(D) Modifying Scoring for the Electronic Prior Authorization Measure

When we adopted the Electronic Prior Authorization measure in the 2024 CMS Interoperability and Prior Authorization final rule (89 FR 8909 through 8927), we

finalized that MIPS eligible clinicians would report the measure as an unscored attestation for the CY 2027 performance period (89 FR 8910); however, we did not specify the measure's scoring methodology for subsequent years because we determined that it will be more appropriate to determine the measure's scoring methodology closer in time to the measure's effective date.

In the CY 2027 PFS proposed rule, we proposed to modify the Electronic Prior Authorization measure by making the measure optional and eligible for 10 bonus points for MIPS eligible clinicians who submit a ''Yes'' response attesting to meeting the requirements of the measure for the CY 2027 performance period/2029 MIPS payment year (91 FR 44176 through 44181). Allocating 10 bonus points is an appropriate and effective incentive to promote the adoption and use of certified technology for requesting electronic prior authorizations among MIPS eligible clinicians. To account for the allocation of bonus points specific to the Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year, we proposed to amend § 414.1380(b)(4)(ii)(C) by adding a new provision at § 414.1380(b)(4)(ii)(C)(4). In the CY 2027 PFS proposed rule, we referred readers to the proposal (91 FR 44205 and 44206) that establishes the allocation of 10 bonus points to the Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year in § 414.1380(b)(4)(ii)(C)(4), respectively, for MIPS eligible clinicians who affirmatively attest to meeting the requirements of the Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year.

Also, as described in the CY 2027 PFS proposed rule, we proposed to require the reporting of the Electronic Prior Authorization measure beginning with the CY 2028 performance period/2030 MIPS payment year. We refer readers to section IV.A.4.d.(4)(f) of this final rule for discussion of finalization of the Electronic Prior Authorization measure. Similar to the Electronic Prior Authorization measure's original scoring methodology as adopted in the 2024 CMS Interoperability and Prior Authorization final rule (89 FR 8909 through 8927), the Electronic Prior Authorization measure would not be scored or contribute to the MIPS Promoting Interoperability performance category score as long as a MIPS eligible clinician affirmatively attests (submission of a ''Yes'' response) to meeting the requirements of the measure or claims an applicable exclusion beginning with the CY 2028 performance period. If a MIPS eligible clinician submits a ''No'' response for the attestation, fails to submit an attestation for the measure, or fails to claim an applicable exclusion, then the MIPS eligible clinician would receive a score of zero for the MIPS Promoting Interoperability performance category and would not be considered a meaningful EHR user for MIPS for the applicable performance period. Such scoring methodology would provide additional time for MIPS eligible clinicians to adjust to the new electronic prior authorization workflow using Prior Authorization APIs without undue focus on scoring implications in the MIPS Promoting Interoperability performance category. As noted in the CY 2027 PFS proposed rule, we anticipate that the Electronic Prior Authorization measure would retain its importance as an aspect of health information exchange (91 FR 44192).

We requested public comment on these proposals.

We received public comment on the proposals. The following is a summary of the comments we received and our response.

Comment: Many commenters supported the proposed scoring methodology for the Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year, in which the measure would be an optional measure and eligible for 10 bonus points.

Response: We appreciate the support from commenters.

Comment: Several commenters did not support the proposed scoring methodology for the Electronic Prior Authorization measure and raised concerns regarding the proposed scoring consequences associated with making the Electronic Prior Authorization measure mandatory beginning with the CY 2028 performance period/2030 MIPS payment year. Several commenters characterized the proposed scoring methodology for the CY 2028 performance period/2030 MIPS payment year and subsequent years as disproportionate, noting that a MIPS eligible clinician who does not affirmatively attest (submission of a ''Yes'' response) to meeting the requirements of the measure or claim an applicable exclusion would receive a zero score for the entire MIPS Promoting Interoperability performance category, even though the measure itself does not have assigned points. Commenters indicated that MIPS eligible clinicians could face substantial consequences under MIPS due to technical limitations, payer or vendor failures, interoperability issues, or other circumstances outside their control.

Some commenters recommended for CMS to assign the measure a specific number of points and apply a proportionate scoring consequence when the measure is not met, which would be consistent with the scoring of other measures in the MIPS Promoting Interoperability performance category. A commenter recommended for CMS to phase in scoring or initially treat the measure as an attestation-only requirement that would not result in a zero score for the entire Promoting Interoperability performance category if the measure is not successfully met.

A few commenters requested that the Electronic Prior Authorization measure continue to be an optional measure and eligible for 10 bonus points for the CY 2028 performance period/2030 MIPS payment year to encourage adoption while implementation and ecosystem readiness are further evaluated. A commenter recommended that CMS monitor implementation of standardized electronic prior authorization functionality and adjust scoring if widespread limitations are identified.

Response: We appreciate the feedback from commenters. We recognize that successful use of standards-based electronic prior authorization depends on coordination among MIPS eligible clinicians, payers, health IT developers, intermediaries, and other entities; and some implementation challenges may be outside the control of individual MIPS eligible clinicians. However, we believe that making the Electronic Prior Authorization measure as an optional measure and eligible for 10 bonus points for the CY 2027 performance period/2029 MIPS payment year provides a transition period for MIPS eligible clinicians to implement and test the measure without negative scoring consequences. Also, we believe that the scoring methodology for the Electronic Prior Authorization measure is appropriate when the measure becomes required beginning with the CY 2028 performance period/2030 MIPS payment year to encourage adoption of electronic prior authorization for prescription drugs, which provides valuable information in assessing meaningful use of CEHRT under the MIPS Promoting Interoperability performance category. With regard to the commenters that recommended CMS assign the Electronic Prior Authorization measure a specific number of points, we note that a points based scoring methodology for the Electronic Prior Authorization measure

would be inconsistent with our scoring approach for other required, non-scored measures in the MIPS Promoting Interoperability performance category. Therefore, as we aim to provide consistency and reduce complexity in scoring, such approach aligns with the scoring methodology for other required measures in the MIPS Promoting Interoperability performance category, in which the Electronic Prior Authorization measure would not be scored or contribute to the MIPS Promoting Interoperability performance category score as long as a MIPS eligible clinician affirmatively attests (submission of a ''Yes'' response) to meeting the requirements of the measure or claims an applicable exclusion. Conversely, if a MIPS eligible clinician submits a ''No'' response for the attestation-based measure, fails to submit an attestation for the measure, or fails to claim an applicable exclusion, then the MIPS eligible clinician will receive a score of zero for the MIPS Promoting Interoperability performance category and will not be considered a meaningful EHR user under MIPS for the applicable performance period.

We intend to assess implementation experience, payer and health IT readiness, technological advancements, and the availability of ONC-certified health IT as the measure is implemented.

After consideration of public comment, we are finalizing, as proposed, the proposal to establish the scoring methodology of the Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year, in which the measure will be an optional measure and eligible for 10 bonus points. Also, we are finalizing, as proposed, the proposal to establish the scoring methodology for the Electronic Prior Authorization measure as it becomes a required measure beginning with the CY 2028 performance period/2030 MIPS payment year, in which the measure will not be scored or contribute to the MIPS Promoting Interoperability performance category score as long as a MIPS eligible clinician affirmatively attests (submission of a ''Yes'' response) to meeting the requirements of the measure or claims an applicable exclusion. Conversely, if a MIPS eligible clinician submits a ''No'' response for the attestation-based measure, fails to submit an attestation for the measure, or fails to claim an applicable exclusion, then the MIPS eligible clinician will receive a score of zero for the MIPS Promoting Interoperability performance category and will not be considered a meaningful EHR user under MIPS for the applicable performance period. We refer readers to Table C–G–4 and Table C–G 5 in section IV.A.4.d.(4)(g)(ii)(D) this final rule for more information regarding the scoring methodology for the MIPS Promoting Interoperability performance category for the CY 2027 performance period/2029 MIPS payment year and CY 2028 performance period/2030 MIPS payment year and subsequent years.

BILLING CODE 4169–69–P

TABLE C-G 3: SCORING METHODOLOGY FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange Under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: • Immunization Registry Reporting • Electronic Case Reporting	25 points	Required
	Report one of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting • Syndromic Surveillance Reporting • Public Health Reporting Using TEFCA	5 points (*bonus*)	Optional
Protect Patient Health Information	Security Risk Analysis	Not scored*	Required
	High Priority Practices SAFER Guide	Not scored*	Required
No Associated Objective: Attestation Requirements**	Actions to Limit or Restrict the Compatibility of CEHRT	Not scored*	Required

* Required measures and attestations that are not scored and do not have associated points. Failure to fulfill such requirements will result in a score of zero for the MIPS Promoting Interoperability performance category.

**Attestation Requirements: As described in section IV.A.4.d.(4)(c)(ii) of this final rule, the removal of the required ONC-Direct Review attestation and the optional ONC-ACB Surveillance attestation is applicable starting with the CY 2026 performance period/2028 MIPS payment year.

TABLE C-G 4: SCORING METHODOLOGY FOR THE CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange Under TEFCA	30 points	
	Electronic Prior Authorization*	10 points (*bonus*)	Optional
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: • Immunization Registry Reporting • Electronic Case Reporting	25 points	Required
	Report one of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting • Syndromic Surveillance Reporting • Public Health Reporting Using TEFCA	5 points (*bonus*)	Optional
Protect Patient Health Information**	High Priority Practices SAFER Guide	Not scored***	Required
No Associated Objective: Attestation Requirements****	Actions to Limit or Restrict the Compatibility of CEHRT	Not scored***	Required

* As described in sections IV.A.4.d.(4)(f)(v) and IV.A.4.d.(4)(f)(vi) of this final rule, the Electronic Prior Authorization measure is optional and eligible for 10 bonus points for the CY 2027 performance period/2029 MIPS payment year; and required and not scored starting with the CY 2028 performance period/2030 MIPS payment year.

** As described in section IV.A.4.d.(4)(d)(ii) of this final rule, the removal of the Security Risk Analysis measure is applicable starting with the CY 2027 performance period/2029 MIPS payment year.

*** Required measures and attestations that are not scored and do not have associated points. Failure to fulfill such requirements will result in a score of zero for the MIPS Promoting Interoperability performance category.

**** Attestation Requirements: As described in section IV.A.4.d.(4)(c)(ii) of this final rule, the removal of the required ONC-Direct Review attestation and the optional ONC-ACB Surveillance attestation is applicable starting with the CY 2026 performance period/2028 MIPS payment year.

TABLE C-G 5: SCORING METHODOLOGY FOR THE CY 2028 PERFORMANCE PERIOD/2030 MIPS PAYMENT YEAR AND SUBSEQUENT YEARS

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange Under TEFCA	30 points

	Electronic Prior Authorization for Prescription Drugs***	Not scored**	Required
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: • Immunization Registry Reporting • Electronic Case Reporting	25 points	Required
	Report one of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting • Syndromic Surveillance Reporting • Public Health Reporting Using TEFCA	5 points (*bonus*)	Optional
Protect Patient Health Information****	High Priority Practices SAFER Guide	Not scored**	Required
No Associated Objective: Attestation Requirements*****	Actions to Limit or Restrict the Compatibility of CEHRT	Not scored***	Required

* As described in section IV.A.4.d.(4)(f)(vi) of this final rule, the Electronic Prior Authorization measure is required and not scored starting with the CY 2028 performance period/2030 MIPS payment year. We note that in section IV.A.4.d.(4)(f)(v) of this final rule, the Electronic Prior Authorization measure is optional and eligible for 10 bonus points for the CY 2027 performance period/2029 MIPS payment year.

** Required measures and attestations that are not scored and do not have associated points. Failure to fulfill such requirements will result in a score of zero for the MIPS Promoting Interoperability performance category.

*** As described in section IV.A.4.d.(4)(e)(ii) of this final rule, the newly adopted Electronic Prior Authorization for Prescription Drugs measure is required and not scored starting with the CY 2028 performance period/2030 MIPS payment year.

**** As described in section IV.A.4.d.(4)(d)(ii) of this final rule, the removal of the Security Risk Analysis measure is applicable starting with the CY 2027 performance period/2029 MIPS payment year.

*****Attestation Requirements: As described in section IV.A.4.d.(4)(c)(ii) of this final rule, the removal of the required ONC-Direct Review attestation and the optional ONC-ACB Surveillance attestation is applicable starting with the CY 2026 performance period/2028 MIPS payment year.

BILLING CODE 4169–69–C

The proposals in this final rule include modifications that are effective for the CY 2026 performance period/2028 MIPS payment year, CY 2027 performance period/2029 MIPS payment year, and CY 2028 performance period/2030 MIPS payment year. Table C–G 6 summarizes the required measures and attestations for each of the three aforementioned performance periods.

BILLING CODE 4169–69–P

TABLE C-G 6: SUMMARY OF REQUIREMENTS FOR THE MIPS PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR, CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR, CY 2028 PERFORMANCE PERIOD/2030 MIPS PAYMENT YEAR, AND SUBSEQUENT YEARS

Objective	Measure	2026 Performance Period	2027 Performance Period	2028 Performance Period and Subsequent Years
Electronic Prescribing	e-Prescribing	Required (10 points)	Required (10 points)	Required (10 points)
	Query of PDMP	Required (10 points)	Required (10 points)	Required (10 points)

* Required measures and attestations that are not scored and do not have associated points. Failure to fulfill such requirements will result in a score of zero for the MIPS Promoting Interoperability performance category.

BILLING CODE 4169–69–C

(iii) Exclusion Redistribution

In the CY 2027 PFS proposed rule (91 FR 44196) and this final rule, we note that many required measures have exclusions associated with them as set forth in Table C–G 7. If a MIPS eligible clinician determines that an exclusion for a particular measure is applicable, then the MIPS eligible clinician may claim the applicable exclusion when reporting their data. The maximum available points, as shown in Table C–G 7, do not include the points that would be redistributed if a MIPS eligible clinician claims an exclusion for a specific measure. Table C–G 7 sets forth how points will be redistributed among the objectives and measures specified for the MIPS Promoting Interoperability performance category for the CY 2027 performance period/2029 MIPS payment year in the event a MIPS eligible clinician claims an exclusion for a given measure.

TABLE C-G 7: EXCLUSION REDISTRIBUTION FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Objective	Measure	Redistribution if exclusion is claimed
Electronic Prescribing	e-Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
Health Information Exchange (HIE)	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange Under TEFCA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following two measures: • Electronic Case Reporting • Immunization Registry Reporting	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to Their Health Information measure

(iv) ONC Health IT Certification Criteria

In the CY 2027 PFS proposed rule (91 FR 44197 and 44198) and this final rule, Table C–G 8 sets forth the objectives and measures for the MIPS Promoting Interoperability performance category for the CY 2027 performance period/2029 MIPS payment year and subsequent years, and the associated ONC health IT certification criteria set forth at 45 CFR 170.315, as applicable as of the publication of this final rule. Also, Table C–G 8 summarizes the changes to the relevant ONC Health IT certification criteria proposed in the HTI–5 proposed rule (90 FR 60970 through 61034) and finalized in the HTI–5 final rule (91 FR 67916 through 67998). We refer readers to section IV.A.4.d.(4)(b)(ii) of this final rule for discussion of and amendments to the definition of CEHRT at § 414.1305.

BILLING CODE 4169–69–P

TABLE C-G 8: MIPS PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY OBJECTIVES AND MEASURES, AND ONC HEALTH IT CERTIFICATION CRITERIA

Objective	Measure	Certification Criteria (CY 2027 Performance Period/2029 MIPS Payment Year and Subsequent Years) in Title 45 of the CFR	HTI-5 Proposed Actions	HTI-5 Final Actions
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing	N/A	N/A
	Query of PDMP	§ 170.315(b)(3) Electronic prescribing	N/A	N/A

	Clinical Data Registry Reporting (Optional)	No ONC health IT certification criteria at this juncture.	N/A	N/A
	Public Health Reporting Using TEFCA (Optional)	Examples of certified health IT capabilities to support the actions of this measure may include but are not limited to technology certified to the following criteria:		
		§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting	Revise	Revision Not Finalized
Protect Patient Health Information	Security Risk Analysis	The requirements are a part of CEHRT specific to each certification criterion.	N/A	N/A
	High Priority Practices SAFER Guide	No ONC health IT certification criteria at this juncture.	N/A	N/A

* As described in sections IV.A.4.d.(4)(f)(v) and IV.A.4.d.(4)(f)(vi) of this final rule, the Electronic Prior Authorization measure is optional and eligible for 10 bonus points for the CY 2027 performance period/2029 MIPS payment year; and required and not scored starting with the CY 2028 performance period/2030 MIPS payment year.

** As described in section IV.A.4.d.(4)(e)(ii) of this final rule, the newly adopted Electronic Prior Authorization for Prescription Drugs measure is required and not scored starting with the CY 2028 performance period/2030 MIPS payment year.

BILLING CODE 4169–69–C

B. MIPS Final Score Methodology

1. Performance Category Scores

a. Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act requires us to use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures and activities that must be specified under the quality performance category. The statute does not specify the number of quality measures on which a MIPS eligible clinician must report, nor does it specify the amount or type of information that a MIPS eligible clinician must report on each quality measure.

In the CY 2027 PFS proposed rule (91 FR 44198 through 44207), we proposed scoring policies consistent with the MIPS core measure reporting requirement proposed in the CY 2027 PFS proposed rule (91 FR 44157 through 44159). Additionally, we proposed policies building on the current scoring policies for topped out quality measures. Moreover, we proposed policies to modify the benchmarks for Medicare CQMs and apply flat benchmarks to Medicare eCQMs that are consistent with the proposed Medicare eCQM collection type in section III.G.3.d.(3) of this final rule. In this section, we also proposed policy to update scoring for the Electronic Prior Authorization measure in the Promoting Interoperability performance category. Lastly, we also included a request for information (RFI) on the future direction of MVP scoring policies. Specifically, we proposed to:

- Establish a policy for scoring MIPS core measures;
- Apply the defined topped out benchmark for certain topped out measures for clinicians impacted by limited measure choice;
- Apply the defined topped out benchmark for topped out MIPS core measures;
- Modify the publishing location of topped out measures impacted by limited measure choice and scored according to the defined topped out benchmark;
- Modify the flat benchmarking methodology for the Medicare CQMs collection type;
- Establish a flat benchmarking methodology for the Medicare eCQMs collection type;
- Modify the Electronic Prior Authorization measure from a required measure to an optional measure under the Promoting Interoperability performance category for the CY 2027 performance period/2029 MIPS payment year.

and

- Modify § 414.1380(b)(3)(i) to clarify and maintain that, for MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent.

Additionally, we discussed the impact of the MIPS core measure scoring for small practices and explained that we would apply the historical benchmark if a measure is no longer topped out. We noted that the proposed policies for scoring the MIPS quality performance category would apply to both traditional MIPS and MVP scoring.

b. Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measures and Administrative Claims Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2020, CY 2021, CY 2022, CY 2023, CY 2024, CY 2025, and CY 2026 PFS final rules (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR 65490 through 65509, 87 FR 70088 through 70091, 88 FR 79368 and 79369, 89 FR 98427 through 98439, and 90 FR 49903 through 49914), and § 414.1380(b)(1) for our current policies regarding, among other things, quality measure benchmarks, calculating total measure achievement points, calculating the quality performance category score, including achievement and improvement points, the small practice bonus, and scoring flexibilities. In the CY 2026 PFS final rule (90 FR 49903 through 49914), we finalized policies for scoring topped out measures impacted by limited measure choice and the scoring methodology for administrative claims-based quality measures at § 414.1380(b)(1)(i) and (b)(1)(ii)(D).

(1) Scoring of MIPS Core Measures

Section 1848(q)(5)(B)(i) of the Act requires the Secretary to treat any MIPS eligible clinician who fails to report on a required measure or activity as achieving the lowest potential score applicable to the measure or activity. In the CY 2017 Quality Payment Program final rule (81 FR 77291), we finalized at § 414.1380(b)(1) that MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335, on which no data is submitted in accordance with § 414.1325. In the CY 2022 PFS final rule (86 FR 65421), we finalized that scoring the required quality measures in an MVP is consistent with traditional MIPS scoring policies described under § 414.1380(b)(1).

In section IV.A.4.d.(1)(c)(iii)(B) of this final rule, we are finalizing that MIPS eligible clinicians will need to report a MIPS core measure, as one of their six required quality measures in traditional MIPS or one of their four required quality measures in MVP reporting. The MIPS core measure requirement will replace the existing outcome or high priority measure requirement for clinicians participating in traditional MIPS and MVP reporting. We also are finalizing an attestation requirement, during data submission, for clinicians who do not have an available and applicable MIPS core measure. Additionally, we are finalizing in that section that the MIPS core measure reporting requirement will not apply to clinicians in small practices. We refer readers to section IV.A.4.d.(1)(c)(iii) of this final rule for details on the MIPS core measure reporting requirement, the attestation process, and exemption of small practices from the MIPS core measure reporting requirement that we are finalizing in this final rule. We refer readers to Appendix 1: MIPS Quality Measures and Appendix 3: MVP Inventory of this final rule for details on the MIPS core measures inventory for the CY 2027 performance period/2029 MIPS payment year.

Beginning in the CY 2027 performance period/2029 MIPS payment year, for scoring the quality performance category for clinicians that are not part of small practices, we will include the MIPS core measure we are finalizing in this rule as one of the six required quality measures for clinicians participating in traditional MIPS or one of the four required quality measures for clinicians participating in MVP reporting. As discussed in section IV.A.4.d.(1)(c)(iii)(B) of this final rule, clinicians who attest to not having an applicable and available MIPS core measure will still need to report enough measures to meet the required number of six quality measures in traditional MIPS or four quality measures in MVP

reporting. For clinicians who attest to not having an applicable and available MIPS core measure, we will use the highest scoring six or four quality measures, respectively, to determine the quality performance category score. As discussed in section IV.A.4.d.(1)(c)(iii)(B) of this final rule, there may be instances in which a clinician attested to not having an applicable and available MIPS core measure, but new information or changing circumstances later made it so that the clinician does have an applicable and available MIPS core measure to report. To account for these cases, if an attestation is submitted during data submission and a MIPS core measure is also reported, we will score the MIPS core measure as one of the six required quality measures in traditional MIPS reporting or one of the four required quality measures in MVP reporting. If a MIPS eligible clinician submits data for more than one MIPS core measure, we will use the highest scoring MIPS core measure as one of the six or four quality measures, and the remaining scored measures will consist of either the five highest scoring quality measures or the three highest scoring measures, as applicable, in traditional MIPS and MVP reporting.

In section IV.A.4.d.(1)(c)(ii) of this final rule, we are finalizing our proposal to remove the current quality measure data submission requirement of one outcome measure (or, if an outcome measure is not available, one high priority measure) for traditional MIPS and MVP reporting and replace the requirement with a MIPS core measure data submission requirement. As discussed in section IV.A.4.d.(1)(c)(i) of this final rule, one of the factors considered for the MIPS core measure selection included an emphasis on whether the measure is an outcome-based measure. We refer readers to section IV.A.4.d.(1)(c)(i) of this final rule for additional details on the designation of MIPS core measures. In the CY 2027 PFS proposed rule (91 FR 44199 and 44200), we proposed to assign zero measure achievement points for one quality measure if clinicians reporting traditional MIPS or MVP do not submit a MIPS core measure and do not attest during data submission that they do not have an available and applicable MIPS core measure. This proposal is consistent with the existing rule under § 414.1380(b)(1)(i). Under the existing policy under § 414.1380(b)(1)(i), MIPS eligible clinicians who submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the measures with the greatest number of measure achievement points. Therefore, we did not propose any changes to the regulatory text for this proposal.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposal to keep the scoring methodology consistent in the transition to MIPS core measures. A commenter supported using the highest scoring MIPS core measure for clinicians who submit more than one MIPS core measure.

Response: We thank the commenters for their support.

Comment: Several commenters requested that CMS not score zero points during the initial MIPS core measure implementation period to allow time for clinicians to update workflows to support the attestation and evaluate the applicability and burden associated with MIPS core measure reporting before incorporating such measures into scoring methodologies. A commenter requested that CMS provide information and notice as part of the annual performance feedback for clinicians who did not meet the MIPS core measure data submission requirement and are assigned zero measure achievement points.

Response: We appreciate commenters' concerns that clinicians may need to assess the applicability of the MIPS core measures, update workflows, and become familiar with the process for indicating that a required MIPS core measure is not available or applicable. However, assigning zero measure achievement points when a required MIPS core measure is applicable, but the data submission requirement is not satisfied, is necessary to ensure that the MIPS core measure data submission requirement is meaningful and applied consistently across MIPS eligible clinicians. Additionally, we believe that clinician workflows will be able to support this policy because it is consistent with the existing policy under § 414.1380(b)(1) that MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335, on which no data is submitted in accordance with § 414.1325. As discussed in section IV.A.4.d.(1)(c)(i) of this final rule, the MIPS core measure inventory includes outcome measures or measures previously identified as high priority, and the MIPS core measure data submission requirement will replace the existing data submission requirement to report an outcome or high priority measure. Where a MIPS core measure is not available or applicable, clinicians may attest as such using the process defined in section IV.A.4.d.(1)(c)(iii)(B) of this final rule.

We also appreciate the commenters' interest in having an opportunity to evaluate the burden associated with MIPS core measure reporting and to gain experience with the applicable attestation requirements. We will continue to monitor implementation of the MIPS core measure data submission requirements, including clinician experience with the attestation process, reporting burden, and available submission and performance data. We refer readers to sections V.B.7.b.(1) and V.B.7.c.(1) for the discussion that we are not adjusting our burden estimates due to this policy.

Comment: A few commenters did not support the proposal to assign zero achievement points if no MIPS core measure or attestation is submitted. A commenter expressed concern with the proposal since eCQM MIPS core measures are not available for every MVP.

Response: Assigning zero measure achievement points when an applicable MIPS core measure is required but the data submission requirement is not satisfied is necessary to ensure that the MIPS core measure data submission requirement is meaningful and applied consistently across MIPS eligible clinicians. Without a scoring policy for not meeting the MIPS core measure data submission requirement, the requirement would have limited effect in promoting consistent reporting of MIPS core measures.

We recognize that the availability and applicability of MIPS core measures may vary, such as when no eCQM MIPS core measures are available in an MVP, which is why the data submission requirement as described in section IV.A.4.d.(1)(c)(iii)(B) of this final rule, does not require a clinician to report a MIPS core measure that is not available or applicable to the clinician. The clinician may attest to that circumstance and would not be assigned zero measure achievement points solely because the MIPS core measure was not available or applicable.

Comment: A commenter requested confirmation that an attestation stating that no applicable MIPS core measure exists would not result in the assignment of zero achievement points. A commenter suggested that CMS should not assign zero achievement points for not reporting a MIPS core measure until CMS has established clear applicability guidance and provided clinicians with an opportunity to correct

a submission if a measure applicability determination is not accepted. A commenter requested that CMS ensure that MIPS core measure scoring reflects the diversity and complexity of practices while supporting meaningful comparisons across clinicians.

Response: We agree that clear information regarding the applicability of MIPS core measures is important to support accurate reporting and scoring. As described in section IV.A.4.d.(1)(c)(iii)(B) of this final rule, when a MIPS core measure is not available or applicable, a MIPS eligible clinician may attest that the measure is not available or applicable. A MIPS eligible clinician who submits such an attestation that they do not have an available and applicable MIPS core measure would not be assigned zero measure achievement points for one quality measure in traditional MIPS or MVP as long as they report enough measures to meet the required number of six quality measures or a complete specialty measure set in traditional MIPS or four quality measures in MVP reporting. We recognize the importance of providing clinicians with sufficient information to understand the MIPS core measure data submission requirements, including the circumstances under which a MIPS core measure may be considered not available or applicable, as discussed in section IV.A.4.d.(1)(c)(iii)(B) of this final rule. We will continue to provide guidance and resources, as appropriate, to support clinicians in understanding and satisfying these requirements. After consideration of public comments, we are finalizing as proposed to assign zero measure achievement points for one quality measure if clinicians reporting traditional MIPS or MVP do not submit a MIPS core measure and do not attest during data submission that they do not have an available and applicable MIPS core measure. A MIPS eligible clinician who submits an attestation that they do not have an available and applicable MIPS core measure would not be assigned zero measure achievement points for one quality measure in traditional MIPS or MVP reporting as long as they report enough measures to meet the required number of six quality measures or a complete specialty measure set in traditional MIPS or four quality measures in MVP reporting. This policy is consistent with the existing § 414.1380(b)(1)(i).

(2) Small Practice Scoring Exemption Clarification for MIPS Core Measures

Historically, we have heard from clinicians in small practices that they face unique challenges to successfully participate in MIPS. To further support clinicians in small practices, who often have limited resources to successfully participate in MIPS, we implemented policies to provide them with more flexibilities. For example, as described under § 414.1380(b)(1)(v)(C), beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians in small practices receive six measure bonus points if they submit data to MIPS on at least one quality measure. To continue the existing flexibilities and further support clinicians in small practices, we are finalizing in section IV.A.4.d.(1)(c)(iii)(C) of this final rule, that small practice clinicians participating in both traditional MIPS and MVP reporting would be exempt from the MIPS core measure reporting requirement. Under this exemption, clinicians in small practices are not required to submit a MIPS core measure and will not need to attest during data submission if they do not have an available and applicable MIPS core measure. The existing regulation text under § 414.1380(b)(1)(i) states that MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 for which no data is submitted in accordance with § 414.1325. Consistent with the existing regulation at § 414.1380(b)(1)(i) and given the finalization of the proposal to exempt small practices from the MIPS core measure requirement in section IV.A.4.d.(1)(c)(iii)(C) of this final rule, we will not assign zero measure achievement points for one MIPS core measure if clinicians in small practices do not submit data for such measure in traditional MIPS and MVP reporting. If a small practice chooses to submit data on a MIPS core measure, we will include the MIPS core measure in the quality performance category score only if the MIPS core measure is one of the six highest scoring measures in traditional MIPS or one of the four highest scoring measures in MVP reporting, in accordance with the existing regulation under § 414.1380(b)(1)(i). We refer readers to Appendix 1: MIPS Quality Measures and Appendix 3: MVP Inventory of this final rule for details on the MIPS core measures inventory for the CY 2027 performance period/2029 MIPS payment year.

We received public comments on the proposal that small practice clinicians participating in both traditional MIPS and MVP reporting would be exempt from the MIPS core measure reporting requirement. We refer readers to section IV.A.4.d.(1)(c)(iii)(C) of this final rule for discussion of the public comments received.

(3) Scoring Topped Out Measures

(a) Background on Scoring Topped Out Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules (81 FR 77282 through 77287, 82 FR 53721 through 53727, and 83 FR 59761 through 59765), the CY 2023, CY 2025, and CY 2026 PFS final rules (88 FR 70090 and 70091, 89 FR 98428 through 98435, and 90 FR 49902 through 49908), and § 414.1380(b)(1)(iv) for established topped out measure scoring policies.

Topped out measures are measures for which measure performance is considered so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (81 FR 77136). Section 1848(q)(3)(B) of the Act requires that in establishing performance standards with respect to measures and activities, we consider, among other things, the opportunity for continued improvement. Topped out measures do not provide an opportunity for continued improvement, nor do payment adjustments based on topped out measures incentivize clinicians to improve their care. As a result, we finalized policies in the CY 2018 Quality Payment Program final rule (82 FR 53723 through 53727) to identify and cap the scoring potential of topped out measures. Additionally, we established policies for the removal of topped out measures, such as establishing the topped out measure lifecycle, to continue to drive quality improvement in areas where such improvement is possible and necessary. The topped out measure lifecycle is described in the CY 2018 Quality Payment Program final rule (82 FR 53721 through 53727). We established at § 414.1380(b)(1)(iv)(B) that we will cap scoring for topped out measures at 7 measure achievement points in the second consecutive year that the measure benchmark is identified as topped out. If a measure has been identified as topped out for three consecutive years after being originally identified through the benchmarks, such measure may then be proposed for removal through notice-and-comment rulemaking (83 FR 59761). This timeline, however, is not fixed. We noted our concern that removal of topped out measures may leave clinicians with fewer than six applicable measures to report and that such removal in those instances will impact some specialties more than

others (82 FR 53721). We stated that consideration for ensuring available applicable measures would be made when considering measure removals (83 FR 59763).

In the CY 2018 Quality Payment Program final rule (82 FR 53727), we established the topped out scoring cap to encourage MIPS eligible clinicians to submit measures that are not topped out. However, we created an exemption to this policy in the CY 2025 PFS final rule (89 FR 98428 through 98435) for certain topped out measures that are frequently used by certain specialties impacted by limited measure choice (89 FR 98428 through 98435). To address scoring scenarios in which limited measure choice compels clinicians to report topped out measures with scoring caps, we finalized in the CY 2025 PFS final rule (89 FR 98428 through 98435) at § 414.1380(b)(1)(iv)(C) that beginning with the CY 2025 performance period/2027 MIPS payment year, topped out measures frequently used by certain specialties reporting specialty measure sets that are impacted by limited measure choice, as specified in accordance with § 414.1380(b)(1)(ii)(E), are not subject to the 7-point scoring cap. In the CY 2025 PFS final rule, we finalized at § 414.1380(b)(1)(ii)(E) that beginning with the CY 2025 performance period/2027 MIPS payment year, we will annually publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice. Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period, in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

In the CY 2026 PFS final rule (90 FR 49904 through 49908), we modified our approach for identifying the list of measures impacted by limited measure choice and subject to defined topped out measure benchmarks. We finalized that each specialty measure set and MVP is reviewed by collection type to identify if the prevalence of topped out measures within such a set of measures hinders a clinician's ability to successfully participate in the MIPS quality performance category. To make such a determination, we finalized a policy stating that we will analyze the ability of clinicians reporting the specialty measure sets and MVPs to reasonably achieve 75 percent of available quality achievement points based upon the measures available to them and program requirements. Specifically, at the collection type level, each measure is assigned points based upon the current benchmarking data: new measures receive 7 or 5 points based on year in the program, measures with benchmarks are given points based upon the highest decile achievable with a less than perfect score (less than 100 percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark are given 0 points. All measure set points are added together to get an output of scoring potential; the Medicare Part B claims collection type measure sets have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each specialty measure set and MVP are then compared to the analysis threshold of 75 percent of available quality achievement points, based on the number of available measures. Any specialty measure sets or MVPs that are unable to meet or exceed the analysis threshold are flagged as ''at-risk.'' Additional factors that we take into consideration include whether the topped out measure is considered a cross-cutting measure or is a broadly applicable measure, which we consider to be a measure included in three or more specialty sets or MVPs. We also consider whether the specialty measure set or MVP contains more than ten measures, by collection type (90 FR 49904 through 49908).

(b) Measures Impacted by Limited Measure Choice To Be Subject to Defined Topped Out Benchmark for the CY 2027 Performance Period/2029 MIPS Payment Year

Table C–H1 of this final rule contains the list of measures that meet the criteria for topped out measures impacted by limited measure choice in specialty measure sets and MVPs as finalized in the CY 2026 PFS final rule (90 FR 49904 through 49908), and for which we proposed, in the CY 2027 PFS proposed rule (91 FR 44201 through 44203), to apply the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year.

TABLE C-H1: TOPPED OUT MEASURES IMPACTED BY LIMITED MEASURE CHOICE AND SUBJECT TO DEFINED TOPPED OUT MEASURE BENCHMARKS FOR THE CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Measure ID	Collection Type	Measure Title
127	MIPS CQM	Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention - Evaluation of Footwear
144	MIPS CQM	Oncology: Medical and Radiation - Plan of Care for Pain
145	Medicare Part B Claims, MIPS CQM	Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy
249	Medicare Part B Claims, MIPS CQM	Barrett's Esophagus
250	Medicare Part B Claims, MIPS CQM	Radical Prostatectomy Pathology Reporting
351	MIPS CQM	Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation
360	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies
364	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines
395	Medicare Part B Claims, MIPS CQM	Lung Cancer Reporting (Biopsy/Cytology Specimens)
396	MIPS CQM	Lung Cancer Reporting (Resection Specimens)
397	Medicare Part B Claims, MIPS CQM	Melanoma Reporting
405	MIPS CQM	Appropriate Follow-up Imaging for Incidental Abdominal Lesions
406	Medicare Part B Claims, MIPS CQM	Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients
440	MIPS CQM	Skin Cancer: Biopsy Reporting Time - Pathologist to Clinician
477	MIPS CQM	Multimodal Pain Management

We discussed in the CY 2027 PFS proposed rule (91 FR 44201 through 44203) that we considered proposing measures 143: Oncology: Medical and Radiation—Pain Intensity Quantified (eCQM and MIPS CQM), 320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patient (Medicare Part B Claims and MIPS CQM), and 350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy (MIPS CQM) to be subject to the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year since the measures met the criteria for topped out measures in specialty measure sets or MVPs impacted by limited measure choice according to the methodology finalized in the CY 2026 PFS final rule (90 FR 49904 through 49908). However, we did not propose these measures for the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year because we proposed to remove these measures from the MIPS quality performance category measure inventory for the CY 2027 performance period/2029 MIPS payment year in the CY 2027 PFS proposed rule (91 FR 44161 and 44162). We proposed that if we do not finalize the removal of these measures from the MIPS quality performance category inventory for the CY 2027 performance period/2029 MIPS payment year, we would score these measures with the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year. Since we are finalizing measures 143: Oncology: Medical and Radiation—Pain Intensity Quantified (eCQM and MIPS CQM), 320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patient (Medicare Part B Claims and MIPS CQM), and 350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical)

Therapy (MIPS for removal in section IV.A.4.d.(1)(e)(ii) of this final rule, the measures will not be subject to the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year. We had also proposed to score measures 430: Prevention of Post-Operative Nausea and Vomiting (PONV)—Combination Therapy and 463: Prevention of Post-Operative Vomiting (POV)—Combination Therapy (Pediatrics) to be scored according to the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year. However, because those measures are finalized for removal in Table Group C of Appendix 1 of this final rule, the measures will not be subject to the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed list of measures subject to the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year. Commenters expressed their belief that the defined topped out measure benchmark will provide scoring relief for clinicians who feel compelled to report topped out measures with the 7-point scoring cap due to limited measure choice.

Response: We thank commenters for their support.

Comment: Several commenters suggested CMS expand the criteria for measures impacted by limited measure choice and apply the defined topped out measure benchmark to additional topped out measures, including measures that do not meet the previously finalized criteria for topped out measures impacted by limited measure choice. Several commenters suggested CMS apply the defined topped out measure benchmark to all topped out measures. Commenters cited their belief that limiting the application of the defined topped out measure benchmark to a subset of topped out measures impacted by limited measure choice adds complexity, creates inequitable scoring opportunities across specialties, and does not fairly reward high performance on topped out measures. A commenter recommended that QCDR measures should be included in the defined topped out measure benchmark policy.

Response: The defined topped out measure benchmark is applied to measures impacted by limited measure choice, as determined by criteria finalized in the CY 2025 PFS final rule (89 FR 98432 through 98435) and CY 2026 PFS final rule (90 FR 49904 through 49908), using an analysis of the ability of clinicians reporting the specialty measure set or MVP to reasonably achieve 75 percent of available quality achievement points based upon the measures available to them and program requirements and factors such as whether the topped out measure is considered a cross-cutting or broadly applicable measure. These criteria were previously finalized in order to focus the application of the defined topped out measure benchmark to cases in which clinicians are unable to report sufficient non-topped out measures to successfully participate in the MIPS quality performance category, while maintaining the 7-point topped out measure scoring cap to continue to encourage MIPS eligible clinicians to submit measures that are not topped out in cases where there is not limited measure choice. We believe that encouraging clinicians to report non-topped out measures outweighs the complexity of only scoring some topped out measures using the defined topped out measure benchmark, and applying the defined topped out measure benchmark to all topped out measures may lead to increased reporting of topped out measures and increased quality performance category scores and the overall final scores. Because topped out measures do not provide an opportunity for continued improvement, nor do payment adjustments based on topped out measures incentivize clinicians to improve their care, we continue to believe the 7-point topped out measure scoring cap is appropriate. We will continue to monitor the impact of the topped out measure scoring cap and conduct future assessments to determine whether the criteria should be updated. In section IV.B.1.a.(3)(c) of this final rule, we are finalizing MIPS core measures in their second or more consecutive year of being topped out will also be scored using the defined topped out benchmark, which will provide additional scoring relief for clinicians reporting topped out MIPS core measures. QCDR measures are not included in the defined topped out measure benchmark policy since they are governed by policy at § 414.1400(b)(4)(iii)(C) stating that CMS may revoke a measure's second year approval if identified as topped out.

Comment: A commenter requested that CMS not omit the ninth decile in the defined topped out measure benchmark because they believed it would result in more consistent and fair scoring.

Response: We clarify that the defined topped out measure benchmark does not omit any decile. In the CY 2025 PFS final rule (89 FR 98429 through 98432), we discussed that we proposed to remove the ninth decile for the defined topped out measure benchmark, however, that policy was not finalized. We finalized the defined topped out measure benchmark to include the ninth decile, which corresponds to a performance rate from 99 to 99.9 percent.

Comment: A commenter recommended that CMS set a 2-year timeframe for reevaluating measures selected for the list of topped out measures impacted by limited measure choice.

Response: We do not apply the defined topped out measure benchmarks for a 2-year timeframe because measure performance varies each year, and thus a measure's topped out status may change each year.

After consideration of public comments, we are finalizing as proposed the list of topped out measures impacted by limited measure choice and subject to the defined topped out measure benchmark for the CY 2027 performance period/2029 MIPS payment year.

(c) Scoring Topped Out MIPS Core Measures According to Defined Topped Out Benchmark

In the CY 2027 PFS proposed rule (91 FR 44157 and 44158), we proposed that MIPS eligible clinicians would need to report a MIPS core measure as one of their six required quality measures in traditional MIPS or one of their four required quality measures in MVP reporting, beginning in the CY 2027 performance period/2029 MIPS payment year. We refer readers to Appendix 1: MIPS Quality Measures and Appendix 3: MVP Inventory of this final rule for the MIPS core measure inventory. There were 19 proposed MIPS core measures that are topped out and subject to the 7-point topped out measure scoring cap for the CY 2026 performance period/2028 MIPS payment year. To address scoring scenarios in which limited measure choice compels clinicians to report topped out measures with scoring caps, we finalized the defined topped out benchmark in the CY 2025 PFS final rule (89 FR 98428 through 98435). The defined topped out benchmark removes the 7-point scoring cap for topped out measures and scores them from 1 to 10 measure achievement points according

to a benchmark calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

The prevalence of topped out MIPS core measures, combined with the limited measure choice associated with MIPS core measures, could result in a clinician being compelled to report a topped out MIPS core measure as one of their six required quality measures in traditional MIPS or one of their four required quality measures in MVP reporting. Given the combination of limited measure choice and the 7-point scoring cap for topped out measures, we are concerned that the application of the 7-point scoring cap to topped out MIPS core measures would penalize clinicians for complying with the MIPS core measure reporting requirement. Therefore, we proposed in the CY 2027 PFS proposed rule (91 FR 44203) that MIPS core measures in their second or more consecutive year of being topped out would not be subject to the 7-point topped out measure scoring cap, and instead the measures would be scored from 1 to 10 measure achievement points according to the defined topped out benchmark.

Subsequently, we proposed to create the scoring methodology for MIPS core measures that are topped out. Thus, we proposed to amend and codify at § 414.1380(b)(1)(ii) by establishing a new provision at § 414.1380(b)(1)(ii)(H), which would establish the scoring (1 to 10 measure achievement points) for MIPS core measures that have benchmarks identified as topped out for 2 or more consecutive years. Specifically, we proposed to establish and codify at § 414.1380(b)(1)(ii)(H), which would determine the following: Beginning in the CY 2027 performance period/2029 MIPS payment year, MIPS core measures, which are required under § 414.1335(a)(1)(i) and (ii), for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years, are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year. Also, we proposed for MIPS core measures not to be subject to the 7-point topped out measure scoring cap. Specifically, we proposed to amend and codify at § 414.1380(b)(1)(iv) by establishing a new provision at § 414.1380(b)(1)(iv)(D), which would determine the following: Beginning with the CY 2027 performance period/2029 MIPS payment year, MIPS core measures, which are required under § 414.1335(a)(1)(i) and (ii), are not subject to the 7 measure achievement point cap specified at § 414.1380(b)(1)(iv)(B).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for the proposal that MIPS core measures in their second or more consecutive year of being topped out would not be subject to the 7-point topped out measure scoring cap, and instead the measures would be scored from 1 to 10 measure achievement points according to the defined topped out benchmark. Commenters expressed their belief that the 7-point topped out scoring cap would unfairly limit scoring opportunities for MIPS core measures because of the MIPS core measure reporting requirement, as discussed in section IV.A.4.d.(1)(c)(iii)(B) of this final rule.

Response: We thank commenters for their support.

Comment: A few commenters requested clarification regarding whether the proposal to score MIPS core measures in their second or more consecutive year of being topped out according to the defined topped out benchmark would apply to all measures designated as MIPS core measures, even, for example, when reported via an MVP in which the measure is not a MIPS core measure for that MVP, but the measure is a MIPS core measure in another MVP. A commenter also requested clarification regarding whether the topped out MIPS core measure would be scored with the defined topped out measure benchmark if a clinician reports more than one MIPS core measure.

Response: The defined topped out measure benchmark will be applied to all measures designated as MIPS core measures that are in their second or more consecutive year of being topped out. The defined topped out measure benchmark will be applied every time the measure is reported, even if the measure is not designated as a MIPS core measure in the MVP being reported, and even if a clinician has additionally reported other MIPS core measures.

Comment: A commenter expressed concern that scoring MIPS core measures in their second or more consecutive year of being topped out from 1 to 10 measure achievement points according to the defined topped out benchmark would not adequately address the scoring limitations of topped out MIPS core measures, citing their belief that the heavily skewed distribution of topped out measure performance limits a clinician's ability to earn a high score if their performance rate is below 100 percent.

Response: The defined topped out measure benchmark, as described in the CY 2025 PFS final rule (89 FR 98429), is intended to address the heavily skewed performance distribution of topped out measures. Specifically, the defined topped out benchmark aims, for clinicians with limited measure availability, to continue to account for high performance without capping the scoring potential at 7 point for exceptional performers and offers better scoring opportunities for those performing higher than the median score in the distribution. . A performance rate of 97 percent corresponds to a score equivalent to 10 percent of the performance threshold. For example, if the performance threshold is 75, a performance rate of 97 percent would earn 7.5 measure achievement points. A clinician with a performance rate of 98–99 percent would earn 8–9 measure achievement points, which rewards clinicians with high performance.

After consideration of public comments, we are finalizing as proposed that MIPS core measures in their second or more consecutive year of being topped out would not be subject to the 7-point topped out measure scoring cap, and instead the measures would be scored from 1 to 10 measure achievement points according to the defined topped out benchmark.

(d) Clarification Regarding Scoring Non-Topped Out Measures According to Historical Benchmark

In the CY 2025 PFS final rule (89 FR 98428 through 98435), we finalized at § 414.1380(b)(1)(ii)(E) that beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice on an annual basis. Measures included in the list will be scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year. The measures are identified using a methodology finalized in the CY 2026

PFS final rule (90 FR 49904 through 49908), which analyzes whether the prevalence of topped out measures within a specialty measure set or an MVP hinders a clinician's ability to successfully participate in the MIPS quality performance category. Using current benchmarking data, the analysis evaluates the ability of clinicians to reasonably achieve 75 percent of available quality achievement points given the measures available to them and program requirements.

At the time of the internal analysis to inform the list of measures impacted by limited measure choice, the most current benchmarking data is for the performance period prior to that which the defined topped out measure benchmark would be applied. For example, we analyzed CY 2026 benchmarks to inform the list of measures impacted by limited measure choice for the CY 2027 performance period/2029 MIPS payment year. Therefore, there are instances in which a measure is finalized to be scored according to the defined topped out benchmark for a given performance period, but it is later determined that the historic baseline period benchmark for that measure is not topped out for that performance period. This was the case for Medicare Part B Claims Measure 141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20 percent OR Documentation of a Plan of Care for the CY 2026 performance period/2028 MIPS payment year. In the CY 2026 PFS final rule (90 FR 49906 through 49908), we finalized Medicare Part B Claims Measure 141 to be scored according to the defined topped out measure benchmark for the CY 2026 performance period/2028 MIPS payment year based on an analysis of the CY 2025 performance period/2027 MIPS payment year benchmarks, the most recently available benchmarks at the time of the analysis. However, the subsequently released benchmarks for the CY 2026 performance period/2028 MIPS payment year indicated that the baseline period benchmark for Medicare Part B Claims Measure 141 was not topped out. Given the topped out measure lifecycle, as finalized in the CY 2018 Quality Payment Program final rule (82 FR 53721 through 53727), Medicare Part B Claims Measure 141 would not be capped at 7 measure achievement points for the CY 2026 performance period/2028 MIPS payment year since it was not topped out.

If a measure is not topped out, it no longer meets the criteria for the removal of the 7 measure achievement point cap. We clarify that if a measure previously finalized for removing the 7-point cap is no longer topped out, it will be scored using its historical benchmark instead of the topped out measure benchmark.

(e) Modify Location for Publishing List of Measures Subject to Defined Topped Out Benchmark

In the CY 2025 PFS final rule (89 FR 98428 through 98435), we finalized at § 414.1380(b)(1)(ii)(E) to state that beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice on a yearly basis. Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year. In the CY 2026 PFS final rule (90 FR 49904 through 49908), we finalized the methodology to identify topped out measures impacted by limited measure choice. We analyzed whether the prevalence of topped out measures with a 7-point cap within a specialty measure set or an MVP hinders a clinician's ability to successfully participate in the MIPS quality performance category. This analysis was based on the most current benchmarking data available at that time. We finalized in the CY 2018 Quality Payment Program final rule that MIPS eligible clinicians will know the quality performance category measure benchmarks in advance of the performance period, when possible (81 FR 77271 and 77272), and that the benchmarks will be posted on the Quality Payment Program website (81 FR 77139).

Given the benchmark availability timeline, the list of topped out measures scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark published in the **Federal Register** for a performance period may not accurately indicate whether a measure is topped out for that performance period. For example, as discussed in the CY 2027 PFS proposed rule (91 FR 44203 and 44204), a measure previously determined to be topped out and scored from 1 to 10 points for the CY 2026 performance period/2028 MIPS payment year based on data using the CY 2025 performance period benchmarks was later found not to be topped out based on the updated CY 2026 benchmarks. This occurs because, during the time of analysis to identify measures impacted by limited measure choice, only the most recent benchmarks from the prior performance period are available. For example, we analyzed CY 2026 performance period benchmarks to inform topped out measures impacted by limited measure choice for the CY 2027 performance period/2029 MIPS payment year.

We are concerned that publishing the list of topped out measures impacted by limited measure choice and scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark in the **Federal Register**, prior to the benchmark information for that performance period being available, can lead to confusion. To avoid confusion for clinicians, we proposed in the CY 2027 PFS proposed rule (91 FR 44204) that, beginning in the CY 2027 performance period/2029 MIPS payment year, we would publish the list of topped out measures impacted by limited measure choice and scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark on the Quality Payment Program website at *https://qpp.cms.gov.* Specifically, we proposed to remove the phrase ''in the **Federal Register**'' under § 414.1380(b)(1)(ii)(E).

Further, we noted in the CY 2027 PFS proposed rule (91 FR 44204) that the measures included in this list would still be identified using the previously finalized methodology for determining topped out measures impacted by limited measure choice in specialty measure sets and MVPs, as finalized in the CY 2026 PFS final rule (90 FR 49904 through 49908). By publishing the list of topped out measures impacted by limited measure choice on the Quality Payment Program website, we would be able to update the list, once the benchmark information for that performance period becomes available, to remove measures that are not topped out for that performance period, consistent with the topped out measure lifecycle finalized in the CY 2018 Quality Payment Program final rule (82 FR 53721 through 53727). We refer readers to section IV.B.1.b.(3)(d) of this final rule for our discussion that measures previously finalized to be scored using the defined topped out benchmark will instead be scored using the baseline period benchmark if updated benchmark data show the measure is not topped out for that performance period.

As discussed in the CY 2027 PFS proposed rule (91 FR 44204), we would publish the list of topped out measures impacted by limited measure choice and

scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark on the Quality Payment Program website no later than the publication of the proposed rule for that CY performance period/MIPS payment year. This timeline would provide interested parties with sufficient opportunity to review and provide comments on the list of measures during the public comment period for that proposed rule. This would mean that a list of measures subject to the defined topped out measure benchmark for a given performance year would be published three times: once following the publication of that year's proposed rule, once with the final rule, and once again when the benchmarks for that performance year are published. Once the list of topped out measures impacted by limited measure choice and scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark is published with the final rule, the only changes to the list would be the removal of a measure because it is no longer topped out based on most current benchmarks published in the performance period, consistent with the topped out measure lifecycle finalized in the CY 2018 Quality Payment Program final rule (82 FR 53721 through 53727).

Thus, we proposed to amend § 414.1380(b)(1)(ii)(E) by removing the phrase ''in the **Federal Register**''. Also, we proposed a technical amendment in § 414.1380(b)(1)(ii)(E) for grammar purposes, which would modify the beginning of the second sentence in § 414.1380(b)(1)(ii)(E) from ''. . . measure included in the list . . .'' to ''measure included on the list . . .''.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to publish the list of topped out measures impacted by limited measure choice and scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark on the Quality Payment Program website, expressing their belief that the policy would increase transparency and external party engagement.

Response: We thank the commenters for their support.

Comment: A commenter suggested that the proposed rule should publish the list of measures to be scored with the defined topped out measure benchmark prospectively within the rule or other annual updates ahead of the respective performance year and not on the Quality Payment Program website. The commenter expressed their belief that this would assist with planning and workflow efforts and not result in last-minute changes.

Response: The proposal to publish the list of measures to be scored with the defined topped out measure benchmark on the Quality Payment Program website is intended to provide accurate and timely information to provide opportunities for clinicians to develop planning and workflow efforts and mitigate last-minute changes. We will publish the list of topped out measures impacted by limited measure choice and scored according to the defined topped out measure benchmark no later than the publication of the proposed rule for the respective performance year. Maintaining the list of measures on the Quality Payment Program website will provide clinicians with the most up to date benchmark information as benchmark data becomes available for the respective performance year.

After consideration of public comments, we are finalizing that beginning in the CY 2027 performance period/2029 MIPS payment year, we will publish the list of topped out measures impacted by limited measure choice and scored from 1 to 10 measure achievement points according to the defined topped out measure benchmark on the Quality Payment Program website at *https://qpp.cms.gov* with the proposed rule, final rule, and publication of benchmarks for a given performance year. Once published, the only revisions to the list would be the removal of measures that are no longer topped out or those finalized for removal by notice and comment rulemaking. These measures will still be identified by our methodology previously established for determining topped out measures impacted by limited measure choice in specialty measure sets and MVPs, as finalized in the CY 2026 PFS final rule (90 FR 49904 through 49908).

In order to improve the clarity of the regulation text, we are modifying our proposed amendment to § 414.1380(b)(1)(ii)(E). Rather than removing the phrase ''in the **Federal Register**'' from § 414.1380(b)(1)(ii)(E), we are finalizing that we will specify that beginning for the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice, and beginning in the CY 2027 performance period/2029 MIPS payment year, remove the phrase ''in the **Federal Register**'' and replace it with ''on the QPP website''. We are also finalizing as proposed the technical amendment in § 414.1380(b)(1)(ii)(E) for grammar purposes, which will modify the beginning of the second sentence in § 414.1380(b)(1)(ii)(E) from ''. . . measure included in the list . . .'' to ''measure included on the list . . .''. The revised § 414.1380(b)(1)(ii)(E) will state: For the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years, CMS will publish a list in the **Federal Register** of topped out measures determined to be impacted by limited measure choice on a yearly basis. Beginning with the CY 2027 performance period/2029 MIPS payment year, CMS will publish a list of topped out measures determined to be impacted by limited measure choice on the QPP website. Measures included on the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

c. Scoring the Quality Performance Category for Medicare Shared Savings Program ACOs

(1) Use Flat Benchmarks To Score Medicare Shared Savings Program ACOs Reporting Medicare CQMs

In the CY 2025 PFS final rule (89 FR 98117), we finalized our proposal to establish new benchmarks for scoring Medicare Shared Savings Program ACOs on the Medicare CQMs under MIPS in alignment with MIPS benchmarking policies. As historical Medicare CQM data would not be available, we finalized that for performance years 2024 and 2025, we will score Medicare CQMs using performance period benchmarks. We also finalized that, for performance year 2026 and subsequent performance years, when baseline period data are available to establish historical benchmarks in a manner that is consistent with the MIPS benchmarking policies at § 414.1380(b)(1)(ii), we would score Medicare CQMs using historical benchmarks. In the CY 2025 PFS final rule, we also finalized our proposal to add § 414.1380(b)(1)(ii)(F) to state that beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQM collection type would be scored using flat benchmarks for their first two performance periods in MIPS (89 FR 98120).

As described in the CY 2027 PFS proposed rule (91 FR 44205), we proposed to modify § 414.1380(b)(1)(ii)(F) by removing the applicability of the first two performance periods to the use of flat benchmarks and extending the use of flat benchmarks to score all Medicare CQMs for performance year 2025 and subsequent performance years. Also, we proposed to retroactively apply flat benchmarks to Quality Measure ID: 001 (Diabetes: Glycemic Status Assessment Greater Than 9%), Quality Measure ID: 134 (Preventive Care and Screening: Screening for Depression and Follow-up Plan), and Quality Measure ID: 236 (Controlling High Blood Pressure), if reported via the Medicare CQMs collection type for performance year 2026.

Specifically, we proposed to amend and codify at § 414.1380(b)(1)(ii)(F), by converting such section to a title section entitled ''Medicare CQMs collection type benchmarks'' and establishing § 414.1380(b)(1)(ii)(F)(*1*) and (*2*). In § 414.1380(b)(1)(ii)(F)(*1*), we proposed that for the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQMs collection type would utilize flat benchmarks for their first two performance periods in MIPS. In § 414.1380(b)(1)(ii)(F)(*2*), we proposed to retroactively apply the utilization of flat benchmarks for the Medicare CQMs collection type beginning with the CY 2026 performance period/2028 MIPS payment year. Specifically, we proposed that beginning with the CY 2026 performance period/2028 MIPS payment year, measures of the Medicare CQMs collection type would utilize flat benchmarks. We refer readers to the CY 2027 PFS proposed rule (91 FR 44039 through 44044) for further discussion regarding the extension of applying the utilization of flat benchmarks for the Medicare CQMs collection type, including discussion about the retroactive use of flat benchmarks for the Medicare CQMs collection type for the CY 2026 performance period/2028 MIPS payment year.

We requested public comment on these proposals.

We received public comments on the proposals. The following is a summary of the comments we received and our responses. However, we note that additional comments and responses pertaining to the extension and retroactive application of utilizing flat benchmarks for the Medicare CQMs collection type are discussed in section III.G.3.c. of this final rule.

Comment: Many commenters supported the utilization of flat benchmarks to assess performance for the Medicare CQM collection type for the CY 2027 performance period and subsequent performance periods. The commenters stated that the extension of flat benchmarks provides increased predictability, transparency, and stability during the transition to digital quality measurement.

Response: We appreciate the support from commenters; and agree with commenters. As discussed in the CY 2027 PFS proposed rule (91 FR 44039 through 44044), the extension of utilizing flat benchmarks for the Medicare CQMs collection type provides continuity and supports the transition to digital quality measurement (91 FR 44039 through 44044). In the CY 2025 PFS final rule, we indicated that the use of flat benchmarks would allow Medicare Shared Savings Program ACOs with high scores to earn maximum or near maximum achievement points while allowing room for quality improvement and rewarding that improvement in subsequent years (89 FR 98118). The use of flat benchmarks helps to ensure that Medicare Shared Savings Program ACOs with high performance on a measure are not penalized as low performers (89 FR 98118).

Comment: Many commenters supported the proposal to retroactively apply the flat benchmark to assess performance on Quality Measure ID: 001 (Diabetes: Glycemic Status Assessment Greater Than 9%), Quality Measure ID: 134 (Preventive Care and Screening: Screening for Depression and Follow-up Plan), and Quality Measure ID: 236 (Controlling High Blood Pressure) for the CY 2026 performance period. Several commenters stated that the retroactive application of flat benchmarks improves benchmarking transparency, reduces reporting uncertainty, and promotes scoring consistency.

Response: We agree with commenters and appreciate the support.

Comment: A commenter expressed concern regarding the application of flat benchmarks to Quality Measure ID: 001 (Diabetes: Glycemic Status Assessment Greater Than 9%) and Quality Measure ID: 236 (Controlling High Blood Pressure), conveying that such measures are influenced by patient complexity, risk factors, and resource constraints. The commenter stated that flat benchmarks may not reflect such differences and could unintentionally disadvantage clinicians caring for high-risk or underserved populations.

Response: As described in the CY 2027 PFS proposed rule (91 FR 44039), we analyzed performance year 2024 data on Shared Savings Program ACOs that reported all three Medicare CQMs (Quality Measure ID: 001 (Diabetes: Glycemic Status Assessment Greater Than 9%), Quality Measure ID: 134 (Preventive Care and Screening: Screening for Depression and Follow-up Plan), and Quality Measure ID: 236 (Controlling High Blood Pressure)) in the APP quality measure set, which had performance-based benchmarks, and compared performance year 2024 quality scores to simulated quality scores using flat benchmarks for the three Medicare CQMs. The analysis showed that the use of flat benchmarks was estimated to increase average quality scores by 11 percentage points; thus, increasing the likelihood that Shared Savings Program ACOs would meet the quality performance standard for sharing in savings at the maximum rate under its track. The analysis illustrated that the use of performance-based benchmarks, if flat benchmarks are not used, could lead to Medicare Shared Savings Program ACOs forgoing shared savings that might otherwise have been available for reinvestment. As such, applying flat benchmarks would afford the Medicare Shared Savings Program ACOs with increased shared savings the opportunity to devote greater resources to providing better quality of care to Medicare beneficiaries over time and improving care coordination that benefits the Medicare beneficiaries served by the Medicare Shared Savings Program ACOs. For further discussion, we refer readers to section III.G.3.c. of this final rule.

Comment: A few commenters requested CMS to periodically reassess the appropriateness of flat benchmarks and evaluate whether observed performance changes reflect improvements in care or differences in data captured and reporting methods. A commenter requested that CMS monitor performance to ensure that benchmarks appropriately distinguish high performers while avoiding unintended consequences for organizations serving medically complex, rural, or socially at-risk populations.

Response: We will continue to monitor the uptake of Medicare CQMs by Medicare Shared Savings Program ACOs and the appropriateness of the flat benchmarks, and evaluate how quality of care or care improvements are assessed and rewarded as a result of using flat benchmarks.

After consideration of public comments, we are finalizing the following proposals, as proposed.

- Modify § 414.1380(b)(1)(ii)(F) by removing the applicability of the first two performance periods to the use of

flat benchmarks and extending the use of flat benchmarks to score all Medicare CQMs for performance year 2026 and subsequent performance years.

- Retroactively apply flat benchmarks to Quality Measure ID: 001 (Diabetes: Glycemic Status Assessment Greater Than 9%), Quality Measure ID: 134 (Preventive Care and Screening: Screening for Depression and Follow-up Plan), and Quality Measure ID: 236 (Controlling High Blood Pressure), if reported via the Medicare CQMs collection type for performance year 2026.
- Specifically, amend and codify at § 414.1380(b)(1)(ii)(F) by converting such section to a title section entitled ''Medicare CQMs collection type benchmarks'' and establish § 414.1380(b)(1)(ii)(F)(*1*) and (*2*).

++ In § 414.1380(b)(1)(ii)(F)(*1*), we establish that for the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQMs collection type use flat benchmarks for their first two performance periods in MIPS.

++ In § 414.1380(b)(1)(ii)(F)(*2*), we are retroactively applying the utilization of flat benchmarks for the Medicare CQMs collection type beginning with the CY 2026 performance period/2028 MIPS payment year. Specifically, beginning with the CY 2026 performance period/2028 MIPS payment year, measures of the Medicare CQMs collection type use flat benchmarks.

(2) Use Flat Benchmarks To Score Medicare Shared Savings Program ACOs Reporting Medicare eCQMs

As described in the CY 2027 PFS proposed rule (91 FR 44205), we proposed to develop a policy that establishes the utilization of flat benchmarks for measures of the newly proposed Medicare eCQMs collection type reported by Medicare Shared Savings Program ACOs. As a result, Medicare eCQMs would be scored using flat benchmarks beginning with the 2027 performance period. To effectuate such proposal under MIPS for purposes of assessing and scoring performance for the quality performance category, we proposed to add § 414.1380(b)(1)(ii)(G) to establish a new provision specific to benchmarks for measures of the Medicare eCQMs collection type, entitled ''Medicare eCQMs collection type benchmarks.'' Subsequently, we proposed to add § 414.1380(b)(1)(ii)(G)(1), which establishes the utilization of flat benchmarks under the Medicare eCQMs collection type benchmarks provision established at § 414.1380(b)(1)(ii)(G). Specifically, we proposed in § 414.1380(b)(1)(ii)(G)(1) to establish that beginning with the CY 2027 performance period/2029 MIPS payment year, measures of the Medicare eCQMs collection type would utilize flat benchmarks.

We requested public comment on this proposal.

We received public comments on the proposal. The following is a summary of the comments we received and our responses. However, please note that additional comments and responses pertaining to the utilization of flat benchmarks for the Medicare eCQMs collection type are discussed in section III.G.3.d.(3) of this final rule.

Comment: Several commenters supported the proposal to develop a policy that establishes the utilization of flat benchmarks for measures of the new Medicare eCQMs collection type reported by Medicare Shared Savings Program ACOs. The commenters indicated that the utilization of flat benchmarks provides a consistent, predictable, and transparent scoring methodology.

Response: We appreciate the support from commenters. We refer readers to section III.G.3.d.(3) of this final rule for further discussion and additional comments/responses regarding the implementation and reporting requirements of the Medicare eCQMs collection type within the APP Plus measure set.

Comment: A few commenters expressed concern regarding the reporting of Medicare eCQMs, which could be associated with lower performance rates compared to the reporting of Medicare CQMs.

Response: We appreciate the feedback from commenters regarding the concern about potentially lower performance rates for eCQMs compared with reported CQM rates. For further discussion, we refer readers to section III.G.3.d.(3) of this final rule.

After consideration of public comment, we are finalizing the proposal, as proposed, to add § 414.1380(b)(1)(ii)(G), which establishes a new provision specific to benchmarks for measures of the Medicare eCQMs collection type, entitled ''Medicare eCQMs collection type benchmarks,'' and add § 414.1380(b)(1)(ii)(G)(1), which establishes the utilization of flat benchmarks under the Medicare eCQMs collection benchmarks provision established at § 414.1380(b)(1)(ii)(G). Specifically, in § 414.1380(b)(1)(ii)(G)(1), we establish that beginning with the CY 2027 performance period/2029 MIPS payment year, measures of the Medicare eCQMs collection type use flat benchmarks.

d. Scoring the Promoting Interoperability Performance Category

(1) Modify the Scoring of the Electronic Prior Authorization Measure for CY 2027 Performance Period/2029 MIPS Payment Year

In the CY 2027 PFS proposed rule (91 FR 44177 and 44178), we proposed to modify the Electronic Prior Authorization measure by changing the measure from a required measure to an optional measure and eligible for 10 bonus points when MIPS eligible clinicians affirmatively attest (''Yes'' response) to meeting the requirements of the measure for the CY 2027 performance period/2029 MIPS payment year. We believed that the allocation of 10 bonus points is an appropriate and effective incentive to promote the adoption and use of certified technology for requesting electronic prior authorizations among MIPS eligible clinicians. To account for the allocation of bonus points specific to the Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year, we noted that the scoring methodology for optional measures available for bonus points needed to be amended.

In § 414.1380(b)(4)(ii)(C)(3), the optional measures available for reporting are not identified or categorized by objective; however, the applicable optional measures available in the MIPS Promoting Interoperability performance category as of the CY 2026 performance period (Syndromic Surveillance Reporting, Public Health Registry Reporting, Clinical Data Registry Reporting, and Public Health Reporting Using TEFCA) are all under the Public Health and Clinical Data Exchange objective. When reporting one, more than one, or all such optional measures, the total number of bonus points that could be earned is five bonus points. To distinguish between such optional measures that are available under the Public Health and Clinical Data Exchange objective and the Electronic Prior Authorization measure as an optional measure for the CY 2027 performance period/2029 MIPS payment year that is under the Health Information Exchange objective and has an allocation of 10 bonus points, we proposed to modify the scoring methodology to account for the optional measures available under each applicable objective within the MIPS Promoting Interoperability performance category.

We proposed to modify the scoring methodology for optional measures to reflect an allocation of a total of five bonus points when reporting one, more than one, or all optional measures (Syndromic Surveillance Reporting, Public Health Registry Reporting, Clinical Data Registry Reporting, and Public Health Reporting Using TEFCA) available under the Public Health and Clinical Data Exchange objective and an allocation of a total of 10 bonus points when reporting the optional Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year available under the Health Information Exchange objective.

Thus, we proposed to amend § 414.1380(b)(4)(ii)(C)(*3*) by modifying the provision to identify the MIPS Promoting Interoperability performance category objective, specifically the Public Health and Clinical Data Exchange objective, in which the applicable optional measures are available to earn a total of five bonus points when reporting one, more than one, or all optional measures. Specifically, we proposed to amend § 414.1380(b)(4)(ii)(C)(*3*) by modifying the provision to indicate that the total number of bonus points available to be earned when reporting one optional measure, more than one optional measure, or all optional measures under the Public Health and Clinical Data Exchange objective is a total of five bonus points beginning with the CY 2026 performance period/2028 MIPS payment year. Additionally, we proposed to establish a new provision at § 414.1380(b)(4)(ii)(C)(*4*) to account for the Electronic Prior Authorization measure being an optional measure under the Health Information Exchange objective and having an allocation of a total of 10 bonus points for the CY 2027 performance period/2029 MIPS payment year. Specifically, we proposed to establish § 414.1380(b)(4)(ii)(C)(*4*), which would determine that the total number of bonus points available to be earned when reporting the Electronic Prior Authorization optional measure is a total of 10 bonus points for the CY 2027 performance period/2029 MIPS payment year. The establishment of such provision (only applicable to the CY 2027 performance period/2029 MIPS payment year) would enable a MIPS eligible clinician to earn 10 bonus points for affirmatively attesting that they requested a prior authorization electronically from a payer's Prior Authorization API using data from CEHRT for at least one medical item or service (excluding drugs) ordered within the CY 2027 performance period/2029 MIPS payment year.

We requested public comment on this proposal.

We received public comment on the proposal. The following is a summary of the comments we received and our response.

Comment: Some commenters supported the proposal to enable a MIPS eligible clinician to earn 10 bonus points for affirmatively attesting that they requested a prior authorization electronically from a payer's Prior Authorization API using data from CEHRT for at least one medical item or service (excluding drugs) ordered within the CY 2027 performance period/2029 MIPS payment year. The commenters conveyed that such approach provides a transition period for MIPS eligible clinicians to prepare for implementation and meeting the requirements of the measure before the measure becomes required beginning with the CY 2028 performance period/2030 MIPS payment year. A commenter expressed support for the Electronic Prior Authorization measure not being required for the CY 2027 performance period, which would not negatively impact MIPS eligible clinicians who do not report the optional measure.

Response: We appreciate the support from commenters.

After consideration of public comment, we are finalizing the proposal, as proposed, to modify the scoring methodology for optional measures to reflect an allocation of a total of five bonus points when reporting one, more than one, or all optional measures (Syndromic Surveillance Reporting, Public Health Registry Reporting, Clinical Data Registry Reporting, and Public Health Reporting Using TEFCA) available under the Public Health and Clinical Data Exchange objective and an allocation of a total of 10 bonus points when reporting the optional Electronic Prior Authorization measure for the CY 2027 performance period/2029 MIPS payment year available under the Health Information Exchange objective.

Specifically, we are:

- Amending § 414.1380(b)(4)(ii)(C)(*3*) by modifying the provision to indicate that the total number of bonus points available to be earned when reporting one optional measure, more than one optional measure, or all optional measures under the Public Health and Clinical Data Exchange objective is a total of five bonus points beginning with the CY 2026 performance period/2028 MIPS payment year.
- Establishing a new provision at § 414.1380(b)(4)(ii)(C)(*4*), which determines that the total number of bonus points available to be earned when reporting the Electronic Prior Authorization optional measure is a total of 10 bonus points for the CY 2027 performance period/2029 MIPS payment year. The establishment of such provision (only applicable to the CY 2027 performance period/2029 MIPS payment year) enables a MIPS eligible clinician to earn 10 bonus points for affirmatively attesting that they requested a prior authorization electronically using CEHRT to send a request through a payer's Prior Authorization API for at least one medical item or service (excluding drugs) ordered within the CY 2027 performance period/2029 MIPS payment year.

e. MVP Scoring Request for Information

As we move toward the full implementation of MVPs, we are exploring scoring policies that consider commenter feedback and align with the intended goals of MVPs. Specifically, we are exploring an MVP scoring methodology and policies to fairly evaluate and reward MVP participants for delivering high-quality and low-cost care by comparing clinician performance with others reporting the same MVP. As we consider policy options for MVP scoring, we sought comments on questions in the CY 2027 PFS proposed rule (91 FR 44206 through 44207) to inform further discussion and considerations for the future of MVP scoring. We received many comments in response to this request for information and appreciate all the input received. We will consider the feedback shared with CMS in future rulemaking.

f. Scoring the Improvement Activities Performance Category for APMs

In the CY 2017 Quality Payment Program final rule (81 FR 77008 through 77012), we established policies for scoring the improvement activities performance category, including criteria for weighting and attestation. In that same rule, we also established special scoring provisions for MIPS eligible clinicians participating in Alternative Payment Models (APMs), recognizing that such clinicians are often already engaged in activities aligned with MIPS improvement activities through their APM participation. Specifically, we finalized a policy under § 414.1380(b)(3)(i) to assign a minimum score for the improvement activities performance category for MIPS eligible clinicians participating in APMs (81 FR 77096). We explained that this approach was intended to reduce reporting

burden while acknowledging that APM participants are typically undertaking practice improvement efforts consistent with the goals of the improvement activities performance category.

We have maintained this policy in subsequent rulemaking, specifically the CY 2021 PFS final rule (85 FR 84472), we attempted to ensure that scoring this category did not inadvertently harm participants. However, in doing so we introduced scenarios where IA scores for some APM participants would not be awarded credit as established in section 1848(q) of the Act.

We proposed to revise § 414.1380(b)(3)(i) to clarify and maintain that, for MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent. This revision is consistent with the policy we established in the CY 2017 Quality Payment Program.

We requested public comment on this proposal.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

C. Third-Party Intermediaries General Requirements

1. Background

We refer readers to 42 CFR 414.1305,414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84926 through 84947), the CY 2022 PFS final rule (86 FR 65538 through 65550), CY 2023 PFS final rule (87 70102 FR through 70109), the CY 2024 PFS final rule (88 FR 79381 through 79394), the CY 2025 PFS final rule (89 FR 98459), and the CY 2026 PFS final rule (90 FR 49920) for our previously established policies regarding third-party intermediaries.

In this section of the final rule, we update our requirements for third-party intermediaries related to conditions for approval for Qualified Clinical Data Registries (QCDRs) and qualified registries, remove the additional requirements for health IT vendors, and update our remedial action/termination policies. Specifically, we proposed the following in the CY 2027 PFS proposed rule (91 FR 44207 through 44211):

- Additional Requirements for Health IT Vendors:

++ Clarifying that additional requirements for health IT vendors do not apply beginning with the CY 2025 performance period/2027 MIPS payment year, because beginning in the CY 2025 performance period/2027 MIPS payment year health IT vendors are no longer allowed to submit MIPS data as a third-party intermediary,

- Conditions for Approval:

++ Clarifying that performance feedback reports from QCDRs and qualified registries to clinicians would be provided based on participation level (for example, individual, group, subgroup, virtual group, or APM entity).

++ Updating two existing policies, in which (1) a third-party intermediary with fewer than 10 Quality Payment Program participants submitting MIPS data must audit all Quality Payment Program participants and (2) a third-party intermediary submitting data for Quality Payment Program participants with fewer than 5 patient records must audit all patient records.

++ Updating the policy in which third-party intermediaries that do not submit data for one year are required to submit a self-nomination participation plan.

++ Modifying the qualified postings' policy in which changes to the information submitted should not be done after the qualified posting is publicly posted on the Quality Payment Program website (*https://qpp.cms.gov/*).

++ Revising existing policies to specify a QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one MIPS core measure to align with the proposed removal of high-priority designation from MIPS quality measures and the MIPS core measure reporting requirements in section IV.A.4.d.(1)(c) of this final rule.

- Remedial Action and Termination of Third-party Intermediaries:

++ Clarifying that if a third-party intermediary does not submit data for one year, they would be required to provide documentation and would be terminated if documentation cannot be provided and/or the documentation shows that they would not be submitting data for the given MIPS performance period.

We received public comments on each of these proposals and discuss further details later in the sections.

2. Further Clarify in Regulation Text That Health IT Vendors Can Not Submit Data Beginning With the CY 2025 Performance Period/2027 MIPS Payment Year and That Preexisting Requirements for Health IT Vendors No Longer Apply

In the CY 2017 Quality Payment Program final rule (81 FR 77377 through 77382), we established the category of health IT vendors as a type of third-party intermediary in the Quality Payment Program. In the CY 2019 PFS final rule, we codified the definition of a health IT vendor as an entity that supports the health IT requirements on behalf of a MIPS eligible clinician (including obtaining data from a MIPS eligible clinician's Certified Electronic Health Record Technology (CEHRT) (83 FR 59907). In the CY 2022 PFS final rule (86 FR 65541), we finalized a reorganization of the regulatory text governing third-party intermediaries to improve clarity and readability. In that revised text, we established general requirements at § 414.1400(a), additional requirements for QCDRs and qualified registries at § 414.1400(b), and additional requirements for health IT vendors at § 414.1400(c).

The CY 2024 PFS final rule removed health IT vendors from the category of third-party intermediaries in the Quality Payment Program beginning in the CY 2025 performance period/2027 MIPS payment year at § 414.1400(a)(1)(iii) (88 FR 79390 and 79391). We noted that the removal of health IT vendors from the definition of third-party intermediary would not preclude the vendors from assisting MIPS eligible clinicians with reporting under the program by providing their technology for clinicians to directly report under MIPS. We also noted that removing the category of health IT vendor as a distinct type of third-party intermediary created a clearer distinction between (1) vendors that are submitting data to CMS for the purposes of MIPS and must meet the requirements of a qualified registry or QCDR, and (2) vendors that work with clinicians through the sale and support of health IT permitting the clinician or group to submit the data.

We recognize that § 414.1400(c)(1) outlines additional requirements for health IT vendors submitting data for the MIPS performance category beginning with the CY 2021 performance period/2023 MIPS payment year even though we removed the category of health IT vendors for the Quality Payment Program beginning in the CY 2025 performance period/2027 MIPS payment year at § 414.1400(a)(1)(iii). These requirements being left in the regulation text caused confusion for some organizations interested in serving as third-party intermediaries because it was not clear that these additional requirements for health IT vendors were no longer in place. If an organization that was previously under the health IT vendor category as a third-party intermediary would like to continue serving as a

third-party intermediary for the Quality Payment Program, they must meet the requirements to become a qualified registry or QCDR. Therefore, to reduce confusion and further clarify our existing policies, in the CY 2027 PFS proposed rule (91 FR 44208), we proposed to add at § 414.1400(c)(2) that beginning with the CY 2025 performance period/CY 2027 MIPS payment year, health IT vendors cannot submit MIPS data unless they meet the requirements for a qualified registry or QCDR. We also proposed to modify § 414.1400(c)(1) to clarify that the additional requirements for health IT vendors only apply for the CY 2021 performance period/CY 2023 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, when health IT vendors were still a separate type of third-party intermediaries.

We received a public comment on these proposals. The following is a summary of the comment we received and our response.

Comment: A commenter expressed concern with the removal of the health IT vendor category from third-party intermediaries as finalized in the CY 2024 PFS final rule and suggested that this removal led to increased costs associated with transferring data from an electronic health record (EHR) to a QCDR or qualified registry.

Response: As stated in the CY 2024 PFS final rule (88 FR 79391), we finalized our proposal to remove the health IT vendor category given we observed many EHRs can self-nominate to serve as registries or QCDRs under our existing requirements and many others can also facilitate direct reporting of MIPS data by clinicians and groups. Further, as noted in the 2024 PFS proposed rule (88 FR 52608), a lack of self-nomination process has made it difficult to fully understand the nature of the health IT vendors and therefore made it difficult to properly identify and develop corrective action plans for those with data issues. We acknowledge the commenter's concern that removal of the health IT vendor category may have resulted in increased costs associated with transferring data from an EHR to a QCDR or qualified registry in their particular situation. However, the removal of this category did not preclude EHR vendors from supporting MIPS data submission or from self-nominating to become a QCDR or qualified registry, provided they meet the current requirements. Instead, this change in policy acknowledged that without a process to identify health IT vendors, we did not have a process to review them, approve them, or develop corrective actions to ensure data accuracy.

Additionally, although we finalized removal of the health IT vendor category in the CY 2024 PFS final rule, the corresponding requirements remained in the regulation text, causing confusion for some organizations interested in serving as third-party intermediaries because it was not clear that these additional requirements for health IT vendors were no longer applicable.

After consideration of the public comment, we are finalizing our proposal to clarify at § 414.1400(c)(2) that beginning with the CY 2025 performance period/CY 2027 MIPS payment year, health IT vendors cannot submit MIPS data as a third-party intermediary unless they meet the requirements for a qualified registry or QCDR. We are also finalizing our proposal to modify § 414.1400(c)(1) to clarify that the additional requirements for health IT vendors only apply for the CY 2021 performance period/CY 2023 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, when health IT vendors were still a separate type of third-party intermediary.

3. Conditions for Approval

a. Requirement To Provide Performance Feedback Reports at the Level of Data Submitted

In the CY 2017 Quality Payment Program final rule, we established requirements for performance feedback for QCDRs (81 FR 77367 through 77374) and qualified registries (81 FR 77383 through 77387) to provide timely feedback to clinicians, at least four times a year, on all MIPS performance categories that the QCDR or qualified registry would report. We also finalized that the feedback should be given to the individual MIPS eligible clinician or group (if participating as a group) at the individual participant level or group level, as applicable, for which the QCDR or qualified registry reports. In the CY 2020 PFS final rule, we codified the requirement for QCDRs (84 FR 63057 and 63058) and qualified registries (84 FR 63076 and 63077) to provide timely feedback at least four times per year along with a new requirement to provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure. In the CY 2022 PFS final rule (86 FR 65538 through 65550), we reorganized and consolidated the regulatory text governing third-party intermediaries for clarity and simplicity and specifically to consolidate regulations that applied identically to both QCDRs and qualified registries. In that reorganization, the previously established policy for QCDRs and qualified registries to provide feedback which had been established at § 414.1400(b)(1) and (c)(1) was consolidated and redesignated at § 414.1400(b)(3)(iii) without a change in requirements. In the initial codification of the requirements for performance feedback in the CY 2020 PFS final rule for QCDRs (84 FR 63057 and 63058) and qualified registries (84 FR 63076 and 63077), we did not codify but also did not propose to remove the requirements previously established in the CY 2017 Quality Payment Program final rule for QCDRs (81 FR 77367 through 77374) and qualified registries (81 FR 77383 through 77387) that the feedback should be given to the individual MIPS eligible clinician or group (if participating as a group) at the individual participant level or group level, as applicable, for which the QCDR or qualified registry reports. We also did not refer to this requirement in the CY 2022 PFS final rule reorganization and redesignation of the regulatory text.

We have identified situations in which QCDRs or qualified registries provide the required performance feedback reports, but the feedback may reflect the performance of the individual when the clinician is reporting within a group. Alternatively, the feedback report reflects the performance of a group, but it was the individual that is reporting. We believe that this undermines the improvement opportunity that is inherent in these feedback reports and the value of these QCDRs and qualified registries. For this reason, we proposed to add at § 414.1400(b)(3)(iii) that QCDRs and qualified registries must provide the performance feedback at the level at which the data was or will be submitted (for example, individual, group, virtual group, subgroup, APM entity) (91 FR 44208). This proposal would codify the requirements that were previously established but not codified in the CY 2017 Quality Payment Program final rule for QCDRs (81 FR 77367 through 77374) and qualified registries (81 FR 77383 through 77387) to provide feedback at the level at which data is submitted. We also proposed to remove the term ''clinicians and groups'' in both places in this portion of the regulation. We believe that this requirement aligns with the requirement originally established in the CY 2017 Quality Payment Program Rule (81 FR 77363) but reflects the increased types of reporting entities available to MIPS eligible clinicians to

include individuals, groups, virtual groups, subgroups, and APM entities.

We did not receive comments on our proposal to remove the term ''clinicians and groups'' from § 414.1400(b)(3)(iii). We received public comments on our proposal to require performance feedback at the level at which data was or will be submitted. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed our proposal to require performance feedback at the level at which data was or will be submitted, expressing a concern that decisions about the level of reporting are often not made until long after the relevant performance period has started.

Response: We recognize that the anticipated level of reporting may change during the performance period but would expect that the third—party intermediary provide feedback to the clinician or group at the level the clinician or group has indicated they intend to report at the time the feedback is provided. That is, we would expect that a third—party intermediary would provide feedback at the level the intermediary has on record for the clinician or group at the time feedback is issued. However, we believe that providing feedback at the applicable level of reporting is important to ensure the feedback is meaningful and useful to participants in understanding their performance. Accordingly, we believe this requirement balances the need to provide participants with relevant performance information while avoiding the unnecessary burden of requiring third-party intermediaries to provide feedback at every potential level of reporting.

Comment: A few commenters suggested that the requirement to provide feedback at the level of reporting would require third-party intermediaries to provide performance feedback to participants at all potential levels of reporting and expressed concern that this much data would be confusing for participants and/or would increase administrative burden in the MIPS program.

Response: We appreciate the commenters' concerns that requiring feedback at the level of reporting could be interpreted as requiring third-party intermediaries to provide performance feedback at all potential levels of reporting, which could result in confusing information for participants or unnecessary burden. We clarify that this requirement is not intended to require third-party intermediaries to provide feedback at every potential level of reporting. Rather, third-party intermediaries would be required to provide feedback that is specific to the level at which the participant will report data for the purposes of MIPS (for example, providing information on the performance of an individual pulmonologist on measures contained in the Pulmonology Care MVP). We believe that providing feedback at the applicable level of reporting will ensure participants receive meaningful information regarding their performance without requiring third-party intermediaries to provide information at reporting levels that are not applicable to the participant.

After consideration of public comments, we are finalizing, as proposed, our proposal to add at § 414.1400(b)(3)(iii) that QCDRs and qualified registries must provide the performance feedback at the level at which the data was or will be submitted (for example, individual, group, virtual group, subgroup, APM entity). We are also finalizing, as proposed, our proposal to remove the term ''clinicians and groups'' in both places in this portion of the regulation.

b. Data Validation Requirements

(1) Background

Section 414.1400(b)(3)(v) outlines the requirements for a third-party intermediary's annual data validation audit. As finalized in the CY 2024 PFS final rule (88 FR 79388), specified at § 414.1400(b)(3)(v)(E), the QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements: (1) Uses a sample size of at least 3 percent of a combination of individual clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups and APM entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities; and (2) Uses a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

(2) Update Sampling Methodology for Data Validation Purposes

We noticed that recently certain third-party intermediaries are using less than the minimum sample size as required by § 414.1400(b)(3)(v)(E), which raises concern as to whether the data sample submitted is adequate. To ensure that our data remains true, accurate, and complete, we proposed the following updates (91 FR 44209):

- If the third-party intermediary submits MIPS data to CMS for fewer than 10 Quality Payment Program participants, the data validation audit sample must include all Quality Payment Program participants. We proposed to modify the existing requirements at § 414.1400(b)(2)(v)(E)(1) and (2) that govern a QCDR or qualified registry's data validation audit sampling methodology. Specifically, we proposed at § 414.1400(b)(2)(v)(E)(1) that if the third-party intermediary submits MIPS data to CMS for fewer than 10 Quality Payment Program participants, the data validation audit sample must include all Quality Payment Program participants. If the third-party intermediary submits data for 10 or more Quality Payment Program participants, it must use a sample size of at least 3 percent of a combination of the individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS. The sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups, or APM entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities.
- If there are fewer than 5 patient records from a Quality Payment Program participant, the patient record audit sample must include all patient records. We proposed at § 414.1400(b)(2)(v)(E)(2) that if there are fewer than 5 patient records, the patient record audit sample must include all patient records. If there are 5 or more patient records, the intermediary must use a sample that includes at least 25 percent of the patient records of the individual clinician, group, virtual group, subgroup, or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients. These updates would help third-party intermediaries submit data that is true, accurate, and complete while meeting their submission requirements for data validation purposes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A commenter supported both proposed updates to the data validation sampling strategy and suggested that high audit standards are an important element of high-quality data collection.

Response: We thank the commenters for their support.

Comment: A few commenters opposed the revised data validation sampling strategy and offered alternative suggestions in which third-party intermediaries would have more flexibility in demonstrating assurance of data accuracy which could be based on previous records of data compliance.

Response: We understand the interest in having greater flexibility in demonstrating assurance of data accuracy which could be based on previous records of data compliance. However, we believe it is important to avoid any ambiguity in our data validation standards and to maintain clearly established data validation requirements that apply consistently across all third-party intermediaries. We believe these requirements are necessary to provide assurance that the data third-party intermediaries submit are true, accurate, and complete and that third-party intermediaries continue to meet submission requirements for data validation purposes.

Comment: A commenter opposed the revised data validation sampling strategy as being unnecessarily complicated and duplicative of existing audits that CMS performs on MIPS eligible clinicians and suggested that these efforts undermine a statutory requirement to encourage the use of QCDRs to report quality measures.

Response: Audits that may be performed on MIPS eligible clinicians have a different intent from the data validation requirements for third-party intermediaries. Clearly established data validation requirements are necessary to ensure that the data submitted by third-party intermediaries are true, accurate, and complete and consistent with the information recorded by the clinician in their medical records. Establishing these standards for third-party intermediaries protects clinicians who are interested in using them to facilitate reporting MIPS. The need to establish clear data validation requirements does not undermine the statutory requirement to encourage the use of QCDRs to report quality measures because the statutory requirement does not suggest that data quality be ignored in encouraging their use. Rather, establishing clear data validation requirements provides appropriate assurance regarding the accuracy and completeness of data submitted across all of our third-party intermediaries.

We note that the preamble discussion in the CY 2027 PFS proposed rule for this issue included typographical errors that misplaced the specified proposed regulatory text change at § 414.1400(b)(2)(v)(E)(1)(2) (91 FR 44209). However, the proposed regulation text was correctly listed at 414.1400(b)(3)(v)(E)(1) and (2) in the regulation text section of the CY 2027 PFS proposed rule (91 FR 44284 and 44285). In addition, our rationale and discussion in the CY 2027 PFS proposed rule correctly reflect the substance of our policies. After consideration of public comments, we are finalizing as proposed, the following:

- Codifying § 414.1400(b)(3)(v)(E)(1) that if the intermediary submits MIPS data to CMS for fewer than 10 Quality Payment Program participants, the data validation audit sample must include all Quality Payment Program participants. If the intermediary submits data for 10 or more Quality Payment Program participants, it must use a sample size of at least 3 percent of a combination of the individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups, or APM entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities.
- Codifying at § 414.1400(b)(3)(v)(E)(2) that if there are fewer than 5 patient records the patient record audit sample must include all patient records. If there are 5 or more patient records, the intermediary must use a sample that includes at least 25 percent of the patient records of the individual clinician, group, virtual group, subgroup, or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

c. Require Submission of a Self-Nomination Plan for Third-Party Intermediaries That Do Not Submit Data for One Year

In the CY 2022 PFS final rule, we noted that we had identified several QCDRs and qualified registries that continued to self-nominate to become a third-party intermediary for MIPS but had not submitted data to CMS (86 FR 65545). We further noted as MIPS continues to mature, we wished to reduce the number of third-party intermediaries that self-nominate to become a CMS-approved third-party intermediary but do not actively participate in MIPS. Maintaining intermediaries who do not actively participate does not benefit MIPS, rather it creates interested parties' confusion by including these intermediaries in our qualified postings. We also noted that our goal was to decrease the operational burden on CMS and those third-party intermediaries that do not submit MIPS data to CMS (86 FR 65546).

Accordingly, we finalized requirements for approved QCDRs and qualified registries that have not submitted performance data to submit a participation plan as part of their self-nomination process. We finalized an incremental approach to addressing this issue. First, at § 414.1400(b)(3)(vii), we finalized a participation plan requirement, which requires a QCDR or qualified registry that was approved but did not submit data for any of the CY 2017 through 2020 performance periods/2019 through 2022 MIPS payment years to submit a participation plan in order to be approved for the CY 2023 performance period/2025 MIPS payment year (86 FR 65545 and 65546). Second, at § 414.1400(b)(3)(viii), we finalized that a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan in order for it to be approved for the CY 2024 performance period/2026 MIPS payment year or a future performance period/payment year (86 FR 65546).

While this policy has reduced the number of QCDRs and qualified registries that do not submit data, some QCDRs and qualified registries are still being listed on the qualified posting for as long as three years without submitting data. Maintaining these third-party intermediaries that do not actively participate does not benefit MIPS, rather it creates confusion for interested parties by including these third-party intermediaries in our qualified postings. We emphasize that our goal is to continue decreasing the operational burden on CMS and interested parties. CMS would decrease its operational burden by eliminating the need to screen these third-party intermediaries.

In an effort to avoid further confusion, reduce administrative burden for both CMS and interested parties, and ensure compliance, we proposed to reduce the timeframe available for a QCDR or qualified registry that was approved but did not submit any MIPS data to submit a participation plan. Currently, a QCDR

or qualified registry must submit a participation plan if they do not submit data for either of the 2 years preceding the applicable self-nomination period. We proposed to require a QCDR or qualified registry to submit a participation plan if they do not submit data for the year preceding the applicable self-nomination period. We proposed to redesignate and amend § 414.1400(b)(3)(viii) and add § 414.1400(b)(3)(viii)(A) and (B). Additionally, we also note that we encourage QCDRs and qualified registries to implement the participation plan at the beginning of the calendar year instead of waiting until the self-nomination period, which generally opens on July 1 and closes on September 1 of the year prior to the applicable MIPS performance period.

In summary, we specifically proposed to redesignate the existing text at § 414.1400(b)(3)(viii) to § 414.1400(b)(3)(vii)(B) and amend the text to reflect that this requirement applies from the CY 2024 performance period/2026 MIPS payment year through the CY 2026 performance period/2028 MIPS payment year (91 FR 44209). Additionally, we also proposed to add at § 414.1400(b)(3)(vii)(C) that beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for the year preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry. We also proposed to redesignate the existing text at § 414.1400(b)(3)(vii) to at § 414.1400(b)(3)(vii)(A) and add the heading participation plan for third-party intermediary not submitting data at § 414.1400(b)(3)(vii).

We received a public comment on these proposals. The following is a summary of the comment we received and our response.

Comment: A commenter opposed our proposed reduction in the timeframe available for a QCDR or qualified registry that was approved to submit data but did not do so. This commenter suggested that a one year gap in submitting is not evidence of a pattern of non-compliance and that requiring a participation plan after one year of not reporting would unduly increase administrative burden.

Response: We acknowledge that while submitting a participation plan may impose some additional burden on a third-party intermediary that has not submitted data for one year, this limited burden is appropriate to demonstrate the third-party intermediary's intent to actively participate in the program. Additionally, we note that the purpose of this requirement is not to establish a pattern of non-compliance. Rather we intend to reduce the number of third-party intermediaries that self-nominate to become a CMS-approved third-party intermediary but do not actively participate in MIPS. Maintaining these intermediaries does not benefit MIPS, rather it creates confusion. Therefore, finalizing this proposal will reduce potential confusion, support more efficiency across CMS, and help ensure that CMS-approved third-party intermediaries intend to actively participate in MIPS.

We note that the regulatory text section of the CY 2027 PFS Proposed Rule (91 FR 44284 and 44285) contained a typographical error such that the proposed regulatory text did not accurately reflect the placement of the regulatory text that was discussed in the preamble. This typographical error inadvertently placed the text identified within the preamble for § 414.1400(b)(3)(vii)(B) at § 414.1400(b)(3)(vii)(A) and the text identified within the preamble for § 414.1400(b)(3)(vii)(C) at § 414.1400(b)(3)(vii)(B). The proposed regulation text also inadvertently removed the existing text at § 414.1400(b)(3)(vii) that we proposed to redesignate to § 414.1400(b)(3)(vii)(A). However, the substance of our policies and placement of the regulation text were correctly described in the preamble. After consideration of public comments, we are finalizing our proposal as proposed, to redesignate the existing text at § 414.1400(b)(3)(viii) to § 414.1400(b)(3)(vii)(B) and amend the text to reflect that this requirement applies from the CY 2024 performance period/2026 MIPS payment year through the CY 2026 performance period/2028 MIPS payment year. Additionally, we are also finalizing our proposal to add at § 414.1400(b)(3)(vii)(C) that beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for the year preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry. Finally, we are also finalizing our proposal as proposed, to redesignate the existing text at § 414.1400(b)(3)(vii) to at § 414.1400(b)(3)(vii)(A) and add the heading participation plan for third-party intermediary not submitting data at § 414.1400(b)(3)(vii).

d. Update Qualified Posting

Every year, CMS publishes a qualified posting on the Quality Payment Program website (*https://qpp.cms.gov/*) containing a list of all CMS-approved third-party intermediaries that have self-nominated to submit data on behalf of MIPS eligible clinicians for the MIPS performance period. This list is updated to account for withdrawals, remedial action, or termination of third-party intermediaries. The qualified posting contains information about approved third-party intermediaries such as organization details, information about remedial action or termination, supported performance categories, specialty focus, a description of services they provide and associated costs, reporting options (MVP versus traditional MIPS) and participation options (individual clinician, group, subgroup, virtual group, APM entity) supported, and measures they are approved to support. MIPS eligible clinicians can refer to information in the qualified posting to identify and select a third-party intermediary.

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must sign a document that verifies their name, contact information, cost for MIPS eligible clinicians or groups to use the qualified registry, services provided, and the specialty-specific measure sets the qualified registry intends to report. As technology progressed, we no longer needed third-party intermediaries to sign a document and instead required an attestation. We became aware that this requirement was no longer consistent with our established policy in describing the manner in which the QCDR or qualified registry documents this information. To align with current processes, we finalized in the CY 2024 PFS final rule to add § 414.1400(b)(3)(xiv), which required that QCDRs and qualified registries attest that the information listed on the qualified posting is accurate (88 FR 79385). Additionally, we also finalized in the CY 2024 final rule, at § 414.1305, to define qualified posting as the document made available by CMS that lists QCDRs or qualified registries available for use by MIPS

eligible clinicians, groups, subgroups, virtual groups, and APM Entities (88 FR 79385). We noted that we had used the term qualified posting since the inception of the Quality Payment Program but had not previously defined the term.

We have recently been made aware that certain third-party intermediaries are making changes to the information they provided for their qualified posting after receiving CMS approval of the qualified posting. Examples of changes include updates to costs, services that are included in the initial cost, and other administrative changes. This creates an increased administrative burden for CMS, who must identify and rectify such changes, and it creates confusion amongst clinicians who contract with the third-party intermediary as to what they will pay for the cost of the third-party intermediary's services. Subsequently, we must make additional updates to the qualified posting, which increases the administrative burden on CMS. To reduce administrative burden for both clinicians and CMS, we proposed to update § 414.1400(b)(3)(xiv) by adding a requirement that changes to information (for example, cost, services included) on the qualified posting must be included and finalized during the qualified posting review period (91 FR 44210). We proposed specifying in regulatory text that third-party intermediaries will not be permitted to make changes after the qualified posting is publicly posted on the Quality Payment Program website (*https://qpp.cms.gov/*).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed general support for the goals associated with our proposal to not change information provided on the qualified posting following the qualified posting review period but suggested that in some cases external situations may alter what a third-party intermediary is able to provide and that it would be preferable to align that information with what is included on the qualified posting. Some of the commenters recommended a process for updating this information following the completion of the qualified posting review. A commenter requested that CMS remain flexible to accommodate the various differences in operating models across third-party intermediaries (for example., specialty society led QCDR vs. other QCDR entities).

Response: We understand that there may be circumstances outside of a third-party intermediary's control that may affect the services or capabilities the third-party intermediary can provide after the qualified posting review period has concluded. However, having a defined review period during which third-party intermediaries, including those that may have different operating models, can review and request changes to their information as necessary can ensure that qualified postings are finalized in a timely manner. It also allows us to provide consistent information to clinicians and groups needing information on third-party intermediaries. Establishing an additional process to make changes after the qualified posting review would require us to continually review and update information, thereby creating uncertainty for interested parties relying on the qualified postings to identify third-party intermediaries and the services they offer. Therefore, we do not see a need to establish an additional process for updating information following the conclusion of the qualified posting review period.

Comment: A commenter opposed our proposal stating their belief that it would increase administrative burden. The commenter suggested that this would require alignment of all business decisions by the third-party intermediary with the CMS qualified posting schedule and would discourage reporting through QCDRs.

Response: Establishing a defined period during which a third-party intermediary may review and request changes to their information is necessary to ensure the qualified postings are accurate and the information posted can be finalized in a timely manner. While we aim to reduce administrative burden as much as possible, clinicians are using these third-party intermediaries to participate in MIPS and therefore need to know which third-party intermediaries are qualified and what services they offer so the clinician or group can select a third-party intermediary that meets their needs. As such, there are some deadlines and other requirements that the business entity may need to accommodate to facilitate reporting for MIPS eligible clinicians.

The designated review period gives third-party intermediaries an appropriate opportunity to verify the accuracy of their information and identify any necessary changes before the qualified postings are finalized. Accordingly, this approach balances the need to provide third-party intermediaries with an opportunity to review their information with the need to maintain accurate, consistent, and timely information for clinicians and groups seeking to identify a third-party intermediary for their MIPS reporting. Establishing a defined qualified posting review period should not discourage the use of QCDRs but should instead provide greater certainty regarding the information available on qualified postings.

After consideration of public comments, we are finalizing our proposal as proposed, to update § 414.1400(b)(3)(xiv) by adding a requirement that changes to information (for example, cost, services included) on the qualified posting must be included and finalized during the qualified posting review period. We are also finalizing our proposal as proposed, to specify in regulatory text that third-party intermediaries will not be permitted to make changes after the qualified posting is publicly posted on the Quality Payment Program website (*https://qpp.cms.gov/*).

e. Update CMS Data Submission Requirements for Third-Party Intermediaries

In the CY 2017 Quality Payment Program final rule, we finalized at § 414.1400(b)(3)(x) and (b)(3)(x)(A) that a QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one outcome measure and if no outcome measure is available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure (81 FR 77368).

However, in CY 2027 PFS proposed rule, we proposed to remove the high-priority designation from MIPS quality measures beginning in the CY 2027 performance period/CY 2029 MIPS payment year (91 FR 44210). Additionally, we also proposed to remove the requirement to report an outcome measure and require reporting a MIPS core measure. Under the new proposal, MIPS eligible clinicians participating through traditional MIPS must submit data on at least six measures, including at least one MIPS core measure.

To align third-party intermediaries' requirements with the MIPS core measure set and high priority designation for MIPS quality measures proposals, we proposed to revise § 414.1400(b)(3)(x)(B) to state that beginning in the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry must be able to submit to CMS, data for at least six quality measures including at least one MIPS core measure (91 FR 44210). We also proposed to revise § 414.1400(b)(3)(x) and (b)(3)(x)(A) so that the requirement for a QCDR or

qualified registry to be able to submit an outcome measure and if the outcome measure is not available, then a high priority measure can be submitted, concludes with the CY 2026 performance period/CY 2028 MIPS payment year.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed our proposed update to require qualified registries and QCDRs to report on at least one core measure. These commenters generally expressed concern that a QCDR or qualified registry could capture data on a more specialized set of clinicians than would be part of a broader MVP such as a clinician providing echocardiography as part of a cardiology group and that requiring support for at least one core measure would reduce the availability of QCDRs for specialized clinicians.

