hospital Inpatient Quality Reporting Program measure set from which a hospital could self-select that have not previously been finalized to become mandatory already: Hospital Harm-Falls with Injury and Hospital Harm-Postoperative Respiratory Failure. Under this policy, these two measures will begin mandatory reporting with the FY 2030 payment determination, given they were adopted in the FY 2025 IPPS/LTCH PPS final rule for self-selection eCQMs beginning with the FY 2028 payment determination (89 FR 69534 through 69545). Additionally, as discussed in section IX.C.3.b. of the preamble of this final rule, we are adopting the Hospital Harm-Postoperative VTE eCQM as a self-selected eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination. This measure will begin mandatory reporting with the FY 2032 payment determination.

Current Hospital Inpatient Quality Reporting Program policy under OMB control number 0938–1022 requires hospitals to submit data for three self-selected and eight mandatory eCQMs, for a total of 11 eCQMs, for the CY 2028 reporting period/FY 2030 payment determination and subsequent years. The currently approved information collection burden per reported eCQM under OMB control number 0938–1022 is 10 minutes (0.167 hours) per hospital per quarter or 40 minutes (0.67 hours) per hospital annually. For the CY 2028 reporting period/FY 2030 payment determination and CY 2029 reporting period/FY 2031 payment determination, we estimate the reporting modifications to the Malnutrition Care Score and two Hospital Harm eCQMs will result in a total increase of 120 minutes (2 hours) per hospital annually (10 minutes/eCQM × 3 eCQMs × 4 quarters) or a total annual burden increase across all 3,050 IPPS hospitals of 6,100 hours (2 hours × 3,050 IPPS hospitals) at a cost of $335,866 (6,100 hours × $55.06). Beginning with the CY 2030 reporting period/FY 2032 payment determination, when the Hospital Harm-Postoperative VTE eCQM becomes a mandatory eCQM, we estimate the reporting modifications will result in a total increase of 160 minutes (2.67 hours) per hospital annually (10 minutes/eCQM × 4 eCQMs × 4 quarters) or a total annual burden increase across all 3,050 IPPS hospitals of 8,133 hours (2.67 hours × 3,050 IPPS hospitals) at a cost of $447,803 (8,133 hours × $55.06).

h. Summary of Information Collection Burden Estimates for the Hospital Inpatient Quality Reporting Program

In summary, under OMB control number 0938–1022 (expiration date December 31, 2028), we estimate that the policies finalized in this final rule will result in an increase in information collection burden of 8,133 hours at a cost of $447,803. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1022. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.K. of Appendix A of this final rule).

TABLE XII.B-01: SUMMARY OF HOSPITAL INPATIENT QUALITY REPORTING PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2028 AND CY 2029 REPORTING PERIODS

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1022 for the CY 2028 and CY 2029 Reporting Periods								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across Hospitals	Previously Finalized Annual Burden (in hours) Across Hospitals	Net Difference in Annual Burden Hours
Modification of Malnutrition Care Score eCQM Reporting	10	4	3,050	1	0.67	24,400	22,367	2,033
Modification of Hospital Harm eCQMs Reporting	20	4	3,050	1	1.33	26,433	22,367	4,067
	Total Change in Information Collection Burden Hours: 6,100							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (6,100) = **$335,866**							

TABLE XII.B-02: SUMMARY OF HOSPITAL INPATIENT QUALITY REPORTING PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2030 REPORTING PERIOD

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1022 for the CY 2028 and CY 2029 Reporting Periods								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across Hospitals	Previously Finalized Annual Burden (in hours) Across Hospitals	Net Difference in Annual Burden Hours
Modification of Malnutrition Care Score eCQM Reporting	10	4	3,050	1	0.67	24,400	22,367	2,033
Modification of Hospital Harm eCQMs Reporting	30	4	3,050	1	2.0	28,467	22,367	6,100
	Total Change in Information Collection Burden Hours: 8,133							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (8,133) = **$447,803**							

We received no comments on these information collection burden estimates and therefore are finalizing the burden estimates associated with these provisions without modification.

5. ICRs for the PPS-Exempt Cancer Hospital (PCH) Quality Reporting Program

a. Background

OMB has currently approved a total of 2 hours of burden at a cost of $111 under OMB control number 0938–1175 (expiration date January 31, 2029), accounting for the annual information collection requirements for 11 PCHs for the PCH Quality Reporting Program. In this final rule, we describe the burden changes regarding collection of information under OMB control number 0938–1175 for PCHs.

For more detailed information on our finalized policies for the PCH Quality Reporting Program, we refer readers to sections IX.B. and IX.D. of this final rule. We are adopting two measures with voluntary reporting for the CY 2028 reporting period/FY 2030 program year followed by mandatory reporting beginning with the CY 2029 reporting period/FY 2031 program year: (1) the Advance Care Planning electronic clinical quality measure (eCQM); and (2) the Malnutrition Care Score eCQM. This is a modification from the FY 2027 IPPS/LTCH PPS proposed rule, in which we proposed to adopt both measures with mandatory reporting beginning with the CY 2028 reporting period/FY 2030 program year (91 FR 19564 through 19568 and 91 FR 19605 through 19608). We are also removing the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) measure beginning with the CY 2026 reporting period/FY 2028 program year. We discuss the impacts on information collection burden associated with these policies later in this section.

Using the most recent data from the BLS for medical records specialists (SOC 29–2072), entitled, the May 2024 Occupational Employment and Wage Estimates, we are finalizing the use of the median hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $27.53.[717] Because we are estimating the burden specific to PCHs, as previously assumed in the FY 2026 IPPS/LTCH PPS final rule, we believe the industry of ''general medical and surgical hospitals'' is more specific to this program compared to other industries under medical records specialists, such as ''office of physicians'' or ''nursing care facilities'' (90 FR 37194). We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with the FY 2026 IPPS/LTCH PPS final rule and previous years (90 FR 37194). This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.53 × 2 = $55.06) to estimate total cost is a reasonably accurate estimation method. Unless otherwise specified, we will calculate cost burden to PCHs using a wage plus benefits estimate of $55.06 per hour throughout the discussion in this section of this rule for the PCH Quality Reporting Program. In order to maintain consistency to the extent possible between proposed and final rules, as noted in the FY 2027 IPPS/LTCH PPS proposed rule, although BLS released updated wage rates after the proposed rule appeared in the **Federal Register** and before this final rule will appear in the **Federal Register**, we are maintaining the wage rates used in the proposed rule (91 FR 19757).

[717] U.S. Bureau of Labor Statistics. Occupational Employment and Wage Statistics: General Medical and Surgical Hospitals, Medical Records Specialists. Available at: *https://www.bls.gov/oes/special-requests/oesm24in4.zip.*

b. Information Collection Burden Estimate for the Adoption of Two eCQMs

In sections IX.B.1. and IX.D.2.a. of this final rule, we are adopting the Advance Care Planning and Malnutrition Care Score eCQMs, respectively, with voluntary reporting for the CY 2028 reporting period/FY 2030 program year, followed by mandatory reporting beginning with the CY 2029 reporting period/FY 2031 program year. This is a modification from the FY 2027 IPPS/LTCH PPS proposed rule, in which we proposed to adopt both measures with mandatory reporting beginning with the CY 2028 reporting period/FY 2030 program year (91 FR 19564 through 19568 and 91 FR 19605 through 19608). For voluntary reporting in the CY 2028 reporting period/FY 2030 program year, we assume 6 PCHs (50 percent) will report each eCQM. Similar to the currently approved information collection burden estimates for submission of eCQMs for the Hospital Inpatient Quality Reporting Program under OMB control number 0938–1022, we assume a Medical Records Specialist will require 10 minutes (0.167 hours) per eCQM to submit the data required per quarter for each PCH, or 40 minutes (0.67 hours) annually. For both eCQMs in the CY 2028 reporting period/FY 2030 program year, we estimate a total of 80 minutes (1.33 hours) annually per PCH, or 8 hours across 6 PCHs (1.33 hours × 6 PCHs) at a cost of $440 (8 hours × $55.06). For both eCQMs beginning with the CY 2029 reporting period/FY 2031 program year, we estimate an annual burden of 15 hours across all PCHs (1.33

hours × 11 PCHs) at a cost of $826 (15 hours × $55.06).

c. Information Collection Burden Estimate for the Removal of the COVID–19 Vaccination Coverage Among HCP Measure

In section IX.D.3.a. of this final rule, we are removing the COVID–19 Vaccination Coverage among HCP measure beginning with the CY 2026 reporting period/FY 2028 program year. This measure was previously adopted in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45428 through 45434), and the associated information collection is approved under OMB control number 0920–1317 [718] (expiration date January 31, 2028).

PCHs have the option to manually enter data directly into the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network web-based application or by uploading a CSV file. CDC estimates that each PCH requires between 40 minutes (0.67 hours) to upload a CSV file and 45 minutes (0.75 hours) monthly to enter the data manually. CDC assumes that manual data entry will be completed by a Microbiologist with a wage rate of $58.60/hour and uploading of a CSV file will be completed by an Information Technologist with a wage rate of $56.50/hour. Therefore, we estimate that this removal will result in a decrease in burden of between 88 hours (0.67 hours × 12 months × 11 PCHs) at a cost of $4,972 (88 hours × $56.50/hour) and 99 hours (0.75 hours × 12 months × 11 PCHs) at a cost of $5,801 (99 hours × $58.60/hour) annually across all 11 PCHs under OMB control number 0920–1317.

d. Summary of Information Collection Burden Estimates for the PCH Quality Reporting Program

In summary, under OMB control number 0938–1175 (expiration date January 31, 2029), we estimate that the policies finalized in this final rule for the PCH Quality Reporting Program will result in an increase in information collection burden of 15 hours and $826. We also estimate that the policies finalized in this final rule for the PCH Quality Reporting Program will result in a decrease in information collection burden between 88 hours at a savings of $4,972 and 99 hours at a savings of $5,801 under OMB control number 0920–1317. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1175. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.L. of Appendix A of this final rule).

We did not receive any public comments regarding these information collection burden estimates.

TABLE XII.B-03: SUMMARY OF PCH QUALITY REPORTING PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2028 REPORTING PERIOD UNDER OMB CONTROL NUMBER 0938-1175

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1175 for the CY 2028 Reporting Period								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across PCHs	Previously Finalized Annual Burden (in hours) Across PCHs	Net Difference in Annual Burden Hours
Adoption of Advance Care Planning eCQM	10	4	6	1	0.67	4	0	+4
Adoption of Malnutrition Care Score eCQM	10	4	6	1	0.67	4	0	+4
	Total Change in Information Collection Burden Hours: +8							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (+8) = **$440**							

TABLE XII.B-04: SUMMARY OF PCH QUALITY REPORTING PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2029 REPORTING PERIOD UNDER OMB CONTROL NUMBER 0938-1175

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1175 for the CY 2029 Reporting Period								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across PCHs	Previously Finalized Annual Burden (in hours) Across PCHs	Net Difference in Annual Burden Hours
Adoption of Advance Care Planning eCQM	10	4	11	1	0.67	7	0	+7
Adoption of Malnutrition Care Score eCQM	10	4	11	1	0.67	7	0	+7
	Total Change in Information Collection Burden Hours: +15*							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (+15) = **$826**							

* Due to rounding, total change in burden differs from the sum of burden for each proposal.

TABLE XII.B-05: SUMMARY OF PCH QUALITY REPORTING PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2026 REPORTING PERIOD UNDER OMB CONTROL NUMBER 0920-1317

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0920-1317 for the CY 2026 Reporting Period								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across PCHs	Previously Finalized Annual Burden (in hours) Across PCHs	Net Difference in Annual Burden Hours
Removal of COVID-19 Vaccination Coverage Among HCP Measure	-45*	12	11	1	-9	0	99	-99
	Total Change in Information Collection Burden Hours: -99*							
	Total Cost Estimate: Updated Hourly Wage ($58.60) x Change in Burden Hours (-99) = **-$5,801**							

*For purposes of this table, we state the maximum possible burden across all PCHs.

6. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

As required by section 1886(m)(5)(A)(i) of the Act, an LTCH that does not meet the requirements of the LTCH QRP for a fiscal year will receive a 2-percentage point reduction to its otherwise applicable annual update for that fiscal year. We estimated that the burden associated with the LTCH QRP is the time and effort associated with complying with the requirements of the LTCH QRP.

In section IX.E.3. of this final rule, we finalized our proposal to remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) (HCP COVID–19 Vaccine) measure. We also finalized our proposal, in section IX.E.4 of this final rule, to remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date (Patient/Resident COVID–19 Vaccine) measure. We also finalized our proposal that both measure removals will be effective beginning with the FY 2028 LTCH QRP.

a. ICRs for Removal of the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) Measure Beginning with the FY 2028 LTCH QRP

In section IX.E.3. of this final rule, we finalized our proposal to remove the (HCP COVID–19 Vaccine measure beginning with the FY 2028 LTCH QRP. We note that the CDC would account for the burden associated with the HCP COVID–19 Vaccine measure collection under OMB control number 0920–1317 (expiration 01/31/2028). Currently, the CDC does not estimate burden for COVID–19 vaccination reporting under PRA package OMB control number 0920–1317 due to a waiver under section 321 of the National Childhood Vaccine Injury Act of 1986 (Pub. L. 99–660, enacted on November 14, 1986 (NCVIA)).[719] However, CMS is providing an estimate of reduction in burden and cost for LTCHs here. Consistent with the CDC's experience of collecting data using the NHSN, we estimate the removal of this measure will result in a reduction of 1 hour per month to collect data for the HCP COVID–19 Vaccine measure and enter it into NHSN. We believe that this data would be entered by a medical secretary or administrative assistant. However, LTCHs determine the staffing resources necessary.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages from the BLS May 2024 Occupational Employment and Wage Estimates.[720] To account for overhead and fringe benefits, we have doubled the hourly wage. These amounts are detailed in table XII.B–06.

TABLE XII.B-05: U.S. BUREAU OF LABOR AND STATISTICS' MAY 2024 OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation Title	Occupation Code	Median Hourly Wage ($/hr)	Other Indirect Costs and Fringe Benefit ($/hr)	Adjusted Hourly Wage ($/hr)
Administrative Assistants	43-6013	$21.46	$21.46	$42.92

We estimated that the removal of the HCP COVID–19 measure from the LTCH QRP will result in a reduction of 12 hours per LTCH per year. Using FY 2025 data, we estimated a total of 318 LTCHS annually for a decrease of 3,816 hours (12 hours × 318 LTCHS) for all LTCHs. Given an estimated $42.92 hourly wage for administrative assistants, we estimate a decrease of $515.04 per LTCH (12 hours × $42.92), or a decrease of $163,782.72 for all LTCHs annually ($515.04 × 318 LTCHs). The total revised annual cost increase beginning with the FY 2028 LTCH QRP related to this information collection is summarized in Table XII.B–06.

[719] Section 321 of the NCVIA provides the PRA waiver for activities that come under the NCVIA, including those in the NCVIA at section 2102 of the Public Health Service Act (*https://www.govinfo.gov/content/pkg/USCODE-2023-title42/pdf/USCODE-2023-title42-chap6A-subchapXIX-part1-sec300aa-2.pdf*). Section 321 is not codified in the U.S. Code but can be found in a note *(https://www.govinfo.gov/content/pkg/USCODE-2023-title42/pdf/USCODE-2023-title42-chap6A-subchapXIX-part1-sec300aa-1.pdf*).

[720] U.S. Bureau of Labor Statistics' (BLS) May 2024 Occupational Employment and Wage Estimates. *https://www.bls.gov/oes/special-requests/oesm24nat.zip*

TABLE XII.B-06: ESTIMATED BURDEN ASSOCIATED WITH COLLECTION OF THE HCP COVID-19 VACCINE MEASURE BEGINNING WITH THE FY 2028 LTCH QRP

Requirement	Per LTCH		All LTCHs	
	Change in Annual Burden Hours	Change in Annual Cost	Change in Annual Burden Hours	Change in Annual Cost
Proposed Removal of the HCP COVID-19 Vaccine Measure	-12.00	-$515.04	-3,960	$163,782.72

b. ICRs for Proposed Removal of the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date Measure Beginning with the FY 2028 LTCH QRP

In section IX.E.4. of this final rule, we finalized our proposal to remove Patient/Resident COVID–19 Vaccine measure, beginning with the FY 2028 LTCH QRP. We believe that data collection would be completed equally by a Registered Nurse (RN) and a Licensed Practical and Licensed Vocational Nurse (LPN/LVN). However, LTCHs determine the staffing resources necessary. In section IX.E.4 of this final rule we also finalize our proposal to remove the item (O0350) from the LCDS, currently approved under OMB control number 0938–1163 (Expiration date: 10/31/2027). The following is a discussion of this information collection.

The net result of removing the related Patient/Resident COVID–19 Vaccine Status measure and the LCDS item used to collect the measure data (O0350. Patient COVID–19 vaccination is up to date) is a decrease of 0.3 minutes or 0.005 hour of clinical staff time. We estimated that the burden and cost for LTCHs for complying with requirements of the FY 2028 LTCH QRP would decrease under our proposal.

For the purposes of calculating the costs associated with the collection of information requirements, we obtained median hourly wages for these staff from the U.S. Bureau of Labor Statistics' (BLS) May 2024 Occupational Employment and Wage Estimates.[721] To account for other indirect costs and fringe benefits, we doubled the hourly wage. These amounts are detailed in Table G3. We established a composite cost estimate using our adjusted wage estimates. The composite estimate of $78.16/hr was calculated by weighting each adjusted hourly wage equally (that is, 50 percent) [($61.80/hr × 0.5) plus ($92.32/hr × 0.5) = $76.57].

TABLE XII.B-07: U.S. BUREAU OF LABOR AND STATISTICS' MAY 2024 OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation Title	Occupation Code	Median Hourly Wage ($/hr)	Other Indirect Costs and Fringe Benefit ($/hr)	Adjusted Hourly Wage ($/hr)
Licensed Practical and Licensed Vocational Nurse (LPN/LVN)	29-2061	$29.97	$29.97	$60.81
Registered Nurse (RN)	29-1141	$45.00	$45.00	$92.32

Using FY 2025 data, we estimated an annual total of 102,590 discharges from 318 LTCHs for an annual decrease of 512.95 hours (102,590 × 0.005 hour) for all LTCHs. Given 0.005 hours at $76.57 per hour, we estimated the total cost will decrease annually by $39,276.58 for all LTCHs ($76.57 × 512.95 hours). For each LTCH, we estimated an annual burden decrease of 1.61 hours (512.95 hours/318 LTCHs) and an annual decreased cost of $123.51. The total estimated annual burden decrease associated with the removal of the Patient/Resident COVID–19 Vaccine Status item (O0350) on discharge beginning with the FY LTCH QRP is summarized in Table XII.B–08.

TABLE XII.B-06: ESTIMATED BURDEN ASSOCIATED WITH COLLECTION OF THE HCP COVID-19 VACCINE MEASURE BEGINNING WITH THE FY 2028 LTCH QRP

Requirement	Per LTCH		All LTCHs	
	Change in Annual Burden Hours	Change in Annual Cost	Change in Annual Burden Hours	Change in Annual Cost
Proposed Removal of the HCP COVID-19 Vaccine Measure	-12.00	-$515.04	-3,960	$163,782.72

We invited public comments on the proposed modification to information collection requirements for LTCH QRP beginning with the FY 2028 LTCH QRP.

We received comments on the proposed modification to information collection requirements for the LTCH QRP, related to the removal of the HCP COVID–19 Vaccine and Patient/Resident COVID–19 Vaccine measures, and have summarized those in sections IX.E.3. and IX.E.4, respectively. After careful consideration of the comments,

[721] U.S. Bureau of Labor Statistics. Occupational Employment and Wage Statistics. May 2024. *https://www.bls.gov/oes/special-requests/oesm24nat.zip.*

we are finalizing these proposals without modification.

7. ICRs for the Medicare Promoting Interoperability Program

a. Background

OMB has currently approved 30,151 hours of burden at a cost of $1,669,707 under OMB control number 0938–1278 (expiration date March 31, 2029), accounting for information collection burden experienced by approximately 3,150 eligible hospitals and 1,400 Critical Access Hospitals (CAHs) for the electronic health record (EHR) reporting period in CY 2026. The collection of information burden analysis in this final rule focuses on all eligible hospitals and CAHs that could participate in the Medicare Promoting Interoperability Program and report on objectives, measures, and electronic clinical quality measures (eCQMs) under the Medicare Promoting Interoperability Program for the EHR reporting periods in CY 2026 and CY 2027.

For more detailed information on our policies for the Medicare Promoting Interoperability Program, we refer readers to section IX.B. and IX.F. of the preamble of this final rule. For the Medicare Promoting Interoperability Program, we are adopting three new measures: (1) the Advance Care Planning eCQM beginning with the CY 2028 reporting period; (2) the Hospital Harm-Postoperative Venous Thromboembolism (VTE) eCQM beginning with the CY 2028 reporting period; and (3) the Unique Device Identifiers for Implantable Medical Devices measure beginning with the EHR reporting period in CY 2027. Additionally, we are removing two attestations and five measures: (1) the Office of the National Coordinator for Health Information Technology (ONC) Direct Review Attestation beginning with the EHR reporting period in CY 2026; (2) the optional ONC-Authorized Certification Body (ONC–ACB) Surveillance Attestation beginning with the EHR reporting period in CY 2026; (3) the Support Electronic Referral Loops by Sending Health Information measure beginning with the EHR reporting period in CY 2029; (4) the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure beginning with the EHR reporting period in CY 2029; (5) the VTE Prophylaxis eCQM beginning with the CY 2028 reporting period; (6) the Intensive Care Unit VTE Prophylaxis eCQM beginning with the CY 2028 reporting period; and (7) the Discharged on Antithrombotic Therapy eCQM beginning with the CY 2028 reporting period. We are also updating the Electronic Prior Authorization measure by modifying the measure description text, making the measure optional for the EHR reporting period in CY 2027 and required beginning with the EHR reporting period in CY 2028, and modifying the ONC health IT certification criteria eligible hospitals and CAHs must use to attest ''Yes'' beginning with the EHR reporting period in CY 2027.

We are modifying the Malnutrition Care Score eCQM to require mandatory reporting beginning with the CY 2028 reporting period. For those Hospital Harm eCQMs that are not already required to be reported (including any we may propose to adopt in the future), we are also modifying the eCQM reporting and submission requirements for Hospital Harm eCQMs to require mandatory reporting after 2 years of self-selected reporting beginning with the CY 2028 reporting period. We will discuss the impacts on information collection burden associated with these policies later in this section.

We are also revising the definition of CEHRT at 42 CFR 495.4 for the Medicare Promoting Interoperability Program so the definition will be consistent with proposed modifications to ONC health IT certification criteria in the HTI–5 proposed rule. Because the HTI–5 final rule will be issued after this final rule is published in the **Federal Register**, if the ONC health IT certification criteria-related proposals that ONC finalizes in the HTI–5 final rule are different from what was proposed in the HTI–5 proposed rule, we will assess those finalized policies and consider necessary revisions in future rulemaking. There is no information collection burden associated with the finalized revision to the definition of CEHRT.

Using the most recent data from the BLS for medical records specialists (SOC 29–2072), entitled, the May 2024 Occupational Employment and Wage Estimates, we finalized the use of the median hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $27.53.[722] We believe the industry of ''general medical and surgical hospitals'' is more specific to this program compared to other industries under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($27.53 × 2 = $55.06) to estimate total cost is a reasonably accurate estimation method. Unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of $55.06 per hour throughout the discussion in this section of this rule for the Medicare Promoting Interoperability Program. As noted in the FY 2027 IPPS/LTCH PPS proposed rule, although BLS released updated wage rates after the proposed rule appeared in the **Federal Register** and before this final rule will appear in the **Federal Register**, we are maintaining the wage rates used in the proposed rule (91 FR 19761).

In the FY 2026 IPPS/LTCH PPS final rule (90 FR 37199), our burden estimates were based on an assumption of 4,550 eligible hospitals and CAHs. For this final rule, based on data from the EHR reporting period in CY 2024, we continue to estimate approximately 3,150 eligible hospitals and 1,400 CAHs will be eligible to report data to the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2027, for a total number of 4,550 respondents.

b. Information Collection Burden for the Adoption of Two eCQMs

In sections IX.B.1. and IX.F.9.b. of the preamble of this final rule, we are adopting two new eCQMs beginning with the CY 2028 reporting period, respectively: (1) the Advance Care Planning eCQM and (2) the Hospital Harm-Postoperative VTE eCQM, to add to the set of eCQMs from which eligible hospitals and CAHs may self-select to meet their eCQM reporting requirements. The adoption of these two eCQMs will not affect the information collection burden of submitting eCQMs under the Medicare Promoting Interoperability Program as currently estimated under OMB control number 0938–1022, which accounts for eligible hospitals and CAHs submitting data for three self-selected and eight mandatory eCQMs, for a total of 11 eCQMs, from the eCQM measure set for the CY 2028 reporting period and subsequent years. In other words, although these two eCQMs will be added to the eCQM measure set, eligible hospitals and CAHs are not currently required to report more than a total of 11 eCQMs for

[722] U.S. Bureau of Labor Statistics. Occupational Employment and Wage Statistics: General Medical and Surgical Hospitals, Medical Records Specialists. Accessed December 29, 2025. Available at: *https://www.bls.gov/oes/special-requests/oesm24in4.zip.*

the CY 2028 reporting period and subsequent years. However, in section XII.B.7.h, we discuss the burden associated with modifying eCQM reporting and submission requirements to require mandatory reporting for the Malnutrition Care Score and all Hospital Harm eCQMs after two years of self-selected reporting beginning with the CY 2028 reporting period, resulting in eligible hospitals and CAHs being required to report a total of 14 eCQMs for the CY 2028 and CY 2029 reporting periods, and 15 eCQMs beginning with the CY 2030 reporting period.

c. Information Collection Burden Estimate for the Adoption of the Unique Device Identifiers for Implantable Medical Devices Measure

In section IX.F.6. of the preamble of this final rule, we are adopting the Unique Device Identifiers for Implantable Medical Devices measure under the Public Health and Clinical Data Exchange objective beginning with the EHR reporting period in CY 2027. For this attestation-based measure, eligible hospitals and CAHs will be required to report a ''Yes'' response, a ''No'' response, or claim an applicable exclusion for which they are eligible. Like other attestations approved for the Public Health and Clinical Data Exchange objective under OMB control number 0938–1278, we assume eligible hospitals and CAHs require 30 seconds (0.5 minutes) to attest to this measure. Therefore, we estimate a total annual burden increase across all 4,550 eligible hospitals and CAHs of 38 hours (0.0083 hours × 4,550 eligible hospitals and CAHs) at a cost of $2,092 (38 hours × $55.06). As stated in section IX.F.6.b. of the preamble of this final rule, we note that the ONC health IT certification criterion at 45 CFR 170.315(g)(10) can support fulfillment of the measure. Eligible hospitals and CAHs are already required to record and maintain patient-linked implantable device information in their records under 21 CFR 821.30. Additionally, as approved by OMB under control number 0938–1022 for the Hospital Inpatient Quality Reporting Program, in which we account for the information collection burden associated with eCQM reporting and submission for eligible hospitals and CAHs, only the time associated with electronically submitting data to CMS is accounted for in our burden estimates because patient data are already entered into EHRs and health information technology systems as part of clinical practice. Therefore, we assume no additional information collection burden under OMB control number 0938–1278 associated with entry of Unique Device Identifier information into EHRs by eligible hospitals and CAHs.

d. Information Collection Burden Estimate for the Removal of the ONC Direct Review and Optional ONC–ACB Surveillance Attestations

In section IX.F.3. of the preamble of this final rule, we are removing the ONC Direct Review attestation and optional ONC–ACB Surveillance attestation beginning with the EHR reporting period in CY 2026. The information collection burden associated with the ONC Direct Review attestation is currently approved under OMB control number 0938–1278 and assumes each eligible hospital and CAH requires 1 minute (0.0167 hours) at a cost of $1 (0.0167 hours × $55.06) annually to attest ''Yes'' or ''No.'' We therefore estimate a total annual burden decrease across all 4,550 eligible hospitals and CAHs of 76 hours (0.0167 hours × 4,550 eligible hospitals and CAHs) at a savings of $4,185 (76 hours × $55.06). Similarly, we estimate each eligible hospital and CAH that currently elects to submit the optional ONC–ACB Surveillance attestation will experience a decrease in burden of 1 minute (0.0167 hours) at a savings of $1 (0.0167 hours × $55.06) annually. We therefore estimate a total annual burden decrease across all 4,550 eligible hospitals and CAHs of 76 hours (0.0167 hours × 4,550 eligible hospitals and CAHs) at a savings of $4,185 (76 hours × $55.06). We note that although the ONC–ACB Surveillance attestation was finalized in the CY 2017 Quality Payment Program final rule with comment period (81 FR 77019 through 77028), the associated information collection burden has not been accounted for under OMB control number 0938–1278. We will submit a revised Information Collection Request under this OMB control number reflecting the inclusion of this attestation as well as its removal.

e. Information Collection Burden Estimate for the Removal of the Support Electronic Referral Loops by Sending Health Information and Support Electronic Referral Loops by Receiving and Reconciling Health Information Measures

In section IX.F.4. of the preamble of this final rule, we are removing the Support Electronic Referral Loops by Sending Health Information and Support Electronic Referral Loops by Receiving and Reconciling Health Information measures, with a modification, beginning with the EHR reporting period in CY 2029. Under OMB control number 0938–1278, eligible hospitals and CAHs are currently required to report using one of three options under the Health Information Exchange objective: (1) the Support Electronic Referral Loops by Sending Health Information and Support Electronic Referral Loops by Receiving and Reconciling Health Information measures; (2) the Health Information Exchange (HIE) Bi-Directional Exchange measure; or (3) the Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) measure. Because eligible hospitals and CAHs will still be required to report either the HIE Bi-Directional Exchange or the Enabling Exchange Under TEFCA measure, we are not finalizing any change to information collection burden associated with this proposal.

f. Information Collection Burden Estimate for the Removal of Three eCQMs

In section IX.F.9.b. of the preamble of this final rule, we are removing three eCQMs beginning with the CY 2028 reporting period: (1) the VTE Prophylaxis eCQM; (2) the Intensive Care Unit VTE Prophylaxis eCQM; and (3) the Discharged on Antithrombotic Therapy eCQM.

The burden associated with eligible hospitals and CAHs submitting eCQMs is currently approved under OMB control number 0938–1022. Because reporting these eCQMs is not mandatory, but they are instead available in the Medicare Promoting Interoperability Program eCQM measure set from which eligible hospitals and CAHs self-select to report, removing these eCQMs will not result in a change in burden associated with OMB control number 0938–1022.

g. Information Collection Burden Estimate for the Updates to the Electronic Prior Authorization Measure

In section IX.F.5. of the preamble of this final rule, we are updating the Electronic Prior Authorization measure beginning with the EHR reporting period in CY 2027. Specifically, we are finalizing that eligible hospitals and CAHs must use technology certified to the criteria at 45 CFR 170.315(g)(31), (32), and (33) to report on the Electronic Prior Authorization measure beginning with the EHR reporting period in CY 2027. We are also modifying the Electronic Prior Authorization measure description such that for at least one medical item or service (excluding drugs) ordered during a hospital encounter that occurs within the EHR reporting period, the prior authorization is requested electronically through a

Prior Authorization API using CEHRT. Because the information collection burden for the Electronic Prior Authorization measure is currently approved under OMB control number 0938–1278 and we are only updating the criteria which eligible hospitals and CAHs will have to meet to attest ''Yes'', we are not finalizing any changes to information collection burden associated with this policy.

In section IX.F.5.d. of the preamble of this final rule, we are making the Electronic Prior Authorization measure optional for the EHR reporting period in CY 2027 and eligible for 10 bonus points. We are also making the Electronic Prior Authorization measure a required measure beginning with the EHR reporting period in CY 2028. Under OMB control number 0938–1278, the currently approved burden estimate for this measure is 0.5 minutes per eligible hospital and CAH. Because we are unable to estimate the number of eligible hospitals and CAHs which may elect not to attest to this measure for the EHR reporting period in CY 2027 as a result of this policy, for burden purposes, we are not finalizing any changes to the currently approved burden estimates.

h. Information Collection Burden Estimate for the Changes to eCQM Reporting and Submission Requirements for CAHs

In section IX.F.9.c. of the preamble of this final rule, we are modifying the reporting and submission requirements for the Malnutrition Care Score eCQM to require mandatory reporting beginning with the CY 2028 reporting period. The Malnutrition Care Score eCQM (previously known as Global Malnutrition Composite Score eCQM) was initially adopted in the FY 2023 IPPS/LTCH PPS final rule into the Medicare Promoting Interoperability Program measure set from which an eligible hospital or CAH could self-select to report beginning with the CY 2024 reporting period (87 FR 49361 through 49364).

In section IX.F.9.c. of the preamble of this final rule, we are modifying the eCQM reporting and submission requirements for all Hospital Harm eCQMs to begin mandatory reporting after two years of self-selected reporting beginning with the CY 2028 reporting period. This policy applies only to Hospital Harm eCQMs that are not already required to be reported, including any Hospital Harm eCQMs we may adopt in future rules. In the currently approved eCQM measure set, there are two Hospital Harm eCQMs in the Medicare Promoting Interoperability Program measure set from which an eligible hospital or CAH could self-select: Hospital Harm-Falls with Injury and Hospital Harm-Postoperative Respiratory Failure. Under this policy, these two measures will begin mandatory reporting with the CY 2028 reporting period, given they were adopted in the FY 2025 IPPS/LTCH PPS final rule as eCQMs that eligible hospitals and CAHs could self-select to report beginning with the CY 2026 reporting period (89 FR 69621 and 69622). Additionally, as discussed in section IX.F.9.b. of the preamble of this final rule, we are adopting the Hospital Harm-Postoperative VTE eCQM as a self-selected eCQM beginning with the CY 2028 reporting period. This measure will begin mandatory reporting with the CY 2030 reporting period.

Currently for the Medicare Promoting Interoperability Program's eCQM reporting requirements, the information collection burden is estimated under OMB control number 0938–1022, and the policy requires eligible hospitals and CAHs to submit data for three self-selected and eight mandatory eCQMs, for a total of 11 eCQMs, for the CY 2028 reporting period and subsequent years. The currently approved information collection burden per reported eCQM under OMB control number 0938–1022 is 10 minutes (0.167 hours) per eligible hospital or CAH per quarter or 40 minutes (0.67 hours) annually. For the CY 2028 and CY 2029 reporting periods, we estimate the modifications to the Malnutrition Care Score and two Hospital Harm eCQMs will result in a total increase of 120 minutes (2 hours) per CAH annually (10 minutes/eCQM × 3 eCQMs × 4 quarters) or a total annual burden increase across all 1,500 CAHs of 3,000 hours (2 hours × 1,500 CAHs) at a cost of $165,180 (3,000 hours × $55.06). Beginning with the CY 2030 reporting period, when the Hospital Harm-Postoperative VTE eCQM will become a mandatory eCQM to report, we estimate the modifications will result in a total increase of 160 minutes (2.67 hours) per CAH annually (10 minutes/eCQM × 4 eCQMs × 4 quarters) or a total annual burden increase across all 1,500 CAHs of 4,000 hours (2.67 hours × 1,500 CAHs) at a cost of $220,240. We refer readers to section XII.B.4.g. of this final rule for discussion of the burden estimates associated with the similar proposals impacting hospitals participating in the Hospital Inpatient Quality Reporting Program. With aligned eCQM reporting requirements between the Medicare Promoting Interoperability Program and the Hospital Inpatient Quality Reporting Program, hospitals need only report eCQMs once for credit in both programs.

i. Summary of Estimates Used To Calculate the Collection of Information Burden

In summary, under OMB control number 0938–1278 (expiration date March 31, 2029), we estimate that the policies in this final rule will result in a decrease in information collection burden of 114 hours at a savings of $6,278. We also estimate that the policies promulgated in this final rule will result in an increase in information collection burden of 4,000 hours at a cost of $220,240 under OMB control number 0938–1022. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1278. With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.N. of Appendix A of this final rule).

TABLE XII.B-10: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE EHR REPORTING PERIOD IN CY 2026

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1278 for the CY 2026 Reporting Period								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across Hospitals	Previously Finalized Annual Burden (in hours) Across Hospitals	Net Difference in Annual Burden Hours
Removal of ONC Direct Review Attestation	1	1	4,550	1	0.0167	0	76	-76
Removal of ONC-ACB Surveillance Attestation	1	1	4,550	1	0.0167	0	76	-76
	Total Change in Information Collection Burden Hours: -152							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (-152) = **-$8,370**							

TABLE XII.B-11: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE EHR REPORTING PERIOD IN CY 2027

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1278 for the CY 2027 Reporting Period								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across Hospitals	Previously Finalized Annual Burden (in hours) Across Hospitals	Net Difference in Annual Burden Hours
Removal of ONC Direct Review Attestation	1	1	4,550	1	0.0167	0	76	-76
Removal of ONC-ACB Surveillance Attestation	1	1	4,550	1	0.0167	0	76	-76
Adoption of Unique Device Identifiers for Implantable Medical Devices Attestation	0.5	1	4,550	1	0.0083	38	0	+38
	Total Change in Information Collection Burden Hours: -114							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (-114) = **-$6,278**							

TABLE XII.B-12: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2028 AND CY 2029 REPORTING PERIODS

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1022 for the CY 2028 and CY 2029 Reporting Periods								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across Hospitals	Previously Finalized Annual Burden (in hours) Across Hospitals	Net Difference in Annual Burden Hours
Modification of Malnutrition Care Score eCQM	10	4	1,500	1	0.67	12,000	11,000	1,000
Modification of Hospital Harm eCQMs	20	4	1,500	1	1.33	13,000	11,000	2,000
	Total Change in Information Collection Burden Hours: 3,000							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (3,000) = **$165,180**							

TABLE XII.B-12: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2030 REPORTING PERIOD

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1022 for the CY 2030 Reporting Period								
Activity	Estimated Time per Record (in minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per Quarter	Annual Burden (Hours) per Respondent	Finalized Annual Burden (in hours) Across Hospitals	Previously Finalized Annual Burden (in hours) Across Hospitals	Net Difference in Annual Burden Hours
Modification of Malnutrition Care Score eCQM	10	4	1,500	1	0.67	12,000	11,000	1,000
Modification of Hospital Harm eCQMs	30	4	1,500	1	2.00	14,000	11,000	3,000
	Total Change in Information Collection Burden Hours: 4,000							
	Total Cost Estimate: Updated Hourly Wage ($55.06) x Change in Burden Hours (4,000) = **$220,240**							

We received no comments on these information collection burden estimates and therefore are finalizing burden estimates associated with these provisions without modification.

8. ICRs for the Transforming Episode Accountability Model

In section X.A. of the preamble of this final rule, we discuss testing the Transforming Episode Accountability Model (TEAM), finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), and finalize updates to the model under the authority of the CMS Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. As stated in section 1115A(d)(3) of the Act, chapter 35 of title 44, United States Code, shall not apply to the testing and evaluation of models under section 1115A of the Act. As a result, the information collection requirements contained in this final rule for TEAM need not be reviewed by the Office of Management and Budget. However, the anticipated impact of the model's effect is assessed in the Regulatory Impact Analysis (section I.G.11 of Appendix A of this final rule).

We received no comments on the information collection requirements and therefore are finalizing this provision without modification.

9. ICRs for the Comprehensive Care for Joint Replacement Expanded (CJR–X) Model

In section X.C. of the preamble of this final rule, we discuss testing the Comprehensive Care for Joint Replacement Expanded (CJR–X) Model, under the authority of the CMS Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. As stated in section 1115A(d)(3) of the Act, chapter 35 of title 44, United States Code, shall not apply to the testing and evaluation of models or expansion of such models under section 1115A of the Act. As a

result, the information collection requirements contained in this final rule for CJR–X need not be reviewed by the Office of Management and Budget. However, the anticipated impact of the model's effect is assessed in the Regulatory Impact Analysis (section I.G.12 of Appendix A of this final rule).

We received no comments on the information collection requirements and therefore are finalizing this provision without modification.

10. ICRs for Acquisition Costs, Reasonable Costs, and Other Cost-Related Policies

In section X.D.3. of the preamble of this final rule, we are finalizing our proposed clarification and codification of cost allocation policies, and in section X.D.4. of the preamble of this final rule, we are finalizing our proposed discretionary Administrator review of CMS reviewing official decisions for IOPOs and HCLs for reimbursement appeals. In section X.D.5. of the preamble of this final rule, we are finalizing our proposed clarifications and technical corrections to regulation text. In section X.D.2. of the preamble of this final rule, we are finalizing our proposals, with certain modifications, pertaining to Medicare's reasonable cost reimbursement policies applicable to all providers. We are also finalizing our provision pertaining to OPO public education to be effective with the effective date of this final rule; however, we are allowing a 1-year delay in enforcement, to account for broad initiatives impacting the OPO and transplant ecosystem in parallel with this rule, and for certain IOPOs to update their public education programs.

In section X.D.1. of the preamble of the proposed rule, we proposed to reconcile non-renal organ acquisition costs for IOPOs and HCLs and to require the contractor to establish, adjust if necessary, and publish interim rates for IOPOs and HCLs, with a 1-year delay, effective for cost reporting periods beginning on or after October 1, 2027. We are finalizing our proposal with modifications in section X.D.1. of the preamble of this final rule to reconcile non-renal organ acquisition costs for IOPOs and HCLs and to provide a 2-year delay, to allow additional time to update the IOPO and HCL Medicare cost report and to provide additional time for IOPOs and HCLs to prepare for these changes. We are finalizing our proposals with modifications to allow more IOPO and HCL involvement in setting and adjusting their SACs and testing rates, respectively, as detailed in section X.D.1. of this final rule. Specifically, we are requiring the IOPO to provide the Medicare contractor its reasonable estimate for each organ SAC based upon its prior year's costs and organ procurement volumes and its reasonable and documented estimate of its projected costs and organ procurement volumes for the subsequent year, for contractor review (to ensure reasonableness) and approval. For HCLs, we are requiring the HCL to provide the Medicare contractor its reasonable estimate of its testing rates based on its prior year costs and its reasonable and documented estimate of its projected testing costs and testing volumes for the subsequent year, for contractor review (to ensure reasonableness) and approval. We are also finalizing our proposals to publish non-renal IOPO SACs and HCL testing rates, and to reconcile non-renal organs, as proposed.

There are no additional data collection requirements for IOPOs and HCLs as a result of our finalized policies in section X.D.1. of the preamble of this final rule, because IOPOs and HCLs already collect the data needed for estimating and adjusting their IOPO SACs and HCL testing rates, and for reconciling non-renal organ acquisition costs for IOPOs and HCLs, in accordance with §§ 413.20 and 413.24. However, we recognize that there will be additional reporting requirements associated with our final policies, as IOPOs and HCLs would have to report which organs procured or tests conducted were for organs sent to military or VA hospitals or to foreign countries.

The methods of determining costs payable under Medicare involve making use of data available from the institution's basis accounts, as usually maintained, to arrive at equitable and proper payment for services. Burden hours for each OPO/HCL are the estimated time required (number of hours) to complete ongoing data gathering and recordkeeping tasks, search existing data resources, review instructions, and complete the OMB number 0938–0102, Form CMS–216–94. Currently there are 94 Medicare certified OPOs/HCLs that file Form CMS–216–94 annually. The current estimated average burden per OPO/HCL is 45 hours (30 hours for recordkeeping and 15 hours for reporting). In the proposed rule, we did not estimate additional recordkeeping burden but estimated an average additional reporting burden of 10 hours per OPO/HCL and an estimated additional cost of $785.40 per OPO/HCL. The most recent median hourly wage data is available from the Bureau of Labor Statistics using their national table (available at *https://www.bls.gov/oes/tables.htm*). We reported in the proposed rule that the 2024 median hourly wage for Category 13–2011 (accounting and audit professionals) is $39.27. We added 100 percent of the median wage to account for fringe benefits and overhead costs, which calculates to $78.54 ($39.27 + $39.27) and multiplied it by 10 hours, to determine the additional annual reporting costs per OPO/HCL to be $785.40 ($78.54 IOPOs × 10 hours). We recognized this average reporting burden varies depending on the OPO/HCL's size and complexity. In the proposed rule, we stated that because there are 94 IOPOs and HCLs, the total reporting burden cost for all IOPOs and HCLs would be $73,828 (94 × $785.40). We invited public comment on the hours estimate as well as the staffing requirements utilized to compile and complete the Medicare cost report. Because we modified our proposed 1-year delay, the estimated reporting burden for our final policies would not occur until FY 2029, for cost reporting periods beginning on or after October 1, 2028.

CMS currently collects data on OMB control number 0938–0102, Form CMS–216–94, and revisions to OMB control number 0938–0102 will be included in a future PRA package notice as required under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). There are no new collection of information requirements resulting from any of our proposals in sections X.D.2., X.D.3., X.D.4., and X.D.5. of the preamble of this final rule.

Comment: Several commenters wrote that our burden estimate underestimated IOPO administrative burden and should be revised. A commenter stated that the $785.40 estimate appeared limited to the incremental time associated with completing the revised Medicare cost reporting requirements and does not account for substantial administrative infrastructure needed to operationalize the proposal. A few commenters stated that they would need to overhaul internal accounting methodologies for non-renal organs, revise cost allocation systems, implement new workflows to track and compare actual costs against contractor-approved SACs, and continuously monitor receivables and payables in anticipation of annual reconciliation, in addition to legal, compliance, finance, reimbursement, and IT costs to implement and maintain compliance with the policies. A commenter added that one IOPO reported devoting 32 hours per month just to reconciliation related activities under the existing renal organ

reimbursement requirements. Other commenters wrote that they would need 2 additional finance FTEs to ensure operational viability under the proposals, or an additional 1000 hours of work to prepare for the changes plus 0.5 FTE for quality assurance moving forward. Several commenters asked CMS to conduct additional stakeholder engagement with OPO financial and reimbursement personnel.

Response: The burden estimate we included was devised pursuant to the Paperwork Reduction Act (PRA) requirements for estimating burden to complete the Medicare cost report. The PRA requires federal agencies, including CMS, to comply with its requirements when we require additional documentation from providers, suppliers, and beneficiaries. Therefore, the burden estimate we provided in the proposed rule was solely related to the additional time an IOPO or HCL would be required to complete a revised Medicare Cost Report. Regarding the commenter who noted time spent on current kidney reconciliation activities, our existing kidney reconciliation process has been unchanged for many years. Without more information from the commenter, we are unable to respond further.

CMS follows standardized definitions, accounting, statistics, and reporting practices that are widely accepted in healthcare and related fields. Changes in these practices and systems are not required in order to determine costs payable under the principles of reimbursement. Essentially the methods of determining costs payable under Medicare involve making use of data available from the institution's basis accounts, as usually maintained, to arrive at equitable and proper payment for services. Regulations at 42 CFR 413.20 and 413.24 require that providers submit acceptable cost reports on an annual basis and maintain sufficient financial records and statistical data, capable of verification by qualified auditors. In addition, the regulations require that providers furnish such information to the contractor, including the provider's working trial balance and audited financial statements, as may be necessary to ensure proper payment by the program, receive program payments, and satisfy program overpayment determinations. Some of these accounting controls should already be in place. These costs are general and administrative costs. We appreciate that IOPOs and HCLs will have to make operational and financial changes to comply with the finalized policies, and as noted previously, have extended the implementation timeframe that we proposed to allow an extra year's delay, with implementation finalized for cost reporting periods beginning on or after October 1, 2028.

We are updating the burden estimate for updating the IOPO/MCR cost report to use the latest BLS median wage data available, and to continue to use 10 hours of burden for IOPOs and HCLs. The 2025 median national hourly wage for Category 13–2011 (accounting and audit professionals) is $40.23. We added 100 percent of the median wage to account for fringe benefits and overhead costs, which calculates to $80.46 ($40.23 + $40.23) per hour. Using this updated wage rate, we estimate the burden to complete the revised IOPO/HCL Medicare cost report to now be $804.60 ($80.46 × 10 hours) per IOPO and HCL or $75,632 (94 IOPOs × $804.60) in total for all IOPOs and HCLs. These updated burden estimates, which are associated with the changes to the IOPO/HCL cost report, already account for additional reporting of organs or tests for organs sent to military or VA hospitals, or to foreign countries. IOPOs and HCLs will have two opportunities to comment on these estimates in a forthcoming PRA package and **Federal Register** notice.

Mehmet Oz, Administrator of the Centers for Medicare & Medicaid Services, approved this document on July 31, 2026.

For the reasons set forth in the preamble, the Centers for Medicare and Medicaid Services amends 42 CFR Chapter IV and the Department of Health and Human Services amends 45 CFR subtitle A, subchapter D as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

§ 405.1801 [Amended]

■ 2. In § 405.1801 paragraph (a) is amended in the definition of Administrator review by removing the reference ''§ 405.1875'' and adding in its place the reference ''§§ 405.1834 and 405.1875''.

■ 3. Section 405.1803 is amended by revising paragraph (d)(1)(ii) to read as follows:

§ 405.1803 Contractor determination and notice of amount of program reimbursement.

* * * * *

(d) * * *

(1) * * *

(ii) A final decision by a CMS reviewing official (as described in § 405.1834(f)(1) of this subpart) or the Administrator (as described in §§ 405.1834 and 405.1875(e)(4) of this subpart) following review of a hearing decision by the contractor, the Board or the CMS reviewing official, as the case may be.

* * * * *

■ 4. Section 405.1811 is amended by revising paragraphs (a)(2) and (c)(3) to read as follows:

§ 405.1811 Right to contractor hearing; contents of, and adding issues to, hearing request.

(a) * * *

(2) With the exception of an IOPO or histocompatibility laboratory, the amount in controversy (as determined in accordance with § 405.1839) must be at least $1,000 but less than $10,000. An IOPO or histocompatibility laboratory is subject to the amount in controversy requirement specified in § 413.420(g).

* * * * *

(c) * * *

(3) With the exception of an IOPO or histocompatibility laboratory, the amount in controversy (as determined in accordance with § 405.1839) must be at least $1,000 but less than $10,000. An IOPO or histocompatibility laboratory is subject to the amount in controversy requirement specified in § 413.420(g).

* * * * *

■ 5. Section 405.1813 is amended by revising paragraphs (e)(1) and (2) and adding paragraph (e)(3) to read as follows:

§ 405.1813 Good cause extension of time limit for requesting a contractor hearing.

* * * * *

(e) * * *

(1) A decision denying an extension request under this section and dismissing the appeal is final and binding on the provider, unless the dismissal decision is—

(i) Reviewed by a CMS reviewing official in accordance with § 405.1834(b)(2)(i) of this subpart;

(ii) Reviewed by the Administrator; or

(iii) Reopened and revised by the contractor hearing officer(s) in accordance with §§ 405.1885 through 405.1889 of this subpart.

(2) The contractor hearing officer(s) promptly sends the decision to the appropriate component of CMS (currently the Center for Medicare) (as specified in § 405.1834(b)(4) of this subpart) and the Reviewing Official (currently the CMS Office of Hearings).

(3) A decision granting an extension request under this section is not subject to immediate review by a CMS reviewing official (as described in § 405.1834(b)(3) of this subpart). Any decision may be examined during—

(i) The course of a CMS reviewing official's review of a final jurisdictional dismissal decision or a final hearing decision by the contractor hearing officer(s) (as described in § 405.1834(b)(2)(i) and (ii) of this subpart); or

(ii) The Administrator's review of a CMS reviewing official decision.

■ 6. Section 405.1814 is amended by revising paragraphs (a)(5), (c)(3), and (d) to read as follows:

§ 405.1814 Contractor hearing officer jurisdiction.

(a) * * *

(5) Final jurisdictional findings and jurisdictional dismissal decisions by the contractor hearing officer(s) are subject to the CMS reviewing official procedure in accordance with paragraph (d) of this section and § 405.1834(b)(2)(i) and (b)(2)(ii) of this subpart, as well as the possibility of review by the Administrator as described in § 405.1834(g).

* * * * *

(c) * * *

(3) A jurisdictional dismissal decision by the contractor hearing officer(s) under paragraph (c)(2) of this section is final and binding on the parties, unless the decision is—

(i) Reviewed by a CMS reviewing official in accordance with § 405.1834 of this subpart;

(ii) Is subsequently reviewed by the Administrator in accordance with § 405.1834 of this subpart; or

(iii) Reopened and revised by the contractor hearing officer(s) in accordance with §§ 405.1885 through 405.1889 of this subpart.

(d) *CMS reviewing official and Administrator review of jurisdictional decisions.* Any finding by the contractor hearing officer as to whether it has jurisdiction to grant a hearing on a specific matter at issue in an appeal is not subject to further administrative review, except as provided in this paragraph. The contractor hearing officer's jurisdictional findings as to specific matters at issue in an appeal may be reviewed solely during the course of the CMS reviewing official's review of one of the contractor hearing officer decisions specified in § 405.1834(b)(2) of this subpart or during the course of the Administrator's review of a CMS reviewing official's decision.

■ 7. Section 405.1821 is amended by revising paragraphs (d)(2) introductory text, (d)(2)(i), and (d)(2)(iii) introductory text to read as follows:

§ 405.1821 Prehearing discovery and other proceedings prior to the contractor hearing.

* * * * *

(d) * * *

(2) *Exception.* To the extent a ruling authorizes discovery or disclosure of a matter for which an objection based on privilege or other protection from disclosure such as case preparation, confidentiality, or undue burden, was made before the contractor hearing officer(s), that portion of the discovery or disclosure ruling may immediately be reviewed by a CMS reviewing official or the Administrator in accordance with § 405.1834.

(i) Upon notice to the contractor hearing officer that the provider intends to seek immediate review of a ruling, or that the contractor or other affected nonparty intends to suggest that the CMS reviewing official or the Administrator, take own motion review of the ruling, the contractor hearing officer stays all proceedings affected by the ruling.

(iii) If the CMS reviewing official or the Administrator—

* * * * *

■ 8. Section 405.1833 is revised to read as follows:

§ 405.1833 Effect of contractor hearing decision.

(a) A contractor hearing decision issued in accordance with § 405.1831 of this subpart is final and binding on all parties to the contractor hearing and on the contractor, unless the contractor hearing decision is—

(1) Reviewed by a CMS reviewing official or by a CMS reviewing official and then is in turn reviewed by the Administrator in accordance with § 405.1834 of this subpart; or

(2) Reopened and revised by the contractor hearing officer(s) in accordance with §§ 405.1885 through 405.1889 of this subpart.

(b) Final contractor hearing decisions are subject to the provisions of § 405.1803(d) of this subpart.

■ 9. Section 405.1834 is amended by—

■ a. Revising the section heading and paragraphs (a), (b)(1)(ii), (b)(4) introductory text, (b)(4)(ii), (c), (c)(1)(i), (c)(3), (c)(3)(i), (d), (d)(1);

■ b. Adding paragraphs (d)(4) and (d)(5);

■ c. Revising paragraphs (e)(1), (e)(3), (f) introductory text, (f)(1) and (f)(2) introductory text;

■ d. Adding paragraphs (f)(3) and (g).

The revisions and additions read as follows:

§ 405.1834 CMS reviewing official procedure and Administrator review.

(a) *Scope.* CMS or a provider that is a party to, and dissatisfied with, a final decision by the contractor hearing officer(s), upon submitting a request that meets the requirements of paragraph (c) of this section, is entitled to further administrative review of the decision by a CMS reviewing official, and the decision may be reviewed at the discretion of first a designated CMS reviewing official and then

discretionary review by the Administrator. No other individual, entity, or party has the right to the review. The review is conducted first by a designated CMS reviewing official who considers whether the decision of the contractor hearing officer(s) is consistent with the controlling legal authority (as described in § 405.1834(e)(1) of this subpart) and the evidence in the record, and the CMS reviewing official's decision may then be subject to further discretionary review by the Administrator.

(b) * * *

(1) * * *

(ii) The CMS reviewing official exercises this review authority in response to a request from a provider party to the appeal that meets the requirements of paragraph (c) of this section, or in response to a request from CMS, or may exercise his or her discretion to take own motion review.

* * * * *

(4) The contractor hearing officer(s) must promptly send copies of any decision specified in paragraph (b)(2) or (b)(3) of this section or in § 405.1821(d)(2) of this subpart and the underlying contractor hearing officer's administrative record to the appropriate component of CMS (currently the Center for Medicare).

(i) * * *

(ii) The appropriate CMS component examines each contractor hearing officer decision that is reviewable under paragraph (b)(2) or (b)(3) of this section or § 405.1821(d)(2) of this subpart, along with any review requests and any other submissions made by a party or CMS in accordance with the provisions of this section, in order to assist the CMS reviewing official's and the Administrator's exercise of this review authority.

(c) *Request for review by a CMS reviewing official.*

(1) * * *

(i) The date of receipt by the appropriate CMS component of the review request is no later than 60 days after the date of receipt by the provider of the contractor hearing officer decision; and

* * * * *

(3) A request from a party or CMS for immediate review of a contractor hearing officer ruling authorizing discovery or disclosure in accordance with paragraph (b)(3) of this section must—

(i) Be made as soon as practicable after the ruling is made, but in no event later than 5 business days after the date the requesting party or CMS received notice of the ruling; and

* * * * *

(d) *Own motion review of a CMS reviewing official.*

(1) The CMS reviewing official has discretion to take own motion review of a contractor hearing officer decision (regardless in either case of whether the decision was favorable or unfavorable to the provider) or other reviewable action.

* * * * *

(4) If the CMS reviewing official does not notify the parties and the contractor that he or she intends to review the contractor hearing officer decision or other reviewable action within 90 days after the date of the contractor hearing officer's decision, then the Administrator may issue a notice instructing the CMS reviewing official to review the contractor hearing officer decision and issue a decision if the CMS reviewing official fails to do so.

(i) The Administrator promptly provides copies of the notice instructing the CMS reviewing official to review the contractor hearing officer decision to the parties, the contractor, and to the appropriate component of CMS.

(ii) After the CMS reviewing official's receipt of the Administrator's notice (instructing the CMS reviewing official to review the contractor hearing officer decision and issue a decision), the CMS reviewing official must allow the parties a reasonable period to comment on the issues identified by the Administrator for review.

(5) If no party requests review of the contractor hearing decision and the CMS reviewing official does not take review on his or her own motion or at the direction of the Administrator within the time periods specified in this paragraph, the contractor hearing officer decision is final in accordance with § 405.1833 of this subpart.

(e) * * *

(1) In reviewing a contractor hearing officer decision specified in paragraph (b)(2) or (b)(3) of this section, the CMS reviewing official must—

* * * * *

(3) Upon completion of the review of a contractor hearing decision specified in paragraph (b)(2) or (b)(3) of this section, the CMS reviewing official issues a written decision that includes findings of fact and conclusions of law on jurisdictional issues and on the merits of each issue under review over which the CMS reviewing official has jurisdiction and affirms, reverses, or modifies the contractor hearing decision or remands the contractor hearing decision to the contractor hearing officer for further proceedings. A copy of the decision must be sent promptly to each party, to the contractor, and to the appropriate component of CMS (currently the Center for Medicare).

(f) *Effect of a reviewing official's decision, remand, and the possibility of Administrator review.*

(1) A decision of affirmation, reversal, or modification by the CMS reviewing official is final and binding on each party and the contractor, except as set forth in paragraph (g) of this section. The CMS reviewing official's decision may be reopened and revised by the CMS reviewing official in accordance with §§ 405.1885 through 405.1889 of this subpart. Decisions of a CMS reviewing official are subject to the provisions of § 405.1803(d) of this subpart. A decision by a CMS reviewing official remanding an appeal to the contractor hearing officer(s) for further proceedings under paragraph (f)(2) of this section is not a final decision.

(2) A remand to the contractor hearing officer(s) by the CMS reviewing official must do all of the following:

* * * * *

(3) The CMS reviewing official must promptly send copies of the CMS reviewing official decision, along with any other submissions made by a party or CMS in accordance with the provisions of this section, to the appropriate component of CMS (currently the Center for Medicare) and to the Administrator c/o the CMS Office of the Attorney Advisor.

(g) *Administrator review of a CMS reviewing official's decision.*

(1) CMS or any party to a CMS reviewing official decision may request Administrator review of a CMS reviewing official decision in accordance with this section. No other provider, individual, or entity may request review. The Administrator may grant or deny review of a CMS reviewing official decision at his or her discretion. The Administrator may also review any decision of the CMS reviewing official on his or her own motion (regardless of whether the decision was favorable or unfavorable to the provider).

(2) A party or CMS may request that the Administrator review a CMS reviewing official decision within 15 days of their receipt of a final CMS reviewing official decision.

(i) All requests for Administrator review and any other submissions to the Administrator under this paragraph must be sent to the Office of the Attorney Advisor. The request for review must be in writing, attach a copy of the CMS reviewing official decision for which it seeks review, and include a brief description of all of the following:

(A) Those aspects of the CMS reviewing official decision with which the requestor is dissatisfied.

(B) The reasons for the requestor's dissatisfaction.

(C) Any argument or record evidence the requestor believes supports its position.

(D) Any additional, extra-record evidence relied on by the provider, along with a demonstration that such evidence was improperly excluded in proceedings below (as described in § 405.1823 of this subpart).

(ii) The Administrator must issue a Notice advising the parties of his or her intent to review or to decline to review within 45 days of the Administrator's receipt of a request for review from CMS or any party to the CMS reviewing official's decision. That Notice must be promptly sent to the parties, the contractor, and the appropriate component of CMS. A Notice advising the parties of the Administrator's intent to review must contain a brief statement of the issues under review and solicit comments from the parties, the contractor, and CMS. A Notice that the Administrator is declining to review need not set forth the basis for the Administrator's decision to decline review the CMS reviewing official's decision.

(iii) If the Administrator declines to review the reviewing official decision or the Administrator does not issue a determination regarding review of the reviewing official decision within 45 days of the Administrator's receipt of a request to review, the decision of the CMS reviewing official is final in accordance with paragraph (f)(1) of this section.

(3) In the absence of a request for the Administrator to review under 405.1834(g)(2), the Administrator may issue a Notice of Review on his or her own motion within 45 days of the Administrator's receipt of a CMS reviewing official's decision. The Notice of Review must be sent to the parties, the contractor, and the appropriate component of CMS. The Notice of Review must contain a brief statement of the issues under review and solicit comments from the parties, contractor, and CMS. If the Administrator does not issue a determination regarding his or her own motion review within 45 days of the Administrator's receipt of a CMS reviewing official's decision, the decision of the CMS reviewing official is final.

(4) If the Administrator elects to review the CMS reviewing official's decision—

(i) The Administrator will set deadlines for the parties and affected nonparties to submit comments; and

(ii) The Administrator's decision affirming, reversing, or modifying the CMS reviewing official's decision is final and binding on each party and the contractor. A decision remanding an appeal to the CMS reviewing official or contractor hearing officer(s) is not a final decision. Decisions of the Administrator are subject to the provisions of § 405.1803(d) of this subpart.

(5) If the Administrator does not issue a written decision that affirms, reverses, modifies or remands the CMS reviewing official's decision within 60 days of the date of issuance of the Notice of Review, the CMS reviewing official's decision becomes final in accordance with paragraph (f)(1) of this section.

(6) The Administrator may remand the CMS reviewing official's decision to the CMS reviewing official, to the contractor hearing officer, or to the contractor. A remand by the Administrator must do all of the following:

(i) Vacate the CMS reviewing official's or the contractor hearing officer's decision or both decisions as to the specific issues remanded.

(ii) Be governed by the same criteria that apply to remands by the Administrator to the Board under § 405.1875(f)(2) of this subpart and require the entity to which the matter is remanded to take specific actions on remand.

(iii) Result in the CMS reviewing official, contractor hearing officer(s), or contractor taking the actions required on remand and issuing a new decision.

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 10. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 11. Section 412.24 is amended by adding paragraph (g) to read as follows:

§ 412.24 Requirements under the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program.

* * * * *

(g) *Requirements for submission of electronic clinical quality measures (eCQMs) under the PCHQR Program.* When reporting eCQMs under the PCHQR Program, PCHs must use all of the following:

(1) Health information technology (IT) certified to the ONC Health IT Certification Program certification criteria necessary for eCQM reporting, as adopted and updated at 45 CFR 170.315(c).

(2) Certified health IT described in paragraph (g)(1) to calculate, export, and submit results for the eCQMs available to report under the PCHQR Program.

(3) The eCQM electronic measure specifications for the applicable reporting period available on the Electronic Clinical Quality Improvement Resource Center website at *https://ecqi.healthit.gov/* or another website as designated by CMS.

■ 12. Section 412.87 is amended by revising paragraphs (c) introductory text, (d), and (f) to read as follows:

§ 412.87 Additional payment for new medical services and technologies: General provisions.

* * * * *

(c) *Eligibility criteria for alternative pathway for certain transformative new devices.* For applications submitted for new technology add-on payments for FYs 2021 through 2029, inclusive, CMS provides for additional payments (as specified in § 412.88) beyond the standard DRG payments and outlier payments to a hospital for discharges involving covered inpatient hospital services that are new medical devices, if the following conditions are met:

(1) A new medical device is part of the Food and Drug Administration's (FDA) Breakthrough Devices Program and has received Breakthrough Device designation as of September 30, 2026, and has received marketing authorization as a Breakthrough Device for the indication covered by the Breakthrough Device designation by May 1, 2028.

* * * * *

(d) *Eligibility criteria for alternative pathway for certain antimicrobial products.* For applications submitted for new technology add-on payments for FYs 2021 through 2029, inclusive, CMS provides for additional payments (as specified in § 412.88) beyond the standard DRG payments and outlier payments to a hospital for discharges involving covered inpatient hospital services that are new medical products, if the following conditions are met:

(1)(i) For applications submitted for new technology add-on payments for FYs 2021 through 2029, inclusive, a new medical product is designated by FDA as a Qualified Infectious Disease Product as of September 30, 2026, and has received marketing authorization for the indication covered by the Qualified Infectious Disease Product designation by May 1, 2028; or

(ii) For applications submitted for new technology add-on payments for FYs 2022 through 2029, inclusive, a new medical product is approved under FDA's Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) and used for the indication

approved under the LPAD pathway by May 1, 2028.

* * * * *

(f) *Announcement of determinations and deadline for consideration of new medical service or technology applications.*

* * * * *

(2) CMS only considers, for add-on payments for a particular fiscal year, an application for which the new medical service or technology has received FDA marketing authorization by May 1 prior to the particular fiscal year.

§ 412.88 [Amended]

■ 13. Section 412.88 is amended in paragraph (a)(2)(ii)(A) introductory text by removing the phrase ''paragraph (a)(2)(ii)(B) of'' and adding in its place the phrase ''paragraphs (a)(2)(ii)(B) and (C) of''.

§ 412.90 [Amended]

■ 14. Section 412.90 paragraph (j) is amended by removing the date ''October 1, 2025'' and adding in its place the date ''January 1, 2027''.

§ 412.101 [Amended]

■ 15. Section 412.101 is amended by—
■ a. In paragraph (b)(2)(i), removing the phrase ''FY 2010 and FY 2026 and subsequent years,'' and adding in its place the phrase ''FY 2010 and the portion of FY 2027 beginning January 1, 2027, and subsequent fiscal years,'';
■ b. In paragraph (b)(2)(iii), removing the phrase ''FY 2025,'' and adding in its place the phrase ''the portion of FY 2027 ending December 31, 2026,'';
■ c. In paragraph (c)(1), removing the phrase ''FY 2010 and FY 2026 and subsequent years,'' and adding in its place the phrase ''FY 2010 and the portion of FY 2027 beginning January 1, 2027, and subsequent fiscal years,''; and
■ d. In paragraph (c)(3) introductory text, removing the phrase ''FY 2019 through FY 2025,'' and adding in its place ''FY 2019 through the portion of FY 2027 ending December 31, 2026,''.

■ 16. Section 412.105 is amended by revising paragraph (f)(1)(i) to read as follows:

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

* * * * *

(f) * * *

(1) * * *

(i) The resident must be enrolled in an approved teaching program. An approved teaching program is one that meets one of the following requirements, subject to the requirements in § 413.84 of this chapter:

(A) Is approved by one of the national organizations listed in *§ 415.152 of this chapter.*

(B) May count towards certification of the participant in a specialty or subspecialty listed in the current edition of either of the following publications:

(*1*) The Directory of Graduate Medical Education Programs published by the American Medical Association.

(*2*) The Annual Report and Reference Handbook published by the American Board of Medical Specialties.

(C) Is approved by the Accreditation Council for Graduate Medical Education (ACGME), or other organization designated by the Secretary, as a fellowship program in geriatric medicine.

§ 412.108 [Amended]

■ 17. Section 412.108 is amended by—
■ a. In paragraph (a)(1) introductory text, removing the date ''October 1, 2025'' and adding in its place the date ''January 1, 2027''; and
■ b. In paragraph (c)(2)(iii) introductory text, removing the date ''October 1, 2025'' and adding in its place the date ''January 1, 2027''.

§ 412.116 [Amended]

■ 18. Section 412.116 is amended in paragraph (c) by removing the phrase ''for kidney acquisition costs in hospitals with approved kidney transplant programs)'' and adding in its place the phrase ''for organ acquisition costs in hospitals with approved organ transplant programs)''.

■ 19. Section 412.230 is amended by—
■ a. In paragraph (a)(5)(i) removing the phrase ''purposes of the wage index if the pre-reclassified'' and adding in its place the phrase ''purposes of the wage index if, using data described in paragraph (d)(2) of this section, the pre-reclassified'';
■ b. Revising paragraph (c)(1); and
■ c. Adding paragraph (d)(6).

The revision and addition read as follows:

§ 412.230 Criteria for an individual hospital seeking redesignation to another rural area or an urban area.

* * * * *

(c) * * *

(1) To demonstrate proximity to the area, the hospital must submit evidence from a nationally recognized electronic mapping service of the shortest route from the front entrance of the hospital over improved roads or waterways traveled by ferry boats to the county line of the requested area and the distance of that route.

* * * * *

(d) * * *

(6) *Home area reclassification exception.* The requirements of paragraph (d)(1)(iv) of this section do not apply to a hospital that has been granted redesignation as rural under *§ 412.103* and seeks redesignation under this section to its geographic urban area.

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END–STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 20. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww.

■ 21. Section 413.5 is amended by adding paragraphs (c)(10) through (c)(19) to read as follows:

§ 413.5 Cost reimbursement: General.

* * * * *

(c) * * *

(10) Costs incurred by providers for entertainment, including costs associated with entertainment activities, or that are entertainment in nature, are not allowable costs.

(i) This paragraph (c)(10) includes costs that OPOs incur to engage in public education to increase awareness of organ donation and increase donor registration.

(ii) Non-allowable entertainment costs include, but are not limited to the following:

(A) Tickets, admission fees, or entry to sporting or other events, including national or professional sporting events.

(B) Sponsorship of sporting events, teams or athletes, including race car drivers or motorsports activities.

(C) Sponsorship of floats in large-scale regional and national parades.

(D) Concert, theater, or performing arts events, professional musicians or other entertainers.

(E) Wine tours or alcoholic beverages.

(F) Retreats held at spas or luxury resorts, spa services or treatments.

(G) Golf outings, ski trips, cruises, and similar recreational excursions.

(11) Costs incurred by an OPO to engage in public education within its donation service area (DSA), including public education activities designed to reach a broad audience within its DSA, such as but not limited to, billboards, radio advertisements, and social media campaigns, to increase awareness of organ donation and increase donor registration within its DSA are

allowable if they are reasonable and do not violate paragraph (c)(10) of this section.

(12) De minimis or modest costs incurred by providers for employees for purposes of improving employee morale are allowable costs, provided that such costs do not violate the limitations set forth in 42 CFR 413.9(c).

(13) Costs incurred by providers to furnish alcoholic beverages to anyone are not allowable costs.

(14) Costs incurred by OPOs—

(i) For professional education such as meetings, seminars, and presentations on organ donation to acquire all useable organs from potential donors where continuing education credits are not given and where the attendee is clinical staff, non-clinical staff, or contracted staff including, but not limited to, OPO staff, donor hospital staff, and physicians whose role is essential to the OPO's objectives are allowable costs;

(ii) For OPO-sponsored seminars where continuing education credits are given and where the attendee is a member of on the OPO staff are allowable costs to the extent that they are patient care related, reasonable and necessary; and

(iii) For OPO-sponsored seminars where continuing education credits are given and where the attendee is not on the OPO staff, in accordance with § 413.402(d)(2)(v), are not allowable costs.

(15) Costs incurred by a provider—

(i) For employee travel are generally allowable to the extent that they are patient care related, reasonable and necessary;

(ii) To conduct, or send its employees or staff including contracted employees to, patient care related professional education refresher programs, seminars and workshops that increase the quality of patient care or operating efficiency of the provider, are generally allowable costs to the extent that they are patient care related, reasonable, and necessary;

(iii) For entertainment and vacation travel expenses such as travel on cruises or to resorts or spas, or transportation to entertainment or sporting events, are not allowable costs regardless of whether they are or are not incurred in connection with professional educational seminars or continuing education; and

(iv) Related to the personal use of provider vehicles are not allowable costs.

(16) Costs incurred by providers—

(i) For meals sold to visitors, meals for their employees and staff (including executives and management) and non-personnel (including attending physicians) are not allowable costs;

(ii) For de minimis refreshments provided to attendees at educational events, including attendees of OPO-sponsored seminars (with or without continuing education credits) are allowable costs; and

(iii) For meals for employees and contracted staff, whose role is essential to the provider's objectives, when an employee or contracted staff is required to travel away from their primary work location and an overnight stay is required, such as when completing trainings or education, provided such trainings are patient care related are allowable costs.

(17) Costs incurred by providers for drugs sold to other than patients are not related to patient care and are not allowable costs.

(18) Costs incurred by providers for cost of fines or penalties resulting from Federal, State or local laws are not allowable costs.

(19) Costs incurred by providers for operation of a gift shop are not allowable costs.

* * * * *

■ 22. Section 413.9 is amended by adding paragraphs (b)(3) and (c)(4) to read as follows:

§ 413.9 Cost related to patient care.

* * * * *

(b) * * *

(3) *Prudent buyer.* The prudent buyer is a person, provider type or entity that purchases items or property with caution, good judgment, and a sensible approach, aiming to make a sound, informed decision that minimizes risk and avoids unnecessary financial loss. This person, provider type or entity thoughtfully evaluates the condition, legal, and financial aspects of a purchase, much like a reasonably prudent person would in a similar situation.

(c) * * *

(4) Providers are expected to economize by not paying more than the going price for an item or service and seeking to minimize their costs, so that their actual costs will not exceed what a prudent and cost-conscious buyer would pay for a given item or service. If costs are determined to exceed the level that prudent buyers incur, the excess costs are not reimbursable in the absence of clear evidence that the higher costs were unavoidable.

■ 23. Section 413.24 is amended by revising paragraph (d)(6) and adding paragraph (d)(8) to read as follows:

§ 413.24 Adequate cost data and cost finding.

* * * * *

(d) * * *

(6) *Preventing duplication of costs: departments and provider-based entities.* In some situations, the main provider in a provider-based complex may purchase services for a provider-based entity or for a department of the provider through a contract for services (for example, a management contract), directly assigning the costs to the provider-based entity or department and reporting the costs directly in the cost center for that entity or department. In any situation in which costs are directly assigned to a cost center, there is a risk of excess cost in that cost center resulting from the directly assigned costs plus a share of overhead improperly allocated to the cost center which duplicates the directly assigned costs. This duplication could result in improper Medicare payment to the provider. Where a provider has purchased services for a provider-based entity or for a provider department, like general service costs of the provider (for example, like costs in the administrative and general cost center) must be separately identified to ensure that they are not improperly allocated to the entity or the department. If the like costs of the main provider cannot be separately identified, the costs of the services purchased through a contract must be reclassified to the main provider and allocated among the main provider's benefiting cost centers.

