Abstract of Information Available

Human remains representing, at least, two individuals have been identified. The one associated funerary object is one lot of faunal bone. This collection was excavated in Carbon County, Montana by the Montana Archaeological Survey and donated in 1941 to the University of Chicago. There is no

known presence of any potentially hazardous substances.

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice.

Determinations

Indiana University has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- The one object described in this notice is reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