Response: Similar to our approach in establishing submission requirements for third-party intermediaries in the CY 2017 Quality Payment Program final rule, it is important to align requirements across third-party intermediaries where appropriate. The requirement to support at least one measure from the MIPS core measure set does not preclude a QCDR or qualified registry from continuing to support measures that are applicable to more specialized clinicians or clinical practice areas. Rather, this requirement establishes a minimum requirement for QCDRs and qualified registries while allowing them to continue to support the specialized measures and clinician populations they serve.

Comment: A commenter suggested that CMS publish the MIPS core measure list on a timeline that precedes the self-nomination period for the applicable performance year in order to ensure that the third-party intermediary can demonstrate the capability to submit at least one MIPS core measure during the self-nomination period.

Response: We note that the existing requirement is that a QCDR or qualified registry must be able to submit data to CMS for at least six quality measures, including at least one outcome measure or, if an outcome measure is not available, at least one other high-priority measure. Under the proposed policy, a QCDR or qualified registry would instead be required to be able to submit data to CMS for at least six quality measures, including at least one MIPS core measure. Consistent with the existing self-nomination process, QCDRs and qualified registries identify the measures they are capable of submitting based on the information available during the applicable self-nomination period. MIPS core measures will be cataloged and identified at the Quality Payment Program resource library (*https://qpp.cms.gov/resources/resource-library*). This same timeline would apply to the requirement to be able to submit at least one MIPS core measure. Identifying core measures for a particular MIPS performance period earlier than under the current timeline is not consistent with our overall review of the measure inventory on an annual basis which allows for updates to reflect changes in measure availability as close to the performance period as possible.

After consideration of public comments, we are finalizing our proposal as proposed, to revise § 414.1400(b)(3)(x)(B) to state that beginning in the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry must be able to submit to CMS, data for at least six quality measures including at least one MIPS core measure. We are also finalizing our proposal to revise § 414.1400(b)(3)(x) and (b)(3)(x)(A) so that the requirement for a QCDR or qualified registry to be able to submit an outcome measure and if the outcome measure is not available, then a high priority measure can be submitted, concludes with the CY 2026 performance period/CY 2028 MIPS payment year.

4. Remedial Action and Termination of Third-Party Intermediaries

a. Background

We refer readers to § 414.1400(e), the CY 2017 Quality Payment Program final rule (81 FR 77548) the CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), the CY 2021 PFS final rule (85 FR 84947), the CY 2022 PFS final rule (86 FR 65542 and 65550), and the CY 2023 PFS final rule (87 FR 70106 through 70108) for previously finalized policies for remedial action and termination of third-party intermediaries.

b. Termination of a Third-Party Intermediary That Does Not Submit Data for 1 Year

In the CY 2023 PFS final rule, we established that we will terminate QCDRs and qualified registries that are required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period and continue to not submit MIPS data to CMS for the applicable performance period (87 FR 70107 through 70108). Timely termination of third-party intermediaries that are not submitting data is important to minimize unnecessary operational and administrative tasks for both CMS and third-party intermediaries. Maintaining third-party intermediaries that do not actively participate does not provide a benefit to the MIPS program, rather it creates confusion for interested parties by including these third-party intermediaries in our qualified postings (86 FR 65545).

In the CY 2027 PFS proposed rule, we noted that the policy for termination of third-party intermediaries not submitting data would be impacted by the proposed requirement to submit a participation plan for third-party intermediaries that do not submit data for one year (91 FR 44211). This proposed policy means that we would terminate QCDRs and qualified registries that were required to submit participation plans during the applicable self-nomination period under § 414.1400(b)(3)(viii) because they did not submit any MIPS data for 1 year (rather than 2 years) preceding the applicable self-nomination period and continue to not submit MIPS data to CMS for the applicable performance period. However, because the data submission period lasts for one year following the performance period, there is a delay in CMS being made aware of whether a third-party intermediary submitted data for a given year. Therefore, currently, CMS does not have a mechanism to acquire the necessary knowledge to appropriately terminate a third-party intermediary until the year after the applicable performance period.

Currently, if a third-party intermediary does not submit data for the performance period for which they submitted a self-nomination participation plan, they will be terminated. However, CMS does not become aware of the third-party intermediary's failure to submit data for a given MIPS performance period until the year following the performance period. For example, under the current policy, if a third-party intermediary self-nominated for the 2024 performance period and was required to submit a self-nomination participation plan but does not submit data for the 2024 performance period, CMS would not know the third-party intermediary did not submit MIPS data for the 2024 performance period until the end of the submission period in March 2025. Therefore, the third-party intermediary can continue to participate for the 2025 MIPS performance period as if they

were already approved and posted as a 2025 CMS-approved third-party intermediary. To shorten the timeline of when CMS is aware that the third-party intermediary does not submit any data and when CMS appropriately terminates the third-party intermediary, we proposed to update our policy such that CMS would request documentation that the third-party intermediary has contracted with Quality Payment Program's participants who will submit MIPS data for the given MIPS performance period. CMS's query for documentation would occur before the end of the calendar year for the given MIPS performance period. If the appropriate documentation cannot be provided by the date specified by CMS, the third-party intermediary would be terminated. This proposal would provide the information needed to terminate a third-party intermediary during the applicable performance period year instead of waiting until the following year.

Specifically, we proposed adding a new requirement for third-party intermediaries to submit documentation about intent to submit MIPS data and to terminate a third-party intermediary if they do not submit the appropriate documentation by the date specified by CMS (91 FR 44211). We also proposed to add at § 414.1400(e)(5)(ii) that beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under § 414.1400(b)(3)(viii), but does not submit MIPS data for the applicable performance period for which they self-nominated under § 414.1400(b)(3)(viii), will be queried by CMS before the end of the calendar year of the given MIPS performance period for documentation that they have contracted with Quality Payment Program participants who will submit data for the given MIPS performance period. If the appropriate documentation cannot be provided, the third-party intermediary would be terminated. We also proposed redesignating the existing text at § 414.1400(e)(5) to § 414.1400(e)(5)(i). We also proposed to add the heading ''Termination for Third-party Intermediary not submitting data.'' at § 414.1400(e)(5).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters opposed our proposal to update the requirements for submitting a participation plan after a year in which the QCDR or qualified registry did not submit data. The commenters supported the current policy requiring a submission plan after two years of failing to submit data but suggested that a single year in which the QCDR or qualified registry failed to submit data was not evidence of a pattern and that external circumstances may cause a QCDR or qualified registry to not report for a year. A commenter requested that if CMS were to finalize the policy, a process to demonstrate active engagement without submitting data should be developed.

Response: We clarify that the purpose of this requirement is not to establish a pattern of non-compliance and understand that external circumstances may cause a QCDR or qualified registry to not report for a year. However, maintaining these intermediaries who do not actively participate in MIPS does not provide a benefit to the program and may create confusion across interested parties when these vendors continue to appear on our qualified postings despite not submitting MIPS data. A submission plan is a way to demonstrate active engagement in lieu of submission of data. Therefore, finalizing this proposal will reduce potential confusion, support more efficiency across CMS, and help ensure that CMS-approved third-party intermediaries intend to actively participate in MIPS.

Comment: A commenter suggested that CMS clarify the documentation needed, the window within which the third-party intermediary must provide the documentation, and the criteria for approval in order to ensure that the third-party intermediary meets the submission requirements and avoids being terminated.

Response: We clarify that required documents to self-nominate have not changed outside of what is already posted. Intermediaries can refer to the ''2027–MIPS–QCDR-QualifiedRegistry-Self-Nomination-Fact-Sheet'' included in the ''2027 Self-Nomination Toolkit for QCDRs and Qualified Registries'' posted in the QPP Resource Library. This resource includes the requirement of participation of at least 25 participants, verification and maintenance of clinician information such as Business Associate Agreements and consents (intermediaries have contracted with QPP participants who will submit data) for the given MIPS performance period.

If the third-party intermediary does not intend to submit data to CMS on behalf of any of their clients, they should notify CMS at the end of the performance period (December 31st) that they will not be sending any data for that performance period. If the submitter could produce an acceptable reason for no data submission, CMS would consider that documentation, but the termination clause would be executed unless adequate reasoning was provided. With respect to the window, CMS would expect documentation to show why no data will be submitted for that performance period and why the third-party intermediary believes that they will have clinicians and/or groups submitting data to them for reporting for the next MIPS performance period. This documentation is due to CMS by December 31st of the performance period. Finally, we note that we will provide additional technical guidance, as appropriate, at a later date.

After consideration of public comments, we are finalizing our proposal as proposed, to add a new requirement for third-party intermediaries to submit documentation about submitting MIPS data and to terminate a third-party intermediary if they do not submit the appropriate documentation by the date specified by CMS. We are also finalizing at § 414.1400(e)(5)(ii) that beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under § 414.1400(b)(3)(viii), but does not submit MIPS data for the applicable performance period for which they self-nominated under § 414.1400(b)(3)(viii), will be queried by CMS before the end of the calendar year of the given MIPS performance period for documentation that they have contracted with Quality Payment Program participants who will submit data for the given MIPS performance period. If the appropriate documentation cannot be provided, the third-party intermediary would be terminated. Additionally, we are also finalizing our proposal as proposed, to redesignate the existing text at § 414.1400(e)(5) to § 414.1400(e)(5)(i). Finally, we are also finalizing as propose to add the heading ''Termination for Third-party Intermediary not submitting data.'' at § 414.1400(e)(5).

D. Calculating Final Score

1. Background

For a description of the statutory basis of and our previously finalized policies for calculating the final score for each MIPS eligible clinician, including performance category weights and reweighting the performance categories, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, CY 2021, CY

2022, CY 2023, and 2025 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785 and 53895 through 53900, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917, 86 FR 65509 through 65527, 87 FR 70093 through 70096, 89 FR 98455 through 98459 respectively).

In the CY 2027 PFS proposed rule, we proposed to change the data source that CMS uses to determine eligibility for reweighting under the MIPS automatic extreme and uncontrollable circumstances (EUC) policy beginning with the CY 2027 performance period/2029 MIPS payment year (91 FR 44212). We also proposed to change the deadline by which clinicians must request reweighting where data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third-party intermediary (91 FR 44213).

Section 1848(q)(5)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards for the applicable measures and activities for each performance category applicable to such clinician for a performance period and, using the methodology, provide for a final score (using a scoring scale of 0 to 100) for each MIPS eligible clinician for the performance period.

Additionally, section 1848(q)(5)(E) of the Act specifies how we must weigh the scores for each performance category in our calculation of the MIPS eligible clinician's final score. We have codified these weights at § 414.1380(c)(1). Meanwhile, section 1848(q)(5)(F) of the Act provides that, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of 0). We also have finalized at § 414.1380(c)(2) several policies addressing the basis for reweighting one or more performance categories, and how those weights will be redistributed to the remaining performance categories.

2. Alternative Data Sources To Determine Clinician Eligibility for the MIPS Automatic EUC

For the quality, cost, and improvement activities performance categories, under the current reweighting policies at § 414.1380(c)(2)(i)(A)(6) through (8), and for the Promoting Interoperability performance category, under the reweighting policies at § 414.1380(c)(2)(i)(C)(2) and (3), performance category weights may be redistributed to another performance category or categories in circumstances where MIPS eligible clinicians are subject to, or located in an area affected by, an EUC. This includes MIPS eligible clinicians with an approved application-based EUC reweighting request (83 FR 59871 through 59874 and 82 FR 53680 through 53687) or an automatic reweighting for a clinician identified as located in a CMS designated region affected by an EUC such as a Federal Emergency Management Agency (FEMA)-designated major disaster or a public health emergency (as determined by the Secretary of Health and Human Services) (82 FR 53895 through 53900). The MIPS automatic EUC policy for quality, cost, and improvement activities performance categories is described at § 414.1380(c)(2)(i)(A)(8) and the MIPS automatic EUC policy for the Promoting Interoperability performance category is described at § 414.1380(c)(2)(i)(C)(3). Additionally, we previously finalized at § 414.1380(c) that MIPS eligible clinicians scored on fewer than two performance category scores will receive a final score equal to the performance threshold, which will result in a neutral payment adjustment (81 FR 77326 through 77328 and 82 FR 53778 through 53779). We noted in the CY 2018 Quality Payment Program final rule that we anticipate the types of events that could trigger the MIPS automatic EUC policy would be events designated as a FEMA major disaster or a public health emergency declared by the Secretary, although we will review each situation on a case-by-case basis (82 FR 53897).

In the CY 2018 Quality Payment Program final rule, we specified that CMS will determine if an individual MIPS eligible clinician is located in an area affected by an EUC as identified by CMS based on the practice location address listed in the Provider Enrollment, Chain and Ownership System (PECOS) (82 FR 53898). Since adopting a policy to use PECOS data, recent clinician reweighting requests have increasingly identified clinicians who were incorrectly excluded from the MIPS automatic EUC policy because PECOS address data may be inaccurate or outdated in some cases. For example, individual MIPS eligible clinicians impacted by an EUC may not be identified by CMS in circumstances where a clinician has not updated their PECOS data or in circumstances where a clinician begins providing services in an additional geographic location or zip code. In order to ensure the accurate identification of impacted clinicians for subsequent performance periods, we proposed that beginning with the CY 2027 performance period/2029 MIPS payment year CMS will use the most current and reliable data available to determine if an individual MIPS eligible clinician is located in an area that has been identified as being affected by an EUC (91 FR 44212) that will trigger implementation of the MIPS automatic EUC policy. For example, we may use the zip codes on billed claims, that identify the location of service, to make this determination. This data source may be used in addition to or in lieu of the zip codes included in PECOS address data to achieve our goal of accurately identifying all impacted clinicians. This policy will ensure that all individual MIPS eligible clinicians affected by natural disasters and public health emergencies are accurately identified by CMS. We requested public comment on this proposal.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to use the most current and reliable data available to determine if an individual MIPS eligible clinician is located in an area that has been identified as being affected by an EUC. Commenters noted that disasters may disrupt clinical operations, and that it is essential for CMS to finalize this proposal to identify all affected clinicians and limit clinicians' need to apply for reweighting while experiencing a hardship.

Response: We thank commenters for their support.

Comment: Several commenters recommended that when considering which data are most current and reliable, CMS use additional data sources to supplement PECOS data. Commenters noted that clinicians may practice in multiple locations and that using PECOS or claims data alone could exclude temporary service locations. A commenter also recommended that CMS check data sources regularly in order to comprehensively identify clinicians, and to confirm that the process is accurate.

Response: We agree that it is important to be as comprehensive as possible in identifying clinicians that are impacted by an EUC. We intend to use whatever data are most accurate to identify impacted clinicians and this may include, for example, both the zip codes on billed claims as well as PECOS address data to achieve the goal of

accurately identifying all impacted clinicians. Additionally, we intend to explore the feasibility of identifying and informing impacted clinicians more frequently. We will continue to assess the accuracy and reliability of these methods to ensure that all individual MIPS eligible clinicians affected by natural disasters and public health emergencies are accurately identified by CMS and to limit the need for clinicians to submit an EUC application.

After consideration of public comments, we are finalizing as proposed the policy that beginning with the CY 2027 performance period/2029 MIPS payment year we will use the most current and reliable data available to determine if an individual MIPS eligible clinician is located in an area that has been identified as being affected by an EUC.

3. Update to the Deadline for Clinicians To Inform CMS That Third-Party Intermediary Did Not Submit Data Due to Reasons Outside the MIPS Eligible Clinician's Control

We previously finalized at § 414.1380(c)(2)(i)(A)(10) and (c)(2)(i)(C)(12) that beginning with the CY 2024 performance period/2026 MIPS payment year, we may reweight one or more of the quality, improvement activities, and Promoting Interoperability performance categories where we determine, based on documentation submitted to us through a reweighting request on or before November 1st of the year preceding the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of their data to a third-party intermediary, evidenced by a written agreement between the MIPS eligible clinician and the third-party intermediary, and the third-party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines (89 FR 62096). We previously finalized that this reweighting policy is available only for the quality, improvement activities, and Promoting Interoperability performance categories because a MIPS eligible clinician may delegate data submission to a third-party intermediary for these three performance categories, and not the cost performance category. MIPS eligible clinicians do not submit data separately for measures for the cost performance category; we score cost measures based solely on administrative claims data (89 FR 98455 through 98455).

As specified in the CY 2025 PFS final rule, we would only approve reweighting requests with evidence of a written agreement between the MIPS eligible clinician and a third-party intermediary. Such written agreement must provide that the MIPS eligible clinician delegated submission of their data to the third-party intermediary, and that the third-party intermediary agreed to submit data on their behalf in accordance with applicable deadlines, for the performance category or performance categories in question. We review requests and make determinations to reweight based on our assessment that data were not submitted due to reasons outside the control of the MIPS eligible clinician (89 FR 62096). Under this reweighting policy, the MIPS eligible clinician must submit reweighting requests beginning with the close of a relevant performance period's data submission period, only after it is confirmed that no data has been submitted in accordance with applicable deadlines. MIPS eligible clinicians were then required to submit reweighting requests on or before November 1st of the year preceding the associated MIPS payment year in order to allow time for CMS to re-calculate their final score and MIPS payment adjustment factor (89 FR 62096).

In the CY 2027 PFS proposed rule, we proposed to adjust the deadline by which clinicians would be able to submit reweighting requests for the quality, improvement activities, and Promoting Interoperability performance categories due to scenarios where a third-party intermediary did not submit data on their behalf in accordance with the applicable data submission deadlines (91 FR 44213). Specifically, we proposed that beginning with the CY 2025 performance period/2027 MIPS payment year, MIPS eligible clinicians would be able to submit reweighting requests on or before December 31st of the year preceding the relevant MIPS payment year (91 FR 44213). We are also codifying this updated deadline at § 414.1380(c)(2)(i)(A)(10) for the quality and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(12) for the Promoting Interoperability performance category. Under this reweighting policy, the MIPS eligible clinician may submit reweighting requests beginning with the close of a relevant performance period's data submission period, only after it is confirmed that no data has been submitted in accordance with applicable deadlines. MIPS eligible clinicians would then be able to submit reweighting requests before the beginning of the associated MIPS payment year.

The December 31st deadline for MIPS eligible clinicians to submit reweighting requests before the beginning of the associated MIPS payment year is aligned with the requirements finalized in the CY 2020 PFS final rule for clinicians to request reweighting in circumstances where data are inaccurate, unusable, or otherwise compromised. Under this policy, we apply reweighting only in cases when we learn of the compromised data before the beginning of the associated MIPS payment year (84 FR 63023 through 63026). We intend for this policy to offer increased flexibility to impacted clinicians and note that this timeline will encourage MIPS eligible clinicians and their third-party intermediaries to inform us of these concerns in a timely manner so we can update our data sets while minimizing the impacts to other interested parties who utilize MIPS data. The updated deadline will still allow CMS to re-calculate final scores and MIPS payment adjustments factor in a timely manner.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal that in scenarios where a third-party intermediary did not submit data on their behalf, clinicians would be able to submit reweighting requests on or before December 31st of the year preceding the relevant MIPS payment year. Commenters stated their support for policies that increase flexibility and ensure that clinicians are not penalized for events outside of their control. A few commenters also stated that aligning the deadline with the requirements for clinicians to request reweighting in circumstances where data are inaccurate, unusable, or otherwise compromised will reduce confusion.

Response: We thank the commenters for their support

Comment: A commenter recommended that CMS consider providing automatic reweighting in scenarios where a third-party intermediary did not submit data on behalf of a clinician, rather than requiring an application and documentation from impacted clinicians.

Response: We are extending the deadline for clinicians to submit reweighting requests in scenarios where a third-party intermediary did not submit data on their behalf in order to offer as much flexibility as possible and

to ensure that clinicians are not penalized for data submission issues that are outside of their control. Because CMS must be informed of any failure on the part of a third-party intermediary to submit data, it is not feasible to offer automatically applied reweighting when a third-party intermediary fails to submit data on behalf of a clinician. Additionally, before CMS can offer reweighting, CMS must consider the following in evaluating these requests: whether there is a written agreement between the MIPS eligible clinician and third-party intermediary; whether the MIPS eligible clinician knew or had reason to know of the issue with its third-party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third-party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines, which would also prohibit CMS from automatically applying reweighting.

Comment: A commenter recommended that CMS use a calendar year-end deadline for all reweighting and EUC hardship requests.

Response: We appreciate this recommendation and note that deadlines for reweighting requests are aligned to the extent possible. Under the automatically applied extreme and uncontrollable circumstances policy there is no deadline, as no application is required (83 FR 59875). Requests for reweighting must be submitted by December 31st of the performance period as specified in the CY 2018 QPP final rule for the Promoting Interoperability performance category both in the event of a significant hardship (82 FR 53683) and for the application based reweighting policy (82 FR 53781 through 53783). In scenarios where we are applying reweighting due to issues with data submission, we must set the application deadline later, during the data submission period, as clinicians would not be aware of issues during the performance period. Accordingly, the policy to update the application submission deadline to December 31st of the year preceding the payment year in scenarios where a third-party intermediary did not submit data on a clinician's behalf aligns with the policy specified in the CY 2020 PFS final rule for scenarios where data are inaccurate, unusable, or otherwise compromised. Specifically, in a scenario where data are inaccurate, unusable, or otherwise compromised CMS must learn the relevant information prior to the beginning of the associated MIPS payment year, which is December 31st of the year preceding the payment year (84 FR 63023 through 63026).

After consideration of public comments, we are finalizing as proposed the policy to require reweighting requests on or before December 31st of the year preceding the relevant MIPS payment year, and the proposal to codify this updated deadline at § 414.1380(c)(2)(i)(A)(10) for the quality and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(12) for the Promoting Interoperability performance category.

E. Public Reporting

1. Background

Public reporting of Merit-based Incentive Payment System (MIPS) eligible clinician performance information on the Compare Tool on medicare.gov (here after referred to as the ''Compare Tool'') is authorized under section 10331(a)(1) and (2) of the Affordable Care Act (ACA). Section 10331(a)(1) of the ACA established a physician compare website for the public reporting of clinician performance information.

The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) amended the Social Security Act by adding section 1848(q)(9), which requires the Secretary to continue to make publicly available, on the Compare Tool and in an easily understandable format, information regarding the performance of individual MIPS eligible clinicians and groups (81 FR 77391).

For previous discussions and established policies regarding public reporting on the Compare Tool, we refer readers to § 414.1395 as well as, the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2021 PFS final rule (85 FR 84947 through 84948), the CY 2022 PFS final rule (86 FR 65550 through 65554), the CY 2023 PFS final rule (87 FR 70109 through 70104), the CY 2024 PFS final rule (88 FR 79394 through 79401), and the CY 2026 PFS final rule (90 FR 49862). The Compare Tool is available at *https://www.medicare.gov/care-compare/* and in the Medicare Provider Data Catalog available at *https://data.cms.gov/provider-data/topics/doctors-clinicians*.

In this section of the final rule, we are finalizing removal of the requirement that prevents public reporting of any performance data reported through a MIPS Value Pathway (MVP) on new improvement activities and Promoting Interoperability measures on the Compare Tools for the first year the new measures and activities are included in such MVP. We also included a request for information (RFI) in the CY 2027 proposed rule to obtain feedback on potential improvements to the current star rating assignment methodology for quality measure scores reported under the administrative claims collection type.

2. Remove the Public Reporting Requirements for the MIPS Value Pathway (MVP) Requirement at § 414.1395(c)(2)

In the CY 2022 PFS final rule (86 FR 65550 through 65552), we finalized a policy under which we would not publicly report any MVP data, or MIPS performance data reported through an MVP, on a new improvement activity or new Promoting Interoperability measure, objective, or activity for the first year the new activity or measure is included in an MVP. For example, if a new improvement activity is finalized for inclusion in MIPS and an MVP for the CY 2027 performance period/CY 2029 MIPS payment year, under the current regulatory framework, we would not publicly report the first year of data for MIPS eligible clinicians who report the new improvement activity through the MVP. The intent of this requirement was to encourage participation in the new MVP reporting framework and to provide participants with additional time to transition to MVPs before their performance on new Promoting Interoperability measures or improvement activities were publicly reported. However, we have determined that this requirement has not served as an effective incentive for MVP participation because most improvement activities and Promoting Interoperability measures included in MVPs are not considered new as of 2026 and would be publicly reported, as they have been included in MIPS for over a year.

Consistent with section 1848(q)(9)(A)(i)(II) of the Act, we finalized in the CY 2017 Quality Payment Program final rule a decision to make all measures, objectives, or activities under the MIPS quality, cost, improvement activities, and PI performance categories available for public reporting on the Compare tools

(81 FR 77391 through 77396), using a phased approach for new performance information facilitated by section 1848(q)(9)(A) and (D). In the CY 2018 PFS final rule (82 FR 53825 through 53827), we further finalized that the first year of data for new improvement activities and Promoting Interoperability measures would be publicly reported for MIPS eligible clinicians on the Compare tools if all other public reporting criteria established under § 414.1395(b) are met. Since we established § 414.1395(c)(2), the annual consumer testing conducted consistent with the requirements of § 414.1395(b) demonstrates that patients and caregivers find the new improvement activities and Promoting Interoperability information understandable and useful for their decision-making. Therefore, this information should be publicly reported. The purpose of the Compare Tools is to provide patients with timely, clear, and credible information on provider performance that is available for public reporting.

Since the adoption of the requirement to not publicly report the first year of new improvement activity or Promoting Interoperability measure information for clinicians who report through an MVP, we have observed that the policy does not apply to a sufficient number of MIPS eligible clinicians to encourage meaningful participation in MVPs. For example, during 2025, only four individual clinician's performance information would not have been publicly reported for new improvement activities included in MVPs, and CMS did not include any new Promoting Interoperability measures in MVPs for 2025. This represented less than 1 percent of clinicians reporting the new improvement activities for that performance period. Similarly, we observed that this requirement applied to less than 1 percent of MIPS eligible clinicians reporting new improvement activities and Promoting Interoperability information overall since MVPs became available as a reporting framework beginning with the CY 2023 performance period. There has not been a sufficient number of new Promoting Interoperability measures or improvement activities included in MVPs, and there is not enough data to continue supporting this requirement.

In the CY 2027 proposed rule, we proposed to remove the requirement at § 414.1395(c)(2) that we would not publicly report any MVP data on new improvement activity or Promoting Interoperability measure, objective, or activity for the first year in which it is included in an MVP. Upon the removal of this requirement, we would revert to the original policy finalized in the CY 2018 PFS final rule (82 FR 53825 through 53827) and would include all eligible performance information for new improvement activities and new Promoting Interoperability measures in public reporting on the Compare Tools beginning with the first year in which the measures and activities are included in the program.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to remove the requirement that we will not publicly report any data on new improvement activities or Promoting Interoperability measures, objective, or activity during the first year in which it is included in an MVP. Several commenters agreed that this change will improve transparency in the quality of care. A commenter also noted that as MVP participation grows and stakeholders gain familiarity with the reporting framework, earlier public reporting is appropriate. Another commenter also discussed the low impact the first-year policy had on incentivizing MVP participation.

Response: We appreciate the commenters' support.

Comment: Some commenters supported the proposal but discussed the need for CMS to remain attentive to risks to data quality and compliance arising from accelerated public reporting timeframes. Commenters also recommended that CMS continue to provide clinicians with sufficient opportunity to review and correct reported information to ensure that publicly displayed results accurately reflect clinician performance.

Response: We appreciate the commenter's concern regarding data quality and compliance. We are required under sections 10331(a) and 10331(b) of the Affordable Care Act to include processes to ensure publicly reported data are valid, reliable, and accurate, and under section 1848(q)(9)(C) of the Act to provide clinicians with an opportunity to review information before it is publicly reported. Consistent with these requirements, we will continue to monitor data quality and maintain processes to assess, validate, and address potential data quality issues, and provide a 30-day preview period for clinicians and groups to review their performance information before it is public reported (80 FR 71120; 81 FR 77391; § 414.1395(d)).

Comment: Some commenters disagreed with the proposal. A few commenters stated that the first year allows clinicians needed time to adapt to new measures and activities before performance data are made public, and that removing the requirement may create unnecessary technical and workflow risks. A commenter also predicted that removing this requirement will increase hesitation for physicians to report MVPs.

Response: We appreciate the commenters' feedback regarding the time needed to adapt to new measures and activities, as well as potential workflow and technical challenges. These considerations can be addressed through clear guidance and education on any new improvement activity or Promoting Interoperability measure, objective, or activity. We have made this a priority since the beginning of MIPS and will continue to do so by providing a range of resources and support available through the Quality Payment Program website at *https://QPP.cms.gov*. We would also remind commenters of the nominal percentage of clinicians reporting new improvement activities and Promoting Interoperability measures overall since MVPs became available as a reporting option beginning with the CY 2023 performance period. Moreover, the limited reporting of new improvement activities and Promoting Interoperability measures suggests that the availability of such measures is not a significant driver of clinicians' decisions regarding MVP participation. Accordingly, we do not believe this policy is likely to materially influence clinicians' decisions to report MVPs.

Comment: Two commenters recommended expanding the current requirement so that CMS would not publicly report any data on new improvement activities or Promoting Interoperability measure during the first 2 years in which it is included in an MVP.

Response: Thank you for this recommendation. The primary concerns raised regarding the original proposal to remove the requirement to not publicly report MVP data on new improvement activities or Promoting Interoperability measures, objectives, or activities during its first year of availability to report focused on attributes of performance data from other performance categories, including measure attribution, calculation, risk adjustment methodologies, and benchmark development. Because individual MIPS eligible clinicians and groups simply attest to whether improvement activities and Promoting Interoperability measures were completed—and no calculation is involved at the measure or

activity level—we conclude that this does not provide a sufficient basis to postpone the public reporting of this information. Moreover, we believe that the recommendation to expand the initial public reporting grace period to 2 years would only further diminish transparency, particularly because this information continues to be meaningful to patients and supports their decision-making.

After consideration of the public comments, we are finalizing our proposal as proposed and removing the requirement at § 414.1395(c)(2) that we will not publicly report any MVP data on new improvement activities or Promoting Interoperability measures, objectives, or activities during the first year in which it is included in an MVP.

3. Request for Information: Star Rating Assignment Methodology for Administrative Claims Quality Measures

In the CY 2027 proposed rule, we issued an RFI to investigate potential improvements to the star rating methodology used to display administrative claims-based quality measure scores on clinician profile pages in the Medicare.gov Compare Tool. The option included in the RFI uses a standard deviation-based approach for the calculation of star rating cutoffs, reflecting the normally distributed nature of administrative claims-based measure scores. We requested feedback on whether this alternative method would be easily understood and more appropriate prior to public reporting of these scores. We appreciate the feedback we received in response to this comment solicitation and may consider this information for possible future rulemaking.

F. Advanced APMs

1. Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables us to advance accountability and encourage improvements in care. Our vision for increased clinician participation in Advanced APMs is aimed at integrating individuals' clinical needs across a spectrum of providers and settings to improve patient care and population health. In the CY 2026 PFS final rule (90 FR 50012), we finalized an update to our methodology to add an individual-level calculation to Qualifying APM Participant (QP) determinations, as set forth in § 414.1425(b)(3) and (c)(3), for all eligible clinicians participating in an Advanced APM, such that each eligible clinician would receive both APM Entity-level calculation and an individual-level calculation. Second, we finalized a policy at §§ 414.1435 and 414.1305 to perform QP determinations using both an E/M services approach and a Covered Professional Services approach.

2. QP Determination

a. General

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy for QP determinations at § 414.1425. We perform QP determinations for eligible clinicians three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations as described at § 414.1425.

In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77440) we established a process to calculate Partial QP status at § 414.1425(d). While to date our Partial QP policies have impacted only a small number of eligible clinicians, and thus we have not focused our discussion on this specific policy, we note that any changes to QP determinations at § 414.1425 also would likely require conforming changes to the policies for Partial QPs for consistency across the program.

b. Applying QP Determinations at the TIN/NPI Level

When we initially established our policy in the CY 2017 Quality Payment Program final rule to make most QP determinations at the APM Entity level, we also specified that we would apply QP status at the NPI level (81 FR 77440). In other words, for a given eligible clinician (NPI), were one of their TIN/NPI relationships to be determined a QP, that QP status has applied all of their TIN/NPI relationships, both for purposes of being excluded from MIPS as well as for the application of QP financial incentives. Given the complexity of the program, we believed it was the best approach at the time to create one QP status result for a clinician at all of their billing organizations. However, we did not intend for the policy to create conflicting incentives to participation in Advanced APMs. We realized that an NPI being a QP at all of their TINs also meant that they would receive the financial incentives of QP status, at the time the APM Incentive Payment, across all of those TINs, irrespective of whether those TINs were participating with Advanced APMs. However, we believed that the significance of that incentive would serve to increase clinician participation in Advanced APMs, and that the application of the QP thresholds would ensure that the clinician was appropriately incented to try to increase their individual Advanced APM participation. Further, we also had finalized at § 414.1450(c)(1) that we would pay the entire APM Incentive Payment amount to the TIN associated with the QP's participation in the Advanced APM Entity through which QP status had been attained (81 FR 77555), and we believed that by directing the lump sum entirely to the TIN participating with the Advanced APM Entity, we would reward the clinician without also rewarding non-participating TINs.

Upon gaining early experience implementing the APM Incentive Payments, we learned that for a variety of reasons (clinician movement, changes to a practice's TINs), we were not always able to send payment to the TIN associated with the APM Entity. We revised § 414.1450(c) in the CY 2021 PFS (88 FR 85035) to establish a hierarchy we would apply when determining where to send the APM Incentive Payments, which still prioritized TINs participating in Advanced APMs but allowed for payment to be sent to other, non-participating TINs if that was the only place we could find the clinician active at the time of payment. Still, we were satisfied that our prioritization of the lump-sum APM Incentive Payment to TINs that had Advanced APM participation remained a protection against providing non-participating TINs significant windfalls.

However, section 1848(d)(1)(A) of the Act establishes that, beginning with payment year 2026, QPs will receive a higher qualifying conversion factor update than non-QPs on their covered professional services claims. While the APM Incentive Payment has been extended multiple times as described in section III.G.6.d. of this final rule, the implementation of the QP conversion factor means that a QP financial incentive goes directly to TINs in the form of claims payment. Particularly as the QP conversion factor grows and constitutes a larger proportion of the QP incentive structure over time, we are

concerned that a significant proportion of incentives paid for QP status will be paid to TINs that are not part of an Advanced APM, creating a disincentive for these TINs to join an Advanced APM and meaningfully engage in risk-bearing value-based care.

As such, we proposed adding new provisions at § 414.1425(c)(8) and (d)(5) to apply QP status and Partial QP status, respectively, strictly to an eligible clinician as such term is defined at § 414.1305, specifically as a TIN/NPI combination, and that meets the definition at § 414.1305 of Qualifying APM participant (QP) or Partial QP, respectively, by participating in an Advanced APM during the QP performance period. Under the proposal, QP status and Partial QP status would therefore only apply to the clinician at the TIN that is participating with the APM Entity in the Advanced APM. Therefore, the financial incentives in the form of both the APM Incentive Payment and the QP conversion factor would apply to the NPI's claims only with those TINs, as would the ability of a Partial QP to opt into or out of MIPS.

For an eligible clinician who is participating in multiple APM Entities, the proposal's effects would be based on how the clinician becomes a QP or Partial QP. Section 414.1435(h)(2) specifies that CMS assigns to the eligible clinician the score that results in the greater QP status. In accordance with this provision, if an eligible clinician attains QP status at the individual level from participation in multiple APM Entities, under the proposal we would assign the QP status at each of the clinician's TINs participating across those APM Entities. However, if, the eligible clinician did not attain QP status at the individual level and did attain QP status as part of a specific APM Entity-level determination, we would assign QP status to the clinician at only the TIN(s) that are associated with the APM Entity or Entities that collectively attained QP status. If the eligible clinician did not attain any QP status through any determination but did attain Partial QP status, this same preference for the highest status would apply for Partial QP status. As we explained in the proposed rule, this proposed approach would maintain the longstanding policy within QPP to give the clinician the highest possible outcome available to them.

We proposed to no longer apply QP determinations to a clinician as a whole and we recognized the possibility of this being perceived as introducing complexity into an eligible clinician's QPP experience, for example because under the proposal some eligible clinicians would be a QP with one TIN and participating in MIPS with another. In these cases, the eligible clinician's QP status would apply at each of their TINs under the proposal. For the clinicians who are not already participating in an Advanced APM across all of their TIN reassignments, we explained that CMS believes that this policy would provide a meaningful incentive to increase their participation in an Advanced APM. Participation in Advanced APMs across Original Medicare continues to grow and we expect this policy to support our progress.

As we noted in the proposed rule, our proposal aligns with MIPS, which already operates on a TIN/NPI basis, meaning that QPP internal operations and communications would be the same for all clinicians. Under our current policy, we receive a significant number of inquiries from billing organizations where clinicians have been excluded from MIPS as a result of QP status with another billing organization where that organization is participating in an Advanced APM. In these cases, organizations have made a significant investment to report MIPS but do not receive a MIPS final score and MIPS payment adjustment for these clinicians. Our proposed policy would ensure that these billing organizations are in control of how MIPS eligibility criteria apply to clinicians that have been reassigned to their organizations.

In addition to programmatic alignment, we explained in the proposed rule that our operational experience tells us that, when a TIN has any clinicians who are subject to MIPS, it most often simply reports on all of its clinicians, as including everybody is easier than removing clinicians before reporting. As such, we believe that in the relatively few situations where the proposal would result in an eligible clinician with QP status at one TIN being subject to MIPS at one or more other TINs, the TINs where the clinician is subject to MIPS in many cases already report data for that clinician, meaning that neither the clinician nor their MIPS-participating TIN(s) would bear any new burden as a consequence of the proposed policy. Further, as it was established at the outset, operational experience indicates that MIPS eligible clinicians' experience has not been significantly impaired by the TIN/NPI operation of that portion of the program.

Finally, in the proposed rule we recognized that this proposal would decrease the dollar value of the financial incentives available for affected QPs. However, we believe that assigning QP status at the TIN/NPI level will serve to prevent an increasing windfall for TINs that do not participate in Advanced APMs, particularly given that the higher qualifying conversion factor update that is now part of the physician fee schedule. This update is baked into the amount Medicare pays on claims and therefore always is paid to the TIN through which the service was furnished without regard to whether that TIN is part of the Advanced APM that conferred QP status to the clinician. We believe that this proposal would prevent waste and potential for abuse, and that these matters outweigh concerns around complexity or reduced incentives. Notably, under current law the QP conversion factor will increase each year relative to the non-QP conversion factor. In addition, because payment of the claims is made directly to the TINs through which the services were billed means that CMS has no mechanism of directing these incentives to Advanced APM participating TINs in the way we have done with the APM Incentive Payment. As such, while relatively few QPs would be affected by this proposal, CMS anticipates the amount of the resulting windfall flowing directly to non-participating TINs under the current framework will increase over time, with little benefit to the clinician and no benefit to the practices that are doing the work of Advanced APM participation.

With respect to Partial QP status, the proposal would maintain programmatic alignment within QPP and would provide for the application of the ability to opt out of MIPS at the TIN/NPI level. While there are not financial incentives for these eligible clinicians in the same manner that there are for QPs, we believe that applying the opt-out flexibility at the TIN/NPI level similarly confers the burden reduction of Partial QP status. In our proposal we limited the application of Partial QP status to only to those TINs that are affiliated with the APM Entity participating in the Advanced APM. However, based on comments discussed in this section we are modifying our proposal and finalizing a policy that extends Partial QP status to all TIN/NPI combinations for a given NPI.

We proposed amending § 414.1425(c) to add new paragraph (8) to apply QP status strictly to the eligible clinician as such term is defined at § 414.1305, specifically as a TIN/NPI combination, and that meets the definition of Qualifying APM participant (QP) as defined at § 414.1305 by participating in an Advanced APM during the QP performance period. We also proposed amending § 414.1425(d) to add new paragraph (5) to establish the same

policy with respect to the application of Partial QP status.

We sought public comments on this proposal.

We received several public comments on these proposals. Comments were a mix of support and opposition. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed the proposal, citing administrative complexity for clinicians who bill under multiple TINs. Commentors noted that incentives for QPs are an important driver of Advanced APM participation, particularly for large organizations with multiple TINs. Commenters requested that we provide additional impact data.

Response: We appreciate the substantial interested parties' input on this proposal. We acknowledge commenter concerns regarding administrative burden for clinicians who bill under multiple TINs. In an effort to understand the potential for increased burden we have investigated how this policy would have impacted historical participation in QPP. We started by modeling participation data from 2025. We were particularly concerned about instances where TIN/NPIs would be required to report to MIPS. However, we found that there would be very few instances where a TIN/NPI no longer had QP status but was also MIPS eligible at an individual level. Out of all the TIN/NPIs participating in an Advanced APM in 2025 only 1.1 percent would fall into the category of having lost QP status, while also being MIPS eligible at the individual level. In other words, the overwhelming majority of TIN/NPIs in advanced APMs have seen no change in reporting requirements. In order to further investigate MIPS reporting feasibility for this subgroup we looked at their MIPS reporting data for the 2025 performance year. We found that more than half of the TIN/NPIs, represented in the aforementioned 1.1 percent, already had MIPS participation data at the APM entity, group, or individual level.

We have noted in the CY 2026 PFS final rule (90 FR 49994) that, projecting future participation in Advanced APMs and the impact is difficult. We also continue to believe that the benefit of TIN/NPI-level application of QP status furthers the goal of increasing participation in Advanced APMs. In an effort to be responsive to interested parties' concerns we are finalizing a modification to our proposed policy as discussed in the comment and response below. Our modification will ensure that NPIs who are otherwise meaningfully participating, in Advanced APMs, above the Partial QP thresholds, can be afforded the choice to opt in or out of MIPS participation.

As commentors noted we would expect our policy to have a greater impact on large integrated systems which are often comprised of more than one TIN. We believe our policy provides an incentive structure that favors the inclusion of more providers in Advanced APMs, including specialists. Where the previous policy may have further promoted the creation of multiple TINs and the exclusion of some providers within a large organization from Advanced APM participation our policy seeks to correct the incentive structure.

Comment: Several commenters noted potential issues for new TIN reassignment. Commentors noted that because there is a two-year delay between performance year and payment year our proposed policy may inhibit providers from joining new organizations or leaving their current organization.

Response: We acknowledge commentor concern around new and changing TIN assignment. With the gap in timing between the QP performance period and payment year where we expect new TIN/NPI combinations will be created both as a part of an Advanced APM and not participating in an Advanced APM. We share this concern and plan to further clarify the application of the qualifying APM conversion factor to new TIN/NPI combinations in these scenarios in future rulemaking.

Comment: Several commenters suggested that CMS' application of QP, and Partial QP status was inconsistent with the statutory provisions under section 1833(z) and 1848(q) of the Act.

Response: We thank commenters for their comments. However, our application of QP status at the TIN/NPI level is consistent with our previous application of ''qualifying APM participant'' as defined in section 1833(z)(2) of the Act. When we established our policy in the CY 2017 Quality Payment Program final rule to apply QP status at the NPI level (81 FR 77440) we also considered applying QP and Partial QP status at the TIN/NPI level. We elected not to do so, in large part, to promote administrative simplicity as we developed the infrastructure to operate the new program. Some commentors had suggested we should apply QP status at the TIN/NPI level, and while we disagreed at that time and noted that we believed the most logical reading of the statute was to apply QP status at the NPI level, we did not dismiss the alternative of the TIN/NPI approach as legally barred. We also note that applying QP and Partial QP status at the TIN/NPI level is consistent with the definition of ''Eligible professional'' at section 1848(k)(3)(B) of the Act. Furthermore, we established in the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77441) and have consistently made QP determinations at the APM entity group level as defined at § 414.1305, which we note is a group of ''eligible clinicians'' as defined at § 414.1305 specifically as identified as a unique TIN and NPI combination. In other words, QP determinations have consistently considered TIN/NPI as the basis for participation in an Advanced APM.

Comment: Several commenters supported the proposal as more accurately targeting incentives to TINs that assume Advanced APM risk. Commenters on this subject included practices that have been adversely impacted by some of their clinicians having QP and Partial QP status and therefore not receiving the positive MIPS payment adjustment. Commentors noted that active enrollments often exist for TINs where the clinician is no longer rendering a large volume of services and that in these cases the action of another organization impacts the payment they receive through their TIN. Commenters who raised this perspective have indicated the financial impact of not receiving the MIPS adjustments for member clinicians who attained QP status elsewhere.

Response: We appreciate the support for the proposed policy. Our aim is to balance program integrity and burden reduction. Applying QP status to the TINs participating in Advanced APMs ensures that organizations participating in these models are provided an earned incentive. We believe that this will result in a program where TINs are incentivized to participate in Advanced APMs. Furthermore, our policy aligns the application of QP and partial QP status at the TIN/NPI level with MIPS which for some TINs may reduce fragmentation within the program. In other words, when a group practice receives a MIPS payment adjustment based on their own performance and they are no longer impacted by the behavior of another group in QPP.

Comment: Several commenters requested that the policy be delayed, or that CMS adopt an alternative approach that preserves QP or partial QP status at the NPI level while limiting the financial incentive to participating TINs. These commenters note return on investment in Advanced APM

participation, as well as MIPS relief afforded by QP and partial QP status, as key considerations. Some commenters expressed that providing TIN/NPI-level QP information for education would allow for practices to track and plan.

Response: We appreciate commentor feedback. We recognize that commenters are in particular considering that the policy can lead to eligible clinicians being required to participate in MIPS with one or more TINs. However, we believe that delaying the implementation of the policy would extend the provision of the financial windfall described in this section without sufficient benefit to clinicians to be necessary. As proposed, the policy change is effective with the 2027 QP performance period, meaning that the first instance of MIPS reporting as a consequence of the policy would be in early 2028; further, while QPs are excluded from MIPS as clinicians, in significant numbers of cases, the QPs' other TINs (those that do not participate with Advanced APMs) already have MIPS reporting experience. We identified that when MIPS eligible TINs report for their practices, they commonly report for everyone, including clinicians who are QPs. As such, we do not believe that preparation for potential MIPS readiness warrants a delay. Further, we note that for TINs who are part of the APM Entities participating in Advanced APMs, the application of QP and Partial QP status at the TIN/NPI level would not increase burden or result in MIPS obligations. QP determinations always have involved the use of TIN/NPI-level data to form the numerator (APM Entity participation), so APM Entities and eligible clinicians who historically have attained QP status would not see that expectation change as a consequence of our proposed policy. Rather, the policy matches the resulting QP or partial QP status to the TIN/NPI combination(s) that were used in the determination itself. As such, TINs associated with participating APM Entities will not see changes in the QP or partial QP status results. The only thing that would change for these TINs is the amount of any APM Incentive Payment they might get in or after payment year 2029; we note that, under current law, there is no such incentive beyond payment year 2028.

The second suggestion made by these commenters was to continue applying QP and Partial QP status at the NPI level while limiting financial incentives to Advanced APM-participating TINs. This type of approach would stop the windfall we described in this section without leading to situations where MIPS participation is required for clinicians who have attained QP or Partial QP status. We recognize the appeal of such an approach, especially in cases where QP status or Partial QP status is earned at the individual level, signifying that the eligible clinician is individually and meaningfully participating in value-based care through one or more Advanced APM. As a result, we are modifying our proposed policy such that, in cases where QP or Partial QP status is attained at the individual level, the eligible clinician would be treated as a Partial QP across all of their TIN/NPI combinations. We believe that this modification preserves our goals with respect to program integrity and stopping wasteful spending without requiring eligible clinicians who are meeting or exceeding the Partial QP thresholds as individuals to also engage with MIPS. Notably, this approach also preserves the option for these clinicians to participate in MIPS, which we believe is important in light of supportive comments that we described earlier in this section.

Because Partial QP status means that reporting to MIPS is optional, this modification meets the preferences of both those commenters who are concerned about the burdens associated with MIPS reporting and those commenters who support the idea of having all of their clinicians participating in MIPS and receiving the attendant payment adjustments. Specifically, the modification would allow the TIN the choice of whether or not to participate in MIPS, allowing TINs to prioritize either MIPS adjustments or reduced burden, as they see fit.

We are finalizing the policy to amend § 414.1425(c) and (d) to add new subparagraphs that apply, respectively, QP status and Partial QP status at the TIN/NPI level, with a modification based on public comments that, for eligible clinicians whose QP or Partial QP status was determined at the individual level, we will apply Partial QP status to all TIN reassignments for the NPI as codified at § 414.1425(d), which will allow for the choice of whether or not to participate in MIPS for the applicable performance period.

3. APM Entity Terminations

a. Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77446 through 77447), we finalized for the timing of QP determinations that a QP Performance Period runs from January 1 through August 31 of the calendar year that is 2 years prior to the payment year. We finalized that during the QP Performance Period, we will make QP determinations at three separate snapshot dates (March 31, June 30, and August 31), each of which will be a final determination for the eligible clinicians who are determined to be QPs. The QP Performance Period and the three separate QP determinations apply similarly for both the group of eligible clinicians on a Participation List and the individual eligible clinicians on an Affiliated Practitioner List.

In the CY 2017 Quality Payment Program final rule, we finalized at § 414.1425(c)(5) and (d)(3) that an eligible clinician is not a QP or Partial QP for a year, respectively, if the APM Entity group voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period (81 FR 77446 through 77447). We also finalized at § 414.1425(c)(6) and (d)(4) that an eligible clinician is not a QP or Partial QP for a year if one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP or Partial QP payment amount threshold or QP or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities (81 FR 77446 through 77447).

b. APM Entity Terminations Before Financial Risk was Borne

In the CY 2020 PFS final rule (84 FR 63087 through 63089), we finalized revisions to § 414.1425(c)(5) to add § 414.1425(c)(5)(i) and (ii) to state, beginning with the 2020 QP Performance Period, that an eligible clinician is not a QP for a year if: (1) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; (2) or the APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs. We also finalized conforming revisions in § 414.1425(d)(3) with respect to Partial QP status. In addition, we finalized revisions to our regulation at § 414.1425(c)(6) and add § 414.1425(c)(6)(i) and (ii) to state, beginning with the 2020 QP Performance Period, that an eligible clinician is not a QP for a year if: (1) one or more of the APM Entities in which the eligible clinician participates

voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities; or (2) one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities. We also finalized conforming revisions in § 414.1425(d)(3) with respect to Partial QP status.

When we finalized the revisions in the CY 2020 PFS, due to a clerical error we inadvertently included language in the text of § 414.1425(c)(5)(ii) that we believe is unnecessary and has potential to cause confusion. Specifically, § 414.1425(c)(5)(ii) states that an eligible clinician is not an QP for a year when an APM Entity termination occurs ''at a date on which the APM Entity would not bear financial risk for that QP performance period under the terms of the Advanced APM*, even if such termination date occurs within such QP Performance Period*'' (emphasis added). The inclusion of the emphasized language was a clerical error. This language did not appear in the CY 2020 PFS proposed rule regulation text for § 414.1425(c)(5)(ii) (84 FR 40929) nor does it appear in the companion finalized regulation for Partial QP status at § 414.1425(d)(3)(ii). What's more, in the CY 2020 PFS final rule, we indicated that we were finalizing these policies ''without modification'' (84 FR 63089), but the addition of this clause would have constituted a modification that we would have discussed if intentionally made. Further, we believe the language is unnecessary because § 414.1425(c)(5)(i) already addresses terminations within the QP performance period. Therefore, we believe that the clause not only serves no meaningful purpose, but also that it could result in confusion because it could appear to be filling a regulatory gap that in fact does not exist. However, we do not believe any clarifying language is necessary. The principal reasons that cause us to change proposed regulatory text in final are to address public comments or fix an error or address an issue that we recognized only after the proposal was made. We had not received any comments that indicated any confusion regarding the applicable timeframe for the proposed version of § 414.1425(c)(5)(ii) (that again, did not include the relevant clause), and we had not independently identified any problems with the proposed text, so we did not have any reason to believe we needed to clarify the applicable timing. Furthermore, we have not experienced any problems in the implementation of the companion regulation with respect to Partial QP status, which also does not contain this additional clause.

Therefore, to align the QP regulation text at § 414.1425(c)(5)(ii) with the Partial QP regulation text at § 414.1425(d)(3)(ii), and to remove any potential for confusion with respect to the intended timeframe for APM Entity terminations before financial risk is borne in the Advanced APM, we proposed to amend the text of § 414.1425(c)(5)(ii) to remove '', even if such termination date occurs within such QP Performance Period.''

We sought but did not receive public comments on our provision to modify the text of § 414.1425(c)(5)(ii). Therefore, we are finalizing the text of § 414.1425(c)(5)(ii) to read ''The APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk for that performance period under the terms of the Advanced APM.'' as proposed.

c. Clarification for APMs Without a Participation List

The definition of ''Participation List'' was first established in the CY 2017 QPP final rule, (81 FR 77008). In that rule, we codified the definition of ''Participation List'' at § 414.1305 as the mechanism by which CMS identifies the eligible clinicians associated with a given APM Entity for purposes of QP determinations and related QPP functions (81 FR 77246 through 77257). The definition has remained substantively unchanged since its initial adoption in the CY 2017 QPP final rule, though the regulatory provisions that rely upon it—including those governing QP determination methodology under § 414.1425, APM Entity group composition under § 414.1317, and APM Performance Pathway eligibility under § 414.1367—have been refined through subsequent annual rulemaking. The existing regulatory definition of ''Participation List'' does not expressly address the circumstance in which an APM does not require or generate a Participation List for its APM Entities. This gap has the potential to create interpretive ambiguity—particularly as CMS considers the design of future episode-based, mandatory, and other APMs under which Participation Lists may not be a structural feature of APM participation. To enhance regulatory clarity and ensure that the framework governing QP determinations and MIPS APM scoring can accommodate the full range of APM designs CMS may implement, we proposed a clarification to the definition of ''Participation List'' within § 414.1305 to ensure that in cases where a participation list is not operationally practicable, we would not include these APMs for MIPS scoring or QP determinations.

We sought but did not receive public comments on this provision. Therefore, we are finalizing our proposed clarification to the definition of ''Participant List'' within § 414.1305 as proposed.

4. APM Incentive Payment

a. Overview

Section 1833(z)(1) of the Act establishes an incentive payment for participation in eligible alternative payment models, which originally ran from payment years 2019–2024. As such, when we established the definition of ''APM Incentive Payment'' at § 414.1305 in the CY 2017 Quality Payment Program final rule (81 FR 77008) we included in the definition that the payment would be made from payment year 2019 through payment year 2024. We also established at § 414.1450(b)(1) that the amount of the APM Incentive Payment was ''equal to 5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year'' (81 FR 77554).

b. APM Incentive Payment Extension

The incentive payment originally was extended as part of the Consolidated Appropriations Act, 2023, which provided for a 3.5 percent payment in payment year 2025. In the CY 2023 PFS final rule (88 FR 79539), we finalized revisions to § 414.1450(a)(1)(i) to make reference payment years 2019 through 2025 and to § 414.1450(b)(1) to codify the legislative extension. The Consolidated Appropriations Act, 2024 provided an additional payment of 1.88 percent in payment year 2026, and in the CY 2024 PFS final rule (89 FR 98564) we again made conforming updates to § 414.1450(a)(1)(i) and (b)(1)

to incorporate that extension. As such, currently, in § 414.1450(a)(i) and (b)(1), the lump sum APM Incentive Payment is available for payment years 2019 through 2026, with the applicable percentage varying by year in accordance with the statute: 5 percent for payment years 2019 through 2024, 3.5 percent for payment year 2025, 1.88 percent for payment year 2026.

The Consolidated Appropriations Act, 2026, now has provided for a 3.1 percent APM Incentive Payment in payment year 2028. Accordingly, we proposed to codify this extension for 2028 into § 414.1450(a)(1)(i) and (b)(1). We also recognize that with several extensions of this payment now having occurred, and each extension having a new and unique applicable percentage, the current single-paragraph structure of the regulation at § 414.1450(b)(1) is beginning to get unwieldy and becoming harder to follow. Specifically, the relevant percentages and years have been listed within a single sentence at § 414.1450(b)(1) that describes the amount of the incentive payment. With each extension, this set of clauses has grown longer, creating greater distance between the concept of a percentage applying and the description of what the percentage in question applies to. Adding the most recent extension will make this sentence longer still.

Therefore, we proposed a technical restructuring of § 414.1450(b)(1), which would not change the policies of this paragraph but, we believe, simply make it easier to read in light of now having three years of extensions at different percentages. Under the proposal, we would pull out the references to percentages and years from the first sentence of (b)(1) into a new list of subparagraphs, mirroring the way that the QP and Partial QP thresholds are listed in § 414.1430. Specifically, we proposed to amend § 414.1450(b)(1) by: (1) remove all of the language in the first sentence that references percentages and payment years and begin the sentence ''The amount of the APM Incentive Payment is''; (2) insert after ''is'' the phrase ''the applicable percentage established for the payment year''; (3) add at the end of the subparagraph ''The applicable percentage is the following value for the indicated payment years:''; and (4) create new paragraphs (i) through (iv) to list the specific applicable percentages, including the extension for 2028. The proposed revised paragraph would read similar to the following:

The amount of the APM incentive payment is the applicable percentage established for the payment year of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment. The applicable percentage is the following value for the indicated payment years.

- 2019 through 2024: 5 percent.
- 2025: 3.5 percent.
- 2026: 1.88 percent.
- 2028: 3.1 percent.''

We believe that this proposed revised structure is cleaner than the current single paragraph with its increasingly long detailing of years and percentages, and therefore will provide an easier-to-follow explanation of the APM Incentive Payment amount. These proposed technical structural changes would not modify the substantive policies of this provision. The only substantive change we proposed is the codifying in new subparagraph § 414.1450(b)(1)(iv) of the 3.1 percent legislated for 2028.

We sought public comments on this proposal.

The following is a summary of the comments we received and our responses.

Comment: Commenters noted that these payments remain important to supporting physician participation in Advanced APMs and encouraging the transition toward value-based care. The commenters appreciated CMS's implementation of the congressional extension and urged CMS to continue supporting policies that provide stability and meaningful incentives for clinicians participating in Advanced APMs.

Response: We appreciate the commenter's support. After consideration of public comments, and for the reasons discussed in this section, we are finalizing as proposed our changes to § 414.1450 codifying in new paragraph § 414.1450(b)(1)(iv) of the 3.1 percent legislated for 2028.

c. APM Incentive Payment Definition

As described in the earlier, we established the definition of ''APM Incentive Payment'' at § 414.1305 in the CY 2017 Quality Payment Program final rule (81 FR 77008), we included language that specifically referenced payment years 2019 through 2024. However, when we revised § 414.1450 in the CY 2023 and CY 2024 PFS final rules to codify the legislative extensions of the APM Incentive Payment, we neglected to make conforming changes to the definition of ''APM Incentive Payment'' at § 414.1305 to reflect those subsequent legislative actions. As such, the current definition at § 414.1305 references only the original statutory payment years of 2019 through 2024, making it out-of-date. To address this, we proposed to update the definition to remove the references to specific years and instead refer to § 414.1450(b)(1). The revised definition would read: ''*APM Incentive Payment* means the lump sum incentive payment for a year as described in § 414.1450(b)(1) and that is paid for an eligible clinician who is a QP for the applicable year.'' This proposal would allow for the APM Incentive Payment definition to automatically be inclusive of any year that may be added through future legislation and codified at § 414.1450(b)(1) without the need for a conforming change to the definition at § 414.1305 itself.

We sought public comment on this proposal.

We did not receive public comments on this proposed revision to the definition of ''APM Incentive Payment'' within § 414.1305, and therefore, we are finalizing as proposed.

d. Summary

We proposed to codify the most recent legislative extension of the APM Incentive Payment by: (1) revising § 414.1450(a)(1)(i) to include the payment amounts for 2019 through 2028; and (2) revising § 414.1450(b)(1) to make structural changes that include the applicable percentages for 2019 through 2024, 2025, 2026, and 2028, respectively at § 414.1450(b)(1)(i) through (iv). We note that the only substantive change involved in these modifications would be the addition of the 2028 extension. The proposed structural changes would not affect the policies of this provision but simply improve the readability of this paragraph.

We also proposed to revise the definition of ''APM Incentive Payment'' at § 414.1305 to remove the current references to specific payment years and replace them with a reference to the years described in § 414.1450(b)(1).

We sought comment on our proposal to revise § 414.1450(a)(1)(i) and § 414.1450(b)(1) along with the definition of ''APM Incentive Payment'' at § 414.1305 but did not receive public comments on these provisions. Therefore, we are finalizing these revisions as proposed.

5. QP and Partial QP Thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs

required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019 (performance period 2017). The All-Payer Combination Option, through which QP status is calculated using the Medicare Option in addition to an eligible clinician's participation in Other Payer Advanced APMs, has been applicable since payment year 2021 (performance period 2019). In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b). Section 304(a)(2) of Division G, Title I, Subtitle C, of the Consolidated Appropriations Act (CAA), 2024 (Pub. L. 118–42, March 9, 2024), amended section 1833(z)(2) of the Act by extending a freeze for payment years 2025 and 2026 (performance periods 2023 and 2024) in the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status through the Medicare Option. Section 6204 of the CAA, 2026 (Pub. L. 119–75, February 3, 2026), applied these freezes to payment year 2028 (performance period 2026). Specifically, section 6204(a)(2) of the CAA, 2026 amended section 1833(z)(2) of the Act: (1) to freeze the QP payment amount threshold at 50 percent for payment year 2028 (performance period 2026); and (2) require that, for payment year 2026, the Secretary use the same percentage criteria for the QP patient count threshold that applied in payment year 2022. Further, section 6204(b) of the CAA, 2026, amended section 1848(q)(1)(C)(iii) of the Act to freeze in payment year 2028 the 40 percent Partial QP threshold and apply the 50 percent threshold for payment years 2027 and 2029 and thereafter. The law did not change the thresholds that apply.

To conform our regulation with the amendments made by the CAA, 2026, we sought comment on our proposed amendments to § 414.1430.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported the temporary reduction in QP and Partial QP thresholds for performance year 2026 required by the Consolidated Appropriations Act, 2026, but expressed concern about the scheduled increase in future years and its effect on clinicians' ability to attain QP status.

Response: We appreciate commenters' support for the reduced QP and Partial QP thresholds applicable for performance year 2026. The QP and Partial QP payment-amount and patient-count thresholds, including the scheduled increases for future performance years, are established in statute under section 1833(z)(2) and section 1848(q)(1)(C)(iii) of the Act respectively. CMS does not have authority to permanently freeze these thresholds administratively; any such change requires congressional action. We will continue to provide timely, transparent guidance identifying the applicable thresholds for each performance year through the Quality Payment Program website, consistent with commenters' request.

After considering interested parties' comments we are finalizing as proposed amendments to § 414.1430 by revising paragraphs (a) and (b) to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count under the Medicare Option. Over the years, as legislative changes have been enacted, we have added new regulatory provisions. Additionally, we note that these thresholds increased for payment year 2027 (performance period 2025) before the CAA, 2026 restored them to lower levels for payment year 2028 (performance period 2026). To maintain relative structural simplicity in the regulation, we are finalizing condensed lists of applicable years and thresholds for both the Medicare Option and All-Payer Combination Option. The finalized structure would limit duplication in our description of the applicable thresholds.

We are finalizing the following revisions to § 414.1430(a) and (b) for the Medicare Option and All-Payer Combination Option QP and Partial QP thresholds as follows:

- Paragraph (a)(1)(vi) to state that for 2027 the amount is 75 percent, and a new paragraph (a)(1)(vii) to state that for 2028, the amount is 50 percent, and a new paragraph (a)(1)(viii) to state that for 2029 and later, the amount is 75 percent.
- Paragraph (a)(2)(vi) to state that for 2027 the amount is 50 percent, and a new paragraph (a)(2)(vi) to state that for 2028 the amount is 40 percent, and a new paragraph that for 2028 and later, the amount is 50 percent.
- Paragraph (a)(3)(vi) to state that for 2027 the amount is 50 percent, and a new paragraph (a)(3)(vii) to state that for 2028, the amount is 35 percent, and a new paragraph (a)(3)(viii) to state that for 2029 and later, the amount is 50 percent.
- Paragraph (a)(4)(vi) to state that for 2027 the amount is 35 percent, and a new paragraph (a)(4)(vii) to state that for 2028, the amount is 25 percent, and a new paragraph (a)(3)(viii) to state that for 2029 and later, the amount is 35 percent.
- Paragraph (b)(1)(i)(B) to state that for 2027 the amount is 75 percent, and a new paragraph (b)(1)(i)(C) to state that for 2028, the amount is 50 percent, and a new paragraph (b)(1)(i)(D) to state that for 2029 and later, the amount is 75 percent.
- Paragraph (b)(2)(i)(B) to state that for 2027 the amount is 75 percent and a new paragraph (b)(2)(i)(C) to state that for 2027, the amount is 50 percent, and a new paragraph (b)(2)(i)(D) to state that for 2028 and later, the amount is 75 percent.
- Paragraph (b)(3)(i)(B) to state that for 2027 the amount is 50 percent, and a new paragraph (b)(3)(i)(C) to state that for 2028, the amount is 35 percent, and a new paragraph (b)(3)(i)(D) to state that for 2029 and later, the amount is 50 percent.
- Paragraph (b)(4)(i)(B) to state that for 2027 the amount is 35 percent, and a new paragraph (b)(4)(i)(C) to state that for 2028, the amount is 25 percent, and a new paragraph (b)(4)(i)(D) to state that for 2029 and later, the amount is 35 percent.

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501–3520, we are required to provide notice in the **Federal Register** and solicit public comment before ''collection of information'' requirement is submitted to the Office of Management and Budget (OMB) for review and approval. Collection of information is defined under 5 CFR 1320.3(c) of the PRAs implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, 44 U.S.C. 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

Our July 16, 2026, proposed rule (CMS–1848–P, OMB 0938–1485)

solicited public comment on each of the aforementioned issues for the proposed provisions that contained confirmed or potential information collection requirements. As indicated below, comments were received for ICR #3 (Limiting Medicare Coverage of Certain Individuals) and ICR #5 (Medicare Prescription Drug Inflation Rebate). A summary of the comments and our responses follow under the applicable ICR section.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' (BLS) May 2025 National Occupational Employment and Wage Estimates for all salary estimates (*https://www.bls.gov/oes/tables.htm*). In this regard, Tables D–A1 and D–A2 present BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

We note that the BLS data does not include median hourly wage rates for multiple physician occupation types listed in Table D–A2; in these cases, the BLS identifies that the median wage rate is equal to or greater than $115.00/hr or $239,200 per year. BLS data for prior years, such as the May 2022 and May 2023 data, provide similar notes for median wage rates for occupations that are above the same threshold ($115.00/hr or $239,200 per year for the May 2022 BLS data (*https://www.bls.gov/oes/2022/may/oes_nat.htm*) and May 2023 BLS data (*https://www.bls.gov/oes/2023/may/oes_nat.htm*)). Therefore, for consistency with previous years for estimating physician wage rates, we have continued to use mean hourly wage rates across our wage estimates.

TABLE D-A1: NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES (EXCLUDING PHYSICIANS)

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Billing and Posting Clerks	43-3020	24.55	24.55	49.10
Business Operations Specialists	13-1000	44.63	44.63	89.26
Computer System Analysts	15-1211	55.10	55.10	110.20
General and Operations Managers	11-1021	64.87	64.87	129.74
Licensed Practical and Licensed Vocational Nurses	29-2061	32.24	32.24	64.48
Medical and Health Services Managers	11-9110	67.77	67.77	135.54
Software Quality Assurance Analysts and Testers	15-1253	53.60	53.60	107.20
Training and Development Managers	11-3131	71.33	71.33	142.66

For our purposes, BLS' May 2025 National Occupational Employment and Wage Estimates does not provide an occupation that we could use for ''Physician'' wage data. To estimate a Physician's costs, we used an average conglomerate wage of $307.74/hr as demonstrated in Table D–A2.

TABLE D-A2: NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES (PHYSICIANS)

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Anesthesiologists	29-1211	173.35	173.35	346.70
Family Medicine Physicians	29-1215	122.99	122.99	245.98
General Internal Medicine Physicians	29-1216	128.46	128.46	256.92
Obstetricians and Gynecologists	29-1218	134.16	134.16	268.32
Orthopedic Surgeons, Except Pediatric	29-1242	179.60	179.60	359.20
Pediatric Surgeons	29-1243	241.37	241.37	482.74
Pediatricians, General	29-1221	101.98	101.98	203.96
Physicians, All Other	29-1229	125.98	125.98	251.96
Psychiatrists	29-1223	129.78	129.78	259.56
Surgeons	29-1240	175.17	175.17	350.34
Surgeons, All Other	29-1249	179.78	179.78	359.56
Total				3,385.24
Average Physician Wage (3,385.24/11)				307.74

Private Sector

To derive average costs, we used the most recently available data from the US Bureau of Labor Statistics (BLS), the May 2025 National Occupational Employment and Wage Statistics, for all salary estimates (*https://www.bls.gov/oes/tables.htm*). In this regard, Table D–A3 presents BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage.

TABLE D-A3: NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation Title	Occupation Code	Mean Hourly Wage ($/hr)	Fringe Benefits and Other Indirect Costs ($/hr)	Adjusted Hourly Wage ($/hr)
Billing and Posting Clerks	43-3021	24.55	24.55	49.10
Computer System Analysts	15-1211	55.10	55.10	110.20
General and Operations Managers	11-1021	64.87	64.87	129.74
Licensed Practical and Licensed Vocational Nurses	29-2061	32.24	32.24	64.48
Medical and Health Services Managers	11-9110	67.77	67.77	135.54
Physicians	29-1210	133.30	133.30	266.60
Software Quality Assurance Analysts and Testers	15-1253	53.60	53.60	107.20

As indicated, we are adjusting our employee hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate the total cost is a reasonably accurate estimation method.

Wages for Individuals

We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of $24.05/hr.

The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices [409] identifies the approach for valuing time when individuals undertake activities on their own time. To derive the costs for beneficiaries, we used a measurement of the usual weekly earnings of wage and salary workers of $1,159 [410] for 2024 and then divided by 40 hours to calculate an hourly pre-tax wage rate of $28.98/hr. This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 17 percent or $4.93/hr ($28.98/hr × 0.17), resulting in the post-tax hourly wage rate of $24.05/hr ($28.98/hr − $4.93/hr). Unlike our private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

B. Information Collection Requirements (ICRs)

1. ICRs Regarding Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions (§ 414.504)

Section 1834A(h)(2) of the Act states that chapter 35 of title 44 United States Code (U.S.C.), which includes such provisions as the PRA, does not apply to information collected under section 1834A of the Act. Consequently, we are not setting out burden for the changes under § 414.504. Please refer to section VII.F.4. of this final rule for a discussion of the impacts associated with the changes to § 414.504 as described in section III.C. of this final rule.

2. ICRs Regarding Ambulatory Specialty Model

In this final rule, we are finalizing several provisions related to the Ambulatory Specialty Model (ASM), which is tested under the authority of section 1115A of the Act. As stated in the CY 2026 PFS final rule (90 FR 49973), under section 1115A(d)(3) of the Act, Chapter 35 of title 44 U.S.C., does not apply to the testing, evaluation, and expansion of models under section 1115A of the Act and, therefore, the information collection requirements associated with the ASM provisions described in this rule are not subject to the PRA.

3. ICRs Regarding Limiting Medicare Coverage of Certain Individuals

In accordance with section 1899C of the Act, this final rule updates the Medicare initial enrollment forms to expand the response options to include specific citizenship, nationality, and immigration status or category data elements to support Medicare Part A enrollment eligibility determinations. This is a small change that will not increase the burden that is currently approved by OMB under control numbers 0938–0251 (CMS 18–F–5), 0938–0245 (CMS 4040), 0938–1426 (CMS–10797) and 0938–0080 (CMS 43). The revised forms will be submitted to OMB for review and approval.

For the CMS–10797 form, the majority of respondents are expected to be U.S. citizens or nationals who will spend no more than one minute on the citizenship section, which is considered negligible. The currently approved burden for this collection reflects 34,612 respondents generating 34,612 total annual responses at 0.25 hours per response, for a total of 8,653 hours (34,612 responses × 0.25 hr/response) at a cost of $208,105 (8,653 hrs × $24.05/hr), or $6.01 per respondent ($208,105/34,612 respondents). We requested comment on our proposed burden assumptions for the CMS–10797.

Otherwise, the addition of the new SEP category to the CMS–10797 form creates additional burden for individuals who utilize the SEP to apply

[409] *https://aspe.hhs.gov/sites/default/files/migrated_legacy_files//176806/VOT.pdf.*

[410] *https://fred.stlouisfed.org/series/LEU0252881500A.*

for enrollment in Medicare following a change in their citizenship, nationality, or immigration status or category. Individuals will need to provide information requested in the CMS–10797 to enroll or re-enroll in Medicare using the newly established SEP. We do not have historical data on which to base a precise estimate of SEP utilization, as this is a newly proposed enrollment pathway with no prior utilization experience. OACT estimates that approximately 32,000 individuals will lose Medicare coverage beginning in 2027. Therefore in the proposed rule, for purposes of this burden estimate, we assumed that approximately 10 percent of individuals projected to lose Medicare coverage, approximately 3,200 (32,000 × 0.10) individuals annually, may utilize the SEP to re-enroll in Medicare following a change in their citizenship, nationality, or immigration status or category. We estimated 3,200 total respondents annually at 0.25 hours per response, for an addition of 800 hours (3,200 responses × 0.25 hr/response) and $19,240 (800 hr × $24.05/hr), or $6.01 per respondent ($19,240/3,200 respondents), beginning in CY 2027. We assumed that the 0.25 hours per response applies to this SEP, as the burden associated with establishing or reestablishing immigration status or category and updating documentation, as necessary or applicable, is outside the Medicare enrollment process and, therefore, this burden estimate only accounted for time to enroll in Medicare.

The updated total burden for OMB control number 0938–1426, inclusive of both the currently approved burden and the additional SEP burden, was 37,812 respondents (34,612 + 3,200), 9,453 hours (8,653 hr + 800 hr), and $227,345 ($208,105 + $19,240).

The procedural steps that MA and Part D plans must take to receive and process disenrollment transactions are currently approved by OMB under control numbers 0938–0753 (CMS–R–267) and 0938–0964 (CMS–10141). We are not attributing any additional burden to this provision since the change is small relative to the number of disenrollment transactions processed by MA and Part D plans annually.

We sought public comments on all aspects of the proposed changes to entitlement and eligibility rules for Parts A and B, the underlying burden assumptions, and the changes to limit coverage under Medicare cost plans, MA plans, and Part D plans. We received the following comments on the underlying burden assumptions.

Comment: Some commenters noted that CMS's estimate of 32,000 individuals that will lose Medicare coverage in 2027 is lower than CBO's estimate of individuals potentially losing Medicare coverage. Commenters noted that if this estimate is incorrect, it may risk skewing the 2027 cost estimate related to the burden on individuals who need to complete the CMS–10797 form to enroll using the new SEP, as the burden estimate assumed approximately 10 percent of the 32,000 estimated to lose coverage would use the SEP to re-enroll in coverage after regaining status.

Response: We acknowledge the commenters' concerns. There is very little information available on the number of beneficiaries who will be affected by this provision of the law. CMS actuaries and CBO both prepare estimates to inform policymakers of the potential impact of enacted legislation and other regulatory policy proposals. Because of varied assumptions using this limited information, the estimates are likely to be different, and one may turn out to be more accurate than the other. However, based on the SSA's most recent estimate of approximately 300,000 preliminary notices that will be sent to individuals in November 2026 to request updated evidence of eligibility, we are revising our estimate of individuals using the newly established SEP to 10 percent of 300,000 or 30,000. Since the SEP is available to any individual who loses coverage or does not enroll due to the new eligibility requirements in section 1899C, we believe that a percentage of the individuals who receive the notices and will potentially lose coverage is a reasonable approximation of who will use the SEP to re-enroll.

Therefore, for purposes of the revised burden estimate for OMB control number 0938–1426, we assume that approximately 10 percent of individuals who receive the November preliminary notice, approximately 30,000 (300,000 × 0.10) individuals annually, may utilize the SEP to re-enroll in Medicare following a change in their citizenship, nationality, or immigration status or category. As noted in the proposed rule, there is no historical precedent on which to base the estimate and CMS will take into account actual utilization data in future years to estimate the burden of this new SEP. We estimate 30,000 total respondents annually at 0.25 hours per response, for an addition of 7,500 hours (30,000 responses × 0.25 hr/response) and $180,375 (7,500 hr × $24.05/hr), or $6.01 per respondent ($180,375/30,000 respondents), beginning in CY 2027. We assume that the 0.25 hours per response applies to this proposed SEP, as the burden associated with reestablishing immigration status and updating documentation is outside the Medicare enrollment process and therefore this burden estimate only accounts for time to enroll in Medicare.

The updated total burden for OMB control number 0938–1426, inclusive of both the currently approved burden and the additional SEP burden, is 64,612 respondents (34,612 + 30,000), 16,153 hours (8,653 hr + 7,500 hr), and $388,480 ($208,105 + $180,375).

4. ICRs Regarding Rebate Reduction Requests Under Sections 11101 and 11102 (§§ 427.402, 428.302, and 428.303)

This ICR collects information from manufacturers of Part B rebatable biosimilar biological products and generic Part D rebatable drugs and biosimilars that are requesting rebate reductions to inform CMS' determinations regarding such rebate reduction requests pursuant to the policies adopted in the CY 2025 PFS final rule (89 FR 97710). The information collection requirements for the Rebate Reduction Requests under sections 11101 and 11102 of the IRA ICR currently approved under OMB Control Number 0938–1474 are scheduled to expire on July 31, 2027. Upon publication of the CY 2027 PFS final rule, we will request renewal of this collection from OMB prior to its expiration. The renewal will continue the currently approved requirements with technical updates to the forms, such as the email address to submit rebate reduction requests and references to relevant sections of the CY 2025 PFS final rule. These technical updates do not materially affect burden from respondents or CMS. No policy changes related to this collection are proposed in this rule. Consequently, we are not setting out any proposed burden estimates under this section of this final rule.

5. ICRs Regarding Medicare Prescription Drug Inflation Rebate (§ 428.203(c))

The following changes will be submitted to OMB for approval under control number 0938–1485 (CMS–10930).

In section III.F.3.c.2.c. of this final rule, we are requiring all providers and suppliers that are covered entities as defined under § 10.3 (hereinafter collectively ''340B providers'' unless otherwise noted) to submit data elements from their Part D 340B claims to the 340B repository for all covered Part D drugs billed to Medicare Part D by such covered entity or its contractor(s) beginning in 2027 for Part

D claims with dates of service on or after January 1, 2027. To allow sufficient time for 340B providers to gather, validate, and submit the specified data to the 340B repository, we are requiring that 340B providers are expected to report data on a quarterly basis (though they may choose to submit more frequently) to the 340B repository within one calendar quarter following the close of the relevant calendar quarter. For example, for claims with dates of service between October 1, 2027 through December 31, 2027, 340B providers will submit the data elements from Part D 340B claims to the 340B repository no later than March 31, 2028. We are also finalizing a delayed deadline of September 30, 2027 for the first mandatory submission, which will cover claims data with dates of service during Q1 and Q2 2027.

340B providers will submit this data directly to CMS to be included in the 340B repository. We will rely upon the completeness and accuracy of the data submitted by 340B providers to the 340B repository, consistent with the 340B provider requirement to certify the accuracy of such submissions, to consider all data elements received by the 340B repository to be associated with Part D 340B claims. We are also requiring, as part of every submission to require 340B providers (or an individual or contractor with the delegated authority as an authorized representative of the 340B provider to perform the certification) to certify that the data elements from all claims submitted to the 340B repository are from verified 340B claims and, to the best of the 340B provider's knowledge, its submissions include all Part D 340B claims for the 340B provider at the time of submission for the relevant period. 340B providers or their authorized representative will be required to certify the completeness and accuracy of the data submitted and to certify that the submitter is authorized to submit on behalf of the 340B provider. We will match the stored data elements in the 340B repository to PDE transactions for each Part D rebatable drug dispensed during the applicable period and will evaluate 340B repository data for: (1) data integrity and (2) submission frequency and completeness across covered entity types and geographies.

The information collected by CMS from 340B providers will provide CMS with information to assess the usability of the data received and feasibility of CMS removing 340B units from the total number of units used to calculate the total rebate amount in the future based on the data submitted. This data and information are necessary to implement statutory requirements of the Medicare Part D Drug Inflation Rebate Program at section 1860D–14B(b)(1)(B) of the Act, which requires that beginning with plan year 2026, we shall exclude from the total number of units for a Part D rebatable drug, with respect to an applicable period, those units for which a manufacturer provides a discount under the 340B Program. As stated earlier, we are requiring all 340B providers to submit data elements from their Part D 340B claims to the 340B repository for all covered Part D drugs billed to Medicare Part D beginning in 2027 for Part D claims with dates of service on or after January 1, 2027.

Based on internal CMS analyses of the unique 340B ID numbers in the OPAIS database that are active (that is, not terminated) with at least one contract pharmacy association listed, we estimate that approximately 14,000 340B providers would respond by submitting data 4 times per year (quarterly) to the 340B repository in the format and manner specified by CMS.

For a 340B provider or its third-party administrator (TPA), we estimate it would take 6 hours at $107.20/hr for a Software Quality Assurance Analyst and Tester sampling for each submission and 2 hours at $129.74/hr for a General and Operations Manager to review each submission. In addition to the recurring submissions, we estimate it would take a General and Operations Manager one hour at $129.74/hr to complete the one-time registration for the 340B repository.

In aggregate, we estimate an annual burden of 462,000 hours ([56,000 responses × 8 hr/response] + [14,000 340B providers × 1 hr/registration]) at a cost of $52,366,440 [(2 hr × $129.74/hr × 56,000 responses) + (6 hr × $107.20/hr × 56,000 responses) + (1 hr × $129.74/hr × 14,000 registrations)]) (see Table D–A4).

TABLE D-A4: SUMMARY OF TOTAL ANNUAL BURDEN FOR ALL 340B PROVIDERS OR TPAS TO COMPLETE 340B REPOSITORY DATA ELEMENTS FORM IN 2027

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§ 428.203(c) (Regarding the Medicare Prescription Drug Inflation Rebate Program under Sections 11101 and 11102 of the Inflation Reduction Act)	0938- 1485 (CMS-10930)	14,000 340B Providers or TPAs	70,000 (14,000 registrations/year + 56,000 responses/year	Varies	462,000	Varies	52,366,440

We received public comments on these estimates. The following is a summary of the comments we received and our responses.

Comment: A few commenters stated they would be able to submit the data requested for the 340B repository without undue burden. A few commenters who recognized our responsibility to remove 340B drug units from Part D inflation rebate calculations also expressed concerns about the burden of mandatory quarterly submissions to the 340B repository. Many commenters stated that the burden on covered entities to submit the proposed data was underestimated. Some commenters stated the burden estimate does not account for the burden associated with other 340B-related changes, including the requirement to add claim modifiers to 340B drugs reimbursed under the Outpatient Prospective Payment System and the 340B Rebate Pilot. A couple of

commenters stated the difficulty with implementing changes and processes to comply with mandatory submissions by January 1, 2027 because identifying and consolidating all Part D 340B claims across the various 340B TPAs and contract pharmacies with which they contract is challenging for smaller covered entities. One commenter stated that the burden to comply is much higher than CMS estimates because the scope of data collection is broader than necessary to achieve the agency's stated objectives.

Response: We thank the commenters for their feedback. We appreciate the commenters sharing their concerns regarding the burden of updating software, modifying workflows, and coordinating multiple sources of data to comply with the mandatory submissions to the 340B repository. We believe that the majority of concerns expressed are with regard to the initial setup for producing the requested data as opposed to burden associated with ongoing quarterly submissions. We expect that the initial submission will take longer due to 340B providers setting up processes to perform repeated submissions. However, subsequent submissions would require less time due to operational efficiency gained. For purposes of the burden estimate, the submission response times are averaged across the year such that the burden for initial setup for producing the required data is accounted for in the quarterly submission burden. CMS assumes 340B providers, or their TPAs, will have a dedicated Quality Assurance Analyst or team of analysts reviewing sample claim-level data elements, collecting and reporting the required data elements, and certifying that all data elements submitted are from verified 340B claims. CMS also assumes if a TPA submits claim-level data on behalf of a 340B provider, the 340B provider will not also submit this data. We estimate it would take a General and Operations Manager 1 hour to complete the one-time registration for the 340B repository, while we expect that each submission will take 6 hours for a Software Quality Assurance Analyst and Tester and 2 hours for a General and Operations Manager. CMS anticipates that TPAs would submit claims data to the 340B repository to support their covered entity clients, as is the practice in some State Medicaid 340B clearinghouses today.[411] As a result, CMS expects the number of parties submitting claims data may be less than what is previously outlined, which is representative of individual covered entities as potential respondents whereas TPAs may submit claims on behalf of multiple covered entities. We believe that these estimates are conservative because we have not taken into account the number of 340B providers that will use TPAs for submission of data and the fact that the TPAs may already have updated software, workflows in place, and coordination from multiple sources of data for similar requirements and submissions that can be leveraged to submit the required data to the 340B data repository on behalf of the 340B provider. We note that some 340B providers, or their TPAs, could have already registered and set up their system(s) for submission when the 340B data repository was a voluntary submission for covered entities.

The commenters' suggestion that the burden estimate does not account for the burden associated with other 340B-related changes, including the requirement to add claim modifiers to 340B drugs reimbursed under the Outpatient Prospective Payment System and the 340B Rebate Pilot, is out of scope for this final rule.

In response to the commenters that stated the difficulty with implementing changes and processes to comply with mandatory submissions by January 1, 2027, we clarify that the proposed deadline for submission of 340B claims from January 1 through March 31, 2027 was June 30, 2027, so covered entities would have needed to be able to send the required data by June 30, 2027 instead of by January 1, 2027. However, in response to commenters' feedback, we are extending the deadline for submitting 340B claims from January 1 through March 31, 2027 from June 30, 2027 to September 30, 2027. This 3-month change provides covered entities with an additional quarter in which to implement changes to comply with the mandatory submissions into the 340B repository.

In response to the commenter that stated the scope of data collection is broader than necessary to achieve the agency's stated objectives, we disagree that the scope of the data collection is too broad. The data collected is limited to the minimum necessary, which only includes Medicare Part D 340B claims. To be clear, 340B providers are not required to submit 340B claims data from other payers to include Medicaid and commercial or private insurance to the 340B repository. This scope aligns with the Medicare Part D Drug Inflation Rebate Program.

Comment: A couple of commenters recommended that CMS publish detailed file specifications and provide a test environment for covered entities prior to the first submission deadline to facilitate successful compliance with the mandatory data submissions into the 340B repository.

Response: We thank the commenters for their feedback. We note that detailed file specifications and other information about the 340B repository are located in the Medicare Part D Claims Data 340B Repository section of the Medicare Inflation Rebate Program website.[412] We also note that the 340B repository is publicly accessible as of October 1, 2026. Interested parties may access the repository and submit files to test their processes during the voluntary submission period prior to January 1, 2027.

6. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out Shared Savings Program burden estimates under this section of the rule. Please refer to the Regulatory Impact Analysis (section VI. of this final rule) for a discussion of the impacts associated with the proposed changes to the Shared Savings Program as described in section III.G. of this final rule.

7. ICRs Regarding the Quality Payment Program

a. Background

The following identifies finalized changes that will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

All changes to burden and information collections for Quality Payment Program ICRs due to changes associated with finalized policies will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). Non-rulemaking revisions, resulting from updated data and assumptions, will also be submitted to OMB. This section is intended to focus our PRA score on the impact of this rule's finalized policy changes.

We estimate that the finalized QPP policies will reduce annual information collection burden by 51,188 hours and $5,808,502 for the CY 2027 performance period/2029 MIPS payment year, primarily through removal of the Promoting Interoperability Security Risk Analysis measure and increased participation in MVPs following the

addition of three new MVPs, with smaller reductions from removal of the ONC attestations, while required reporting of the two Promoting Interoperability electronic prior authorization measures will add 323 hours and $35,595 annually beginning with the CY 2028 performance period/2030 MIPS payment year.

However, independent of this final rule changes, we also intend to merge the information collection requests in the Virtual Groups PRA package (OMB control number 0938–1343, CMS–10652) into OMB control number 0938–1314 (CMS–10621) in order to consolidate QPP-related ICRs into a single collection of information request to avoid duplication. For more detailed information on our finalized policies, we refer readers to section IV. of this final rule.

We apply the updated BLS wage rate data identified in section V.A. of this final rule. We refer readers to section VII.F.10. of this final rule for the Regulatory Impact Analysis for discussion of impacts to final scores and payment adjustments.

(1) Framework for Understanding the Burden of MIPS Data Submission

Across organizations permitted or required to submit data on behalf of clinicians, there can be variation across the types of data provided, and whether a clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, a MIPS Alternative Payment Model (APM) participant, or an Advanced APM participant. MIPS eligible clinicians and other clinicians voluntarily submitting data to MIPS for the quality, Promoting Interoperability, and improvement activities performance categories may submit data as the following participation types: individual; group; virtual groups (available only for traditional MIPS); subgroups (available only for MIPS Value Pathways (MVPs); and APM Entities. Eligible clinicians who attain Partial Qualifying APM Participant (QP) status may be subject to data collection burden if they elect to participate in MIPS. MIPS eligible clinicians are not required to submit any data for the cost performance category, as CMS calculates performance on measures specified for this performance category based on claims-data. Virtual groups are subject to the same data submission requirements per performance category as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted.

For the aforementioned participation types, we assessed the same burden per reporting option and assumed from our available data that all non-Medicare Shared Savings Program (Shared Savings Program) APM Entity submissions are assessed based on a single Taxpayer Identification Number (TIN). Per section 1899(e) of the Act, the PRA does not apply to the Shared Savings Program, thus we excluded submissions by Shared Savings Program APM Entities from our MIPS reporting estimates. The regulatory impact analysis in section VII.F.8. of this final rule discusses impacts to the Shared Savings Program from provisions associated with this final rule.

There are three MIPS reporting options: traditional MIPS, MVPs, and the APM Performance Pathway (APP). In section V.B.7.c.(1) of this final rule, we provide distinct estimates for the traditional MIPS and MVP reporting options for the quality performance category, focusing on changes to our currently approved burden estimates. As with the CY 2026 PFS final rule (90 FR 49942 through 49943), we have not separately estimated burden for traditional MIPS and MVPs for the Promoting Interoperability and improvement activity performance categories. Traditional MIPS and MVPs require reporting on all Promoting Interoperability performance category objectives and measures. Traditional MIPS reporting for the improvement activities performance category typically requires attestation to two improvement activities; however, clinicians, groups, and virtual groups with a special status designation are only required to attest to one improvement activity. All MVP participants are only required to attest to one improvement activity. For additional details on historic burden assumptions for the improvement activities performance category, we refer readers to the CY 2025 PFS final rule (89 FR 98492). In the related collection of information request (OMB control number 0938–1314, CMS–10621), we aggregate submissions across all reporting options. For additional burden historic frameworks, we refer readers to the CY 2024 PFS final rule (88 FR 79422 through 79424) and the CY 2025 PFS proposed rule (89 FR 62111 through 62114).

(2) Additional Data Considerations

The accuracy of our estimates of the total burden for data submission for MIPS performance categories may be impacted by several factors. First, we are unable to predict with certainty the number of participants who will obtain a QP status, thus exempt from MIPS reporting, for the CY 2027 performance period/2029 MIPS payment year and later years. Eligible clinicians who do not achieve QP status for a given performance period may be required to participate in MIPS. Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2027 performance period/2029 MIPS payment year or later years. Therefore, the actual number of Partial QP participants and whether they elect to submit MIPS data may differ from our estimates. However, we believe our methodology for assessing burden, as described in the preceding Framework for Understanding the Burden of MIPS Data Submission section, is most appropriate given all the limitations. We refer readers to section VII.F.10.e.(2).(b). of this final rule for a discussion of the potential but unquantifiable burden implications on MIPS-related burden of the policy to modify the application of the QP and partial QP status, presented in section IV.F.2. of this final rule.

b. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

We refer readers to § 414.1400(d) for our previously established requirements for CMS-approved third-party intermediaries that may submit data on behalf of MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities. The following sections detail in the finalized policy that impact existing ICRs relevant to Third-Party Intermediaries. Additionally, in section IV.C. of this final rule, we are finalizing our proposals to (1) add a requirement that CMS-approved third-party intermediaries may be terminated after failure to submit data for one year; and (2) add a new requirement for third-party intermediaries to submit documentation about intent to submit MIPS data and to terminate a third-party intermediary if they do not submit documentation by the date specified by CMS. We refer readers to section VII.F.10.e.(2).(c). of this final rule for additional discussion on the impact of these finalized policies for which burden is not quantifiable.

(1) Full and Simplified Self-Nomination for Qualified Clinical Data Registries (QCDRs) and Qualified Registries

As described in section IV.C. of this rule, we are finalizing our proposals to: (1) further clarify that additional requirements for health IT vendors do not apply beginning with the CY 2025 performance period/2027 MIPS payment year because health IT vendors are no longer allowed to submit MIPS data as third-party intermediaries starting in that year; (2) clarify the level at which performance feedback reports are provided; (3) update the existing

sampling methodologies for data auditing purposes; and (4) update the policy so that third-party intermediaries will not be permitted to make changes to the qualified posting after it is publicly posted on the Quality Payment Program resource library. We assume that there will be no impact on the time required to complete either the full or simplified self-nomination process due to these finalized policies. Additionally, related to our policy to implement core measures in traditional MIPS and MVPs in section IV.A.4.d.(1)(c) of this final rule, we are finalizing our proposal to revise the data submission requirement in which a QCDR or a qualified registry must be able to submit at least six qualified measures including at least one MIPS core measure, beginning with the CY 2027 performance period/2029 MIPS payment year. This policy does not alter the minimum number of measures a qualified registry or QCDR is required to support; therefore, we assume no impact to the overall time estimated for qualified registries or QCDRs to submit their information at the time of self-nomination. We are not revising our estimated responses and time per response for both the Full and Simplified Self-Nominations for Qualified Registries and QCDRs under OMB control number 0938–1314 (CMS–10621). We did not receive public comments on our burden estimates and assumptions for these provisions.

(2) Third-Party Intermediary Plan Audits

We are finalizing our proposed updates related to Third-Party Intermediary Plan Audits, which include targeted audit requirements, participation plan submissions, and corrective action and termination processes for third-party intermediaries.

(a) Participation Plans

In section IV.C.3.c. of this final rule, we are finalizing our proposal to update the conditions for approval related to participation plans such that third-party intermediaries that do not submit data for 1 year would be required to submit a participation plan during self-nomination. Currently, third-party intermediaries are required to submit a participation plan only after not submitting data for 2 consecutive years. We do not expect this policy to affect the number of participation plans submitted during the self-nomination process and therefore do not anticipate an impact on burden; therefore, we are not modifying our burden estimates under OMB control number 0938–1314 (CMS–10621). We did not receive public comments on our burden estimates and assumptions for this provision.

c. ICRs Regarding Quality Data Submission

(1) Changes to Quality Performance Category Submissions

In section IV.A.4.a. of this final rule, we are finalizing the addition of three new MVPs beginning with the CY 2027 performance period/2029 MIPS payment year. In section IV.A.3. of this final rule, we are finalizing with modification our proposal that MVPs and APP will be the only reporting option for MIPS beginning in the CY 2029 performance period/2031 MIPS payment year such that the proposal will take effect beginning with the CY 2031 performance period/2033 MIPS payment year. As the collection of information section of this rule provides estimates for the period in which the OMB control number 0938–1314 (CMS–10621) is approved, we will update our burden estimates for this provision in a future rule. Additionally, we are finalizing our proposal to include virtual groups in MVP reporting beginning in the CY 2029 performance period/2031 MIPS payment year.

Comment: A commenter recommended that we evaluate the significant financial, technical, and operational burdens that increased reliance on QCDRs and qualified registries for MVP reporting may place on medical practices and without adequate compensation to recover costs. The commenter asked for clarification on whether these costs are included in our burden estimates, including time to purchase, implement, integrate, maintain, monitor, and troubleshoot the technical requirements needed to produce an accurate report.

Response: We acknowledge the commenter's feedback and understand the concerns raised regarding the transition to MVP reporting. We generally estimate burden for information collection related to reporting, recordkeeping or third-party disclosure requirements; we do not include operational, technical, or financial costs in our burden estimates. We note that the majority of the clinicians may already participate in MIPS, and therefore, would have the technical infrastructure to support MVP reporting. Additionally, given the variation in group practice structures and in the MVPs selected, we are unable to reliably quantify the change in burden associated with transition to MVP reporting. As discussed in section IV.A.3. of this final rule, we are delaying the sunset of traditional MIPS by 2 years, with MVP reporting required for clinicians beginning in the CY 2031 performance period/2033 MIPS payment year. We will continue to consider these concerns, including the operational implications of fully implementing MVPs, in future rulemaking as we further develop and refine the MVP framework.

The following policies will not have an impact on burden as they do not affect the minimum reporting requirements for the respective quality performance category submission:

In section IV.A.4.a.(2). of this final rule, we are finalizing the proposal for MVP maintenance updates to our MVP inventory that are aligned with the MVP development criteria (85 FR 84849 through 84854), in section IV.A.4.d.(1).(c).(iii). of this final rule, we are finalizing our proposal for MIPS core measures in traditional MIPS and MVPs with an attestation process. In section IV.A.4.d(1).(e). of this final rule, we are also finalizing MIPS quality measure inventory updates. We did not receive public comments on our burden estimates and assumptions for these provisions.

In section IV.A.4.d.(1).(c).(iii). of this final rule, we are finalizing our proposal to establish a MIPS core measure attestation process whereby the clinician would be required to attest during the data submission period that there was not an available and applicable MIPS core measure for them to report. We are not adjusting our burden estimates due to this provision as we believe the currently approved burden for traditional MIPS and MVP quality measure submissions is sufficient to absorb the negligible effort of the attestation in lieu of reporting a quality measure. We did not receive public comments on our burden estimates and assumptions for this provision. In the following sections, we estimate the number of submissions for each collection type that require active reporting by individual clinicians, groups, subgroups (as applicable for MVP reporting), or non-Shared Savings Program APM Entities for the CY 2027 performance period/2029 MIPS payment year per the finalized policies previously discussed. Available collection types include B claims measures (small practices only), MIPS Clinical Quality Measures (CQM), QCDR measures, and electronic Clinical Quality Measures (eCQMs). We do not assess burden for the administrative claims-based quality measures, as CMS automatically calculates scores for individual clinicians, groups, subgroups (as applicable for MVP reporting), or non-Shared Savings Program APM

Entities that meet requirements to be scored. As there are no changes due to policy provisions related to the non-Shared Savings Program related APM Performance pathway, we assume no change to our currently approved burden estimates.

(a) CY 2027 Performance Period/2029 MIPS Payment Year

The following section details the burden estimate for the finalized proposal to add three new MVPs starting with the CY 2027 performance period/2029 MIPS payment year consistent with the finalized proposals outlined in section IV.A.4.a. of this rule.

(i) Updated Data Assumptions for Quality Submissions

For the traditional MIPS and MVP Quality Performance Category ICRs, our currently approved estimates used submission data from the CY 2023 performance period/2025 MIPS payment year and estimated that: (1) 14 percent of quality submissions will submit as an MVP based on the MVP inventory available in the CY 2026 performance period/2028 MIPS payment year; and (2) 20 subgroups (90 FR 49948 through 49949). At the time of this rulemaking, we have updated historic submission data for the CY 2024 performance period/2026 MIPS payment year, inclusive of individual, group, and non-Shared Savings Program APM Entities.

In Tables D–A5 and D–A6, we identify the updated response estimates by reporting option due to the availability of this updated data and add our estimate of 20 subgroup submissions currently approved under OMB control number 0938–1314 (CMS–10621). The response estimates for these ICRs apply our existing approach for estimating the impact of MVPs as a percentage of historic submissions, the currently approved estimate of 14 percent as established in the CY 2026 PFS Final Rule (90 FR 49949).

The impact on burden for each finalized proposal discussed in the following sections use these updated active response estimates when calculating change in total time and cost. The updated estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

TABLE D-A5: RESPONDENT COUNTS FOR QUALITY PERFORMANCE CATEGORY AND MVP REGISTRATION ICRs

Reporting Option	Performance Category	Requirement	Currently Approved Responses*	Revised Responses **	Change Due to Updated Data
Traditional MIPS	Quality	Medicare Part B Claims Measure Collection Type Submission	8,350	7,307	(1,043)
Traditional MIPS	Quality	MIPS CQM and QCDR Measure Collection Type Submission	17,407	18,820	1,413
Traditional MIPS	Quality	eCQM Collection Type Submission	23,936	22,830	(1,106)
MVPs	N/A	MVP Registration	8,110	7,989	(121)
MVPs	Quality	Medicare Part B Claims Measure Collection Type Submission	1,359	1,189	(170)
MVPs	Quality	MIPS CQM and QCDR Measure Collection Type Submission	2,844	3,074	230
MVPs	Quality	eCQM Collection Type Submission	3,907	3,726	(181)

*Under OMB control number 0938-1314 (CMS-10621).

**Traditional MIPS updates calculated as updated submission data for CY 2024 performance period/2026 MIPS payment year submissions minus 14 percent (existing MVP submission rate). MVPs calculated as 14 percent of historic submissions plus estimated subgroup submissions (split evenly across the eCQM and MIPS CQM/QCDR measure collection types).

(ii) MVP Participation Estimate

We estimate the number of MVP submissions for the CY 2027 performance period/2029 MIPS payment year as a percent of the total traditional MIPS and MVP submissions from the CY 2024 performance period/2026 MIPS payment year (see Table D–A5). We assessed measure-level submission trends from the CY 2024 performance period/2026 MIPS payment year data for the new MVPs as finalized in section IV.A.4.a. of this final rule. The total average of quality measure submissions for the proposed new MVPs was equivalent to approximately 6 percent of the total quality performance category submissions in the CY 2024 performance period/2026 MIPS payment year. With the existing 14 percent estimate previously finalized in the CY 2026 PFS final rule (90 FR 32789) plus the incremental change of an additional 6 percent due to the proposed new MVPs, we estimate that 20 percent of quality performance category submissions may report via MVPs for the CY 2027 performance period/2029 MIPS payment year (row b). While this approach to estimate MVP submissions as a function of historic traditional MIPS and MVP submissions, and not just MVP submissions from a given year, is used to estimate future reporting behaviors with an expected increase in adoption due to the annual expansion of the MVP inventory, as summarized in section IV.A.4.a. of this final rule, there are limitations, such as lack of longitudinal data to appropriately assess behavior changes related to future adoptions or submissions in both new and existing MVPs. For example, the most recent submission data available is from the CY 2024 performance period/2026 MIPS payment year when the MVP inventory was composed of 16 MVPs, whereas for CY 2027 performance period/2029 MIPS payment year we are finalizing an MVP inventory of 30 MVPs. Consistent with the past approach, we project any increase to our expected MVP participation rate reduces the number of estimated submissions for each quality performance category collection type via traditional MIPS.

Table D–A6 of this final rule identifies our methods to estimate the number of individual clinicians, groups, and non-Shared Savings Program APM Entities that may submit data via each collection type in the CY 2027 performance period/2029 MIPS payment year, separating traditional MIPS and MVP estimates. We identify estimated submissions per collection type from CY 2024 performance period/2026 MIPS payment year data (row a). Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM/

QCDR, or eCQM collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table D–A6 are not mutually exclusive. We assume that each response or submission per collection type for traditional MIPS includes six quality measures, and that each response or submission per collection type for MVPs includes four quality measures.

TABLE D-A6: ESTIMATED NUMBER OF SUBMISSIONS FOR QUALITY PERFORMANCE CATEGORY BY COLLECTION TYPE

Burden and Submission Description	Medicare Part B Claims Measure	MIPS CQM/QCDR Measure	eCQM
Total 2027 Performance Period Quality Performance Category Submissions (Excludes QPs) (a)	8,496	21,894	26,556
2026 Performance Period Approved MVPs (14 percent) (b) = (a) × 0.14	1,189	3,065	3,718
2027 Performance Period Finalized MVPs (20 percent) (c) = (a) × 0.20	1,699	4,379	5,311
2027 Traditional MIPS Performance Period (Excludes QPs and Estimated MVP Submissions) (d) = (a) - (c)	6,797	17,515	21,245
Number of Submissions Moving to MVPs due to New MVPs (e) = (c) - (b)	510	1,313	1,593

* Estimates in the table are rounded to the nearest whole number, therefore the Number of Submissions Moving to MVPs due to New MVPs row may deviate from the provided formula due to rounding.

(iii) Traditional MIPS Quality Data Submission

The following estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians, groups, and non-Shared Savings Program APM Entities. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 70149 through 70151) and the CY 2025 PFS final rule (89 FR 98479 through 98483), and CY 2026 PFS final rule (90 FR 49946 through 49949). All estimates encompass time to review measure specifications unless otherwise noted.