Example: A provider-based complex is composed of a hospital and a hospital-based rural health clinic (RHC). The hospital furnishes the entirety of its own administrative and general costs internally. The RHC, however, is managed by an independent contractor through a management contract. The management contract provides a full array of administrative and general services, with the exception of patient billing. The hospital directly assigns the costs of the RHC's management contract to the RHC cost center (for example, Form CMS 2552–96, Worksheet A, Line 71). A full allocation of the hospital's administrative and general costs to the RHC cost center would duplicate most of the RHC's administrative and general costs. However, an allocation of the hospital's cost (included in hospital administrative and general costs) of its patient billing function to the RHC would be appropriate. Therefore, the hospital must include the costs of the patient billing function in a separate cost center to be allocated to the benefiting cost centers, including the RHC cost center. The remaining hospital administrative and general costs would be allocated to all cost centers, excluding the RHC cost center. If the

hospital is unable to isolate the costs of the patient billing function, the costs of the RHC's management contract must be reclassified to the hospital administrative and general cost center to be allocated among all cost centers, as appropriate.

(8) *Improper allocation of overhead prohibited.* Providers must not include a statistical cost which does not relate to the allocation of administrative and general expenses when it causes an improper distribution of overhead.

(i) Providers must employ either or both methods described in paragraphs (d)(8)(ii) or (iii) of this section, if needed, to prevent the improper allocation of overhead on the Medicare cost report.

(ii) *Negative Adjustment Method for accumulated cost.* When direct costs are reported in a cost center or department that includes purchased services or supplies, costs other than the purchased service costs may receive an allocation of administrative and general costs, and the purchased service costs that are not to receive administrative and general must be identified and removed.

(A) On the Medicare cost report, in any column using accumulated costs as the statistical basis for allocating costs, providers must identify any cost center that is not to receive an allocation by entering a negative 1 (−1) on the appropriate line in the accumulated cost column, or by entering the total accumulated cost as a negative amount on the appropriate line in the reconciliation column. For those cost centers using accumulated costs that are to receive partial allocation of costs, providers must enter a negative amount for the costs that are to be excluded from the statistic on the appropriate line in the reconciliation column.

(B) Cost centers that are not to receive an allocation must not have entries in both the reconciliation and accumulated cost columns when the accumulated cost statistic is offset to zero.

(C) For those cost centers that are to receive partial allocation of costs for costs other than purchased services, the cost to be excluded from the accumulated cost statistic must be reported as a negative amount on the effected cost center in the reconciliation column. This results in entries in both the reconciliation column and accumulated cost statistic column simultaneously for the same line (cost center).

(iii) *Fragmenting (componentizing): Administrative and General Method.* When a provider chooses to fragment, or componentize administrative and general costs, the provider must fragment (that is, subscript), the administrative and general cost center into 2 or more cost centers using accurate statistics to allocate its costs and ensure that overhead costs are accurately assigned to departments benefiting from the services provided. When creating multiple administrative and general cost centers, a provider must track and allocate overhead expenses based on actual resource consumption.

(iv) *Provider request to change its cost finding method.*

(A) A provider that wishes to change its cost finding method must submit a request to its contractor, in writing, 90 days prior to the end of the cost reporting period to which the provider's request for change applies.

(B) The contractor's determination of a provider's request to change methods will be furnished to the provider in writing and will be binding on the provider as of the date of the contractor's written notice.

(C) When the contractor approves the provider's request to change methods, the provider must use this method for the cost reporting period to which the request applies and for all subsequent cost reporting periods, unless the contractor approves a subsequent request by the provider to change its cost finding methods.

* * * * *

§ 413.65 [Amended]

■ 24. Section 413.65 is amended by:

■ a. In paragraph (e)(3)(iii)(A) removing the phrase ''the facility or organization'' and adding in its place the phrase ''an inpatient or outpatient facility or organization''; and

■ b. In paragraph (e)(3)(iii)(B) removing the phrase ''the facility or organization'' and adding in its place the phrase ''an outpatient facility or organization''.

■ 25. Section 413.75 is amended in paragraph (b) by revising the definitions for ''Approved geriatric program'' and ''Approved medical residency program'' to read as follows:

§ 413.75 Direct GME payments: General requirements.

* * * * *

(b) * * *

* * * * *

Approved geriatric program means, subject to the requirements in § 413.84 of this chapter, a fellowship program of one or more years in length that is approved by one of the national organizations listed in § 415.152 of this chapter under that respective organization's criteria for geriatric fellowship programs.

Approved medical residency program means, subject to the requirements in § 413.84 of this chapter, a program that meets one of the following criteria:

(i) Is approved by one of the national organizations listed in *§ 415.152 of this chapter.*

(ii) May count towards certification of the participant in a specialty or subspecialty listed in the current edition of either of the following publications:

(A) The Directory of Graduate Medical Education Programs published by the American Medical Association, and available from American Medical Association, Department of Directories and Publications, 515 North State Street, Chicago, Illinois 60610.

(B) The Annual Report and Reference Handbook published by the American Board of Medical Specialties, and available from American Board of Medical Specialties, One Rotary Center, Suite 805, Evanston, Illinois 60201.

(iii) Is approved by the Accreditation Council for Graduate Medical Education (ACGME), or other organization designated by the Secretary, as a fellowship program in geriatric medicine.

* * * * *

■ 26. Section 413.79 is amended by revising paragraph (l) to read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

* * * * *

(l) For purposes of this section, a new medical residency training program means a program that receives initial accreditation by the appropriate accrediting body or begins training residents on or after January 1, 1995, and in the case of a medical residency training program that receives initial accreditation by the appropriate accrediting body and is still within its 5-year cap building period as of October 1, 2026, or starts training residents on or after October 1, 2026, that meets the following conditions:

(1) Subject to the provisions of paragraphs (l)(2) and (l)(3) of this section, at least 90 percent of the individual residents that participate in the program during the 5-year cap building period (that is, for new urban teaching hospitals, during the first 5 program years of the first new program's existence under paragraph (e)(1) of this section; and for rural hospitals, during the first 5 program years of each new program under paragraph (e)(3) of this section) must not have previous experience training in another program in the same specialty.

(2) For purposes of determining whether a program satisfies the requirement under paragraph (l)(1) of

this section, the count of individual residents excludes an individual—

(i) With previous experience training in another program in the same specialty who enters the program as a first-year resident through the National Resident Matching Program or another binding third-party resident matching program; or

(ii) Who meets the definition of a ''displaced resident'' under paragraph (h)(1)(iii) of this section.

(3) The requirement under paragraph (l)(1) of this section does not apply to a program accredited for 16 or fewer resident positions.

* * * * *

■ 27. Section 413.84 is added to read as follows:

§ 413.84 Prohibition against unlawful discrimination.

(a) An approved medical residency training program, as defined in §§ 412.105(f)(1)(i), 413.75(b), and 415.152 of this chapter, or an approved nursing and allied health education program, as defined in § 413.85 of this chapter, must not discriminate, or promote or encourage discrimination, on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

(b) An accrediting organization of approved medical residency training programs under §§ 412.105(f)(1)(i), 413.75(b), and 415.152 of this chapter, or of approved nursing and allied health education programs under § 413.85 of this chapter, and any publications cited in the regulations that list specialties or subspecialties of such programs, must not use criteria that discriminate, or promote or encourage discrimination, on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits.

(c) Approved medical residency training programs and approved nursing and allied health education programs include programs that would be accredited except for the accrediting agency's reliance upon an accreditation standard that requires an entity to—

(1) Discriminate, or promote or encourage discrimination, on the basis of race, color, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits; or

(2) Perform an induced abortion or require, provide, or refer for training in the performance of induced abortions, or make arrangements for such training, regardless of whether the standard provides exceptions or exemptions.

■ 28. Section 413.85 is amended by—

■ a. In paragraph (c), revising the definition of ''Approved educational activities'' introductory text; and

■ b. Revising paragraphs (d)(2) and (e).

The revisions read as follows:

§ 413.85 Cost of approved nursing and allied health education activities.

* * * * *

(c) * * *

Approved educational activities means, subject to the requirements in § 413.84 of this chapter, formally organized or planned programs of study of the type that—

* * * * *

(d) * * *

(2) * * *

(i) Subject to the provisions of paragraphs (d)(2)(ii) and (iii) of this section, the net cost of approved educational activities is determined as follows:

(A) Determine allowable direct costs incurred by the provider for trainee stipends and compensation of faculty employed by the provider.

(B) Subtract from those direct costs the revenues the provider receives from students or on behalf of students enrolled in the program, such as, but not limited to, tuition, student fees, or textbooks purchased for resale.

(C) Allocate indirect costs of the activities as determined under the Medicare cost-finding principles in § 413.24, limited to those costs that the provider itself incurs and that are directly attributable to the operation of the approved educational activities.

(ii) The direct and indirect allowable costs of educational activities do not include patient care costs, costs incurred by a related organization, or costs that constitute a redistribution of costs from an educational institution to a provider or costs that have been or are currently being provided through community support.

* * * * *

(e) *Approved nursing and allied health education programs.* Subject to the requirements in § 413.84 of this chapter, CMS will consider an activity an approved nursing and allied health education program if the program is a planned program of study that is licensed by State law, or if licensing is not required, is accredited by the recognized national professional organization for the particular activity.

* * * * *

■ 29. Section 413.402 is amended by revising paragraph (a) and (d)(2)(v) to read as follows:

§ 413.402 Organ acquisition costs.

(a) *Costs related to organ acquisition.* Costs recognized in *paragraph (b)* of this section are allowable costs incurred in the acquisition of organs intended for transplant, including those organs that are subsequently determined unsuitable for transplant and furnished for research from a living donor or a deceased donor by the hospital, or from a deceased donor by an OPO. Additionally, there are administrative and general costs that may be allowable and included on the cost report for an OPO or a TH. Costs incurred by OPOs for public education within its donation service area in accordance with § 413.5(c)(11) and professional education in accordance with § 413.5(c)(14)(iii) are allowable overhead costs and are included on the cost report for an OPO.

* * * * *

(d) * * *

(2) * * *

(v) Costs associated with and incurred for OPO-sponsored seminars where continuing education credits are given and where the attendee is not on the OPO's staff (as described at *§ 486.326(b)*). Costs incurred by OPOs for public education within their donation service area in accordance with § 413.5(c)(11) and professional education in accordance with § 413.5(c)(14)(iii) are allowable overhead costs.

* * * * *

■ 30. Section 413.404 is amended by—

■ a. In paragraph (b)(3)(ii)(A) removing the phrase ''average cost'' and adding in its place the phrase ''average organ acquisition cost'';

■ b. Adding paragraph (b)(3)(ii)(C)(*8*);

■ c. Revising paragraph (c) introductory text; and

■ d. Adding paragraph (d);

The additions and revision read as follows:

§ 413.404 Standard acquisition charge.

* * * * *

(b) * * *

(3) * * *

(ii) * * *

(C) * * *

(*8*) Registry fees as specified in § 413.402(b)(6) of this subpart.

(c) *Independent OPO SACs, for cost reporting periods beginning before October 1, 2028—*

* * * * *

(d) *Independent OPO organ SACs, for cost reporting periods beginning on or after October 1, 2028—*

(1) *General.* For each organ type, the contractor approves the organ-specific SAC based on submission from the IOPO of an estimate of initial cost reporting year projected costs, divided by the initial cost reporting year projected number of usable deceased donor organs that the IOPO expects to procure. For subsequent cost reporting years, the contractor approves the organ-specific SAC submission from the IOPO based on the prior year's actual, reasonable and necessary costs and the IOPO's reasonable estimate of the costs it expects to incur to procure deceased donor organs during the IOPO's cost reporting period, divided by the subsequent cost reporting year's projected number of usable deceased donor organs the IOPO expects to procure during that cost reporting period.

(i) *Initial year.* For each organ type, the contractor approves the IOPO's initial organ-specific SAC, based on the IOPO's budget information.

(ii) *Subsequent years.* For each organ type, the IOPO must provide the Medicare contractor with its reasonable estimated SAC based upon its prior cost reporting period's costs and organ procurement volumes, and its reasonable and documented estimate of its projected costs and organ procurement volumes for the subsequent cost reporting period, for contractor review to ensure reasonableness, and approval.

(iii) *Relationship to interim payments.* Each organ-specific SAC amount is the organ-specific interim payment the TH or other OPO pays to the IOPO, as set forth in § 413.420(d)(2)(i) and (ii).

(iv) *Costs to develop the IOPO deceased donor SACs.* Costs that may be used to develop the IOPO deceased donor SACs include, but are not limited to the following:

(A) Costs of organs acquired from other THs or OPOs.

(B) Costs of transportation as specified in § 413.402(b)(8).

(C) Surgeons' fees for excising deceased donor organs (limited to $1,250 for kidneys).

(D) Costs of tissue typing services, including those furnished by independent laboratories.

(E) Organ preservation and perfusion costs.

(F) General routine and special care service costs (for example, intensive care unit or critical care unit services related to the donor).

(G) Operating room and other inpatient ancillary service costs.

(v) *SAC adjustments.* Only the contractor may adjust the organ SACs. IOPOs may request that the contractor make an adjustment in accordance with § 413.64(e), or the contractor may initiate an adjustment, in accordance with § 413.64(d)(2) or § 413.64(e), as applicable, but no more than quarterly. The IOPO must provide the Medicare contractor with an estimated adjusted SAC based on its actual cost data and its reasonable and documented estimate of costs through the end of its accounting period, to enable the Medicare contractor to review to ensure reasonableness and approve the adjusted SAC.

(2) *Billing SACs for organs generally.* When an IOPO obtains an organ from another OPO, the receiving IOPO is responsible for paying the procuring OPO's SAC. The receiving IOPO uses its SAC for each organ type, and not the procuring OPO's SAC, when billing the TH receiving the organ.

■ 31. Section 413.420 is amended by—

■ a. Revising the section heading and paragraphs (a), (c) introductory text, (c)(1) introductory text, (c)(1)(ii), (iii), and (iv);

■ b. In paragraph (c)(2), removing the phrase ''IOPO or laboratory'' and adding in its place the phrase ''IOPO or HCL'';

■ c. Revising paragraph (d);

■ d. In paragraph (e)(1) introductory text removing the phrase ''IOPOs and histocompatibility laboratories'' and adding in its place the phrase ''IOPOs and HCLs'';

■ e. In paragraph (e)(1)(i) removing the phrase ''IOPO or laboratory'' and adding in its place the phrase ''IOPO or HCL'';

■ f. In paragraph (e)(2) introductory text removing the phrase ''IOPO or histocompatibility laboratory'' and adding in its place the phrase ''IOPO or HCL'';

■ g. Revising paragraphs (e)(2);

■ h. Adding paragraph (e)(3); and

■ i. Revising paragraph (g).

The revisions and additions read as follows:

§ 413.420 Payment to independent organ procurement organizations (IOPOs) and histocompatibility laboratories (HCLs) for organ acquisition costs.

(a) * * *

(1) Covered services furnished by IOPOs and HCLs in connection with organ acquisition and transplantation are reimbursed under the principles for determining reasonable cost contained in this part as follows:

(i) For kidney acquisition and transplantation services, IOPOs and HCLs are reimbursed under the principles for determining reasonable cost.

(ii) For non-renal organ acquisition and transplantation services furnished for cost reporting periods beginning on or after October 1, 2028, IOPOs and HCLs are reimbursed under the principles for determining reasonable cost.

(2) Services furnished by IOPOs and HCLs, that have an agreement with the Secretary in accordance with paragraph (c) of this section, are paid directly by the TH or OPO using a contractor-approved kidney standard acquisition charge (SAC) (for an IOPO) or contractor-approved kidney rates (for an HCL). Effective for cost reporting periods beginning on or after October 1, 2028, services furnished by IOPOs and HCLs, that have an agreement with the Secretary in accordance with paragraph (c) of this section, are paid directly by the TH or OPO using a contractor-approved non-renal organ SAC (for an IOPO) or contractor-approved non-renal rates (for an HCL). (The reasonable costs of services furnished by IOPOs or HCLs are reimbursed in accordance with the principles contained in §§ 413.60 and 413.64.)

* * * * *

(c) Agreements with IOPOs and HCLs.

(1) Any IOPO or HCL that wishes to have the cost of its pre-transplant services reimbursed under the Medicare program must file an agreement with CMS under which the IOPO or HCL agrees to do all of the following:

* * * * *

(ii) To permit CMS to designate a contractor to approve the interim reimbursement rate, payable by the THs or OPOs for services provided by the IOPO or HCL, and to determine Medicare's reasonable cost based upon the cost report filed by the IOPO or HCL.

(iii) To provide such budget or cost projection information as may be required for the contractor to approve an initial interim rate.

(iv) To pay to CMS amounts that have been received or are receivable by IOPOs or HCLs from THs and OPOs, and that are determined to be in excess of the reasonable cost of the services provided by the IOPO or HCL.

* * * * *

(d) * * *

(1) THs with approved transplant programs and OPOs pay the IOPO or HCL for their pre-transplantation services on the basis of interim rates approved by the contractor for that IOPO or HCL, as follows:

(i) THs with approved kidney transplant programs and OPOs pay the

IOPO or HCL for their kidney pre-transplantation services, based on interim rates approved by the contractor for that IOPO or HCL.

(ii) THs with approved non-renal transplant programs and OPOs pay the IOPO or HCL for their non-renal organ pre-transplantation services furnished for cost reporting periods beginning on or after October 1, 2028, based on interim rates approved by the contractor for that IOPO or HCL.

(2) The interim rates are contractor approved rates, based on costs associated with procuring an organ for transplantation incurred by an IOPO or HCL, respectively, during its previous fiscal year, and on the IOPO's or HCL's reasonable and documented estimate of its projected costs in its subsequent fiscal year, as follows:

(i) The interim rates for kidneys are a contractor approved kidney SAC or contractor approved rates, based on costs associated with procuring kidneys for transplantation, incurred by an IOPO or HCL, respectively, during its previous fiscal year and on the IOPO's or HCL's reasonable and documented estimate of its projected costs in its subsequent fiscal year. If there is not adequate cost data to determine the initial interim rate, the contractor approves it according to the IOPO's or HCL's estimate of its projected costs for the fiscal year.

(ii) For services furnished for cost reporting periods beginning on or after October 1, 2028, the interim rates for non-renal organs are contractor approved non-renal organ-specific SACs or contractor approved rates, based on costs associated with procuring each specific type of non-renal organ for transplantation incurred by an IOPO or HCL, respectively, during its previous fiscal year and on the IOPO's or HCL's reasonable and documented estimate of its projected costs in its subsequent fiscal year. If there is not adequate cost data to determine the initial interim rates, the contractor approves them according to the IOPO's or HCL's estimate of its projected costs for the fiscal year.

(3) Payments or amounts payable from THs and OPOs based on interim rates specified in paragraph (d)(2)(i) of this section are reconciled directly with the IOPO or HCL after the close of the IOPO's or HCL's fiscal year in accordance with § 413.420(e). For cost reporting periods beginning on or after October 1, 2028, payments or amounts payable from THs and OPOs based on interim rates specified in paragraph (d)(2)(ii) of this section are reconciled directly with the IOPO or HCL after the close of the IOPO's or HCL's fiscal year in accordance with § 413.420(e).

(4) When a contractor approves interim rates for IOPOs and HCLs, it must disseminate those interim rates to all THs, OPOs, and contractors.

(e) * * *

(2) *Audit and adjustment for cost reporting periods beginning before October 1, 2028.* A cost report submitted by an IOPO or histocompatibility laboratory is reviewed by the contractor and a new interim reimbursement rate for kidney acquisition costs for the subsequent fiscal year is approved based upon this review.

(i) *Retroactive adjustment.* A retroactive adjustment of the amounts received or receivable by the IOPO or HCL under the kidney interim rate is made in accordance with § 413.64(f).

(ii) *Lump sum adjustment.* If the determination of reasonable cost reveals an overpayment or underpayment resulting from the kidney interim reimbursement rate received or receivable by the IOPO or HCL from THs and OPOs, a lump sum adjustment is made directly between the contractor and the IOPO or HCL.

(3) *Audit and adjustment for cost reporting periods beginning on or after October 1, 2028.* A cost report submitted by an IOPO or HCL is reviewed by the contractor and new interim reimbursement rates for organ acquisition costs for the subsequent fiscal year are approved by the contractor based upon this review and upon the IOPO's or HCL's reasonable estimate of its costs for organ procurement and testing, respectively, in the subsequent fiscal year.

(i) *Retroactive adjustment.* A retroactive adjustment of the amounts received or receivable by the IOPO or HCL under the organ-specific interim rates is made in accordance with § 413.64(f).

(ii) *Lump sum adjustment.* If the determination of reasonable cost reveals an overpayment or underpayment resulting from the organ-specific interim reimbursement rates received or receivable by the IOPO or HCL from THs and OPOs, an adjustment to the interim rate may be initiated by the contractor or requested by the IOPO or HCL, but no more than quarterly. If a rate adjustment is made, then an IOPO or HCL may request that a lump sum adjustment be made directly between the contractor and the IOPO or HCL.

* * * * *

(g) *Appeals.* If the amount in controversy is $1,000 or more, any IOPO or HCL that disagrees with a contractor's cost determination under this section is entitled to a contractor hearing, review of the contractor hearing officer's decision by a CMS reviewing official, and Administrator Review of a CMS reviewing official's decision, in accordance with the procedures set forth in §§ 405.1801(b)(2) and 405.1811 through 405.1834 of this chapter.

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 32. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395h(h).

■ 33. Section 415.152 is amended in the definition of ''Approved graduate medical education (GME) program'' by revising the introductory text and paragraph (1) to read as follows:

§ 415.152 Definitions.

* * * * *

Approved graduate medical education (GME) program means, subject to the requirements in § 413.84 of this chapter, one of the following:

(1) A residency program approved by the Accreditation Council for Graduate Medical Education, by the American Osteopathic Association, by the Commission on Dental Accreditation of the American Dental Association, or by the Council on Podiatric Medical Education of the American Podiatric Medical Association, or other organization determined by the Secretary.

* * * * *

PART 419—PROSPECTIVE PAYMENT SYSTEMS FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 34. The authority citation for part 419 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395l(t), and 1395hh.

■ 35. Section 419.66 is amended by revising paragraph (c)(2)(ii) to read as follows:

§ 419.66 Transitional pass-through payments: Medical devices.

* * * * *

(c) * * *

(2) * * *

(ii) For devices for which pass-through payment status began on or after January 1, 2020, and on or before January 1, 2029, as an alternative pathway to *paragraph (c)(2)(i)* of this section, a new device is part of the Food and Drug Administration's (FDA's)

Breakthrough Devices Program and has received Breakthrough Device designation as of September 30, 2026, and has received marketing authorization for the indication covered by the Breakthrough Device designation.

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 36. The authority citation for part 495 continues to read as follows:

Authority: *42 U.S.C. 1302* and *1395hh.*

■ 37. Section 495.4 is amended in the definition of ''Certified electronic health record technology (CEHRT)'' by revising paragraphs (2)(i) and (2)(ii)(A) in introductory text to read as follows:

§ 495.4 Definitions.

Certified electronic health record technology (CEHRT) * * *

(2) * * *

(i) For 2019 through 2026, at 45 CFR 170.315(a)(12) (family health history) and 45 CFR 170.315(e)(3) (patient health information capture); and

(ii) * * *

(A) For 2019 through 2026, the applicable measure calculation certification criterion at *45 CFR 170.315(g)(1)* or *(2)* for all certification criteria that support a meaningful use objective with a percentage-based measure.

* * * * *

§ 495.40 [Amended]

■ 38. Section 495.40 is amended in paragraph (b)(2)(i)(I) introductory text by removing the phrase ''To engage'' and adding in its place the phrase ''Through CY 2026, to engage''.

PART 512—STANDARD PROVISIONS FOR MANDATORY INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR CERTAIN MODELS

■ 39. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 40. Section 512.505 is amended by—

■ a. Adding definitions for ''APC update factor'' and ''MS–DRG update factor'' in alphabetical order;

■ b. Revising definition for ''Spinal fusion''; and

■ c. Adding definition for ''Updated prospective trend factor'' in alphabetical order.

The additions and revision read as follows:

§ 512.505 Definitions.

* * * * *

APC update factor refers to a component applied to the prospective trend factor to ensure that the APC weights corresponding to the performance year are incorporated into the target price calculations, as set forth in § 512.540(b)(7).

* * * * *

MS–DRG update factor refers to a component applied to the prospective trend factor for episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of the performance year to account for changes in MS–DRG definitions and weights between the first and second fiscal years in the performance year, as set forth in § 512.540(b)(7).

* * * * *

Spinal fusion means any cervical, thoracic, or lumbar spinal fusion procedure paid through either of the following:

(1) The IPPS under—

(i) MS–DRG 402, 426, 427, 428, 429, 430, 447, 448, 450, 451, 471, 472, or 473; and

(ii) On or after October 1, 2026 MS–DRG 523, 524, or 525.

(2) The OPPS under HCPCS codes 22551, 22554, 22612, 22630, or 22633.

* * * * *

Updated prospective trend factor refers to the multiplier incorporated into the preliminary target price to estimate changes in spending patterns between the baseline period and the corresponding calendar year and fiscal year in the performance year, calculated as set forth in § 512.540(b)(7).

* * * * *

■ 41. Section 512.525 is amended by revising paragraph (d)(4)(i) to read as follows:

§ 512.525 Episodes.

(d) * * *

(4) * * *

(i) IPPS discharge under—

(A) MS–DRG 402, 426, 427, 428, 429, 430, 447, 448, 450, 451, 471, 472, or 473; and

(B) On or after October 1, 2026 MS–DRG 523, 524, or 525; or

* * * * *

■ 42. Section 512.537 is amended by adding paragraph (b)(4) to read as follows:

§ 512.537 Determination of the episode.

(b) * * *

(4) The beneficiary is in a CJR–X episode and has a procedure performed at a TEAM participant during the 90-day post-discharge period after a CJR–X anchor hospitalization or CJR–X anchor procedure.

* * * * *

■ 43. Section 512.540 is amended by—

■ a. In paragraph (a)(1)(i) by removing the phrase ''the 24 MS–DRGs'' and adding in its place the phrase ''the MS–DRGs''; and

■ b. Revising paragraphs (b)(6) through (8).

The revisions read as follows:

§ 512.540 Determination of preliminary target prices.

(b) * * *

(6) *Prospective normalization factor.* Based on the episodes in the most recent calendar year of the baseline period for performance year 1 and for the entire baseline period starting in performance year 2, CMS calculates a prospective normalization factor at the MS–DRG/HCPCS region level, which is a multiplier that ensures that the average of the total risk-adjusted benchmark price does not exceed the average of the total non-risk adjusted benchmark price, by doing the following:

(i) CMS applies risk adjustment multipliers, as specified in § 512.545(a)(1) through (3), to the most recent baseline year episodes for performance year 1 and to the entire baseline period episodes starting in performance year 2, to calculate the estimated risk-adjusted target price for all performance year episodes.

(ii) CMS divides the mean of the benchmark price for each episode across all hospitals and regions by the mean of the estimated risk-adjusted benchmark price calculated in § 512.540(b)(6)(i) for the same episode types across all hospitals and regions.

(7) *Prospective and updated trend factors.*

(i) Prospective trend factor. The prospective trend factor for each MS–DRG/HCPCS episode type and region is the average (arithmetic mean) of the multiplier, as calculated in paragraph (b)(7)(i) of this section, for that MS–DRG/HCPCS episode type and region and the national average for that MS–DRG/HCPCS episode type.

(A) CMS calculates a multiplier for each MS–DRG/HCPCS episode type and region which is applied to the most recent calendar year of the applicable baseline period.

(B) The multiplier is calculated using linear regression on the logarithmically transformed average regional spending for each MS–DRG/HCPCS episode type in the baseline years and trend years at both the regional and national level.

(C) CMS exponentiates the coefficient from this regression to calculate the estimated annual change (where an exponentiated coefficient of 1 signifies no change) in average regional spending

for each MS–DRG/HCPCS episode type from year to year.

(D) CMS squares the value in paragraph (C) to calculate the 2-year prospective trend factor.

(ii) *Updated prospective trend factor.* CMS calculates the updated prospective trend factor as the product of all the following factors:

(A) The prospective trend factor specified in paragraph (b)(7)(i) of this section.

(B) The APC update factor as specified in this paragraph (B). CMS calculates an APC update factor, after the corresponding calendar year inputs are published in the CY OPPS/ASC final rule, as the ratio of benchmark prices calculated with APC weights corresponding to the calendar year of the performance year to benchmark prices calculated with APC weights corresponding to the calendar year prior to the performance year.

(C) The MS–DRG update factor as specified in this paragraph (C). CMS calculates an MS–DRG update factor, after the corresponding fiscal year inputs are published in the FY IPPS/LTCH PPS final rule, for episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year as the ratio of benchmark prices calculated with the second fiscal year inputs to benchmark prices calculated with the first fiscal year inputs.

(8) *Communication of preliminary target prices.* CMS communicates the preliminary target prices for each MS–DRG/HCPCS episode type for each region, and the preliminary target prices for each MS–DRG/HCPCS episode type specific to the TEAM participant before the performance year in which they apply. CMS communicates the APC and MS–DRG update factors after the corresponding calendar year and second fiscal year inputs are published with the corresponding calendar year and fiscal year final payment rules.

* * * * *

■ 44. Section 512.545 is amended by—

■ a. Revising paragraphs (d)(1) and(e)(1)(ii);

■ b. Adding paragraph (e)(1)(iii);

■ c. Redesignating paragraph (e) as paragraph (e)(2)(i);

■ d. Adding paragraph (e)(2)(ii); and

■ e. Revising paragraph (f).

The revisions and additions read as follows:

§ 512.545 Determination of reconciliation target prices.

* * * * *

(d)(1) At the time of reconciliation, the preliminary target prices computed under § 512.540 are risk adjusted by applying the applicable beneficiary level and hospital-level risk adjustment factors specific to the beneficiary in the episode, as set forth in paragraphs (a)(1) through (6) of this section.

(2) CMS applies the coefficients estimated with the assigned first fiscal year MS–DRG/HCPCS inputs, as determined in § 512.550(c)(1), for episodes with anchor hospitalizations or anchor procedure end date in the fourth quarter of a performance year.

(e) * * *

(1) * * *

(ii) Episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year are calculated specific to the assigned first and second fiscal year MS–DRG/HCPCS episode type and region combination, as determined in § 512.550(c)(1). The benchmark prices and risk adjustment coefficients are calculated with the assigned first fiscal year MS–DRG/HCPCS inputs and applied to the realized case mix of the second fiscal year MS–DRG/HCPCS.

(iii) As applied, cannot exceed ±5 percent of the prospective normalization factor (as specified in § 512.540(b)(6)).

(2) * * *

(ii) For episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year, the final normalization factor is applied to each assigned first and second fiscal year MS–DRG/HCPCS episode type and region combination.

(f) CMS calculates a multiplier, referred to as the capped retrospective trend factor, for each MS–DRG/HCPCS episode type and region, which is applied during reconciliation to the most recent calendar year of the applicable baseline period.

(1)(i) The retrospective trend factor is calculated as the average regional capped performance year episode spending for each MS–DRG/HCPCS episode type divided by the average regional capped baseline period episode spending for each MS–DRG/HCPCS episode type.

(ii) For episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year, CMS calculates the retrospective trend factor as the average regional capped performance year episode spending specific to the second fiscal year MS–DRG/HCPCS episode type divided by the average regional capped baseline period episode spending calculated with the assigned first fiscal year MS–DRG/HCPCS inputs.

(2) The retrospective trend factor is capped so that the maximum difference cannot exceed ±3 percent of the updated prospective trend factor (as specified in § 512.540(b)(7)).

(3)(i) CMS applies the capped retrospective trend factor to the previously calculated normalized, risk adjusted target prices specific to each region and MS–DRG/HCPCS episode type, as specified in paragraph (e)(2) of this section, to calculate the reconciliation target prices, which are compared to performance year spending at reconciliation, as specified in § 512.550(c).

(ii) For episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year, the capped retrospective trend factor is applied specific to each assigned first and second fiscal year MS–DRG/HCPCS episode type and region combination.

■ 45. Section 512.547 is amended by—

■ a. In paragraph (a)(1)(i), removing the phrase ''CY 2025'' and adding in its place the phrase ''July 1, 2024 through June 30, 2025'';

■ b. In paragraph (a)(1)(ii), removing the phrase ''CY 2025'' and adding in its place the phrase ''July 1, 2023 through June 30, 2025'';

■ c. In paragraph (a)(1)(iii), removing the phrase ''CY 2025'' and adding in its place ''the phrase July 1, 2024 through June 30, 2025'';

■ d. In paragraph (a)(2)(i), removing the phrase ''CY 2025'' and adding in its place the phrase ''July 1, 2025 through June 30, 2026'';

■ e. In paragraph (a)(2)(iv), removing the phrase ''CY 2026'' and adding in its place the phrase ''July 1, 2024 through June 30, 2026'';

■ f. In paragraph (a)(2)(v), removing the phrase ''CY 2025'' and adding in its place the phrase ''July 1, 2025 through June 30, 2026'';

■ g. In paragraph (a)(3) introductory text, removing the phrase ''years 3 through 5:'' and adding in its place the phrase ''year 3:'';

■ h. In paragraph (a)(3)(i), removing the phrase ''CY 2025'' and adding in its place the phrase ''July 1, 2026 through June 30, 2027'';

■ i. In paragraph (a)(3)(ii), removing the phrase ''2026'' and adding in its place the phrase ''2028'';

■ j. In paragraph (a)(3)(iii), removing the phrase ''2026'' and adding in its place the phrase ''2028'';

■ k. In paragraph (a)(3)(iv), removing the phrase ''CY 2026'' and adding in its place the phrase ''July 1, 2025 through June 30, 2027'';

■ l. In paragraph (a)(3)(v), removing the phrase ''CY 2025'' and adding in its place the phrase ''July 1, 2026 through June 30, 2027'';

■ m. In paragraph (a)(3)(vi), removing the phrase ''CY 2027'' and adding in its place the phrase ''January 1, 2028 through December 31, 2028'';
■ n. Adding paragraphs (a)(4) and (5).
The additions read as follows:

§ 512.547 Quality measures, composite quality score, and display of quality measures.

(a) * * *

(4) For performance year 4:

(i) *For all episode categories:* Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356) with a July 1, 2027 through June 30, 2028 CQS baseline period.

(ii) *For all episode categories:* Hospital Harm—Falls with Injury (CMIT ID #1518) with a January 1, 2029 through December 31, 2029 CQS baseline period.

(iii) *For all episode categories:* Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) with a January 1, 2029 through December 31, 2029 CQS baseline period.

(iv) *For all episode categories:* Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (ISCMR) (CMIT ID #134) with a July 1, 2026 through June 30, 2028 CQS baseline period.

(v) *For LEJR episodes:* Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618) with a July 1, 2027 through June 30, 2028 CQS baseline period.

(vi) *For LEJR and Spinal Fusion episodes:* Information Transfer PRO–PM (CMIT ID #1797) with a January 1, 2029 through December 31, 2029 CQS baseline period.

(5) For performance year 5:

(i) *For all episode categories:* Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356) with a July 1, 2028 through June 30, 2029 CQS baseline period.

(ii) *For all episode categories:* Hospital Harm—Falls with Injury (CMIT ID #1518) with a January 1, 2030 through December 31, 2030 CQS baseline period.

(iii) *For all episode categories:* Hospital Harm—Postoperative Respiratory Failure (CMIT ID #1788) with a January 1, 2030 through December 31, 2030 CQS baseline period.

(iv) *For all episode categories:* Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (ISCMR) (CMIT ID #134) with a July 1, 2027 through June 30, 2029 CQS baseline period.

(v) *For LEJR episodes:* Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618) with a July 1, 2028 through July 30, 2029 CQS baseline period.

(vi) *For LEJR and Spinal Fusion episodes:* Information Transfer PRO–PM (CMIT ID #1797) with a January 1, 2030 through December 31, 2030 CQS baseline period.

■ 46. Section 512.550 is amended by revising paragraph (c) to read as follows:

§ 512.550 Reconciliation process and determination of the reconciliation payment or repayment amount.

* * * * *

(c) * * *

(1) CMS assigns a first fiscal year MS–DRG by identifying diagnosis or procedure codes that change between the first and second fiscal year of the performance year per the fiscal year final payment rule MS–DRG definitions, for each episode with an anchor hospitalization or anchor procedure end date in the fourth quarter of a performance year. The first fiscal year MS–DRG will match the second fiscal year MS–DRG if there are no mapping changes for an initiating MS–DRG.

(i) CMS does not assign mapping changs for episodes with anchor hospitalization or anchor procedure end dates in the first three quarters of a performance year.

(2) CMS cancels an episode with an anchor hospitalization or anchor procedure end date in the fourth quarter of a performance year, in accordance with § 512.537(b), if the assigned first fiscal year MS–DRG is not specified in § 512.525(d).

(3) CMS determines the performance year spending for each episode included in the performance year (other than episodes that have been canceled in accordance with § 512.537(b)) for each MS–DRG/HCPCS episode type using claims data that is available 6 months after the end of the performance year.

(4) CMS calculates and applies the high-cost outlier cap for performance year episode spending by applying the calculation described in § 512.540(b)(4) to performance year episode spending for each MS–DRG/HCPCS episode type.

(5)(i) CMS applies the adjustments specified in § 512.545 to the preliminary target prices computed in accordance with § 512.540 to calculate the reconciliation target prices for each MS–DRG/HCPCS episode type.

(ii) CMS calculates the reconciliation target prices for each assigned first and second fiscal year MS–DRG/HCPCS episode type for episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year.

(6)(i) CMS aggregates the reconciliation target prices computed in accordance with paragraph (c)(3) of this section for all episodes included in the performance year (other than episodes that have been canceled in accordance with § 512.537(b)) for each MS–DRG/HCPCS episode type.

(ii) CMS aggregates the reconciliation target prices for each assigned first and second fiscal year MS–DRG/HCPCS episode type for episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year.

(7)(i) CMS subtracts the performance year spending amount determined under paragraphs (c)(1) and (2) of this section from the reconciliation target price amount determined under paragraph (c)(4) of this section for each MS–DRG/HCPCS episode type.

(i) CMS first subtracts the performance year spending amount from the reconciliation target amount for each assigned first and second fiscal year MS–DRG/HCPCS episode type, then sums values for each MS–DRG/HCPCS episode type for episodes with anchor hospitalization or anchor procedure end dates in the fourth quarter of a performance year.

(8) CMS sums the values calculated under paragraph (c)(5) of this section across all MS–DRG/HCPCS episode types to determine the reconciliation amount.

(9)(i) CMS caps the performance year spending amount for each MS–DRG/HCPCS episode type determined under paragraphs (c)(3) and (4) of this section to equal the reconciliation target price computed in accordance with paragraph (c)(5) of this section for episode categories where the TEAM participant did not meet the low volume threshold of at least 31 episodes during the 3-year baseline period.

(ii) Low volume hospital episodes, including episode categories where CMS caps performance year spending, are included in the CQS, as calculated in § 512.547(b), and stop-loss/stop-gain thresholds, as applied at paragraph (e) of this section.

■ 47. Part 512 is amended by adding subpart F to read as follows:

Subpart F—Comprehensive Care For Joint Replacement Expanded (CJR–X) Model

Sec.

General

512.600 Basis and scope of subpart.

512.605 Definitions.

CJR–X Participation

512.610 Mandatory participation.
512.615 APM options.

Beneficiary Population

512.620 Beneficiary inclusion criteria.
512.622 Beneficiary notification.

Episode of Care

512.625 Scope of episode.
512.630 Determination of the episode.

Quality Measures and Composite Quality Score

512.635 Quality measures, composite quality score, and display of quality measures.

Pricing Methodology

512.640 Determination of preliminary target prices.
512.645 Determination of reconciliation target prices.
512.650 Reconciliation process and determination of the reconciliation payment or repayment amount.
512.652 Treatment of incentive programs or add-on payments under existing Medicare payment systems.
512.655 Proration of payments for services that extend beyond an episode.
512.660 Appeals process.

Data Sharing

512.665 Data sharing with CJR–X participants.

Financial Arrangements and Beneficiary Incentives

512.670 Sharing arrangements.
512.675 Distribution arrangements.
512.680 Downstream distribution arrangements.
512.685 CJR–X beneficiary incentives.
512.690 Application of the CMS-sponsored Model Arrangements and Patient Incentives Safe Harbor.

Medicare Program Waivers

512.695 CJR–X Medicare Program Waivers.

Subpart F—Comprehensive Care For Joint Replacement Expanded (CJR–X) Model

General

§ 512.600 Basis and scope of subpart.

(a) *Basis.* This subpart implements the expansion of the Comprehensive Care for Joint Replacement (CJR) Model under section 1115A(c) of the Act. Except as specifically noted in this subpart, the regulations under this subpart do not affect the applicability of other provisions affecting providers and suppliers under Medicare FFS, including the applicability of provisions regarding payment, coverage, and program integrity.

(b) *Scope.* This subpart sets forth the following:

(i) Participation in CJR–X.

(ii) Scope of episodes.

(iii) Pricing methodology.

(iv) Quality measures and quality reporting requirements.

(v) Reconciliation and review processes.

(vi) Data Sharing and other requirements.

(vii) Financial arrangements and beneficiary incentives.

(viii) Medicare program waivers.

(c) *Applicability.* Except as otherwise specified in this subpart, CJR–X participants are subject to the standard provisions for Innovation Center models specified in subpart A of this part 512 and in subpart K of part 403 of this chapter.

§ 512.605 Definitions.

For the purposes of this subpart, the following definitions are applicable unless otherwise stated:

AAPM stands for Advanced Alternative Payment Model.

AAPM option means the advanced alternative payment model option for CJR–X participants that provide their CMS EHR Certification ID and attest to their use of CEHRT in accordance with § 512.615.

ACO means an accountable care organization, as defined at § 425.20 of this chapter.

ACO participant has the meaning set forth in § 425.20 of this chapter.

ACO provider/supplier has the meaning set forth in § 425.20 of this chapter.

Acute care hospital means a provider subject to the prospective payment system specified in § 412.1(a)(1) of this chapter.

Age bracket risk adjustment factor means the coefficient of risk associated with a patient's age bracket, calculated as described in § 512.645(a)(1).

Aggregated reconciliation target price means the sum of the reconciliation target prices for all episodes attributed to a CJR–X participant for the applicable performance year.

Alignment payment means a payment from a CJR–X collaborator to a CJR–X participant under a sharing arrangement, for the sole purpose of sharing the CJR–X participant's responsibility for making repayments to Medicare.

Anchor hospitalization means the initial hospital stay upon admission for a lower extremity joint replacement for which the institutional claim is billed through the inpatient prospective payment system (IPPS).

Anchor procedure means a TKA or THA procedure that is permitted and paid for by Medicare when performed in a hospital outpatient department (HOPD) and billed through the Hospital Outpatient Prospective Payment System (OPPS).

APM stands for Alternative Payment Model as defined in § 414.1305 of this chapter.

Baseline episode spending means the total episode spending by all providers and suppliers associated with a given MS–DRG/HCPCS episode type for all hospitals in a given region during the baseline period.

Baseline period means the 3-year historical period CMS uses to construct the preliminary target price and reconciliation target price for a given performance year.

Baseline year means any one of the three years included in the baseline period.

Benchmark price means the average standardized episode spending by all providers and suppliers associated with an MS–DRG/HCPCS episode type for all hospitals in a defined region during the applicable baseline period.

Beneficiary economic risk adjustment factor means the coefficient of risk associated with a patient's economic status, calculated as described in § 512.645(a)(3).

CCN stands for CMS certification number.

CDI stands for *Community Deprivation Index.*

CEHRT means certified electronic health record technology that meets the requirements set forth in § 414.1305 of this chapter.

CJR stands for the Comprehensive Care for Joint Replacement Model, that was the Phase I episode-based payment model test by the Innovation Center from April 2016 to December 2024.

CJR–X stands for the Comprehensive Care for Joint Replacement Expanded Model.

CJR–X activities mean any activity related to promoting accountability for the quality, cost, and overall care for CJR–X beneficiaries and performance in the model, including managing and coordinating care, encouraging investment in infrastructure and redesigned care processes for high quality and efficient service delivery, or carrying out any other obligation or duty under the model.

CJR–X beneficiary means a beneficiary who meets the beneficiary inclusion criteria in § 512.620.

CJR–X collaborator means an ACO or one of the following Medicare-enrolled individuals or entities that enters into a sharing arrangement:

(1) Skilled Nursing Facility (SNF).

(2) Home Health Agency (HHA).

(3) Long-Term Care Hospital (LTCH).

(4) Inpatient Rehabilitation Facility (IRF).

(5) Physician.
(6) Nonphysician practitioner.
(7) Therapist in private practice.
(8) Comprehensive Outpatient Rehabilitation Facility (CORF).
(9) Provider of outpatient therapy services.
(10) Physician Group Practice (PGP).
(11) Hospital.
(12) Critical Access Hospital (CAH).
(13) Non-Physician Provider Group Practice (NPPGP).
(14) Therapy Group Practice (TGP).

CJR–X data sharing agreement means an agreement between the CJR–X participant and CMS that includes the terms and conditions for any beneficiary-identifiable data shared with the CJR–X participant under § 512.665.

CJR–X HCC count risk adjustment factor means the CJR–X Hierarchical Condition Category count that is a categorical risk adjustment variable that reflects a beneficiary's overall health status during a 180-day lookback period that groups similar diagnoses into one related category and counts the total number of diagnostic categories that apply to the beneficiary.

CJR–X participant means an acute care hospital located in any of the 50 United States, District of Columbia, or U.S. Territories that initiates LEJR episodes and is eligible to be paid under both the IPPS and OPPS, unless it meets an exception in § 512.610(b).

CJR–X payment means a payment made by CMS only to CJR–X participants, or a payment adjustment made only to payments made to CJR–X participants, under the terms of CJR–X that is not applicable to any other providers or suppliers.

CJR–X reconciliation report means the report prepared after each reconciliation that CMS provides to each CJR–X participant notifying the CJR–X participant of the outcome of the reconciliation.

Clinician engagement list means the list of eligible clinicians or MIPS eligible clinicians that participate in CJR–X activities and have a contractual relationship with the CJR–X participant, and who are not listed on the financial arrangements list, as described in § 512.615(c).

CMS Electronic Health Record (EHR) Certification ID means the identification number that represents the combination of Certified Health Information Technology that is owned and used by providers and hospitals to provide care to their patients and is generated by the Certified Health Information Technology Product List.

Collaboration agent means an individual or entity that is not a CJR–X collaborator and that is either of the following:

(1) A member of a PGP, NPPGP, or TGP that has entered into a distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a CJR–X collaborator.

(2) An ACO participant or ACO provider/supplier that has entered into a distribution arrangement with the same ACO in which it is participating, and where the ACO is a CJR–X collaborator.

Composite quality score (CQS) means a score computed for each CJR–X participant to summarize the CJR–X participant's level of quality performance on specified quality measures as described in § 512.635.

CORF stands for comprehensive outpatient rehabilitation facility.

Critical access hospital (CAH) means a hospital designated under subpart F of part 485 of this chapter.

Discount factor means a set percentage included in the preliminary target price and adjusted for quality at reconciliation as described at § 512.645(g).

Distribution arrangement means a financial arrangement between a CJR–X collaborator that is an ACO, PGP, NPPGP, or TGP and a collaboration agent for the sole purpose of distributing some or all of a gainsharing payment received by the ACO, PGP, NPPGP, or TGP.

Distribution payment means a payment from a CJR–X collaborator that is an ACO, PGP, NPPGP, or TGP to a collaboration agent, under a distribution arrangement, composed only of gainsharing payments.

DME stands for durable medical equipment.

Downstream collaboration agent means an individual who is not a CJR–X collaborator or a collaboration agent and who is a member of a PGP, NPPGP, or TGP that has entered into a downstream distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a collaboration agent.

Downstream distribution arrangement means a financial arrangement between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and a downstream collaboration agent for the sole purpose of sharing a distribution payment received by the PGP, NPPGP, or TGP.

Downstream participant means an individual or entity that has entered into a written arrangement with a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent under which the downstream participant engages in one or more CJR–X activities.

Dually eligible beneficiary means a beneficiary enrolled in both Medicare and full Medicaid benefits.

EHR stands for electronic health record.

Eligible clinician means a clinician as defined in § 414.1305 of this chapter.

Episode means all Medicare Part A and B items and services described in § 512.625(b) (and excluding the items and services described in § 512.625(c)) that are furnished to a CJR–X beneficiary during the time period that begins on the date of the beneficiary's admission to an anchor hospitalization or the date of the anchor procedure, as described at § 512.630(c), and ends on the 90th day following the date of discharge from the anchor hospitalization or anchor procedure, as described at § 512.630(d).

Episode type means the subset of episodes that are associated with a given MS–DRG/HCPCS, as set forth at § 512.640(a)(1).

Final normalization factor means the mathematical mean of the benchmark price for each MS–DRG/HCPCS episode type and region divided by the mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type and region.

Financial arrangements list means the list of eligible clinicians or MIPS eligible clinicians that have a financial arrangement with the CJR–X participant, CJR–X collaborator, collaboration agent, and downstream collaboration agent, as described in § 512.615(b).

Gainsharing payment means a payment from a CJR–X participant to a CJR–X collaborator, under a sharing arrangement, composed of only reconciliation payments, internal cost savings, or both.

HCPCS stands for Healthcare Common Procedure Coding System and means the system used to bill for items and services.

HHA means a Medicare-enrolled home health agency.

High-cost outlier cap means the CMS-applied episode spending cap at the 99th percentile of regional spending for a given MS DRG/HCPCS episode type, region, and baseline year.

Hospital means a hospital as defined in section 1886(d)(1)(B) of the Act.

Hospital discharge planning means the standards set forth in § 482.43 of this chapter.

ICD–CM stands for International Classification of Diseases, Clinical Modification.

Inpatient measure composite quality score means the sum of inpatient quality

measure point values capped at 20 points.

Internal cost savings means the measurable, actual, and verifiable cost savings realized by the CJR–X participant resulting from care redesign undertaken by the CJR–X participant in connection with providing items and services to CJR–X beneficiaries within an episode. Internal cost savings does not include savings realized by any individual or entity that is not the CJR–X participant.

IPF stands for inpatient psychiatric facility.

IPPS stands for Inpatient Prospective Payment System, and means the payment system for subsection (d) hospitals as defined in section 1886(d)(1)(B) of the Act.

IRF stands for inpatient rehabilitation facility.

LIS stands for Medicare Part D Low-Income Subsidy.

Lower-extremity joint replacement (LEJR) means any hip, knee, or ankle replacement that is paid under MS–DRG 469, 470, 521, or 522 through the IPPS or HCPCS code 27447 or 27130 through the OPPS.

Low-volume hospital means a hospital identified by CMS as having fewer than 31 LEJR episodes during the applicable baseline period.

LTCH stands for long-term care hospital as defined in section 1861(ccc) of the Act.

Medicare severity diagnosis-related group (MS–DRG) means, for the purposes of this model, the classification of inpatient hospital discharges updated in accordance with § 412.10 of this chapter.

Medicare-dependent, small rural hospital (MDH) means a specific type of hospital that meets the classification criteria specified under § 412.108 of this chapter.

Member of the NPPGP or *NPPGP member* means a nonphysician practitioner or therapist who is an owner or employee of an NPPGP and who has reassigned to the NPPGP his or her right to receive Medicare payment.

Member of the PGP or *PGP member* means a physician, nonphysician practitioner, or therapist who is an owner or employee of the PGP and who has reassigned to the PGP his or her right to receive Medicare payment.

Member of the TGP or *TGP member* means a therapist who is an owner or employee of a TGP and who has reassigned to the TGP his or her right to receive Medicare payment.

MIPS stands for Merit-based Incentive Payment System

MIPS eligible clinician means a clinician as defined in § 414.1305 of this chapter.

Model start date means the start of the Phase II model test on January 1, 2028.

Non-AAPM option means the CJR–X participant's choice to not attest to the use of CEHRT as described in § 512.615.

Nonphysician practitioner means one of the following:

(1) A physician assistant who satisfies the qualifications set forth at § 410.74(a)(2)(i) and (ii) of this chapter.

(2) A nurse practitioner who satisfies the qualifications set forth at § 410.75(b) of this chapter.

(3) A clinical nurse specialist who satisfies the qualifications set forth at § 410.76(b) of this chapter.

(4) A certified registered nurse anesthetist (as defined at § 410.69(b)).

(5) A clinical social worker (as defined at § 410.73(a)).

(6) A registered dietician or nutrition professional (as defined at § 410.134).

NPI stands for National Provider Identifier.

NPPGP stands for non-physician provider group practice and means an entity that is enrolled in Medicare as a group practice, includes at least one owner or employee who is a nonphysician practitioner, does not include a physician owner or employee, and has a valid and active TIN.

Net payment reconciliation amount (NPRA) means the dollar amount calculated in accordance with § 512.650(c).

OIG stands for the Department of Health and Human Services' Office of Inspector General.

OP means an outpatient procedure for which the institutional claim is billed by the hospital through the OPPS.

OPPS stands for the Outpatient Prospective Payment System.

Outpatient composite quality score means the sum of outpatient quality measure points values, capped at 20 points.

Overall composite quality score means the sum of the weighted average of the inpatient measure composite quality score and the outpatient measure composite quality score, capped at 20 points.

PAC stands for post-acute care.

PAC provider is a home health agency (HHA), skilled nursing facility (SNF), inpatient rehabilitation facility (IRF), or long-term care hospital (LTCH), as defined in section 1899B(a)(2) of the Act.

Performance year (PY) means a 12-month period beginning on January 1 and ending on December 31 to align with the calendar year.

Performance year spending means the sum of standardized Medicare claims payments during a performance year for the items and services that are included in the episode in accordance with § 512.625(b), excluding the items and services described in § 512.625(c).

PGP stands for physician group practice.

Physician has the meaning set forth in section 1861(r) of the Act.

Preliminary target price means the CMS-set financial amount provided to the CJR–X participant prior to the start of the performance year, that is subject to adjustment at reconciliation, as set forth at § 512.640.

Prospective normalization factor means the multiplier used by CMS in the preliminary target price calculation to ensure that the average of the total risk-adjusted benchmark price does not exceed the average of the total non-risk adjusted benchmark price, calculated as set forth in § 512.640(b)(6).

Prospective trend factor means the multiplier used by CMS in the preliminary target price calculation to estimate changes in spending patterns between the baseline period and the performance year, calculated as set forth in § 512.640(b)(7).

Provider of outpatient therapy services means an entity that is enrolled in Medicare as a provider of therapy services and furnishes one or more of the following:

(1) Outpatient physical therapy services as defined in § 410.60 of this chapter.

(2) Outpatient occupational therapy services as defined in § 410.59 of this chapter.

(3) Outpatient speech-language pathology services as defined in § 410.62 of this chapter.

Reconciliation payment amount means the amount that CMS may pay to a CJR–X participant after reconciliation as determined in accordance with § 512.650(g).

Reconciliation target price means the target price applied to an episode at reconciliation, as determined in accordance with § 512.645.

Region means one of the nine U.S. census divisions, as defined by the U.S. Census Bureau, with the U.S. territories included in Census Division 9.

Reorganization event means a merger, consolidation, spin-off or other restructuring that results in a new hospital entity under a given CCN.

Repayment amount means the amount that the CJR–X participant may owe to Medicare after reconciliation as determined in accordance with § 512.650(g).

Retrospective trend factor means the multiplier CMS uses in its reconciliation target price calculation to

estimate realized changes in spending patterns during the performance year, calculated as set forth in § 512.645(f).

Rural hospital means an IPPS hospital that meets one of the following criteria:

(1) Is located in a rural area as defined under § 412.64 of this chapter.

(2) Is located in a rural census tract defined under § 412.103(a)(1) of this chapter.

Safety net hospital means a hospital in the top 25th percentile in their region for percentage of Medicare LEJR episodes provided to dually eligible beneficiaries during the applicable baseline period.

Sharing arrangement means a financial arrangement between a CJR–X participant and a CJR–X collaborator for the sole purpose of making gainsharing payments or alignment payments under CJR–X.

SNF stands for skilled nursing facility as defined in section 1819(a) of the Act.

Sole community hospital (SCH) means a hospital that meets the classification criteria specified in § 412.92 of this chapter.

Swing-bed hospital means a hospital that meets the definition specified in § 413.114 of this chapter.

TAA stands for total ankle arthroplasty.

TGP or therapy group practice means an entity that is enrolled in Medicare as a therapy group in private practice, includes at least one owner or employee who is a therapist in private practice, does not include an owner or employee who is a physician or nonphysician practitioner, and has a valid and active TIN.

THA means total hip arthroplasty.

Therapist means one of the following individuals as defined at § 484.4 of this chapter:

(1) Physical therapist.

(2) Occupational therapist.

(3) Speech-language pathologist.

Therapist in private practice means a therapist that—

(1) Complies with the special provisions for physical therapists in private practice in § 410.60(c) of this chapter;

(2) Complies with the special provisions for occupational therapists in private practice in § 410.59(c) of this chapter; or

(3) Complies with the special provisions for speech-language pathologists in private practice in § 410.62(c) of this chapter.

TIN stands for taxpayer identification number.

TKA stands for total knee arthroplasty.

CJR–X Participation

§ 512.610 Mandatory participation.

(a) *General*

(1) CJR–X participants, as defined in § 512.605, must participate in CJR–X, except as specified in paragraph (b) of this section.

(2) CJR–X participants will remain CJR–X participants, unless they no longer meet the definition of CJR–X participant, CMS terminates CJR–X, or the CJR–X participant receives notice of termination from CJR–X in accordance with § 512.610(c).

(b) *Exclusions.* CMS excludes from CJR–X hospitals that meet any of the following criteria:

(1) Is a TEAM participant as defined at § 512.505.

(2) Is located in the State of Maryland.

(c) *CJR–X participant termination from CJR–X.*

(1) CMS may in its sole discretion terminate a CJR–X participant's participation in the model immediately or upon advance notice if CMS determines:

(i) One or more grounds for remedial action described in § 512.160(a) have occurred with respect to the CJR–X participant; or

(ii) The CJR–X participant's continued participation would be inconsistent with the purposes of CJR–X, the requirements of this part, or applicable law.

(2) If a CJR–X participant receives a notification from CMS of termination from CJR–X and wishes to dispute the termination, it must provide a written notice to CMS requesting review of the termination within 10 calendar days of the notice.

(i) CMS has 30 days to respond to the CJR–X participant's request for review.

(ii) If the CJR–X participant fails to provide timely notification to CMS, the termination is deemed final.

(3) Where a participant is terminated from the CJR–X Model, the participant hospital will remain liable for all negative NPRA generated from episodes of care that ended prior to termination.

§ 512.615 CJR–X APM options.

(a) *APM options.* A CJR–X participant may choose either of the following options based on their CEHRT use:

(1) *AAPM option.* A CJR–X participant selects the AAPM option by attesting in a form and manner and by a date specified by CMS to their use of CEHRT, as defined in § 414.1305 of this chapter, on an annual basis prior to the start of each performance year. In addition to submitting an annual CEHRT attestation, the CJR–X participant must:

(i) Provide their CMS electronic health record certification ID in a form and manner and by a date specified by CMS on annual basis prior to the end of each performance year; and

(ii) Retain documentation of their attestation to CEHRT use and provide access to the documentation in accordance with § 512.135.

(2) *Non-AAPM option.* CMS assigns the CJR–X participant to the non-AAPM option if the CJR–X participant does not satisfy the requirements set forth in § 512.615(a)(1).

(b) *Financial arrangements list.* A CJR–X participant with CJR–X collaborators, collaboration agents, or downstream collaboration agents during a performance year must submit to CMS a financial arrangements list in a form and manner and by a date specified by CMS on a quarterly basis for each performance year. The financial arrangements list must include the following:

(1) *CJR–X collaborators.* For each physician, nonphysician practitioner, or therapist who is a CJR–X collaborator during the applicable performance year:

(i) The name, TIN, and NPI of the CJR–X collaborator.

(ii) The start date and, if applicable, end date of the sharing arrangement between the CJR–X participant and the CJR–X collaborator.

(2) *Collaboration agents.* For each physician, nonphysician practitioner, or therapist who is a collaboration agent during the applicable performance year:

(i) The name, TIN, and NPI of the collaboration agent and the name and TIN of the CJR–X collaborator with which the collaboration agent has entered into a distribution arrangement.

(ii) The start date and, if applicable, end date of the distribution arrangement between the CJR–X collaborator and the collaboration agent.

(3) *Downstream collaboration agents.* For each physician, nonphysician practitioner, or therapist who is a downstream collaboration agent during the applicable performance year:

(i) The name, TIN, and NPI of the downstream collaboration agent and the name and TIN of the collaboration agent with which the downstream collaboration agent has entered into a downstream distribution arrangement.

(ii) The start date and, if applicable, end date of the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.

(c) *Clinician engagement list.* A CJR–X participant must submit to CMS a clinician engagement list in a form and manner and by a date specified by CMS on a quarterly basis during each performance year. The clinician

engagement list must include the following:

(1) For each physician, nonphysician practitioner, or therapist who is not on a CJR–X participant's financial arrangements list during the performance year but who does have a contractual relationship with the CJR–X participant and participates in CJR–X activities during the applicable performance year:

(i) The name, TIN, and NPI of the physician, nonphysician practitioner, or therapist.

(ii) The start date and, if applicable, the end date of the contractual relationship between the physician, nonphysician practitioner, or therapist and the CJR–X participant.

(d) *Attestation to no individuals.* A CJR–X participant with no individuals that meet the criteria specified in paragraphs (b)(1) through (3) of this section for the financial arrangements list or paragraph (c) of this section for the clinician engagement list must attest in a form and manner and by a date specified by CMS that there are no financial arrangements or clinician engagements to report.

(e) *Documentation requirements.* A CJR–X participant that submits a financial arrangements list specified in paragraph (b) of this section or a clinician engagement list specified in paragraph (c) of this section must retain and provide access to the documentation in accordance with § 512.135.

Beneficiary Population

§ 512.620 Beneficiary inclusion criteria.

(a) An individual is a CJR–X beneficiary if, based on a 180-day lookback period that ends on the day prior to an anchor procedure or anchor hospitalization, the individual—

(1) Is enrolled in Medicare Parts A and B;

(2) Has Medicare as their primary payer;

(3) Is not eligible for Medicare on the basis of having end stage renal disease, as described at § 406.13 of this chapter;

(4) Is not enrolled in any managed care plan (for example, Medicare Advantage, health care prepayment plans, or cost-based health maintenance organizations);

(5) Is not covered under a United Mine Workers of America health care plan; and

(6) Is in an episode.

(b) The episode is canceled in accordance with § 512.630(e) if at any time during the episode a beneficiary no longer meets all of the criteria in paragraph (a) of this section.

§ 512.622 Beneficiary notifications.

(a) *CJR–X participant beneficiary notification.*

(1) *Notification to beneficiaries.* Each CJR–X participant must provide written notification to each CJR–X beneficiary of his or her inclusion in the CJR–X Model.

(2) *Timing of notification.* Prior to discharge from either the anchor hospitalization or the anchor procedure, as applicable, the CJR–X participant must provide the CJR–X beneficiary with a beneficiary notification as described in paragraph (a)(4) of this section.

(3) *List of CJR–X beneficiaries who have received a notification.* The CJR–X participant must be able to generate a list of all CJR–X beneficiaries who have received such notification, including the date on which the notification was provided to the CJR–X beneficiary, and provide such list to CMS or its designee upon request.

(4*) Content of notification.* The beneficiary notification must contain all of the following:

(i) A detailed explanation of CJR–X and how it might be expected to affect the CJR–X beneficiary's care.

(ii) That the CJR–X beneficiary retains freedom of choice to choose providers, suppliers, and services.

(iii) Explanation of how the CJR–X beneficiary can access care records and claims data through an available patient portal, if applicable, and how to share access to Blue Button® electronic health information with caregivers.

(iv) Explanation of the type of beneficiary-identifiable claims data the CJR–X participant may receive.

(v) A statement that all existing Medicare beneficiary protections continue to be available to the CJR–X beneficiary. These include the ability to report concerns of substandard care to Quality Improvement Organizations or the 1–800–MEDICARE helpline.

(vi) A list of the CJR–X collaborators with which the CJR–X participant has a sharing arrangement. This requirement may be fulfilled by the CJR–X participant including in the detailed notification a publicly available web address where the CJR–X beneficiary may access the list.

(b) *CJR–X collaborator notice.* The CJR–X participant must require every CJR–X collaborator that furnishes an item or service to a CJR–X beneficiary during an episode to provide written notice, to be developed by CMS, to the CJR–X beneficiary that describes general information on the quality and payment incentives under CJR–X, and the existence of the CJR–X collaborator's sharing arrangement.

(1) The notice must be provided no later than the time at which the CJR–X beneficiary first receives an item or service from the CJR–X collaborator during an episode. In circumstances where, due to the CJR–X beneficiary's condition, it is not feasible to provide notification at such time, the notification must be provided to the CJR–X beneficiary or his or her representative as soon as is reasonably practicable.

(2) The CJR–X collaborator must provide to CMS upon request, a list of all CJR–X beneficiaries who received such a notice, including the date on which the notice was provided to the CJR–X beneficiary.

(c) *Discharge planning notice.* The CJR–X participant must provide the CJR–X beneficiary with a written notice of any potential financial liability associated with non-covered items and services recommended or presented as an option as part of discharge planning, no later than the time that the CJR–X beneficiary discusses a particular post-acute care option or at the time the CJR–X beneficiary is discharged from an anchor procedure or anchor hospitalization, whichever occurs earlier.

(1) If the CJR–X participant knows or should have known that the CJR–X beneficiary is considering or has decided to receive a non-covered post-acute care service or other non-covered associated item or service, the CJR–X participant must notify the CJR–X beneficiary in writing that the item or service would not be covered by Medicare.

(2) If the CJR–X participant is discharging a CJR–X beneficiary to a SNF after an inpatient hospital stay, and the CJR–X beneficiary is being transferred to or is considering a SNF that would not qualify under the SNF 3-day waiver in § 512.695(b), the CJR–X participant must notify the CJR–X beneficiary in accordance with paragraph (b)(1) of this section that the CJR–X beneficiary will be responsible for payment for the items and services furnished by the SNF during that stay, except those items and services that would be covered by Medicare Part B during a non-covered inpatient SNF stay.

(d) *Access to records and retention.* The CJR–X participant must provide access to the list and notice described in paragraphs (a), (b), and (c), of this section to CMS, or its designees, in accordance with § 512.135.

Episode of Care

§ 512.625 Scope of episode.

(a) *Lower extremity joint replacement (LEJR) procedures.* The MS–DRGs and HCPCS codes included in episodes are as follows:

(1) IPPS discharge under MS–DRG 469, 470, 521, or 522.

(2) OPPS claim for HCPCS codes 27130 or 27447.

(b) *Included services.* All Medicare Part A and B items and services are included in the episode, except as specified in paragraph (c) of this section. These items and services include, but are not limited to, the following:

(1) Physicians' services.

(2) Inpatient hospital services (including hospital readmissions).

(3) IPF services.

(4) LTCH services.

(5) IRF services.

(6) SNF services.

(7) HHA services.

(8) Hospital outpatient services.

(9) Outpatient therapy services.

(10) Clinical laboratory services.

(11) DME.

(12) Part B drugs and biologic, except for those excluded under paragraph (c) of this section.

(13) Hospice services.

(14) Part B professional claims dated in the 3 days prior to an anchor hospitalization if a claim for the surgical procedure for the same episode type is not detected as part of the hospitalization because the procedure was performed by the CJR–X participant on an outpatient basis, but the patient was subsequently admitted as an inpatient.

(c) *Excluded services.* The following items, services, and payments are excluded from the episode:

(1) Select items and services considered unrelated to the anchor hospitalization or the anchor procedure for episodes in the baseline period and performance year, including, but not limited to, the following:

(i) Inpatient hospital admissions for MS–DRGs that group to the following categories of diagnoses:

(A) Oncology.

(B) Trauma unrelated to the CJR–X episode.

(C) Organ transplant.

(D) Ventricular shunt.

(ii) Inpatient hospital admissions that fall into the following Major Diagnostic Categories (MDCs):

(A) MDC 02 (Diseases and Disorders of the Eye).

(B) MDC 14 (Pregnancy, Childbirth, and Puerperium).

(C) MDC 15 (Newborns).

(D) MDC 25 (Human Immunodeficiency Virus).

(2) New technology add-on payments, as defined in part 412, subpart F of this chapter for episodes in the baseline period and performance year.

(3) Transitional pass-through payments for medical devices as defined in § 419.66 of this chapter for episodes initiated in the baseline period and performance year.

(4) Hemophilia clotting factors provided in accordance with § 412.115 of this chapter for episodes in the baseline period and performance year.

(5) Part B payments for low-volume drugs, high-cost drugs and biologics, and blood clotting factors for hemophilia for episodes in the baseline period and performance year, billed on outpatient, carrier, and DME claims, defined as—

(i) Drug/biologic HCPCS codes that are billed in fewer than 31 episodes in total across all episodes in CJR–X during the baseline period;

(ii) Drug/biologic HCPCS codes that are billed in at least 31 episodes in the baseline period and have a mean allowed cost of greater than $25,000 per episode in the baseline period; and

(iii) HCPCS codes corresponding to clotting factors for hemophilia patients, identified in the quarterly average sales price file for certain Medicare Part B drugs and biologics as HCPCS codes with clotting factor equal to 1, HCPCS codes for new hemophilia clotting factors not included in the baseline period, and other HCPCS codes identified as hemophilia.

(6) Part B payments for low-volume drugs, high-cost drugs and biologics, and blood clotting factors for hemophilia for episodes initiated in the performance year, billed on outpatient, carrier, and DME claims, defined as—

(i) Drug/biologic HCPCS codes that were not captured in the baseline period and appear in 10 or fewer episodes in the relevant performance year;

(ii) Drug/biologic HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the relevant performance year, and have a mean cost of greater than $25,000 per episode in the relevant performance year; and

(iii) Drug/biologic HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the relevant performance year, have a mean cost of $25,000 or less per episode in the relevant performance year, and correspond to a drug/biologic that appears in the baseline period but was assigned a new HCPCS code between the baseline period and the relevant performance year.

(iv) HCPCS codes for new hemophilia clotting factors not included in the baseline period.

(d) *CJR–X exclusions list.* The list of excluded MS–DRGs, MDCs, and HCPCS codes is posted on the CMS website.

(e) *Updating the CJR–X exclusions list.* The list of excluded services is updated through rulemaking to reflect any of the following:

(1) Changes to the MS–DRGs under the IPPS.

(2) Coding changes.

(3) Other issues brought to CMS' attention.

§ 512.630 Determination of the episode.

(a) *Timing of episodes.* Episodes initiated on or after January 1, 2028.

(b) *Episode attribution.* All items and services included in the episode are attributed to the CJR–X participant at which the anchor hospitalization or anchor procedure, as applicable, occurs.

(c) *Episode initiation.* An episode is initiated by—

(1) A beneficiary's admission to a CJR–X participant for an anchor hospitalization that is paid under a MS–DRG specified in § 512.625(a); or

(2) A beneficiary's receipt of an anchor procedure billed under a HCPCS code specified in § 512.625(a). If an anchor hospitalization is initiated on the same day as or within 3 days of an outpatient procedure for the same episode type at the same CJR–X participant, the episode start date will be that of the outpatient procedure rather than the admission date, and an anchor procedure will not be initiated.

(d) *Episode conclusion.*

(1) An episode ends on the 90th day following the date of the anchor procedure or the date of discharge from the anchor hospitalization, as applicable, with the date of the anchor procedure or the date of discharge from the anchor hospitalization being counted as the first day in the 90-day post-discharge period.

(e) *Cancellation of an episode.* The episode is canceled and is not included in the reconciliation calculation as specified in § 512.650 if any of the following occur:

(1) The beneficiary ceases to meet any criterion listed in § 512.620.

(2) The beneficiary dies at any point during the episode.

(3) The episode qualifies for cancellation due to extreme and uncontrollable circumstances. An extreme and uncontrollable circumstance occurs if both of the following criteria are met:

(i) The CJR–X participant has a CCN primary address that—

(A) Is located in an emergency area, as those terms are defined in section

1135(g) of the Act, for which the Secretary has issued a waiver under section 1135; and

(B) Is located in a county, parish, or tribal government designated in a major disaster declaration under the Stafford Act.

(ii) The date of admission to the anchor hospitalization or the date of the anchor procedure is during an emergency period (as defined in section 1135(g) of the Act) or in the 30 days before the date that the emergency period (as defined in section 1135(g) of the Act) begins.

(4) The beneficiary is in a TEAM episode and receives a LEJR procedure at a CJR–X participant during the 30-day post-discharge period after a TEAM anchor hospitalization or TEAM anchor procedure.

Quality Measures and Composite Quality Score

§ 512.635 Quality measures, composite quality score, and display of quality measures.

(a) *Quality measures.* CMS calculates the quality measures used to evaluate the CJR–X participant's performance using Medicare claims data or patient-reported outcomes data reported under existing CMS quality reporting programs, including but not limited to the Hospital Inpatient Quality Reporting Program and the Hospital Outpatient Quality Reporting Program. The following quality measures are used for public reporting and for determining the CJR–X participant's CQS as described in paragraph (b) of this section:

(1) *For all inpatient episodes:* Hospital-level Risk-Standardized Complication Rate following elective primary Total Hip Arthroplasty and/or Total Knee Arthroplasty (CMIT ID #350).

(2) *For all outpatient episodes:* Hospital Visits within 7 days of Hospital Outpatient Department Surgery (CMIT ID #344, OP–36).

(3) *For all inpatient episodes:* Hospital Consumer Assessment of Healthcare Providers and Systems Survey (HCAHPS) (CMIT ID #338).

(4) *For all outpatient episodes:* Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Survey (OAS CAHPS) (CMIT #162, OP–46).

(5) *For all inpatient episodes:* Hospital-Level Total Hip and/or Total Knee Arthroplasty Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618).

(b) *Calculation of the composite quality score (CQS).* CMS calculates an overall composite quality score during reconciliation, capped at 20 points, for each CJR–X participant for the relevant performance year. The overall composite quality score equals the sum of the inpatient measure composite quality score, as described in paragraph (b)(1) of this section, and the outpatient measure composite quality score, as described in paragraph (b)(2) of this section.

(1) CMS calculates the inpatient measure composite quality score by summing the CJR–X participant's quality performance points for all of the following:

(i) The measure identified in paragraph (a)(1) of this section. This measure is weighted at 50 percent of the inpatient composite quality score.

(ii) The measure identified in paragraph (a)(3) of this section. This measure is weighted at 40 percent of the inpatient composite quality score.

(iii) The measure identified in paragraph (a)(5) of this section. This measure is weighted at 10 percent of the inpatient composite quality score.

(2) CMS calculates the outpatient measure composite quality score by summing the CJR–X participant's quality performance points for all of the following:

(i) The measure identified in paragraphs (a)(2) of this section. This measure is weighted at 50 percent of the outpatient composite quality score.

(ii) The measure identified in paragraphs (a)(4) of this section. This measure is weighted at 40 percent of the outpatient composite quality score.

(iii) The measure identified in paragraph (a)(5) of this section. This measure is weighted at 10 percent of the inpatient composite quality score.

(c) *Quality performance points.* CMS calculates quality performance points for each quality measure based on the CJR–X participant's performance relative to the distribution of performance of all hospitals that are eligible for payment under IPPS and meet the minimum patient case or survey count for that measure.

(1) For the measures described in paragraphs (a)(1) and (a)(2) of this section, CMS assigns the CJR–X participant measure value to a performance percentile and then quality performance points are assigned based on the following performance percentile scale:

(i) 10.00 for ≥90th.
(ii) 9.25 for ≥80th and <90th.
(iii) 8.50 for ≥70th and <80th.
(iv) 7.75 for ≥60th and <70th.
(v) 7.00 for ≥50th and <60th.
(vi) 6.25 for ≥40th and <50th.
(vii) 5.50 for ≥30th and <40th.
(viii) 0.00 for <30th.