(A) Medicare Part B Claims Measure Collection Type

The following estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians from a small practice with 15 or fewer clinicians. We acknowledge a range of times for computer system analysts to submit quality measure data (minimum, mean, and maximum burden estimates) for this collection type. We continue to apply the maximum burden in our total burden estimates.

For the CY 2027 performance period/2029 MIPS payment year, we estimate a decrease of 510 submissions due to the finalized addition of three new MVPs in this final rule. When considering a range of Computer System Analyst response times (from 1.15 to 8.2 hr/response) we estimate a maximum total decrease of 7,242 hours and $883,105 as demonstrated in Tables D–A7 through D–A9. We did not receive public comments on our burden estimates and assumptions.

TABLE D-A7: ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR TRADITIONAL MIPS MEDICARE PART B CLAIMS MEASURE COLLECTION TYPE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Range: Time/Cost	Time (hr) - Computer System Analyst	Time (hr) - Other Occupations	Total Time (hr)	Cost ($) - Computer System Analyst	Cost ($) - Other Occupations	Total Cost ($)
Minimum	(587)	(3,060)	(3,647)	(64,632)	(422,249)	(486,881)
Mean	(1,046)	(3,060)	(4,106)	(115,214)	(422,249)	(537,463)
Maximum	(4,182)	(3,060)	(7,242)	(460,856)	(422,249)	(883,105)

TABLE D-A8: ESTIMATED INFORMATION COLLECTION BURDEN RANGE FOR COMPUTER SYSTEM ANALYSTS IN TRADITIONAL MIPS MEDICARE PART B CLAIMS MEASURE COLLECTION TYPE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Computer System Analyst	Wage ($/hr)	Respondents	Time per Submission (hr)	Total Time (hr)	Total Cost ($)
Minimum	110.20	(510)	1.15	(587)	(64,632)
Mean	110.20	(510)	2.05	(1,046)	(115,214)
Maximum	110.20	(510)	8.2	(4,182)	(460,856)

TABLE D-A9: ESTIMATED INFORMATION COLLECTION BURDEN RANGE FOR OTHER OCCUPATIONS IN TRADITIONAL MIPS MEDICARE PART B CLAIMS MEASURE COLLECTION TYPE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Other Occupations	Wage ($/hr)	Respondents	Time per Submission (hr)	Total Time (hr)	Total Cost ($)
Billing Clerks	49.10	(510)	1	(510)	(25,041)
Licensed Practical Nurses (LPNs)	64.48	(510)	1	(510)	(32,885)
Medical and Health Service Managers	135.54	(510)	3	(1,530)	(207,376)
Physicians	307.74	(510)	1	(510)	(156,947)
Total	n/a	(510)	varies	(3,060)	(422,249)

(B) MIPS CQM and QCDR Measure Collection Types

For the CY 2027 performance period/2029 MIPS payment year, we estimate a decrease of 1,313 submissions due to the finalized addition of three new MVPs in this final rule. Multiplying the estimated change in submissions (1,313) by the time per submission by labor category, we estimate a decrease of 11,926 hours and $1,499,903 as demonstrated in Table D–A10. We did not receive public comments on our burden estimates and assumptions.

TABLE D-A10: ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR TRADITIONAL MIPS CQM AND QCDR MEASURE COLLECTION TYPES FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Other Occupations	Wage ($/hr)	Respondents	Time per Submission (hr)	Total Time (hr)	Total Cost ($)
Computer System Analyst	110.20	(1,313)	4.083	(5,361)	(590,782)
Billing Clerks	49.10	(1,313)	1	(1,313)	(64,468)
Licensed Practical Nurses (LPNs)	64.48	(1,313)	1	(1,313)	(84,662)
Medical and Health Service Managers	135.54	(1,313)	2	(2,626)	(355,928)
Physicians	307.74	(1,313)	1	(1,313)	(404,063)
Total	N/A	(1,313)	Varies	(11,926)	(1,499,903)

(C) MIPS eCQM Collection Type

For the CY 2027 performance period/2029 MIPS payment year, we estimate a decrease of 1,593 submissions due to the finalized addition of three new MVPs in this final rule. Multiplying the estimated change in submissions by the time per submission by labor category, we estimate a decrease of 12,744 hours and $1,629,639 as demonstrated in Table D–A11. We did not receive public comments on our burden estimates and assumptions.

TABLE D-A11: ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR TRADITIONAL MIPS eCQM COLLECTION TYPE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Other Occupations	Wage ($/hr)	Respondents	Time per Submission (hr)	Total Time (hr)	Total Cost ($)
Computer System Analyst	110.20	(1,593)	3	(4,779)	(526,646)
Billing Clerks	49.10	(1,593)	1	(1,593)	(78,216)
Licensed Practical Nurses (LPNs)	64.48	(1,593)	1	(1,593)	(102,717)
Medical and Health Service Managers	135.54	(1,593)	2	(3,186)	(431,830)
Physicians	307.74	(1,593)	1	(1,593)	(490,230)
Total	N/A	(1,593)	Varies	(12,744)	(1,629,639)

(iv) MVP Registration: Individuals, Groups, Subgroups, and APM Entities

We estimate that the finalized addition of three new MVPs would result in an increase of 3,416 MVP registrations. Using the currently approved estimate of 0.25 hour per registration, we estimate an annual burden increase of 854 hours (+3,416 registrations × 0.25 hr/registration) at a cost of +$94,111 (+854 hr × $110.20/hr for a computer system analyst or equivalent). We did not receive public comments on our burden estimates and assumptions.

(v) MVP Quality Performance Category Submission

We estimate a change to the number of annual MVP quality performance category submissions per collection type from our currently approved burden estimates, beginning with the CY 2027 performance period/2029 MIPS payment year. These estimates include the figures detailed in section V.B.7.c.(1). of this final rule. These estimates aggregate individual clinician, group, subgroup, and non-Shared Savings Program APM Entity submissions. All estimates presume maximum submission time and encompass time to review measure specifications unless otherwise noted.

(A) Medicare Part B Claims Measure Collection Type

We estimate an increase of 510 submissions due to the finalized addition of three new MVPs. Multiplying the estimated change in submissions (+510) by the time per submission by labor category, we estimate a total increase of 4,816 hours at a cost of $587,143 as demonstrated in Table D–A12. We did not receive public comments on our burden estimates and assumptions.

TABLE D-A12: ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR MVP MEDICARE PART B CLAIMS MEASURE COLLECTION TYPE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Occupation	Wage ($/hr)	Respondents	Time per Submission (hr)	Total Time (hr)	Total Cost ($)
Computer System Analyst	110.20	510	5.46	2,785	306,907
Medical and Health Service Managers	135.54	510	2	1,020	138,251
Licensed Practical Nurses (LPNs)	64.48	510	0.66	337	21,730
Billing Clerks	49.10	510	0.66	337	16,547
Physicians	307.74	510	0.66	337	103,708
Total	n/a	510	varies	4,816	587,143

(B) MIPS CQM and QCDR Measure Collection Type

We estimate an increase of 1,313 submissions due to the finalized addition of three new MVPs. Multiplying the estimated change in submissions (+1,313) by the time per submission by labor category, we estimate a total increase of 7,840 hours at a cost of $986,867 as demonstrated in Table D–A13. We did not receive public comments on our burden estimates and assumptions.

BILLING CODE 4169–69–C

(C) eCQM Collection Type

We estimate an increase of 1,593 submissions due to the finalized addition of three new MVPs. Multiplying the estimated change in submissions (+1,593) by the time per submission by labor category, we estimate a total increase of 8,442 hours at a cost of $1,079,350 as demonstrated in Table D–A14. We did not receive public comments on our burden estimates and assumptions.

TABLE D-A14: ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR MVP eCQM COLLECTION TYPE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Occupation	Wage ($/hr)	Respondents	Time per Submission (hr)	Total Time (hr)	Total Cost ($)
Computer System Analyst	110.20	1,593	1.99	3,170	349,334
Medical and Health Service Managers	135.54	1,593	1.33	2,119	287,209
Licensed Practical Nurses (LPNs)	64.48	1,593	0.66	1,051	67,768
Billing Clerks	49.10	1,593	0.66	1,051	51,604
Physicians	307.74	1,593	0.66	1,051	323,435
Total	N/A	1,593	Varies	8,442	1,079,350

(vi) Summary of Quality Performance Category Estimated Information Collection Burden Change for CY 2027 Performance Period/2029 MIPS Payment Year

Across the quality performance category collection types for Traditional MIPS and MVPs, we estimate that the finalized policies will lead to a decrease in burden of 9,960 hours and a savings of $1,265,176 under OMB control number 0938–1314 (Table D–A15). We did not receive public comments on our burden estimates and assumptions.

TABLE D-A15: SUMMARY OF QUALITY PERFORMANCE CATEGORY ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Requirement	Change in Number of Respondents	Change in Time	Change in Cost ($)
Traditional MIPS Quality Submission	(3,416)	(31,912)	(4,012,647)
MVP Registration	3,416	854	94,111
MVP Quality Submission	3,416	21,098	2,653,360
Total	0*	(9,960)	(1,265,176)

* Respondents moving from Traditional MIPS to MVPs need to complete MVP registration plus MVP Quality Submission, therefore the net number of new respondents will be 0.

d. ICRs Regarding Reporting the MIPS Promoting Interoperability Performance Category

We refer readers to § 414.1375 for our previously established policies regarding reporting requirements for the MIPS Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325 for data submission requirements, and §§ 414.1380(b)(4) and 414.1365(d)(3)(iv) for MIPS Promoting Interoperability performance category scoring. For historic assumptions on reporting requirements for the MIPS Promoting Interoperability performance category, we refer readers to the CY 2024 PFS final rule (88 FR 79449 through 79451).

In the CY 2026 PFS final rule (90 FR 49952), the burden estimates represented an assumed number of 20,881 respondents, which is based on submission data from the CY 2023 performance period/2025 MIPS payment year. In the CY 2027 PFS proposed rule, we proposed to update the burden estimates to represent an assumed number of respondents to 19,325, which is based on submission data from the CY 2024 performance period/2026 MIPS payment year (91 FR 44234).

In the following paragraphs, we outline the finalized policy changes to the MIPS Promoting Interoperability performance category reporting requirements as discussed in section IV.A.4.d.(4) of this final rule. For the first three finalized, as proposed, policies (modifications to the definition of CEHRT, removal of the required ONC Direct Review attestation and optional ONC-Authorized Certified Bodies (ACB) Surveillance attestation, and modifications to the Electronic Prior Authorization measure), there are similar finalized, as proposed, policies for the Medicare Promoting Interoperability Program in the FY 2027 Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment Systems (IPPS/LTCH PPS) final rule (91 FR 49573). The burden assumptions for the MIPS Promoting Interoperability performance category policies in this final rule are consistent with the burden assumptions for the Medicare Promoting Interoperability Program as described in the FY 2027 IPPS/LTCH PPS final rule (91 FR 50331 through 50332). For the fourth finalized, as proposed, policy (adoption of the new Electronic Prior Authorization for Prescription Drugs measure), there is a change in burden for the MIPS Promoting Interoperability performance category due to the addition of the new required measure. Lastly, for the finalized, as proposed, policy (removal of the Security Risk Analysis measure), there is a change in burden estimate for this performance category.

First, beginning with the CY 2027 performance period/2029 MIPS payment year, we are finalizing, as proposed, the proposal to modify the MIPS Promoting Interoperability performance category definition of Certified Electronic Health Record Technology (CEHRT) at 42 CFR 414.1305 as discussed in section IV.A.4.d.(4).(b). of this final rule, which aligns with proposals to remove certain certification criteria from the Office of the National Coordinator for Health Information Technology (ONC) Health IT Certification Program as detailed in Table C–G1 and as outlined in the Health Data, Technology, and Interoperability: ONC Deregulatory Actions to Unleash Prosperity (HTI–5) final rule (91 FR 67916). In the CY 2027 PFS proposed rule, we noted that the proposal to modify the definition of CEHRT would not impact reporting burden for the MIPS Promoting Interoperability performance category and as a result, we did not propose to modify the burden estimate pertaining to the proposed modifications to the definition of CEHRT (91 FR 44234). We proposed to maintain the burden estimates and assumptions for the proposed modifications to the definition CEHRT. We requested public comment on the proposal. We did not receive public comment on the proposal, and therefore, we are finalizing, as proposed, the proposal to maintain the burden estimates and assumptions for the proposed modifications to the definition CEHRT.

Second, beginning with the CY 2026 performance period/2028 MIPS payment year, we are finalizing, as proposed, the proposal to remove the required ONC Direct Review attestation and the optional ONC-Authorized Certified Bodies (ACB) Surveillance attestation from the MIPS Promoting Interoperability performance category to reduce administrative burden as discussed in section IV.A.4.d(4).(c). of this final rule. The CY 2024 submission data show that 79 percent of MIPS eligible clinicians elected to report the optional ONC–ACB Surveillance attestation. In the CY 2027 PFS proposed rule, we estimated that the removal of the required ONC Direct Review attestation would decrease burden by 1 minute (0.0167 hr) (91 FR 44234 through 44235). Also, in the CY 2027 PFS proposed rule, we estimate that removing the ONC Direct Review attestation would result in an annual decrease in total cost of $35,595 for all responses (-0.0167 hr per response × 19,325 responses)[413] × $110.20/hr for a computer systems analyst to submit MIPS Promoting Interoperability performance category data (91 FR 44235). Similarly, in the CY 2027 PFS proposed rule (91 FR 44235), we estimated that eligible clinicians who elected to submit the optional ONC–

[413] This figure is rounded to whole number.

ACB Surveillance attestation would experience a decrease in burden of 1 minute (0.0167 hr) which is consistent with the CY 2027 IPPS/LTCH PPS proposed rule (91 FR 19761). Also, in the CY 2027 PFS proposed rule, we estimated that removing this attestation will result in an annual decrease in total cost of $35,595 for all responses (-0.0167 hr per response × 19,325 responses) [414] × $110.20/hr for a computer systems analyst to submit MIPS Promoting Interoperability performance category data (91 FR 44235). We requested public comment on the proposals to reduce the burden estimate for the MIPS Promoting Interoperability performance category accounting for the removal of the required ONC Direct Review attestation and the optional ONC–ACB Surveillance attestation. We did not receive public comment on the proposals, and therefore, we are finalizing, as proposed, the proposed burden estimates and assumptions for MIPS Promoting Interoperability performance category that account for the removal of the required ONC Direct Review attestation and the optional ONC–ACB Surveillance attestation starting with the CY 2026 performance period/2028 MIPS payment year. Such burden estimate is consistent with the finalized, as proposed, burden estimates and assumptions in the CY 2027 IPPS/LTCH PPS final rule (91 FR 50332).

Third, we are finalizing, as proposed, the proposal to modify the Electronic Prior Authorization measure to an optional (bonus) measure for the CY 2027 performance period/2029 MIPS payment year as discussed in section IV.A.4.D.(4).(f). of this final rule, which will require the use of one or more specific FHIR-enabled health IT modules within CEHRT to complete at least one prior authorization request and determination for at least one medical item or service during the performance period. Also, we are finalizing, as proposed, the proposal to make the Electronic Prior Authorization measure required starting with the CY 2028 performance period/2030 MIPS payment year as discussed in section IV.A.4.d.(4).(f). of this final rule, which will require the use of all three specific FHIR-enabled health IT modules within CEHRT to complete at least one prior authorization request and determination for at least one medical item or service during the performance period.

The Electronic Prior Authorization measure was established in the CMS Interoperability and Prior Authorization final rule (89 FR 8758) and was referenced in the CY 2026 PFS final rule (90 FR 49952). Initially, the implementation of this measure as a requirement of the MIPS Promoting Interoperability performance category was specified starting with the CY 2027 performance period/2029 MIPS payment year. In the CY 2027 PFS proposed rule, we proposed updates to the burden estimates that account for the requirement to report such measure starting with CY 2028 performance period/2030 MIPS payment year. Under OMB control number 0938–1278 (CMS–10552), the currently approved burden estimate for this measure is 0.5 minutes (0.0083 hours) per eligible MIPS eligible clinician. In the CY 2027 PFS proposed rule, we noted that we are unable to estimate the number of MIPS eligible clinicians who may attest to the Electronic Prior Authorization measure as a bonus measure for the CY 2027 performance period/2029 MIPS payment year and did not propose to modify the burden estimates for CY 2027 performance period/2029 MIPS payment year. As discussed in the CY 2027 PFS proposed rule, the proposal to require the Electronic Prior Authorization measure starting with CY 2028 performance period/2030 MIPS payment year included an increase in burden estimate; we estimated that the requirement to attest ''Yes''/''No'' for the Electronic Prior Authorization measure would increase burden by 0.5 minutes (0.0083 hours) (91 FR 44235). Also, in the CY 2027 PFS proposed rule, we estimated that the proposal to modify the measure by making the measure required would result in an annual increase in total cost of $17,632 for all responses (+0.0083 hours per response × 19,325 responses) [415] × $110.20/hr for a computer systems analyst to submit Promoting Interoperability data (91 FR 44235). We requested public comment on the proposal to increase the burden estimates and assumptions that account for the required reporting of the Electronic Prior Authorization measure starting with the CY 2028 performance period/2030 MIPS payment year. We did not receive public comment on the proposal, and therefore, we are finalizing, as proposed, the proposed burden estimates and assumptions for Electronic Prior Authorization starting with the CY 2028 performance period/2030 MIPS payment year.

Fourth, we are finalizing, as proposed, the proposal to adopt a new measure, Electronic Prior Authorization for Prescription Drugs as discussed in section V.A.4.d.(4).(e). of this final rule, which will require the use of specific FHIR-enabled health IT modules within CEHRT to complete at least one prior authorization request and determination for prescription drugs and medications. The Electronic Prior Authorization for Prescription Drugs measure will be a required measure starting with the CY 2028 performance period/2030 MIPS payment year. In the CY 2027 PFS proposed rule, we noted that starting with the CY 2029 performance period/2031 MIPS payment year, we estimated that the requirement to attest ''Yes''/''No'' to this measure would increase burden by 0.5 minutes (0.0083 hours) (91 FR 44235). Also, in the CY 2027 PFS proposed rule, we estimated that the addition of the new measure would result in an annual increase in total cost of $17,632 for all responses (+0.0083 hr per response × 19,325 responses) [416] × $110.20/hr for a computer systems analyst to submit Promoting Interoperability data (91 FR 44235). We requested public comment on the proposal to increase the burden estimates and assumptions that account for the required reporting of the new Electronic Prior Authorization for Prescription Drugs measure starting with the CY 2028 performance period/2030 MIPS payment year. We did not receive public comment on the proposal, and therefore, we are finalizing, as proposed, the proposed burden estimates and assumptions for the new Electronic Prior Authorization for Prescription Drugs measure starting with the CY 2028 performance period/2030 MIPS payment year.

Lastly, starting with the CY 2027 performance period/2029 MIPS payment year, we are finalizing, as proposed, the proposal to remove the Security Risk Analysis measure from the MIPS Promoting Interoperability performance category to reduce burden as discussed in section IV.A.4.d.(4).(d). of this final rule. While the Security Risk Analysis measure has been required and included in the aggregate estimate for reporting burden for the MIPS Promoting Interoperability performance category (formerly the Advancing Care Information performance category and renamed in the CY 2019 PFS final rule (83 FR 59719)) since the inception of MIPS under the Quality Payment Program as described in the CY 2017 Quality Payment Program final rule (81 FR 77014), we do not have a historical burden estimate attributed separately for this specific measure.

With the 2015 Medicare EHR Incentive Program final rule serving as the basis for developing the requirements and structure for the

[414] This figure is rounded to whole number.

[415] This figure is rounded to whole number.

[416] This figure is rounded to a whole number.

Advancing Care Information performance category under MIPS (81 FR 28215 through 28230), we reviewed how burden was historically estimated. We found that the 2015 Medicare EHR Incentive Program estimated burden by objective as follows: 10 minutes to attest to objectives with measures requiring a numerator and denominator to be generated, 1 minute to attest to objectives with measures with ''Yes''/''No'' attestations, and 6 hours to attest the Security Risk Analysis measure (80 FR 62918). The Security Risk Analysis measure requires providers to attest that they are protecting electronic health information which involves conducting or reviewing a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (to include encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process.

In developing the MIPS Promoting Interoperability (formerly Advancing Care Information) performance category in the CY 2017 Quality Payment Program final rule, we streamlined the submission requirements that were outlined in the 2015 Medicare EHR Incentive Program final rule and removed two objectives and their associated measures, thereby reducing burden from nearly seven hours in the Medicare EHR Incentive Program final rule to three hours for the MIPS Advancing Care Information performance category (81 FR 77510). In the CY 2026 PFS final rule (90 FR 49952), the finalized burden estimate for the reporting requirements to submit MIPS Promoting Interoperability performance category data is 2.7 hours (162 minutes). As indicated in the CY 2027 PFS proposed rule, we applied the same burden assumptions used in the 2015 Medicare EHR Incentive Program final rule (apply 10 minutes of burden per objectives for measures requiring the generation of a numerator/denominator and 0.5 to 1 minute of time for measures requiring ''Yes''/''No'' attestations to the currently approved requirements for reporting MIPS Promoting Interoperability performance category data), which establishes a burden estimate of 36 minutes (91 FR 44235). As a result, we deduced that the remainder of time (126 minutes) can be attributed to the Security Risk Analysis measure (91 FR 44235). In the CY 2027 PFS proposed rule; we estimated that the removal of the Security Risk Analysis measure would decrease burden by 2.1 hours (126 minutes) (91 FR 44235). Also, in the CY 2027 PFS proposed rule, we estimated that the removal of the Security Risk Analysis measure would result in an annual decrease in total cost of $4,472,247 for all responses (-2.1 hr per response × 19,325 responses) [417] × $110.20/hr for a computer systems analyst to submit MIPS Promoting Interoperability performance category data beginning with the CY 2027 performance period/2029 MIPS payment year (91 FR 44235). We requested comment on the proposal that reduces the burden estimates and assumptions for the MIPS Promoting Interoperability performance category accounting for the removal of the Security Risk Analysis measure starting with the CY 2027 performance period/2029 MIPS payment year. We did not receive public comment on the proposal, and therefore, we are finalizing, as proposed, the burden estimates and assumptions for the MIPS Promoting Interoperability performance category accounting for the removal of the Security Risk Analysis measure starting with the CY 2027 performance period/2029 MIPS payment year.

Tables D–A16 and D–A17 detail the estimated change in burden for each finalized, as proposed, measure/attestation change by performance period (CY 2027 performance period/2029 MIPS payment year and the CY 2028 performance period/2030 MIPS payment year, respectively). Each table includes an adjusted total change in annual burden for submitting MIPS Promoting Interoperability performance category data.

TABLE D-A16: CHANGE IN ESTIMATED BURDEN FOR PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY DATA SUBMISSION FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR

Measure/Attestation	No. of Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)*	Labor Cost ($/hr)	Total Cost ($)*
Removal of ONC Direct Review Attestation+	19,325	19,325	(0.0167)	(323)	110.20	(35,595)
Removal of ONC-ACB Surveillance Attestation+	19,325	19,325	(0.0167)	(323)	110.20	(35,595)
Removal of Security Risk Analysis Measure	19,325	19,325	(2.1000)	(40,583)	110.20	(4,472,247)
Total	19,325	19,325	(2.1334)	(41,228)	110.20	(4,543,326)

*Total Annual Time estimates in the table are rounded to the hour and Total Cost estimates are rounded to the dollar, therefore the Total row may deviate from the sum of all rows.

+The proposals to remove the ONC attestations begin with the CY 2026 performance period/2028 MIPS payment year and will be updated under OMB control number 0938-1314.

We are finalizing, as proposed, the proposals for establishing the burden estimate that reflect the removal of the required ONC Direct Review attestation and optional ONC–ACB Surveillance attestation starting with the CY 2027 performance period/2029 MIPS payment year, as identified in Table D–A16 of this final rule. Starting with the CY 2027 performance period/2029 MIPS payment year, we are adjusting the burden estimate by a total reduction of 2.1334 hours per response (0.0167 + 0.0167 + 2.1), resulting in an annual decrease in total hours of 41,228 (2.1334

[417] This figure is rounded to a whole number.

hr per response × 19,325 responses) [418] and total savings of $4,543,326 for all responses (-2.1334 hr per response × 19,325 responses) [419] × $110.20/hr for a computer systems analyst to submit MIPS Promoting Interoperability performance category data.

TABLE D-A17: CHANGE IN ESTIMATED BURDEN FOR PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY DATA SUBMISSION FOR CY 2028 PERFORMANCE PERIOD/2030 MIPS PAYMENT YEAR

Measure/Attestation	No. of Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)*	Labor Cost ($/hr)	Total Cost ($)*
Add Electronic Prior Authorization Measure	19,325	19,325	.0083	+161	110.20	+$17,742
Add Electronic Prior Auth for Prescription Drugs Measure	19,325	19,325	.0083	+161	110.20	+$17,742
Total	19,325	19,325	.0167	+323	110.20	+$35,595

*Total Annual Time estimates in the table are rounded to the hour and Total Cost estimates are rounded to the dollar, therefore the Total row may deviate from the sum of all rows.

We are finalizing, as proposed, the two proposals establishing the burden estimates that reflect the modifications to the Electronic Prior Authorization requiring the reporting of the measure starting with the CY 2028 performance period/2030 MIPS payment year and the addition/adoption of the new Electronic Prior Authorization for Prescription Drugs measure requiring the reporting of the measure starting with the CY 2028 performance period/2030 MIPS payment year, as identified in Table D–A17 of this final rule. Starting with the CY 2028 performance period/2030 MIPS payment year, we estimate a total increase in 0.0167 hours per response (0.00833 + 0.00833), resulting in an annual increase in total hours of 323 (0.0167 hr x 19,325 responses) [420] and a cost of $35,595 for all responses (+0.0167 hr per response x 19,325 responses) [421] x $110.20/hr for a computer systems analyst to submit MIPS Promoting Interoperability performance category data.

The finalized, as proposed, the proposals relevant to the submission of MIPS Promoting Interoperability performance category data requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

e. ICRs Regarding Reporting for the Improvement Activities Performance Category

We refer readers to §§ 414.1355 and 414.1365(c)(3) for our previously established policies regarding reporting for the improvement activities performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1360 for data submission requirements, and §§ 414.1380(b)(3) and 414.1365(d)(3)(iii) for improvement activities performance category scoring. For historic assumptions on reporting requirements for the improvement activities performance category, we refer readers to the CY 2024 PFS final rule (88 FR 79454 and 79455).

In section IV.A.4.d.(3) of this final rule, we are finalizing our proposed changes to the Improvement Activities Inventory for the CY 2027 performance period/2029 MIPS payment year and subsequent years. Consistent with our assumptions in the CY 2023 PFS final rule (87 FR 70211), the CY 2024 PFS final rule (88 FR 79519), the CY 2025 PFS final rule (89 FR 98492), the CY 2026 PFS final rule (90 FR 49953), we believe clinicians performing improvement activities will continue to perform the same activities because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified via rulemaking (82 FR 54175). We did not receive public comments on our burden estimates and assumptions for these provisions. We refer readers to section VII.F.10.e.(2).(a). of this final rule for additional discussion.

Independent of these policies, we are updating the number of submissions due to the availability of updated submission data from the CY 2024 performance period/2026 MIPS payment year. While not scored in this rule, the non-policy changes will be submitted to OMB under control number 0938–1314 (CMS–10621).

f. ICRs Regarding the Cost Performance Category

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by Compact Disc or hardcopy. The policy to update the Operational List of care episode and patient condition groups and codes beginning with the CY 2027 performance period/2029 MIPS payment year, detailed in section IV.A.4.d.(2) of this final rule, will not result in the need to add, revise, or delete any claims data fields. Consequently, we are not making adjustments under the aforementioned OMB control number.

g. ICRs Regarding Voluntary Participants Election to Opt Out of Performance Data Display on Compare Tools

As described in section IV.E.2. of this final rule, we are finalizing our proposal to amend § 414.1395(c)(2) to remove the 1—year delay for publicly reporting new improvement activities and Promoting Interoperability measures, objectives, or activities included in a Merit—based Incentive Payment System Value Pathway (MVP), provided the data meet the public reporting standards at § 414.1395(b).

We are not updating our burden estimates under OMB control number 0938–1314 (CMS–10621) as this provision affects the timing of public

[418] This figure is rounded.

[419] This figure is rounded.

[420] This figure is rounded.

[421] This figure is rounded.

reporting for measures and activities included in MVPs but does not modify the existing process by which voluntary participants may elect to opt—out of having their performance data publicly displayed on Care Compare tools, as established under § 414.1395. We did not receive public comments on our burden estimates and assumptions for this provision.

h. ICRs Regarding the Virtual Group Election

As described in section IV.A.3.d. of this final rule, we are finalizing, as proposed, the proposal to include Virtual Groups in MVP reporting starting with the CY 2029 performance period/2031 MIPS payment year. In the CY 2027 PFS proposed rule, we noted that we are not updating the burden estimates under OMB control number 0938–1314 (CMS–10621) as the operational details of the implementation of Virtual Group reporting in MVPs have not yet been developed. Thus, in this final rule, we note that we will seek OMB approval for changes in burden once the details pertaining to the implementation of Virtual Group reporting in MVPs are sufficiently developed.

C. Summary of Annual Burden Estimates

Tables D–A18 through D–A20 set out the burden for this rulemaking's finalized policies that are subject to the PRA. It does not score burden adjustments that are strictly based on updated data and are unrelated to any of this rule's finalized policies. Table D–A21 sets out the burden for this rulemaking's finalized provisions that are subject to the PRA. It does not score burden adjustments that are strictly based on updated data and are unrelated to any of the provisions.

TABLE D-A18: ANNUAL REQUIREMENTS AND BURDEN ESTIMATES (CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR)

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)

VII. Regulatory Impact Analysis

A. Statement of Need

In this final rule, we are finalizing payment and policy changes under the Medicare PFS. Our final policies in this rulemaking specifically address: changes to the PFS and other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; modifications to the Medicare Shared Savings Program (Shared Savings Program); updates to the Quality Payment Program (MIPS and Advanced APMs); changes to payment policies for drugs and biological products paid under Medicare Part B; changes to the Clinical Laboratory Fee Schedule requirements; other changes to Medicare Part B payment policies for Rural Health Clinics and Federally Qualified Health Centers; and changes to the regulations associated with the Ambulance Fee Schedule. The policies reflect CMS' stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Clinical Laboratory Fee Schedule (CLFS)—Revisions Consistent With Recent Statutory Changes

In section III.C. of this final rule, we are finalizing the conforming regulations text changes for CLFS data reporting requirements due to the enactment of section 6226 of the Consolidated Appropriations Act, 2026 (CAA, 2026) (Pub. L. 119–75, February 3, 2026). Specifically, section 6226 of the CAA, 2026 revised the next required data reporting period for CDLTs that are not ADLTs to be May 1, 2026 through July 31, 2026, and specified that the applicable data collection period is January 1, 2025 through June 30, 2025. Additionally, section 6226 of the CAA, 2026 amended section 1834A(b)(3) of the Act to specify that the applicable percent was 0 percent for all of CY 2026, meaning that the payment amount determined for a CDLT for CY 2026 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2025, and to extend the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2029. Therefore, the applicable percent of up to 15 percent will apply for CYs 2027 through 2029.

Discretionary Provisions

a. Medicare Shared Savings Program

In section III.G. of this final rule, we finalized modifications to the Shared Savings Program regulations that would accelerate accountable care service delivery, further CMS's goal of aligning spending and value in Original Medicare, and support achieving other related strategic objectives. The finalized changes to the Shared Savings Program include the following.

We are finalizing our proposed changes to Shared Savings Program policies for determining beneficiary assignment, applicable for the performance year starting on January 1, 2028, and subsequent performance years, to exclude from assignment calculations allowed charges for primary care services billed through a non-ACO TIN by an ACO professional used in assignment and modify assignment eligibility criteria and prospective assignment exclusion criteria based on Medicare enrollment status. We also are finalizing our proposed changes to revise the definition of primary care services for the performance year starting on January 1, 2027, and subsequent performance years, to align with payment policy proposals and include, among other services for purposes of beneficiary assignment, services for Screening, Brief Intervention, and Referral to Treatment, Vaccine Adverse Effects Management, and Advance Care Planning.

We are finalizing our proposals to revise the quality performance standard and other quality reporting requirements, by extending the availability of the MIPS CQMs collection type and the MIPS CQM reporting incentive for Shared Savings Program ACOs, extending the scoring of Shared Savings Program ACOs reporting Medicare CQMs using flat benchmarks,

revising the Shared Savings Program quality reporting requirements, establishing the Medicare eCQMs collection type for Shared Savings Program ACOs reporting the APP Plus quality measure set, revising the definition of a beneficiary eligible for Medicare CQMs, revising the Shared Savings Program scoring policy for excluded APP Plus measures and APP Plus measures that lack a benchmark, and updating the APP Plus quality measure set. We are also finalizing our proposals to simplify the Shared Savings Program CEHRT use requirements by sunsetting existing Shared Savings Program CEHRT use and public reporting requirements, providing new options for ACOs to meet the Shared Savings Program CEHRT use requirement, and requiring that they publicly report their selected option.

We are finalizing our proposed changes to the Shared Savings Program's benchmarking and financial methodology to strengthen financial incentives for ACOs to participate in the program while mitigating selection issues and benchmark rebasing concerns. We are finalizing the following changes that would be applicable to agreement periods beginning on January 1, 2027, and in subsequent years: increasing the sharing rate under Level E of the BASIC track, reducing the maximum weight on the regional adjustment for lower-spending ACOs under the ENHANCED track, modifying the prior savings adjustment to increase the scaling factor, risk adjusting the 5 percent cap on upward adjustments to the historical benchmark, and incentivizing new participation through a growth adjustment to the historical benchmark. We also are finalizing our proposed reforms to the ACPT component of the three-way blended benchmark update factor to improve accuracy and strengthen Shared Savings Program financial incentives.

To expand the tools available to ACOs to support beneficiary engagement, we are finalizing our proposal to allow eligible Shared Savings Program ACOs that have submitted a Part B cost sharing support application and for which CMS has approved their application to reduce or eliminate Part B cost sharing for eligible beneficiaries. We also are finalizing the proposal to discontinue availability of the option for prepaid shared savings.

We are finalizing our proposal to modify the methodology for determining quarterly advance investment payment amounts (for eligible ACOs), by removing use of the area deprivation index and adding instead a rural criterion within an approach where we would use a flat per-beneficiary payment amount. We also are finalizing our proposed revisions to the definitions of experienced and inexperienced with performance-based risk Medicare ACO initiatives used in determining an ACO's eligibility for certain participation options. Finally, we are finalizing our proposal to modify Shared Savings Program beneficiary notification requirements, by revising distribution timing of standardized written notices and removing the requirement to provide a beneficiary follow-up notice.

b. Drugs and Biological Products Paid Under Medicare Part B

In section III.A.1. of this final rule, as part of our continued implementation of section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) (IIJA), which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereinafter, refundable drug), we discuss one application received for increased applicable percentage.

c. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this final rule, we are finalizing changes to the payment of Diabetes Self-Management and Training (DSMT) and Medical Nutrition Therapy (MNT) services in RHCs. We are finalizing the policy to recognize DSMT and MNT services as qualified visits that are covered and paid as stand-alone billable visits under the RHC benefit. We are also finalizing revisions to § 405.2463(a) and (b)(2) to reflect that DSMT and MNT services will be stand-alone billable visits in RHCs.

In section III.B.3 of this final rule, we are finalizing conforming regulatory text changes at §§ 405.2463(b)(3) and 405.2469(d) since section 6209(d) of the CAA, 2026 extended the abeyance of the RHC and FQHC mental health in-person requirements through December 31, 2027. This provision requires that the in-person visit requirements not apply to any services furnished through to December 31, 2027. We are also finalizing technical changes to §§ 405.2464(g) and 405.2469(d).

In section III.B.4 of this final rule, we discuss the final CY 2027 FQHC PPS market basket update. Section 1834(o)(2)(B)(ii) requires the FQHC PPS base rate be updated annually by the percentage increase in a market basket of FQHC goods and services as issued through regulations, or if such an index is not available, by the percentage increase in the MEI (as defined in section 1842(i)(3) of the Act) for the year involved. For CY 2027, we are finalizing to use an estimate of the 2022-based FQHC market basket to update payments to FQHCs based on the best available data. Consistent with CMS practice, we used the update based on the most recent historical data available at the time of publication of the final rule.

d. Ambulatory Specialty Model (ASM)

In section III.D. of this final rule, we discuss final policies related to the Ambulatory Specialty Model (ASM), a mandatory alternative payment model that will be tested by the Innovation Center under the authority at section 1115A of the Act. Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and CHIP beneficiaries.

Health care is becoming more fragmented as Medicare beneficiaries are increasingly seeing a greater number of specialists on a more regular basis. We believe there are opportunities to improve coordination between specialists and primary care providers and increase beneficiary engagement in care decisions, particularly with respect to preventing the onset and progression of chronic disease. ASM will evaluate select specialists that furnish a requisite volume of services related to heart failure or low back pain as measured by historic episode-based cost measure (EBCM) episode volume and test whether rewarding them based on measures of quality, cost, care coordination, and Promoting Interoperability results in enhanced quality of care and reduced costs through more effective upstream chronic condition management for ASM's targeted chronic conditions. We expect that a more targeted approach where specialists are evaluated: (1) on a set of relevant performance measures they are required to report; and (2) among specialists furnishing similar sets of services for similar chronic conditions, will produce final scores and subsequent payment adjustments that are more reflective of clinician performance. A more targeted approach to measurement will also offer more insight into how clinical decisions and processes, such as care coordination, affect patient outcomes. We believe this insight is necessary to support and encourage accountable care, increasing

beneficiary access to coordinated specialty care.

We believe that ASM's meaningful comparisons of performance to similar specialists furnishing a substantial volume of services related to ASM's targeted chronic conditions when matched with a payment methodology that creates impactful Medicare Part B payment adjustments will encourage quality improvements in specialty care and meaningful engagement with primary care providers to both prevent and manage the onset of chronic conditions, all while achieving net savings to Medicare.

We finalized ASM through notice and comment rulemaking in CY 2026 PFS final rule (90 FR 49562 through 49720). The final policies within this final rule address policy gaps and make technical or conforming updates to ensure ASM has sound and well-developed technical, administrative, and operational policies.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866, Regulatory Planning and Review, Executive Order 13563, ''Improving Regulation and Regulatory Review;'' Executive Order 14192, ''Unleashing Prosperity Through Deregulation;'' the Regulatory Flexibility Act (RFA) (Pub. L. 96—354); section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4); and Executive Order 13132, ''Federalism'', and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits.

A regulatory impact analysis (RIA) must be prepared for regulatory actions that are significant under section 3(f)(1) of Executive Order 12866. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1)). Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at *https://www.sba.gov/document/support-table-size-standards* (refer to the 620000 series).) Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other suppliers, and providers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, Medicare payment is made under the PFS for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this rulemaking will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2026, that threshold is approximately $193 million. This rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this rulemaking does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which, together with the information provided in the rest of this rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this rule; details the costs and benefits of this rulemaking; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we discussed various changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services and to implement provisions of the statute. We provide information for each policy change in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this rule. The relevant sections of this rulemaking describe significant alternatives we considered, if applicable.

C. Executive Order 14192, ''Unleashing Prosperity Through Deregulation''

Executive Order 14192, titled ''Unleashing Prosperity Through Deregulation'' was issued on January 31, 2025, and requires that ''any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least 10 prior regulations.'' This final rule is exempt from otherwise-applicable requirements under E.O. 14192, per footnote 1 of OMB's Accounting Methods.[422]

D. Effects of the Changes in Relative Value Units (RVUs)

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the

[422] *https://www.reginfo.gov/public/pdf/eo14192/Accounting_Methods_under_EO_14192.pdf.*

year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compare payment rates for CY 2026 with payment rates for CY 2027 using CY 2025 Medicare utilization. The payment impacts described in this rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS).

As required by section 1848(d)(1)(A) of the Act, beginning in CY 2026, there are two separate conversion factors (CFs): one for items and services furnished by a qualifying APM participant as defined in section 1833(z)(2) of the Act (referred to as the qualifying APM conversion factor) and another for other items and services (referred to as the nonqualifying APM conversion factor), equal to the respective conversion factor for the previous year multiplied by the update established under section 1848(d)(20) of the Act for such respective conversion factor for such year. As specified by section 1848(d)(20) of the Act, the update to the qualifying APM conversion factor for CY 2027 is 0.75 percent while the update to the nonqualifying APM conversion factor for CY 2027 is 0.25 percent.

To calculate the estimated CY 2027 PFS conversion factors, we took the CY 2026 conversion factors without the payment increase of 2.50 percent provided by statute that applied to services furnished from January 1, 2026 through December 31, 2026 and multiplied them by the budget neutrality adjustment required as described in the preceding paragraphs, then multiplied by the qualifying APM and nonqualifying APM updates specified by section 1848(d)(20) of the Act. We estimate the CY 2027 PFS qualifying APM CF to be 32.9548 which reflects a -0.12 percent budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.75 percent update adjustment factor specified under section 1848(d)(20) of the Act. We estimate the CY 2027 PFS nonqualifying APM CF to be 32.6286 which reflects a -0.12 percent budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.25 percent update adjustment factor specified under section 1848(d)(20) of the Act. We estimate the CY 2027 anesthesia qualifying APM CF to be 20.3068 and the CY 2027 anesthesia nonqualifying APM CF to be 20.1056, reflecting the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE D-B1: CALCULATION OF THE CY 2027 PFS QUALIFYING APM CONVERSION FACTOR

CY 2026 Conversion Factor		33.5675
Conversion Factor without One Year 2.50% Increase		32.7488
CY 2027 Qualifying APM Update Factor	0.75 percent (1.0075)	
CY 2027 RVU Budget Neutrality Adjustment	-0.12 percent (0.9988)	
CY 2027 Conversion Factor		**32.9548**

TABLE D-B2: CALCULATION OF THE CY 2027 PFS NON-QUALIFYING APM CONVERSION FACTOR

CY 2026 Conversion Factor		33.4009
Conversion Factor without One Year 2.50% Increase		32.5863
CY 2027 Non-Qualifying APM Update Factor	0.25 percent (1.0025)	
CY 2027 RVU Budget Neutrality Adjustment	-0.12 percent (0.9988)	
CY 2027 Conversion Factor		**32.6286**

TABLE D-B3: CALCULATION OF THE CY 2027 ANESTHESIA QUALIFYING APM CONVERSION FACTOR

CY 2026 National Average Anesthesia Conversion Factor		20.5998
Conversion Factor without One Year 2.50% Increase		20.0974
CY 2027 Qualifying APM Update Factor	0.75 percent (1.0075)	
CY 2027 RVU Budget Neutrality Adjustment	-0.12 percent (0.9988)	
CY 2027 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.41 percent (1.0041)	
CY 2027 Conversion Factor		**20.3068**

TABLE D-B4: CALCULATION OF THE CY 2027 ANESTHESIA NON-QUALIFYING APM CONVERSION FACTOR

CY 2026 National Average Anesthesia Conversion Factor		20.4976
Conversion Factor without One Year 2.50% Increase		19.9976
CY 2027 Non-Qualifying APM Update Factor	0.25 percent (1.0025)	
CY 2027 RVU Budget Neutrality Adjustment	-0.12 percent (0.9988)	
CY 2027 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.41 percent (1.0041)	
CY 2027 Conversion Factor		**20.1056**

In the interest of greater accessibility, we are posting the CY 2027 PFS Estimated Impact on Total Allowed Charges by Specialty table as a public use file as opposed to a table within the preamble text. We believe that posting this table as a separate file will make it easier for interested parties to access the data within the table as well as making the data more readable outside of a text-based format. This public use file shows the impact on PFS payment for physicians' services based on the policies included in this rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in the CY 2027 PFS Estimated Impact on Total Allowed Charges by Specialty public use file. This file is available on the CMS website under ''Downloads'' for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-noticesl*.

In recent years, we have received requests from interested parties to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented us with high-level information suggesting that Medicare payment policies are directly responsible for consolidating privately owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in healthcare delivery, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in the CY 2023 PFS final rule (87 FR 69429 through 69438). As part of our holistic review of how best to update our data and offer interested parties' additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under ''downloads'' for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

2. CY 2027 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty-level impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The proposals to update code valuation and improve the accuracy of the practice expense methodology are estimated to have a significant positive impact on clinical psychologists and clinical social workers, with smaller increases to physical and occupational therapists, interventional radiology, and vascular surgery. To a lesser degree, projected increases for some specialties would result from the proposed changes to HCPCS code G2211 and the fourth and final year of the behavioral health work update. Increases would also result from proposed increases in valuation for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from supply and equipment pricing updates. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the Clinical Lab Fee Schedule.

Specialties that we estimate would see a significant decrease include dermatology, otolaryngology, orthopedic surgery, and hand surgery, and to a smaller extent, ophthalmology, podiatry, audiologists, neurosurgery, portable x-ray suppliers, and plastic surgeons. These changes can largely be attributed to the proposed changes to modifier -25 and the proposal to remove the Indirect Practice Cost Index (IPCI) from the calculation of the PE RVUs, although the effects on PE are mitigated by the proposed PE stabilization adjustment. The estimated impacts also reflect decreased payments due to continued implementation of previously finalized code-level reductions that are being phased in over several years.

The proposal to reduce payment when a separately identifiable office/outpatient E/M visit is furnished by the same physician (or a physician in the same group practice) on the same day as a 0-, 10-, or 90-day global procedure and identified on the claim with modifier -25 is projected to have the largest negative impact on otolaryngology, dermatology, and podiatry, and to a smaller extent, hand surgery, physicians assistant, and colon and rectal surgery. These specialties frequently report E/M services with modifier -25 in conjunction with a 0-, 10-, or 90-day global procedure. Most other specialties are projected to receive a small increase due to the redistribution of those RVUs. Our utilization estimates for this proposal are reflected in the file titled ''CY 2026 PFS Proposed Rule 2025 Utilization Data Crosswalked to 2027'' available under ''downloads'' for the CY 2027 PFS final rule on the CMS website at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.*

We received many comments about the impact of this proposal. Most of the discussion of these impacts can be found in section II.D. of this final rule. We are finalizing to reduce payment to all but the highest paid service by 20 percent when a separately identifiable office/outpatient E/M visit is furnished by the same physician (or a physician of the same specialty in the same group practice) on the same day as a 0-day global procedure and identified on the claim with modifier -25. This policy is estimated to still have the largest

impacts on dermatology, otolaryngology, and podiatry, but the percentage of the impacts have been reduced with the decrease in payment reduction from 50 percent to 20 percent in response to commenters. We estimate that the impacts to specialties will be reduced by around 1 percent by limiting this policy to only 0-day global services, rather than 0-, 10-, and 90-day global services as proposed.

We are finalizing the proposal to replace HCPCS code G2211 with a modifier (MOD1) that is set to 16 percent of the total RVUs for the E/M service on the claim. This policy is expected to have minimal impact given that the volume previously reported using HCPCS code G2211 would now be reported with the modifier, and that was accounted for using the weighted average of the percent increase for utilization of HCPCS code G2211 and adjusted for budget neutrality. The proposal to pay for services furnished in an ACO using a modifier (MOD2) that pays 32 percent of the total RVUs for the E/M service on the claim is expected to increase payment for practitioners that furnish a higher percentage of their services in ACOs. We note that MOD1 and MOD2 were placeholder codes. We are finalizing that MOD1 is now modifier B1, and MOD2 is now modifier B2. Our utilization estimates for MOD1 and MOD2 are reflected in the file titled ''CY 2026 PFS Proposed Rule 2025 Utilization Data Crosswalked to 2027'' available under ''Downloads'' for the CY 2027 PFS proposed rule on the CMS website at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices*.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table, including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically, the changes are driven by the valuation of a relatively small number of new and potentially misvalued codes. The percentage changes in the specialty impact table are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty and compared to the same summed total from the previous calendar year. Therefore, they are averages and may not necessarily represent what is happening to the particular services furnished by a single practitioner within any given specialty.

As previously discussed, we have reviewed our suite of PUFs and have worked on new ways to offer interested parties' additional information that addresses concerns about the lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a PUF that models the expected percentage change in total RVUs per practitioner. We also note the code level RVU changes are available in the Addendum B PUF available on the CMS website under ''downloads'' for the CY 2027 PFS final rule at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.*

The specialty impacts reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from proposed policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) of the Act but does not include any changes in spending which result from proposed policies that are not subject to the statutory budget neutrality adjustment, and therefore, have a neutral impact across all specialties. The 0.75 percent and 0.25 percent updates to the CY 2027 and nonqualifying APM conversion factors, respectively, are statutory changes that take place outside of BN, and therefore, are not captured in the specialty impacts.

b. Impact

Column G of specialty level impacts displays the estimated CY 2025 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high-volume procedures is available under ''downloads'' on the CY 2027 PFS final rule website at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.* We selected these procedures for the sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and non-facility rates are shown. For an explanation of facility and non-facility PE, we refer readers to Addendum A on the CMS website at *https://www.cms.gov/medicare/payment/fee-schedules/physician/federal-regulation-notices.*

E. Effects of the Changes Related to Telehealth Services

We are finalizing as proposed to add several codes to the Medicare Telehealth We are finalizing as proposed to revise the code descriptors for CPT codes G0508 and G0509 to align with the permanent removal of telehealth frequency limitations. We are finalizing as proposed to allow teaching physicians to bill for services involving residents when either the teaching physician or resident is in the same physical location as the beneficiary. These services, in addition to other Medicare Telehealth Services, are expected to substitute for in-person visits and as such would not increase overall utilization of these services.

Section 6209(a) and (b) of the Consolidated Appropriations Act, 2026 (CAA, 2026) (Pub. L. 119–75, February 3, 2026) extends the flexibilities for Medicare telehealth services to remove the geographic restrictions, expand the list of acceptable originating sites, and expand the array of practitioners eligible to furnish telehealth services from January 30, 2026 to the extended date of December 31, 2027. Section 6209(d) of the CAA, 2026 delays the in-person visit requirements for mental health services furnished through telehealth from January 30, 2026 to the extended date of January 1, 2028. Section 6209(e) of the CAA, 2026 extends the flexibilities to allow audio-only Medicare telehealth services from January 30, 2026 to the extended date of January 1, 2028. Additionally, section 6209(g) of the CAA, 2026, requires CMS to establish modifiers for telehealth services in certain instances, effective January 1, 2027. We anticipate that our provisions will result in continued utilization of services that can be furnished as Medicare telehealth services during CY 2027 at levels comparable to observed utilization of these services during CY 2026.

F. Other Provisions of the Final Rule

1. Impacts Related to Technical Corrections of Comprehensive Outpatient Rehabilitation Facility (CORF) Services Regulations

As discussed in section II.F. of this final rule, we proposed to amend the regulatory text at §§ 410.105 and 414.1105 for accuracy that we overlooked during CY 2008 PFS rulemaking when we amended § 410.100. As such, there are no impacts for the policies in section II.F. of this final rule.

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as

noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023, 2024, and 2025 PFS final rules, we finalized several policies to implement the provision. In September of 2026, CMS sent discarded drug refund reports for CY 2024 ''updated refund quarters'' and CY 2025 ''new refund quarters,'' as defined at § 414.902. The total refunds owed for these quarters amount to more than $224 million, reflecting a 29.5 percent increase from the prior year, and are required by law to be deposited into the Supplementary Medical Insurance Trust Fund. In section III.A.1 of this final rule, we discuss one application (CMS 10835, OMB 0938–1435) for increased applicable percentage which will have no impact on Medicare spending.

3. Impacts Related to Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2.c. of this final rule, to improve access to preventive services in RHCs, we are finalizing changes to the payment of DSMT and MNT services in RHCs. We are finalizing the policy to recognize DSMT and MNT services as qualified visits that are covered and paid as stand-alone billable visits under the RHC benefit. A national claims-based analyses of evaluation and management billing patterns indicated that a nominal volume of DSMT and MNT services were bundled within payments to RHCs during 2025.

Since DSMT and MNT services are generally underutilized by the Medicare population, we believe that increase to Medicare Part B expenditures due to the final policy will be negligible. As discussed in section III.B.2.c of this final rule, an analysis of Medicare claims data from 2024 indicates that utilization of DSMT and MNT in RHC settings is substantially lower than in comparable care settings. In CY 2024, DSMT services were furnished to approximately 125 RHC beneficiaries, representing 0.005 percent of the total RHC beneficiary population of approximately 2.3 million. MNT services were furnished to approximately 439 RHC beneficiaries, representing 0.019 percent of the total RHC beneficiary population. On a claims basis, DSMT accounted for 0.002 percent and MNT for 0.007 percent of total RHC claims in CY 2024. By comparison, FQHCs showed DSMT utilization rates approximately 22 times higher and MNT utilization rates approximately 28 times higher than RHCs on a per-beneficiary basis. On a claim basis, FQHC utilization of DSMT and MNT exceeded RHC utilization by approximately 31 times and 32 times, respectively. Rural physician offices, which share the geographic and demographic characteristics of RHC patient populations, showed that overall, DSMT and MNT utilization rates were approximately 17 times and 7 times higher than RHCs, respectively, on a per-beneficiary basis. The analysis further demonstrated that within the PFS setting where DSMT and MNT are most readily identifiable in claims data, these services represent a very small share of total Medicare spending—less than 0.01 percent and 0.02 percent of total PFS line payments, respectively, in CY 2024. We believe that while our final policy supports an increase in the furnishing DSMT and MNT at RHCs, we do not expect a significant increase for CY 2027 since RHCs would need to determine potential changes to their care delivery and staffing which may impact timing for uptake.

4. Impacts Related to the Clinical Laboratory Fee Schedule (CLFS): CAA, 2026

In section III.C. of this final rule, we outline statutory amendments to section 1834A of the Act that revise the data reporting period, data collection period, and requirements for the phase-in of payment reductions under the CLFS. In accordance with section 6226 of the CAA, 2026, we are finalizing certain conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we are finalizing revisions at § 414.502 that update the definitions of both the ''data collection period'' and ''data reporting period,'' specifying that the data collection period is the 6-month period from January 1 through June 30, during which applicable information is collected and that precedes the data reporting period, and that the data reporting period for CDLTs that are not ADLTs is the 3-month period, May 1 through July 31, and for ADLTs is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period. We are also finalizing revisions at § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning May 1, 2026. In addition, we are finalizing conforming changes to our requirements for the phase-in of payment reductions to reflect the amendments in section 6226 of the CAA, 2026. Specifically, we are finalizing revisions at § 414.507(d) to indicate that for CY 2026, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2025, and for CYs 2027 through 2029, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the initial data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017, through March 31, 2017). In addition, as outlined in section III.C. of this final rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS–1450 14x Type of Bill. As such, the CAA, 2026 amendments to the data reporting period will implement the use of updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to unforeseen changes in private payor rates due to shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor rates, for purposes of this final rule, we are unable to estimate a budgetary impact. CMS published preliminary weighted median private payor rates for CY 2027 on September 21, 2026, based on applicable information reported during the 2026 data reporting period. CMS anticipates finalizing the CY 2027 payment rates for clinical diagnostic laboratory tests under the CLFS in November 2026. Final CY 2027 payment rates remain subject to public comment and the statutory limit on annual payment reductions. Consequently, we anticipate providing impact information related to updated CLFS rates, including the impact of the CAA, 2026 provisions, subsequent to the issuance of this final rule.

We are also finalizing a correction to § 414.523(a)(1) to restore regulatory language concerning the statutory $2.00 increase in the specimen collection fee for qualifying collections in a skilled nursing facility or by a laboratory on behalf of a home health agency. Because CMS already applies this increase in its payment policy and claims processing, we do not expect the correction to

change payments or impose additional costs.

5. Impacts Related to the Ambulatory Specialty Model (ASM)

In section III.D. of this final rule, we discuss the Ambulatory Specialty Model (ASM) tested by the CMS Center for Medicare and Medicaid Innovation (hereinafter ''Innovation Center'') under the authority of section 1115A of the Act. Section 1115A of the Act authorizes the Innovation Center to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. ASM will test whether adjusting payment for eligible specialists who furnish services related to ASM's targeted chronic conditions (that is, heart failure and low back pain) based on performance across targeted measures of quality, cost, care coordination, and meaningful use of certified electronic health record (EHR) technology (CEHRT) results in enhanced quality of care and reduced costs through more effective upstream chronic condition management. By testing ASM, we aim to reduce avoidable hospitalizations and unnecessary procedures, improve patient experience and outcomes, and lower Original Medicare expenditures by incentivizing preventive care, more effective management of chronic conditions, and enhanced coordination and collaboration among specialists and primary care providers. We finalized ASM's provisions in the CY 2026 PFS final rule (90 FR 49562 through 49720), including the framework for identifying ASM participants, performance evaluation, scoring, and payment adjustments.

Based on feedback we received from interested parties after the publication of the CY 2026 PFS final rule and our own internal review, we proposed and are finalizing several technical refinements and adjustments to ASM, including but not limited to revising select definitions, revising and adding ASM participant exceptions from specific ASM requirements, adjusting data submission requirements, incorporating a rural scoring adjustment to final scores, adjusting provisions related to collaborative care arrangements under ASM, and making minor adjustments to specific ASM performance category policies in this final rule. We believe our final policies will improve the clarity, practicality, and alignment of ASM implementation. Further, our final policies do not modify the fundamental framework of ASM for identifying ASM participants over the course of the ASM test period, overall performance evaluation, scoring, or payment adjustments and continue to support CMS priorities related to reducing low—value care, promoting preventive care, enhancing management of chronic conditions, and improving coordination and collaboration among specialists and primary care providers.

Accordingly, we believe our finalized policies in this final rule would not increase federal costs or alter the estimated Medicare program savings described in the CY 2026 PFS final rule (90 FR 49969 through 49975). In the CY 2026 PFS final rule, we estimated an impact of $177 million in net savings to the Medicare program due to ASM from January 1, 2029 through December 31, 2033 (90 FR 49972). This estimate reflects relevant finalized provisions including the ASM test period, geographic scope, participant eligibility, ASM risk levels, the amount of ASM incentive pools distributed to ASM participants in the form of payment adjustments, and the estimated amount of Medicare Part B covered professional service payments subject to ASM payment adjustments. We refer readers to the ASM section of the regulatory impact analysis of CY 2026 PFS final rule for additional information on our methodology and sensitivity analysis (90 FR 49969 through 90 FR 49975). Because we did not propose changes to key assumptions used to previously calculate the Medicare program savings estimate, we do not expect the final policies in this final rule to materially affect the Medicare program savings estimates in the CY 2026 PFS final rule. For example, we do not anticipate that the provisions related to ASM participant exceptions from specific ASM requirements would substantially affect the number of ASM participants meeting ASM requirements over the ASM test period because we believe any exceptions would be balanced by other participation provisions that allow for clinicians who newly meet the ASM participant eligibility criteria to be added as ASM participants over the course of the ASM test period. Therefore, ASM's previously estimated financial impact to the Medicare program remains unchanged from the CY 2026 PFS final rule.

6. Impacts Related to the Limiting Medicare Coverage of Certain Individuals

Section 71201 of the Working Families Tax Cut (WFTC) legislation, which added section 1899C to the Social Security Act (the Act), restricts Medicare eligibility to individuals who meet one of the following criteria: (1) U.S. citizens or nationals; (2) lawful permanent residents; (3) Cuban and Haitian entrants; or (4) individuals who lawfully reside in the United States in accordance with a Compact of Free Association. Individuals who do not meet these criteria and who were enrolled in Medicare on or before July 4, 2025, will have their coverage terminated effective February 1, 2027, which is the date that is 18 months after enactment of the WFTC legislation (July 4, 2025). As established in section 1899C(a) of the Act, individuals enrolled after July 4, 2025, who do not meet the eligibility requirements, are subject to denial or termination under the framework established at proposed §§ 406.14, 406.28 and 407.27.

Based on estimates from OACT, approximately 32,000 individuals are projected to lose Medicare coverage beginning in 2027, representing approximately 0.05 percent of the total Medicare-aged enrollment. OACT's estimate was derived from a 2025 Pew Research study on race and ethnicity in the United States and by using a Congressional report authored by the Department of Homeland Security (DHS). Recently, the SSA has estimated that approximately 300,000 notices will be sent out in November 2026 to individuals who may lose coverage. These individuals will get the opportunity to provide the necessary documentation to continue eligibility so the actual number who lose coverage remains unknown. Because of this, and significant time constraints, OACT is not revising their estimate.

In addition, citing research on lower health care utilization by immigrants, OACT assumes that affected individuals have average Medicare spending equal to approximately two-thirds of the average Medicare beneficiary, reflecting the generally healthier and younger age profile of this population, as well as lower utilization due to increased barriers in accessing health care including language barriers, limited familiarity with the U.S. health system, and concerns related to immigration status that may discourage enrollment and utilization even among those who are eligible. The population captured in this estimate is certain immigrants with temporary protections who no longer meet the revised eligibility requirements of section 1899C(a) of the Act.

TABLE D-B5: ESTIMATED IMPACT ON MEDICARE SPENDING – LIMITING MEDICARE COVERAGE OF CERTAIN INDIVIDUALS ($ MILLIONS)

Year	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2027-2036 Total
FY Cash	-$220	-$390	-$420	-$450	-$490	-$520	-$560	-$600	-$640	-$680	-$4,970

Source: Office of the Actuary (OACT), May 1, 2026. Negative values indicate reductions in Medicare program outlays.

The financial impact of this provision is classified as a transfer—specifically, a reduction in Medicare program outlays that would otherwise have been paid to plans and providers on behalf of affected individuals. Based on OACT's estimates, the 10-year reduction in Medicare spending attributable to this provision is approximately $4.97 billion, ranging from approximately $220 million in 2027 to approximately $680 million in 2036 (see Table D–B5).

Disenrollments from Medicare Advantage, Part D, and Medicare cost plans resulting from loss of entitlement to Part A and/or enrollment in Part B (as applicable) will be processed automatically by CMS when SSA provides updated eligibility and entitlement records. Plans do not process these disenrollments and are not required to provide additional notification, as SSA provides a loss of entitlement notice directly to affected individuals. All information impacts related to the procedural steps plans must take to receive and process enrollment and disenrollment transactions have already been accounted for under OMB control numbers 0938–0753 (CMS–R–267) and 0938–0964 (CMS–10141). The burden associated with the revision of Medicare initial enrollment forms to support eligibility determinations under this provision is described in the Collection of Information Requirements section of this rule.

Dahl and Forbes (2023) estimate that 46 percent of individuals are willing to pay $638 per person, in 2011 dollars—or approximately $873 when updated for inflation—to avoid switching medical providers (specifically, primary-care physicians).[423] For purposes of this regulatory impact analysis, it is assumed that $873 is a reasonable estimate of an average that includes the 46-percent of WTP amounts above it and the 54-percent below. Multiplying this $873 annual amount by 32,000 disenrollments yields a cost estimate of $28 million. This quantitative estimate is characterized by various forms of uncertainty, including:

- *Tendency toward underestimation.* Switching insurance plans, or newly lacking insurance coverage altogether, involves a more sweeping set of changes than just reestablishing a new primary-care physician, so WTP to avoid the latter probably understates WTP to avoid the former.
- *Tendency toward overestimation.* The relatively low level of churn associated with employer-sponsored insurance (ESI) may offer a greater opportunity to establish doctor-patient relationships than what is available to individuals affected by this provision (due to many of them having non-permanent immigration status), so extrapolating an ESI-derived estimate may overstate the WTP for continuity that would be relevant for this regulatory impact analysis.

We received multiple comments on the regulatory impact analysis of the provisions related to limiting Medicare coverage of certain individuals. The following is a summary of the comments we received and our response.

Comment: Several commenters noted that CMS's estimates of individuals that will lose Medicare coverage due to the implementation 1899C was lower than the Congressional Budget Office's (CBO) estimate that 100,000 people will lose coverage. Commenters shared concerns that CMS may be underestimating the number of impacted individuals and that accurate projections are necessary for legislators, policy makers, and external stakeholders to assess policy impacts and make future budget decisions. CMS should consider other reliable data sources, including CBO, for more accurate projections.

Response: We acknowledge the commenters' concerns. There is very little information available on the number of beneficiaries who will be affected by this provision of the law. CMS actuaries and CBO both prepare estimates in order to inform policymakers of the potential impact of enacted legislation and other regulatory policy proposals. Because of varied assumptions using this limited information, the estimates are likely to be different, and one may turn out to be more accurate than the other. However, the implementation of this provision is independent of the estimate and is not the only data used to estimate the operational needs to implement the new provision. CMS is working closely with SSA to monitor the number of potentially impacted individuals and resources needs and will continue to do so throughout the implementation of 1899C.

7. Impacts Related to the Medicare Prescription Drug Inflation Rebate Program

In section III.F. of this final rule, as part of our continued implementation of the Inflation Reduction Act of 2022 (IRA), which established the Medicare Prescription Drug Inflation Rebate Program under sections 11101 and 11102 of the Act, we finalized several modifications. For the Medicare Part B Drug Inflation Rebate Program, this rulemaking modifies the excluded product category for Part B rebatable drugs so that the exclusion applies only to certain skin substitute products and clarifies what Consumer Price Index for all Urban Consumers (CPI–U) data CMS will use in the event CPI–U data are unavailable. Additionally, we are clarifying the definition of ''first marketed date'' as used in the context of the Part B Drug Inflation Rebate Program. For the Medicare Part D Drug Inflation Rebate Program, this rulemaking clarifies what CPI–U data CMS will use in the event CPI–U data are unavailable, modifies the methodology finalized in the CY 2026 PFS final rule to account for 340B-eligible units for AIDS Drug Assistance Programs (ADAPs), and requires all providers and suppliers that are covered entities as defined under § 10.3 (hereinafter collectively ''340B providers'' unless otherwise noted) to submit data elements from their Part D 340B claims to the 340B repository beginning in 2027. As described in III.F.3.c.2.c. of this final rule, we are finalizing a delayed deadline for the first mandatory reporting deadline by 1 quarter. That is, 340B providers would not need to submit claims with dates of service between January 1, 2027 and March 31, 2027 to the 340B repository until September 30, 2027, though they

[423] Dahl, G.B. & Forbes, S.J. (2023). Doctor switching costs. *Journal of Public Economics, 221,* 104858, *https://doi.org/10.1016/j.jpubeco.2023.104858.*

may choose to submit earlier. The first mandatory submission will cover two calendar quarters of data (the first and second quarters of 2027) and will be due September 30, 2027.

We do not expect the finalized policies regarding the Medicare Part B Drug Inflation Rebate Program and the Medicare Part D Drug Inflation Rebate Program to have a material impact on the calculation of total rebates in aggregate, as these proposals are refinements to regulatory requirements that improve program efficiency and do not otherwise change the current scope of rebatable drugs.

In section III.F.3.c.2.c. of this final rule, we are finalizing a requirement that all 340B providers submit data elements from their Part D 340B claims for all covered Part D drugs billed to Medicare Part D by such covered entity or its contractor(s) beginning with claims with a date of service on or after January 1, 2027. 340B providers will be required to follow the processes and requirements that CMS established for voluntary reporting starting in 2026 and the associated information collection currently approved under OMB control number 0938–1485. CMS will require that each 340B provider report data on a quarterly basis (though they may choose to submit more frequently) within one calendar quarter following the close of the relevant calendar quarter, with the exception of the first quarter, as described above. CMS will consider all data elements received by the 340B repository to be associated with Part D 340B claims; therefore, the 340B repository will rely on the accuracy and completeness of the submitted, certified data to the 340B repository to verify the 340B status of a claim, and CMS will analyze these data to determine if they could be used reliably in the future to remove 340B units from Part D inflation rebate calculations in accordance with section 1860D–14B(b)(1)(B) of the Act. Under this process, CMS will require, as part of every submission, 340B providers (or an individual or contractor with the delegated authority as an authorized representative of the 340B provider to perform the certification) to certify that the data elements from all claims submitted to the 340B repository are from verified 340B claims and, to the best of the 340B provider's knowledge, its submissions include all Part D 340B claims for the 340B provider at the time of submission for the relevant period. 340B providers, or their authorized representative, will be required to certify the completeness and accuracy of the data submitted and to certify that the submitter is authorized to submit on behalf of the 340B provider.

In section III.F.3.c.1. of this final rule, we finalized a modification to the Prescriber-Pharmacy Methodology whereby all claims for Part D drugs dispensed to beneficiaries identified as having ADAP supplemental coverage will be treated as 340B-eligible and excluded from Part D inflation rebate calculations, with safeguards to prevent double-counting of units already identified under the existing methodology. This modification addresses a limitation to the Prescriber-Pharmacy Methodology that may under-identify 340B units for drug claims associated with ADAPs that use pharmacies not registered in the OPAIS database as contract pharmacies. This change may result in overestimation of 340B-eligible units associated with ADAPs, although it is expected to have minimal or no impact on the percentage of Part D units identified as 340B eligible for most drug classes with the exception of antiretroviral medications used in the treatment of HIV. The change will be effective for Rebate Reports issued for applicable periods beginning October 1, 2025 and subsequent applicable periods.

In sections III.F.2.c. and III.F.3.b. of this final rule, we amended §§ 427.302, 428.20, and 428.202 to address gaps in monthly CPI–U data by establishing a methodology that uses the first available CPI–U data following any unavailable month. CMS calculates the inflation-adjusted payment amount for Part B rebatable drugs using benchmark and rebate period CPI–U data, with the benchmark period CPI–U determined based on a drug's FDA approval and first marketed date, and the rebate period CPI–U set as the greater of the benchmark CPI–U or the CPI–U from two calendar quarters prior to the applicable quarter. CMS calculates inflation-adjusted payment amount for Part D rebatable drugs using benchmark period and applicable period CPI–U data, with the benchmark period CPI–U determined based on a drug's FDA approval and first marketed date, and the applicable period CPI–U set as the CPI–U for the first month of the applicable period. However, it was necessary to account for situations in which a monthly CPI–U figure is unavailable. Alternative approaches, including the Department of the Treasury's inflation contingency index, a CMS-calculated inflation factor, or using the prior month's data, were considered but not proposed as either less consistent with statutory requirements or administratively impracticable.

We do not anticipate our inflation rebate policies will result in an incrementally significant financial impact on the Medicare program relative to a baseline that reflects the status quo in the absence of any modifications to inflation rebate regulations at parts 427 and 428 as these finalized policies are refinements to regulatory requirements.

We solicited comments on the regulatory impact analysis for these proposals.

We did not receive public comments on the regulatory impact analysis for the Medicare Prescription Drug Inflation Rebate Program, and therefore, we are finalizing as proposed.

8. Impacts Related to the Medicare Shared Savings Program

a. General Impacts

As of January 1, 2026, the Shared Savings Program has 511 ACOs with over 700,000 healthcare providers and organizations providing care to over 12.6 million assigned beneficiaries.[424] The policies in this final rule are designed, in part, to strengthen financial incentives for ACOs to participate in the Shared Savings Program while mitigating selection issues and benchmark rebasing concerns, expand the population of Original Medicare beneficiaries for which ACOs are held accountable for quality and cost of care while minimizing gaming, advance ACOs' use of digital quality measures, reduce participant burden, and increase beneficiary engagement.

As we described in the CY 2026 PFS final rule (90 FR 32814), the ACOs in the program in PY 2023 combined to cover $128 billion in benchmark target spending. Actual ACO spending totaled approximately $123 billion, which is approximately $5.2 billion below the PY 2023 combined benchmark. After accounting for $3.1 billion in net shared savings to ACOs, the remaining difference of $2.1 billion would represent federal savings from the program if benchmarks proved to be a perfect counterfactual in aggregate. The Regulatory Impact Analysis in the December 2018 final rule (see 83 FR 68044 through 68050) provided evidence that the benchmarks for PY 2016 combined to represent a lower spending target than the theoretical counterfactual for estimating what spending would have been in the total FFS Medicare Program had ACOs not

[424] See CMS, ''Shared Savings Program Fast Facts—As of January 1, 2026'', available at *https://www.cms.gov/files/document/2026-shared-savings-program-fast-facts.pdf*.

been present that year. Evidence included all of the following:

- Lower combined market level spending trends observed for cohorts of Hospital Referral Regions (HRRs) with significant ACO formation relative to other HRRs without material ACO activity.
- Spillover effects on spending outside of ACO benchmarks, including non-assigned beneficiaries served by ACO providers and suppliers.
- Program design elements that restrained benchmark levels, including rebasing with agreement periods of only 3 years, feedback of communal ACO effects on national trends used to update benchmarks, and restrictions on risk adjustment.

The Regulatory Impact Analysis in the December 2018 final rule (83 FR 68048) estimated that ACOs may have been responsible for half of the 1.2 percent difference in spending trend observed between national average and the subset of HRRs with minimal ACO activity through 2016. This scaled impact represented about four times the gross savings measured relative to benchmarks, or about 0.5 percent net savings across the entire FFS program after accounting for shared savings payments despite benchmarks only officially showing roughly equivalent overall reductions in spending relative to benchmark compared to total outlays from shared savings payments. Since 2016, changes to the Shared Savings Program have potentially moved the benchmarks closer to what the spending would have been in the absence of the program.

In the CY 2026 PFS final rule (90 FR 49975 through 49976), we explained that updating the earlier study to compare more recent trends for markets with varying levels of ACO activity requires updates to the initial study approach, as ACOs have become active in an increasing majority of markets across the nation. There no longer exists a sufficient number of HRRs with nominal ACO penetration in 2023 to construct a de facto counterfactual similar to the study in the December 2018 final rule. An alternate method, however, continued to show spending trends inversely correlated with ACO penetration over time. Roughly 5 percent of beneficiaries live in HRRs with ACO penetration consistently below the national average by 10 percentage points or more over the 2013 to 2023 time series (''Lagging''), while about 9 percent of beneficiaries live in HRRs with ACO penetration 10 percentage points or more above the national average over the same period (''Leading''). Relative to the 2011 base year immediately preceding the Shared Savings Program's introduction, growth in average unadjusted per capita spending in 2023 for Lagging and Leading markets was 4.3 percent higher and 3.9 percent lower than the national average. The divergence in spending growth was even wider after HCC risk adjustment: 5.3 percent higher for Lagging markets and 4.6 percent lower for Leading markets.

These market trends potentially overstate the impact that ACOs may have had on program spending in 2023. The portion of the difference in spending growth driven by risk adjustment may reflect efforts by ACOs to increase coding intensity. Leading markets may exhibit higher participation rates in CMMI models. ACO participation may naturally flock to markets with lower trend for exogenous reasons. Still, conservatively assuming only 35 percent of the unadjusted trend gap is causally related to Shared Savings Program ACOs would roughly validate the $5.2 billion gross savings indicated by comparing aggregate program benchmarks to actual ACO spending in 2023, and the roughly $2 billion in net savings to FFS Medicare. A more optimistic estimate, assuming Shared Savings Program ACOs were responsible for 50 percent of the risk-adjusted spending growth difference (mirroring assumptions used in the December 2018 final rule), would imply net savings roughly 3 times greater, or roughly $6 billion net savings for FFS Medicare.

In the CY 2026 PFS final rule (90 FR 49976), we explained that a study of benchmark performance for cohorts of ACOs that participated in both PY 2022 and PY 2023 revealed that the BASIC track is the primary driver of net savings (as measured by program benchmark target spending less actual spending and shared savings payments). An updated analysis, summarized in Table D–B6, finds that ACOs remaining in the BASIC track continued to demonstrate roughly 50 percent higher net savings in PY 2024 (2.3 percent of benchmark) than ACOs that remained in the ENHANCED track over the same 3 year period (1.5 percent of benchmark), where ''net savings'' is calculated as the difference in combined cohort spending from combined cohort benchmark spending net of combined cohort shared savings outlays, expressed as percentage of combined cohort benchmark (column D in Table D–B6). Meanwhile, ACOs moving into the ENHANCED track from the BASIC track show a marked decline in net savings. Thirty-eight ACOs moved from the BASIC track in PY 2022 (with net savings of 2.5 percent) to the ENHANCED track by PY 2024 with net savings dropping to 1.7 percent of benchmark. Mean net savings declined for the 38 ACOs that moved to the ENHANCED track despite gross savings growing after rebasing into ENHANCED (1.8 percentage point increase from 2022 to 2024 shown in column B) by a greater margin than average gross savings growth for the 210 ACOs that remained in BASIC over the same period (1.0 percentage point increase from 2022 to 2024) and despite both cohorts showing roughly identical average unadjusted per capita spending growth from 2022 to 2024 (not shown in Table D–B6).

TABLE D-B6: WEIGHTED AVERAGE FINANCIAL PERFORMANCE BY ACO COHORT DEFINED BY PATH OF PARTICIPATION OVER PY 2022 TO PY 2024 ($ BILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

Participation Pathway From PY22 to PY24	ACO Count	Benchmark ($B) [A]	Gross Savings % of Benchmark [B]			Shared Savings % of Benchmark [C]			Net Difference % of Benchmark [D]		
			2022	2023	2024	2022	2023	2024	2022	2023	2024
BASIC All 3 Years	210	51	-3.1	-3.4	-4.1	1.3	1.4	1.8	-1.8	-2.0	-2.3
BASIC->ENHANCED	38	14	-4.5	-5.8	-6.3	2.0	3.5	4.6	-2.5	-2.4	-1.7
ENHANCED All 3 Years	123	50	-4.8	-5.1	-5.8	3.5	3.8	4.3	-1.2	-1.4	-1.5

Notes: "Participation Pathway" are the following groups of ACOs, identified by the track/level of their participation in PY 2022, PY 2023 and PY 2024: "BASIC All 3 Years" are ACOs that remained in the BASIC track (Level A, B, C, D, or E) for PY 2022, PY 2023 and PY 2024; "BASIC->ENHANCED" are ACOs that participated in BASIC in PY 2022 and either (a) remained in BASIC in PY 2023 before then advancing to the ENHANCED track in PY 2024, or (b) advanced to the ENHANCED track in PY 2023 and remained in the ENHANCED track in PY 2024; and "ENHANCED ALL 3 Years" are ACOs that remained in the ENHANCED track for PY 2022, PY 2023 and PY 2024.
"Benchmark" [A] is the total PY 2024 benchmark spending for each cohort, in billions of dollars.
"Gross Savings % of Benchmark" [B] is the percentage that a cohort's combined spending deviated from their combined benchmark spending (a negative percentage implies savings).
"Shared Savings % of Benchmark" [C] is the cohort's combined shared savings (and losses) paid to (from) ACOs expressed as a percentage of benchmark.
"Net Difference % of Benchmark" [D] is the sum of "Gross Savings % of Benchmark" [B] and "Shared Savings % of Benchmark" [C] and represents the portion of gross savings (as measured by program benchmarks) retained by the Trust Funds.

Favorable regional adjustments have helped certain ACOs maximize earnings in the ENHANCED track without taking on a high degree of real risk.[425] Only about 2 percent of ENHANCED track ACOs owed losses in PY 2024 while 90 percent earned shared savings. The ENHANCED track has grown from including only 14 percent of ACOs in 2020 to 58 percent in 2026. Without the benefit of demonstrating lower actual spending growth (as found absent for ACOs migrating from BASIC to ENHANCED from 2022 to 2024 relative to those remaining in BASIC—as noted previously in this section), the existing ENHANCED track continues to appear to be overly generous relative to the incentives that are more efficiently provided to ACOs participating in the BASIC track.

The first impact estimate in this section assesses the coordinated set of provisions to rebalance the incentives between the BASIC track and ENHANCED track. These provisions include reducing the maximum weight used in calculating the positive regional adjustment for lower-spending ACOs under the ENHANCED track from 50 percent to 35 percent, increasing the prior savings adjustment's scaling factor from 50 percent to 75 percent, and increasing the shared savings rate for BASIC track Level E from 50 percent to 60 percent. A stochastic modeling approach consistent with the regulatory impact analysis from previous rules was employed to simulate the impact this set of provisions would have on existing ACOs and potential new ACOs over the 10-year scoring period. The changes will reduce the propensity for ACOs to be able to passively earn shared savings at the highest sharing rate by solely relying on baseline efficiency through the regional adjustment to the benchmark and instead will place a stronger incentive on generating new efficiency over the agreement period. New efficiency will also be incentivized by the increase in the prior savings adjustment's scaling factor. That change, combined with the higher sharing rate in BASIC track Level E, will likely attract a greater number of new ACOs serving populations that often have high spending at baseline relative to the regional average. The increase to the prior savings adjustment scaling factor would strengthen the degree that such higher spending ACOs would continue to share in savings originally made in their first agreement period despite then facing rebasing into a subsequent agreement period—a dynamic further enhanced by the policy to risk adjust the cap on benchmark adjustments (currently defined as 5 percent of unadjusted national average assignable per capita spending). These policies are together estimated to better allocate shared savings payments to ACOs, creating new gains in efficiency as opposed to ACOs merely maintaining their historical baseline efficiency, and resulting in $4.59 billion lower spending over 10 years, ranging from $6.42 billion lower spending to $2.88 billion lower spending at the 10th and 90th percentiles, respectively. The annual and 10-year total projections for the changes to Shared Savings Program participation options are detailed in Table D–B7.

[425] Additional analysis for the role that benchmark adjustments have in generating increased payments to ACOs, including ENHANCED ACOs in particular, is included in comment response in Section III.G.5.c.(2).(b).

TABLE D-B7: PROJECTED IMPACT OF FINANCIAL METHODOLOGY PROVISIONS TO REDUCE THE REGIONAL ADJUSTMENT WEIGHTING FOR ENHANCED TRACK ACOS, INCREASE SHARING RATE FOR BASIC TRACK LEVEL E, AND INCREASE THE PRIOR SAVINGS ADJUSTMENT PERCENTAGE ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	Total
Impact Estimate	−580	−650	−720	−850	−980	−100	−140	−170	−190	−210	**−4,590**
Estimate Range:											
Low Estimate (10th Percentile)	−730	−810	−930	−1,150	−1,310	−300	−380	−420	−480	−510	**−6,420**
High Estimate (90th Percentile)	−450	−480	−510	−560	−680	100	70	70	70	100	**−2,880**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The second area of material impact on program spending is for the creation of a growth adjustment to incentivize new participation among providers and suppliers that have not been part of a Medicare ACO within the past 5 years. As described in sections III.G.5.a and III.G.5.f of this final rule, participation in the Shared Savings Program has grown substantially since the program began in 2012, from approximately 3 million beneficiaries assigned in its first year to more than 12 million assigned beneficiaries as of January 2026. This growth has occurred alongside strong program performance; we have observed that when participation in the program increases, we see increases in both quality improvements for beneficiaries and increased savings to the Trust Funds. The Shared Savings Program has had eight consecutive years of generating savings for Medicare relative to benchmarks, with over $12 billion in total savings,[426] with an upward trend in savings year over year. (As noted previously in this discussion, these savings measured by benchmarks are reasonably substantiated by lower observed per capita spending trend in markets with early ACO adoption versus higher average per capita spending trend in markets with lagging ACO adoption.) Additionally, we have observed that ACOs in the Shared Savings Program have demonstrated improved quality over time and higher quality relative to other physician groups, suggesting that the Shared Savings Program is achieving savings while improving quality of care.

This historical experience supports our expectation that expanding participation would extend the program's quality benefits to additional beneficiaries and create further opportunities for Medicare savings. The growth adjustment is part of a complementary package of modifications to the benchmark methodology intended to realign financial incentives and grow participation, thus expanding the reach of quality improvements demonstrated in the Shared Savings Program and encourage further savings.

The growth adjustment would be applied on top of the highest of the existing benchmark adjustments, including regional adjustment, prior savings adjustment, or population adjustment (if eligible), and would not exceed a risk adjusted 5 percent cap for consistency with the finalized approach to capping other upward adjustments to the historical benchmark. The policy is estimated to have the greatest impact on new ACOs that would have the greatest potential to bring in beneficiaries who have not been previously assigned to ACOs. The growth adjustment is projected to increase ACO shared savings payments by $5.3 billion over 10 years, but most of that cost would be offset by new savings on reduced benefit spending from bringing additional populations into care management under Shared Savings Program ACOs. As a result, the estimated net cost to the program is estimated to be considerably less than the increase in net sharing to ACOs. This policy is estimated to result in a net increase in spending by $1.67 billion over 10 years, with the annual increase declining in later years as savings from increased participation grow while the effect of the growth adjustment on benchmarks eventually moderates. We have observed that beneficiaries receive higher quality of care (as evidenced by ACOs' quality performance) when assigned to ACOs in the Shared Savings Program, and increasing participation in the Shared Savings Program through the growth adjustment has the potential to broaden higher quality of care to additional Medicare FFS beneficiaries. The range of uncertainty spans costs of $1.13 billion to $2.28 billion at the 10th and 90th percentiles, respectively. The annual and 10-year total projections for these provisions are detailed in Table D–B8.

[426] Additional information on past years Shared Savings Program Performance Year Finance and Quality Results is available at: *https://data.cms.gov/medicare-shared-savings-program/performance-year-financial-and-quality-results.*

TABLE D-B8: PROJECTED IMPACT FOR GROWTH ADJUSTMENT INCENTIVE TO ENCOURAGE NEW PARTICIPATION ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	Total
Impact Estimate	290	270	310	320	330	20	10	30	50	40	**1,670**
Estimate Range:											
Low Estimate (10th Percentile)	240	210	250	300	300	-60	-120	-100	-80	-70	**1,130**
High Estimate (90th Percentile)	330	270	380	370	420	140	120	120	150	160	**2,280**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The third portion of our impact estimate is for the changes to beneficiary assignment, including removing from assignment calculations allowed charges for primary care services billed through a non-ACO TIN by an ACO professional used in assignment, and modifying regulatory criteria that exclude from eligibility for assignment Medicare FFS beneficiaries with any months of Part A only or Part B only enrollment, or Medicare or group health plan enrollment (including MA) during the assignment window. These changes would marginally increase the number of beneficiaries assigned to a given ACO. More importantly, they would improve the ability for the program to hold ACOs accountable for more of the patients actually served by ACO clinicians, including those with accentuated need for care management. The first policy would reduce the ability for an ACO, through billings for primary care services by ACO professionals used in assignment, to ''lemon drop''—a potential form of gaming where patients with high needs are purposefully billed services through a TIN external to the ACO to engineer their assignment away from the ACO. The second policy helps reduce a notable blind spot in the current assignment methodology. As enrollment in Medicare Advantage (MA) has grown over recent years, so has the number of beneficiaries switching back to OM from MA—a population that the revised assignment criteria would more nimbly pick up for inclusion in ACO assignment. This provision would also improve the symmetry in assignment for ACOs relative to the national and regional assignable populations because the Shared Savings Program does not currently employ the same exclusions based on Medicare enrollment status for identifying the assigned and assignable populations. Together these provisions are estimated to reduce program spending by $2.3 billion over 10 years, ranging from $2.97 billion to $1.69 billion savings at the 10th and 90th percentiles, respectively. Savings from these changes could effectively be materially higher if gaming of assignment were to otherwise significantly grow in popularity at baseline.

TABLE D-B9: PROJECTED IMPACT FOR CHANGES TO ASSIGNMENT METHODOLOGY ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	Total
Impact Estimate	−380	−280	−220	−200	−200	−300	−230	−190	−160	−140	**−2,300**
Estimate Range:											
Low Estimate (10th Percentile)	−410	−330	−300	−300	−320	−410	−350	−320	−310	−290	**−2,970**
High Estimate (90th Percentile)	−350	−230	−140	−100	−80	−210	−120	−80	−10	−20	**−1,690**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The last provision estimated to have a material impact on spending is the change to the methodology for the ACPT. The current policy includes a discretionary option for CMS to reduce the weight on the ACPT's contribution to the three-way blended update to ACO benchmarks if unforeseen circumstances arise. The finalized changes would create uniform annual one-year growth projections common to ACOs in overlapping agreement periods—eliminating reliance on multi-year projections that the ACPT currently employs—and a policy that, for agreement periods beginning on or after January 1, 2027, would limit the effect of under-projection or over-projection as compared to actual retrospective national expenditure trend such that an effective ACPT trend (cumulatively from BY3 to a given performance year) is no more than one percentage point below (or no more than 1.5 percentage points above) national growth. The asymmetry of these guardrails preserves a limited degree of margin related to the ideal scenario where ACOs as a group cause national trend to slow relative to projected trend over the course of a given agreement period, but more importantly has several notable advantages relative to the current methodology with potential down-weighting. It protects the validity of benchmark updates by limiting how far

the projected trend used in the ACPT portion of the three-way blended update factor would be allowed to deviate from observed national trend, and does so under an objective formula that eliminates the subjectivity of the current down-weighting policy that could otherwise potentially be invoked to a greater degree in years where down-weighting would favor ACOs as opposed to public pressure to maintain the one-third weighting in years where over-projection could favor ACOs. The policy would also improve on the current down-weighting policy because it would preserve the role of national trend in the overall update, which can help preserve the incentive for neighboring ACOs to collectively lower spending in their overlapping service area (an outcome that down-weighting would penalize by increasing the effective weighting on regional trends in calculating benchmark updates). Despite estimating higher spending in 2027 and 2028 related partly to our separate finalized policy to only apply the lower 1.0 percentage point threshold for ACOs in existing agreement periods, the total impact over ten years is estimated to be a savings of $350 million, ranging from a $1.11 billion savings to a $340 million cost at the 10th and 90th percentiles, respectively. The estimates are shown in Table D–B10:

TABLE D-B10: PROJECTED IMPACT FOR CHANGES TO ACPT AND ASSOCIATED GUARDRAILS ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	Total
Impact Estimate	130	70	−10	−50	−70	−80	−90	−90	−80	−70	**−350**
Estimate Range:											
Low Estimate (10th Percentile)	−60	−40	−90	−140	−200	−250	−290	−300	−200	−190	**−1,110**
High Estimate (90th Percentile)	350	200	80	10	20	30	30	40	20	30	**340**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The remaining changes to the Shared Savings Program regulations, as described in section VI.A.2.a. of this final rule, are not estimated to have an impact on program spending at the aggregate level.

The policies detailed previously in this section are expected to increase assignment to ACOs in the program by 0.5 to 1.0 million beneficiaries on average per year. The combined impacts from all Shared Savings Program provisions on federal spending are shown in Table D–B11. Because estimates are rounded to the nearest $10 million, and because the percentiles are independently sorted for each year and for the 10-year totals, the annual estimates may not sum to exactly match the total 10-year estimates. Together these policies are estimated to reduce program spending by $5.5 billion over 10 years, ranging from $8.9 billion to $2.3 billion savings at the 10th and 90th percentiles, respectively.

TABLE D-B11: PROJECTED IMPACT OF MEDICARE SHARED SAVINGS PROGRAM PROVISIONS (INDIVIDUALLY SHOWN IN TABLES D-B8 THROUGH D-B11) ($ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	Total
Impact Estimate	−580	−640	−690	−830	−960	−410	−400	−360	−330	−340	**−5,550**
Estimate Range:											
Low Estimate (10th Percentile)	−970	−1,010	−1,090	−1,280	−1,510	−920	−980	−970	−890	−910	**−8,870**
High Estimate (90th Percentile)	−180	−300	−300	−400	−420	40	80	130	160	190	**−2,310**

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The policies are expected to both decrease and increase net shared savings payments across the overall distribution of ACOs. The mean projection is an overall increase in such payments by $1.05 billion over 10 years, ranging from a $2.6 billion decrease to a $4.63 billion increase at the 10th and 90th percentiles, respectively. The increase in shared savings payments to ACOs is driven by the growth adjustment policy, and without this policy the majority of savings to Medicare would be achieved through reductions in shared savings payments. Annual and total projections for the impact on shared savings net of shared losses are shown in Table D–B12.

TABLE D-B12: PROJECTED IMPACT OF MEDICARE SHARED SAVINGS PROGRAM PROVISIONS ON SHARED SAVINGS PAYMENTS TO ACOS ($ MILLIONS; POSITIVE VALUES REPRESENT INCREASED NET PAYMENTS TO ACOS)

	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	Total

High Estimate (90th Percentile)	210	130	200	180	230	720	850	990	1,060	1,180	**4,630**

b. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the new policies described in this rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following finalized policies require the use of our authority under section 1899(i) of the Act: modifications to the ACPT component of the three-way blended benchmark update factor (described in section III.G.5.g. of this final rule); discontinuing availability of the option for prepaid shared savings (described in section III.G.6.b. of this final rule); and changes to the calculation methodology for quarterly advance investment payments (described in section III.G.7. of this final rule). When considered together, these changes to the Shared Savings Program are expected to improve the quality and efficiency of items and services furnished under the Medicare program by improving the accuracy of the benchmark update factor and strengthening financial incentives under the Shared Savings Program, decreasing administrative burden and conserving resources by discontinuing the availability of the prepaid shared savings option given low uptake and anticipated limited participation, and simplifying the calculation of quarterly amounts of advance investment payment (for eligible ACOs) while encouraging ACO formation in rural areas. These changes are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies we have adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule (87 FR 70195 and 70196), we estimated that the projected impact of the payment methodology that incorporates all policies finalized by that final rule would result in $4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excluded the policies that we have enacted relying on the authority of section 1899(i)(3) of the Act. The marginal impact of the changes in the CY 2024 PFS final rule (88 FR 79496) were estimated to lower net spending by $330 million over the subsequent 10-year period (2024 through 2033) for all new policies combined. The marginal impact of the changes in the CY 2025 PFS final rule (89 FR 98527) were estimated to lower net spending by an additional $200 million in total through 2034. The marginal impact of the changes in the CY 2026 PFS final rule (90 FR 49978) were estimated to be a $20 million reduction in net spending through 2035. The marginal impact of the changes in this final rule is estimated to be $5.5 billion reduction in net spending through 2036. The incremental changes have been estimated to improve program financial savings since the CY 2023 PFS final rule, and hence the cumulative impact of all policies (including those in this rule) is estimated to result in more than the previously-estimated $4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the policies we have enacted relying on section 1899(i)(3) of the Act as authority. Therefore, we estimate that program expenditures associated with the implementation of the provisions in this final rule, in combination with other policies associated with the statutory payment model and current policies we have adopted under the authority of section 1899(i)(3) of the Act, are expected to improve the quality and efficiency of items and services furnished under the Medicare program and would not be expected to increase program expenditures relative to those of the statutory payment model.

We will continue to reexamine this projection in the future to ensure that an alternative payment model does not result in additional program expenditures and so continues to satisfy the requirement under section 1899(i)(3)(B) of the Act. Additional Shared Savings Program data accumulating after the end of the PHE for COVID–19, along with emerging information on the characteristics of, and performance trends for, new entrants in the Shared Savings Program for agreement periods beginning on January 1, 2024, January 1, 2025, and January 1, 2026, are anticipated to gradually improve our ability to reevaluate program impacts in a comprehensive fashion. If we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we will undertake notice and comment rulemaking to adjust the payment model to ensure continued compliance with the statutory requirements.

9. Impacts Related to the Ambulance Fee Schedule

As outlined in section III.H.2. of this final rule, section 6203 of the Consolidated Appropriations Act, 2026 amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons sets forth in those sections through December 31, 2027. The ambulance extender provisions are enacted through legislation that is self-implementing. We are finalizing our proposals to revise dates at § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self—implementing statutory requirements.

A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions. We have estimated the cost of these provisions to be $260 million over the 10-year period and the Congressional Budget Office (CBO)'s estimated cost of these provisions was $52 million in FY 2026, $111 million in FY 2027, and $34 million in FY 2028 with minimal costs for the remaining years of this 10- year period, resulting in a net effect of $197 million from FY 2026 to FY 2035 (*https://www.cbo.gov/system/files/2026-01/hr7148-CAA-2026.pdf,* page 4).

As discussed in section III.H.4., of this final rule, we are finalizing our proposal to make use of the revised OMB delineations as set forth in the July 21, 2023 OMB Bulletin No. 23–01 and the most recent modifications of the RUCA codes for purposes of payment under the AFS. By adopting OMB's revised delineations and the updated RUCA codes, ambulance providers and suppliers that pick up Medicare beneficiaries in areas that would be Micropolitan or otherwise outside of MSAs based on OMB's revised delineations or in a rural census tract of an MSA based on the updated RUCA codes (but are currently within urban areas) may experience increases in payment for such transports because they may become eligible for the rural adjustment factors discussed previously, while those ambulance providers and suppliers that pick up Medicare beneficiaries in areas that would be urban based on OMB's revised delineations and the updated RUCA codes (but are currently in Micropolitan Areas or otherwise outside of MSAs, or in a rural census tract of an MSA) may experience decreases in payment for such transports because they would no longer be eligible for the rural adjustment factors discussed previously.

The use of the revised OMB delineations and the updated RUCA codes would mean the recognition of new urban and rural boundaries based on the population migration that occurred over a 10-year period, between 2010 and 2020. As discussed previously in this section, we are finalizing our proposal to use the updated 2020 RUCA codes to identify rural census tracts within MSAs, such that the census tracts falling at or above RUCA level 4.0 would continue to be designated as rural areas.

Based on our analysis, the geographic designations for approximately 95.87 percent of ZIP codes would be unchanged by using OMB's revised delineations and the updated RUCA codes. There are more ZIP codes that would change from urban to rural (1,172, or 2.73 percent) than rural to urban (602, or 1.40 percent). In general, it is expected that ambulance providers and suppliers in 1,172 ZIP codes within 47 States and Puerto Rico may experience payment increases if we adopt the revised OMB delineations and the updated RUCA codes, as these areas would be redesignated from urban to rural. The State of Maryland would have the highest percentage oft ZIP codes changing from urban to rural with a total of 49, or 7.78 percent. Ambulance providers and suppliers in 602 ZIP codes within 43 States may experience payment decreases if we adopt the revised OMB delineations and the updated RUCA codes, as these areas would be redesignated from rural to urban. The State of South Carolina would have the highest percentage of ZIP codes changing from rural to urban (20, or 3.68 percent). Adoption of the revised OMB delineations and the updated RUCA codes would have no negative impact on ambulance transports in super rural areas, as none of the current super rural areas would lose their status due to the revised OMB delineations and the updated RUCA codes. We estimate that the adoption of the revised OMB delineations and the updated RUCA codes will have a minimal fiscal impact on the Medicare program.

We did not receive any public comments on the impact section for the Ambulance Fee Schedule. As stated previously, we are finalizing our proposals to revise dates at § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self—implementing statutory requirements. We are also finalizing our proposal to make use of the revised OMB delineations as set forth in the July 21, 2023 OMB Bulletin (No. 23–01 and the most recent modifications of the RUCA codes to recognize levels of rurality in census tracts falling at or above RUCA code level 4.0 as rural areas for purposes of payment under the AFS.

10. Impacts Related to the Quality Payment Program

In this section of the final rule, we estimate the impacts of the Quality Payment Program policies. We estimate participation, final scores, and payment adjustments for eligible clinicians participating through MIPS, the Advanced APMs, and MVPs. For Advanced APMs, we estimate the impacts on the number of Qualified Participants (QPs) that are associated with our policies.

a. Overall Impact Modeling Approach and Data Assessment

(1) MIPS Impact Modeling Approach

For this final rule, we used a similar modeling approach as the CY 2026 PFS final rule (90 FR 49266 through 50481). We created two MIPS impact models: a baseline and a policies model. Our baseline model includes previously finalized policies that are still in effect for the CY 2027 performance period/ 2029 MIPS payment year and in the absence of any of the new policies in this rule. Examples of previously finalized policies included in the baseline model are revised administrative claims quality measure benchmarking methodology, modifications to the Total Per Capita Cost measure, and removal of the topped-out measure scoring cap and application of the defined topped out measure benchmarks to 19 quality measures identified for CY 2026 performance period/2028 MIPS payment year. Please refer to CY2026 PFS final rule for a comprehensive, detailed discussion of finalized policies (90 FR 49266).

The policies model builds on the baseline model and incorporates the new MIPS policies we proposed for the CY 2027 performance period/2029 MIPS payment year included in this final rule. By comparing the baseline model to the policies model, we are able to estimate the impact of the policies in this final rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This approach enables our model to align as much as possible with actual MIPS scoring

(2) Data Used to Estimate Future MIPS Performance

In the CY 2026 PFS proposed and final rules, we used data from performance year 2023 to construct baseline and policies model simulations. For this proposed and final rule, we used data from performance year 2024. This is the most recent available data and reflects our most up-to-date information on program participation, final scores, and payment adjustments.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

Beginning with QP Performance Period 2017 (payment year 2019), through the Medicare Option, eligible clinicians who are determined to have

a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs are QPs for the applicable QP performance period and the corresponding payment year. In payment years 2019 through 2024, these QPs received a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the base year (the calendar year immediately preceding the payment year). In payment year 2025, eligible clinicians who attained QP status for QP Performance Period 2023 will receive a lump-sum APM Incentive Payment equal to 3.5 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. In payment year 2026, eligible clinicians who attained QP status in QP Performance Period 2024 will receive a lump-sum APM Incentive Payment equal to 1.88 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2025. In payment year 2028, eligible clinicians who attained QP status in QP Performance Period 2026 will receive a lump-sum APM Incentive Payment equal to 3.1 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2027.

Beginning with QP Performance Period 2019 (payment year 2021), in addition to the Medicare Option, the All-Payer Combination Option also affords eligible clinicians an opportunity at QP status. The All-Payer Combination Option allows eligible clinicians to become QPs by assessing a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a given QP Performance Period are not subject to MIPS reporting requirements and payment adjustments for the contemporaneous MIPS performance period/payment year. Eligible clinicians who do not become QPs but meet a lower threshold requirement to become Partial QPs for the year may elect to (or not to) report to MIPS. If they elect to report, they are subject to MIPS scoring and payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Separately from the APM Incentive Payment, beginning in payment year 2026, there are two separate PFS CFs—one for QPs for the year (the qualifying APM CF), and the other for all non-QP eligible clinicians and other suppliers paid under the PFS (the nonqualifying APM CF). The update to the qualifying APM CF for a year is 0.75 percent, whereas the update to the non-qualifying APM CF for a year is 0.25 percent. Such updates produce approximately a 0.5 percent difference in the two conversion factors each year.

The thresholds to achieve QP status in the 2027 QP Performance Period (2029 payment year) are set to 75 percent for the payment amount, and 50 percent for the patient count. Overall, we estimated that for the 2026 QP Performance Period, between 517,800 and 530,900 eligible clinicians will become QPs, and therefore will be excluded from MIPS reporting requirements and payment adjustments.

In the CY2026 PFS final rule, we finalized our proposal to use two new definitions, ''Covered professional service attribution-eligible beneficiary'' and ''E/M attribution-eligible beneficiary'' such that we conduct two determination calculations, one that includes any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination and one that continues to use Evaluation and Management services furnished by the eligible clinician (NPI) for whom we are making the QP determination. We also finalized our proposal to add a QP determination at the individual level for all Advanced APM participants, beginning with the 2026 QP Performance Period.

We project the number of eligible clinicians who will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2027 QP Performance Period. The following APMs are expected to be Advanced APMs for the 2027 QP Performance Period:

- Enhancing Oncology Model (EOM);
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Long Term Enhanced ACO Design (LEAD) Model;
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track);
- States Advancing All-Payer Health Equity Approaches and Development (AHEAD) Model; and
- Transforming Episode Accountability Model (TEAM).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable (see § 414.1425(a) for information on the APM Participant Lists used for QP determinations) for the 2024 QP performance period third snapshot QP determination date to estimate the number of QPs for the 2027 QP Performance Period. For models starting in the 2027 QP Performance Period we estimated performance based on projected participation. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries were attribution eligible thresholds.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2027 Performance Period/2029 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Policies Models

For this final rule, we applied the same assumptions as in the CY 2026 PFS final rule (90 FR 49980) to estimate our initial population of clinicians using 2024 performance data. Specifically, we used the CY 2024 final reconciled eligibility determination file, same as the 2023 file described in the CY 2026 PFS final rule (90 FR 49980). This file reconciles eligibility from two determination periods and aligns with the CY 2024 performance period submissions data on which we based this model. Our analysis included 1,984,786 clinicians with PFS claims in this initial population. This initial population of clinicians was used to determine eligibility using the methodology described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians After Applying Eligibility Assumptions

(a) Methods and Assumptions Used To Estimate Eligibility

After identifying the clinician population with PFS claims, we applied the same eligibility assumptions and determination process described in the CY 2026 PFS final rule (90 FR 49980). We did not propose any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and policies model.

For our impact analysis, we established the ''required eligibility''

category, which means the clinician exceeds the low-volume threshold in all three criteria (§§ 414.1305 and 414.1310 (b)(1)(iii)) and is subject to a MIPS payment adjustment. We based this estimate on the CY 2024 performance period data described in this section of the final rule, which includes the three low-volume criteria.