(2) For the measure described in paragraphs (a)(3) and (a)(4) of this section, CMS assigns the CJR–X participant measure value to a performance percentile and then quality performance points are assigned based on the following performance percentile scale:

(i) 8.00 for ≥90th.
(ii) 7.40 for ≥80th and <90th.
(iii) 6.80 for ≥70th and <80th.
(iv) 6.20 for ≥60th and <70th.
(v) 5.60 for ≥50th and <60th.
(vi) 5.00 for ≥40th and <50th.
(vii) 5.40 for ≥30th and <40th.
(viii) 0.00 for <30th.

(3) For the measure described in paragraph (a)(5) of this section, CMS assigns the CJR–X participant's measure value to a performance percentile and then CMS assigns quality performance points based on the following performance percentile scale:

(i) 2.00 for ≥90th.
(ii) 1.85 for ≥80th and <90th.
(iii) 1.70 for ≥70th and <80th.
(iv) 1.55 for ≥60th and <70th.
(v) 1.40 for ≥50th and <60th.
(vi) 1.25 for ≥40th and <50th.
(vii) 1.10 for ≥30th and <40th.
(viii) 0.00 for <30th.

(d) *Exception for hospitals without a measure value.*

(1) If the CJR–X participant is without a measure value that would allow CMS to assign quality performance points for that quality measure, CMS assigns the 50th percentile quality performance points to the CJR–X participant for the individual measure.

(2) A CJR–X participant will not have a measure value for—

(i) The measure described in paragraph (a)(1) of this section, if the CJR–X participant does not meet the minimum 25 patient case count.

(ii) The measure described in paragraph (a)(2) of this section, if the CJR–X participant does not meet the minimum 25 patient case count.

(iii) The measure described in paragraph (a)(3) of this section, if the CJR–X participant does not meet the minimum 100 completed surveys.

(iv) The measure described in paragraph (a)(4) of this section, if the CJR–X participant does not meet the minimum 100 completed surveys.

(v) The measure described in paragraph (a)(5) of this section, if the CJR–X participant does not meet the minimum 25 patient case count.

(e) *Display of quality measures.*

(1) CMS displays quality measure results on the publicly available CMS website that is specific to CJR–X, in a form and manner consistent with other publicly reported measures.

(2) CMS shares quality measures with the CJR–X participant prior to display on the CMS website. Quality measure

performance in performance year 1 will be reported in Calendar Year 2029. Subsequent years will be reported in the year following the performance period.

Pricing Methodology

§ 512.640 Determination of preliminary target prices.

(a) *Preliminary target price application.* CMS establishes preliminary target prices for CJR–X participants for each performance year of the model as follows:

(1) *MS–DRG/HCPCS episode type.* CMS uses the MS–DRGs and, as applicable, HCPCS codes specified in § 512.625(d) when calculating the preliminary target prices for each MS–DRG/HCPCS episode type.

(i) CMS determines a separate preliminary target price for each of the MS–DRGs specified in § 512.625(a)(1).

(ii) Preliminary target prices for MS–DRG 470 include HCPCS 27130 and 27447.

(2) *Applicable time period for preliminary target prices.* CMS calculates preliminary target prices for each MS–DRG/HCPCS episode type and region for each performance year and applies the preliminary target price to each episode based on the episode's date of discharge from the anchor hospitalization or the episode's date of the anchor procedure, as applicable.

(3) *Episodes that begin in one performance year and end in the subsequent performance year.* CMS applies the preliminary target price to the episode based on the date of discharge from the anchor hospitalization or the date of the anchor procedure, as applicable, and reconciles the episode based on the date of discharge from the anchor hospitalization or the date of the anchor procedure.

(4) *Exception for low-volume hospitals.* CJR–X participants with fewer than 31 episodes in the applicable baseline period do not receive preliminary target prices for the upcoming performance year and are not eligible for reconciliation for that performance year.

(b) *Preliminary target price calculation.*

(1) CMS calculates preliminary target prices based on average baseline episode spending for the region where the CJR–X participant is located. The region CMS uses for calculating the preliminary target price corresponds to the U.S. Census Division associated with the primary address of the CCN of the CJR–X participant, and CMS bases the regional episode spending amount on all hospitals within the region, except for those excluded from CJR–X as specified in § 512.610(b).

(2) CMS uses the following baseline periods to determine baseline episode spending:

(i) Performance Year 1: Episodes with anchor hospitalization start dates or anchor procedure dates beginning on or after January 1, 2024 and anchor hospitalization discharge dates or anchor procedure dates between January 1, 2024 and December 31, 2026.

(ii) Performance Year 2 and future performance years: CMS uses the same cadence described in paragraph (i) of this section to roll the baseline period forward a year to construct the baseline period.

(3) CMS calculates the benchmark price as the weighted average of baseline episode spending, applying the following weights:

(i) Baseline episode spending from baseline year 1 is weighted at 17 percent.

(ii) Baseline episode spending from baseline year 2 is weighted at 33 percent.

(iii) Baseline episode spending from baseline year 3 is weighted at 50 percent.

(4) *Exception for high episode spending.* CMS applies a high-cost outlier cap to baseline episode spending at the 99th percentile of regional spending for each of the MS–DRG/HCPCS episode types specified in § 512.640(a)(1) for each baseline year individually.

(5) *Exclusion of incentive programs and add-on payments under existing Medicare payment systems.* CMS excludes certain Medicare incentive programs and add-on payments from baseline episode spending by using, with certain modifications, the CMS Price (Payment) Standardization Detailed Methodology.

(6) *Prospective normalization factor.* Based on the episodes in the baseline period, CMS calculates a prospective normalization factor, at the MS–DRG/HCPCS region level, so that the average of the total risk-adjusted benchmark price does not exceed the average of the total non-risk adjusted benchmark price, by—

(i) Applying risk adjustment multipliers, as specified in § 512.645(a)(1) through (3), to baseline period episodes to calculate the estimated risk-adjusted target price for all performance year episodes; and

(ii) Dividing the mean of the benchmark price for each episode across all hospitals and regions by the mean of the estimated risk-adjusted benchmark price calculated in § 512.640(b)(6)(i) for the same episode types across all hospitals and regions.

(7) *Prospective trend factor.* CMS determines the prospective trend factor for each MS–DRG/HCPCS episode type and region as the average (arithmetic mean) of the multiplier, as calculated in paragraph (7)(i) of this section, for that MS–DRG/HCPCS episode type and region and the national average for that MS–DRG/HCPCS episode type.

(i) CMS calculates a multiplier for each MS–DRG/HCPCS episode type and region and applies that multiplier to the most recent calendar year of the applicable baseline period. CMS calculates the multiplier using linear regression on the logarithmically transformed average regional spending for each MS–DRG/HCPCS episode type in the baseline years at both the regional and national level.

(ii) CMS exponentiates the coefficient from the linear regression (as described in paragraph (7)(i) of this section) to calculate the estimated annual change (where an exponentiated coefficient of 1 signifies no change) in average regional spending for each MS–DRG/HCPCS episode type from year to year.

(8) *Discount factor.* CMS applies a discount factor of 2 percent to the CJR–X participant's preliminary target price.

(9) *Notification of preliminary target prices.* CMS provides written notice, in a form and manner specified by CMS, to the CJR–X participant of its preliminary target prices for each MS–DRG/HCPCS episode type for each region prior to the start of the performance year in which the preliminary target prices apply.

§ 512.645 Determination of reconciliation target prices.

(a) *Risk adjustment factors.* CMS risk adjusts the preliminary target prices calculated in accordance with § 512.640 at the beneficiary level using the following: a CJR–X Hierarchical Condition Category (HCC) count risk adjustment factor, an age bracket risk adjustment factor, a beneficiary economic risk adjustment factor, and the additional factors specified in paragraph (a)(6) of this section, and at the hospital level using a hospital bed size risk adjustment factor and a safety net hospital risk adjustment factor.

(1) The CJR–X HCC count risk adjustment factor uses five variables, representing beneficiaries with zero, one, two, three, or four or more CMS–HCC conditions based on a 180-day lookback period that begins 181 days prior to the anchor hospitalization or anchor procedure and ends on the day prior to the anchor hospitalization or anchor procedure.

(2) The age bracket risk adjustment factor uses four variables, representing beneficiaries in the following age groups as of the first day of the episode:

(i) Less than 65 years.

(ii) 65 to less than 75 years.

(iii) 75 years to less than 85 years.

(iv) 85 years or more.

(3) The beneficiary economic risk adjustment factor uses two variables, representing beneficiaries that, as of the first day of the episode:

(i) Meet one or more of the following economic measures:

(A) National CDI above the 80th percentile.

(B) Eligibility for the low-income subsidy.

(C) Eligibility for full Medicaid benefits.

(ii) Do not meet any of the three economic measures in paragraph (a)(3)(i) of this section.

(4) The hospital bed size risk adjustment factor uses four variables based on the CJR–X participant's characteristics:

(i) 250 beds or fewer.

(ii) 251–500 beds.

(iii) 501–850 beds.

(iv) 851 beds or more.

(5) The safety net hospital risk adjustment factor is based on the CJR–X participant meeting the safety net hospital definition in § 512.605.

(6) Additional beneficiary level risk adjustment factors represent the presence or absence in beneficiaries, based on a 180-day lookback period that ends on the day prior to the anchor hospitalization or anchor procedure, of each of the following conditions:

(i) Ankle procedure or reattachment, partial hip procedure, partial knee arthroplasty, total hip arthroplasty or hip resurfacing procedure, and total knee arthroplasty.

(ii) Disability as the original reason for Medicare enrollment.

(iii) Prior post-acute care use.

(iv) HCC 17: Cancer Metastatic to Lung, Liver, Brain, and Other Organs; Acute Myeloid Leukemia Except Promyelocytic.

(v) HCC 36: Diabetes with Severe Acute Complications.

(vi) HCC 37: Diabetes with Chronic Complications.

(vii) HCC 48: Morbid Obesity.

(viii) HCC 125: Dementia, Severe.

(ix) HCC 126: Dementia, Moderate.

(x) HCC 127: Dementia, Mild or Unspecified.

(xi) HCC 151: Schizophrenia.

(xii) HCC 155: Major Depression, Moderate or Severe, without Psychosis.

(xiii) HCC 199: Parkinson and Other Degenerative Disease of Basal Ganglia.

(xiv) HCC 224: Acute on Chronic Heart Failure.

(xv) HCC 225: Acute Heart Failure (Excludes Acute on Chronic).

(xvi) HCC 226: Heart Failure, Except End-Stage and Acute.

(xvii) HCC 238: Specified Heart Arrhythmias.

(xviii) HCC 253: Hemiplegia/Hemiparesis.

(xix) HCC 267: Deep Vein Thrombosis and Pulmonary Embolism.

(xx) HCC 280: Chronic Obstructive Pulmonary Disease, Interstitial Lung Disorders, and Other Chronic Lung Disorders.

(xxi) HCC 326: Chronic Kidney Disease, Stage 5.

(xxii) HCC 327: Chronic Kidney Disease, Severe (Stage 4).

(xxiii) HCC 383: Chronic Ulcer of Skin, Except Pressure, Not Specified as Through to Bone or Muscle.

(xxiv) HCC402: Hip Fracture/Dislocation.

(b) *Timing and data used for risk adjustment.* CMS uses 3 years of baseline period data, as described under § 512.640(b)(2)(i) and (ii), to compute all risk adjustment factors prior to the start of the performance year through a linear regression analysis.

(c) *Risk adjustment coefficients.* CMS produces exponentiated coefficients through the annual linear regression analysis to determine the anticipated marginal effect of each risk adjustment factor on episode costs. CMS transforms, or exponentiates, these coefficients, and the resulting coefficients are the beneficiary and hospital-level risk adjustment factors, specified in paragraphs (a)(1) through (6) of this section, that CMS uses during reconciliation for the subsequent performance year.

(d) *Applying risk adjustment at reconciliation.* At the time of reconciliation, CMS risk adjusts the preliminary target prices calculated under § 512.640 by applying the applicable beneficiary level and hospital-level risk adjustment factors specific to the beneficiary in the episode, as set forth in paragraphs (a)(1) through (6) of this section.

(e) *Normalization factor update.* CMS normalizes the risk-adjusted preliminary target prices at reconciliation so that the average of the total risk-adjusted preliminary target price does not exceed the average of the total non-risk adjusted preliminary target price.

(1) The final normalization factor at reconciliation—

(i) Is the mean benchmark price for each MS–DRG/HCPCS episode type and region divided by the mean risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type and region.

(ii) As applied, cannot exceed +/− 5 percent of the prospective normalization factor (as specified in § 512.640(b)(6)).

(2) CMS applies the final normalization factor to the previously calculated, beneficiary-level, risk-adjusted preliminary target prices specific to each region and MS–DRG/HCPCS episode type.

(f) *Trend factor update.* CMS calculates a multiplier for each MS–DRG/HCPCS episode type and region and applies the multiplier at reconciliation to the most recent calendar year of the applicable baseline period. CMS calculates the multiplier as the average regional capped performance year episode spending for each MS–DRG/HCPCS episode type divided by the average regional capped baseline period episode spending for each MS–DRG/HCPCS episode type.

(1) CMS caps the retrospective trend factor so that the maximum difference cannot exceed ±3 percent of the prospective trend factor (as specified in § 512.640(b)(7)).

(2) CMS applies the capped retrospective trend factor to the previously calculated normalized, risk adjusted preliminary target prices specific to each region and MS–DRG/HCPCS episode type, as specified in paragraph (e)(2) of this section.

(g) *Payment system changes.* CMS revises preliminary target prices, as calculated under § 512.640, when determining reconciliation target prices to account for calendar year and fiscal year payment rule updates that occur after preliminary target prices are determined.

(h) *Quality adjustment to discount factor.* CMS calculates a composite quality score as specified at § 512.635(b) and adjusts the discount factor specified at § 512.640(b)(8) to calculate the reconciliation target prices, which are compared to performance year spending at reconciliation, as specified in § 512.650(c) as follows:

(1) A CJR–X participant with excellent composite quality scores, defined as composite quality scores greater than or equal to 17.1, receives a 0.0 discount factor.

(2) A CJR–X participant with good composite quality scores, defined as composite quality scores greater than or equal to 12.1 and less than or equal to 17.0, receives a 1.0 discount factor.

(3) A CJR–X participant with acceptable composite quality scores, defined as composite quality scores greater than or equal to 6.1 and less than or equal to 12.0, receives a 2.0 discount factor.

(4) A CJR–X participant with below acceptable composite quality scores, defined as composite quality scores less than or equal to 6.0, receives a 2.0 discount factor and are ineligible to receive a reconciliation payment, as specified in § 512.650(d).

§ 512.650 Reconciliation process and determination of the reconciliation payment or repayment amount.

(a) *General.* Providers and suppliers furnishing items and services included in the episode bill for such items and services in accordance with existing Medicare rules.

(b) *Reconciliation process.*

(1) Six months after the end of each performance year, CMS performs a reconciliation calculation to establish a reconciliation payment or repayment amount for each CJR–X participant in the applicable performance year as described in paragraph (c) of this section.

(2) For CJR–X participants that experience a reorganization event in which one or more hospitals reorganize under the CCN of a CJR–X participant, CMS performs both of the following:

(i) Separate reconciliation calculations for each predecessor CJR–X participant for episodes where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the reorganization event.

(ii) Reconciliation calculations for each new or surviving CJR–X participant for episodes where the anchor hospitalization admission or anchor procedure occurred on or after the effective date of the reorganization event.

(c) *Calculation of the Net Payment Reconciliation Amount (NPRA).* CMS compares the reconciliation target prices described in § 512.645 and the CJR–X participant's performance year spending to establish an NPRA for the CJR–X participant for each performance year as follows:

(1) CMS determines the performance year spending for each episode included in the performance year (other than episodes that have been canceled in accordance with § 512.630(b)) for each MS–DRG/HCPCS episode type using claims data that is available 6 months after the end of the performance year.

(2) CMS calculates and applies the high-cost outlier cap for performance year episode spending by applying the calculation described in § 512.640(b)(4) to performance year episode spending for each MS–DRG/HCPCS episode type.

(3) CMS applies the adjustments specified in § 512.645 to the preliminary target prices calculated in accordance with § 512.640 to determine the reconciliation target prices for each MS–DRG/HCPCS episode type.

(4) CMS aggregates the reconciliation target prices determined in accordance with paragraph (c)(3) of this section for all episodes included in the performance year (other than episodes that have been canceled in accordance with § 512.630(b)).

(5) CMS aggregates the adjusted performance year spending amounts determined in paragraphs (c)(1) through (2) of this section and subtracts the resulting amount from the aggregated reconciliation target price amount determined in paragraphs (c)(3) through (4) of this section.

(6) CMS applies stop-loss and stop-gain limits to the amount calculated in paragraph (c)(5) of this section as follows:

(i) *Limitation on loss.* For CJR–X participants, except as provided in paragraph (d)(3) of this section, the repayment amount for a performance year cannot exceed 20 percent of the aggregated reconciliation target price amount calculated in paragraph (c)(4) of this section for the performance year. The post-episode spending calculation amount in paragraph (c)(7) of this section is not subject to the limitation on loss.

(ii) *Limitation on gain.* For CJR–X participants, the reconciliation payment amount for a performance year cannot exceed 20 percent of the aggregated reconciliation target price amount calculated in paragraph (c)(4) of this section for the performance year. The post-episode spending amount calculated in paragraph (c)(7) of this section is not subject to the limitation on gain.

(iii) *Additional limitation on loss for certain hospitals.* The repayment amount for the following types of CJR–X participants as defined at § 512.605, cannot exceed 5 percent of the aggregated reconciliation target price amount calculated in paragraph (c)(4) of this section:

(A) Medicare-dependent, small rural hospital (MDH).

(B) Rural hospital.

(C) Safety net hospital.

(D) Sole community hospital (SCH).

(7) CMS calculates the post-episode spending amount. If the average post-episode spending amount for a CJR–X participant in the performance year being reconciled is greater than 3 standard deviations above the regional average post-episode spending amount for the performance year, then the post-episode spending amount that exceeds 3 standard deviations above the regional average post-episode spending amount for the performance year is subtracted from the NPRA for that performance year.

(d) *Reconciliation payment amount or repayment amount.*

(1) Excluding CJR–X participants that receive a below acceptable composite quality score, as specified in § 512.645(h), if the amount calculated in paragraph (c) of this section is positive, CMS pays the CJR–X participant a reconciliation payment equal to the amount described in paragraph (c) of this section.

(2) If the amount calculated in paragraph (c) of this section is negative, the CJR–X participant for the applicable performance year must pay to CMS a repayment equal to the amount described in paragraph (c) of this section.

(e) *CJR–X reconciliation report.* CMS issues each CJR–X participant a CJR–X reconciliation report for the performance year. Each CJR–X reconciliation report contains the following:

(1) The total performance year spending for the CJR–X participant.

(2) The CJR–X participant's reconciliation target prices.

(3) The CJR–X participant's reconciliation amount.

(4) The CJR–X participant's composite quality score calculated in accordance with § 512.635(b).

(5) The CJR–X participant's quality-adjusted reconciliation amount.

(6) The stop-loss and stop-gain limits that apply to the CJR–X participant.

(7) The CJR–X participant's NPRA.

(8) The CJR–X participant's post-episode spending amount, if applicable.

(9) The reconciliation payment amount or repayment amount for the performance year, if applicable.

§ 512.652 Treatment of incentive programs or add-on payments under existing Medicare payment systems.

(a) The CJR–X Model does not replace any existing Medicare incentive programs or add-on payments. The CJR–X payments are independent of, and do not affect, any incentive programs or add-on payments under existing Medicare payment systems.

§ 512.655 Proration of payments for items and services that extend beyond an episode.

(a) *General.* CMS prorates items and services included in the episode that extend beyond the episode so that only those portions of the items and services that were furnished during the episode are included in the calculation of the actual episode payments.

(b) *Proration of items and services.* CMS prorates payments for items and

services that extend beyond the episode for the purposes of calculating both baseline episode spending and performance year spending using the following methodology:

(1) *Non-IPPS inpatient items and services.* Non-IPPS inpatient items and services that extend beyond the end of the episode are prorated according to the percentage of the actual length of stay (in days) that falls within the episode.

(2) *Home health agency items and services.* Home health agency items and services paid under the Medicare prospective payment system in accordance with part 484, subpart E of this chapter that extend beyond the episode are prorated according to the percentage of days, starting with the first billable service date and through and including the last billable service date, that occur during the episode.

(3) *IPPS items and services.* IPPS items and services that extend beyond the end of the episode are prorated according to the MS–DRG geometric mean length of stay, using the following methodology:

(i) The first day of the IPPS stay is counted as 2 days.

(ii) If the actual length of stay that occurred during the episode is equal to or greater than the MS–DRG geometric mean, the full MS–DRG payment is allocated to the episode.

(iii) If the actual length of stay that occurred during the episode is less than the MS–DRG geometric mean length of stay, the MS–DRG payment amount is allocated to the episode based on the number of inpatient days that fall within the episode.

(4) If the full amount of the payment is not allocated to the episode, any remainder amount is allocated to the post-episode spending calculation (defined in § 512.650(c)(7)).

§ 512.660 Appeals process.

(a) *General.* Subject to the limitations on review in § 512.170, the CJR–X participant may submit a notice of calculation error for one or more calculations involving a matter related to payment, reconciliation payment amounts, repayment amounts, the use of quality measure results in determining the composite quality score, or the application of the composite quality score during reconciliation.

(b) *Requirements.*

(1) If the CJR–X participant identifies a calculation error as described in paragraph (a) of this section, the CJR–X participant must submit written notice of the error, in a form and manner specified by CMS, within 30 days of the issuance of the reconciliation report.

(2) If the CJR–X participant does not provide timely written notice of calculation error, CMS deems the CJR–X reconciliation report to be final 30 days after it is issued and proceeds with the payment or repayment processes as applicable.

(3) Only CJR–X participants may use this calculation error process.

(c) *Process.*

(1) If CMS determines the timely error notice meets the requirements of this section and contains sufficient information to substantiate the request, CMS issues an initial determination in writing within 30 days of receipt to either confirm that there was an error in the calculation or verify that the calculation is correct.

(2) CMS reserves the right to extend the time for providing its initial final determination upon written notice to the CJR–X participant.

(3) If the request is not compliant with the requirements of this section or requires additional information—

(i) CMS contacts the CJR–X participant to request additional information in a form and manner as specified by CMS;

(ii) The CJR–X participant must respond within 10 days of CMS' request for additional information in a form and manner as specified by CMS; and

(iii) If a CJR–X participant does not respond in accordance with paragraph (c)(3)(ii) of this section, then the reconciliation report is deemed final.

(d) *Reconsideration request.* A CJR–X participant who wishes to dispute an initial determination made in accordance with paragraph (c) of this section may invoke the reconsideration review process under § 512.190.

Data Sharing

§ 512.665 Data sharing with CJR–X participants.

(a) *General.* CMS shares certain beneficiary-identifiable data as described in paragraphs (b), (c), and (e) of this section and certain regional aggregate data as described in paragraph (d) of this section with CJR–X participants regarding CJR–X beneficiaries and performance under the model, consistent with applicable law.

(b) *Beneficiary-identifiable claims data.* CMS shares beneficiary-identifiable claims data with CJR–X participants as follows:

(1) CMS makes available certain beneficiary-identifiable claims data described in paragraph (5) of this section for CJR–X participants to request for purposes of conducting health care operations work that falls within paragraph (1) or (2) of the definition of health care operations at 45 CFR 164.501 regarding their CJR–X beneficiaries.

(2) A CJR–X participant that wishes to receive beneficiary-identifiable claims data for its CJR–X beneficiaries must:

(i) Submit a formal request for the data on an annual basis in a manner and form and by a date specified by CMS, indicating their selection of summary beneficiary-identifiable data, raw beneficiary-identifiable data, or both, and attest that—

(A) The CJR–X participant is requesting claims data of CJR–X beneficiaries who would be in an episode during the baseline period or performance year, as a HIPAA covered entity.

(B) The CJR–X participant's request reflects the minimum data necessary, as set forth in paragraph (c) of this section, for the CJR–X participant to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501.

(C) The CJR–X participant's use of claims data will be limited to developing processes and engaging in appropriate activities related to coordinating care, improving the quality and efficiency of care, and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all CJR–X beneficiaries, in an episode during the baseline period or performance year, and that these data will not be used to reduce, limit or restrict care for specific Medicare beneficiaries.

(ii) Sign and submit a CJR–X data sharing agreement, as defined in § 512.605, with CMS as set forth in paragraph (e) of this section.

(3) CMS shares this beneficiary-identifiable claims data with a CJR–X participant in accordance with applicable privacy and security laws and established privacy and security protections.

(4) CMS omits from the beneficiary-identifiable claims data any information that is subject to the regulations in 42 CFR part 2 governing the confidentiality of substance use disorder patient records.

(5) The beneficiary-identifiable claims data will include, when available, the following:

(i) Unrefined (raw) Medicare Parts A and B beneficiary-identifiable claims data for CJR–X beneficiaries in an episode during the 3-year baseline period and performance year.

(ii) Summarized (summary) Medicare Parts A and B beneficiary-identifiable claims data for CJR–X beneficiaries in

an episode during the 3-year baseline period and applicable performance year.

(6) CMS makes available the beneficiary-identifiable claims data for retrieval by CJR–X participants at the following frequency:

(i) Annually, at least one month prior to every performance year for baseline period data, based on the baseline periods described in § 512.640(b)(2).

(ii) As frequently as monthly during the performance year and for up to 6 months after the performance year for performance year data.

(c) *Minimum necessary data.* The CJR–X participant must limit its request for beneficiary-identifiable data under paragraph (b) of this section to the minimum necessary Parts A and B data elements which may include, but are not limited to the following:

(1) Medicare beneficiary identifier (ID).

(2) Procedure code.

(3) Sex.

(4) Diagnosis code.

(5) Claim ID.

(6) The from and through dates of service.

(7) The provider or supplier ID.

(8) The claim payment type.

(9) Date of birth and death, if applicable.

(10) Tax identification number.

(11) National provider identifier.

(d) *Regional aggregate data.*

(1) CMS shares regional aggregate data for the 3-year baseline period and relevant performance year with CJR–X participants as follows.

(i) CMS shares 3-year baseline period regional aggregate data annually at least 1 month before the relevant performance year, based on the baseline periods described in § 512.640(b)(2).

(ii) CMS shares performance year regional aggregate data as frequently as a monthly basis during the applicable performance year and for up to 6 months after the relevant performance year.

(2) Regional aggregate data will—

(i) Be aggregated based on all Parts A and B claims associated with episodes in CJR–X for the U.S. Census Division in which the CJR–X participant is located;

(ii) Summarize average episode spending for episodes in CJR–X in the U.S. Census Division in which the CJR–X participant is located; and

(iii) Be de-identified in accordance with 45 CFR 164.514(b).

(e) *CJR–X data sharing agreement.*

(1) A CJR–X participant who wishes to retrieve the beneficiary-identifiable data specified in paragraph (b) of this section, must complete and submit, on at least an annual basis, a signed CJR–X data sharing agreement, as defined in § 512.605, to be provided in a form and manner and by a date specified by CMS, under which the CJR–X participant agrees:

(i) To comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA Privacy Rule (45 CFR part 160 and subparts A and E of part 164), HIPAA Breach Notification Rule (45 CFR subpart D of part 164) and the requirements of the CJR–X set forth in this part.

(ii) To comply with additional privacy, security, breach notification, and data retention requirements specified by CMS in the CJR–X data sharing agreement.

(iii) To contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the CJR–X participant to the same terms and conditions to which the CJR–X participant is itself bound in its CJR–X data sharing agreement with CMS as a condition of the business associate's receipt of the beneficiary-identifiable data retrieved by the CJR–X participant under the CJR–X.

(iv) That if the CJR–X participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the data sharing agreement, CMS may deem the CJR–X participant ineligible to retrieve beneficiary-identifiable data under paragraph (b) of this section for any amount of time, and the CJR–X participant may be subject to additional sanctions and penalties available under the law.

(2) A CJR–X participant must comply with all applicable laws and the terms of the CJR–X data sharing agreement in order to retrieve the beneficiary-identifiable data.

Financial Arrangements and Beneficiary Incentives

§ 512.670 Sharing arrangements.

(a) *General.*

(1) A CJR–X participant may enter into a sharing arrangement with a CJR–X collaborator to make a gainsharing payment, or to receive an alignment payment, or both. A CJR–X participant must not make a gainsharing payment to a CJR–X collaborator, or receive an alignment payment from a CJR–X collaborator, except in accordance with a sharing arrangement.

(2) A sharing arrangement must comply with the provisions of this section and all other applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements.

(3) CJR–X participants must develop, maintain, and use a set of written policies for selecting individuals and entities to be CJR–X collaborators.

(i) These policies must contain criteria related to, and inclusive of, the quality of care delivered by the potential CJR–X collaborator and the provision of CJR–X activities.

(ii) The selection criteria cannot be based directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent.

(iii) A selection criterion that considers whether a potential CJR–X collaborator has performed a reasonable minimum number of services that would qualify as CJR–X activities, as determined by the CJR–X participant, will be deemed not to violate the volume or value standard if the purpose of the criterion is to ensure the quality of care furnished to CJR–X beneficiaries.

(4) If a CJR–X participant enters into a sharing arrangement, its compliance program must include oversight of sharing arrangements and compliance with the applicable requirements of CJR–X.

(b) *Requirements.*

(1) A sharing arrangement must be in writing and signed by the parties, and entered into before care is furnished to CJR–X beneficiaries under the sharing arrangement.

(2) Participation in a sharing arrangement must be voluntary and without penalty for nonparticipation.

(3) The sharing arrangement must require the CJR–X collaborator and its employees, contractors (including collaboration agents), and subcontractors (including downstream collaboration agents) to comply with all of the following:

(i) The applicable provisions of this part 512 (including requirements regarding beneficiary notifications in § 512.622, access to records in § 512.135(b), record retention in § 512.135(c), and participation in any evaluation, monitoring, compliance in § 512.130, and enforcement activities performed by CMS or its designees in § 512.160).

(ii) All applicable Medicare provider enrollment requirements at § 424.500 of this chapter, including having a valid and active TIN or NPI, during the term of the sharing arrangement.

(iii) All other applicable laws and regulations.

(4) The sharing arrangement must require the CJR–X collaborator to have or be covered by a compliance program that includes oversight of the sharing arrangement and compliance with the requirements of CJR–X that apply to its role as a CJR–X collaborator, including any distribution arrangements.

(5) The sharing arrangement must not potentially or actually negatively impact beneficiary access, beneficiary freedom of choice, or quality of care.

(6) The board or other governing body of the CJR–X participant must have responsibility for overseeing the CJR–X participant's participation in CJR–X, its arrangements with CJR–X collaborators, its payment of gainsharing payments, its receipt of alignment payments, and its use of beneficiary incentives in the CJR–X Model.

(7) The specifics of the agreement must be documented in writing and must be made available to CMS upon request (as outlined in § 512.150).

(8) The sharing arrangement must specify the following:

(i) The purpose and scope of the sharing arrangement.

(ii) The obligations of the parties, including specified CJR–X activities and other services, to be performed by the parties under the sharing arrangement.

(iii) The date range for which the sharing arrangement is effective.

(iv) The financial or economic terms for payment, including the following:

(A) Eligibility criteria for a gainsharing payment.

(B) Eligibility criteria for an alignment payment.

(C) Frequency of gainsharing or alignment payments.

(D) Methodology and accounting formula for determining the amount of a gainsharing payment or alignment payment.

(9) The sharing arrangement must not do either of the following:

(i) Induce the CJR–X participant, CJR–X collaborator, or any employees, contractors, or subcontractors of the CJR–X participant or CJR–X collaborator to reduce or limit medically necessary services to any Medicare beneficiary.

(ii) Restrict the ability of a CJR–X collaborator to make decisions in the best interests of its patients, including the selection of devices, supplies, and treatments.

(c) *Gainsharing payment, alignment payment, and internal cost savings conditions and restrictions.*

(1) Gainsharing payments, if any, must—

(i) Be derived solely from reconciliation payment amounts, or internal cost savings, or both;

(ii) Be distributed on an annual basis (not more than once per calendar year);

(iii) Not be a loan, advance payment, or payment for referrals or other business; and

(iv) Be clearly identified as a gainsharing payment at the time it is paid.

(2) Gainsharing payment eligibility-

(i) To be eligible to receive a gainsharing payment, a CJR–X collaborator must meet quality of care criteria for the performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment that comprises the gainsharing payment. The quality of care criteria must be established by the CJR–X participant and directly relate to the episode.

(ii) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a CJR–X collaborator other than ACO, PGP, NPPGP, or TGP, must have directly furnished a billable item or service to a CJR–X beneficiary during an episode that was attributed to the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment.

(iii) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a CJR–X collaborator that is a PGP, NPPGP, or TGP, must meet the following criteria:

(A) The PGP, NPPGP, or TGP, must have billed for an item or service that was rendered by one or more PGP member, NPPGP member, or TGP member, respectively to a CJR–X beneficiary during an episode that was attributed to the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment.

(B) The PGP, NPPGP, or TGP, must have contributed to CJR–X activities and been clinically involved in the care of CJR–X beneficiaries during the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment. A non-exhaustive list of examples where a PGP, NPPGP, or TGP might have been clinically involved in the care of CJR–X beneficiaries includes—

(*1*) Providing care coordination services to CJR–X beneficiaries during or after inpatient admission;

(*2*) Engaging with a CJR–X participant in care redesign strategies, and performing a role in implementing such strategies, that are designed to improve the quality of care for episodes and reduce episode spending; or

(*3*) In coordination with other providers and suppliers (such as PGP members, NPPGP members, or TGP members the CJR–X participant; and post-acute care providers), implementing strategies designed to address and manage the comorbidities of CJR–X beneficiaries.

(iv) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a CJR–X collaborator that is an ACO must meet the following criteria:

(A) The ACO must have had an ACO provider/supplier that directly furnished, or an ACO participant that billed for, an item or service that was rendered to a CJR–X beneficiary during an episode that was attributed to the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment; and

(B) The ACO must have contributed to CJR–X activities and been clinically involved in the care of CJR–X beneficiaries during the performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment. A non-exhaustive list of ways in which an ACO might have been clinically involved in the care of CJR–X beneficiaries could include—

(*1*) Providing care coordination services to CJR–X beneficiaries during or after inpatient admission;

(*2*) Engaging with a CJR–X participant in care redesign strategies and performing a role in implementing such strategies that are designed to improve the quality of care and reduce spending for episodes; or

(*3*) In coordination with providers and suppliers (such as ACO participants, ACO providers/suppliers, the CJR–X participant, and post-acute care providers), implementing strategies designed to address and manage the comorbidities of CJR–X beneficiaries.

(3) The methodology for accruing, calculating, and verifying internal cost

savings will be determined by the CJR–X participant. The methodology—

(i) Must be transparent, measurable, and verifiable in accordance with generally accepted accounting principles (GAAP) and Government Auditing Standards (The Yellow Book).

(ii) Used to calculate internal cost savings that reflect the actual, internal cost savings achieved by the CJR–X participant through the documented implementation of CJR–X activities identified by the CJR–X participant and must exclude—

(A) Any savings realized by any individual or entity that is not the CJR–X participant; and

(B) ''Paper'' savings from accounting conventions or past investment in fixed costs.

(4) The amount of any gainsharing payments must be determined in accordance with a methodology that is based solely on quality of care and the provision of CJR–X activities. The methodology may take into account the amount of CJR–X activities provided by a CJR–X collaborator relative to other CJR–X collaborators.

(5) For a performance year, the aggregate amount of all gainsharing payments that are derived from reconciliation payment amounts must not exceed the amount of that year's reconciliation payment amount.

(6) No entity or individual, whether a party to a sharing arrangement or not, may condition the opportunity to make or receive gainsharing payments or to make or receive alignment payments directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent.

(7) A CJR–X participant must not make a gainsharing payment to a CJR–X collaborator if CMS has notified the CJR–X participant that such CJR–X collaborator is subject to any action by CMS, HHS or any other governmental entity, or its designees, for noncompliance with this part or the fraud and abuse laws, for the provision of substandard care to CJR–X beneficiaries or other integrity problems, or for any other program integrity problems or noncompliance with any other laws or regulations.

(8) The sharing arrangement must require the CJR–X participant to recoup any gainsharing payment that contained funds derived from a CMS overpayment on a reconciliation payment amount or was based on the submission of false or fraudulent data.

(9) Alignment payments from a CJR–X collaborator to a CJR–X participant may be made at any interval that is agreed upon by both parties, and must not be—

(i) Issued, distributed, or paid prior to the calculation by CMS of a repayment amount;

(ii) Loans, advance payments, or payments for referrals or other business; or

(iii) Assessed by a CJR–X participant in the absence of a repayment amount.

(10) The CJR–X participant must not receive any amounts under a sharing arrangement from a CJR–X collaborator that are not alignment payments.

(11) For a performance year, the aggregate amount of all alignment payments received by the CJR–X participant must not exceed 50 percent of the CJR–X participant's repayment amount.

(12) The aggregate amount of all alignment payments from a CJR–X collaborator to the CJR–X participant may not be greater than with respect to a CJR–X collaborator—

(i) Other than an ACO, 25 percent of the CJR–X participant's repayment amount; or

(ii) That is an ACO, 50 percent of the CJR–X participant's repayment amount.

(13) The amount of any alignment payments must be determined in accordance with a methodology that does not directly account for the volume or value of past or anticipated referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent.

(14) All gainsharing payments and any alignment payments must be administered by the CJR–X participant in accordance with generally accepted accounting principles (GAAP) and Government Auditing Standards (The Yellow Book).

(15) All gainsharing payments and alignment payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(d) *Documentation requirements.*

(1) CJR–X participants must—

(i) Document the sharing arrangement contemporaneously with the establishment of the arrangement;

(ii) Post (and update on at least a quarterly basis) on a publicly available web page on the CJR–X participant's website the following:

(A) Accurate lists of all current CJR–X collaborators, including the CJR–X collaborators' names and addresses as well as accurate historical lists of all CJR–X collaborators.

(B) Written policies for selecting individuals and entities to be CJR–X collaborators as required by § 512.670(a)(3).

(iii) Maintain, and require each CJR–X collaborator to maintain, contemporaneous documentation with respect to the payment or receipt of any gainsharing payment or alignment payment that includes all of the following, at a minimum:

(A) Nature of the payment (gainsharing payment or alignment payment).

(B) Identity of the parties making and receiving the payment.

(C) Date of the payment.

(D) Amount of the payment.

(E) Date and amount of any recoupment of all or a portion of a CJR–X collaborator's gainsharing payment.

(F) Explanation for each recoupment, such as whether the CJR–X collaborator received a gainsharing payment that contained funds derived from a CMS overpayment of a reconciliation payment or was based on the submission of false or fraudulent data.

(2) The CJR–X participant must keep records of all of the following:

(i) A process for determining and verifying its potential and current CJR–X collaborators' eligibility to participate in Medicare.

(ii) A plan to track internal cost savings.

(iii) Information on the accounting systems used to track internal cost savings.

(iv) A description of current health information technology, including systems to track reconciliation payment amounts, repayment amounts, and internal cost savings.

(v) A plan to track gainsharing payments and alignment payments.

(3) The CJR–X participant must retain and provide access to, and require each CJR–X collaborator to retain and provide access to, the required documentation in accordance with § 512.135.

§ 512.675 Distribution arrangements.

(a) *General.*

(1) An ACO, PGP, NPPGP, or TGP, that is a CJR–X collaborator and has entered into a sharing arrangement with a CJR–X participant may distribute all or a portion of any gainsharing payment it receives from the CJR–X participant only in accordance with a distribution arrangement.

(2) All distribution arrangements must comply with the provisions of this

section and all other applicable laws and regulations, including the fraud and abuse laws.

(b) *Requirements.*

(1) All distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to CJR–X beneficiaries under the distribution arrangement.

(2) Participation in a distribution arrangement must be voluntary and without penalty for nonparticipation.

(3) The distribution arrangement must require the collaboration agent to comply with all applicable laws and regulations.

(4) The opportunity to make or receive a distribution payment must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent.

(5) The amount of any distribution payments from an ACO, from an NPPGP to an NPPGP member, or from a TGP to a TGP member, must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities and that may take into account the amount of such CJR–X activities provided by a collaboration agent relative to other collaboration agents.

(6) The amount of any distribution payments from a PGP must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities and that may take into account the amount of such CJR–X activities provided by a collaboration agent relative to other collaboration agents.

(7) A collaboration agent is eligible to receive a distribution payment only if the collaboration agent furnished or billed for an item or service rendered to a CJR–X beneficiary during an episode that was attributed to the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount that comprises the gainsharing payment being distributed.

(8) With respect to the distribution of any gainsharing payment received by an ACO, PGP, NPPGP, or TGP, the total amount of all distribution payments for a performance year must not exceed the amount of the gainsharing payment received by the CJR–X collaborator from the CJR–X participant for the same performance year.

(9) All distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(10) The collaboration agent must retain the ability to make decisions in the best interests of the patient, including the selection of devices, supplies, and treatments.

(11) The distribution arrangement must not do either of the following:

(i) Induce the collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary.

(ii) Reward the provision of items and services that are medically unnecessary.

(12) The CJR–X collaborator must maintain contemporaneous documentation regarding distribution arrangements in accordance with § 512.135, including all of the following:

(i) The relevant written agreements.

(ii) The date and amount of any distribution payment(s).

(iii) The identity of each collaboration agent that received a distribution payment.

(iv) A description of the methodology and accounting formula for determining the amount of any distribution payment.

(13) The CJR–X collaborator may not enter into a distribution arrangement with any individual or entity that has a sharing arrangement with the same CJR–X participant.

(14) The CJR–X collaborator must retain and provide access to, and must require collaboration agents to retain and provide access to, the required documentation in accordance with § 512.135.

§ 512.680 Downstream distribution arrangements.

(a) *General.*

(1) An ACO participant that is a PGP, NPPGP, or TGP and that has entered into a distribution arrangement with a CJR–X collaborator that is an ACO, may distribute all or a portion of any distribution payment it receives from the CJR–X collaborator only in accordance with a downstream distribution arrangement.

(2) All downstream distribution arrangements must comply with the provisions of this section and all applicable laws and regulations, including the fraud and abuse laws.

(b) *Requirements.*

(1) All downstream distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to CJR–X beneficiaries under the downstream distribution arrangement.

(2) Participation in a downstream distribution arrangement must be voluntary and without penalty for nonparticipation.

(3) The downstream distribution arrangement must require the downstream collaboration agent to comply with all applicable laws and regulations.

(4) The opportunity to make or receive a downstream distribution payment must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the CJR–X participant, any CJR–X collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a CJR–X participant, CJR–X collaborator, collaboration agent, or downstream collaboration agent.

(5) The amount of any downstream distribution payments from an NPPGP to an NPPGP member or from a TGP to a TGP member must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities and that may take into account the amount of such CJR–X activities provided by a downstream collaboration agent relative to other downstream collaboration agents.

(6) The amount of any downstream distribution payments from a PGP must be determined in accordance with a methodology that is solely based on quality of care and the provision of CJR–X activities and that may take into account the amount of such CJR–X activities provided by a downstream collaboration agent relative to other downstream collaboration agents.

(7) A downstream collaboration agent is eligible to receive a downstream distribution payment only if the downstream collaboration agent furnished an item or service to a CJR–X beneficiary during an episode that is attributed to the same performance year for which the CJR–X participant accrued the internal cost savings or earned the reconciliation payment amount that comprises the gainsharing payment from which the ACO made the distribution payment to the PGP, NPPGP, or TGP that is an ACO participant.

(8) The total amount of all downstream distribution payments made to downstream collaboration agents must not exceed the amount of the distribution payment received by the PGP, NPPGP, or TGP from the ACO.

(9) All downstream distribution payments must be made by check,

electronic funds transfer, or another traceable cash transaction.

(10) The downstream collaboration agent must retain his or her ability to make decisions in the best interests of the beneficiary, including the selection of devices, supplies, and treatments.

(11) The downstream distribution arrangement must not do either of the following:

(i) Induce the downstream collaboration agent to reduce or limit medically necessary services to any Medicare beneficiary.

(ii) Reward the provision of items and services that are medically unnecessary.

(12) The PGP, NPPGP, or TGP must maintain contemporaneous documentation regarding downstream distribution arrangements in accordance with § 512.135, including the following:

(i) The relevant written agreements.

(ii) The date and amount of any downstream distribution payment.

(iii) The identity of each downstream collaboration agent that received a downstream distribution payment.

(iv) A description of the methodology and accounting formula for determining the amount of any downstream distribution payment.

(13) The PGP, NPPGP, or TGP may not enter into a downstream distribution arrangement with any PGP member, NPPGP member, or TGP member who has—

(i) A sharing arrangement with a CJR–X participant.

(ii) A distribution arrangement with the ACO that the PGP, NPPGP, or TGP is a participant in.

(14) The PGP, NPPGP, or TGP must retain and provide access to, and must require downstream collaboration agents to retain and provide access to, the required documentation in accordance with § 512.135.

§ 512.685 CJR–X beneficiary incentives.

(a) *General.* CJR–X participants may choose to provide in-kind patient engagement incentives including but not limited to items of technology to CJR–X beneficiaries in an episode, subject to the following conditions:

(1) The incentive must be provided directly by the CJR–X participant or by an agent of the CJR–X participant under the CJR–X participant's direction and control to the CJR–X beneficiary during an episode.

(2) The item or service provided must be reasonably connected to medical care provided to a CJR–X beneficiary during an episode.

(3) The item or service must be a preventive care item or service or an item or service that advances a clinical goal, as listed in paragraph (c) of this section, for a CJR–X beneficiary in an episode by engaging the CJR–X beneficiary in better managing his or her own health.

(4) The item or service must not be tied to the receipt of items or services outside the episode.

(5) The item or service must not be tied to the receipt of items or services from a particular provider or supplier.

(6) The availability of the items or services must not be advertised or promoted, except that a CJR–X beneficiary may be made aware of the availability of the items or services at the time the CJR–X beneficiary could reasonably benefit from them.

(7) The cost of the items or services must not be shifted to any federal health care program, as defined at section 1128B(f) of the Act.

(b) *Technology provided to a CJR–X beneficiary.* CJR–X beneficiary engagement incentives involving technology are subject to the following additional conditions:

(1) Items or services involving technology provided to a CJR–X beneficiary may not exceed $1,000 in retail value for any one CJR–X beneficiary during any one episode.

(2) Items or services involving technology provided to a CJR–X beneficiary must be the minimum necessary to advance a clinical goal, as listed in paragraph (c) of this section, for a beneficiary in an episode.

(3) Items of technology exceeding $75 in retail value must—

(i) Remain the property of the CJR–X participant; and

(ii) Be retrieved from the CJR–X beneficiary at the end of the episode, with documentation of the ultimate date of retrieval. The CJR–X participant must document all retrieval attempts. In cases when the item of technology is not able to be retrieved, the CJR–X participant must determine why the item was not retrievable. If it was determined that the item was misappropriated (if it were sold, for example), the CJR–X participant must take steps to prevent future beneficiary incentives for that CJR–X beneficiary. Following this process, documented, diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

(c) *Clinical goals of CJR–X.* The following are the clinical goals of CJR–X, which may be advanced through CJR–X beneficiary incentives:

(1) Beneficiary adherence to drug regimens.

(2) Beneficiary adherence to a care plan.

(3) Reduction of readmissions and complications following an episode.

(4) Management of chronic diseases and conditions that may be affected by the CJR–X procedure.

(d) *Documentation of CJR–X beneficiary incentives.*

(1) CJR–X participants must maintain documentation of items and services furnished as beneficiary incentives that exceed $25 in retail value.

(2) The documentation must be established contemporaneously with the provision of the items and services with a record established and maintained to include at least the following:

(i) The date the incentive is provided.

(ii) The identity of the CJR–X beneficiary to whom the item or service was provided.

(3) The documentation regarding items of technology exceeding $75 in retail value must also include contemporaneous documentation of any attempt to retrieve technology at the end of an episode, or why the items were not retrievable, as described in paragraph (b)(3) of this section.

(4) The CJR–X participant must retain and provide access to the required documentation in accordance with § 512.135.

§ 512.690 Application of the CMS-sponsored Model Arrangements and Patient Incentives Safe Harbor.

(a) *Application of the CMS-sponsored model arrangements safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) is available to protect remuneration furnished in CJR–X in the form of the sharing arrangement's gainsharing payments and alignment payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and § 512.670, in the form of the distribution arrangement's distribution payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and § 512.675, and in the form of the downstream distribution arrangement's distribution payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and § 512.680.

(b) *Application of the CMS-sponsored model patient incentives safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) is available to protect CJR–X beneficiary incentives that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and 512.685.

Medicare Program Waivers

§ 512.695 CJR–X Medicare Program Waivers.

(a) *Waiver of certain telehealth requirements.*

(1) *Waiver of the geographic site requirements.* Except for the geographic site requirements for a face-to-face encounter for home health certification, CMS waives the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act for episodes being tested in CJR–X solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are included in the episode in accordance with § 512.625(e).

(2) *Waiver of the originating site requirements.* Except for the originating site requirements for a face-to-face encounter for home health certification, CMS waives the originating site requirements under section 1834(m)(4)(C)(ii)(I) through (X) of the Act for episodes to permit a telehealth visit to originate in the beneficiary's home or place of residence solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are included in the episode in accordance with § 512.625(e).

(3) *Waiver of selected payment provisions.*

(i) CMS waives the payment requirements under section 1834(m)(2)(B) of the Act so that the facility fee normally paid by Medicare to an originating site for a telehealth service is not paid if the service originated in the beneficiary's home or place of residence.

(ii) CMS waives the payment requirements under section 1834(m)(2)(A) of the Act to allow the distant site payment for telehealth home visit HCPCS codes unique to CJR–X.

(4) *Other requirements.* All other requirements for Medicare coverage and payment of telehealth services continue to apply, including the list of specific services approved to be furnished by telehealth.

(b) *Waiver of the SNF 3-day rule.*

(1) *Episodes initiated by an anchor hospitalization.* CMS waives the SNF 3-day rule for coverage of a SNF stay within 30 days of the date of discharge from the anchor hospitalization for a beneficiary who is a CJR–X beneficiary on the date of discharge from the anchor hospitalization if the SNF is identified on the applicable calendar quarter list of qualified SNFs at the time of the CJR–X beneficiary's admission to the SNF.

(2) *Episodes initiated by an anchor procedure.* CMS waives the SNF 3-day rule for coverage of a SNF stay within 30 days of the date of service of the anchor procedure for a beneficiary who is a CJR–X beneficiary on the date of service of the anchor procedure if the SNF is identified on the applicable calendar quarter list of qualified SNFs at the time of the CJR–X beneficiary's admission to the SNF.

(3) *Determination of qualified SNFs.* CMS determines the qualified SNFs for each calendar quarter based on a review of the most recent rolling 12 months of overall star ratings on the Five-Star Quality Rating System for SNFs on the Nursing Home Compare website.

(i) Qualified SNFs are rated an overall of 3 stars or better for at least 7 of the 12 months.

(ii) Qualified SNFs include providers furnishing SNF services under swing bed agreements, which will not be subject to the star ratings requirement.

(4) *Posting of qualified SNFs.* CMS posts to the CMS website the list of qualified SNFs in advance of the calendar quarter.

(5) *Financial liability for non-covered SNF services.* If CMS determines that the waiver requirements specified in paragraph (b) of this section were not met, the following apply:

(i) CMS makes no payment to a SNF for SNF services if the SNF admits a CJR–X beneficiary who has not had a qualifying anchor hospitalization or anchor procedure.

(ii) In the event that CMS makes no payment for SNF services furnished by a SNF as a result of paragraph (b)(5)(i) of this section, the beneficiary protections specified in paragraph (b)(5)(iii) of this section apply, unless the CJR–X participant has provided the beneficiary with a discharge planning notice in accordance with § 512.622(c).

(iii) If the CJR–X participant does not provide the beneficiary with a discharge planning notice in accordance with § 512.622(c)—

(A) The SNF must not charge the beneficiary for the expenses incurred for such services;

(B) The SNF must return to the beneficiary any monies collected for such services; and

(C) The CJR–X participant is financially liable for the expenses incurred for such services.

(4) If the CJR–X participant provided a discharge planning notice to the beneficiary in accordance with § 512.622(c), then normal SNF coverage requirements apply and the beneficiary may be financially liable for non-covered SNF services.

(6) *Other requirements.* All other Medicare rules for coverage and payment of Part A-covered services continue to apply except as otherwise waived in this part.

(c) *Waiver of direct supervision requirement for certain post-discharge home visits.*

(1) *General.* CMS waives the requirement in § 410.26(b)(5) of this chapter that services and supplies furnished incident to a physician's service must be furnished under the direct supervision of the physician (or other practitioner) to permit home visits as specified in this section. The services furnished under this waiver are not considered to be ''hospital services,'' even when furnished by the clinical staff of the hospital.

(2) *General supervision of qualified personnel.* The waiver of the direct supervision requirement in § 410.26(b)(5) of this chapter applies only in the following circumstances:

(i) The home visit is furnished during the episode to a CJR–X beneficiary who has been discharged from an anchor hospitalization or anchor procedure.

(ii) The home visit is furnished at the CJR–X beneficiary's home or place of residence.

(iii) The CJR–X beneficiary does not qualify for home health services under sections 1835(a) and 1814(a) of the Act at the time of any such home visit.

(iv) The visit is furnished by clinical staff under the general supervision of a physician or non-physician practitioner. Clinical staff are individuals who work under the supervision of a physician or other qualified health care professional, and who are allowed by law, regulation, and facility policy to perform or assist in the performance of a specific professional service, but do not individually report that professional service.

(v) No more than 9 visits are furnished to the CJR–X beneficiary during the episode.

(3) *Payment.* Up to 9 post-discharge home visits per CJR–X episode may be billed under Part B by the physician or nonphysician practitioner or by the CJR–X participant to which the supervising physician has reassigned his or her billing rights.

(4) *Other requirements.* All other Medicare rules for coverage and payment of services incident to a physician's service continue to apply.

PART 170—HEALTH INFORMATION TECHNOLOGY STANDARDS, IMPLEMENTATION SPECIFICATIONS, AND CERTIFICATION CRITERIA AND CERTIFICATION PROGRAMS FOR HEALTH INFORMATION TECHNOLOGY

■ 48. The authority citation for part 170 continues to read as follows:

Authority: 42 U.S.C. 300jj–11; 42 U.S.C 300jj–14; 5 U.S.C. 552.

■ 49. Section 170.215 is amended by revising paragraphs (j), (k), (m), and (n) to read as follows:

§ 170.215 Application Programming Interface Standards.

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning On or After October 1, 2026, and Payment Rates for LTCHs Effective for Discharges Occurring On or After October 1, 2026

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2027 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2027. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that would be effective for cost reporting periods beginning on or after October 1, 2026. In addition, we are setting forth a description of the methods and data we used to determine the LTCH PPS standard Federal payment rate that would be applicable to Medicare LTCHs for FY 2027.

In general, except for SCHs and MDHs, for FY 2027, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (including, as discussed in section IV.E. of the preamble of this final rule, uncompensated care payments under section 1886(r)(2) of the Act).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section

5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor. Section 2202 of the Full-Year Continuing Appropriations and Extensions Act, 2025 extended the MDH program through FY 2025. As discussed in section V.F. of the preamble of this final rule, section 6202 of the Consolidated Appropriations Act, 2026 (Pub. L. 119–75) extended the MDH program for FY 2027 discharges occurring before January 1, 2027. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2027. We refer readers to section V.F. of the preamble of this final rule for further discussion of the MDH program.

As discussed in section V.B.2. of the preamble of this final rule, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. In general, Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update. Accordingly, our discussion later in this section does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum of this final rule, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2027. In section III. of this Addendum of this final rule, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2027. In section IV. of this Addendum, we are setting forth the rate-of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2027. In section V. of this Addendum, we discuss policy changes for determining the LTCH PPS standard Federal rate for LTCHs paid under the LTCH PPS for FY 2027. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the internet on the CMS website.

II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2027

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. In this section, we discuss the factors we are using for determining the prospective payment rates for FY 2027.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the internet on the CMS website) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2027, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount.

We refer readers to section VI.B. of the preamble of this final rule for a complete discussion on the FY 2027 inpatient hospital update. The table that follows shows these four scenarios:

FY 2027 APPLICABLE PERCENTAGE INCREASE FOR THE IPPS				
FY 2027	**Hospital Submitted Quality Data and is a Meaningful EHR User**	**Hospital Submitted Quality Data and is NOT a Meaningful EHR User**	**Hospital Did NOT Submit Quality Data and is a Meaningful EHR User**	**Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User**
Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.8	-0.8
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-2.4	0.0	-2.4
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.9	-0.9	-0.9	-0.9
Applicable Percentage Increase Applied to Standardized Amount	**2.3**	**-0.1**	**1.5**	**-0.9**

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for ''subsection (d)'' hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico. In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. Accordingly, the applicable percentage increase for subsection (d) Puerto Rico hospitals that are not meaningful EHR users for FY 2027 and subsequent fiscal years is adjusted by the adjustment for failure to be a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act. The regulations at 42 CFR 412.64(d)(3)(ii) reflect the current law for the update for subsection (d) Puerto Rico hospitals for FY 2022 and subsequent fiscal years.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to the standardized amount to ensure budget neutrality for the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, as discussed in section II.D.2.c. of the preamble of this final rule, consistent with our current methodology for implementing DRG recalibration and

reclassification budget neutrality under section 1886(d)(4)(C)(iii) of the Act.

- An adjustment to ensure the wage index and labor-related share changes (depending on the fiscal year) are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005)). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.
- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2026 budget neutrality factor and applying a revised factor.
- An adjustment to the standardized amount to implement in a budget neutral manner the wage index cap policy (as described in section III.G.5 of the preamble of this final rule).
- Using our authority under section 1886(d)(5)(I)(i) of the Act, an adjustment to the standardized amount to implement in a budget neutral manner the transition for the discontinuation of the low wage index hospital policy (as described in section III.F.6 of the preamble of this final rule).
- An adjustment to remove the FY 2026 outlier offset and apply an offset for FY 2027, as provided for in section 1886(d)(3)(B) of the Act.

We note, in section VI.N. of the preamble of this final rule, we discuss the Rural Community Hospital Demonstration (RCHD) program. In past years, we made an adjustment to ensure the effects of the RCHD program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. As discussed in that section, as we are not yet able to finalize the FY 2027 estimated costs of the demonstration at this time, we did not propose to apply a budget neutrality offset in the FY 2027 IPPS/LTCH PPS proposed rule. Rather, we are finalizing as proposed to apply budget neutrality offsets for both FY 2027 and FY 2028 to the national IPPS rates in the FY 2028 IPPS/LTCH PPS rulemaking. We would also incorporate any statutory change that might affect the methodology for determining hospital costs either with or without the demonstration. We refer the reader to section VI.N. of the preamble of this final rule for complete details.

For FY 2027, consistent with current law, we are applying the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State-level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2027 wage index for the rural floor.

For FY 2027, we are continuing to not remove the Stem Cell Acquisition Budget Neutrality Factor from the prior year's standardized amount and to not apply a new factor. If we removed the prior year's adjustment, we would not satisfy budget neutrality. We believe this approach ensures the effects of the reasonable cost-based payment for allogeneic hematopoietic stem cell acquisition costs under section 108 of the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94) are budget neutral as required under section 108 of Public Law 116–94. For a discussion of Stem Cell Acquisition Budget Neutrality Factor, we refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 59032 and 59033).

A. Calculation of the Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983, interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2027, we are continuing to use the national labor-related and nonlabor-related shares (which are based on the 2023-based hospital IPPS market basket) that were used in FY 2026. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.'' For FY 2027, as discussed in section III.H. of the preamble of this final rule, as proposed, we are finalizing to use a labor-related share of 66.0 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, as proposed, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the internet on the CMS website.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage increase. Accordingly, we are calculating the FY 2027 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, we are using the 2023-based IPPS operating and capital market baskets for FY 2027. As discussed in section VI.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are reducing the FY 2027 applicable percentage increase (which for this final rule is based on IGI's second quarter 2026 forecast of the 2023-based IPPS market basket) by the productivity adjustment, as discussed elsewhere in this final rule.

Based on IGI's second quarter 2026 forecast of the IPPS hospital market basket percentage increase (as discussed in appendix B of this final rule), the forecast of the hospital market basket percentage increase for FY 2027 for this final rule is 3.2 percent and the forecast of the productivity adjustment for FY 2027 for this final rule is 0.9 percentage point. As discussed earlier, for FY 2027, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section VI.B. of the preamble of this final rule for a complete discussion on the FY 2027 inpatient hospital update to the standardized amount. We also refer readers to the previous table for the four possible applicable percentage increases that would be applied to update the national standardized amounts. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the internet on the CMS website reflect these differential amounts.

Although the update factors for FY 2027 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2027 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the FY 2027 update factors is set forth in appendix B of this final rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the FY 2027 standardized amount is as follows:

• To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we applied the following inclusion and exclusion criteria: include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); exclude CAHs and Rural Emergency Hospitals (REHs) at the time of this final rule (we finalized to remove REHs in the calculation of the standardized amount in the FY 2025 IPPS/LTCH final rule (89 FR 69941–69942); exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS excluded-cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.

• As in the past, we are adjusting the FY 2027 standardized amount to remove the effects of the FY 2027 geographic reclassifications and outlier payments before applying the FY 2027 updates. We then applied budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2027 payment policies.

• We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

• Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total ''operating DRG payments,'' which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

• Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

• Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

• Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field for the budget neutrality adjustments. We are removing organ acquisition charges, except for cases that group to MS–DRG 018, from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS. Revenue centers 081X–089X are typically excluded from ratesetting, however, we are not removing revenue center 891 charges from MS–DRG 018 claims during ratesetting because those revenue 891 charges were included in the relative weight calculation for MS–DRG 018, which is consistent with the policy finalized in the FY 2021 final rule (85 FR 58600). We note that a new MedPAR variable for revenue code 891 charges was introduced in April 2020.

• For FY 2027, we are continuing to remove allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).

• Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, consistent with the approach we have taken in prior years, for FY 2027, we are applying a proxy based on the prior fiscal year hospital readmissions payment adjustment and a proxy based on the prior fiscal year hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). Under this policy for FY 2027, we used the final FY 2026 readmissions adjustment factors from Table 15 of the FY 2026 IPPS/LTCH PPS final rule and the final FY 2026 hospital VBP adjustment factors from Table 16B of the FY 2026 IPPS/LTCH PPS final rule. These proxy factors are applied on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum. We refer the reader to section V.K. of the preamble of this final rule for a complete discussion on the Hospital Readmissions Reduction Program and section V.L. of the preamble of this final rule for a complete discussion on the Hospital VBP Program.

• The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and any additional statutory adjustment, is available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

Consistent with prior fiscal years, we are including the estimated empirically justified Medicare DSH payments that would be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we considered estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

We also are including the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

• When calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.G. of the preamble to this final rule and later in this section, we are continuing to use the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we are including estimated uncompensated care payments in this comparison.

As discussed elsewhere in this final rule, section 6202 of the Consolidated Appropriations Act, 2026 (Pub. L. 119–75) extended the MDH program for FY 2027 discharges occurring before January 1, 2027. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2027. In the proposed rule we stated that approximately 80 hospitals would receive additional payments under the MDH program for the first quarter of FY 2027. Given the limited magnitude, we proposed not to include this extension in the total payments for budget neutrality. Therefore, for purposes of the proposed rule's calculations, we computed payments under the Federal national rate (not including 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate as applicable) for the total payments for these hospitals in the budget neutrality calculations discussed in this same section in the proposed rule and we accounted for uncompensated care payments in the computation of total payments under the Federal rate. We did not receive any comments on this proposal. We are finalizing as proposed not to include this extension in the total payments for budget neutrality. Therefore, as stated previously, for this final rule, we computed payments under the Federal national rate (not including 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate as applicable) for the total payments for these hospitals in the budget neutrality calculations discussed in this section and we accounted for uncompensated care payments in the computation of total payments under the Federal rate.

• As proposed, we included an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2027. Similar to FY 2026, we are including this adjustment based on data on the prior year's performance. Payments for hospitals would be estimated based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2027.

• In our determination of all budget neutrality factors described in section II.A.4. of this Addendum, we used transfer-adjusted discharges.

We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49414 through 49415), we finalized a change to the ordering of the budget neutrality factors in the calculation so that the RCH Demonstration budget neutrality factor (if applicable to the fiscal year) is applied after all wage index and other budget neutrality factors. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

a. Reclassification and Recalibration of MS–DRG Relative Weights Before Cap

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.D. of the preamble of this final rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For this FY 2027 final rule, as we proposed, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2025 discharge data to simulate payments and compared the following:

• Aggregate payments using the FY 2026 labor-related share percentages, the FY 2026 relative weights, and the FY 2026 pre-reclassified wage data, and applied the proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments (as described previously); and

• Aggregate payments using the FY 2026 labor-related share percentages, the FY 2027 relative weights before applying the 10-percent cap, and the FY 2026 pre-reclassified wage data, and applied the same proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments applied previously.

Because this payment simulation uses the FY 2027 relative weights (before applying the 10-percent cap), consistent with our policy in section V.I. of the preamble to this final rule, we are applying the adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments. We note that because the simulations of payments for all of the budget neutrality factors discussed in this section also use the FY 2027 relative weights, we are applying the adjustor for certain MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and other immunotherapies) cases in all simulations of payments for the budget neutrality factors discussed later in this section. We refer the reader to section V.I. of the preamble of this final rule for a complete discussion on the adjustor for certain cases that group to MS–DRG 018 and to section II.D.2.b. of the preamble of this final rule, for a complete discussion of the adjustment to the FY 2027 relative weights to account for certain cases that group to MS–DRG 018.

Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we are applying the MS–DRG reclassification and recalibration budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2026. Please see the table later in this section setting forth each of the FY 2027 budget neutrality factors.

b. Budget Neutrality Adjustment for Reclassification and Recalibration of MS–DRG Relative Weights With Cap

As discussed in section II.D.2.c. of the preamble of this final rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900), we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. As also discussed in section II.D.2.c. of the preamble of this final rule, and consistent with our current methodology for implementing budget neutrality for MS–DRG reclassification and recalibration of the relative weights under section 1886(d)(4)(C)(iii) of the Act, we apply a budget neutrality adjustment to the standardized amount for all hospitals so that this 10-percent cap on relative weight reductions does not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

To calculate this budget neutrality adjustment factor for FY 2027, we used FY 2025 discharge data to simulate payments and compared the following:

• Aggregate payments using the FY 2026 labor-related share percentages, the FY 2027 relative weights before applying the 10-percent cap, and the FY 2026 pre-reclassified wage data, and applied the proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments (as described previously); and

• Aggregate payments using the FY 2026 labor-related share percentages, the FY 2027 relative weights after applying the 10-percent cap, and the FY 2026 pre-reclassified wage data, and applied the same proxy FY 2027 hospital readmissions payment adjustments and proxy FY 2027 hospital VBP payment adjustments applied previously.

Because this payment simulation uses the FY 2027 relative weights, consistent with the proposal finalized in section V.I. of the preamble to this final rule and our historical policy, and as discussed in the preceding section, we applied the adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor before the cap

(derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2026 to FY 2027. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we are applying this budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2026. Please see the table later in this section setting forth each of the FY 2027 budget neutrality factors.

c. Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index, or budget neutral.

Section 1886(d)(3)(E)(i) of the Act directs the Secretary to estimate from time to time the proportion of hospital costs that are labor-related and to adjust the proportion (as estimated by the Secretary from time to time) of hospitals' costs that are attributable to wages and wage-related costs of the diagnosis related group (DRG) prospective payment rates. We refer to the portion of hospital costs attributable to wages and wage-related costs as the labor-related share. In the FY 2026 IPPS/LTCH PPS final rule (90 FR 36869 through 36873), we finalized a labor-related share of 66.0 percent for discharges occurring on or after October 1, 2025. For FY 2027, we are continuing to use a labor-related share of 66.0 percent for discharges occurring on or after October 1, 2026. Section 1886(d)(3)(E)(ii) of the Act provides that the Secretary must employ 62 percent as the labor-related share unless this would result in lower payments to a hospital than would otherwise be made. Thus, hospitals receive payment based on either a 62-percent labor-related share, or the labor-related share estimated from time to time by the Secretary, depending on which labor-related share results in a higher payment. (We refer the reader to section III.H of the preamble of this final rule for a complete discussion about the labor-related share).

As discussed in section III.H of the preamble of this final rule, for FY 2027, for all IPPS hospitals (including Puerto Rico hospitals) whose wage indexes are less than or equal to 1.0000, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount. For all IPPS hospitals (including Puerto Rico hospitals) whose wage indexes are greater than 1.000, for FY 2027, we are applying the wage index to a labor-related share of 66.0 percent of the national standardized amount.

Section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act (among other provisions) had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent.

Section 1886(d)(3)(E)(i) of the Act provides for the collection of data at least every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program, to construct an occupational mix adjustment to the wage index. Consistent with current policy, for FY 2027, we are adjusting 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.D of the preamble of this final rule.

To compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2025 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2027 relative weights and the FY 2026 pre-reclassified wage indexes, applied the FY 2026 labor-related share of 66.0 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the proxy hospital readmissions payment adjustment and the proxy hospital VBP payment adjustment (as described previously).
- Aggregate payments using the FY 2027 relative weights and the FY 2027 pre-reclassified wage indexes, applied the labor-related share for FY 2027 of 66.0 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same proxy FY 2027 hospital readmissions payment adjustments and proxy FY 2027 hospital VBP payment adjustments applied previously.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor before the cap (derived in the first step) and the 10-percent cap on relative weight reductions adjustment factor (derived from the second step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2026 to FY 2027. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount for changes to the wage index. Please see the table later in this section for a summary of the FY 2027 budget neutrality factors.

d. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971 through 58977), we finalized a policy beginning with FY 2025 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and only exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act.

We refer the reader to the FY 2015 IPPS final rule (79 FR 50371 and 50372) for a complete discussion regarding the requirement of section 1886(d)(8)(C)(iii) of the Act. We further note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) of the Act shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2027, we used FY 2025 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2027 labor-related share percentage, the FY 2027 relative weights, and the FY 2027 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments (as described previously).
- Aggregate payments using the FY 2027 labor-related share percentage, the FY 2027 relative weights, and the FY 2027 wage data after such reclassifications, and applied the same proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments applied previously.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this final rule, which is available via the internet on the CMS website. This table reflects reclassification crosswalks for FY 2027 and applies the policies explained in section III of the preamble of this final rule. Based on this comparison, we computed a budget neutrality adjustment factor and applied this factor to the standardized amount to ensure that the effects of these provisions are budget neutral, consistent with the statute. Please see the table later in this section for a summary of the FY 2027 budget neutrality factors.

The FY 2027 budget neutrality adjustment factor was applied to the standardized

amount after removing the effects of the FY 2026 budget neutrality adjustment factor. We note that the FY 2027 budget neutrality adjustment reflects FY 2027 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this final rule.

e. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) are equal to the aggregate prospective payments that would have been made in the absence of this provision. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor is a national adjustment to the wage index.

In fiscal years in which there are no hospitals in rural Puerto Rico with wage data, similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), we calculate a national rural Puerto Rico wage index. In such years, our calculation of the national rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all urban areas that are contiguous to (share a border with) the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Based on the current labor market area delineations used for the wage index, all Puerto Rico urban areas are contiguous to a rural area. Therefore, the national rural Puerto Rico wage index is calculated based on the average of the FY 2027 wage indexes for the following urban areas: Aguadilla, PR (CBSA 10380); Arecibo, PR (CBSA 11640), Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); and San Juan-Bayamon-Caguas, PR (CBSA 41980).

We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971–77), we finalized a policy beginning with FY 2025 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations and to only exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of the rural floor.

To calculate the national rural floor budget neutrality adjustment factor, we used FY 2025 discharge data to simulate payments, and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the rural floor.
- National simulated payments with the rural floor.

Based on this comparison, we determined a national rural floor budget neutrality adjustment factor. The national adjustment was applied to the national wage indexes to produce rural floor budget neutral wage indexes. Please see the table later in this section for a summary of the FY 2027 budget neutrality factors.

As further discussed in section III.G.2 of this final rule, section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2), enacted on March 11, 2021, amended section 1886(d)(3)(E)(i) of the Act (42 U.S.C. 1395ww(d)(3)(E)(i)) and added section 1886(d)(3)(E)(iv) of the Act to establish a minimum area wage index (or imputed floor) for hospitals in all-urban States for discharges occurring on or after October 1, 2021. Unlike the imputed floor that was in effect from FY 2005 through FY 2018, section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index shall not be applied in a budget neutral manner. Specifically, section 9831(b) of Public Law 117–2 amends section 1886(d)(3)(E)(i) of the Act to exclude the imputed floor from the budget neutrality requirement under section 1886(d)(3)(E)(i) of the Act. In the past, we budget neutralized the estimated increase in payments each year resulting from the imputed floor that was in effect from FY 2005 through FY 2018. For FY 2022 and subsequent years, in applying the imputed floor required under section 1886(d)(3)(E)(iv) of the Act, we are applying the imputed floor after the application of the rural floor and would apply no reductions to the standardized amount or to the wage index to fund the increase in payments to hospitals in all-urban States resulting from the application of the imputed floor. We refer the reader to section III.G.2 of the preamble of this final rule for a complete discussion regarding the imputed floor.

f. Permanent Cap Policy for Wage Index—Budget Neutrality Adjustment

As noted previously, in section III.G.6 of the preamble to this final rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021) we finalized a policy to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, a hospital's wage index would not be less than 95 percent of its final wage index for the prior FY. We also finalized the application of this permanent cap policy in a budget neutral manner through an adjustment to the standardized amount to ensure that estimated aggregate payments under our wage index cap policy for hospitals that will have a decrease in their wage indexes for the upcoming fiscal year of more than 5 percent will equal what estimated aggregate payments would have been without the permanent cap policy.

To calculate a wage index cap budget neutrality adjustment factor for FY 2027, we used FY 2025 discharge data to simulate payments and compared the following:

- Aggregate payments without the 5-percent cap using the FY 2027 labor-related share percentages and the FY 2027 relative weights, and applied the proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments (as described previously).
- Aggregate payments with the 5-percent cap using the FY 2027 labor-related share percentages and the FY 2027 relative weights, and applied the same proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments applied previously.

g. Continued Transition for the Discontinuation of the Low Wage Index Hospital Policy Budget Neutrality Factor

In the FY 2025 interim final action with comment period (IFC) (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. For FY 2026 and subsequent fiscal years, consistent with the FY 2025 IFC, after considering the D.C. Circuit's decision in *Bridgeport Hospital* v. *Becerra,* we discontinued the low wage index hospital policy and the application of the low wage index budget neutrality factor to the standardized amounts.

For FY 2025 and FY 2026, consistent with our past practice to establish temporary transition policies to mitigate short-term instability and payment fluctuations, we established transition policies for hospitals significantly impacted by the discontinuation of the low wage index hospital policy using our authority under section 1886(d)(5)(I) of the Act. The transitional payment exception for FY 2025 for those hospitals was equal to the additional FY 2025 amount a hospital would have been paid under the IPPS if its FY 2025 wage index were equal to 95 percent of its FY 2024 wage index. The transitional payment exception for FY 2026 was equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index.[723] For FY 2025, we opted not to budget neutralize the interim transition policy given the timing of the *Bridgeport Hospital* v. *Becerra* decision. However, for FY 2026, we finalized a payment transition with a budget neutrality adjustment through notice-and-comment rulemaking for hospitals facing significant reductions over two years that would not be sufficiently mitigated by the wage index cap policy at 42 CFR 412.64(h)(7). We refer readers to the FY 2025 IFC (89 FR 80405 through 80421) and to the FY 2026 IPPS/LTCH PPS Final Rule (90 FR 36855 through 36857) for a full discussion of these transitional payment policies.