Our next two eligibility assumptions concern clinicians participating in MIPS through groups. They may voluntarily participate in MIPS but are not required to participate. First, our group eligibility, includes clinicians with a group submission, and their group exceeds all three low-volume threshold criteria. Second, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in at least one criterion, but not all three, may elect to opt in. Based on the number of individuals who opted in to MIPS in performance year 2024, our model estimates that these clinicians will continue to opt in to MIPS in CY2027 performance period/ 2029 MIPS payment year.

Additionally, we estimate the number of ''Potentially MIPS Eligible'' clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These clinicians are potentially eligible because they are either opt-in eligible but did not opt-in or group eligible but did not report.

Finally, we estimate the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. They include clinicians who are below all three low-volume threshold criteria (both as an individual and as a group), QPs, and clinicians excluded from MIPS for other reasons, such as those with a non-MIPS-eligible clinician type or newly enrolled in Medicare

After applying these assumptions to our initial population, we estimate that there will be 586,925 MIPS eligible clinicians with ~$51.70 billion in allowed charges in the CY2027 performance period/2029 MIPS payment year.

(b) MIPS Eligibility Estimates

In our policies model, we estimate to have 586,925 MIPS eligible clinicians Table D–B13 summarizes our eligibility estimates for the policies model after applying our assumptions outlined in this section of the final rule.

BILLING CODE 4169–69–P

TABLE D-B13: ESTIMATION OF MIPS ELIGIBILITY STATUS FOR CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR USING THE CY 2027 PFS FINAL RULE ASSUMPTIONS

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians	Number of Clinicians	PFS allowed charges ($ in mil)[1]
MIPS Eligible Clinicians			
MIPS eligible (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS	94,895	$28,668
	Did not Report to MIPS	36,898	$11,100
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Had a group submission	451,654	$11,710[2]
Subgroup Eligible	MVP Subgroup reporting	286	$14
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Opted-in To MIPS	3,192	$204
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		**586,925**	**$51,695**
Potentially MIPS Eligible Clinicians			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible; Do not opt-in	176,361	$5,594
	Group Eligible; Did not Report	497,433	$11,590
Total Number of Clinicians Potentially MIPS Eligible		673,794	$17,184
Not MIPS Eligible Clinicians			
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	130,199	$807
Excluded for other reasons (Non-eligible clinician type, newly enrolled)	Not applicable	91,962	$635
Qualified Participant (QP)	Not applicable	501,906	$23,259
Total Number of Clinicians Not MIPS Eligible		724,067	**$24,701**
Total Number of Clinicians Not MIPS Eligible or Potentially MIPS Eligible But Did Not Opt-in/Report		1,397,861	**$41,885**
Total Number of Clinicians (MIPS, Potentially, and Not MIPS Eligible)		**1,984,786**	**$93,580**

[1]Allowed charges estimated in 2024 dollars and projected to 2029 dollars (payment year. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

[2]Most clinicians are represented by Group submissions yet are below LVT and have low allowed charges.

BILLING CODE 4169–69–C

d. Modeling Approach and Methods for MIPS Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this final rule, we present several proposals that impact the measures and activities, the performance category scores, final scores, and MIPS payment adjustments for MIPS eligible clinicians. In section IV.A. of this final rule, we outline these changes in more detail and describe our methodology to estimate MIPS payment adjustments for the CY 2027 performance period/2029 MIPS payment year. We then present the impact of the policies in the CY 2027 performance period/2029 MIPS payment year by comparing select metrics to the baseline model. By comparing model outputs between the baseline model and the policies model, we are able to observe the impact of the

policies for the CY 2027 performance period/2029 MIPS payment year. MIPS eligible clinicians' final scores are calculated based on the clinicians' performance on measures and activities specified under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity, and via traditional MIPS, the APM Performance Pathway (APP), or MVP reporting options. MIPS APM participants who are ACOs participating in the shared saving program are required to report through the APP/APP Plus measure set. The APP or APP Plus reporting option only scored on three performance categories: quality, improvement activities, and Promoting Interoperability. Our simulation applies the finalized and baseline policies to the existing scoring engine.

(2) Methodology To Assess Impact for MIPS Value Pathways

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register to report a particular MVP prior to submitting. We assessed whether to use 2024 MVP registration data to estimate MVP participation and policy impact but elected not to simulate the impact for MVP because we do not have sufficient MVP scoring data for modeling and simulation. Thus, modeling based on limited data is less reliable for impact assessment. As more MVP scoring data becomes available in the future, we will reassess our methodology for estimating MVP participation, final scores, and payment adjustments.

(3) Methodology To Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we use the data from performance year 2024, including data submitted for the quality, cost, improvement activities, and Promoting Interoperability performance categories and claims data for the cost performance category.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for certain quality measures, and other data sets. For the CY 2027 performance period/2029 MIPS payment year, we calculate hypothetical final scores for the baseline and policies models for each MIPS eligible clinician by applying appropriate measure level, performance category, and final scoring policies.

(a) Methodology To Estimate the Quality Performance Category Score

We used the CY 2026 PFS final rules as the starting point of our baseline model (90 FR 49982). This includes our policies regarding the new benchmark for Administrative Claims measures and scoring topped out measures impacted by limited measure choice. Please refer to the CY 2026 PFS final rule for a comprehensive, detailed discussion of finalized policies (90 FR 49266).

Our policies model incorporates the following policies from this final rule:

- In section IV.B.1.b.(3) of this final rule, to facilitate fairer scoring, we proposed to remove the scoring cap and change the benchmarking approach for additional topped out measures applicable to clinicians facing both limited measure choice and limited scoring opportunities as well as MIPS Core Measures. We do not simulate the addition or removal of quality measures outlined in section IV.A.4.d.(1) of this final rule because current data from the CY 2024 performance period do not include new measures, and we cannot estimate the impact of removing measures since we are not able to predict clinician response in measure selections.

In section IV.B.1.b.(1) of this final rule, we proposed to remove the requirement to submit one outcome or high priority measures and instead require the submission of a MIPS Core Measure. We proposed that small practices with no more than 15 clinicians would be exempt from the MIPS Core Measure requirement. CMS internal analysis found 57 percent of the MVP submissions in performance year 2024 did not contain any of the MIPS Core measures. Modeling quality performance category score with insufficient historical submission data will introduce uncertainty and complexity to the modeling simulation. Working under this limitation, we believe the previous outcome/high-priority reporting requirement and scoring rules reflected in the performance year 2024 data can serve as a proxy for core measure reporting in the models. As a result, we do not simulate the MIPS Core Measure reporting policy. We did, however, model the impact of the core measure exemption for small practices.

(b) Methodology To Estimate the Cost Performance Category Score

We estimate the cost performance category score using the same methodology as described in the CY 2026 PFS final rule (90 FR 49982) for the baseline and the policies models.

We do not model the impact of the Acute Kidney Injury requiring New Inpatient Dialysis (AKI) measure because it was suppressed for the CY 2024 performance period/2026 MIPS payment year. Therefore, there was no performance data available in 2024 to model the impact of the Acute Kidney Injury requiring New Inpatient Dialysis (AKI) measure

(c) Methodology To Estimate the Promoting Interoperability Performance Category Score

We estimate the Promoting Interoperability performance category score using the same methodology as described in the CY 2026 PFS final rule (90 FR 49982) for the baseline model and the policies models.

For the policies model, we simulate the following changes:

In section IV.A.4.d.(4) of this final rule, we proposed the removal of three attestations in the Promoting Interoperability performance category: ONC Direct Review, ONC–ACB Surveillance, and Security Risk Analysis.

(d) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline model, we use the same method to estimate the improvement activities performance category score as described in the CY 2026 PFS final rule (90 FR 49983), including alignment with the clarification provided regarding IA automatic weighting for APM participants (89 FR 79366).

In section IV.A.4.d.(3) of this final rule, we proposed updates to the Improvement Activities inventory, such as removing activities. There is no historical data reflecting IA inventory updates, such as activity removal, for us to estimate potential impact. Our RIA models cannot predict how clinicians will alter their behavior once activities are removed.

(e) Methodology To Estimate the Complex Patient Bonus Points

This final rule does not include policies to modify the complex patient bonus. Therefore, for the baseline and policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(f) Methodology To Estimate the Final Score

We did not propose any changes to how we calculate the MIPS final score. Our baseline and policies models assign

a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For both models, after adding any applicable complex patient bonus, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a MIPS eligible clinician was approved for reweighting of one or more performance categories in the baseline model according to the data from the CY 2024 performance period/2026 MIPS payment year, we continue to apply that reweighting in our policies model by assigning them a neutral score equal to the performance threshold if all categories were reweighted or assigning the applicable weights to the categories which were reweighted. Although it is unlikely (but possible) that the exact same clinicians will apply for and receive reweighting in both the CY 2024 performance period/2026 MIPS payment year (which our data is based on) and the CY 2027 performance period/2029 MIPS payment year (which we are simulating), we believe that this assumption appropriately reflects future clinician behavior for two reasons. First, while the exact same MIPS eligible clinicians may not receive reweighting in two different years, we believe that this assumption allows us to quantify the impact of the reweighting on a population level. In other words, even if the same clinicians do not apply for and receive reweighting in these two different years, the absolute number of reweighting and the characteristics of practices that receive reweighting are likely to remain similar. Secondly, if we were not to assign reweighting to those MIPS eligible clinicians, many of them would receive a very low final score because they did not submit data for one or more performance categories during the year in which they received reweighting. We do not believe that it is a realistic assumption that, in the absence of reweighting, those clinicians will continue not to submit data. For these reasons, we assume that clinicians who received reweighting in the CY 2024 performance period/2026 MIPS payment year are also approved for reweighting in the CY 2027 performance period/2029 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(g) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and policies models, we applied the hierarchy as finalized in the CY 2024 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculate the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we apply the performance threshold of 75 points finalized in the CY 2026 PFS final rule. In this final rule, we do not make any changes to the performance threshold. Therefore, for both the baseline and policies models, we use a performance threshold of 75 to calculate the exchange function for MIPS payment adjustments. We note that the results of this exchange are not identical between the baseline and policies models. This is because the scaling factor used to determine positive adjustments is dependent on the total dollar amount of negative payment adjustments, and those adjustments differ as final scores are not identical between both models.

For both the baseline and policies models, we use these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Methodology To Assess Impact for APM Performance Pathways

Shared Savings Program Accountable Care Organizations, participating in MIPS through a MIPS APM are scored on performance in the quality, Promoting Interoperability, and Improvement Activities performance categories. We included the following previously finalized policies for SSP ACOs participating in a MIPS APM into the CY 2027 baseline model:

- In 2024, the CMS Web Interface continued to be a collection type available to Shared Savings Program Accountable Care Organizations (SSP ACOs) reporting under the Advanced Payment Pathway. Because our model simulation relies on data from performance year 2024, including CMS Web Interface submissions, we are unable to predict which collection type SSP ACOs will adopt in lieu of the web interface for CY 2027 performance period/2029 MIPS payment year, given that the Web Interface collection type was no longer available after the CY 2025 performance period/2027 MIPS payment year.

We do incorporate the following policies into the policies model:

- In section IV.B.1.c.(1) of this final rule, we proposed to score all Medicare CQMs using flat benchmarks retroactively beginning in CY 2026.

(5) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in section VII.F.11.d(3) of this final rule, we create a baseline and policies simulation. Using this simulation, we estimate the impact of the policies of this final rule.

(a) Impact on Clinician Eligibility

In section VII.F.11.(c) of this final rule, we noted that we do not modify clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact on Clinician's Final Scores for Traditional MIPS

Table D–B14 shows the median final score by practice size and the percentage of MIPS eligible clinicians of each practice size with a positive, neutral, or negative adjustment.

BILLING CODE 4169–69–P

TABLE D-B14: CY 2027 FINAL SCORE ESTIMATES BY PRACTICE SIZE

Practice Size[1]	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate[2]	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline					
(1) Solo	15,427	75.00	34.98	26.27	38.75
(a) Reporting	7,326	89.61	73.66	9.00	17.35
(b) Non-Reporting[3]	8,101	24.7	0.00	41.90	58.10
(2) Small (2 to 15)	60,634	87.98	67.60	14.84	17.36
(a) Reporting	47,596	91.35	86.37	4.02	9.62
(b) Non-Reporting[4]	13,040	75	0.04	54.33	45.64
(3) Medium (16 to 99)	115,077	88.63	89.91	7.17	11.92
(4) Large (100+)	395,787	89.20	94.19	1.67	4.14
Overall	586,925	88.83	87.30	4.76	7.94
Policies					
(1) Solo	15,427	75.00	34.77	26.28	38.95
(a) Reporting	7,325	90.23	73.23	9.00	17.77
(b) Non-Reporting	8,101	24.70	0.00	41.90	58.10
(2) Small (2 to 15)	60,634	88.61	67.65	14.83	17.52
(a) Reporting	47,596	91.84	86.17	4.01	9.82
(b) Non-Reporting	13,040	75	0.04	54.33	45.64
(3) Medium (16 to 99)	115,077	89.14	81.08	7.14	11.78
(4) Large (100+)	395,787	89.48	94.80	1.63	3.57
Overall	586,925	89.21	87.73	4.72	7.55

[1]Practice size refers to the number of NPIs in a TIN

[2]The median final score includes clinicians who receive reweighting for all MIPS performance categories our policies at § 414.1380(c)(2). These clinicians who have all performance categories reweighted are assigned a score of 75 (neutral payment adjustment) in our model.

[3]52.51% of the solo practitioners did not report by not submitting any data

[4]21.51% of the small practice providers did not report by not submitting any data

BILLING CODE 4169–69–C

MIPS performance and financial distribution remain stable with marginal improvements in the overall median final scores and slightly higher overall percentage of clinicians receiving a positive payment adjustment. The overall median final score is 88.83 in the baseline model and 89.21 in the policies model, a slight increase for all practice sizes. About 87.3 percent of eligible clinicians receive a positive payment adjustment in the baseline model and 87.73 percent in the policies model Overall, the percentage of eligible clinicians with negative payment adjustment will drop slightly, from 7.94 percent baseline to 7.55 percent policies.

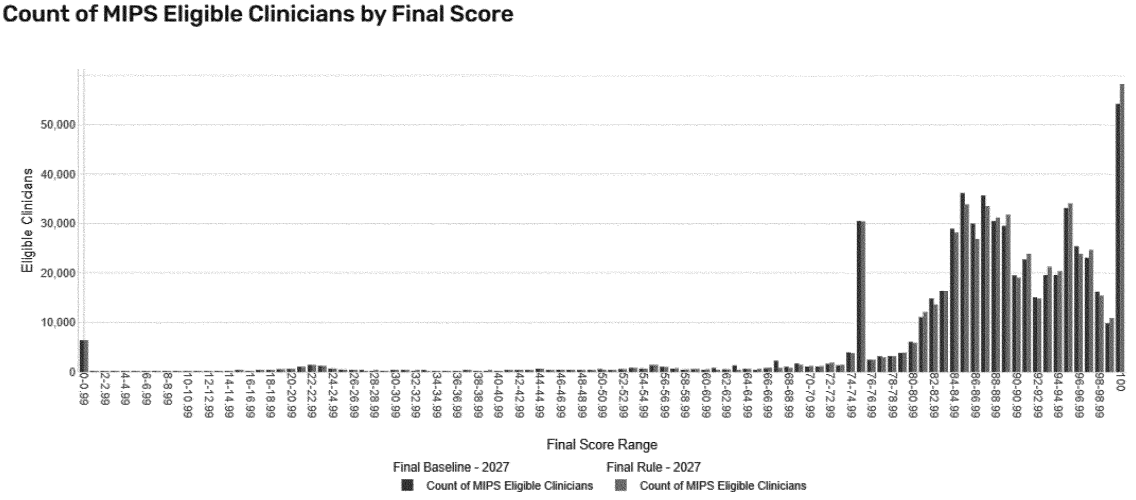

Table D–B15 shows the median quality category score for MIPS eligible clinicians who are scored on the quality performance category for the baseline and policies models. Overall, the median quality performance category score showed a marginal increase from 83.16 to 83.72. Solo practitioners, who actively report, experience the most noticeable increase (+2.25) in median quality performance category score compared to those of other practice sizes.

TABLE D-B15: CY 2027 QUALITY SCORE ESTIMATES BY PRACTICE SIZE

Practice Size	MIPS Eligible Clinicians Receiving Quality Score	Total Number of MIPS Eligible Clinicians	Percent of MIPS Eligible Clinicians Receiving Quality Score	Median Quality Score Estimate
Baseline

Small (2-15)	49,999	60,634	82.46	87.93
(a) Reporting	44,047	47,596	92.54	90.63
(b) Non-reporting	5,952	13,038	45.65	0
Medium (16-99)	97,926	115,077	85.10	83.13
Large (100+)	378,001	395,787	95.51	83.72
Overall	**537,214**	**586,925**	**91.53**	**83.72**

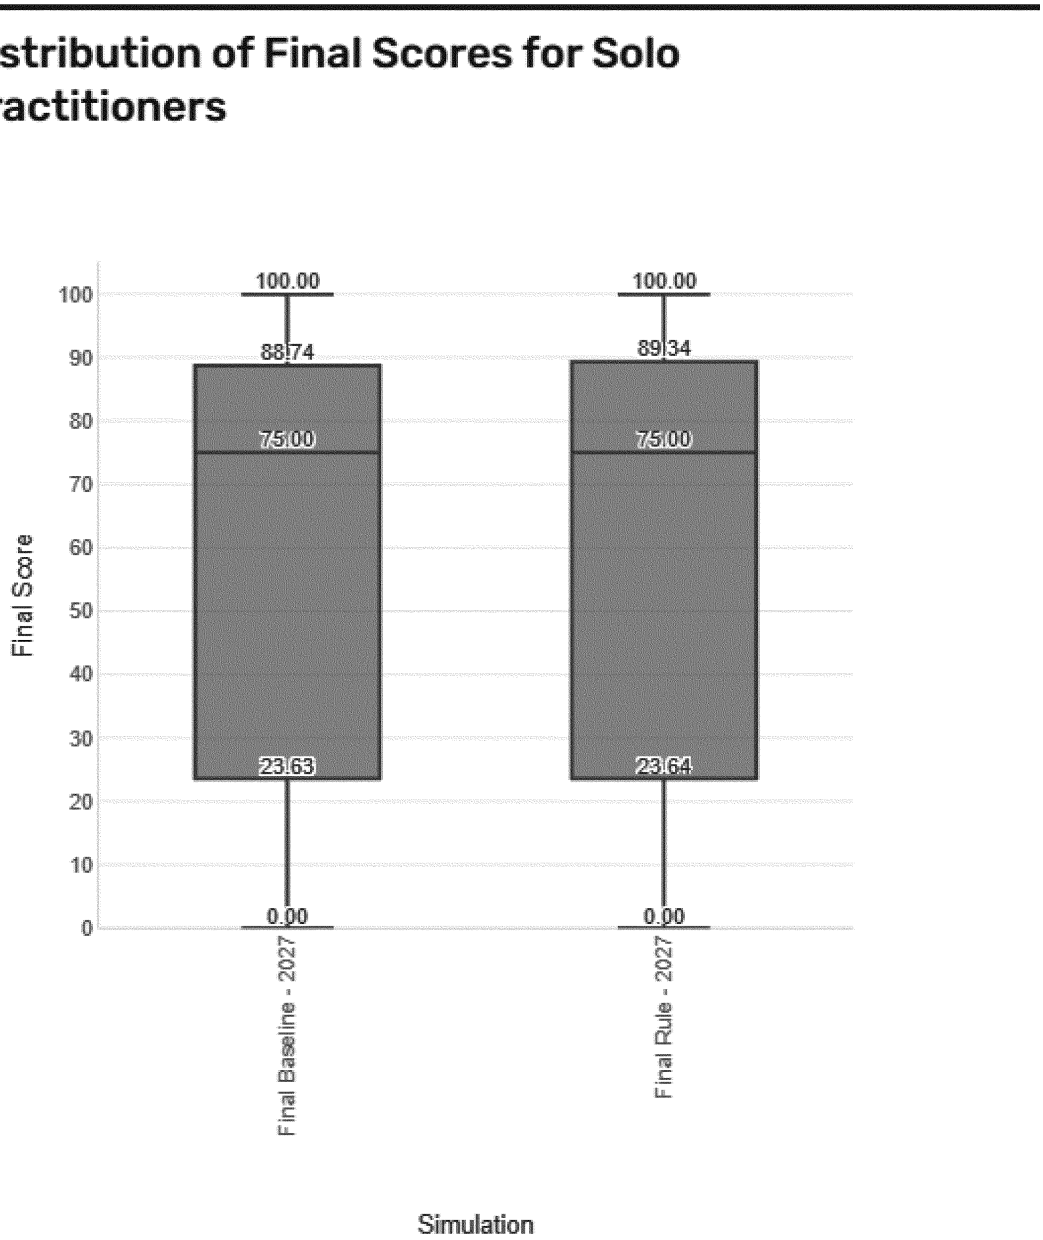
Figure D–B1 shows the distribution of final scores for all MIPS eligible clinicians. Note that there is a noticeable size of MIPS eligible clinicians with a final score of 75. MIPS eligible clinicians whom we approved for reweighting all MIPS performance categories in accordance with our reweighting policies at § 414.1380(c)(2) are assigned a final score of exactly the performance threshold (75). Overall, the distribution is left skewed, indicating that many more clinicians would receive final scores on the higher side.

FIGURE D-B1: Count of MIPS Eligible Clinicians by Final Score

(i) Impact to Small and Solo Practices

Across both the baseline and policies models, approximately 15,427 MIPS-eligible clinicians are solo practitioners, accounting for 2.63 percent of all MIPS-eligible clinicians.

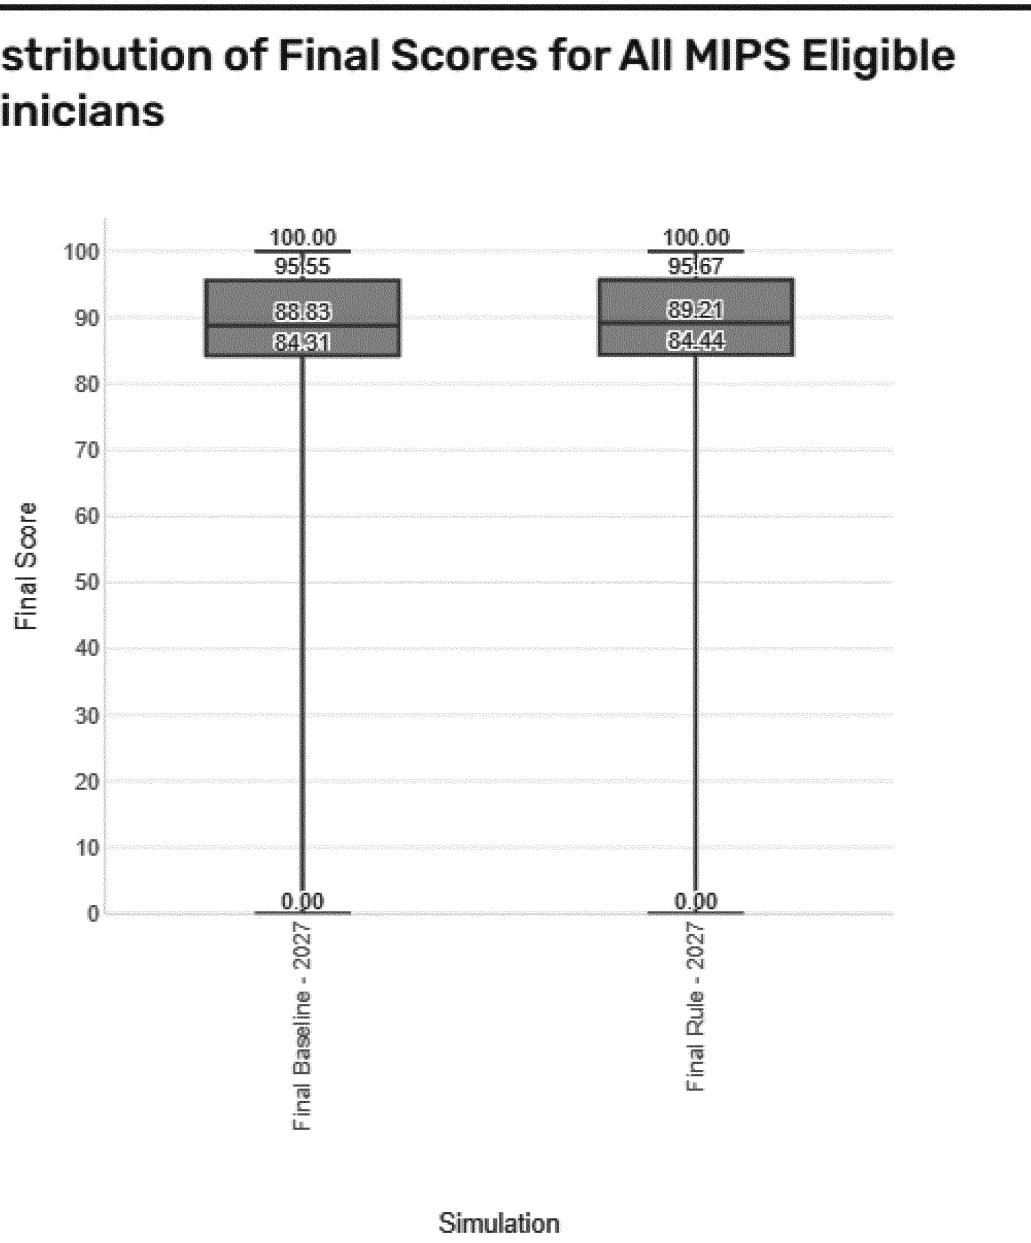
The median final score for solo practitioners who actively report data is 89.61 in the baseline model and 90.23



in the policies model. However, the median final scores for solo practitioners who do not report data are substantially lower: 24.7 in both baseline and policies models. The portion of all solo practitioners receiving a positive adjustment is starkly different between reporting and non-reporting solo practitioners. About 73.66 percent (baseline) and 73.23 percent (policies) reporting solo practitioners will receive a positive payment adjustment; whereas 0 percent (both baseline and policies) non-reporting solo practitioners will receive a positive payment adjustment.

Many solo practitioners do not actively submit data to MIPS despite being MIPS eligible clinicians. Based on the 2024 performance data, we estimate that about 52.51 percent of solo practitioners receiving a MIPS payment adjustment do not submit any data to MIPS.

Table D–B16 shows that, even among reporting solo practitioners, the percentage receiving a positive payment adjustment is lower than that of clinicians from small, medium, or large practices. Similarly, even for reporting solo practitioners, a higher proportion of them face negative payment adjustments compared to those in small, medium, and large practices Figure D–B2 shows the distribution of final scores for solo practitioners. Both baseline and policies box plots show identical final score distributions, and both baseline and policies models show a large distance between the lower and upper quartiles. Figure D–B3 shows the final score distribution for all MIPS eligible clinicians between the baseline and the policies models. These box plots also show identical final score distributions; however, the distance between lower and upper quartiles is substantially narrower for all MIPS eligible clinicians than it is for solo practitioners.



BILLING CODE 4169–69–P

FIGURE D-B2: Distribution of Final Scores for Solo Practitioners

BILLING CODE 4169–69–C

FIGURE D-B3: Distribution of Final Scores for All MIPS Eligible Clinicians

Small practices, defined at § 414.1305 as groups with 2 to 15 clinicians, have a median final score of 87.98 in the baseline and 88.61 in the policies model. However, as shown in Table D–B14, the median final score for the reporting small practice providers is 91.35 (baseline) and 91.84 (policies), substantially higher than the median final score of 75—in both baseline and policies models—for the non-reporting small practice providers. They are also higher than the median final scores for all MIPS eligible clinicians who submit data, which are 89.85 in the policies model and 89.66 in the baseline model. This indicates that small practice providers who submit MIPS data can perform better than it is for the medium-sized and large practice providers. Table D–B16 shows the percentage of clinicians, by practice size, either do or do not submit data to MIPS and their corresponding median final scores. Note that, in the policies model, the median final scores for small, medium, and large practice clinicians who do not submit data are 75. This indicates that many small, medium or large practice clinicians who do not submit data to MIPS have been approved for reweighting of all of their MIPS performance categories under our policies at § 414.1380(c)(2). In contrast, the median final scores for solo clinicians, who do not submit data are 24.70. This indicates that many of them are either not being eligible for or not applying for our reweighting policies for extreme uncontrollable circumstances or hardships. Over 90 percent of the medium-sized and large practice clinicians submit data to MIPS. It is possible that the remaining 10 percent or less MIPS eligible clinicians who do

not submit data to MIPS are primarily those who have received reweighting under our policies at § 414.1380(c)(2).

TABLE D-B16: PERCENTAGE OF MIPS ELIGIBLE CLINICIANS WHO SUBMIT DATA AND MEDIAN FINAL SCORE

	Percent of MIPS Eligible Clinicians who Submit Data (by practice size)	Median Final Score of MIPS Eligible Clinicians who Submit Data	Median Final Score of MIPS Eligible Clinicians who Do not submit data.

(2) Small (2 to 15)	78.50	91.84	75.00
(3) Medium (16 to 99)	90.71	90.26	75.00
(4) Large (100+)	97.71	89.66	75.00
Overall	**93.03**	**89.85**	**75.00**

(ii) Impact to Rural Providers

In our data we assign rural practitioners a special status. Impact assessment of this group of clinicians indicates that their overall final scores are slightly lower than the overall MIPS eligible clinicians. Table D–B17 shows the median final score and the percentage of eligible clinicians with a positive, neutral, or negative adjustment by practice size for rural practitioners.

BILLING CODE 4169–69–P

TABLE D-B17: CY 2027 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR RURAL PRACTITIONERS ONLY

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment

Large (100+)	35,684	87.22	96.09	1.42	2.49
Overall	**66,801**	**87.46**	**87.81**	**3.77**	**8.41**

[1]46.52% of the rural, solo practitioners did not report by not submitting any data[2]14.22% of the rural, small practice providers did not report by not submitting any data.

The overall median final score for rural practitioners is 87.37 in the baseline model and 87.46 in the policies model. This is slightly lower than the median final score for all MIPS eligible clinicians, which is 88.83 in the baseline model and 89.21 in the policies model. According to the results from the policies model, rural clinicians in large practices have a slightly lower median final score (87.22) than it is for reporting, rural, solo practitioners (88.9), reporting, rural, small practice providers (91.33), and rural medium-size practice providers (89.80).

(iii) Impact to Safety Net Providers

(A) Updated Definition of Safety Net Providers

In the CY 2022 PFS final rule (87 FR 70094), we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS eligible clinicians Hierarchical Conditions Categories risk score and social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

In the 2024 PFS final rule (88 FR 79513), we compared the performance of clinicians who received the complex patient bonus with our overall population. As we further developed our model, we decided to adopt a more precise definition of safety net providers. We believe that by narrowing our definition of safety net providers to clinicians fall in the top 20 percentile for their percentage of patients who are dually eligible for Medicare and Medicaid, we can identify providers who care for a large proportion of socially vulnerable individuals.

Table D–B18 shows the median final score estimates for safety net providers under this definition. In the policies model, safety net providers have a higher median final score (93.22) than the overall MIPS eligible clinicians (89.21). Safety net solo practitioners who actively report data have a substantially higher median final score (93.84 in the policies model) than that from the non-reporting, safety net, solo practitioners (29.41 in the policies model). Almost 57 percent of safety net solo practitioners and over 30 percent of safety net small practice providers did not report by not submitting any MIPS data, compared to ~53 percent and ~22 percent of the overall solo practitioners and small practice providers, respectively.

TABLE D-B18: CY 2027 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR SAFETY NET PRACTITIONERS ONLY

[2]30.26% of the safety-net, small practice providers did not report by not submitting any data

BILLING CODE 4169–69–C

(c) Impact to MIPS Eligible Clinicians' Payment Adjustments

We did not propose to increase the performance threshold in this final rule. Table D–B20 shows that the payment adjustments are very similar between the baseline and policies model. This is because our policies can maintain program stability. The maximum positive payment adjustment is 1.37 percent in the baseline model and 1.34 percent in the policies model. The baseline model estimates redistributing $332 million, and the policies model estimates redistributing $330 million. This slight decrease is due to slightly higher proportions of clinicians receiving positive payment adjustments in the policies model (87.73 percent) than it is in the baseline model (87.30 percent). As the proportion of MIPS eligible clinicians receiving a positive payment adjustment increases slightly, the portion of clinicians receiving a negative payment adjustment also slightly decreases accordingly (7.55 percent in the policies model vs. 7.94 percent in the baseline model). As the proportion of MIPS eligible clinicians receiving negative payment adjustments decreases slightly, the budget neutral funds available for redistribution also decrease somewhat.

FIGURE D-B5: Final Score Distribution and Payment Adjustment

We also report on the median positive and negative payment adjustments by practice size in Table D–B19.

TABLE D-B19: CY 2027 MEDIAN POSITIVE AND NEGATIVE PAYMENT ADJUSTMENT ESTIMATES BY PRACTICE SIZE

Practice Size	Median Positive Payment Adjustment[1]	Median Negative Payment Adjustment
Baseline		
Solo (1)	+1.01	-6.43
(a) Engaged	+1.01	-2.67
(b) Non-Reporting	N/A[2]	-9.00
Small (2-15)	+0.96	-6.08
(a) Reporting	+0.96	-1.50
(b) Non-Reporting	+0.08	-6.74
Medium (16-99)	+0.87	-1.92
Large (100+)	+0.81	-1.35
Overall	+0.83	-2.46
Policies		
Solo (1)	+1.03	-6.42
(a) Engaged	+1.03	-2.53
(b) Non-Reporting	N/A	-9.00
Small (2-15)	+0.97	-6.06
(a) Reporting	+0.97	-1.47
(b) Non-Reporting	+0.08	-6.74
Medium (16-99)	+0.88	-1.92
Large (100+)	+0.80	-2.08
Overall	+0.83	-2.62

[1]Final score above the performance threshold. The median negative adjustment is defined as the medium payment adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal to the performance threshold.

[2]There are no solo practitioners who did not report data and received a Positive payment adjustment. The maximum they could receive is from the Quality Admins Claims, and even if they received excellent scores, it would still be less than the performance threshold.

The overall median negative payment adjustment in the policies model is slightly lower than it is in the baseline model. That is because the policies model has a higher mean final score than the baseline model (89.21 policies vs. 88.83 baseline).

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting payment adjustments, we are finalizing several policies that will impact burden. In section V.B.7. of this final rule, we estimate the burden impacts of finalized policy provisions.

(2) Additional Impacts to Clinicians

We provide additional burden discussions for policy provisions that we are unable to quantify.

(a) Modifications to the MIPS Improvement Activities Inventory

As discussed in section IV.A.4.d.(3) of this final rule, we are finalizing our proposed updates to the MIPS Improvement Activities Inventory beginning with the CY 2027 performance period/2029 MIPS payment year. We do not expect these changes to affect our burden estimates for the number of estimated respondents or response time, as most of the improvement activities in the MIPS Improvement Activities Inventory remain unchanged for the CY 2027 performance period/2029 MIPS payment year. We refer readers to section IV.A.4.d.(3) of this final rule for details on the changes to the MIPS Improvement Activities Inventory.

(b) Qualifying Alternative Payment Model (APM) Participant (QP) Determinations

In section IV.F.2. of this final rule, we are finalizing with modification, our proposal to apply QP and partial QP status at the TIN/NPI level. We note that year-over-year participation changes have historically had outsized impacts on our projections. For example, ACOs frequently add or remove participants as part of their operations. These changes in participation make it difficult to project how these proposals will impact clinicians who are determined to be QPs, Partial QPs, or previously reported MIPS (at the individual, group, subgroup, or APM Entity level), if at all. Accordingly, we have not adjusted our estimates related to performance category submissions due to these proposals. For details on these policies, see section IV.F.2. of this final rule.

(c) Third-Party Intermediaries

In section IV.C. of this final rule, we are finalizing our proposal to (1) add a requirement that CMS-approved third-party intermediaries may be terminated after failure to submit data for 1 year; and (2) clarify that if a third-party intermediary does not submit data for 1 year, they would be required to provide documentation and would be terminated if documentation cannot be provided and/or the documentation shows that they would not be submitting data for the given MIPS performance period. Due to the technical nature of these changes, there is no data available to quantify the burden for third-party intermediaries during the CY 2027 performance period/2029 MIPS payment year. We refer readers to section IV.C. of this final rule for additional information on the policy provisions related to third-party intermediaries.

G. Alternatives Considered Related to the Ambulatory Specialty Model

In section III.D. of this final rule, we discuss the mandatory ASM. We will test whether ASM leads to improved chronic condition management, higher quality care, and reduced costs by incentivizing ASM participants with the opportunity for positive payment adjustments to Medicare Part B covered professional services payments based on their performance on data reported on quality, cost, improvement activities, and CEHRT interoperability.

Throughout this final rule, we identified our proposed policies and alternatives that we considered and provided information as to the effects of these alternatives and summaries of public comments received on the proposed policies. This final rule provides descriptions of the requirements that we will mandate and presents rationales for our decisions and, where relevant, alternatives that we considered. For example, we considered whether we should waive the requirement for ASM participants in rural areas to attest to complete IA–2: Establishing Communication and Collaboration Expectations with Primary Care using Collaborative Care Arrangements (CCAs) instead of providing the proposed rural scoring adjustment to an ASM participant's final score. Although ASM participants in rural areas may face challenges forming partnerships with primary care providers due to limited primary care availability, we believe that a rural scoring adjustment more broadly accounts for challenges that could affect ASM participant performance across the four ASM performance categories compared to only waiving IA–2.

We solicited comments on our proposals and on the alternatives, which are addressed in this final rule.

H. Impact on Beneficiaries

As noted previously, we estimate that a combination of the finalized proposals for the Shared Savings Program, including introducing a growth adjustment, the increase to the sharing rate in BASIC track Level E, and the increase in the scaling factor for the prior savings adjustment, are expected to increase the number of ACOs in the program and correspondingly the size of the population of beneficiaries assigned to ACOs by up to one million beneficiaries per year, with roughly two-thirds of such increase attributable to the proposed growth adjustment. This growth in participation is likely to feature beneficiaries who might particularly benefit from care management because the growth adjustment is designed to attract new providers without experience in the program who are serving beneficiaries new to value-based care. Additionally, the increase to the scaling factor for the prior savings adjustment, together with risk-adjusting the 5 percent cap on benchmark adjustments, could moderate the rebasing ratcheting effect and thereby improve the business case for ACOs serving high needs populations to invest additional resources in care management.

In the CY 2027 PFS proposed rule (91 FR 44274), we noted that in PY 2024, ACOs performed better on certain patient-experience and performance measures than physician groups participating in MIPS (90 FR 50003 and 50004) and referred readers to our discussion in the CY 2026 PFS final rule for additional details on ACOs' measure performance (90 FR 50002). Since the publication of the CY 2027 PFS proposed rule, preliminary PY 2025 data on ACOs' measure performance and measure performance relative to physician groups participating in MIPS has become available.

ACOs have been found to perform better on certain patient experience and performance measures than physician groups participating in MIPS (as shown in Table D–B20). In PY 2025, ACOs scored better than comparable MIPS groups[427] on the three eCQMs in the APP Plus quality measure set that are available in traditional MIPS and the

[427] Quality Payment Program measurement data are for MIPS groups that have 16 or more clinicians. The mean number of beneficiaries for MIPS groups with 16 or more clinicians is 11,012.

difference was statistically significant for Quality ID: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan ($p < .05$) and Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs also performed better than comparable MIPS groups on one of the three MIPS CQMs in the APP Plus quality measure set that are available in traditional MIPS and the difference was statistically significant for Quality ID: 236 Controlling High Blood Pressure ($p < .05$). Additionally, ACOs performed better than comparable MIPS groups on six of the ten patient experience summary survey measures that contribute to Quality ID: 321 Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS, and for one of these summary survey measures the difference was statistically significant: CAHPS–1 Getting Timely Care, Appointments and Information ($p <.05$).

We note there are key differences between the Shared Savings Program and MIPS that limit our analysis of ACOs' performance on the eCQMs/MIPS CQMs and the CAHPS for MIPS Summary Survey Measures compared to MIPS groups. Specifically, Shared Savings Program ACOs are required to report the eCQMs/MIPS CQMs included in the APP Plus quality measure set; whereas MIPS groups can choose which eCQMs and MIPS CQMs they report on and tend to choose those they will perform well on. Shared Savings Program ACOs are required to administer the CAHPS for MIPS Survey, while it is optional for MIPS groups. A large number of MIPS groups do not administer the CAHPS for MIPS Survey as they are less likely to meet the minimum sample size required to administer the survey, coupled with the tendency of MIPS groups to choose measures they will perform well on.

BILLING CODE 4169–69–P

TABLE D-B20: PY 2025 QUALITY MEASURES THAT SHARED SAVINGS PROGRAM ACOs PERFORMED BETTER ON THAN COMPARABLE MIPS GROUPS

Quality #	Measure Title	Difference in Mean ACO and MIPS Group Performance Rates for PY 2025 (%)[1]
	eCQMs	
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	-3.5[2]

CAHPS-4	Access to Specialists	0.59[3]
CAHPS-5	Health Promotion and Education	1.49[3]
CAHPS-6	Shared Decision Making	1.09[3]
CAHPS-7	Health Status and Functional Status	0.24[3]
CAHPS-8	Care Coordination	0.57[3]
CAHPS-9	Courteous and Helpful Office Staff	0.18[3]

[1] The numbers in this column represent the mean ACO performance rate in PY 2025 minus the mean ACO performance rate in PY 2024 for each measure.

[2] This is an inverse measure, and a lower number indicates better quality performance.

[3] Indicates statistically significant differences between ACOs' mean performance rates between PY 2024 and PY 2025 ($p < 0.05$).

On average, ACOs have improved their performance on a variety of quality measures from PY 2024 to PY 2025. In PY 2025, ACOs improved their performance on three of the eCQMs in the APP Plus quality measure set and the difference in their performance was statistically significant for two of these eCQMs, Quality ID: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (≤9%) ($p < .05$)) and Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs also improved their performance on two of the Medicare CQMs in the APP Plus quality measure set in PY 2025 and the difference in their performance was statistically significant for one of these Medicare CQMs, Quality ID: 236 Controlling High Blood Pressure ($p < .05$). ACOs improved their performance on nine of the ten patient experience summary survey measures that contribute to Quality ID: 321 CAHPS for MIPS, and for all nine the difference in their performance was statistically significant ($p < .05$). We note that a comparison of ACOs' average performance on Quality ID: 112 Breast Cancer Screening between PY 2024 and PY 2025 is not available since PY 2025 was the first year this measure was available in the APP Plus quality measure set that Shared Savings Program ACOs are required to report.

Based on ACOs' quality performance results historically (as shown in Tables D–B20 and D–B21), we anticipate that the policies in this final rule will enable ACOs to continue to improve the quality of care for the beneficiaries they serve. Increased participation in the Shared Savings Program would extend ACO care coordination to additional beneficiaries which can help improve the quality of care they receive.

1. Quality Payment Program

There are several changes in this final rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we believe the policies in this final rule will improve the quality and value of care provided to Medicare beneficiaries.

Several of the new quality measures include patient-reported outcome-based measures, which could be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and could also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which will not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors frequently of interest to patients when making decisions about treatment.

2. Ambulatory Specialty Model

We believe that the refinements to ASM's provisions finalized in this final rule will not change the potential effects of ASM on beneficiaries. We continue to believe that ASM will have no impact on cost to beneficiaries because ASM payment adjustments will not affect Medicare beneficiary coinsurance amounts. The coinsurance will be calculated based on the Medicare allowed amounts before any ASM payment adjustment multipliers are applied to Medicare Part B payments for covered professional services.

I. Estimating Regulatory Familiarization Costs

Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is

possible that not all commenters reviewed this year's rule in detail, and it is also possible that some reviewers choose not to comment on the proposed rule. We welcomed any public comments on the approach in estimating the number of entities that would review the proposed rule. We did not receive any public comments specific to our solicitation.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimated that the cost of reviewing this rulemaking is $119.10, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it would take approximately [8 hours for the staff to review half of this final rule. For each entity that reviews the rule, the estimated cost is $952.80 ($119.10 x 8). Therefore, we estimated that the total cost of reviewing this regulation is $410,475,77 ($952.80 x 43,081 reviewers on this year's proposed rule).

J. Accounting Statement

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/2025/08/CircularA-4.pdf*), in Tables D–B20 and D–B21 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2026 to CY 2027 based on the FY 2027 President's Budget baseline.

TABLE D-B20: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

CATEGORY	TRANSFERS
CY 2027 Annualized Monetized Transfers	Estimated decrease in expenditures of $2.1 billion for PFS CF update.
Bearers of Transfer Gain	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE D-B21: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

CATEGORY	TRANSFER
CY 2027 Annualized Monetized Transfers of beneficiary cost coinsurance.	-$0.4 billion
Bearers of Transfer Gain	Beneficiaries to Federal Government.

TABLE D-B22: ACCOUNTING STATEMENT FOR PROVISIONS FOR MEDICARE SHARED SAVINGS PROGRAM (CYS 2027 to 2036) ($ MILLIONS)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
BENEFITS				
Annualized monetized: Discount rate: 3%	-$565 million	-$1,058 million	-$115 million	Tables D-B7 through D-B10; summarized in total in Table D-B11
Annualized monetized: Discount rate: 7%	-$579 million	-$1,063 million	$134 million	Tables D-B8 through D-B10; summarized in total in Table D-B11

Notes: Negative values reflect a reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

K. Conclusion

The analysis in the previous sections, together with the remainder of this final rule, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this rule, provides an RIA. In accordance with the provisions of Executive Order 12866, this rule was reviewed by the Office of Management and Budget.

VIII. Waiver of Delay in Effective Date

The Congressional Review Act (CRA) (Pub. L. 104–121, Title II) requires a 60-day delay in the effective date for major rules unless an agency finds good cause that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, in which case the rule shall take effect at such time as the agency determines. 5 U.S.C. 801(a)(3) and 808(2).

We believe that further notice and public procedure are unnecessary, and that it would be impracticable and contrary to the public interest to delay the effective date of the PFS final rule for the following reasons.

If the effective date of this final rule is delayed by 60 days, the finalized policies addressed in the rule (including changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies; new policies for the

Medicare Prescription Drug Inflation Rebate Program; provisions limiting Medicare coverage of certain individuals; updates to the Ambulatory Specialty Model; updates to drugs and biological products paid under Part B; the Medicare Shared Savings Program requirements; updates to the Quality Payment Program; updates to policies for Rural Health Clinics and Federally Qualified Health Centers; updates to the Ambulance Fee Schedule regulations; codification of the Inflation Reduction Act and Consolidated Appropriations Act, 2026 provisions; updates to Clinical Laboratory Fee Schedule regulations; and updates to the Medicare Promoting Interoperability Program), will not be effective as of the beginning of the payment year, and CMS will be compelled to continue to use obsolete reimbursement rates which will disadvantage health care providers and suppliers.

In accordance with section 1848(b)(1) of the Act, the PFS is a calendar year payment system. We typically issue the PFS final rule by November 1 of each year to comply with the statutory requirement under section 1848(b)(1) of the Act to establish the fee schedules annually and to ensure 60-days' notice so that the payment policies for the system are effective on January 1, the first day of the calendar year to which the policies are intended to apply. The policies described previously are intended to align with the PFS payment system.

In this final rule, we review and revise values for specific services and adopt or revise other policies that relate to the PFS for CY 2027 or future years. Section 1848(b)(1) of the Act requires that no less often than annually, the Secretary shall establish fee schedules that establish payment amounts for all physicians' services furnished in all fee schedule areas. Section 1848(c)(2)(B)(ii)(II) of the Act also requires that adjustments to relative values under the PFS be made in a budget neutral manner. We find that, in order to comply with the statutory requirements to annually review and update this payment system, to preserve budget neutrality as required by statute, and to promote an orderly transition to a new payment year, it is in the public interest to ensure that the rule is effective no later than 1 full year after the effective date of the previous year's update (that is, January 1 of each year). Moreover, it is in the public interest to waive the 60-day delay of the effective date, so that providers, and suppliers are adequately reimbursed starting at the beginning of the calendar year, so that an adjusted conversion factor applies to services furnished on or after January 1, 2027, and so that budget neutrality can be maintained. Therefore, we find good cause to waive the 60-day delay in the effective date for this final rule.

Mehmet Oz, Administrator of the Centers for Medicare & Medicaid Services, approved this document on XXXX XX, 2026.

List of Subjects

42 CFR Part 400

Grant programs-health, Health facilities, Health maintenance organizations (HMO), Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 406

Health facilities, Diseases, and Medicare.

42 CFR Part 407

Medicare.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 417

Administrative practice and procedure, Grant programs-health, Health care, Health insurance, Health maintenance organizations (HMO), Loan programs-health, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 422

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 427

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 428

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 512

Administrative practice and procedure, Health care, Health facilities, Health insurance, Intergovernmental relations, Medicare, Penalties, Privacy, and Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 400—INTRODUCTION; DEFINITIONS

■ 1. The authority for part 400 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh, and 44 U.S.C. Chapter 35.

■ 2. Section 400.200 is amended by adding a definition for ''Eligible noncitizen'' in alphabetical order to read as follows:

§ 400.200 General definitions.

* * * * *

Eligible noncitizen means an individual who, effective July 4, 2025, is an—

(1) Alien lawfully admitted for permanent residence under the Immigration and Nationality Act;

(2) Alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(3) Individual who lawfully resides in the United States in accordance with a Compact of Free Association referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 3. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 4. Section 405.2463 is amended by—
■ a. Adding paragraph (a)(1)(iii);
■ b. In paragraph (b)(2) introductory text, removing the phrase ''a FQHC patient'' and adding in its place the phrase ''an FQHC patient or a RHC patient''; and
■ c. In paragraph (b)(3), removing the phrase ''Not before October 1, 2025'' and adding in its place the phrase ''Not before January 1, 2028'';

The addition reads as follows:

§ 405.2463 What constitutes a visit.

(a) * * *
(1) * * *
(iii) Furnished under the direct supervision of the RHC practitioner, a face-to-face encounter between a patient and either of the following:
(A) A qualified provider of medical nutrition therapy services as defined in part 410, subpart G, of this chapter.
(B) A qualified provider of outpatient diabetes self-management training services as defined in part 410, subpart H, of this chapter.
* * * * *

§ 405.2464 [Amended]

■ 5. Section 405.2464 is amended by—
■ a. In paragraph (b)(1), removing the phrase ''paragraphs (d) and (e) of this section'' and adding in its place the phrase ''paragraphs (c) through (h) of this section'';
■ b. In paragraph (b)(2)(i), removing the reference ''§ 405.2462(c)(1)'' and adding in its place the reference ''§ 405.2462(e)(1)'';
■ c. In paragraph (b)(2)(ii), removing the reference ''§ 405.2462(c)(2)'' and adding in its place the reference ''§ 405.2462(e)(2)''; and
■ d. In paragraph (g), removing the term ''an encounter'' wherever it appears and adding in its place the term ''services''.

■ 6. Section 405.2469 is amended by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter, or an encounter furnished using interactive, real-time, audio and video telecommunications technology, or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology, for the purposes of diagnosis, evaluation, or treatment of a mental health disorder, occurs between a Medicare Advantage enrollee and a practitioner as set forth in § 405.2463. A mental health encounter furnished using interactive, real-time, audio and video telecommunications technology, or audio-only interactions, is not payable unless the FQHC is in compliance with the in-person requirements set forth in § 405.2463(b)(3).

PART 406—HOSPITAL INSURANCE ELIGIBILITY AND ENTITLEMENT

■ 7. The authority for part 406 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395i–2, 1395i–2a, 1395p, 1395q, and 1395hh.

■ 8. Section 406.5 is amended by revising paragraph (a) to read as follows:

§ 406.5 Basis of eligibility and entitlement.

(a) *Hospital insurance without premiums.* Hospital insurance is available to most individuals without payment of a premium if they meet the following conditions:
(1) The individual—
(i) Is age 65 or over;
(ii) Has received social security or railroad retirement disability benefits for 25 months; or
(iii) Has end-stage renal disease. Subpart B of this part explains the requirements such individuals must meet to obtain hospital insurance without premiums.
(2) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen as defined in 42 CFR 400.200.
* * * * *

■ 9. Section 406.6 is amended by revising paragraph (b) and adding paragraph (f) to read as follows:

§ 406.6 Application or enrollment for hospital insurance.

* * * * *

(b) *Individuals who need not file an application for hospital insurance.* An individual who meets the requirements of § 406.5(a)(2), and any of the following conditions need not file an application for hospital insurance:
* * * * *

(f) *Special rules for eligible noncitizens.* Individuals who only meet the requirements of § 406.5(a)(1), but do not also meet the requirements of § 406.5(a)(2), may subsequently meet both § 406.5(a)(1) and (2) due to a change in U.S. citizenship, U.S. nationality, or immigration status or category. For these individuals, the following requirements apply:
(1) An individual who meets the conditions of paragraph (b) of this section must contact SSA to initiate entitlement to hospital insurance. Entitlement may be retroactive for up to 6 months, but not earlier than the first month in which the individual met all of the requirements of § 406.5(a).
(i) If acceptable evidence establishes the month in which the individual first satisfied § 406.5(a)(2), SSA will use that month, subject to the applicable retroactivity limits noted in paragraph (f)(1) of this section.
(ii) If the earliest month of eligibility cannot be established based on acceptable documentary evidence, entitlement will begin on the first day of the month in which SSA verifies that the individual satisfies § 406.5(a)(2), based on applicable data made available by the Department of Homeland Security.
(2) An individual who meets the conditions of paragraph (c) of this section must contact SSA to file an application for hospital insurance. Entitlement may be retroactive for up to 6 months, but not earlier than the first month in which the individual met all of the requirements of § 406.5(a).
(i) If acceptable evidence establishes the month in which the individual first satisfied § 406.5(a)(2), SSA will use that month, subject to the applicable retroactivity limits noted in paragraph (f)(2) of this section.
(ii) If the earliest month of eligibility cannot be established based on acceptable documentary evidence, entitlement will begin on the first day of the month in which SSA verifies that the individual satisfies § 406.5(a)(2), based on applicable data made available by the Department of Homeland Security.

■ 10. Section 406.10 is amended by revising paragraph (a) and adding paragraph (b)(3) to read as follows:

§ 406.10 Individual age 65 or over who is entitled to social security or railroad retirement benefits, or who is eligible for social security benefits.

(a) *Requirements.* An individual is entitled to hospital insurance benefits under section 226 of the Act under the following conditions:
(1) The individual has attained age 65 and is—
(i) Entitled to monthly social security benefits under section 202 of the Act;
(ii) A qualified railroad retirement beneficiary who has been certified as

such to the Social Security Administration by the Railroad Retirement Board in accordance with section 7(d) of the Railroad Retirement Act of 1974; or

(iii) Effective January 1, 1981, eligible for monthly social security benefits under section 202 of the Act and has filed an application for hospital insurance.

(2) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen as defined in 42 CFR 400.200.

(b) * * *

(3) Entitlement continues until the date entitlement is terminated in accordance with § 406.14(b) or (c).

■ 11. Section 406.11 is amended by revising paragraph (b)(2) to read as follows:

§ 406.11 Individual age 65 or over who is not eligible as a social security or railroad retirement benefits beneficiary, or on the basis of government employment.

* * * * *

(b) * * *

(2) *Residence and citizenship.* He or she is a resident of the United States and is

(i) A citizen or national of the United States;

(ii) An alien lawfully admitted for permanent residence under the Immigration and Nationality Act who has continuously resided in the United States for 5 years immediately preceding the first month in which he or she meets all other requirements for entitlement to hospital insurance;

(iii) An alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(iv) An individual who lawfully resides in the United States in accordance with a Compact of Free Association (COFA), as referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

■ 12. Section 406.12 is amended by revising paragraph (a) and adding paragraph (d)(2)(v) to read as follows:

§ 406.12 Individual under age 65 who is entitled to social security or railroad retirement disability benefits.

(a) *Basic requirements.* An individual under age 65 is entitled to hospital insurance benefits under the following conditions:

(1) If, for 25 months, the individual has been—

(i) Entitled or deemed entitled to social security disability benefits as an insured individual, child, widow, or widower who is ''under a disability''; or

(ii) A disabled qualified beneficiary certified under section 7(d) of the Railroad Retirement Act.

(2) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen as defined in 42 CFR 400.200.

* * * * *

(d) * * *

(2) * * *

(v) The date entitlement is terminated in accordance with § 406.14(b) or (c).

* * * * *

■ 13. Section 406.13 is amended by revising paragraphs (c) and (f) to read as follows:

§ 406.13 Individual who has end-stage renal disease.

* * * * *

(c) *Requirements.* An individual who has been medically determined to have ESRD is entitled to hospital insurance benefits under the following conditions:

(1) He or she is—

(i) Fully or currently insured under the social security program (title II of the Act) or would be fully or currently insured if his or her employment (after 1936) as defined under the Railroad Retirement Act were considered ''employment'' under the Act;

(ii) Entitled to monthly social security or railroad retirement benefits; or

(iii) The spouse or dependent child of a person who meets the requirements of paragraph (c)(1)(i) or (c)(1)(ii) of this section.

(2) He or she has filed an application for Medicare Part A.

(3) He or she has satisfied the waiting period explained in paragraph (e) of this section.

(4) Effective July 4, 2025, the individual is a citizen or national of the United States or an eligible noncitizen, as defined in 42 CFR 400.200.

* * * * *

(f) *End of entitlement.* Entitlement ends under any of the following conditions:

(1) With the end of the 12th month after the month in which a regular course of dialysis ends.

(2) With the end of the 36th month after the month in which the individual received a kidney transplant. Beginning January 1, 2023, an individual who is no longer entitled to Part A benefits due to this paragraph may be eligible to enroll in Part B solely for purposes of coverage of immunosuppressive drugs as described in § 407.55 of this subchapter.

(3) With the date entitlement is terminated in accordance with § 406.14(b) or (c).

* * * * *

■ 14. Section 406.14 is added to read as follows:

§ 406.14 End of entitlement due to change in U.S. citizenship, U.S. nationality, or immigration status or category.

(a) *Basis.* Individuals whose U.S. citizenship, U.S. nationality, or immigration status or category changes such that they no longer meet the requirements of § 406.5(a)(2) of this part will lose entitlement to hospital insurance benefits without premiums.

(b) For individuals who were entitled to, or enrolled for, hospital insurance benefits without premiums as of July 4, 2025, the SSA must, not later than 1 year after July 4, 2025, complete a review of individuals for purposes of identifying individuals not described by § 406.5(a)(2). SSA must notify each individual identified under such review that if SSA determines that an individual does not meet the requirements of § 406.5(a)(2), the individual's entitlement to, or enrollment for, hospital insurance benefits will be terminated in accordance with paragraph (d) of this section.

(c) Entitlement will end as provided under paragraph (d) of this section for individuals who were entitled to, or enrolled for, hospital insurance benefits without premiums who were not identified and notified by the SSA per § 406.14(b) and were subsequently determined by the SSA as not meeting the requirements of § 406.5(a)(2).

(d) *Termination notice.* The SSA will send notice to individuals if they no longer satisfy the requirements of § 406.5(a)(2). The notice contains the following information:

(1) Specifies the individual's appeal rights in accordance with 20 CFR part 404, subpart J.

(2) States the effective date of the hospital insurance benefits entitlement termination action, which will be the end of the month following the month in which the termination notice is dated.

(3) States that the individual should contact the SSA if their citizenship, nationality, or immigration status or category changes such that they may be entitled to, or enrolled for, hospital insurance benefits under this part.

(e) *Resumption of benefits.* An individual whose hospital insurance benefits were terminated under paragraph (d) of this section may request resumption of benefits if the individual's U.S. citizenship, U.S. nationality, or immigration status or category changes such that the individual meets the requirements of § 406.5(a)(2) of this part. To request resumption of entitlement, the individual must contact SSA and provide information sufficient to

establish that the requirements of § 406.5(a)(2) are met.

■ 15. Section 406.20 is amended by revising paragraph (b)(2) and adding paragraph (c)(5) to read as follows:

§ 406.20 Basic requirements.

* * * * *

(b) * * *

(2) Is a resident of the United States and, effective July 4, 2025, is—

(i) A citizen or national of the United States;

(ii) An alien lawfully admitted for permanent residence under the Immigration and Nationality Act who has continuously resided in the United States for 5 years immediately preceding the first month in which they meet all other requirements for entitlement to hospital insurance;

(iii) An alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(iv) An individual who lawfully resides in the United States in accordance with a Compact of Free Association referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

(c) * * *

(5) Meets the eligibility requirements in paragraph (b)(2) of this section.

■ 16. Section 406.27 is amended by redesignating paragraph (f) as paragraph (g) and adding a new paragraph (f) to read as follows:

§ 406.27 Special enrollment periods for exceptional conditions.

* * * * *

(f) *Special enrollment period for verification of eligible noncitizen/citizenship status.* An SEP exists for individuals who have not been entitled to, or enrolled for, Medicare due to failure to meet the requirements of § 406.20(b)(2), but subsequently meet the requirements or whose Medicare entitlement or enrollment was terminated due to loss of U.S. citizenship, U.S. nationality, or eligible noncitizen status, who subsequently meet the citizenship, nationality, or immigration status or category requirements specified in § 406.20(b)(2).

(1) *SEP parameters.* (i) An individual is eligible for this SEP if the individual otherwise met the eligibility requirements for Medicare, except for § 406.20(b)(2), and the individual subsequently meets the applicable Medicare eligibility requirements, including § 406.20(b)(2).

(ii) An individual is eligible for this SEP if the individual's prior Medicare entitlement or enrollment was terminated because the individual did not meet the requirements of § 406.20(b)(2) and the individual subsequently meets the applicable Medicare eligibility requirements, including § 406.20(b)(2).

(iii) An individual does not need to miss an enrollment period to be eligible for this SEP.

(2) *SEP duration.* The SEP begins on the first day of the month in which the individual contacts the SSA and provides information sufficient to establish that the requirements of § 406.20(b)(2) are met and ends on the last day of the 12th month after the month in which the SEP began.

(3) *Entitlement.* (i) *General rule.* Entitlement begins the first day of the month following the month of enrollment.

(ii) *Special rule.* An individual who enrolls during the SEP in accordance with subparagraph (1) has the option of requesting entitlement for a coverage effective date that is the later of the first day of the sixth month before the month of enrollment or the first day of the month in which the individual first met all of the eligibility requirements, provided the coverage effective date does not precede the month in which the individual met the eligibility requirements and the individual pays the monthly premiums for the period of coverage (as required under § 406.32(f) of this subchapter).

* * * * *

■ 17. Section 406.28 is amended by adding new paragraph (g) to read as follows:

§ 406.28 End of entitlement due to change in citizenship, nationality, or immigration status or category.

* * * * *

(g) *Loss of eligibility due to lack of U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Individuals whose U.S. citizenship, U.S. nationality, or immigration status or category changes such that they no longer meet the requirements of § 406.20(b) of this part will lose entitlement to premium hospital insurance benefits.

(1) For individuals who were entitled to, or enrolled for, premium hospital insurance benefits as of July 4, 2025, the SSA must, not later than 1 year after July 4, 2025, complete a review of individuals for purposes of identifying individuals not described by § 406.20(b)(2). SSA must notify each individual identified under such review that if SSA determines that an individual does not meet the requirements of § 406.20(b)(2), the individual's entitlement to, or enrollment for, premium hospital insurance benefits will be terminated in accordance with paragraph (g)(3) of this section.

(2) Entitlement will end as provided under paragraph (g)(3) of this section for individuals who were entitled to, or enrolled for, premium hospital insurance benefits who were not identified and notified by the SSA per § 406.28(g)(1) and were subsequently determined by the SSA as not meeting the requirements of § 406.20(b)(2).

(3) *Termination notice.* The SSA will send notice to individuals if they no longer satisfy the requirements of § 406.20(b)(2). The notice contains the following information:

(i) Specifies the individual's appeal rights in accordance with 20 CFR part 404, subpart J.

(ii) States the effective date of the hospital insurance benefits entitlement termination action, which will be the end of the month following the month in which the termination notice is dated.

(iii) States that the individual should contact the SSA if their eligibility status changes such that they may be entitled to, or enrolled for, hospital insurance benefits under this part.

■ 18. Section 406.50 is amended by revising the section heading and paragraph (a) to read as follows:

§ 406.50 Nonpayment of benefits on behalf of eligible noncitizens.

(a) Hospital insurance benefit payments may not be made for services furnished to any eligible noncitizen, as defined in 42 CFR 400.200, for any month in which his or her monthly social security benefits are suspended (or would be suspended if he or she were entitled to those benefits) because the eligible noncitizen remains outside the United States for more than 6 months.

(b) Benefits will be payable beginning with services furnished in the first full calendar month the eligible noncitizen is back in the United States.

* * * * *

PART 407—SUPPLEMENTARY MEDICAL INSURANCE (SMI) ENROLLMENT AND ENTITLEMENT

■ 19. The authority for part 407 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395p, 1395q, and 1395hh.

■ 20. Section 407.10 is amended by revising paragraph (a) to read as follows:

§ 407.10 Eligibility to enroll.

(a) *Basic rule.* Except as specified in paragraph (b) of this section, an

individual is eligible to enroll for SMI if he or she—

(1) Is entitled to hospital insurance under any of the rules set forth in §§ 406.10 through 406.15 of this chapter; or

(2) Meets the following requirements:

(i) Has attained age 65. (An individual is considered to have attained age 65 on the day before the 65th anniversary of his or her birth.)

(ii) Is a resident of the United States and, effective July 4, 2025, is—

(A) A citizen or national of the United States;

(B) An alien lawfully admitted for permanent residence under the Immigration and Nationality Act, who has resided continuously in the United States during the 5 years preceding the month in which he or she applies for enrollment;

(C) An alien who has been granted the status of Cuban and Haitian entrant, as defined in section 501(e) of the Refugee Education Assistance Act of 1980; or

(D) An individual who lawfully resides in the United States in accordance with a Compact of Free Association as referred to in 8 U.S.C. 1612(b)(2)(G).

* * * * *

■ 21. Section 407.23 is amended by redesignating paragraph (f) as paragraph (g) and adding a new paragraph (f) to read as follows:

§ 407.23 Special enrollment periods for exceptional conditions.

* * * * *

(f) *Special enrollment period for verification of eligible noncitizen/citizenship status.* An SEP exists for individuals who have not been entitled to, or enrolled for, Medicare due to failure to meet the requirements of § 407.10(a)(2), but subsequently meet the requirements or whose Medicare entitlement or enrollment was terminated due to loss of U.S. citizenship, loss of U.S. nationality, or eligible noncitizen status, who subsequently meet the citizenship, nationality, or immigration status or category requirements specified in § 407.10(a)(2).

(1) *SEP parameters.* (i) An individual is eligible for this SEP if the individual otherwise met the eligibility requirements for Medicare, except for § 407.10(a)(2), and the individual subsequently meets the applicable Medicare eligibility requirements, including § 407.10(a)(2).

(ii) An individual is eligible for this SEP if the individual's prior Medicare entitlement or enrollment was terminated because the individual did not meet the requirements of § 407.10(a)(2) and the individual subsequently meets the applicable Medicare eligibility requirements, including § 407.10(a)(2).

(iii) An individual does not need to miss an enrollment period to be eligible for this SEP.

(2) *SEP duration.* The SEP begins on the first day of the month in which the individual contacts the SSA and provides information sufficient to establish that the requirements of § 407.10(a)(2) are met and ends on the last day of the 12th month after the month in which the SEP began.

(3) *Entitlement.* (i) *General rule.* Entitlement begins the first day of the month following the month of enrollment.

(ii) *Special rule.* An individual who enrolls during the SEP in accordance with subparagraph (1) has the option of requesting entitlement for a coverage effective date that is the later of the first day of the sixth month before the month of enrollment or the first day of the month in which the individual first met all of the eligibility requirements, provided the coverage effective date does not precede the month in which the individual met the eligibility requirements and the individual pays the monthly premiums for the period of coverage (as required under § 408.4 of this subchapter).

* * * * *

■ 22. Section 407.27 is amended by adding paragraph (e) to read as follows:

§ 407.27 Termination of entitlement: Individual enrollment.

* * * * *

(e) *Loss of eligibility due to lack of U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Individuals whose U.S. citizenship, U.S. nationality, or immigration status or category changes such that they do not meet the requirements of § 407.10(a)(2)(ii) of this part will lose entitlement to SMI.

(1) For individuals who were entitled to, or enrolled for, SMI as of July 4, 2025, the SSA must, not later than 1 year after July 4, 2025, complete a review of individuals for purposes of identifying individuals not described by § 407.10(a)(2). SSA must notify each individual identified under such review that if SSA determines that an individual does not meet the requirements of § 407.10(a)(2), the individual's entitlement to, or enrollment for, SMI will be terminated in accordance with paragraph (e)(3) of this section.

(2) Entitlement will end as provided under paragraph (e)(3) of this section for individuals who were entitled to, or enrolled for, SMI who were not identified and notified by the SSA per § 407.27(e)(1) and were subsequently determined by the SSA as not meeting the requirements of § 407.10(a)(2)(ii).

(3) *Termination notice.* The SSA will send notice to individuals if they no longer satisfy the requirements of § 407.10(a)(2). The notice contains the following information:

(i) Specifies the individual's appeal rights in accordance with 20 CFR part 404, subpart J.

(ii) States the effective date of the SMI entitlement termination action, which will be the end of the month following the month in which the termination notice is dated.

(iii) States that the individual should contact the SSA if their citizenship, nationality, or immigration status or category changes such that they may be entitled to, or enrolled for, SMI under this part.

■ 23. Section 407.55 is amended by revising paragraph (a) to read as follows:

§ 407.55 Eligibility to enroll.

(a) Basic rules.

(1) Except as specified in paragraph (b) of this section, an individual is eligible to enroll, be deemed enrolled, or reenroll in the Part B–ID benefit if their Part A entitlement ends as described in § 406.13(f)(2) of this subchapter.

(2) Effective July 4, 2025, the individual must meet the eligibility criteria set forth in § 407.10(a)(2)(ii).

* * * * *

■ 24. Section 407.62 is amended by redesignating paragraph (f) as paragraph (g) and adding a new paragraph (f) to read as follows:

§ 407.62 Termination of coverage.

* * * * *

(f) Enrollment in the Part B–ID benefit ends the date entitlement is terminated in accordance with § 407.27(e) due to the individual's failure to meet the citizenship, nationality, or eligible noncitizen requirements described in § 407.10(a)(2).

* * * * *

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 25. The authority for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 25A. Section 410.26 is amended by revising paragraphs (a) and (b) to read as follows:

§ 410.26 Services and supplies incident to a physician's professional services: Conditions.

* * * * *

(b) * * *

(5) In general, services and supplies must be furnished under the direct supervision of the physician (or other practitioner).

(i) Designated care management services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided incident to the services of a physician (or other practitioner).

(ii) Behavioral health services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or other practitioner).

(iii) Health coaching services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or other practitioner).

(iv) The physician (or other practitioner) supervising the auxiliary personnel need not be the same physician (or other practitioner) who is treating the patient more broadly.

(v) Only the supervising physician (or other practitioner) may bill Medicare for incident to services.

* * * * *

■ 26. Section 410.78 is amended by—

■ a. Revising paragraph (a)(3);

■ b. Adding paragraphs (b)(2)(xiii), (b)(3)(xiv)(D), (b)(3)(xv), and (b)(6); and

■ c. Revising paragraph (f);

The revisions and additions read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph (a)(3), multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner.

(i) An interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home on or before December 31, 2027.

(ii)(A) For telehealth services furnished after December 31, 2027 date, interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a patient in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined in this paragraph (a)(3), but the patient is not capable of, or does not consent to, the use of video technology.

(B) The following modifiers must be appended to a claim for telehealth services furnished using two-way, real-time audio-only communication technology to verify that the conditions set forth in paragraph (a)(3)(ii)(A) of this section have been met:

* * * * *

(b) * * *

(2) * * *

(xiii) Occupational therapists, physical therapists, speech-language pathologists, or audiologists, through December 31, 2027.

* * * * *

(3) * * *

(xiv) * * *

(D) Consistent with section 6209(d) of the CAA, 2026, in-person visit requirements for the purposes of diagnosis, evaluation, or treatment of a mental health disorder do not apply through December 31, 2027.

* * * * *

(6) Consistent with section 6209(a) of the CAA, 2026, the geographic requirements specified in paragraph (b)(4) of this section do not apply through December 31, 2027.

* * * * *

(f) *Process for adding or deleting services.* Except as otherwise provided in this paragraph (f), changes to the list of Medicare telehealth services are made through the annual physician fee schedule rulemaking process. CMS maintains the list of services that are Medicare telehealth services under this section, including the current HCPCS codes that describe the services on the CMS website.

§ 410.105 [Amended]

■ 27. Section 410.105 is amended in paragraph (b)(3)(ii) by removing the reference ''§ 410.100(m)'' and adding in its place the reference ''§ 410.100(1)''.

■ 28. Section 410.175 is amended by revising paragraphs (a) and (b) to read as follows:

§ 410.175 Alien absent from the United States.

(a) Medicare does not pay Part B benefits for services furnished to an eligible noncitizen, as defined in 42 CFR 400.200, if those services are furnished in any month for which the individual is not paid monthly social security cash benefits (or would not be paid if he or she were entitled to those benefits) because he or she has been outside the United States continuously for 6 full calendar months.

(b) Payment of benefits resumes with services furnished during the first full calendar month the eligible noncitizen, as defined in 42 CFR 400.200, is back in the United States.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 29. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

■ 30. Section 414.502 is amended by revising the definitions of ''Data collection period'' and ''Data reporting period'' to read as follows:

§ 414.502 Definitions.

* * * * *

Data collection period is the 6 months from January 1 through June 30, during which applicable information is collected and that precedes the data reporting period.

Data reporting period for CDLTs that are not ADLTs is the 3-month period, May 1 through July 31, and for ADLTs is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period.

* * * * *

§ 414.504 [Amended]

■ 31. Section 414.504 is amended in paragraph (a)(1) by removing the date ''January 1, 2026'' and adding in its place the date ''May 1, 2026''.

■ 32. Section 414.507 is amended by—

■ a. Revising paragraph (d) introductory text and paragraph (d)(9); and

■ b. Adding paragraph (d)(12).

The revisions and addition read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

* * * * *

(d) *Phase-in of payment reductions.* For years 2018 through 2029, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

* * * * *

(9) 2026—0.0 percent of the payment rate established in 2025.

* * * * *

(12) 2029—15 percent of the payment rate established in 2028.

* * * * *

■ 33. Section 414.523 is amended by revising paragraph (a)(1)(v) to read as follows:

§ 414.523 Payment for laboratory specimen collection fee and travel allowance.

(a) * * *

(1) * * *

(v) For a specimen collected from a Medicare beneficiary in a skilled nursing facility or on behalf of a home health agency, the specimen collection fee otherwise payable under paragraph (a)(1) of this section is increased by $2.00.

■ 34. Section 414.610 is amended by—

■ a. Revising paragraph (c)(1)(ii) introductory text; and

■ b. In paragraph (c)(5)(ii) removing the date ''September 30, 2025'' and adding in its place the date ''December 31, 2027''.

The revision reads as follows:

§ 414.610 Basis of payment.

* * * * *

(c) * * *

(1) * * *

(ii) For services furnished during the period July 1, 2008 through December 31, 2027, ambulance services originating in either of the following:

* * * * *

■ 35. Section 414.1105 is amended by revising paragraph (c) introductory text to read as follows:

§ 414.1105 Payment for Comprehensive Outpatient Rehabilitation Facility (CORF) services.

* * * * *

(c) *Payment for supplies and durable medical equipment, prosthetic and orthotic devices.* Supplies and durable medical equipment that are CORF services under § 410.100(k), prosthetic device services that are CORF services under § 410.100(f), and orthotic devices that are CORF services under § 410.100(g) are paid the lesser of 80 percent of the following:

* * * * *

■ 36. Section 414.1305 is amended by revising the definitions of ''APM Incentive Payment'', ''Certified Electronic Health Record Technology (CEHRT)'' paragraph (2), ''Collection type'', ''MVP participant'' and ''Participant List'' to read as follows:

§ 414.1305 Definitions.

* * * * *

APM Incentive Payment means the lump sum incentive payment for a year as described in § 414.1450(b)(1) and that is paid for an eligible clinician who is a QP for the applicable year.

* * * * *

Certified Electronic Health Record Technology (CEHRT) * * *

(2) * * *

(i) For CY 2019 through CY 2026, at 45 CFR 170.315(a)(12) (family health history) and 45 CFR 170.315(e)(3) (patient health information capture); and

(ii) * * *

(A) For CY 2019 through CY 2026, the applicable measure calculation certification criterion at 45 CFR 170.315(g)(1) or (2) for all certification criteria that support a meaningful use objective with a percentage-based measure.

(B) Clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures at 45 CFR 170.315(c)(2) and (c)(3), and for CY 2019 through CY 2026, optionally (c)(4), and can be electronically accepted by CMS.

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey measure; administrative claims measures; Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs); and Medicare Electronic Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare eCQMs).

* * * * *

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and future years, MVP participant means an individual MIPS eligible clinician, single-specialty group, multispecialty group that meets the requirements of a small practice, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. Beginning in the CY 2029 performance period/2031 MIPS payment year, MVP participant means an individual MIPS eligible clinician, single specialty group, multispecialty group that meets the requirements of a small practice, virtual group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Participation List means the list of participants in an APM Entity that is compiled from a CMS-maintained list where practicable.

* * * * *

■ 37. Section 414.1330 is amended by revising paragraph (c)(2)(iv) to read as follows.

§ 414.1330 Quality performance category.

(c) * * *

(2) * * *

(iv) Whether the quality measure is designated as high priority or not, through the CY 2026 performance period/2028 MIPS payment year.

* * * * *

■ 38. Section 414.1335 is amended by—

■ a. Revising paragraphs (a)(1)(i) introductory text, (a)(1)(ii), and (a)(4)(i);

■ b. Adding paragraph (a)(1)(iii);

■ c. Revising paragraph (a)(4)(i); and

■ d. Adding paragraph (a)(5).

The revisions and additions read as follows:

§ 414.1335 Data submission criteria for the quality performance category.

(a) * * *

(1) * * *

(i) For the CY 2017 through 2026 performance periods/2019 through 2028 MIPS payment years, except as provided in paragraph (a)(1)(ii) of this section, submits data on at least six measures, including at least one outcome measure. If an applicable outcome measure is not available, reports one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician, group, virtual group, or APM Entity, reports on each measure that is applicable. Beginning in the CY 2027 performance period/2029 MIPS payment year, MIPS eligible clinicians, except as provided in paragraphs (a)(1)(ii) and (a)(1)(iii) of this section, submits data on at least six measures, including at least one MIPS core measure. If there is not an available and applicable MIPS core measure, a MIPS eligible clinician must attest to not having an available and applicable MIPS core measure and submit data on a separate MIPS quality measure. If fewer than six measures apply then the MIPS eligible clinician, group, virtual

group, or APM Entity must report on each measure that is applicable.

* * * * *

(ii) For the CY 2017 through 2026 performance periods/2019 through 2028 MIPS payment years, a MIPS eligible clinician, group, virtual group, and APM Entity that report on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures established by CMS through rulemaking, must submit data on at least six measures within that set, including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician, group, virtual group, or APM Entity, report on each measure that is applicable. Beginning in the CY 2027 performance period/2029 MIPS payment year, except as provided in paragraph (a)(1)(iii) of this section, a MIPS eligible clinician that reports on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures established by CMS through rulemaking, must submit data on at least six measures within that set, including at least one MIPS core measure. If there is not an available and applicable MIPS core measure, a MIPS eligible clinician must attest to not having an available and applicable MIPS core measure and submit data on a separate MIPS quality measure within that set. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician, report on each measure that is applicable.

* * * * *

(iii) *Small practices.* Beginning with the CY 2027 performance period/2029 MIPS payment year, MIPS eligible clinicians in small practices are not required to submit at least one MIPS core measure or attest to not having an applicable and available MIPS core measure. MIPS eligible clinicians in small practices must submit data on at least six measures, if applicable.

* * * * *

(4) *For Medicare CQMs.* (i) A MIPS eligible clinician, group, and APM Entity reportingquality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set or APP Plus measure set (as applicable) and administering the CAHPS for MIPS Survey as required under the APP.

(ii) [Reserved]

(5) *For Medicare eCQMs.* (i) A MIPS eligible clinician, group, and APM Entity reporting on the Medicare eCQMs (reporting quality data on beneficiaries eligible for Medicare eCQMs as defined at § 425.20) within the APP Plus measure set and administering the CAHPS for MIPS Survey as required under the APP.

(ii) [Reserved]

* * * * *

■ 39. Section 414.1340 is amended by—
■ a. Revising paragraphs (d) and (e); and
■ b. Adding paragraph (f).

The revisions and additions read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

* * * * *

(d) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on the following:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria for MIPS payment year 2026 and future MIPS payment years.

(e) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare eCQMs must submit data on the following:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare eCQM, as defined at § 425.20, who meet the measure's denominator criteria for MIPS payment years 2029 and future MIPS payment years.

(2) [Reserved]

(f) If quality data are submitted selectively such that the submitted data are unrepresentative of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5).

■ 40. Section 414.1365 is amended by—
■ a. Adding paragraph (a)(2); and
■ b. Revising paragraphs (c)(1) introductory text and (c)(1)(ii).

The revisions and additions read as follows:

§ 414.1365 MIPS Value Pathways.

(a) * * *

(2) Beginning in the CY 2031 performance period/2033 MIPS payment year, except for MIPS eligible clinicians reporting through the APM Performance Pathway in accordance with § 414.1367, all MIPS eligible clinicians must report through an MVP.

* * * * *

(c) * * *

(1) *Quality.* Through the CY 2026 performance period/2028 MIPS payment year, except as provided in paragraph (c)(1)(i) of this section, an MVP participant must select and report, if applicable, four quality measures, including one outcome measure (or, if an outcome measure is not available, one high priority measure), included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section. Beginning in the CY 2027 performance period/2029 MIPS payment year, except as provided in paragraphs (c)(1)(i) and (c)(1)(ii) of this section, an MVP participant must select and report, if applicable, four quality measures, including one MIPS core measure available in the MVP, excluding the population health measure required under paragraph § 414.1365(c)(4)(ii). If there is not an available and applicable MIPS core measure, an MVP participant must attest to not having an available and applicable MIPS core measure and submit a separate MIPS quality measure within the MVP.

* * * * *

(ii) *Small practices.* Beginning with the CY 2027 performance period/2029 MIPS payment year, an MVP participant that meets the requirements of a small practice is not required to submit at least one MIPS core measure or attest to not having an available and applicable MIPS core measure. Except as provided in paragraph (c)(1)(i) of this section, an MVP participant that meets the requirements of a small practice must select and report, if applicable, at least four quality measures included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section.

* * * * *

■ 41. Section 414.1375 is amended is amended by revising paragraphs (b)(2)(ii)(A) and (b)(3)(i) introductory text to read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(A) Through the 2028 MIPS payment year, report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs;

* * * * *

(3) * * *

(i) *Supporting providers with the performance of CEHRT (SPPC).*

From the 2019 MIPS payment year through the 2027 MIPS payment year, to engage in activities related to supporting providers with the performance of CEHRT, the MIPS eligible clinician—

* * * * *

■ 42. Section 414.1380 is amended by—
■ a. Revising paragraphs (b)(1)(ii)(E) and (b)(1)(ii)(F);
■ b. Adding paragraphs (b)(1)(ii)(G) and (H), and (b)(1)(iv)(D);
■ c. Revising paragraphs (b)(3)(i) and (b)(4)(ii)(C)(*3*);
■ d. Adding paragraph (b)(4)(ii)(C)(*4*); and
■ e. Revising paragraphs (c)(2)(i)(A)(*10*) and (c)(2)(i)(C)(*12*).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(ii) * * *

(E) For the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years, CMS will publish a list of topped out measures determined to be impacted by limited measure choice in the **Federal Register** on a yearly basis. Beginning with the CY 2027 performance period/2029 MIPS payment year, CMS will publish a list of topped out measures determined to be impacted by limited measure choice on the QPP website. Measures included on the list are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

(F) *Medicare CQMs collection type benchmarks.*

(*1*) Beginning in the CY 2025 performance period/2027 MIPS payment year, measures of the Medicare CQMs collection type use flat benchmarks for their first two performance periods in MIPS.

(*2*) Beginning with the CY 2026 performance period/2028 MIPS payment year, measures of the Medicare CQMs collection type use flat benchmarks.

(G) *Medicare eCQMs collection type benchmarks.*

(*1*) Beginning with the CY 2027 performance period/2029 MIPS payment year, measures of the Medicare eCQMs collection type use flat benchmarks.

(*2*) [Reserved]

(H) Beginning in the CY 2027 performance period/2029 MIPS payment year, MIPS core measures, which are required under § 414.1335(a)(1)(i) and (ii), for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years, are scored from 1 to 10 measure achievement points according to defined topped out measure benchmarks calculated from performance data in the baseline period in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

* * * * *

(iv) * * *

(D) Beginning with the CY 2027 performance period/2029 MIPS payment year, MIPS core measures, which are required under § 414.1335(a)(1)(i) and (ii), are not subject to the 7 measure achievement point cap specified in paragraph (b)(1)(iv)(B) of this section.

* * * * *

(3) * * *

(i) For MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent.

* * * * *

(4) * * *

(i) * * *

(C) * * *

(ii) * * *

(C) * * *

(3) Beginning with the CY 2026 performance period/2028 MIPS payment year, the total number of bonus points available to be earned when reporting one optional measure, more than one optional measure, or all optional measures under the Public Health and Clinical Data Exchange objective is a total of 5 bonus points.

(4) For the CY 2027 performance period/2029 MIPS payment year, the total number of bonus points available to be earned when reporting the Electronic Prior Authorization optional measure is a total of 10 bonus points.

* * * * *

(c) * * *

(2) * * *

(i) * * *

(A) * * *

(10) Beginning with the 2026 MIPS payment year, for the quality and improvement activities performance categories, CMS determines based on documentation provided to the agency that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third-party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third-party intermediary, and the third-party intermediary did not submit the data for the performance category(ies) on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the affected performance category(ies), CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third-party intermediary's submission of the clinician's data for the performance category(ies); whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third-party intermediary caused no data to be submitted for the performance category(ies) in accordance with applicable deadlines.

(i) For the 2026 MIPS payment year, requests must be submitted by November 1st of the year preceding the relevant MIPS payment year.

(ii) Beginning with the 2027 MIPS payment year, requests must be submitted by December 31st of the year preceding the relevant MIPS payment year.

* * * * *

(C) * * *

(12) Beginning with the 2026 MIPS payment year, CMS determines based on documentation provided to the agency that data for a MIPS eligible clinician are inaccessible or unable to be submitted due to circumstances outside of the control of the clinician because the MIPS eligible clinician delegated submission of the data to their third-party intermediary, evidenced by a written agreement between the MIPS eligible clinician and third-party intermediary, and the third-party intermediary did not submit the data for the performance category on behalf of the MIPS eligible clinician in accordance with applicable deadlines. To determine whether to apply reweighting to the Promoting Interoperability performance category, CMS will consider: whether the MIPS eligible clinician knew or had reason to know of the issue with its third-party intermediary's submission of the clinician's data for the performance category; whether the MIPS eligible clinician took reasonable efforts to correct the issue; and whether the issue between the MIPS eligible clinician and their third-party intermediary caused no data to be submitted for the performance category in accordance with applicable deadlines.

(i) For the 2026 MIPS payment year, requests must be submitted by

November 1st of the year preceding the relevant MIPS payment year.

(ii) Beginning with the 2027 MIPS payment year, requests must be submitted by December 31st of the year preceding the relevant MIPS payment year.

* * * * *

§ 414.1395 [Amended]

■ 43. Section 414.1395 is amended by removing paragraph (c)(2) and redesignating paragraph (c)(1) as paragraph (c).

■ 44. Section 414.1400 is amended by—

■ a. Revising paragraphs (b)(3)(iii), (b)(3)(v)(E)(*1*),

■ b. Redesignating paragraph (b)(3)(vi) and (viii) as (b)(3)(vii)(A) and (B), respectively;

■ c. Adding paragraph (b)(3)(vii)(C);

■ d. Reserving paragraphs (b)(3)(vi) and (viii);

■ e. Revising paragraphs (b)(3)(x), (b)(3)(xiv), and (c)(1) introductory text;

■ b. Adding paragraphs (c)(2); and

■ c. Revising paragraph (e)(5);

The revisions and additions read as follows:

§ 414.1400 Third-party intermediaries.

* * * * *

(b) * * *

(3) * * *

(iii) Beginning with the CY 2021 performance period/2023 MIPS payment year, the QCDR or qualified registry must provide performance feedback at least 4 times a year and provide specific feedback on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Feedback must be provided at the level at which data is submitted. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the performance period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

* * * * *

(v) * * *

(E) * * *

(*1*) If the intermediary submits MIPS data to CMS for fewer than 10 Quality Payment Program participants, the data validation audit sample must include all Quality Payment Program participants. If the intermediary submits data for 10 or more Quality Payment Program participants, it must use a sample size of at least 3 percent of a combination of the individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups or APM entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities.

(*2*) If there are fewer than 5 patient records, the patient record audit sample must include all patient records. If there are 5 or more patient records, the intermediary must use a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

* * * * *

(vi) [Reserved].

(vii) Participation plan for third-party intermediary not submitting data.

(A) For the CY 2023 performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS' approval. The participation plan must include the QCDR and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(B) For the CY 2024 performance period/2026 MIPS payment year through CY 2026 performance period/2028 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(C) Beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for the year preceding the applicable self-nomination period must submit a participation plan for CMS' approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) [Reserved].

* * * * *

(x) For the CY 2017 performance period/2019 MIPS payment year through CY 2026 performance period/CY 2028 MIPS payment year, a QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one outcome measure.

(A) For the CY 2017 performance period/2019 MIPS payment year through CY 2026 performance period/CY 2028 MIPS payment year, if no outcome measure is available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure.

(B) Beginning with CY 2027 performance period/2029 MIPS payment year, a QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one MIPS core measure.

* * * * *

(xiv) A QCDR or a qualified registry must attest that the information listed on the qualified posting is accurate. Changes to information (for example, cost, services included) on the qualified posting must be included and finalized during the qualified posting review period. Third-party intermediaries will not be permitted to make changes after the qualified posting is publicly posted on the Quality Payment Program website.

* * * * *

(c) * * *

(1) For the CY 2021 performance period/2023 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

* * * * *

(2) Beginning with the CY 2025 performance period/2027 MIPS payment year, health IT vendors cannot submit MIPS data.

* * * * *

(5) *Termination for third-party intermediary not submitting data.*

(i) Beginning with the CY 2024 performance period/2026 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-

nominated under paragraph (b)(3)(viii) of this section, will be terminated.

(ii) Beginning with the CY 2027 performance period/2029 MIPS payment year, a QCDR or qualified registry that submits a participation plan as required under paragraph (b)(3)(viii) of this section, but does not submit MIPS data for the applicable performance period for which they self-nominated under paragraph (b)(3)(viii) of this section, will be queried by CMS before the end of the calendar year for the given MIPS performance period requesting documentation that they have contracted with Quality Payment Program participants who will submit data for the given MIPS performance period. If appropriate documentation cannot be provided or the third-party intermediary will not be submitting MIPS data or both for the given MIPS performance period, the third-party intermediary will be terminated.

■ 45. Section § 414.1425 is amended by—

■ a. Revising paragraph (c)(5); and

■ b. Adding paragraphs (c)(8) and (d)(5).

The revision and additions read as follows:

§ 414.1425 Qualifying APM participant determination: In general.

* * * * *

(c) * * *

(5) * * *

(ii) The APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk for that QP performance period under the terms of the Advanced APM, even if such termination date occurs within such QP Performance Period.

* * * * *

(8) Beginning in the 2027 QP Performance Period, application of QP determination is limited strictly to eligible clinicians as defined at § 414.1305 and that meet the definition of Qualifying APM participant (QP) as defined at § 414.1305 by participating in an Advanced APM during the QP performance period. Partial QP status is also applied to all eligible clinicians receiving QP status for an individual QP determination as codified at § 414.1425(d).

* * * * *

(d) * * *

(5) Beginning in the 2027 QP Performance Period, application of Partial QP determination as part of an APM entity group as defined at § 414.1305 is limited strictly to eligible clinicians as defined at § 414.1305 that meet the definition of Partial Qualifying APM Participant (Partial QP) as defined at § 414.1305 by participating in an Advanced APM during the QP performance period. Partial QP status is also applied to all eligible clinicians receiving partial QP status for an individual determination as codified at § 414.1425(d)

* * * * *

■ 46. Section § 414.1430 is amended by revising paragraphs (a), (b)(1)(i), (2)(i), (3)(i), and (4)(i) to read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) *QP payment amount threshold.* The QP payment amount thresholds are the following values for the indicated payment years: (i) 2019 and 2020: 25 percent.

(ii) 2021 through 2026: 50 percent.

(iii) 2027: 75 percent.

(iv) 2028: 50 percent.

(v) 2029 and thereafter: 75 percent.

(2) *Partial QP payment amount threshold.* The Partial QP payment amount thresholds are the following values for the indicated payment years:

(i) 2019 and 2020: 20 percent.

(ii) 2021 through 2026: 40 percent.

(iii) 2027: 50 percent.

(iv) 2028: 40 percent.

(v) 2029 and thereafter: 50 percent.

(3) *QP patient count threshold.* The QP patient count thresholds are the following values for the indicated payment years: (i) 2019 and 2020: 20 percent.

(ii) 2021 through 2026: 35 percent.

(iii) 2027: 50 percent.

(iv) 2028: 35 percent.

(v) 2029 and thereafter: 50 percent.

(4) *Partial QP patient count threshold.* The Partial QP patient count thresholds are the following values for the indicated payment years: (i) 2019 and 2020: 10 percent.

(ii) 2021 through 2026: 25 percent.

(iii) 2027: 35 percent.

(iv) 2028: 25 percent.

(v) 2029 and thereafter: 35 percent.

(b) * * *

(1) * * *

(i) * * *

(A) 2021 through 2026: 50 percent

(B) 2027: 75 percent.

(C) 2028: 50 percent.

(D) 2029 and thereafter: 75 percent.

(2) * * *

(i) * * *

(A) 2021 through 2026: 40 percent

(B) 2027: 50 percent.

(C) 2028: 40 percent.

(D) 2029 and thereafter: 75 percent.

* * * * *

(3) * * *

(i) * * *

(A) 2021 through 2026: 35 percent.

(B) 2027: 50 percent.

(C) 2028: 35 percent.

(D) 2029 and thereafter: 50 percent.

* * * * *

(4) * * *

(i) * * *

(A) 2021 through 2026: 25 percent

(B) 2027: 35 percent.

(C) 2028: 25 percent.

(D) 2029 and thereafter: 35 percent.

* * * * *

■ 47. Section § 414.1450 is amended by revising paragraphs (a)(1)(i) and (b)(1) to read as follows:

§ 414.1450 APM Incentive Payment.

(a) * * *

(1) * * *

(i) For payment years in which an APM incentive payment is authorized under section 1833(z)(1)(A) of the Act, CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section for the applicable payment year and in the manner described in paragraphs (d) and (e) of this section.

(b) * * *

(1) The amount of the APM incentive payment is the applicable percentage established for the payment year of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment. The applicable percentage is the following value for the indicated payment years:

(i) 2019 through 2024: 5 percent.

(ii) 2025: 3.5 percent.

(iii) 2026: 1.88 percent.

(iv) 2028: 3.1 percent.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 48. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 49. Section 415.172 is amended by revising paragraphs (a) introductory text and (b)(2) to read as follows:

(a) *General rule.* If a resident participates in a service furnished in a teaching setting, physician fee schedule payment is made only if a teaching physician is present during the key portion of any service or procedure for

which payment is sought. This includes Medicare telehealth services, provided through audio/video real-time communications technology, when either the teaching physician or resident is in the same physical location as the beneficiary or in instances when the service is a 3-way telehealth visit, with the teaching physician, resident, and patient in different locations.

* * * * *

(b) * * *

(2) For all teaching settings, except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document whether the teaching physician was physically present or present through audio/video real-time communications technology at the time the service (including a Medicare telehealth service) is furnished. The medical records must contain a notation describing the specific portion(s) of the service for which the teaching physician was present through audio/video real-time communications technology. The presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by the physician or as provided in § 410.20(e) of this chapter.

■ 50. Section 415.174 is amended by revising paragraph (a) introductory text to read as follows:

§ 415.174 Exception: Evaluation and management services furnished in certain centers.

(a) In the case of certain evaluation and management codes (as specified by CMS in program instructions), MACs may make physician fee schedule payment for a service furnished by a resident without the presence of a teaching physician. For the exception to apply, all of the following conditions must be met:

* * * * *

PART 417—HEALTH MAINTENANCE ORGANIZATIONS, COMPETITIVE MEDICAL PLANS, AND HEALTH CARE PREPAYMENT PLANS

■ 51. The authority for part 417 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh, and 300e, 300e–5, and 300e–9, and 31 U.S.C. 9701.

■ 52. Section 417.2 is amended by revising paragraph (b) to read as follows:

§ 417.2 Basis and scope.

* * * * *

(b) Subparts G through R of this part set forth the rules for Medicare contracts with, and payment to, HMOs and competitive medical plans (CMPs) under sections 1876 and 1899C of the Act and 8 U.S.C. 1611.

* * * * *

■ 53. Section 417.422 is amended by revising paragraph (h) to read as follows:

§ 417.422 Eligibility to enroll in an HMO or CMP.

* * * * *

(h) Effective July 4, 2025, is a United States citizen or national, or an eligible noncitizen as defined in 42 CFR 400.200.

■ 54. Section 417.460 is amended by revising paragraphs (b)(2)(iv) and (j) to read as follows:

§ 417.460 Disenrollment of beneficiaries by an HMO or CMP.

* * * * *

(b) * * *

(2) * * *

(iv) No longer meets the requirements of § 417.422(h); or

* * * * *

(j) *Enrollee is not a United States citizen or national, or an eligible noncitizen.* Disenrollment is effective the first day of the month following the month in which the HMO or CMP receives a notice from CMS that the individual is ineligible in accordance with § 417.422(h).

PART 422—MEDICARE ADVANTAGE PROGRAM

■ 55. The authority for part 422 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–21 through 1395w–28, and 1395hh.

■ 56. Section 422.1 is amended by adding paragraph (a)(1)(xii) and removing and reserving paragraph (a)(2) to read as follows:

§ 422.1 Basis and scope.

(a) * * *

(1) * * *

(xii) 1899C—Limiting Medicare coverage of certain individuals.

(2) [Reserved]

* * * * *

■ 57. Section 422.50 is amended by revising paragraph (a)(7) to read as follows:

§ 422.50 Eligibility to elect an MA plan.

* * * * *

(a) * * *

(7) Effective July 4, 2025, is a United States citizen or national, or an eligible noncitizen as defined in 42 CFR 400.200.

* * * * *

■ 58. Section 422.62 is amended by revising paragraph (b)(16) to read as follows:

§ 422.62 Election of coverage under an MA plan.

* * * * *

(b) * * *

(16) Verification of eligible noncitizen/citizenship status.

(i) The SEP begins when the individual provides SSA with sufficient information to demonstrate that the requirements of § 406.20(b)(2) and § 407.10(a)(2)(ii) have been met and receives notice of their entitlement to Medicare Part A and enrollment in Medicare Part B. The SEP continues for 2 additional calendar months after the month the notice is received.

* * * * *

■ 59. Section 422.74 is amended by revising paragraphs (b)(2)(v) and (d)(9) to read as follows:

§ 422.74 Disenrollment by the MA organization.

* * * * *

(b) * * *

(2) * * *

(v) The individual no longer meets the requirements of § 422.50(a)(7).

* * * * *

(d) * * *

(9) *Enrollee loses U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Disenrollment is effective the first day of the month following the month in which the MA organization receives a notice from CMS that the individual is ineligible in accordance with § 422.50(a)(7) of this chapter.

* * * * *

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

■ 60. The authority for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh.

■ 61. Section 423.1 is amended by adding a section in numerical order in paragraph (a)(1) and removing and reserving paragraph (a)(3) to read as follows:

§ 423.1 Basis and scope.

(a) * * *

(1) * * *

1899C. Limiting Medicare coverage of certain individuals.

* * * * *

(3) [Reserved]

* * * * *

■ 62. Section 423.30 is amended by revising paragraph (a)(1)(iii) to read as follows:

§ 423.30 Eligibility and enrollment.

(a) * * *

(1) * * *

(iii) Effective July 4, 2025, is a United States citizen or national, or an eligible noncitizen as defined in 42 CFR 400.200.

* * * * *

■ 63. Section 423.38 is amended by revising paragraphs (c)(21)(i) and (ii) to read as follows:

§ 423.38 Enrollment periods.

* * * * *

(c) * * *

(21) * * *

(i) Verification of eligible noncitizen/citizenship status.

(ii) The SEP begins when the individual provides SSA with sufficient information to demonstrate that the requirements of § 406.20(b)(2) or § 407.10(a)(2)(ii) have been met and receives notice of their entitlement to, or enrollment for, either Medicare Part A or Part B. The SEP continues for 2 additional calendar months after the month the notice of the Part A entitlement or Part B enrollment is received, whichever is earlier.

* * * * *

■ 64. Section 423.44 is amended by revising paragraphs (b)(2)(vi) and (d)(8) to read as follows:

§ 423.44 Involuntary disenrollment from Part D coverage.

* * * * *

(b) * * *

(2) * * *

(vi) The individual no longer meets the requirements of § 423.30(a)(1)(iii).

* * * * *

(d) * * *

(8) *Individual loses U.S. citizenship, U.S. nationality, or eligible noncitizen status.* Disenrollment is effective the first day of the month following the month in which the PDP sponsor receives a notice from CMS that the individual is ineligible in accordance with § 423.30(a)(1)(iii) of this chapter.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 65. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 66. Section 424.516 is amended by adding paragraph (f)(4) to read as follows:

§ 424.516 Additional provider and supplier requirements for enrolling and maintaining active enrollment status in the Medicare program.

* * * * *

(f) * * *

(4) A provider or supplier that is a covered entity as defined at 42 CFR 10.3 is required to—

(i) Submit to CMS the documentation set forth at § 428.203(c)(1) and (2) relating to covered Part D drugs written or ordered by such provider or supplier.

(ii) Comply with the submission requirements set forth at § 428.203(c)(3) through (5).

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 67. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 68. Section 425.20 is amended by—

■ a. Revising and republishing the definition of ''Beneficiary eligible for Medicare CQMs'';

■ b. Adding the definition of ''Beneficiary eligible for Medicare eCQMs'' in alphabetical order;

■ c. Revising paragraph (2) in the definition of ''Experienced with performance-based risk Medicare ACO initiatives'';

■ d. Revising paragraph (2) in the definition of ''Inexperienced with performance-based risk Medicare ACO initiatives''; and

■ e. Adding the definition of ''Rural county status'' in alphabetical order.

The revisions, republication, and additions read as follows:

§ 425.20 Definitions.

* * * * *

Beneficiary eligible for Medicare CQMs means a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs), who meets the following requirements (as applicable):

(1) For performance years 2024 through 2026, the beneficiary is either of the following:

(i) A Medicare fee-for-service beneficiary (as defined at § 425.20) who—

(A) Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

(B)(*1*) For performance year 2024, had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(*2*) For performance years 2025 and 2026, had at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(ii) A Medicare fee-for-service beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

(2) For performance years 2027 and subsequent performance years, a beneficiary that is assigned to the ACO under subpart E of this part.

Beneficiary eligible for Medicare eCQMs means a beneficiary identified for purposes of reporting Medicare eCQMs for ACOs participating in the Medicare Shared Savings Program (Medicare eCQMs), who is a beneficiary that is assigned to the ACO under subpart E of this part.

* * * * *

Experienced with performance-based risk Medicare ACO initiatives * * *

(2) Forty percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in any of the 5 most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years, unless the ACO participant TIN did not have a written agreement to participate in the performance-based risk Medicare ACO initiative.

* * * * *

Inexperienced with performance-based risk Medicare ACO initiatives * * *

(2) Less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in each of the 5 most recent performance years. An ACO participant is considered to

have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years, unless the ACO participant TIN did not have a written agreement to participate in the performance-based risk Medicare ACO initiative.

* * * * *

Rural county status means a county that has a status of Micropolitan (population of 10,000 to 50,000 individuals) or Noncore (population less than 10,000 individuals) per the Federal Office of Rural Health Policy (FORHP) county designation using the most recently available version of the United States Census Bureau Delineation File.