Some hospitals that previously benefitted from the low wage index hospital policy would continue to experience decreases of approximately 5 percent or more per year from their FY 2024 wage index (with the low wage index hospital policy applied). Therefore, we are finalizing as proposed to extend the transitional exception to the calculation payments for FY 2027 for these hospitals in the same manner as we did for the FY 2026 wage index. As noted previously, in section III.G.6 of the preamble to this final rule, for FY 2027 we are finalizing as proposed to use our authority under section 1886(d)(5)(I)(i) of the Act twice. First, we are adopting a narrow

[723] 90.25 percent = 95 percent for FY 2025 * 95 percent for FY 2026. This can also be expressed as .95 − 2.

transitional exception to the calculation of FY 2027 IPPS payments for low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy. Second, we are exercising our authority again to do so in a budget neutral manner. To calculate the transition wage index budget neutrality adjustment factor for FY 2027, we used FY 2025 discharge data to simulate payments and compared the following:

- Aggregate payments without the transition for the discontinuation of the low wage index hospital policy, the 5-percent cap using the FY 2027 labor-related share percentages, the FY 2027 relative weights, and applied the proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments (as described previously).
- Aggregate payments with the transition for the discontinuation of the low wage index hospital policy, the 5-percent cap using the FY 2027 labor-related share percentages the FY 2027 relative weights, and applied the same proxy hospital readmissions payment adjustments and the proxy hospital VBP payment adjustments applied previously.

This FY 2027 budget neutrality adjustment factor was applied to the standardized amount.

We note, Table 2 associated with this final rule contains the wage index by provider before and after applying the 5 percent cap and the transition for the discontinuation of the low wage index hospital policy.

The following table is a summary of the FY 2027 budget neutrality factors, as discussed in the previous sections.

SUMMARY OF FY 2027 BUDGET NEUTRALITY FACTORS	
MS-DRG Reclassification and Recalibration Budget Neutrality Factor	0.998748
Cap Policy MS-DRG Weights Budget Neutrality Factor	0.999730
Wage Index Budget Neutrality Factor	1.000312
Reclassification Budget Neutrality Factor	0.949363
*Rural Floor Budget Neutrality Factor	0.973492
Cap Policy Wage Index Budget Neutrality Factor	0.999379
Continued Transition for the Discontinuation of the Low Wage Index Hospital Policy Budget Neutrality Factor	0.999777

*The rural floor budget neutrality factor is applied to the national wage indexes while the rest of the budget neutrality adjustments are applied to the standardized amounts.

h. Request for Information on Potential IPPS Payment Adjustments for Changes in Coding and Classification

Section 1886(d)(4) of the Act requires that the Secretary establish a classification of inpatient hospital discharges by DRG and a methodology for classifying specific hospital discharges within these DRGs. For each DRG, it also requires the Secretary to assign an appropriate weighting factor (*i.e.* DRG relative weight) which reflects the relative hospital resources used with respect to discharges classified within that DRG compared to discharges classified within other DRGs. It also requires the Secretary to adjust the classifications and DRG relative weights to reflect changes in treatment patterns, technology, and other factors which may change the relative use of hospital resources. Section 1886(d)(4)(C)(iii) of the Act specifically requires that these adjustments be made in a budget neutral manner. Furthermore, under section 1886(d)(3)(A)(vi) of the Act, insofar as the Secretary determines that these adjustments did (or are likely to) result in a change in aggregate payments that are a result of changes in the coding or classification of discharges that do not reflect real changes in case mix, the Secretary may adjust payments so as to eliminate the effect of such coding or classification changes.

In the recent 2026 Annual Report of the Boards of Trustees of the Federal Hospital Insurance Trust Fund,[724] it was projected that the increase in real case mix was expected to slow to 0.5 percent annually in fiscal years 2027 through 2035. This projected growth in real case mix is a result of an assumed continuation of the current trend toward treating less complicated cases in outpatient settings, ongoing changes in DRG coding, and the overall impact of new technology. In light of the projected 0.5 percent growth in real case mix, we are seeking public input to inform potential future rulemaking on the establishment of a reasonable maximum default threshold for the annual increase in real case-mix growth. Case mix growth beyond that maximum threshold could be considered a change due to coding and classification and could trigger a proposal for a prospective IPPS payment adjustment under section 1886(d)(3)(A)(vi) of the Act. As an illustrative example, if the projection of real case-mix growth was 0.5 percent for a given year we could establish a maximum default threshold of double that amount (*i.e.* 1.0 percent = 2 times 0.5 percent.) If subsequently the actual case mix growth for that year were to be 1.7 percent we could then propose to prospectively reduce payments by 0.7 percent (= the 1.7 percent actual case mix growth for that year minus the 1.0 percent maximum threshold established for that year.)

We also seek public input on alternative approaches, data sources, and methodologies to ensure that changes in aggregate payments do not inappropriately reflect changes in coding or classification consistent with section 1886(d)(3)(A)(vi) of the Act. Suggestions on alternative approaches, data sources, and methodologies can be sent to *DAC@cms.hhs.gov*.

i. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for ''outlier'' cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the ''outlier threshold'' or ''fixed-loss'' amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the outlier threshold as the outlier ''fixed-loss cost threshold.'' To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital's CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2027 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the percent target by dividing the total projected operating outlier payments by the total projected operating DRG payments plus projected operating outlier payments. As discussed in the next section, for FY 2027, we are incorporating an estimate of the impact of outlier reconciliation when setting the outlier threshold. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated total of outlier payments as a proportion of total DRG payments. More information on outlier payments may be

[724] *https://www.cms.gov/oact/tr/2026.*

(1) Methodology To Incorporate an Estimate of the Impact of Outlier Reconciliation in the FY 2027 Outlier Fixed-Loss Cost Threshold

The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement will be based on operating and capital cost-to-charge ratios (CCRs) calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. Instructions for outlier reconciliation are in section 20.1.2.5 of chapter 3 of the Claims Processing Manual (available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*). The original instructions issued in July 2003 [725] instruct MACs to identify for CMS any instances where: (1) a hospital's actual operating CCR for the cost reporting period fluctuates plus or minus 10 percentage points or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed; and (2) the total operating and capital outlier payments for the hospital exceeded $500,000 for that cost reporting period. Cost reports that meet these criteria will have the hospital's outlier payments reconciled at the time of cost report final settlement if approved by the CMS Central Office. For the remainder of this discussion, we refer to these criteria as the original criteria for outlier reconciliation (or the original criteria).

On March 28, 2024, we issued Change Request (CR) 13566, which is available at *https://www.cms.gov/medicare/regulations-guidance/transmittals/2024-transmittals/r12594cp.* CR 13566 provided additional instructions to MACs for cost reports beginning on or after October 1, 2024 that expand the criteria for identifying cost reports MACs are to refer to CMS for approval of outlier reconciliation. On September 22, 2025, we issued Change Request (CR) 14233, which is available at *https://www.cms.gov/medicare/regulations-guidance/transmittals/2025-transmittals/r13428cp,* which delayed the implementation of CR 13566 to cost reports beginning on or after October 1, 2025. As discussed in the FY 2025 IPPS/LTCH final rule, we anticipate that MACs will identify more cost reports to refer to CMS for outlier reconciliation approval. Specifically, CR 14233 instructs for cost reports beginning on or after October 1, 2025, MACs shall identify for CMS any instances where: (1) the actual operating CCR is found to be plus or minus 20 percent or more from the operating CCR used during that time period to make outlier payments, and (2) the total operating and capital outlier payments for the hospital exceeded $500,000 for that cost reporting period. For the remainder of this discussion, we refer to these criteria as the new criteria for outlier reconciliation (or the new criteria). These new criteria for identifying hospital cost reports that MACs identify for outlier reconciliation approval are in addition to the original criteria for reconciliation described previously. That is, under the new criteria, MACs identify hospitals for outlier reconciliation approval that would not have met the original criteria. In addition, CR 14233 instructs that for cost reporting periods that begin on or after October 1, 2025, a hospital in its first cost reporting period will be referred for reconciliation of outlier payments at the time of cost report final settlement. As such, new hospitals will be referred for outlier reconciliation approval regardless of the change to the operating CCR and no matter the amount of outlier payments during the cost reporting period. If we determine that a hospital's outlier payments should be reconciled, we reconcile both operating and capital outlier payments. We refer readers to section 20.1.2.5 of Chapter 3 of the Medicare Claims Processing Manual for complete instructions regarding outlier reconciliation, including the update to the outlier reconciliation criteria provided in CR 14233. (Refer to the FY 2025 IPPS/LTCH PS final rule for additional information (89 FR 69950).)

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42635), we finalized a methodology to incorporate outlier reconciliation in the FY 2020 outlier fixed loss cost threshold. As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19592), we stated that rather than trying to predict which claims and/or hospitals may be subject to outlier reconciliation, we believe a methodology that incorporates an estimate of outlier reconciliation dollars based on actual outlier reconciliation amounts reported in historical cost reports would be a more feasible approach and provide a better estimate and predictor of outlier reconciliation for the upcoming fiscal year. We also stated that we believe the methodology addresses stakeholder's concerns on the impact of outlier reconciliation on the modeling of the outlier threshold. (For a detailed discussion of additional background regarding outlier reconciliation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule.)

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69949 through 69955), we finalized changes to our methodology to incorporate an estimate of outlier reconciliation in the FY 2025 outlier fixed loss cost threshold to reflect the estimated reconciled outlier payments under the new criteria (described previously). (We note, when we finalized these changes to the methodology beginning with FY 2025, CR 13566 was in place making the new criteria in effect for cost reports beginning on or after October 1, 2024.) In that final rule, we provided step by step details under our methodology to incorporate a projection of outlier payment reconciliations for the FY 2025 outlier threshold calculation. We refer the reader to the FY 2025 IPPS/LTCH final rule for complete details (89 FR 69950 through 69955).

(a) Incorporating a Projection of Outlier Reconciliations for the FY 2027 Outlier Threshold Calculation

Under our methodology for incorporating a projection of outlier reconciliation for the outlier threshold calculation, for each year, we typically advance the historical data used by 1 year, using cost report data that is on a 6-year lag, which is typically the most recent and complete available data to project the estimate of outlier reconciliation. Accordingly, for FY 2025 we used FY 2019 cost report data. Because at that time, the new criteria were not effective until FY 2025 cost reports, to estimate outlier reconciliation dollars under the new criteria, we applied the new criteria to FY 2019 cost reports as if they had been in place at the time of final cost report settlement. (As noted previously, when we finalized these changes to the methodology beginning with FY 2025, CR 13566 was in place making the new criteria in effect for cost reports beginning on or after October 1, 2024.) In FY 2026, we evaluated the FY 2020 cost report data under our methodology as established in FY 2020 and modified in the FY 2025 IPPS/LTCH PPS final rule. As discussed in the FY 2026 IPPS/LTCH PPS final rule, based on our evaluation of the data, for purposes of incorporating an estimate of outlier reconciliation in the outlier fixed-loss cost threshold calculation for FY 2026, we held the data constant and used the percentage of total operating outlier reconciliation dollars to total Federal operating payments from the FY 2025 IPPS/LTCH PPS final rule, which was based on FY 2019 cost reports and PSF data.

For FY 2027, we evaluated the use of the FY 2021 cost report data under our methodology as established in FY 2020 and modified in the FY 2025 IPPS/LTCH PPS final rule, to incorporate a projection of operating outlier reconciliations for the FY 2027 outlier threshold calculation (that is, the FY 2020 methodology as modified in FY 2025 to reflect additional cost reports that would be identified for outlier reconciliation approval under the new criteria in CR 14233). Specifically, for FY 2027 we evaluated using the same steps finalized in the FY 2025 IPPS/LTCH PPS final rule.

Specifically, we calculated a projection of outlier reconciliation using cost report data from FY 2021 hospital cost reports in the December 2025 HCRIS extract that were reconciled using the original criteria for referral for outlier reconciliation approval. In addition, in calculating this estimate, we used data from the Provider Specific File (PSF) and the cost report data to identify the FY 2021 cost reports that would have met the new criteria if those criteria had been in effect. This allows us to account for the additional hospital cost reports that would be referred for outlier reconciliation approval as a result of the new criteria under our methodology. For purposes of this estimate, we used the latest quarterly PSF update (December 2025 for the proposed rule).

As explained previously, our 5-step methodology to incorporate a projection of outlier payment reconciliations for the outlier threshold calculation is described in detail in the FY 2025 IPPS/LTCH final rule (see 89 FR 69950 through 69952). The 5 steps can be summarized as follows:

[724] Change Request 2785 (Transmittal A–03–058; July 3, 2003) found at *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/a03058.pdf.*

Step 1: Identify hospital cost reports that meet the original criteria (Step 1a) or the new criteria (Step 1b).

Step 2: Determine the aggregate amount of operating outlier reconciliation dollars (under both the original criteria (Step 2a) and the new criteria (Steps 2b)).

Step 3: Calculate the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data.

Step 4: Determine the percentage of total operating outlier reconciliation dollars to total Federal operating payments for the cost report data year.

Step 5: Adjust the outlier target using the percentage from Step 4.

With regard to incorporating outlier reconciliation in the FY 2027 outlier fixed-loss cost threshold, we evaluated the use of the most recent available data (as described previously) using the 5-step methodology as set forth in the FY 2025 IPPS/LTCH PPS final rule. As we explain in greater detail in the discussion that follows, similar to FY 2026, we found that using the most recent available data under our 5-step methodology appears to produce anomalous results that may not provide an appropriate estimate and predictor of outlier reconciliation for the upcoming fiscal year. (We note, for the hospitals identified in Step 1b (hospitals that would be referred for outlier reconciliation under the new criteria), for the proposed rule we posted a public use file that includes the operating CCR calculated from the FY 2021 cost report in the most recent publicly available quarterly HCRIS extract (the December 2025 HCRIS for the proposed rule), the weighted operating CCR used for claim payment during the FY 2021 cost reporting period from the latest quarterly PSF update (December 2025 for the proposed rule), and the supplemental data from the MACs and operating outlier payment reported on the FY 2021 cost report.)

Step 4 of the methodology divides the aggregate amount from Step 2 [726] (operating outlier reconciliation dollars under both the original criteria and the new criteria or total reconciled dollars) by the amount from Step 3 [727] (total Federal operating payments across all applicable hospitals using the cost report data) and multiplies the resulting amount by 100 to produce the percentage of total operating outlier reconciliation dollars to total Federal operating payments (89 FR 69952). As discussed in previous proposed and final rules, when the percentage of total operating outlier reconciliation dollars to total Federal operating payments in Step 4 rounds to a negative value, the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. When the percentage of total operating outlier reconciliation dollars to total Federal operating payments in Step 4 rounds to a positive value, the effect is an increase to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars.

Using the most recent available data for the proposed rule (as described previously), the ratio calculated under Step 4 of the methodology was 0.000000 percent (($457,535/$82,060,762,488) × 100), which, when rounded to the second digit, was +0.0 percent (we note, in the proposed rule we inadvertently listed the denominator as $77,326,439,126 instead of $82,060,762,488. The ratio under step was still 0.0 percent as described). We stated that under Step 5 of the methodology, this percentage amount would be used to adjust the outlier target for FY 2027. This would have meant that for FY 2027, we would have incorporated a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.1 percent [5.1 percent − (0.0 percent)]. This 0.0 percentage was being driven by the numerator in Step 4 (that is, the total reconciled dollars or the aggregate operating outlier reconciliation dollars under both the original criteria and the new criteria).

As stated in the proposed rule, typically, the total reconciled dollars in Step 2 (the numerator of Step 4) is a negative amount reflecting that overall, providers would owe the Medicare program money at the time of outlier reconciliation, which then produces a negative percentage of operating outlier reconciliation dollars to total Federal operating payments in Step 4. Using the most recent available data available at the time of the proposed rule (described previously), the total reconciled dollars in Step 2 (the numerator of Step 4) which is the aggregate operating outlier reconciliation dollars under both the original criteria and the new criteria resulted in a small negative amount owed by providers to CMS $457,535 (we note, in the proposed rule we inadvertently stated that the total reconciled dollars was a small positive amount of $457,535 owed by CMS to providers instead of a negative amount). When Step 2 is divided by the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data in Step 3 ($82,060,762,488; the denominator in Step 4), this resulted in no adjustment to the proposed threshold (0.0 percent).

As mentioned previously, since FY 2020 we have incorporated outlier reconciliation into the outlier fixed loss cost threshold calculation. For the outlier fixed loss cost threshold calculation for FYs 2020 through 2025, the percentage of operating outlier reconciliation dollars to total Federal operating payments from Step 4 has resulted in a negative value (having the effect of a decrease to the outlier threshold). Similar to the evaluation of FY 2020 cost report data for FY 2026, using the FY 2021 cost report data and PSF values described previously under our methodology would result in a percentage of operating outlier reconciliation dollars to total Federal operating payments that is inconsistent with the prior historical data. Similar to the evaluation of the FY 2020 cost report data for FY 2026, compared to the historical data used to calculate the estimate of outlier reconciliation for FYs 2020–2025, we stated in the proposed rule that we believe 0.0 percent may be an anomaly and may not be an accurate predictor of outlier reconciliations for FY 2027 to use as an estimate of outlier reconciliation dollars for incorporating the effect of outlier reconciliation in the FY 2027 outlier fixed-loss cost threshold. Therefore, rather than use the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 based on the latest available data (as described previously), for purposes of incorporating an estimate of outlier reconciliation into the outlier fixed-loss cost threshold calculation for FY 2027, we proposed to hold the data constant and to use the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data. As discussed in that final rule (89 FR 69952), the ratio was a negative 0.041994 percent ((−$36,439,127/$86,772,005,692) × 100), which, when rounded to the second digit, is −0.04 percent. Given the anomaly in the most recent available data described earlier, we stated in the proposed rule that we believe that this is the best available data to estimate and predict outlier reconciliations for FY 2027 to use to incorporate the effect of outlier reconciliation in the FY 2027 outlier fixed-loss cost threshold. This percentage amount was then used to adjust the proposed outlier target for FY 2027 as determined in Step 5. (For complete details on the calculation, refer to the FY 2025 IPPS/LTCH final rule (89 FR 69950 through 69952).)

Under Step 5 of our methodology, because the outlier reconciliation dollars are only available on the cost reports, and not in the Medicare claims data in the MedPAR file used to model the outlier threshold, we proposed to target 5.1 percent minus the percentage determined under Step 4 in determining the outlier threshold. Consistent with the FY 2025 IPPS/LTCH PPS final rule, to incorporate a projection of outlier reconciliation dollars, we proposed to target an outlier threshold at an amount higher than 5.1 percent for outlier payments for FY 2027. Therefore, for FY 2027, we proposed to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent − (−0.04 percent)]. As explained earlier, when the aggregate amount of outlier reconciliation as a percent of total operating payments rounds to a negative percent, the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. In section II.A.4.i.(2). of the Addendum to the proposed rule, we provided the FY 2027 proposed outlier threshold as calculated for the proposed rule both with and without

[726] Step 2, the numerator of step 4, is the aggregate amount of operating outlier reconciliation dollars under both the original criteria and the new criteria which is the sum of the amounts from Steps 2a and 2b. (89 FR 69951 through 69952).

[727] Step 3, the denominator of step 4, is the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data (*i.e.,* FY 2021 cost reports for FY 2027). The total Federal operating payments consist of the Federal payments (Worksheet E, Part A, Line 1.01 and Line 1.02, plus Line 1.03 and Line 1.04), outlier payments (Worksheet E, Part A, Lines 2.02, 2.03, and 2.04), and the outlier reconciliation amounts from Steps 2a and 2b. (89 FR 69952).

including this percentage estimate of operating outlier reconciliation.

Consistent with the approach taken in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19593), we would continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount. Therefore, the proposed operating outlier offset to the standardized amount was 0.949 (1 − 0.051).

We noted in the proposed rule that, for the FY 2027 final rule, consistent with our historical practice, we planned to evaluate the updated data available at the time of the development of that final rule (such as the March 2026 HCRIS extract of the FY 2021 cost report). We stated that we would evaluate the use of that updated data in the methodology to assess whether that data still shows an anomaly such that it would not be appropriate to use in calculating the projection of outlier reconciliation dollars for FY 2027 and, depending on the results of this evaluation, we stated that we may consider use of that data for purposes of projecting an estimate of outlier reconciliation dollars and incorporating that estimate into the modeling for the fixed loss cost outlier threshold for FY 2027. We invited public comment on our proposed methodology for projecting an estimate of outlier reconciliation and incorporating that estimate into the modeling for the fixed loss cost outlier threshold for FY 2027.

Comment: We received a comment supporting our proposal to hold the data constant from the FY 2025 IPPS/LTCH PPS final rule. The commenter also requested that CMS release information on the outlier reconciliation process and data showing the amounts recovered so that it can evaluate the impact of the reconciliation process on the outlier threshold.

Response: We appreciate the commenter's support. We note that the quarterly HCRIS data contains the information the commenter is requesting and is published as a public use file available at *http://www.cms.gov/research-statistics-data-and-systems/downloadable-public-use-files/cost-reports/cost-reports-by-fiscal-year*. For the annual proposed rule we use the December HCRIS and for the annual final rule we use the March HCRIS. Quarterly updates of HCRIS are generally available by the end of the month following the quarterly cutoff date. For example, the December 2025 HCRIS update used in the FY 2027 proposed rule would generally become available towards the end of January 2026. This final rule discusses the impact of incorporating the reconciliation amounts from March 2026 HCRIS reports.

Also, as stated above, for the hospitals identified in Step 1b, we posted a public use file that includes the operating CCR calculated from the FY 2021 cost report in the most recent publicly available quarterly HCRIS extract (the December 2025 HCRIS for the proposed rule), the weighted operating CCR used for claim payment during the FY 2021 cost reporting period from the latest quarterly PSF update (December 2025 for the proposed rule), supplemental data from the MACs and capital outlier payments reported on the FY 2021 cost report.

For this final rule, we evaluated the updated data available at the time of the development of this final rule (specifically, the March 2026 HCRIS extract of the FY 2021 cost report). Using the most recent available data available at the time of this final rule (described previously), the total reconciled dollars in Step 2 (the numerator of Step 4) which is the aggregate operating outlier reconciliation dollars under both the original criteria and the new criteria resulted in a small positive amount owed by CMS to providers of $1,951,291. We note, in the proposed rule, the total reconciled dollars in Step 2 resulted in a small negative amount owed by providers to CMS.

When Step 2 is divided by the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data in Step 3 ($82,077,743,603; the denominator in Step 4), this results in no adjustment to the threshold (0.0 percent). We note, in the proposed rule, the total reconciled dollars in Step 2 resulted in a small negative amount owed by providers to CMS. As noted above, when Step 2 was divided by the aggregate amount of total Federal operating payments across all applicable hospitals using the cost report data in Step 3 (the denominator in Step 4), the result was the same in the proposed and final rule with no adjustment to the threshold (0.0 percent).

As discussed earlier, typically, the total reconciled dollars in Step 2 (the numerator of Step 4) is a negative amount reflecting that overall, providers would owe the Medicare program money at the time of outlier reconciliation, which then produces a negative percentage of operating outlier reconciliation dollars to total Federal operating payments in Step 4. Using the most recent available data for this final rule (described previously), the total reconciled dollars in Step 2 (the numerator of Step 4) is a small positive amount reflecting that overall, CMS would owe providers money at the time of outlier reconciliation, which, when rounded to the second digit, is +0.0 percent. Similar to the proposed rule, for this final rule, we believe this small positive value may be an anomaly and may not be an accurate predictor of outlier reconciliations for FY 2027 to use as an estimate of outlier reconciliation dollars for incorporating the effect of outlier reconciliation in the FY 2027 outlier fixed-loss cost threshold.

After considering the comments received and based on our evaluation using the updated data available at the time of the development of this final rule which continues to show that that data may be an anomaly, we are finalizing as proposed. Specifically, for purposes of incorporating an estimate of outlier reconciliation into the outlier fixed-loss cost threshold calculation for FY 2027, we are holding the data constant and using the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data.

As discussed in that final rule (89 FR 69952), the ratio was a negative 0.041994 percent ((−$36,439,127/$86,772,005,692) × 100), which, when rounded to the second digit, is −0.04 percent. Given the anomaly in the most recent available data described earlier, we continue to believe that this is the best available data to estimate and predict outlier reconciliations for FY 2027 to use to incorporate the effect of outlier reconciliation in the FY 2027 outlier fixed-loss cost threshold. We are using this percentage to adjust the outlier target for FY 2027 as determined in Step 5. (For complete details on the calculation, refer to the FY 2025 IPPS/LTCH final rule (89 FR 69950 through 69952).)

Under Step 5 of our methodology, because the outlier reconciliation dollars are only available on the cost reports, and not in the Medicare claims data in the MedPAR file used to model the outlier threshold, we are finalizing to target 5.1 percent minus the percentage determined under Step 4 in determining the outlier threshold. Consistent with the FY 2025 IPPS/LTCH PPS final rule, to incorporate a projection of outlier reconciliation dollars, we are targeting an outlier threshold at an amount higher than 5.1 percent for outlier payments for FY 2027. Therefore, for FY 2027, we are incorporating a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent − (−0.04 percent)]. As explained earlier, when the aggregate amount of outlier reconciliation as a percent of total operating payments rounds to a negative percent, the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. In section II.A.4.i.(2). of this Addendum, we provide the FY 2027 outlier threshold as calculated for this final rule both with and without including this percentage estimate of operating outlier reconciliation.

Consistent with the approach taken in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19593), we would continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount. Therefore, the final operating outlier offset to the standardized amount is 0.949 (1 − 0.051).

(b) Adjustment To Account for Capital Outlier Reconciliation Payments in the Projected Proportion of Capital IPPS Payments Paid as Outliers in Determining the FY 2027 Capital Federal Rate

We establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital related costs (58 FR 46348). Similar to the calculation of the adjustment to the standardized amount to account for the projected proportion of operating payments paid as outlier payments, as discussed in greater detail in section III.A.2. of this Addendum, we proposed to reduce the FY 2027 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers. The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement would be based on operating and capital CCRs calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is

settled. As such, any reconciliation also applies to capital outlier payments.

Under our methodology for incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers in determining the FY 2027 capital Federal rate, each year, we typically advance the historical data used by 1 year and use cost report data that is on a six year lag, which is typically the most recent and complete available data to project the estimate of outlier reconciliation. Accordingly, for FY 2025 we used FY 2019 cost report data. Because at that time, the new criteria were not effective until FY 2025 cost reports, to estimate outlier reconciliation dollars under the new criteria, we applied the new criteria to FY 2019 cost reports as if they had been in place at the time of final cost report settlement. (As noted previously, when we finalized these methodology changes beginning with FY 2025, CR 13566 was in place making the new criteria in effect for cost reports beginning on or after October 1, 2024.) In FY 2026, we evaluated the FY 2020 cost report data under our methodology as established in FY 2020 and modified in the FY 2025 IPPS/LTCH PPS final rule. As discussed in the FY 2026 IPPS/LTCH PPS final rule, based on our evaluation of the data, for purposes of incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers in determining the FY 2026 capital Federal rate, we held the data constant and used the percentage of total capital outlier reconciliation dollars to total capital Federal payments from the FY 2025 IPPS/LTCH PPS final rule, which was based on FY 2019 cost reports and PSF data.

For FY 2027, we evaluated the use of the FY 2021 cost report data under the methodology we used for FY 2025 to incorporate an adjustment to the FY 2027 capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers (that is, the FY 2020 methodology as modified in FY 2025 to reflect additional cost reports that would be identified for reconciliation under the new criteria in CR 14233). Specifically, we calculated an estimate of outlier reconciliation using cost report data from FY 2021 hospital cost reports in the December 2025 HCRIS extract that were reconciled using the original criteria for referral for outlier reconciliation. Similarly, in calculating this estimate, we used data from the Provider Specific File (PSF) and the cost report data to identify the FY 2021 cost reports that would have met the new criteria if those criteria had been in effect. This allowed us to account for the additional hospital cost reports that would be referred for outlier reconciliation approval as a result of the new criteria under our methodology. For purposes of the estimate, we used the latest quarterly PSF update (December 2025) for the proposed rule.

As previously explained, in the FY 2025 IPPS/LTCH PPS final rule (89 FR 699540 through 69955), we finalized changes to our methodology to incorporate an estimate of outlier reconciliation in the FY 2025 outlier fixed loss cost threshold to reflect the estimated reconciled outlier payments under the new criteria in CR 13566 (described previously). In that final rule, we provided step by step details under our methodology to incorporate a projection of outlier payment reconciliations for the FY 2025 outlier threshold calculation. (For complete details on our 5-step methodology to incorporate an adjustment to the capital outlier adjustment factor, we refer readers to the FY 2025 IPPS/LTCH final rule (89 FR 69953 through 69955).) The 5 steps can be summarized as follows:

Step 1: Identify hospital cost reports that meet the original criteria (Step 1a) or the new criteria (Step 1b).

Step 2: Determine the aggregate amount of capital outlier reconciliation dollars (under both the original criteria (Step 2a) and the new criteria (Steps 2b)).

Step 3: Calculate the aggregate amount of total capital Federal payments across all applicable hospitals using the cost report data.

Step 4: Determine the percentage of total capital outlier reconciliation dollars to total capital Federal payments for the cost report data year.

Step 5: Adjust the capital outlier adjustment factor using the percentage from Step 4.

Under this methodology, because the outlier reconciliation dollars are only available on the cost reports, and not in the specific Medicare claims data in the MedPAR file used to estimate outlier payments, in Step 5 the estimate of capital outlier payments are determined by adding the percentage determined in Step 4 to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. (We note that this percentage is added for capital outlier payments but subtracted in the analogous step for operating outlier payments. We have a unified outlier payment methodology that uses a shared threshold to identify outlier cases for both operating and capital payments. The difference stems from the fact that operating outlier payments are determined by first setting a ''target'' percentage of operating outlier payments relative to aggregate operating payments which produces the outlier threshold. Once the shared threshold is set, it is used to estimate the percentage of capital outlier payments to total capital payments based on that threshold. Because the threshold is already set based on the operating target, rather than adjusting the threshold (or operating target), we adjust the percentage of capital outlier to total capital payments to account for the estimated effect of capital outlier reconciliation payments. This percentage is adjusted by adding the capital outlier reconciliation percentage from Step 4 to the estimate of the percentage of capital outlier payments to total capital payments based on the shared threshold.)

As discussed in previous proposed and final rules, when the aggregate capital outlier reconciliation dollars in Step 2 is negative, the estimate of capital outlier payments under our methodology would be lower than the percentage of capital outlier payments otherwise determined using the shared outlier threshold. Under Step 5 this would be a relatively smaller outlier budget neutrality adjustment factor which would have the effect of an increase to the capital Federal rate. When the aggregate capital outlier reconciliation dollars from Step 2 are positive, the estimate of capital outlier payments under our methodology would be higher than the percentage of capital outlier payments otherwise determined using the shared outlier threshold. Under Step 5 this would be a relatively larger outlier budget neutrality adjustment factor which would have the effect of a decrease to the capital Federal rate.

With regard to incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers, we evaluated the use of the most recent available data (as described previously) using the 5-step methodology as set forth in the FY 2025 IPPS/LTCH PPS final rule. (We note, for the hospitals identified in Step 1b (hospitals that would be referred for outlier reconciliation approval under the new criteria), for the proposed rule we posted a public use file that included the capital CCR calculated from the FY 2021 cost report in the most recent publicly available quarterly HCRIS extract (the December 2025 HCRIS for the proposed rule), the weighted capital CCR used for claim payment during the FY 2021 cost reporting period from the latest quarterly PSF update (December 2025 for the proposed rule), and the supplemental data from the MACs and capital outlier payment reported on the FY 2021 cost report.)

Step 4 of the methodology divides the aggregate amount from Step 2 [4] (capital outlier reconciliation dollars under both the original criteria and the new criteria or total reconciled dollars) by the amount from Step 3 [5] (total Federal capital payments across all applicable hospitals using the cost report data) and multiplies the resulting amount by 100 to produce the percentage of total capital outlier reconciliation dollars to total capital Federal payments (89 FR 69955). Under the methodology, in Step 5 this amount is added to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold (as explained previously).

For the proposed rule, the estimated percentage of FY 2027 capital outlier payments otherwise determined using the shared outlier threshold was 3.60 percent (estimated capital outlier payments of

[4] Step 2, the numerator of step 4, is the aggregate amount of capital outlier reconciliation dollars under both the original criteria and the new criteria which is the sum of the amounts from Steps 2a and 2b. (89 FR 69954 through 69955).

[5] Step 3, the denominator of step 4, is the aggregate amount of total capital Federal payments across all applicable hospitals using the cost report data. The total capital Federal payments consist of the capital DRG payments, capital outlier payments, capital indirect medical education (IME) Payments, capital disproportionate share hospital (DSH) payments (Worksheet E, Part A, Line 50, Column 1) and the capital outlier reconciliation amounts from Steps 2a and 2b. (89 FR 69955).

$264,774,667 divided by (estimated capital outlier payments of $264,774,667 plus the estimated total capital Federal payment of $7,080,040,076)). Using the most recent available data at the time of the proposed rule, the total in Step 2 was $4,597,730, which was a negative amount. The percentage calculated in Step 4 was a negative 0.065891 percent (($4,597,730/$6,977,699,344) × 100), which, when rounded to the second digit, was −0.07 percent (we note, in the proposed rule, we inadvertently listed the denominator as $6,979,384,161 instead of $6,977,699,344 and listed the percentage in step 4 as 0.065876 instead of 0.065891; this update to the denominator and percentage in step 4 does not change the percentage in Step 5). Under Step 5 of the methodology, this percentage amount would be used to adjust the estimate of capital outlier payments for FY 2027. This would mean that for the FY 2027 proposed rule we would have decreased the estimated percentage of FY 2027 aggregate capital outlier payments by 0.07 percent. This negative 0.07 percentage point was being driven by the numerator in Step 4 (that is, the total reconciled dollars or the aggregate capital outlier reconciliation dollars under both the original criteria and the new criteria).

The total reconciled dollars in Step 2 (the numerator of Step 4) was a negative amount reflecting that overall, providers would owe the Medicare program money at the time of outlier reconciliation, which then produces a negative percentage of capital outlier reconciliation dollars to total Federal capital payments in Step 4. This is consistent with the trends in the historical data.

However, we stated in the proposed rule that, as discussed earlier, using the FY 2021 cost report data and PSF values under our methodology for incorporating a projection of operating outlier reconciliations for the outlier threshold calculation would result in a percentage of operating outlier reconciliation dollars to total Federal operating payments that is inconsistent with the historical data. As previously discussed, compared to the historical data used to calculate the estimate of outlier reconciliation for FYs 2020–2025, we stated that we believe that 0.0 percent may be an anomaly and may not be an accurate predictor of outlier reconciliations for FY 2027 to use as an estimate of outlier reconciliation dollars for incorporating the effect of outlier reconciliation in the FY 2027 outlier fixed-loss cost threshold. Therefore, for purposes of incorporating an estimate of outlier reconciliation into the outlier fixed-loss cost threshold calculation for FY 2027, we proposed to hold the data constant and to use the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data rather than use the percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 based on the latest available data. For this reason, to ensure the use of consistent data for incorporating a projection of operating and capital outlier reconciliations, for purposes of incorporating an adjustment to the capital standard Federal rate for FY 2027, we proposed to also hold the data constant and to use the percentage of total capital outlier reconciliation dollars to total capital Federal payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data rather than use the percentage of total capital outlier reconciliation dollars to total capital Federal payments from Step 4 based on the latest available data. We stated that we believe aligning the projection of operating and capital outlier reconciliations based on data from the same period (2019 cost reports) is a consistent and methodologically sound approach for ensuring comparability across calculations and minimizes possible distortions that could result from using data from different reporting periods.

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69955), based on FY 2019 cost reports and PSF data, the ratio was a negative 0.028042 percent ((−$2,181,440/$7,779,306,800) × 100), which, when rounded to the second digit, is −0.03 percent. Accordingly, for the proposed rule, taking into account projected capital outlier reconciliation under our methodology would decrease the estimated percentage of FY 2027 aggregate capital outlier payments by 0.03 percent. This percentage amount was used to adjust the proposed estimated percentage of FY 2027 aggregate capital outlier payments under Step 5 of the methodology. (For complete details on the calculation, refer to the FY 2025 IPPS/LTCH final rule (89 FR 69953 through 69955).)

As discussed in section III.A.2. of the Addendum of the proposed rule, we incorporated the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the proposed capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2027.

We noted in the proposed rule, for the FY 2027 final rule, consistent with our historical practice, we plan to evaluate the updated data available at the time of the development of that final rule (such as the March 2026 HCRIS extract of the FY 2021 cost report). We stated that we would evaluate the use of that updated data in the methodology to assess whether that data still shows an anomaly such that it would not be appropriate to use in calculating the projection of outlier reconciliation dollars for FY 2027 and, depending on the results of this evaluation, may consider use of that data for purposes of projecting an estimate of outlier reconciliation dollars and incorporating an adjustment to the FY 2027 capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers. We invited public comment on our proposed methodology for incorporating an adjustment to account for capital outlier reconciliation payments in the projected proportion of capital IPPS payments paid as outliers in determining the FY 2027 capital Federal rate.

Comment: As previously mentioned, we received a comment supporting our proposal to hold the data constant from the FY 2025 IPPS/LTCH PPS final rule. The commenter also requested that CMS release information on the outlier reconciliation process and data showing the amounts recovered so that it can evaluate the impact of the reconciliation process on the outlier threshold.

Response: We appreciate the support for the proposal to hold constant the outlier reconciliation estimate. With regard to the comment requesting that CMS release information on the outlier reconciliation process and data showing the amounts recovered so that it can evaluate the impact of the reconciliation process on the outlier threshold, we refer the reader to our response discussed above.

For this final rule, we evaluated the updated data available at the time of the development of this final rule (specifically, the March 2026 HCRIS extract of the FY 2021 cost report). Using the most recent available data for this final rule, similar to the proposed rule, the total in Step 2 is $4,599,561, which is a negative amount. The percentage calculated in Step 4 is a negative 0.065906 percent (($4,599,561/$6,978,870,688) × 100), which, when rounded to the second digit, is −0.07 percent. Under Step 5 of the methodology, this percentage amount would be used to adjust the estimate of capital outlier payments for FY 2027. This would mean that for this FY 2027 final rule we would decrease the estimated percentage of FY 2027 aggregate capital outlier payments by 0.07 percent. This negative 0.07 percentage point is being driven by the numerator in Step 4 (that is, the total reconciled dollars or the aggregate capital outlier reconciliation dollars under both the original criteria and the new criteria).

After considering the comments received and based on our evaluation using the updated data available at the time of the development of this final rule, we are finalizing as proposed. Specifically, to ensure the use of consistent data for incorporating a projection of operating and capital outlier reconciliations, for purposes of incorporating an adjustment to the capital standard Federal rate for FY 2027, we are finalizing as proposed to also hold the data constant and to use the percentage of total capital outlier reconciliation dollars to total capital Federal payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data rather than use the percentage of total capital outlier reconciliation dollars to total capital Federal payments from Step 4 based on the latest available data. As discussed in the proposed rule, we believe aligning the projection of operating and capital outlier reconciliations based on data from the same period (2019 cost reports) is a consistent and methodologically sound approach for ensuring comparability across calculations and minimizes possible distortions that could result from using data from different reporting periods.

As discussed in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69955), based on FY 2019 cost reports and PSF data, the ratio was a negative 0.028042 percent ((−$2,181,440/$7,779,306,800) × 100), which, when rounded to the second digit, is −0.03

percent. Accordingly, for this final rule, taking into account projected capital outlier reconciliation under our methodology would decrease the estimated percentage of FY 2027 aggregate capital outlier payments by 0.03 percent. This percentage amount is being used to adjust the estimated percentage of FY 2027 aggregate capital outlier payments under Step 5 of the methodology. (For complete details on the calculation, refer to the FY 2025 IPPS/LTCH final rule (89 FR 69953 through 69955).)

As discussed in section III.A.2. of the Addendum of this final rule, we incorporated the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2027.

(2) FY 2027 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a detailed discussion of the changes.

As we have done in the past, to calculate the FY 2027 outlier threshold, we simulated payments by applying FY 2027 payment rates and policies using cases from the FY 2025 MedPAR file. As noted in section II.C. of this Addendum, we specify the formula used for actual claim payment which is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the Provider-Specific File (PSF) while CMS uses an adjusted CCR (as described later in this section) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

In order to determine the FY 2027 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2025 to FY 2027. Consistent with the FY 2020 IPPS/LTCH PPS final rule (84 FR 42626 and 42627), we are using the following methodology to calculate the charge inflation factor for FY 2027:

- Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); include CAHs and REHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor; include hospitals in Maryland; and remove PPS-excluded cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- Include providers that are in both periods of charge data that are used to calculate the 1-year average annual rate of-change in charges per case. We note this is consistent with the methodology used since FY 2014.
- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- In order to ensure that we capture only FFS claims, we included claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- In order to further ensure that we capture only FFS claims, we excluded claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS. As noted previously, we removed allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).
- Because this payment simulation uses the FY 2027 relative weights, consistent with our policy discussed in section IV.I. of the preamble to this final rule, we applied the adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments.

Our general methodology to inflate the charges computes the 1-year average annual rate-of-change in charges per case which is then applied twice to inflate the charges on the MedPAR claims by 2 years since we typically use claims data for the fiscal year that is 2 years prior to the upcoming fiscal year.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42627), we modified our charge inflation methodology. We stated that we believe balancing our preference to use the latest available data from the MedPAR files and stakeholders' concerns about being able to use publicly available MedPAR files to review the charge inflation factor can be achieved by modifying our methodology to use the publicly available Federal fiscal year period (that is, for FY 2020, we used the charge data from Federal fiscal years 2017 and 2018), rather than the most recent data available to CMS which, under our prior methodology, was based on calendar year data. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for a complete discussion regarding this change.

For the same reasons discussed in that rulemaking, for FY 2027, we proposed to use the same methodology as FY 2020 to determine the charge inflation factor. That is, for FY 2027, we proposed to use the MedPAR files for the two most recent available Federal fiscal year time periods to calculate the charge inflation factor, as we did for FY 2020. Specifically, for the proposed rule we used the December 2024 MedPAR file of FY 2024 (October 1, 2023, to September 30, 2024) charge data (released for the FY 2026 IPPS/LTCH PPS proposed rule) and the December 2025 MedPAR file of FY 2025 (October 1, 2024, to September 30, 2025) charge data (released for the FY 2027 IPPS/LTCH PPS proposed rule) to compute the proposed charge inflation factor. We proposed that for the FY 2027 final rule, we would use more recently updated data, that is the MedPAR files from March 2025 for the FY 2024 time period and March 2026 for the FY 2025 time period.

For FY 2027, under this proposed methodology, to compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of $90,776.90 ($623,467,062,919/6,868,125) from October 1, 2023, through September 30, 2024, to the average covered charge per case of $97,412.36 ($677,169,023,175/6,951,572) from October 1, 2024, through September 30, 2025. This rate-of-change was 7.310 percent (1.07310) or 15.154 percent (1.15154) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, in the FY 2027 IPPS/LTCH PPS proposed rule, we proposed to establish the FY 2027 outlier threshold using hospital CCRs from the December 2025 update to the Provider-Specific File (PSF), the most recent available data at the time of the development of the proposed rule. We proposed to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2027, we proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section). We also proposed that, if more recent data become available, we would use that data to calculate the final FY 2027 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted

operating and capital CCR from the same period of the prior year. Therefore, as we have done in the past, we proposed to adjust the CCRs from the December 2025 update of the PSF by comparing the percentage change in the national average case weighted operating CCR and capital CCR from the December 2024 update of the PSF to the national average case weighted operating CCR and capital CCR from the December 2025 update of the PSF. We note that, in the proposed rule, we used total transfer-adjusted cases from FY 2025 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology, for the proposed rule, we calculated a December 2024 operating national average case-weighted CCR of 0.24059 and a December 2025 operating national average case-weighted CCR of 0.235176.We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2024 operating national average case-weighted CCR from the December 2025 operating national average case-weighted CCR and then dividing the result by the December 2024 national operating average case-weighted CCR. This resulted in a proposed one-year national operating CCR adjustment factor of 0.977497.

We used this same proposed methodology to adjust the capital CCRs. Specifically, we calculated a December 2024 capital national average case-weighted CCR of 0.01644 and a December 2025 capital national average case-weighted CCR of 0.015639. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2024 capital national average case-weighted CCR from the December 2025 capital national average case-weighted CCR and then dividing the result by the December 2024 capital national average case-weighted CCR. This resulted in a proposed one-year national capital CCR adjustment factor of 0.951277.

For purposes of estimating the proposed outlier threshold for FY 2027, we used a wage index that reflects the policies discussed in the proposed rule. This includes the following:

- The proposed rural and imputed floor adjustments.
- The proposed State frontier floor adjustments in accordance with section 10324(a) of the Affordable Care Act, Public Law 111–148.
- The proposed out-migration adjustment as added by section 505 of Public Law 108–173.
- Our policy (described in section III.F.5 of the preamble of this final rule) to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline.
- The proposed continuation of the transition for the discontinuation of the low wage index hospital policy (as described in section III.F.6 of the preamble of this final rule).

If we did not take the aforementioned into account, our estimate of total FY 2027 payments would be too low, and, as a result, the proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments (which includes outlier reconciliation).

As described in sections V.K. and V.L., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the proposed outlier threshold calculation or the proposed outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments would continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the estimated hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments from the calculation of the proposed outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2027, we proposed to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally.

Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2027, we proposed to include estimated FY 2027 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

In addition, consistent with the methodology finalized in the FY 2023 final rule, we proposed to include the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals in the computation of the FY 2027 proposed outlier fixed-loss cost threshold. Specifically, we proposed to use the estimated per-discharge supplemental payments to hospitals eligible for the supplemental payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we proposed to incorporate an estimate of FY 2027 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for the FY 2027 proposed rule, we proposed to hold the data constant and to use the FY 2025 final rule percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data. As discussed in the FY 2025 IPPS/LTCH PPS final rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) was a negative 0.041994 percent, which, when rounded to the second digit, is -0.04 percent. Therefore, for FY 2027, we proposed to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent $-(-.04$ percent)]. Under this proposed approach, we determined a proposed threshold of $51,704 and calculated total outlier payments of $4,642,138,720 total operating Federal payments of $90,312,360,835. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.14 percent target, which reflected our proposal to incorporate an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We note that, if calculated without applying our proposed methodology for incorporating an estimate of outlier reconciliation in the determination of

the outlier threshold, the proposed threshold would be $52,096. We proposed an outlier fixed-loss cost threshold for FY 2027 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus $51,704.

Comment: Commenters expressed concern about the proposed increase in the high-cost outlier threshold, noting that the fixed-loss threshold will have nearly doubled since FY 2020 compared to only a 15 percent increase over the prior decade. Commenters requested that CMS carefully analyze its methodology to determine why the model for projecting outlier payments in FY 2027 is resulting in a significant increase to the fixed-loss amount.

Several commenters argued that the proposed FY 2027 outlier threshold relies too heavily on recent charge growth, resulting in a substantial increase in the threshold that hospitals may be unable to absorb given continued financial instability, elevated labor costs, and increasing patient acuity. A commenter recommended that CMS consider using a multi-year rolling average for charge inflation calculations or linking the charge inflation factor to the market basket or another reasonable trend factor to moderate the proposed increase while maintaining the targeted outlier payment level. The commenter noted that CMS recognized anomalies in recent outlier reconciliation data by relying on older FY 2019 reconciliation assumptions instead of FY 2021 data and urged CMS to exercise similar caution when establishing the FY 2027 outlier threshold.

Another commenter stated that that CMS's significantly higher proposed charge inflation factor for FY 2027 suggests that CCRs would decrease more rapidly than CMS's 2.25 percent projection of the change in CCRs, given that CMS is also projecting cost inflation for FY 2027 will remain relatively steady. The commenter recommended that CMS consider this discrepancy and whether the charge inflation factor requires any downward adjustment.

A different commenter expressed concern that the proposed FY 2027 outlier threshold methodology may be distorted by unusual CCR trends during a period of high inflation. The commenter stated that CMS's methodology relies on historical CCR and outlier reconciliation data that may not accurately reflect current cost conditions. The commenter asserted that more recent data suggest CCRs are declining and recommended that CMS reexamine its outlier threshold methodology to better reflect current cost conditions. The commenter also urged CMS to consider temporary modifications to mitigate the impact of large year-over-year increases in the outlier threshold, particularly for hospitals serving high-acuity Medicare populations that rely on outlier payments.

Another commenter expressed concern that the data and assumptions used to calculate the proposed FY 2027 outlier threshold are subject to significant variability because they rely on data that are two years old and one-year trends in charges and CCRs. The commenter stated that this methodology may not adequately reflect longer-term trends and may have contributed to the unusually large increase in the proposed outlier threshold. The commenter urged CMS to reevaluate the charge inflation and CCR adjustment factors and to ensure the outlier payment methodology reflects actual year-over-year changes in CCRs as more recent data become available.

Response: We appreciate the commenters sharing their concerns and recommendations. The charge inflation factor (which is based on the latest available MedPAR files that are publicly available at the time of this final rule), CCR adjustment factor, and CCRs used to establish the FY 2027 outlier threshold are based on the most recent data available at the time of rulemaking. Because the outlier threshold is established prospectively, it necessarily relies on projections using the best available data. Although several commenters suggested alternative methodologies, such as using multi-year averages, limiting the annual increase in the threshold, or using different trend factors, they did not provide evidence demonstrating that these approaches would more accurately predict the outlier threshold needed to achieve the target of outlier payments equal to 5.1 percent of total operating DRG payments. Moreover, adopting such alternatives without evidence that they improve the accuracy of our projections could increase the likelihood that estimated outlier payments would deviate from the 5.1 percent target, resulting in non-budget neutral outlier payments. Accordingly, we continue to believe that using the most recent available data provides the best basis for estimating an outlier threshold for FY 2027 that would ensure that outlier payments are equal to the 5.1 percent target.

Comment: A commenter requested that CMS apply trims when calculating charge inflation as it does under the LTCH PPS to ''remove all claims from providers whose growth in average charges was a statistical outlier''.

Response: We responded to a similar comment in the FY 2024 IPPS/LTCH final rule (88 FR 59351–59352). We refer the reader to the FY 2024 IPPS/LTCH final rule for complete details.

Comment: A commenter requested that CMS consider whether it is appropriate to include extreme cases when calculating the threshold. This commenter explained that high charge cases have a significant impact on the threshold. The commenter stated that it examined the data and stated that it observed that the inclusion of extreme cases in the calculation of the threshold, the rate of which are increasing over time, significantly impacts CMS' determination of the fixed-loss threshold. If this trend continues (that is, if the number (and proportion) of extreme cases continues to increase each year), the commenter stated that the impact of this population of cases on the threshold will likewise increase. Thus, the commenter recommended that CMS study the trend, evaluate whether such cases should be excluded from the threshold calculation or addressed through a separate payment mechanism, and adopt an approach that produces a threshold more representative of typical cases.

Response: We responded to a similar comment in prior rulemaking, most recently in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37226). As we explained in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38526) and other prior rulemaking, the methodology used to calculate the outlier threshold includes all claims to account for all different types of cases, including high charge cases, to ensure that CMS meets the 5.1 percent target. As the commenter pointed out, the volume of these cases continues to rise, making their impact on the threshold significant. We continue to believe excluding these cases would artificially lower the threshold. We continue to believe it is important to include all cases in the calculation of the threshold no matter how high or low the charges. Including these cases with high charges lends more accuracy to the threshold, as these cases have an impact on the threshold and continue to rise in volume. Therefore, we believe the inclusion of the high-cost outlier cases in the calculation of the outlier threshold is appropriate.

Comment: A commenter stated that it believes that CMS should disclose all aspects of its edits to the most current data used for the proposed rule and commit to the same process and methods when it recalculates the threshold for purposes of the final rule. Additionally, the commenter stated CMS should commit to make public the data files it uses for the final rule, including all edits and calculations, when it publishes the final rule.

Response: We refer the reader to the FY 2022 IPPS/LTCH final rule (86 FR 45540) where we responded to a similar comment.

Comment: A commenter noted the final fixed-loss threshold established by CMS has consistently been lower than the threshold set forth in the proposed rule, and the variance between the proposed and final thresholds has generally exceeded 4 percent. The commenter emphasized that this demonstrates that CMS must ordinarily use the most recent data to appropriately calculate the outlier threshold.

Response: We responded to similar comments in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50378 through 50379) and refer readers to that rule for our response. We reiterate that CMS' historical policy is to use the best available data when setting the payment rates and factors in both the proposed and final rules. Sometimes there are variables that change between the proposed and final rule as result of the availability of more recent data, such as the charge inflation factor and the CCR adjustment factors that can cause fluctuations in the threshold amount. Other factors such as changes to the wage indexes and market basket increase can also cause the outlier fixed loss cost threshold to fluctuate between the proposed rule and the final rule each year. We use the latest data that is available at the time of the development of the proposed and final rules, such as the most

recent update of MedPAR claims data and CCRs from the most recent update of the PSF.

Comment: Some commenters requested that, if anomalous data are driving the proposed increase in the FY 2027 outlier threshold, CMS maintain the FY 2026 outlier threshold of $40,397 for FY 2027, consistent with its approach for the LTCH outlier threshold. Other commenters suggested CMS to reconsider the calculation of the FY 2027 threshold and finalize an amount that protects hospitals from such a large year-over-year swing in outlier payments. A commenter urged CMS to provide additional sensitivity analysis regarding the proposed threshold and consider phasing in significant year-over-year increases to preserve the financial protection the outlier policy is designed to provide. Another commenter suggested that CMS cap the annual increase (for example, at 5 percent), which the commenter stated would result in an outlier threshold of approximately $43,500 instead of the proposed $51,704.

Another commenter expressed concern that the proposed FY 2027 outlier threshold increase is not supported by recent outlier payment experience. The commenter stated that its analysis of cost report data found outlier payments were below the statutory target in recent years and noted that CMS estimated FY 2025 outlier payments at 4.86 percent of total operating payments, below the 5.1 percent target. The commenter asserted that the proposed threshold increase could result in outlier payments falling below the target and urged CMS to limit the increase in the FY 2027 outlier threshold to reduce payment risk for hospitals.

Response: As noted previously, section 1886(d)(5)(A)(iv) of the Act states that outlier payments may not be less than 5 percent nor more than 6 percent of the total payments projected or estimated to be made based on DRG prospective payment rates for discharges in that year. We believe that the commenters suggestions to cap or maintain the threshold the same as the prior year would be inconsistent with the statute as such a threshold would not result in a projection of outlier payments that are not less than 5 percent nor more than 6 percent of projected total payments for FY 2027. Additionally, each year we present our methodology to meet the statutory target. We believe we have thoroughly explained our proposed methodology so that commenters can review and provide meaningful comments. There are many factors that can drive the threshold to increase or decrease from one fiscal year to the next making it challenging to pinpoint which exact factor is causing the threshold to increase from one FY to the next.

After consideration of the public comments we received and for the reasons discussed, we are finalizing to use the same methodology we proposed, without modifications, to calculate the final outlier threshold for FY 2027.

For the FY 2027 final outlier threshold, we used the March 2025 MedPAR file of FY 2024 (October 1, 2023 through September 30, 2024) charge data (released in conjunction with the FY 2026 IPPS/LTCH PPS final rule) and the March 2026 MedPAR file of FY 2025 (October 1, 2024 through September 30, 2025) charge data (released in conjunction with this FY 2027 IPPS/LTCH PPS final rule) to determine the charge inflation factor. To compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of $ 90,928.19 ($628,141,824,405/6,908,109 cases) from October 1, 2023 through September 31, 2024, to the average covered charge per case of $ 97,536.48 ($681,287,940,919/6,984,955 cases) from October 1, 2024 through September 31, 2025. This rate-of-change was 7.3 percent (1.07268) or 11.3 percent (1.15064) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, we are establishing the FY 2027 outlier threshold using hospital CCRs from the March 2026 update to the Provider-Specific File (PSF), the most recent available data at the time of the development of the final rule. We applied the following edits to providers' CCRs in the PSF. We believe these edits are appropriate to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replaced these CCRs with the statewide average CCR for the upcoming fiscal year. We also assigned the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We did not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2027, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section).

For this final rule, as we have done since FY 2014 (with the exception of FYs 2022 and 2023, as discussed in the FY 2022 and FY 2023 IPPS/LTCH PPS proposed and final rules), we are adjusting the CCRs from the March 2026 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2025 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2026 update of the PSF. We note that we used total transfer-adjusted cases from FY 2025 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the methodology noted earlier, for this final rule, we calculated a March 2025 operating national average case-weighted CCR of 0.240425 and a March 2026 operating national average case-weighted CCR of 0.233434. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2025 operating national average case weighted CCR from the March 2026 operating national average case-weighted CCR and then dividing the result by the March 2025 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.970922.

We used the same methodology earlier to adjust the capital CCRs. Specifically, for this final rule, we calculated a March 2025 capital national average case-weighted CCR of 0.016402 and a March 2026 capital national average case-weighted CCR of 0.01528. We then calculated the percentage change between the two national capital case weighted CCRs by subtracting the March 2025 capital national average case-weighted CCR from the March 2026 capital national average case-weighted CCR and then dividing the result by the March 2025 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.931594.

As discussed previously, for purposes of estimating the final outlier threshold for FY 2027, we used a wage index that reflects the policies discussed in this final rule. This includes the following:

- Application of the rural and imputed floor adjustment.
- The frontier State floor adjustments in accordance with section 10324(a) of the Affordable Care Act.
- The out migration adjustment as added by section 505 of Public Law 108–173.
- Incorporating our policy (described in section III.6. of the preamble of this final rule) to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline.
- The continuation of the transition for the discontinuation of the low wage index hospital policy (as described in section III.F.6 of the preamble of this final rule).

As stated previously, if we did not take the above into account, our estimate of total FY 2027 payments would be too low, and, as a result, the outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.14 percent of total payments (which reflects the estimate of outlier reconciliation calculated for this final rule).

- We excluded the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.
- We used the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.
- Based on the policy finalized, as previously described, we used the estimated per-discharge supplemental payments to hospitals eligible for the supplemental payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the

Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we are finalizing to incorporate an estimate of FY 2027 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, we are finalizing to hold the data constant and to use the FY 2025 final rule percentage of total operating outlier reconciliation dollars to total Federal operating payments from Step 4 from the FY 2025 IPPS/LTCH PPS final rule which is based on FY 2019 cost reports and PSF data. As discussed in the FY 2025 IPPS/LTCH PPS final rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) was a negative 0.041994 percent, which, when rounded to the second digit, is −0.04 percent. Therefore, for FY 2027, we incorporated a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent–(−.04 percent)]. Under this approach, we determined a threshold of $49,346 and calculated total outlier payments of $ 4,660,920,375 and total operating Federal payments of $86,015,121,737. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.14 percent target, which incorporated an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We note that, if calculated without applying our methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold, the threshold would be $49,728. We are finalizing an outlier fixed-loss cost threshold for FY 2027 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add on payments for new technology, plus $49,346.

(3) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a higher percentage of outlier payments for capital-related costs than for operating costs. We project that the threshold for FY 2027 (which reflects our methodology to incorporate an estimate of operating outlier reconciliation) would result in outlier payments that would equal 5.1 percent of operating DRG payments and we estimate that capital outlier payments would equal 3.23 percent of capital payments based on the Federal rate (which reflects our methodology discussed previously to incorporate an estimate of capital outlier reconciliation).

In accordance with section 1886(d)(3)(B) of the Act and as discussed previously, we reduce the FY 2027 standardized amount by 5.1 percent to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that would be applied to the operating standardized amount and capital Federal rate based on the FY 2027 outlier threshold are as follows:

	Operating Standardized Amounts	Capital Federal Rate*
National	0.949	0.967684

*The adjustment factor for the capital Federal rate includes an adjustment to the estimated percentage of FY 2027 capital outlier payments for capital outlier reconciliation, as discussed previously and in section III.A.2 in this Addendum.

We are applying the outlier adjustment factors to the FY 2027 payment rates after removing the effects of the FY 2026 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we currently apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.267 or capital CCRs greater than 0.126 or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the range previously specified. These statewide average ratios would be effective for discharges occurring on or after October 1, 2026, and would replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B would be used during FY 2027 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted previously. Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that section 20.1.2 of chapter three of the Medicare Claims Processing Manual (on the internet *at https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*) covers an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in the manual. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of the manual are followed. In addition, the manual outlines the outlier reconciliation process for hospitals and Medicare contractors. We refer hospitals to the manual instructions for complete details on outlier reconciliation.

(4) FY 2025 Outlier Payments

Our current estimate, using available FY 2025 claims data, is that actual outlier payments for FY 2025 were approximately 4.90 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2025, the percentage of actual outlier payments relative to actual total payments is lower than we projected for FY 2025. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2025 are equal to 5.1 percent of total MS–DRG payments. As explained in the FY 2003 Outlier final rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS–DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section states that outlier payments be equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS–DRG payments. We believe that an important goal of a PPS

is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that, because the MedPAR claims data for the entire FY 2026 period would not be available until after September 30, 2026, we are unable to provide an estimate of actual outlier payments for FY 2026 based on FY 2026 claims data in this final rule. We will provide an estimate of actual FY 2026 outlier payments in the FY 2028 IPPS/LTCH PPS proposed rule.

5. FY 2027 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the internet on the CMS website) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2027. The standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 66.0 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we would apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000. In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2027.

The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2027 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). Similarly, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2026 national standardized amounts to the FY 2027 national standardized amounts. The second through fifth columns display the changes from the FY 2026 standardized amounts for each applicable FY 2027 standardized amount. The first row of the table shows the updated (through FY 2026) average standardized amount after restoring the FY 2026 offsets for outlier payments, geographic reclassification, rural demonstration, transition for the discontinuation of the low wage index hospital policy and wage index cap policy. The MS–DRG reclassification and recalibration before cap, cap policy for MS–DRG weight and recalibration and wage index budget neutrality factors, are cumulative (that is, we have not restored the offsets). Accordingly, those FY 2026 adjustment factors have not been removed from the base rate in the following table.

BILLING CODE 4169–69–P

CHANGES FROM FY 2026 STANDARDIZED AMOUNTS TO THE FY 2027 STANDARDIZED AMOUNTS

	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User

BILLING CODE 4169–69–C

Comment: A few commenters believe Congress required CMS to calculate the standardized amount using the ''average standardized amount computed for the previous fiscal year under paragraph (2)(D) or this subparagraph'' (with the subparagraph referring to section 1886(d)(3)(A) of the Act), as they commented in the FY 2026 rulemaking. The commenters believe that CMS should use the FY 1985 standardized amount before it was adjusted to offset projected outlier payments under section 1886(d)(3)(B) of the Act and the neutrality provisions of sections 1886(d)(3)(C)(i) and (e)(1)(B) of the Act. The commenters believe that the FY 1986 IPPS rates reduced the standardized rate in that year and all subsequent years, including the time-period at issue here. To correct this error, the commenters believe CMS should either adjust the standardized amount or adjust the standardized amount and the MS–DRG weights.

Response: We responded to these comments in the FY 2026 IPPS final rule (90 FR 37226 through 37227) and refer readers to that discussion. As we stated in that rule, we understand that commenters now express disagreement with those decisions made after notice and comment nearly forty years ago. However, we do not believe it is appropriate to address these concerns again now, particularly in light of the fact that we did not solicit comments on the issue of revisiting the FY 1986 adjustment. It would be inappropriate to revise a long-standing decision made following notice and an opportunity for comment without providing notice that we were considering revisions of the issue.

Comment: One commenter urged CMS to correct what they contend is a longstanding error in the calculation of the IPPS standardized amount. The commenter argued that when CMS established the original standardized amount in 1983, it improperly counted hospital transfer cases as discharges, despite adopting a prospective payment policy that treated transfers differently from discharges. They assert that this inflated the discharge count, understated the standardized amount, and has resulted in lower Medicare inpatient payments to hospitals for more than four decades because the standardized amount has only been updated for inflation since its initial calculation. The commenter cited several court decisions which they believe support CMS's authority and obligation to correct this historical calculation. Accordingly, the commenter requested that CMS remove transfer cases from the standardized amount calculation for FY 2027, quantify the fiscal impact of correcting the error, and disclose that impact in the FY 2027 IPPS Final Rule.

Response: We did not solicit comments in this year's IPPS on our treatment of transfers

in the original calculation of the standardized amount calculated more than 40 years ago. The original IPPS standardized amount is policy was established following notice and comment rulemaking has remained consistent since the IPPS was first established. It would be inappropriate to revise a long-standing decision made following notice and an opportunity for comment without providing notice that we were considering revisions of the issue.

B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the internet on the CMS website), contain the labor-related and nonlabor-related shares that we are using to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2027. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2027, as discussed in section IV.B.3. of the preamble of this final rule, we are applying a labor-related share of 66.0 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2027 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor. For FY 2011 and in prior fiscal years, we used the most recent cost-of-living adjustment (COLA) factors obtained from the U.S. Office of Personnel Management (OPM) website at *https://www.opm.gov/policy-data-oversight/pay-leave/pay-systems/nonforeign-areas/#url=COLA-Rates* to update this nonlabor portion.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the OPM every 4 years (coinciding with the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively). In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45546 through 45547), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and Consumer Price Indices (CPIs) data through 2020. Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we utilized these COLA factors for FYs 2022 through 2025 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii.

In general, under our existing methodology, we update the 2009 OPM COLA factors by a comparison of the growth in the CPIs for the areas of Urban Alaska and Urban Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). We use the comparison of the growth in the overall CPI relative to the growth in the CPI for those areas to update the COLA factors for all areas in Alaska and Hawaii, respectively, because BLS publishes CPI data for only Urban Alaska and Urban Hawaii. Using the respective CPI commodities index and CPI services index and using the approximate commodities/services shares obtained from the IPPS market basket, we create reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. Lastly we exercised our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating the statutorily mandated cap of 25 percent that was applied when determining OPM's COLA factors. (For additional information, refer to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45546 through 45547).)

We previously stated our intention to update the COLA factors at the same time as the update to the labor-related share of the IPPS market basket. In the FY 2026 IPPS/LTCH PPS proposed rule, we proposed to update the labor-related share of the IPPS market basket. We also stated that at that time, we believed it would be appropriate to maintain the current COLA factors for FY 2026 to allow us to consider whether it would be appropriate to incorporate additional data sources or other methodology changes in determining the COLA factors we apply to IPPS payments to account for the unique circumstances of hospitals located in Alaska and Hawaii (90 FR 18437 through 18438). Therefore, we proposed to continue to use the FY 2025 COLA factors to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii for FY 2026. We solicited comments on any possible data sources that could be considered in the development of the COLA factors.

As summarized in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37230), a commenter supported CMS' proposal to maintain the current COLA methodology temporarily while we evaluate alternative approaches. The commenter requested that CMS utilize a more sensitive adjustment to reflect cost variation across Alaska. The commenter stated that tying Alaska's COLA to a single urban index does not reflect higher costs in more remote areas. The commenter also requested that CMS reconsider the 25-percent cap on the COLAs and engage with providers during the development of the new methodology. After consideration of the public comment we received, we finalized our proposal to continue to use the FY 2025 COLA factors to adjust the nonlabor related portion of the standardized amount for hospitals located in Alaska and Hawaii for FY 2026.

After further consideration, effective for FY 2027, we proposed to adjust non-labor related costs for hospitals located in Alaska and Hawaii, using the Overseas Cost-of-Living Allowance (OCOLA) data [728] published by the Department of Defense (DOD). These OCOLAs are received by Service members serving outside of the contiguous U.S. (OCONUS) and are designed to offset higher prices of non-housing goods and services in order to equalize purchasing power with members stationed in the contiguous U.S. (CONUS). To calculate the OCOLAs for each OCONUS area, DOD currently uses Living Pattern Survey (LPS) data on purchasing patterns of Service members (*e.g.* how and where they purchase certain goods and services including whether these are purchased from a commissary, retail store, or online) and price data for approximately 150 goods and services.[729] The DOD compares the OCONUS LPS and price data with similar data obtained in CONUS.

We stated in the proposed rule that we believe the DOD OCOLAs are an appropriate data source to capture the cost differences of hospital nonlabor-related inputs purchased in the areas of Hawaii and Alaska compared to the continental U.S. The DOD OCOLAs reflect the relative price differences in a basket of non-housing goods and services that would be consistent with many of the nonlabor-related goods and services that hospitals purchase (such as pharmaceuticals, food, and cleaning supplies). In addition, unlike the prior approach that relied on CPI data for urban areas, these relative price differences would account for the additional shipping costs to remote areas. Specifically, the DOD OCOLAs are reflective of the specific areas of Alaska and Hawaii where hospitals are located.

For the proposed COLA factors for IPPS hospitals located in Alaska and Hawaii for

[728] *https://www.travel.dod.mil/Allowances/Overseas-Cost-of-Living-Allowance/.*

[729] Previously, pricing data was collected by Country Allowance Coordinators in each OCONUS location using the Retail Price Schedule. Effective August 2025, the DOD has outsourced the pricing data collection process for OCONUS to a private contractor.

FY 2027, we proposed to use the OCOLAs published by DOD effective for January 1, 2026. The DOD OCOLAs are available for 26 Alaska locality areas and 6 Hawaii locality areas. Similar to the COLAs used for Alaska and Hawaii for FY 2022 through FY 2026 that are based on the original OPM COLAs, we proposed to continue to use the four Nonforeign COLA Areas designated by OPM for Alaska and the four Nonforeign COLA Areas designated by OPM for Hawaii as shown in Table II.B.2 of the proposed rule.

For each of the designated OPM areas for cities in Alaska (City of Anchorage, City of Fairbanks, and City of Juneau), if there is more than one DOD OCOLA within a 50-mile radius of the city, we proposed to average the DOD OCOLAs within the designated OPM area to calculate the proposed COLA. Specifically, for the COLA factor for the City of Anchorage, we proposed to average the DOD OCOLAs for the Anchorage and Wasilla locality areas. For the COLA factor for the City of Fairbanks, we proposed to average the DOD OCOLAs for the College, Eielson Air Force Base, and Fairbanks locality areas. For the Rest of Alaska COLA, given that there are IPPS hospitals located in two locality areas (Bethel and Kenai), we proposed to average the DOD OCOLAs for these two locality areas to calculate the proposed COLA.

For Hawaii, the OCOLAs published by DOD are generally consistent with the OPM designated areas. To obtain the COLA factor for the OPM designated area of County of Maui and County of Kalawao, we proposed to average the DOD OCOLAs for the Maui and Molokai locality areas.

Starting with the FY 2027 payment year, we proposed to no longer cap the COLA factors at 25 percent. We noted that OPM's COLA factors were calculated with a statutorily mandated cap of 25 percent [730] and we had exercised our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating this 25-percent cap. We stated that since we are no longer proposing to use the OPM COLA factors, as well as in consideration of the public comment we received, we are exercising our discretionary authority to no longer cap the COLA factors at 1.25. Lastly, for fiscal years after FY 2027, in order to facilitate stability in payment rates, we proposed to continue to update the COLA factors at the same time the labor-related share of the IPPS market basket is updated.

In the proposed rule (91 FR 19813 through 19814), we presented a table with the proposed COLA factors for FY 2027, as calculated using this proposed methodology, which indicated that changing the data source and eliminating the 25-percent cap has different impacts by area. We solicited comments on this proposed methodology and the use of the DOD OCOLAs, including any comments on how the use of survey data that are specific to Service members, including their access to discounted commissary prices that might be variable by geographic area, may result in differential impacts across the designated areas. We also requested comment on any potential modifications to this proposed methodology, including a potential phase-in of the use of these data or a transition period for implementation, which we stated we may consider finalizing in the FY 2027 IPPS/LTCH PPS final rule, after consideration of the comments received.

Comment: Several commenters supported the proposal to remove the 25 percent cap on COLA factors for Hawaii and Alaska. A commenter strongly supported the proposed adoption of the DOD OCOLA data. The commenter stated that the prior methodology's reliance on CPI–U for Anchorage, Alaska, as a proxy for cost differences across the entire state of Alaska was fundamentally flawed. The commenter stated that the vast majority of goods arriving in Alaska pass through Anchorage by port or airport before being transported further—often by road, boat, barge, or small aircraft—to their final destinations in communities like Kenai, Bethel, Fairbanks, and Mat-Su. The commenter further claimed that the additional shipping, freight, and logistics costs incurred by hospitals outside of Anchorage are real, significant, and were entirely unaccounted for under the prior CPI-based approach. The commenter also stated that they agreed with the proposed methodology for the ''Rest of Alaska'' COLA of averaging the DOD OCOLAs for the Bethel and Kenai locality areas. The commenter urged CMS to finalize these changes without modification, and specifically without any phase-in or transition period that would delay their implementation.

Other commenters opposed the use of the DOD OCOLA and stated that these data fail to measure cost differences faced by hospitals in Hawaii. A commenter recommended CMS continue to use the CPI–U as the basis for COLA adjustments. The commenter requested that CMS defer the proposed change to the basis for COLA adjustments from CPI–U until a more appropriate basis can be determined that would not undermine either Alaska or Hawaii. The commenter raised concerns about the OCOLA stating it was designed to measure consumer retail purchasing power for military personnel stationed overseas, not the operational cost structure of hospitals in non-contiguous U.S. states. The commenter stated that the OCOLA data fail to capture many other core drivers of hospital expenses, including real estate premiums and high energy and utility costs that are unique to Hawaii. The commenter also referenced concerns from a report by the Government Accounting Office (GAO) regarding the DOD Cost-of-Living Allowances,[731] published April 2026. The commenter claimed the OCOLA data was empirically unstable and undergoing significant methodological transition.

Some commenters requested that CMS consider alternative data sources or work to develop an appropriate data source to measure hospital nonlabor related cost differences. A commenter stated CMS should direct the Office of the Actuary or the Office of Assistant Secretary for Planning Evaluation to conduct a rigorous evaluation of alternative data sources that reflect the actual cost structure of non-DoD hospitals in non-contiguous states.

Commenters also raised equity considerations beyond Alaska and Hawaii, with some urging CMS to explore extending COLA adjustments to U.S. territories, and another commenter recommending that a COLA be implemented under the OPPS as well. Commenters supported our proposal to continue to update the COLA factors at the same time the labor-related share of the IPPS market basket is updated.

Response: The recent GAO report discussing the DOD OCOLA methodology included recommendations for improvements, a few of which DOD has acknowledged they will look to implement, but overall does not suggest the DOD OCOLA is not a valid data source.

We have been unable to identify a data source that directly reflects the prices of specific hospital expenses included in the nonlabor-related share for geographic areas in Alaska and Hawaii to compare with those same expenses in the contiguous U.S. Therefore, as done previously with the use of the OPM COLAs, we proposed to use a data source that reflects the relative price differences in a basket of goods and services that would be consistent with many of the nonlabor-related goods and services that hospitals purchase (such as pharmaceuticals, food, and cleaning supplies). As stated in the FY 2027 IPPS/LTCH PPS proposed rule, we continue to believe the DOD OCOLAs are an appropriate data source to capture the price differences of hospital nonlabor-related inputs purchased in the areas of Hawaii and Alaska compared to the continental U.S.

However, we appreciate and recognize the commenter's concerns that the current DOD OCOLA may not reflect all purchases made by hospitals, with specific concerns related to high real estate premiums and energy and utility costs that are unique to Hawaii. Since the CMS COLA factors apply to both operating and capital IPPS payments, we will continue to explore other data sources and methodologies for the CMS COLA factors to ensure they are adequately capturing the price differences facing hospitals. We also welcome recommendations regarding any additional data sources that could be used to develop the COLA factors (including those that might specifically capture capital and utility prices for Alaska and Hawaii and the contiguous U.S.). Commenters can send an email with feedback or suggestions on possible data sources to be used in developing the COLA factors to the following email: *cmsdnhs@cms.hhs.gov*.

With respect to commenters who asked CMS to explore extending COLA adjustments to U.S. territories and to establish a COLA under the OPPS, we note the COLA adjustment made under section 1886(d)(5)(H) of the Act specifies an appropriate adjustment to take into account the unique circumstances of hospitals located in Alaska and Hawaii. We refer commenters to the CY 2027 OPPS proposed rule (91 FR 41927

[730] Section 5941 of title 5, United States Code, and Executive Order 10000 (as amended) authorize the payment of COLAs in nonforeign areas (*https://www.opm.gov/policy-data-oversight/pay-leave/pay-systems/nonforeign-areas/*). Section 5941 states that the allowance may not exceed 25 percent.

[731] *https://files.gao.gov/reports/GAO-26-107490/index.html?_gl=1*n3r0hv*_ga*MTAxNzI0Nzk0Ny4xNzgxMDA0MTEx*_ga_V393SNS3SR*czE3ODEwMDQxMTAkbzEkZzEkdDE3ODEwMDQyNjQkajYwJGwwJGgw.*

through 41928), in which we proposed to implement a COLA using our authority under section 1833(t)(2)(E) of the Act. We note that we did not propose to extend COLA adjustments to U.S. territories and may consider these requests in future rulemaking.

We appreciate the commenters' support for our proposal to continue to update the COLA factors in conjunction with the labor-related share of the IPPS market basket.

As stated in the FY 2027 IPPS/LTCH PPS proposed rule, we requested comments on any potential modifications to our proposed methodology, including a potential phase-in of the use of these data or a transition period for implementation. We appreciate the commenters' support to no longer cap the COLA factors at 25 percent. As we stated in the proposed rule. OPM's COLA factors were calculated with a statutorily mandated cap of 25 percent and we had exercised our discretionary authority to adjust payments to hospitals in Alaska and Hawaii by incorporating this 25-percent cap. Since we are no longer proposing to use the OPM COLA factors, we are exercising our discretionary authority to no longer cap the OCOLA-based COLA factors at 1.25. After consideration of public comments, we are finalizing our proposed methodology to use the DOD OCOLAs to determine the COLA factors, to no longer cap these OCOLA-based COLA factors at 25 percent, and to continue to update the COLA factors in conjunction with the labor-related share of the IPPS market basket. However, given the concerns raised by commenters, in particular that the OCOLA data may not reflect some of the high costs directly affecting Hawaii, for any locality area where the COLA factors would decrease using the DOD OCOLA data, we will maintain the COLA factors that were in place for FY 2022 through FY 2026. This would allow us to avoid adverse financial impacts to these areas while CMS can more fully evaluate the issues raised by commenters.

Therefore, as shown in Table H–01, we are finalizing the use of the DOD OCOLAs to determine the COLAs for each of the designated OPM areas in Alaska and for the designated OPM areas for County of Hawaii and County of Kauai and to no longer cap these OCOLA-based COLA factors at 25 percent. For the areas of City and County of Honolulu and County of Maui and County of Kalawao, given that the DOD OCOLA data would result in a decrease in the COLA factor, we will maintain the current COLA factors of 1.25. The following table lists the COLA factors for FY 2027 for the OPM designated areas of Alaska and Hawaii.

TABLE H-01: COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Areas	Finalized FY 2027
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.28
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.32
City of Juneau and 80-kilometer (50-mile) radius by road	1.36
Rest of Alaska	1.44
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.32
County of Kauai	1.26
County of Maui and County of Kalawao	1.25

C. Calculation of the Prospective Payment Rates

1. General Formula for Calculation of the Prospective Payment Rates for FY 2027

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs and MDHs, for FY 2027 equals the Federal rate (which includes uncompensated care payments). As previously discussed, section 6202 of the Consolidated Appropriations Act, 2026 (Pub. L. 119–75) extended the MDH program for FY 2027 discharges occurring before January 1, 2027. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2027.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (which, as discussed in section V.E. of the preamble of this final rule, includes uncompensated care payments).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2027 equals the higher of the applicable Federal rate, or the hospital-specific rate as described later in this section. The prospective payment rate for MDHs for discharges occurring before January 1, 2027, equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described in this section. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

2. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula specified in this section is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described previously) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS–DRG and MS–DRG relative weight (from Table 5) for each claim primarily based on the ICD–10–CM diagnosis and ICD–10–PCS procedure codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described previously.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS–DRG Relative Weight × [(Labor-Related Applicable Standardized Amount × Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH * 0.25))

—Federal Payment for Capital Costs = MS–DRG Relative Weight × Federal Capital Rate × Geographic Adjustment Fact × (l + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)

—Capital Costs = (Billed Charges × Capital CCR).

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital

outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)
—Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals + New Technology Add-On Payment Amount
—Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)
—Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor × Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS–DRG)
—Operating Outlier Payment = (Operating Costs − Operating Outlier Threshold) × Marginal Cost Factor
—Capital Outlier Payment = (Capital Costs − Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment and supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals to the total claim payment amount. As noted in the previous formula, we take uncompensated care payments, supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and new technology add-on payments into consideration when calculating outlier payments.

3. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment. As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987, or FY 2002 costs per discharge. As noted, under current law, the MDH program is effective for FY 2027 discharges before January 1, 2027.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990, final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2027

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. As discussed in section V.F. of the preamble of this final rule, section 6202 of the Consolidated Appropriations Act, 2026 (Pub. L. 119–75) extended the MDH program for FY 2027 discharges occurring before January 1, 2027. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2027.

Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2027	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.8	-0.8
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.4	0	-2.4
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.9	-0.9	-0.9	-0.9
Applicable Percentage Increase Applied to Standardized Amount	**2.3**	**-0.1**	**1.5**	**-0.8**

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section V.F. of the preamble of this final rule. In addition, because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital specific-rate for an SCH or MDH is adjusted by the MS–DRG reclassification and recalibration budget neutrality factor, as discussed in section III. of this Addendum and listed in the table in section II. of the Addendum of this final rule. In addition, as discussed in section II.E.2.d. of the preamble this final rule and previously, we are applying a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, as finalized in the FY 2023 IPPS/LTCH PPS final rule. Because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, consistent with the policy adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900 and 49432 through 49433), the hospital specific-rate for an SCH or MDH would be adjusted by the MS–DRG 10-percent cap budget neutrality factor. The resulting rate is used in determining the payment rate that an SCH or MDH would receive for its discharges beginning on or after October 1, 2026.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital Related Costs for FY 2027

The PPS for acute care hospital inpatient capital related costs was implemented for cost reporting periods beginning on or after October 1, 1991. The basic methodology for determining Federal capital prospective rates is set forth in- the regulations at 42 CFR 412.308 through 412.352. In this section of this Addendum, we discuss the factors that we used to determine the capital Federal rate for FY 2027, which would be effective for

discharges occurring on or after October 1, 2026.

All hospitals (except ''new'' hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. We annually update the capital standard Federal rate, as provided in § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital related costs, which currently specifies capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

A. Determination of the Federal Hospital Inpatient Capital Related- Prospective Payment Rate Update for FY 2027

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2027. In particular, we explain why the FY 2027 capital Federal rate will increase approximately 3.03 percent, compared to the FY 2026 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we estimate that capital payments per discharge will increase approximately 3.0 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change, as appropriate, each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The update factor for FY 2027 under that framework is 3.4 percent based on a projected 3.1 percent increase in the 2023-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a forecast error correction of 0.3 percentage point. As discussed in section III.C. of the Addendum of this final rule, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2027 CIPI projection in that same section of this Addendum. In this final rule, we describe the policy adjustments that we applied in the update framework for FY 2027.

The case mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case- mix- index corresponds to an equal percentage increase in hospital payments.

The case mix- index can change for any of several reasons—

- The average resource use of Medicare patient changes (''real'' case mix- change);
- Changes in hospital documentation and coding of patient records result in higher weighted- DRG assignments (''coding effects''); or
- The annual DRG reclassification and recalibration changes may not be budget neutral (''reclassification effect'').

We define real case mix change as actual changes in the mix (and resource requirements) of Medicare patients, as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004, IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts, as discussed in section II. of appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2027, we are projecting a 0.5 percent total increase in the case mix index. We estimate that the real case-mix increase will equal 0.5 percent for FY 2027. The net adjustment for change in case mix is the difference between the projected real increases in case mix and the projected total increase in case mix. Therefore, the net adjustment for case-mix change in FY 2027 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, for this final rule, we have the FY 2025 MedPAR claims data available to evaluate the effects of the FY 2025 DRG reclassification and recalibration as part of our update for FY 2027. We assume for purposes of this adjustment, that the estimate of FY 2025 DRG reclassification and recalibration would result in no change in the case-mix when compared with the case mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, as proposed, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2027.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if the difference in the actual increase and projected increase of the capital input price index for any year is greater than 0.25 percentage point in absolute terms. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. The forecast error in any given year can be derived as the actual CIPI increase less the forecasted CIPI increase. A forecast error of 0.3 percentage point was calculated for the FY 2025 update, for which there are historical data. That is, current historical data indicate that actual realized price increases (2.9 percent) were 0.3 percentage point higher than the forecasted FY 2025 CIPI increase (2.6 percent) used in calculating the FY 2025 update factor. Since this exceeds the 0.25 percentage point threshold, we are making an adjustment for forecast error in the update for FY 2027.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculate this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflects how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove non cost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the Consumer Price Index for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the

combination of quality enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual change is due to each of these factors. Thus, the capital update framework provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, as proposed, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2027 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 0436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2027, we are using an intensity measure that is based on an average of cost per-discharge data from the 5-year period beginning with FY 2020 and extending through FY 2024. Based on these data, we estimated that case-mix constant intensity declined during FYs 2020 through 2024. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimated that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero-intensity adjustment for FY 2027. Therefore, as proposed, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2027.

Earlier, we described the basis of the components we used to develop the 3.4 percent capital update factor under the capital update framework for FY 2027, as shown in the following table.

FY 2027 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	3.1
Intensity:	0.0
Case-Mix Adjustment Factors:	
Projected Case-Mix Change	-0.5
Real Across DRG Change	0.5
Subtotal	0.0
Effect of FY 2025 Reclassification and Recalibration	0.0
Forecast Error Correction	0.3
Total Update	3.4

*The capital input price index represents the 2023-based CIPI.

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital related costs. A shared threshold is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier threshold is set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments. For FY 2027, as proposed, we continue to incorporate the impact of estimated operating outlier reconciliation payment amounts into the outlier threshold model. (For more details on our methodology to incorporate an estimate of the impact of operating outlier reconciliation payment amounts into the outlier threshold model, see section II.A.4.i. of the Addendum to this final rule.)

For FY 2026, we estimated that outlier payments for capital-related PPS payments will equal 3.84 percent of inpatient capital related-payments based on the capital Federal rate. Based on the threshold discussed in section II.A. of the Addendum of this final rule, we estimate that prior to taking into account projected capital outlier reconciliation payments, outlier payments for capital-related costs will equal 3.26 percent of inpatient capital-related payments based on the capital Federal rate in FY 2027. Using the methodology outlined in section II.A.4.i. of the Addendum of this final rule, we estimate that taking into account projected capital outlier reconciliation payments will decrease the estimated percentage of FY 2027 capital outlier payments by 0.03 percent. Therefore, accounting for estimated capital outlier reconciliation, the estimated outlier payments for capital-related PPS payments will equal 3.23 percent (3.26 percent—0.03 percent) of inpatient capital-related payments based on the capital Federal rate in FY 2027. Accordingly, we applied an outlier adjustment factor of 0.9677 in determining the capital Federal rate for FY 2027. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2027 will be lower than the percentage we estimated for FY 2026.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2027 outlier adjustment of 0.9677 is a 0.63 percent change from the FY 2026 outlier adjustment of 0.9616. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2027 is 1.0063 (0.9677/0.9616) so that the outlier adjustment will increase the FY 2027 capital Federal rate by approximately 0.63 percent compared to the FY 2026 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate, after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF, are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes.

As discussed in section III.F.6. of the preamble of this final rule, in the FY 2025 interim final action with comment period (IFC) (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. The recalculation of the FY 2025 hospital wage index impacted the FY 2025 GAFs. We also removed the budget neutrality adjustment for changes to the GAF for the lowest quartile adjustment from the FY 2025 capital Federal rate. For FY 2026 and subsequent fiscal years, after considering the D.C. Circuit's decision in *Bridgeport Hospital* v. *Becerra,* we discontinued the low wage index hospital policy.

For FY 2026, we established a payment transition with a budget neutrality adjustment for hospitals significantly impacted by the discontinuation of the low wage index hospital policy. The transitional payment exception for FY 2026 was equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index. Under that transitional policy, we made a budget neutral equivalent exception under the capital IPPS for FY 2026. We refer readers to the FY 2026 IPPS/LTCH PPS final rule (90 FR 37234 through 37235) for a full discussion on the FY 2026 transitional payment exception under the capital IPPS.

As discussed in III.F.6 of this final rule, we recognize that some hospitals that previously benefitted from the low wage index hospital policy would experience decreases of 15 percent or more over the three years from their FY 2024 wage index (with the low wage index hospital policy applied) to their FY 2027 wage index. Therefore, in addition to our 5-percent wage index cap policy at 42

CFR 412.64(h)(7), we are extending the transitional exception to the calculation of payments for FY 2027 for hospitals significantly impacted by the discontinuation of the low wage index hospital policy in a budget neutral manner. The transitional payment exception will end when the impact of discontinuing the low wage index hospital policy is mitigated and the hospital's wage index decrease is less than 95 percent for each year since 2024 (also expressed as 0.95∧n, with n being the number of years since FY 2024). Specifically, for FY 2027, for hospitals that benefitted from the low wage index hospital policy in FY 2024 and whose FY 2027 wage index is decreasing by more than 14.2625 percent from the hospital's FY 2024 wage index, we are continuing a transitional payment exception for FY 2027 for that hospital that would be equal to the additional FY 2027 amount the hospital would be paid under the IPPS if its FY 2027 wage index were equal to 85.7375 percent of its FY 2024 wage index. Under this policy, we are making a budget neutral equivalent exception under the capital IPPS. In this section, we refer to this policy as the transition for the discontinuation of the low wage index hospital policy.

As referenced previously, beginning in FY 2023, we finalized at 42 CFR 412.64(h)(7) a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY regardless of the circumstances causing the decline. That is, under this policy, a hospital's wage index value would not be less than 95 percent of its prior year value (87 FR 49018 through 49021). In this section, we refer to our policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year as the 5-percent cap on wage index decreases policy. We note that the transitional payment exception for FY 2027 discussed previously will be applied after the application of the 5-percent cap on wage index decreases policy.

For this final rule, as we proposed, we used a 2-step methodology for computing the budget neutrality factor for changes in the GAFs in light of the effect of those wage index changes on the GAFs. In the first step, we calculate a factor to ensure budget neutrality for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy, consistent with our historical GAF budget neutrality factor methodology. In the second step, we calculate a factor to ensure budget neutrality for changes to the GAFs due to the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy.

The budget neutrality factors applied for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are built permanently into the capital Federal rate; that is, they are applied cumulatively in determining the capital Federal rate. However, the budget neutrality factor for the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy is not permanently built into the capital Federal rate. This is because the GAFs with 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy applied from the previous year are not used in the budget neutrality factor calculations for the current year. Accordingly, and consistent with this approach, prior to calculating the GAF budget neutrality factors for FY 2027, we removed from the capital Federal rate the budget neutrality factor applied in FY 2026 for the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy. Specifically, we divided the capital Federal rate by the FY 2026 budget neutrality factor of 0.9989 (90 FR 37235 through 37236). (We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45552) for additional discussion on our policy of removing from the capital Federal rate the prior year budget neutrality factor(s) that are not used in the budget neutrality factor calculations for the current year.)

We discuss our 2-step calculation of the GAF budget neutrality factors for FY 2027 as follows. To determine the GAF budget neutrality factors for FY 2027, we first compared estimated aggregate capital Federal rate payments based on the FY 2026 MS–DRG classifications and relative weights and the FY 2026 GAFs to estimated aggregate capital Federal rate payments based on the FY 2026 MS–DRG classifications and relative weights and the FY 2027 GAFs without incorporating the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy. To achieve budget neutrality for these changes in the GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 0.9916 for FY 2027.

Next, we compared estimated aggregate capital Federal rate payments based on the FY 2027 GAFs with and without the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy. For this calculation, estimated aggregate capital Federal rate payments were calculated using the FY 2027 MS–DRG classifications and relative weights (after application of the 10-percent cap discussed later in this section) and the FY 2027 GAFs (both with and without the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy). (We note, for this calculation the GAFs included the imputed floor, out-migration, and Frontier State adjustments.) To achieve budget neutrality for the effects of the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy on the FY 2027 GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 0.9990.

The budget neutrality factor for the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy is not permanently built into the capital Federal rate. Consistent with this, we present the budget neutrality factor for the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy calculated under the second step of this 2-step methodology separately from the other budget neutrality factors in the discussion that follows, and this factor is not included in the calculation of the combined GAF/DRG adjustment factor described later in this section.

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. Consistent with our historical methodology for adjusting the capital standard Federal rate to ensure that the effects of the annual DRG reclassification and the recalibration of DRG weights are budget neutral under § 412.308(c)(4)(ii), we finalized to apply an additional budget neutrality factor to the capital standard Federal rate so that the 10-percent cap on decreases in an MS–DRG's relative weight is implemented in a budget neutral manner (87 FR 49436). Specifically, we augmented our historical methodology for computing the budget neutrality factor for the annual DRG reclassification and recalibration by computing a budget neutrality adjustment for the annual DRG reclassification and recalibration in two steps. We first calculate a budget neutrality factor to account for the annual DRG reclassification and recalibration prior to the application of the 10-percent cap on MS–DRG relative weight decreases. Then we calculate an additional budget neutrality factor to account for the application of the 10-percent cap on MS–DRG relative weight decreases.

To determine the DRG budget neutrality factors for FY 2027, we first compared estimated aggregate capital Federal rate payments based on the FY 2026 MS–DRG classifications and relative weights to estimated aggregate capital Federal rate payments based on the FY 2027 MS–DRG classifications and relative weights prior to the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were calculated using the FY 2027 GAFs without the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy. The incremental adjustment factor for DRG classifications and changes in relative weights prior to the application of the 10-percent cap is 0.9987. Next, we compared estimated aggregate capital Federal rate payments based on the FY 2027 MS–DRG classifications and relative weights prior to the application of the 10-percent cap to estimated aggregate capital Federal rate payments based on the FY 2027 MS–DRG classifications and relative weights after the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were also calculated using the FY 2027 GAFs without the 5 percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy. The incremental adjustment factor for the application of the 10-percent cap on relative weight decreases is 0.9997. Therefore, to achieve budget neutrality for the FY 2027 MS–DRG reclassification and recalibration

(including the 10-percent cap), based on the calculations described previously, we applied an incremental budget neutrality adjustment factor of 0.9984 (0.9987 × 0.9997) for FY 2027 to the capital Federal rate. We note that all the values are calculated with unrounded numbers.

The incremental adjustment factor for the FY 2027 MS–DRG reclassification and recalibration (0.9984) and for changes in the FY 2027 GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy (0.9916) is 0.9901 (0.9984 × 0.9916). This incremental adjustment factor is built permanently into the capital Federal rates.

To achieve budget neutrality for the effects of the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy on the FY 2027 GAFs, as described previously, we calculated a budget neutrality adjustment factor of 0.9990 for FY 2027. We refer to this budget neutrality factor for the remainder of this section as the cap/transition adjustment factor.

We applied the budget neutrality adjustment factors described previously to the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are determined separately. Under the capital IPPS, there is a single budget neutrality adjustment factor for changes in the GAF that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy. In addition, there is no adjustment for the effects that geographic reclassification, the 5-percent cap on wage index decreases policy, or the transition for the discontinuation of the low wage index hospital policy described previously have on the other payment parameters, such as the payments for DSH or IME.

The incremental GAF/DRG adjustment factor of 0.9901 accounts for the MS–DRG reclassifications and recalibration (including application of the 10-percent cap on relative weight decreases) and for changes in the GAFs that result from updates to the wage data, the effects on the GAFs of FY 2027 geographic reclassification decisions made by the MGCRB compared to FY 2026 decisions, and the application of the rural floor policy. The cap/transition adjustment factor of 0.9990 accounts for changes that result from the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy. However, these factors do not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2027

For FY 2026, we established a capital Federal rate of $524.15 (90 FR 37236). We are establishing an update of 3.4 percent in determining the FY 2027 capital Federal rate for all hospitals. As a result of this final update and the budget neutrality factors discussed earlier, we are establishing a national capital Federal rate of $540.03 for FY 2027. The national capital Federal rate for FY 2027 was calculated as follows:

- The FY 2027 update factor is 1.034; that is, the update is 3.4 percent.
- The FY 2027 GAF/DRG budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS–DRG classifications and relative weights (including application of the 10-percent cap on relative weight decreases) and changes in the GAFs that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy is 0.9901.
- The FY 2027 cap/transition budget neutrality adjustment factor that is applied to the capital Federal rate for changes due to the 5-percent cap on wage index decreases policy and the transition for the discontinuation of the low wage index hospital policy is 0.9990.
- The FY 2027 outlier adjustment factor is 0.9677.

We are providing the following chart that shows how each of the factors and adjustments for FY 2027 affects the computation of the FY 2027 national capital Federal rate in comparison to the FY 2026 national capital Federal rate. The FY 2027 update factor has the effect of increasing the capital Federal rate by 3.4 percent compared to the FY 2026 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.99 percent. The FY 2027 cap/transition budget neutrality adjustment factor has the effect of increasing the capital Federal rate by 0.01 percent compared to the FY 2026 capital Federal rate. The FY 2027 outlier adjustment factor has the effect of increasing the capital Federal rate by 0.63 percent compared to the FY 2026 capital Federal rate. The combined effect of all the changes will increase the national capital Federal rate by approximately 3.03 percent, compared to the FY 2026 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2026 CAPITAL FEDERAL RATE AND THE FY 2027 CAPITAL FEDERAL RATE

	FY 2026	FY 2027	Change	Percent Change
Update Factor[1]	1.0280	1.034	1.034	3.4
GAF/DRG Adjustment Factor[1]	0.9918	0.9901	0.9901	-0.99
GAF Cap/Transition Adjustment Factor[2]	0.9989	0.9990	1.0001	0.01
Outlier Adjustment Factor[3]	0.9616	0.9677	1.0063	0.63
Capital Federal Rate	$524.15	540.03	1.0303	3.03

[1] The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rate. Thus, for example, the incremental change from FY 2026 to FY 2027 resulting from the application of the 0.9901 GAF/DRG budget neutrality adjustment factor for FY 2027 is a net change of 0.9901 (or -0.99 percent).

[2] The GAF Cap/Transition budget neutrality adjustment factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2027 GAF Cap/Transition budget neutrality adjustment factor is 0.9990/0.9989 or 1.0001 (or 0.01 percent).

[3] The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2027 outlier adjustment factor is 0.9677/0.9616 or 1.0063 (or 0.63 percent).

[4] Percent change may not sum due to rounding.

B. Calculation of the Inpatient Capital Related-Prospective Payments for FY 2027

For purposes of calculating payments for each discharge during FY 2027, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. Section 412.312(c) provides for a shared threshold to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier threshold for FY 2027 is in section II.A. of the Addendum of this final rule. For FY 2027, a case will qualify as a cost outlier if the cost for the case is greater than the prospective payment rates for the MS–DRG plus IME and DSH payments (including the empirically justified Medicare DSH payment and the estimated uncompensated care payment), estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus the fixed-loss amount of $49,346.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation, unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect, the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted average of past capital purchase prices up to and including the current year.

For this final rule, as we proposed, we are using the IPPS operating and capital market baskets that reflect a 2023 base year. For a complete discussion of the rebasing of the IPPS operating and capital market baskets, we refer readers to section IV. of the preamble of the FY 2026 IPPS/LTCH PPS final rule (90 FR 36859 through 36879).

2. Forecast of the CIPI for FY 2027

Based on IHS Global Inc.'s second quarter 2026 forecast, for this final rule, we are forecasting the 2023-based CIPI to increase 3.1 percent in FY 2027. This reflects a projected 3.7 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), a projected 0.4 percent increase in vintage-weighted interest expense prices and a projected 3.2 percent increase in other capital expense prices in FY 2027. The weighted average of these three factors produces the forecasted 3.1 percent increase for the 2023-based CIPI in FY 2027.

As we proposed, we are using the more recent data available to determine the FY 2027 capital update factor for this final rule.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2027

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are paid on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital, based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, as specified in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38536), effective for cost reporting periods beginning during FY 2018, the annual update to the target amount for extended neoplastic disease care hospitals (hospitals described in § 412.22(i) of the regulations) also is the rate-of-increase percentage specified in § 413.40(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

For the FY 2027 IPPS/LTCH PPS proposed rule, based on IGI's 2025 fourth quarter forecast, we estimated that the proposed 2023-based IPPS operating market basket percentage increase for FY 2027 was 3.2 percent (that is, the estimate of the market basket rate-of-increase). Based on this estimate, the FY 2027 rate-of-increase percentage that would be applied to the FY 2026 target amounts in order to calculate the FY 2027 target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa was 3.2 percent, in accordance with the applicable regulations at 42 CFR 413.40. However, we proposed that if more recent data became available for the FY 2027 IPPS/LTCH PPS final rule, we would use such data, if appropriate, to calculate the final IPPS operating market basket update for FY 2027.

More recent data has become available. Based on IGI's second quarter 2026 forecast, we estimate that the 2023-based IPPS operating market basket percentage increase for FY 2027 is 3.2 percent (that is, the estimate of the market basket rate-of-increase). Accordingly, the FY 2027 rate-of-increase percentage that we will apply to the FY 2026 target amounts in order to calculate the FY 2027 target amounts for children's hospitals, the 11 cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is 3.2 percent, which is based on IGI's second quarter 2026 forecast.

IRFs and rehabilitation distinct part units, IPFs and psychiatric units, and LTCHs are excluded from the IPPS and paid under their respective PPSs. The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section IX. of the preamble and section V. of the Addendum of this final rule for the changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2027. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

We received no comments on this proposal and therefore are finalizing this provision without modification. Incorporating more recent data available for this final rule, as we proposed, we are adopting a 3.2 percent update for FY 2027.

V. Changes to the Payment Rates for the LTCH PPS for FY 2027

A. LTCH PPS Standard Federal Payment Rate for FY 2027

1. Overview

In section VIII. of the preamble of this final rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2027.

Under § 412.523(c)(3) of the regulations, for FY 2012 and subsequent years, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3) (citing sections 1886(b)(3)(B)(xi)(II) and 1886(m)(4) of the Act as set forth in the regulations at § 412.523(c)(3)(viii) through (xvii)). (For a summary of the payment rate development prior to FY 2012, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38310 through 38312) and references therein.)

Section 1886(m)(3)(A) of the Act specifies that, for rate year 2012 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act as discussed in section IX.C.2. of the preamble of this final rule. This section of the Act further provides that the application of section 1886(m)(3)(B) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VIII.C.2. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.)

For LTCHs that fail to submit the required quality reporting data in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

2. Development of the FY 2027 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice and § 412.523(c)(3)(xvii), for FY 2027, as we proposed, we are applying the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the LTCH PPS standard Federal payment rate for FY 2027, we also are making certain regulatory adjustments, consistent with past practices. Specifically, in determining the FY 2027 LTCH PPS standard Federal payment rate, as we proposed, we are applying a budget neutrality adjustment factor for the changes related to the area wage level adjustment (that is, changes to the wage data and labor-related share) as discussed in section V.B.6. of the Addendum of this final rule.

In this final rule, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 2.3 percent (that is, the most recent estimate of the 2022-based LTCH market basket increase of 3.2 percent less the productivity adjustment of 0.9 percentage point). Therefore, in accordance with § 412.523(c)(3)(xvii), we are applying an update factor of 1.023 to the FY 2026 LTCH PPS standard Federal payment rate of $50,824.51 to determine the FY 2027 LTCH PPS standard Federal payment rate. Also, in accordance with § 412.523(c)(3)(xvii) and (c)(4), we are required to reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points for LTCHs that fail to submit the required quality reporting data for FY 2027 as required under the LTCH QRP. Therefore, for LTCHs that fail to submit quality reporting data under the LTCH QRP, we are establishing an annual update to the LTCH PPS standard Federal payment rate of 0.3 percent (or an update factor of 1.003). This update reflects the annual market basket update of 3.2 percent reduced by the 0.9 percentage point productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act, minus 2.0 percentage points for LTCHs failing to submit quality data under the LTCH QRP, as required by section 1886(m)(5) of the Act. Consistent with § 412.523(d)(4), we are applying an area wage level budget neutrality factor to the FY 2027 LTCH PPS standard Federal payment rate of 1.002679, based on the best available data at this time, to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index (including application of the 5-percent cap on wage index decreases, discussed later in this section), and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Accordingly, we are establishing an LTCH PPS standard Federal payment rate of $52,132.76 (calculated as $50,824.51 × 1.023 × 1.002679) for FY 2027. For LTCHs that fail to submit quality reporting data for FY 2027, in accordance with the requirements of the LTCH QRP under section 1866(m)(5) of the Act, we are establishing an LTCH PPS standard Federal payment rate of $51,113.55 (calculated as $50,824.51 × 1.003 × 1.002679) for FY 2027.

B. Adjustment for Area Wage Levels Under the LTCH PPS for FY 2027

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

The FY 2027 LTCH PPS standard Federal payment rate wage index values that will be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2026, through September 30, 2027, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of this Addendum and available via the internet on the CMS website.

2. Geographic Classifications (Labor Market Areas) Under the LTCH PPS

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an ''urban area,'' or a ''rural area,'' as defined in § 412.503. Under § 412.503, an ''urban area'' is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by OMB, and a ''rural area'' is defined as any area outside of an urban area.

The geographic classifications (labor market area definitions) currently used under the LTCH PPS are based on the Core Based Statistical Areas (CBSAs) established by OMB. In the July 16, 2021, **Federal Register** (86 FR 37777), OMB finalized a schedule for future updates based on results of the decennial Census updates to commuting patterns from the American Community Survey. In accordance with that schedule, on July 21, 2023, OMB released Bulletin No. 23–01. According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (''the 2020 Standards''), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (that is, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). A copy of OMB Bulletin No. 23–01 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf.*

In the FY 2025 IPPS/LTCH PPS final rule, we stated that we believe that adopting the CBSA-based labor market area delineations established in OMB Bulletin No. 23–01 will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (89 FR 69974). We also noted that our adoption of the revised delineations announced in OMB Bulletin No. 23–01 is consistent with the changes under the IPPS for FY 2025. Therefore, in that same final rule, we adopted the updates set forth in OMB Bulletin No. 23–01, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, for the LTCH PPS effective for FY 2025. We refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69973 through 69975), for a full discussion of our use of the OMB delineations based on OMB Bulletin No. 23–01 for the LTCH PPS. For additional information on the CBSA-based labor market area (geographic classification) delineations used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).

We continue to believe that the CBSA-based labor market area delineations, as established in OMB Bulletin No. 23–01, ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (89 FR 69974). Therefore, for FY 2027, we are continuing to use the CBSA-based labor market area delineations as established in OMB Bulletin No. 23–01 and adopted in the FY 2025 IPPS/LTCH final rule.

CBSAs are made up of one or more constituent counties. For FY 2027, we are continuing to use the Federal Information Processing Standard (FIPS) county codes, maintained by the U.S. Census Bureau, for purposes of crosswalking counties to CBSAs. The current county-to-CBSA crosswalk was adopted under the LTCH PPS in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69973 through 69975) and is located on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/long-term-care-hospital/other-files-download.*

3. Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH market basket. Additional background information on the historical development of the labor-related share under

the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

Effective FY 2025, we rebased and revised the 2017-based LTCH market basket to reflect a 2022 base year and determined the labor-related share annually as the sum of the relative importance of each labor-related cost category in the 2022-based LTCH market basket using the most recent available data. (For more details, we refer readers to the FY 2025 IPPS/LTCH PPS final rule (89 FR 69435 through 69455).)

In the FY 2027 IPPS/LTCH PPS proposed rule (91 FR 19824), consistent with our historical practice, we proposed that the LTCH PPS labor-related share for FY 2027 would be the sum of the FY 2027 relative importance of each labor-related cost category in the LTCH market basket using the most recent available data. Specially, we proposed that the labor-related share for FY 2027 is the sum of the labor-related portion of operating costs from the 2022-based LTCH market basket (that is, the sum of the FY 2027 relative importance shares of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services) and a portion of the relative importance of Capital-Related cost weight from the 2022-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2022) and FY 2027. Based on IHS Global Inc.'s fourth quarter 2025 forecast of the 2022-based LTCH market basket, the sum of the FY 2027 relative importance for Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; and All Other: Labor-Related Services was 69.1 percent. The portion of capital-related costs that is influenced by the local labor market was estimated to be 46 percent (that was, the same percentage applied to the 2009-based, 2013-based, and 2017-based LTCH market basket capital-related costs relative importance). Since the FY 2027 relative importance for capital-related costs was 8.4 percent based on IHS Global Inc.'s fourth quarter 2025 forecast of the 2022-based LTCH market basket, we took 46 percent of 8.4 percent to determine the labor-related share of capital-related costs for FY 2027 of 3.9 percent. Therefore, we proposed a total labor-related share for FY 2027 of 73.0 percent (the sum of 69.1 percent for the labor-related share of operating costs and 3.9 percent for the labor-related share of capital-related costs). Consistent with our historical practice, we also proposed that if more recent data become available after the publication of the proposed rule and before the publication of the final rule (for example, a more recent estimate of the relative importance of each labor-related cost category of the 2022-based LTCH market basket), we would use such data, if appropriate, to determine the FY 2027 LTCH PPS labor-related share.

Comment: A commenter stated that they did not object to maintaining the current labor-related share, but CMS should continue evaluating whether current labor market measures adequately capture the persistent and structurally embedded cost pressures hospitals face (specifically, in regard to contract labor costs).

Response: We acknowledge the commenter's concern. The proposed labor-related share for FY 2027 was 73.0 percent (0.1 percentage point higher than the FY 2026 labor-related share), which reflects the sum of the FY 2027 relative importance shares of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services; and a portion of the relative importance of Capital-Related cost weight from the 2022-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2022) and FY 2027.

After consideration of public comments, we are finalizing the FY 2027 labor-related share using the most recently available data—specifically, IHS Global Inc.'s second quarter 2026 forecast with historical data through the first quarter of 2026. Based on this forecast, the FY 2027 labor-related share for the final rule is still estimated at 73.0 percent. Therefore, we are finalizing a labor-related share for FY 2027 of 73.0 percent.

4. Wage Index for FY 2027 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the ''urban'' or ''rural'' designation of any related or affiliated provider. As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also employ a policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, to determine the applicable area wage index values for the FY 2027 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, as we proposed, we are continuing to employ our historical practice of using the same data we used to compute the FY 2027 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this final rule (that is, wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2023) because these data are the most recent complete data available.

Comment: A commenter opposed CMS's use of unadjusted FY 2023 cost report data for determining the applicable area wage index values for the FY 2027 LTCH PPS standard Federal payment rate. The commenter noted that pandemic-driven labor costs, especially contract labor, were unusually high and not representative of expected labor costs in FY 2027. The commenter argued that using data from this period without appropriate adjustments will distort wage index values.

Response: As we stated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69266 through 69268) and the FY 2026 IPPS/LTCH PPS final rule (90 FR 37239), it is not readily apparent how any changes due to the COVID–19 PHE differentially impacted the wages paid by individual hospitals. The commenter did not provide specific examples or data to show that certain providers or CBSAs were disproportionately affected by the PHE or contract labor costs. The commenter also did not suggest any specific adjustments CMS should make to the wage data. The concerns raised appear to be generalized without evidence of specific distortions in the FY 2023 wage data. As we stated in previous rules, even if CMS applied a uniform adjustment to contract labor salaries and hours, it would proportionally affect both area and national average hourly wages (AHW), leaving the wage index—which is a relative measure—essentially unchanged.

Taking all of these factors into account, we believe the FY 2023 wage data is the best available wage data to use for FY 2027. Therefore, as we proposed, consistent with our historical practice, we are using the most recent data available to determine the final applicable area wage index values for the FY 2027 LTCH PPS standard Federal payment rate in this final rule.

In addition, as we proposed, we computed the FY 2027 LTCH PPS standard Federal payment rate area wage index values consistent with the ''urban'' and ''rural'' geographic classifications (that is, the labor market areas based on the OMB area delineations from Bulletin No. 23–01 as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. As we proposed, we also continued to apportion the wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2027, as we proposed, we continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2023 IPPS wage data that we used to determine the FY 2027 LTCH PPS area wage index values in this final rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980).

Consistent with our existing methodology, we calculated the FY 2027 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12054, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 31924, 40660, 42340, 46660, and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum of this final rule.

Based on the FY 2023 IPPS wage data that we used to determine the FY 2027 LTCH PPS area wage index values in this final rule, there are no IPPS wage data for rural North Dakota (CBSA 35). Consistent with our existing methodology, we calculated the FY 2027 wage index value for CBSA 35 as the average of the wage index values for all CBSAs that are contiguous to the rural counties of the State (that is, CBSAs 13900, 22020, 24220, and 33500), as shown in Table 12B, which is listed in section VI. of this Addendum. We note that, as IPPS wage data are dynamic, it is possible that the number of urban and rural areas without IPPS wage data will vary in the future.

5. Cap on Wage Index Decreases

a. Cap on LTCH PPS Wage Index Decreases

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49440 through 49442), we finalized a policy that applies a permanent 5-percent cap on any decrease to an LTCH's wage index from its wage index in the prior year. Consistent with the requirement at § 412.525(c)(2) that changes to area wage level adjustments are made in a budget neutral manner, we include the application of this policy in the determination of the area wage level budget neutrality factor that is applied to the standard Federal payment rate, as is discussed later in section V.B.6. of this Addendum.

Under this policy, an LTCH's wage index will not be less than 95 percent of its wage index for the prior fiscal year. An LTCH's wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the LTCH PPS wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2027 would not be eligible for the LTCH PPS wage index cap in FY 2027. These LTCHs would receive the calculated wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage index cap. The cap on wage index decreases policy is reflected at § 412.525(c)(1).

For each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped wage index. This includes the LTCH's final prior year wage index value, the LTCH's uncapped current year wage index value, and the LTCH's capped current year wage index value. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact their MAC to ensure that its wage index value is not less than 95 percent of the value paid to it for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

Comment: A commenter stated that while they support the permanent cap on LTCH PPS wage index decreases policy, they urge CMS to implement this policy in a non-budget-neutral manner to address financial strain that LTCHs continue to face.

Response: Implementation of this policy in a budget neutral manner is consistent with the requirement at § 412.525(c)(2) that changes to area wage level adjustments are made in a budget neutral manner. Consistent with this requirement, we continue to believe that changes to area wage level adjustments, including the 5-percent cap on the decrease on an LTCH's wage index, should not result in any change in estimated aggregate LTCH PPS payments. Furthermore, we also continue to anticipate that, in the absence of wage index policy changes beyond an annual update of the wage data, most LTCHs will experience year-to-year wage index declines less than 5 percent in any given year, and that the overall budget neutrality adjustments associated with the cap on wage index decreases will therefore be relatively small and will not create volatility in LTCH PPS payments. We note that approximately 32 LTCHs are expected to receive the 5-percent cap on wage index decreases in FY 2027.

b. Cap on IPPS Comparable Wage Index Decreases

Determining LTCH PPS payments for short-stay-outlier cases (reflected in § 412.529) and site neutral payment rate cases (reflected in § 412.522(c)) requires calculating an ''IPPS comparable amount.'' For information on this ''IPPS comparable amount'' calculation, we refer the reader to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49608 through 49610). Determining LTCH PPS payments for LTCHs that do not meet the applicable discharge payment percentage (reflected in § 412.522(d)) requires calculating an ''IPPS equivalent amount.'' For information on this ''IPPS equivalent amount'' calculation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42439 through 42445).

Calculating both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' requires adjusting the IPPS operating and capital standardized amounts by the applicable IPPS wage index for nonreclassified IPPS hospitals. That is, the standardized amounts are adjusted by the IPPS wage index for nonreclassified IPPS hospitals located in the same geographic area as the LTCH. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49442 through 49443), we finalized a policy that applies a permanent 5-percent cap on decreases in an LTCH's applicable IPPS comparable wage index from its applicable IPPS comparable wage index in the prior year. Historically, we have not budget neutralized changes to LTCH PPS payments that result from the annual update of the IPPS wage index for nonreclassified IPPS hospitals. Consistent with this approach, the cap on decreases in an LTCH's applicable IPPS comparable wage index is not applied in a budget neutral manner.

Under this policy, an LTCH's applicable IPPS comparable wage index will not be less than 95 percent of its applicable IPPS comparable wage index for the prior fiscal year. An LTCH's applicable IPPS comparable wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the applicable IPPS comparable wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2027 would not be eligible for the applicable IPPS comparable wage index cap in FY 2027. This means that these LTCHs would receive the calculated applicable IPPS comparable wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage cap. The cap on IPPS comparable wage index decreases policy is reflected at § 412.529(d)(4)(ii)(B) and (d)(4)(iii)(B).

Similar to the information we are making available for the cap on the LTCH PPS wage index values (described previously), for each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped applicable IPPS comparable wage index. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact its MAC to ensure that its applicable IPPS comparable wage index value is not less than 95 percent of the value paid to them for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this final rule at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

6. Budget Neutrality Adjustments for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage level adjustment budget neutrality factor that is applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we have applied an area wage level adjustment budget neutrality factor in determining the standard

Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

For FY 2027, in accordance with § 412.523(d)(4), we are applying an area wage level budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments, consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). As discussed in section V.B.5. of this Addendum, consistent with, § 412.525(c)(2), we include the application of the 5-percent cap on wage index decreases in the determination of the area wage level budget neutrality factor. Specifically, as we proposed, we determined an area wage level adjustment budget neutrality factor that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2027 using the following methodology:

Step 1—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2026 wage index values and the FY 2026 labor-related share of 72.9 percent.

Step 2—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2027 wage index values (including the application of the 5-percent cap on wage index decreases) and the FY 2027 labor-related share of 73.0 percent. (As noted previously, the changes to the wage index values based on updated hospital wage data are discussed in section V.B.4. of this Addendum and the labor-related share is discussed in section V.B.3. of this Addendum.)

Step 3—Calculate the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2026 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the FY 2027 updates to the area wage level adjustment (calculated in Step 2) to determine the budget neutrality factor for updates to the area wage level adjustment for FY 2027 LTCH PPS standard Federal payment rate payments.

Step 4—Apply the FY 2027 updates to the area wage level adjustment budget neutrality factor from Step 3 to determine the FY 2027 LTCH PPS standard Federal payment rate after the application of the FY 2027 annual update.

As we proposed, we used the most recent data available, including claims from the FY 2025 MedPAR file, in calculating the FY 2027 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor. We note that, because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, consistent with historical practice, we only used data from claims that qualified for payment at the LTCH PPS standard Federal payment rate under the dual rate LTCH PPS to calculate the FY 2027 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor.

For this final rule, using the steps in the methodology previously described, we determined a FY 2027 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 1.002679. Accordingly, in section V.A. of this Addendum, we applied the area wage level adjustment budget neutrality factor of 1.002679 to determine the FY 2027 LTCH PPS standard Federal payment rate, in accordance with § 412.523(d)(4).

C. Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels.

For FY 2011 and in prior fiscal years, we used the most recent cost-of-living adjustment (COLA) factors obtained from the U.S. Office of Personnel Management (OPM) website at *https://www.opm.gov/policy-data-oversight/pay-leave/pay-systems/nonforeign-areas/#url=COLA-Rates* to update this nonlabor portion.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by OPM every 4 years (coinciding with the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28019 through 28020 and 77 FR 53481 through 53482, respectively). In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45559 through 45560), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule and Consumer Price Indices (CPIs) data through 2020. Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we utilized these COLA factors for FYs 2022 through 2025 to adjust the nonlabor-related portion of the standard Federal payment rate for LTCHs located in Alaska and Hawaii.

In general, under our existing methodology, we update the 2009 OPM COLA factors by a comparison of the growth in the CPIs for the areas of Urban Alaska and Urban Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). We use the comparison of the growth in the overall CPI relative to the growth in the CPI for those areas to update the COLA factors for all areas in Alaska and Hawaii, respectively, because BLS publishes CPI data for only Urban Alaska and Urban Hawaii. Using the respective CPI commodities index and CPI services index and using the approximate commodities/services shares obtained from the IPPS market basket, we create reweighted CPIs for each of the respective areas to reflect the underlying composition of the IPPS market basket nonlabor-related share. Lastly, we exercised our discretionary authority to adjust payments to LTCHs in Alaska and Hawaii by incorporating the statutorily mandated cap of 25 percent that was applied when determining OPM's COLA factors. (For additional information, refer to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45559 through 45560).)

We previously stated our intention to update the COLA factors at the same time as the update to the labor-related share of the IPPS market basket. In the FY 2026 IPPS/LTCH PPS proposed rule, we proposed to update the labor-related share of the IPPS market basket. We also stated that at that time, we believed it would be appropriate to maintain the current COLA factors for FY 2026 to allow us to consider whether it would be appropriate to incorporate additional data sources or other methodology changes in determining the COLA factors we apply to LTCH PPS payments to account for the unique circumstances of LTCHs located in Alaska and Hawaii (90 FR 18448 through 18449). Therefore, we proposed to continue to use the FY 2025 COLA factors to adjust the nonlabor-related portion of the standard Federal payment rate for LTCHs located in Alaska and Hawaii for FY 2026. We solicited comments on any possible data sources that could be considered in the development of the COLA factors.

Although we received no comments on our FY 2026 LTCH PPS proposal, a commenter, as summarized in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37230), supported CMS' proposal to maintain the current COLA methodology under the IPPS temporarily while we evaluate alternative approaches. The commenter requested that CMS utilize a more sensitive adjustment to reflect cost variation across Alaska. The commenter stated that tying Alaska's COLA to a single urban index does not reflect higher costs in more remote areas. The commenter also requested that CMS reconsider the 25-percent cap on the COLAs and engage with providers during the development of the new methodology. After consideration of the public comment we received, we finalized our proposal to continue to use the FY 2025 COLA factors to adjust the nonlabor-related portion of the standard Federal payment rate for LTCHs located in Alaska and Hawaii for FY 2026.

After further consideration and consistent with the approach proposed under the IPPS, effective for FY 2027, we proposed to adjust nonlabor-related costs for LTCHs located in Alaska and Hawaii, using the Overseas Cost-

of-Living Allowance (OCOLA) data[732] published by the Department of Defense (DOD). These OCOLAs are received by Service members serving outside of the contiguous U.S. (OCONUS) and are designed to offset higher prices of non-housing goods and services in order to equalize purchasing power with members stationed in the contiguous U.S. (CONUS). To calculate the OCOLAs for each OCONUS area, DOD currently uses Living Pattern Survey (LPS) data on purchasing patterns of Service members (*e.g.* how and where they purchase certain goods and services including whether these are purchased from a commissary, retail store, or online) and price data for approximately 150 goods and services.[733] The DOD compares the OCONUS LPS and price data with similar data obtained in CONUS.

We stated in the proposed rule that we believe the DOD OCOLAs are an appropriate data source to capture the cost differences of LTCH nonlabor-related inputs purchased in the areas of Hawaii and Alaska compared to the continental U.S. The DOD OCOLAs reflect the relative price differences in a basket of non-housing goods and services that would be consistent with many of the nonlabor-related goods and services that LTCHs purchase (such as pharmaceuticals, food, and cleaning supplies). In addition, unlike the prior approach that relied on CPI data for urban areas, these relative price differences would account for the additional shipping costs to remote areas. Specifically, the DOD OCOLAs are reflective of the specific areas of Alaska and Hawaii where LTCHs are located.

For the proposed COLA factors for LTCHs located in Alaska and Hawaii for FY 2027, we proposed to use the OCOLAs published by DOD effective for January 1, 2026. The DOD OCOLAs are available for 26 Alaska locality areas and 6 Hawaii locality areas. Similar to the COLAs used for Alaska and Hawaii for FY 2022 through FY 2026 that are based on the original OPM COLAs, we proposed to continue to use the four Nonforeign COLA Areas designated by OPM for Alaska and the four Nonforeign COLA Areas designated by OPM for Hawaii as shown in Table V.C.1 of the proposed rule.

For each of the designated OPM areas for cities in Alaska (City of Anchorage, City of Fairbanks, and City of Juneau), if there is more than one DOD OCOLA within a 50-mile radius of the city, we proposed to average the DOD OCOLAs within the designated OPM area to calculate the proposed COLA. Specifically, for the COLA factor for the City of Anchorage, we proposed to average the DOD OCOLAs for the Anchorage and Wasilla locality areas. For the COLA factor for the City of Fairbanks, we proposed to average the DOD OCOLAs for the College, Eielson Air Force Base, and Fairbanks locality areas. For the Rest of Alaska COLA, given that there are IPPS hospitals located in two locality areas (Bethel and Kenai), we proposed to average the DOD OCOLAs for these two locality areas to calculate the proposed COLA. We note there is currently only one LTCH in Alaska, located in Anchorage.

For Hawaii, the OCOLAs published by DOD are generally consistent with the OPM designated areas. To obtain the COLA factor for the OPM designated area of County of Maui and County of Kalawao, we proposed to average the DOD OCOLAs for the Maui and Molokai locality areas. We note there are currently no LTCHs located in Hawaii.

Starting with the FY 2027 payment year, we proposed to no longer cap the COLA factors at 25 percent. We noted that OPM's COLA factors were calculated with a statutorily mandated cap of 25 percent[734] and we had exercised our discretionary authority to adjust payments to LTCHS in Alaska and Hawaii by incorporating this 25-percent cap. We stated that since we proposed to no longer use the OPM COLA factors, we also proposed to exercise our discretionary authority to no longer cap the COLA factors at 1.25. Lastly, for fiscal years after FY 2027, in order to facilitate stability in payment rates, we proposed to continue to update the COLA factors at the same time the labor-related share of the IPPS market basket is updated. In addition, in the proposed rule we solicited comments on this proposed methodology and the use of the DOD OCOLAs, including any comments on how the use of survey data that are specific to Service members, including their access to discounted commissary prices that might be variable by geographic area, may result in differential impacts across the designated areas. We also requested comment on any potential modifications to this proposed methodology, including a potential phase-in of the use of these data or a transition period for implementation.

We received no comments on these proposals and therefore are finalizing this provision without modification. Therefore, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, effective for FY 2027, as we proposed, we used the DOD OCOLAs to determine the COLAs for each of the designated OPM areas in Alaska and Hawaii and no longer capped these COLA factors at 25 percent. Below is a table with the finalized COLA factors for FY 2027, as calculated using this finalized methodology.

TABLE V.C.1: COST-OF LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2027

Areas	FY 2022 to FY 2026	FY 2027
Alaska:		
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22	1.28
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22	1.32
City of Juneau and 80-kilometer (50-mile) radius by road	1.22	1.36
Rest of Alaska	1.24	1.44
Hawaii:		
City and County of Honolulu	1.25	1.20
County of Hawaii	1.22	1.32
County of Kauai	1.25	1.26
County of Maui and County of Kalawao	1.25	1.24

[732] *https://www.travel.dod.mil/Allowances/Overseas-Cost-of-Living-Allowance/.*

[733] Previously, pricing data was collected by Country Allowance Coordinators in each OCONUS location using the Retail Price Schedule. Effective August 2025, the DOD has outsourced the pricing data collection process for OCONUS to a private contractor.

[734] Section 5941 of title 5, United States Code, and Executive Order 10000 (as amended) authorize the payment of COLAs in nonforeign areas (*https://www.opm.gov/policy-data-oversight/pay-leave/pay-systems/nonforeign-areas/*) and states that the allowance may not exceed 25 percent.

D. Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the dual rate LTCH PPS payment structure under section 1206 of Public Law 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the FY 2016 IPPS/LTCH PPS final rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8-percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

To maintain budget neutrality, consistent with the budget neutrality requirement at § 412.523(d)(1) for HCO payments to LTCH PPS standard Federal rate payment cases, we also adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted previously, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS and are also used to determine payments for site neutral payment rate cases. As noted earlier, in determining HCO and the site neutral payment rate payments (regardless of whether the case is also an HCO), we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding CCRs and HCO adjustments for either LTCH PPS payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs in excess of the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. LTCH Total CCR Ceiling

Consistent with our historical practice, as we proposed, we used the best available data to determine the LTCH total CCR ceiling for FY 2027 in this final rule. Specifically, in this final rule, we used our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the March 2026 update of the Provider Specific File (PSF), which is the most recent data available. Accordingly, we are establishing an LTCH total CCR ceiling of 1.342 under the LTCH PPS for FY 2027 in accordance with § 412.525(a)(4)(iv)(C)(*2*) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48117 through 48119).)

We did not receive any public comments on our proposals and are finalizing our proposals as described previously.

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on ''total'' IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C), the SSO policy at § 412.529(f)(4)(iii), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, as we proposed, we are using our established methodology for determining the LTCH PPS statewide average CCRs, based on the most recent complete IPPS ''total CCR'' data from the March 2026 update of the PSF. As we proposed, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that will be effective for discharges occurring on or after October 1, 2026, through September 30, 2027, in Table 8C listed in section VI. of the Addendum of this final rule (and available via the internet on the CMS website).

Under the current LTCH PPS labor market areas, all areas in the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, as we proposed, we are continuing to use, as a proxy, the national average total

CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

Furthermore, although Connecticut, Massachusetts, and North Dakota have areas that are designated as rural under the current LTCH PPS labor market areas, in our calculation of the LTCH statewide average CCRs, there were no trimmed CCR data available from IPPS hospitals located in these rural areas as of March 2026. We refer the reader to section II.A.4.i.(2). of this Addendum for details on the trims applied to the IPPS CCR data from the March 2026 update of the PSF, which are the same data used to calculate the LTCH statewide average total CCRs. Therefore, consistent with our existing methodology, we used the national average total CCR for rural IPPS hospitals for rural Connecticut, Massachusetts, and North Dakota in Table 8C. We note that there were no LTCHs located in these rural areas as of March 2026.

We did not receive any public comments on our proposals. We are finalizing our proposals as described previously.

d. Reconciliation of HCO Payments

Under the HCO policy at § 412.525(a)(4)(iv)(D), the payments for HCO cases are subject to reconciliation (regardless of whether payment is based on the LTCH standard Federal payment rate or the site neutral payment rate). Specifically, any such payments are reconciled at settlement based on the CCR that was calculated based on the cost report coinciding with the discharge. For additional information on the reconciliation policy, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010) and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821), and most recently modified by Change Request 14233 (Transmittal 13428; September 22, 2025) with an update to the outlier reconciliation criteria.

3. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

Under the regulations at § 412.525(a)(2)(ii) and as required by section 1886(m)(7) of the Act, the fixed-loss amount for HCO payments is set each year so that the estimated aggregate HCO payments for LTCH PPS standard Federal payment rate cases are 99.6875 percent of 8 percent (that is, 7.975 percent) of estimated aggregate LTCH PPS payments for LTCH PPS standard Federal payment rate cases. (For more details on the requirements for high-cost outlier payments in FY 2018 and subsequent years under section 1886(m)(7) of the Act and additional information regarding high-cost outlier payments prior to FY 2018, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38544).)

b. Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2027

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments (that is, the target percentage) under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy would continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount for LTCH PPS standard Federal payment rate cases would be determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes had been in effect at the time of those discharges.

In the FY 2027 IPPS/LTCH PPS proposed rule (91 FR 19829 through 19830), for the reasons discussed below, we proposed to depart from our historical methodology for determining the fixed-loss amount, which we used to determine the FY 2026 fixed-loss amount in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37243 through 37247). Under our historical methodology, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been an LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. Due to the lag time in the availability of claims data, under our historical methodology, we inflate charges from the claims data by a uniform factor based on the historical growth in charges for LTCH PPS standard Federal payment rate cases. We then multiply the inflated charges by each provider's best available CCR, which has been adjusted by a factor calculated from historical changes in the average case-weighted CCR for LTCHs. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

On September 22, 2025, we issued Change Request (CR) 14233, which is available at *https://www.cms.gov/medicare/regulations-guidance/transmittals/2025-transmittals/r13428cp*. CR 14233 provides additional instructions to MACs that expand the criteria for identifying cost reports MACs are to refer to CMS for approval of outlier reconciliation. The original criteria issued in July 2003 instructed MACS to identify for CMS any instances where: (1) the actual CCR is found to be plus or minus 10 percentage points from the CCR used during that cost reporting period to make outlier payments, and (2) the total outlier payments exceeded $500,000 for that cost reporting period. CR14233 expanded this criteria for cost reports beginning on or after October 1, 2025, by instructing MACs to also identify for CMS any instances where: (1) the actual CCR is found to be plus or minus 20 percent or more from the CCR used during that time period to make outlier payments, and (2) the total outlier payments exceeded $500,000 for that cost reporting period.

For the proposed rule, we analyzed the FY 2023 cost reports to better understand the potential impact the expanded criteria would have on LTCH payments. We found that approximately 2 percent of LTCH cost reports met the original reconciliation criteria, while approximately 24 percent of LTCH cost reports would have met the expanded reconciliation criteria. For the vast majority of the cost reports that would have met the expanded criteria, the LTCHs increased their charges during their cost reporting period at rates that far exceed their costs. This practice of significant year-over-year charge increases has been documented in the charge inflation factors we have calculated in recent rules. (As an example, in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37246), we determined that LTCHs, on average, increased their charges approximately 13 percent from FY 2023 to FY 2024.) Based on the most recent data available for the proposed rule, we determined that LTCHs, on average, increased their charges approximately 17 percent from FY 2024 to FY 2025.

As discussed in greater detail below, in the proposed rule we stated our belief that our historical methodology, which relies on the most recently available data, would not accurately estimate outlier payments for LTCHs in FY 2027. Ordinarily, the best available data to use for ratesetting is the most recently available data. However, in light of the issuance of CR 14233, we do not believe the most recently available data for estimating outlier payments is reflective of the expected LTCH experience in FY 2027. With an incentive to avoid outlier reconciliation, we believe LTCHs will not continue to increase their charges relative to costs at the rates reflected in the most recently available data. Specifically, we do not believe the recent annual increase in average charges of approximately 17 percent is a reliable indicator for forecasting future annual increases in charges that will occur for purposes of estimating outlier payments in FY 2027. Similarly, we do not believe the historical changes in LTCHs' CCRs observed from cost reporting periods subject to only the original criteria can be used to reliably predict future CCR levels for purposes of estimating outlier payments in FY 2027.

In the proposed rule, we discussed that we currently lack sufficient information to reasonably quantify the magnitude a behavioral change would have on charging practices and outlier payment trends in FY 2027. Using a variety of assumptions for charge inflation and degree of outlier reconciliation, in the proposed rule we estimated that a fixed-loss amount that would meet the statutory budget neutral target of estimated LTCH PPS outlier payments in FY 2027 would fall in the range of approximately $67,000 (a decrease of approximately $12,000 compared to the current fixed-loss amount) to $109,000 (an increase of approximately $30,000 compared to the current fixed-loss amount). Given this

wide range of uncertainty in attempting to adopt assumptions about charge inflation and degree of outlier reconciliation for purposes of estimating the fixed-loss amount for FY 2027 and the aforementioned issues with using the historic methodology for purposes of estimating the fixed-loss amount for FY 2027, in the proposed rule we stated our belief that maintaining the fixed-loss amount at its FY 2026 level of $78,936 is a reasonable estimate of a fixed-loss amount that will result in estimated LTCH PPS outlier payments being equal to 7.975 percent of total LTCH PPS payments for FY 2027. Therefore, we proposed a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2027 of $78,936 and stated our belief that setting the FY 2027 fixed-loss amount at the FY 2026 level would provide stability and predictability while allowing CMS time to gain insight into LTCHs' response to the additional reconciliation criteria.

Comment: Several commenters, while supportive of CMS's proposal to maintain the FY 2027 fixed-loss amount at the FY 2026 level, recommended that CMS instead calculate the FY 2027 fixed-loss amount using alternative methodological approaches that commenters believe would produce a lower amount. Like previous years, several commenters requested that CMS return to the methodology employed prior to FY 2022 in which the charge inflation factor was set equal to the market basket update. Some commenters stated this change has been a primary driver of the increases in the fixed-loss amount in recent years. Commenters argued that the prior methodology better aligned the threshold with overall payment growth and provided greater predictability from year to year. Some commenters requested that CMS recalculate the FY 2026 fixed-loss amount using this methodology and cap the FY 2027 fixed-loss amount at the resulting value. Commenters independently calculated that the FY 2026 fixed-loss amount would have been approximately $51,000 under the prior methodology.

Other commenters recommended that CMS calculate the FY 2027 fixed-loss amount using a charge inflation assumption based on IPPS hospital data. These commenters stated that CMS should establish the FY 2027 fixed-loss amount as the lower of the FY 2026 amount or the amount derived using the IPPS charge inflation assumption. These commenters noted that prior to the COVID–19 public health emergency (PHE), the LTCH PPS and IPPS fixed-loss amounts and year-to-year changes were closely aligned, and expressed an expectation that charge growth for LTCHs will return to levels similar to IPPS hospitals as COVID–19 cost effects subside and site-neutral payment policies are fully implemented.

Some commenters encouraged CMS to calculate the fixed-loss amount for the final rule using the most recently available MedPAR claims and cost report data, specifically the June 2026 updates of these data rather than the March 2026 updates, and recommended that if the resulting calculated amount is lower than the FY 2026 amount, CMS should adopt the lower amount rather than maintaining the FY 2026 amount.

Like previous years, a commenter urged CMS to exclude dialysis patients from the FY 2025 claims data when determining the fixed-loss amount, presenting evidence that the cost of treating dialysis patients in LTCHs has significantly increased and is expected to continue to rise. The commenter argued that CMS's ratesetting methodology is unable to capture these rising costs due to the lag in claims and cost report data, and that including these cases skews the calculation of the fixed-loss amount.

Response: We appreciate the feedback and suggestions that commenters provided regarding specific changes to our methodology for determining the fixed-loss amount. As we did in prior rules, we acknowledge that in recent years the calculated fixed-loss amount would have been lower if we had estimated charge inflation based on the market basket update. However, while the market basket methodology would have yielded lower fixed-loss amounts, we reiterate that the methodology would have resulted in high cost outlier payments that significantly exceeded the statutory target compared to the current methodology. For these reasons, we are not adopting commenters' recommendation to revert to the market basket-based charge inflation methodology for FY 2027 nor are we adopting commenters' recommendation to set the FY 2027 amount equal to the amount that would have been determined in FY 2026 using this methodology.

We understand commenters' expectation that LTCH charge growth will return to levels more consistent with IPPS hospitals as the effects of the COVID–19 PHE continue to subside. However, the most recent data available does not yet support that conclusion. Based on the data used in this final rule, we estimate that LTCHs increased their charges on average by 17 percent from FY 2024 to FY 2025, while IPPS hospitals increased their charges on average by 7 percent over the same period. Considering this significant divergence in the most recently available data, we do not believe it would be appropriate to base our LTCH charge inflation assumption on IPPS hospital data. Therefore, we are not adopting commenters' recommendation to calculate the FY 2027 fixed-loss amount using a charge inflation assumption based on IPPS hospital data.

We appreciate the commenters' suggestion to use the most recently available MedPAR claims and cost report data when calculating the fixed-loss amount for this final rule. We are unable to adopt commenters' recommendation to use the June 2026 updates of the MedPAR claims and cost report data, as these data are not available at the time we calculate the rates for this final rule.

With regard to the suggestion to exclude dialysis claims when calculating the fixed-loss amount, as we noted in the FY 2026 final rule, the commenter has again provided evidence supporting their belief that the costs of treating dialysis patients have increased in recent years and are likely to continue to increase. However, we note that if the commenter's assertion that dialysis costs are increasing at a rate faster than other LTCH cases is correct, a potential appropriate technical adjustment under our payment model would not be to exclude these cases. Excluding these cases from the dataset would reduce the accuracy of our payment model by removing standard Federal payment rate cases for which the outlier policy is designed to provide payment support. For these reasons, we are not adopting the recommendation to calculate the FY 2027 fixed-loss amount excluding dialysis patients from the MedPAR claims data.

Comment: Several commenters urged CMS to account for anticipated outlier reconciliation recoupments under the expanded reconciliation criteria when calculating the fixed-loss amount, consistent with CMS's existing approach for the IPPS. Commenters argued that the new reconciliation criteria will ''lower the bar'' for reconciliation and result in a greater number of LTCHs having outlier payments recouped at cost report settlement. Commenters stated that CMS's failure to make this adjustment for LTCHs, while doing so for IPPS hospitals, will result in artificially high fixed-loss thresholds that do not reflect the actual outlier payments LTCHs will remain after cost report settlement.

Response: As we stated in the FY 2026 IPPS/LTCH PPS final rule, we agree with commenters that incorporating an estimate of reconciled outlier dollars for the fiscal year into our methodology for determining the fixed-loss amount would improve its accuracy. We continue to believe that it would be difficult to predict the specific LTCHs that will have CCRs and outlier payments reconciled in any given year, as there are many different factors that determine whether a specific case will be eligible for an outlier payment, including the CCR, the estimated costs of the case, the payment amounts, and the fixed-loss amount itself. We also note, commenters did not provide any suggestions for how to make such predictions or develop a proxy for the specific LTCHs that will have CCRs and outlier payments reconciled in any given year. Historically, under the IPPS, an outlier reconciliation adjustment to the fixed-loss threshold has generally been computed using the percentage of total outlier reconciliation dollars to total Federal payments for a historical cost report data year. Rather than trying to predict which claims and/or hospitals may be subject to outlier reconciliation, we adopted a methodology that incorporates an estimate of outlier reconciliation dollars based on actual outlier reconciliation amounts reported in historical cost reports, as we believe such an approach would be more feasible and would provide a better estimate and predictor of outlier reconciliation for the upcoming fiscal year (84 FR 42623). We continue to believe that any such adjustment to the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases would involve similar considerations and could therefore be computed in a similar manner.

In direct response to comments received in the FY 2026 rulemaking cycle, CMS requested supplemental LTCH PPS outlier reconciliation payment data from the MACs

for FY 2023 to potentially be used in FY 2027 rulemaking. The data CMS received is comparable to the supplemental outlier reconciliation data requested and received for IPPS hospitals, as discussed in detail in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69948 through 69955). CMS considered how these data could be incorporated into the methodology for determining the FY 2027 LTCH PPS fixed-loss amount. As discussed in the proposed rule, we found that 24 percent of FY 2023 LTCH cost reports would have met the expanded reconciliation criteria. We also stated in the proposed rule our belief that LTCHs will be incentivized to take steps to avoid outlier reconciliation. Therefore, we determined that these supplemental data could not be used directly to accurately estimate outlier reconciliation payments for LTCHs in FY 2027, as the data reflect a degree of outlier reconciliation that we do not expect to be representative of future years, once LTCHs have had the opportunity to adjust their behavior in response to the expanded reconciliation criteria.

As discussed in the proposed rule, we ran payment simulations that determined fixed-loss amounts assuming a varying degree of reconciliation, and these data helped inform the parameters used in those simulations, which led to our proposal to maintain the fixed-loss amount at its FY 2026 level. For these reasons, we are not adopting commenters' suggestion for FY 2027 to directly incorporate an estimate of outlier reconciliation into our methodology for determining the fixed-loss amount. However, we continue to welcome recommendations or suggestions on how to account for the potential impact of reconciliation in the determination of the fixed-loss amount for LTCH PPS standard Federal payment rate cases for future rulemaking.

Comment: A commenter recommended that CMS set the threshold at the lowest value within the estimated range of $67,000 to $109,000 presented by CMS in the proposed rule—a range derived by applying varying assumptions for charge inflation and the degree of outlier reconciliation—that would meet the statutory requirement that outlier payments equal approximately 8 percent of total LTCH PPS payments. The commenter stated that this approach would better support LTCHs that care for highly complex patients while remaining consistent with statutory obligations.

Response: We do not believe it would be appropriate to anchor the fixed-loss amount to either extreme end of this range. The lower bound of $67,000 and the upper bound of $109,000 each reflect our most extreme assumptions regarding charge inflation and the degree of outlier reconciliation, and we do not believe either set of assumptions is the most likely to reflect actual LTCH experience in FY 2027. We believe it is most reasonable to assume that the actual values for both charge inflation and the degree of outlier reconciliation will fall somewhere between these extremes, and that a fixed-loss amount at either end of the range would therefore be much less likely to result in actual outlier payments meeting the statutory target.

Comment: A commenter requested that CMS account for the effects of the COVID–19 PHE on the FY 2024 cost report data being used for FY 2027 LTCH PPS ratesetting. The commenter stated that the FY 2024 cost report data used for FY 2027 ratesetting overlaps with the PHE period and that the COVID–19 utilization and acuity patterns that occurred in FY 2024 will not resemble those expected in FY 2027. The commenter cited CDC data demonstrating decreases in COVID–19 hospitalizations and deaths since FY 2024 and provided facility-level data on the total number of COVID–19 patients treated at their LTCHs from 2020 to 2024. The commenter also argued that the FY 2024 cost report data reflects abnormally elevated pandemic-era labor costs that CMS is not accounting for when setting FY 2027 rates. The commenter additionally argued that CMS's proposal to maintain the FY 2026 fixed-loss amount for FY 2027 does not resolve the commenter's concern that the FY 2026 fixed-loss amount was itself calculated using data the commenter asserts were materially affected by the COVID–19 PHE—specifically FY 2023 cost report data and FY 2024 claims data. The commenter argued that carrying this amount forward without modification compounds what the commenter characterized as an error in the FY 2026 ratesetting and requested that CMS apply appropriate modifications to the data underlying the FY 2026 fixed-loss amount to account for the PHE's impact before carrying that amount forward into FY 2027.

Response: We disagree with the commenter's statement that the FY 2024 cost report data overlaps with the COVID–19 PHE period. The COVID–19 PHE expired on May 11, 2023, and the earliest FY 2024 cost reports began on October 1, 2023—nearly five months after the PHE expired. Furthermore, approximately 57 percent of LTCHs' FY 2024 cost reports began on or after June 1, 2024—more than a year after the PHE expired. Therefore, the FY 2024 cost report data used in this final rule does not overlap with the PHE period. We also disagree with the commenter's assertion that utilization at LTCHs in FY 2024 was significantly influenced by COVID–19. Our review of the FY 2024 MedPAR file found that approximately 3 percent of LTCH standard Federal payment rate cases included a COVID–19 diagnosis, which is not significantly different from the approximately 2 percent observed in the FY 2025 MedPAR file. We do not believe the level of COVID–19 prevalence in the FY 2024 claims data is sufficient to conclude that FY 2024 LTCH utilization and acuity patterns were significantly distorted by COVID–19 in a manner that would meaningfully affect FY 2027 ratesetting calculations. We also disagree with the commenter's assertion that CMS needs to account for elevated pandemic labor costs in the FY 2024 cost report data when determining FY 2027 rates. While the commenter provided evidence that labor costs increased significantly during the PHE, they did not provide evidence that these costs are no longer elevated and wouldn't be representative of expected costs in FY 2027. Rather the commenter stated in their letter that labor costs at their facilities remain abnormally high. For these reasons, we are not adopting the commenter's recommendation to apply modifications to the FY 2024 cost report data used in FY 2027 ratesetting to account for the effects of the COVID–19 PHE.

We also disagree with the commenter's assertion that CMS did not properly account for the impact of the COVID–19 PHE on the FY 2023 cost report data and FY 2024 claims data used to determine the FY 2026 fixed-loss amount. We discussed in the FY 2026 IPPS/LTCH PPS final rule (90 FR 37243 through 37244) why we did not believe such adjustments were appropriate. For the same reasons discussed in that final rule, we do not believe it would be appropriate to apply modifications to the data underlying the FY 2026 fixed-loss amount for purposes of determining the FY 2027 fixed-loss amount.

Comment: Several commenters asserted that the implementation of the dual payment rate structure has contributed significantly to the increases in the fixed-loss amount in recent years. Commenters noted that because CMS only uses cases that would have been paid the standard Federal rate, the claims dataset used in the calculation is smaller and thus more susceptible to year-to-year fluctuations. Commenters also stated that the dual payment rate structure has incentivized LTCHs to prioritize higher-acuity admissions through the ICU and Ventilator Criterion exceptions to site-neutral payment, making these patients more likely to qualify for outlier payments. Commenters further stated that CMS has not updated its outlier policies to reflect the changes caused by the implementation of the dual payment rate system. Several commenters requested that CMS implement a non-budget neutral cap on future increases to the fixed-loss amount. Some commenters stated a cap is necessary until CMS has had time to adopt permanent reforms to its outlier policies. Some commenters stated that this cap would be similar to the cap policies CMS already applies to the LTCH PPS wage index and MS–LTC–DRG relative weights. Some commenters stated that the cap should be set equal to the annual market basket percent increase. Others requested that CMS establish a minimum two-year transition period before any future fixed-loss amount increases take effect.

Response: We agree with commenters that the implementation of the dual payment rate structure has led to fewer standard Federal rate cases, thereby resulting in lower aggregate LTCH PPS standard Federal rate payments. We also understand commenters' concerns regarding the concentration of standard Federal payment rate cases among a smaller and higher-acuity claims dataset under the dual rate payment structure, and the potential impact this may have on the fixed-loss amount calculation. Section 1886(m)(7) of the Act directs the Secretary to establish a fixed-loss amount for LTCH PPS standard Federal payment rate cases that would result in total estimated outlier payments being equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Implementing a cap or transition policy of the types requested by commenters would result in fixed-loss amounts that do not achieve the statutory target of 7.975 percent,

and we therefore do not believe it would be appropriate to adopt such an approach at this time. We note that the LTCH PPS wage index and MS–LTC–DRG relative weights cap policies referenced by some commenters are applied in a budget neutral manner.

Comment: A commenter disputed CMS's assertion in the proposed rule that most of the LTCHs whose FY 2023 cost reports would have met the expanded criteria increased their charges during their cost reporting period at rates that far exceed their costs. The commenter argued that that pandemic-era charge increases were driven by genuine cost pressures rather than profit-maximization.

Response: We disagree with the commenter. We believe the historical FY 2023 cost report data referenced in the proposed rule clearly demonstrate that these LTCHs increased their charges at rates that greatly exceeded their growth in costs during that period. Our analysis of FY 2023 cost report data found that the actual CCRs for approximately 23 percent of LTCHs were at least 20 percent lower than their ''paid CCRs'' (historical CCRs that were used to make claim payments). This means that for nearly one in four LTCHs, the actual relationship between costs and charges in FY 2023 had declined substantially relative to the historical cost reporting period from which their paid CCR was calculated.

Tentative settlement of a cost report typically occurs within 8 months after the close of the cost reporting period, therefore, the paid CCRs in effect during FY 2023 were generally derived from cost reports covering FY 2021 or FY 2022. (For example, the CCR from a LTCH's cost report period that ended on 3/31/2022 would typically be the paid CCR used for claim payments beginning 11/1/2022.) For simplicity, if we assume the paid CCRs were calculated from FY 2021 cost reports, an LTCH's charges would need to have grown at a rate of approximately 12 percentage points per year faster than costs between FY 2021 and FY 2023 for its CCR to decline 20 percent.