* * * * *

■ 69. Section 425.304 is amended by—

■ a. In paragraph (a)(2), removing the phrase ''paragraph (b) or (c) of this section'' and adding in its place the phrase ''paragraph (b), (c), or (e) of this section''; and

■ b. Adding paragraph (e).

The addition reads as follows:

§ 425.304 Beneficiary incentives.

* * * * *

(e) *Part B Cost Sharing Support*—(1) *General.* ACOs, subject to certain conditions and safeguards, may enter into Part B cost sharing support arrangements with ACO participants, pursuant to which the ACO participants reduce or eliminate cost sharing for those categories of eligible Part B items and services and eligible beneficiaries identified by the ACO. This cost sharing support could include both or either of Medicare FFS deductible and coinsurance amounts.

(2) *Application of the CMS-sponsored model safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives (§ 1001.952(ii)(1) and (2) of this title) is available to protect remuneration exchanged under Part B cost sharing support arrangements between ACOs and ACO participants, and patient incentives in the form of Part B cost sharing support furnished to eligible beneficiaries under the Shared Savings Program that meet all of the requirements of this section and the anti-kickback statute safe harbor requirements set forth at § 1001.952(ii) of this title.

(3) *Application procedures*—(i) *General.* An ACO must submit a Part B cost sharing support implementation plan in the form and manner and by a deadline specified by CMS. The implementation plan must include the following:

(A) The categories of eligible beneficiaries for which the ACO plans to make Part B cost sharing support available.

(B) The categories of eligible Part B items and services for which the ACO plans to make Part B cost sharing support available.

(C) A description of how the ACO's planned Part B cost sharing support strategy meets at least one of the clinical goals in paragraph (e)(4)(iii) of this section.

(D) The procedures that the ACO will implement to ensure that ACO participants that have entered into a Part B cost sharing support arrangement with the ACO have access to the most current list of beneficiaries eligible to receive Part B cost sharing support.

(E) A requirement for the ACO to submit to CMS a complete and accurate list of ACO participants that have entered into a Part B cost sharing support arrangement with the ACO according to paragraph (e)(5)(i) of this section.

(F) An attestation that, in any marketing or communications regarding the availability of Part B cost-sharing support, the ACO and its ACO participants will not represent such support as a substitute for supplemental insurance coverage or encourage beneficiaries to reduce or terminate such coverage.

(G) Such other information as may be specified by CMS.

(ii) *CMS review.* CMS evaluates an ACO's implementation plan and approves or denies the application. An ACO may only offer Part B cost sharing support to beneficiaries if CMS approves its application. CMS may reject the ACO's application on the basis of one or more of the following:

(A) The ACO's and the ACO participant's history of noncompliance in the Shared Savings Program.

(B) The ACO's history of noncompliance in CMMI ACO models.

(C) Whether the implementation plan complies with the requirements of § 425.304.

(D) Such other factors as CMS deems reasonable to protect the integrity of the Shared Savings Program, including concerns that the use of Part B cost sharing support may contribute to fraud, waste or abuse.

(iii) *Changes to the implementation plan.* If an ACO wants to make a change to its implementation plan, the ACO must submit a description of the change to CMS in a form and manner and by a deadline or deadlines specified by CMS. CMS evaluates the proposed change and either approves or rejects it.

(4) *Part B cost sharing support requirements*—(i) *Beneficiary eligibility.* Beneficiaries are eligible to receive Part B cost sharing support if they meet the following criteria:

(A) The beneficiary is assigned to the applying ACO (as described at § 425.400(a)(1)(i)) if the ACO has selected prospective assignment or the beneficiary is an assignable beneficiary (as defined at § 425.20), if the applying ACO has selected preliminary prospective assignment with retrospective reconciliation.

(B) The beneficiary does not have secondary insurance that covers the associated Part B cost sharing obligation.

(C) The beneficiary's overall health is expected to be improved or maintained by receiving the associated Part B item or service.

(ii) *Eligible Part B items and services.* ACOs may reduce or eliminate beneficiary cost sharing for all Medicare FFS Part B items and services except durable medical equipment, prosthetics, orthotics, supplies, and prescription drugs.

(iii) *Clinical goals.* Cost sharing support must advance one or more of the following clinical goals:

(A) Adherence to a treatment regime.

(B) Adherence to a drug regime.

(C) Adherence to a follow-up care plan.

(D) Management of a chronic disease or condition.

(5) *Part B cost sharing support arrangements*—(i) *ACO participant agreements.* The ACO must have a written agreement with each ACO participant that has agreed to reduce or eliminate Part B cost sharing for eligible ACO beneficiaries under a Part B cost sharing support arrangement with the ACO. The terms of the Part B cost sharing support agreement must include all of the following:

(A) The categories of eligible beneficiaries and eligible Part B items and services for which the ACO participant may reduce or eliminate Part B cost sharing.

(B) A requirement that the ACO participant reduce or eliminate cost sharing in accordance with the ACO's approved implementation plan.

(C) The amount and frequency with which the ACO will reimburse the ACO participant for the cost sharing amounts not collected.

(D) A requirement for ACO participants to maintain copies of records that identify each beneficiary who received a reduction or elimination

of Part B cost sharing, the type and date of item or service for which cost sharing support was provided, and the dollar amount of the cost sharing support.

(E) The ability for the ACO or ACO participant to terminate the Part B cost sharing support agreement if the ACO or ACO participant fails to comply with the requirements of this section.

(F) A requirement that the ACO or ACO participants will not market to beneficiaries the availability of the Part B cost sharing support as a substitute for their supplemental insurance coverage.

(ii) *Other rules governing participation.* (A) An ACO participant must not be required by an ACO to participate in a Part B cost sharing support arrangement.

(B) An ACO may participate in Part B cost sharing support in accordance with an approved implementation plan even if not all of its ACO participants agree to participate.

(iii) *Source of funding.* The ACO must finance all payments made to ACO participants in accordance with the Part B cost sharing support agreement from its own funds.

(6) *Record retention.* (i) The ACO must maintain copies of the written Part B cost sharing support agreement with ACO participants, as well as the following records:

(A) Records that identify each beneficiary who received a reduction or elimination of Part B cost sharing.

(B) Records that document the type and date of the Part B item or service for which Part B cost sharing was reduced or eliminated.

(C) Records that document the dollar amount of Part B cost sharing that was reduced or eliminated.

(D) Records that document the ACO participant that furnished the item or service for which Part B cost sharing was reduced or eliminated.

(ii) The ACO must provide the records specified in paragraph (e)(6)(i) of this section to CMS upon request.

(7) *Addressing compliance problems.* At any time, CMS may suspend or prohibit the ACO or any ACO participant from participating in a Part B cost sharing support arrangement if CMS determines that the ACO or its ACO participants have failed to comply with any of the requirements of this part. This suspension or prohibition will be effective, in CMS' discretion, regardless of whether the ACO has corrected or otherwise resolved the noncompliance.

■ 70. Section 425.308 is amended by—

■ a. In paragraph (b)(9) introductory text, removing the phrase ''For performance year 2025 and subsequent performance years,'' and adding in its place the phrase ''For performance years 2025 and 2026,''; and

■ b. Adding paragraph (b)(11).

The addition reads as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(11) For performance year 2027 and subsequent performance years, the CEHRT use activity selected by the ACO for the purpose of meeting the ACO CEHRT use requirement at § 425.507(c).

* * * * *

■ 71. Section 425.312 is amended by—

■ a. Revising the last sentence in paragraph (a)(2)(iii);

■ b. Adding a new sentence at the end of paragraph (a)(2)(iv); and

■ c. Removing paragraph (a)(2)(v).

The revision and addition read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) * * *

(iii) * * * The standardized written notice must be furnished to all of these beneficiaries by May 30, unless CMS specifies a later date during the performance year.

(iv) * * * The standardized written notice must be furnished to all of these beneficiaries by May 30, unless CMS specifies a later date during the performance year.

* * * * *

■ 72. Section 425.400 is amended by revising paragraph (c)(1)(x) introductory text and adding paragraph (c)(1)(xi) to read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(x) For the performance year starting on January 1, 2026, as follows:

* * * * *

(xi) For the performance year starting on January 1, 2027, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 96160 and 96161 (codes for administration of health risk assessment).

(*2*) 96202 and 96203 (codes for caregiver behavior management training).

(*3*) 97550, 97551, and 97552 (codes for caregiver training services).

(*4*) 98016 (code for virtual check-in).

(*5*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(*6*) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a skilled nursing facility (SNF)).

(*7*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*8*) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(*9*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(xi)).

(*10*) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(*11*) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(*12*) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(*13*) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(*14*) 99439 (code for non-complex chronic care management).

(*15*) 99452 (code for interprofessional consultation service).

(*16*) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(*17*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(*18*) 99495 and 99496 (codes for transitional care management services).

(*19*) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(*1*) G0019 and G0022 (codes for community health integration services).

(*2*) G0023 and G0024 (codes for principal illness navigation services).

(*3*) G0101 (code for cervical or vaginal cancer screening).

(*4*) G0136 (code for physical activity and nutritional assessment services).

(*5*) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(*6*) G0402 (code for the Welcome to Medicare visit).

(*7*) G0438 and G0439 (codes for the annual wellness visits).

(*8*) G0442 (code for alcohol misuse screening service).

(*9*) G0443 (code for alcohol misuse counseling service).

(*10*) G0444 (code for annual depression screening service).

(*11*) G0463 (code for services furnished in electing teaching amendment (ETA) hospitals).

(*12*) G0506 (code for chronic care management).

(*13*) G0537 and G0538 (codes for cardiovascular risk assessment and risk management services).

(*14*) G0539 and G0540 (codes for individual behavior management/modification caregiver training services).

(*15*) G0541, G0542, and G0543 (codes for direct care caregiver training services).

(*16*) G0544 (code for post-discharge telephonic follow-up contacts intervention).

(*17*) G0556, G0557, and G0558 (codes for advanced primary care management services).

(*18*) G0560 (code for safety planning interventions).

(*19*) G0568 and G0569 (codes for behavioral health integration add-on when furnished with advanced primary care management services).

(*20*) G0570 (code for psychiatric collaborative care model add-on when furnished with advanced primary care management services).

(*21*) G0572 and G0573 (codes for advance care planning).

(*22*) G0576 (code for assessment and treatment of vaccine adverse effects).

(*23*) G2010 (code for the remote evaluation of patient video/images).

(*24*) G2011, G0396, G0397 (codes for screening, brief intervention, and referral to treatment).

(*25)* G2012 and G2252 (codes for virtual check-in).

(*26*) G2058 (code for non-complex chronic care management).

(*27*) G2064 and G2065 (codes for principal care management services).

(*28*) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(*29*) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(*30*) G2214 (code for psychiatric collaborative care model).

(*31*) G3002 and G3003 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(xi)(A) of this section or a HCPCS code specified in paragraph (c)(1)(xi)(B) of this section, when the assignment window or expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 73. Section 425.401 is revised and republished to read as follows:

§ 425.401 Criteria for a beneficiary to be assigned to an ACO.

(a) *Assignment eligibility criteria.* A beneficiary may be assigned to an ACO under the assignment methodology in §§ 425.402 and 425.404, for a performance or benchmark year, if the beneficiary meets all of the following criteria during the assignment window:

(1) For performance years starting prior to January 1, 2028 (as applicable):

(i)(A) Has at least 1 month of Part A and Part B enrollment; and

(B) Does not have any months of Part A only or Part B only enrollment.

(ii) Does not have any months of Medicare group (private) health plan enrollment.

(iii) Is not assigned to any other Medicare shared savings initiative.

(iv) Lives in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residence at the end of the assignment window.

(2) For the performance year starting on January 1, 2028, and subsequent performance years:

(i) Has at least 1 month of Part A and Part B enrollment and does not have Medicare group (private) health plan enrollment during that same month during the assignment window.

(ii) Is not assigned to any other Medicare shared savings initiative.

(iii) Lives in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residence at the end of the assignment window.

(b) *Prospective assignment exclusion criteria.* A beneficiary is excluded from the prospective assignment list of an ACO that is participating under prospective assignment under § 425.400(a)(3) at the end of a performance or benchmark year and quarterly during each performance year consistent with § 425.400(a)(3)(ii), or at the end of CY 2019 as specified in § 425.609(b)(1)(ii) and (c)(1)(ii) if the beneficiary meets any of the following criteria during the performance or benchmark year:

(1) For performance years starting prior to January 1, 2028 (as applicable):

(i)(A) Does not have at least 1 month of Part A and Part B enrollment; and

(B) Has any months of Part A only or Part B only enrollment.

(ii) Has any months of Medicare group (private) health plan enrollment.

(iii) Did not live in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residency at the end of the year.

(2) For the performance year starting on January 1, 2028, and subsequent performance years:

(i) Does not have at least 1 month of Part A and Part B enrollment without Medicare group (private) health plan enrollment during that same month during the assignment window.

(ii) Did not live in the United States or U.S. territories and possessions, based on the most recent available data in our beneficiary records regarding the beneficiary's residency at the end of the year.

■ 74. Section 425.402 is amended by revising and republishing paragraphs (b)(3), (b)(4) and (b)(5)(iv) to read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(b) * * *

(3)(i) Under the first step, a beneficiary identified in paragraph (b)(1) of this section is assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary by primary care physicians who are ACO professionals and non-physician ACO professionals in the ACO are greater than the allowed charges for primary care services furnished by primary care physicians, nurse practitioners, physician assistants, and clinical nurse specialists who are—

(A) ACO professionals in any other ACO; or

(B) Not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

(ii) For performance year 2028 and subsequent performance years, if an ACO professional for which CMS identifies a primary care service under paragraph (b)(2) of this section also bills primary care services under a Medicare-enrolled billing TIN unaffiliated with any ACO, then CMS excludes from consideration in assignment under paragraph (b)(3)(i) of this section the allowed charges for primary care services billed by the ACO professional under the non-ACO TIN during the applicable assignment window.

(4)(i) The second step considers the remainder of the beneficiaries identified in paragraph (b)(1) of this section who have not had a primary care service rendered by any primary care physician, nurse practitioner, physician assistant, or clinical nurse specialist, either inside

the ACO or outside the ACO. The beneficiary will be assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary by physicians who are ACO professionals with specialty designations as specified in paragraph (c) of this section are greater than the allowed charges for primary care services furnished by physicians with specialty designations as specified in paragraph (c) of this section—

(A) Who are ACO professionals in any other ACO; or

(B) Who are unaffiliated with an ACO and are identified by a Medicare-enrolled billing TIN.

(ii) For performance year 2028 and subsequent performance years, if an ACO professional for which CMS identifies a primary care service under paragraph (b)(2) of this section also bills primary care services under a Medicare-enrolled billing TIN unaffiliated with any ACO, then CMS excludes from consideration in assignment under paragraph (b)(4)(i) of this section the allowed charges for primary care services billed by the ACO professional under the non-ACO TIN during the applicable assignment window.

(5) * * *

(iv)(A) A beneficiary identified in paragraph (b)(5)(ii) of this section is assigned to the ACO if the allowed charges for primary care services furnished to the beneficiary by ACO professionals in the ACO who are primary care physicians, physicians with specialty designations included in paragraph (c) of this section, or non-physician ACO professionals during the applicable expanded window for assignment are greater than the allowed charges for primary care services furnished by primary care physicians, physicians with specialty designations as specified in paragraph (c) of this section, nurse practitioners, physician assistants, and clinical nurse specialists who are—

(*1*) ACO professionals in any other ACO; or

(*2*) Not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

(B) For performance year 2028 and subsequent performance years, if an ACO professional for which CMS identifies a primary care service under paragraph (b)(5)(iii) of this section also bills primary care services under a Medicare-enrolled billing TIN unaffiliated with any ACO, then CMS excludes from consideration in assignment under paragraph (b)(5)(iv)(A) of this section the allowed charges for primary care services billed by the ACO professional under the non-ACO TIN during the applicable expanded window for assignment.

* * * * *

■ 75. Section 425.507 is amended by—

■ a. In paragraph (a) introductory text, removing the phrase ''For performance years beginning on or after January 1, 2025,'' and adding in its place the phrase ''For performance years 2025 and 2026,'';

■ b. In paragraph (b) introductory text, by adding the words ''For performance years 2025 and 2026,'' to the beginning of the first sentence; and

■ c. Adding paragraph (c).

The addition reads as follows:

§ 425.507 Incorporating Promoting Interoperability requirements related to the Quality Payment Program for performance years beginning on or after January 1, 2025.

* * * * *

(c) For performance years beginning on or after January 1, 2027, an ACO must demonstrate the use of CEHRT (as defined in paragraph (3) of the CEHRT definition at § 414.1305 of this chapter) in one of the following manners:

(1) The ACO uses CEHRT (as defined in paragraph (3) of the CEHRT definition at § 414.1305 of this chapter) that also supports the calculation and reporting of clinical quality measures by being certified to the ONC health IT certification criteria at 45 CFR 170.315(c)(2) and (c)(3), to completely report at least one of the measures in the APP Plus quality measure set using the eCQMs or Medicare eCQMs collection types and meets the data completeness requirement at § 414.1340 of this chapter for the applicable performance year.

(2) The ACO completely reports at least one measure in the APP Plus quality measure set and meets the data completeness requirement at § 414.1340 of this chapter for the applicable performance year using EHR technology that meets paragraph (3) of the CEHRT definition at § 414.1305 of this chapter and attests that it used data collected from an HL7® Fast Healthcare Interoperable Resources (FHIR®)-based API to support quality measurement using a Health IT Module (as defined in 45 CFR 170.102) that has been certified to an unexpired criterion or criteria in 45 CFR 170.315 supporting standardized API access.

(3) The ACO attests to at least one of the Shared Savings Program CEHRT use metrics from the list of metrics established for the applicable performance year.

■ 76. Section 425.508 is amended by adding paragraphs (c)(1) through (4) to read as follows:

§ 425.508 Incorporating quality reporting requirements related to the Quality Payment Program.

* * * * *

(c) * * *

(1) For performance years beginning on or after January 1, 2026. ACOs may exclude one or more TINs of ACO participants from an ACO's submission of eCQM/MIPS CQM/Medicare CQM/Medicare eCQM data (as applicable) for each measure as required in this paragraph (c). Applicable exclusions may include:

(i) Unforeseen circumstance(s) that are outside of the control of the ACO, such as the unexpected closure of a group or individual's practice that bills under the ACO participant TIN.

(ii) An ACO participant TIN has a CEHRT that is intended for specialty use and does not support the measure(s) included in the APP Plus quality measure set.

(iii) Other circumstances as determined by CMS.

(2) ACOs may not exclude an ACO participant TIN from the ACO's quality data submission for each measure based on the following:

(i) The demographics of the beneficiaries who had an encounter during the performance year with an ACO participant TIN.

(ii) The health status of the beneficiaries who had an encounter during the performance year with an ACO participant TIN.

(iii) The estimated impact of the ACO participant TIN on the ACO's quality performance.

(3) The ACO's submission of eCQM/MIPS CQM/Medicare CQM/Medicare eCQM data (as applicable) for each measure must include ACO participant TINs that represent at least 95 percent of the beneficiaries assigned to the ACO under subpart E of this part prior to the application of the measure specifications.

(4) CMS retains the right to audit and validate eCQM/MIPS CQM/Medicare CQM/Medicare eCQM data reported by an ACO and may request documentation from the ACO related to the exclusion of ACO participant TINs under paragraph (c)(1) of this section. Failure to report quality measure data accurately, completely, and timely may result in compliance actions as described in §§ 425.216 and 425.218.

* * * * *

■ 77. Section 425.512 is amended by—

■ a. In paragraph (a)(2)(iv), removing the phrase ''eCQMs/Medicare CQMs'' and adding in its place the phrase ''eCQMs/MIPS CQMs/Medicare CQMs/Medicare eCQMs'';

■ b. In paragraph (a)(5)(i)(B) introductory text, removing the phrase ''For performance years 2025 and 2026,'' and adding in its place the phrase ''For performance year 2025 and subsequent performance years,'';
■ c. Removing paragraph (a)(5)(i)(C);
■ d. In paragraph (a)(5)(iii)(C), removing the phrase ''eCQMs/Medicare CQMs'' and adding in its place the phrase ''eCQMs/MIPS CQMs/Medicare CQMs/Medicare eCQMs'';
■ e. In paragraph (a)(7)(ii), removing the phrase ''For performance year 2025 and subsequent performance years,'' and adding in its place the phrase ''For performance years 2025 and 2026''; and
■ f. Adding paragraph (a)(7)(iii).

The addition reads as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(*7*) * * *

(iii) For performance year 2027 and subsequent performance years, if an ACO reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP Plus quality measure set, and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter, for the relevant performance year, and the ACO meets the following—

(A) The ACO's MIPS Quality performance category score is calculated on less than five measures; and

(B) Any unscored measure(s) must meet all of the following:

(*1*) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score are reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(*2*) The ACO's total measure achievement points used to calculate the ACO's MIPS Quality performance category score are not reduced under § 414.1380(b)(1)(iii) of this subchapter.

* * * * *

§ 425.600 [Amended]

■ 78. Section 425.600 is amended by—

in paragraph (f)(4)(ii) by removing the references ''§§ 425.601(f), and 425.656(e)'' and adding in their place the references ''§ 425.601(f), and § 425.656(e) and (f)''.

■ 79. Section 425.605 is amended by—
■ a. Revising paragraph (d)(1)(v)(A)(*3*)(*ii*), the first sentence of paragraph (d)(1)(v)(A)(*4*) introductory text, and paragraph (d)(1)(v)(A)(*4*)(*ii*);
■ b. Adding paragraph (d)(1)(v)(A)(*5*);
■ c. In paragraph (h)(2), removing the references ''paragraph (d)(1)(i)(A)(*4*), (d)(1)(ii)(A)(*4*), (d)(1)(iii)(A)(*4*), (d)(1)(iv)(A)(*4*), or (d)(1)(v)(A)(*4*) of this section'' and adding in their place the references ''paragraph (d)(1)(i)(A)(*4*), (d)(1)(ii)(A)(*4*), (d)(1)(iii)(A)(*4*), (d)(1)(iv)(A)(*4*), (d)(1)(v)(A)(*4*) or (d)(1)(v)(A)(*5*) of this section'';
■ d. In paragraph (i)(2)(i) introductory text, removing the phrase ''paragraph (i)(2)(ii) of this section'' and adding in its place the phrase ''paragraph (i)(2)(ii) or (i)(2)(iii) of this section, as applicable''; and
■ e. Adding new paragraph (i)(2)(iii).

The revisions and additions read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

* * * * *

(d) * * *

(1) * * *

(v) * * *

(A) * * *

(*3*) * * *

(*ii*) 50 percent multiplied by the ACO's quality score calculated according to § 425.512 for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(4)(ii).

(*4*) *For ACOs in agreement periods beginning on July 1, 2019, through January 1, 2026, for performance years beginning on or after January 1, 2024.*

* * *

(*ii*) 50 percent multiplied by the ACO's quality score calculated according to § 425.512 for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

(*5*) *For ACOs in agreement periods beginning on or after January 1, 2027, for performance years beginning on or after January 1, 2027.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment equal to a percentage of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section). Except as provided in paragraph (h) of this section, the percentage is as follows:

(*i*) 60 percent for an ACO that that meets the quality performance standard by meeting the criteria specified in § 425.512(a)(2) or (a)(5)(i).

(*ii*) 60 percent multiplied by the ACO's quality score calculated according to § 425.512 for an ACO that meets the alternative quality performance standard by meeting the criteria specified in § 425.512(a)(5)(ii).

* * * * *

(i) * * *

(2) * * *

(iii) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027, for performance year 2025 and subsequent performance years of the ACO's agreement period. CMS calculates the benchmark-based loss recoupment limit as follows:

(A) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year prior to the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

(B) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year after the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

(C) Calculates the product of the percentage specified in paragraph (d)(1)(iii)(D)(*2*), (d)(1)(iv)(D)(*2*), and (d)(1)(v)(D)(*2*) of this section, as applicable, and the lesser of the ACO's total benchmark expenditures calculated according to paragraphs (i)(2)(iii)(A) and (i)(2)(iii)(B) of this section.

■ 80. Section 425.610 is amended by—
■ a. In paragraph (l)(2) introductory text, removing the phrase ''paragraph (l)(3) of this section'' and adding in its place the phrase ''paragraph (l)(3) or (l)(4) of this section, as applicable''; and
■ b. Adding paragraph (l)(4).

The addition reads as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

* * * * *

(l) * * *

(4) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027, for performance year 2025 and subsequent performance years of the ACO's agreement period. The amount of shared losses for which an eligible ACO is liable may not exceed 15 percent of the lesser of the following:

(i) Total benchmark expenditures calculated as the product of an ACO's per capita updated benchmark expenditures for the performance year prior to the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

(ii) Total benchmark expenditures calculated as the product of an ACO's per capita updated benchmark expenditures for the performance year

after the recomputation of the ACPT as specified in § 425.660(c)(1) and an ACO's assigned beneficiary person years for the performance year.

§ 425.612 [Amended]

■ 81. Section 425.612 is amended in paragraph (a)(1)(iv)(A)(*2*) by removing the references ''§ 425.401(a)(1) and (2)'' and adding in its place the references ''§ 425.401(a)(1)(i) and (ii) and (a)(2)(i) (as applicable)''.

■ 82. Section 425.630 is amended by—

■ a. In paragraph (e)(1), removing the phrase ''social determinants of health'' and adding in its place the phrase ''upstream drivers of health'';

■ b. Revising paragraph (f)(2)(ii) introductory text to add a new first sentence; and

■ c. Revising and republishing paragraphs (f)(2)(iii) and (f)(2)(iv).

The revisions and republications read as follows:

§ 425.630 Option to receive advance investment payments.

* * * * *

(f) * * *

(2) * * *

(ii) For performance years 2023 through 2027.

* * * * *

(iii) Determines a beneficiary's payment amount.

(A) For performance years 2023 through 2027. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS determines the payment amount that corresponds to the beneficiary's risk factors-based score determined in paragraph (f)(2)(ii) of this section. The beneficiary payment amount is as follows:

TABLE 1 TO PARAGRAPH (f)(2)(iii)(A)

Risk factors-based score	1–24	25–34	35–44	45–54	55–64	65–74	75–84	85–100
Payment amount	$0	$20	$24	$28	$32	$36	$40	$45

(B) For performance year 2028 and subsequent performance years. For each beneficiary in the assigned population identified in paragraph (f)(2)(i) of this section, CMS determines the quarterly payment amount, as follows:

(*1*) An ACO will receive a quarterly payment of $45 for each beneficiary that meets any of the following criteria:

(*i*) Is enrolled in the LIS.

(*ii*) Is dually eligible for Medicare and Medicaid.

(*iii*) Is residing in a county with rural county status (as defined at § 425.20). CMS determines the county of residence for the beneficiary based on the beneficiary's mailing address.

(*2*) An ACO will receive a quarterly payment of $25 for each beneficiary that does not meet any of the criteria listed in paragraph (f)(2)(iii)(B)(*1*) of this section.

(iv) Calculates the ACO's quarterly payment amount.

(A) For performance years 2023 through 2027. The ACO's quarterly payment amount is the sum of the beneficiary payment amounts corresponding to each assigned beneficiary's risk factors-based score, specified in paragraph (f)(2)(iii)(A) of this section, capped at 10,000 beneficiaries. If the ACO has more than 10,000 assigned beneficiaries according to paragraph (f)(2)(i) of this section, CMS will calculate the quarterly payment amount based on the 10,000 assigned beneficiaries with the highest risk factors-based scores determined according to paragraph (f)(2)(ii) of this section.

(B) For performance year 2028 and subsequent performance years. The ACO's quarterly payment amount is the sum of the beneficiary payment amounts corresponding to the quarterly payments specified in paragraph (f)(2)(iii)(B) of this section. If the ACO has more than 10,000 assigned beneficiaries according to paragraph (f)(2)(i) of this section, CMS will calculate the quarterly payment amount based on the 10,000 assigned beneficiaries with the highest quarterly payment amount determined according to paragraph (f)(2)(iii)(B) of this section.

* * * * *

■ 83. Section 425.640 is amended by—

■ a. In paragraph (b)(1)(i), removing the phrase ''January 1, 2026, or in subsequent years'' and adding in its place the phrase ''January 1, 2026 or January 1, 2027'';

■ b. In paragraph (c)(1), removing the phrase ''January 1, 2026, or in subsequent years'' and adding in its place the phrase ''January 1, 2026 or January 1, 2027''; and

■ c. Revising paragraphs (f)(1)(i) and (ii).

The revisions read as follows:

§ 425.640 Option to receive prepaid shared savings.

* * * * *

(f) * * *

(1) * * *

(i) An eligible ACO entering an agreement period beginning on January 1, 2026 or January 1, 2027 will receive quarterly prepaid shared savings payments through December 31, 2027, unless the payment is withheld or terminated under paragraph (h) of this section.

(ii) An eligible ACO participating in an agreement period beginning on January 1, 2025, will receive quarterly prepaid shared savings payments starting with the performance year beginning on January 1, 2026 through December 31, 2027, unless the payment is withheld or terminated under paragraph (h) of this section. The ACO will not receive additional or catch-up payments for performance year 2025.

* * * * *

§ 425.650 [Amended]

■ 84. Section 425.650 is amended in paragraph (a) by removing the references ''§§ 425.652 through 425.662'' and adding in their place the references ''§§ 425.652 through 425.664''.

■ 85. Section 425.652 is amended by adding paragraph (a)(8)(iii) to read as follows:

§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

(a) * * *

(8) * * *

(iii) For agreement periods beginning on January 1, 2027, and in subsequent years, in addition to any adjustment applied to the historical benchmark in accordance with paragraph (a)(8)(ii) of this section (either a regional adjustment, prior savings adjustment, or population adjustment, as applicable), the ACO will receive a growth adjustment (as calculated under § 425.664), if eligible. The sum of the adjustment amount (if any) applied in paragraph (a)(8)(ii) of this section and the growth adjustment (determined according to § 425.664(i)(1)) may not exceed an amount equal to the cap specified in § 425.664(i)(2).

* * * * *

■ 86. Section 425.656 is amended by—

■ a. Revising paragraph (a);

■ b. In paragraph (c)(2), removing the phrase ''paragraph (e) of this section'' and adding in its place the phrase

''paragraphs (e) or (f) of this section (as applicable)'';

■ c. Revising and republishing paragraph (c)(3);

■ d. Revising paragraph (e) introductory text;

■ e. Redesignating paragraph (f) as paragraph (g);

■ f. Adding new paragraph (f); and

■ g. In newly redesignated paragraph (g) introductory text, removing the phrase ''paragraphs (b) through (e) of this section'' and adding in its place the phrase ''paragraphs (b) through (f) of this section''.

The revisions, republications, and addition read as follows:

§ 425.656 Calculating the regional adjustment to the historical benchmark.

(a) *General.* This section describes the methodology for calculating the regional adjustment to the historical benchmark based on the ACO's regional service area expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. This section applies to regional adjustment calculations for agreement periods beginning on January 1, 2024, and in subsequent years, except as specified otherwise.

* * * * *

(c) * * *

(3)(i) For agreement periods beginning on or after January 1, 2024 and before January 1, 2027. Caps the per capita dollar amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (c)(2) of this section at a dollar amount equal to a percentage of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary. The cap is applied as follows:

(A) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(B) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at negative 1.5 percent of the national per capita expenditure amount for the enrollment type for BY3.

(ii) For agreement periods beginning on January 1, 2027, and in subsequent years. Caps the per capita dollar amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) calculated under paragraph (c)(2) of this section at a dollar amount, as follows:

(A) For positive adjustments, the per capita dollar amount for a Medicare enrollment type is capped at a dollar amount calculated as follows:

(*1*) Calculate the product of the following:

(*i*) The amount of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

(*ii*) The ACO's weighted average CMS–HCC risk score for the enrollment type for BY3.

(*2*) Calculate 5 percent of the enrollment type-specific product determined in paragraph (c)(3)(ii)(A)(*1*) of this section.

(B) For negative adjustments, the per capita dollar amount for a Medicare enrollment type is capped at a dollar amount equal to negative 1.5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

* * * * *

(e) *Phase-in of weights used in the regional adjustment calculation for agreement periods beginning on or after January 1, 2024 and before January 1, 2027.*

* * * * *

(f) *Phase-in weights used in the regional adjustment calculation for agreement periods beginning on January 1, 2027, and in subsequent years.* (1) The first time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area.

(ii) Using 15 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's initial or rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(2) The second time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) For an ACO participating under the BASIC track—

(A) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(ii) For an ACO participating under the ENHANCED track—

(A) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(3) The third time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) For an ACO participating under the BASIC track—

(A) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to

have higher spending than the ACO's regional service area.

(ii) For an ACO participating under the ENHANCED track—

(A) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(4) The fourth or subsequent time that an ACO's benchmark is adjusted based on the ACO's regional service area expenditures, CMS calculates the regional adjustment as follows:

(i) For an ACO participating under the BASIC track, using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark.

(ii) For an ACO participating under the ENHANCED track—

(A) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have lower spending than the ACO's regional service area; or

(B) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark if the ACO is determined to have higher spending than the ACO's regional service area.

(5) To determine if an ACO has lower or higher spending compared to the ACO's regional service area, CMS does the following:

(i) Multiplies the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark for each population of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) as calculated under paragraph (c)(1) of this section by the applicable proportion of the ACO's assigned beneficiary population (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) for BY3 of the historical benchmark.

(ii) Sums the amounts determined in paragraph (f)(5)(i) of this section across the populations of beneficiaries (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries).

(iii) If the resulting sum is a net positive value, the ACO is considered to have lower spending compared to the ACO's regional service area. If the resulting sum is a net negative value, the ACO is considered to have higher spending compared to the ACO's regional service area.

(iv) If during the term of the agreement period CMS adjusts the ACO's benchmark, as specified in § 425.652(a)(9), CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (f)(1) through (4) of this section used in calculating the regional adjustment.

* * * * *

■ 87. Section 425.658 is amended by—

■ a. Revising paragraph (c)(1) introductory text and paragraph (c)(2); and

■ b. In paragraph (d), removing the phrase ''paragraph (c)(1) of this section'' and adding in its place the phrase ''paragraph (c) of this section''.

The revisions read as follows:

§ 425.658 Calculating the prior savings adjustment to the historical benchmark.

* * * * *

(c) * * *

(1) For agreement periods beginning on or after January 1, 2024 and before January 1, 2027. If an ACO is eligible for the prior savings adjustment as determined in paragraph (b)(3) of this section, the prior savings adjustment will equal the lesser of the following:

* * * * *

(2) For agreement periods beginning on January 1, 2027, and in subsequent years. If an ACO is eligible for the prior savings adjustment as determined in paragraph (b)(3) of this section, the prior savings adjustment will equal the lesser of the following:

(i) 75 percent of the pro-rated average per capita amount computed in paragraph (b)(3)(ii) of this section.

(ii) A single per capita value that is calculated as follows:

(A) Calculate the product of the following for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries)—

(*1*) The national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary; and

(*2*) The ACO's weighted average CMS–HCC risk score for that enrollment type for BY3.

(B) Calculate 5 percent of each enrollment type-specific product determined in paragraph (c)(2)(ii)(A) of this section.

(C) Calculate the single per capita value as a person-year weighted average by multiplying each of the enrollment type-specific values determined in accordance with paragraph (c)(2)(ii)(B) of this section by the proportion of the ACO's assigned beneficiaries within that particular enrollment type, and then summing the results.

* * * * *

■ 88. Section 425.660 is revised to read as follows:

§ 425.660 Accountable Care Prospective Trend (ACPT).

(a) *General.* The methodology by which CMS calculates and adjusts a projected growth rate called the Accountable Care Prospective Trend (ACPT) is described in this section. CMS incorporates the ACPT into the blended update factor described in § 425.652(b) when updating an ACO's benchmark for each performance year of the agreement period, for agreement periods beginning on January 1, 2024, and in subsequent years.

(b) *Determination of ACPT.* An ACPT is a flat dollar amount calculated using one or more annualized growth rates based on national fee-for-service Medicare expenditures projected by the CMS Office of the Actuary. In determining the ACPT for a Medicare enrollment type for each performance year, CMS does all of the following:

(1) *Calculate annualized projected growth rates.* The annualized projected growth rates are calculated as an annual rate of growth in projected expenditures relative to the prior year. CMS projects annualized per capita growth in Parts A and B fee-for-service expenditures for each performance year of the ACO's agreement period. In calculating the annualized projected growth rates, CMS does all of the following:

(i) Excludes IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals.

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(A) ESRD.

(B) Aged/Disabled.

(iii) Calculates one or more annualized projected growth rates for the ESRD population of beneficiaries described in paragraph (b)(1)(ii)(A) of this section, and one or more annualized growth rates for the Aged/Disabled population of beneficiaries described in paragraph (b)(1)(ii)(B) of this section, as follows:

(A) Using a uniform annualized projected rate of growth over each of the 5 performance years of the 5-year agreement period (for agreement periods beginning on or after January 1, 2024, and before January 1, 2027), or for each performance year (for agreement periods beginning on January 1, 2027, and in subsequent years), as applicable; or

(B) If annualization as specified in paragraph (b)(1)(iii)(A) of this section is determined not to reasonably fit the anticipated growth curve, CMS applies an alternative annualization technique using two or more annualized growth rates reflecting the projected rates of growth during the 5 performance years comprising the 5-year agreement period (for agreement periods beginning on or after January 1, 2024, and before January 1, 2027), or for each performance year (for agreement periods beginning on January 1, 2027, and in subsequent years), as applicable.

(2) *Calculate cumulative projected growth rate.* For each performance year, CMS calculates cumulative projected growth rates relative to the ACO's benchmark year (BY) 3, using the annualized projected growth rates, determined in accordance with paragraph (b)(1) of this section, for each population of beneficiaries: the ESRD population and the Aged/Disabled population.

(3) *Express cumulative projected growth rate as a flat dollar amount.* For each performance year, CMS multiplies the applicable cumulative projected growth rate described in paragraph (b)(2) of this section by BY3 truncated national per capita fee-for-service Medicare expenditures for assignable beneficiaries for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) identified for the 12-month calendar year corresponding to BY3 to express the cumulative projected growth rate as a flat dollar amount as follows:

(i) The ESRD cumulative projected growth rate calculated in accordance with paragraph (b)(2) of this section is used for the ESRD population.

(ii) The Aged/Disabled cumulative projected growth rate calculated in accordance with paragraph (b)(2) of this section is used for the following populations: disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(4) *Risk adjust the flat dollar amount.* CMS adjusts the flat dollar amounts described in paragraph (b)(3) of this section for each performance year for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population for each Medicare enrollment type identified for the 12-month calendar year corresponding to BY3.

(5) *Calculate ACO-specific ACPT growth rates.* CMS divides the risk adjusted flat dollar amounts described in paragraph (b)(4) of this section by the ACO's historical benchmark expenditures described in § 425.652(a) for each Medicare enrollment type to calculate the percentage increase to be included in the blended update factor described in § 425.652(b)(4).

(6) *Timing of calculations.* (i) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027.

(A) At the beginning of the ACO's agreement period, CMS calculates the annualized projected growth rates for all performance years of the ACO's agreement period in accordance with paragraph (b)(1) of this section. These annualized projected growth rates will remain fixed over the ACO's agreement period.

(B) For a given performance year, CMS calculates an ACO-specific ACPT value, in accordance with paragraphs (b)(2) through (b)(5) of this section, using the annualized projected growth rates calculated at the beginning of the ACO's agreement period, as described in paragraph (b)(6)(i)(A) of this section.

(ii) For agreement periods beginning on January 1, 2027, and in subsequent years.

(A) In the calendar year preceding a given performance year, CMS calculates the annualized projected growth rates in accordance with paragraph (b)(1) of this section for that performance year.

(B) For a given performance year, CMS calculates an ACO-specific ACPT value, in accordance with paragraphs (b)(2) through (b)(5) of this section, using the annualized projected growth rates calculated in the preceding calendar year, as described in paragraph (b)(6)(ii)(A) of this section.

(c) *Recomputation of ACPT.* At financial reconciliation for a given performance year, CMS may recompute the ACO-specific ACPT value for a Medicare enrollment type initially determined at paragraph (b)(5) of this section for that performance year, to address under-projection or over-projection of the ACPT (as applicable), as follows:

(1) For agreement periods beginning on or after January 1, 2024, and before January 1, 2027.

(i) For performance year 2025 and subsequent performance years of the ACO's agreement period, CMS separately calculates for the ESRD and Aged/Disabled populations the difference between the cumulative projected growth rates calculated in paragraph (b)(2) of this section and the cumulative observed growth in per capita expenditures for the national assignable FFS population.

(ii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(1)(i) of this section is less (more negative) than −1.0 percentage point, CMS will recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section. CMS will calculate an ACO-specific ACPT value for the corresponding enrollment type(s), in accordance with paragraphs (b)(3) through (b)(5) of this section, using the cumulative observed growth in expenditures for the national assignable FFS population minus 1.0 percentage point.

(iii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(1)(i) of this section is greater than (less negative) or equal to −1.0 percentage point, CMS will not recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section.

(2) For agreement periods beginning on January 1, 2027, and in subsequent years.

(i) CMS separately calculates for the ESRD and Aged/Disabled populations the difference between the cumulative projected growth rates calculated in paragraph (b)(2) of this section and the cumulative observed growth in per capita expenditures for the national assignable FFS population.

(ii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(2)(i) of this section is less (more negative) than −1.0 percentage point, CMS will recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph

(b)(5) of this section. CMS will calculate an ACO-specific ACPT value for the corresponding enrollment type(s), in accordance with paragraphs (b)(3) through (b)(5) of this section, using the cumulative observed growth in expenditures for the national assignable FFS population minus 1.0 percentage point.

(iii) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(2)(i) of this section is greater than +1.5 percentage points, CMS will recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section. CMS will calculate an ACO-specific ACPT value for the corresponding enrollment type(s), in accordance with paragraphs (b)(3) through (b)(5) of this section, using the cumulative observed growth in expenditures for the national assignable FFS population plus 1.5 percentage point.

(iv) For the ESRD and Aged/Disabled populations separately, if the difference calculated in paragraph (c)(2)(i) of this section is between −1.0 and +1.5 percentage points, inclusive, CMS will not recompute the ACO-specific ACPT value for the corresponding enrollment type(s) initially determined at paragraph (b)(5) of this section.

■ 89. Section 425.662 is amended by revising and republishing paragraph (b)(2) to read as follows:

§ 425.662 Calculating the population adjustment to the historical benchmark.

* * * * *

(b) * * *

(2)(i) For agreement periods beginning on January 1, 2025, or January 1, 2026. Calculates a scaler as the difference between 5 percent of the national per capita expenditure amount, expressed as single value as calculated in paragraph (b)(1) of this section, and the higher of: the regional adjustment, expressed as a single value as described in § 425.656(d); the per capita prior savings adjustment determined in § 425.658(c); or no adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment under § 425.658(b)(3)(i).

(ii) For agreement periods beginning on January 1, 2027, and in subsequent years. Calculates a scaler as the difference between the following:

(A) A single per capita value that is calculated as follows:

(*1*) Calculate the product of the following for each Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries):

(*i*) The national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries in that enrollment type identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary.

(*ii*) The ACO's weighted average CMS–HCC risk score for that enrollment type for BY3.

(*2*) Calculate 5 percent of each enrollment type-specific product determined in paragraph (b)(2)(ii)(A)(*1*) of this section.

(*3*) Calculate a single per capita value as a person-year weighted average by multiplying each of the enrollment type-specific values determined in accordance with paragraph (b)(2)(ii)(A)(*2*) of this section by the proportion of the ACO's assigned beneficiaries within that particular enrollment type, then summing the results.

(B) The highest among—

(*1*) The regional adjustment, expressed as a single value as described in § 425.656(d);

(*2*) The per capita prior savings adjustment determined in § 425.658(c); or

(*3*) No adjustment, in the case where the regional adjustment is negative and the ACO is not eligible for the prior savings adjustment under § 425.658(b)(3)(i).

* * * * *

■ 90. Section 425.664 is added to read as follows:

§ 425.664 Calculating the growth adjustment to the historical benchmark.

(a) *General.* This section describes the methodology for calculating the growth adjustment to the historical benchmark for agreement periods beginning on January 1, 2027, and in subsequent years.

(b) *Determine an ACO's new growth share of assigned beneficiary person years*—(1) *Identify shared savings initiatives for the growth adjustment.* CMS means, for purposes of this part, an initiative implemented by CMS, including the following options and initiatives—

(i) The Shared Savings Program;

(ii) The Innovation Center ACO models; or

(iii) Other initiatives that may be specified by CMS.

(2) *Identify ACO professionals who are inexperienced in shared savings initiatives.* CMS determines that an ACO professional is inexperienced in a shared savings initiative if the ACO professional has not billed primary care services through a participant in the Shared Savings Program, or participated in an Innovation Center ACO model, or other initiative specified by CMS in financial reconciliation for one or more performance years under such initiative during any of the 5 performance years directly preceding the start of the current agreement period.

(3) *Identify beneficiaries who are inexperienced with shared savings initiatives assigned to the ACO.* CMS determines that a beneficiary assigned to an ACO is inexperienced with shared savings initiatives if the beneficiary was not included in assignment in financial reconciliation to an ACO in the Shared Savings Program, Innovation Center ACO model, or other initiative specified by CMS in the performance year that corresponds to the ACO's BY3.

(4) *Calculate an ACO's new growth for the applicable performance year.* CMS calculates an ACO's new growth as follows:

(i) CMS determines the number of beneficiary person years for beneficiaries who are inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) with an ACO professional who is inexperienced with shared savings initiatives (as determined under paragraph (b)(2) of this section) as the ACO professional who provided the highest number of primary care services at the ACO within the assignment window, or to whom the beneficiary was voluntarily aligned, in the performance year as follows:

(A) Count the primary care services (as defined at § 425.20) each assigned beneficiary who is inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) has with each ACO professional participating in the ACO within the assignment window, or to whom the beneficiary was voluntarily aligned for the applicable performance year.

(B) For the purposes of this calculation, attribute the assigned beneficiary who is inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) to the ACO professional with whom the beneficiary had the highest number of primary care services (as defined at § 425.20) for the applicable performance year.

(C) CMS counts, as new growth for the performance year, the number of beneficiary person years for beneficiaries who are inexperienced with shared savings initiatives (as determined under paragraph (b)(3) of this section) and who received the

highest number of primary care services (as defined at § 425.20) for the applicable performance year from an ACO professional who is inexperienced with shared savings initiatives (as determined under paragraph (b)(2) of this section).

(ii) [Reserved]

(c) *Determine an ACO's overall growth assigned beneficiary person years.* CMS calculates an ACO's overall growth as the number of assigned beneficiary person years in the performance year minus the number of assigned beneficiary person years in the performance year that corresponds to the ACO's BY3. If the ACO is a new entrant or re-entering ACO, the overall growth is equal to the number of assigned beneficiary person years in the performance year.

(d) *Determine an ACO's capped new growth for the performance year.* An ACO's new growth is the lesser of an ACO's new growth (as determined in paragraph (b) of this section) and an ACO's overall growth (as determined in paragraph (c) of this section).

(e) *Apply the minimum new growth thresholds for the performance year.* CMS applies the minimum new growth threshold for each performance year, expressed in absolute terms and relative terms. CMS determines the minimum new growth threshold that applies as the lesser of the relative minimum new growth threshold multiplied by the number of total assigned beneficiary person years and the absolute minimum new growth threshold. The absolute minimum new growth threshold and the relative minimum new growth threshold are as follows:

TABLE 1 TO PARAGRAPH (e)

	PY 1	PY 2	PY 3	PY 4	PY 5
Absolute Minimum New Growth Threshold	100	300	600	900	1,200
Relative Minimum New Growth Threshold	0.5%	1.5%	3.5%	5.5%	7.5%

(f) *Calculate the new growth above the minimum and below the cap for the performance year.* CMS calculates the new growth above the minimum and below the cap for each performance year as the difference between an ACO's capped new growth for the applicable performance year (as determined under paragraph (d) of this section) and the minimum new growth threshold applied for the performance year (as determined under paragraph (e) of this section), or zero, if negative. The ACO is eligible for a growth adjustment for the applicable performance year if the new growth above the minimum and below the cap is greater than zero.

(g) *Calculate the new growth share for the performance year.* CMS calculates the new growth share for the performance year as the new growth above the minimum and below the cap in the performance year (as determined under paragraph (f) of this section) divided by the total assigned beneficiary person years in the performance year.

(h) *Determine ACO's incentive factor.* The ACO's incentive factor is an ACO-specific per capita dollar amount calculated as 5 percent of the per capita historical benchmark expressed as a single value before the application of the adjustments to the historical benchmark specified at § 425.652(a)(8)(ii) (as applicable).

(i) *Determine the ACO's growth adjustment to the historical benchmark.* (1) CMS calculates the growth adjustment to the historical benchmark as the product of the ACO's new growth share (as determined under paragraph (g) of this section) and the ACO's incentive factor (as determined under paragraph (h) of this section).

(2) The per capita dollar amount for a Medicare enrollment type is capped at 5 percent of the product of the following—

(i) The national per capita expenditure amount for the enrollment type for BY3; and

(ii) The ACO's weighted average CMS–HCC risk score for the enrollment type for BY3.

§ 425.672 [Amended]

■ 91. Section 425.672 is amended in paragraph (c)(2)(iv) by removing the reference ''§ 425.658(c)(1)(ii)'' and adding in its place the references ''§ 425.658(c)(1)(ii) and (c)(2)(ii)''.

§ 425.702 [Amended]

■ 92. Section 425.702 is amended in paragraph (c)(1)(iii) introductory text by removing the phrase ''For performance year 2024 and subsequent performance years,'' and adding in its place the phrase ''For performance years 2024 through 2026,''.

PART 427—MEDICARE PART B DRUG INFLATION REBATE PROGRAM

■ 93. The authority citation for part 427 continues to read as follows:

Authority: 42 U.S.C. 1395w–3a(i), 1302, and 1395hh.

■ 94. Section 427.20 is amended by revising the definition of ''First marketed date'' to read as follows:

§ 427.20 Definitions.

* * * * *

First marketed date means the earliest date of first sale of any NDC–11 within a billing and payment code among all products and package sizes under the same FDA application. The first marketed date will be identified using ASP data reported by NDC–11 to CMS by a manufacturer as required under sections 1927(b)(3)(A)(iii)(I) and 1847A(f)(2) of the Act, if available. If an ASP first marketed date is not available, the first marketed date will be identified using an alternative public source, such as the NDC Directory.

■ 95. Section 427.101 is amended by revising paragraph (b)(5) to read as follows.

§ 427.101 Identification of the Part B rebatable drugs.

(b) * * *

(5) *Skin substitutes.* A product included within the suite of cellular- and tissue-based products that aid wound healing, other than skin substitute products that are licensed as a drug or biological product under section 351 of the Public Health Service Act.

■ 96. Section 427.302 is amended by adding paragraph (e)(6) and revising paragraph (f) to read as follows.

§ 427.302 Calculation of the per unit Part B rebate.

* * * * *

(e) * * *

(6) For paragraphs (e)(2) through (e)(5) of this section, in the event CPI–U data are unavailable for the month described in such paragraph, CMS will use the first month for which CPI–U data are available following the month for which CPI–U data are unavailable.

(f) *Identification of the rebate period CPI–U.* For each Part B rebatable drug by billing and payment code, CMS will identify and use the greater of the benchmark period CPI–U index level or the CPI–U index level for the first month of the calendar quarter that is 2 calendar quarters before the applicable

calendar quarter in which the Part B rebatable drug is furnished.

(1) In the event CPI–U data are unavailable for the month described in such paragraph, CMS will use the first month for which CPI—U data are available following the month for which CPI–U data are unavailable.

(2) [Reserved]

PART 428—MEDICARE PART D DRUG INFLATION REBATE PROGRAM

■ 97. The authority citation for part 428 continues to read as follows:

Authority: 42 U.S.C. 1395w–114b, 1302, and 1395hh.

■ 98. Section 428.20 is amended by revising the definition of ''Applicable period Consumer Price Index for All Urban Consumers (CPI–U)'' to read as follows.

§ 428.20 Definitions.

* * * * *

Applicable period Consumer Price Index for All Urban Consumers (CPI–U) means, with respect to an applicable period, the CPI–U for the first month of such applicable period (that is, October). In the case where the first month's CPI–U data are unavailable, CMS will use the first month for which CPI–U data are available following the month for which CPI–U data are unavailable.

■ 99. Section 428.202(e) is amended by adding paragraph (e)(6) to read as follows.

§ 428.202 Calculation of the per unit Part D rebate amount.

* * * * *

(e) * * *

(6) For paragraphs (e)(2) through (e)(5) of this section, in the event CPI–U data are unavailable for the month described in such paragraph, CMS will use the first month for which CPI–U data are available following the month for which CPI–U data are unavailable.

■ 100. Section 428.203 is amended by adding paragraph (c) to read as follows:

§ 428.203 Determination of the total number of units dispensed under Part D.

* * * * *

(c) *Data reporting requirement.* (1) Beginning with claims with a date of service on or after January 1, 2027, a provider or supplier that is a covered entity as defined at § 10.3 must submit the data elements associated with each claim for a covered Part D drug billed to Medicare Part D for which such covered entity or its contractor(s) (such as contract pharmacies) dispensed units of a drug for which a manufacturer provides a discount under the 340B Program to such covered entity:

(i) Date of service.

(ii) Prescription or service reference number.

(iii) Fill number.

(iv) Dispensing pharmacy NPI.

(v) NDC–11.

(2) In addition to submitting the data elements set forth in paragraph (c)(1) of this section, such provider or supplier must submit its 340B ID and name as designated in the 340B Office of Pharmacy Affairs Information System (OPAIS) database.

(3) The data elements and information set forth in paragraphs (c)(1) and (2) of this section must be submitted on a quarterly basis and in a form and manner specified by CMS in accordance with the following timelines:

(i)(A) Except as specified in paragraph (c)(3)(i)(B) of this section, data elements and information associated with claims with dates of service during the first quarter of a calendar year must be submitted by the close of the second quarter of that calendar year.

(B) Claims with dates of service during the first quarter of CY 2027, must be submitted by the close of the third quarter of CY 2027.

(ii) Data elements and information associated with claims with dates of service during the second quarter of a calendar year must be submitted by the close of the third quarter of that calendar year.

(iii) Data elements and information associated with claims with dates of service during the third quarter of a calendar year must be submitted by the close of the fourth calendar quarter of that calendar year.

(iv) Data elements and information associated with claims with dates of service during the fourth quarter of that calendar year must be submitted by the close of the first calendar quarter of the immediately following calendar year.

(4) Data elements and information submitted in accordance with paragraph (c)(3) of this section that is either incomplete or contains invalid data must be resubmitted at a later time in a form and manner specified by CMS.

(5) Data elements and information submitted in accordance with paragraph (c)(3) of this section must be certified by one of the following:

(i) The chief executive officer (CEO) of the provider or supplier that is a covered entity;

(ii) The chief financial officer (CFO) of the provider or supplier that is a covered entity;

(iii) An individual other than a CEO or CFO, who has authority equivalent to a CEO or a CFO.

(iv) An individual or contractor with the delegated authority as an authorized representative of the provider or supplier that is a covered entity to perform the certification on behalf of one of the individuals specified in paragraphs (c)(5)(i) through (c)(5)(iii) of this section and is authorized to submit the data elements in this submission on behalf of such provider or supplier.

PART 512—STANDARD PROVISIONS FOR MANDATORY INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR CERTAIN MODELS

■ 101. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 102. Section 512.705 is amended by—

■ a. Revising the definition for ''ASM beneficiary'', ''Dual eligible proportion'', and ''Small practice''; and

■ b. Adding definitions for ''PECOS'' and ''Rural area'' in alphabetical order.

The revisions and additions read as follows:

§ 512.705 Definitions.

* * * * *

ASM beneficiary means a Medicare FFS beneficiary who is being treated by an ASM participant for an ASM targeted chronic condition.

* * * * *

Dual eligible proportion means the share of an ASM participant's beneficiaries who are dually eligible Medicare beneficiaries.

* * * * *

PECOS stands for the Provider Enrollment, Chain, and Ownership System.

* * * * *

Rural area has the same meaning as the term is defined at 42 CFR 414.1305 under MIPS.

* * * * *

Small practice means a TIN consisting of 15 or fewer clinicians at the time CMS selects ASM participants for an ASM performance year as described at *§ 512.710(g).*

* * * * *

■ 103. Section 512.710 is amended by—

■ a. Revising paragraph (a)(1) introductory text;

■ b. Revising paragraphs (a)(2) and (c);

■ c. Revising the introductory text of paragraphs (d)(1) and (d)(2); and

■ d. Adding paragraph (h).

The revisions and additions read as follows:

§ 512.710 Participant eligibility and selection.

(a) * * *

(1) A clinician selected by CMS as an ASM participant for any ASM

performance year and who furnishes covered services during any applicable ASM performance year remains an ASM participant for the duration of the ASM test period unless CMS either terminates ASM in accordance with § 512.165 or the ASM participant receives notice of termination as described in paragraph (h) of this section.

* * * * *

(2) *Effect of not meeting ASM participant eligibility criteria for an ASM performance year.* For any ASM performance year within the ASM test period that an ASM participant does not meet the eligibility criteria for mandatory participation set forth in this section, the ASM participant is—

(i) Not subject to §§ 512.715, 512.720, and 512.745 for the applicable ASM performance year;

(ii) Not subject to § 512.750 for the corresponding ASM payment year;

(iii) Not eligible for the waivers described in § 512.775 for the applicable ASM performance year; and

(iv) Not eligible for the CMS-sponsored model arrangements and patient incentives safe harbor described in § 512.765 with respect to remuneration attributable to the applicable ASM performance year.

* * * * *

(c) *Exceptions to specific ASM performance requirements*—(1) *Exceptions.* CMS may in its sole discretion determine that an ASM participant who meets the requirements described in paragraph (c)(1)(i) or (ii) of this section is excepted from model requirements as described in paragraph (c)(2) of this section for the duration specified in paragraph (c)(3) of this section. CMS will provide notice, in the form and manner specified by CMS, to an ASM participant that an exception applies and specify the effective date of such exception. An ASM participant who meets the requirements of paragraph (c)(1)(i) or (ii) of this section may voluntarily provide written notice of the change to CMS in a form and manner determined by CMS and CMS will evaluate that notice to determine if an exception applies.

(i) *Exception based on change in TIN.* An ASM participant stops reassigning billing rights to the TIN that CMS used to select the ASM participant for the applicable ASM performance year.

(ii) *Exception based on ASM heart failure participant specialty type redesignation.* An ASM heart failure participant redesignates their primary specialty type through the applicable paper CMS–855 form or Internet-based PECOS before or during the applicable ASM performance year to any of the following specialty type redesignations for ASM heart failure participants:

(A) Cardiac Electrophysiology.

(B) Cardiac Surgery.

(C) Interventional Cardiology.

(D) Advanced Heart Failure and Transplant Cardiology.

(E) Adult Congenital Heart Disease.

(2) *Effect of exception.* If CMS determines an ASM participant meets an exception under paragraph (c)(1) of this section, the ASM participant is—

(i) Not subject to §§ 512.715, 512.720, and 512.745 for the ASM performance year;

(ii) Not subject to § 512.750 for the ASM payment year that corresponds to the ASM performance year specified in paragraph (c)(2)(i) of this section;

(iii) Not eligible for the waivers described in § 512.775 as of the date CMS specifies in its notice to the ASM participant that an exception applies; and

(iv) Not eligible for CMS-sponsored model arrangements and patient incentives safe harbor described at § 512.765 with respect to remuneration attributable to the period as of the date CMS specifies in its notice to the ASM participant that an exception applies.

(3) *Duration of exception.* (i) An exception under paragraph (c)(1)(i) of this section must remain in effect for each ASM performance year in the remainder of the ASM test period, as applicable, unless the ASM participant does all of the following:

(A) Reassigns billing rights to the TIN under which they received an exception based on a change in TIN.

(B) Meets the ASM participant eligibility criteria under the TIN described in paragraph (c)(3)(i)(A) of this section for a future ASM performance year.

(ii) An exception under paragraph (c)(1)(ii) of this section must remain in effect for each ASM performance year in the remainder of the ASM test period.

(d) * * *

(1) Heart failure specialty type—

* * * * *

(2) Low back pain specialty type—

* * * * *

(h) *Termination.* (1) CMS may in its sole discretion terminate an ASM participant's participation in the model immediately or upon advance notice if CMS determines:

(i) One or more grounds for remedial action described in § 512.160(a) have occurred with respect to the ASM participant; or

(ii) The ASM participant's continued participation would be inconsistent with the purposes of ASM, the requirements of this part, or applicable law.

(2) CMS will provide notice to the ASM participant specifying the grounds for termination and the effective date of such termination.

■ 104. Section 512.720 is amended by—

■ a. Revising paragraphs (a)(1)(i), (a)(ii)(B), and (e); and

■ b. Removing paragraph (f).

The revisions read as follows:

§ 512.720 Data submission requirements.

(a) * * *

(1) * * *

(i) * * *

(A) Include numerator and denominator data for at least one applicable quality measure described in § 512.725(b) or (c) that is not an administrative claims-based collection type and that meets the data completeness requirement as specified at § 512.725(f); and

(B) Except as provided in paragraph (a)(1)(i)(C) of this section, be submitted at the TIN/NPI level.

(C) An ASM participant who is in a small practice may submit quality ASM performance category data at either the TIN/NPI or the TIN level.

(ii) * * *

(B) Be submitted at either the TIN/NPI or TIN level;

* * * * *

(e) * * *

(1) *Quality ASM performance category.* (i) If CMS receives multiple data submissions in the quality ASM performance category in accordance with paragraph (a)(1)(i) of this section from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor) for an individual ASM participant, CMS scores each submission and assigns the highest score.

(ii) If CMS receives multiple data submissions for the quality ASM performance category in accordance with paragraph (a)(1)(i) of this section from one or more submitters in the same organization for an individual ASM participant, CMS scores the most recent submission and assigns that score.

(iii) If CMS receives a TIN-level data submission in the quality ASM performance category in accordance with paragraph (a)(1)(i) of this section for an ASM participant in a small practice, CMS scores the TIN-level submission and assigns that score to all individual ASM participants in the small practice, regardless of any TIN/NPI-level submission(s) received for one or more of those ASM participants.

(2) *Improvement activities ASM performance category.* (i) If CMS receives multiple data submissions in the improvement activities ASM

performance category in accordance with paragraph (a)(1)(ii) of this section from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor) for an individual ASM participant, CMS scores each submission and assigns the highest score.

(ii) If CMS receives multiple data submissions in the improvement activities ASM performance category in accordance with paragraph (a)(1)(ii) of this section from one or more submitters in the same organization for an individual ASM participant, CMS scores the most recent submission and assigns that score.

(3) *Promoting Interoperability ASM performance category.* (i) For multiple data submissions received for the Promoting Interoperability ASM performance category in accordance with paragraph (a)(1)(iii) of this section, CMS calculates a score for each submission and assigns the highest of the scores.

* * * * *

■ 105. Section 512.725 is amended by—

■ a. Revising paragraph (c)(4);

■ b. Adding paragraphs (c)(5), (e)(3)(i), and adding and reserving paragraph (e)(3)(ii);

■ c. Revising paragraphs (f)(3), (h)(1)(i), (h)(2) introductory text, and (h)(2)(i) introductory text;

■ d. Removing paragraph (h)(2)(iii);

■ e. Redesignating paragraph (h)(2)(iv) as paragraph (h)(2)(iii); and

■ f. Adding new paragraphs (h)(2)(iv) and (i).

The revisions and additions read as follows:

§ 512.725 Quality ASM performance category.

* * * * *

(c) * * *

(4) Functional Outcome Assessment (MIPS Q182).

(5) Magnetic Resonance Imaging (MRI) Lumbar Spine for Low Back Pain (modified for ASM).

* * * * *

(e) * * *

(3) * * *

(i) For ASM participants in small practices, CMS scores all administrative claims-based quality measures at the TIN/NPI level according to the measure specifications for the applicable ASM performance year.

(ii) [Reserved]

* * * * *

(f) * * *

(3) CMS excludes from an ASM participant's total measure achievement points and total available measure achievement points any measure required under paragraph (b) or (c) of this section that meets the respective measure's data completeness requirement but does not have a benchmark.

* * * * *

(h) * * *

(1) * * *

(i) For each ASM performance year, an ASM participant receives between 1 and 10 measure achievement points (including partial points) for each measure specified in paragraph (b) or (c) of this section that satisfies the requirements described in paragraph (h)(1)(i)(A) or (h)(1)(i)(B) of this section, as applicable.

(A) For each measure other than an administrative claims-based quality measure under the quality ASM performance category on which data is submitted in accordance with paragraph (e) of this section, the measure must do all of the following:

(*1*) Have a benchmark specified in paragraph (h)(2) of this section.

(*2*) Meet the case minimum requirements specified in paragraph (g) of this section.

(*3*) Meet the data completeness criteria specified in paragraph (f) of this section.

(B) For each administrative claims-based quality measure calculated by CMS under the quality ASM performance category, the measure must have a benchmark as specified in paragraph (h)(2) of this section and meet the case minimum requirements specified in paragraph (g) of this section.

* * * * *

(2) *Benchmarks for quality ASM performance category.* (i) CMS bases benchmarks on an ASM participant's performance by collection type, from one of the following data sources:

* * * * *

(iv) CMS excludes from an ASM participant's total measure achievement points and total available measure achievement points any measure required under paragraphs (b) or (c) of this section that does not have a benchmark.

* * * * *

■ 106. Section 512.740 is amended by—

■ a. Revising paragraphs (b) introductory text (b)(2)(ii), (b)(2)(iv), and (b)(3)(i)(C);

■ b. Removing paragraph (b)(3)(ii);

■ c. Redesignating paragraph (b)(3)(iii) as paragraph (b)(3)(ii);

■ d. Removing paragraph (b)(4)(i);

■ e. Redesignating paragraph (b)(4)(ii) as paragraph (b)(4)(i) and reserving paragraph (b)(4)(ii);

■ f. Revising newly redesignated paragraph (b)(4)(i) and paragraph (c) introductory text;

■ g. Redesignating paragraph (c)(2) as paragraph (c)(3); and

■ h. Adding new paragraph (c)(2) and paragraph (d).

The revisions and additions read as follows:

§ 512.740 Promoting Interoperability ASM performance category.

* * * * *

(b) *Reporting for the Promoting Interoperability ASM performance category beginning in the 2028 ASM performance year.* Beginning in the 2028 ASM performance year, to earn an ASM performance category score greater than zero for the Promoting Interoperability ASM performance category for inclusion in the final score, an ASM participant must be a meaningful EHR user and meet the following criteria:

(2) * * *

(i) v

(ii) An ASM participant must fulfill the Health Information Exchange objective through the following:

(A) Report one of the following options:

(*1*) Support Electronic Referral Loops by Sending Health Information (Measure ID # PI_HIE_1) and Support Electronic Referral Loops by Receiving and Reconciling Health Information (Measure ID # PI_HIE_4).

(*2*) Health Information Exchange (HIE) Bi-Directional Exchange (Measure ID # PI_HIE_5).

(*3*) Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) (Measure ID # PI_HIE_6).

(B) Report both measures described in paragraphs (b)(2)(ii)(B)(*1*) and (b)(2)(ii)(B)(*2*) of this section, report one measure and claim one exclusion, or claim exclusions to both measures:

(*1*) Electronic Prior Authorization (Measure ID # PI_HIE_7).

(*2*) Electronic Prior Authorization for Prescription Drugs (Measure ID # PI_HIE_8).

* * * * *

(iv) An ASM participant must fulfill the Public Health and Clinical Data Exchange objective by reporting both measures described in paragraphs (b)(2)(iv)(A) and (b)(2)(iv)(B) of this section, reporting one measure and claiming one exclusion, or claiming exclusions to both measures:

(A) Immunization Registry Reporting (Measure ID # PI_PHCDRR_1).

(B) Electronic Case Reporting (Measure ID # PI_PHCDRR_3).

* * * * *

(3) * * *

(i) * * *

(C) An exclusion for each measure that includes an option for an exclusion.

(ii) Submit an affirmative attestation regarding the ASM participant's completion of the annual self-assessment checklist under the MIPS Promoting Interoperability High Priority Practices Guide of the SAFER Guides measure (Measure ID# PI_PPHI_2) within the calendar year of the ASM performance year.

(4) * * *

(i) *Actions to limit or restrict the compatibility or interoperability of CEHRT.* To fulfill ASM requirements for activities related to limiting or restricting the compatibility or interoperability of CEHRT, an ASM participant must not knowingly and willfully take action, such as disabling functionality, to limit or restrict the compatibility or interoperability of CEHRT.

(ii) [Reserved]

* * * * *

(c) *Scoring the Promoting Interoperability ASM performance category beginning in the 2028 ASM performance year*

(2) *Promoting Interoperability measure suppression.* If certain circumstances occur that impact CMS' assessment of the performance of ASM participants on a measure specified for the Promoting Interoperability ASM performance category, CMS may in its sole discretion suppress the affected measure by excluding it from CMS' assessment of ASM participant performance while allocating the maximum points available or providing full credit for the affected measure as long as the affected measure is reported, resulting in a suppressed measure contributing to the Promoting Interoperability ASM performance category objective score under paragraph (c)(3) of this section; or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. CMS determines whether certain circumstances exist that warrant suppression of a measure based on CMS' consideration of one or more of the following factors:

(i) The nature, breadth, and duration of the circumstances' effect on ASM participants' ability to fulfill the measure requirement.

(ii) The availability of certified health IT modules to fulfill the measure.

(iii) The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.

(iv) Out-of-date or conflicting technical standards.

(v) Technical and operational capacity of required partners.

(vi) Other factors as determined by CMS.

(d) *Transition year policy for the 2027 ASM performance year.* (1) Notwithstanding paragraphs (b) and (c) of this section and § 512.720(a)(1)(iii)(A)(*1*) and (*2*), for the 2027 ASM performance year only, an ASM participant satisfies the performance requirements for the Promoting Interoperability ASM performance category by using CEHRT as defined at *§ 414.1305* and submitting, in accordance with § 512.720(a)(1)(iii)(A)(*3*) and (*4*), both of the following:

(i) The CEHRT ID from the CHPL for the CEHRT used by the ASM participant; and

(ii) The start date and end date of the applicable performance period used by the ASM participant as set forth in paragraph (a) of this section.

(2) CMS assigns a Promoting Interoperability ASM performance category score of 100 percent to an ASM participant that satisfies paragraph (d)(1) of this section. The Promoting Interoperability ASM performance category score cannot exceed 100 percent.

(3) An ASM participant may, but is not required to, report the measures and attestations described in paragraph (b) of this section.

* * * * *

■ 107. Section 512.745 is amended by—

■ a. Revising paragraph (a) introductory text and paragraph (a)(2)(iii)(B);

■ b. Redesignating paragraph (a)(5) as paragraph (a)(6);

■ c. Adding new paragraph (a)(5);

■ d. Revising newly redesignated paragraph (a)(6);

■ e. Revising paragraphs (b)(4) through (b)(6); and

■ f. Adding paragraphs (b)(7).

The revisions and additions read as follows:

§ 512.745 Final scoring.

(a) *Final score calculation.* CMS calculates a final score of zero to 100 points using the formula specified at paragraph (a)(6) of this section for each ASM participant that meets the requirements to receive a final score as specified in paragraph (a)(2) of this section.

* * * * *

(2) * * *

(iii) * * *

(B) Do not receive either a—

(*1*) Quality ASM performance category score under § 512.725(h)(4)(iii); or

(*2*) Cost ASM performance category score under § 512.730(e)(3)(i).

* * * * *

(5) *Rural scoring adjustment*—(i) *Scoring adjustment for an ASM participant in a rural area.* CMS adds 5 points to the final score of an ASM participant who is in a rural area as defined at § 512.705 and meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section for an applicable ASM performance year.

(ii) [Reserved]

(6) *Final score formula.* Final score = [(quality ASM performance category score × quality ASM performance category weight) + (cost ASM performance category score × cost ASM performance category weight)] × 100 + improvement activities ASM performance category scoring adjustment + Promoting Interoperability ASM performance category scoring adjustment + complex patient scoring adjustment + small practice scoring adjustment + rural scoring adjustment. The final score cannot be below zero points or exceed 100 points.

(b) * * *

(2) The ASM participant's complex patient scoring adjustment under paragraph (a)(3) of this section, as applicable.

(3) The ASM participant's small practice or solo practitioner scoring adjustment under paragraph (a)(4) of this section, as applicable.

(4) The ASM participant's rural scoring adjustment under paragraph (a)(5) of this section, as applicable.

(5) The ASM participant's final score, as applicable.

(6) The ASM payment adjustment factor under § 512.750(c)(1).

(7) The ASM payment multiplier under § 512.750(c).

* * * * *

■ 108. Section 512.750 is amended by revising paragraphs (c)(1)(i), (f)(1), and (f)(2) to read as follows:

§ 512.750 Payment adjustment.

* * * * *

(c) * * *

(1) * * *

(i) *ASM risk level.* CMS sets an ASM risk level that is the magnitude of the maximum downside and upside risk to which an ASM participant is subject to during an ASM payment year.

(A) For the 2029 ASM payment year, the ASM risk level is 9 percent.

(B) For the 2030 ASM payment year, the ASM risk level is 9 percent.

(C) For the 2031 ASM payment year, the ASM risk level is 10 percent.

(D) For the 2032 ASM payment year, the ASM risk level is 11 percent.

(E) For the 2033 ASM payment year, the ASM risk level is 12 percent.

* * * * *

(f) * * *

(1) If an NPI submits Part B covered professional service claims during an ASM payment year under a different TIN than the TIN CMS selected them as an ASM participant for that same ASM performance year and to which the NPI began assigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year, CMS multiplies the amount otherwise paid under Part B for covered professional services to the different TIN by the ASM payment multiplier calculated for the ASM participant based on their performance in the corresponding ASM performance year.

(2) CMS multiplies the amount otherwise paid under Part B for covered professional services by the highest ASM payment multiplier calculated for an NPI who meets all the following:

(i) Is an ASM participant under multiple TINs for a given ASM performance year.

(ii) Submits Part B covered professional service claims during an ASM payment year under a TIN by which CMS did not select the NPI as an ASM participant and to which the ASM participant began reassigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year.

* * * * *

■ 109. Section 512.765 is amended by adding paragraph (c) to read as follows:

§ 512.765 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

* * * * *

(c) *Scope.* The CMS-sponsored model arrangements and patients incentives safe harbor described in paragraphs (a) and (b) of this section is available only with respect to remuneration exchanged or furnished in connection with an ASM participant's performance under the model and does not apply with respect to remuneration attributable to any ASM performance year for which CMS determines the ASM participant does not meet ASM participant eligibility criteria under § 512.710(a)(2) or with respect to an ASM participant to whom an exception under § 512.710(c)(1) applies, the period described in § 512.710(c)(2)(iv).

■ 110. Section 512.771 is amended by—

■ a. Revising paragraphs (a)(1), (a)(2), (a)(5), and (a)(6);

■ b. Redesignating paragraphs (a)(7) and (a)(8) as paragraphs (d)(2) and (d)(3), respectively.

■ c. Redesignating paragraphs (a)(9) through (13) as (a)(7) through (11), respectively.

■ d. Revising newly redesignated paragraphs (a)(7) and (a)(9); and

■ e. Adding paragraph (d).

The revisions and additions read as follows:

§ 512.771 Collaborative care arrangements.

(a) * * *

(1) The collaborative care arrangement must be in writing, signed by all parties, specify the effective date, and be exclusively between an ASM participant, or one or more ASM participants who reassign billing rights through the same TIN, and a primary care practice.

(2) The primary care practice party must share one or more patients who are ASM beneficiaries with at least one ASM participant party to the collaborative care arrangement.

* * * * *

(5) All parties to the collaborative care arrangement must comply with the provisions of this section and all other applicable statutes, regulations, and guidance.

(6) Neither the opportunity to enter into a collaborative care arrangement nor remuneration given or received under a collaborative care arrangement may be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business generated by, between, or among the parties to the collaborative care arrangement or any other person. A selection criterion that considers whether an ASM participant and primary care practice share one or more ASM beneficiaries for the purpose of satisfying the requirement set forth in paragraph (a)(2) of this section will be deemed not to violate the volume or value standard of this section if the purpose of the criterion is to further the purpose of the collaborative care arrangement.

(7) All parties to the collaborative care arrangement must retain the ability to make decisions in the best interests of ASM beneficiaries, including the selection of clinicians, devices, supplies, and treatments.

* * * * *

(9) An ASM participant must maintain contemporaneous documentation, in accordance with § 512.135, regarding all collaborative care arrangements entered into, including the following:

(i) The relevant written agreements.

(ii) Records of all remuneration exchanged, if any, for each ASM participant party to a collaborative care arrangement, including, at a minimum, all of the following:

(A) A description of the remuneration.

(B) The value of remuneration.

(C) The methodology for determining the value of any in-kind remuneration in accordance with paragraph (d)(2)(ii) of this section, if applicable.

(D) The date on which the remuneration was exchanged.

(iii) The identity of each ASM participant who is a party to the collaborative care arrangement.

* * * * *

(d) *Remuneration under a collaborative care arrangement.* If the parties to a collaborative care arrangement elect to include terms allowing for the exchange of remuneration under the collaborative care arrangement, the parties must also comply with all of the following:

(1) The purpose of the exchange of remuneration under the collaborative care arrangement must be reasonably related to the purpose of the collaborative care arrangement, consistent with the requirements of paragraph (a)(3) of this section.

(2) The total amount of any remuneration exchanged under a collaborative care arrangement in a given ASM performance year must not exceed an amount equal to the ASM participant's ASM payment adjustment factor for the applicable ASM performance year multiplied by the amount otherwise paid to the ASM participant by CMS under Part B for covered professional services during the applicable ASM performance year.

(i) The collaborative care arrangement must specify a methodology for the parties to identify and calculate the total amount of remuneration exchanged under such arrangement in the ASM performance year for each ASM participant and determine within a reasonable amount of time after the information necessary to make the calculation in paragraph (d)(2) of this section becomes available whether the total amount of remuneration exceeds the limitation in paragraph (d)(2) of this section.

(ii) For in-kind remuneration, the value of remuneration exchanged for the purpose of this section is determined based on the offeror's cost for the remuneration, using any reasonable accounting methodology, or the fair market value of the in-kind remuneration.

(iii) The collaborative care arrangement must require the parties to reconcile any remuneration exchanged by each ASM participant under the arrangement in the ASM performance

year after the limitation in paragraph (d)(2) of this section is determined.

(iv) If the total amount of remuneration received by a party in the ASM performance year exceeds the limitation in paragraph (d)(2) of this section, the collaborative care arrangement must require the party that received the excess amount to repay the excess amount to the other party within a reasonable amount of time after the reconciliation.

(3) Any remuneration exchanged under a collaborative care arrangement must be solely between the parties to the arrangement. To the extent that remuneration exchanged is monetary, any payment between the parties must be made by check, electronic funds transfer, or another traceable cash transaction.

* * * * *

§ 512.775 [Amended]

■ 111. Section 512.775 is amended in paragraph (a) by removing the reference ''§ 512.710(a)(2)'' and adding in its place the phrase ''§ 512.710(a)(2) or (c)''.

Robert F. Kennedy, Jr.,

Secretary, Department of Health and Human Services.

The following Appendices will not appear in the **Code of Federal Regulations**.

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this final rule, previously finalized measures and specialty sets will continue to apply for the CY 2027 performance period/2029 MIPS payment year and future years. Previously finalized measures and specialty sets are in the CY 2017 through CY 2026 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, 87 FR 70250 through 70633, 88 FR 79556 through 79964, 89 FR 98599 through 98957, and 90 FR 50036 through 50353. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a Consensus-Based Entity (CBE) are shown in Table A of this Appendix as follows: CBE # / eCQM CBE #.

NOTE: In section IV.A.4.d.(1)(c)(i) of this final rule, we finalized to implement MIPS core measures for traditional MIPS and MVP reporting which are identified in the tables in this Appendix. In addition, in section IV.A.4.d.(1)(c)(ii) of this final rule, we finalized to remove the high priority designation from MIPS quality measures and therefore, we removed the high priority indicator across all tables in this Appendix.

Table Group A: New MIPS Quality Measures Finalized and Finalized with Modification for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

Note: Proposed specialty sets for new measures are indicated under Table Group A of this Appendix within the last row of each A table. Commenters who requested additions of the new quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.

We requested comments on these new measures and the applicable specialty sets.

We received a few public comments asking for updates to the proposed new measures. We note that we would need to go through rulemaking in the future to make any substantive changes to the new measures. Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. We have previously established criteria that apply when we consider making substantive changes to a quality measure (81 FR 77137 and 86 FR 65441 through 65442). On an annual basis, we review the established MIPS quality measure inventory to identify appropriate updates to the measures, based on, but not limited to, interested party feedback, known issues, and clinical guideline updates, for measure steward consideration. The measure steward is responsible for the maintenance of a measure and serves as the primary contact for any suggested revisions for possible implementation in future years. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contacts tab once posted on the QPP website (*https://qpp.cms.gov*) for CY 2027.

A.1. Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	517
Description:	Percentage of patients aged 18 years and older with clinical atherosclerotic cardiovascular disease (ASCVD) who received a low-density lipoprotein cholesterol (LDL-C) test via lipid panel and achieved an LDL-C of <70mg/dL on the most recent test during the performance period.
Measure Steward:	American Heart Association
Numerator:	Numerator 1: Patients with clinical atherosclerotic cardiovascular disease (ASCVD) who had a low-density lipoprotein cholesterol (LDL-C) tested via a lipid panel. Numerator 2: Patients aged 18 years and older with clinical ASCVD and a completed lipid panel during the performance period who achieved an LDL-C of <70 mg/dL on the most recent test.
Denominator:	Denominator 1: All patients aged 18 years and older diagnosed with clinical atherosclerotic cardiovascular disease (ASCVD). Denominator 2: All patients aged 18 years and older with clinical ASCVD who had a low-density lipoprotein cholesterol (LDL-C) tested via a lipid panel during the measurement period.

Category	Description
Exclusions:	Pregnancy, ESRD, hospice, over age 66+ with advanced illness, frailty, or dementia medications
Measure Type:	Intermediate Outcome
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this intermediate outcome measure because it addresses appropriate care for adult patients with clinical atherosclerotic cardiovascular disease (ASCVD), ensuring patients diagnosed with this condition are annually tested for LDL-C and achieve a desired level. Studies support that elevated LDL-C levels contribute to ASCVD and once identified can be addressed via lipid management. Lowering LDL-C produces a marked reduction in clinical ASCVD and evidence shows that lower LDL-C levels are associated with better outcomes.[428] This measure ensures that patients receiving cholesterol lowering treatment, such as statin therapy, achieve a reduction in LDL-C, which in turn reduces risk of ASCVD and other patient outcomes, such as hospitalizations and cardiovascular death.[429] This measure is based on peer-reviewed evidence demonstrating that, for adults 20 years of age or older and not on lipid-lowering therapy, measurement of either a fasting or non-fasting plasma lipid profile is effective in estimating ASCVD risk and documenting baseline LDL-C.[430] This measure will expand on current MIPS measure Q438: *Statin Therapy for the Prevention and Treatment of Cardiovascular Disease*, which focuses on appropriate statin treatment of patients at high risk for cardiovascular events. While measure Q438 assesses for the prescribing of statin therapy, this new measure will build on measure Q438 by assessing the outcome of LDL-C treatment, through achievement of reaching a desired LDL-C level. The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee reached consensus agreement to recommend the measure. Testing indicated good reliability based on signal to noise ratio and adequate face validity. Testing of measure performance indicated a gap in care with a mean performance rate of 46.8 percent for the first criteria and 64.9 percent for the second criteria. This demonstrates that there is room for improvement among clinicians treating this patient population. This measure is not currently CBE endorsed. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 1848(q)(2)(D)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidence-based. This measure could be added to multiple MVPs in the future, including the proposed Hypertension MVP, Advancing Care for Heart Disease MVP, and Value in Primary Care MVP. We proposed adding this measure to applicable specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties. Note: Refer to the PRMR Clinician Recommendation Committee Spreadsheet of Final Recommendations to CMS and HHS at *https://p4qm.org/sites/default/files/2026-02/Final-2025-2026-MUC-Recommendations-Report-508.pdf.*
Measure Proposed for Addition to the Following Specialty Sets:	Cardiology, Endocrinology, Family Medicine, Geriatrics, Internal Medicine, Nephrology, Neurology, Obstetrics/Gynecology, Preventive Medicine, Vascular Surgery

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed addition of the *Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management* measure. Commenters said that using meaningful, guideline-based outcome measures is key to changing clinician and patient behavior and improving chronic disease outcomes. A few commenters highlighted the disconnect between the current MIPS measure Q438: *Statin Therapy for the Prevention and Treatment of Cardiovascular Disease* and LDL-C

[428] Grundy, S. M., Stone, N. J., Bailey, A. L., Beam, C., Birtcher, K. K., Blumenthal, R. S., Braun, L. T., de Ferranti, S., Faiella-Tommasino, J., Forman, D. E., Goldberg, R., Heidenreich, P. A., Hlatky, M. A., Jones, D. W., Lloyd-Jones, D., Lopez-Pajares, N., Ndumele, C. E., Orringer, C. E., Peralta, C. A., Saseen, J. J., … Yeboah, J. (2019). 2018 AHA/ACC/AACVPR/AAPA/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Blood Cholesterol: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines. Circulation, 139(25), e1082–e1143. https://doi.org/10.1161/CIR.0000000000000625.

[429] See footnote Grundy et al., 2019.

[430] See footnote Grundy et al., 2019.

control, noting that the proposed new measure as an intermediate outcome measure addresses this gap and represents a significant step forward in care for patients with ASCVD, better reflects meaningful reductions in cardiac and stroke events, and is critical to improving cardiovascular health and reducing cardiovascular-related morbidity.

One commenter urged CMS to ensure the measure accounts for patients with familial hypercholesterolemia, noting the condition is often underdiagnosed and undertreated and requires combination lipid-lowering therapy beyond statins alone to reach recommended LDL-C levels. Another commenter supported this new measure and its inclusion across multiple specialty sets.

Response: We thank the commenters for supporting this new measure in MIPS. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contacts tab once posted on the QPP website (*https://qpp.cms.gov*) for CY 2027. Any potential new substantive changes need to go through notice and comment rulemaking.

Comment: One commenter strongly supported finalizing the new *LDL-C Monitoring and Management* measure, stating that measure Q438 only rewards statin prescribing and cannot detect undertreatment. The commenter stated that a threshold-based LDL-C measure would better align with trial evidence and the 2026 ACC/AHA Guideline for the Management of Dyslipidemia,[431] which uses numeric LDL-C goals, and would incentivize appropriate retesting and treatment intensification. In addition to finalizing the measure, the commenter urged CMS to align LDL-C thresholds with the guideline's risk-based targets, allow a 4–12-week retesting window, include exceptions for statin intolerance and shared decision-making, and retain measure Q438 during a transition period. A second commenter recommended allowing denominator exceptions for documented intolerance, patient refusal, limited life expectancy, and pregnancy. They also suggested using non-HDL-C or apolipoprotein as alternative numerators when LDL-C is unreliable and stratifying the measure by social risk. A third commenter asked CMS to keep this measure aligned with current cholesterol guidelines and they emphasized the need for clear exclusions, exceptions, attribution rules, and practical implementation across settings.

Response: We thank the commenters for supporting this new measure in MIPS. We note that measure Q438 was not proposed for removal from MIPS. We encourage the commenters to reach out to the new proposed measure's steward to discuss revisions for possible implementation in future years. As we are finalizing CY2027 proposals, it is not possible to substantively change the measure nor to hold for testing as this was required at the time of submission for consideration for implementation in MIPS. However, as currently specified, the measure is still aligned with current guidelines in assessing for the most current health outcome. In addition to capturing and maintaining public comment, we review each measure annually to create recommendations for potential measure updates for future performance periods for measure steward consideration. The measure developer did not recommend risk adjustment or stratification at this time as the existing denominator exclusions, outlined in Table A.1 of this Appendix, are intended to address concerns regarding case-mix through appropriate patient exclusion criteria.

Comment: One commenter supported this new measure and noted that it must go beyond simply documenting that a lipid-lowering medication was prescribed and instead assess whether LDL-C is adequately controlled. Because lower LDL-C levels maintained over time reduce cardiovascular risk, quality measures should focus on LDL-C response to therapy, appropriate follow-up, and treatment intensification to reach evidence-based LDL-C goals. This approach would better align CMS quality reporting with contemporary cardiovascular prevention and the outcomes that matter most to patients, such as preventing heart attack and stroke. The commenter stated that CMS can improve the measure by shifting from "Was a medication prescribed?" to "Was the patient's LDL-C adequately treated to reduce cardiovascular risk?"

Another commenter stated that no disease status is as common and more dangerous than heart disease, and LDL cholesterol is a major driving factor for cardiovascular risk. The commenter indicated it is important that MIPS quality measures are clinically relevant and make sense. Targeting use of "statins" does not align with the lipid lowering therapy goals that are currently in the guidelines.

Response: We thank the commenters for supporting this new measure in MIPS. This new measure will go beyond ensuring medication prescription; it aims to assess whether patients aged 18 years and older with clinical ASCVD achieved an LDL-C of <70 mg/dL on their most recent test. This new measure builds upon the current MIPS measure Q438 by assessing the outcome of lipid management with the goal of reduction in LDL-C which in turn reduces risk of ASCVD. The proposed measure as currently specified is based on established clinical guidelines and while the new guidelines[432] released this spring have a lower recommended LDL-C value for high-risk patients, the current quality action would allow for assessing compliance across a broader range of patients without stratifying by risk factors. As with all MIPS quality measures, the measure steward will continue evaluating potential future updates to the measure.

---

[431] Blumenthal, R. S., Morris, P. B., Gaudino, M., Johnson, H. M., Anderson, T. S., Bittner, V. A., Blankstein, R., Brewer, L. C., Cho, L., de Ferranti, S. D., Gianos, E., Gluckman, T. J., Gradney, K. F., Isiadinso, I., Lloyd-Jones, D. M., Marrs, J. C., Martin, S. S., McLain, K. H., Mehta, L. S., Mora, S., … Wilkins, J. T. (2026). 2026 ACC/AHA/AACVPR/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Dyslipidemia: A Report of the American College of Cardiology/American Heart Association Joint Committee on Clinical Practice Guidelines. *Journal of the American College of Cardiology*, *87*(19), 2624–2757. https://doi.org/10.1016/j.jacc.2025.11.016.

[432] See footnote Blumenthal et al., 2026.

Comment: A few commenters supported the measure but recommended specific modifications to strengthen its impact and feasibility.

- One commenter noted that medication cost, access to specialty drugs, patient adherence, and social factors can limit patients' ability to reach LDL-C targets even with good care. The commenter recommended that CMS monitor how the measure performs and allow flexibility for patients who improve their LDL-C substantially but do not reach a strict threshold.
- One commenter requested that CMS consider adding LDL targets <70 achieved to help close the care gap and save lives. The commenter stated that measuring LDL-C is part of the solution, but CMS needs clear goals for health care clinicians to take action and to reduce cardiovascular events/mortality.
- One commenter asked that CMS add the following language to the measure specification in the final rule: A qualifying lipid panel may be performed using serum, plasma, capillary whole blood, or venous whole blood when the testing system is authorized or appropriately validated for the specimen type used, the system produces a valid and reportable LDL-C result, and testing is performed according to the manufacturer's instructions and applicable laboratory requirements.

Response: Thank you for the comments. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. As currently specified, the measure is aligned with current guidelines in assessing for the most current health outcome for a broad patient population. In addition to capturing and maintaining public comment, CMS reviews each measure annually to develop recommendations for potential measure updates for future performance periods for measure steward consideration.

Comment: One commenter did not support this new measure. The commenter supported evidence-based lipid-lowering and prevention of recurrent events but cautioned that a uniform LDL-C target tied to quality or payment should preserve clinical discretion for patients who develop ASCVD despite untreated or presenting LDL-C ≤70 mg/dL.

The commenter requested that CMS:

1. Preserve pathways for documented shared decision-making and medically justified exceptions to LDL-C thresholds.
2. Do not financially penalize clinicians when patients miss LDL-C <70 mg/dL despite documented, appropriate care.
3. Promote prospective study of ASCVD in patients with untreated or presenting LDL-C ≤70 mg/dL, including Major Adverse Cardiovascular Events (MACE), mortality, and safety outcomes.
4. Distinguish, when appropriate, between low LDL-C from treatment and low LDL-C present before treatment or ASCVD onset.
5. Evaluate residual-risk mechanisms (e.g., lipoprotein (a), apolipoprotein B particles, insulin resistance, hypertension, inflammation) rather than relying on LDL-C alone.

The commenter expressed that the solution is not less lipid management but better evidence, better phenotyping, and preservation of individualized clinician–patient decision-making. The commenter asked CMS to build clinical flexibility into this measure and to promote prospective study of ASCVD in patients with already-low untreated LDL-C.

Response: We thank the commenter for their suggestions and encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Currently all MIPS eligible clinicians have choice in what measures they choose to report; therefore, if this measure does not reflect the patient population for which they care for, they can choose a different measure. The current measure is based on established clinical guidelines and while the new guidelines[433] released this spring have a lower recommended LDL-C value for high-risk patients, the current quality action would allow for compliance with a broader range of patients without stratifying by risk factors. As with all MIPS quality measures, the measure steward will continue evaluating potential future updates to the measure. Regarding differentiation between low LDL-C values from treatment and at ASCVD onset, the measure looks at patients with ASCVD and an LDL-C test via lipid panel to ensure the most recent test was less than 70 mg/dL; therefore, patients without an ASCVD diagnosis would not qualify for the denominator and would not be included in the performance data.

Comment: As this new measure was one of 10 new proposed Clinical Quality Measures (CQMs), one commenter asked why CMS would consider new CQM measures that are not Fast Healthcare Interoperability Resources (FHIR)-based with a transition to FHIR-based reporting in the next 2-3 years. The commenter said that CMS should place a moratorium on consideration and approval of any non-FHIR-based measures. After a review of these proposed CQMs, it is also unclear why they are not being proposed and written in an electronic CQM (eCQM) format at a minimum.

Response: We thank the commenter for sharing their concerns. We are advancing quality measurement by transitioning existing quality measures and reporting processes to FHIR-based digital approaches. Subject to future notice and comment rulemaking, we are developing a phased 2-year transition period beginning with the CY 2028 performance period/2030 MIPS payment year. During this period, existing CQM and eCQM collection types, including eCQM reporting via Quality Reporting Data Architecture (QRDA) files, would continue to be available while FHIR-based digital quality measures (dQM) options are introduced for selected new and existing measures. Under this plan, we may still propose non-FHIR MIPS CQMs in the interim.

[433] See footnote Blumenthal et al., 2026.

We are encouraging measure stewards to begin reviewing their measures against current FHIR-based standards and assessing their measures for updates necessary to support the digital transition. Currently, it is at the discretion of the measure steward to determine which collection types are developed and available when submitting to the Annual Call for Quality Measures. See the Measures Under Consideration Entry/Review Information Tool (MERIT) login page for more information on timelines to submit measures for consideration by CMS (*https://cmsmerit.cms.gov/merit/#/login*).

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44305 through 44306), we are finalizing the *Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.2. Functional Improvement for Patients with Neck Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	518
Description:	Percentage of patients aged 18 years and older with a neck impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Pain Interference (PPI) or the alternative (legacy) patient-reported outcome measure (PROM), the Neck Disability Index (NDI).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPI score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a neck impairment who completed a baseline PPI.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the neck impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q478: *Functional Status Change for Patients with Neck Impairments*. This new measure will address the same clinical topic as measure Q478; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Pain Interference tool, which was developed using item response theory (IRT) methods. Evidence indicates that the PROMIS-PI items constitute a psychometrically sound item bank for assessing the negative effects of pain on functioning across the range commonly experienced by people who have pain.[434] It allows clinician flexibility in administration as it uses computer adaptive testing (CAT) or a fixed-length short form. This measure also allows utilization of the Neck Disability Index (NDI), which is a commonly used tool for neck pain with established reliability and validity.[435] [436] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Many commenters strongly supported adding the proposed new functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments under Table A.2 through A.6 of this Appendix. These measures focus on patients' ability to function safely and independently. Because physical therapists routinely use standardized outcome measures to track progress, these metrics better capture the value rehabilitation professionals provide than process-based measures alone. A few other commenters supported this new measure and other new functional measures, because they better reflect current rehabilitative practice, let reporting clinicians calculate performance independently, and reduce administrative burden.

One commenter supported the new functional measures and urged CMS and stakeholders to pay close attention to the specific implementation guidance and operational details in the full measure specifications for these new measures.

Response: We thank the commenters for supporting this new measure in MIPS. We agree with the recommendation that we and the stakeholders review the full measure specifications for the functional improvement measures once posted for CY 2027.

Comment: Several commenters supported CMS' introduction of PROMIS measures. One of these commenters stated these changes are a positive step toward making quality reporting more relevant to clinical practice, but additional reforms are needed to ensure that physical therapists can participate meaningfully and efficiently. Another commenter supported the expanded use of the functional rehabilitation measures within MIPS and future MVP development and encouraged development of additional rehabilitation-focused outcome measures incorporating PROMIS methodologies and other validated functional outcome tools. The commenter urged CMS to recognize the operational and financial resources required to collect and report functional and

Reliability, Construct Validity, and Responsiveness of the Neck Disability Index and Numeric Pain Rating Scale in Patients with Mechanical Neck Pain Without Upper Extremity Symptoms. *Physiotherapy Theory and Practice*, *35*(12), 1328–1335. https://doi.org/10.1080/09593985.2018.1471763.

[436] MacDermid, J. C., Walton, D. M., Avery, S., Blanchard, A., Etruw, E., McAlpine, C., & Goldsmith, C. H. (2009). Measurement Properties of the Neck Disability Index: A Systematic Review. *The Journal of Orthopaedic and Sports Physical Therapy*, *39*(5), 400–417. https://doi.org/10.2519/jospt.2009.2930.

patient-reported outcome measures, emphasizing that many outpatient rehabilitation providers depend on third-party platforms with per-provider subscription models that create significant costs, particularly for small and mid-sized independent practices.

Response: We thank the commenters for supporting the new functional status measures in MIPS. The proposed functional measures allow use of PROMIS tools which are publicly available at no cost for non-electronic surveys. For additional flexibility, the measures also allow for the use of legacy tools specified within each measure which are publicly available at no cost. We recognize the effort required to collect and score the surveys for these measures; however, these patient-reported outcome (PROM) based measures are critical for assessing quality outcomes. Third party platforms are not a CMS requirement to report these functional improvement measures and clinicians are not currently required to report these measures and may select measures that best fit their clinical workflow and scope of practice. The current Physical Therapy Specialty Measure Set contains 23 measures, only 5 of which are the new PRO-PMs, allowing clinicians to submit those measures that are meaningful to their scope of care with sufficient choice to meet the quality reporting requirements.

Comment: One commenter expressed the following concerns on this new measure (with the same concerns for the other functional improvement measures under Tables A.3, A.4, A.5, and A.6 of this Appendix):

- The P-MCI methodology lacks sufficient public detail for independent implementation.
- Registries may need licensing agreements to calculate or validate the measures and proprietary platforms may be needed.
- Practices may face additional financial, technical, and administrative burdens to implement the measures.
- Missing public specifications prevent transparent auditing and reproducibility.
- Smaller practices may be unable to report the measures.
- Conversion of scores across multiple approved instruments remains unclear.

The commenter made the following recommendations to CMS:

- Require stewards to publish a validated, publicly available crosswalk for all approved assessments.
- Require full publication of the P-MCI methodology, including the risk-adjustment model, coefficients, required data elements, episode definitions, missing-data rules, and numerator/denominator logic.
- Offer a publicly accessible calculator or API as an alternative that any reporting entity could use without relying on Limber Health or Patient360.
- Not finalize the measures for broad reporting if the methodology and crosswalk cannot be made public and independently implementable.

A second commenter did not support the new functional measures in MIPS until detailed measure specification and testing information is made available on the feasibility, reliability, and validity of these measures.

Response: Thank you for the comments and recommendations. We appreciate the concerns raised and note that the complete measure specifications will be publicly posted after publication of the final rule. The eligible tools and calculations necessary for reporting the measures will be publicly available at no cost and are included in the measure specifications. We are aware of the concerns and acknowledge they may stem from the current functional outcome measures; however, the proposed measures are intended to mitigate those concerns and reduce reporting burden. These measures were fully developed and tested as QCDR measures in accordance with § 414.1400(b)(4)(iii)(A)(3), which follow the same requirements as those submitted through Call for Measures.

Comment: One commenter expressed concern about the addition of the new functional measures because PROMs can be difficult and resource-intensive to collect and report.

Response: We thank the commenter for their comment. The proposed functional measures allow use of PROMIS tools which are publicly available at no cost for non-electronic surveys, in addition to the use of legacy tools specified within each measure to allow for increased implementation flexibility. We recognize the effort that may be required to collect and submit data for these measures for some clinicians; however, these patient-reported outcome-based measures are critical for assessing quality outcomes. Reporting these functional measures are not required by MIPS, and clinicians have many alternative measures to select if they determine that the reporting burden is too high. We also note that these measures would be optional to report, as clinicians have choice of which MIPS quality measures they choose to report.

Comment: One commenter asked if the Limber Health platform will be required to report the functional improvement measures and asked if this would add financial and other burdens to the clinician and subsequently to the patient.

Response: Thank you for the comment. The eligible tools and calculations necessary for reporting the measure will be publicly available at no cost and are included in the measure specifications. Clinicians who choose to report these measures will not be required to utilize Limber Health and its platform.

Comment: One commenter questioned why the new functional measures in Tables A.2, A.3, A.4, A.5, and A.6 of this Appendix were not proposed for the Physical Medicine specialty set.

Response: We thank the commenter for this comment, and we will consider inclusion of the new functional measures in other relevant specialty sets in future years as we continue to evaluate measure performance, clinical workflows, and stakeholder

feedback.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44307 through 44308), we are finalizing the *Functional Improvement for Patients with Neck Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.3. Functional Improvement for Patients with Upper Extremity Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	519
Description:	Percentage of patients aged 18 years and older with an upper extremity impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Upper Extremity (PUE) or the alternative (legacy) patient-reported outcome measure (PROM), the Quick Disabilities of the Arm, Shoulder, & Hand (QDASH).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PUE score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with an upper extremity impairment who completed a baseline PUE.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for upper extremity impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q221: *Functional Status Change for Patients with Shoulder Impairments* and Q222: *Functional Status Change for Patients with Elbow, Wrist or Hand Impairments*. This new measure will address the same clinical topics as measures Q221 and Q222; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Upper Extremity tool, which was developed using item response theory (IRT) methods and evidence supports high reliability and validity[437]. It allows clinician flexibility in administration as it uses computer adaptive testing (CAT) or a fixed-length short form. This measure also allows use of the Quick Disabilities of the Arm, Shoulder, and Hand (QuickDASH) tool, which has also shown to be highly reliable and valid for use in patients with upper extremity musculoskeletal disorders.[438] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: One commenter supported the move toward validated functional-improvement measures and specifically supported addition of a measure addressing upper extremity impairment. The commenter recommended ensuring that the measure applied to neurologic rehabilitation as well as orthopedic diagnoses, rather than being limited to strictly orthopedic conditions or short outpatient therapy episodes.

Response: We thank the commenter for their suggestion and encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contacts tab once posted to the QPP website (*https://qpp.cms.gov*) for CY 2027. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44309 through 44310), we are finalizing the *Functional Improvement for Patients with Upper Extremity Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.4. Functional Improvement for Patients with Back Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	520
Description:	Percentage of patients aged 18 years and older with a back impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Pain Interference (PPI) or the alternative (legacy) patient-reported outcome measure (PROM), the Modified Low Back Disability Questionnaire (MDQ).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPI score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a back impairment who completed a baseline PPI.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the back impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q220: *Functional Status Change for Patients with Low Back Impairments*. This new measure will address the same clinical topic as measure Q220; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Pain Interference tool, which was developed using item response theory (IRT) methods. Evidence indicates that the PROMIS-PI items constitute a psychometrically sound item bank for assessing the negative effects of pain on functioning across the range commonly experienced by people who have pain.[439] It allows clinician flexibility in administration as it uses computer adaptive testing (CAT) or a fixed-length short form. This measure also allows utilization of the Modified Low Back Disability Questionnaire (MDQ), which has shown to be a valid, reliable, and responsive condition-specific assessment tool that is suited for use in clinical practice.[440] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.

Category	Description
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44311 through 44312), we are finalizing the *Functional Improvement for Patients with Back Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.5. Functional Improvement for Patients with Lower Extremity Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	521
Description:	Percentage of patients aged 18 years and older with a lower extremity impairment—not including knee impairments—that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Physical Function (PPF) or alternative (legacy) patient-reported outcome measure (PROM), the Lower Extremity Functional Scale (LEFS).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPF score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a non-knee impairment who completed a baseline PPF.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the non-knee lower extremity impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: The patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measures Q218: *Functional Status Change for Patients with Hip Impairments* and Q219: *Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments*. This new measure will address the same clinical topics as measures Q218 and Q219; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Physical Function (PPF) tool, which was developed using item response theory (IRT) methods and has demonstrated reliability, convergent and known-groups discriminant validity, and responsiveness in a sample of patients with a lower extremity orthopedic trauma injury.[441] This measure also allows utilization of the Lower Extremity Functional Scale (LEFS). Evidence supports the reliability, validity, and responsiveness of LEFS scores for assessing functional impairment in a wide array of patient groups with lower extremity musculoskeletal conditions.[442] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44313 through 44314), we are finalizing the *Functional Improvement for Patients with Lower Extremity Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.6. Functional Improvement for Patients with Knee Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	522
Description:	Percentage of patients aged 18 years and older with a knee impairment that met the risk-adjusted Predicted Moderate Clinical Improvement (P-MCI) on the PROMIS Physical Function (PPF) or the alternative (legacy) patient-reported outcome measure (PROM), the Knee Outcome Survey (KOS).
Measure Steward:	Limber Health, Inc. and Patient360, LLC
Numerator:	Patients with a completed episode of care whose most recent PPF score beyond the baseline score meets or exceeds the P-MCI at the time of the completed episode of care.
Denominator:	All patients aged 18 years or older at the start of the episode of care with a knee impairment who completed a baseline PPF.
Exclusions:	Pre-operative Care: Patients who are being seen for pre-operative care and/or have surgery for the knee impairment within 30 days after the initial assessment, documented in the medical record. Cognitive Deficit: A significant mental or cognitive impairment. Hospice or Palliative Care: Patient is in hospice care or receiving palliative care for terminal illness, as documented in the medical record. Active Cancer Treatment: Patient is in active treatment for cancer AND the goal of MSK care is primarily to avoid or minimize decline in function, documented in the medical record. Maintenance Therapy: Patient is receiving maintenance therapy.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure to replace current MIPS quality measure Q217: *Functional Status Change for Patients with Knee Impairments*. This new measure will address the same clinical topic as measure Q217; however, it allows for broader implementation by including widely available, non-proprietary tools to assess physical function improvement. Additionally, this measure's analytic allows independent calculation of performance by the clinician, or easy and free collaboration with the steward, which supports clinicians reporting this important aspect of rehabilitative care. This measure utilizes the PROMIS® Physical Function (PPF) tool, which was developed using item response theory (IRT) methods and has demonstrated reliability, convergent and known-groups discriminant validity, and responsiveness in a sample of patients with a lower extremity orthopedic trauma injury.[443] This measure also allows utilization of the Knee Outcome Survey (KOS). Evidence shows it is a reliable, valid, and responsive instrument for the assessment of functional limitations that result from a wide variety of pathological disorders and impairments of the knee.[444] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Rehabilitative Support for Musculoskeletal Care MVP (proposed to be renamed as the Rehabilitative Support MVP under Appendix 3: MVP Inventory, Table B.24). We proposed adding this measure to the Chiropractic Medicine and Physical Therapy/Occupational Therapy specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.

Category	Description
Measure Proposed for Addition to the Following Specialty Sets:	Chiropractic Medicine, Physical Therapy/Occupational Therapy

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table A.2 of this Appendix, many commenters strongly supported adding the functional improvement quality measures for patients with neck, upper extremity, back, lower extremity, and knee impairments.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44315 through 44316), we are finalizing the *Functional Improvement for Patients with Knee Impairments* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.7. Age-Related Hearing Loss: Comprehensive Audiometric Evaluation

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	523
Description:	Percentage of patients aged 50 years and older who failed a hearing screening and/or who report suspected hearing loss or tinnitus who were ordered or referred for a comprehensive audiometric evaluation on the day of diagnosis/office visit OR received a comprehensive audiometric evaluation within 4 weeks of the office visit.
Measure Steward:	American Academy of Otolaryngology - Head and Neck Surgery Foundation
Numerator:	Patients were ordered or referred for a comprehensive audiometric evaluation on the day of diagnosis/office visit OR received a comprehensive audiometric evaluation within 4 weeks of the office visit.
Denominator:	All patients aged 50 years and older who failed a hearing screening and/or who report suspected hearing loss or tinnitus.
Exclusions:	None
Measure Type:	Process
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR measure as it fills a gap in the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. It is specific to audiology and ensures that patients suspected of having age-related hearing loss, either identified through a failed hearing screen or diagnosis, are referred for or receive a comprehensive audiometric evaluation. Implementation of this measure as a MIPS CQM will allow wider availability for reporting by MIPS eligible clinicians. The objective of auditory assessment is to diagnose the type and magnitude of hearing loss and the need for treatment, including candidacy for amplification. Age-related hearing loss (ARHL), despite being the most common sensory deficit seen in the older population, remains an underdiagnosed and undertreated condition among individuals aged 50 years and above.[445] Identifying ARHL in early stages could prevent its known adverse outcomes, such as lower quality of life and ability to function.[446] [447] Undertreatment may lead to associated health risks, including dementia, depression, cardiovascular disease, and falls.[448] This measure is based on clinical guidelines intended to inform the practice of hearing care professionals involved in the audiological management of adults with severe to profound hearing loss.[449] Additionally, the guidelines identify quality improvement opportunities and evidence-based recommendations regarding the identification and management of ARHL.[450] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. We proposed adding this measure to the Audiology and Otolaryngology specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Audiology, Otolaryngology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the *Age-Related Hearing Loss: Comprehensive Audiometric Evaluation* measure in MIPS. Another commenter recommended adding this measure to the Family Medicine, Internal Medicine, and Geriatrics specialty sets, explaining that these specialties typically perform the Initial Preventive Physical Examination, where hearing screening was expected, and that appropriate screenings should lead directly to the follow-up actions reflected in the measure numerator. The commenter noted that audiology and otolaryngology generally receive patients who have already been identified as needing a comprehensive audiometric evaluation.

Response: We thank the commenters for supporting this new measure in MIPS. We will consider inclusion of this measure in other relevant specialty sets, such as Family Medicine, Internal Medicine, and Geriatrics, in future years as we continue to evaluate measure performance, clinical workflows, and stakeholder feedback.

Comment: A few commenters stated that the proposed measure is not feasible for inclusion in the Audiology specialty set because it is limited to clinicians eligible to bill Evaluation and Management (E/M) codes. They noted that, although the measure

---

Guidelines for Best Practice in the Audiological Management of Adults with Severe and Profound Hearing Loss. *Seminars in Hearing*, *41*(3), 141–246. https://doi.org/10.1055/s-0040-1714744.

[450] See footnote Tsai et al., 2024.

may conceptually involve audiology, its structure does not support participation by audiologists who cannot bill E/M services. The commenters also indicated that while audiologists can identify when an audiologic evaluation is clinically necessary, they cannot independently issue the required order or referral, meaning they would not be able to meet the measure's 4-week timeframe. The commenters suggested that this measure could potentially be adapted for audiology in the future with modifications.

Response: We thank the commenters for their feedback regarding the new measure. Based on the concerns cited, and coding finalization, we are not finalizing this new measure for inclusion in the Audiology specialty set.

After consideration of public comments, we are finalizing the *Age-Related Hearing Loss: Comprehensive Audiometric Evaluation* measure with modification. We are finalizing the measure for MIPS and the Otolaryngology specialty set as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. However, we are not finalizing the measure in the Audiology specialty set based on the considerations stated above and coding finalization.

A.8. Patient-Reported Experience with Anesthesia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	524
Description:	Percentage of patients, aged 18 and older, who were surveyed on their patient experience and satisfaction with anesthesia care and who reported a positive experience.
Measure Steward:	American Society of Anesthesiologists Anesthesia Quality Institute
Numerator:	Numerator 1. Patients who received a valid survey within 30 days of the procedure to assess their experience and satisfaction with anesthesia. Numerator 2. Patients who reported a positive experience with anesthesia care within 60 days of receipt of the survey.
Denominator:	Denominator 1. Patients aged 18 and older, who undergo a procedure under anesthesia during the denominator identification period. Denominator 2. All patients from Submission Criteria 1 who complete a survey on their patient experience and satisfaction with anesthesia care within 60 days of receipt of the survey.
Exclusions:	Organ Donors as designated by American Society of Anesthesiologists (ASA) Physical Status 6[451] Patient died within 30 days of the procedure Patients who did not complete the mandatory anesthesia satisfaction question within 60 days of receipt of the survey
Measure Type:	Patient-Reported Outcome-Based Performance Measure
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	A minimum of 20 completed surveys required to be eligible to report Denominator 2
Rationale:	We proposed this current QCDR patient-reported outcome-based performance measure as it fills a gap in the Anesthesiology specialty set. It will be the only patient experience of care measure for that specialty and is reported for each procedure. The measure assesses for patients that receive a valid survey and report a positive experience with their anesthesia care. The assessment of patient satisfaction with anesthesia care provides important feedback allowing clinicians to improve the quality-of-care delivery.[452] There are a variety of surveys available for practices and clinicians to implement based upon local patient populations, such as the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS): Patients' Perspectives of Care Survey[453] and Outpatient and Ambulatory Surgery CAHPS.[454] However, the measure will not require the use of a specific survey to collect patient feedback. Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Patient Safety and Support of Positive Experiences with Anesthesia MVP. We proposed adding this measure to the Anesthesiology specialty set based on available coding and because the clinical quality action is within the scope of care for anesthesiologists.
Measure Proposed for Addition to the Following Specialty Sets:	Anesthesiology

[451] American Society of Anesthesiologists (ASA) Physical Status 6 is defined as a declared brain-dead patient whose organs are being removed for donor purposes.
ASA. (2026). American Society of Anesthesiologists Statement on ASA Physical Status Classification System. *Anesthesiology Open, 1*(1), e0002. https://doi.org/10.1097/ao9.0000000000000002.
[452] Agency for Healthcare Research and Quality. (2013). Guide to Patient and Family Engagement in Hospital Quality and Safety. https://psnet.ahrq.gov/issue/guide-patient-and-family-engagement-hospital-quality-and-safety.
[453] CMS. (2025). HCAHPS: Patients' Perspectives of Care Survey. https://www.cms.gov/data-research/research/consumer-assessment-healthcare-providers-systems/hospital-cahps-hcahps.
[454] CMS. (2026). Outpatient and Ambulatory Surgery CAHPS (OAS CAHPS). https://www.cms.gov/data-research/research/consumer-assessment-healthcare-providers-systems/outpatient-and-ambulatory-surgery-cahps.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters supported the proposed addition of the *Patient-Reported Experience with Anesthesia* measure for use in MIPS. One of the commenters noted that the measure, already used by QCDRs and included in the Anesthesia MVP, is an important way for anesthesiologists to understand patients' perceptions of their care. The commenter stated that anesthesiology groups use these survey results to improve patient-centered perioperative care.

Response: We thank the commenters for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44319), we are finalizing the *Patient-Reported Experience with Anesthesia* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.9. Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	525
Description:	Percentage of general, neuraxial, or regional anesthesia care cases performed during the performance period in which the mean arterial pressure (MAP) fell below 65 mmHg for a cumulative total of 15 minutes or more.
Measure Steward:	Anesthesia Quality Registry (AQR QCDR) in Collaboration with Anesthesia Quality Institute (AQI) and American Society of Anesthesiologists (ASA)
Numerator:	Patients who have a MAP below 65 mmHg that exceeds the cumulative length of 15 minutes during the performance period.
Denominator:	All cases in which adults (ages 18 and older) with non-cardiac, non-emergency surgery requires general, neuraxial, or regional anesthesia care during the performance period.
Exclusions:	Patients with a baseline MAP below 65 mmHg Patients with surgeries where anesthesia is complicated by utilization of controlled hypotension during the primary anesthesia procedure Patients with American Society of Anesthesiologists (ASA) Physical Status Classification of 1, 5 or 6[455] Emergency cases Patients who are undergoing cardiac, cataract, obstetric non-operative, or liver/lung transplant procedures
Measure Type:	Intermediate Outcome
MIPS Core Measure:	Yes
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A
Rationale:	We proposed this current QCDR measure as it fills a gap in the Anesthesiology specialty set. This inverse, intermediate outcome measure ensures mean arterial pressure (MAP) does not fall below 65mmHg for greater than 15 minutes during a procedure as it could be associated with adverse outcomes, such as acute kidney injury (AKI) or myocardial injury.[456] Evidence indicates a MAP below absolute thresholds of 65 mmHg or relative thresholds of 20 percent was progressively related to both myocardial and kidney injury. Prolonged exposure below the threshold was also associated with increased risk. Noncardiac surgery patients are at increased risk of AKI when their cumulative time below a MAP of 65 mmHg reaches or exceeds 13 minutes. When patients fall further below 65 mmHg, even shorter durations are associated with increased risk of AKI.[457] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. This measure may be added to the Patient Safety and Support of Positive Experiences with Anesthesia MVP. We proposed adding this measure to the Anesthesiology specialty set based on available coding and because the clinical quality action is within the scope of care for anesthesiologists.

[455] ASA Physical Status 1 is defined as a normal healthy patient. Physical Status 5 is defined as a moribund patient who is not expected to survive without the operation. Physical Status 6 is defined as a declared brain-dead patient whose organs are being removed for donor purposes.
See footnote ASA, 2026.

Category	Description
Measure Proposed for Addition to the Following Specialty Sets:	Anesthesiology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed addition of the *Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases* measure in MIPS. The commenter noted that the measure, already used by QCDRs, is an important intermediate outcome for anesthesiologists and the anesthesia care team. IOH has long been a clinical concern, and advances in monitoring technology now enable more proactive blood pressure management. This measure allows anesthesiologists to track IOH and understand its impact on patient outcomes, and the commenter stated that anesthesiologists use it intraoperatively to better predict and plan for potential postoperative complications.

Response: We thank the commenter for supporting this new measure in MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44320 through 44321), we are finalizing the *Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.10. SGLT2 Inhibitors for Patients with Chronic Kidney Disease (CKD) With or Without Type 2 Diabetes Mellitus

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	526
Description:	The percentage of patients aged 18 years and older with chronic kidney disease (CKD) stages 2 and 3 who are prescribed an SGLT2 inhibitor during the performance period.
Measure Steward:	A Value-Based Care Registry
Numerator:	Patients who were prescribed or were currently taking an SGLT2 inhibitor during the performance period.
Denominator:	All patients aged 18 years and older diagnosed with chronic kidney disease (CKD) stages 2-3 during the performance period.
Exclusions:	Patients with Type 1 Diabetes Mellitus Diabetic Ketoacidosis
Measure Type:	Process
MIPS Core Measure:	No
Collection Type:	MIPS CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this current QCDR measure as it fills a gap in the MIPS quality measure inventory, ensuring the appropriate, evidence-based treatment of patients diagnosed with CKD with SGLT2 inhibitors. Evidence demonstrates that SGLT2 inhibitors slow the progression of CKD and reduce cardiovascular events in this patient population.[458] [459] [460] As a result, SGLT2 inhibitors have become a key disease-modifying therapy to prevent CKD progression. These medications prevent decline in kidney function through reduction in glomerular hypertension, independent of their effect on glycemic control. This has expanded the approved clinical indications for these medications beyond patients with diabetes.[461] Current clinical and practice guidelines also recommend use of SGLT2 inhibitors to slow CKD progression in patients with or without type 2 diabetes.[462] [463] Under section 1848(q) of the Act, a QCDR measure may only become reportable as a MIPS quality measure if the Secretary formerly adopts it through rulemaking and includes it in the MIPS quality measure inventory. We have the authority to establish quality measures under MIPS. This authority is not dependent upon the pre-rulemaking process used to develop measures. Beginning with the CY 2024 performance period/2026 MIPS payment year, all QCDR measures are required to be fully developed and tested at the clinician level by their second year in MIPS, as finalized in the CY 2023 PFS final rule (87 FR 70104 through 70106) and codified at § 414.1400(b)(4)(iii)(A)(3). As a current QCDR measure, this measure has demonstrated feasibility, reliability, and validity in accordance with § 414.1400(b)(4)(iii)(A)(3). The measure is evidence-based and is fully developed and tested. We proposed adding this measure to multiple applicable specialty sets based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Cardiology, Endocrinology, Family Medicine, Geriatrics, Internal Medicine, Nephrology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed addition of the *SGLT2 Inhibitors for Patients with Chronic Kidney Disease (CKD) With or Without Type 2 Diabetes Mellitus* measure in MIPS. One commenter supported the addition of this optional measure within Family Medicine, Cardiology, Endocrinology, Geriatrics, Internal Medicine and Nephrology specialty sets in MIPS. The commenter agreed with the goal of this new measure; however, they stressed that successful implementation depends on patients having affordable and reliable access to the medications needed to meet the measure. The commenter urged CMS to ensure these therapies are well covered under Medicare, included on affordable formularies, and available to beneficiaries without excessive cost-sharing or administrative hurdles. Another commenter requested that this measure reflect current guidelines and promote equitable medication access across diverse practice settings.

Response: We thank the commenters for supporting this new measure in MIPS. We will continue to monitor implementation of this measure for adherence to clinical guidelines and addition to appropriate specialty measure sets.

---

Comment: One commenter supported adding the measure to the Geriatrics specialty set but stated it would be strengthened by adding denominator exceptions for clinical contraindication or intolerance, documenting patient preference, and considering advanced illness, frailty, hospice, polypharmacy, and limited expected benefit. Another commenter supported the addition of this measure and recommended setting a uACR threshold of at least 200 mg/g for stage 2–3 CKD to ensure clinical appropriateness. With this change, the commenter supported adding the measure across multiple specialty sets and emphasized its alignment with guidelines and its kidney and cardiovascular benefits.

Response: We thank the commenters for supporting this new measure in MIPS. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: One commenter did not support including this new measure in MIPS until detailed measure specification and testing information is made available. The commenter was unable to find the detailed measure specifications or the results on the feasibility, reliability, and validity testing of this measure. It would also be important to know the process by which this measure was developed, including whether a technical expert panel was convened, which specialties and experts were included, and other important details relevant to the development and testing process.

Response: We appreciate the concerns raised and note that this measure was previously available for MIPS reporting as a QCDR measure. As a QCDR measure, the same requirements for being fully developed and tested would apply (§ 414.1400(b)(4)(iii)(A)(3)). The complete measure specification will be publicly posted after publication of the final rule.

Comment: One commenter asked who a Value-Based Care Registry is as the measure steward.

Response: The Value-Based Care Registry is a MIPS Qualified Clinical Data Registry (QCDR); as the author/owner of the measure, they are responsible for the ongoing development and maintenance of the measure specifications. Measure steward contact information will be available in the 2027 MIPS Quality Measures List in the Measure Steward Contact tab once posted on the QPP website (*https://qpp.cms.gov*) for CY 2027.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44321 through 44322), we are finalizing the *SGLT2 Inhibitors for Patients with Chronic Kidney Disease (CKD) With or Without Type 2 Diabetes Mellitus* measure as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Table Group AA: New MIPS Quality Measures Finalized for the CY 2028 Performance Period/2030 MIPS Payment Year and Future Years

In addition to the new quality measures proposed in Table Group A of this Appendix, we proposed adding one eCQM for the 2028 performance period/2030 MIPS payment year and future years to allow clinicians sufficient time to adapt their workflows prior to implementation within MIPS. We requested comments on this new measure.

AA.1. Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection

Category	Description
CBE # / eCQM CBE #:	N/A / 4700e
Quality #:	527
Description:	This electronic clinical quality measure (eCQM) reports the percentage of female patients aged 40 to 75 years with at least one abnormal screening (BI-RADS 0) or screening-to-diagnostic (BI-RADS 4, 5) mammogram during the measurement period (i.e., calendar year) who received timely diagnostic resolution defined as either follow-up imaging with negative/benign/probably benign results or a breast biopsy within 60 days after their index (i.e., first) abnormal screening mammogram.
Measure Steward:	Brigham and Women's Hospital
Numerator:	Patients in the denominator population who received timely diagnostic resolution defined as negative/benign/probably benign follow-up imaging (BI-RADS 1, 2, 3) or breast biopsy within 60 days after the date of their index (i.e., first) abnormal screening (BI-RADS 0) or screening-to-diagnostic (BI-RADS 4, 5) mammogram.
Denominator:	Female patients aged 40 to 75 years with an abnormal screening (BI-RADS 0) or screening-to-diagnostic (BI-RADS 4, 5) mammogram during the measurement period (i.e., calendar year). Only the first abnormal screening or screening-to-diagnostic mammogram (i.e., index screening test) is included in the measure calculation.
Exclusions:	N/A
Measure Type:	Process
MIPS Core Measure	No
Collection Type:	eCQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale:	We proposed this eCQM because it addresses timely follow up of diagnostic testing for patients with an abnormal mammogram. Additionally, it fills a gap in the Diagnostic Radiology specialty set with potential for inclusion in an MVP. Breast cancer is the second most common cause of cancer deaths among women in the United States[464] and survival is dependent upon cancer stage at diagnosis. Breast cancer mainly occurs in middle-aged and older women, with the median age at the time of diagnosis being 62 years.[465] Noninvasive mammographic screening is the primary screening modality used to detect breast cancer. Studies show that between 27 to 72 percent of women did not receive appropriate follow-up within 6 months of an abnormal mammogram.[466] Delays in diagnostic follow-up after abnormal mammographic screening results increase the risk of diagnosing cancer at a more advanced stage.[467] Timely follow-up is essential to facilitate early-stage detection and improve overall survival outcomes. The Pre-Rulemaking Measure Review (PRMR) Clinician Recommendation Committee did not reach consensus on this measure; however, the majority (71 percent) of the committee expressed support for use of the measure. The measure is CBE endorsed with conditions of continued monitoring of performance and additional data element validity testing of other electronic health records (EHRs). We proposed this measure with a one-year delay in implementation to allow time for clinicians to adapt their workflows and therefore ensure greater feasibility of reporting within MIPS. If finalized as proposed, this measure will be available for reporting for the CY 2028 performance period/2030 MIPS payment year. We proposed adding this measure to the Diagnostic Radiology specialty set for the CY 2028 performance period/2030 MIPS payment year based on available coding and because the clinical quality action is within the scope of care for clinicians in these specialties.
Measure Proposed for Addition to the Following Specialty Sets:	Diagnostic Radiology

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: One commenter was pleased this proposed measure is an eCQM. Another commenter supported the delay of this new measure until CY 2028. This additional lead time will allow organizations to address potential gaps and challenges before reporting becomes required, ultimately supporting a smoother transition and more successful adoption of the measure.

Response: We thank the commenters for supporting eCQM measures and this measure in MIPS. Accordingly, this measure is not required for reporting. Clinicians have the flexibility to choose which measures to report based upon the appropriateness of the measure to their scope of care.

Comment: One commenter opposed using this measure for clinician- or group-level MIPS reporting at this time, emphasizing that it was designed for facility and system accountability and has been tested only in limited settings. The commenter was concerned the measure would hold radiologists responsible for scheduling, patient delays, navigation barriers, workforce constraints, and care delivered by others, and noted that BI-RADS data are often stored in unstructured reports without consistent extraction tools across vendors—issues that could especially burden small or rural practices and distort performance and payment. The commenter urged CMS not to finalize the measure for clinician- or group-level MIPS reporting in 2028. The commenter recommended it remain at the facility level or be delayed until robust multi-TIN, varied practice-type testing confirms reliable performance and confirms accurate attribution when clinicians do not control the full care pathway. They also recommended CMS ensure that eCQM data are available in standardized, interoperable formats, provide clear extraction tools and vendor guidance, and establish safeguards for follow-up care outside the reporting entity's control.

If CMS proceeds with the measure, the commenter recommended using 2028 and later for voluntary, non-scored testing in varied practice and technology settings, releasing detailed specifications and standardized BI-RADS extraction tools early, and including exclusions for factors outside clinicians' control plus support for resource-limited sites. They also advised starting with

N., Inrig, S., Skinner, C. S., Quinn, V. P., Haas, J. S., Schnall, M., Rutter, C. M., Barlow, W. E., … PROSPR consortium (2016). Follow-Up of Abnormal Breast and Colorectal Cancer Screening by Race/Ethnicity. *American Journal of Preventive Medicine*, *51*(4), 507–512. https://doi.org/10.1016/j.amepre.2016.03.017.

confidential feedback only (no payment or public reporting impact) and moving to full implementation only after proving interoperability, data completeness, reliable attribution, and no harm to breast imaging access.

A few additional commenters expressed similar concerns to above. This measure, if finalized, would be the only breast imaging measure in MIPS. One of the commenters urged CMS not to finalize inclusion of this measure in MIPS until further testing is conducted. Another commenter recommended this measure should also be reportable as a MIPS CQM.

Response: Thank you for the comments, suggestions, and concerns raised. Testing for reliability and validity was completed at the individual clinician level, in accordance with requirements outlined in Pre-Rulemaking: The Measure Submission Period and the Measures Under Consideration (MUC) List - 2026 Frequently Asked Questions.[468] Reliability testing at the individual clinician level indicated a median Signal to Noise Ratio (SNR) was 0.962 for 99 clinicians. With regards to attribution, as an important measure concept we agree that radiologists and radiology practices retain meaningful influence over scheduling and operational prioritization (e.g., adding late-day slots, advocating within hospital operations), and therefore share responsibility for timely follow-up. Published literature shows that long wait times to diagnostic evaluation are associated with increased tumor size and lymph node metastases in patients with delays exceeding 12 weeks.[469] [470] [471] BI-RADS data is available in discrete fields within major electronic health records, such as Epic and Oracle Health (Cerner), and while it may not be available in some facilities, multi-site testing showed string-search/natural language processing (NLP) methods achieved accurate extraction where structured fields were not consistently used, as demonstrated within the measure steward's submitted material. We encourage the commenters to reach out to the measure steward to discuss collection type expansion for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44323 through 44324), we are finalizing the *Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection* measure as proposed for the CY 2028 performance period/2030 MIPS payment year and future years.

Table Group B: Modifications to Previously Finalized Specialty Sets Finalized and Finalized with Modification for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

In the CY 2027 PFS proposed rule (91 FR 44325), we proposed modifying the previously finalized specialty sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies and other interested parties. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D of this Appendix.

We use the following symbols in the Indicator column in the Table Group B tables below:

- Existing quality measures with substantive changes described in Table Group D of this Appendix are identified with an asterisk (*).
- Quality measures designated as MIPS core measures are identified with an exclamation point (!). As discussed in section IV.A.4.d.(1)(c)(i) of this final rule, we finalized implementation of the MIPS core measure designation for traditional MIPS and MVP reporting.
- Quality measures finalized for addition to a specialty set are identified with a plus sign (+).

Additionally, measures that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE # / eCQM CBE #.

In the proposed rule (91 FR 44325), we updated the format of the specialty set tables to reflect what the specialty set will be for the CY 2027 performance period, if finalized as proposed. Measures proposed for addition to the specialty sets were added to applicable tables and are noted with a plus sign (+) in the Indicator column. See Table Group A of this Appendix for rationales for proposed new measures. Existing measures proposed for addition to a specific specialty set are also indicated with a plus sign (+) and were included in the introductory paragraphs of the specialty set, as applicable. If the measure was not finalized for addition in the CY 2027 PFS final rule, it would have been removed from the specialty set table. For proposed new measures, the reason for its removal from the specialty set would have been addressed under Table Group A of this Appendix.

Measures proposed for removal were removed from each specialty set, as applicable. See Table Group C of this Appendix for rationales for proposed measure removals from MIPS. Specialty-specific measure removals were also noted in the introductory paragraphs of the specialty set, as applicable. If a measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back to the specialty set table. For proposed measure removals from MIPS, the reason for its retention would have been addressed under Table Group C of this Appendix.

NOTE:

- Updates to measure titles and/or measure descriptions under Table Group B in this final rule may or may not be considered substantive in nature, therefore may not be proposed or updated under Table Group D. If the change was considered substantive in nature, it was finalized under Table Group D.
- Under Table Group B, we responded to comments related to existing measures that were proposed for addition to a specific specialty, and/or specialty-specific measure removals, as applicable. Comments and responses pertaining to new measures that were proposed for addition to the specialty set can be found in Table Group A of this Appendix. Comments and responses pertaining to measures that were proposed for removal from MIPS, and therefore from the specialty set, can be found in Table Group C of this Appendix. Comments and responses pertaining to previously finalized measures that have substantive changes can be found in Table Group D of this Appendix. Any comments received on previously finalized measures that have no substantive changes are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- For each specialty set, measures in the Finalized tables will be available for reporting in CY 2027.

We requested comments on proposed measure additions of previously finalized measures in six specialty sets in this Appendix: B.5, B.13, B.19, B.25. B.26, and B.38. Previously finalized measures that had no substantive changes were not open for comment under the proposed rule.

The following specialty set had no proposed modifications and no proposed substantive changes to previously finalized measures for the CY 2027 performance period/2029 MIPS payment year: Diagnostic Radiology.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.1. Allergy/Immunology

B.3. Audiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Audiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

Below will be the specialty set for this specialty for the CY 2027 performance period with modification. The *Age-Related Hearing Loss: Comprehensive Audiometric Evaluation* measure is not being finalized for the Audiology set as discussed under Table A.7 of this Appendix and therefore has been removed from the table below.

B.3. Audiology

B.4a. Cardiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.4b. Electrophysiology Cardiac Specialist

FINALIZED MEASURES IN THE ELECTROPHYSIOLOGY CARDIAC SPECIALIST SPECIALTY SET

*	2474 / N/A	392	N/A	MIPS CQM	Outcome	Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation	American College of Cardiology Foundation
*	N/A / N/A	393	N/A	MIPS CQM	Outcome	Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision	American College of Cardiology Foundation

B.5. Certified Nurse Midwife

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Certified Nurse Midwife specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding one existing MIPS quality measure to this specialty set:

- **Q493:** *Adult Immunization Status*: This MIPS quality measure assesses whether adult patients are up-to-date with recommended routine immunizations. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type. Certified Nurse Midwives are advanced practice clinicians uniquely qualified to deliver comprehensive primary care, pregnancy care, and gynecological care. Their scope of practice often includes primary care services such as immunizations, especially in alignment with their focus on preventive care and wellness for women.[472] [473] Adding this measure will align the Certified Nurse Midwife specialty set with the Obstetrics and Gynecology specialty set, recognizing the similarities in care delivery between these specialties and ensuring consistency across specialty sets. Including this measure in the Certified Nursing Midwife specialty set acknowledges the important role they play in preventive care and primary health maintenance, as well as promoting consistent, high quality care delivery across patient populations. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received no public comments on the measure proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (91 FR 44333), we are finalizing the *Certified Nurse Midwife Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.5. Certified Nurse Midwife

FINALIZED MEASURES IN THE CERTIFIED NURSE MIDWIFE SPECIALTY SET

B.6. Chiropractic Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Chiropractic Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Family Medicine specialty set. Clinical guidelines, such as those from the Centers for Disease Control and Prevention (CDC), recommend regular screening for STIs in individuals with HIV.[474] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[475] Including this measure emphasizes adherence to established best practices in care provision within family medicine. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q340**: *HIV Annual Retention in Care*: This MIPS quality measure promotes routine monitoring to track patient progress and ensure treatment efficacy. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Family Medicine specialty set. Incorporating this measure aligns with national goals such as the Ending the HIV Epidemic initiative, led by the CDC, which highlights retention and viral suppression as cornerstones for reducing transmission and new infections.[476] A study from the Centers for AIDS Research Network of Integrated Clinical Systems revealed that patients who missed more than two clinic visits over a two-year period had significantly higher mortality risks, even if they otherwise met institutional retention metrics.[477] These findings underscore the life-saving importance of retention in improving survival rates. By measuring and promoting retention in HIV care, the addition of this measure could drive system-wide improvements, support better patient outcomes, reduce preventable mortality, and contribute to public health efforts to end the HIV epidemic. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q340: *HIV Annual Retention in Care* to this specialty set. Another commenter supported addition of measure Q205 specifically; however, they noted that because many patients receive HIV care from specialists or HIV clinics, CMS should ensure appropriate attribution and acknowledge that this measure has limited applicability across family medicine overall.

Response: We thank the commenters for supporting the addition of these measures to this specialty set and for recognizing the importance of routine STI screening for people with HIV. We will continue to consider issues of measure attribution and specialty-specific applicability as we evaluate the use and performance of this measure within the Family Medicine specialty set over time.

Comment: One commenter opposed adding measure Q340 to this specialty set. The commenter stated this measure is not broadly applicable to family medicine because many patients receive HIV-specific care from infectious disease specialists or dedicated HIV clinics, not family physicians. The commenter was concerned about attribution and said patients should be attributed to the clinician providing HIV care, so primary care physicians are not held accountable when they are not managing HIV treatment and follow-up. The commenter stated that specialty sets should focus on measures that are broadly relevant to family medicine and where physicians can meaningfully influence performance, rather than highly condition-specific measures with limited applicability.

Response: We thank the commenter for providing feedback on measure Q340. We acknowledge the commenter's concerns about the measure's applicability in the Family Medicine Specialty Set and the importance of attributing patients to clinicians responsible for managing HIV care. Clinicians have the flexibility to choose which measures to report based upon the appropriateness of the measure to their scope of care. Accordingly, this measure is not required for reporting; however, the addition of this measure enhances clinician choice on which measures to report. Currently, the Family Medicine Specialty Set contains 61 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care.

For the reasons stated above and in the proposed rule (91 FR 44344), we are finalizing the *Family Medicine Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.13. Family Medicine

FINALIZED MEASURES IN THE FAMILY MEDICINE SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title**	**Measure Steward**
* !	0059 / N/A	001	CMS1 22v15	Medicare Part B Claims Measure, eCQM, MIPS CQM	Intermediate Outcome	Diabetes: Glycemic Status Assessment Greater Than 9%	National Committee for Quality Assurance

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.14. Gastroenterology

FINALIZED MEASURES IN THE GASTROENTEROLOGY SPECIALTY SET

B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Internal Medicine specialty set. Clinical guidelines, such as those from the CDC, recommend regular screening for STIs in individuals with HIV.[478] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[479] Including this measure emphasizes adherence to established best practices in care provision within family medicine. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q340**: *HIV Annual Retention in Care*: This MIPS quality measure promotes routine monitoring to track patient progress and ensure treatment efficacy. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Internal Medicine specialty set. Incorporating this measure aligns with national goals such as the Ending the HIV Epidemic initiative, led by the CDC, which highlights retention and viral suppression as cornerstones for reducing transmission and new infections.[480] A study from the Centers for AIDS Research Network of Integrated Clinical Systems revealed that patients who missed more than two clinic visits over a two-year period had significantly higher mortality risks, even if they otherwise met institutional retention metrics.[481] These findings underscore the life-saving importance of retention in improving survival rates. By measuring and promoting retention in HIV care, the addition of this measure could drive system-wide improvements, support better patient outcomes, reduce preventable mortality, and contribute to public health efforts to end the HIV epidemic. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q340: *HIV Annual Retention in Care* to this specialty set.

Response: We thank the commenters for supporting the addition of these two measures to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44357), we are finalizing the *Internal Medicine Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.24. Neurosurgical

FINALIZED MEASURES IN THE NEUROSURGICAL SPECIALTY SET

	N/A / N/A	471	N/A	MIPS CQM	Patient-Reported Outcome-Based Performance Measure	Functional Status After Lumbar Surgery	Minnesota Community Measurement

B.25. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding one existing MIPS quality measure to this specialty set:

- **Q317**: *Preventive Care and Screening*: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure supports screening for high blood pressure. We agreed with interested parties' feedback that adding this measure to this specialty set will help empower registered dietician nutritionists (RDNs) to meaningfully participate in quality programs and value-based care, ensuring patients receive high-value nutritional care. Hypertension (HTN) is among the leading global preventable risk factors for cardiovascular disease and premature mortality.[482] Early detection and effective management of HTN have demonstrated significant reductions in mortality, morbidity, and health care costs.[483] RDNs provide medical nutrition therapy, which has demonstrated effectiveness in improving outcomes such as blood pressure control and reducing cardiovascular risks.[484] Including this measure within the Nutrition/Dietician specialty set recognizes the critical role of RDNs in managing HTN and promotes team-based, whole-person care. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: One commenter supported adding measure Q317: *Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented* to this specialty set.

Response: We thank the commenter for supporting the addition of measure Q317 to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44372), we are finalizing the *Nutrition/Dietician Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.25. Nutrition/Dietician

B.26. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Obstetrics/Gynecology specialty set. Clinical guidelines, such as those from the CDC, recommend regular screening for STIs in individuals with HIV.[485] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[486] Adding measure Q205 to this specialty set will help address critical screening gaps, ensuring sexual health services are consistently delivered in settings managing patients' reproductive health. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q338**: *HIV Viral Suppression*: This MIPS quality measure promotes effective management of HIV viral load for patients diagnosed with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Obstetrics/Gynecology specialty set. This specialty plays an essential role in ensuring patients remain actively engaged in HIV care while accessing comprehensive prevention services that improve health outcomes. Viral suppression is widely recognized as the clinical goal of HIV treatment, reflecting successful management of the condition.[487] [488] Measuring viral suppression ensures clinicians are accountable for achieving this outcome across their patient population, which is directly linked to measurable preventive outcomes, such as reducing HIV transmission rates and decreasing HIV-related morbidity and mortality.[489] [490] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q338: *HIV Viral Suppression* to this specialty set.

Response: We thank the commenters for supporting the addition of these two measures to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44374), we are finalizing the *Obstetrics/Gynecology Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.27b. Radiation Oncology

FINALIZED MEASURES IN THE RADIATION ONCOLOGY SPECIALTY SET

B.35. Physical Therapy/Occupational Therapy

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.38. Preventive Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable.

We also proposed adding two existing MIPS quality measures to this specialty set:

- **Q205**: *Sexually Transmitted Infection (STI) Testing for People with HIV*: This MIPS quality measure assesses appropriate screening of STIs for patients with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Preventive Medicine specialty set. Clinical guidelines, such as those from the CDC, recommend regular screening for STIs in individuals with HIV.[491] Despite the high incidence of STIs among people with HIV, screening rates remain suboptimal.[492] Including this measure emphasizes adherence to established best practices in care provision within preventive medicine. This measure will allow clinicians and health systems to track and benchmark their performance in meeting preventive care goals for patients with HIV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.
- **Q338**: *HIV Viral Suppression*: This MIPS quality measure promotes effective management of HIV viral load for patients diagnosed with HIV. We agreed with interested parties' feedback that this measure is clinically relevant to this clinician type and proposed adding this measure to the Preventive Medicine specialty set. This specialty plays an essential role in ensuring patients remain actively engaged in HIV care while accessing comprehensive prevention services that improve health outcomes. Viral suppression is widely recognized as the clinical goal of HIV treatment, reflecting successful management of the condition.[493] [494] Measuring viral suppression ensures clinicians are accountable for achieving this outcome across their patient populations, which is directly linked to measurable preventive outcomes, such as reducing HIV transmission rates and decreasing HIV-related morbidity and mortality.[495] [496] The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2027 PFS final rule publication. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: Three commenters supported adding measures Q205: *Sexually Transmitted Infection (STI) Testing for People with HIV* and Q338: *HIV Viral Suppression* to this specialty set.

Response: We thank the commenters for supporting the addition of these two measures to this specialty set.

For the reasons stated above and in the proposed rule (91 FR 44396), we are finalizing the *Preventive Medicine Specialty Set* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years. Below will be the specialty set for this specialty for the CY 2027 performance period.

B.42. Speech Language Pathology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Speech Language Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The measure table for this specialty set includes previously finalized measures we are maintaining within the set and modifications finalized for the CY 2027 performance period/2029 MIPS payment year.

Measures finalized for addition to this specialty set under Table Group A of this Appendix, or previously finalized measures finalized for addition, are indicated by a + in the Indicator column, as applicable. Measures finalized for removal under Table Group C of this Appendix have been removed from this specialty set, as applicable. Measures with substantive changes under Table Group D of this Appendix are indicated with a * in the Indicator column, as applicable. Below will be the specialty set for this specialty for the CY 2027 performance period as proposed.

B.42. Speech Language Pathology

FINALIZED MEASURES IN THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET							
Indicator	**CBE # / eCQM CBE #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**Measure Title and Description**	**Measure Steward**

Table Group C: Previously Finalized Quality Measures Finalized for Removal for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

In this final rule, we are removing 20 previously finalized MIPS quality measures for the CY 2027 performance period/2029 MIPS payment year and future years. These measures are discussed in detail in the removal tables below. Note: Specialty sets impacted by each measure removal are indicated under Table Group C of this Appendix within the last row of each C table.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discuss our incremental approach to removing process measures. Further considerations are given in the evaluation of a measure's performance data to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion we use for the removal of measures includes extremely topped-out measures, which refers to measures topped out with an average (mean) performance rate between 98-100 percent. For a measure proposed for removal due to criteria relating to the benchmark and performance data, further information regarding 2025 MIPS benchmarking data can be located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.*

As codified in the CY 2025 PFS final rule (89 FR 98561) at § 414.1330(c)(1), we list 12 criteria used to determine the removal of a quality measure.

(i) If the Secretary determines that the quality measure is no longer meaningful, such as measures that are topped out.
(ii) If a measure steward is no longer able to maintain the quality measure.
(iii) If the quality measure reached extremely topped out status.
(iv) If the quality measure does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.
(v) If the quality measure is duplicative.
(vi) If the quality measure is not updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice.
(vii) If the quality measure is a process measure.
(viii) If the quality measure addresses a measurement gap.
(ix) If the quality measure is a patient-reported outcome.
(x) If the quality measure is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.
(xi) The robustness of the quality measure.
(xii) Consideration of the quality measure in developing MIPS Value Pathways (MVPs).

Additionally, we codified at § 414.1330(c)(2) 6 instances when a quality measure that otherwise meets the criteria for removal in § 414.1330(c)(1) may nonetheless be retained based on the following considerations:

(i) Whether the removal of the process measure impacts the number of measures available for a specific specialty.
(ii) Whether the quality measure addresses a priority area.
(iii) Whether the quality measure promotes positive outcomes in patients.
(iv) Whether the quality measure is designated as high priority or not.
(v) Whether the quality measure has reached extremely topped out status.
(vi) Evaluation of the quality measure's performance data.

However, we note that in section IV.A.4.d.(1)(c)(ii) of this final rule we are finalizing to update the existing quality measure retention consideration at § 414.1330(c)(1)(iv) to state that we will consider whether the quality measure is designated as high priority or not through the CY 2026 performance period/CY 2028 MIPS payment year.

We requested comments on these measure removals and the impacted specialty sets.

C.1 Coronary Artery Disease (CAD): Antiplatelet Therapy

Category	Description
CBE # / eCQM CBE #:	0067 / N/A
Quality#:	006
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
Measure Steward:	American Heart Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), at the measure steward's request because it will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Cardiology, Family Medicine, Internal Medicine, Skilled Nursing Facility

We received no public comments on the proposed removal of this measure. For reasons stated above and in the proposed rule (91 FR 44412), we are finalizing the removal of measure Q006 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.2 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)

Category	Description
CBE # / eCQM CBE #:	0070 / 0070e
Quality#:	007
CMS eCQM ID:	CMS145v15
Collection Type:	eCQM / MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤ 40% who were prescribed beta-blocker therapy.
Measure Steward:	American Heart Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), at the measure steward's request because it will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Cardiology, Family Medicine, Internal Medicine, Skilled Nursing Facility

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter requested that measure Q007: *Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)* be retained based on the measure's clinical relevance and inclusion in a number of specialty sets. The commenter requested the measure be retained for CY 2027 under topped-out status.

Response: We thank the commenter for their comment; however, as the measure steward is no longer supporting the measure, we are unable to continue implementation within MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44412), we are finalizing the removal of measure Q007 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.3 Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
CBE # / eCQM CBE #:	0384 / 0384e
Quality#:	143
CMS eCQM ID:	CMS157v15
Collection Type:	eCQM / MIPS CQM
Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Measure Steward:	American Society of Clinical Oncology
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286). This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Oncology/Hematology, Radiation Oncology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. The commenter stated a recent review of reporting rates on MIPS topped out measures during the first 6 years of the program identified that, of the 137 topped out measures, the vast majority were not reported by a large percentage of clinicians and groups. In fact, the median reporting rate across those measures was not more than 5 percent.[497] Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), this measure was reported by just over 1,000 individuals and groups out of the more than 12,000 oncologists who reported at least one measure and over 40 percent were small practices and 30 percent served in a health professional shortage area.

Response: We thank the commenter for their feedback and acknowledge their concern regarding the removal of specialty measures. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures may address important aspects of care, the underlying quality actions are generally considered standard practice and offer limited opportunity for further improvement in clinical outcomes. This measure has been topped out for 5 consecutive years, 9 total years, for the eCQM collection type and 9 consecutive years for the MIPS CQM collection type. While the measure was identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, removing this process measure will better support the goal of prioritizing measures that improve patient outcomes and include robust quality actions that go beyond assessment of concerns.

Comment: A few commenters opposed the removal of measure Q143: *Oncology: Medical and Radiation – Pain Intensity Quantified* and noted that this measure operates as a paired measure with measure Q144: *Oncology: Medical and Radiation – Plan of Care for Pain.* Without the Pain Intensity Quantified measure, clinicians are unable to identify patients requiring a documented plan of care for pain. Pain management is paramount in oncology care, and existing metrics should not be dismantled without a sufficient replacement. One of the commenters recommended CMS work with the measure steward to combine measures Q143 and Q144, or alternatively adopt the existing QCDR measure PIMSH4 for broader use in MIPS prior to removing measure Q143.

Response: We acknowledge the commenters' concern regarding the removal of measure Q143; however, we determined that removal of this measure is necessary to promote meaningful and complete quality reporting, informing quality care for patients with pain receiving chemotherapy or radiation therapy. Measures Q143 and Q144 represent a single, unified quality action that requires both detection and an intervention; splitting this into two separate measures allows for reporting of one without the other and breaks up what should be a unified standard of care. We agree the measures should be combined; however, the measure steward has decided not to combine them. Measure Q143 is also topped out and while topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered standard of practice and offer limited opportunity to further improve clinical outcomes.

[497] Chung, Y., Nicola, L. P., & Rula, E. Y. (2026). Reporting Rates of Topped-Out Merit-Based Incentive Payment System (MIPS) Quality Measures, 2017–2023. *Health Affairs Scholar*, *4*(4), qxag061. https://doi.org/10.1093/haschl/qxag061.

While we agree the concept is important to quality care, the removal of the measure does not preclude the quality action from continuing. Whether the clinician/group is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. High measure performance suggests that assessment is happening already as standard of care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44413), we are finalizing the removal of measure Q143 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.4 Functional Status Change for Patients with Knee Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	217
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with knee impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Knee Impairments measure being finalized in Table A.6 of this Appendix. Measure Q217 is specific to knee impairments and restricts clinicians to using the proprietary tool FOTO LEPF PROM or a manual crosswalk for numerator assessment. The new measure in Table A.6 of this Appendix is a more comprehensive patient-reported outcome-based performance measure. The new measure allows the use of various validated assessments tools, including the Knee Outcome Survey, Patient-Reported Outcomes Measurement Information System (PROMIS) Physical Function, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the Predicted Moderate Clinical Improvement (P-MCI), a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix. One of the commenters highlighted the new measure set's broad use across major health systems, its whole-person, patient-centered design, and its flexibility across practice types and EHR systems. They also pointed to low-cost administration options and strong alignment with CMS' patient-centered MVP goals, particularly the emphasis on patient-reported outcomes. The commenter appreciated that adopting PROMIS would expand meaningful reporting opportunities for physical therapists. Another commenter supported the removal of these measures, noting that they are duplicative of the newly proposed functional improvement measures.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44413), we are finalizing the removal of measure Q217 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.5 Functional Status Change for Patients with Hip Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	218
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with hip impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Lower Extremity Impairments measure being finalized in Table A.5 of this Appendix. Measure Q218 is specific to hip impairments and restricts clinicians to using the proprietary tool FOTO LEPF PROM or a manual crosswalk for numerator assessment. The new measure in Table A.5 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all lower extremity injuries. The new measure allows the use of various validated assessments tools, including the Lower Extremity Functional Scale (LEFS), PROMIS Physical Function, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44414), we are finalizing the removal of measure Q218 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.6 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	219
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with foot, ankle or lower leg impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Lower Extremity Impairments measure being finalized in Table A.5 of this Appendix. Measure Q219 is specific to lower leg, foot and ankle impairments and restricts clinicians to the use of the proprietary tool FOTO LEPF PROM or a manual crosswalk for numerator assessment. The new measure in Table A.5 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all lower extremity injuries. The new measure allows the use of various validated assessments tools, including the LEFS, PROMIS Physical Function, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy, Podiatry

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44414), we are finalizing the removal of measure Q219 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.7 Functional Status Change for Patients with Low Back Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	220
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with low back impairments. The change in FS is assessed using the FOTO Low Back FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Back Impairments measure being finalized in Table A.4 of this Appendix. Measure Q220 is specific to low back impairments and restricts clinicians to the use of the proprietary tool FOTO Low Back FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.4 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all back impairments. The new measure allows the use of various validated assessment tools, such as the Modified Low Back Disability Questionnaire, PROMIS Pain Interference, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44415), we are finalizing the removal of measure Q220 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.8 Functional Status Change for Patients with Shoulder Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	221
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with shoulder impairments. The change in FS is assessed using the FOTO Shoulder FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Upper Extremity Impairments measure being finalized in Table A.3 of this Appendix. Measure Q221 is specific to shoulder impairments and restricts clinicians to the use of the proprietary tool FOTO Shoulder FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.3 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all upper extremity injuries. The new measure allows the use of various validated assessment tools, such as the Quick Disabilities of the Arm, Shoulder, & Hand (QDASH) and PROMIS Upper Extremity, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44415), we are finalizing the removal of measure Q221 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.9 Functional Status Change for Patients with Elbow, Wrist or Hand Impairments

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	222
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with elbow, wrist, or hand impairments. The change in FS is assessed using the FOTO Elbow/Wrist/Hand FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative of the Functional Improvement for Patients with Upper Extremity Impairments measure being finalized in Table A.3 of this Appendix. Measure Q222 is specific to elbow, wrist and hand impairments and restricts clinicians to the use of the proprietary tool FOTO Elbow/Wrist/Hand FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.3 of this Appendix is a more comprehensive patient-reported outcome-based performance measure that includes all upper extremity injuries. The new measure allows the use of various validated assessment tools, such as QDASH and PROMIS Upper Extremity, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44416), we are finalizing the removal of measure Q222 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.10 Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients

Category	Description
CBE # / eCQM CBE #:	0658 / N/A
Quality#:	320
CMS eCQM ID:	N/A
Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Measure Description:	Percentage of patients aged 45 to 75 years of age receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of 10 years for repeat colonoscopy documented in their colonoscopy report.
Measure Steward	American Gastroenterological Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81 FR 77286). This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf*.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Gastroenterology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the removal of measure Q320: *Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients*, stating that there is no documented performance gap for screening patients over age 86, that peak colorectal cancer incidence occurs in patients aged 65–69, and that the measure lacks testing data at the individual or physician level to support its use.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: As indicated under Table C.3 of this Appendix, one commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), just over 800 individuals and groups out of the more than 7,000 gastroenterologists reported this measure and 33 percent were small practices.

Response: We thank the commenter for their feedback and acknowledge their concern regarding the removal of measure Q320: *Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients*. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures may address important aspects of care, the underlying quality actions are generally considered standard practice and offer limited opportunity for further improvement in clinical outcomes. Measure adoption is a statistic reviewed when identifying quality measures for removal and is included as part of the overarching criteria used for quality measure inventory refinements. Communication of procedure results and recommended follow-up should be a standard of care, which is reflected in the current MIPS data that shows that both collection types have been topped out for 10 years. We continue to encourage the development of new quality measures to fill important gaps in quality care that continue to drive high-quality outcomes.

Comment: One commenter supported removing measure Q320 from facility-based reporting programs because it inappropriately attributes clinician decisions to facilities. However, the commenter did not support removing the measure from MIPS because scores do not reflect true gastroenterology performance, it is the only colonoscopy-specific measure outside a QCDR, and it helps align quality with the Surveillance/Screening Colonoscopy episode-based cost measure. The commenter echoed the previous commenter above about experience data on reporting of this measure. The commenter stated that if CMS removes measure Q320 from MIPS, gastroenterologists who don't use a QCDR would lose the only colonoscopy-specific measure reportable via claims and MIPS CQM collection type. It would also reduce access to a widely available clinician-level colorectal cancer prevention quality measure while keeping the related cost accountability. This commenter and another commenter urged CMS to maintain topped-out or standard of care, GI-relevant measures when measure choice is limited and no clinically superior replacements are available using defined topped-out measure benchmarks where appropriate.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q320. We acknowledge the measure's role in supporting clear communication of follow-up intervals in adherence to USPSTF recommendations, promoting avoidance of unnecessary procedures and costs; however, the measure doesn't assess for

compliance. Therefore, the clinician may meet numerator compliance for all denominator eligible patients, but this would not indicate future appropriate use and screening. We acknowledge the commenters' concerns that measure Q320 is currently the only colonoscopy-specific quality measure reportable outside a QCDR. Although topped-out measures address important aspects of care, the underlying quality actions are generally considered standard practice and offer limited opportunity for further improvement in clinical outcomes. Removal of the measure does not preclude continuation of the underlying quality actions. While the measure was identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, the measure's consistently high performance indicates little variability in completion of this quality action. Please note that measure Q113: *Colorectal Cancer Screening* is available for the Medicare Part B Claims collection type for MVP reporting and assesses appropriate colorectal cancer screening at the clinician-level. We continue to encourage the development of new quality measures to fill important gaps in quality care that continue to drive high-quality outcomes.

Comment: Two commenters opposed removal of measure Q320, stating that the measure ensures adherence to USPSTF recommendations for a 10-year follow-up interval after a normal, high-quality colonoscopy in average-risk adults and promotes clear communication of follow-up recommendations to patients and referring clinicians and is appropriately attributed at the individual clinician level within MIPS. They noted that this measure is also included in the CQMC Gastroenterology core measure set.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q320. We acknowledge the measure's role in supporting clear communication of follow-up intervals in adherence to USPSTF recommendations, promoting avoidance of unnecessary procedures and costs; however, the measure doesn't assess for compliance. Therefore, the clinician may meet numerator compliance for all denominator eligible patients, but this would not indicate future appropriate use and screening. We endeavor to maintain alignment in measures across programs; however, for the purposes of MIPS, reporting this measure doesn't produce meaningful benchmarks allowing for distinctions in quality of care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44416), we are finalizing the removal of measure Q320 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.11 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	326
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Measure Steward	American Heart Association
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), at the measure steward's request because it will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Cardiology, Family Medicine, Internal Medicine, Skilled Nursing Facility

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: Two commenters opposed removal of measure Q326: *Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy* because this measure would result in only one atrial fibrillation-related measure in the MIPS quality measure inventory, measure Q392: *Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation*, which focuses on adverse events for an atrial fibrillation procedure that is only relevant to a subset of the overall atrial fibrillation population. One of these commenters suggested that CMS retain measure Q326 until CMS adopts a clinically appropriate successor measure focused on stroke risk reduction.

Response: We thank the commenters for their feedback. We acknowledge the concern that removal of measure Q326 would leave only one atrial fibrillation-related measure (Q392) in the MIPS quality inventory and that measure Q392 applies only to a subset of the atrial fibrillation population. However, as the measure steward is no longer supporting Q326, we are unable to continue implementation within MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44416 through 44417), we are finalizing the removal of measure Q326 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.12 Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	332
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
Measure Steward	American Academy of Otolaryngology – Head and Neck Surgery Foundation (AAO-HNSF)
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure is duplicative in clinical topic of measure Q331: *Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)*. Measure Q331 assesses patients with a diagnosis of acute viral sinusitis for receipt of antibiotics within 10 days of symptoms onset, highlighting inappropriate use of antibiotics in eligible patients. Measure Q331 is broader than measure Q332 as it encourages avoidance of prescribing any antibiotic for viral illnesses, capturing the patient populations found in both measures. Measure Q332 is narrower in scope, focusing only on patients with bacterial sinusitis appropriately receiving an antibiotic, impacting a smaller proportion of sinusitis cases.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Allergy/Immunology, Emergency Medicine, Family Medicine, Internal Medicine, Otolaryngology, Urgent Care

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the removal of measure Q332: *Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)*, stating that its narrow scope limits meaningful reporting for many otolaryngology practices. The commenter encouraged CMS to retain measure Q331 as a more broadly relevant alternative.

Response: We thank the commenter for supporting the removal of this measure from MIPS. We note that measure Q331 was not proposed for removal from MIPS.

Comment: One commenter strongly opposed removal of measure Q332 because it is a key tool for antimicrobial stewardship and resistance prevention. The commenter disagreed that measure Q332 is duplicative of measure Q331, noting that measure Q331 addresses whether to prescribe antibiotics at all for viral sinusitis, while measure Q332 addresses which antibiotic to prescribe for bacterial sinusitis, representing two distinct clinical decisions in mutually exclusive patient populations. The commenter argued that removing measure Q332 would create a critical stewardship gap by failing to address inappropriate broad-spectrum antibiotic use in patients who genuinely need treatment, particularly given that acute sinusitis is a common source of overly broad outpatient antibiotic prescribing. The commenter urged CMS to retain measure Q332 or clearly identify replacement measures that will promote appropriate outpatient antibiotic selection, and more broadly to preserve and expand antimicrobial stewardship–relevant measures to support national efforts by HHS and CDC to combat antimicrobial resistance.

Response: We agree that appropriate antibiotic prescribing is essential, and MIPS will continue assessing overuse through measure Q331. To maintain a streamlined yet robust measure set, we are retaining this overuse measure as a critical first element. Per AAO-HNSF guidelines, only about 50 percent of clinically diagnosed acute bacterial rhinosinusitis (ABRS) cases have positive bacterial cultures, and many resolve spontaneously, making randomized controlled trial (RCT)-based efficacy difficult to determine.[498] Amoxicillin (with or without clavulanate) is recommended for its safety, efficacy, low cost, narrow spectrum, and alignment with antimicrobial stewardship principles, rather than RCT outcomes. As this measure targets a subpopulation already covered by measure Q331, we maintain that these actions would be part of the same episode of care given that the choice of antibiotic would follow the decision to treat with an antibiotic. We therefore proposed its removal, while encouraging the measure steward to incorporate this aspect into measure Q331 for a more comprehensive assessment of appropriate ABRS care.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44417), we are finalizing the removal of measure Q332 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

---

T., Rosenfeld, R., Akrami, Z., & Dhepyasuwan, N. (2025). Clinical Practice Guideline: Adult Sinusitis Update. *Otolaryngology–Head and Neck Surgery, 173*, S1–S56. https://doi.org/10.1002/ohn.1344.

C.13 Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	350
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients regardless of age undergoing a total knee or total hip replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure.
Measure Steward	American Association of Hip and Knee Surgeons
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because it is a process measure. Removing this process measure will support the goal of prioritizing measures that improve patient outcomes and have meaningful impact. Additionally, this measure is not prescriptive to conservative therapy utilization; therefore, it only assesses for informed consent, which is a standard of care for any clinician. In the CY 2019 (83 FR 59763 through 59765) and CY 2020 (84 FR 62957) PFS final rules, we communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 77101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.1330(c)(1)(vii) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Orthopedic Surgery

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter indicated that measure Q350: *Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy* was reported primarily through MVPs with more than 2,500 of the over 4,000 reporting groups using the MVP reporting option. As indicated under Table C.3 of this Appendix, the commenter expressed concerns about the topped-out methodology as the basis for removing measures from MIPS. Similarly, a second commenter requested CMS retain this measure and apply the defined topped out benchmark.

Another commenter opposed removal of measure Q350, stating that it promotes meaningful shared decision-making and that removing it would further limit MIPS CQM options, particularly within the Improving Care for Lower Extremity Joint Repair MVP. The commenter noted that reducing measure availability disproportionately harms clinicians without CEHRT and specialists with few applicable measures.

Response: We thank the commenters for their feedback and acknowledge their concern regarding this measure. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures may address important aspects of care, the underlying quality actions are generally considered standard practice and; therefore, represent a relatively low bar for measuring quality performance, offering limited opportunity to drive or discern improvement in clinical outcomes. We appreciate the commenters' input on measure Q350. While the measure was identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, removing this process measure will better support the goal of prioritizing measures that improve patient outcomes.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44418), we are finalizing the removal of measure Q350 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.14 Children Who Have Dental Decay or Cavities

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	378
CMS eCQM ID:	CMS75v15
Collection Type:	eCQM
Measure Description:	Percentage of children, 1 - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.
Measure Steward:	Centers for Medicare & Medicaid Services
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), due to the robustness of the measure. This measure lacks a quality action that can be attributed to the clinicians reporting it, and as a result, the current scoring methodology for determination of measure achievement points for this measure is not a reflection of the quality of care provided. This measure focuses on incidence of tooth decay or cavities rather than the quality of care delivered, as patients will be attributed to clinicians based on encounter and not whether they have been involved in the patient's care. Therefore, it is likely they had no impact on the outcome being assessed. While tracking the incidence of tooth decay or cavities identifies the prevalence of the issue, it is not a reflection of the quality of care given, as currently specified, and does not promote meaningful dental care interventions that will drive improvements in oral health outcomes. The lack of an actionable quality assessment reduces the overall robustness of the measure.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Dentistry

We received no public comments on the proposed removal of this measure. For the reasons stated above and in the proposed rule (91 FR 44418), we are finalizing the removal of measure Q378 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.15 Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	384
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Patients aged 18 years and older who had surgery for primary rhegmatogenous retinal detachment who did not require a return to the operating room within 90 days of surgery.
Measure Steward:	American Academy of Ophthalmology
Measure Type:	Outcome
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Ophthalmology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.3 of this Appendix, one commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), this measure only had 154 individuals and groups out of the more than 11,000 ophthalmologists reporting the measure, with almost half classified as a small practice. A few commenters opposed removal based on topped-out status and stated there are limited measures in the Complete Ophthalmologic Care MVP and that retinal specialists face limited measure choice.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q384: *Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery* due to the topped-out lifecycle of the measure; however, in developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Measure adoption is a statistic reviewed when identifying quality measures for removal and is included as part of the overarching criteria used for quality measure inventory refinements. Given the measure's current performance data, no meaningful comparisons can be made to drive quality improvement, which is MIPS goal. The Complete Ophthalmologic Care MVP for 2027 will have 8 MIPS quality measures available for reporting across the Retinal Disease (5 measures), Advancing Health and Wellness (2 measures), and Experience of Care (1 measure) clinical groupings.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44418 through 44419), we are finalizing the removal of measure Q384 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.16 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	415
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.
Measure Steward:	American College of Emergency Physicians
Measure Type:	Efficiency
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because this measure has reached the end of the topped-out lifecycle (82 FR 53640) and has a limited opportunity to improve clinical outcomes. This measure's continued topped-out status is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks*, in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Emergency Medicine

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.3 of this Appendix, one commenter urged CMS to implement a more thorough and thoughtful process based on specific criteria when identifying whether a measure is topped out and potentially considered for removal from MIPS. Using data from the 2024 QPP Experience Public Use File (*https://data.cms.gov/quality-of-care/quality-payment-program-experience/data*), just under 2,000 out of the more than 25,000 emergency medicine physicians reported this measure with roughly 30 percent of them serving within a health professional shortage area; a similar percentage were also classified with safety-net status and a quarter were rural. A second commenter did not support removal of Q415 based on topped-out status.

Response: We thank the commenters for their feedback and acknowledge the concern regarding the removal of measure Q415: *Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older* due to the topped-out lifecycle of the measure. While this measure was identified as being eligible for the defined topped-out benchmark and may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. Measure adoption is a statistic reviewed when identifying quality measures for removal and is included as part of the overarching criteria used for quality measure inventory refinements. Removing this measure will better support the goal of prioritizing measures that promote meaningful quality reporting showing improvement in clinical quality care. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP for 2027 will have 6 MIPS quality measures available for reporting by emergency medicine clinicians.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44419), we are finalizing the removal of measure Q415 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.17 Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy

Category	Description
CBE # / eCQM CBE #:	N/A /N/A
Quality#:	430
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients, aged 18 years and older, who undergo a procedure under an inhalational general anesthetic, AND who have three or more risk factors for post-operative nausea and vomiting (PONV), who receive combination therapy consisting of at least two prophylactic pharmacologic antiemetic agents of different classes preoperatively and/or intraoperatively.
Measure Steward:	American Society of Anesthesiologists
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77675), because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this measure, 99.34 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.* For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Anesthesiology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed removal of measures Q430: *Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy* and Q463: *Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)* from MIPS, emphasizing the measures capture most anesthesia patients and reflect a core, clinically integrated component of anesthesia care. The commenter noted that PONV remains a common, clinically significant, and preventable complication that affects patient comfort, satisfaction, recovery, and resource use, and stated that high MIPS scores should not be interpreted as evidence that the underlying quality gap has been eliminated or that performance is uniform across the broader clinical population. The commenter indicated that their submissions showed far fewer facilities achieving very high performance compared with CMS data, suggesting discrepancies in measure definition, implementation, and data capture.

The commenter stated that removing measures Q430 and Q463 would increase administrative burden because the measures are already embedded in existing data-capture systems and workflows, while adopting the newly proposed Patient-Reported Experience with Anesthesia and IOH measures would require significant vendor engagement, system updates, and workflow changes over several months. They argued that inclusion of these new measures should not be viewed as replacing measures Q430 and Q463 and encouraged CMS to maintain the existing measures until anesthesia groups can transfer to reporting the two newly proposed measures. To ensure continuity and reporting flexibility as clinicians move from traditional MIPS to MVPs, the commenter encouraged CMS to retain measure Q430 either within traditional MIPS or, at a minimum, as an MVP-only measure in the Anesthesia MVP.

A second commenter opposed removal of measure Q430 because it would eliminate an anesthesia measure and create a significant and inequitable barrier to successful MIPS participation for anesthesia clinicians and groups. This would impact the number of quality measures available in the Patient Safety and Support of Positive Experiences with Anesthesia MVP and would result in a practice needing to use a QCDR measure to satisfy the reporting requirement.

Response: We thank the commenters for their feedback and acknowledge their concern regarding the removal of anesthesia measures. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures address important aspects of care, the underlying quality actions are generally considered standard practice; the continued high-performance rates don't allow for meaningful benchmarking, offering limited opportunity for further improvement in clinical outcomes. We appreciate the commenter's input on measures Q430 and Q463. While the measures were identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, the measures' consistently high performance indicates little variability in completion of this quality action across reporting within MIPS. We recognize changes to the measure inventory may lead to system rework and updating; however, we don't want to maintain measures in MIPS that are no longer showing actionable data to drive quality care. To support continued robust anesthesia-related reporting, as the commenter stated above, we have proposed two new MIPS CQMs under Tables A.8 (*Patient-Reported Experience with Anesthesia*) and A.9 (*Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases*) of this Appendix, maintaining the current number of four available MIPS CQMs.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44420), we are finalizing the removal of measure Q430 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.18 Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	463
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	Percentage of patients aged 3 through 17 years, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.
Measure Steward:	American Society of Anesthesiologists
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2018 Quality Payment Program final rule (82 FR 53966 through 53975), because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this measure, 98.99 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate is based on the current 2026 MIPS benchmarking data located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.* For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Anesthesiology

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed removal of measure Q463: *Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)* because it would eliminate an anesthesia measure and create a significant and inequitable barrier to successful MIPS participation for anesthesia clinicians and groups. This commenter also opposed removal of measure Q430: *Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy* with full comments under Table C.17 of this Appendix. This measure's removal would impact the number of quality measures available in the Patient Safety and Support of Positive Experiences with Anesthesia MVP and would result in a practice needing to use a QCDR measure to satisfy the reporting requirement. This commenter and a second commenter recommended maintaining measures Q430 (under Table C.17 of this Appendix) and Q463 as MVP-only measures.

Response: We thank the commenters for their feedback and acknowledge their concern regarding the removal of anesthesia measures. In developing this proposal, we sought to balance meaningful quality reporting with the resources and operational demands required to collect measures that may not meaningfully inform performance. Although topped-out measures address important aspects of care, the associated quality actions are generally considered standard practice and offer limited opportunity to further improve clinical outcomes. While the measures were identified as being eligible for the defined topped-out benchmark and, therefore eligible to receive over 7 points, the measure's consistent high performance indicates little variability in completion of this quality action. The removal of the measure does not preclude continuation of the underlying quality actions. To support continued robust anesthesia-related reporting, we are finalizing two new anesthesia measures under Tables A.8 and A.9 of this Appendix, maintaining the current number of 4 available MIPS CQMs.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44420), we are finalizing the removal of measure Q463 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.19 Functional Status Change for Patients with Neck Impairments

Category	Description
CBE # / eCQM CBE #:	3461 / N/A
Quality#:	478
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with neck impairments. The change in FS is assessed using the FOTO Neck FS PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2020 Quality Payment Program final rule (84 FR 63205 through 63213), because this measure is duplicative of the Functional Improvement for Patients with Neck Impairments measure being finalized in Table A.2 of this Appendix. Measure Q478 is specific to neck impairments and restricts clinicians to the use of the proprietary tool FOTO Neck FS PROM or a manual crosswalk for numerator assessment. The new measure in Table A.2 of this Appendix is a more comprehensive patient-reported outcome-based performance measure. The new measure allows the use of various validated assessment tools, such as the Neck Disability Index, PROMIS Pain Interference, or equivalent tools. The new measure focuses on clinically meaningful outcomes by assessing improvement against the P-MCI, a patient-specific, risk-adjusted threshold. This measure incorporates a risk adjustment model that will improve feasibility of reporting as all information to calculate performance will be provided by the measure steward.
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Chiropractic Medicine, Orthopedic Surgery, Physical Therapy/Occupational Therapy

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: As indicated under Table C.4 of this Appendix, a few commenters supported the proposal to replace the FOTO functional status measures with the new functional improvement measures in Table A of this Appendix.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44421), we are finalizing the removal of measure Q478 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

C.20 Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)

Category	Description
CBE # / eCQM CBE #:	3568 / N/A
Quality#:	483
CMS eCQM ID:	N/A
Collection Type:	MIPS CQM
Measure Description:	The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM Patient Reported Outcome Measure (PROM) a comprehensive and parsimonious set of 11 patient-reported items - to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the clinician or practice.
Measure Steward:	The American Board of Family Medicine
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale for Removal:	We proposed the removal of this quality measure from MIPS, finalized in the CY 2020 Quality Payment Program final rule (84 FR 63205 through 63213), because the limited adoption of this quality measure does not allow for the creation of a benchmark after being in the program for two consecutive CY performance periods. For more information on benchmarks, see the MIPS 2026 Quality Benchmarks User Guide at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3611/2026-Quality-Benchmarks-User-Guide.pdf*. The current 2026 MIPS benchmarking data is located at *https://qpp.cms.gov/reporting-requirements/measures-activities/benchmarks.*
In the Circumstance the Measure Was Retained:	There were no substantive changes for this measure. If the measure was not finalized for removal in the CY 2027 PFS final rule, it would have been added back into the applicable finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
Proposed for Removal from the Following Specialty Sets:	Family Medicine, Internal Medicine

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported removing measure Q483: *Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)*, noting concerns about whether the measure would meaningfully lead to improvements in care, a lack of evidence to demonstrate such improvement, and the instrument lacking face validity. The commenter stated that the measure is burdensome to implement in a general internal medicine practice.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: Many commenters opposed removing measure Q483, noting that CMS already uses alternative approaches that could achieve benchmarking goals without eliminating this measure. They emphasized that the PCPCM PRO-PM aligns with the rule's focus on prevention, chronic disease management, longitudinal relationships, and outcomes-based, prospective payment, and that its removal would create a critical gap just as payment reforms most need this tool.

The commenters noted no concerns about the PCPCM's validity, reliability, clinical relevance, or patient burden. The commenters cited the measure is included in the Value in Primary Care MVP and primary care specialty sets, and the ACO Primary Care Flex Model. The measure is CBE-endorsed and a high-priority measure.

They also observed that limited adoption and missing benchmarks are common early on. Over 30 percent of current MIPS measures lack national benchmarks. CMS can use performance-period benchmarks, and scoring floors encourage reporting before benchmarks form; removing the broader 3-point floor in 2023 may have dampened adoption and slowed benchmark development. One commenter urged CMS to retain this measure and consider alternative scoring approaches such as a scoring floor.

The National Academies of Sciences, Engineering, and Medicine (NASEM) Standing Committee on Primary Care calls for metrics on core primary care functions (access, continuity, comprehensiveness, coordination, person-centeredness). PCPCM is the only validated, low-burden patient-reported measure of these kind and commenters believed its removal would undercut the "Redesigning Primary Care to Make America Healthy Again" initiative. The commenters recommended CMS retain measure Q483, apply a defined scoring floor for 2 performance periods, and keep it in the Value in Primary Care MVP and primary care specialty sets.

Response: We appreciate the commenters' feedback. While we agree that the measure concept is clinically relevant and aligned with core primary care functions important to the provision of high-quality person-centered care, removal of the measure does not preclude continuation of the underlying quality actions. Regardless of whether a clinician or group is formally assessed on this aspect of care, it should continue to be performed as a component of high-quality care. While commenters suggest relying on performance-period benchmarks and defined scoring floors to encourage ongoing reporting, further continuation of this measure

under the current conditions would prolong reporting burden without reasonable assurance that adequate adoption and benchmarking will be achieved. In addition, the implementation and reporting burden for both clinicians and patients, as well as the measure's non-proportional analytic, can make it challenging to assess performance consistently across all clinician types. We also note that removal would maintain alignment across CMS reporting programs as this measure has been removed from the ACO Primary Care Flex Model.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44421), we are finalizing the removal of measure Q483 from MIPS and applicable specialty sets as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Table Group D: Finalized and Finalized with Modification Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

The D Tables within this final rule provide the substantive changes finalized for the MIPS quality measures for CY 2027. We requested comments on these substantive changes. Two measures have finalized substantive changes that will result in a new benchmark. All measures with substantive changes are discussed in detail in the tables below. In addition, measures that are endorsed by a CBE are shown in Table Group D of this Appendix as follows: CBE # / eCQM CBE #.

We note that some MIPS quality measures available in traditional MIPS and MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP), specifically the inclusion of such measures in the APP Plus measure set, as finalized in the CY 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection types solely applicable for purposes of the APP Plus measure set (Medicare Clinical Quality Measures for Accountable Care Organizations (ACOs) Participating in the Medicare Shared Savings Program (Medicare CQMs) collection type and newly finalized Medicare Electronic Clinical Quality Measures for ACOs Participating in the Medicare Shared Savings Program (Medicare eCQMs) collection type as described in section IV.A.4.d.(1)(c)(v) of this final rule) are also specified as a collection type available for such relevant measures described in Table Group D.

Changes made to denominator code sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2027 may not be identified within this final rule due to their later publication. Coding revisions to the denominator may be postponed until CY 2028, if measure steward review and their ability to implement the coding changes are impacted due to the timing of 2027 CPT and ICD-10 updates. The 2027 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types on the QPP website at *https://qpp.cms.gov*.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2027 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has been added to all quality measure specifications in the form of a revised 'Instructions Note' to clearly identify if telehealth encounters are allowed for denominator eligibility regardless of changes in coding or billing practices that may occur. Eligibility of telehealth encounters will be based on the intent of the measure and those settings that are appropriate for inclusion.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow for the most accurate implementation.

As indicated in the introduction to Table Group B of this Appendix, comments on measures that have substantive changes that are not related to what was proposed are considered out of scope and are not included in this final rule. In addition, requested changes on previously finalized measures that were not proposed under the CY 2027 PFS proposed rule are also out of scope to this final rule.

Section 1848(q)(2)(D)(i)(II)(cc) of the Act requires all substantive measure changes to be proposed and identified through notice-and-comment rulemaking. We have previously established criteria that will apply when we are considering making substantive changes to a quality measure (81 FR 77137 and 86 FR 65441 through 65442). On an annual basis, we review the established MIPS quality measure inventory to identify appropriate updates to the measures, based on, but not limited to, interested party feedback, known issues, and clinical guideline updates, for measure steward consideration. The measure steward is responsible for the maintenance of a measure and serves as the primary contact for suggested revisions for possible implementation in future years.

Commenters who requested clarifications on how to implement previously finalized quality measures should contact the QPP Service Center by emailing QPP@cms.hhs.gov, submitting a QPP Service Center ticket, or calling 1-866-288-8292 (Monday-Friday, 8 a.m. – 8 p.m. ET).

D.1 Diabetes: Glycemic Status Assessment Greater Than 9%

Category	Description
CBE # / eCQM CBE #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had a glycemic status assessment (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) > 9.0% during the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types. **Updated logic: For the eCQM collection type: Revised:** to prioritize identifying numerical glycemic status results over null values.
Measure Steward:	National Committee for Quality Assurance
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to update the logic of the eCQM collection type to ensure clinically meaningful data is prioritized for inclusion in the measure, better aligning with the measure intent. We also proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q001: *Diabetes: Glycemic Status Assessment Greater Than 9%* to prioritize numerical glycemic status results over null values.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44422), we are finalizing the changes to measure Q001 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.2 Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	102
CMS eCQM ID:	CMS129v16
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.
Substantive Change:	**Updated measure logic and logic definitions: For the eCQM collection type: Added:** Gleason Grade Group and anatomical site specificity for tumor staging. **Updated value set/coding: For the eCQM collection type: Added:** two direct reference codes representing Gleason Grade Group and value set 'Prostate Anatomical Site' (2.16.840.1.113762.1.4.1248.411). **Updated definition: For the MIPS CQM collection type**: **Added:** PET/CT, Ga-68 PSMA-11, F-18 flotufolastat PSMA PET/CT, PET/MRI (full body imaging) to 'Bone Scan'.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	For the eCQM collection type, we proposed the addition of Gleason Grade Group and anatomical site specificity for tumor staging to facilitate the capture of low or very low risk of prostate cancer. With this addition to the eCQM, we also proposed revising the measure logic to include coding that will capture Gleason Grade Group as an option for assessing prostate cancer risk, as well as the addition of value set 'Prostate Anatomical Site,' which will ensure anatomical site specificity for tumor staging. For the MIPS CQM collection type, we proposed the addition of PET/CT, Ga-68 PSMA-11, F-18 flotufolastat PSMA PET/CT imaging, and PET/MRI (full body imaging) to the measure, to align with guideline-directed avoidance of advanced imaging related to low or very low risk prostate cancer.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported reducing low-value imaging but opposed including these newer molecular imaging modalities in measure Q102: *Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients* at this time because their role in evaluating prostate cancer is still evolving. Labeling these tools as overuse now could discourage clinically appropriate imaging for select low-risk patients who may still have metastatic disease and require individualized assessment. The commenter urged CMS to delay including PSMA PET and other advanced imaging in measure Q102 until there is stronger clinical consensus and clearer guidance to avoid penalizing appropriate patient care.

Response: We thank the commenter for their feedback. We acknowledge the commenter's request that the PSMA PET[499] and other advanced imaging be removed; however, the measure steward refined the list to include appropriate imaging for clarity and purposes of reporting this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44423), we are finalizing the changes to measure Q102 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[499] Fendler, W. P., Eiber, M., Beheshti, M., et al. (2017). 68Ga-PSMA PET/CT: Joint EANM and SNMMI Procedure Guideline for Prostate Cancer Imaging: Version 1.0. *European Journal of Nuclear Medicine and Molecular Imaging, 44*, 1014–1024. https://doi.org/10.1007/s00259-017-3670-z.

D.3 Documentation of Current Medications in the Medical Record

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	130
CMS eCQM ID:	CMS68v16
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.
Substantive Change:	**Updated value set/coding**: **For the eCQM collection type: Revised:** Direct Reference Code (DRC) "Acute health crisis (finding)" (SNOMEDCT Code (705016005)) to value set 'Acute Health Crisis' (OID: 2.16.840.1.113762.1.4.1248.429) to allow for additional conditions to qualify for the exception. **Updated value set/coding**: **For the eCQM collection type: Revised:** 'Encounter to Document Medications' (2.16.840.1.113883.3.600.1.1609) to remove CPT code 99211 and add CPT code 92622 as outlined in the previous EKI.[500]
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the coding for the eCQM collection type to ensure the measure includes additional coding for the denominator exception, aligning with measure intent and allowing for mapping to equivalent appropriate clinical circumstances. Additionally, the encounter coding has been revised to ensure the appropriate patient population is being captured in the denominator for assessment.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q130: *Documentation of Current Medications in the Medical Record* to expand the SNOMEDCT code set to allow for the additional exceptions. One commenter supported the substantive changes and continued to recommend that we define "Acute Health Crisis" clearly due to the importance of accurate medication reconciliation for patients with multimorbidity and polypharmacy.

Response: We thank the commenters for supporting the substantive changes to this measure. We acknowledge the request for a clearer definition of "acute health crisis" and will review and discuss this revision for possible implementation in future years. The value sets within the measure specification will contain all coding applicable to each measure component.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44424), we are finalizing the changes to measure Q130 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[500] See eCQM Known Issue (EKI) #39 at https://oncprojectracking.healthit.gov/support/browse/EKI-39.

D.4 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	134
CMS eCQM ID:	CMS2v16
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types. **The measure description is revised to read: For the eCQM collection type:** Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented from the date of the screening to two days after the date of the qualifying encounter or an active depression medication or active depression management intervention was active or prescribed at any time on the date of qualifying encounter. **Updated definition: For the eCQM collection type: Added:** Active Depression Medication or Active Depression Management Intervention Documentation that patient is actively receiving interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options. **Updated guidance: For the eCQM collection type: Added:** clarifying language on screening tool to be used for screening a 17-year-old, and which screening should be used to satisfy the numerator. **The measure numerator is revised to read: For the eCQM collection type:** Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented from the date of the screening to two days after the date of the qualifying encounter or an active depression medication or active depression management intervention was active or prescribed at any time during the qualifying encounter. **Updated numerator definition: For the MIPS CQM, Medicare CQM, and the Medicare Part B Claims Measure collection types: Added:** Prior screening within performance period: Patient previously screened by another clinician using an age-appropriate standardized depression screening tool with documented results within the performance period AND if positive, a follow-up plan is documented. **Updated denominator exception: For the MIPS CQM, Medicare CQM, and the Medicare Part B Claims Measure collection types: Added:** Screening for depression not completed, previous patient screening with results documented within performance period.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	For the eCQM collection type, we proposed to expand the numerator so that an active depression medication or depression management intervention that is prescribed or in place at any time on the date of the qualifying encounter may meet the numerator quality action.[501] We proposed to revise the language in the description, definitions, and numerator statement to reflect the proposed revision and align with measure logic. We also proposed clarifying the screening tools that may be used to satisfy the measure for patients who are 17 years old at the start of the measurement period, as this age group may fall into a transitional category requiring unique considerations for tool selection. For the MIPS CQM, Medicare CQM, and Medicare Part B Claims Measure collection types, we proposed adding a new denominator exception for patients with documentation of being previously screened, with a follow-up care plan documented if appropriate, in accordance with the measure requirements, by another clinician within the performance period to enhance team-based, coordinated, and patient-centered care processes between clinicians.[502]

J., Kutcher, S., Malus, M., Sacks, D., Waslick, B., & Sarvet, B. (2018). Guidelines for Adolescent Depression in Primary Care (GLAD-PC): Part I. Practice Preparation, Identification, Assessment, and Initial Management. *Pediatrics*, *141*(3), e20174081. https://doi.org/10.1542/peds.2017-4081.

[502] Department of Veterans Affairs, & Department of Defense. (2022). VA/DoD Clinical Practice Guideline for the Management of Major Depressive Disorder (Version 4.0). https://www.healthquality.va.gov/guidelines/MH/mdd/VADODMDDCPGFinal508.pdf.

Category	Description
	We also proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the substantive changes to measure Q134: *Preventive Care and Screening: Screening for Depression and Follow-Up Plan* but expressed concern that differences between the eCQM and MIPS CQM requirements create unnecessary documentation burden and introduce performance variation unrelated to care quality. One of the commenters supported the proposed denominator exception for a patient that was previously screened within the same performance year but noted that it was not proposed for the eCQM collection type. Another commenter indicated the eCQM allows an active depression medication or an active depression management intervention to satisfy the follow-up requirement, while the MIPS CQM accepts only documentation of a follow-up plan. Commenters recommended aligning the eCQM and MIPS CQM criteria to reduce burden, improve consistency, and better represent real clinical pathways for depression identification and management.

Response: We thank the commenters for supporting the substantive changes to this measure. We reviewed and discussed this revision for all collection types; however, these revisions are unnecessary for the eCQM collection type, where the measure logic, and patient-based structure, already address and resolve the issue. The additional language and measure component are needed for appropriate implementation of the MIPS CQM, Medicare CQM, and the Medicare Part B Claims Measure collection types as they don't contain the same measure logic as the eCQM collection type. Therefore, differences in measure specification language and requirements between collection types reflect nuances in implementation within MIPS and address the abilities and constraints specifically inherent to each collection type.

Comment: One commenter appreciated CMS' proposed denominator exception for depression screening but stated it does not fully fix implementation problems for ACOs, especially when aggregating data across multiple practices and EHRs. The commenter recommended clarifying across all reporting options that one depression screen with follow-up (if positive) at any time in the performance period is sufficient, using the most recent screen if multiple exist, which would eliminate the need for the denominator exception. Similarly, another commenter stated the denominator exception for prior screenings within the performance period adds unnecessary complexity and instead recommended updating the numerator to: "Patients screened for depression during the measurement period using an age-appropriate standardized tool and if positive, a follow-up plan is documented on the date of or up to two days after the positive screening." The commenter also requested removal of the requirement that screening occur on the date of the encounter or up to 14 days prior, because tying screening to denominator-eligible encounters relies on billing rules rather than clinical relevance and penalizes clinicians when screening is done at non-eligible encounters despite meeting best practices.

Response: We thank the commenters for their feedback. We will review and discuss this revision for possible implementation in future years as it would be substantive in nature and would need to go through public notice and comment. Regarding implementation at the ACO level, measure Q134 has explicitly defined the timeframe and quality actions necessary to meet the numerator for this once per performance period patient level measure to ensure screenings, results, and care plans are appropriately aligned with best practices. As each collection type may have slight nuances in implementation, this revision has created harmonized specifications and clear guidance on handling multiple encounters and multiple screenings.

Comment: One commenter thanked CMS for expanding the eCQM numerator criteria for measure Q134 by making active depression or active depression management intervention active or prescribed. However, the commenter asked CMS to continue looking at adding CPT codes for measure qualifying encounter expansion. The commenter asked CMS through help desk tickets to consider post-partum visit codes for inclusion. The commenter further asked CMS to consider expanding screening exclusions or exceptions for patients that are unable to be screened as they may be cognitively impaired, non-verbal, or have other disabilities that may prevent them from accurate depression screening. Another commenter supported the substantive changes and requested CMS add CPT code 97168 to the denominator, noting that occupational therapy re-evaluations may identify functional or psychosocial changes that warrant depression screening and follow-up.

Response: We thank the commenters for supporting the substantive changes to this measure. We will review and discuss this revision for possible implementation in future years as it would be substantive in nature and would need to go through public notice and comment. We note this measure contains other occupational therapy codes within the measure's denominator eligible encounters. Therefore, patients being reevaluated should already be found within the denominator and assessed for depression screening; however, this doesn't preclude the quality action from being completed as a matter of high-quality care based on clinician judgement at any encounter.

Comment: One commenter did not support the proposed eCQM requirement that depression medication or depression management be active or prescribed only on the date of the qualifying encounter and instead recommended allowing documentation on or before that date to avoid unnecessary re-documentation that does not improve care. The commenter requested clarification of what qualifies as an "active depression management intervention" within the eCQM and recommended that a referral for behavioral health evaluation count as an appropriate intervention when clinically indicated. The commenter also

noted that requiring a behavioral health evaluation within 2 days of the encounter is often impractical due to cross-organization care and scheduling limitations and therefore requested clear and flexible eCQM documentation requirements that accommodate care delivered across multiple organizations.

Response: We thank the commenter for their feedback. We encourage the commenter to view the revised measure specification on the eCQI Resource Center (*https://ecqi.healthit.gov/*) for specific information; however, we note that the measure was updated to include a definition for 'Active Depression Medication or Active Depression Management Intervention' as noted in the Substantive Change row in Table D.4 above. We will review and discuss suggested revisions and clarifications for possible implementation in future years as it would be substantive in nature and would need to go through public notice and comment.

Comment: One commenter requested clarification regarding whether and how the exception for patients with documentation of being previously screened would be applied within the Medicare CQM collection methodology.

Response: As stated in the Substantive Change row in Table D.4 above, the numerator definition and denominator exception will be updated within the Medicare CQM collection type. Measure specifications will be posted prior to January 1, 2027.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44425 through 44426), we are finalizing the changes to measure Q134 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.5 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care

Category	Description
CBE # / eCQM CBE #:	0563 / N/A
Quality#:	141
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.
Substantive Change:	**Measure description revised to read: For all collection types:** Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within 7 days after the patient encounter when IOP was assessed. **Updated denominator exclusions: For all collection types: Added:** 1. Eyes with absolute glaucoma blindness 2. Pre-existing visual acuity findings include: Count fingers (CF or FC), Hand motion (HM), Light perception (LP), No light perception (NLP) **Updated numerator: For all collection types: Added:** a plan of care was documented within 7 days after the patient encounter when IOP was assessed. **Updated numerator definition**: **For all collection types: Revised:** definition for Plan of Care to include: The plan of care must be documented within 7 days after the patient encounter when IOP was assessed. **Updated numerator options: For all collection types: Revised:** **Performance Met:** Glaucoma plan of care documented within 7 days after the patient encounter when IOP was assessed
Measure Steward:	American Academy of Ophthalmology
MIPS Core Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to update multiple components of the measure for all collection types to align with the added numerator definition that specifies the timing of when the plan of care must be documented in the patient's medical record after the IOP is assessed. This will ensure timely and optimal patient care across clinicians for measure performance, as well as reduce variability in how the measure is applied. We proposed adding denominator exclusions for patients with absolute glaucoma blindness or specific visual acuity findings because they represent end-stage clinical conditions characterized by absolute blindness or profound vision loss, in which further IOP reduction is unlikely to provide meaningful benefit in preserving visual function or slowing glaucoma progression. The exclusions will align with the intent of the measure to assess IOP management in support of preserving remaining visual function and limiting disease progression and will refine the denominator to reflect patients who may reasonably benefit from vision-preserving IOP management and related care planning.[503]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed modification to require a glaucoma plan of care to be documented within 7 days after the patient encounter when IOP was assessed for measure Q141: *Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care*. One commenter supported the substantive changes to the denominator exclusion.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: One commenter supported the substantive changes for measure Q141, but requested clarification on whether the exclusion criteria must be met in both eyes.

Response: We thank the commenter for supporting the substantive changes to this measure. For implementation purposes, it would be expected to assess each patient for eligibility and numerator compliance based upon each eye in accordance with the intent to maintain the IOP within a range to ensure any visual field loss is unlikely to significantly reduce a patient's health-related quality of life. Therefore, if a patient meets denominator eligibility based on one or both eyes, it would be expected that

[503] Kastner, A., & King, A. J. (2020). Advanced Glaucoma at Diagnosis: Current Perspectives. *Eye (London, England)*, *34*(1), 116–128. https://doi.org/10.1038/s41433-019-0637-2.

they are assessed for the quality action at that level (one or both eyes); ensuring the patient has received appropriate and complete care for their eyes.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44427), we are finalizing the changes to measure Q141 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.6 Oncology: Medical and Radiation - Plan of Care for Pain

Category	Description
CBE # / eCQM CBE #:	0383 / N/A
Quality#:	144
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Substantive Change:	**Updated denominator note: For Submission Criteria 2: Added:** definition for lookback period in the instance a code has a billing date different from the face-to-face encounter.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding a defined look-back window to identify the encounter at which the plan of care to address pain should be documented for numerator assessment. This will clarify implementation of the numerator assessment, which will ensure reporting is appropriate and consistent across clinician submissions. Addressing treatment-induced pain improves patients' health, quality of life, and long-term survival,[504] and reduces interruption in radiation therapy due to pain, thereby ensuring treatment compliance.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44428), we are finalizing the changes to measure Q144 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[504] Konopka-Filippow, M., Polityńska, B., Wojtukiewicz, A. M., & Wojtukiewicz, M. Z. (2025). Cancer Pain: Radiotherapy as a Double-Edged Sword. *International Journal of Molecular Sciences*, *26*(11), 5223. https://doi.org/10.3390/ijms26115223.

D.7 Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure

Category	Description
CBE # / eCQM CBE #:	0114 / N/A
Quality#:	167
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older undergoing isolated coronary artery bypass graft (CABG) surgery (without pre-existing renal failure) who develop postoperative renal failure or require dialysis.
Substantive Change:	**Updated definitions: Added:** **Denominator:** **Baseline serum creatinine** – Most recent creatinine level obtained prior to the operating room entry **Numerator:** **Postoperative period** – Period begins upon operating room exit and continues to discharge from the hospital after cardiac surgery.
Measure Steward:	Society of Thoracic Surgeons
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed adding two definitions to clarify implementation of the denominator exclusion for documented history of baseline serum creatinine and the numerator assessment timeframe for patients who develop postoperative renal failure or require dialysis. The first definition (baseline serum creatinine) will ensure the denominator eligible patient population is appropriately identified, and the second definition (postoperative period) will clarify the numerator assessment timeframe. These additions will ensure appropriate and consistent implementation across clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter strongly supported the substantive changes to measure Q167: *Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure*. The commenter explained these changes were intended to provide greater clarity and promote consistent implementation across clinician submissions. The proposed definitions for baseline serum creatinine and the postoperative period more clearly define the appropriate patient populations and assessment timeframes while maintaining the measure's clinical intent.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44429), we are finalizing the changes to measure Q167 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.8 Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration

Category	Description
CBE # / eCQM CBE #:	0115 / N/A
Quality#:	168
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older undergoing isolated coronary artery bypass graft (CABG) surgery who require a return to the operating room (OR) for mediastinal bleeding with or without tamponade, unplanned coronary artery intervention (native vessel, graft or both), valve dysfunction, aortic reintervention or other cardiac reason during the current hospitalization.
Substantive Change:	**Updated definition: Added:** **Postoperative period –** Period for surgical re-exploration begins upon OR exit and continues to discharge from the hospital after cardiac surgery.
Measure Steward:	Society of Thoracic Surgeons
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed adding a definition of postoperative period to clarify the numerator assessment timeframe, which will ensure appropriate and consistent implementation across clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter strongly supported the substantive changes to measure Q168: *Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration.*

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44429), we are finalizing the changes to measure Q168 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.9 Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	176
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	**The measure numerator is revised to read:** Patients for whom any record of TB testing is documented or performed (PPD, Tspot or QuantiFERON-TB Gold Plus) in the medical record in the 12 months preceding the biologic and/or immune response modifier prescription.
Measure Steward:	American College of Rheumatology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed changes to the measure numerator to clarify the appropriate tests for TB screening to meet the numerator quality action. This revision will ensure the intent of the measure was met and numerator compliance is consistently assessed across all clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q176: *Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy*. The commenter supported CMS' proposed clarification of which TB tests count toward the numerator, so that only validated tests are recognized, performance is measured consistently, and clinicians using guideline-concordant screening are appropriately credited. The commenter recommended that both the Interferon-Gamma Release Assay (IGRA) and Tuberculin Skin Test (TST) remain specified as acceptable tests and urged CMS to maintain the measure's clinical integrity and support appropriate pre-treatment TB screening.

Response: We thank the commenter for their feedback. We acknowledge the commenter's request that the final specifications fully capture that both IGRA and TST remain specified as acceptable tests; however, the measure steward refined the list to include appropriate TB screenings for clarity and purposes of reporting this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44430), we are finalizing the changes to measure Q176 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.10 Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	178
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 18 years and older with two or more diagnoses of rheumatoid arthritis (RA) at least 90 days apart for whom a functional status assessment was performed at least once during the performance period.
Substantive Change:	**The measure title is revised from Rheumatoid Arthritis (RA): Functional Status Assessment to:** Rheumatic Disease: Functional Status Assessment. **The measure description is revised to read:** Percentage of patients aged 18 years and older with two or more encounters with a diagnosis of rheumatoid arthritis (RA), psoriatic arthritis (PsA), or systemic lupus erythematosus (SLE) at least 90 days apart for whom a functional status assessment was performed at least once during the performance period. **Updated intent and clinical applicability: Revised:** to include PsA and SLE. **The measure denominator is revised to read:** Patients aged 18 years and older with two or more RA, PsA, or SLE diagnoses documented at least 90 days apart with at least one encounter with an RA, PsA, or SLE diagnosis occurring during the performance period and an additional encounter with an RA, PsA or SLE diagnosis occurring in the performance period or prior performance period. **Updated denominator criteria: Revised:** to include diagnosis coding for PsA and SLE. Added PsA and SLE to the additional encounter criteria. **Updated denominator definition: Revised:** definition for additional encounter to include PsA and SLE. **Updated numerator definition: Revised:** definition for functional status assessment to include PsA and SLE.
Measure Steward:	American College of Rheumatology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise multiple components of this measure by adding psoriatic arthritis (PsA) or systemic lupus erythematosus (SLE) to ensure that all patients diagnosed with rheumatic disease are included in the measure's denominator. The addition of PsA and SLE to the RA measure improves the comprehensiveness of the measure, aligns with shared disease characteristics and treatment approaches, and ensures appropriate care across rheumatic diseases. In the event the proposed substantive change(s) were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for the creation of a performance period benchmark, a new benchmark will be used for scoring.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44431), we are finalizing the changes to measure Q178 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.11 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
CBE # / eCQM CBE #:	0565 / 0565e
Quality#:	191
CMS eCQM ID:	CMS133v15
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	**Updated value set/coding**: **For the eCQM collection type: Updated:** to a single value set for significant ocular conditions denominator exclusion.
Measure Steward:	American Academy of Ophthalmology
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to replace the individual condition specific value sets for the ocular conditions denominator exclusion with a single value set of significant ocular conditions to streamline implementation.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44431), we are finalizing the changes to measure Q191 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.12 Controlling High Blood Pressure

Category	Description
CBE # / eCQM CBE #:	NA / N/A
Quality#:	236
CMS eCQM ID:	CMS165v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types.
Measure Steward:	National Committee for Quality Assurance
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44432), we are finalizing the changes to measure Q236 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.13 Radical Prostatectomy Pathology Reporting

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	250
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status.
Substantive Change:	**Updated denominator exclusion**: **For all collection types: Removed:** Specimen site other than anatomic location of prostate. **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic location of prostate.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to move the denominator exclusion for "Specimen site other than anatomic location of prostate" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44432), we are finalizing the changes to measure Q250 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.14 Dementia: Education and Support of Caregivers for Patients with Dementia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	288
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Substantive Change:	**The measure description is revised to read:** Percentage of patients with dementia whose caregiver(s), who are not part of the licensed care team, were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months. **Updated intent and clinician applicability: Added:** whose caregiver(s), who are not part of the licensed care team, were provided with education on dementia disease. **The measure numerator is revised to read:** Patients with dementia whose caregiver(s), who are not part of the licensed care team, were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Measure Steward:	American Academy of Neurology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of this measure to clarify that the education and support required as part of the numerator quality action is intended for caregivers who are not part of the licensed clinical care team. Consistent with the measure's intent, educating caregivers that are not part of the licensed care team recognizes their essential role in patient care, improves patient-centered care outcomes, enhances caregiver well-being, and strengthens the overall continuity of care across both formal and informal settings.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the substantive changes to measure Q288: *Dementia: Education and Support of Caregivers for Patients with Dementia.* One commenter stated that the measure revisions further recognize unpaid caregivers' essential role in patient care and was grateful for this update. One of the commenters recommended clarifying who is considered an unlicensed caregiver and encouraged future inclusion of multicomponent caregiver supports such as counseling, training, and connections to community services.

Response: We thank the commenters for supporting the substantive changes to this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44433), we are finalizing the changes to measure Q288 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.15 Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	291
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.
Substantive Change:	**Updated denominator criteria: Added:** coding for physical therapy.
Measure Steward:	American Academy of Neurology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed adding physical therapy coding as part of the denominator criteria for this measure as it is clinically appropriate for this clinician type to assess patients with a diagnosis of PD for cognitive impairment or dysfunction. Physical therapists play a critical role in identifying functional limitations linked to cognitive decline and tailoring interventions accordingly. These codes recognize that cognitive dysfunction significantly influences physical function and safety, and they integrate the expertise of physical therapists into the multidisciplinary care of PD.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter urged CMS to ensure that expanding clinician eligibility to physical therapists does not blur distinctions between cognitive screening and specialized cognitive interventions for measure Q291: *Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease*. The commenter stated that such interventions require training and expertise not typically covered in physical therapist education and encouraged CMS to consider safeguards that maintain discipline-appropriate care and scope-of-practice standards.

Response: We thank the commenter for the feedback on this measure and for highlighting the importance of maintaining clear distinctions between cognitive screening and specialized cognitive interventions. We acknowledge the commenter's concerns regarding scope of practice and the need to ensure that clinicians performing specialized cognitive interventions have appropriate training and expertise; however, clinicians reporting this measure would need to meet all requirements as specified for numerator compliance. The measure steward has approved inclusion of all added physical therapy coding for this measure, allowing for it to be at the clinician's discretion to choose to report the measure based upon applicability to their scope of care. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44433), we are finalizing the changes to measure Q291 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.16 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	317
CMS eCQM ID:	CMS22v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / MIPS CQM
Current Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.
Substantive Change:	**Updated denominator criteria: For all collection types: Added:** coding for physical and occupational therapy.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the denominator criteria to include coding for physical and occupational therapy (PT/OT) as it is clinically appropriate for these clinician types to assess for high blood pressure. By adding PT/OT professionals in this measure, healthcare organizations can help ensure a more inclusive, proactive, and effective approach to managing cardiovascular health in patients aged 18 and older, while also capitalizing on all patient touchpoints to achieve comprehensive wellness and improved health outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported adding physical therapy and occupational therapy coding, noting that occupational therapy practitioners routinely identify health risks and play an underrecognized role in addressing chronic conditions.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44434), we are finalizing the changes to measure Q317 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.17 Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	336
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breastfeeding evaluation and education, postpartum depression screening, intimate partner violence screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Substantive Change:	**The measure numerator is revised to read:** Patients receiving the following at a postpartum visit: • Evaluating the physical recovery from birth, including pain and incontinence • Evaluating and counseling for sleep hygiene and fatigue • Breastfeeding evaluation and education, including patient-reported breastfeeding • Postpartum depression and anxiety screening • Intimate partner violence screening • Postpartum glucose screening for gestational diabetes patients • Family and contraceptive planning counseling, including same-day placement of a long-acting reversible contraceptive (LARC) if desired • Tobacco use screening and cessation education • Substance use disorder /opioid use disorder screening • Physical activity and exercise counseling • Immunization review and update **Updated definitions: Added:** **Evaluating Physical Recovery From Birth –** Patients who were evaluated for physical recovery from birth, including pain and incontinence, with referral as indicated (e.g., to physical therapy, urogynecology). **Evaluating and Counseling for Sleep Hygiene and Fatigue –** Patients were evaluated for sleep hygiene and fatigue and clinicians discussed coping options for fatigue and sleep disruption. **Substance Use Disorder/Opioid Use Disorder Screening –** Patients were screened for substance use/opioid use and referred to postpartum psychosocial support services, including substance use disorder treatment and relapse prevention programs. **Revised:** **Physical Activity and Exercise Counseling –** Patients with uncomplicated pregnancies who were encouraged to undertake regular physical activity and/or to engage in aerobic and strength-conditioning exercises (of any intensity) after pregnancy, as part of efforts to recommend and reinforce a healthy lifestyle. **Postpartum Depression and Anxiety Screening –** added anxiety screening via a self-reported validated anxiety tool. **Updated Numerator Instructions: Revised:** to include evaluating for physical recovery from birth, including pain and incontinence; evaluating and counseling for sleep hygiene and fatigue; postpartum anxiety screening; same-day placement of a long-acting reversible contraceptive (LARC) if desired; substance use disorder /opioid use disorder screening; and physical activity and exercise counseling.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the measure numerator by adding evaluations for physical recovery from birth, including pain and incontinence; evaluations and counseling for sleep hygiene and fatigue; postpartum anxiety screening; same-day placement of a long-acting reversible contraceptive (LARC) if desired; substance use disorder /opioid use disorder screening; and physical activity and exercise counseling as recommended by The American College of Obstetricians and Gynecologists (ACOG).[505] The additional evaluations provide significant added value to postpartum care by addressing broader aspects of maternal health that may impact recovery, well-being, and long-term outcomes. Additionally, we proposed to reflect this revision in the definitions and numerator instructions sections of the measure to ensure appropriate assessment of quality actions and consistent implementation across clinician submissions.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q336: *Maternity Care: Postpartum Follow-up and Care Coordination* to include physical activity and exercise counseling.