To illustrate, assume an LTCH's CCR for FY 2021 is 1.00. For the LTCH's CCR to decline 20 percent by FY 2023, the FY 2021 CCR must fall from 1.00 to 0.80. If costs grow at 3.0 percent per year (a factor of 1.030), the numerator of the CCR (costs) would increase by 6.09 percent (or 1.030×1.030) in 2 years. For the CCR to be equal to 0.80, the denominator of the CCR (charges) would have to increase by 32.61 percent (a factor 1.3261) in 2 years (that is, CCR = costs/charges = 1.0609/1.3261 = 0.80). This is an annual growth in charges of approximately 15.2 percent per year ($\sqrt{1.3261} = 1.1515$ or 15.2 percent per year). Therefore, the annual charge growth was approximately 12 percentage points per year faster than the annual cost growth from FY 2021 to FY 2023 (15.2 percent annual charge growth − 3.0 percent annual cost growth = 12.2 percentage points). Thus, for a hospital's CCR to be 20 percent lower by FY 2023, its billed charges would have had to rise dramatically faster than its actual costs (that is, about 12 percentage points more each year.)

Comment: A commenter requested that CMS disclose its projected FY 2026 LTCH high-cost outlier expenditures and assess proximity to the approximately 8 percent outlier target, as provided in prior proposed rules.

Response: We understand the commenter's interest in these projections. In prior proposed rules, we were able to provide projected LTCH high-cost outlier expenditures for the year preceding the ratesetting year—for example, projected FY 2025 outlier expenditures in the FY 2026 rule—and assess proximity to the 8 percent outlier target, because the historical data underlying our payment model provided a reliable basis for producing such projections. As discussed in detail in this proposed rule and described previously, the historical data currently available for projecting LTCH high-cost outlier payments are subject to significant uncertainty. Specifically, the same concerns regarding the reliability of the historical data that preclude us from determining a fixed-loss amount for FY 2027 using our historical methodology also hinder our ability to produce a reliable projection of FY 2026 outlier expenditures.

Comment: Several commenters expressed support for CMS's proposal to maintain the FY 2027 fixed-loss amount at the FY 2026 level of $78,936. Commenters acknowledged the uncertainty surrounding charge inflation and the implementation of the new outlier reconciliation policy and agreed that maintaining the threshold at the current amount represents a reasonable and measured approach that promotes stability and predictability for LTCHs while CMS continues to evaluate evolving data and provider behavior. Other commenters argued that requiring a hospital to absorb $78,936 in losses before qualifying for outlier payment undermines the intended purpose of the outlier policy and imposes financial and operational harm on LTCHs and the Medicare beneficiaries they serve. The commenters noted that the current fixed-loss amount is causing a negative effect on LTCH admissions of high-acuity patients, as LTCHs are increasingly unwilling to absorb the fixed-loss amount. The commenter argued that these declines in admissions are creating downstream consequences, including increased backlogs in IPPS hospital ICUs, fewer discharge options for complex patients, and additional LTCH closures.

Response: We thank the commenters for their support of our proposal to maintain the FY 2027 LTCH PPS high-cost outlier fixed-loss amount at the FY 2026 level of $78,936. We agree with commenters that keeping the threshold unchanged is a reasonable and measured approach that promotes stability and predictability for LTCHs while we continue to assess the data and provider behavior. We understand the comments on the impact the fixed-loss amount has on LTCH finances and access to care under the LTCH PPS and will continue to consider those issues for future rulemaking. As discussed in detail earlier in this section, we have considered and are not adopting the various alternative recommendations made by commenters that they believe would result in a lower fixed-loss amount for FY 2027.

After consideration of all comments received, we are finalizing our proposal to maintain the FY 2027 LTCH PPS high-cost outlier fixed-loss amount at its FY 2026 level of $78,936. We continue to believe that maintaining the fixed-loss amount at its FY 2026 level of $78,936 is a reasonable estimate of a fixed-loss amount that will result in estimated LTCH PPS outlier payments being equal to 7.975 percent of total LTCH PPS payments for FY 2027. We intend to reassess the appropriateness of returning to our historical calculation methodology for future years as more representative data becomes available.

Therefore, under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, as we proposed, we are establishing a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2027 of $78,936 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2027 payments for such cases. As such, we will make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the proposed adjusted LTCH PPS standard Federal payment rate payment and the fixed-loss amount for LTCH PPS standard Federal payment rate cases of $78,936).

4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 and FY 2018 because the historical claims data available in each of these years were not all subject to the LTCH PPS dual rate payment system. Similarly, for FYs 2019 through 2025, we continued to rely on these considerations and actuarial projections because, due to the transitional blended payment policy for site neutral payment rate cases and the provisions of section 3711(b)(2) of the CARES Act, the historical claims data available in each of these years were not subject to the full effect of the site neutral payment rate.

For FYs 2016 through 2025, our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for

cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for FYs 2016 through 2025 would be equal to the IPPS fixed-loss amount for that particular fiscal year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the corresponding IPPS fixed-loss amounts for FYs 2016 through 2025.

In the FY 2026 IPPS/LTCH PPS final rule (90 FR 37247) we discussed that section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases. This waiver applied to patients admitted during the COVID–19 PHE period and expired on May 11, 2023. Although the vast majority of LTCH discharges in FY 2024 were not subject to the waiver of the application of the site neutral payment rate, we believed LTCHs' admission patterns may still have been adapting to the expiration of the waiver of the application of the site neutral payment rate. Therefore, we did not believe it was appropriate to use FY 2024 data to develop a fixed-loss amount for site neutral payment rate cases for FY 2026. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the FY 2026 IPPS fixed-loss amount of $40,397 (90 FR 37247).

As discussed above, the waiver of the application of the site neutral payment rate under section 3711(b)(2) of the CARES Act expired on May 11, 2023. While FY 2024 and FY 2025 claims data reflect discharges that were not subject to this waiver, we believe that only two years of data subject to the full application of the site neutral payment rate is not sufficient for establishing a separate methodology for determining the fixed-loss amount for site neutral payment rate cases. We remain concerned that LTCH admission patterns may still be evolving following the expiration of the PHE waiver, and that adjusting our current policy based on this limited period of data would not be appropriate. We will continue to monitor claims data in future years to assess whether adjustments to this policy may be warranted as we accumulate a more robust dataset reflecting the post-PHE environment. For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for LTCHs for FY 2027 is the IPPS fixed-loss amount for FY 2027.

Accordingly, for FY 2027, as we proposed, we are establishing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the IPPS fixed-loss amount. That is, we are establishing a fixed-loss amount for site neutral payment rate cases of $49,346, which is the same FY 2027 IPPS fixed-loss amount discussed in section II.A.4.i.(2). of the Addendum of this final rule. Accordingly, under this policy, for FY 2027, we will calculate an HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the site neutral payment rate payment and the fixed-loss amount for site neutral payment rate cases of $49,346).

In establishing an HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases is budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2027 would not result in any increase in estimated aggregate FY 2027 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2027. Consistent with our historical practice, as we proposed, we are continuing this policy.

As discussed earlier, consistent with the IPPS HCO payment threshold, we estimate the fixed-loss threshold would result in FY 2027 HCO payments for site neutral payment rate cases to equal 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2027 would not result in any increase in estimated aggregate FY 2027 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2027. To achieve this, for FY 2027, as we proposed, we are applying a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as 1.0 − 5.1/100 = 0.949) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with our current policy, this HCO budget neutrality adjustment will not be applied to the HCO portion of the site neutral payment rate amount (81 FR 57309).

Comment: A commenter expressed concern with the proposed increase to the fixed-loss amount for site-neutral rate cases, stating it would result in fewer cases qualifying for an outlier payments and result in hospitals absorbing more financial risk for expensive and highly complex patients.

Response: We acknowledge the commenters' concern. We note that the commenter did not suggest any modifications for CMS to make in establishing the fixed-loss amount for site-neutral rate cases in this final rule. We believe it is reasonable for LTCH PPS site neutral payment rate cases to receive similar HCO payments to those cases that would be paid under the IPPS while we assess whether establishing a separate methodology for determining the fixed-loss amount for site neutral payment rate cases is warranted. Therefore, after consideration of comments received, we are finalizing our proposals as described previously, without modification.

E. Update to the IPPS Comparable Amount To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' under the SSO policy at § 412.529 and the ''IPPS equivalent amount'' under the site neutral payment rate at § 412.522. Historically, the determination of both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' includes an amount for inpatient operating costs ''for the costs of serving a disproportionate share of low-income patients.'' Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under the age of 65 who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all hospitals that receive Medicare DSH payments.

To reflect the Medicare DSH payment adjustment methodology statutory changes in section 3133 of the Affordable Care Act in the

calculation of the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS, we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766) that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that are based on IPPS rates). We also stated, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

As discussed in the FY 2027 IPPS/LTCH PPS proposed rule (91 FR 19832), for FY 2027, based on the most recent data available at that time, we proposed to establish that the calculation of the ''IPPS comparable amount'' under § 412.529 would include an applicable operating Medicare DSH payment amount that is equal to 73.75 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we proposed that, if more recent data became available, we would use that data to determine the applicable operating Medicare DSH payment amount used to calculate the ''IPPS comparable amount'' in the final rule.

We did not receive any public comments in response to our proposal, and as such are finalizing this proposal. However, as we proposed, we are determining the applicable operating Medicare DSH payment amount used to calculate the ''IPPS comparable amount'' in this final rule using more recent data.

For FY 2027, as discussed in greater detail in section IV.E.2.b. of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 67.14 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2027. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act is adjusted to 50.36 percent (the product of 75 percent and 67.14 percent) and the resulting amount is used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2027, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 75.36 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 50.36 percent = 75.36 percent). Therefore, for FY 2027, consistent with our proposal, we are establishing that the calculation of the ''IPPS comparable amount'' under § 412.529 will include an applicable operating Medicare DSH payment amount that is equal to 75.36 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act.

F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2027

Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages; we make this adjustment by multiplying the labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the FY 2027 values are shown in Tables 12A through 12B listed in section VI. of the Addendum of this final rule and are available via the internet on the CMS website). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the FY 2027 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing an LTCH PPS standard Federal payment rate for FY 2027 of $52,132.76, as discussed in section V.A. of this Addendum. We illustrate the methodology to adjust the LTCH PPS standard Federal payment rate for FY 2027, applying our LTCH PPS amounts for the standard Federal payment rate, MS–LTC–DRG relative weights, and wage index in the following example:

Example: During FY 2027, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in CBSA 16984, which has a FY 2027 LTCH PPS wage index value of 1.0102 (as shown in Table 12A listed in section VI. of the Addendum of this final rule). The Medicare patient case is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2027 of 0.9678 (as shown in Table 11 listed in section VI. of the Addendum of this final rule). The LTCH submitted quality reporting data for FY 2027 in accordance with the LTCH QRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted Federal prospective payment for this Medicare patient case in FY 2027, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted FY 2027 LTCH PPS standard Federal payment rate ($52,132.76) by the labor-related share (73.0 percent) and the wage index value (1.0102). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted LTCH PPS standard Federal payment rate (27.0 percent; adjusted for cost of living, if applicable) to determine the adjusted LTCH PPS standard Federal payment rate, which is then multiplied by the MS–LTC–DRG relative weight (0.9678) to calculate the total adjusted LTCH PPS standard Federal payment for FY 2027 ($50,829.77). The table illustrates the components of the calculations in this example.

EXAMPLE: LTCH'S TOTAL ADJUSTED FEDERAL PROSPECTIVE PAYMENT

Unadjusted LTCH PPS Standard Federal Prospective Payment Rate	$52,132.76
Labor-Related Share	x 0.730
Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= $38,056.91
Wage Index (CBSA 16984)	x 1.0102
Wage-Adjusted Labor Share of the LTCH PPS Standard Federal Payment Rate	= $38,445.09
Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate ($52,132.76 x 0.270)	+ $14,075.85
Adjusted LTCH PPS Standard Federal Payment Amount	= $52,520.94
MS-LTC-DRG 189 Relative Weight	x 0.9678
Total Adjusted LTCH PPS Standard Federal Prospective Payment	= $50,829.77

VI. Tables Referenced in This Final Rule Generally Available Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this final rule and in the Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2026, for the FY 2027 rulemaking cycle, the IPPS and LTCH PPS tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be on the CMS website. Specifically, all IPPS tables listed in the final rule, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E, will generally be available on the CMS website. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

Tables 7A and 7B historically contained the Medicare prospective payment system selected percentile lengths of stay for the MS–DRGs for the prior year and upcoming fiscal year. We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49452), we finalized beginning with FY 2023, to provide the percentile length of stay information previously included in Tables 7A and 7B in the supplemental AOR/BOR data file. The AOR/BOR files can be found on the FY 2027 IPPS final rule home page on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

As discussed in section II.E.6. of the preamble to this final rule, for certain FY 2027 new technology add-on payment applications, we are making available separate tables listing the ICD–10–PCS codes or ICD–10–CM codes that would be used to identify the relevant indication, or exclude cases related to a different technology, for purposes of the new technology add-on payment, in Table 10 associated with this final rule.

After hospitals have been given an opportunity to review and correct their calculations for FY 2027, we will post Table 15 (which will be available via the CMS website) to display the final FY 2027 readmissions payment adjustment factors that will be applicable to discharges occurring on or after October 1, 2026. We expect Table 15 will be posted on the CMS website in the Fall 2026.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified in this final rule should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this final rule are generally available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* Click on the link on the left side of the screen titled ''FY 2027 IPPS Final Rule Home Page'' or ''Acute Inpatient -Files- for Download.''

* For LTCHs that fail to submit quality reporting data for FY 2027 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Statement of Need

This final rule is necessary to make payment and policy changes under the IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS. Also, as we note later in this Appendix, the primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In

addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule, such as the updates to the IPPS and LTCH PPS rates, and the policies and discussions relating to applications for new technology add-on payments, are needed to further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries.

We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and provide equitable payments, while avoiding or minimizing unintended adverse consequences.

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

a. Update to the IPPS Payment Rates

In accordance with section 1886(b)(3)(B) of the Act and as described in section VI.B. of the preamble of this final rule, we are updating the national standardized amount for inpatient hospital operating costs by the applicable percentage increase of 2.3 percent (that is, a 3.2 percent market basket percentage increase with a reduction of 0.9 percentage point for the productivity adjustment). We are also updating the hospital-specific rates by the applicable percentage increase (including the market basket percentage increase and the productivity adjustment).

Subsection (d) hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 1.5 percent, which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data. Hospitals that are not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of −0.1 percent, which reflects a three-quarter percent reduction of the market basket update for not meeting the requirements to be a meaningful EHR user.

Hospitals that are not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of −0.9 percent, which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data and a three-quarter percent reduction of the market basket update for not meeting the requirements to be a meaningful EHR user.

b. Changes for the Add-On Payments for New Services and Technologies

Consistent with sections 1886(d)(5)(K) and (L) of the Act, we review applications for new technology add-on payments based on the eligibility criteria at 42 CFR 412.87. As set forth in 42 CFR 412.87(f)(1), we consider whether a technology meets the criteria for the new technology add-on payment and announce the results as part of the annual updates and changes to the IPPS. New technology add-on payments are not budget neutral.

As discussed in section II.E.7. of the preamble of this final rule, we are finalizing our proposal that for all applications received for new technology add-on payments for FY 2028 and subsequent fiscal years, including applications for FDA-designated Breakthrough Devices and QIDPs, or drugs approved under FDA's LPAD pathway, we would evaluate whether the technology is new and not substantially similar to an existing technology, and the technology must demonstrate that it meets the requirements under § 412.87(b) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries, unless the technology is specifically grandfathered under the alternative pathway eligibility criteria. We note that this policy will be effective beginning with applications received for new technology add-on payments for FY 2028 and subsequent fiscal years, and there will be no impact of this policy in FY 2027. In addition, we are finalizing our proposal that all applications received for OPPS device pass-through payment status on or after October 1, 2026, including all applications received through the remainder of the CY 2028 OPPS application cycle ending on March 1, 2027, and subsequent calendar years would have to demonstrate that the technology meets the requirements currently reflected at § 419.66(c)(2)(i), unless specifically grandfathered under the alternative pathway eligibility criteria.

If all of the future Breakthrough Devices, QIDPs, and LPADs that would have applied for new technology add-on payments would have been approved under the criteria at § 412.87(b), this change has no impact relative to current policy. To the extent that there are future Breakthrough Devices, QIDPs, and LPADs that are the subject of applications for new technology add-on payments under the traditional pathway, and those applications would have been approved under the current new technology add-on payment alternative pathway criteria, but would not meet the requirement to be new and not substantially similar to existing technologies and the requirements under § 412.87(b), this change would result in additional savings, but the savings are not estimable. Additional savings would be reduced to the extent that future Breakthrough Devices, QIDPs, and LPADs are grandfathered under the alternative pathway eligibility criteria.

For future Breakthrough Devices that would have applied for OPPS device pass-through payment and would have met the criteria currently at § 419.66(c)(2)(i), this change has no impact relative to current policy. To the extent that there are future Breakthrough Devices that are the subject of applications for OPPS device pass-through payment under the traditional pathway, and those applications would have been approved under the current OPPS device pass-through payment alternative pathway criteria, but would not meet the requirements currently under § 419.66(c)(2)(i), this change would result in additional savings, but the savings are not estimable. Additional savings would be reduced to the extent that future Breakthrough Devices, QIDPs, and LPADs are grandfathered under the alternative pathway eligibility criteria.

c. Continued Transition for the Discontinuation of the Low Wage Index Hospital Policy

In the FY 2025 interim final action with comment period (IFC) (89 FR 80405 through 80421), we recalculated the FY 2025 IPPS hospital wage index to remove the low wage index hospital policy for FY 2025. We also removed the low wage index budget neutrality factor from the FY 2025 standardized amounts. For FY 2026 and subsequent fiscal years, consistent with the FY 2025 IFC, after considering the D.C. Circuit's decision in *Bridgeport Hospital* v. *Becerra,* we discontinued the low wage index hospital policy and the application of the low wage index budget neutrality factor to the standardized amounts (90 FR 36854).

For FY 2025 and FY 2026, consistent with our past practice to establish temporary transition policies to mitigate short-term instability and payment fluctuations, we established transition policies for hospitals significantly impacted by the discontinuation of the low wage index hospital policy using our authority under section 1886(d)(5)(I) of the Act. The transitional payment exception for FY 2025 for those hospitals was equal to the additional FY 2025 amount a hospital would have been paid under the IPPS if its FY 2025 wage index were equal to 95 percent of its FY 2024 wage index. The transitional payment exception for FY 2026 was equal to the additional FY 2026 amount the hospital would be paid under the IPPS if its FY 2026 wage index were equal to 90.25 percent of its FY 2024 wage index.[735] For FY 2025, we opted not to budget neutralize the interim transition policy given the timing of the *Bridgeport Hospital* v. *Becerra* decision. However, for FY 2026, we finalized a payment transition with a budget neutrality adjustment through notice-and-comment rulemaking for hospitals facing significant reductions over two years that would not be sufficiently mitigated by the wage index cap policy at 42 CFR 412.64(h)(7). We refer readers to the FY 2025 IFC (89 FR 80405 through 80421) and to the FY 2026 IPPS/LTCH PPS Final Rule (90 FR 36855 through 36857) for a full discussion of these transitional payment policies.

Some hospitals that previously benefitted from the low wage index hospital policy would continue to experience decreases of approximately 5 percent or more per year from their FY 2024 wage index (with the low wage index hospital policy applied). Therefore, we proposed to extend the transitional exception to the calculation of payments for FY 2027 for these hospitals in the same manner as we did for the FY 2026 wage index. In section III.F.6. of the preamble to this final rule, for FY 2027 we are finalizing as proposed to use our authority under section 1886(d)(5)(I)(i) of the Act twice. First, we are finalizing to adopt a narrow transitional exception to the calculation of FY 2027 IPPS payments for

[735] 90.25 percent = 95 percent for FY 2025 * 95 percent for FY 2026. This can also be expressed as .95^2.

low wage index hospitals significantly impacted by the discontinuation of the low wage index hospital policy. Second, we are finalizing to exercise our authority again to do so in a budget neutral manner. We refer readers to section III.F.6. of the preamble to this final rule for a detailed discussion of the continued transition for the discontinuation of the low wage index hospital policy, which is being implemented in a budget-neutral manner.

d. Additional Payment for Uncompensated Care to Medicare Disproportionate Share Hospitals (DSHs) and Supplemental Payment

In this final rule, as required by section 1886(r)(2) of the Act, we are updating our estimates of the 3 factors used to determine uncompensated care payments for FY 2027. Beginning with FY 2023 (87 FR 49036 through 49038), we adopted a multiyear averaging methodology to determine Factor 3 of the uncompensated care payment methodology, which helps mitigate any large fluctuations in uncompensated care payments from year to year. Under this methodology, for FY 2025 and subsequent fiscal years, we determine Factor 3 for all eligible hospitals using a 3-year average of the data on uncompensated care costs from Worksheet S–10 for the 3 most recent fiscal years for which audited data are available. We are using a 3-year average of audited data on uncompensated care costs from Worksheet S–10, from the FY 2021, FY 2022, and FY 2023 cost reports, to calculate Factor 3 for FY 2027 for all eligible hospitals.

Beginning with FY 2023 (87 FR 49047 through 49051), we also established a supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico. In section IV.D. of the preamble of this final rule, we summarize the ongoing methodology for supplemental payments.

e. Rural Community Hospital Demonstration Program

We note, in section V.N. of the preamble of this final rule, we discuss the Rural Community Hospital (RCH) demonstration program. In past years, we made an adjustment to ensure the effects of the RCH demonstration program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. As discussed in that section, as we are not yet able to finalize the FY 2027 estimated costs of the demonstration at this time, we did not propose to apply a budget neutrality offset in this FY 2027 IPPS/LTCH PPS proposed rule. Rather, we proposed to apply budget neutrality offsets for both FY 2027 and FY 2028 to the national IPPS rates in the FY 2028 IPPS/LTCH PPS rulemaking. We would also incorporate any statutory change that might affect the methodology for determining hospital costs either with or without the demonstration. We refer the reader to section VI.N. of the preamble of this final rule for complete details on this proposal.

2. Frontier Community Health Integration Project (FCHIP) Demonstration

The Frontier Community Health Integration Project (FCHIP) demonstration was authorized under section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275), as amended by section 3126 of the Affordable Care Act of 2010 (Pub. L. 114–158), and most recently re-authorized and extended by the Consolidated Appropriations Act of 2021 (Pub. L. 116–260). The legislation authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care in order to improve access to and better integrate the delivery of acute care, extended care and other health care services to Medicare beneficiaries in certain rural areas. The FCHIP demonstration initial period was conducted in 10 critical access hospitals (CAHs) from August 1, 2016, to July 31, 2019, and the demonstration ''extension period'' began on January 1, 2022, to run through June 30, 2027.

The authorizing legislation requires the FCHIP demonstration to be budget neutral. In this final rule, we proposed to continue with the budget neutrality approach used in the demonstration initial period for the demonstration extension period—to offset payments across CAHs nationally—should the demonstration incur costs to Medicare.

3. Update to the LTCH PPS Payment Rates

The update to the LTCH PPS standard Federal payment rate for FY 2027 is discussed in section VIII.C. of the preamble of this final rule. For FY 2027, we are establishing an annual market basket update to the LTCH PPS standard Federal payment rate of 2.3 percent (that is, the 3.2 percent market basket increase with a reduction of 0.9 percentage point for the productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act). LTCHs that failed to submit quality data, as required by 1886(m)(5)(A)(i) of the Act will receive an update of 0.3 percent for FY 2027, which reflects a 2.0 percentage point reduction for failure to submit quality data.

4. Hospital Quality Programs

Section 1886(b)(3)(B)(viii) of the Act requires subsection (d) hospitals to report data in accordance with the requirements of the Hospital Inpatient Quality Reporting Program for purposes of measuring and making publicly available information on health care quality and links the quality data submission to the annual applicable percentage increase. Sections 1886(b)(3)(B)(ix), 1886(n), and 1814(l) of the Act require eligible hospitals and CAHs to demonstrate they are meaningful users of certified EHR technology for purposes of electronic exchange of health information to improve the quality of health care and link the submission of information demonstrating meaningful use to the annual applicable percentage increase for eligible hospitals and the applicable percent for CAHs. Section 1886(m)(5) of the Act requires each LTCH to submit quality measure data in accordance with the requirements of the Long Term Care Hospital Quality Reporting Program for purposes of measuring and making publicly available information on health care quality, and to avoid a 2-percentage point reduction. Section 1886(o) of the Act requires the Secretary to establish a value-based purchasing program under which value-based incentive payments are made in a fiscal year to hospitals that meet the performance standards established on an announced set of quality and efficiency measures for the fiscal year. The purposes of the Hospital Value-based Purchasing Program include measuring the quality of hospital inpatient care, linking hospital measure performance to payment, and making publicly available information on hospital quality of care. Section 1886(p) of the Act requires a reduction in payment for subsection (d) hospitals that rank in the worst-performing 25 percent with respect to measures of hospital-acquired conditions under the Hospital Acquired Condition Reduction Program for the purpose of measuring HACs, linking measure performance to payment, and making publicly available information on health care quality. Section 1886(q) of the Act requires a reduction in payment for subsection (d) hospitals for excess readmissions based on measures for applicable conditions under the Hospital Readmissions Reduction Program for the purpose of measuring readmissions, linking measure performance to payment, and making publicly available information on health care quality. Section 1866(k) of the Act applies to hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as ''PPS-exempt cancer hospitals'' or ''PCHs'') and requires PCHs to report data in accordance with the requirements of the PCH Quality Reporting Program for purposes of measuring and making publicly available information on the quality of care furnished by PCHs. However, there is no reduction in payment to a PCH that does not report data.

5. Other Provisions

a. Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this final rule, we discuss the alternative payment model called the Transforming Episode Accountability Model (TEAM), is tested under the authority at section 1115A of the Act. Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and CHIP beneficiaries while reducing program expenditures. The underlying issue addressed by TEAM is that under the traditional fee-for-service (FFS) payment system, Medicare makes separate payments to providers and suppliers for items and services furnished to a beneficiary over the course of an episode of care. Because providers and suppliers are paid for each individual item or service delivered, this may lead to care that is fragmented, unnecessary or duplicative, while making it challenging to invest in quality improvement or care coordination that would maximize patient benefit. We anticipate TEAM may reduce costs while maintaining or improving quality of care by bundling payment for items and services for a given episode and holding TEAM participants accountable for spending and quality performance, as well as by providing incentives to promote high quality and efficient care. Further, testing TEAM will allow us to learn more about the patterns of potentially inefficient utilization of health care services, as well as how to improve the

beneficiary care experience during care transitions and incentivize quality improvements for common surgical episodes. This information could inform future Medicare payment policy and potentially establish the framework for managing clinical episodes as a standard practice in Original Medicare.

TEAM was finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986) and subsequent updates were made in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36536)). The final policies within this final rule increase hospital and beneficiary participation, address policy gaps, and make technical or conforming updates to ensure TEAM has sound and well developed technical, administrative, and operational policies.

We received no comments on the statement of need and therefore are finalizing this provision without modification.

b. Comprehensive Care for Joint Replacement Expanded (CJR–X) Model

In section X.C of the preamble of this final rule, we finalize the expansion of the Comprehensive Care for Joint Replacement (CJR) model, with the expanded model referred to as CJR–X. Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and CHIP beneficiaries while reducing program expenditures. CJR–X participants will be accountable for the cost and quality of care for beneficiaries who receive a LEJR episode of care at their hospital. We anticipate the model will reduce costs while maintaining or improving quality of care, as well as by providing incentives to promote high quality and efficient care.

Based on our analysis, the CJR–X model will build upon the successful test of the CJR model. Given the strength of evidence from the CJR Model test, we believe its expansion across all eligible acute care hospitals is the logical follow on to continue driving value-based care for Medicare beneficiaries. Further, we believe CJR–X establishes a solid framework for managing clinical episodes as a standard practice in Original Medicare and could be used to inform episodes of care for Medicare Advantage or other payers.

Under the CJR–X model, acute care hospitals paid under the IPPS and OPPS, with limited exclusions, will be accountable for LEJR episodes of care. We believe the model will benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode. The model will also provide financial incentives for providers to coordinate their efforts to meet patient needs and prevent future costs. CJR–X may benefit beneficiaries by holding hospitals accountable for the quality and cost of care for during the anchor hospitalization or anchor procedure and for 90 days after a beneficiary is discharged from the anchor hospitalization or anchor procedure, which could promote high quality and efficient service delivery that focuses on patient-centered care.

We received no comments on the statement of need and therefore are finalizing this provision without modification.

c. Provisions Regarding Acquisition Costs, Reasonable Costs, and Other Cost-Related Policies

In section X.D. of the preamble of this final rule, we are making payment and policy changes to ensure that Medicare reimburses non-renal organ acquisition costs to IOPOs and HCLs on a reasonable cost basis, in accordance with sections 1881(b)(2)(A) and 1861(v) of the Act. This final rule is also clarifying, revising, and/or codifying, for all providers, Medicare's reasonable cost payment policies related to allowable costs, and clarifying and codifying, for all providers, Medicare's policies related to overhead allocation. This final rule is necessary to increase compliance with reasonable cost principles, increase payment accuracy, and increase provider understanding of reasonable cost principles. This final rule is also necessary to make a technical change to IOPO and HCL appeals policy, by codifying requirements that provide more consistency in the appeals process. Finally, this final rule is necessary to make technical corrections to clarify or correct regulation text.

The finalized policies in this final rule reflect our commitment to increasing payment accuracy for providers paid under reasonable cost principles, assisting providers in understanding reasonable cost principles, assisting IOPOs and HCLs in understanding their appeal rights, and responsibly stewarding the Medicare Trust Fund.

After consideration of public comments received on section X.D.1. (91 FR 19729 through 19736), we are finalizing, with modifications, our proposal to reconcile non-renal organ acquisition costs for IOPOs and HCLs. Specifically, we are finalizing a 2-year implementation delay, effective for cost reporting periods beginning on or after October 1, 2028, rather than the 1-year delay originally proposed. We are also finalizing, with modifications, our proposal regarding the establishment of IOPO non-renal SACs and HCL non-renal testing rates. Rather than requiring the Medicare contractor to establish these rates, we are finalizing a revised approach. IOPOs will submit to the Medicare contractor a reasonable estimate of their non-renal SACs by organ, based on prior year costs and a reasonable, documented estimate of projected costs and organ volumes for the subsequent year. The Medicare contractor will review the estimate for reasonableness and provide approval. Independent HCLs will submit to the Medicare contractor a reasonable estimate of their non-renal testing rates, based on prior year costs and a reasonable, documented estimate of projected testing costs and volumes for the subsequent year. The Medicare contractor will review the estimate for reasonableness and provide approval.

We are also finalizing, with modifications, our proposal regarding rate adjustments. IOPOs must provide the Medicare contractor with an estimated adjusted non-renal SAC by organ, based on actual cost data and a reasonable, documented estimate of costs through the end of its accounting period. The Medicare contractor will review the proposed adjustment for reasonableness and provide approval. Additionally, Independent HCLs must provide the Medicare contractor with adjusted non-renal organ testing rates, based on actual cost data and a reasonable, documented estimate of costs through the end of its accounting period. The Medicare contractor will review the interim rate adjustment for reasonableness and provide approval.

Finally, we are finalizing, as proposed, the policy requiring the Medicare contractor to publish IOPO non-renal SACs and HCL non-renal testing rates. Comments related to IOPO or HCL impacts are included in Appendix A, section I.G.14.a.

After consideration of public comments received on section X.D.2. (91 FR 19736 to 19744), we are finalizing our proposals, with certain modifications, pertaining to longstanding Medicare reasonable cost reimbursement policies applicable to all providers. We are also finalizing our provision pertaining to OPO public education to be effective with the effective date of this final rule; however, we are allowing a 1-year delay in enforcement to address concerns raised by some providers.

After consideration of public comments received on section X.D.3. (91 FR 19744 to 19747), we are finalizing, as proposed, our clarification and codification of cost allocation principles. No modifications were made to this provision. Additionally, after consideration of public comments received on section X.D.4. (91 FR 19747 to 19751), we are finalizing, as proposed, the codification of the discretionary Administrator review of CMS reviewing official determinations with respect to appeals under § 413.420(g) for IOPOs and HCLs. No modifications were made to this provision. Finally, we are also finalizing, as proposed, the technical corrections and clarifications in section X.D.5. (91 FR 19751).

B. Overall Impact

We have examined the impacts of this final rule as required by Executive Order 12866, ''Regulatory Planning and Review''; Executive Order 13132, ''Federalism''; Executive Order 13563, ''Improving Regulation and Regulatory Review''; Executive Order 14192, '' Unleashing Prosperity Through Deregulation''; the Regulatory Flexibility Act (RFA) (Pub. L. 96–354); section 1102(b) of the Social Security Act; and section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select those regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect

on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, or the President's priorities.

A regulatory impact analysis (RIA) must be prepared for a regulatory action that is significant under section 3(f)(1) of E.O. 12866. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1). We have prepared a regulatory impact analysis that to the best of our ability presents the costs and benefits of the rulemaking. OMB has reviewed these regulations, and the Departments have provided the following assessment of their impact.

We estimate that the changes for FY 2027 acute care hospital operating and capital payments will redistribute amounts in excess of $100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, would result in an estimated $2.9 billion increase in payments in FY 2027, primarily driven by the net effect of changes in FY 2027 operating payments, including uncompensated care payments, FY 2027 capital payments, the expiration of the temporary changes in the low-volume hospital program, the expiration of the MDH program, and new technology add-on payment changes. These changes are relative to payments made in FY 2026. The impact analysis of the capital payments can be found in section I.I. of this Appendix. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience an increase in payments of approximately $54 million in FY 2027 relative to FY 2026.

Our operating payment impact estimate includes the 2.3 percent applicable percentage increase to the standardized amount (reflecting the 3.2 percent market basket rate-of-increase reduced by the 0.9 percentage point productivity adjustment). The estimates of IPPS operating payments to acute care hospitals generally do not reflect any changes in hospital admissions or real case-mix intensity, which would also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

Because this final rule contains a range of policies, we refer readers to the section of the final rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the final policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2027, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case, while holding all other payment policies constant. We use the best data available, but, generally, unless specifically indicated, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, case mix, changes to the Medicare population, or incentives. In addition, we discuss limitations of our analysis for specific policies in the discussion of those policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital related- costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 26 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short term, acute care hospitals, hospitals in Maryland are paid in accordance with the AHEAD Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 6 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2026, there were 3,005 IPPS acute care hospitals included in our analysis. This represents approximately 51 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,388 CAHs. These small, limited-service hospitals are paid on the basis of reasonable costs, rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, cancer hospitals, extended neoplastic disease care hospital, and short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2027 is discussed in section I.J. of this Appendix.

F. Quantitative Estimates of Effects of the Policy Changes Under the IPPS for Operating Costs and Medicare DSH Uncompensated Care Payments

1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2027 for operating costs of acute care hospitals and for uncompensated care payments. The FY 2027 updates to the capital payments to acute care hospitals are discussed in section I.I. of this Appendix. A more detailed analysis of the update to uncompensated care payments is discussed in section I.G.2 of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2027 operating payments, including uncompensated care payments, will increase by 1.7 percent compared to FY 2026. The operating payment impacts generally do not reflect changes in the number of hospital admissions or real case-mix intensity, which will also affect overall payment changes.

We have prepared separate impact analyses of the changes on the operating and capital prospective payment systems. This section primarily deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the best available claims data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in operating payments per case presented in this section are taken from the FY 2025 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the best available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not generally adjust for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix.

Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2025 MedPAR file, we simulate payments under the operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, and the impact of payments other than inpatient operating payments including uncompensated care payments are not analyzed in this section. Estimated payment impacts for the capital IPPS for FY 2027 are discussed in section I.I. of this Appendix.

We discuss the following changes:

- The estimated effects of outlier payments returning to their targeted levels in FY 2027 as compared to the estimated outlier payments for FY 2026 produced from our payment simulation model.
- The effects of the application of the applicable percentage increase of 2.3 percent (that is, a 3.2 percent market basket rate-of-increase with a reduction of 0.9 percentage point for the productivity adjustment), and the applicable percentage increase (including the market basket rate-of-increase and the productivity adjustment) to the hospital-specific rates.
- The effects of the changes to estimated uncompensated care payments in FY 2027 as compared to FY 2026.
- The effects of the expiration of the special payment status for MDHs beginning January 1, 2027 under current law.
- The effects of the changes to the relative weights and MS–DRG GROUPER.
- The effects of the changes in hospitals' wage index values due to the effects of the incorporation of updated wage data from hospitals' cost reporting periods and the changes in wage index reclassifications.
- The total estimated change in payments based on the FY 2027 policies relative to payments based on FY 2026 policies.

To illustrate the impact of the FY 2027 changes, our analysis begins with a FY 2026 baseline simulation model using: the FY 2026 national adjusted operating standardized amount; the FY 2026 MS–DRG GROUPER (Version 43); the FY 2026 CBSA designations for hospitals based on the OMB definitions from the 2020 Census; the FY 2026 wage index, including the FY 2026 labor and nonlabor share percentages; FY 2026 uncompensated care payments; and FY 2026 outlier payments which reflects our estimate of 5.9 percent of total operating MS–DRG and outlier payments as produced by our payment simulation model based on FY 2025 MedPAR data.

Our comparison illustrates the percent change in payments per case from FY 2026 to FY 2027. The update to the standardized amount is a significant factor in the percent change in payments per case. In accordance with section 1886(b)(3)(B)(i) of the Act, each year we update the national standardized amount for inpatient hospital operating costs by a factor called the ''applicable percentage increase.'' For FY 2027, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section VI.B. of the preamble of this final rule for a complete discussion of the FY 2027 inpatient hospital update, including the four possible applicable percentage increases. For purposes of the simulations shown later in this section, we modeled the payment changes for FY 2027 using a reduced update for hospitals that (1) failed to submit quality data but are meaningful EHR users; (2) are identified as not meaningful EHR users that do submit quality data; and (3) are identified as not meaningful EHR users that do not submit quality data. The reduced updates used for these hospitals are discussed previously and in section VI.B. of the preamble of this final rule and these hospitals are identified in the impact file posted in conjunction with this final rule.

We note, section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act for hospitals that fail to submit quality data or are not a meaningful EHR users. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs for FY 2027 are the same as the four applicable percentage increases discussed in section VI.B. of the preamble of this final rule.

2. Impact Analysis of Changes on Payments for IPPS Operating Costs and Uncompensated Care Payments

Table I displays the results of our analysis of the changes for FY 2027 on payments for IPPS operating costs and uncompensated care payments. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the acute care hospitals included in the analysis.

The next two rows of Table I contain hospitals categorized according to their geographic location: urban and rural. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The last groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2027 payment classifications, including any reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act. For example, the rows labeled urban and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under section 1886(d)(8)(B) of the Act, also known as Lugar hospitals, and section 1886(d)(8)(E) of the Act as implemented at 42 CFR 412.103).

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments.

In the DSH categories, hospitals are grouped according to their DSH status, and whether they are considered urban or rural for DSH payment purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next six rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs and MDHs) and reclassification status from urban to rural in accordance with section 1886(d)(8)(E) of the Act.

The next series of groupings are based on the type of ownership and the hospital's Medicare and Medicaid utilization expressed as a percent of total inpatient days. These data were taken from the most recent available Medicare cost reports.

The next grouping concerns the geographic reclassification status of hospitals. The first subgrouping is based on whether a hospital is reclassified or not. The second and third subgroupings are based on whether urban and rural hospitals were reclassified by the MGCRB for FY 2027 or not, respectively. The fourth subgrouping displays hospitals that reclassified from urban to rural in accordance with section 1886(d)(8)(E) of the Act as implemented at 42 CFR 412.103. The fifth subgrouping displays hospitals deemed urban in accordance with section 1886(d)(8)(B) of the Act, also known as Lugar hospitals.

TABLE I.—IMPACT ANALYSIS OF CHANGES ON PAYMENTS FOR IPPS OPERATING COSTS AND UNCOMPENSATED CARE PAYMENTS FOR FY 2027

	Number of Hospitals[1]	FY 2027 Outlier Payments (1)[2]	FY 2027 Hospital Rate Update (2)[3]	MDH Expiration (3)[4]	FY 2027 Uncompensated Care Payments (4)[5]	FY 2027 Weights and DRG Changes with Application of Recalibration Budget Neutrality (5)[6]	FY 2027 Wage Index (6)[7]	All FY 2027 Changes (7))[8]
All Hospitals	3,005	-0.6	2.2	-0.1	0.2	0.0	0.0	1.7

Rural Non-reclassified Hospitals Full Year	358	-0.3	2.2	-0.6	0.1	-0.4	0.3	1.2
All hospitals that reclassified from urban to rural in accordance with section 1886(d)(8)(E) as implemented at 42 CFR 412.103	885	-0.7	2.2	-0.1	0.2	0.1	0.2	1.9
Other Reclassified Hospitals (Section 1886(d)(8)(B), also known as Lugar hospitals)	52	-0.3	2.2	-1.6	0.1	-0.5	0.0	-0.1

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2025, and hospital cost report data are from the latest available reporting periods.
[2] This column displays the effects of estimated outlier payments returning to their targeted levels in FY 2027 as compared to the estimated outlier payments for FY 2026.
[3] This column displays the payment impact of the hospital rate update, including the 2.3 percent update to the national standardized amount and the hospital-specific rate (the 3.2 percent IPPS market basket rate-of-increase reduced by the 0.9 percentage point for the productivity adjustment).
[4] This column displays the impact of the expiration of the MDH status on January 1, 2027, a non-budget neutral payment provision.
[5] This column displays the effects of the changes to estimated uncompensated care payments in FY 2027 as compared to FY 2026 as a percent change in estimated total payments. See also the table in section I.G.2 of this Appendix.
[6] This column displays the payment impact of Version 44 GROUPER, the changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2025 MedPAR data, and the 10-percent cap where the relative weight for a MS-DRG will decrease by more than ten percent in a given fiscal year. This column displays the application of the recalibration budget neutrality factor and the 10-percent cap budget neutrality factor (which can be found in section II.A.4 of the Addendum of this final rule).
[7] This column displays the effects of the changes to the FY 2027 wage index. This includes: (1) the update to wage index data using FY 2023 cost report data, the application of the wage index budget neutrality factor and the update to the labor and nonlabor shares; (2) the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB), showing the payment impact of going from FY 2026 reclassifications to the reclassifications scheduled to be in effect for FY 2027; (3) the effects of the application of the rural floor; (4) the effects of urban to rural reclassifications under section 1886(d)(8) of the Act on the wage index; (5) the effects of the application of "LUGAR" status under section 1886(d)(10) of the Act on the wage index; and (6) the adjustments to the wage index driven by non-budget neutral policies. These non-budget neutral policies include: (a) the imputed floor for all-urban states; (b) the policy that requires hospitals located in frontier States have a wage index no less than 1.0; and (c) the policy which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. The budget neutrality factors for the effects that are budget neutral can be found in section II.A.4 of the Addendum of this final rule. This column also displays the redistributive effects of the budget neutral transition for the discontinuation of the low wage index hospital policy from hospitals that do not benefit from the transition to hospitals that do benefit (primarily all the hospitals located in Puerto Rico) due to the associated budget neutrality factor. The budget neutrality factor for the transition can be found in section II.A.4 of the Addendum of this final rule.
[8] This column shows the estimated change in payments from FY 2026 to FY 2027.

a. Effects of the Outlier Adjustment (Column 1)

This column reflects the effect of estimated outlier payments returning to their targeted levels in FY 2027 as compared to the estimated outlier payments for FY 2026 produced from our payment simulation model. As discussed in section II.A.4.i. of the Addendum to this final rule, the statute requires that outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments plus outlier payments, and also requires that the average standardized amount be reduced by a factor to account for the estimated proportion of total DRG payments made to outlier cases. We continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount, just as we did for FY 2026. Therefore, our estimate of payments per discharge for FY 2027 from our payment simulation model reflects this 5.1 percent outlier payment target. Our payment simulation model shows that estimated outlier payments for FY 2026 were greater than that target by approximately 0.8 percentage points.

Overall, hospitals will experience a 0.6 percent decrease in payments primarily due to the estimated −0.8 percent change in outlier payments produced by our payment simulation model when returning to the 5.1 percent outlier target for FY 2027 in combination with interactive effects among the various add-on payment factors.

b. Effects of the Hospital Update (Column 2)

As discussed in section VI.B. of the preamble of this final rule, this column includes the hospital update, including the 3.2 percent IPPS market basket rate-of-increase reduced by 0.9 percentage point for the productivity adjustment. As a result, we are making a 2.3 percent update to the national standardized amount. This column also includes the update to the hospital-specific rates which includes the 3.2 percent market basket rate-of-increase reduced by 0.9

percentage point for the productivity adjustment. As a result, we are making a 2.3 percent update to the hospital-specific rates. This column also includes any applicable adjustments for hospitals that fail to comply with the quality data submission requirements and/or are not meaningful EHR users.

Overall, hospitals are expected to experience a 2.2 percent increase in payments primarily due to the combined effects of the hospital update to the national standardized amount and the hospital update to the hospital-specific rates.

c. Effects of the Expiration of MDH Special Payment Status (Column 3)

Column 3 shows our estimate of the changes in payments due to the expiration of MDH status, a nonbudget neutral payment provision. Section 6202 of the Consolidated Appropriations Act, 2026 further extended the MDH program through December 31, 2026. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2027. Hospitals that qualify to be MDHs receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate amount plus 75 percent of the difference between payments based on the Federal rate and payments based on the hospital-specific rate (a hospital-specific cost-based rate). Because this provision is not budget neutral, the expiration of this payment provision is estimated to result in a 0.1 percent decrease in IPPS payments overall. There are currently 166 MDHs, of which we estimate 81 would be paid under the blended payment of the Federal rate and hospital-specific rate if the MDH program were not set to expire. Because those 81 MDHs will no longer receive the blended payment and will be paid only under the Federal rate beginning January 1, 2027, it is estimated that those hospitals would experience an overall decrease in payments of approximately $94 million (relative to the MDH program payments they received for FY 2026 discharges).

d. Effects of the Changes in Uncompensated Care Payments (UCP) (Column 4)

Column 4 shows the effects of the changes in uncompensated care payments for eligible hospitals in FY 2027. As discussed in section IV.E. of the preamble of this final rule, the total uncompensated care payments and supplemental payments equal approximately $8.0 billion. Overall, hospitals will experience a 0.2 percent increase in total operating IPPS payments and uncompensated care payments relative to FY 2026 total payments due to the change in uncompensated care payments. For a more detailed impact analysis of the changes to uncompensated care payments, we refer readers to section I.G.2 of appendix A to this final rule.

e. Effects of the Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 5)

Column 5 shows the effects of the changes to the MS–DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral. We also applied the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given year and an associated recalibration cap budget neutrality factor to account for the 10-percent cap on relative weight reductions to ensure that the overall payment impact is budget neutral.

As discussed in section II.D. of the preamble of this final rule, for FY 2027, we calculated the MS–DRG relative weights using the FY 2025 MedPAR data grouped to the Version 44 (FY 2027) MS–DRGs. The reclassification changes to the GROUPER are described in more detail in section II.C. of the preamble of this final rule.

The ''All Hospitals'' line in Column 5 indicates that changes due to the MS–DRGs and relative weights are expected to result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor (discussed in section II.A.4.a. of the Addendum to this final rule) and the recalibration cap budget neutrality factor to the standardized amount (discussed in section II.A.4.b. of the Addendum to this final rule).

f. Effects of the Wage Index Changes (Column 6)

Column 6 shows the impact of the changes to hospitals' FY 2027 wage index as compared to hospitals' FY 2026 wage index. Overall, the FY 2027 wage index changes are expected to lead to a 0.0 percent change for all hospitals, as shown in Column 6. This column reflects updates to the wage data reported by hospitals, changes in the geographic reclassifications of hospitals, and the interactions of those changes with statutory wage index floors and exceptions. We combine these changes because the complex and interactive ways in which hospitals increasingly seek to maximize their wage index values in a given year render isolation of these effects in a year-over-year context less informative. For example, the impact of the updates to the wage data reported by hospitals in the absence of the changes in geographic reclassification and especially the interaction of both of those with statutory wage index floors and exceptions is less meaningful than showing the combined effect of those factors.

Specifically, this column in Table I shows the combined effects of the application of the following FY 2027 wage index changes relative to FY 2026:

(1) Effects of the Changes to the Wage Data

Column 6 reflects the effects of the updated wage data and the labor and non-labor shares, with the application of the wage index budget neutrality factor for FY 2027 relative to FY 2026.

Section 1886(d)(3)(E) of the Act requires that we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2027 is based on data submitted for hospital cost reporting periods, beginning on or after October 1, 2022, and before October 1, 2023. Column 6 reflects the percentage change in payments when going from a model using the FY 2026 wage index based on FY 2026 reclassifications and the FY 2026 labor-related share of 66.0 percent, to a model using the FY 2027 wage index based on FY 2027 reclassifications (as described in further detail in the next section) and the labor-related share of 66.0 percent, while holding other payment parameters, such as use of the Version 44 MS–DRG GROUPER, constant.

In addition, the column incorporates the application of the wage index budget neutrality to the national standardized amount. As discussed in section II.A.4.c. of the Addendum to this final rule, for FY 2027 we calculated the wage index budget neutrality factor to ensure that payments under the wage index calculated from the updated wage data and the labor-related share of 66.0 percent are budget neutral, without regard to the lower share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. This budget neutrality factor can be found in the summary table of the FY 2027 budget neutrality factors in section II.A.4. of the Addendum to this final rule.

(2) Effects of MGCRB, Urban to Rural, and ''Lugar'' Reclassifications

Column 6 reflects the impact of MGCRB reclassification decisions under section 1886(d)(10) of the Act, urban to rural reclassifications under section 1886(d)(8)(E) of the Act, and Lugar status redesignations under section 1886(d)(8)(B) of the Act on the wage index for FY 2027 relative to FY 2026. The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, as discussed in section II.A.4.d. of the Addendum to this final rule, we apply a reclassification budget neutrality adjustment to ensure that the effects of the reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral. This budget neutrality factor can be found in the summary table of the FY 2027 budget neutrality factors in section II.A.4. of the Addendum to this final rule.

Table 2 listed in section VI. of the Addendum to this final rule and available on the CMS website reflects the reclassifications for FY 2027 at the time of development of this final rule. For further information on MGCRB reclassifications, urban to rural reclassifications and Lugar status redesignations, we refer readers to section III.E of the preamble of this final rule.

(3) The Effects of the Rural Floor, Including Budget Neutrality Adjustment

Column 6 reflects the effects of the application of the rural floor and the application of the rural floor budget neutrality on the wage index for FY 2027 relative to FY 2026. As discussed in section III.F.1. of the preamble of this final rule, section 4410 of Public Law 105–33 established the rural floor by requiring that

the wage index for a hospital in any urban area cannot be less than the wage index applicable to hospitals located in rural areas in the same state. We apply a uniform budget neutrality adjustment to the wage index as discussed in section II.A.4.e. of the Addendum to this final rule. All IPPS hospitals in our model have their wage indexes reduced by the rural floor budget neutrality adjustment. This budget neutrality factor can be found in the summary table of the FY 2027 budget neutrality factors in section II.A.4. of the Addendum to this final rule.

(4) Effects the Application of the Imputed Floor, Frontier State Wage Index, and Out-Migration Adjustment

Lastly, this column also reflects the combined effects of the application of the following non-budget neutral provisions for FY 2027 relative to FY 2026: (a) the imputed floor under section 1886(d)(3)(E)(iv)(I) and (II) of the Act for certain all-urban States (as discussed in section III.F.2. of the preamble of this final rule); (b) the minimum post-reclassified wage index of 1.00 for all hospitals located in ''frontier States'' as required by section 1886(d)(3)(E)(iii) Act (as discussed in section III.F.3. of the preamble of this final rule); and (c) the effects of the out-migration adjustment under section 1886(d)(13) of the Act (as discussed in section III.F.4. of the preamble of this final rule).

g. Effects of All FY 2027 Changes (Column 7)

Column 7 shows our estimate of the changes in payments per discharge from FY 2026 and FY 2027, resulting from all changes for FY 2027 included in Table I. It includes the combined effects of the year-over-year change of the factors described in the previous columns in the table.

The average increase in payments under the IPPS for all hospitals is approximately 1.7 percent for FY 2027 relative to FY 2026, which is primarily driven by the changes reflected in Column 1 (outlier payments), Column 2 (hospital update) and Column 4 (uncompensated care payments). As described in Column 2, the annual hospital update for hospitals paid under the national standardized amount, combined with the annual hospital update for hospitals paid under the hospital-specific rates are expected to result in a 2.2 percent increase in payments in FY 2027 relative to FY 2026 for all hospitals. As described in Column 4, uncompensated care payments will result in a 0.2 percent increase in payments in FY 2027 relative to FY 2026 for all hospitals.

Overall payments to hospitals paid under the IPPS are estimated to increase by 1.7 percent for FY 2027 (as compared to FY 2026) due to the outlier adjustment, the applicable percentage increase, the MDH program expiration, and uncompensated care payments. Hospitals in urban areas would experience a 1.8 percent increase in payments per discharge in FY 2027 compared to FY 2026. Hospital payments per discharge in rural areas are estimated to increase by 1.1 percent in FY 2027. The relatively lower projected increase for rural hospitals is due in part to the MDH program expiration (Column 3) and the MS–DRG and relative weight changes with the application of budget neutrality (Column 5). Hospital categories that generally treat relatively less complex cases, such as rural hospitals and smaller urban hospitals, are expected to experience a decrease in their payments, while hospitals that generally treat relatively more complex cases, such as larger urban hospitals, are expected to experience no change in their payments as a result of the changes to the relative weights.

3. Estimated Average Payments per Discharge

Table II displays the results of our analysis of the changes for FY 2027 on estimated average payments per discharge for IPPS operating costs and uncompensated care payments. It presents the impact for the categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2026 with the estimated average payments per discharge for FY 2027, as calculated under our models. It reflects the combined effects of the changes presented in Table I, and therefore the estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 7 of Table I.

TABLE II.--IMPACT ANALYSIS OF CHANGES ON AVERAGE PAYMENTS PER DISCHARGE FOR OPERATING COSTS AND UNCOMPENSATED CARE

	Number of Hospitals (1)	Estimated Average FY 2026 Payment Per Discharge (2)	Estimated Average FY 2027 Payment Per Discharge (3)	FY 2027 Changes (4)
All Hospitals	3,005	18,998	19,324	1.7
By Geographic Location:

Other Reclassified Hospitals (Section 1886(d)(8)(B), also known as Lugar hospitals)	52	12,668	12,652	-0.1

G. Effects of Other Policy Changes

In addition to those policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule. As noted in section I.D. of this Appendix, our payment simulation model uses the most recent available claims data to estimate the impacts on payments per case of certain changes in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes using that payment simulation model. For these changes, we have attempted to predict the payment impacts based upon our experience and other more limited data. Our estimates of the likely impacts associated with these other changes are discussed in this section.

1. Effects of the Changes Relating to New Medical Service and Technology Add-On Payments

a. FY 2027 Status of Technologies Approved for FY 2026 New Technology Add-On Payments

In section II.E.4. of the preamble of this final rule, we are continuing to make new technology add-on payments for the technologies listed in the following table in FY 2027 because these technologies would still be considered new for purposes of new technology add-on payments. Under § 412.88(a)(2), the new technology add-on payment for each case would be limited to the lesser of: (1) 65 percent of the costs of the new technology (or 75 percent of the costs for technologies designated as Qualified Infectious Disease Products (QIDPs) or approved under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) pathway, or for the gene therapies, Casgevy™ (exagamglogene autotemcel) and Lyfgenia™ (lovotibeglogene autotemcel), when indicated and used specifically for the treatment of SCD, which were approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69128 through 69135, and 89 FR 69188 through 69196)); or (2) 65 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case (or 75 percent of the amount for technologies designated as QIDPs; for technologies approved under the LPAD pathway; or for the gene therapies, Casgevy™ and Lyfgenia™, when indicated and used specifically for the treatment of SCD, which were approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule (89 FR 69128 through 69135, and 89 FR 69188 through 69196)). Because it is difficult to predict the actual new technology add-on payment for each case, our estimates in this final rule are based on the applicant's estimate at the time they submitted their original application and the increase in new technology add-on payments for FY 2027 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment.

In the following table are estimates for the 41 new technology add-on payments which we are continuing in FY 2027:

FY 2027 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS TO CONTINUE FOR FY 2027				
	Technology Name	Estimated Cases	FY 2027 NTAP Amount (65% or 75%)	Estimated Total FY 2027 Impact
1	Annalise Enterprise CTB Triage - OH	271,200	$241.39	$65,464,968.00
2	ASTar® System	69,000	$97.50	$6,727,500.00
3	Edwards EVOQUE™ Tricuspid Valve Replacement System (“EVOQUE™ System”)	800	$31,850.00	$25,480,000.00
4	GORE® EXCLUDER® Thoracoabdominal Branch Endoprosthesis (TAMBE Device)	518	$47,238.75	$24,469,672.50
5	LimFlow™ System	561	$16,250.00	$9,116,250.00
6	Paradise™ Ultrasound Renal Denervation System	200	$14,950.00	$2,990,000.00
7	PulseSelect™ Pulsed Field Ablation (PFA) Loop Catheter	3,402	$6,337.50	$21,560,175.00
8	Symplicity Spyral™ Multi-Electrode Renal Denervation Catheter	55	$10,400.00	$572,000.00
9	TriClip™ G4	150	$26,000.00	$3,900,000.00
10	VADER® Pedicle System	200	$28,242.50	$5,648,500.00
11	ZEVTERA™ (ceftobiprole medocaril); ABSSSI and CABP indications	245	$5,287.50	$1,295,437.50
12	ZEVTERA™ (ceftobiprole medocaril); SAB indication	571	$16,215.00	$9,258,765.00
13	CASGEVY™ (exagamglogene autotemcel); Sickle Cell Disease indication	117	$1,650,000.00	$193,050,000.00
14	HEPZATO™ KIT (melphalan for injection/hepatic delivery system)	149	$118,625.00	$17,675,125.00
15	LYFGENIA™ (lovotibeglogene autotemcel)	40	$2,325,000.00	$93,000,000.00
16	4WEB Medical Ankle Truss System	124	$15,275.00	$1,894,100.00
17	AeroPace® System	550	$23,650.90	$13,007,995.00
18	AGENT™ Paclitaxel-Coated Balloon Catheter	9,010	$4,776.36	$43,035,026.13
19	alfapump® system	200	$21,450.00	$4,290,000.00
20	aprevo®-C cervical interbody fusion device	400	$21,125.00	$8,450,000.00
21	CERAMENT® G	466	$5,687.50	$2,650,375.00
22	Emily's Care Nourish Test System (Model 1)	11	$3,347.50	$36,822.50
23	Esprit™ BTK Everolimus Eluting Resorbable Scaffold System	5,300	$6,922.50	$36,689,250.00
24	EUROPA™ Posterior Cervical Fusion System	849	$80,548.00	$68,385,252.00
25	iFuse TORQ TNT™ Implant System	1,392	$4,135.95	$5,757,242.40
26	Merit Wrapsody® Cell Impermeable Endoprosthesis (CIE)	936	$3,770.00	$3,528,720.00
27	Minima Stent System	10	$22,685.00	$226,850.00
28	MY01 Continuous Compartmental Pressure Monitor	2,000	$2,112.50	$4,225,000.00
29	PBC Separator with Selux AST System	68,149	$87.78	$5,982,119.22
30	restor3d TIDAL™ Fusion Cage	96	$18,196.75	$1,746,888.00
31	ShortCut™	550	$9,750.00	$5,362,500.00
32	The WiSE CRT System	209	$41,145.00	$8,599,305.00
33	TriVerity Test	5,755	$243.75	$1,402,781.25
34	VITEK® REVEAL™ AST System	19,000	$81.25	$1,543,750.00
35	EMBLAVEO™ (aztreonam-avibactam)	207	$9,000.68	$1,863,140.76
36	CONTEPO™ (fosfomycin)	573	$4,111.65	$2,355,975.45
37	AURLUMYN™ (iloprost injection)	300	$28,600.00	$8,580,000.00
38	BREYANZI® (lisocabtagene maraleucel)	290	$316,860.05	$91,889,414.50
39	GRAFAPEX™ (treosulfan)	368	$21,411.00	$7,879,248.00
40	IMDELLTRA® (tarlatamab-dlle)	692	$7,117.50	$4,925,310.00
41	TECELRA® (afamitresgene autoleucel)	55	$472,550.00	$25,990,250.00
Aggregate Estimated Total FY 2027 Impact				**$840,505,708.21**

b. FY 2027 Applications for New Technology Add-On Payments

As discussed in sections II.E.5. and 6. of the preamble to this final rule, we are approving 19 technologies (3 traditional and 16 alternative) for new technology add-on payments for FY 2027. As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral.

As discussed in section II.E.6. of the preamble of this final rule, under the alternative pathway for new technology add-on payments, new technologies that are medical products with a QIDP designation, approved through the FDA LPAD pathway, or are designated under the Breakthrough Device program will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to demonstrate that the technology represents a substantial clinical improvement. These technologies must still be within the 2- to 3-year newness period, as discussed in section II.E.1.a.(1). of the preamble this final rule, and must also still meet the cost criterion.

As fully discussed in section II.E.6. of the preamble of this final rule, we are approving 16 new technology add-on payments for the alternative pathway applications for FDA market authorized Breakthrough Devices submitted for FY 2027 new technology add-on payments. We did not receive any QIDP or LPAD applications for add-on payments for new technologies for FY 2027.

Based on preliminary information from the applicants at the time of this final rule, we estimate that total payments for the technologies approved under the alternative pathway will be approximately $418 million for FY 2027.

In the following table, we present detailed estimates for the 16 technologies for which we are approving new technology add-on payments under the alternative pathway in FY 2027:

FY 2027 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS FOR TECHNOLOGIES UNDER THE ALTERNATIVE PATHWAY

	Technology Name	Pathway (QIDP, LPAD, or Breakthrough Device)	Estimated Cases	FY 2027 NTAP Amount (65% or 75%)	Estimated Total FY 2027 Impact
1	Bayesian Health Sepsis Flagging Device	Breakthrough Device	89,594	$61.84	$5,540,492.96
2	BriefCase-Triage: CARE (Clinical AI Reasoning Engine) Multi-Triage CT Body	Breakthrough Device	234,300	$137.53	$32,223,279.00
3	Ceribell Delirium Monitor System	Breakthrough Device	84,000	$2,171.00	$182,364,000.00
4	CMORE® CT System (posterior cervico-thoracic system)	Breakthrough Device	100	$60,905.00	$6,090,500.00
5	GORE® VIABAHN® FORTEGRA Venous Stent	Breakthrough Device	567	$7,186.40	$4,074,688.80
6	Infuse™ Bone Graft	Breakthrough Device	2,120	$4,396.60	$9,320,792.00
7	InVision Precision Cardiac Amyloid	Breakthrough Device	6,000	$2,275.00	$13,650,000.00
8	Nelli™ Seizure Monitoring System	Breakthrough Device	1,485	$975.00	$1,447,875.00
9	NEXUS® Aortic Arch Stent Graft System	Breakthrough Device	300	$35,880.00	$10,764,000.00
10	OmniaSecure™ MRI SureScan™ Lead Model 3930M	Breakthrough Device	2,067	$7,796.75	$16,115,882.25
11	PearlMatrix™ P-15 Peptide Enhanced Bone Graft	Breakthrough Device	963	$3,380.00	$3,254,940.00
12	SAPIEN M3 Transcatheter Mitral Valve Replacement System	Breakthrough Device	700	$35,100.00	$24,570,000.00
13	SetPoint System®	Breakthrough Device	82	$38,675.00	$3,171,350.00
14	Spur® Peripheral Retrievable Stent System	Breakthrough Device	15,300	$2,596.75	$39,730,275.00
15	Trilogy™ Transcatheter Aortic Valve Regurgitation System	Breakthrough Device	2,500	$25,675.00	$64,187,500.00
16	ViaOne™ Epicardial Access System	Breakthrough Device	945	$1,300.00	$1,228,500.00
Estimated Total FY 2027 Impact					**$417,734,075.01**

As fully discussed in section II.E.5. of the preamble of this final rule, we are approving new technology add-on payments for 3 technologies that applied under the traditional pathway for new technology add-on payments for FY 2027. Based on information from the applicants at the time of rulemaking, we estimate that total payments for the technologies for which we are making new technology add-on payment is approximately $481 million for FY 2027.

In the following table, we present detailed estimates for the 3 technologies for which we are approving new technology add-on payments under the traditional pathway in FY 2027:

FY 2027 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS FOR TECHNOLOGIES UNDER THE TRADITIONAL PATHWAY				
	Technology Name	Estimated Cases	FY 2027 NTAP Amount (65%)	Estimated Total FY 2027 Impact
1	GAMIFANT® (emapalumab-lzsg)	15	$672,756.50	$10,091,347.50
2	YARTEMLEA® (narsoplimab-wuug)	1,585	$287,079.00	$455,020,215.00
3	ZEVASKYN™ (prademagene zamikeracel)	8	$2,045,550.00	$16,364,400.00
Estimated Total FY 2027 Impact				**$481,475,962.50**

c. Total Estimated Costs for NTAP in FY 2027

In the following table, we present summary estimates for all new technology add-on payments for FY 2027:

FY 2027 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS	
Category	Estimated Total FY 2027 Impact
Technologies Continuing New Technology Add-on Payments in FY 2027	$840,505,708.21
Alternative Pathway Applications	$417,734,075.01
Traditional Pathway Applications	$481,475,962.50
Aggregate Estimated Total FY 2027 Impact	**$1,739,715,745.72**

2. Medicare DSH Uncompensated Care Payments and Supplemental Payment for Indian Health Service Hospitals and Tribal Hospitals and Hospitals Located in Puerto Rico

As discussed in section V.E. of the preamble of this final rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has reported uncompensated care. Each hospital that is eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's amount of uncompensated care relative to the aggregate amount of uncompensated care of all hospitals eligible for Medicare DSH payments (Factor 3). The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this final rule, we are establishing the amount to be distributed as uncompensated care payments (UCP) to DSH-eligible hospitals for FY 2027, which is $7,939,472,850. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 67.14 percent. For FY 2026, the amount available to be distributed for uncompensated care was $7,713,127,500, or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 62.14 percent. In addition, eligible IHS/Tribal hospitals and hospitals located in Puerto Rico are estimated to receive approximately $109,391,454.46 in supplemental payments in FY 2027, based on the difference between each hospital's base year amount (that is, each hospital's FY 2022 UCP adjusted by 1 plus the percent change in the aggregate amount of uncompensated care payments between FYs 2022 and 2027) and its FY 2027 UCP. *See* 42 CFR 412.106(h)(3). If this difference is less than or equal to zero, the hospital will not receive a supplemental payment. For this final rule, the total UCP and supplemental payments equals approximately $8.049 billion. For FY 2027, we are using 3 years of data on uncompensated care costs from Worksheet S–10 of the FYs 2021, 2022, and 2023 cost reports to calculate Factor 3 for all DSH-eligible hospitals, including IHS/Tribal hospitals and Puerto Rico hospitals. For a complete discussion regarding the methodology for calculating Factor 3 for FY 2027, we refer readers to section V.E. of the preamble of this final rule. For a discussion regarding the methodology for calculating the supplemental payments, we refer readers to section V.D. of the preamble of this final rule.

To estimate the impact of the combined effect of the changes in Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare UCP along with changes to supplemental payments for IHS/Tribal hospitals and hospitals located in Puerto Rico, we compared total UCP and supplemental payments estimated in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36536) to the combined total of the UCP and the supplemental payments estimated in this FY 2027 IPPS/LTCH PPS final rule. For FY 2026, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 62.14 percent and multiplied by a Factor 3 calculated using the methodology described in the FY 2026 IPPS/LTCH PPS final rule. For FY 2027, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments during FY 2027 absent section 3133 of the Affordable Care Act, adjusted by a final Factor 2 of 67.14 percent and multiplied by a Factor 3 calculated using the methodology described previously. For this final rule, the supplemental payments for IHS/Tribal hospitals and Puerto Rico hospitals are calculated as the difference between the hospital's base year amount and the hospital's FY 2027 UCP.

Our analysis included 2,277 hospitals that are projected to be DSH-eligible in FY 2027. Our analysis did not include hospitals that had terminated their participation in the Medicare program as of June 10, 2026, Maryland hospitals, new hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. The 22 hospitals that are anticipated to be participating in the Rural Community Hospital Demonstration Program were also excluded from this analysis, as participating hospitals are not eligible to receive empirically justified Medicare DSH payments and UCP. In addition, the data from merged or acquired hospitals were combined under the surviving hospital's CMS certification number (CCN), and the non-surviving CCN was excluded from the analysis. The estimated impact of the changes in Factors 1, 2, and 3 on UCP and supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals across all hospitals projected to be DSH-eligible in FY 2027, by hospital characteristic, is presented in the following table:

MODELED UNCOMPENSATED CARE PAYMENTS* AND SUPPLEMENTAL PAYMENTS FOR ESTIMATED FY 2027 DSHS BY HOSPITAL TYPE

Source: Dobson | DaVanzo analysis of 2021, 2022 and 2023 Hospital Cost Reports.
*Dollar UCP calculated by [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, UCP and supplemental payments are estimated to be $7.821 billion in FY 2026, and UCP and supplemental payments are estimated to be $8.049 billion in FY 2027.
** For IHS/Tribal hospitals and Puerto Rico hospitals, this impact table reflects the supplemental payments.
*** Percentage change is determined as the difference between Medicare UCP and supplemental payments modeled for this FY 2027 IPPS/LTCH PPS final rule (column 3) and Medicare UCP and supplemental payments modeled for the FY 2026 IPPS/LTCH PPS final rule (column 2) divided by Medicare UCP and supplemental payments modeled for the FY 2026 IPPS/LTCH PPS final rule (column 2) times 100 percent.
****Hospitals with missing or unknown Medicare utilization or Medicaid utilization are not shown in the table.

The changes in projected FY 2027 UCP and supplemental payments compared to the total of UCP and supplemental payments in FY 2026 are driven by a decrease in Factor 1 and an increase in Factor 2. Factor 1 has decreased from the FY 2026 final rule's Factor 1 of $12.412 billion to this final rule's Factor 1 of $11.825 billion. Factor 2 has increased from the FY 2026 final rule's Factor 2 of 62.14 percent to this final rule's Factor 2 of 67.14 percent. In addition, we note that there is a slight decrease in the number of projected DSH-eligible hospitals to 2,277 at the time of the development of this final rule compared to the 2,364 DSHs at the time of development of the FY 2026 IPPS/LTCH PPS final rule (90 FR 36536). Based on the changes, the impact analysis found that, across all projected DSH-eligible hospitals, FY 2027 UCP and supplemental payments are estimated at approximately $8.049 billion, or an increase of approximately 2.9 percent from FY 2026 UCP and supplemental payments (approximately $7.821 billion). While the changes will result in a net increase in the final rule's total amount available to be distributed in UCP and supplemental payments, the projected payment changes vary by hospital type. This redistribution of payments is caused by changes in Factor 3 and the amount of the supplemental payment for DSH-eligible IHS/Tribal hospitals and Puerto Rico hospitals. As seen in the previous table, a percent change greater than 2.9 percent indicates that hospitals within the specified category are projected to experience a larger increase in payments, on average, compared to the universe of projected FY 2026 DSH-eligible hospitals. Conversely, a percentage change less than 2.9 percent indicates that a hospital type is projected to have a smaller increase compared to the overall average, or a decrease in payments. The variation in the distribution of overall payments by hospital characteristic is largely dependent on a given hospital's uncompensated care costs as reported on the Worksheet S–10 and used in the Factor 3 computation and whether the hospital is eligible to receive the supplemental payment.

Rural hospitals, in general, are projected to experience a decrease in UCP compared to the increase their urban counterparts are projected to experience. Overall, rural hospitals are projected to receive a 4.6 percent decrease in payments, while urban hospitals are projected to receive a 3.4 percent increase in payments, which is slightly above the overall hospital average.

By bed size, rural hospitals with 0 to 99 beds, 100 to 249 beds, and 250+ beds are projected to receive lower than average percent change of approximately −3.7 percent, −7.2 percent, and 1.0 percent, respectively. Among urban hospitals, the largest urban hospitals, those with 250+ beds and 100–249 beds, are projected to receive an above average increase in payments of 4.1 percent. In contrast, smaller urban hospitals with 100–249 beds and with 0–99 beds are projected to receive lower than average percent change in payments of 1.9 percent and −2.2 percent respectively.

By region, rural hospitals are projected to receive a varied range of payment changes. Rural hospitals in the Middle Atlantic and Pacific regions are projected to receive larger than average increase in payments. However, rural hospitals in all other regions including New England, South Atlantic, East North Central, East South Central, West North Central, West South Central, and Mountain regions are projected to receive a decrease in payments. Similarly, urban hospitals are projected to receive a varied range of payment changes. Urban hospitals in New

England, Middle Atlantic, West South Central, and Mountain regions are projected to receive larger than average increase in payments, and those in the East South Central, West North Central, Pacific regions, and Puerto Rico are projected to receive smaller than average increases in payments. However, urban hospitals in South Atlantic and East North Central are projected to receive decreases in payments.

By payment classification, hospitals in urban payment areas overall are expected to receive a larger than average change in UCP and supplemental payments of 3.7 percent. Hospitals in large urban payment areas are also projected to receive a larger than average increase in payments (4.9 percent), while hospitals in other urban payment areas are projected to receive a smaller-than-average increase in payments of 1.8 percent. Hospitals in rural payment areas are projected to receive a smaller than average increase in payments of 2.4 percent.

Nonteaching hospitals and teaching hospitals with fewer than 100 residents are projected to receive smaller than average increase in payments of 0.5 percent and 1.8 percent, respectively. Teaching hospitals with 100+ residents are projected to receive a larger than average increase in payments of 5.2 percent. Voluntary hospitals and proprietary hospitals are projected to receive average payment change of 2.9 percent and −1.3 percent, respectively, while government-owned hospitals are expected to receive a larger than average increase in payments of 5.0 percent.

Hospitals with less than 25 percent Medicare utilization are projected to receive a larger than average increase in payments of 4.3 percent, while hospitals with Medicare utilization between 25–50 percent and 50–65 percent are projected to receive a decrease of 2.9 percent and decrease of 13.2 percent, respectively. (Medicare utilization refers to a hospital's Medicare days divided by a hospital's total inpatient days.) We note that there is one hospital with greater than 65 percent Medicare utilization that did not receive UCP in FY 2026 and is projected to have no UCP in FY 2027. Thus, there is a zero percent change in payments for this hospital. Hospitals with 25–50 percent Medicaid utilization and those with 50–65 percent Medicaid utilization are projected to receive larger than average increase in payments of 4.5 percent and 6.0 percent, respectively. Hospitals with less than 25 percent Medicaid utilization and those with greater than 65 percent Medicaid utilization are projected to receive a smaller than average increase in payments of 0.8 percent and 1.9 percent. (Medicaid utilization refers to a hospital's Medicaid days divided by a hospital's total inpatient days.)

The impact table reflects the final FY 2027 UCP and final supplemental payments for IHS/Tribal and Puerto Rico hospitals. We note that the final supplemental payments to IHS/Tribal hospitals and Puerto Rico hospitals are estimated to be approximately $109.4 million in FY 2027.

3. Effects of Expiration of Temporary Changes to the Low-Volume Hospital Payment Policy

In section V.D. of the preamble of this final rule, we discuss the extension of the temporary changes to the low-volume hospital payment policy originally provided by the Affordable Care Act and extended by subsequent legislation. Specifically, section 6201 of the Consolidated Appropriations Act, 2026 further extended the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12) through December 31, 2026.