[505] American College of Obstetricians and Gynecologists. (2018). ACOG Committee Opinion No. 736: Optimizing Postpartum Care. *Obstetrics & Gynecology, 131*(5), e140–e150. https://doi.org/10.1097/AOG.0000000000002633.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44435), we are finalizing the changes to measure Q336 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.18 Closing the Referral Loop: Receipt of Specialist Report

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	374
CMS eCQM ID:	CMS50v15
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.
Substantive Change:	**Updated guidance: For the eCQM collection type: Added:** If two or more referrals have the same date/time stamp and are captured in the denominator as "first" referral, a consultant report for any of these "first" referrals will qualify the patient for the numerator. **Updated denominator criteria: For all collection types: Added:** coding for audiology visits. **Updated logic: For the eCQM collection type: Revised:** numerator logic to capture the 'first referral' when multiple instances of a "first referral" with the same date/time stamp are present.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the denominator criteria to include audiology visits as this measure is applicable to their scope of care. By including audiology visits in the measure, it will ensure that referrals made by audiologists are tracked, especially as specialization continues to increase in the provision of patient care, facilitating better coordination of care. Additionally, we proposed to update the measure guidance and logic for the eCQM collection type to clarify implementation when multiple referrals are received and ensure the logic is aligned. This will ensure consistent reporting across clinician submitters.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44435 through 44436), we are finalizing the changes to measure Q374 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.19 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
CBE # / eCQM CBE #:	1879 / N/A
Quality#:	383
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
Substantive Change:	**Updated denominator: Revised:** (Table 1) added oral antipsychotic medications: - pimavanserin - pimozide - olanzapine-fluoxetine - xanomeline-tropisum chloride
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to update the list of medications used to identify denominator eligible patients by adding four oral antipsychotic medications to the existing list in the denominator. This expansion will provide an up-to-date list of appropriate oral antipsychotic medications that clinicians may have prescribed for their patients, thereby ensuring that as many of the appropriate patients are identified in the denominator of this measure as possible.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44436), we are finalizing the changes to measure Q383 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.20 Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation

Category	Description
CBE # / eCQM CBE #:	2474 / N/A
Quality#:	392
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation. This measure is submitted as four rates stratified by age and sex. • Submission Age Criteria 1: Females 18-64 years of age • Submission Age Criteria 2: Males 18-64 years of age • Submission Age Criteria 3: Females 65 years of age and older • Submission Age Criteria 4: Males 65 years of age and older
Substantive Change:	**Updated reporting frequency and implementation considerations: Revised:** measure is to be submitted each time a denominator eligible procedure is performed.
Measure Steward:	American College of Cardiology Foundation
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to update the measure submission frequency to each time a denominator eligible procedure is performed as cardiac tamponade is a life-threatening emergency.[506] Requiring this measure to be submitted for each procedure will ensure MIPS eligible clinicians are monitoring and assessing patients for all instances of cardiac tamponade and/or pericardiocentesis occurring within 30 days following atrial fibrillation ablation, as well as adhering to evidence-based practices, which will improve clinical outcomes for patients. This change reflects a transition towards higher standards of care, increased accountability, and greater alignment with the goals of modern healthcare delivery systems.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44437), we are finalizing the changes to measure Q392 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[506] Khan Z. (2023). Cardiac Tamponade During Catheter Atrial Fibrillation Ablation: A Life-Threatening Complication. *Cureus*, *15*(9), e44989. https://doi.org/10.7759/cureus.44989.

D.21 Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	393
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Infection rate following CIED device implantation, replacement, or revision.
Substantive Change:	**Updated reporting frequency and implementation considerations: Revised:** measure is to be submitted each time a denominator eligible procedure is performed. **The measure denominator is revised to read:** **For Submission Criteria 1:** All patients with a new CIED from January July 1, 2026, through June 30, 2027, of the performance period. **For Submission Criteria 2:** All patients with replacement or revision of a CIED from July 1, 2026, through June 30, 2027, of the performance period. **Updated denominator definition: Added:** Denominator Identification Period – The twelve month period in which eligible patients have a procedure. The "denominator identification period" includes dates of procedure 7/1/2026 to 6/30/2027.
Measure Steward:	American College of Cardiology Foundation
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to update the measure submission frequency to each time a denominator eligible procedure is performed as infections resulting from implantable cardiac devices are associated with substantial morbidity. Requiring this measure to be submitted for each procedure will ensure MIPS eligible clinicians are monitoring and assessing patients for all instances of an infection requiring device removal or surgical revision within 180 days following CIED implantation, replacement, or revision, as well as adhering to evidence-based practices, which will improve clinical outcomes for patient. This change reflects a transition towards higher standards of care, increased accountability, and greater alignment with the goals of modern healthcare delivery systems.[507] We also proposed to lengthen the denominator identification period from July of the previous year through June of the measurement period to allow for a full year of denominator eligibility, ensuring the denominator eligible patient population being assessed for the numerator action is complete.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44438), we are finalizing the changes to measure Q393 with modification for the CY 2027 performance period/2029 MIPS payment year and future years. There is a typographical error in the dates given for Submission Criteria 1 denominator, which will be revised to read, "All patients with a new CIED from July 1, 2026, through June 30, 2027, of the performance period."

[507] Lakkireddy, D. R., Rao, A., Theriot, P., Darden, D., Pothineni, N. V. K., Ram, R., Gao, Y. R., Cheung, J. W., & Birgersdotter-Green, U. (2023). Contemporary Management of Cardiac Implantable Electronic Device Infection: The American College of Cardiology COGNITO Survey. *JACC. Advances*, *3*(2), 100773. https://doi.org/10.1016/j.jacadv.2023.100773.

D.22 Lung Cancer Reporting (Biopsy/Cytology Specimens)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	395
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.
Substantive Change:	**Updated denominator exclusion: For all collection types: Removed:** Specimen site other than anatomic location of lung or is not classified as primary non-small cell lung cancer. **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic location of lung or is not classified as primary non-small cell lung cancer.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to move the denominator exclusion for "specimen site other than anatomic location of lung or is not classified as primary non-small cell lung cancer" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44439), we are finalizing the changes to measure Q395 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.23 Lung Cancer Reporting (Resection Specimens)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	396
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Pathology reports based on lung resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.
Substantive Change:	**Updated denominator exclusion: For all collection types: Removed:** Specimen site other than anatomic location of lung OR classified as non-small cell lung cancer, not otherwise specified (NSCLC-NOS). **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic location of lung OR classified as NSCLC-NOS.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to move the denominator exclusion for "Specimen site other than anatomic location of lung OR classified as NSCLC-NOS" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44439), we are finalizing the changes to measure Q396 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.24 Melanoma Reporting

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	397
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.
Substantive Change:	**The measure description is revised to read**: **For all collection types:** Pathology reports for primary malignant cutaneous melanoma that include the thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors, and for excisions, pT category. **Updated intent and applicability: For all collection types: Revised:** to clarify pT category reporting is only required for excisions. **Updated denominator instructions: For the MIPS CQM collection type: Removed**: instructions moved to the numerator. **Updated denominator exclusion: For all collection types: Removed:** Specimen site other than anatomic cutaneous location. **The measure numerator is revised to read: For all collection types:** Pathology reports for primary malignant cutaneous melanoma that include the thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors, and in excisions, pT Category. **Updated numerator instructions: For all collection types: Revised:** to clarify pT category reporting is only required for excisions. **Updated numerator options: For all collection types: Revised:** to clarify pT category reporting is only required for excisions. **Updated denominator exception: For all collection types: Added:** Specimen site other than anatomic cutaneous location.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise multiple components of the measure to align with the College of American Pathologists 2025 Protocols[508] [509] and improve the quality of care for melanoma patients by mandating the inclusion of specific, evidence-based pathological parameters in all reports. We are specifically requiring pT category reporting for excisions only. By standardizing and ensuring completeness in pathology reporting, clinicians will significantly enhance diagnostic accuracy, treatment planning, and patient outcomes. Additionally, we proposed to move the denominator exclusion for "Specimen site other than anatomic cutaneous location" to the numerator options as a denominator exception. Moving this criteria from a denominator exclusion to a denominator exception will allow for more automated capture of the relevant cases for the measure with less manual intervention required for measure reporting.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44440), we are finalizing the changes to measure Q397 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.25 Optimal Asthma Control

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	398
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.
Substantive Change:	**Updated numerator and component options: For Submission Criteria 1: Component 1: Removed:** Asthma control Questionnaire (ACQ) **Added:** Asthma Impairment and Risk Questionnaire (AIRQ) and Pediatric Asthma Impairment and Risk Questionnaire (Peds-AIRQ) **Updated numerator note: For Submission Criteria 1: Component 2: Revised:** to base exacerbation on one of two methods. **Added:** Method 2: Asthma Impairment and Risk Questionnaire (AIRQ) result of 0 or 1 – ages 12 and older Pediatric Asthma Impairment and Risk Questionnaire (Peds-AIRQ) result of 0 or 1 – ages 5 – 11 **Updated component options: For Submission Criteria 1: Component 2: Added:** **Performance Met:** Not at elevated risk of exacerbation based on AIRQ or Peds-AIRQ score and results documented **Performance Not Met:** At elevated risk of exacerbation based on AIRQ or Peds-AIRQ score and results documented OR specified asthma control tool not used, reason not given **Updated numerator and component options: For Submission Criteria 2: Component 1: Removed:** Asthma control Questionnaire (ACQ) **Added:** Asthma Impairment and Risk Questionnaire (AIRQ) **Updated numerator note: For Submission Criteria 2: Component 2: Revised:** to base exacerbation on one of two methods. **Added:** Method 2: Asthma Impairment and Risk Questionnaire (AIRQ) result of 0 or 1 – ages 12 and older **Updated component options: For Submission Criteria 2: Component 2: Added:** **Performance Met:** Not at elevated risk of exacerbation based on AIRQ score and results documented **Performance Not Met:** At elevated risk of exacerbation based on AIRQ score and results documented OR specified asthma control tool not used, reason not given
Measure Steward:	Minnesota Community Measurement
MIPS Core Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to remove ACQ tools from the list of acceptable patient-reported outcome tools for all submission criteria. We proposed adding the AIRQ (both submission criteria) and Peds-AIRQ (Submission Criteria 1 only) tools for COMPONENT 1: Asthma well-controlled. Additionally, we proposed adding the AIRQ (both submission criteria) and Peds-AIRQ (Submission Criteria 1 only) tools as a second method for determining exacerbation risk for COMPONENT 2: Patient not at elevated risk of exacerbation. These changes will ensure that the tools used are better suited to current evidence-based practices for asthma management.[510] The AIRQ and Peds-AIRQ tools support the shift toward standardization, accuracy, and relevance in clinical decision-making.[511]

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q398: *Optimal Asthma Control* to update the list of acceptable patient-reported outcome tools.

Response: We thank the commenter for supporting the substantive changes to this measure.

[510] Murphy, K. R., Chipps, B., Lanz, M. J., Bacharier, L. B., Guilbert, T. W., George, M., Mohammad, A., Winders, T., LeNoir, M., Gilbert, I. A., Eudicone, J. M., Coyne, K. S., Harding, G., & Zeiger, R. S. (2025). Pediatric Asthma Impairment and Risk Questionnaire: A Control Assessment for Children Aged 5 to 11 years. *The Journal of Allergy and Clinical Immunology: In Practice, 13*(10), 2659–2671. https://doi.org/10.1016/j.jaip.2025.06.039.

[511] AstraZeneca. Pediatric Asthma Impairment and Risk Questionnaire. https://www.asthmaresourcecenter.com/home/peds_airq_studies.html.

Comment: One commenter supported the substantive changes to measure Q398 and stated that adding AIRQ and Peds-AIRQ as accepted instruments for both Component 1 (asthma control) and Component 2 (exacerbation risk) directly addresses a gap that the commenter previously raised with QPP's Service Center. The commenter had two clarifications before this change is finalized. First, the commenter wanted to confirm that the AIRQ tool as proposed reflects the same instrument its clients and members are already using in practice, since a mismatch in tool version or scoring methodology at this stage could recreate the same reporting gap in a different form. Second, the commenter also wanted to confirm if CMS is proposing to remove ACQ entirely, not just add AIRQ alongside it, which means practices currently reporting Component 1 or Component 2 using ACQ will need to transition to AIRQ, Peds-AIRQ, or one of the remaining accepted tools (ACT, C-ACT, ATAQ) by the time this change takes effect.

Response: We thank the commentor for the support and feedback on this measure. We are unable to verify alignment with specific instruments used in individual practices. Clinicians should refer to the official AIRQ and Peds-AIRQ materials[512] to ensure they are using the correct versions and scoring methodology. We did propose to remove ACQ entirely. Retiring ACQ in favor of AIRQ/Peds-AIRQ and other validated tools keeps measure Q398 aligned with current clinical science and measurement best practices, improving the measure's ability to capture clinically meaningful asthma control.[513] The measure steward's workgroup determined the AIRQ tools had several advantages including availability and ease of workflow incorporation, as well as accuracy and both risk and impairment assessment ability, which should help with the transition between tools by the time this measure change goes into effect. Eliminating ACQ rather than maintaining multiple overlapping tools also reduces measurement variability and ensures more consistent, interpretable data across clinicians and practices reporting measure Q398.[514]

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44441), we are finalizing the changes to measure Q398 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.26 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v10
Current Collection Type:	eCQM / MIPS CQM
Current Measure Description:	Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the performance period: • All patients who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR • Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40 to 75 years with a diagnosis of diabetes; OR • Patients aged 40 to 75 with a 10-year ASCVD risk score of ≥ 20 percent.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the performance period: • Patients ≥18 years of age who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR • Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40 to 75 years with a diagnosis of diabetes; OR • Patients aged 40 to 75 with a 10-year ASCVD risk score of ≥ 20 percent. **Updated rate aggregation: For eCQM collection type: Revised: For Population 1:** Patients greater than or equal to 18 years of age at the beginning of the measurement period were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure before the end of the measurement period. **Updated measure strata and performance rates: For MIPS CQM collection type: Revised: For Submission Criteria 1**: Patients ≥ 18 years of age at the beginning of the performance period and reporting timeframe for diagnosis of clinical ASCVD, including ASCVD procedure. **Updated guidance: For the eCQM collection type: Revised:** age for initial patient population 1 to greater than or equal to 18 years. **Updated initial patient population: For the eCQM collection type: Revised: For population 1:** age greater than or equal to 18 years. **The measure denominator is revised to read: For the MIPS CQM collection type: For Submission Criteria 1:** Patients ≥18 years of age who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure. **Updated denominator criteria: For the MIPS CQM collection type:** **Revised: For Submission Criteria 1:** age ≥ 18 years at the beginning of the performance period and reporting timeframe for diagnosis of clinical ASCVD, including ASCVD procedure. **Removed**: **For Submission Criteria 3:** presymptomatic diabetes codes. **Updated denominator exclusion: For all collection types: Added: For all Submission Criteria:** Patients who are pregnant at any time during the performance period.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise Patient Population 1 / Submission Criteria 1 for the eCQM and MIPS CQM collection types, to include patients 18 years of age and older who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure before the end of the performance period to align with the intent of the measure and current guidelines for adults.[515] [516] In addition, we proposed to update

[515] de Ferranti, S. D., Steinberger, J., Ameduri, R., Baker, A., Gooding, H., Kelly, A. S., Mietus-Snyder, M., et al. (2019). Cardiovascular Risk Reduction in High-Risk Pediatric Patients: A Scientific Statement From the American Heart Association. *Circulation, 139*(13). https://doi.org/10.1161/CIR.0000000000000618.

[516] Blumenthal, R., Morris, P., Gaudino, M., et al. (2026). 2026 ACC/AHA/AACVPR/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Dyslipidemia: A Report of the American College of Cardiology/American Heart Association Joint Committee on

Category	Description
	the rate aggregation and guidance for the eCQM collection type to align with the updated Patient Population 1. For the MIPS CQM collection type, we are updating the denominator criteria for Submission Criteria 1 with the updated age criteria. These updates aim to refine the population targeted by the measure and enhance alignment with clinical guidelines.[517] Additionally, we proposed to remove patients with presymptomatic diabetes from the denominator of Patient Population 3 / Submission Criteria 3 to focus on patients with established clinical diagnoses rather than those at risk or presymptomatic. Evidence suggests that use of statins may increase the risk of progression of prediabetes to type 2 diabetes.[518] Excluding these patients from Submission Criteria 3 will allow clinicians to use their clinical judgement and appropriately prescribe statin therapy to those patients who will benefit most without affecting their performance on the measure. We also proposed to add patients who are pregnant to the denominator exclusions, for all collection types, to align with current recommendations. It is recommended that patients stop statin therapy as soon as pregnancy is discovered.[519] Excluding pregnant patients will allow clinicians to align with evidence-based practices, ensuring safe and appropriate care for this patient population, without affecting their performance on the measure. We proposed to revise the measure description for all collection types, to improve the clarity, clinical utility, and applicability of the measure by explicitly defining high-risk patient populations. These enhancements aim to ensure more accurate identification of eligible patients, assess appropriate use of statin therapy, and ultimately drive improvements in cardiovascular health outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the substantive changes to measure Q438: *Statin Therapy for the Prevention and Treatment of Cardiovascular Disease*. One of the commenters requested that CMS ensure the final specifications capture the full range of clinical ASCVD recognized in current guidelines, including coronary, cerebrovascular, and peripheral arterial disease, while preserving shared decision-making and clinical judgment. Another commenter asked if CMS would look at denominator exception criteria logic that is not dependent on a specific statin or statin level for exception from the measure.

Response: We thank the commenters for supporting the substantive changes to this measure. We acknowledge the commenter's request that the final specifications fully capture the range of clinical ASCVD recognized in current guidelines (including coronary, cerebrovascular, and peripheral arterial disease) while preserving shared decision-making and clinical judgment. We will review and discuss revisions to the denominator exception for possible implementation in future years as it would be substantive in nature and would, therefore, need to go through public notice and comment.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44442 through 44443), we are finalizing the changes to measure Q438 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.27 Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	440
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of biopsies with a diagnosis of cutaneous basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.
Substantive Change:	**The measure description is revised to read:** Percentage of biopsies with a diagnosis of cutaneous basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 5 business days from the time when the tissue specimen was received by the pathologist. **The measure numerator is revised to read:** Number of final pathology reports diagnosing cutaneous basal cell carcinoma or squamous cell carcinoma or melanoma (to include in situ disease) sent from the Pathologist/Dermatopathologist to the biopsying clinician for review within 5 business days from the time when the tissue specimen was received by the pathologist. **Updated the numerator option**: **Revised:** to within 5 business days.
Measure Steward:	American Academy of Dermatology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed revising multiple components of this measure to clarify the timing of when a pathologist must communicate the results to the biopsying clinician. Reporting the results within 5 business days will enable clinicians to make timely decisions regarding patient management, scheduling surgeries or therapies, and planning follow-up consultations.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive change to measure Q440: *Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician*, agreeing that the updated timeframe to 5 business days enables timely care decisions and aligns with an existing QCDR measure, AAD6: *Skin Cancer: Biopsy Reporting Time – Clinician to Patient.*

Response: We thank the commenter for supporting the substantive change to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44444), we are finalizing the changes to measure Q440 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.28 Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	441
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 130/80 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated – AND • High Intensity Statin Use Unless Contraindicated
Substantive Change:	**Updated the measure strata and performance rates: Revised:** a patient will only be included in Submission Criteria 2 of the measure if they meet the denominator criteria for both Submission Criteria 1 and Submission Criteria 2.
Measure Steward:	Wisconsin Collaborative for Healthcare Quality
MIPS Core Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed to revise the measure strata and performance rates to clarify how to handle scenarios in which the patient meets denominator criteria for both Submission Criteria 1 and Submission Criteria 2. This change will ensure consistency in the abstraction of the measure's elements that support rigorous data for the calculation of MIPS performance rates.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44444), we are finalizing the changes to measure Q441 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.29 Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)

Category	Description
CBE # / eCQM CBE #:	0210 / N/A
Quality#:	453
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.
Substantive Change:	**The measure title is revised from 'Percentage of Patients who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)' to:** Percentage of Patients who Died with Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better) **The measure description is revised to read:** Percentage of patients, aged 18 years and older, who died with cancer receiving systemic cancer-directed therapy in the last 14 days of life. **Updated intent and clinician applicability: Revised:** patients aged 18 years and older. **Updated Implementation Considerations: Revised:** Measure type revised to Intermediate Outcome. **Updated denominator note: Revised:** The patient must have two encounters during the performance period and both eligible encounters must include a diagnosis of cancer. **The measure denominator is revised to read:** Patients, aged 18 years and older, who died with cancer. **Updated denominator criteria:** **Revised:** Patients aged ≥ 18 years and Diagnosis for cancer during the encounter. **Added:** Patients who died during performance period. **Removed:** Patients who died from cancer. **Updated denominator exclusion: Added:** Patients given hydroxyurea or bruton tyrosine kinase (BTK) inhibitors. **Updated numerator definition: Revised:** **Systemic Cancer-directed Therapy –** Includes: ▪ Cytotoxic chemotherapy ▪ Drugs and biologics which activate or inhibit the hallmarks of cancer (e.g., kinase inhibitors) ▪ Antineoplastic Agents • Alkylating agents (id: L01A) • Antimetabolites (id: L01B) • Cytotoxic antibiotics and related substances (id: L01D) • Monoclonal antibodies and antibody drug conjugates (id: L01F) • Other antineoplastic agents (id: L01X) • Plant alkaloids and other natural products (id: L01C) • Protein kinase inhibitors (id: L01E) o Exclude: Cyclin-dependent kinase (CDK) inhibitors (id: L01EF) ▪ Immunostimulants (Includes only those that apply to cancer) • Interferons (id: L03AB) o Include only: interferon alfa-2b, ropeginterferon alfa-2b, and ropeginterferon alfa-2b-njft • Interleukins (id: L03AC) o Include only: aldesleukin • Other immunostimulants (id: L03AX) o Include only: sipuleucel-T ▪ Immunosuppressants (Includes only those that apply to cancer) • Selective immunosuppressants (id: L04AA) o Include only: alemtuzumab, everolimus, and sirolimus • Other immunosuppressants (id: L04AX) o Include only: lenalidomide, pomalidomide, and thalidomide Excludes: • Hormones and hormone antagonists • Red Blood Cell (RBC) growth factors used to treat chemotherapy-induced anemia • White Blood Cell (WBC) growth factors used to treat chemotherapy-induced neutropenia • Bisphosphonates and biologics used to treat osteopenia or osteoporosis • Antiemetics and antinauseants • Pain medications Example: Drugs and biologics under the World Health Organization's (WHO) Anatomical Therapeutic Chemical (ATC) classification "Antineoplastic Agents" and select "Immunostimulants" and "Immunosuppressants".

Category	Description
	"Antineoplastic and Immunomodulating Agents" Drug Classes and Identifiers: Note: To find the drug members under each class, go to https://mor.nlm.nih.gov/RxClass/ and enter the class name or ID on the "Search" field of the RxClass browser. **Updated numerator instructions: Added:** • Receipt of systemic cancer-directed therapy in the last 14 days of life can be calculated as follows: • (Date of death minus Most Recent Systemic cancer-directed therapy Administration Date or Date Filled) < 14 days. **Updated numerator note: Added:** The measure includes intramuscular, intravenous, oral, and subcutaneous routes of administration of systemic cancer-directed therapy. Oral systemic cancer-directed therapy is oral prescription of extension of same oral drug or prescription of new oral drug. The measure is limited to medications approved by the United States Food and Drug Administration (FDA). Patients that are given bridging chemotherapy and other cancer-directed therapies while awaiting transplant or chimeric antigen receptor T-cell therapy (CAR T-cell therapy) should be reported as a denominator exception. For patients given Hydroxyurea and bruton tyrosine kinase (BTK) inhibitors, it may be inappropriate to withdraw at the end of life and/or are used for palliative purposes. For the purposes of reporting this inverse quality measure, this scenario is considered "performance not met" only in the absence of other systemic therapies. **Updated denominator exception: Added:** Patient received systemic cancer-directed therapy due to 1) receipt or in process of receipt of bone marrow or peripheral blood stem cell transplant (transplant status) in the last 60 days of life, or 2) receipt or in process of receipt of CAR T-cell therapy in the last 60 days of life. **Updated numerator options: Added:** **Performance Not Met:** Patients given hydroxyurea or BTK inhibitors.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of this measure to ensure the appropriate patient population is identified by including an age, defined encounter eligibility, and additional guidance for defining the eligible patient population. We proposed revising the measure type to intermediate outcome to be reflective of the quality action. Additionally, we proposed adding a denominator exclusion for common drugs given for palliation or to prevent rapid disease acceleration at the end of life as recommended by ASCO's End of Life Technical Expert Panel as this conflicts with the measure's intent. We proposed adding further clarification and granularity to the numerator definition of systemic cancer-directed therapy to ensure numerator assessment is consistent across clinician submissions. Additionally, we proposed adding a denominator exception to remove patients receiving bone marrow or peripheral blood stem cell transplant, or CAR T-cell therapy as these patients are appropriately given bridging chemotherapy and other types of cancer-directed therapy beforehand. We proposed these changes to better align with the intent of the measure and to ensure consistent implementation across submissions. In the event the proposed substantive change(s) were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for the creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed denominator exceptions to measure Q453: *Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)* and encouraged CMS to periodically reassess these specifications as cell-therapy technologies evolve to ensure that quality measures do not become inadvertently tethered to an outdated description of the relevant therapeutic modalities. Another commenter urged CMS to consider adding a secondary 30-day measurement period in addition to the existing 14-day period, stating that a 30-day measure could more effectively prompt timely transitions to palliative care, support improved symptom management, and provide a more complete picture of end-of-life care for patients dying of cancer.

Response: We thank the commenters for supporting the substantive changes to this measure. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we complete measure analysis to evaluate measure performance, identify potential unintended consequences, assess alignment with current clinical guidelines and evidence, and determine whether technical or substantive updates are needed for future performance periods, which we recommend to measure stewards for their consideration. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, we are finalizing the changes to measure Q453 with modification for the CY 2027 performance period/2029 MIPS payment year and future years. The proposal to "**Updated denominator exclusion: Added:** Patients given hydroxyurea or bruton tyrosine kinase (BTK) inhibitors" is duplicative of the proposed numerator revision **"Updated numerator options: Added: Performance Not Met:** Patients given hydroxyurea or BTK inhibitors." While administration of these drugs appears discordant with the measure intent, it may be inappropriate to withdraw at the end of life. Therefore, it would be appropriate to include patients receiving these medications in the eligible patient population to ensure they are assessed for utilization of other systemic therapies. For this inverse measure, appropriate use of hydroxyurea or BTK inhibitors would be reported as Performance Not Met, indicating better quality care.

D.30 Percentage of Patients who Died from Cancer Admitted to Hospice for less than 3 Days (lower score – better)

Category	Description
CBE # / eCQM CBE #:	0216 / N/A
Quality#:	457
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of Patients who Died from Cancer Admitted to Hospice for less than 3 Days (lower score – better)
Substantive Change:	**The measure title is revised from Percentage of Patients who Died from Cancer Admitted to Hospice for Less than 3 Days (lower score – better) to:** Percentage of Patients who Died with Cancer Enrolled in Hospice For At Least 3 Days Immediately Before Death. **The measure description is revised to read:** Percentage of patients, aged 18 years and older, who died with cancer and were enrolled in hospice for at least 3 days immediately before and on date of death. **Updated Implementation Considerations: Revised:** Measure analytic to no longer be inverse and measure type to Intermediate Outcome. **The measure denominator is revised to read:** Patients, aged 18 years and older, who died with cancer. **Updated denominator note: Revised:** The patient must have two encounters during the performance period and both eligible encounters must include a diagnosis of cancer. **Updated denominator criteria:** **Revised:** Patients aged ≥ 18 years and Diagnosis for cancer during the encounter. **Removed:** Patients enrolled in hospice and Patients who died from cancer. **Added:** Patients who died during performance period. **The measure numerator is revised to read:** Patients enrolled in hospice for at least 3 days immediately before and on the date of death. **Updated numerator instructions: Removed:** Inverse measure analytic **Added:** • Patients should be currently enrolled in hospice on date of death to meet the numerator. • Enrolled in hospice for at least 3 days immediately before death can be calculated as follows: • (Date of death minus Most Recent Date of Hospice Admission) ≥ 3 days **Updated numerator note: Added:** • Receipt of or in the process of receipt of bone marrow transplant, peripheral blood stem cell transplant, or CAR T-cell therapy are typically not covered in hospice but may be appropriate for select patients at the end of life. In these scenarios, the denominator exception should be reported. • It may be inappropriate to withdraw Hydroxyurea and bruton tyrosine kinase (BTK) inhibitors at the end of life and/or are used for palliative purposes, however these treatments are not covered by hospice. In this situation, the denominator exception should be reported. **The measure numerator options are revised to read**: **Performance Met:** Patient enrolled in hospice for at least 3 days immediately before and on the date of death. **Denominator Exception:** Patient not enrolled in hospice due to 1) receipt or in process of receipt of bone marrow or peripheral blood stem cell transplant (transplant status) in the last 60 days of life, or 2) receipt or in process of receipt of CAR T-cell therapy in the last 60 days of life. **Denominator Exception:** Patients given hydroxyurea or BTK inhibitors. **Performance Not Met:** Patient enrolled in hospice less than 3 days immediately before death or on date of death.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to revise the measure type to intermediate outcome and to allow for a proportional non-inverse analytic for the purpose of determining measure performance. We proposed these changes to better align with the intent of the measure and to provide a performance rate reflective of appropriate resource utilization. We proposed to update multiple components of this measure to ensure the appropriate patient population is identified by including an age, defined encounter eligibility, and additional guidance for defining the eligible patient population. We also proposed to update the numerator options to align with a proportional non-inverse measure analytic such that a higher score indicates better quality care; and add denominator exceptions to remove patients 1) receiving bone marrow or peripheral blood stem cell transplant, or CAR T-cell therapy or 2) receiving drugs for palliation or to prevent rapid disease acceleration at the end of life as recommended by ASCO's End Of Life Technical Expert Panel. We proposed these changes to better align with the intent of the measure and to ensure consistent implementation across clinician submissions.

Category	Description
	In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for the creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the proposed denominator exceptions to measure Q457: *Percentage of Patients who Died from Cancer Admitted to Hospice for less than 3 Days (lower score – better)* and encouraged CMS to periodically reassess these specifications as cell-therapy technologies evolve to ensure that quality measures do not become inadvertently tethered to an outdated description of the relevant therapeutic modalities. Another commenter urged CMS to extend the measurement window to include hospice lengths of stay of less than seven days, noting that the current three-day window captures only the most extreme cases of late referrals. The commenter stated that evidence consistently shows longer hospice stays are associated with improved symptom control, higher patient and family satisfaction, fewer in-hospital deaths, and lower end-of-life expenditures, while shorter stays are a marker of poorer-quality care.

Response: We thank the commenters for supporting the substantive changes to the measure. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we complete measure analysis to evaluate measure performance, identify potential unintended consequences, assess alignment with current clinical guidelines and evidence, and determine whether technical or substantive updates are needed for future performance periods, which we recommend to measure stewards for their consideration. Any potential new substantive changes need to go through notice and comment rulemaking.

Comment: One commenter indicated that the revisions to measure Q457 are substantial enough to limit comparability with historical performance. The commenter noted that changes to the measure name, type, denominator specifications, denominator exceptions, and directionality would affect interpretation, scoring, benchmarking, and communication to clinicians. They recommended that CMS treat measure Q457 as a new measure for the 2027 performance year and apply the corresponding new-measure policies for benchmarking and scoring.

Response: We thank the commenter for their feedback and acknowledge that the data would not be comparable to previous years; therefore, we will remove the historical benchmark. While the analytic of the measure has changed, the intent and quality action being assessed remains consistent and doesn't constitute a need to classify this as a new quality measure. In addition, as this measure concept has shown sufficient adoption in MIPS, the new measure benchmarking and scoring would not be appropriate.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44447 through 44448), we are finalizing the changes to measure Q457 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.31 Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use

Category	Description
CBE # / eCQM CBE #:	0657 / N/A
Quality#:	464
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.
Substantive Change:	**The measure description is revised to read**: Percentage of patients aged 2 months through 12 years with a diagnosis of otitis media with effusion (OME) who were not prescribed systemic antimicrobials within 3 months of diagnosis. **Updated implementation and considerations: Revised:** 90 days to 3 months. **The measure numerator is revised to read:** Patients who were not prescribed systemic antimicrobials within 3 months of diagnosis. **Updated numerator options**: **Revised:** to include timeframe of within 3 months of diagnosis.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of the measure by adding "within 3 months of diagnosis" to clarify the timeframe during which systemic antimicrobials were not prescribed to patients. This clarification, based on AAO-HNS's Clinical Practice Guideline on Otitis Media with Effusion (Update),[520] will ensure the numerator quality action is appropriately and consistently assessed.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter did not support the substantive change modifying the timeframe from 90 days to 3 months, stating that the current 90-day period is clearer and supports consistent interpretation for measure Q464: *Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use*.

Response: We thank the commenter for the feedback on the substantive change to the measure. The language change from 90 days to 3 months is in accordance with current clinical practice guidelines,[521] where they recommend watchful waiting for 3 months after onset/diagnosis, ensuring the patient population is consistently and appropriately assessed for numerator compliance. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44449), we are finalizing the changes to measure Q464 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.32 HIV Screening

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	475
CMS eCQM ID:	CMS349v9
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human immunodeficiency virus (HIV).
Substantive Change:	**Updated initial patient population: Removed:** without an HIV diagnosis prior to the start of the measurement period.
Measure Steward:	Centers for Disease Control and Prevention
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the initial patient population language to better align with the logic of the measure as this patient population is removed by the denominator exclusion: Patients diagnosed with HIV prior to the day of the start of the measurement period.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter urged CMS not to remove the exclusion for patients with a prior HIV diagnosis, since screening measures are intended to identify undiagnosed infection and it is clinically inappropriate to "screen" patients already known to have HIV. The commenter was concerned that this change would misalign the measure with guideline-defined screening populations, distort performance results, and could drive redundant testing of patients already in HIV care without improving detection of new infections. The commenter recommended retaining the current exclusion and, if CMS seeks to achieve a different objective (such as targeted testing in specific groups), developing a separate measure designed for that purpose, while ensuring any changes keep measure Q475: *HIV Screening* aligned with screening guidelines and strengthen its role in promoting broad, guideline-concordant HIV screening.

Response: We thank the commentor for their feedback on the substantive change and note this revision addresses duplicative criteria but doesn't change the patient population being assessed. This change does not modify the denominator exclusion, rather it removes the redundancy from the initial population. The denominator exclusion already ensures all patients being assessed don't have an HIV diagnosis and will remain as "Patients diagnosed with HIV prior to the day of the start of the measurement period" within the measure specifications.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44450), we are finalizing the changes to measure Q475 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.33 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	476
CMS eCQM ID:	CMS771v8
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Substantive Change:	**The measure description is revised to read:** Percentage of patients with an office visit during the measurement period and a new diagnosis of clinically significant benign prostatic hyperplasia (BPH) who have International Prostate Symptom Score (IPSS) or American Urological Association Symptom Index (AUA-SI) documented within one month of diagnosis and again 6-12 months after diagnosis, with an improvement of at least 3 points. **The measure numerator is revised to read:** Patients with an improvement of at least 3 points in their IPSS or AUA-SI urinary symptom score from baseline to the 6-12 month follow-up assessment.
Measure Steward:	Large Urology Group Practice Association and Oregon Urology Institute
MIPS Core Measure:	No
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to revise both the description of the measure and the numerator to include specific timeframes for completion of the assessments. By explicitly detailing timeframes (baseline within one month of diagnosis and follow-up assessment within 6–12 months) and the outcome metric (3-point improvement), the measure reduces ambiguity in performance measurement and ensures consistency in reporting.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter encouraged CMS to consider allowing the documentation of patient preference when symptoms are stable and treatment escalation is not desired to ensure goal concurrent care.

Response: We thank the commenter for their feedback on this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44450), we are finalizing the changes to measure Q476 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.34 Hospital-wide, 30-day, All-cause Unplanned Readmission (HWR) Rate for the Merit-based Incentive Payment System (MIPS) Groups

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	479
CMS eCQM ID:	N/A
Current Collection Type:	Administrative Claims
Current Measure Description:	This measure is a re-specified version of the measure, "Risk-adjusted readmission rate (RARR) of unplanned readmission within 30 days of hospital discharge for any condition" (NQF 1789), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to MIPS participating clinician groups and assesses each group's readmission rate. The measure comprises a single summary score, derived from the results of five models, one for each of the following specialty cohorts (groups of discharge condition categories or procedure categories): medicine, surgery/gynecology, cardio-respiratory, cardiovascular, and neurology.
Substantive Change:	**Updated denominator exclusion: Removed:** With a principal or a secondary diagnosis code of COVID-19 coded as present on admission (POA) on the index admission claim.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Outcome
Rationale:	We proposed to remove the exclusion for admissions with either a principal or secondary diagnosis of COVID–19 present on admission from the measure denominator due to the end of the public health emergency. This change will align this measure with language finalized under the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates; Changes to the FY 2025 IPPS Rates Due to Court Decision; Requirements for Quality Programs; and Other Policy Changes; Health Data, Technology, and Interoperability: Electronic Prescribing, Real-Time Prescription Benefit and Electronic Prior Authorization final rule (90 FR 36948 through 36950).

We received public comments on the substantive change proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive change to measure Q479: *Hospital-wide, 30-day, All-cause Unplanned Readmission (HWR) Rate for the Merit-based Incentive Payment System (MIPS) Groups*, stating that the change will improve consistency in specifications and enhance comparability of performance results across MIPS groups.

Response: We thank the commenter for supporting the substantive change to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44451), we are finalizing the change to measure Q479 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.35 Intravesical Bacillus-Calmette-Guerin for Non-Muscle Invasive Bladder Cancer

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	481
CMS eCQM ID:	CMS646v7
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.
Substantive Change:	**Measure description is revised to read:** Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of initial diagnosis of bladder cancer. **Updated denominator exclusion: Revised:** timing is centered around diagnosis. **Updated numerator: Revised:** timing is centered around diagnosis. **Updated denominator exception: Revised:** timing is centered around diagnosis. **Updated logic and logic definitions: Revised:** timing is centered around diagnosis.
Measure Steward:	Oregon Urology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update multiple components of the measure to clarify that the timing for receipt of intravesical BCG is based on the initial diagnosis of bladder cancer and not staging. The revision to base the timing of intravesical BCG administration on the initial diagnosis of bladder cancer enhances clinical clarity, promotes consistency in care measurement and measure reporting, and encourages more timely treatment, all of which contributes to improved patient care.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44451), we are finalizing the changes to measure Q481 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.36 Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status

Category	Description
CBE # / eCQM CBE #:	3661 / N/A
Quality#:	491
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both.
Substantive Change:	**Updated denominator criteria: Added:** coding to diagnosis criteria for genetic susceptibility.
Measure Steward:	College of American Pathologists
MIPS Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding additional codes to the denominator criteria for genetic susceptibility as it will ensure better targeting of high-risk populations, optimize resources, and contribute to improved patient outcomes and data reliability for cancer care.[522]

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44452), we are finalizing the changes to measure Q491 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[522] Robson, M. E., Storm, C. D., Weitzel, J., Wollins, D. S., & Offit, K. (2015). American Society of Clinical Oncology Policy Statement Update: Genetic and Genomic Testing for Cancer Susceptibility. *Journal of Clinical Oncology, 33*, 3660–3667. https://doi.org/10.1200/JCO.2015.63.0996.

D.37 Preventive Care and Wellness (composite)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	497
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).
Substantive Change:	**Updated numerator definition: For Submission Criteria 3: Added: Reviewed** – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the mammography report. The mammography report may also be provided by the patient for the clinician's review during the visit and should be documented in the medical record. **Updated numerator definition: For Submission Criteria 4: Added: Reviewed** – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the colorectal screening report. The colorectal screening report may also be provided by the patient for the clinician's review during the visit and should be documented in the medical record. **Updated denominator criteria: For Submission Criteria 7: Added:** coding for physical and occupational therapy.
Measure Steward:	Centers for Medicare & Medicaid Services
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise the measure numerator definition for Submission Criteria 3 and 4, the medical record must document the clinician's review of the mammography or colorectal screening report, whether obtained directly or provided by the patient, during the visit. By specifying that the review should be documented in the medical record, the measure ensures clinicians are confirming review of mammography and colorectal screening results, not just receipt, and the measure encourages standardization in documentation practices across different clinical settings, which promotes care coordination and appropriate patient follow-up if needed. We also proposed to update the denominator criteria for Submission Criteria 7 with physical and occupational therapy codes to align with the eCQM measure specifications. By adding PT/OT coding in this measure, healthcare organizations can help ensure a more inclusive, proactive, and effective approach to managing cardiovascular health, while also capitalizing on all patient touchpoints to achieve comprehensive wellness and improve health outcomes.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q497: *Preventive Care and Wellness (composite)*, Submission Criteria 4, noting the changes align with those made to measure Q113: *Colorectal Cancer Screening*. The commenter noted, however, that the measure did not recognize all FDA-approved, Medicare-covered colorectal cancer screening options, specifically blood-based tests and stool RNA tests. The commenter recommended that CMS work with NCQA to ensure that colorectal cancer screening quality measures used across CMS programs incorporate all FDA-authorized, Medicare-covered screening tests. A second commenter noted that the measure still relies on an outdated definition of "appropriate" screening based on old USPSTF recommendations that exclude newer FDA-approved, Medicare-covered tests and recommended updating measures Q497 and Q113 to reflect current coverage and clinical practice guidelines.

Response: We thank the commenters for supporting the substantive changes to this measure. We will review and discuss this revision for possible implementation in future years as it would be substantive in nature and would therefore need to go through public notice and comment. We encourage the commenter to reach out to the measure steward of measure Q113 to discuss revisions for possible implementation and application to measure Q497 in future years.

Comment: Two commenters opposed the proposed updates to the numerator definitions for Submission Criteria 3 (Breast Cancer Screening) and 4 (Colorectal Cancer Screening). They emphasized that adding a requirement for explicit documentation that the clinician "reviewed" the mammography or colorectal cancer screening report would create additional administrative burden without meaningful clinical benefit. Commenters noted that when screening results are already available in the electronic health record, reviewing those results is part of routine clinical workflow. Introducing a separate attestation or specific notation of review solely for reporting purposes adds unnecessary documentation steps for clinicians and staff. Commenters also expressed concern that expanding the numerator definition beyond the original intent of the measure could lead to unintended consequences. Because the lookback period for colorectal cancer screening can extend up to 10 years, commenters cautioned that it is unlikely prior reviews and discussions are documented in an accessible way. As a result, clinicians may feel compelled to order repeat mammograms or colorectal screenings not because they are clinically indicated, but to satisfy measure requirements. They noted that this could lead to overuse of screening procedures, patient confusion, and unnecessary alarm, especially if

physicians must discuss old test results ordered or reviewed by other providers. Lastly, one of the commenters recommended that CMS consider including patient refusal as an exception in the future.

Response: We appreciate the feedback on measure Q497 on Submission Criteria 3 and 4. The added definition of "reviewed" is intended to clarify, not expand, the original measure intent by specifying that review of a mammography or colorectal cancer screening report includes documenting that review in the medical record, consistent with usual clinical practice. There are a multitude of benefits for both the patient and provider in having a clinician review, discuss, and document the results/findings and discussion, including but not limited to, supporting shared decision-making[523] and ensuring continuity of care.[524] Screening decisions should continue to be based on clinical judgment, evidence-based guidelines, and patient preferences. While in healthcare it is standard practice to document care provided to a patient, including documenting a discussion upon the review of results/findings of a medical test or exam, the measure specification does not dictate the format or structure of such documentation. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44453), we are finalizing the changes to measure Q497 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

[523] Schrager, S. B., Phillips, G., & Burnside, E. (2017). A Simple Approach to Shared Decision Making in Cancer Screening. *Family Practice Management, 24*(3), 5–10. https://pmc.ncbi.nlm.nih.gov/articles/PMC5697707/.

D.38 Reduction in Suicidal Ideation or Behavior Symptoms

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	505
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit' within 120 days after an index assessment.
Substantive Change:	**The measure description is revised to read**: The percentage of patients aged 12 years and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale 'Screen Version' or 'Since Last Visit' (C-SSRS), or other clinician rating tools such as the Clinician Rating of Potential Suicide Risk (CRPSR) or the Suicide Assessment Five-step Evaluation & Triage (SAFE-T) protocol with C-SSRS, within 120 days after an index assessment. **The measure denominator is revised to read**: Patients aged 12 and older with a mental and/or substance use disorder with an index assessment completed who were identified as having suicidal ideation and/or behavior symptoms as determined by a non-zero score on the patient-rated C-SSRS OR deemed a suicide risk based on their clinician's evaluation using a clinician rating tool such as the CRPSR or the SAFE-T protocol with C-SSRS during the denominator identification period. **Updated denominator definitions: Revised:** **Suicide risk based on clinician rating tool –** clarified suicide risk to be based on a clinician-rating tool, which may be C-SSRS or other. **Denominator Identification Period** and **Index Assessment –** updated to reflect use of other clinician-rating tools. **Updated the denominator criteria: Revised:** age to 12 **Removed:** 'Suicidal Ideation and/or Behavior Symptoms based on the C-SSRS' and 'Suicide risk based on their clinician's evaluation or a clinician-rated tool' **Revised:** index assessment criteria to reflect use of other clinician-rating tools. **The measure numerator is revised to read**: Patients who demonstrated a reduction in suicidal ideation and/or behavior symptoms as demonstrated by results of a follow-up assessment using the patient-rated C-SSRS OR reduction in suicide risk based on their clinician's evaluation using a clinician rating tool such as the CRPSR or the SAFE-T protocol with C-SSRS, within 120 days after the index assessment during the measurement period. **Updated numerator definitions: Revised:** **Reduction –** to account for use of other clinician-rating tools. **Follow-up Assessment –** to account for use of other clinician-rating tools and require consistency in index and follow-up assessment.
Measure Steward:	American Psychiatric Association
MIPS Core Measure:	No
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed to update multiple components of the measure to lower the denominator eligible age to 12 years and older and expand the denominator requirements to allow use of other clinician-rating tools for the index assessment and follow-up, to ensure inclusion of a critical demographic group in suicide prevention and substance use disorder interventions. This measure enhances alignment with CMS' mental health priorities, leverages validated tools like the C-SSRS and promotes actionable insights into improved care outcomes for a vulnerable population. We also proposed to update the numerator definition to clarify that the same patient-rated C-SSRS or clinician rating tool must be used at a follow-up encounter after the index assessment. This will ensure consistent implementation and ensure direct comparability of data between assessments.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter encouraged CMS and the measure steward to reevaluate whether the current methodology for defining improvement accurately reflects clinically meaningful changes in suicide risk for measure Q505: *Reduction in Suicidal Ideation or Behavior Symptoms*.

The measure defines improvement as any reduction in the total C-SSRS score, calculated as the sum of all Yes/No responses (Yes = 1, No = 0), with performance met when the follow-up score is lower than the index score. However, in clinical practice, clinicians primarily rely on the C-SSRS to assess and interpret suicide risk rather than to calculate or trend a total numerical score. As a result, clinicians and health IT systems may not routinely display, track, or act upon changes in the cumulative score required for measure reporting. The commenter encouraged CMS and the measure steward to consider whether future

refinements should incorporate changes in clinically validated risk categories, item-level weighting, or other approaches that better reflect meaningful changes in suicide risk. At a minimum, CMS should evaluate whether the current score-based methodology accurately captures the measure's stated intent of reducing suicidal ideation and behavior symptoms while maintaining consistency with real-world clinical workflows and suicide risk assessment practices.

Response: We thank the commentor for their feedback regarding the substantive changes to this measure. The intent of the measure was not changed with these revisions; rather, we streamlined and clarified the components to support more consistent and efficient implementation. We also considered the need for the measure to be feasible within the program's reporting structure and to generate meaningful, actionable metrics. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, we complete measure analysis to evaluate measure performance, identify potential unintended consequences, assess alignment with current clinical guidelines and evidence, and determine whether technical or substantive updates are needed for future performance periods, which we recommend to measure stewards for their consideration. Any potential new substantive changes will need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44454), we are finalizing the changes to measure Q505 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.39 Appropriate Germline Testing for Ovarian Cancer Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	507
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients, aged 18 and older, diagnosed with epithelial ovarian, fallopian tube, or primary peritoneal cancer who undergo germline testing within 6 months of diagnosis.
Substantive Change:	**Updated denominator criteria**: **Removed:** Audio only Telehealth codes.
Measure Steward:	American Society of Clinical Oncology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to remove audio only visits from the denominator criteria because they lack the visual assessment necessary to confirm a patient's physical condition (e.g., performance status; physical signs of toxicity, pain, and distress) and the physical assessment required by the clinician providing the care and responsible for conducting germline testing.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q507: *Appropriate Germline Testing for Ovarian Cancer Patients*.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44455), we are finalizing the changes to measure Q507 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.40 Melanoma: Tracking and Evaluation of Recurrence

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	509
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II, in the past 5 years in which the operating provider examines and/or diagnoses the patient for recurrence of melanoma.
Substantive Change:	**The measure description is revised to read**: Percentage of patients who had an excisional surgery for melanoma or melanoma in situ with initial American Joint Committee on Cancer (AJCC) staging of 0, I, or II, in the past 5 years for whom the clinician or practice responsible for longitudinal care documents examination and/or diagnosis for recurrence of melanoma during the performance period. **Updated intent and clinician applicability: Revised:** The examination for recurrence may be performed by any qualified clinician, provided that the clinician or practice reporting the measure documents that the examination occurred in the medical record. **Updated denominator note**: **Added**: The excisional surgery may have been performed by any clinician or practice, provided documentation of the qualifying procedure and staging is present in the medical record of the clinician or practice reporting the measure.
Measure Steward:	American Academy of Dermatology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed revising this measure to address instances where one clinician may perform the excision and another performs the subsequent skin examinations. This measure revision will ensure inclusiveness, continuity, and accuracy in reporting excisional surgery outcomes by allowing documentation from any qualified clinician or practice, as is common in clinical practice.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter supported the substantive changes to measure Q509: *Melanoma: Tracking and Evaluation of Recurrence* and requested information on the examination and how to implement the measure.

Response: We thank the commenter for supporting the substantive changes to this measure. The examination for recurrence may be performed by any qualified clinician, allowing for care coordination and continuity. Please see the measure specification, once posted by January 1, 2027, for specific reporting requirements.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44455), we are finalizing the changes to measure Q509 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

D.41 Patient Reported Falls and Plan of Care

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality#:	513
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients (or caregivers as appropriate) with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at every visit.
Substantive Change:	**Updated denominator criteria: Removed: For all Submission Criteria:** diagnosis coding not specific to an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke. **Updated definitions: For all Submission Criteria: Added:** **Last Visit –** if the patient is established, this would be since the last visit with the same clinician/group. If the patient is new, it would be since the patient's last visit with any clinician. **Updated denominator**: **For Submission Criteria 2: Added**: Patient reported a fall since last visit OR Accidental Fall **Updated numerator note: For Submission Criteria 1: Added:** Denominator Exception medical reason(s) should be documented at the time of the denominator eligible encounter. **Updated numerator options: For Submission Criteria 2: Revised:** **Performance Met:** Patients that reported a fall occurred who had a plan of care for falls documented **Performance Not Met:** Patients that had a fall who did not have a plan of care for falls documented **Removed:** Denominator Exception
Measure Steward:	American Academy of Neurology
MIPS Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to revise multiple components of this measure to ensure alignment with intent and clinical workflow. We proposed to remove coding that is broad in nature and not specific to the diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke. Removal will ensure the denominator does not include patients beyond those in neurology with symptomology who will not be appropriate for assessment of the quality action. While patient safety in context of falls is important in all patients, the quality action for this measure is specific for the patient population intended and may not be appropriate for any falls patient. For clarity we proposed adding a definition for 'Last Visit' so that all clinicians reporting are following the same timeline, ensuring consistent implementation across clinician submissions. Additionally, we proposed adding to the Submission Criteria 1 numerator note to clarify that the medical reason should be documented as active or present on the day of the denominator eligible encounter. This will ensure that regardless of condition, whether it be chronic or acute, active or historical, it will be attributable to that interaction. Finally, we proposed to revise Submission Criteria 2 to focus on those patients who reported a fall since their last visit as this is the at-risk patient population requiring the quality action; plan of care for falls. This revision aligns with measure intent as well as the structure of other screening measures in MIPS for better consistency.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: One commenter opposed limiting measure Q513: *Patient Reported Falls and Plan of Care* to a narrow set of diagnoses, stating that fall assessment is important for a broader patient population and noting concerns about further reducing measure choice for clinicians. The commenter requested CMS expand the numerator to include all patients for whom fall risk assessment and appropriate follow-up are clinically important.

Response: We thank the commenter for the feedback on the substantive changes to this measure. Limiting the diagnosis will ensure the denominator does not include patients beyond those in neurology with symptomology who will not be appropriate for assessment of the quality action. In addition, there are two alternative quality measures that address falls within MIPS that are age-based as opposed to diagnosis-based. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Any potential new substantive changes need to go through notice and comment rulemaking.

After consideration of public comments, and for the reasons stated above and in the proposed rule (91 FR 44456), we are finalizing the changes to measure Q513 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Table Group DD: Finalized Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MVPs for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MVPs only while removed from traditional MIPS: Q112**:** *Breast Cancer Screening*, Q113: *Colorectal Cancer Screening*, and Q128**:** *Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan* (88 FR 79897 through 79902). We note that measures Q112 and Q113 available only in MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP), specifically for inclusion in the APP Plus measure set, as finalized in the CY 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection types solely applicable for purposes of the APP Plus measure set (Medicare Clinical Quality Measures for Accountable Care Organizations (ACOs) Participating in the Medicare Shared Savings Program (Medicare CQMs) collection type and newly finalized Medicare Electronic Clinical Quality Measures for ACOs Participating in the Medicare Shared Savings Program (Medicare eCQMs) collection type as described in section IV.A.4.d.(1)(c)(v) of this final rule) are also specified as a collection type available for such relevant measures described in Table Group DD of this Appendix.

Table Group DD within this final rule provides substantive changes finalized for the CY 2027 performance period/2029 MIPS payment year for MIPS quality measures available only in a relevant MVP. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2027 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2027 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2028. The 2027 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at *https://qpp.cms.gov*.

Measures that are endorsed by a CBE are shown in Table Group DD of this Appendix as follows: CBE # / eCQM CBE #.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but it is important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2027 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the finalized substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

There were no proposed substantive changes for measure Q128. We requested comments on the substantive changes for the other measures outlined below.

DD.1 Breast Cancer Screening

Category	Description
CBE # / eCQM CBE #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of women 40-74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types.
Measure Steward:	National Committee for Quality Assurance
Core Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44458), we are finalizing the changes to measure Q112 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

DD.2 Colorectal Cancer Screening

Category	Description
CBE # / eCQM CBE #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v15
Current Collection Type:	Medicare Part B Claims Measure / eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	**Modified collection type:** Medicare Part B Claims Measure, eCQM, Medicare CQM, MIPS CQM, Medicare eCQM collection types.
Measure Steward:	National Committee for Quality Assurance
Core Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the collection types available for this measure to include the Medicare eCQM collection type to allow choice in submission method for Medicare Shared Savings Program ACOs reporting the APP Plus measure set. See section IV.A.4.d.(1)(c)(v) of this final rule for further information on the Medicare eCQM collection type.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (91 FR 44458), we are finalizing the changes to measure Q113 as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

APPENDIX 2: IMPROVEMENT ACTIVITIES

In the CY 2027 PFS proposed rule (90 FR 44143), we proposed, for the CY 2027 performance period/2029 MIPS payment year and future years, to add **six** new improvement activities, modify **five** previously finalized improvement activities, and remove **eleven** previously finalized improvement activities. These proposals are discussed in section IV.A.4.d.(3).(b). of this final rule and in more detail below. We solicited comment on our proposals. Overall, we received comments sharing support, concerns, and suggestions. Many of the comments focused on specific proposed improvement activity additions, modifications, and removals, which are detailed below. Generally, comments addressed the safety of AI use for clinicians and patients and offered suggestions for developing additional activities in the future to support health initiatives aimed at reducing cardiovascular disease risk and preventing HIV.

TABLE F-B1: New Improvement Activities

New Improvement Activity	
Proposed Activity ID:	**IA_CC_20**
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Use of Data to Improve Practice Workflows
Proposed Activity Description:	MIPS-eligible clinicians collaborate to design, implement, and continuously refine evidence based utilization pathways and clinical workflows that support the integration of current research and clinical guidelines into everyday practice. Eligible activities include the creation or maintenance of any algorithm, clinical pathway, process, or order set that is grounded in established clinical practice guidelines and/or peer reviewed literature. Actions that fulfill this activity may include: • Collecting and analyzing clinical data to identify the need for a new or revised pathway, order set, or process • Developing and deploying the updated pathway, order set, or process within clinical operations • Evaluating adoption, effectiveness, and clinical impact through ongoing monitoring and feedback. Additional qualifying activities may include, for example, conducting annual reviews of existing pathways or algorithms by a pathology group and/or in collaboration with ordering clinician, developing and disseminating educational materials, and identifying or engaging new stakeholders to support pathway improvement and implementation.
Rationale:	Promoting uptake of best clinical practices from guidelines and other resources is critical for improving quality of patient care. However, translating recommendation statements into action can be challenging for individual practices due to resource constraints. Clinical pathways and algorithms are effective ways to encourage implementation of guidelines.[525] Development of such pathways requires clinical expertise and time, although a 10-step process has been established by other organizations.[526] By including a multi-disciplinary team in pathway development, care coordination can be maximized and all stakeholders can ensure that the pathway is feasible to implement. Such guidance requires regular review as new clinical practice statements become available, especially if the pathway includes multiple specialties (e.g., oncology, radiology, pathology, pain management, etc.).

[525] Fiordalisi, C., Borsky, A., Chang, S., & Guise, J.-M. (2019). AHRQ EPC Series on Improving Translation of Evidence into Practice for the Learning Health System: Introduction. Journal on Quality and Patient Safety, 45(8), 558-565. doi: 10.1016/j.jcjq.2019.05.006

[526] Flores, E. J., Jue, J. J., Giradi, G., Schoelles, K., Mull, N. K., & Umscheid, C. A. (2019). AHRQ EPC series on improving translation of evidence: use of a clinical pathway for C. Difficile treatment to facilitate the translation of research findings into practice. The Joint Commission Journal on Quality and Patient Safety, 45(12), 822-828. doi: 10.1016/j.jcjq.2019.10.002.

	Therefore, the effort involved in this activity is ongoing and requires input from many members of the care team.
Comment & Response:	*Comment*: We received several comments in support of finalizing this new activity. *Response*: We thank commenters for their support of this new activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_CC_21**
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Understand and Improve Diagnostic Performance
Proposed Activity Description:	This activity aims to improve patient safety by reducing diagnostic safety events, including delayed, inaccurate, or missed diagnoses, as well as failures to communicate correct diagnoses to patients and their families. This activity should support diagnostic transparency, build staff competency through training, and improve the completeness and accuracy of patient data. Understanding and improving diagnostic performance includes establishing a standardized process to monitor diagnostic discrepancies, diagnostic safety events, near misses, and miscommunications. Key components of this activity may include: • Identifying a metric to track (e.g., frozen section discrepancy rate) • Implementing a consistent tracking mechanism • Conducting ongoing monitoring • Initiating mitigation or education efforts when needed. Processes must incorporate both routine tracking and root cause analysis, followed by appropriate corrective actions such as workflow changes, education, and/or targeted training for individuals and/or groups.
Rationale:	Accurate and timely diagnosis is the cornerstone of effective patient care. Diagnostic performance directly influences treatment decisions, patient outcomes, and healthcare resource utilization. Recent studies have emphasized the importance of addressing diagnostic safety events in clinical settings.[527] A deeper understanding of diagnostic processes--including cognitive, systemic, and technological factors--enables healthcare providers to identify gaps, implement targeted interventions, and promote a culture of continuous learning and accountability. As healthcare becomes increasingly data-driven, integrating diagnostic improvement efforts with quality metrics, patient feedback, and interdisciplinary collaboration ensures that care is not only clinically sound but also patient-centered.
Comment & Response	*Comment*: We received several comments in support of finalizing this new activity. *Response*: We thank commenters for their support of this new activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_AHW_2**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Systematic Screening and Intervention for Nutrition and other Health-Impacting, Non-Clinical Issues
Proposed Activity Description:	This activity supports the implementation of standardized health-related, non-clinical issues screening tools and workflows to identify and address wellness-impacting factors such as poor nutrition, housing instability, transportation barriers, and financial strain. It may include: • Training staff on screening protocols • Embedding validated screening tools into the electronic health record (EHR)

[527] Auerbach, A. D., Lee, T. M., Hubbard, C. C., Ranji, S. R., Raffel, K., Valdes, G., ... & Schnipper, J. L. (2024). Diagnostic errors in hospitalized adults who died or were transferred to intensive care. JAMA Internal Medicine, 184(2), 164-173.

	• Establishing referral pathways to community-based resources • Tracking follow-up and resolution of identified needs.
Rationale:	This activity addresses a gap for a nutrition-focused improvement activity. It aligns with CMS's focus on wellness and whole-person care, and supports Enhancing Oncology Model (EOM) and MVP efforts by integrating health-related, non-clinical issues into quality improvement strategies. This activity builds on existing patient navigation and care coordination activities but focuses specifically on upstream factors.
Comment & Response:	*Comment*: We received several comments in support of finalizing this new activity. *Response*: We thank commenters for their support of this new activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_AHW_3**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Advance Care Planning Conversations to Support Patient Wellness and Care Preferences
Proposed Activity Description:	MIPS-eligible clinicians engage patients and their caregivers in structured, proactive discussions about end-of-life preferences, advance care planning (ACP), and palliative care options as part of comprehensive wellness and care management. This activity integrates conversations about goals of care, symptom management, and quality of life into routine encounters with patients who have serious or life limiting illness. CMS reminds clinicians that they must not attempt to influence the ACP-related decisions of their patients. Participating clinicians must document: • Use of standardized communication tools or frameworks (e.g., Serious Illness Conversation Guide, Practitioner Orders for Life Sustaining Treatment (POLST)) to support consistent, high quality discussions; • Inclusion of wellness oriented topics, such as symptom relief, emotional wellbeing, social supports, and patient identified priorities; • Coordination and alignment of care plans across specialties, including primary care, palliative care, behavioral health, and other involved clinicians; and • Regular review and updates of advance directives or care preferences to ensure they remain accurate and reflective of the patient's evolving goals and clinical status.
Rationale:	End-of-life care planning discussions contribute to improved patient and caregiver well-being by reducing stress, enhancing understanding of care options, and ensuring treatment aligns with patient goals. Integrating these conversations into wellness and/or chronic care management visits supports a holistic approach to health, one that prioritizes quality of life, emotional and physical comfort, and patient autonomy. Evidence indicates that patients who engage in structured end-of-life care planning experience better symptom control, higher satisfaction, and reduced hospitalizations, aligning with MIPS goals of improved care coordination and patient-centered outcomes.
Comment & Response:	*Comment*: We received several comments in support of finalizing this new activity. One commenter recommended encouraging clinicians to assess existing ACP documents, verifying that patient preferences remain current, and promoting availability and exchange of ACP information across care settings. *Response:* We thank commenters for sharing their support and suggestions for this new activity. While we appreciate the recommendations, we believe these aspects are already incorporated into the activity.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	
Proposed Activity ID:	**IA_AHW_4**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Clinician Use of Artificial Intelligence (AI) to Improve Patient Care

Proposed Activity Description:	MIPS-eligible clinicians implement and participate in structured organizational initiatives that improve patient care through the responsible and transparent use of artificial intelligence (AI) in clinical and operational workflows. This activity supports the safe adoption of AI-enabled technologies while encouraging the development, evaluation, and refinement of AI resources designed to improve patient outcomes, care-team efficiency, and population health management. As part of this activity, participating clinicians and organizations must: • Establish and maintain organizational policies and procedures for AI use in healthcare settings that guide the evaluation, deployment, and monitoring of AI-enabled tools ○ These policies incorporate key AI model characteristics including fairness, appropriateness, validity, and effectiveness as foundational criteria for assessing model performance, identifying event patterns, and determining appropriate risk-mitigation and escalation actions and • Engage in or support innovative initiatives that encourage the creation, piloting, and/or enhancement of AI-enabled tools, workflows, and/or resources ○ Examples include developing risk-stratification models, AI-supported clinical decision support (CDS), predictive analytics for chronic-disease management, and/or tools that expand patient access, wellness interventions, and/or care-coordination capabilities. Additional examples include using AI tools to summarize medical literature for clinical decision making, support documentation (e.g., generate notes with AI for clinician review), and/or support population health management by identifying care gaps, determining patient eligibility for clinical trials, or generating draft responses to patient questions for clinician review.
Rationale:	The rapid expansion of artificial intelligence (AI) in healthcare presents significant opportunities to improve clinical outcomes, reduce clinician burden, and enhance population health management. However, realizing these benefits requires deliberate, responsible, and transparent implementation practices that ensure AI tools are safe, fair, reliable, and aligned with evidence-based care. This improvement activity encourages MIPS-eligible clinicians to adopt AI in a structured, governance-driven manner that promotes innovation while safeguarding patient well-being. Establishing organizational policies and procedures for AI use provides an essential foundation for ensuring that deployed tools are evaluated using key model characteristics (fairness, appropriateness, validity, and effectiveness). By incentivizing participation in innovation initiatives such as developing or piloting new AI-enabled tools and workflows, this activity further advances the field of applied clinical AI, encouraging clinicians and practices to collaborate in the creation and refinement of AI resources. This activity also aligns with the AI-related goals of the CMS ACCESS (Advancing Chronic Care with Effective, Scalable Solutions) Model, a 10-year voluntary Medicare program testing outcome-aligned payments to expand technology-supported chronic care for common conditions.[528]
Comment & Response:	*Comment*: We received many comments related to this new activity. The majority of comments shared support for finalizing the new activity with some offering suggestions on additional protections or technologies to include within the activity. One commenter opposed AI in medicine and asked to delay the integration of AI into the Improvement Activities Inventory. *Response*: We thank commenters for expressing their support, concerns, and suggestions for this activity. We will continue to track the progression of AI technology and tools, best practices, and safeguards. We note that the activity requires participating clinicians and organizations to: "Establish and maintain organizational policies and procedures for AI use in healthcare settings that guide the evaluation, deployment, and monitoring of AI-enabled tools." We will continue to make modifications and additions to the Improvement Activity Inventory as needed. We welcome collaboration with interested parties on this topic.
Final Action:	After consideration of public comments, we are finalizing this new activity as proposed.
New Improvement Activity	

[528] Centers for Medicare and Medicaid Services. (n.d). ACCESS (Advancing Chronic Care with Effective, Scalable Solutions) Model. https://www.cms.gov/priorities/innovation/innovation-models/access.

Proposed Activity ID:	**IA_AHW_5**
Proposed Subcategory:	Advancing Health and Wellness
Proposed Activity Title:	Lifestyle Approaches to Diabetes Remediation
Proposed Activity Description:	MIPS-eligible clinicians engage patients and their caregivers in structured, evidence-based lifestyle interventions to support the treatment and management of diabetes. Clinicians use the American College of Lifestyle Medicine's (ACLM) Lifestyle Empowerment Approach for Diabetes Remission (LEADR) or a similar diabetes-focused lifestyle program to help patients address modifiable behavioral factors and improve overall health status. These programs provide education, coaching, and support across key lifestyle domains such as nutrition, physical activity, sleep, stress management, and reducing harmful behaviors. Participating clinicians may use one or more of the following evidence-based programs and resources: • ACLM Lifestyle Empowerment Approach for Diabetes Remission (LEADR)[529] • Diabetes Self-Management Education and Support (DSMES)[530] • American Diabetes Association Institute of Learning – Hands On Webinar: Diet, Lifestyle, Medicine, and Beyond—CardioKidneyMetabolic Strategies for Managing Obesity in People with Type 2 Diabetes[531] Use of each resource includes participating in the LEADR and/or Hands on Webinar programs and implementing learnings into practice with patients as clinically appropriate or referring patients when clinically appropriate to a DSMES program in-house or externally.
Rationale:	This activity aligns with CMS's focus on wellness and whole-person care and supports MVP efforts by integrating health-related, non-clinical issues into quality improvement strategies.
Comment & Response:	*Comment*: Several commenters expressed support for finalizing this activity. Commenters shared how this activity aligns with evidence-based approaches to managing diabetes. Some commenters suggested adding more information to the activity description to explain how each resource should be used. *Response*: We thank the commenters for sharing their support and suggestions for this activity.
Final Action:	We have made minor edits to this activity description accordingly and are otherwise finalizing this new activity as proposed.

In this proposed rule, we are proposing to modify **five** previously finalized improvement activities for the CY 2027 performance period/2029 MIPS payment year and future years. These

[531] American Diabetes Association. (n.d.). Hands On: Diet, Lifestyle, Medicine, and Beyond CardioKidneyMetabolic Strategies for Managing Obesity in People with Type 2 Diabetes https://professionaleducation.diabetes.org/ProductInfo/HandsOnFeb25OD.

proposed changes are discussed in section IV.A.4.d.(3)(b)(IV) of this proposed rule and in more detail below.

TABLE F-B2: Modifications to Previously Finalized Improvement Activities

Current Improvement Activity	
Current Activity ID:	**IA_PSPA_16**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
Current Activity Description:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs. Clinicians should focus on utilizing open-source, freely available, interoperable CDS in completing the requirements of this activity.
Proposed Change and Rationale:	Stakeholder comments on the CY 2026 PFS NPRM supported stronger oversight of clinical AI, including monitoring, root cause analysis, and mitigation of AI-related diagnostic safety events and near-misses. This activity, IA_PSPA_16, already contains core patient safety elements, making it a strong candidate for modification to explicitly include AI-enabled decision support, aligned with the Office of the National Coordinator for Health Information Technology (ONC) definition of predictive decision-support interventions in 45 CFR 170.102 and stakeholder concerns about safety, liability, and governance.
Revised Activity Title:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs
Revised Activity Description:	MIPS-eligible clinicians use platform-agnostic, interoperable clinical decision support (CDS) tools—including artificial intelligence (AI)-enabled predictive decision-support interventions—to guide care-team workflow and support evidence-based, patient-centered decision-making. As part of this activity, clinicians prioritize open-source or freely available CDS tools where feasible and implement organizational policies to ensure the safe, appropriate, and effective use of these technologies. This activity may include: • Use of interoperable CDS tools, including AI-enabled technologies that meet the ONC definition of predictive decision-support interventions in 45 CFR 170.102: "technology that supports decision-making based on algorithms or models that derive relationships from training data and then produce an output that results in prediction, classification, recommendation, evaluation, or analysis"[532] • Organizational policies for safe CDS and AI use, including processes to identify, review, and mitigate AI-related adverse events or near-misses, and to address clinician concerns about liability, model reliability, and appropriate use • Evaluation of AI-enabled CDS tools using the following quality principles: ○ Fairness: outputs free from bias or undue risk ○ Appropriateness: relevance to the clinical context ○ Validity: accurate and reliable predictions or recommendations ○ Effectiveness: demonstrated benefit in real-world use • Workflow integration practices showing that CDS recommendations—whether originally human-curated or AI-generated—are applied consistently in treatment planning, patient counseling, and follow-up • Periodic review and updating of CDS tools and related protocols to maintain alignment with best practices, organizational policies, and patient-safety standards.

[532] Office of the National Coordinator for Health IT. (2026). *45 CFR 170.315: ONC certification criteria for Health IT*. U.S. Code of Federal Regulations. https://www.ecfr.gov/current/title-45/subtitle-A/subchapter-D/part-170/subpart-C/section-170.315.

Comment & Response:	*Comment*: We received several comments related to the modification of this activity. All comments shared support for finalizing the modification with some suggesting additional requirements to include within the activity. *Response*: We thank commenters for expressing their support and suggestions for this activity modification. We will continue to track the progression of AI technology and tools, best practices, and safeguards. We will propose further modifications to this activity as needed in the future. We welcome collaboration with interested parties on this topic.
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed
Current Improvement Activity	
Current Activity ID:	**IA_BMH_4**
Current Subcategory:	Behavioral And Mental Health
Current Activity Title:	Depression screening
Current Activity Description:	Depression screening and follow-up plan: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including depression screening and follow-up plan (refer to NQF #0418) for patients with co-occurring conditions of behavioral or mental health conditions
Proposed Change and Rationale:	IA_BMH_4 and IA_BMH_5 contain similar elements that could be combined into one, more robust activity.
Proposed Revised Activity Title:	Depression Screening, Treatment, and Prevention
Proposed Revised Activity Description:	MIPS-eligible clinicians or groups regularly engage in integrated screening, treatment, and/or prevention interventions for patients with behavioral or mental health conditions, with a focus on early identification and coordinated management of major depressive disorder and associated risks. This activity includes systematic depression screening and follow-up planning, along with suicide risk assessment for individuals at elevated risk. Clinicians participating in this activity should implement and document: • Use of validated depression screening tools administered at appropriate intervals for patients • Completion of suicide risk assessments when clinically indicated, using standardized tools for patients who screen positive for depression or exhibit mental-illness warning signs • Development and execution of evidence-based follow-up plans, including safety planning, symptom management, referral to behavioral health specialists, and monitoring of treatment response • Integrated, team-based coordination of care between primary care, behavioral health, psychiatry, and other relevant specialties to support continuity, patient safety, and positive patient outcomes • Routine monitoring and reassessment, including documentation of treatment adjustments, patient (and/or family/caregiver) engagement, and adherence to follow-up intervals consistent with clinical guidelines.
Comment & Response:	*Comment*: We received some comments specifically related to the modification of this activity. One comment shared support for finalizing the modification and suggested adding "evidence-based depression treatment" to the activity. Another comment shared concern that the combination of two depression-related improvement activities could diminish the visibility of depression management. *Response*: We thank commenters for expressing their support, concern, and suggestions for this activity modification. We believe that language relating to evidence-based depression treatment is already incorporated into the activity description sufficiently. The combination of depression-related improvement activities will not lessen focus on depression management. This modification is aimed at reducing duplicative activities to reduce administrative effort.
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed.
Current Improvement Activity	

Current Activity ID:	**IA_CC_8**
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of documentation improvements for practice/process improvements
Current Activity Description:	Implementation of practices/processes that document care coordination activities (e.g., a documented care coordination encounter that tracks all clinical staff involved and communications from date patient is scheduled for outpatient procedure through day of procedure).
Proposed Change and Rationale:	IA_CC_8, IA_CC_10, IA_CC_11, and IA_CC_12 all contain similar elements that could be combined into one, more robust activity.
Proposed Revised Activity Title:	Implementation of Documentation and/or Operational Improvements for Practice/Process Improvements
Proposed Revised Activity Description:	This activity aims to strengthen communication, transparency, and patient-centered care across all transitions—outpatient, inpatient, specialty, and community settings. It seeks to promote clinicians' proactively coordinating care, tracking patient progress, documenting actions taken, and maintaining clear, structured processes that reduce fragmentation and improve clinical outcomes. This activity may include: • Documentation of care coordination encounters that track all clinical staff involved, communication steps, and handoffs from the time a patient is scheduled for an outpatient procedure or referral through completion of the episode of care • Systematic tracking of patients referred to consultants or specialists, including confirmation that the referral was received, appointments were completed, and recommendations were integrated into the plan of care • Documentation of care transition practices reflecting a patient-centered action plan aligned with the patient's values, preferences, and social context • Implementation of care coordination agreements with frequently used consultants or facilities that set expectations for timely, bidirectional information sharing and clearly define responsibilities across settings.
Comment & Response:	We did not receive public comment specifically on this modification.
Final Action:	We are finalizing this activity modification as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_9**
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of practices/processes for developing regular individual care plans
Current Activity Description:	Implementation of practices/processes, including a discussion on care, to develop regularly updated individual care plans for at-risk patients that are shared with the beneficiary or caregiver(s). Individual care plans should include consideration of a patient's goals and priorities, as well as desired outcomes of care.
Proposed Change and Rationale:	IA_CC_9 and IA_BE_15 contain similar elements that could be combined into one, more robust activity.
Proposed Activity Title:	Implementation of Practices/Processes for Developing Regular Individual Care Plans
Proposed Revised Activity Description:	Implementation of practices/processes, including a discussion about care goals and preferences, to develop regularly updated individual care plans for at-risk patients that are developed and shared with the beneficiary and family and/or caregiver(s). Individual care plans should include consideration of a patient's (and family/caregiver's, as appropriate) goals and priorities, as well as desired outcomes of care.
Comment & Response:	*Comment*: We received some comments specifically related to the modification of this activity. One commenter supports the modification of this activity and its consolidation with IA_BE_15. However, a commenter also expressed concern that beneficiary-engagement activities previously recognized under IA_BE_15 may be excluded if the modification is finalized. Another commenter requested that this activity retain references to family and caregivers. *Response*: We thank commenters for expressing their support and concern with this activity modification. We do not believe that beneficiary-engagement activities will be diminished by combining these activities. The revised activity is intended to recognize care coordination and individualized care planning activities in partnership with

	patients' goals. Beneficiary engagement remains an important element of this activity because effective individualized care plans depend on engaging patients, family, and caregivers in developing a care plan and prioritizing their goals. This modification aims to reduce redundancy in the Inventory and administrative effort for clinicians. References to family and caregivers remain in this activity description post-modification. We also note that fifteen activities will remain in the Inventory in the Beneficiary Engagement subcategory.
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_4**
Current Subcategory:	Population Management
Current Activity Title:	Glycemic management services
Current Activity Description:	For outpatient Medicare beneficiaries with diabetes and who are prescribed antidiabetic agents (e.g., insulin, sulfonylureas), MIPS eligible clinicians and groups must attest to having: For the first performance year, at least 60 percent of medical records with documentation of an individualized glycemic treatment goal that: a) Considers patient-specific factors, including, at least 1) age, 2) comorbidities, and 3) risk for hypoglycemia, and b) Is reassessed at least annually. The performance threshold will increase to 75 percent for the second performance year and onward. Clinician would attest that, 60 percent for first year, or 75 percent for the second year, of their medical records that document individualized glycemic treatment represent patients who are being treated for at least 90 days during the performance period.
Proposed Change and Rationale:	IA_PM_4, IA_PM_19, and IA_PM_20 all contain similar elements that could be combined into one, more robust activity.
Proposed Revised Activity Title:	Glycemic Screening, Referral, and Management
Proposed Revised Activity Description:	For outpatient Medicare beneficiaries, MIPS-eligible clinicians and groups must attest to having: For the first performance year, at least 60 percent of medical records with documentation of screening patients for abnormal blood glucose, referring eligible patients with prediabetes to a CDC-recognized diabetes prevention program, and developing individualized glycemic treatment plans that: a) Consider patient-specific factors, including, at least 1) age, 2) comorbidities, and 3) risk for hypoglycemia, and b) Are reassessed at least annually. The performance threshold will increase to 75 percent for the second performance year and onward. Clinicians must attest that 60 percent (for the first year) and 75 percent (for the second year and beyond) of their medical records include documentation of screening patients for abnormal blood glucose according to current US Preventive Services Task Force (USPSTF) and/or American Diabetes Association (ADA) guidelines. Clinicians must attest that 60 percent (for the first year) and 75 percent (for the second year and beyond) of their medical records include documentation of referring eligible patients with prediabetes to a CDC-recognized diabetes prevention program operating under the framework of the National Diabetes Prevention Program. Clinicians must attest that 60 percent (for the first year) and 75 percent (for the second year and beyond) of their medical records document individualized glycemic treatment

	plans representing patients who are being seen for at least 90 days during the performance period.
Comment & Response:	*Comment*: We received some comments related to the modification of this activity, including expressions of support. A specific comment suggested recognizing nutrition-risk and food-access assessments, coordinating glycemic and nutrition intervention, longitudinal follow up, and referrals within this activity. *Response*: We thank commenters for expressing their support and providing suggestions for this activity modification. We believe that this activity as modified already includes follow up and referral. We will continue to monitor the implementation of this activity, and make further modifications to this activity as needed. We welcome collaboration with interested parties on this topic. We are finalizing this activity as proposed, and will carefully monitor its implementation..
Final Action:	After consideration of public comments, we are finalizing this activity modification as proposed.

In this proposed rule, we are proposing to remove **eleven** previously finalized improvement activities beginning with the CY 2027 performance period/2029 MIPS payment year. These changes are discussed in section IV.A.4.d.(3)(b)(V) of this proposed rule and in more detail below; activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

TABLE F-B3: Improvement Activities Being Removed

Current Improvement Activity	
Current Activity ID:	**IA_BMH_5**
Current Subcategory:	Behavioral And Mental Health
Current Activity Title:	MDD prevention and treatment interventions
Current Activity Description:	Major depressive disorder: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including suicide risk assessment (refer to NQF #0104) for mental health patients with co-occurring conditions of behavioral or mental health conditions.
Removal Rationale:	Proposed removal to combine with IA_BMH_4; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One specific comment shared support for finalizing this removal. Another comment shared concern that the combination of two depression-related improvement activities could diminish the visibility of depression management. *Response*: We thank commenters for expressing their support and concern regarding this activity removal. We believe that the combination of depression-related improvement activities will not lessen focus on depression management. This removal is aimed at reducing duplicative activities to reduce administrative effort.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_10**
Current Subcategory:	Care Coordination
Current Activity Title:	Care transition documentation practice improvements
Current Activity Description:	In order to receive credit for this activity, a MIPS eligible clinician must document practices/processes for care transition with documentation of how a MIPS eligible clinician or group carried out an action plan for the patient with the patient's preferences in mind (that is, a "patient-centered" plan) during the first 30 days following a discharge. Examples of these practices/processes for care transition include: staff involved in the care transition; phone calls conducted in support of transition; accompaniments of patients to appointments or other navigation actions; home visits; patient information access to their medical records; real time communication between PCP and consulting clinicians; PCP included on specialist follow-up or transition communications.
Removal Rationale:	Proposed removal to combine with IA_CC_8; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One specific comment shared concern that removing IA_CC_10, IA_CC_11, and IA_CC_12 could inadvertently reduce recognition of the care transition and coordination activities performed by clinicians, particularly infectious disease physicians whose patients regularly move across care settings.

	Response: We thank commenters for sharing their concern and emphasizing the importance of care transitions and care coordination for patients with complex conditions. Proposed removals are aimed at reducing duplication within the Inventory while maintaining recognition of the importance of care transitions and care coordination. We note that--with ten activities remaining in the Care Coordination subcategory--the Improvement Activities Inventory will continue to recognize care transitions, care coordination, and information-sharing practices and give clinicians credit for this work.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_11**
Current Subcategory:	Care Coordination
Current Activity Title:	Care transition standard operational improvements
Current Activity Description:	Establish standard operations to manage transitions of care that could include one or more of the following: • Establish formalized lines of communication with local settings in which empaneled patients receive care to ensure documented flow of information and seamless transitions in care; and/or • Partner with community or hospital-based transitional care services.
Removal Rationale:	Proposed removal to combine with IA_CC_8; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One specific comment shared concern that removing IA_CC_10, IA_CC_11, and IA_CC_12 could inadvertently reduce recognition of the care transition and coordination activities performed by clinicians, particularly infectious disease physicians whose patients regularly move across care settings. *Response*: We thank commenters for sharing their support and concern and emphasizing the importance of care transitions and care coordination for patients with complex conditions. Proposed removals are aimed at reducing duplication within the Inventory while maintaining recognition of the importance of care transitions and care coordination. We note that--with ten activities remaining in the Care Coordination subcategory--the Improvement Activities Inventory will continue to recognize care transitions, care coordination, and information-sharing practices and give clinicians credit for this work.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_12**
Current Subcategory:	Care Coordination
Current Activity Title:	Care coordination agreements that promote improvements in patient tracking across settings
Current Activity Description:	Establish effective care coordination and active referral management that could include one or more of the following: • Establish care coordination agreements with frequently used consultants that set expectations for documented flow of information and MIPS eligible clinician or MIPS eligible clinician group expectations between settings. Provide patients with information that sets their expectations consistently with the care coordination agreements; • Track patients referred to specialist through the entire process; and/or • Systematically integrate information from referrals into the plan of care.
Removal Rationale:	Proposed removal to combine with IA_CC_8; Factor 1, activity is duplicative

Comment & Response:	*Comment*: We received some comments related to the removal of this activity. One commenter shared concern that removing IA_CC_10, IA_CC_11, and IA_CC_12 could inadvertently reduce recognition of the care transition and coordination activities performed by clinicians, particularly infectious disease physicians whose patients regularly move across care settings. *Response*: We thank commenters for their support and for sharing concern and emphasizing the importance of care transitions and care coordination for patients with complex conditions. Proposed removals are aimed at reducing duplication within the Inventory while maintaining recognition of the importance of care transitions and care coordination. We note that--with ten activities remaining in the Care Coordination subcategory--the Improvement Activities Inventory will continue to recognize care transitions, care coordination, and information-sharing practices and give clinicians credit for this work.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PSPA_2**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Participation in MOC Part IV
Current Activity Description:	In order to receive credit for this activity, a MIPS eligible clinician must participate in Maintenance of Certification (MOC) Part IV. Maintenance of Certification (MOC) Part IV requires clinicians to perform monthly activities across practice to regularly assess performance by reviewing outcomes addressing identified areas for improvement and evaluating the results. Some examples of activities that can be completed to receive MOC Part IV credit are: the American Board of Internal Medicine (ABIM) Approved Quality Improvement (AQI) Program, National Cardiovascular Data Registry (NCDR) Clinical Quality Coach, Quality Practice Initiative Certification Program, American Board of Medical Specialties Practice Performance Improvement Module or American Society of Anesthesiologists (ASA) Simulation Education Network, for improving professional practice including participation in a local, regional or national outcomes registry or quality assessment program; specialty- specific activities including Safety Certification in Outpatient Practice Excellence (SCOPE); American Psychiatric Association (APA) Performance in Practice modules.
Removal Rationale:	Many physicians are already required (e.g., by states) to participate in MOC; therefore, this activity is not likely to be driving additional meaningful clinical care improvement; Factors 1 & 7, activity is duplicative and/or obsolete
Comment & Response:	*Comment*: We received one comment specifically related to this activity removal. This commenter opposed this removal, stating that the MOC Part IV activity incentivizes clinician education and practical quality improvement. *Response*: We thank the commenter for sharing their opposition to this activity removal. We believe that MOC Part IV participation is standard practice and/or required and is therefore unlikely to be driving additional meaningful clinical care improvement.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_CC_16**
Current Subcategory:	Care Coordination
Current Activity Title:	Primary Care Physician and Behavioral Health Bilateral Electronic Exchange of Information for Shared Patients
Current Activity Description:	The primary care and behavioral health practices use the same electronic health record system for shared patients or have an established bidirectional flow of primary care and behavioral health records.

Removal Rationale:	Given advancements in EHR adoption and data-sharing practices, this activity is no longer likely driving additional meaningful clinical care improvement; Factor 7, activity is obsolete.
Comment & Response:	*Comment*: We received some comments specifically related to the removal of this activity. One comment opposed the removal of this improvement activity, stating that information exchange between primary care and behavioral health providers remains inconsistent and that this activity would continue to incentivize information exchange. *Response*: We thank commenters for sharing their concern and emphasizing the importance of information exchange between primary care and behavioral health providers. We agree that information exchange is important, but believe this activity is unlikely to drive additional meaningful clinical care improvement because EHR adoption and data sharing has advanced significantly since the creation of this activity. Also, please see existing IA_CC_13, Practice improvements to align with OpenNotes principles; and IA_BE_4, Engagement of Patients through Implementation of New Patient Portal.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_BE_15**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
Current Activity Description:	Engage patients, family, and caregivers in developing a plan of care and prioritizing their goals for action, documented in the electronic health record (EHR) technology.
Removal Rationale:	Proposed removal to combine with IA_CC_9; Factor 1, activity is duplicative
Comment & Response:	*Comment*: We received some comments related to the removal of this activity, including the expression of support. However, a specific comment also expressed concern that beneficiary-engagement activities previously recognized under IA_BE_15 will be excluded if the removal is finalized. *Response*: We thank commenters for expressing their support and concern with this activity removal. We do not believe that beneficiary-engagement activities will be diminished by this activity's removal, which is intended to reduce redundancy in the Inventory and administrative effort for clinicians. Beneficiary engagement remains an important element of the modified activity because effective individualized care plans depend on engaging patients, family, and caregivers in developing a care plan and prioritizing their goals. We also note that fifteen activities will remain in the Inventory in the Beneficiary Engagement subcategory.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_19**
Current Subcategory:	Population Management
Current Activity Title:	Glycemic Screening Services
Current Activity Description:	For at-risk outpatient Medicare beneficiaries, individual MIPS eligible clinicians and groups must attest to implementation of systematic preventive approaches in clinical practice for at least 60 percent for the 2018 performance period and 75 percent in future years, of electronic medical records with documentation of screening patients for abnormal blood glucose according to current US Preventive Services Task Force (USPSTF) and/or American Diabetes Association (ADA) guidelines.
Removal Rationale:	Proposed removal to be combined with IA_PM_4; Factor 1, activity is duplicative

Comment & Response:	We did not receive public comments specifically on this removal.
Final Action:	We are finalizing this removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_20**
Current Subcategory:	Population Management
Current Activity Title:	Glycemic Referring Services
Current Activity Description:	For at-risk outpatient Medicare beneficiaries, individual MIPS eligible clinicians and groups must attest to implementation of systematic preventive approaches in clinical practice for at least 60 percent for the CY 2018 performance period and 75 percent in future years, of medical records with documentation of referring eligible patients with prediabetes to a CDC-recognized diabetes prevention program operating under the framework of the National Diabetes Prevention Program.
Removal Rationale:	Proposed removal to be combined with IA_PM_4; Factor 1, activity is duplicative
Comment & Response:	We did not receive public comments specifically on this removal.
Final Action:	We are finalizing this removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_EPA_4**
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Additional improvements in access as a result of QIN/QIO TA
Current Activity Description:	As a result of Quality Innovation Network (QIN)-Quality Improvement Organization (QIO) technical assistance, performance of additional activities that improve access to services or improve care coordination (for example, investment of on-site diabetes educator).
Removal Rationale:	This activity is one of several focused on improvements that can be supported and/or driven by QIN/QIOs. This particular activity could be attested to with relatively low levels of effort and without a need to measure specific outcomes. If this concept is important to eligible clinicians, they can attest to IA_PSPA_19. Other QIN/QIO-relevant activities will remain in the Inventory. Factor 2; There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. Factor 7; Activity is obsolete.
Comment & Response:	We did not receive public comments specifically on this removal.
Final Action:	We are finalizing this removal as proposed.
Current Improvement Activity	
Current Activity ID:	**IA_PM_2**
Current Subcategory:	Population Management
Current Activity Title:	Anticoagulant management improvements
Current Activity Description:	Individual MIPS eligible clinicians and groups who prescribe anti-coagulation medications (including, but not limited to oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors) must attest that for 75 percent of their ambulatory care patients receiving these medications are being managed with support from one or more of the following improvement activities:

	• Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program); • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Removal Rationale:	Direct oral anticoagulant medications (DOACs) have dramatically changed clinical practice, with significantly decreased use of warfarin over the last decade. Despite these changes, there are still specific circumstances that require use of warfarin, including the presence of prosthetic valves, antiphospholipid syndrome, and a high risk of bleeding complications, particularly gastrointestinal bleeding. This activity drives 'classic' quality actions related to the use of warfarin. Given the transition away from warfarin's common use, removing this activity is likely appropriate. We acknowledge the ongoing importance of medication management and will work to ensure that, going forward, improvement activities that support continued enhancement and maintenance of anticoagulation medication management are reflected in MIPS. Factor 7; activity is obsolete.
Comment & Response:	Comment: We received some comments related to the removal of IA_PM_2. One commenter opposed the removal of IA_PM_2 and recommended maintaining the activity within the inventory. Response: We thank commenters for their feedback. However, this activity no longer reflects current anticoagulation practice broadly. To ensure improvement activities remain strongly and widely clinically relevant, we will finalize the removal of this activity. We will continue to consider opportunities to develop future activities that reflect current approaches to anticoagulation management.
Final Action:	After consideration of public comments, we are finalizing this activity removal as proposed.

APPENDIX 3: MVP INVENTORY

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs. These criteria include MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix includes three groups of finalized MVP tables: Table 1 covers the MVP Foundational Layer, Group A presents 3 finalized new MVPs, and Group B outlines finalized modifications to 27 previously finalized MVPs.

Each MVP is composed of measures and activities from the quality, improvement activities, and cost performance categories relevant to the clinical specialty of the MVP. Additionally, every MVP includes a foundational layer which consists of population health measures and Promoting Interoperability performance category objectives and measures. The foundational layer is consistent across all MVPs and is detailed in Table 1: MVP Foundational Layer.

When applicable and substantive, we included a brief overview of the planned modifications to QCDR measures within relevant MVPs. Although QCDR measures are exempt from public notice and comment, providing this overview ensures transparency and offered interested parties the opportunity to provide comment on all aspects of each MVP prior to finalization. Final decisions regarding modifications to QCDR measure specifications are made by QCDR measure stewards independently of the rulemaking process, though these modifications may have influenced the decisions in this final rule.

IA_PCMH: Electronic submission of Patient Centered Medical Home Accreditation is not listed in the finalized MVP tables. In accordance with § 414.1380(b)(3)(ii), MIPS eligible clinicians in practices certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, may attest to this activity and receive an improvement activities performance category score of 100 percent (81 FR 77179 through 77180).

MVP Development: Performance Category Sources

Table 1, Group A, and Group B MVP tables include foundational measures and sets of MIPS quality measures, QCDR measures (as applicable), improvement activities, and cost measures organized around clinical topics. For further reference, the sources for the measures and activities included in the MVP tables can be found on the Quality Payment Program website, as detailed below:

- Existing MIPS quality measures are included in the 2026 MIPS Quality Measures List.[533] For details on finalized changes, refer to Appendix 1: MIPS Quality Measures in this final rule, which outlines the following: finalized additions (Table Group A), finalized removals (Table Group C), and finalized modifications to existing quality measures (Table Groups D and DD).

[533] See the 2026 MIPS Quality Measures List: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3570/2026-MIPS-Quality-Measures-List.xlsx.*

● Existing QCDR measures are derived from the latest publication of the 2026 QCDR Measure Specification file.[534] We anticipate updating the list of 2027 QCDR measures in December 2026.

● Existing improvement activities are included in the 2026 Improvement Activities Inventory and the 2026 MIPS Data Validation Criteria.[535] For details on finalized changes, refer to Appendix 2: Improvement Activities in this final rule, which outlines the following: finalized additions (Table Group A), finalized modifications to existing improvement activities (Table Group B), and finalized removals (Table Group C).

● Existing cost measures are included in the 2026 Cost Measures Inventory.[536] There were no proposed changes to cost measures included in the finalized CY 2027 MVPs.

● Existing Promoting Interoperability measures and attestations, adopted in prior rulemaking and included in the foundational layer, can be found on the Quality Payment Program website.[537] For details on finalized proposals to the Promoting Interoperability performance category, we refer readers to section IV.A.4.d.(4) of this final rule. Finalized proposals include a modification to the definition of CEHRT, a reduction in requirements, and the following: A modification to the PI_HIE_7: Electronic Prior Authorization measure, which changed the measure from being a required measure to an optional measure for the CY 2027 performance period/2029 MIPS payment year (measure was previously finalized as a required measure in the CMS Interoperability and Prior Authorization final rule (89 FR 8915 through 8927); and the addition of a new measure, Electronic Prior Authorization for Prescription Drugs (PI_HIE_8), which would be a required measure starting with the CY 2028 performance period/2030 MIPS payment year.

● For more information on the population health measures, attributed to the quality performance category and included in the foundational layer, refer to the CY 2022 PFS final rule (86 FR 65408 through 65409).

MVP Development: Measure and Improvement Activity Updates

● Group A and Group B MVPs include an additional table, identifying the finalized MIPS core measures within each MVP. For details on the finalized MIPS core measure proposal and selection criteria for MVPs refer to section IV.A.4.d.(1)(c) of this final rule.

● Refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of MIPS quality measures.

● Refer to Appendix 2: Improvement Activities (Table Group C) in this final rule for details on the removal of improvement activities.

● Refer to section IV.A.4.d.(4) Promoting Interoperability Performance Category measures in this final rule for details on the removal of Promoting Interoperability Performance Category measures. The following Promoting Interoperability measures, previously included in the foundational layer of MVPs, were finalized for removal from MIPS: **PI_PPHI_1:** Security Risk Analysis, **PI_ONCDIR_1:** ONC Direct Review Attestation, and **PI_ONCACB_1:** ONC-ACB Surveillance Attestation (Optional).

[535] See the 2026 Improvement Activities Inventory: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3567/2026-Improvement-Activities-Inventory.zip* and 2026 MIPS Data Validation Criteria: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3574/2026-MIPS-Data-Validation-Criteria.zip*.
for improvement activity details.

[536] See the 2026 Cost Measures Inventory: *https://qpp.cms.gov/reporting-requirements/measures-activities/explore?tab=costMeasures&py=2026.*

[537] See the 2026 Promoting Interoperability Measure Specifications: *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3566/2026-MIPS-Promoting-Interoperability-Measure-Specifications.zip* for Promoting Interoperability measure details.

MVP Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables in this appendix:

- Quality measures finalized as MIPS core measures in an MVP are identified with a single exclamation point (!).
- Quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP are identified with a plus sign (+).
- Finalized new MIPS quality measures, improvement activities, and Promoting Interoperability measures included in an MVP beginning with the CY 2027 performance period/2029 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1: MIPS Quality Measures: Table Group A, Appendix 2: Improvement Activities: Table Group A, and section IV.A.4.d.(4) of this final rule for further information regarding new MIPS quality measures, improvement activities and Promoting Interoperability measures.
- Existing measures and improvement activities with finalized revisions are identified with a single asterisk (*). For further information regarding finalized revisions see Appendix 1: MIPS Quality Measures: Tables Group D and DD for revisions to MIPS quality measures, Appendix 2: Improvement Activities: Table Group B for revisions to improvement activities, and section IV.A.4.d.(4) for revisions to Promoting Interoperability measures. Unless changes were required to continue to meet programmatic standards for inclusion, we included existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions were finalized beginning with the CY 2027 performance period/2029 MIPS payment year.
- QCDR measures finalized with modifications by the QCDR measure stewards are identified in this appendix with a single asterisk (*). When applicable and substantive in nature, we provide a brief overview of the planned modifications within applicable MVPs. Since QCDR measures are exempt from public notice and comment, this overview allowed for transparency with interested parties and an opportunity to comment on all aspects of each MVP prior to finalization. Final decisions to modify QCDR measure specifications are determined by QCDR measure stewards, separate from rulemaking, but may impact decisions as finalized in the final rule.
- Quality measures and improvement activities identified with a double asterisk (**) can only be submitted when included in an MVP.
- Improvement activities that include an advancing health and wellness component are identified with a double exclamation point (!!).
- Quality measure collection types are identified in parentheses after each quality measure title.

Foundational Layer

Each MVP contains a foundational layer, which includes the entire set of Promoting Interoperability performance category measures and two population health measures. The foundational layer is the same for all MVPs, as listed in Table 1.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.

Group A: New MVPs Proposed for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

A.1 Diabetic Disease MVP

In the CY 2027 PFS proposed rule (91 FR 43842), we proposed and solicited comments on the Diabetic Disease MVP. The proposed Diabetic Disease MVP assesses meaningful outcomes in diabetic disease care. This MVP would be most applicable to clinicians who provide diabetic disease patient care, including primary care, endocrinology, ophthalmology, podiatry, and nonphysician practitioners (NPPs) such as nurse practitioners, clinical nurse specialists, and

physician assistants. The summary of the public comments received and our responses to this MVP are included immediately after Table A.1b and the list of improvement activities.

Quality Measures

We proposed to include 11 MIPS quality measures and 2 QCDR measures within the quality performance category of this MVP, which are relevant to the clinical topic of diabetic disease care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

For the reasons stated in the introduction of this appendix,[538] we proposed the following measures as MIPS core measures for the Diabetic Disease MVP:

- **Q001**: Diabetes: Glycemic Status Assessment Greater Than 9%
- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
- **Q317**: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented
- **Q488**: Kidney Health Evaluation

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in diabetic disease care:

- **Q001**: Diabetes: Glycemic Status Assessment Greater Than 9%: This inverse outcome MIPS quality measure assesses patients diagnosed with diabetes mellitus for poor control of their HbA1c.
- **Q019**: Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care: This MIPS quality measure focuses on the communication between the primary physician managing ongoing care and the physician performing the dilated macular or fundus exam on patients with diabetic retinopathy.
- **Q117**: Diabetes: Eye Exam: This MIPS quality measure supports eye screening for diabetic retinal disease.
- **Q126**: Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation: This MIPS quality measure ensures patients diagnosed with diabetes mellitus have a lower extremity neurological exam performed at least once every 12 months.
- **Q127**: Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear: This MIPS quality measure ensures patients diagnosed with diabetes mellitus are evaluated for proper footwear and sizing at least once every 12 months.
- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients for a documented BMI with a follow-up plan documented if their most recent documented BMI was outside of normal parameters
- **Q317**: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure ensures all adult patients are screened for high blood pressure at each visit and have a recommended follow-up plan if blood pressure is elevated or hypertensive.
- **Q438**: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.

[538] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q488**: Kidney Health Evaluation: This MIPS quality measure ensures patients with diabetes receive a kidney health evaluation including both an estimated glomerular filtration rate (eGFR) and a urine albumin-creatinine ratio (uACR).
- **IRIS58**: Improved Visual Acuity after Vitrectomy for Complications of Diabetic Retinopathy within 120 Days: This QCDR measure assesses success of vitrectomy procedures in patients with diabetic retinopathy by reviewing patients for complications within 120 days of the procedure.
- **USWR35**: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer: This QCDR measure assesses for adequate off-loading for diabetic foot ulcers during patient visits, which supports positive outcomes of Diabetic Foot Ulcer (DFU) healing.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in diabetic disease care. The quality measures below assess for screenings and follow-up actions for select measures:

- **Q134:** Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q226**: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 13 improvement activities that reflect actions and processes undertaken by clinicians who specialize in diabetic disease care, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision-making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_AHW_5:** Lifestyle Approaches to Diabetes Remediation
- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_3:** Engagement with QIN-QIO to implement self-management training programs
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_19:** Use group visits for common chronic conditions (e.g., diabetes)
- **IA_BE_23:** Integration of patient coaching practices between visits
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_4:** Glycemic management services
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

Cost Measures

We proposed to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of diabetes. We reviewed the MIPS cost measure inventory and considered feedback received during the 2026 MVP candidate feedback period to

determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in diabetic care and align with other measures and activities within this MVP:

- **COST_D_1**: Diabetes: This MIPS cost measure applies to clinicians providing diabetic care.
- **TPCC_1:** Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers.

Symbol Key:
Single exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(!!) IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this new MVP.

Response: We thank the commenters for their support.

Comment: A few commenters recognized the importance of this MVP for assessing diabetes care once traditional MIPS sunsets, but believed its current measures are too narrowly focused on glycemic thresholds and disease control rather than disease reversal and complexity. They noted that the central HbA1c poor control measure rewards staying below a high threshold, often through medication intensification, without recognizing substantial improvement, remission, or reduction in medications (for example, a patient lowering A1c from 8.5% to 5.6% off medications is treated similarly to a patient with an A1c of 6.8% on multiple drugs). Commenters also urged that the MVP be designed with type 1 diabetes (T1D) in mind, explaining that most existing measures are built around type

2 diabetes and do not reflect key T1D realities: lifelong insulin dependence from diagnosis, continuous hypoglycemia risk, and routine use of devices as standard care. They cautioned that measures based solely on glycemic thresholds could systematically disadvantage clinicians caring for the most complex T1D patients and, in a workforce-strained field, might discourage clinicians from accepting high-need beneficiaries. They therefore recommended incorporating measures that better capture disease reversal, lifestyle-driven improvement, and the distinct risks and care patterns in T1D.