Beginning January 1, 2027, the low-volume hospital qualifying criteria and payment adjustment will revert to the statutory requirements that were in effect prior to FY 2011, and the preexisting low-volume hospital payment adjustment methodology and qualifying criteria, as implemented in FY 2005, will resume. Therefore, absent further Congressional action, effective for the portion of FY 2027 occurring on or after January 1, 2027, FY 2028 and subsequent years, in order to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year.

Using the same methodology used in developing the quantitative analyses of changes in payments per case discussed previously in section I.G. of Appendix A of this final rule, based upon the best available data at this time, we estimate the expiration of the temporary changes to the low-volume hospital payment policy effective for discharges occurring on or after January 1, 2027, and subsequent years would decrease aggregate low-volume hospital payments by $258 million in FY 2027 as compared to FY 2026. This payment estimate was determined based on the estimated payments for the approximately 589 providers that are expected to no longer qualify under the criteria that are effective beginning on January 1, 2027.

Of those 589 hospitals, currently approximately 90 hospitals have a low-volume hospital payment adjustment based on 500 or fewer total discharges, while the remaining approximately 499 hospitals have an adjustment based on having between 500 and 3,800 total discharges. Approximately 55 of the 589 hospitals that currently qualify for a low-volume hospital payment adjustment in FY 2026 have 200 or fewer total discharges and could be eligible to continue to receive the adjustment upon the expiration of the temporary extension of the amended low-volume hospital criteria if they also meet the mileage criterion. However, the distance information needed to project whether those hospitals are more than 25 road miles from another subsection (d) hospital (instead of 15 road miles), and therefore would continue to qualify for a low-volume hospital payment adjustment for FY 2027, is evaluated by each hospitals' MAC. Therefore, we are unable to estimate how many of these 55 hospitals would continue to qualify for the low-volume hospital payment adjustment for FY 2027.

4. Effects of Requirements to Prohibit Unlawful Discrimination by GME and NAH Education Programs.

As discussed in section V.F.2. of the preamble of this final rule, we are finalizing our proposal to require that, in addition to meeting other applicable requirements, an approved medical residency training program must not discriminate, or promote or encourage discrimination, on the basis of race, color, national origin, sex, age, disability, or religion, including the use of those characteristics or intentional proxies for those characteristics as a selection criterion for employment, program participation, resource allocation, or similar activities, opportunities, or benefits. In section V.G.3. of the preamble of this final rule, we discuss the finalization of similar proposals with respect to approved nursing and allied health education programs and accreditors. The effective date of these policies is October 1, 2026. We believe that, as of October 1, 2026, no approved programs or accrediting bodies will continue to, or newly engage in unlawful discrimination on the basis of race or other protected characteristics.

5. Effects of Changes for Determining Net Costs of Approved NAH Education Programs

As discussed in section V.G.4. of this final rule, we are finalizing, with modification, our proposal to revise the regulations at 42 CFR 413.85(d)(2) to state that tuition and other revenue must be subtracted from the allowable direct costs of a hospital's NAH education programs prior to the allocation of indirect costs. This policy was proposed in response to an adverse ruling by the U.S. District Court for the District of Columbia in *Mercy Health—St. Vincent Medical Center LLC d/b/a Mercy St. Vincent Medical Center* v. *Becerra,* 717 F. Supp. 3d 33 (D.D.C. 2024). In addition, we are finalizing our clarification of existing policies regarding the nature of allowable costs for purposes of NAH pass-through payment. We are not finalizing our proposal to require hospitals with approved, provider-operated NAH education programs to follow specific procedures for allocating indirect costs to the NAH cost centers. We are unable to estimate the financial impact of the finalized changes to the regulations text since it is unclear what cost reporting procedures hospitals would employ in the absence of this rulemaking, except for the plaintiffs in the *Mercy St. Vincent* litigation.

6. Effects Under the Hospital Readmissions Reduction Program for FY 2027

In section V.I. of the preamble of this final rule, we are adopting with modification a policy to add sepsis as an applicable condition beginning with the FY 2030 program year; the remaining policies finalized in FY 2026 IPPS/LTCH PPS final rule (90 FR 36923) continue to apply. Specifically, we will adopt the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate Following Sepsis Hospitalization measure beginning with an early look for the FY 2028 (applicable period of July 1, 2024 to June 30, 2026) and FY 2029 (applicable period of July 1, 2025 to June 30, 2027) program years. The measure will then be used in the Hospital Readmissions

Reduction Program for payment adjustment beginning with the FY 2030 program year (applicable period of July 1, 2026 to June 30, 2028) and subsequent years. As finalized in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36923 through 36929), we will integrate Medicare Advantage beneficiaries into the cohorts of the Hospital Readmissions Reduction Program measure set and reduce the applicable period from 3 years to 2 years beginning with the FY 2027 program year.

In section V.I.2.b. of the preamble of this final rule, we are adopting the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate Following Sepsis Hospitalization measure beginning with the FY 2030 program year. While we state in section XII.B.1. of the preamble of this final rule that adopting this measure will not result in any change in information collection burden, we acknowledge that hospitals not currently providing the types of discharge planning and care coordination services that will be expected to minimize readmissions may incur other financial impacts such as updating policies and procedures, increased governance and oversight, and staff training in order to do so. We also recognize that most hospitals have already established standard evidence-based sepsis protocols as part of their existing quality improvement and patient safety frameworks. As such, hospitals are generally well-positioned with respect to the acute clinical management of sepsis, and the additional burden associated with this policy is more likely to center on post-discharge care coordination and transition planning rather than inpatient sepsis treatment protocols. However, because each hospital is unique and we lack insight into what services each may already offer or will elect to offer, we emphasize uncertainty in estimating the costs associated with these impacts. We requested public comment on financial impacts related to post-discharge coordination, transition planning, or other areas associated with the acute clinical management of sepsis that hospitals may incur. We received no comments in response to this request. We refer readers to Table V.I.–05 for the estimated total Medicare savings with and without the Sepsis Readmission measure included in the program measure set. Hospitals can choose either to incur resource costs to improve their sepsis-related practices or they can pay the penalty, predicted to be $170 million as reported in Table V.I.–05. Assuming they typically choose to minimize expenses, $170 million is an upper bound on the resource costs; if there is no non-arbitrary lower bound other than $0, then the midpoint cost estimate is $85 million.

The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating diagnosis-related group (DRG) payments to account for excess readmissions of selected applicable conditions and procedures. The table and analysis in this section illustrate the estimated financial impact of the Hospital Readmissions Reduction Program payment adjustment methodology by hospital characteristic. Hospitals are sorted into quintiles based on the proportion of dual-eligible stays among Medicare Fee-For-Service and managed care (that is, Medicare Advantage) stays between July 1, 2021, and June 30, 2023. Hospitals' excess readmission ratios (ERRs)—based on the data used to calculate preliminary Medicare Advantage and Medicare Fee-for-Service readmission measure results from January 1, 2022, through December 31, 2023—are assessed relative to their peer group median. A neutrality modifier is applied in the payment adjustment factor calculation to maintain budget neutrality.

The results in Table I.G.6.–01 include 2,832 non-Maryland hospitals estimated as eligible to receive a penalty during the performance period based on the most recently available data at the time of publication of this final rule. Hospitals are eligible to receive a penalty if they have 25 or more eligible discharges for at least one measure between January 1, 2022, and December 31, 2023. The third column in Table I.G.6.–01 indicates the total number of non-Maryland hospitals with available data for each characteristic that have an estimated payment adjustment factor less than 1 (that is, penalized hospitals). The total estimated Medicare savings for all hospitals is about $361 million.

The fourth column in Table I.G.6.–01 indicates the estimated percentage of penalized hospitals among those eligible to receive a penalty by hospital characteristic. For example, 78.64 percent of eligible hospitals characterized as non-teaching hospitals are expected to be penalized. Among teaching hospitals, 87.93 percent of eligible hospitals with fewer than 100 residents and 93.90 percent of eligible hospitals with 100 or more residents are expected to be penalized. The fifth column in Table I.G.6.–01 estimates the financial impact on hospitals by hospital characteristic. Table I.G.6.–01 also shows the share of penalties as a percentage of all base operating DRG payments for hospitals with each characteristic. This is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals between October 1, 2022, through September 30, 2023 (FY 2023). For example, the penalty as a share of payments for non-teaching hospitals is 0.51 percent. This means that total penalties for all non-teaching hospitals are 0.51 percent of total payments for non-teaching hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments accounts for differences in the amount of base operating DRG payments for hospitals with the characteristic when comparing the financial impact of the program on different groups of hospitals.

TABLE I.G.6.-01: ESTIMATED PERCENTAGE OF HOSPITALS PENALIZED AND PENALTY AS SHARE OF PAYMENTS FOR FY 2027 HOSPITAL READMISSIONS REDUCTION PROGRAM BY HOSPITAL CHARACTERISTIC

Hospital Characteristic	Number of Hospitals Eligible for a Penalty[a]	Number of Penalized Hospitals[b]	Percentage of Hospitals Penalized[c] (%)	Penalty as a Share of Payments[d] (%)
All Hospitals	2,832	2,358	83.26	0.48
By Geographic Location (n= 2,826)				
Urban hospitals	2,180	1,876	86.06	0.48
1-99 beds	511	358	70.06	0.48
100-199 beds	635	562	88.50	0.56
200-299 beds	393	365	92.88	0.57

Source: The table results are based on the data used to calculate preliminary readmission measure results for Medicare Advantage and Medicare Fee-for-Service patients that were available using data from January 1, 2022, through December 31, 2023; Fee-for-Service DRG ratios and dual proportions from July 1, 2021, through June 30, 2023. Although data from all subsection (d), Maryland hospitals, and hospitals that are not eligible to participate in the Hospital Readmissions Reduction Program (such as CAHs) were used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals, hospitals that are not eligible to participate in the Hospital Readmissions Reduction Program, and hospitals that are not open as of the October 2025 public reporting open hospital list because these hospitals are not eligible for a penalty under the program. Hospitals are sorted into five peer groups based on the proportion of Fee-for-Service and Medicare Advantage dual-eligible stays from July 1, 2021, through June 30, 2023. Hospital characteristics are from the FY 2026 IPPS/LTCH PPS Proposed Rule Impact File.

Note: The total number of hospitals with hospital characteristics data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for geographic location, teaching status, ownership type, safety-net status, DSH patient percentage, and MCR percentage (n=2,826; missing=6) and region (n=2,831; missing=1). The methodology differs from the impact analyses included in the FY 2026 IPPS/LTCH PPS final rule in that this table includes the removal of the COVID-19 exclusion, use of a two-year performance period for DRG ratio calculations, and updated input datasets.

[a] This column is the number of applicable hospitals within the characteristic that could receive a penalty (that is, they have 25 or more eligible discharges for at least one measure).

[b] This column is the number of applicable hospitals that are penalized (that is, they have 25 or more eligible discharges for at least one measure and an estimated payment adjustment factor less than 1) within the characteristic.
[c] This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty by characteristic.
[d] This column is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all those hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments in this way allows for comparisons across hospital characteristics that accounts for differences in the amount of base operating DRG payments for different groups of hospitals. MedPAR data from October 1, 2022, through September 30, 2023 (FY 2023), are used to estimate the total base operating DRG payments.
[e] A hospital is considered a teaching hospital if it has an Indirect Medical Education adjustment factor for Operating PPS greater than zero.
[f] A hospital is considered a safety-net hospital if it is in the top DSH quintile.
[g] DSH patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.
[h] MCR (Medicare Cost Report) percentage is the percentage of total inpatient stays from Medicare patients

7. Effects of Finalized Changes Under the FY 2027 Hospital Value-Based Purchasing Program

The Secretary makes value-based incentive payments to hospitals under the Hospital Value-Based Purchasing Program based on their performance on measures during the performance period with respect to a fiscal year. These incentive payments will be funded for FY 2027 through a reduction to the FY 2027 base operating DRG payment amount for hospital discharges for such fiscal year, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2027 and subsequent years is 2 percent. The total amount available for value-based incentive payments must be equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary. In section V.J.1.b. of the preamble of this final rule, we estimate the available pool of funds for value-based incentive payments in the FY 2027 program year, which, in accordance with section 1886(o)(7)(C)(v) of the Act, will be 2.00 percent of base operating DRG payments, or a total of approximately $1.9 billion. This estimated available pool for FY 2027 is based on the historical pool of hospitals that were eligible to participate in the FY 2026 program year and the payment information from the March 2026 update to the FY 2025 MedPAR file.

The estimated impacts of the FY 2027 program year by hospital characteristic, found in Table I.G.8.-01, are based on historical TPSs. We used the FY 2026 program year's TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2026 update to the FY 2025 MedPAR file. The proxy adjustment factors can be found in Table 16 associated with this final rule (available via the internet on the CMS website).

The estimated impact analysis shows that, for the FY 2027 program year, the number of hospitals with a positive percent change in base operating DRG (51.7 percent) is higher than the number of hospitals with a negative percent change (48.3 percent). Approximately half of all hospitals experience a percent change in base operating DRG between -2.1 percent and 0.0 percent. On average, both urban hospitals in the West North Central region and rural hospitals in the Pacific region have the highest positive percent change in base operating DRG. Urban hospitals in the Middle Atlantic, South Atlantic, and East South Central regions experience an average negative percent change in base operating DRG. All other regions (both urban and rural) experience an average positive percent change in base operating DRG. Hospitals in higher MCR percent categories have higher average net percentage payment increases compared to hospitals with lower MCR percent. Hospitals in higher DSH percent categories (50–64 and 65 and over) have negative average net percentage payment, compared to hospitals in the lower DSH categories. On average, non-teaching hospitals have a higher percent change in base operating DRG compared to teaching hospitals.

BILLING CODE 7169–69–C

The actual FY 2027 program year's TPSs will not be reviewed and corrected by hospitals until after the FY 2027 IPPS/LTCH PPS final rule has published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2026 program year have been used for the updated impact analysis in this final rule.

8. Effects of Requirements Under the Hospital-Acquired Condition Reduction Program for FY 2027

We present the estimated impact of the FY 2027 Hospital-Acquired Condition (HAC) Reduction Program on hospitals by hospital characteristic based on previously adopted policies for the program. We are not adding or removing any measures from the HAC Reduction Program in this final rule, nor are we changing reporting or submission requirements. Table I.G.8.–01 in this section presents the estimated proportion of hospitals in the worst-performing quartile of Total HAC Scores by hospital characteristic. Hospitals' CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure results are based on Medicare fee-for-service (FFS) discharges from July 1, 2022, through June 30, 2024, and version 15.0 of the PSI software. Hospitals' measure results for Centers for Disease Control and Prevention (CDC) Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) are derived from standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the CDC's National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2023, and December 31, 2024. Hospital characteristics are based on the FY 2026 IPPS Proposed Rule Impact File.

Table I.G.8.–01 includes 2,891 non-Maryland hospitals with an estimated FY 2027 Total HAC Score based on the most recently available data at the time of publication of this final rule. Maryland hospitals and hospitals without a Total HAC Score are excluded from the table. Actual results for FY 2027 will be determined in the fall of 2026 after a 30-day review and corrections period for hospitals to review their program results. The first column presents a breakdown of each characteristic and the second column indicates the number of hospitals for the respective characteristic.

The third column in Table I.G.8.–01 indicates the estimated number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. For example, with regard to teaching status, 401 hospitals out of 1,620 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 210 out of 959 hospitals with fewer than 100 residents and 100 out of 295 hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in Table I.G.8.–01 indicates the estimated proportion of hospitals for each characteristic that would be in the worst performing quartile of Total HAC Scores and thus receive a payment reduction under the FY 2027 HAC Reduction Program. For example, 24.8 percent of the 1,620 hospitals characterized as non-teaching hospitals, 21.9 percent of the 959 teaching hospitals with fewer than 100 residents, and 33.9 percent of the 295 teaching hospitals with 100 or more residents would be subject to a payment reduction.

We received no comments on these effects.

TABLE I.G.8.-01: ESTIMATED PROPORTION OF HOSPITALS IN THE WORST-PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORES FOR THE FY 2027 HAC REDUCTION PROGRAM BY HOSPITAL CHARACTERISTIC

Hospital Characteristic	Number of Hospitals	Number of Hospitals in the Worst-performing Quartile[a]	Percent of Hospitals in the Worst-Performing Quartile[b]
All Hospitals[c]	2,891	721	25
By Geographic Location (n = 2,874)			
Urban hospitals	**2,245**	**510**	**22.7**
1-99 beds	562	129	23.0
100-199 beds	645	144	22.3
200-299 beds	396	85	21.5
300-399 beds	271	55	20.3
400-499 beds	118	26	22.0

By Safety-Net Status[e] (n = 2,874)			
Safety-net	583	162	27.8
Non-safety net	2,291	549	24.0
By Disproportionate Share Hospital (DSH) Patient Percentage[f] (n = 2,874)			
0-24	1,103	232	21.0
25-49	1,465	387	26.4
50-64	164	45	27.4
65 and over	142	47	33.1
By Medicare Cost Report (MCR) Percentage (n = 2,872)			
0-24	1,455	352	24.2
25-49	1,350	339	25.1
50-64	56	14	25.0
65 and over	11	4	36.4
By Region (n = 2,891)			
New England	120	38	31.7
Middle Atlantic	318	86	27.0
East North Central	456	118	25.9
West North Central	227	56	24.7
South Atlantic	491	97	19.8
East South Central	248	83	33.5
West South Central	438	86	19.6
Mountain	219	45	20.5
Pacific	374	112	29.9

Source: FY 2027 HAC Reduction Program estimated final rule results are based on CMS PSI 90 data from July 1, 2022, through June 30, 2024, and CDC's NHSN HAI results from January 1, 2023, through December 31, 2024. Hospital Characteristics are based on the FY 2026 IPPS Proposed Rule Impact File.

Note: The total number of hospitals with hospital characteristic data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for geographic location, teaching status, ownership, Safety-net status, and DSH percent (n = 2,874; missing = 17), and MCR percentage (n = 2,872; missing = 19).

[a] This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

[b] This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

[c] The number of non-Maryland hospitals with a Total HAC Score (N = 2,891).

[d] A hospital is considered a teaching hospital if it has an Indirect Medical Education (IME) adjustment factor for Operating PPS (based on the TCHOP variable in the IPPS Impact File) greater than zero.

[e] A hospital is considered a safety-net hospital if it is in the top quintile for DSH percent.

[f] The DSH patient percentage is equal to the sum of: (1) the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income; and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

9. Implementation of the Rural Community Hospital Demonstration (RCHD) Program in FY 2027

In section V.L.2 of the preamble of this final rule for FY 2027, we discussed our general budget neutrality methodology for section 410A of Public Law 108173, as amended by sections 3123 and 10313 of Public Law 111–148, by section 15003 of Public Law 114–255, and most recently, by section 128 of Public Law 116–260, which requires the Secretary to conduct a demonstration that would modify payments for inpatient services for up to 30 rural hospitals.

Section 128 of Public Law 116–260 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 15-year extension period (that is, for an additional 5 years beyond the previous extension period). In addition, the statute provides for continued participation for all hospitals participating in the demonstration program as of December 30, 2019.

Section 410A(c)(2) of Public Law 108–173, as amended, requires that in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented (budget neutrality). To ensure budget neutrality, we proposed to continue with the general methodology used in previous years, whereby we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration and then adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. This proposed methodology applies budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented but does not identify the range across which aggregate payments must be held equal.

For this final rule, we are not yet able to finalize the estimated FY 2027 costs of the demonstration at this time, based on available ''as submitted'' cost reports to apply the budget neutrality offset to the national IPPS rates as we have done in previous years.

In previous years, we have also incorporated a second component into the budget neutrality offset amounts identified in the IPPS/LTCH PPS final rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier given year differed from the estimated costs for the demonstration set forth in the IPPS/LTCH PPS final rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2018 through 2020 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS/LTCH PPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 128 of Public Law 116–260, we proposed to continue with this general procedure. As stated, for the FY2027 final rule, we are not yet able to finalize the estimated FY 2027 costs of the

demonstration. Therefore, we are not proposing to apply a budget neutrality offset for the FY 2027 IPPS/LTCH PPS final rule. Instead, we proposed to apply both the FY 2027 and FY 2028 estimated costs of the demonstration into the budget neutrality offset to national IPPS rates in the FY 2028 IPPS/LTCH PPS final rule. Consistent with our methods in previous years, these estimates will also include the difference between estimated costs and actual costs for the demonstration for FY 2021 and FY 2022 in the budget offset amount. We invited public comments.

We received a few public comments, most of which were out of scope. However, all of the comments we received were supportive of continuing the Rural Community Hospital Demonstration.

Comment: A commenter recommended that CMS allow RCHD hospitals whose 5-year participation agreements have expired or will be expiring under the CAA extension reenter the program until the demonstration's statutory end date of June 30, 2028.

Response: We thank the commenter for their interest and recommendation. In the absence of new authorizing legislation, it is CMS' position that we cannot extend expired participation agreements beyond the statutorily defined 5-year periods under the same reauthorization.

Comment: The parent company for two of the participating hospitals expressed support for the continuation of the Rural Community Hospital Demonstration program, but noted that it does not offer long-term financial stability needed to maintain health care access in rural areas. The commenter requests that the demonstration be made a permanent program. Furthermore, the commenter requests several technical adjustments to the administration of the demonstration that may enhance stability in the payment to the participating hospitals.

Response: We appreciate the comments. We have conducted the demonstration program in accordance with section 410A of the MMA, and there is no authority to make the demonstration a permanent program. With regard to any technical adjustments to the demonstration, we intend to work with the commenter and other rural stakeholders to examine the issues involved.

After consideration of the public comments we received, primarily requesting to extend the demonstration, we are finalizing our policy without modification.

10. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

In section VII.C.2 of the preamble of this final rule we discuss the implementation of the FCHIP Demonstration, which was authorized under section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275), as amended by section 3126 of the Affordable Care Act of 2010 (Pub. L. 114–158), and most recently re-authorized and extended by the Consolidated Appropriations Act of 2021 (Pub. L. 116–260). The legislation authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care in order to improve access to and better integrate the delivery of acute care, extended care and other health care services to Medicare beneficiaries in certain rural areas. The FCHIP demonstration initial period was conducted in 10 critical access hospitals (CAHs) from August 1, 2016, to July 31, 2019, and the demonstration ''extension period'' began on January 1, 2022, to run through June 30, 2027. Section 123(g)(1)(B) of Public Law 110–275 required that the demonstration be budget neutral. Specifically, this provision stated that, in conducting the demonstration project, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project under the section were not implemented. Budget neutrality estimates for the demonstration described in the preamble of this final rule are based on the demonstration extension period.

As described in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36971 through 36975), CMS waived certain Medicare rules for CAHs participating in the demonstration extension period to allow for alternative reasonable cost-based payment methods in the three distinct intervention service areas: telehealth services, ambulance services, and skilled nursing facility/nursing facility services. These waivers were implemented with the goal of increasing access to care with no net increase in costs. As we explained in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36971 through 36975), section 129 of Public Law 116–260, stipulates that only the 10 CAHs that participated in the initial period of the FCHIP Demonstration are eligible to participate during the extension period. Among the eligible CAHs, five elected to participate in the extension period. The selected CAHs are located in two states—Montana and North Dakota—and are implementing the three intervention services.

As explained in the FY 2026 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation in the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms meaning that the demonstration would produce savings from reduced transfers and admissions to other health care providers, offsetting any increase in Medicare payments as a result of the demonstration. However, because of the small size of the demonstration and uncertainty associated with the projected Medicare utilization and costs, the policy we finalized for the demonstration extension period of performance in the FY 2026 IPPS/LTCH PPS final rule provides a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met.

In the FY 2026 IPPS/LTCH PPS final rule, we adopted the same budget neutrality policy contingency plan used during the demonstration initial period to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met during the demonstration extension period. If analysis of claims data for Medicare beneficiaries receiving services at each of the participating CAHs, as well as from other data sources, including cost reports for the participating CAHs, shows that increases in Medicare payments under the demonstration during the 5-year extension period is not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide.

As explained in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36971 through 36975), because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality for the demonstration extension period by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration extension period is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration extension period were not implemented, CMS policy is to comply with the budget neutrality requirement finalized in the FY 2026 IPPS/LTCH PPS final rule, by reducing payments to all CAHs, not just those participating in the demonstration extension period.

In the FY 2026 IPPS/LTCH PPS final rule, we stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP Demonstration was specifically designed to test innovations that affect delivery of services by the CAH provider category. As we explained in the FY 2026 IPPS/LTCH PPS final rule, we believe that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented and does not identify the range across which aggregate payments must be held equal.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), CMS concluded that the initial period of the FCHIP Demonstration had satisfied the budget neutrality requirement described in section 123(g)(1)(B) of Public Law 110–275. Therefore, CMS did not apply a budget neutrality payment offset policy for the initial period of the demonstration. As explained in the FY 2022 IPPS/LTCH PPS final rule, we finalized a policy to address the demonstration budget neutrality methodology and analytical approach for the initial period of the demonstration. In the FY 2026 IPPS/LTCH PPS final rule, we finalized a policy to adopt the same budget neutrality methodology and analytical approach used during the demonstration initial period to be used for the demonstration extension period. As stated in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36971 through 36975), our policy for implementing the 5-year extension period for section 129 of Public Law 116–260 follows same budget neutrality methodology and analytical approach as the demonstration initial period methodology. While we expect to use the same methodology that was used to assess the budget neutrality of the FCHIP Demonstration during the initial period of the demonstration to assess the financial impact of the demonstration during this

extension period, upon receiving data for the extension period, we may update and/or modify the FCHIP budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured. Therefore, we did not propose to apply a budget neutrality payment offset to payments to CAHs in FY 2027. This policy will have no impact for any national payment system for FY 2027. We received no comments on this proposal and therefore are finalizing this provision without modification.

11. Effects of the Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this final rule, we discuss testing the mandatory episode-based payment model titled the Transforming Episode Accountability Model (TEAM) under the authority of the CMS Center for Medicare and Medicaid Innovation (CMS Innovation Center). Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries while reducing program expenditures. The intent of TEAM is to improve beneficiary care through financial accountability for episode categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM tests whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM will benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare fee-for-service (FFS) payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

As finalized in the FY 2025 IPPS/LTCH PPS final rule (89 FR 68986), with subsequent updates made in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36536), TEAM is mandatory for acute care hospitals located within mandatory CBSAs and includes acute care hospitals that were eligible for voluntary opt-in.[6] TEAM began on January 1, 2026, and will end on December 31, 2030. Payment approaches that hold providers accountable for episode cost and performance can potentially create incentives for the implementation and coordination of care redesign between participants and other providers and suppliers such as physicians and post-acute care providers. We anticipate TEAM will enable hospitals to consider the most appropriate strategies for care redesign, including (1) increasing post-hospitalization follow-up and medical management for patients; (2) coordinating care across the inpatient and post-acute care spectrum; (3) conducting appropriate discharge planning; (4) improving adherence to treatment or drug regimens; (5) reducing readmissions and complications during the post-discharge period; (6) managing chronic diseases and conditions that may be related to the episodes; (7) choosing the most appropriate post-acute care setting; and (8) coordinating between providers and suppliers such as hospitals, physicians, and post-acute care providers.

Under TEAM, TEAM participants continue to bill Medicare under the traditional FFS system for items and services furnished to Medicare FFS beneficiaries. The TEAM participant may receive a reconciliation payment from CMS if Medicare FFS expenditures for a performance year are less than the reconciliation target price, subject to a quality adjustment. TEAM does not have downside risk for Track 1, meaning TEAM participants will only be accountable for performance year spending below their reconciliation target price, subject to a quality adjustment, that would result in a reconciliation payment amount. For Track 2 and Track 3, TEAM will be a two-sided risk model that requires TEAM participants to be accountable for performance year spending above or below their reconciliation target price, subject to a quality adjustment, that would result in a reconciliation payment amount or a repayment amount.

a. Effects on the Medicare Program

TEAM is a mandatory episode-based payment model which will have a direct effect on the Medicare program because TEAM participants are incentivized to reduce Medicare spending. Additionally, TEAM participants could receive a reconciliation payment amount from CMS or have to pay CMS a repayment amount based on their spending and quality performance. In the FY 2026 IPPS/LTCH PPS final rule (90 FR 37271), we estimated and projected financial impacts of TEAM over the course of the five-year model test. We estimated that on net, that CMS will pay TEAM participants $381 million and TEAM participants will pay CMS $469 million, and that TEAM will save the Medicare program approximately $368 million over the 5 performance years (2026 through 2030).

In this final rule, we are finalizing several policies. We believe several final policies, including policies related to MS–DRGs in the spinal fusion episode category, episode attribution, quality measurement performance and baseline periods, and updates to the preliminary target price methodology will not have a material impact on the Medicare savings estimate. For example, we anticipate the policy to include the updated spinal fusion MS–DRGs would help maintain episode volume and spending, and we do not anticipate that updating the quality measure time periods will have a significant effect on Medicare spending or savings. Additionally, the policies that affect the pricing methodology, such as changes to the construction of the normalization factor and adding update factors to capture current payment system changes, aim to improve the accuracy of target prices and we do not anticipate they will result in dramatic shifts to the Medicare savings estimate.

We note that certain policy considerations in the Requests for Information (RFIs) included in the proposed rule, such as allowing additional voluntary participation for hospitals with physician ownership (POHs) or adding ASC episodes to TEAM would impact the Medicare savings estimate. However, we are not finalizing any policy related to the RFIs in this final rule. We anticipate in future notice and comment rulemaking to propose voluntary participation of POHs and would at that time update the Medicare savings estimate, as applicable. Therefore, TEAM's financial impact to the Medicare program remains unchanged from the FY 2026 IPPS/LTCH PPS final rule.

We received no comments and therefore are finalizing this provision without modification.

b. Effects on Medicare Beneficiaries

We believe the refinements to TEAM in this final rule will not materially alter the potential effects of the model on beneficiaries that we had initially indicated in the FY 2025 IPPS/LTCH PPS final rule (89 FR 70028). We believe the majority of the changes will not alter the effects of the model on beneficiaries because the changes predominantly alter how hospitals interact with the model, rather than how beneficiaries receive care. However, we believe any changes finalized that may have a direct effect on TEAM beneficiaries are positive. In section X.A.2.a.(2) of the preamble of this final rule, we finalized the policy to include new spinal fusion episode categories MS–DRGs with the belief that doing so would continue to capture Medicare beneficiaries in TEAM so they could benefit from improved care transitions and quality of care.

We invited public comments on the impact of TEAM on Medicare beneficiaries. We received no comments and therefore are finalizing this provision without modification.

c. Effects on TEAM Participants

We believe TEAM will not have significant impact on TEAM participant burden. TEAM will not alter the way participating hospitals bill Medicare. Therefore, we believe there will be no additional burden for TEAM participants related to billing practices.

We also believe that TEAM does not impose additional burden related to quality reporting because the quality measures used in the model are measures that TEAM participants already report to CMS under existing CMS quality reporting programs. Accordingly, TEAM participants will not be required to establish new quality reporting systems or submit additional quality measure data solely for purposes of TEAM.

In addition, TEAM does not require TEAM participants to hire additional staff, such as care coordinators, establish a governing board, or otherwise implement new organizational structures as a condition of participation. Therefore, we do not believe TEAM imposes additional regulatory burden on TEAM participants for such activities.

[6] Acute care hospitals that participate in the BPCI Advanced or the CJR model, that are not located in a mandatory CBSA selected for TEAM participation, and continue to participate in BPCI Advanced or CJR until the last day of the last performance period or last performance year of the respective model, were eligible to voluntarily opt into TEAM.

We recognize there may be administrative burden associated with the TEAM requirement that participants submit a financial arrangements list or clinician engagement list, as applicable. TEAM participants that do not have any financial arrangements or clinician engagement relationships that meet the definitions established for the model, as defined at § 512.505, must attest that there are no such relationships, as defined at § 512.522 (d), which we believe would be associated with nominal administrative burden.

For purposes of estimating burden for TEAM participants that submit a list, we assume that approximately 17 percent of participating hospitals may submit a financial arrangements list or clinician engagement list on a quarterly basis, as applicable. We estimate that preparing, reviewing, and submitting the applicable list will require approximately 1 hour per quarterly submission, or 4 hours annually, for each participating hospital that submits one of these lists. We assume this work will be completed by a Medical and Health Services Manager. To estimate costs, we used the May 2025 wage rate data from the U.S. Bureau of Labor Statistics and doubled the mean hourly wage to account for overhead and fringe benefits. Accounting for overhead and benefits, we used an hourly labor cost of $135.54 for a Medical and Health Services Manager.

Based on these assumptions, we estimate that the annual burden for a participating hospital that submits a financial arrangements list or clinician engagement list will be approximately 4 hours at a cost of approximately $542.16 per hospital (4 hours × $135.54 per hour). As noted, we estimate that approximately 17% or 122 of the 719 TEAM participants will submit one of these lists on a quarterly basis. Therefore, we estimate a total annual burden of approximately 488 hours at a cost of approximately $66,143.52 (488 hours × $135.54 per hour) across all TEAM participants. We note this is likely an upper estimate, as a TEAM participant's financial arrangements list or clinician engagement list may remain unchanged between quarters, reducing preparation and review time. We believe this represents the only meaningful administrative reporting requirement under TEAM because TEAM participants are not required to report new quality measures, modify Medicare billing practices, establish new governance structures, or hire additional personnel solely for participation in the model.

Finally, we acknowledge potential burden with respect to TEAM participants at § 512.582(b)(1)(iii), where a TEAM participant must be able to generate a list of all beneficiaries who have received the beneficiary notification. We expect that TEAM participants are able to easily produce lists of beneficiaries who have received the beneficiary notification. We provide flexible guidelines for this requirement as specific record keeping methods can be chosen by individual TEAM participants so long as the necessary information is maintained readily available to report upon request. We don't anticipate such requests to TEAM participants would occur often, unless warranted by monitoring, program integrity, or other concerns. Given we expect this reporting requirement to be nominal, we are unable to provide a direct cost estimate for this requirement.

Overall, we anticipate marginal additional reporting burden resulting from the model.

12. Effects of the Comprehensive Care for Joint Replacement Expansion (CJR–X) Model

In section X.C. of this final rule, we are expanding the CJR Model, with the expanded model referred to as CJR–X. CJR–X will be a mandatory episode-based payment model under the authority of the Center for Medicare and Medicaid Innovation (Innovation Center). Section 1115A of the Act authorizes the Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries while reducing program expenditures. We believe the CJR–X model will further the mission of the Innovation Center to pay for value rather than for volume because it holds CJR–X participants accountable for the cost and quality of care for Medicare beneficiaries during a lower extremity joint replacement (LEJR) episode and promotes alignment across all health care providers and suppliers during the episode of care. In the CJR–X model, the acute care hospital where the anchor hospitalization or anchor procedure occurs will be held accountable for spending during the episode. CJR–X participants will be afforded the opportunity to earn performance-based payments by appropriately reducing expenditures and meeting certain quality metrics. CJR–X participants will also gain access to claims data, pursuant to a request and data sharing agreement, to better understand CJR–X beneficiaries' post-acute care needs and associated spending. Payment approaches that reward providers that assume financial and performance accountability for a particular episode of care create incentives for the implementation and coordination of care redesign between hospitals and other providers and suppliers. Given evidence from the CJR Model, we anticipate CJR–X will continue to reduce Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries.

It is important to note that CJR–X may have effects beyond the effects to the Medicare program or to Medicare beneficiaries. Since CJR–X will be expanded nationally, except to hospitals excluded in section X.C.2.b.(2)(i). of this final rule, we anticipate there may be spillover effects in the non-Medicare market, or even in the Medicare market in other areas as a result of this model. Changes in Medicare payment policy often have substantial implications for non-Medicare payers. As an example, non-Medicare patients may benefit if CJR–X participants introduce system wide changes that improve the coordination and quality of health care. Other payers may also be developing episode payment models and may align their payment structures with CMS. While there is uncertainty on how much spillover effect will occur with respect to CJR–X, we generally anticipate the effect to be positive given a growing body of evidence.[736] [737]

a. Effects on the Medicare Program

CJR–X will be a mandatory episode-based payment model that will have a direct effect on the Medicare program because CJR–X participants will be incentivized to reduce Medicare spending by aiming to have episode expenditures come under the reconciliation target price. CJR–X participants will be subject to two-sided financial risk, therefore CJR–X participants could receive a reconciliation payment amount from CMS or have to pay CMS a repayment amount based on their spending and quality performance. Financial safeguards are included to ensure outlier high-cost episode spending is capped, stop-gain and stop-loss limits would be applied to prevent extreme reconciliation amounts or repayment amounts, and hospitals meeting the low volume threshold are not held accountable for episodes where there is insufficient volume to spread risk or have opportunities for savings.

Table K–CL–01 has been updated to account for the 3-month delay in starting CJR–X, as discussed in section X.C.2.a of this final rule, and shows the projected financial impacts of CJR–X over a 5-year period, with estimated savings to Medicare in each performance year. For the first performance year (January 1, 2028–December 31, 2028), we project CJR–X will generate $129 million in Medicare savings. Estimated savings increase to $133 million in performance year 2 and $137 million in performance year 3. In performance years 4 and 5, projected savings rise to $166 million and $171 million, respectively.

Across the five-year period, we project CMS will pay $1.463 billion to CJR–X participants, while we project CJR–X participants will repay $1.855 billion to CMS. Combined with expected savings from the assumed 1 percent behavior change from CJR–X participants, which affects both episode spending and reconciliation payments, CJR–X will result in estimated net Medicare savings of approximately $736 million. We note these projections represent a portion of the potential savings to Medicare that CJR–X may produce since the model does not have an end date.

TABLE K-CL.-01: PROJECTED FINANCIAL IMPACTS OF CJR-X (IN MILLIONS)

	Performance Year 1	Performance Year 2	Performance Year 3	Performance Year 4	Performance Year 5
CJR-X Episode Spending	$7,964	$8,202	$8,419	$12,320	$12,654
(-) Baseline Episode Spending	$8,026	$8,266	$8,486	$12,394	$12,731
(+) Reconciliation Amounts*					
Reconciliation Payment Amounts	$241	$248	$254	$355	$365
Repayment Amounts	-$307	-$317	-$325	-$447	-$459
Total Impact	-$129	-$133	-$137	-$166	-$171
Impact as % of Baseline	-1.6%	-1.6%	-1.6%	-1.3%	-1.3%

* Reconciliation payments and repayments are attributed to the performance year, not the year the payments occur.

(1) Assumptions

Baseline episode spending is projected using 2024 actual spending trended forward for changes in price and Medicare enrollment. We assume price updates will be consistent with projections for payment increases to hospital payments included in the 2025 Trustees Report.[738] We also assume enrollment projections will be consistent with the report. There were no changes to 2024 volume and intensity applied in our projections, as these trends have historically been negative but have begun to level off. These assumptions have no bearing on savings percentage impacts, only the baseline spending levels.

We also note that baseline spending includes a small impact assumption to account for previous CJR participants increasing spending as a result of not participating in a bundled payment model anymore. We assume about half of the savings from the most recent CJR Model evaluation report (3.4 percent) comes back as a cost to Medicare because they didn't sustain their episode spending reductions given the lapse of participation in an episode-based payment model from the end of CJR to the start of CJR–X.[739] We note mandatory CJR model participants comprise about 12 percent of episode spending.

CJR–X excludes TEAM participants and since TEAM ends in 2030, TEAM participants are assumed to enter CJR–X in 2031, performance year 4. We expect TEAM participants will not reduce episode spending when they enter CJR–X in 2031 because their savings are part of CJR–X's baseline. The baseline already assumes that spending was reduced by 1 percent in 2026, consistent with what was estimated for the Medicare savings estimate for TEAM. We also expect TEAM participants to have more spending capped when the stop loss limits are applied. As demonstrated in Table K–CL.–01, overall estimated CJR–X model savings impacts as a percentage of baseline spending are reduced when TEAM participants enter the CJR–X model.

We also assume that CJR–X participants will reduce episode spending by 1 percent in the first year of the model and maintain that reduction going forward. Comparing this assumption to CJR experience, our savings assumption is lower due to the unbiased selection of CJR hospitals (average episode spending for CJR hospitals was much greater than average) and perhaps less potential for similar spending reductions from less costly providers. Further, post-acute care has steadily decreased over time for LEJR procedures, and there may be less opportunity for future decreases in episode spending. This assumption was sensitivity tested in and displayed in Table K–CL.–02.

We also note the assumed quality adjustment distribution is based on simulations provided by internal analysis and the average quality adjusted discount is 1.3 percent. Lastly, the financial impacts assume that the retrospective trend adjustment isn't capped, meaning the difference between prospective trend and retrospective trend are less than 3 percent in magnitude.

(2) Sensitivity Analysis

We also performed a sensitivity analysis to assess various intervention effects on CJR–X. Overall financial impacts are sensitive to the intervention effect CJR–X will have on participating hospitals' episode spending. Table K–CL.–02 includes financial impacts at various intervention effect assumptions (note that negative values indicate savings).

TABLE K-CL.-02: CJR-X SENSITIVITY ANALYSIS AT DIFFERENT INTERVENTION EFFECTS

Intervention effect	CY 2028	CY 2029	CY 2030	CY 2031	CY 2032
-3.0%	-2.9%	-2.9%	-2.9%	-2.6%	-2.6%
-1.0%	-1.6%	-1.6%	-1.6%	-1.3%	-1.3%
0.0%	-1.0%	-1.0%	-1.0%	-0.7%	-0.7%

Reductions in episode spending lead to lower target prices, however costs from stop loss limits increase as targets prices become more aggressive, since more episode spending is capped. For this reason, overall CJR–X savings does not increase at the same rate as episode spending reductions.

The following is a summary of comments we received on the effects to Medicare and our responses to these comments:

Comment: A couple of commenters stated that the CJR–X Model and its improvements have the potential to realize significant savings for the Medicare program LEJR episodes of care.

Response: We agree with the commenter that the CJR–X Model has the potential to achieve savings for the Medicare program for LEJR episodes. We believe the savings expected under CJR–X are commensurate with the savings opportunities that remain available for LEJR procedures, including opportunities to improve care coordination, reduce avoidable complications, and encourage efficient use of post-acute care and other episode services.

At the same time, we recognize that savings opportunities are not unlimited. As CJR–X participants improve performance and move closer to peak efficiency in furnishing and coordinating LEJR episode care, the amount of additional savings that can be achieved may reduce over time. In that circumstance, we may shift the model focus to maintain efficient spending levels while continuing to protect beneficiary access, choice, and quality of care. Any modifications to CJR–X would be proposed in future notice and comment rulemaking and would also be subject to continued certification of the model.

Comment: A few commenters requested that CMS conduct a more detailed impact analysis given concerns on the model's effect on certain types of hospitals. Commenters requested stratifying the impacts at the hospital level and display impacts of the

[738] *https://www.cms.gov/oact/tr/2025*

[739] Comprehensive Care for Joint Replacement Model—Seventh Annual Report: *https://www.cms.gov/priorities/innovation/data-and-reports/2025/cjr-py7-annual-report.*

various classes of hospitals, such as safety net hospitals and hospitals with no prior experience in episode-based accountability. A commenter urged publishing the results of an expanded analysis in the final rule.

Response: We recognize the commenters' concern that model-level financial projections may not fully describe how the model could affect particular categories of hospitals, including safety net hospitals and hospitals with no prior experience in episode-based accountability. The projected financial impacts presented in Table K–CL.–01 are model-level estimates of the expected Medicare program impacts of CJR–X. These model-level estimates help inform whether the model is expected to achieve Medicare savings and ensure CJR–X supports the purpose of the CMS Innovation Center in testing payment and service delivery models that reduce program expenditures while preserving or enhancing the quality of care furnished to individuals, as described in section 1115A(a) of the Act. Those estimates are not intended to project the financial impact for any individual hospital or category of hospital. CJR–X participants will be subject to two-sided financial risk, and the model includes financial safeguards such as high-cost episode caps, stop-gain and stop-loss limits, and a low-volume threshold, as discussed in section X.C.2.f. of this final rule, to mitigate extreme reconciliation payment amounts or repayment amounts and to avoid holding hospitals accountable where there is insufficient episode volume to spread risk or support opportunities for savings.

Similar to the CJR Model and other episode-based payment models, we intend to rely on monitoring and evaluation to help us determine effects of CJR–X on certain categories of hospitals, like safety net and rural hospitals. Findings from monitoring and evaluation will help inform future policy modifications. We also note that CMS took lessons learned from the CJR Model evaluations into account in designing CJR–X. For example, the CJR Model evaluation demonstrated that safety net hospitals had lower financial performance.[740] Therefore, CJR–X includes modifications intended to improve the model methodology and support hospital performance, including improved target price risk adjustment, as discussed in section X.C.2.f.(4) of this final rule, and lower stop-loss limits for safety net hospitals, as discussed in section X.C.2.f.(5)(g) of this final rule. These policies are intended to improve payment accuracy and reduce the potential for disproportionate financial risk, including for hospitals serving higher-risk or more resource-intensive beneficiary populations.

With respect to commenters' concerns about hospitals with no prior experience in episode-based accountability, we acknowledge that CJR–X would include hospitals that did not previously participate in the CJR Model or other Innovation Center episode-based payment models. However, the CJR Model experience also indicates that care redesign practices for lower extremity joint replacement episodes may extend beyond participating hospitals. In CJR Model evaluations, non-participating comparison hospitals also demonstrated reductions in spending.[741] This may suggest that broader changes in LEJR care patterns and episode management may have occurred outside of formal CJR participation. In addition, we anticipate that some hospitals may have experience relevant to CJR–X participation through other CMS models, Medicare Advantage or commercial episode-based arrangements, or existing hospital efforts to manage LEJR care transitions, post-acute care use, quality, and spending. We believe these experiences, together with the model's lead time, data sharing policies, financial safeguards, and target price methodology, will help support hospitals as they prepare for CJR–X participation.

Comment: Some commenters raised concerns about the operational and financial effects of broader mandatory bundled payment models. They stated that hospitals were already balancing quality reporting obligations, interoperability investments, and adoption of new technologies across service lines. A commenter also requested that CMS address structural design features that they believed could create automatic and compounding payment reductions unrelated to care improvement, asserting that CMS's own analysis projected Medicare savings even if hospitals made no changes to care delivery.

Response: We disagree that CJR–X savings would necessarily result from an automatic compounding payment reduction rather than from the model's episode-based accountability structure. Under CJR–X, target prices will be constructed using regional episode spending and will be updated through prospective and capped retrospective trend adjustments intended to better reflect changes in spending patterns between the baseline period and the performance year. Preliminary target prices will also be updated at reconciliation to account for payment-system changes that may not be fully captured by the capped retrospective trend factor. These features are intended to improve pricing accuracy and reduce the risk that target prices become disconnected from actual performance-year spending.

Further, while the target price methodology includes a discount factor, the discount factor is not applied without regard to quality. A CJR–X participant's composite quality score would affect both reconciliation payment eligibility and the effective discount factor used at reconciliation, as discussed in section X.C.2.f.(5)(e) of this final rule. CJR–X Participants with ''Good'' quality performance would be eligible for a reduced 1.0 percent discount factor, and participants with ''Excellent'' quality performance would be eligible for a 0.0 percent discount factor. CJR–X Participants with ''Below acceptable'' quality performance would not be eligible for a reconciliation payment, even if actual episode spending were below the reconciliation target price.

This structure is intended to align financial incentives with quality performance and encourage hospitals to achieve high-quality episode care while managing episode spending efficiently. Because stronger quality performance can reduce or eliminate the effective discount factor, CJR–X does not create the same financial result for all hospitals regardless of care quality. We believe this approach will encourage appropriate reductions or changes in utilization that achieve high-quality care in a more efficient manner.

We recognize that CJR–X participants may be managing multiple operational priorities, including quality reporting, health information technology, interoperability, and adoption of new clinical or operational technologies. We will consider these operational factors as we evaluate model performance and implementation experience. We may consider modifications, as appropriate, through future notice-and-comment rulemaking if model experience indicates that changes are warranted.

b. Effects on Medicare Beneficiaries

CJR–X may benefit beneficiaries receiving lower extremity joint replacements because the model is intended to improve the coordination and transition of care, invest in infrastructure and redesigned care processes for high quality and efficient service delivery, and incentivize higher value care across the inpatient and post-acute care spectrum spanning the episode of care. We believe the model has a patient-centered focus such that healthcare delivery and communication with the patient and or patient caregivers is based on the needs of the beneficiary, thus benefitting the beneficiary community.

We are finalizing several quality of care and patient experience measures to assess hospital quality performance in CJR–X with the intent that it will encourage the provider community to focus on and deliver improved quality care for the Medicare beneficiary. We are finalizing the adoption and public reporting of five quality measures, as discussed in section X.C.2.e of this final rule, for CJR–X. Those measures include two complications measures, two patient experience survey measures, and one patient reported outcome measure. These measures will be used to ensure CJR–X participants are continually measured on the quality of their care and to also monitor for beneficiary safety. Additionally, CJR–X participants must meet the quality performance standards to qualify to receive a reconciliation payment, as discussed in section X.C.2.f.(5).(f). of this final rule. The accountability of CJR–X participants for both quality and cost of care provided for Medicare beneficiaries with an LEJR episode provides the hospitals with incentives to improve the health and well-being of the Medicare beneficiaries they treat.

Additionally, the model does not affect the beneficiary's freedom of choice to obtain health services from any individual or organization qualified to participate in the Medicare program guaranteed under section 1802 of the Act. Eligible beneficiaries who choose to receive services from a CJR–X participant will not have the option to opt

[740] Comprehensive Care for Joint Replacement Model—Safety Net Hospital Experience in Bundled Payment Model Report: *https://www.cms.gov/priorities/innovation/data-and-reports/2025/cjr-safety-net-hospital-exp-rpt.*

[741] Comprehensive Care for Joint Replacement Model—Fifth Annual Report: *https://www.cms.gov/priorities/innovation/data-and-reports/2023/cjr-py5-annual-report.*

out of inclusion in the model. Although the model allows CJR–X participants to enter into financial arrangements with certain other providers and these hospitals may recommend those providers to the beneficiary, hospitals may not prevent or restrict beneficiaries to any list of preferred or recommended providers.

Many controls exist under Medicare to ensure beneficiary access and quality and in addition we will monitor hospitals and, if necessary, audit CJR–X participants if claims analysis indicates an inappropriate change in delivered services. As described in section X.C.2.f.(5)(i). of this final rule, given that CJR–X participants will receive a reconciliation payment when they are able to spend below the reconciliation target price and meet quality thresholds, they could have an incentive to avoid complex, high-cost cases by referring them to nearby facilities or specialty referral centers. We intend to monitor the claims data from CJR–X participants—for example, to compare a hospital's case mix relative to a pre-model historical baseline to determine whether complex patients are being systematically excluded.

We will implement several safeguards to ensure that Medicare beneficiaries do not experience a delay in services. We believe that the longer the episode duration, the lower the risk of delaying care beyond the episode duration, and we believe that a 90-day episode is sufficiently long to minimize the risk that any lower extremity joint replacement related care will be delayed beyond the end of the episode. Moreover, as part of the pricing methodology, as described in section X.C.2.f.(5).(h). of this final rule that certain outlier costs post-episode payments occurring in the 30-day window subsequent to the end of the 90-day episode will be counted as an adjustment against the reconciliation payment or repayment amount. Importantly, approaches to saving costs will include taking steps that facilitate patient recovery, that shorten recovery duration, and that minimize post-operative problems that might lead to readmissions. Thus, the model itself rewards better patient care.

We invited public comments on the impact of CJR–X on Medicare beneficiaries.

Comment: A commenter stated that beneficiaries undergoing lower-extremity joint replacement procedures vary substantially in medical complexity, functional status, caregiver support, and rehabilitation needs. The commenter expressed concern that CJR–X financial incentives could create pressure to reduce post-acute care utilization without sufficient regard to individual patient needs. The commenter encouraged CMS to continue prioritizing patient protections, quality measurement, and monitoring for unintended consequences, including inappropriate discharge patterns, reduced access for medically complex beneficiaries, avoidance of high-risk patients, delays in medically necessary post-acute care, and disparities in outcomes among vulnerable populations. The commenter also raised concern about the ability to sustain ambulatory surgical centers (ASCs) in underserved urban communities that could support outpatient surgeries.

Response: We agree that lower-extremity joint replacement beneficiaries may have differing clinical, functional, social support, and rehabilitation needs, and we believe that care redesign under CJR–X must be consistent with those individualized needs. As discussed in section X.C.2.c of this final rule, CJR–X would not limit Medicare coverage of medically necessary items and services or restrict a beneficiary's freedom to choose providers or suppliers, including post-acute care providers. The beneficiary protections are intended to help preserve freedom of choice, and provide mechanisms to raise concerns through clinicians, 1–800–MEDICARE, and Quality Improvement Organizations.

We also recognize the commenter's concern that episode-based payment incentives could lead to inappropriate reductions in post-acute care. CJR–X includes multiple quality and monitoring mechanisms intended to balance cost accountability with patient safety, care experience, and outcomes. CJR–X includes quality measures addressing complications, patient experience, and patient reported outcomes, as discussed in section X.C.2.e of this final rule, and CJR–X participants are incentivized to improve quality of care provided to CJR–X beneficiaries because improved quality performance results in a lower discount factor, as discussed in section X.C.2.f.(5)(e) of this final rule. We believe that the quality measure set will provide sufficient information to monitor quality performance and support model evaluation.

In addition to the standard monitoring activities, as discussed in section X.C.2.m of this final rule, we will also monitor activities related to post-acute care use, discharge patterns, and use of model waivers, including the SNF 3-day rule waiver and post-discharge home visit waiver, as discussed in section X.C.2.j of this final rule, to help identify potential inappropriate reductions in care, premature discharges, steering, or other unintended consequences.

We have also included in the payment methodology safeguards intended to reduce incentives that could adversely affect beneficiaries with greater medical complexity. Specifically, target prices are risk-adjusted, as discussed in section X.C.2.f.(4) of this final rule, which includes more precise adjustments for beneficiary clinical and socioeconomic factors to improve the accuracy of target prices. By better accounting for differences in patient complexity and expected episode spending, this methodology helps reduce incentives for CJR–X participants to avoid medically complex or higher-risk beneficiaries.

Further, CJR–X includes a policy that monitors increased episode spending after the episode has ended, as discussed in section X.C.2.f.(5)(h) of this final rule. This policy will hold CJR–X participants accountable for excess spending and is intended to identify and address inappropriate shifting of care, including withholding or delaying medically necessary services until after the episode period ends.

Regarding ASCs, we recognize the value they provide to communities by creating greater access to medically necessary outpatient procedures. While ambulatory surgical centers are not CJR–X participants, nor can an episode be initiated in an ASC setting, we will continue to consider how ASCs can be incorporated into value-based care.

After consideration of the public comments we received, we are finalizing this provision without modification.

c. Effects on CJR–X Participants

We believe CJR–X will not have significant impact on CJR–X participant burden. CJR–X will not alter the way participating hospitals bill Medicare. Therefore, we believe there will be no additional burden for CJR–X participants related to billing practices.

We also believe that CJR–X does not impose additional burden related to quality reporting because the quality measures used in the model are measures that CJR–X participants already report to CMS under existing CMS quality reporting programs. Accordingly, CJR–X participants will not be required to establish new quality reporting systems or submit additional quality measure data solely for purposes of CJR–X.

In addition, CJR–X does not require CJR–X participants to hire additional staff, such as care coordinators, establish a governing board, or otherwise implement new organizational structures as a condition of participation. Therefore, we do not believe CJR–X imposes additional regulatory burden on CJR–X participants for such activities.

We recognize there may be administrative burden associated with CJR–X for the requirement that CJR–X participants submit a financial arrangements list or clinician engagement list, as applicable. CJR–X participants that do not have any financial arrangements or clinician engagement relationships that meet the definitions established for the model, as defined at § 512.605, must attest that there are no such relationships, as defined at § 512.615(d), which we believe would be associated with nominal administrative burden.

For purposes of estimating burden for CJR–X participant that submit a list, we assume that approximately 17 percent of CJR–X participants may submit a financial arrangements list or clinician engagement list on a quarterly basis, as applicable. We estimate that preparing, reviewing, and submitting the applicable list will require approximately 1 hour per quarterly submission, or 4 hours annually, for each CJR–X participants that submits one of these lists. We assume this work will be completed by a Medical and Health Services Manager. To estimate costs, we used the May 2025 wage rate data from the U.S. Bureau of Labor Statistics and doubled the mean hourly wage to account for overhead and fringe benefits. Accounting for overhead and benefits, we used an hourly labor cost of $135.54 for a Medical and Health Services Manager.

Based on these assumptions, we estimate that the annual burden for a CJR–X participants that submits a financial arrangements list or clinician engagement list will be approximately 4 hours at a cost of approximately $542.16 per hospital (4 hours × $135.54 per hour). As noted, we estimate that approximately 17% or 425 of the approximate 2,500 CJR–X participants will

submit one of these lists on a quarterly basis. Therefore, we estimate a total annual burden of approximately 1,700 hours at a cost of approximately $230,418.00 (1,700 hours × $135.54 per hour) across all CJR–X participants. We note this is likely an upper estimate, as a CJR–X participant's financial arrangements list or clinician engagement list may remain unchanged between quarters, reducing preparation and review time. We believe this represents the only meaningful administrative reporting requirement under CJR–X because CJR–X participants are not required to report new quality measures, modify Medicare billing practices, establish new governance structures, or hire additional personnel solely for participation in the model.

Finally, we acknowledge potential burden with respect to CJR–X participants at § 512.622(a)(3), where a CJR–X participant must be able to generate a list of all beneficiaries who have received the beneficiary notification. We expect that CJR-x participants are able to easily produce lists of beneficiaries who have received the beneficiary notification. We provide flexible guidelines for this requirement as specific record keeping methods can be chosen by individual CJR–X participants so long as the necessary information is maintained readily available to report upon request. We don't anticipate such requests to CJR–X participants would occur often, unless warranted by monitoring, program integrity, or other concerns. Given we expect this reporting requirement to be nominal, we are unable to provide a direct cost estimate for this requirement.

Overall, we anticipate marginal additional reporting burden resulting from the model.

13. Effects of the Finalized Policies Regarding Acquisition Costs, Reasonable Costs, and Other Cost-Related Policies

a. Effects of the Finalized Policy To Reconcile Non-Renal Organ Acquisition Costs for Independent Organ Procurement Organizations and Histocompatibility Laboratories

In section X.D.1. of the preamble of this final rule, we are finalizing, with modifications, our proposal to reconcile non-renal organ acquisition costs for independent organ procurement organizations (IOPOs) and histocompatibility laboratories (HCLs), and to require the Medicare contractor to establish, adjust if necessary, and publish non-renal standard acquisition charges (SACs) and non-renal testing rates. We proposed a 1-year delay in implementation, to allow IOPOs and HCLs time to prepare for increased reporting that would be necessary. Our final policies will be effective after a 2-year delay, for cost reporting periods beginning on or after October 1, 2028. Our final policies require reconciliation of non-renal organ acquisition costs for IOPOs and HCLs as proposed but require IOPO and HCL involvement in estimating and in adjusting IOPO SACs and HCL testing rates, as detailed in section X.D.1. of this final rule. We are also finalizing as proposed our listing of allowable costs that can be included in the IOPO SACs, and the requirement for the Medicare contractor to publish IOPO SACs and HCL testing rates.

Impacts. In the proposed rule, we estimated that reconciling non-renal organ acquisition costs would result in an annual cost savings to the Medicare trust fund of $0 in FY 2027 due to the proposed 1-year delay in implementation, $100 million in FY 2028, $500 million over 5 years from FYs 2027 to 2031, and $1.28 billion over 10 years from FY 2027 to FY 2036. In response to public comments, we are finalizing, with modification, a 2-year implementation delay, rather than the proposed 1-year delay, effective for cost reporting periods beginning on or after October 1, 2028. As a result, our updated total estimated cost savings to the Medicare Trust Fund will be $0 in FY 2027 and FY 2028, $110 million in FY 2029, $380 million over 5 years (FYs 2027 to 2031), and $1.16 billion over 10 years (FYs 2027 to 2036). The CMS Office of the Actuary (OACT) estimated these savings on a cash basis using 2024 Medicare cost report data for IOPOs, comparing total revenue to total organ acquisition costs, by organ type. We do not have the required data to estimate the impact on HCLs. In accordance with 42 CFR 413.20(a), CMS follows standardized definitions, accounting, statistics, and reporting practices that are widely accepted in the healthcare industry. Changes in these practices and systems are not required to determine costs payable under the principles of reimbursement.

Comment: Multiple commenters questioned CMS's conclusion that a systemic overpayment exists due to the absence of a reconciliation process for non-renal organs, pointing to the Agency's finding that IOPO non-renal organ revenue would exceed costs by $100 million in FY 2028. Commenters contended that a single year's aggregate surplus is insufficient evidence of systemic overpayment and urged CMS to conduct additional analysis before drawing such a conclusion. Specifically, commenters contended that CMS failed to account for timing differences between cost occurrence and reimbursement, year-to-year variability in donor volume and case complexity, costs associated with organs recovered but not transplanted, and wide variation in financial performance across individual OPOs. Commenters also noted that some IOPOs reported non-renal costs exceeding revenue, meaning Medicare would be required to make those organizations whole, and requested that CMS model the impacts to reflect both payments due from over-reimbursed IOPOs and Medicare's payments made to under-reimbursed IOPOs. Commenters further observed that aggregate national averages may obscure significant variation among OPOs, since factors that differ substantially across donation service areas can materially affect operational costs and financial performance.

Commenters also raised concerns regarding the transparency and completeness of CMS's underlying analysis. One commenter noted that CMS stated additional Medicare contractor costs would offset against the $100 million in estimated savings, without explaining the extent of that offset. Another observed that the $100 million estimated impact was based on OIG audit findings and cost report data, and a few noted that IOPO cost reports are already subject to annual review and audit by the MACs. One commenter requested that CMS publish the complete underlying data and methodology used by the Office of the Actuary to derive the $100 million, $500 million, and $1.28 billion savings estimates, including the distribution of revenue-to-cost ratios across individual IOPOs, the organ types driving the aggregate gap, and any assumptions regarding future volume growth, cost inflation, and behavioral responses to reconciliation of non-renal organ acquisition costs.

Commenters also argued that CMS omitted any monetized health costs, which they stated is a requirement under OMB Circular A–4, and that CMS must quantify the transplant volume implications of the proposals. A commenter encouraged CMS to assess the proposal's impact on pediatric transplant programs and to ensure that reasonable and necessary activities supporting successful transplantation continue to be appropriately recognized within the payment framework.

Commenters further requested additional methodological clarification, including the methods used to allocate expenses between renal and non-renal acquisition activities, the role of timing differences in producing cost reports, distributional analysis across individual OPOs rather than aggregate averages, and the results of sensitivity testing reflecting operational variability. A few commenters requested CMS quantify the change in transplant volumes as a result of our proposed policies and a few encouraged CMS to recognize the impact of process improvement and clinical innovation costs on improving OPO performance and contributing to cost efficiency.

Finally, several commenters encouraged CMS to engage with IOPOs and other stakeholders to better understand the practical and operational implications of the proposals before finalizing major structural reforms.

Response: We included a discussion of our impact analysis of our proposals in the FY 2027 IPPS/LTCH proposed rule (see 91 FR 19838, 19868 and 19869, 19882). Our impact analysis estimated $100 million in savings in FY 2028. This estimate was not based on OIG reports, but on Medicare cost report data for cost reporting years ending in 2024, the most recent complete data available. The analysis followed the same process we use to reconcile kidney acquisition costs and was completed for liver, pancreas, heart, and lung for each IOPO and then summed for a total impact among all IOPOs. Our proposed impact assumed all usable non-renal organs were Medicare usable organs because we currently do not collect data on non-renal organs furnished to military or VA hospitals or to foreign countries; and all non-renal organ acquisition costs were Medicare acquisition costs.

The data we used were from each IOPO's certified Medicare Cost Report (Form CMS–216–94) for the cost reporting period ending in 2024. Worksheet S–1, Part 1, lines 8.01 (liver), 8.02 (pancreas), 8.04 (heart), and 8.09 (lung) showed counts for total non-renal organs and non-viable non-renal organs and their associated revenue. We subtracted the

non-viable non-renal organs from the total non-renal organs to determine the total usable non-renal organs. Worksheet B, column 11, lines 5 (liver), 6 (heart), 7 (pancreas), and 8 (lung) showed total non-renal organ acquisition costs after allocation of general and administrative costs and other overhead costs. In reviewing the data, we discovered that two providers in their 2024 data separately reported double lung organ counts and revenue on Worksheet S–1 on lines other than line 8.09 for lungs, and double lung organ acquisition costs on worksheet B, line 9 rather than on line 8. We included these data to ensure our lung counts, revenue, and costs were complete. We excluded data on islet cells from the analysis because the revenue per pancreas appeared very low and there appeared to be only three viable pancreata. We also excluded data on intestinal transplants because there is not currently a specific line on Worksheet S–1 for intestinal procurements, and IOPOs reported those statistics and revenue on different lines of that worksheet. We excluded combination procurements (for example, heart/lung), which were relatively infrequent. Finally, we excluded five IOPOs in the 2024 data that failed to include non-renal organ revenue on Worksheet S–1. Therefore, our impact analysis was based on non-renal organ data for hearts, livers, lungs, and pancreata for 44 of 49 IOPOs in 2024. We subtracted the total non-renal organ acquisition costs from the total revenue for each organ type, for each IOPO, and in the aggregate. We summed that result for each of the four types of non-renal organs we included and were able to determine whether an IOPO had total non-renal organ revenue greater than its total non-renal organ acquisition costs, or whether an IOPO had total non-renal organ revenue less than its total non-renal organ acquisition costs. Each IOPO is able to run this analysis using its own MCR data, as well as data from all other IOPOs from the publicly available HCRIS cost report data available at *https://www.cms.gov/data-research/statistics-trends-reports/cost-reports/organ-procurement-organization.*

As we noted in the FY 2027 IPPS/LTCH proposed rule, 20 percent of the 49 IOPOs that filed costs reports in 2024 had costs that were greater than their non-renal revenue and would have been made whole if reconciliation of non-renal organ acquisition costs had been in place. After excluding the five IOPOs that did not report non-renal revenue in the 2024 data and using the 44 IOPOs in the impact analysis, that percentage rose to almost 23 percent. In response to commenters asking that we separate the impacts for the IOPOs that were underpaid from those that were overpaid, the 2024 data showed that 10 IOPOs had costs exceeding their revenue and were short by $19,132,720, in the aggregate, while 34 IOPOs had revenue exceeding their costs and were over by $118,819,590, in the aggregate; the difference is $99,686,870. The CMS OACT did not model the data to separate out utilization and price assumptions from the spending trend, nor did it account for any behavioral responses to reconciliation.

Some commenters expressed concern that we chose a single year, 2024, for our analysis. Table Appendix A I.G.14–01 shows the same calculations described above, performed for each IOPO and then summed, without any OACT adjustments, but calculated for cost reporting years ending in 2022, 2023, and 2024, to demonstrate that our findings were not a single-year anomaly but an ongoing pattern. We made the same manual adjustment in 2022 and 2023 that we did in 2024 to include double lung organ counts, costs, and revenue, but in 2022 a third IOPO also separately reported double lung organ acquisition cost data. The excess of revenue over costs incurred is driven in all three years by livers, hearts, and lungs; for all three years, pancreata consistently showed costs exceeding revenue. Consistent with the reasonable cost principle underlying Medicare reimbursement, under which payment is intended to approximate the actual, reasonable costs incurred in furnishing covered services, no more and no less, we have separated the providers that had costs incurred exceeding revenue from those with revenue exceeding incurred costs, as a few commenters requested. Because IOPOs are required to account for their costs and revenue on an accrual basis in accordance with § 413.24(a), we do not believe timing differences between incurring costs and receiving reimbursement account for these overages. Rather, the persistence of this revenue-over-cost pattern across three consecutive years for the same organ types indicates a structural misalignment between payment and actual costs incurred, rather than a transient or timing-related artifact.

TABLE APPENDIX A I.G.14-01.: SUMMARY OF NON-RENAL RECONCILIATION IMPACTS FOR COST REPORTING YEARS ENDING IN 2022, 2023, AND 2024

	2022	2023	2024
Total Usable Non-renal Organs	**19,151**	**18,341**	**18,077**
Avg Rev / Organ	$50,502	$55,314	$56,204
Avg Cost / Organ	$46,042	$50,112	$50,689
Total Non-renal Revenue	$967,170,836	$1,014,514,230	$1,015,999,036
Total Non-renal OACs*	$881,753,312	$919,103,062	$916,312,166
Net Overage	**$85,417,524**	**$95,411,168**	**$99,686,870**
Total IOPO Cost > Revenue	-$14,192,603	-$17,316,202	-$19,132,720
Total IOPO Revenue > Cost	$99,610,127	$112,727,370	$118,819,590
Highest Provider Amt Over Cost	$9,816,794	$11,946,639	$12,762,595
Highest Provider Amt Under Cost	-$4,552,270	-$4,729,631	-$7,808,357
Number IOPOs Over Cost	37	36	34
Numbers IOPOs Under Cost	11	8	10
Total IOPOs	50	49	49
Total Excluded**	2	5	5
IOPOs in Analysis	48	44	44
% of IOPOs Under Cost	22.9%	18.2%	22.7%
% of IOPOs Over Cost	77.1%	81.8%	77.3%

*OACs = organ acquisition costs

**We excluded 2 providers in 2022, 5 providers in 2023, and 5 providers in 2024 because they reported no revenue for their non-renal organs. Non-renal organs included are heart, liver, lung, and pancreas.

Table Appendix A I.G.14–01 includes the usable non-renal organs, which appear to decline from 2022 to 2024. Because we excluded IOPOs that were missing revenue data from the analyses, their non-renal organ counts were not included in these totals. Having three fewer providers in the 2023 and 2024 data compared to the 2022 data is why the organ counts appear to have declined sharply since 2022. If the organ counts of the excluded IOPOs were included in the totals from Table Appendix A I.G.14–01, the table would have shown a 0.8 percent increase in total non-renal organs from 2022 to 2023, and a 0.9 percent decrease in total non-renal organs from 2023 to 2024. The organ counts shown in Table Appendix A I.G.14–01 are associated with the costs and revenue shown in the table.

This ongoing pattern of revenue exceeding costs for non-renal organs has occurred despite annual review and audits by the Medicare contractor, which have not addressed the issues driving that overage. We recognize that some of the excess revenue may be due to procuring more organs than expected, thus lowering fixed costs per organ; however, that cannot fully explain the excess.

Table Appendix A I.G.14–02 shows the distribution of the 37 (2022), 36 (2023), and 34 (2024) IOPOs that had excess revenue over organ acquisition costs for non-renal organs. We are unable to present individual IOPO data, so we instead grouped IOPOs with excess revenue by dollar ranges and by percentages over incurred cost. Some IOPOs' excess revenue was over $10 million, with the highest annual amount from an IOPO that generated almost $13 million in excess revenue over incurred costs in 2024. This excess in non-renal revenue resulted from non-renal SACs that were too high and not commensurate with incurred costs. At the same time, the 10 IOPOs whose 2024 costs exceeded revenue, who are not represented in Table Appendix A I.G.14–02, had losses on non-renal organs that ranged from $225,000 to slightly over $7.8 million.

As a few commenters requested, we calculated revenue-over-cost percentages using the formula ((Total Non-renal Revenue—Total Non-renal Organ Acquisition Costs)/(Total Non-renal Organ Acquisition Costs)) for each of the 3 years to determine the percentage over incurred cost and show them in Table Appendix A I.G.14–02. The revenue-over-cost percentages calculated using the 2024 data ranged from a low of 0.7 percent to a high of 145.4 percent.

While we recognize that SAC estimation may be challenging, we do not believe that timing differences from when SACs are established and when costs are incurred account for these cost overages. Additionally, as average charges, SACs account for cost differences between complex cases and less costly procurements within a given year. Year-to-year variability in case complexity and volume would be reflected in the costs and revenues used in the impact analyses. IOPOs have the ability to adjust their SACs during the year to reflect lower or higher costs reasonably expected to be incurred but it does not appear that most IOPOs have chosen to do so. We believe that THs would likely have welcomed SAC adjustments from IOPOs to more accurately reflect costs incurred, or reasonably expected to be incurred, to account for IOPOs' cost variances during the year, as downward SAC adjustments would have also lowered THs' costs. The IOPOs that had excess revenue also caused inflated costs throughout the transplant ecosystem.

TABLE APPENDIX A I.G.14-02.: DISTRIBUTION OF IOPOS WITH NON-RENAL ORGAN REVENUE GREATER THAN NON-RENAL ORGAN COSTS USING 2022 THROUGH 2024 MEDICARE COST REPORT DATA FOR HEART, LIVER, LUNG, AND PANCREAS, IN DOLLARS AND IN PERCENTAGE EXCESS OVER COSTS

Number of IOPOs with Revenue Greater Than Costs			
Range of Excess	**2022**	**2023**	**2024**
$0-$1 million	9	10	8
>$1 to 5 million	23	17	18
>$5 to 10 million	5	8	6
>10 million	0	1	2
Distribution of IOPOs by Cost > Revenue Percentage (Revenue - Organ Acquisition Costs) / Organ Acquisition Costs			
< 5%	5	2	8
5% to < 10%	5	9	2
10% to <15%	7	7	5
15% to <20%	2	4	3
20% to <25%	5	6	4
25% to <30%	5	1	3
30% to <35%	2	2	1
>35%	6	5	8

Based on cost report revenue and organ acquisition costs for heart, liver, lung, and pancreas for IOPOs with revenue > cost.

Commenters requested that we conduct a sensitivity analysis across a range of IOPO operational scenarios to assess the financial impact of our final policies. We considered such an analysis, adjusting for scenarios such as unanticipated increases in perfusion or transportation costs, or increases in the number of marginal or complex organs that were recovered but not transplanted, and for which no revenue was received. However, because IOPOs are reimbursed on a reasonable cost basis, year-end reconciliation would make IOPOs whole for losses and would return excess amounts to Medicare if revenue exceeded costs. The issue, therefore, is less about the financial outcome and more about the *timing* of SAC adjustments and of being made whole for losses or returning excess revenue to Medicare, which can affect the size of the loss. IOPOs and HCLs can use the protections included in this final rule to substantially mitigate the effects of higher-than-estimated costs or lower-than-estimated revenue earlier in their fiscal year potentially avoiding losses, or large liabilities owed back to Medicare at reconciliation. These protections include:

- Requiring IOPO and HCL involvement in setting and adjusting their SACs or testing rates, respectively;
- Permitting four rate adjustments during the year;
- Providing the opportunity to receive or make lump sum adjustments when a rate is revised following a review; and
- Requiring year-end non-renal organ acquisition cost reconciliation.

We considered the data from the 10 IOPOs with losses in 2024, which are not included in Table Appendix A I.G.14–02. The 2024 data from these 10 IOPOs showed that two IOPOs had losses less than $500,000, six had losses between $500,000 and $1.5 million, one had a loss of $3.1 million, and one had a loss of $7.8 million. If each of these IOPOs had addressed these losses by the end of their first quarter, these IOPOs may have been able to adjust their SACs upward, potentially mitigating losses for the rest of the year, and would have had opportunity to receive a lump sum adjustment to address the shortfall. Each IOPO's monitoring, and if indicated, adjusting of its non-renal SACs will be necessary to avoid large over- or under-payments at cost report settlement. As with any business, each IOPO must maintain operating reserves to manage operational changes that increase cost or decrease revenue; we believe the ability to receive SAC adjustments and the opportunity to receive lump sum adjustments during the year will reduce the need for large reserves. We also believe the 2-year implementation delay provided under this final rule will provide time for IOPOs to build adequate reserves, to the extent that they have not already done so.

As we noted previously, procurement costs are allowable for organs intended for transplant but that are subsequently not transplanted (see § 413.412 (a)(2) and (d)(2)); we assume IOPOs have reported those costs and that they were included in the cost data used in this analysis. Because those organs were not transplanted, there would be no revenue associated with them, and yet most IOPOs still had revenues that greatly exceeded costs. We appreciate IOPOs' investing in improving performance and cost efficiency; reasonable costs associated with process improvements or innovation that are administrative and general operating costs are allowable, in accordance with § 413.402(a). Regarding offsetting additional costs to our Medicare contractor against the estimated impacts, our use of the term ''offset'' may have led some to believe that there is a formal offset calculation when there is not. To clarify, we acknowledge there will be an increase in the Medicare contractor's workload and associated increased costs, but those costs are very small relative to the estimated savings.

The impact analysis in the FY 2027 IPPS/LTCH proposed rule included a full discussion of our proposals in the Regulatory Impact Analysis section, found in Appendix A of the final rule, and included a table showing the monetized health costs required under Circular A–4 (see 91 FR 19882). Regarding commenters who requested that CMS quantify the transplant volume implications of the proposals, we have given multiple reasons in section X.D.1. of this final rule why we do not believe that the policy changes we are finalizing will negatively impact organ procurement. We have addressed provider misunderstanding of existing payment policy by emphasizing that Medicare covers the costs of procuring organs or attempting to procure organs intended for transplant that are subsequently not used for transplant, thus protecting them from losses; we believe this policy removes a financial disincentive to procuring marginal organs or organs from complex donors. We have also addressed some IOPO's misunderstanding of existing payment policy related to high-cost services and explained that Medicare covers the reasonable costs of organ perfusion and preservation technologies, and transportation.

As discussed in section X.D.1., based on comments received, we addressed provider concerns about operational flexibility by finalizing our proposal with modifications to allow IOPOs to be an integral part of the process of establishing and adjusting all organ SACs. We also reminded IOPOs that the Medicare contractor will review SACs at least once during the year, and that existing policy gives IOPOs the ability to request SAC

reviews to address cost change concerns if their SACs need adjusting during the fiscal year. Furthermore, we noted that if a SAC is adjusted during the year, the provider may request a lump sum payment to address cash flow concerns due to costs exceeding revenue. We acknowledged IOPO concerns about cash flow or financial reserves related to the timeliness of the Medicare contractor in adjusting SACs, in providing lump sum adjustments, and in reconciling costs, and said we would address this during the implementation process with the contractor. We also believe that our discussion and finalization of certain reasonable cost policy proposals in sections X.D.2. and X.D.3. of this final rule will provide more understanding to IOPOs, to ensure that they can carry out mission-related activities with greater confidence regarding what costs are allowable under Medicare. We also pointed out that multiple OPO commenters on the July 2022 RFI wrote that reconciling non-renal organs would not affect their procurements, as procurements are incentivized by their organ metrics and their desire to procure every organ every time. Additionally, we have discussed how reconciling non-renal organs will protect those IOPOs whose costs have exceeded revenue by making them whole. We also reiterated that IOPOs are charged with procuring both organs and tissue, and that they are currently allowed a margin on tissue, as tissue procurement is not required to be paid on a reasonable cost basis. For all of these reasons, we believe that organ procurement will not be hindered. We do not believe that our proposals will affect pediatric or adult transplant programs except to lower the procurement cost of non-renal organs that IOPOs are providing to them.

In providing additional details with respect to the methodology and data used in calculating the impacts in this final rule, we noted that we used cost and revenue data that IOPOs reported on their cost report for cost reporting periods ending in 2024, and therefore, we did not allocate costs but relied on what IOPOs reported. In this final rule, we are finalizing a modified implementation date of cost reporting periods beginning on or after October 1, 2028, rather than our proposed implementation date of cost reporting periods beginning on or after October 1, 2027, and we have revised our impact estimates to reflect this 2-year delay. Our revised estimates now project savings of $110 million in FY 2029, a 5-year savings of $380 million, and a 10-year savings of $1.16 billion. Changes to the IOPO/HCL Medicare Cost Report forms and instructions (currently Form CMS–216–94) will be detailed in a forthcoming Paperwork Reduction Act package, to be published in the **Federal Register**.

Burden Estimate. The methods of determining costs payable under Medicare involve making use of data available from the institution's basis accounts, as usually maintained, to arrive at equitable and proper payment for services. Burden hours for each IOPO/HCL are the estimated time required (number of hours) to complete ongoing data gathering and recordkeeping tasks, search existing data resources, review instructions, and complete the IOPO/HCL Medicare cost report, which is OMB number 0938–0102, Form CMS–216–94. Therefore, this burden estimate is solely focused on the additional time that will be required to complete the updated IOPO/HCL cost report. Currently there are 94 Medicare certified IOPOs/HCLs that file Form CMS–216–94 annually. The current estimated average burden per IOPO/HCL is 45 hours (30 hours for recordkeeping and 15 hours for reporting). We updated our burden estimate for this final rule to use the most recent 2025 Bureau of Labor Statistics median hourly wage data. In this final rule, we do not estimate additional recordkeeping burden as IOPOs and HCLs already maintain the data needed but estimate an average additional reporting burden of 10 hours per IOPO/HCL and an estimated additional cost of $804.60 per IOPO/HCL. The most recent median hourly wage data is available from the Bureau of Labor Statistics using their 2025 national table (available at *https://www.bls.gov/oes/tables.htm*). The median hourly wage for Category 13–2011 (accounting and audit professionals) is $40.23. We added 100% of the median hourly wage to account for fringe benefits and overhead costs, which calculates to $80.46 ($40.23 + $40.23) and multiplied it by 10 hours, to determine the additional annual reporting costs per IOPO/HCL to be $804.60 ($80.46 × 10 hours). We recognize this average reporting burden varies depending on the IOPO/HCL's size and complexity. Because there are 94 IOPOs and HCLs, the total reporting burden cost would be $75,632 (94 × $804.60). In section XII.B.10. of this final rule (the Collection of Information section), we invited public comment on the hours estimate as well as the staffing requirements utilized to compile and complete the Medicare cost report. Because we are finalizing this policy with a 2-year delay rather than the 1-year delay which we proposed, these estimated reporting burden costs would not occur until the cost reporting year beginning on or after October 1, 2028. Comments received on the burden estimate to complete the IOPO/HCL cost report are discussed in the Collection of Information section of this final rule, found at section XII.B.10.

b. Effects of the Finalized Reasonable Cost Policies

In section X.D.2. of the preamble of this final rule, we are finalizing our proposals, with certain modifications, pertaining to longstanding Medicare reasonable cost reimbursement policies applicable to all providers. Some commenters requested CMS consider the broad initiatives impacting the transplant ecosystem in parallel with this rule, and some IOPOs indicated they would have increased administrative burden to update their public education programs to comply with our finalized policies, as discussed in section X.D.2. of this final rule. To address these concerns, we are also finalizing our provision pertaining to OPO public education to be effective with the effective date of this final rule; however, we are allowing a 1-year delay in enforcement.

We believe these final policies will not result in additional costs to the Medicare program. The reasonable cost policies finalized in section X.D.2. of this final rule impose no new information collection requirements for all providers, including OPOs; accordingly, no burden estimate has been provided. We believe our final policies will alleviate administrative burden on most providers by providing more clarity as to certain reasonable cost policies. We believe these finalized policies may result in cost savings to the Medicare program due to increased payment accuracy, but we do not have sufficient data to estimate an amount.

c. Effects of the Finalized Cost Allocation Policy

In section X.D.3. of the preamble of this final rule, we are finalizing without modification the proposal to codify cost allocation principles. This finalized policy is applicable to all providers. We believe there will be no additional costs to the Medicare program resulting from these policies. However, we believe these finalized policies may result in a cost savings to the Medicare program due to increased payment accuracy, although we do not have sufficient data to estimate an amount. We believe these finalized policies will not increase burden to providers because these finalized policies are clarifications and codifications of cost allocation policies that providers are already required to follow to properly allocate overhead costs. Comments on these proposals are discussed in section X.D.3. of this final rule.

d. Effects of the Finalized Policy for Discretionary Administrator Review of CMS Reviewing Official Determinations With Respect to Appeals Under § 413.420(g) for Independent Organ Procurement Organizations and Histocompatibility Laboratories

In section X.D.4. of the preamble of this final rule, we are finalizing without modification the proposal to codify the discretionary Administrator review of CMS reviewing official determinations with respect to appeals under § 413.420(g) for IOPOs and HCLs. We believe there will be no additional costs to the Medicare program and no increased burden placed upon providers as a result of our final policy. Comments on these proposals are discussed in section X.D.4. of this final rule.

e. Effects of the Finalized Technical Corrections and Clarifications of §§ 412.116(c) and 413.404(b)(3)(ii)(A) and (C).

In section X.D.5. of the preamble of this final rule, we are finalizing technical corrections or clarifications to regulation text at §§ 412.116(c) and 413.404(b)(3)(ii)(A) and (C). These clarifications and corrections will not create any additional costs to the Medicare program or increased burden upon providers. We received no comments on the proposals in section X.D.5. and are finalizing these corrections and clarifications as proposed.

14. Effects of ONC's Adoption of Health IT Standards and Incorporation by Reference (45 CFR 170.215 and 45 CFR 170.299)

ONC proposed to adopt new updated standard versions of a series of IGs in the 2026 CMS Interoperability Standards and

Prior Authorization for Drugs Proposed Rule (91 FR 20028 through 20029). These IGs were originally adopted by the Secretary in the HTI–4 final rule (90 FR 37130), which appeared in the **Federal Register** on August 4, 2025 as part of the FY 2026 IPPS/LTCH final rule (90 FR 36536). Since the FY 2026 IPPS/LTCH final rule appeared in the **Federal Register**, newer versions of the standards adopted by the Secretary in the HTI–4 final rule have been released. In addition, ONC proposed to adopt an additional standard, the HL7 FHIR® Da Vinci Clinical Data Exchange (CDex) IG [Implementation Guide] in 45 CFR 170.215(k)(3). Therefore, ONC proposed to adopt the following standards on behalf of the Secretary (91 FR 20001 through 20005):

- HL7 FHIR® Da Vinci—Coverage Requirements Discovery IG [Implementation Guide], Version 2.2.1—STU 2.2 (proposed in 45 CFR–170.215(j)) [742]
- HL7 FHIR® Da Vinci—Documentation Templates and Rules Implementation Guide, Version 2.2.0—STU 2.2 (proposed in 45 CFR–170.215(j)) [743]
- HL7 FHIR® Da Vinci Prior Authorization Support (PAS) FHIR Implementation Guide, Version 2.2.1—STU 2.2 (proposed in 45 CFR–170.215(j)) [744]
- HL7 FHIR® CARIN Consumer Directed Payer Data Exchange (CARIN IG for Blue Button®) [Implementation Guide], Version 2.2.0—STU 2.2 (proposed in 45 CFR–170.215(k)) [745]
- HL7 FHIR® Da Vinci Payer Data Exchange (PDex) US Drug Formulary Implementation Guide, Version 2.1.0—STU 2.1 (proposed in 45 CFR–170.215(m)) [746]
- HL7 FHIR® Da Vinci PDex [Payer Data Exchange] Plan Net Implementation Guide, Version 1.2.0—STU 1.2 (proposed in 45 CFR–170.215(n)) [747]
- HL7 FHIR® Da Vinci Clinical Data Exchange (CDex) IG [Implementation Guide], Version 2.1.0—STU 2.1 (proposed in 45 CFR–170.215(k)) [748]

As part of the HTI–4 final rule, ONC finalized certification criteria for electronic prior authorization in the ONC Health IT Certification Program that incorporated the CRD, DTR, and PAS IGs. As part of the 2026 CMS Interoperability Standards and Prior Authorization for Drugs proposed rule (91 FR 19905 through 19906), CMS proposed to incorporate cross-references to 45 CFR 170.215 where these standards would be adopted as part of proposed technical requirements for payer APIs CMS previously established in the 2020 CMS Interoperability and Patient Access and the 2024 CMS Interoperability and Prior Authorization final rules.

ONC analysis of these new standard versions finds that the changes between currently adopted standard versions and these new standard versions are small in scope and would not require significant effort to adopt. Furthermore, ONC adopted the current standard versions in regulation as part of the HTI–4 final rule, with no required date to adopt the new certification criteria and the associated standards, lowering any duplication of effort to first adopt the current standard version and the proposed new standard version (90 FR 36536 through 37308). Because standard versions 2.0.1 and 2.2 (for the purposes of this discussion we refer to the 2.2.1 versions of the CRD and PAS IGs, and the 2.2.0 version of the DTR IG, as the 2.2 versions) are directionally aligned (*i.e.* version 2.2 builds on top of 2.0), time spent by developers of certified health IT to build toward version 2.0 is effort needed to build toward version 2.2, which includes new clarifications that improve specificity over the prior implementation guides. ONC also finds that the finalized updates would not require new adoption of technology by health IT users or adoption of new certification criteria by developers of certified health IT, as those requirements are associated with prior finalized CMS and ONC rulemaking. ONC estimates that developers of certified health IT would face little burden to adopt the updated standard version given these factors. ONC estimates that the effort on developers of certified health IT to adopt these standard versions would be de minimis.

This analysis parallels the ONC HTI–2 proposed rule impact analysis for the proposed update to adopt SMART App Launch IG version 2.2 (89 FR 63498).[749] Similarly here, the proposed update from SMART App Launch IG version 2.0 to 2.2 involved enhancements that would require low effort on developers of certified health IT to adopt to maintain certification to the applicable criteria. Public comments from the HTI–2 proposed rule did not raise any concerns with our impact analysis of the SMART App Launch IG version update, but we recognize that differing standard maturity levels and implementation challenges for the previously proposed IG updates may create more burden on developers to update their certified technology. We requested comment to that effect on the expected level of burden to update certified technology to the latest IG versions proposed previously.

We received public comment on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they agreed with our assessment that development costs would be *de minimis* for most certified health IT developers but suggested that development costs may be greater for less-resourced entities, such as smaller health IT developers, entities delivering technology systems for payers, and entities that function as intermediaries.

Response: The final impact analysis is consistent with the proposed rule and finds that these provisions would impose de minimis costs.

Regarding the comment about disparate costs associated with updating these standards, we note with respect to health IT developers that, as of the publication of this final rule, no products certified to the certification criteria at 45 CFR 170.315(g)(31) through (33) are listed on the Certified Health IT Product List. This indicates that developers are still likely investing resources to build products to meet the existing requirements. Accordingly, finalizing requirements at 45 CFR 170.315(g)(31) through (33) that leverage the 2.2.1 and 2.2.0 versions of the Da Vinci IGs is expected to impose only de minimis incremental costs.

We are also mindful of the disparate costs and level of effort across different developers of certified health IT. In our impact analysis of the criteria and standards adopted in HTI–4, we discussed how costs may vary by the size of developer and whether the developer had already adopted prior versions of the standards in their technology or development plans. Because standard versions 2.0.1 and 2.2 are directionally aligned (*i.e.* version 2.2 builds on top of 2.0.1), time spent by developers of certified health IT to build toward version 2.0 is effort needed to build toward version 2.2. If a small developer, for instance, faced higher average costs to adopt the standard and associated criteria, as finalized in HTI–4, we do not believe the same would hold for this standard update. A small developer may face higher initial build costs than a larger developer, but once it builds toward 2.0.1, we find that the effort to then adopt version 2.2 should be very similar across developers who have adopted version 2.0.1. Furthermore, finalizing these requirements will create more alignment across ONC and CMS programs and give developers of all sizes and scopes more certainty about how to configure their certified health IT.

Developers that have not yet completed certification can align their development efforts with the updated CRD, DTR, and PAS 2.2 versions now, rather than first completing development and certification to the 2.0.1 versions of the Da Vinci IGs and then, shortly thereafter, undertaking additional development and certification efforts to support the 2.2 versions. This approach should reduce duplicative effort and avoid the greater costs that would result from sequential development and certification to two versions of the same IGs.

H. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of July 2026, there were 94 children's hospitals, 11 cancer hospitals, 6 short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, 1 extended neoplastic disease care hospital, and 8 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, the rehabilitation hospitals and units, and the LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and the psychiatric hospitals and units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this final rule. The impacts of the changes on LTCHs are discussed in section I.J. of the appendix of this final rule.

For the children's hospitals, cancer hospitals, short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2027 percentage increase in the 2023-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. Consistent with current law, based on IGI's fourth quarter 2025 forecast of the 2023-based IPPS market basket increase, we are estimating the FY 2027 update to be 3.2 percent (that is, the estimate of the market basket rate-of-increase), as discussed in section VI.B. of the preamble of this final rule. Section 1886(b)(3)(B)(xi)(I) of the Act requires a productivity adjustment (0.9 percentage point reduction for FY 2027), resulting in a 2.3 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section VI.B. of the preamble of this final rule. Children's hospitals, cancer hospitals, short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under section 1886(b)(3)(B)(xi)(I) of the Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the 2023-based IPPS operating market basket for FY 2027, currently estimated at 3.2 percent.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented in this section of this final rule, we used data from the March 2026 update of the FY 2025 MedPAR file and the March 2026 update of the Provider-Specific File (PSF) that was used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2026 update of the most recently available hospital cost report data to categorize hospitals. Our analysis has several qualifications and uses the best data available, as described later in this section of this final rule.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2026 update of the FY 2025 MedPAR file, we simulated payments under the capital IPPS for FY 2026 and the payments for FY 2027 for a comparison of total payments per case. Short-term, acute care hospitals that are not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2027 is as follows:

(Standard Federal rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH adjustment factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the geographic adjustment factor (GAF) and the hospital's case-mix. Then we added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- The capital Federal rate was updated, beginning in FY 1996, by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1. of the Addendum to this final rule, the update to the capital Federal rate is 3.4 percent for FY 2027.
- In addition to the FY 2027 update factor, the FY 2027 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9901, a budget neutrality factor for the 5-percent cap on wage index decreases policy and the continuation of the transition for the discontinuation of the low wage index hospital policy of 0.9990, and a outlier adjustment factor of 0.9677.

2. Results

We used the payment simulation model previously described in section I.I. of the Appendix of this final rule to estimate the potential impact of the changes for FY 2027 on total capital payments per case, using a universe of 3,005 hospitals. As previously described, the individual hospital payment parameters are taken from the best available data, including the March 2026 update of the FY 2025 MedPAR file, the March 2026 update to the PSF, and the most recent available cost report data from the March 2026 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2026 and estimated total payments per case for FY 2027 based on the FY 2027 payment policies. Column 2 shows estimates of payments per case under our model for FY 2026. Column 3 shows estimates of payments per case under our model for FY 2027. Column 4 shows the total percentage change in payments from FY 2026 to FY 2027. The change represented in Column 4 includes the 3.4 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2027 are expected to increase 3.0 percent compared to capital payments per case in FY 2026. This expected increase is primarily due to the 3.4 percent update to the capital Federal rate being partially offset by a projected decrease in capital outlier payments. In general, regional variations in estimated capital payments per case in FY 2027 as compared to capital payments per case in FY 2026 are primarily due to the changes in GAFs, and are generally consistent with the projected changes in payments due to the changes in the wage index (and policies affecting the wage index), as shown in Table I in section I.F. of this final rule.

The net impact of these changes is an estimated 3.0 percent increase in capital payments per case from FY 2026 to FY 2027 for all hospitals (as shown in Table III). The geographic comparison shows that, on average, hospitals in both urban and rural classifications will experience an increase in

capital IPPS payments per case in FY 2027 as compared to FY 2026. Capital IPPS payments per case will increase by an estimated 3.0 percent for hospitals in urban areas and 3.1 percent for rural areas from FY 2026 to FY 2027.

The comparisons by region show that the change in capital payments per case from FY 2026 to FY 2027 for urban areas range from a 1.7 percent increase for the Pacific urban region to a 4.2 percent increase for the East North Central urban region. Meanwhile, the change in capital payments per case from FY 2026 to FY 2027 for rural areas range from a 1.2 percent increase for the Mountain rural region to a 4.8 percent increase for the New England rural region. Capital IPPS payments per case for hospitals located in Puerto Rico are projected to decrease by 1.3 percent. These regional differences are primarily due to the changes in the GAFs.

The comparison by hospital type of ownership (Voluntary, Proprietary, and Government) shows that voluntary hospitals are expected to experience an increase in capital payments per case from FY 2026 to FY 2027 of 3.2 percent. Proprietary hospitals are expected to experience an increase in capital payments per case from FY 2026 to FY 2027 of 2.2 percent. Government hospitals are expected to experience an increase in capital payments per case from FY 2026 to FY 2027 of 2.7 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2027. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this final rule for FY 2027, we show the average capital payments per case for reclassified hospitals for FY 2027. Urban reclassified hospitals are expected to experience an increase in capital payments per case of 3.2 percent; urban non-reclassified hospitals are expected to experience an increase in capital payments of 2.4 percent. Rural reclassified hospitals are expected to experience an increase in capital payments per case of 3.0 percent; rural non-reclassified hospitals are expected to experience an increase in capital payments per case of 3.0 percent.

TABLE III.-- COMPARISON OF TOTAL PAYMENTS PER CASE

FY 2026 PAYMENTS COMPARED TO FY 2027 PAYMENTS	Number of Hospitals	Average FY 2026 Payments/Case	Average FY 2027 Payments/Case	Change
All Hospitals	3,005	1,241	1,278	3.0
By Geographic Location:				
Urban hospitals	2,357	1,275	1,313	3.0
Rural hospitals	648	848	874	3.1
Bed Size (Urban):				
0-99 beds	640	965	976	1.1
100-199 beds	673	1,062	1,094	3.0
200-299 beds	400	1,155	1,189	2.9
300-499 beds	393	1,266	1,303	2.9
500 or more beds	249	1,529	1,575	3.0
Bed Size (Rural):				
0-49 beds	309	705	722	2.4
50-99 beds	174	812	835	2.8
100-149 beds	95	824	849	3.0
150-199 beds	41	909	936	3.0
200 or more beds	29	1,033	1,069	3.5
Urban by Region:				
New England	102	1,364	1,411	3.4
Middle Atlantic	272	1,445	1,496	3.5
East North Central	364	1,179	1,228	4.2
West North Central	155	1,210	1,237	2.2
South Atlantic	393	1,133	1,175	3.7
East South Central	139	1,037	1,058	2.0
West South Central	356	1,175	1,199	2.0
Mountain	177	1,267	1,294	2.1
Pacific	347	1,591	1,618	1.7
Rural by Region:				
New England	19	1,097	1,150	4.8
Middle Atlantic	46	991	1,022	3.1
East North Central	104	837	870	3.9

J. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section X. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2027. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify the policies for FY 2027, and present rationales for our provisions as well as alternatives that were considered. In this section, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a), reduced by 4.6 percent for FYs 2018 through 2026; or 100 percent of the estimated cost of the case as determined under § 412.529(d)(2).

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.533 and 412.535. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and short stay outliers (SSOs). LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate).

In addition, when certain thresholds are met, LTCHs also receive high-cost outlier (HCO) payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

2. Updates to Payments for LTCH PPS Standard Federal Payment Rate Cases

This section details the updates to the LTCH PPS payment rates and related factors that will affect payments for LTCH PPS standard Federal payment rate cases and serve as the basis for the impact analysis presented in this final rule.

- As discussed in section V.A.2. of the Addendum to this final rule, for FY 2027, we are establishing an LTCH PPS standard Federal payment rate of $52,132.76 which reflects the 2.3 percent annual update to the LTCH PPS standard Federal payment rate and the budget neutrality factor for updates to the area wage level adjustment of 1.002679. For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are establishing an LTCH PPS standard Federal payment rate of $51,113.55. This LTCH PPS standard Federal payment rate reflects the updates and factors previously described, as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP.
- As discussed in section V.B.3. of the Addendum to this final rule, for FY 2027, we are establishing a labor-related share of 73.0 percent for FY 2027, based on the most recent available data (IGI's second quarter 2026 forecast) of the relative importance of the labor-related share of operating and capital costs of the 2022-based LTCH market basket.
- As discussed in section V.B.4. of the Addendum to this final rule, for FY 2027, we are updating the wage index values based on the most recent available data (data from cost reporting periods beginning during FY 2023 which is the same data used for the FY 2027 IPPS wage index).
- As discussed in section V.C. of the Addendum to this final rule, for FY 2027, we are updating the COLA factors used to adjust non-labor related costs for LTCHs located in Alaska and Hawaii using the Overseas Cost-of-Living Allowance (OCOLA) data published by the Department of Defense (DOD).
- As discussed in section X.B of the preamble of this final rule, for FY 2027, we are updating the MS–LTC–DRG classifications and MS–LTC–DRG relative weights.

• As discussed in section V.C. of the Addendum to this final rule, for FY 2027, we are maintaining the fixed-loss amount for LTCH PPS standard Federal payment rate cases at its FY 2026 level of $78,936. We estimate this will result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2027 payments for such cases.

3. Impact Analysis

a. Basis and Methodology of Estimates

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this final rule on different categories of LTCHs for FY 2027, it is necessary to estimate payments per discharge for FY 2026 using the rates, factors, and the policies established in the FY 2026 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2027 using the rates, factors, and the policies in this final rule (as discussed in section X. of the preamble of this final rule and section V. of the Addendum to this final rule). The resulting analyses can then be used to compare how our policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

Specifically, to estimate the per discharge payment effects of our policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2026 and FY 2027 payments on a case-by-case basis using historical LTCH claims from the FY 2025 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2025 MedPAR files. We note that in modeling payments for HCO cases, we scaled outlier payments to equal 7.975 percent of total estimated LTCH PPS payments for standard Federal payment rate cases in both FY 2026 and FY 2027.

There are 319 LTCHs included in this impact analysis. We note that, although there are 325 LTCHs in the claims data used for this final rule, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2027 MS–LTC–DRG relative weights (discussed in section X.B.3. of the preamble of this final rule). Moreover, in the claims data used for this final rule, one of the 325 LTCHs only had claims for site neutral payment rate cases and, therefore, does not affect our impact analysis for LTCH PPS standard Federal payment rate cases presented in Table IV.

Based on the FY 2025 LTCH cases that were used for the analysis in this final rule, approximately 7 percent of those cases were classified as site neutral payment rate cases (that is, 7 percent of LTCH cases would not meet the statutory patient-level criteria for exclusion from the site neutral payment rate). Accordingly, based on the FY 2025 LTCH cases that were used for the analysis in this final rule, approximately 93 percent of LTCH cases would meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2027 and would be paid based on the LTCH PPS standard Federal payment rate.

Comment: Some commenters expressed concern that the projected increase in payments stated in the proposed rule for LTCH PPS standard payment rate cases for FY 2027 is insufficient to address the financial pressures facing LTCHs. One commenter argued that the projected increase would fail to keep pace with actual cost growth that is being driven by workforce shortages, increased reliance on contract labor, elevated pharmaceutical and supply costs, and rising patient acuity. Another commenter contended that the projected increase is inadequate given that LTCHs serve Medicare's most medically complex and seriously ill beneficiaries. The commenter stated that persistent reimbursement shortfalls under the current payment system have already contributed to reduced care volumes and facility closures.

Response: We appreciate commenters' concerns about the proposed 2.3 percent increase in payments to LTCH PPS standard Federal payment rate cases. Based on the finalized payment rates and factors in this final rule, we project a 2.2 percent increase in payments to LTCH PPS standard Federal payment rate cases for FY 2027. As discussed later in this section of the rule, that estimated increase is primarily due to the 2.3 percent annual update to the LTCH PPS standard Federal payment rate. We received several comments on the proposed annual update to the LTCH PPS standard Federal payment rate that we fully summarized and responded to in section X.C. of the preamble to this final rule. As stated in that section, we believe the LTCH market basket increase appropriately reflects the input price growth that LTCHs will incur providing medical services in FY 2027.

Comment: A few commenters noted that in the proposed rule CMS did not include a payment projection for site neutral payment rate cases. One commenter stated that this omission made it harder to assess the rule's full financial impact.

Response: We appreciate the commenters' sharing their feedback. The site-neutral payment rate is the lower of the IPPS comparable per diem amount (including any applicable outlier payments) reduced by 4.6 percent for FYs 2018 through 2026; or 100 percent of the estimated cost of the case. Projecting site-neutral payments therefore requires an accurate projection of the costs of site-neutral payment rate cases. For the same reasons that preclude us from determining a FY 2027 fixed-loss amount using our standard methodology (as discussed in section V.C. of the Addendum to this final rule)—namely, the uncertainty surrounding the reliability of the historical data available for projecting LTCH costs—we do not believe a reliable projection of site-neutral payment rate payments is feasible for purposes of this rulemaking. We note that payments to site neutral payment rate cases in FY 2025 represented approximately 3 percent of aggregate FY 2025 LTCH PPS payments.

In the following section, we present in Table IV our provider impact analysis for the changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs, reflecting the estimated ''losses'' or ''gains'' from FY 2026 to FY 2027 based on the payment rates and policy changes presented in this final rule. We note that our analysis does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the policies in this final rule. Consistent with prior years, Table IV only reflects changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

In Table IV, LTCHs are grouped based on characteristics provided in hospital cost report data and PSF data. LTCH groups included the following:

- Location: large urban/other urban/rural.
- Ownership control.
- Census region.
- Bed size.

We include the following columns in Table IV:

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2026 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fifth column shows the estimated FY 2027 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2026 to FY 2027 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 due to the changes to the area wage level adjustment (that is, the updated hospital wage data and the labor-related share) and the application of the corresponding budget neutrality factor (as discussed in section V.B.6. of the Addendum to this final rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 (Column 4) to FY 2027 (Column 5) due to all changes.

TABLE IV: IMPACT OF PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR LTCH PPS STANDARD FEDERAL PAYMENT RATE CASES FOR FY 2027
(ESTIMATED FY 2026 PAYMENTS COMPARED TO ESTIMATED FY 2027 PAYMENTS)

[1] Estimated FY 2027 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this final rule.
[2] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 due to the annual update to the LTCH PPS standard Federal payment rate.
[3] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 due to the changes to the area wage level adjustment under § 412.525(c) (that is, the updated hospital wage data and the labor-related share) with budget neutrality.
[4] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 (shown in Column 4) to FY 2027 (shown in Column 5), due to all of the changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this final rule.

b. Results

Based on the FY 2025 LTCH cases (from 319 LTCHs) that were used for the analyses in this final rule, we have prepared the following summary of the impact (as shown in Table IV) of the LTCH PPS payment rate and policy changes for LTCH PPS standard Federal payment rate cases presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 2.2 percent, on average, for all LTCHs from FY 2026 to FY 2027, as a result of the payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this finale rule. This estimated 2.2 percent increase in LTCH PPS payments per discharge was determined by comparing estimated FY 2027 LTCH PPS payments for LTCH PPS standard Federal payment rate cases (using the payment rates and factors discussed in this final rule) to estimated FY 2026 LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

As stated previously, we established an annual update to the LTCH PPS standard Federal payment rate for FY 2027 of 2.3 percent. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard Federal payment rate. The estimated change attributable solely to the annual update of 2.3 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 2.2 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027, on average, for all LTCHs (Column 6). The estimated increase of 2.2 percent shown in Column 6 also includes estimated payments for SSO cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit the required LTCH QRP data. For all hospital categories, the projected increase in payments based on the LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases also rounds to approximately 2.2 percent.

(1) Location

The vast majority of LTCHs are located in urban areas. The impact analysis presented in Table IV shows that the average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 for all LTCHs is 2.2 percent. Urban LTCHs are also projected to experience an increase of 2.2 percent.

Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 2 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. As shown in Table IV, we are projecting a 1.7 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases for LTCHs located in a rural area. This increase is primarily due to the 2.3 percent annual update to the LTCH PPS standard Federal payment rate for FY 2027 being partially offset by a projected decrease in payments due to the changes to the area wage level adjustment and the changes to the MS–LTC–DRG classifications and relative weights.

(2) Ownership Control

LTCHs are grouped into three categories based on ownership control type: voluntary, proprietary, and government. Based on the best available data, approximately 17 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 81 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, proprietary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases of 2.2 percent. Voluntary LTCHs are expected to experience an

increase in payments to LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 of 1.8 percent. Government owned and operated LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 of 3.7 percent.

(3) Census Region

The comparisons by region show that the changes in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2026 to FY 2027 are projected to increase from 1.3 percent in the East South Central region to 3.4 percent in the Middle Atlantic region. These regional variations are primarily due to the changes to the area wage adjustment.

(4) Bed Size

LTCHs are grouped into five categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; and greater than 125 beds. We project that LTCHs with 0–24 beds and LTCHs with 75–124 beds will experience the largest increase in payments with 2.5 percent. The remaining bed size categories are projected to experience an increase in payments in the range of 1.9 percent to 2.4 percent.

4. Effect on the Medicare Program

We project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2027 relative to FY 2026 of approximately 2.2 percent for the 319 LTCHs in our database. We estimate that aggregate FY 2027 LTCH PPS payments to LTCH PPS standard Federal payment rate cases will be approximately $2.490 billion, as compared to estimated aggregate FY 2026 LTCH PPS payments of approximately $2.436 billion, resulting in an estimated overall increase in payments of approximately $54 million.

As we discuss in detail throughout this final rule, based on the best available data, we believe that the provisions of this final rule relating to the LTCH PPS and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this final rule, and we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As discussed previously, we do not expect the implementation of the site neutral payment system to have a negative impact on access to or quality of care. As demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Requirements for the Hospital Inpatient Quality Reporting Program

In sections IX.B. and IX.C. of the preamble of this final rule, we discuss the requirements for hospitals reporting quality data under the Hospital Inpatient Quality Reporting Program to receive the full annual percentage increase for the FY 2029 payment determination and subsequent years.

In this final rule, we are adopting three new measures: (1) the Advance Care Planning electronic clinical quality measure (eCQM) beginning with the CY 2028 reporting period/FY 2030 payment determination; (2) the Hospital Harm-Postoperative Venous Thromboembolism (VTE) eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination; (3) the Excess Days in Acute Care After Hospitalization for Diabetes measure beginning with the July 1, 2025 through June 30, 2027 performance period, associated with the FY 2029 payment determination. We are also adopting five mortality measures for the July 1, 2024 through June 30, 2026 performance period, associated with the FY 2028 payment determination, through the July 1, 2027 through June 30, 2029 performance period, associated with the FY 2031 payment determination: (1) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Acute Myocardial Infarction Hospitalization measure; (2) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Heart Failure Hospitalization measure; (3) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Pneumonia Hospitalization measure; (4) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Chronic Obstructive Pulmonary Disease Hospitalization measure; and (5) the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate Following Coronary Artery Bypass Graft (CABG) Surgery measure. We are also modifying three measures beginning with the July 1, 2024 through June 30, 2026 performance period, associated with the FY 2028 payment determination: (1) the Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction measure; (2) the Excess Days in Acute Care after Hospitalization for Heart Failure measure; and (3) the Excess Days in Acute Care after Hospitalization for Pneumonia measure. We are removing three eCQMs beginning with the CY 2028 reporting period/FY 2030 payment determination: (1) the VTE Prophylaxis eCQM; (2) the Intensive Care Unit VTE Prophylaxis eCQM; and (3) Discharged on Antithrombotic Therapy eCQM. We are also updating the reporting and submission requirements for the Maternal Morbidity Structural measure beginning with the CY 2026 reporting period/FY 2028 payment determination. Lastly, we are modifying the reporting and submission requirements for eCQMs to require mandatory reporting of the Malnutrition Care Score eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination, and to require mandatory reporting of Hospital Harm eCQMs after 2 years of self-selected reporting beginning with the CY 2028 reporting period/FY 2030 payment determination.

As shown in the summary tables in section XII.B.4.h. of the preamble of this final rule, we estimate an increase of 8,133 hours at a cost of $447,803 in information collection burden associated with the finalized policies compared to the currently approved information collection burden estimates under OMB control number 0938–1022 (expiration date December 31, 2028).

In section IX.B.1. of the preamble of this final rule, we are adopting the Advance Care Planning eCQM beginning with the CY 2028 reporting period/FY 2030 payment determination. Additionally, in sections IX.C.3.b. and IX.C.4. of the preamble of this final rule, we are adopting the Hospital Harm-Postoperative VTE eCQM and subsequently removing the VTE–1 and VTE–2 eCQMs beginning with the CY 2028 reporting period/FY 2030 payment determination. While there is no change in information collection burden associated with these policies because the VTE–1 and VTE–2 eCQMs are available for hospitals to self-select to meet eCQM reporting requirements and the finalized Hospital Harm-Postoperative VTE eCQM will also be available for hospitals to self-select, we note that there will be a reduction in administrative burden as the policies will result in replacing two process eCQMs with a single comprehensive outcome eCQM. We note that the Hospital Harm-Postoperative VTE eCQM will become mandatory due to the finalized policy to require Hospital Harm eCQMs after two years of self-selected reporting, and we have provided estimates for the Collection of Information burden in section XII.B.4.g. in the preamble of this final rule. We note the administrative costs associated with adoption of eCQMs are multifaceted and include not only the burden associated with reporting but also the costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in hospitals' EHR systems for the eCQMs used in the Hospital Inpatient Quality Reporting Program.

We do not anticipate any additional economic impact beyond those discussed in section XII.B.4. of the preamble of this final rule (Collection of Information) for the remaining policies.

Historically, 100 hospitals, on average, that participate in the Hospital Inpatient Quality Reporting Program do not receive the full annual percentage increase in any fiscal year due to the failure to meet all requirements. We anticipate that the number of hospitals not receiving the full annual percentage increase will be approximately the same as in past years based on review of previous performance.

L. Effects of Requirements for the PPS-Exempt Cancer Hospital (PCH) Quality Reporting Program

In sections IX.B. and IX.D. of this final rule, we discuss requirements for PPS-Exempt Cancer Hospitals (PCHs) reporting quality data under the PCH Quality Reporting Program. The PCH Quality Reporting Program is authorized under section 1866(k) of the Act. There is no financial impact to Medicare reimbursement if a PCH does not submit data.

We are adopting two measures with voluntary reporting for the CY 2028 reporting

period/FY 2030 program year, followed by mandatory reporting beginning with the CY 2029 reporting period/FY 2031 program year: (1) the Advance Care Planning electronic clinical quality measure (eCQM); and (2) the Malnutrition Care Score eCQM. This is a modification from the FY 2027 IPPS/LTCH PPS proposed rule, in which we proposed to adopt both measures with mandatory reporting beginning with the CY 2028 reporting period/FY 2030 program year (91 FR 19564 through 19568 and 91 FR 19605 through 19608). We are also removing the COVID–19 Vaccination Coverage among Healthcare Personnel measure beginning with the CY 2026 reporting period/FY 2028 program year.

As shown in the summary tables in section XII.B.5. of this final rule, across all PCHs we estimate an increase of 15 hours at a cost of $826 in information collection burden associated with the finalized policies compared to the currently approved information collection burden estimates under OMB control number 0938–1175 (expiration date January 31, 2029). We also estimate a decrease of between 88 hours at a savings of $4,972 and 99 hours at a savings of $5,801 in information collection burden associated with the finalized policies compared to the currently approved information collection burden estimates under OMB control number 0920–1317 (expiration date January 31, 2028).

With regard to administrative costs associated with adoption of eCQMs, we believe they are multifaceted and include not only the burden associated with reporting but also the costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in PCHs' electronic health record systems for the eCQMs used in the PCH Quality Reporting Program. As discussed in section IX.D.5.b.(1). of this final rule, we intend to transition to a fully digital quality measure landscape by transitioning eCQMs to Health Level 7® Fast Healthcare Interoperability Resources® (FHIR®)-based eCQMs to promote interoperability and increase the value of quality measure data.[749] [750]

We do not believe removal of the COVID–19 Vaccination Coverage among Healthcare Personnel measure will result in any additional economic impact beyond that discussed in section XII.B.5.c. of this final rule (Collection of Information).

M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In section IX.E.3. of this final rule, we finalized our proposal to remove the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) (HCP COVID–19 Vaccine) measure. We also finalized, in section IX.E.4. of this final rule, our proposal to remove the COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date (Patient/Resident COVID–19 Vaccine) measure. Both measure removals will be effective beginning with the FY 2028 LTCH QRP. In section IX.E.6.b. of this final rule, we finalized our proposal to revise the data submission deadline for LCDS assessment and CDC NHSN data for the LTCH QRP. Finally, in sections IX.E.5. of this final rule, we summarize public comments received in response to our request for information on future measure concepts for the LTCH QRP.

The effect of these finalized provisions for the LTCH QRP will be an overall decrease in burden for LTCHs participating in the LTCH QRP. As shown in summary table I.M.-01, we estimate a decrease in total annual burden of 4,473 hours and $203,059.30 for 318 eligible LTCHs associated with our finalized policies. We refer readers to section XII.B.8. of this final rule, where CMS has provided an estimate of the burden and cost to LTCHs.

TABLE I.M.-01: ESTIMATED BURDEN ASSOCIATED WITH THE FY 2028 LTCH QRP

Requirement	Per LTCH		All LTCHs	
	Change in Annual Burden Hours	Change in Annual Cost	Change in Annual Burden Hours	Change in Annual Cost
Proposed Removal of the Patient/Resident COVID-19 Measure	-1.61	-$123.51	-513	-$39,276.58
Proposed Removal of the HCP COVID-19 Vaccine Measure.	-12.00	-$515.04	-3,960	-$163,782.72
Total estimated change in burden associated with the FY 2028 LTCH QRP	-13.61	-$638.55	-4,473	-$203,059.30

We sought comments specific to the estimates.

We received no comments on the estimates of burden related to the removal of the HCP COVID–19 Vaccine and Patient/Resident COVID–19 Vaccine measures and therefore are finalizing this provision without modification.

N. Effects of Requirements Regarding the Medicare Promoting Interoperability Program

In sections IX.B. and IX.F. of the preamble of this final rule, we discuss requirements for eligible hospitals and critical access hospitals (CAHs) to report on objectives, measures, and electronic clinical quality measures (eCQMs) under the Medicare Promoting Interoperability Program.

In this final rule, we are adopting three new measures: (1) the Advance Care Planning eCQM beginning with the CY 2028 reporting period; (2) the Hospital Harm-Postoperative Venous Thromboembolism (VTE) eCQM beginning with the CY 2028 reporting period; and (3) the Unique Device Identifiers for Implantable Medical Devices measure beginning with the EHR reporting period in CY 2027. Additionally, we are removing two attestations and five measures: (1) the Office of the National Coordinator for Health Information Technology (ONC) Direct Review Attestation beginning with the EHR reporting period in CY 2026; (2) the optional ONC-Authorized Certification Body (ONC–ACB) Surveillance Attestation beginning with the EHR reporting period in CY 2026; (3) the Support Electronic Referral Loops by Sending Health Information measure beginning with the EHR reporting period in CY 2029; (4) the Support Electronic Referral Loops by Receiving and Reconciling Health Information measure beginning with the EHR reporting period in CY 2029; (5) the Venous Thromboembolism Prophylaxis (VTE) Prophylaxis eCQM beginning with the CY 2028 reporting period; (6) the Intensive Care Unit VTE Prophylaxis eCQM beginning with the CY 2028 reporting period; and (7) the Discharged on Antithrombotic Therapy eCQM beginning with the CY 2028 reporting period. We are also updating the Electronic Prior Authorization measure by modifying the ONC certification criteria eligible hospitals and CAHs must use to attest ''Yes,'' modifying the measure text, and making the measure an optional bonus measure for the EHR reporting period in CY 2027 and a required measure beginning with the EHR reporting period in CY 2028. Lastly, we are modifying the reporting and submission requirements for the Malnutrition Care Score eCQM beginning with the CY 2028 reporting period and modifying the reporting and submission requirements for Hospital Harm eCQMs to require mandatory reporting after 2 years of self-selected reporting beginning with the CY 2028 reporting period.

As discussed in section XII.B.7.i. of the preamble of this final rule, we estimate a decrease of 3,886 hours at a cost of $213,982 in information collection burden associated with our finalized policies and updated burden estimates for the EHR reporting period in CY 2026 and future years compared to our currently approved information collection burden estimates. We refer readers to section XIII.B.7. of the preamble of this final rule (Collection of Information) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Medicare Promoting Interoperability Program.

[749] For more information on dQMs, visit: *https://ecqi.healthit.gov/dqm/about-dqms.*

[750] FHIR® is the registered trademark of Health Level Seven International (HL7), and its use does not constitute endorsement by HL7.

In section IX.F.9.b. of the preamble of this final rule, we are adopting the Hospital Harm Postoperative VTE eCQM and removing the VTE Prophylaxis eCQM and Intensive Care Unit VTE Prophylaxis eCQM beginning with the CY 2028 reporting period. There is no change in information collection burden associated with these policies because the two current VTE eCQMs are available for CAHs to self-select to meet reporting requirements. The Hospital Harm VTE eCQM adopted in this final rule will be available for CAHs to self-select before becoming mandatory after two years in light of our finalized policy to require Hospital Harm eCQMs after two years of self-selected reporting. We note that there will be a reduction in administrative costs, as the policies result in replacement of two process measures with a single comprehensive outcome measure. In section IX.B.1. of the preamble of this final rule, we are adopting the Advance Care Planning eCQM beginning with the CY 2028 reporting period, for which there is also no change in information collection burden. Regarding administrative costs associated with adoption of eCQMs, we believe they are multifaceted and include not only the burden associated with reporting but also the costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in EHR systems for the objectives, measures, and eCQMs used in the program.

In section IX.F.4. of the preamble of this final rule, we are removing the Support Electronic Referral Loops by Sending Health Information measure and Support Electronic Referral Loops by Receiving and Reconciling Health Information measure, with a modification such that the removal will begin with the EHR reporting period in CY 2029. Eligible hospitals and CAHs currently reporting on these measures will be required to report on either the Health Information Exchange (HIE) Bi-Directional Exchange measure or the Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) measure. Based on Medicare Promoting Interoperability Program data from the EHR reporting period in CY 2024, the 26.6 percent of eligible hospitals and CAHs that reported on the Support Electronic Referral Loops by Sending Health Information and Support Electronic Referral Loops by Receiving and Reconciling Health Information measures may incur some onboarding labor and vendor costs associated with the process to plan, procure, configure, and technically validate the functionality of the information being exchanged. Eligible hospitals and CAHs may also incur some recurring costs associated with joining a health information exchange or TEFCA QHIN, such as annual subscription fees, transaction fees, and vendor maintenance and support, depending on the nature of their agreement with health IT vendors or other entities through which they participate. However, because each eligible hospital, CAH, and health IT vendor or other entity is unique and we lack sufficient insight into individual organizational decisions, the extent of these costs is difficult to quantify generally. Published literature largely does not evaluate the costs and benefits associated with HIE or TEFCA participation in any detail, although some published papers indicate a mixture of both cost benefits and savings associated with HIE participation.[752] We sought public comment describing the direct costs and benefits associated with HIE or TEFCA adoption because it may improve our ability to quantify the financial impacts for eligible hospitals and CAHs affected by the policy. We did not receive any comments.

We do not believe the remaining provision results in any additional economic impact beyond those discussed in section XII.B.7. of the preamble of this final rule.

O. Alternatives Considered

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

1. Alternatives Considered to the LTCH QRP Reporting Requirements

With regard to the proposals to remove both the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) and COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure, we considered keeping both measures. However, when these measures were adopted, there were well-defined parameters for receiving the COVID–19 vaccination. We determined that these measures no longer align with current clinical guidelines and therefore the publicly reported measures may not reliably give consumers information on the number of HCP that are vaccinated, or the percent of stays in which patients in an LTCH are up to date on their COVID–19 vaccinations.

With regard to the proposal to revise the LTCH QRP assessment data submission deadline from 4.5 months to 45 days, we considered keeping the deadline unchanged. We determined that 45 days is a reasonable amount of time for LTCHs to submit data and make any necessary corrections, and that the benefits of this shortened timeframe include making the data timelier and more actionable which increases the value of publicly reported data, both for consumers and their families and for LTCHs to use in their quality improvement activities.

We summarize and respond to comments related to our proposals to remove both the COVID–19 Vaccination Coverage among Healthcare Personnel (HCP) and COVID–19 Vaccine: Percent of Patients/Residents Who Are Up to Date measure and provide responses in sections IX.E.3 and IX.E.4 of the preamble of this final rule. We summarize and respond to comments related to our proposal to revise the LTCH QRP Data Submission Deadlines in section IX.E.6.b of the preamble of this final rule.

2. Alternatives Considered for the Transforming Episode Accountability Model

In section X.A. of the preamble of this final rule, we discuss the mandatory episode-based payment model called the Transforming Episode Accountability Model (TEAM). TEAM is designed to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM tests whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM will benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

Throughout this final rule, we have identified our policies and alternatives that we have considered and provided information as to the effects of these alternatives and the rationale for each of the proposed policies. For example, in section X.A.2.c.(2).(c). of the preamble of this final rule we considered removing the 3 percent cap on the retrospective trend factor to account for MS–DRG and HCPCS–APC changes that may occur after preliminary target prices are released. However, we remain concerned that removing the cap on the retrospective trend factor would introduce target price instability and would present challenges for TEAM participants to predict performance in the model.

We solicited and welcomed comments on our proposals, on the alternatives we have identified, including starting the proposed changes for MS–DRG and APC update factors in performance year 2, as discussed in section X.A.2.c.(2). of the preamble of this final rule, and on other alternatives that we should consider. We addressed the alternatives considered comments in each applicable section of this final rule.

3. Alternatives Considered for the Comprehensive Care for Joint Replacement Expanded (CJR–X) Model

In section X.C. of this final rule, we are finalizing the Comprehensive Care for Joint Replacement Expanded (CJR–X) Model, which builds upon the Comprehensive Care for Joint Replacement (CJR) Model that was tested from April 1, 2016 to December 31, 2024. Based on the strength of evidence from the CJR Model test, the Innovation Center is expanding the model to all acute care hospitals in the 50 United States, District of Columbia, and U.S. Territories, except for hospitals participating in the Transforming Episode Accountability Model (TEAM) and hospitals located in Maryland. CJR–X will include several updates to the CJR Model. CJR–X will begin January 1, 2028.

The model will focus on improving care and reducing spending for Medicare beneficiaries undergoing lower extremity joint replacement (LEJR) procedures. Participant hospitals will be held accountable for spending and quality of care during an initial LEJR admission and for the 90 days following hospital discharge.

[752] Menachemi N, Rahurkar S, Harle CA, Vest JR. The benefits of health information exchange: an updated systematic review. Journal of the American Medical Informatics Association. 2018 Sep;25(9):1259–65.[574]

Throughout the proposed rule, we identified proposed policies and alternatives considered. In the proposed rule, we also provided background and rationale for each of the proposed policies and discussion of alternative policies including their potential effects. For example, we considered several original CJR quality reporting and payment methodology policies but ultimately proposed updates in response to the CJR Model evaluation results, stakeholder feedback, and changes to national care delivery patterns among both CJR and non-CJR hospitals. Throughout the preamble, we solicited comments on our proposals, alternatives policies, and other options we should consider. We addressed the alternatives considered comments in each applicable section of this final rule.

P. Overall Conclusion

1. Acute Care Hospitals

Acute care hospitals are estimated to experience an increase of approximately $2.9 billion in FY 2027, including operating, capital, and the effects of: (1) new technology add-on payment changes; (2) the changes to estimated uncompensated care payments; and (3) the statutory expiration of the MDH program and the temporary changes to the low-volume hospital payment adjustment on January 1, 2027. The estimated change in operating payments including outlier payments, and uncompensated care payments is approximately $2.1 billion (discussed in sections I.F of this Appendix). The estimated change in capital payments is approximately $0.24 billion (discussed in section I.I. of this Appendix). The estimated change in the combined effects of other changes including new technology add-on payment changes and the statutory expiration of the temporary changes to the low-volume hospital payment adjustment on January 1, 2027, is approximately $0.52 billion as discussed in sections I.F and I.G. of the Appendix of this final rule. Totals may differ from the sum of the components due to rounding.

Table I. of section I.F. of the Appendix and Table III of section I.I. of this Appendix of this final rule also demonstrates the estimated redistributional impacts of FY 2027 changes on IPPS operating and capital payments, respectively, relative to FY 2026.

The discussions presented in the previous pages, in combination with the remainder of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience an increase in estimated payments in FY 2027. In the impact analysis, we are using the rates, factors, and policies presented in this final rule based on the best available data to estimate the change in payments under the LTCH PPS for FY 2027. Accordingly, based on the best available data for the 319 LTCHs included in our analysis, we estimate that aggregate FY 2027 LTCH PPS payments to LTCH PPS standard Federal payment rate cases would increase approximately $54 million relative to FY 2026, primarily due to the annual update to the LTCH PPS standard Federal rate.

Q. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on last year's proposed rule will be the number of reviewers of this final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we believe that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcomed comments on the approach in estimating the number of entities which will review this final rule.

We recognize that different types of entities are in many cases affected by mutually exclusive sections of the rule. Thus, for the purposes of our estimate we assume that each reviewer read approximately 50 percent of the proposed rule. Finally, in our estimates, we have used the 979 number of timely pieces of correspondence on the FY 2027 IPPS/LTCH PPS proposed rule as our estimate for the number of reviewers of this rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing the final rule is $113.42 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it would take approximately 29.33 hours for the staff to review half of this final rule. For each IPPS hospital or LTCH that reviews this final rule, the estimated cost is $3,326.61 (29.33 hours × $113.42). Therefore, we estimate that the total cost of reviewing this final rule is $3,256,751 ($3,326.61 × 979 reviewers).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*) in Table V. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

As shown in Table V. of the Appendix of this final rule, the net costs to the Federal Government associated with the policies in this final rule are estimated at $2.9 billion.

TABLE V.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2026 TO FY 2027

Category	Transfers
Annualized Monetized Transfers	$2.9 billion
From Whom to Whom	Federal Government to IPPS Medicare Providers

B. LTCHs

As discussed in section I.J. of the Appendix of this final rule, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS is projected to result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2027 relative to FY 2026 of approximately $54 million based on the data for 319 LTCHs in our analysis. Therefore, as required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*), in Table VI. of the Appendix of this final rule, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate LTCHs. Table VI. of this Appendix provides our best estimate of the estimated change in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 319 LTCHs in our analysis. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

As shown in Table VI. of the Appendix of this final rule, the net cost to the Federal Government associated with the policies for LTCHs in this final rule are estimated at $54 million.

TABLE VI.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2026 LTCH PPS TO THE FY 2027 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	$54 million
From Whom to Whom	Federal Government to LTCH Medicare Providers

C. Quality Reporting Programs

As required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf*) in Table VII. of this Appendix, we have prepared an accounting statement showing the classification of the costs associated with the provisions of this final rule as they relate to the following quality reporting programs: Hospital Inpatient Quality Reporting Program, PPS-Exempt Cancer Hospital Quality Reporting Program, Medicare Promoting Interoperability Program and the Long-Term Care Hospital Quality Reporting Program.

TABLE VII.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS RELATED TO THE VARIOUS QUALITY REPORTING PROGRAMS

Hospital Quality Burden Costs, CYs 2026-2030		
Category	**Primary Estimate**	
Costs	3% Discount Rate	7% Discount Rate
Annualized Monetized Net Costs	$0.1 million	$0.09 million

D. Non-Renal Organ Acquisition Costs for Independent Organ Procurement Organizations and Histocompatibility Laboratories

As required by OMB Circular A–4 (available at *https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf)* in Table VIII. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures and costs associated with the provisions of this final rule as they relate to non-renal organ acquisition costs for independent organ procurement organizations, and histocompatibility laboratories.

TABLE VIII.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES AND COSTS

Non-Renal Organ Acquisition Costs for Independent Organ Procurement Organizations FYs, 2027-2036		
Category	**Transfers**	
Costs	3% Discount Rate	7% Discount Rate
Annualized Monetized Transfers	-$111.6 million	-$105.7 million
From Whom to Whom	Federal Government to Medicare OPOs	
Burden Reporting Costs to IOPOs and HCLs, FY 2029		
Category	**Primary Estimate**	
Annualized Monetized Costs	$75,632	

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. The North American Industry Classification System (NAICS) was adopted in 1997 and is the current standard used by the Federal statistical agencies related to the U.S. business economy. Hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (having revenues of less than $9.0 million to $47.0 million in any 1 year). (For details, see the SBA's website at *http://www.sba.gov/content/small-business-size-standards* (refer to the 620000 series or Sector 62, Health Care and Social Assistance).)

We utilized the NAICS U.S. industry title ''Hospitals'' and corresponding NAICS code 622 in determining impacts for small entities for this rule. The NAICS code 622 has a size standard of $47 million.[753] Table IX shows the number of firms, revenue, and estimated impact per hospital category.

[753] *https://www.sba.gov/sites/sbagov/files/2023-03/Table%20of%20Size%20Standards_Effective%20March%2017%2C%202023%20%281%29%20%281%29_0.pdf.*

TABLE IX: NUMBER OF FIRMS, REVENUE, AND AVERAGE REVENUE PER FIRM OF HOSPITALS FOR NAICS CODE 622

NAICS	NAICS Description	Enterprise Size ($1,000)	Number of Firms	Receipts ($1,000)	Average Receipts Per Firm ($1,000)
622	Hospitals	<100	68	3,235	48
622	Hospitals	100-499	176	47,198	268
622	Hospitals	500-999	61	43,484	713
622	Hospitals	1,000-2,499	36	55,875	1,552
622	Hospitals	2,500-4,999	43	160,867	3,741
622	Hospitals	5,000-7,499	45	285,858	6,352
622	Hospitals	7,500-9,999	77	653,169	8,483
622	Hospitals	10,000-14,999	158	1,852,000	11,722
622	Hospitals	15,000-19,999	173	2,919,720	16,877
622	Hospitals	20,000-24,999	154	3,391,347	22,022
622	Hospitals	25,000-29,999	128	3,342,680	26,115
622	Hospitals	30,000-34,999	126	3,876,502	30,766
622	Hospitals	35,000-39,999	87	3,061,225	35,186
622	Hospitals	40,000-49,999	162	6,839,652	42,220
622	Hospitals	50,000+	1,642	1,328,006,166	808,774
622	Hospitals	Total	3,136	1,354,538,978	431,932

Source: Data obtained from United States Census Bureau table "us_6digitnaics_rcptsize_2022" (SOURCE: 2022 SUSB Annual Data Tables by Establishment Industry) Release Date: 4/10/2025: https://www2.census.gov/programs-surveys/susb/tables/2022/us_6digitnaics_rcptsize_2022.xlsx.

Notes: The 'Average Receipts Per Firm' is calculated as the Receipts ($1,000)/Number of Firms. The 'Total' row represents all the hospital firms under NAICS 622. Overall receipts (revenue) for the 3,136 firms (NAICS 622) are approximately $1,355 billion.

TABLE X: ESTIMATED IMPACT ON SMALL BUSINESSES*

	Total Facilities	Estimated Small Businesses	Total Impact ($1 million)	Estimated Impact to Small Businesses	Estimated Average Impact per Small Business
IPPS Hospitals	3,005	1,385	$2,900	$52,200,000	$37,690
LTCHs	319	147	$54	$1,000,000	$6,803

* Based on the assumptions that small firms represent 46.1 percent of affected entities and account for approximately 1.8 percent of total industry revenues using the SBA size standards.

For purposes of the RFA, approximately half of all hospitals are considered to be small entities. As shown in Table IX, hospitals with enterprise size of $49 million or less (1,494) are approximately 48 percent of total firms (3,136). Because roughly half of hospitals qualify as small entities under the RFA, the impacts described in this final rule generally affect small entities. Individuals and States are not included in the definition of a small entity. MACs are also not considered to be small entities because they do not meet the SBA definition of a small business.

HHS interprets the RFA to consider economic effects ''significant'' when more than 5 percent of providers incur impacts of at least 3 to 5 percent or more of total revenue or total costs. Approximately 44 percent of Medicare-participating hospitals report Medicare utilization of at least 25 percent of their total inpatient days (see the ''Medicare Utilization as a Percent of Inpatient Days'' category in Table I in section I.F. of the Appendix to this final rule), indicating that Medicare payments constitute a substantial portion of hospital revenue. In addition, approximately 5 percent of hospitals qualify as MDHs and report Medicare utilization at least 60 percent of the hospital's inpatient days or discharges. Based on this analysis, we estimate that the policies finalized in this rule would affect more than 5 percent of hospitals with changes in Medicare revenue of at least 3 to 5 percent.

For example, we estimate that a majority of the 3,005 IPPS hospitals included in the impact analysis presented in ''Table I.—Impact Analysis of Changes to the IPPS for Operating Costs for FY 2027'' will experience average payment increases of approximately 1.7 percent. We attribute these increases primarily to outlier payments, the hospital rate update, and uncompensated care payments, as described in section I.F. of the Appendix to this final rule. Across hospital categories, we estimate that impacts will range from an increase of 2.7 percent for urban Middle Atlantic hospitals to a decrease of 6.8 percent for MDHs, as described in section I.F. of the Appendix to this final rule.

We project that LTCHs would experience overall an increase in payments for LTCH PPS standard Federal payment rate cases in FY 2027. In this impact analysis, we use the rates, factors, and policies in this rule, based on the best available data, to estimate payment changes for FY 2027. Accordingly, using the best available data for the 319 LTCHs included in our analysis, we estimate that LTCH PPS payments for LTCH PPS standard Federal payment rate cases would increase approximately $54 million relative to FY 2026, primarily due to the annual update to the LTCH PPS standard Federal rate.

We further estimate that the 319 LTCH PPS hospitals included in the impact analysis presented in ''Table IV: Impact of Payment Rate and Policy Changes to LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases for FY 2027 (Estimated FY 2026 Payments Compared to Estimated FY 2027 Payments)'' will experience an average increase of approximately 2.2 percent. We attribute this increase primarily to the annual standard Federal rate update of 2.3 percent for FY 2027, as discussed in section I.J. of the Appendix to this final rule. Across LTCH categories, we estimate that impacts will range from an increase of 1.3

percent for LTCHs located in the East South Central region to an increase of 3.7 percent for government-owned LTCHs to, as described in section I.J. of the Appendix to this final rule.

As shown in Tables V. and VI. of the Appendix, we estimate that this final rule will result in aggregate transfers of approximately $2.9 billion to IPPS hospitals and $54 million to LTCHs. In Table X, we estimate the impact of this rule on small entities by applying the SBA size standards and approximating the share of affected firms and revenues attributable to small entities. Specifically, we assume that small firms represent 46.1 percent of affected entities and account for approximately 1.8 percent of total industry revenues. Using these assumptions, we estimate that of the 3,005 IPPS hospitals, approximately 1,385 are small entities, and of the 319 LTCHs, approximately 147 are small entities. Applying the 1.8 percent revenue share, we estimate that approximately $52.2 million of the IPPS impacts and approximately $1.0 million of the LTCH impacts will accrue to small entities, which corresponds to an average impact of approximately $37,690 per small IPPS hospital and approximately $6,803 per small LTCH.

This final rule includes a range of policies. It provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered. Rationales for various policies are outlined in the Statement of Need in section I.A. of the Appendix to this final rule. For example, under the statutory requirement at section 1886(b)(3)(B) of the Act, we are updating the national standardized amount for inpatient hospital operating costs by the applicable percentage increase of 2.3 percent, as described in section I.A of the Appendix to this final rule, and we did not consider an alternative for small businesses. Alternatives considered for various proposals are described in section I.O. of the Appendix to this final rule.

The analyses presented in this Appendix and throughout the preamble of this final rule constitute our initial regulatory flexibility analysis. We invited public comment on our estimates and our assessment of the impact of the proposed policies on small entities in the FY 2027 IPPS/LTCH PPS proposed rule (19883 through 19884). We received no comments on those analyses.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals.

As shown in Table I. in section I.F. of the Appendix of this final rule, rural IPPS hospitals with 0–49 beds (309 hospitals) are expected to experience an increase in payments from FY 2026 to FY 2027 of 0.3 percent and rural IPPS hospitals with 50–99 beds (174 hospitals) are expected to experience an increase in payments from FY 2026 to FY 2027 of 0.5 percent. These changes are primarily driven by the hospital rate update and the increase in estimated uncompensated care payment offset by the statutory expiration of the MDH program and the budget neutral changes to the MS–DRGs and relative weights. We refer readers to Table I. in section I.F. of the Appendix of this final rule for additional information on the quantitative effects of the policy changes under the IPPS for operating costs.

All rural LTCHs (16 hospitals) shown in Table IV. in section I.J. of the Appendix of this final rule have less than 100 beds. These hospitals are expected to experience an increase in payments from FY 2026 to FY 2027 of 1.7 percent. This increase is primarily due to the 2.3 percent annual update to the LTCH PPS standard Federal payment rate for FY 2027 being partially offset by a projected decrease in payments due to the changes to the area wage level adjustment and the changes to the MS–LTC–DRG classifications and relative weights.

V. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2026, that threshold is approximately $193 million. This final rule would not mandate any requirements that meet the threshold for State, local, or Tribal governments, nor would it affect private sector costs.

VI. Executive Order 13132

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. This final rule would not have a substantial direct effect on State or local governments, preempt States, or otherwise have a federalism implication.

VII. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having Tribal implications. Section 1880(a) of the Act states that a hospital of the Indian Health Service, whether operated by such Service or by an Indian Tribe or Tribal organization, is eligible for Medicare payments so long as it meets all of the conditions and requirements for such payments which are applicable generally to hospitals. Consistent with section 1880(a) of the Act, this final rule contains general provisions also applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act. We continue to engage in consultations with Tribal officials on IPPS issues of interest. We use input received from these consultations, as well as the comments on the proposed rule, to inform our rulemaking.

VIII. Executive Order 14192

Executive Order 14192, titled ''Unleashing Prosperity Through Deregulation,'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations. We estimate that this final rule would generate $41.6 million in annualized costs at a 7 percent discount rate, discounted relative to year 2024, over a perpetual time horizon.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommends update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2027, consistent with our approach for FY 2026, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2027

A. FY 2027 Inpatient Hospital Update

As discussed in section VI.B. of the preamble to this final rule, for FY 2027, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in

all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket percentage increase or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket percentage increase or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then an adjustment based on changes in economy-wide productivity (the productivity adjustment). Section 1886(b)(3)(B)(xi) of the Act, as added by section 3401(a) of the Affordable Care Act, states that application of the productivity adjustment may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in the FY 2026 IPPS/LTCH PPS final rule (90 FR 36859 through 36879), we replaced the 2018-based IPPS operating and capital market baskets with the rebased and revised 2023-based IPPS operating and capital market baskets beginning in FY 2026.

In the FY 2027 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, we proposed to base the proposed FY 2027 market basket update used to determine the applicable percentage increase for the IPPS on IGI's fourth quarter 2025 forecast of the 2023-based IPPS market basket rate-of-increase with historical data through third quarter 2025, which was estimated to be 3.2 percent. In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section VI.B. of the preamble of the FY 2027 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2025 forecast, we proposed a productivity adjustment of 0.8 percentage point for FY 2027. We also proposed that if more recent data subsequently became available, we would use such data, if appropriate, to determine the FY 2027 market basket update and productivity adjustment for the FY 2027 IPPS/LTCH PPS final rule.

In the FY 2027 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2025 forecast of the 2023-based IPPS market basket percentage increase and the productivity adjustment, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we presented four possible applicable percentage increases that could be applied to the standardized amount.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are establishing the applicable percentage increase for the FY 2027 updates based on IGI's second quarter 2026 forecast of the 2023-based IPPS market basket percentage increase of 3.2 percent and the productivity adjustment of 0.9 percentage point, as discussed in section VI.B of the preamble of this final rule, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, as shown in the table that follows.

FY 2027	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
IPPS Market Basket Rate-of-Increase	3.2	3.2	3.2	3.2
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.8	-0.8
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-2.4	0.0	-2.4
Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.9	-0.9	-0.9	-0.9
Applicable Percentage Increase Applied to Standardized Amount	**2.3**	**-0.1**	**1.5**	**-0.9**

B. FY 2027 SCH and MDH Update

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Therefore, the update to the hospital-specific rates for SCHs and MDHs is also subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act.

As discussed in section VI.F. of the preamble of this final rule, section 6202 of the Consolidated Appropriations Act, 2026 (Pub. L. 119–75) extended the MDH program for FY 2027 discharges occurring before January 1, 2027. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2027. We refer readers to section V.E. of the preamble of this final rule for further discussion of the MDH program.

As previously stated, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four possible applicable percentage increases in the previous table for the hospital-specific rate applicable to SCHs and MDHs.

C. FY 2027 Puerto Rico Hospital Update

Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section VI.B.1. of the preamble of this final rule.

In addition, as discussed in section VI.B.2. of the preamble of this final rule, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that subsection (d) Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016. In addition, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022.

Section 1886(b)(3)(B)(ix) of the Act in conjunction with section 602(d) of Public Law 114–113 requires that for FY 2024 and subsequent fiscal years, any subsection (d) Puerto Rico hospital that is not a meaningful EHR user as defined in section 1886(n)(3) of the Act and not subject to an exception under section 1886(b)(3)(B)(ix) of the Act will have a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments).

Based on IGI's fourth quarter 2025 forecast of the 2023-based IPPS market basket update with historical data through third quarter 2025, in the FY 2027 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as previously discussed, for Puerto Rico hospitals, we proposed an IPPS market basket increase of 3.2 percent and a productivity adjustment of 0.8 percentage point. Therefore, for FY 2027, depending on whether a Puerto Rico hospital

is a meaningful EHR user, we stated that there are two possible applicable percentage increases that can be applied to the standardized amount. Based on these data, we proposed the following applicable percentage increases to the standardized amount for FY 2027 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, we proposed an applicable percentage increase to the operating standardized amount of 2.4 percent (that is, the FY 2027 estimate of the proposed IPPS market basket rate-of-increase of 3.2 percent less an adjustment of 0.8 percentage point for the proposed productivity adjustment).
- For a Puerto Rico hospital that is not a meaningful EHR user, we proposed an applicable percentage increase to the operating standardized amount of 0.0 percent (that is, the FY 2027 estimate of the proposed market basket rate-of-increase of 3.2 percent, less an adjustment of 2.4 percentage point (the proposed IPPS market basket rate-of-increase of 3.2 percent × 0.75 for failure to be a meaningful EHR user), and less an adjustment of 0.8 percentage point for the proposed productivity adjustment).

As noted previously, we proposed that if more recent data subsequently became available, we would use such data, if appropriate, to determine the FY 2027 market basket percentage increase and the productivity adjustment for the FY 2027 IPPS/LTCH PPS final rule.

As discussed in section V.A.1. of the preamble of this final rule, based on more recent data available for this FY 2027 IPPS/LTCH PPS final rule, we estimate that the FY 2027 market basket update used to determine the applicable percentage increase for the IPPS is 3.2 percent less a productivity adjustment of 0.9 percentage point. Therefore, in accordance with section 1886(b)(3)(B) of the Act, for this final rule, for Puerto Rico hospitals the more recent update of the market basket update is 3.2 percent less a productivity adjustment of 0.9 percentage point. For FY 2027, depending on whether a Puerto Rico hospital is a meaningful EHR user, there are two possible applicable percentage increases that can be applied to the standardized amount. Based on these data, we determined the following applicable percentage increases to the standardized amount for FY 2027 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, an applicable percentage increase to the FY 2027 operating standardized amount of 2.3 percent (that is, the FY 2027 estimate of the market basket rate-of-increase of 3.2 percent less 0.9 percentage point for the productivity adjustment).
- For a Puerto Rico hospital that is not a meaningful EHR user, an applicable percentage increase to the operating standardized amount of −0.1 percent (that is, the FY 2027 estimate of the market basket rate-of-increase of 3.2 percent, less an adjustment of 2.4 percentage point (the market basket rate-of-increase of 3.2 percent × 0.75 for failure to be a meaningful EHR user), and less 0.9 percentage point for the productivity adjustment).

D. Update for Hospitals Excluded From the IPPS for FY 2027

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, religious nonmedical health care institutions (RNHCIs) are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. In addition, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (described in § 412.22(i) of the regulations) also are subject to the rate-of-increase limits. As discussed in section VI. of the preamble of this final rule, we are finalizing our policy to use the percentage increase in the 2023-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals for FY 2027 and subsequent fiscal years. Accordingly, for FY 2027, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, extended neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is the FY 2027 percentage increase in the 2023-based IPPS operating market basket. For this final rule, the current estimate of the IPPS operating market basket percentage increase for FY 2027 is 3.2 percent.

E. Update for LTCHs for FY 2027

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this final rule, we are updating the LTCH PPS standard Federal payment rate for FY 2027 by 2.3 percent, consistent with section 1886(m)(3) of the Act which provides that any annual update be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, the productivity adjustment). Furthermore, in accordance with the LTCH QRP under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are establishing an update factor of 1.023 in determining the LTCH PPS standard Federal rate for FY 2027. For LTCHs that fail to submit quality data for FY 2027, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.3 percent (that is, the annual update for FY 2027 of 2.3 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying an update factor of 1.003 in determining the LTCH PPS standard Federal rate for FY 2027. (We note that, as discussed in section IX.C. of the preamble of this final rule, the update to the LTCH PPS standard Federal payment rate of 2.3 percent for FY 2027 does not reflect any budget neutrality factors.)

III. Secretary's Recommendations

MedPAC is recommending inpatient hospital rates be updated by the amount specified in current law. MedPAC's rationale for this update recommendation is described in more detail in this section. As previously stated, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix. We are recommending that the same applicable percentage increases apply to SCHs and MDHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa and extended neoplastic disease care hospitals of 3.2 percent.

For FY 2027, consistent with policy set forth in section IX.C. of the preamble of this final rule, for LTCHs that submit quality data, we are establishing an update of 2.3 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2027, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.3 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2026 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost

base. MedPAC recommended an update to the hospital inpatient rates by the amount specified in current law. MedPAC anticipates that their recommendation to update the IPPS payment rate by the amount specified under current law in FY 2027 would generally be adequate to maintain beneficiaries' access to hospital inpatient and outpatient care and keep IPPS payment rates close to, if somewhat below, the cost of delivering high-quality care efficiently.

MedPAC recommended redistributing the current Medicare safety-net payments (disproportionate share hospital and uncompensated care payments) using the MedPAC-developed Medicare Safety-Net Index (MSNI) for hospitals. In addition, MedPAC recommended adding $1 billion to this MSNI pool of funds to help maintain the financial viability of Medicare safety-net hospitals and recommended to Congress transitional approaches for a MSNI policy.

We refer readers to the March 2026 MedPAC report, which is available for download at *https://www.medpac.gov/document-type/report/*. We look forward to working with Congress on these matters.

We are establishing an applicable percentage increase for FY 2027 of 2.3 percent as described in section 1886(b)(3)(B) of the Act, provided the hospital submits quality data and is a meaningful EHR user consistent with these statutory requirements. We note that, because the operating and capital payments in the IPPS remain separate, we are continuing to use separate updates for operating and capital payments in the IPPS. The update to the capital rate is discussed in section III. of the Addendum to this final rule.

We note that section 1886(d)(5)(F) of the Act provides for additional Medicare payment adjustments, called Medicare disproportionate share hospital (DSH) payments, for subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. Section 1886(r) of the Act provides that, for FY 2014 and each subsequent fiscal year, the Secretary shall pay each such subsection (d) hospital that is eligible for Medicare DSH payments an empirically justified DSH payment equal to 25 percent of the Medicare DSH adjustment they would have received under section 1886(d)(5)(F) of the Act if subsection (r) did not apply. The remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments if subsection (r) of the Act did not apply, reduced to reflect changes in the percentage of individuals who are uninsured, is available to make additional payments to each hospital that qualifies for Medicare DSH payments and has uncompensated care. These additional payments are called uncompensated care payments. We refer readers to section V. of the preamble of this final rule for further discussion of Medicare DSH and uncompensated care payments.