Another commenter believed this MVP fails to reflect the full value of podiatric clinicians, who manage complex interactions among chronic lower-extremity conditions to prevent infection, hospitalization, and amputation. As a result, the commenter believed that for CY2028–CY2029 there is no MVP that accurately measures the work of clinicians providing chronic lower-extremity and complex-comorbidity care. The commenter recommended that podiatric and other lower-extremity chronic-disease measures—such as diabetic foot risk stratification, offloading, and amputation-prevention outcomes—be incorporated into any diabetes-related or chronic-care MVP.

Additional commenters focused on broadening participation and emphasizing meaningful outcomes. One commenter requested that the MVP include measures and activities that would allow pharmacists to participate, including medication-specific quality measures (for example, medication optimization, adherence, reconciliation, and comprehensive medication management) that capture the impact of pharmacist-led services on outcomes and costs, particularly for chronic conditions commonly addressed in the Quality Payment Program. Another commenter emphasized that the value of this MVP depends on its measure composition and urged that we prioritize outcome measures, such as rates of achieved disease control across a clinician's panel, rather than process attestations, noting that documenting counseling without improving control does not deliver value to the public. Finally, a couple of commenters recommended adding Q517: Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management to this MVP.

Response: We thank the commenters for their feedback and may consider modifications to this MVP, including the addition of quality measures, through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter opposed this MVP, arguing it duplicates existing MVPs and should be folded into the Value in Primary Care MVP. They noted that diabetes care is often delivered by primary care providers, so a separate MVP is unnecessary and would increase administrative complexity. Another commenter appreciated the proposal to include this new MVP concept but stated that, as designed, it is not representative of comprehensive diabetes care. The commenter noted that the MVP identifies primary care, endocrinology, ophthalmology, podiatry, and nonphysician clinicians such as nurse practitioners, clinical nurse specialists, and physician assistants as the clinicians for whom this MVP would be most applicable. However, while these specialties participated in diabetes care, they were not responsible for diabetes care as a whole. For example, ophthalmologists and podiatrists address diabetes-related issues affecting the eyes and feet, respectively, but did not manage overall diabetes care.

Response: While we recognize that primary care clinicians often manage diabetes care, this MVP is designed to support clinicians who focus on diabetes management and the continuum of care, to provide meaningful performance measurement across this patient population. The Value of Primary Care MVP is most applicable to clinicians who specialize in preventive, internal, or family medicine or geriatrics, inclusion of these measures would pull in specialties beyond its intended scope. We acknowledge that there may be overlap between MVPs; however, our goal with offering disease-specific MVPs is to increase flexibility allowing clinicians to report on the MVP most relevant to their patient population and scope of care.

Comment: A commenter noted that although many quality measures in this MVP apply to all people with diabetes, Type 1 diabetes differs fundamentally from Type 2 diabetes. Because of these differences, the commenter recommended that the quality measures included in this MVP recognize these differences and support clinicians caring for people with Type 1 diabetes and others who require intensive insulin management. The commenter further recommended considering additional measures that better reflect high-quality diabetes care than A1C alone. Specifically, they suggested that quality measures should recognize the following: improvement over time; prevention of severe hypoglycemia and diabetic ketoacidosis; appropriate use of diabetes technology; individualized treatment plans; patient education and shared decision-making; and continuity and coordination of care.

Response: We appreciate the commenter's observations about the fundamental differences between Type 1 and Type 2 diabetes and the need for measures that support clinicians caring for patients who require intensive insulin

management. We agree that the current quality measure set does not fully capture high-quality diabetes care and encourage the commenter to work with measure developers and stewards to develop and submit measures that address these aspects of care through the Call for Measures process; such as improvement over time, prevention of complications, individualized treatment plans, patient education and shared decision-making, and continuity and coordination of care.

As we continue to refine the diabetes MVP, we will consider whether additional or alternative measures can better reflect these elements of high-quality diabetes care. Finalized MVPs are reviewed annually, and we may consider the addition of new quality measures through the MVP Maintenance Process and future rulemaking. Guidance on submitting recommended changes to an MVP is available on the Quality Payment Program website, and we will evaluate all recommendations to determine whether they are appropriate and aligned with the broader vision for the MVP.

Comment: A couple of commenters supported this MVP in concept but recommended revising to focus on the core elements of diabetes care and patient health conditions rather than medical specialties. Another commenter recommended the addition of the Adult Immunization Status measure. One commenter recommended the MVP include at least one prevention-focused concept measure, emphasizing identification and intervention for prediabetes rather than focusing exclusively on glycemic control and management of already diagnosed diabetes. A commenter recommended the addition of measures recognizing appropriate diagnostic testing, timely diagnosis, and follow-up based on test results in this MVP. Another commenter recommended anchoring MVP performance metrics in this MVP in objective, laboratory confirmed results, such as glycemic status assessment, kidney health evaluation, and lipid management. Another commenter was concerned that the MVP is overly broad and that its groupings are organized by specialty. One commenter expressed concern that the MVP does not adequately account for the foundational role Registered Dietitian Nutritionists (RDNs) play in chronic disease detection and intervention, including for the medical conditions associated with this MVP. The commenter recommended incorporating additional nutrition-related measures in this MVP that reflect the full scope of an RDN's role in preventing, managing, and treating such conditions as part of team-based, high-value care, and requested that RDNs be listed as an applicable clinician type for this MVP. A commenter recommended this MVP include at least one concept addressing prevention of diabetes onset rather than management of diagnosed disease alone.

Response: We appreciate the commenter's feedback. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A couple of commenters supported this MVP. A commenter requested clarification that reporting of Q117: Diabetes: Eye Exam can be any clinician who participates in this MVP.

Response: We thank the commenters for their support. For measure requested clarifications please contact the QPP Service Center by emailing QPP@cms.hhs.gov, submitting a QPP Service Center ticket, or calling 1-866-288-8292 (Monday-Friday, 8 a.m. – 8 p.m. ET).

Comment: A commenter requested the removal of the Total Per Capita Cost (TPCC) measure from this MVP, noting that a diabetes-specific episode cost measure already exists and is more appropriate. They stated that TPCC is fundamentally flawed because it holds physicians accountable for costs related to conditions they did not treat, decisions made by other providers, and spending they cannot influence (such as drug price changes and coverage for high-cost supplies). Since TPCC captures all Medicare Part A and B spending, it offers little actionable information for physicians to reduce costs or for patients to lower out-of-pocket expenses or choose clinicians, making it unsuitable for inclusion in this MVP.

Response: We consider TPCC an appropriate measure for use in this MVP, for reasons outlined in the CY 2027 PFS proposed rule (91 FR 43842). The costs of primary care services captured by the TPCC measure may be related to diabetic care management. Clinicians or groups who choose to report the Diabetic Disease MVP may be scored on the TPCC measure if they meet the established case minimum. We recognize that a portion of a patient's total cost of care may reflect services furnished or ordered by other providers. The measure's revised attribution methodology, specialty exclusion criteria, risk adjustment model, and payment standardization are all elements of the measure construction that help TPCC assess costs within a clinician's influence. We continue to consider potential updates for the TPCC measure and ways to enhance the actionability of the measure for attributed clinicians. We may

consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Diabetic Disease MVP* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.2 Hospitalist MVP

In the CY 2027 PFS proposed rule (91 FR 43842), we proposed and solicited comments on the Hospitalist MVP. The proposed Hospitalist MVP assesses meaningful outcomes for patients receiving care provided by hospitalists. This MVP would be most applicable to hospitalists, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. The summary of the public comments received and our responses to this MVP are included immediately after Table A.2b and the list of improvement activities.

Quality Measures

We proposed to include four MIPS quality measures and five QCDR measures within the quality performance category of this MVP, which are relevant to care provided by hospitalists. We reviewed the MIPS quality measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

For the reasons stated in the introduction of this appendix,[539] we proposed the following measures as MIPS core measures for the Hospitalist MVP:

- **Q005:** Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)
- **Q008:** Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)
- **Q047:** Advance Care Plan

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for hospitalists:

- **Q005:** Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD): This MIPS quality measure ensures patients diagnosed with heart failure and a left ventricular ejection fraction of less than or equal to 40% are prescribed an ACE inhibitor, ARB or ARNI therapy.
- **Q008:** Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD): This MIPS quality measure ensures patients diagnosed with heart failure and a left ventricular ejection fraction of less than or equal to 40% are prescribed beta-blocker therapy.
- **Q238:** Use of High-Risk Medications in Older Adults: This inverse MIPS quality measure supports patient safety by assessing high-risk medication utilization in the older adult population.
- **ECPR51:** Discharge Prescription of Naloxone after Opioid Poisoning or Overdose: This QCDR measure ensures patients treated for opioid poisoning in the acute care setting are prescribed naloxone and receive education on its proper use before discharge.

[539] See MVP Development: Quality Measure and Improvement Activity Updates

- **HCPR24:** Appropriate Utilization of Vancomycin for Cellulitis: This QCDR measure ensures the appropriate use of vancomycin for patients diagnosed with cellulitis in the hospital setting, whether admitted or under observation.
- **HCPR25:** Physician's Orders for Life-Sustaining Treatment (POLST) Form: This QCDR measure ensures patients with advanced illness have a completed POLST form during their hospitalization.
- **HCPR27:** Point-of-Care Ultrasound: Evaluation for Pneumothorax after Central Venous Catheter (CVC) Placement: This QCDR measure ensures patients undergoing CVC placement receive appropriate pneumothorax evaluation using point-of-care ultrasound.
- **HCPR30**: Avoidance of Sliding-Scale Insulin Monotherapy for Admitted Diabetic Patients: This QCDR measure ensures patients admitted to the hospital with a diagnosis of diabetes mellitus receive an order for basal insulin therapy.

The following broadly applicable MIPS quality measure is relevant to clinicians who specialize in hospitalist care.

- **Q047:** Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.

Modifications were considered for the following QCDR measure:

- **ECPR51:** Discharge Prescription of Naloxone after Opioid Poisoning or Overdose: This QCDR measure is undergoing modifications to expand the measure to include the treatment for opioid withdrawal in additional care settings.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 12 improvement activities that reflect actions and processes undertaken by hospitalists, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision-making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_8:** Use of patient safety tools
- **IA_PSPA_15:** Implementation of an ASP
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to hospitalists. We reviewed the MIPS cost measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the

set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for hospitalists and aligns with other measures and activities within this MVP:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to hospitalists.

Symbol Key:
Single exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE A.2a: Hospitalist MVP MIPS Core Measures

Hospitalist MVP MIPS Core Measures
Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)
Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)
Q047: Advance Care Plan

- **(!!) IA_PSPA_15:** Implementation of an ASP
- **(!!) IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this new MVP. A commenter supported the designation of the three MIPS core measures in this MVP.

Response: We thank the commenters for their support.

Comment: A commenter appreciated the recognition of hospitalists through a proposed Hospitalist MVP but believed its four non-QCDR measures do not reflect the full scope of the specialty. They argued the MVP should include at least eight non-QCDR measures and a broader range beyond heart failure, given hospitalists care for patients across many service lines (e.g., cardiology, pulmonology, nephrology, oncology). They concluded that this MVP should only be finalized if at least four additional, relevant non-QCDR quality measures are added. Another commenter encouraged the identification of alternate measures that would remain meaningful for hospitalists should Q005: Heart Failure: Angiotensin-Converting Enzyme Inhibitor or Angiotensin Receptor Blocker Therapy for Left Ventricular Systolic Dysfunction, and Q008: Heart Failure: Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction become retired.

Response: We acknowledge that there are a limited number of quality measures included in this MVP and appreciate the commenter's feedback that the hospitalist clinician type represents a gap for quality measurement. We encourage the commenters to reach out to measure developers and stewards to develop applicable and meaningful measures for hospitalists for submission to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A few commenters requested the inclusion of Q130: Documentation of Current Medications in this MVP. They noted that Q130 had long been part of the Hospitalists Specialty Measure Set, is clinically relevant, and aligned with core responsibilities in the hospitalist setting. They also emphasized that Q130 was operationally feasible and already integrated into clinical workflows, unlike Q238.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter stated that including Q047: Advance Care Plan as a MIPS core measure creates redundant reporting and unnecessary administrative burden because the same information is already captured through the

hospital inpatient eCQM CMS1317v1. The commenter questioned the rationale for maintaining two separate measures that collect the same content in the same setting for a subset of clinicians and urged alignment of advance care planning measures across clinician and hospital programs to reduce duplicative workflows, lessen documentation burden, and support consistent digital quality measurement.

Response: We thank the commenter for their feedback. We acknowledge there may be redundancy between clinical topics across programs; however, to be considered for purposes of reporting as a MIPS core measure, it must be proposed and finalized for MIPS. As each program has unique reporting requirements and nuances, the specification must be developed for that program to ensure feasible implementation. Currently, the hospital inpatient measure is not a part of the MIPS quality measure inventory. We will continue to work towards program alignment as applicable.

Comment: A couple of commenters appreciated both the proposal to include a Hospitalist MVP and the modifications made in response to stakeholder input, including the decision not to blend hospitalists and critical care intensivists into a single MVP. However, the commenters believed additional changes are needed. They stated that this MVP is specialty-based rather than focused on patient conditions and that categories such as "Medications" and "General Clinical Care" do not meaningfully distinguish the diverse patient populations and complications hospitalists manage. A commenter noted that many quality measures apply only to a small subset of patients (for example, heart failure measures for a minority of hospitalist cases) and that most measures are QCDR or eCQM measures that require extraction of data from hospital EHR systems. They explained that hospitalists cannot seamlessly aggregate EHR or registry data, and that hospital EHRs are certified and configured for hospital-level, not clinician-level, eCQMs. The commenters also expressed concern that there were only three eCQM reporting options despite related eCQMs having been adopted in other facility-based reporting programs.

Response: We appreciate the commenter's feedback. We acknowledge limitations to MVP development based upon the current MIPS quality measure inventory. Therefore, we had to balance clinical grouping identification based on selected measures that are meaningful and cover care assessment in alignment with the MVP intent. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. As each program has unique reporting requirements and nuances, the specification has to be developed for that program to ensure feasible implementation; then it must be proposed and finalized for MIPS. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Hospitalist MVP* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

A.3 Hypertension MVP

In the CY 2027 PFS proposed rule (91 FR 43842), we proposed and solicited comments on the Hypertension MVP. The proposed Hypertension MVP assesses meaningful outcomes for patients receiving care for hypertension and appropriate preventive interventions for those considered high-risk. This MVP would be most applicable to clinicians who treat patients at risk for hypertension and with a hypertension diagnosis, including cardiology, family medicine, geriatrics, internal medicine, nutrition and dietician, preventive medicine, and NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. The summary of the public comments received and our responses to this MVP are included immediately after Table A.3b and the list of improvement activities.

Quality Measures

We proposed to include 13 MIPS quality measures within the quality performance category of this MVP, which are specific to the clinical topic of hypertension. We reviewed the MIPS quality measure inventory and considered feedback received during the 2026 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

For the reasons stated in the introduction of this appendix,[540] we proposed the following measures as MIPS core measures for the Hypertension MVP:

- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
- **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
- **Q236:** Controlling High Blood Pressure

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in the treatment of hypertension:

- **Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients for a documented BMI with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- **Q236:** Controlling High Blood Pressure: This intermediate outcome MIPS quality measure assesses patients diagnosed with hypertension for adequately controlled blood pressure.
- **Q239:** Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents: This MIPS quality measure ensures that patients aged 3-17 years have a BMI recorded with appropriate nutrition and physical activity counseling.
- **Q317:** Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: This MIPS quality measure ensures all adult patients are screened for high blood pressure at each visit and have a recommended follow-up plan if blood pressure is elevated or hypertensive.
- **Q441:** Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): This intermediate outcome MIPS quality measure ensures optimal control of patients with IVD by assessing goals for blood pressure management, smoking cessation, antiplatelet use, and high intensity statin use.
- **Q489:** Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: This MIPS quality measure ensures patients diagnosed with chronic kidney disease and proteinuria are prescribed an ACE inhibitor or ARB therapy.
- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management: This proposed intermediate outcome MIPS quality measure ensures lipid monitoring in patients with atherosclerotic cardiovascular disease (ASCVD) and achieving the target goal of an LDL-C less than 70mg/dL.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in the treatment of hypertension. The quality measures below assess for age-specific screenings and follow-up actions for select measures:

- **Q047:** Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decision maker.
- **Q130:** Documentation of Current Medications in the Medical Record: This MIPS quality measure assesses for review and documentation of all current medications at each visit.
- **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- **Q374:** Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures that the referring

[540] See MVP Development: Quality Measure and Improvement Activity Updates

clinician receives a report from the clinician to whom the patient was referred, therefore closing the communication loop.

- **Q431:** Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: This MIPS quality measure screens patients for unhealthy alcohol use. Any patients that screen positive for unhealthy alcohol use should receive brief counseling.
- **Q503:** Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the clinician's ability to manage their health and be an active partner in the health care journey.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in the treatment of hypertension, as well as activities that promote advancing health and wellness, engagement and patient-centeredness, shared decision-making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_AHW_1:** Chronic care and preventative care management for empaneled patients
- **IA_AHW_5:** Lifestyle Approaches to Diabetes Remediation
- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_BMH_2:** Tobacco use
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_4:** Glycemic management services
- **IA_PM_5:** Engagement of community for health status improvement
- **IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk
- **IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of hypertension. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who care for patients with hypertension:

- **TPCC_1:** Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers.

Symbol Key:

Single exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.

Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this new MVP. A couple of commenters supported the inclusion of Q517:Low-Density Lipoprotein (LDL-C) Monitoring and Management in this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested the addition of Q488: Kidney Health Evaluation to this MVP. A commenter recommended the inclusion of Q493: Adult Immunization Status. A commenter urged that this MVP prioritize outcome measures such as rates of achieved disease control in a clinician's panel, rather than process attestations, noting that documenting counseling without improving control fails to deliver value to the public. One commenter believed further refinements are needed. The commenter stated that the MVP is overly broad and that its groupings are organized by specialty.

Response: Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested the inclusion of at least one adult nutrition-focused measure to this MVP so registered dietitians electing to report this MVP can satisfy the four-measure requirement, noting Q239: Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents is specified for patients aged 3 to 17 and is therefore inapplicable to the Medicare population that registered dietitians serve.

Response: The eCQM collection type uses all-payer data and therefore this measure is appropriate for inclusion; however, we acknowledge not all measures included within the MVP will be applicable to all clinicians that elect to report the MVP. The commenter is encouraged to submit recommended changes to an MVP. Guidance on how to submit recommended changes can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter recommended the addition of measures recognizing appropriate diagnostic testing, timely diagnosis, and follow-up based on test results in this MVP. Another commenter recommended anchoring MVP performance metrics in this MVP in objective, laboratory confirmed results, such as glycemic status assessment,

kidney health evaluation, and lipid management. A commenter requested measures and activities be included in this MVP that would allow for pharmacists to participate, including medication-specific quality measures (e.g., medication optimization, adherence, reconciliation, comprehensive medication management) that capture the impact of pharmacist-led services on outcomes and costs, especially for chronic conditions commonly addressed in the Quality Payment Program.

Response: We encourage the commenters to reach out to measure developers to develop new measures applicable and meaningful to the clinical topic of this MVP and submit them to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A commenter opposed this MVP, stating it duplicates existing MVPs. They noted that all its quality measures already appear in the Value in Primary Care and Advancing Care for Heart Disease MVPs, making a separate MVP unnecessary and adding avoidable administrative complexity. Another commenter recommended that this MVP either adopt a narrower focus limited to the treatment of hypertension, or that the Advancing Care for Heart Disease MVP be updated to include measures addressing hypertension treatment in addition to the existing measures related to heart failure and other cardiac conditions.

Response: We acknowledge that there may be overlap between MVPs; however, each MVP is designed to target a specific clinical topic or specialty, allowing clinicians to report on the MVP most relevant to their patient population and scope of care. Additionally, each quality measure has unique denominator criteria which may constrain applicability to settings, clinician types, or patient populations. Our goal with offering disease-specific MVPs is to increase flexibility in the MVPs that clinicians can report. Consolidating these measures into existing MVPs would pull in specialties and patients beyond its intended scope.

Comment: A few commenters recommended the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure be identified as a MIPS core measure.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A couple of commenters expressed concern that Q236: Controlling High Blood Pressure does not reflect current evidence-based clinical guidelines and is identified as a MIPS core measure for this MVP. Q236 uses a less stringent blood pressure control threshold of 140/90 mm Hg than the American Heart Association and American College of Cardiology recommendation of 130/80, as evidence indicates further reduces the risk of heart attack, stroke, heart failure, cardiovascular events, and death.

Response: We thank the commenters for sharing their concern regarding alignment with current evidence-based hypertension guidelines. Q236: Controlling High Blood Pressure is a MIPS core measure for this MVP for several reasons. Q236 is a standardized quality measure with an established 140/90 mm Hg control threshold that supports consistent data collection which allows comparability across practices and enables benchmarking against existing national performance. While its 140/90 mm Hg threshold is less aggressive than the 130/80 mm Hg target recommended by the American Heart Association and American College of Cardiology, it still reflects a clinically meaningful level of control and allows us to assess hypertension management. Including Q236 as a MIPS core measure provides a practical and interpretable outcome measure that supports early learning, comparability, and broad adoption across many practice settings. We will continue to monitor the evidence base and measure landscape and may consider updates in future program years.

Comment: A commenter opposed limiting participation in this MVP. The commenter explained that focusing only on hospital-based physicians fails to reflect how hypertension care is actually delivered, since effective management relies on interdisciplinary teams that include registered nurses, advanced practice registered nurses (APRNs), primary care clinicians, care coordinators, pharmacists, and other professionals involved in patient education, medication management, care coordination, and ongoing monitoring across settings. The commenter recommended revising this MVP to better recognize and incentivize these interdisciplinary care teams, including nurses, that coordinate and deliver high-quality hypertension care.

Response: We appreciate the commenter's feedback. This MVP is not limited to facility-based clinicians. All MIPS-eligible clinicians whose scope of care relates to this MVP and the measures and activities in it may report this MVP.

Comment: A commenter noted that several measures included in this MVP may overlap conceptually or operationally. For example, the Ischemic Vascular Disease All-or-None Outcome Measure includes blood pressure control, smoking cessation, statin therapy, and other components that are also represented elsewhere in the MVP. The commenter questioned whether this overlap creates duplicate accountability, increases reporting burden, or disproportionately influences performance scoring without providing additional clinical value.
The commenter also observed that hypertension management increasingly relies on out-of-office blood pressure assessment and encouraged continued exploration of opportunities to incorporate validated home blood pressure measurements and ambulatory blood pressure monitoring into future quality measurement efforts when appropriate infrastructure exists. The commenter emphasized that current practice increasingly depends on out-of-office monitoring to support accurate diagnosis, treatment adjustment, and long-term management and recommended that future MVP development reflect this growing role while avoiding unnecessary reporting burden.

Response: We thank the commenter for the feedback. The individual measures can assess performance on specific processes or outcomes, which can help clinicians pinpoint where gaps exist and guide quality improvement efforts. The IVD All-or-None Outcome Measure assesses whether patients receive all recommended elements of care, providing a broader view of care coordination and overall quality that is not fully captured by any single component measure.

Please note, in reference to the numerator element for the IVD All-or-None Outcome Measure, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: If the TPCC cost measure will be included in this MVP, a commenter recommended revising the measure so that it is limited to or focused on cost components physicians can reasonably control and does not disincentivize preventive care, including by excluding preventive services from cost calculations and grouping costs by patient condition categories.

Response: We consider TPCC the most appropriate cost measure available for use in this MVP. There is currently no episode-based measure applicable to hypertension. Clinicians or groups who choose to report the Hypertension MVP will be scored on TPCC if they meet the established case minimum. The costs of the primary care services captured by TPCC may be related to management of hypertension. Assessing the cost of care for this population encourages clinicians to provide effective, well-coordinated care to patients with hypertension in a way that supports both improved outcomes and lower overall cost of care. We appreciate the commenter's recommendation regarding the design of the TPCC measure. The TPCC measure incorporates several features intended to limit costs outside of a clinician's influence, including an updated attribution methodology, specialty exclusion criteria, risk adjustment, and payment standardization. We do not currently exclude preventive services from the measure's cost calculations, as these services are relevant to the cost of primary care and doing so could create adverse incentives. We consider the measure as it is currently specified appropriate for use in the Hypertension MVP. However, we will consider enhancements to the TPCC measure and its actionability for future rulemaking. We may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking, such as the availability of a related hypertension episode-based measure. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Hypertension MVP* as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

Group B: Modifications to Previously Finalized MVPs for the CY 2027 Performance Period/2029 MIPS Payment Year and Future Years

B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

Table B.1a represents the proposed MIPS core measures for the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. The B.1b table, followed by a list of improvement activities, represents the measures and activities finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP (90 FR 50406 through 50408) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat patients within the practice of emergency medicine, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.1b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[541] we proposed the following measures as MIPS core measures for the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP:

- **Q116:** Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis
- **Q331:** Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)
- **Q416:** Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

We proposed adding one MIPS quality measure:

- **Q066:** Appropriate Testing for Pharyngitis: This appropriate use MIPS quality measure assesses for completion of a group A streptococcus test for patients diagnosed with pharyngitis or tonsilitis who were prescribed an antibiotic.

For the reasons stated in the introduction of this appendix,[542] we proposed to remove **Q415:** Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older. We proposed to remove one QCDR measure due to low adoption, no benchmark after 2 consecutive years in MIPS and one high performing QCDR measure:

- **ACEP52:** Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Acute Atraumatic Low Back Pain (low adoption, no benchmark after 2 consecutive years in MIPS)
- **ECPR46:** Avoidance of Opiates for Low Back Pain or Migraines (high performing)

Modifications were considered for the following QCDR measure:

- **ACEP52:** Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Acute Atraumatic Low Back Pain: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to the denominator to exclude patients aged 65 and older, as they experience higher rates of osteoporosis-related vertebral fractures during routine activities and have higher rates of

[542] Ibid.

malignancies with spinal metastases compared to patients under 65 years old.

Symbol Key:
Single exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.1a: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP MIPS Core Measures

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12:** Promoting Clinician Wellbeing
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(!!) IA_PSPA_15:** Implementation of an ASP

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter specifically supported the addition of Q066: Appropriate Testing for Pharyngitis.

Response: We thank the commenters for their support.

Comment: A commenter recommended the addition of Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy and Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis to this MVP. Another commenter recommended the inclusion of the Medicare Spend Per Beneficiary (MSPB) and Total Per Capita Cost (TPCC) cost measures as they are currently available to emergency medicine clinicians.

Response: We may consider the addition of quality and cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter was concerned that several of the measures identified as MIPS core measures in this MVP were not universally applicable across emergency medicine practice settings and requested that the MIPS core measures be broadly appliable and reflective of the full spectrum of emergency medicine.

Response: We appreciate the commenter's feedback and may consider alternative MIPS core measures for this MVP through future rulemaking. Understanding that some clinicians may be unable to report the selected MIPS core measures, we do allow attestation for cases in which a MIPS core measure is not available and applicable. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters opposed removing Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older, arguing there is no feasible replacement and that the measure provides important clinical stewardship for imaging. The commenter noted Q415 is high-volume and widely reportable, so its removal could leave many clinicians unable to meet case minimums and stressed that topped-out status should be weighed against feasibility and denominator volume. Another commenter believed it is critical that the MVP includes enough measure options for clinicians, especially with the proposed sunsetting of traditional MIPS.

Response: We acknowledge the commenters' concern regarding the removal of measure Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older. We seek to balance meaningful quality reporting with minimizing strain placed on clinicians. This measure may still represent an important aspect of care, however, it meets criteria for removal from MIPS, finalized in the CY2017 Quality Payment Program final rule (81 FR 77558 through 77675).

Comment: A commenter opposed the removal of ACEP52 and ECPR46, both of which are part of ACEP's Qualified Clinical Data Registry (QCDR), and the Clinical Emergency Data Registry (CEDR). With these removals, only one CEDR measure would remain available within the MVP, significantly limiting emergency physicians' ability to report measures tailored to emergency medicine practice. The commenter believed QCDR measures are essential for capturing specialty specific quality and safety priorities which is not reflected in general MIPS measures. The commenter agreed with the proposed modifications for ACEP52 and believed its removal would be premature, particularly given ongoing efforts to improve adoption and benchmarking.

Response: We appreciate the commenters' feedback on ACEP52 and ECPR46. We agree that ACEP52 may be showing increased adoption; therefore, it will continue to be removed from the MVP based on the reporting requirements. However, we will consider maintaining it in MIPS for an additional year to monitor adoption. While we agree these concepts are important to quality care, the removal of these measures does not preclude clinicians

from continuing these quality actions. Whether the clinician is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of ECPR46, it no longer meets MVP inclusion criteria. MIPS performance data shows high performance and presents limited opportunity to further improve clinical outcomes.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.2: Advancing Cancer Care MVP

Table B.2a represents the proposed MIPS core measures for the Advancing Cancer Care MVP. The B.2b table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Cancer Care MVP (90 FR 50408 through 50411) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Advancing Cancer Care MVP focuses on the clinical specialty of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practices of oncology and hematology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.2b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[543] we proposed the following measures as MIPS core measures for the Advancing Cancer Care MVP:

- **Q102:** Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients
- **Q144:** Oncology: Medical and Radiation - Plan of Care for Pain
- **Q451:** RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy
- **Q457:** Percentage of Patients who Died with Cancer Enrolled in Hospice For At Least 3 Days Immediately Before Death
- **Q495:** Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood
- **Q506:** Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy

We proposed adding two QCDR measures:

- **PIMSH19:** Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents - Avoidance of Overuse (Lower Score - Better): This QCDR measure is an inverse measure (lower score is better) that ensures clinicians follow clinical guidelines for patients treated with low- or minimal-emetic-risk antineoplastic agents by assessing for inappropriate pre-treatment antiemetic therapy.
- **PIMSH20:** Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents: This QCDR measure ensures clinicians follow clinical guidelines for patients treated with high- or moderate-emetic-risk antineoplastic agents by ensuring they receive the appropriate pre-treatment antiemetic therapy, which could result in

[543] See MVP Development: Quality Measure and Improvement Activity Updates

improved control of nausea and vomiting in patients.

For the reasons stated in the introduction of this appendix,[544] we proposed to remove **Q143:** Oncology: Medical and Radiation – Pain Intensity Quantified.

Modifications were considered for the following QCDR measure:

- **PIMSH13:** Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy: This QCDR measure is undergoing modifications to provide additional clarification and to emphasize its focus on first-line treatment. Updates are being made to the description, denominator, denominator exclusions, and numerator, along with the addition of a numerator note.

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[545] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Single exclamation point (!): MIPS core measure within an MVP.

Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.2a: Advancing Cancer Care MVP MIPS Core Measures

Advancing Cancer Care MVP MIPS Core Measures

- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported this MVP. A commenter supported Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood as a MIPS core measure in this MVP. Other commenters supported the addition of PIMSH19: Antiemetic Therapy for Low- and Minimal-Emetic Risk Antineoplastic Agents - Avoidance of Overuse, and PIMSH20: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents.

Response: We thank the commenters for their support.

Comment: A commenter recommended PIMSH19 and PIMSH20 be considered MIPS core measures for this MVP given their broad applicability.

Response: MIPS core measures must be publicly available measures. For details on the finalized MIPS core measure proposal and selection criteria for MVPs refer to section IV.A.4.d.(1)(c) of this final rule. We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter recommended broadening this MVP to include additional cancer-related measures from key diagnostic and management specialties—such as Diagnostic Radiology (Q405, Q406), Women's Health (Q112, Q309), and Pathology (Q249, Q250, Q395, Q396, Q397, Q440, Q491). The commenter believed these measures capture critical information on diagnosis and tumor staging that directly informs treatment decisions and affects patient outcomes and, as such, should be recognized as part of comprehensive cancer care. The commenter further

suggested that expanding the MVP to incorporate measures across the cancer care continuum would better support meaningful performance measurement, reduce reporting burden for multispecialty organizations, and advance efforts to improve patient outcomes. Another commenter recommended the addition of the PIMSH4: Patient-Reported Pain Improvement Within 30 Days, a patient-reported outcome measure.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters opposed the removal of Q143: Oncology: Medical and Radiation – Pain Intensity Quantified from this MVP, explaining that removing this measure would leave an insufficient number of eCQMs to support an all-eCQM reporting strategy and would force organizations to contract with third-party vendors to report alternative measure types solely to meet the requirement to report four quality measures. Another commenter opposed the removal of Q143: Oncology: Medical and Radiation – Pain Intensity Quantified from this MVP because Q143 and Q144: Plan of Care for Pain function as a paired workflow, requiring pain to be quantified before a plan of care is documented. Removing Q143 would force practices to continue collecting pain intensity data to satisfy Q144 without receiving reporting credit. The commenter also noted that Q143 and Q144 are currently used in the Enhancing Oncology Model (EOM-4), and removing Q143 from this MVP would create administrative disruption and benchmarking misalignment between this MVP and EOM. The commenter is developing a new pain Patient-Reported Outcome Performance Measure (PRO-PM) intended to ultimately replace both Q143 and Q144. They therefore recommended retaining Q143 alongside Q144 in this MVP until the new Pain PRO-PM is fully developed, validated through the MUC process, and ready for implementation, with both Q143 and Q144 serving as MIPS core measures in the meantime.

Response: We acknowledge the commenters' concern regarding the removal of measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified; however, as we refine the MIPS quality measure inventory we seek to remove measures that split apart quality actions, as the resultant data doesn't represent a full assessment of the patient's quality of care. While we endeavor to align across programs as applicable, this measure meets criteria for removal from MIPS, finalized in the CY2017 Quality Payment Program final rule (81 FR 77558 through 77675). Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q143.

After consideration of public comments, we are finalizing the *Advancing Cancer Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.3: Advancing Care for Heart Disease MVP

Table B.3a represents the proposed MIPS core measures for the Advancing Care for Heart Disease MVP. The B.3b table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Care for Heart Disease MVP (90 FR 50411 through 50415) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Advancing Care for Heart Disease MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. This MVP would be most applicable to clinicians who treat patients within the practices of cardiology, internal medicine and family medicine, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.3b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[546] we proposed the following measures as MIPS core measures for the Advancing Care for Heart Disease MVP:

- **Q441:** Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)
- **Q492:** Risk-standardized Acute Cardiovascular-related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System
- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management

We proposed adding one MIPS quality measure:

- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management: This proposed intermediate outcome MIPS quality measure ensures lipid monitoring in patients with atherosclerotic cardiovascular disease (ASCVD) and achieving the target goal of an LDL-C less than 70mg/dL.

For the reasons stated in the introduction of this appendix,[547] we proposed to remove **Q006:** Coronary Artery Disease (CAD): Antiplatelet Therapy, **Q007:** Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%), and **Q326:** Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

Improvement Activities

For the reasons stated in the introduction of this appendix,[548] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Advancing Care for Heart Disease Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **IA_BE_24:** Financial Navigation Program
- **IA_BE_25:** Drug Cost Transparency
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_4:** Administration of the AHRQ Survey of Patient Safety Culture
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Several commenters supported the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP. The commenters believed the measure is meaningful, guideline-directed, and outcome-based and therefore critical to influencing clinician and patient behavior to improve chronic disease outcomes in the United States. A couple of commenters supported the measure as a MIPS core measure in this MVP. Another commenter supported the removal of Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy, Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%), and Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

Response: We thank the commenters for their support.

Comment: A commenter recommended the inclusion of Q488: Kidney Health Evaluation to this MVP. The commenter believed the measure will help reinforce the importance of identifying and managing kidney disease risk

in patients with cardiovascular conditions and would better reflect the interconnected nature of cardiovascular-kidney-metabolic health.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be considered a MIPS core measure within this MVP.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter expressed concern that the three proposed MIPS core measures may not be applicable across the diverse cardiovascular subspecialties expected to participate in this MVP. Some cardiovascular clinicians may have limited opportunity to influence these measures in a way that meaningfully reflects their practice.

Response: We thank the commenter for their feedback and acknowledge limitations to MIPS core measure selection based upon the current MIPS quality measure inventory. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. Additionally, the policy includes an option for self-attestation when the MIPS core measures are not appropriate or applicable to their scope of care, allowing clinicians to choose an alternate measure that is more relevant. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.4: Advancing Rheumatology Patient Care MVP

Table B.4a represents the proposed MIPS core measures for the Advancing Rheumatology Patient Care MVP. The B.4b table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Rheumatology Patient Care MVP (90 FR 50415 through 50418) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions. This MVP would be most applicable to clinicians who treat patients within the practice of rheumatology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.4b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[549] we proposed the following measures as MIPS core measures for the Advancing Rheumatology Patient Care MVP:

- **Q039:** Screening for Osteoporosis for Women Aged 65-85 Years of Age
- **Q178:** Rheumatoid Arthritis (RA): Functional Status Assessment

[549] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q180:** Rheumatoid Arthritis (RA): Glucocorticoid Management

We proposed adding one QCDR measure:

- **UREQA8:** Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved: This QCDR measure ensures that patients diagnosed with osteopenia or osteoporosis maintain a hydroxy-vitamin D level at or above the targeted threshold.

We proposed to remove one process QCDR measure that does not include a quality action:

- **ACR12:** Disease Activity Measurement for Patients with PsA

Modifications were considered for the following QCDR measures:

- **ACR10:** Hepatitis B Safety Screening: This QCDR measure is undergoing modifications to add denominator instructions that provide clearer guidance on what qualifies as a 'newly initiated' biologic.
- **ACR12:** Disease Activity Measurement for Patients with PsA: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to the denominator to add a specific age-related timeframe and clarify the required timeframe for the additional face-to-face encounter.
- **ACR14:** Gout: Serum Urate Target: This QCDR measure is undergoing modifications to the denominator to include a specific age-related timeframe. There would also be updates to the denominator exceptions to align with the American College of Rheumatology (ACR) clinical guidelines.
- **ACR15:** Safe Hydroxychloroquine Dosing: This QCDR measure is undergoing modifications to the description and numerator to add a second option for meeting numerator compliance. An alternative criterion, allowing completion and documentation of an Hydroxychloroquine (HCQ) whole blood level measurement would satisfy numerator requirements.

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[550] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Advancing Rheumatology Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_24:** Financial Navigation Program
- **IA_BE_25:** Drug Cost Transparency
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_2:** Tobacco use
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A couple of commenters supported the designation of Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age as a MIPS core measure for this MVP.

Response: We thank the commenters for their support.

Comment: A commenter opposed the removal of ACR12: Disease Activity Measurement for Patients with PsA from this MVP, arguing that it further reduces the already limited number of specialty-relevant measures and eliminated the only psoriatic arthritis measure, thereby disadvantaging rheumatologists. The commenter believed the removal is premature because no concerns had been raised when prior measure changes were communicated and noted that the measure steward could have revised and improved ACR12 if alerted earlier. They requested that ACR12 be retained for the upcoming performance year and refined collaboratively in future rulemaking to maintain meaningful, rheumatology-specific quality assessment.

Response: We thank the commenter for their feedback. We agree that the concept is important to the care of rheumatology patients, specifically those with psoriatic arthritis. However, this process measure only requires the screening of disease activity and does not evaluate whether appropriate follow-up care or interventions occur after the screening. Removing this process measure will support the goal of prioritizing measures that improve patient outcomes and have meaningful impact. We do not want to arbitrarily limit measures within MVPs; however, we do want to have a streamlined set of robust quality measures that drive positive outcomes. We note this MVP still contains over 10 meaningful quality and QCDR measures to ensure applicability and clinician choice for selection. Lastly, we encourage the commenter to reach out to measure developers and stewards to develop new outcome measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, we are finalizing the *Advancing Rheumatology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.5 Complete Ophthalmologic Care MVP

Table B.5a represents the proposed MIPS core measures for the Complete Ophthalmologic Care MVP. The B.5b table, followed by a list of improvement activities, represents the measures and activities finalized within the Complete Ophthalmologic Care MVP (90 FR 50418 through 50421) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. This MVP would be most applicable to clinicians who treat patients within the practices of ophthalmology and optometry, including NPPs such as nurse practitioners,

clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.5b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[551] we proposed the following measures as MIPS core measures for the Complete Ophthalmologic Care MVP:

- **Q012:** Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation
- **Q141:** Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care
- **Q304:** Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery
- **Q385:** Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery
- **Q501:** Acute posterior vitreous detachment and acute vitreous hemorrhage appropriate examination and follow-up

Modifications were considered for the following QCDR measure:

- **IRIS2:** Glaucoma – Intraocular Pressure Reduction: This QCDR measure is undergoing modifications to ensure compliance is based upon assessment of intraocular pressure for each eye effected.

For the reasons stated in the introduction of this appendix,[552] we proposed to remove **Q384:** Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery. We proposed to remove two high performing QCDR measures:

- **IRIS13:** Diabetic Macular Edema - Loss of Visual Acuity
- **IRIS54:** Complications After Cataract Surgery

Improvement Activities

We proposed adding one improvement activity relevant to this MVP, which includes elements of an activity that is proposed for removal from MIPS:

- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements.

For the reasons stated in the introduction of this appendix,[553] we proposed to remove **IA_CC_10:** Care transition documentation practice improvements.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter expressed concern with the selection of Q304: Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery as a MIPS core measure for this MVP.

Response: We thank the commenter for their feedback and acknowledge that not all MIPS core measures will be applicable to all clinicians reporting the MVP. Therefore, in each MVP, we identified multiple MIPS core measures that represent care central to the MVP intent, ensuring measure availability for those clinicians who chose to report the MVP.

Comment: A couple of commenters opposed the removal of IRIS13: Diabetic Macular Edema - Loss of Visual Acuity and IRIS54: Complications After Cataract Surgery, with one commenter also opposing the removal of Q384: Adult Primary Rhegmatogenous Retinal Detachment Surgery: No Return to the Operating Room Within 90 Days of Surgery. The commenters believed eliminating these measures would further narrow an already limited measure set, reduce the MVP's relevance across the scope of ophthalmic practice, and remove a measure that directly supports our priority of addressing chronic disease.

Response: We appreciate the commenter's feedback on IRIS13: Diabetic Macular Edema - Loss of Visual Acuity and IRIS54: Complications After Cataract Surgery. While we agree the focus of these QCDR measures are important to addressing this highly prevalent chronic disease, the removal of these measures does not preclude clinicians from continuing these quality actions. Whether the clinician or group is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, we seek to balance meaningful quality reporting with minimizing burden placed on clinicians. While topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. Measure Q384 meets criteria for removal from MIPS, finalized in the CY2017 Quality Payment Program final rule (81 FR 77558 through 77675). Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q384. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested additional measures be added to this MVP. The commenter is concerned that the current ophthalmology MVP measure is too limited and does not adequately represent the full breadth of ophthalmic practice, particularly for subspecialties with few or no meaningful reporting options, and that adding registry-based QCDR measures such as IRIS1: Endothelial Keratoplasty – Post-operative improvement in best corrected visual acuity to 20/40 or better; IRIS17: Acute Anterior Uveitis – Post-treatment Grade 0 anterior chamber cells; IRIS23: Refractive Surgery – Patients with a postoperative improvement in uncorrected visual acuity of 20/20 or better within 30 days; IRIS38: Endothelial Keratoplasty – Dislocation Requiring Surgical Intervention; IRIS50: Amblyopia – Interocular visual acuity; IRIS59: Regaining Vision After Cataract Surgery; and IRIS63: Exudative Age-Related Macular Degeneration – Gain of Visual Acuity would provide more meaningful reporting opportunities across cornea, uveitis, pediatric ophthalmology, and other subspecialties.

Response: We appreciate the commenter's feedback. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the QPP website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Complete Ophthalmologic Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.6: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

Table B.6a represents the proposed MIPS core measures for the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. The B.6b table, followed by a list of improvement activities, represents the measures and activities finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP (90 FR 50422 through 50424) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or have had a stroke. This MVP would be most applicable to clinicians who treat patients within the practices of neurology, neurosurgical, and vascular surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received

and our responses to this MVP are included immediately after Table B.6b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[554] we proposed the following measures as MIPS core measures for the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP:

- **Q047:** Advance Care Plan
- **Q236:** Controlling High Blood Pressure
- **Q441:** Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control).

For the reasons stated in the introduction of this appendix,[555] we proposed to remove **Q326:** Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

Symbol Key:

Exclamation point (!): MIPS core measures within MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_24:** Financial Navigation Program
- **IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_17:** Patient Navigator Program
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_15:** Implementation of episodic care management practice improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A few commenters recommended the inclusion of Q517: Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management to this MVP.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter expressed concern that Q236: Controlling High Blood Pressure does not reflect current evidence-based clinical guidelines and is identified as a MIPS core measure for this MVP. Q236 uses a less stringent blood pressure control threshold of 140/90 mm Hg than the American Heart Association and American College of Cardiology recommendation of 130/80, as evidence indicates further reduces the risk of heart attack, stroke, heart failure, cardiovascular events, and death.

Response: We thank the commenter for sharing their concern regarding alignment with current evidence-based hypertension guidelines. Q236: Controlling High Blood Pressure is a MIPS core measure for this MVP for several reasons. Q236 is a standardized quality measure with an established 140/90 mm Hg control threshold that supports consistent data collection which allows comparability across practices and enables benchmarking against existing national performance. While its 140/90 mm Hg threshold is less aggressive than the 130/80 mm Hg target recommended by the American Heart Association and American College of Cardiology, it still reflects a clinically meaningful level of control and allows us to assess hypertension management. Including Q236 as a MIPS core measure provides a practical and interpretable outcome measure that supports early learning, comparability, and

broad adoption across many practice settings. We will continue to monitor the evidence base and measure landscape and may consider updates in future program years.

Comment: A commenter requested Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be considered a MIPS core measure within this MVP.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.7: Dermatological Care MVP

Table B.7a represents the proposed MIPS core measures for the Dermatological Care MVP. The B.7b table, followed by a list of improvement activities, represents the measures and activities finalized within the Dermatological Care MVP (90 FR 50424 through 50428) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP would be most applicable to clinicians who treat patients within the practice of dermatology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.7b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[556] we proposed the following measures as MIPS core measures for the Dermatological Care MVP:

- **Q176:** Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy
- **Q410:** Psoriasis: Clinical Response to Systemic Medications
- **Q486:** Dermatitis – Improvement in Patient-Reported Itch Severity

We proposed to remove one high performing QCDR measure:

- **AAD16:** Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures

Modifications were considered for the following QCDR measures:

- **AAD6:** Skin Cancer: Biopsy Reporting Time - Clinician to Patient: This QCDR measure is undergoing modifications to update the description and numerator to reflect a shortened timeframe for clinician notification of final pathology findings, reducing the requirement from 8 days to 7 days.
- **AAD12:** Melanoma: - Appropriate Surgical Margins: This QCDR measure is undergoing modifications to update the title, description, denominator, and numerator to reflect a broader measure that would include additional skin cancers, specifically squamous cell carcinoma and basal cell carcinoma.

Improvement Activities

[556] See MVP Development: Quality Measure and Improvement Activity Updates

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[557] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_8:** Use of Patient Safety Tools

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A couple of commenters expressed concern regarding the removal of AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures, believing this measure is crucial for ensuring that clinicians are not unnecessarily prescribing post-operative systemic antibiotics immediately after reconstruction surgery, that its removal would further reduce the pool of available measures in an MVP that already has a limited number of measures and insufficient measures for dermatologic subspecialties, and that retaining it is important to produce a performance benchmark that is more representative of real-world practice. The commenter also requested the inclusion of IA_PSPA_7: Use of QCDR Data for Ongoing Practice Assessment and Improvements to provide dermatology practices with a meaningful improvement activity that is directly relevant to specialty-specific quality improvement.

Response: We acknowledge the commenters' concerns regarding the removal of measure AAD16: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures; however, we seek to balance meaningful quality reporting with minimizing burden placed on clinicians. While topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. The removal of this measure does not preclude clinicians from continuing these quality actions. Whether the clinician is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, we encourage the commenter to reach out to measure developers and stewards to develop new measures applicable and meaningful to dermatologists for submission to the Call for Measures for possible future implementation. Interested parties are also welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will

evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter was concerned that the three proposed MIPS core measures, which all focus on inflammatory skin disease, did not reflect the full scope of dermatologic care, particularly skin cancer detection, biopsy, pathology, and surgical management. The commenter urged expanding the MIPS core measure options to include measures representing these areas and recommends Q238: Use of High-Risk Medications in Older Adults, Q397: Melanoma Reporting, Q509: Melanoma: Tracking and Evaluation of Recurrence, and as a fourth option, Q486: Dermatitis – Improvement in Patient-Reported Itch Severity as a MIPS core measure set that better reflects general dermatology, dermatopathology, dermatologic surgery, and inflammatory conditions.

Response: We thank the commenter for the suggestions provided to refine the MIPS core measure set for this MVP. We acknowledge that not all MIPS core measures will be applicable to all clinicians reporting an MVP; however, to the extent possible, we considered implementation factors and availability. While broadly applicable measures, such as measure Q238, were included in some MVPs based upon topic alignment and support of clinician's reporting the MVP, we noted that the specialty specific measures were more indicative of dermatological care. Additionally, we accounted for each measure's clinician type applicability; the final selected measures represent that balance between clinical topic alignment, availability, and applicability.

After consideration of public comments, we are finalizing the *Dermatological Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.8 Diagnostic Radiology MVP

Table B.8a represents the proposed MIPS core measures for the Diagnostic Radiology MVP. The B.8b table, followed by a list of improvement activities, represents the measures and activities finalized within the Diagnostic Radiology MVP (90 FR 50376 through 50381) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Diagnostic Radiology MVP assesses meaningful outcomes in diagnostic radiology. This MVP would be most applicable to clinicians who treat patients within the practices of diagnostic radiology and nuclear medicine. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.8b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[558] we proposed the following measures as MIPS core measures for the Diagnostic Radiology MVP:

- **Q145:** Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy
- **Q360:** Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies
- **Q405:** Appropriate Follow-up Imaging for Incidental Abdominal Lesions

We proposed adding four MIPS quality measures to the new Nuclear Medicine clinical grouping:

- **Q282:** Dementia: Functional Status Assessment: This MIPS quality measure focuses on the importance of ensuring that patients diagnosed with dementia receive a comprehensive functional assessment annually.
- **Q286:** Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia: This MIPS quality measure aims to address safety concerns in patients diagnosed with dementia by ensuring that appropriate screening and follow-up actions are conducted.

[558] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q288:** Dementia: Education and Support of Caregivers for Patients with Dementia: This MIPS quality measure focuses on the importance of providing education and support to caregivers of patients with Dementia.
- **Q386:** Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences: This MIPS quality measure focuses on the importance of addressing end-of-life care preferences for patients diagnosed with ALS.

We proposed adding one QCDR measure:

- **ACRAD34:** Multi-strata weighted average for 3 CT Exam Types: Overall Percent of CT exams for which Dose Length Product is at or below the size-specific diagnostic reference level (for CT abdomen-pelvis with contrast/single-phase scan, CT chest without contrast/single-phase scan, and CT head/brain without contrast/single-phase scan): This QCDR measure ensures that all CT scans—abdomen-pelvis with contrast, chest without contrast, and head/brain single-phase—maintain a Dose Length Product at or below the established threshold to help manage patient radiation exposure.

Improvement Activities

For the reasons stated in the introduction of this appendix,[559] we proposed to remove **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings and **IA_PSPA_2:** Participation in MOC Part IV.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Diagnostic Radiology Improvement Activities

- **IA_BE_6**: Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12**: Promoting Clinician Well-Being
- **IA_CC_7**: Regular training in care coordination
- **(*) IA_CC_8**: Implementation of documentation improvements for practice/process improvements
- **IA_CC_19**: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes

- **(**) IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1**: Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7**: Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12**: Participation in private payer CPIA

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the addition of ACRAD34: Overall Percent of CT Exams for which Dose Length Product is at or below the Size-Specific Dose Reference Level in this MVP.

Response: We thank the commenters for their support.

Comment: One commenter expressed appreciation that the proposed MIPS core measures are widely used and commonly reported by radiologists but noted that all three have been topped out for many years. They recommended working with relevant specialty societies to develop and introduce new, clinically meaningful measures that are not topped out, and to create pathways for newer measures that do not yet have established benchmarks.

Response: We appreciate the commenter's feedback. We encourage the commenter to reach out to measure developers and stewards to develop new measures applicable and meaningful to diagnostic radiology for submission to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A commenter recommended considering Q494 as a MIPS core measure in this MVP. CT radiation doses vary widely and are projected to cause substantial numbers of preventable cancers in adults and children, yet the measures identified as MIPS core measures are process-based, largely topped out, and do not directly influence dose or image quality. ACRAD34 only partially addresses dose, omits multiphase scanning (a major source of excess exposure), lacks an image-quality safeguard, and is ineligible for core status. By contrast, Q494 is an automated, low-burden intermediate outcome measure that flags CT exams with excessive size-adjusted dose or inadequate image quality using indication-specific thresholds, while keeping patient data within the institution. The commenter noted that core designation would align clinician and facility accountability for dose-related decisions and is projected to reduce unnecessary multiphase scanning, lower radiation exposure, prevent about 39,600 cancers over a decade, and save approximately $26.7 billion across all payers—benefits that documentation-focused measures cannot achieve.

Response: We thank the commenter for their feedback and acknowledge the importance of minimizing CT radiation doses. However, as currently specified, the measure requires specific software capability for calculating and reporting. As part of identifying MIPS core measures, we want to ensure that we are selecting measures most meaningful to the specific clinician specialty while also ensuring they are widely available and implementable within MIPS. To avoid requiring clinicians to expend resources on reporting this measure, we have not included it as a MIPS core measure at this time.

Comment: A commenter recommended the inclusion of QMM23: Low-Dose Cancer Screening Recommendation for CT and CTA of the Chest with Diagnosis of Emphysema and ACRAD44: Comprehensive Reporting of Coronary Artery Calcification (CAC) on Chest CT as these measures focus on improving preventative care, and chronic disease management. Another commenter recommended the inclusion of the Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection measure in this MVP. Commenters also recommended the inclusion of the new Clinician Use of Artificial Intelligence (AI) to Improve Patient Care improvement activity.

Response: We may consider the addition of quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter expressed concern that expecting QCDRs to support the measures included in the Nuclear Medicine clinical grouping is inappropriate as they noted the measures are not aligned with radiology workflows or data capture. A few commenters recommended the removal of the Nuclear Medicine clinical grouping measures

(measures Q282, Q286, Q288, and Q386) and replacing them with measures that reflect the real-world clinical work of diagnostic radiologists.

Response: We thank the commenters for their feedback regarding Nuclear Medicine clinical grouping measures. This MVP reflects recommendations received from clinical specialties to support different scopes of care to allow for comprehensive MVP reporting. We acknowledge that not all quality measures will be appropriate or applicable to all clinicians who choose to report the MVP.

After consideration of public comments, we are finalizing the *Diagnostic Radiology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.9: Focusing on Women's Health MVP

Table B.9a represents the proposed MIPS core measures for the Focusing on Women's Health MVP. The B.9b table, followed by a list of improvement activities, represents the measures and activities finalized within the Women's Health MVP (90 FR 50428 through 50430) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Focusing on Women's Health MVP focuses on the clinical specialty of providing treatment and management of women's health. This MVP would be most applicable to clinicians who treat patients within the practices of gynecology, obstetrics, and urogynecology, including NPPs such as certified nurse-midwives, nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.9b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[560] we proposed the following measures as MIPS core measures for the Focusing on Women's Health MVP:

- **Q039:** Screening for Osteoporosis for Women Aged 65-85 Years of Age
- **Q112:** Breast Cancer Screening
- **Q432:** Proportion of Patients Sustaining a Bladder or Bowel Injury at the Time of any Pelvic Organ Prolapse Repair

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.9a: Focusing on Women's Health MVP MIPS Core Measures

[560] See MVP Development: Quality Measure and Improvement Activity Updates

Focusing on Women's Health MVP MIPS Core Measures
Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age
Q112: Breast Cancer Screening
Q432: Proportion of Patients Sustaining a Bladder or Bowel Injury at the Time of any Pelvic Organ Prolapse Repair

	Q309: Cervical Cancer Screening (Collection Type: eCQM)	
	Q310: Chlamydia Screening in Women (Collection Type: eCQM)	
	Q400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation (Collection Type: MIPS CQM)	
	Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling (Collection Type: MIPS CQM)	
	(*) Q475: HIV Screening (Collection Type: eCQM)	
	Q493: Adult Immunization Status (Collection Type: MIPS CQM)	
	UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved (Collection Type: QCDR)	

Focusing on Women's Health Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_BMH_11:** Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- **(!!) IA_BMH_14:** Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!!) IA_PM_23:** Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A couple of commenters supported the designation of Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age as a MIPS core measure for this MVP. Several commenters supported the MVP's overall direction and recommended adding specific measures to better assess and improve women's health care. Suggestions included adding a menopause-management measure to systematically evaluate care for midlife women, in line with the principle that what is not measured is not managed; expanding maternal health measures beyond a single encounter or hospital stay to include breastfeeding initiation and continuation and the use of longitudinal, patient-generated data after discharge; and creating a measure for management of genitourinary syndrome of menopause and recurrent urinary tract infections, including use of vaginal estrogen. A commenter recommended the inclusion of the Rate of Timely Follow-up on Abnormal Screening Mammograms for Breast Cancer Detection measure in this MVP. A few commenters requested the addition of Q418: Osteoporosis Management in Women Who Had a Fracture. Other commenters recommended the addition of Q517: Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management to this MVP.

Response: We appreciate the commenters' feedback and thank them for their support. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Focusing on Women's Health MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.10: Gastroenterology Care MVP

Table B.10a represents the proposed MIPS core measures for the Gastroenterology Care MVP. The B.10b table, followed by a list of improvement activities, represents the measures and activities finalized within the Gastroenterology Care MVP (90 FR 50430 through 50434) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP would be most applicable to clinicians who treat patients within the practice of gastroenterology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.10b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[561] we proposed the following measures as MIPS core measures for the Gastroenterology Care MVP:

- **Q226:** Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention
- **Q275:** Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy
- **Q516:** Hepatitis C Virus (HCV): Sustained Virological Response (SVR)

For the reasons stated in the introduction of this appendix,[562] we proposed to remove **Q320:** Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients. We proposed to remove one high performing QCDR measure:

- **NHCR4:** Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation.

Modifications were considered for the following QCDR measures:

- **GIQIC23:** Appropriate follow-up interval based on pathology findings in screening colonoscopy: This QCDR measure is undergoing modifications to ensure patients are receiving appropriate follow up within the recommended timeframe.

Improvement Activities

We proposed adding one improvement activity relevant to this MVP:

- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements.

For the reasons stated in the introduction of this appendix,[563] we proposed to remove **IA_CC_10:** Care transition documentation practice improvements.

Symbol Key:

- **(!!) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter asserted that the proposed MIPS core measures for this MVP do not reflect where most gastroenterology specialists spend their clinical time and effort. They noted that most individual gastroenterologists, and even many groups, are unlikely to meet the 20-case minimum needed to be scored on Q275 or Q516, effectively leaving Q226—which does not represent "the care that is central to the clinical focus" of gastroenterology—as the only reliably scorable MIPS core measure for many GI clinicians. The commenter therefore recommended delaying implementation of the MIPS core measure requirement for this MVP until MIPS core measures can be identified that satisfy the selection criteria for gastroenterology.

Response: We thank the commenter for their feedback and acknowledge that there were limitations to MIPS core measure selection based upon the current MIPS quality measure inventory. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. Of note, reversion to the high priority requirement would create a similar situation and may even decrease ability to achieve maximum points. We will continue to review MIPS core measures annually to determine if revisions are appropriate.

Comment: A couple of commenters opposed the removal of NHCR4: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation and Q320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients from this MVP and requested their retention. One commenter stated that NHCR4 addresses a critical and still-unresolved quality gap: when bowel preparation is inadequate, patients are at substantially higher risk of missed adenomas, yet only about 25% are advised to have the recommended repeat

exam within one year. The commenter asserted that the measure is therefore not topped out and continues to identify important underuse of follow-up care. They further stated that maintaining NHCR4 preserves the integrity of this MVP, maintains economic value for patients who already paid for an incomplete colonoscopy, and keeps attention on payer and prior authorization barriers that limit access to better bowel prep regimens and undermine colorectal cancer prevention. This commenter also requested that Q320 be retained through the CY 2028 performance period. Another commenter asserted that eliminating these measures would leave the MVP with only two colonoscopy-specific QCDR measures (GIQIC26 and GIQIC23), neither of which would be eligible for designation as a MIPS core measure. Given that colonoscopy and upper endoscopy codes (45378, 45385, 45380, G0121/G0105, 43239, 43235) represent some of the highest-volume procedures billed by gastroenterologists, this commenter expressed concern that the resulting colonoscopy-related measure set within the MVP would be unacceptably limited. The commenter also recommended that GIQIC23: Appropriate Follow-Up Interval Based on Pathology Findings in Screening Colonoscopy be maintained as currently specified, emphasizing that it evaluates the clinical decision made and documented by the physician performing the procedure and communicated to the patient and referring clinician, thereby guiding the timing of the patient's next colonoscopy. They added that if a separate retrospective measure of completed follow-up or surveillance is desired, that concept should be independently specified, tested, and validated rather than replacing the existing prospective measure.

Response: While we agree the concepts are important to quality care, the removal of these measures does not preclude the quality action from continuing. Whether the clinician is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. Regarding NHCR4: Repeat Screening or Surveillance Colonoscopy Recommended Within One Year Due to Inadequate Bowel Preparation, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of NHCR4, the measure no longer meets that MVP inclusion criteria. MIPS performance data indicate that NHCR4 is high-performing and presents limited opportunity to further improve clinical outcomes. For measure Q320, see Table Group C of Appendix 1 in this final rule for any comments and responses pertaining to measures that were proposed for removal from MIPS.

We agree with the commenter and the proposed modification to GIQIC23: Appropriate Follow-Up Interval Based on Pathology Findings in Screening Colonoscopy will not be finalized as the measure steward determined no updates to the measure were necessary for CY 2027.

After consideration of public comments, we are finalizing the *Gastroenterology Care MVP* with modifications in Table B.10b for the CY 2027 performance period/2029 MIPS payment year and future years. We are not finalizing the modifications to GIQIC23: Appropriate follow-up interval based on pathology findings in screening colonoscopy as the measure steward has determined updates to the measure were unnecessary for CY2027.

B.11: Improving Care for Lower Extremity Joint Repair MVP

Table B.11a represents the proposed MIPS core measures for the Improving Care for Lower Extremity Joint Repair MVP. The B.11b table, followed by a list of improvement activities, represents the measures and activities finalized within the Improving Care for Lower Extremity Joint Repair MVP (90 FR 50434 through 50435) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat patients within the practice of orthopedic surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.11b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[564] we proposed the following measures as MIPS core measures for the Improving Care for Lower Extremity Joint Repair MVP:

- **Q351:** Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation
- **Q470:** Functional Status After Primary Total Knee Replacement
- **Q480:** Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)

For the reasons stated in the introduction of this appendix,[565] we proposed to remove **Q350:** Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Clinical Grouping	**Quality**	**Cost**
	(!) Q470: Functional Status After Primary Total Knee Replacement (Collection Type: MIPS CQM)	**COST_KA_1:** Knee Arthroplasty
	(!) Q480: Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS) (Collection Type: Administrative Claims)	**COST_PHA_1:** Elective Primary Hip Arthroplasty **COST_KA_1:** Knee Arthroplasty
Advancing Health and Wellness	**(**) Q128:** Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	**COST_PHA_1:** Elective Primary Hip Arthroplasty **COST_KA_1:** Knee Arthroplasty

Improving Care for Lower Extremity Joint Repair Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_7:** Regular training in care coordination
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_15:** PSH Care Coordination
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter requested the addition of the following measures: Q155: Falls: Plan of Care, Q318: Falls: Screening for Future Fall Risk, Q355: Unplanned Reoperation Within the 30-Day Postoperative Period, Q357: Surgical Site Infection, Q461: Leg Pain After Lumbar Surgery.

Response: Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: One commenter expressed concern regarding the removal of Q350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy from this MVP, and noted the measure promotes meaningful shared decision-making between clinicians and patients that is critically important to high-quality care and that removing will reduce the number of MIPS CQMs to four, effectively eliminating meaningful measure choice for clinicians reporting MIPS CQMs within this MVP.

Response: We acknowledge the commenter's concern regarding the removal of measure Q350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy. While process measures may still represent an important aspect of care, this measure's associated quality action essentially assesses for informed consent, a standard of care. Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of measure Q350.

After consideration of public comments, we are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.12 Interventional Radiology MVP

Table B.12a represents the proposed MIPS core measures for the Interventional Radiology MVP. The B.12b table, followed by a list of improvement activities, represents the measures and activities finalized within the Interventional Radiology MVP (90 FR 50381 through 50386) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Interventional Radiology MVP assesses meaningful outcomes in interventional radiology. This MVP would be most applicable to clinicians who treat patients within the practice of interventional radiology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.12b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[566] we proposed the following measures as MIPS core measures for the Interventional Radiology MVP:

- **Q145:** Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy
- **Q413:** Door to Puncture Time for Endovascular Stroke Treatment
- **Q420:** Varicose Vein Treatment with Saphenous Ablation: Outcome Survey

Improvement Activities

We proposed to remove one improvement activity as the activity is more relevant to general surgery and surgical subspecialties:

- **IA_CC_15:** PSH Care Coordination

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.12a: Interventional Radiology MVP MIPS Core Measures

Interventional Radiology MVP MIPS Core Measures
Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy
Q413: Door to Puncture Time for Endovascular Stroke Treatment
Q420: Varicose Vein Treatment with Saphenous Ablation: Outcome Survey

Interventional Radiology Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **(*) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_17:** Patient Navigator Program
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(!!) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP**: Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization.
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level

- **IA_PSPA_25:** Cost Display for Laboratory and Radiographic Orders

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter requested the addition of quality measures and improvement activities that are broadly applicable to interventional radiology practice, including measures addressing care coordination, patient safety, shared decision-making, patient-reported outcomes, access, and practice-based quality improvement.

Response: We thank the commenters for their support and feedback. We may consider the addition of quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Interventional Radiology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.13 Neuropsychology MVP

Table B.13a represents the proposed MIPS core measures for the Neuropsychology MVP. The B.13b table, followed by a list of improvement activities, represents the measures and activities finalized within the Neuropsychology MVP (90 FR 50386 through 50390) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Neuropsychology MVP focuses on the clinical specialty of providing treatment and management of neuropsychological care. This MVP would be most applicable to clinicians who treat patients within the practice of neuropsychology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.13b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[567] we proposed the following measures as MIPS core measures for the Neuropsychology MVP:

- **Q134:** Preventive Care and Screening: Screening for Depression and Follow-Up Plan
- **Q181:** Elder Maltreatment Screen and Follow-up Plan
- **Q282:** Dementia: Functional Status Assessment

Improvement Activities

For the reasons stated in the introduction of this appendix,[568] we proposed to remove **IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.

[567] See MVP Development: Quality Measure and Improvement Activity Updates
[568] Ibid.

Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Neuropsychology Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!!) IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_22:** Improved Practices that Engage Patients Pre-Visit
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **(*) IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_21:** Advance Care Planning

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be added to this MVP. Another commenter requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP.

Response: We thank the commenter for their support. We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Neuropsychology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.14: Optimal Care for Kidney Health MVP

Table B.14a represents the proposed MIPS core measures for the Optimal Care for Kidney Health MVP. The B.14b table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Kidney Health MVP (90 FR 50435 through 50438) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Optimal Care for Kidney Health MVP focuses on the clinical specialty of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This MVP would be most applicable to clinicians who treat patients within the practice of nephrology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.14b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[569] we proposed the following measures as MIPS core measures for the Optimal Care for Kidney Health MVP:

- **Q236:** Controlling High Blood Pressure
- **Q482:** Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate
- **Q489:** Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[570] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Optimal Care for Kidney Health Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **(!!) IA_BE_16**: Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13**: Practice improvements to align with OpenNotes principles
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular Review Practices in Place on Targeted Patient Population Needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A few commenters recommended the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP. One commenter supported

the updates to this MVP and recommend adding new early-stage measures to not only advance the important goals of prevention, earlier intervention, and chronic disease management, but also make the make the MVP most useful for clinicians who are interested in focusing on prevention and early intervention.

Response: We appreciate the commenters' support. We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter expressed concern that Q236: Controlling High Blood Pressure does not reflect current evidence-based clinical guidelines and is identified as a MIPS core measure for this MVP. Q236 uses a less stringent blood pressure control threshold of 140/90 mm Hg than the American Heart Association and American College of Cardiology recommendation of 130/80, as evidence indicates further reduces the risk of heart attack, stroke, heart failure, cardiovascular events, and death.

Response: We appreciate the commenters' concern regarding alignment with current evidence-based hypertension guidelines. Q236: Controlling High Blood Pressure is a MIPS core measure for this MVP for several reasons. Q236 is a standardized quality measure with an established 140/90 mm Hg control threshold that supports consistent data collection which allows comparability across practices and enables benchmarking against existing national performance. While its 140/90 mm Hg threshold is less aggressive than the 130/80 mm Hg target recommended by the American Heart Association and American College of Cardiology, it still reflects a clinically meaningful level of control and allows us to assess hypertension management. Including Q236 as a MIPS core measure provides a practical and interpretable outcome measure that supports early learning, comparability, and broad adoption across many practice settings. We will continue to monitor the evidence base and measure landscape and may consider updates in future program years.

Comment: A commenter requested Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be considered a MIPS core measure within this MVP.

Response: We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Optimal Care for Kidney Health MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.15: Optimal Care for Patients with Urologic Conditions MVP

Table B.15a represents the proposed MIPS core measures for the Optimal Care for Patients with Urologic Conditions MVP. The B.15b table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Patients with Urologic Conditions MVP (90 FR 50438 through 50441) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence, bladder cancer, and prostate cancer. This MVP would be most applicable to clinicians who treat patients within the practices of urology, general urologists, urology oncologists, and urogynecology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.15b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[571] we proposed the following measures as MIPS core measures for the Optimal Care for Patients with Urologic Conditions MVP:

- **Q050:** Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication
- **Q462:** Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

We proposed to remove two high performance QCDR measures, one process QCDR measure, and one QCDR measure due to low adoption, no benchmark after 2 consecutive years in MIPS:

- **AQUA8:** Hospital Admissions or Infectious Complications Within 30 days of Prostate Biopsy (high performing)
- **AQUA14:** Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment (high performing)
- **AQUA15:** Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures (process measure)
- **AQUA16:** Non-Muscle Invasive Bladder Cancer: Repeat Transurethral Resection of Bladder Tumor (TURBT) for T1 Disease (low adoption, no benchmark after 2 consecutive years in MIPS)

Modifications were considered for the following QCDR measures:

- **AQUA14:** Stones: Repeat Shock Wave Lithotripsy (SWL) Within 6 Months of Initial Treatment: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to the title, description, and numerator to align with the American Urological Association (AUA) updated clinical guidelines, which recommend a second SWL or ureteroscopy (URS) when the initial SWL does not achieve complete clearance.
- **AQUA15:** Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to add a quality action to the numerator to ensure abnormal results are appropriately addressed.
- **MUSIC4:** Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients: This QCDR measure is undergoing modifications to ensure patients newly diagnosed with low-risk prostate cancer on active surveillance undergo a confirmation biopsy within 24 months of their diagnosis.

Improvement Activities

We proposed adding two improvement activities relevant to this MVP, both of which include an advancing health and wellness component:

- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[572] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.

	Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months (Collection Type: MIPS CQM)	

Optimal Care for Patients with Urologic Conditions Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(+)(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_7**: Regular training in care coordination
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_17:** Patient Navigator Program
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12:** Participation in private payer CPIA
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A commenter supported the removal of AQUA14 and the improvement activity modifications.

Response: We thank the commenters for their support.

Comment: A few commenters recommended that clinically meaningful urology quality measures should not be removed without replacements. The proposed removal of AQUA8, AQUA14, AQUA15, and AQUA16 would eliminate measures addressing prostate biopsy complications, repeat shock wave lithotripsy, urine testing before stone procedures, and repeat TURBT for T1 bladder cancer. A commenter urged AQUA8 be maintained as they believed as more clinicians report the measure, performance will look different. This commenter believed AQUA15 should be maintained because it addresses an important clinical area. In addition, the commenter opposed any modifications to the measure outside of the measure development and update process established by the measure developer or intellectual property holder. Also, the commenter requested AQUA16 be retained due to its clinical importance and the likelihood of increased adoption as more urologists elect MVP reporting. The commenters believed these measures are relevant patient safety and quality measures and noted high performance or limited adoption should prompt improvement of the measures and reporting process, not automatic removal.

Response: We appreciate the commenter's feedback on AQUA8, AQUA14, AQUA15, and AQUA16. While we agree the concepts addressed by these measures are important to delivering high-quality care, the removal of these measures does not preclude clinicians from continuing these quality actions. Whether the clinician or group is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of AQUA8, AQUA14, AQUA15, and AQUA16, they no longer meet the MVP inclusion criteria. MIPS performance data indicates that AQUA14 is high performing and AQUA8 has had minimal variation in its historical benchmark. AQUA16 has not met the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years. In addition, AQUA15 only assesses for documentation of a urinalysis or urine culture and does not require a quality action or plan of care to account for abnormal results; therefore, missing a workflow step necessary to driving positive health outcomes.

Comment: A commenter requested that more generally applicable measures and a broader range of measures be added to this MVP so that urology clinicians can more easily meet minimum reporting thresholds.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter opposed the MIPS core measures in this MVP as they noted the measures identified as MIPS core measures do not provide meaningful options across urology subspecialties and were selected without sufficient specialty input.

Response: We thank the commenter for their feedback and acknowledge that there were limitations to MIPS core measure selection based upon the current inventory of quality measures. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. We will continue to review MIPS core measures annually to determine if revisions are appropriate.

Comment: A commenter opposed the proposed modification to MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients as it is outside of the measure development and update process established by the measure developer or intellectual property holder.

Response: Proposed modifications to MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients will not be finalized as the measure steward determined no updates to the measure were necessary for CY 2027.

After consideration of public comments, we are finalizing the *Optimal Care for Patients with Urologic Conditions MVP* with modifications in Table B.15b for the CY 2027 performance period/2029 MIPS payment year and future years. We are not finalizing the modifications to MUSIC4: Prostate Cancer: Active Surveillance/Watchful Waiting for Newly Diagnosed Low Risk Prostate Cancer Patients as the measure steward has determined updates to the measure were unnecessary for CY2027.

B.16 Pathology MVP

Table B.16a represents the proposed MIPS core measures for the Pathology MVP. The B.16b table, followed by a list of improvement activities, represents the measures and activities finalized within the Pathology MVP (90 FR 50390 through 50395) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Pathology MVP focuses on assessing meaningful outcomes in pathology. This MVP would be most applicable to pathology clinicians. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.16b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[573] we proposed the following measures as MIPS core measures for the Pathology MVP:

- **Q396:** Lung Cancer Reporting (Resection Specimens)
- **Q440:** Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician
- **Q491:** Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status

We proposed adding one QCDR measure that is relevant to this MVP:

- **QMM33:** Immunohistochemistry (IHC) and/or Molecular BRAF Testing Status in Metastatic Melanoma: This QCDR measure ensures that pathologists include a recommendation for BRAF testing, documentation of current or prior BRAF test results,

[573] See MVP Development: Quality Measure and Improvement Activity Updates

or confirmation that BRAF testing is pending in all final immunohistochemical staining reports for patients with an initial diagnosis of metastatic melanoma.

We proposed to remove one QCDR measure due to low adoption, no benchmark after 2 consecutive years in MIPS:

- **QMM25:** Use of Structured Reporting for Urine Cytology Specimens

Modifications were considered for the following QCDR measures:

- **CAP30:** Urinary Bladder Cancer: Complete Analysis and Timely Reporting: This QCDR measure is undergoing modifications to the title and description to clarify the quality action in relation to patient outcomes and the overarching goal of supporting informed treatment decisions.

Improvement Activities

We proposed adding four additional improvement activities relevant to this MVP, all of which include an advancing health and wellness component:

- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_20:** Use of Data to Improve Practice Workflows
- **IA_CC_21:** Understand and Improve Diagnostic Performance
- **IA_EPA_8:** Provide Education Opportunities for New Clinicians

For the reasons stated in the introduction of this appendix,[574] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care, **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings and **IA_PSPA_2:** Participation in MOC Part IV.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.16a: Pathology MVP MIPS Core Measures

Pathology MVP MIPS Core Measures
Q396: Lung Cancer Reporting (Resection Specimens)
Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician
Q491: Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status

TABLE B.16b: Pathology MVP Clinical Groupings

[574] See MVP Development: Quality Measure and Improvement Activity Updates

Pathology MVP		
Clinical Grouping	**Quality**	**Cost**
Pathology	**Q249:** Barrett's Esophagus (Collection Type: Medicare Part B Claims, MIPS CQM)	**N/A**
	(*) Q250: Radical Prostatectomy Pathology Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(*) Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens) (Collection Type: Medicare Part B Claims, MIPS CQM)	**N/A**
	(!)(*) Q396: Lung Cancer Reporting (Resection Specimens) (Collection Type: Medicare Part B Claims, MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(*) Q397: Melanoma Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	**N/A**
	(!)(*) Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician (Collection Type: MIPS CQM)	
	(!)(*) Q491: Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status (Collection Type: MIPS CQM)	
	(*) CAP30: Urinary Bladder Cancer: Complete Analysis and Timely Reporting (Collection Type: QCDR)	
	CAP34: Molecular Assessment: Biomarkers in Non-Small Cell Lung Cancer (Collection Type: QCDR)	
	CAP40: Squamous Cell Skin Cancer: Complete Reporting (Collection Type: QCDR)	
	QMM21: Incorporating results of concurrent studies into Final Reports for Bone Marrow Aspirate of patients with Leukemia, Myelodysplastic syndrome, or Chronic Anemia (Collection Type: QCDR)	
	QMM29: Use of Appropriate Classification System for Lymphoma Specimen (Collection Type: QCDR)	
	QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodule(s) (Collection Type: QCDR)	
	(+) QMM33: Immunohistochemistry (IHC) and/or Molecular BRAF Testing Status in Metastatic Melanoma (Collection Type: QCDR)	

Pathology Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **(+)(*)(!!) IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(^)(+) IA_CC_20:** Use of Data to Improve Practice Workflows
- **(^)(+) IA_CC_21:** Understand and Improve Diagnostic Performance

- **(+) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_12:** Participation in private payer CPIA
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **IA_PSPA_35:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: One commenter requested the addition of CAP43: Complete Reporting of Gastrointestinal Metaplasia, and CAP44: Molecular Assessment for Endometrial Carcinoma to this MVP. The commenter believed these new measures would expand the diseases addressed and represent opportunities for improvement for pathologists.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Pathology MVP* with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. We are not finalizing the modifications to the title for CAP30: Urinary Bladder Cancer: Complete Analysis and Timely Reporting as the measure steward has determined updates to the measure title were unnecessary for CY2027. Additionally, the measure steward updated the numerator to align with the clarification added in the description.

B.17: Patient Safety and Support of Positive Experiences with Anesthesia MVP

Table B.17a represents the proposed MIPS core measures for the Patient Safety and Support of Positive Experiences with Anesthesia MVP. The B.17b table, followed by a list of improvement activities, represents the measures and activities finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP (90 FR 50441 through 50444) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing the quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. This MVP would be most applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings, including NPPs such as certified registered nurse anesthetists (CRNAs), nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.17b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[575] we proposed the following measures as MIPS core measures for the Patient Safety and Support of Positive Experiences with Anesthesia MVP:

[575] See MVP Development: Quality Measure and Improvement Activity Updates

- **Q404:** Anesthesiology Smoking Abstinence
- **Q477:** Multimodal Pain Management
- **Q525:** Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases

We proposed adding two new MIPS quality measures and two QCDR measures:

- **Q525:** Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases: This proposed MIPS quality measure assesses the mean arterial pressure (MAP) of patients undergoing noncardiac, non-emergency surgery that requires general anesthesia or monitored anesthesia.
- **Q524:** Patient-Reported Experience with Anesthesia: This proposed MIPS quality measure assesses patient experience and satisfaction with anesthesia care.
- **AQI65:** Avoidance of Cerebral Hyperthermia for Procedures Involving Cardiopulmonary Bypass: This QCDR measure ensures patients receive appropriate intraoperative temperature monitoring during cardiopulmonary bypass, with documentation that pulmonary artery, oropharyngeal, or nasopharyngeal temperatures are maintained at or above 37.0 degrees Celsius.
- **AQI71:** Ambulatory Glucose Management: This QCDR measure ensures patients with diabetes undergoing office-based or ambulatory surgery receive appropriate blood glucose monitoring and intervention throughout the entire anesthesia care episode.

For the reasons stated in the introduction of this appendix,[576] we proposed to remove **Q430:** Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy and **Q463:** Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics). We proposed to remove one high performing QCDR measures and two QCDR measures proposed to transition to MIPS measures:

- **ABG44:** Low Flow Inhalational General Anesthesia (high performing)
- **AQI48:** Patient-Reported Experience with Anesthesia (proposed as a MIPS measure)
- **EPREOP31:** Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases (proposed as a MIPS measure)

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.17a: Patient Safety and Support of Positive Experiences with Anesthesia MVP MIPS Core Measures

Patient Safety and Support of Positive Experiences with Anesthesia MVP MIPS Core Measures
Q404: Anesthesiology Smoking Abstinence
Q477: Multimodal Pain Management
Q525: Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases

[576] Ibid.

Patient Safety and Support of Positive Experiences with Anesthesia Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_22:** Improved practices that engage patients pre-visit
- **(!!) IA_BMH_2:** Tobacco use
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the inclusion of Q525: Interoperative Hypotension Among Non-Emergent Noncardiac Surgical Cases as well as the addition of addition of AQI65 and AQI71 to this MVP.

Response: We thank the commenters for their support.

Comment: A commenter supported the concepts for the Interoperative Hypotension Among Non-Emergent Noncardiac Surgical Cases and Patient-Reported Experience with Anesthesia measures but had significant concerns about immediate feasibility. The commenter explained that the intraoperative hypotension measure depends on electronic intraoperative blood pressure data from anesthesia information management systems (AIMS) or automated monitor integrations that many anesthesia practices cannot access or control, particularly when clinicians work across multiple facilities with different platforms and limited authority to modify interfaces, standardize workflows, or implement upgrades. The commenter also noted that the patient experience measure relies on post-discharge surveys and robust patient engagement and communication capabilities that are often managed by facilities or vendors rather than anesthesia organizations and would require substantial new infrastructure and resources. The commenter recommended a transition period of at least 12–24 months, with optional reporting for the patient experience measure, so practices could work with facilities to upgrade systems and develop the technical and patient engagement infrastructure needed before these measures become mandatory. Another commenter expressed concern that many anesthesia groups do not own or control the electronic medical record (EMR), making extraction

of the detailed data required for certain measures in this MVP—such as Intraoperative Hypotension/EPREOP 31 and similar measures—nearly impossible. The commenter further noted that AQI65 has a very limited denominator, making it difficult for clinicians outside cardiac anesthesia to have enough eligible cases, and that the ongoing removal of measures like Q430 and Q463 leaves the anesthesia specialty with few achievable options unless groups own the EMR and practice in high-volume academic settings.

Response: We appreciate the commenters' feedback and their support for the concepts underlying the intraoperative hypotension and anesthesia patient experience measures, as well as their detailed explanations of feasibility concerns. We acknowledge that not all quality measures will be applicable or available to all clinicians reporting an MVP, and these measures remain optional for reporting as we continue working towards the sunsetting of traditional MIPS, providing transition time for practices. We recognize that many anesthesia groups do not own or control the electronic medical record (EMR) or AIMS and may face challenges accessing the data required for measures such as Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases and related measures. We also acknowledge concerns about limited denominators for certain measures and the impact of measure removals on the availability of achievable options for anesthesia clinicians. We will continue to encourage collaboration among clinicians, facilities, and vendors to support data access and interoperable workflows that enable more consistent and reliable reporting. We encourage interested parties to reach out to the relevant measure stewards to discuss potential revisions and implementation considerations for future years, including feasibility, denominator size, and data access issues. Finalized MVPs are reviewed annually to determine whether additional updates are needed to meet the needs of the MVP and program requirements, and we will take these comments into account as part of that ongoing review.

Comment: A few commenters opposed the removal of measures Q430 and Q463 as they believed this leaves the MVP with only three MIPS measures to report and therefore forces anesthesia practices to use a QCDR to satisfy MIPS reporting requirements. One commenter recommended maintaining these two measures for a transition period while practices, facilities, vendors, and registries develop the capabilities necessary to support the new measures.

Response: We acknowledge the commenters' concern regarding the removal of measures Q430: Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy, and Q463: Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics); however, we seek to balance meaningful quality reporting with minimizing burden placed on clinicians. While topped-out measures may still represent an important aspect of care, the associated quality actions are generally considered a standard of practice, presenting limited opportunity to further improve clinical outcomes. We have proposed two new MIPS CQM measures, which will result in a total of four MIPS CQM measures available for reporting as well as two QCDR measures. These measures have been finalized for removal from the program and, consequently, will be removed from this MVP. For the full rationale supporting the removal of Q430 and Q463, please refer to Appendix 1: MIPS Quality Measures of this final rule, Table Group C.

Comment: A commenter supported updating and refining this MVP but highlighted the operational complexity for large multispecialty organizations that must evaluate multiple pathways, determine clinician applicability, and set up reporting structures across specialties. The commenter requested that future modifications to existing MVPs continue to account for clinical relevance and operational feasibility across different specialties and practice settings.

A couple of commenters supported the addition of four new quality measures. A commenter supported the creation of a MIPS core measure set for this MVP, stating these changes would improve measurement stability, reduce reporting burden, enhance comparability, and better reflect CRNA services. They agreed with requiring CRNAs to report a MIPS core measure (or attest that none applies) and exempting small practices, but urged that CRNAs have multiple, clinically relevant MIPS core measure options feasible across diverse settings. A commenter recommended ongoing evaluation and expansion of anesthesia-specific MIPS core measures, clarification that newly developed anesthesia measures can be designated as core in future rulemaking, and removal of technical, administrative, and attribution barriers so CRNAs can fully participate and be appropriately attributed in the MVP.

Response: We appreciate the commenters' feedback and thank them for their support. We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter opposed the removal of ABG44: Low Flow Inhalational General Anesthesia.

Response: QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of ABG44, the measure no longer meets that MVP inclusion criteria. MIPS performance data indicate that ABG44 is high performing and presents limited opportunity to further improve clinical outcomes.

After consideration of public comments, we are finalizing the *Patient Safety and Support of Positive Experiences with Anesthesia MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.18 Podiatry MVP

Table B.18a represents the proposed MIPS core measures for the Podiatry MVP. The B.18b table, followed by a list of improvement activities, represents the measures and activities finalized within the Podiatry MVP (90 FR 50395 through 50400) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Podiatry MVP focuses on assessing meaningful outcomes in foot and ankle care for patients with chronic conditions, wound/ulcers, and general care for the podiatry patient. This MVP would be most applicable to podiatry clinicians, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.18b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[577] we proposed the following measures as MIPS core measures for the Podiatry MVP:

- **Q126:** Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation
- **Q155:** Falls: Plan of Care
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication

We proposed to remove two QCDR measures due to low adoption, no benchmark after 2 consecutive years in MIPS:

- **REGCLR5:** Offloading with Remote Monitoring
- **REGCLR8:** Monitor and Improve Treatment Outcomes in Chronic Wound Healing

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.18a: Podiatry MVP MIPS Core Measures

[577] See MVP Development: Quality Measure and Improvement Activity Updates

Podiatry MVP MIPS Core Measures
Q126: Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation
Q155: Falls: Plan of Care
Q358: Patient-Centered Surgical Risk Assessment and Communication

TABLE B.18b: Podiatry MVP Clinical Groupings

Podiatry MVP		
Clinical Grouping	**Quality**	**Cost**
Chronic Conditions	**(!) Q126:** Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation (Collection Type: MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q127: Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear (Collection Type: MIPS CQM)	
Wound/Ulcer	**USWR32:** Adequate Compression at each visit for Patients with Venous Leg Ulcers (VLUs) appropriate to arterial supply (Collection Type: QCDR)	**N/A**
	USWR33: Diabetic Foot Ulcer (DFU) Healing or Closure (Collection Type: QCDR)	
	USWR34: Venous Leg Ulcer (VLU) Healing or Closure (Collection Type: QCDR)	
	USWR35: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer (Collection Type: QCDR)	
General Podiatry	**(*) Q374:** Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM,)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
Advancing Health and Wellness	**(!) Q155:** Falls: Plan of Care (Collection Type: MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	
	(*) Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	
	(!) Q358: Patient-Centered Surgical Risk Assessment and Communication (Collection Type: MIPS CQM)

	REGCLR3: Bunion Outcome - Adult and Adolescent (Collection Type: QCDR)	

Podiatry Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations

- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter expressed support for the MIPS core measures identified in this MVP and recommended identifying both Q226: Tobacco Use: Screening and Cessation Intervention and Q317: Screening for High Blood Pressure and Follow-Up Documented as MIPS core measure options.

Response: We thank the commenters for their support. We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested USWR33 and USWR34 be considered MIPS core measures for this MVP. As outcome measures the commenter believed they would be more applicable than the three proposed MIPS core measures which are all process measures. The commenter also requested the inclusion of two additional QCDR measures relevant to this MVP; USWR30: Non-invasive arterial assessment of patients with leg ulcers and USWR22: Nutritional Assessment and Intervention Plan in Patients with Wounds and Ulcers.

Response: We appreciate the commenter's feedback. MIPS core measures must be publicly available measures. For details on the finalized MIPS core measure proposal and selection criteria for MVPs refer to section IV.A.4.d.(1)(c) of this final rule. We may consider the addition of quality measures to this MVP through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A few commenters opposed the removal of REGCLR5: Offloading with Remote Monitoring and REGCLR8: Monitor and Improve Treatment Outcomes in Chronic Wound Healing from this MVP and urged that both measures be retained for CY 2027 and subsequent years to allow time to assess participation, reporting, and benchmarking. One commenter emphasized that these measures should be evaluated for their clinical relevance to podiatry and their importance in keeping this MVP a meaningful reporting pathway for podiatrists who provide chronic wound care. A second commenter argued that these QCDR measures capture important aspects of podiatry care and should be retained despite currently low adoption. This commenter stated that keeping the measures in the MVP would incentivize reporting as clinicians face a more limited, focused set of choices, potentially generating sufficient data to establish benchmarks and offering podiatrists a broader set of measures that better match their patient population. The second commenter also noted that retention would allow Registry Clearinghouse QCDR users to report a full set of four QCDR measures and requested that these measures be maintained for at least a few more years to see whether increased MVP participation improves reporting rates for historically un-benchmarked measures.

Response: We appreciate the commenter's feedback on REGCLR5 and REGCLR8. While we agree these concepts are important to quality care, the removal of these measures does not preclude clinicians from continuing these quality actions. Whether the clinician is being assessed for the quality action or not, it should still be completed as part of routine clinical practice. Additionally, QCDR measures must meet established inclusion criteria to be finalized for MIPS and for inclusion within an MVP. Based upon review of REGCLR5 and REGCLR8, they no longer meet that MVP inclusion criteria. MIPS performance data indicate that both measures have not met reporting requirements and have not established a benchmark after being in the program for 2 consecutive years.

Comment: A commenter requested the addition of Q318: Falls: Screening for Future Fall Risk in this MVP as this measure is included in the Podiatry Specialty Set and therefore recognized as relevant to podiatry, reflects podiatrists' role in fall prevention through pain treatment, balance improvement, and stabilizing devices. The commenter requested the addition of two new improvement activities to this MVP for 2027—one on advance care planning conversations that reflects podiatrists' role in managing chronic conditions and goals of care, and one on responsible clinician use of AI given its rapidly expanding role in clinical care. The commenter acknowledged the existing MVP Maintenance Process, which normally delays changes to finalized MVPs by a year, but argues that this creates unnecessary lag for newly proposed activities and asks that these activities be incorporated into relevant MVPs as soon as they are finalized, noting that the rulemaking process already provides sufficient opportunity for public feedback.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Podiatry MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.19: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

Table B.19a represents the proposed MIPS core measures for the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP. The B.19b table, followed by a list of improvement activities, represents the measures and activities finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP (90 FR 50444 through 50447) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on promoting quality care for patients suffering from infectious disorders. This MVP would be most applicable to clinicians who treat patients within the practices of infectious disease and immunology, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.19b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[578] we proposed the following measures as MIPS core measures for the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP:

- **Q205:** Sexually Transmitted Infection (STI) Testing for People with HIV
- **Q338:** HIV Viral Suppression
- **Q516:** Hepatitis C Virus (HCV): Sustained Virological Response (SVR)

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

[578] See MVP Development: Quality Measure and Improvement Activity Updates

For the reasons stated in the introduction of this appendix,[579] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

	Q493: Adult Immunization Status (Collection Type: MIPS CQM)	

Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **(!!) IA_PM_22:** Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship
- **(!!) IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A few commenters supported Q205 and Q338 as core MIPS measures in the MVP. One commenter also supported Q516 as a MIPS core measure in this MVP.

Response: We thank the commenters for their support.

Comment: A commenter requested that Q065: Appropriate Treatment for Upper Respiratory Infection, Q130: Documentation of Current Medications in the Medical Record, and Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan be designated as MIPS core measures within the infectious diseases MVP. The commenter stated that this would provide additional viable reporting options and help ensure that, even when clinicians must rely on a topped-out measure, they can still earn meaningful points reflective of their performance.

Response: We welcome feedback on all MIPS core measures and encourage commenters to submit this during the annual MVP maintenance review process. Understanding that some clinicians may be unable to report the selected MIPS core measures, we do allow attestation for cases in which a MIPS core measure is not available and applicable. When identifying MIPS core measures within this MVP, the focus was on HIV and Hepatitis, as they are associated with high healthcare costs and poor patient outcomes.

After consideration of public comments, we are finalizing the *Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.20: Pulmonology Care MVP

Table B.20a represents the proposed MIPS core measures for the Pulmonology Care MVP. The B.20b table, followed by a list of improvement activities, represents the measures and activities finalized within the Pulmonology Care MVP (90 FR 50447 through 50449) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP would be most applicable to clinicians who specialize in pulmonology and sleep medicine, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.20b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[580] we proposed the following measures as MIPS core measures for the Pulmonology Care MVP:

- **Q052:** Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy
- **Q279:** Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy
- **Q398:** Optimal Asthma Control

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.20a: Pulmonology Care MVP MIPS Core Measures

Pulmonology Care MVP MIPS Core Measures
Q052: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy
Q279: Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy
Q398: Optimal Asthma Control

Experience of Care	**Q047:** Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	**COST_ACOPD_1:** Asthma/ Chronic Obstructive Pulmonary Disease (COPD) **COST_COPDE_1:** Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation
	Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months (Collection Type: MIPS CQM)	

Pulmonology Care Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **(!!) IA_BE_23:** Integration of patient coaching practices between visits
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter recommended adding Q317: Screening for High Blood Pressure and Follow-Up to this MVP. Another commenter requested adding Q240: Childhood Immunization Status, Q394: Immunizations for Adolescents, and Q493: Adult Immunization Status, while separate commenters recommended adding Q322: Adult Sinusitis: Appropriate Antibiotic Choice and Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood. In addition, a commenter requested that CMS support development of new measures that promote earlier identification of ILD and bronchiectasis in higher-risk pulmonary patients.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We also encourage commenters to work with measure developers and stewards to develop and submit measures that address these aspects of care through the Call for Measures process.

After consideration of public comments, we are finalizing the *Pulmonology MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.21: Quality Care for Patients with Neurological Conditions MVP

Table B.21a represents the proposed MIPS core measures for the Quality Care for Patients with Neurological Conditions MVP. The B.21b table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for Patients with Neurological Conditions MVP (90 FR 50449 through 50451) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Quality Care for Patients with Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from neurological conditions. This MVP would be most applicable to clinicians who specialize in neurology care, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.21b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[581] we proposed the following measures as MIPS core measures for the Quality Care for Patients with Neurological Conditions MVP:

- **Q238:** Use of High-Risk Medications in Older Adults
- **Q282:** Dementia: Functional Status Assessment
- **Q495:** Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Quality Care for Patients with Neurological Conditions Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings

- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_24:** Financial Navigation Program
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(*)(!!) IA_BMH_4:** Depression Screening, Treatment, and Prevention
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **(!!) IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood as a MIPS core measure in this MVP.

Response: We thank the commenters for their support.

Comment: A commenter requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP. Another commenter requested the addition of Q182: Functional Outcome and Q283: Dementia: Associated Behavioral and Psychiatric Symptoms Screening and Management to this MVP.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Quality Care for Patients with Neurological Conditions MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.22: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

Table B.22a represents the proposed MIPS core measures for the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. The B.22b table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP (90 FR 50451 through 50453) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL), and otitis media. This MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.22b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[582] we proposed the following

[582] See MVP Development: Quality Measure and Improvement Activity Updates

measures as MIPS core measures for the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP:

- **Q331:** Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)
- **Q357:** Surgical Site Infection (SSI)
- **Q523:** Age-Related Hearing Loss: Comprehensive Audiometric Evaluation

We proposed adding one new MIPS quality measure that is relevant to this MVP:

- **Q523:** Age-Related Hearing Loss: Comprehensive Audiometric Evaluation: This proposed MIPS quality measure assesses patients with hearing loss or tinnitus for completion of a comprehensive audiometric evaluation.

For the reasons stated in the introduction of this appendix,[583] we proposed to remove **Q332:** Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use). We proposed to remove one duplicative QCDR measure and one QCDR measure proposed to transition to a MIPS measure:

- **AAO16:** Age-Related Hearing Loss: Audiometric Evaluation (proposed as a MIPS measure)
- **AAO21:** Otitis Media with Effusion (OME): Comprehensive Audiometric Evaluation for Chronic OME > or = 3 months (duplicative measure)

Modifications were considered for the following QCDR measures:

- **AAO16:** Age-Related Hearing Loss: Audiometric Evaluation: If the measure is not finalized for removal in the CY 2027 PFS final rule, this QCDR measure would undergo modifications to update the description, denominator, and numerator to reflect the addition of a tinnitus diagnosis and clarifying that a hearing screening does not meet the measure's intent. Expanding the measure to include patients diagnosed with tinnitus will help capture a broader group of individuals who may have underlying or undiagnosed hearing loss.
- **AAO20:** Tympanostomy Tubes: Comprehensive Audiometric Evaluation: This QCDR measure is undergoing modifications to update the description, denominator, and instructions to remove the otitis media with effusion (OME) diagnosis and expand the eligible population to include all patients undergoing tympanostomy tube insertion. This would increase the measure's applicability and case volume. This change reflects that preoperative hearing evaluation is an important component of care for any patient receiving tubes, not just those with OME.

Improvement Activities

We proposed adding eight improvement activities relevant to this MVP, several of which include an advancing health and wellness component:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_17:** Patient Navigator Program
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PM_17:** Participation in Population Health Research

[583] Ibid.

- **IA_PSPA_12:** Participation in private payer CPIA

For the reasons stated in the introduction of this appendix,[584] we proposed to remove **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care.

Symbol Key:
Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

- **(+) IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **(+) IA_PSPA_12:** Participation in private payer CPIA

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the adoption of the new measure for Age-Related Hearing Loss: Comprehensive Audiometric Evaluation measure and addressing a gap in this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters recommended the addition of Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, Q374: Closing the Referral Loop: Receipt of Specialist Report, and Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months to this MVP. The commenter also recommended the addition of IA_AHW_1: Chronic Care and Preventative Care Management for Empaneled Patients, IA_EPA_2: Use of telehealth services that expand practice access, and IA_BE_23: Integration of patient coaching practices between visits.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A couple of commenters opposed the removal of Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use) as this would leave allergy and immunology specialists with three potentially relevant measures to report through this MVP, making it impossible for those clinicians to meet the requirement to report four measures.

Response: We acknowledge the commenters' concern regarding the removal of measure Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use). Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q332. While this MVP may not contain sufficient quality measures

appropriate to some clinician's scope of care, we encourage you to review other MVPs for potential applicability. In addition, we encourage the commenter to reach out to measure developers and stewards to develop new measures applicable and meaningful to allergists and immunologists for submission to the Call for Measures for possible future implementation. Finalized MVPs are reviewed annually to determine if additional updates are needed to meet the needs of the MVP and program requirements.

Comment: A commenter opposed the removal of AAO21 and consolidating it with AAO20, explaining that although they appear related, they address different patient cohorts and care pathways, and combining them would obscure clinically meaningful differences and affect scoring. The commenter added that eliminating AAO21 would further narrow already limited, specialty-specific quality options in this MVP, making it harder for some otolaryngologists to find four applicable measures, especially since prior recommendations to add ENT-relevant measures were not adopted, and urges retaining AAO21 as a separate measure with decisions based on patient populations, clinical pathways, performance distributions, and impacts on specialty participation.

Response: We thank the commenter for their feedback. Measure AA021: Otitis Media with Effusion (OME): Comprehensive Audiometric Evaluation for Chronic OME > or = 3 months is duplicative of AAO20: Tympanostomy Tubes: Comprehensive Audiometric Evaluation in clinical topic, as both assess receipt of a comprehensive audiometric evaluation when clinically indicated. We therefore proposed its removal, while encouraging the measure steward to incorporate the patient population into measure AAO20 for a more comprehensive assessment of appropriate audiologic care. We do not want to arbitrarily limit measures within MVP; however, we do want to have a streamlined set of robust quality measures that drive positive outcomes.

After consideration of public comments, we are finalizing the *Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.23: Quality Care in Mental Health and Substance Use Disorders MVP

Table B.23a represents the proposed MIPS core measures for the Quality Care in Mental Health and Substance Use Disorders MVP. The B.23b table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care in Mental Health and Substance Use Disorders MVP (90 FR 50453 through 50456) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Quality Care in Mental Health and Substance Use Disorders MVP focuses on clinical actions promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.23b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[585] we proposed the following measures as MIPS core measures for the Quality Care in Mental Health and Substance Use Disorders MVP:

- **Q305:** Initiation and Engagement of Substance Use Disorder Treatment
- **Q370:** Depression Remission at Twelve Months
- **Q383:** Adherence to Antipsychotic Medications For Individuals with Schizophrenia

[585] See MVP Development: Quality Measure and Improvement Activity Updates

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_BMH_4:** Depression Screening, Treatment, and Prevention.

For the reasons stated in the introduction of this appendix,[586] we proposed to remove **IA_BMH_5:** MDD prevention and treatment interventions.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Mental Health and Substance Use Disorders Improvement Activities

- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_23:** Integration of patient coaching practices between visits
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_2:** Tobacco use
- **(+)(*)(!!) IA_BMH_4:** Depression Screening, Treatment, and Prevention
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **(!!) IA_BMH_14:** Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- **(!!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!!) IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the addition of IA_BMH_4: Depression Screening, Treatment, and Prevention and the removal of IA_BMH_5: MDD prevention and treatment interventions from this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP.

Another commenter requested the addition of the tobacco use and unhealthy alcohol use preventive screening and counseling measures to this MVP, arguing that excluding measures addressing two of the most commonly abused substances makes the MVP incomplete and that including them would reduce reporting burden for psychiatrists, who have historically reported these measures frequently.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

After consideration of public comments, we are finalizing the *Mental Health and Substance Use Disorders MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.24: Rehabilitative Support MVP

Table B.24a represents the proposed MIPS core measures for the Rehabilitative Support MVP. The B.24b table, followed by a list of improvement activities, represents the measures and activities finalized within the Rehabilitative Support for Musculoskeletal Care MVP (90 FR 50457 through 50461) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years, including an MVP title update to Rehabilitative Support MVP to more closely reflect the measures and activities included in the MVP. The Rehabilitative Support MVP focuses on clinical actions promoting quality rehabilitative care for patients. This MVP would be most applicable to clinicians who specialize in providing rehabilitative support such as chiropractic, physiatry, physical therapy and occupational therapy, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.24b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[587] we proposed the following measures as MIPS core measures for the Rehabilitative Support MVP:

- **Q050:** Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older
- **Q155:** Falls: Plan of Care
- **Q520:** Functional Improvement for Patients with Back Impairments

We proposed adding five new MIPS quality measures relevant to this MVP:

- **Q518:** Functional Improvement for Patients with Neck Impairments: This proposed MIPS quality measure assesses functional improvement for patients with neck impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q478: Functional Status Change for Patients with Neck

[587] See MVP Development: Quality Measure and Improvement Activity Updates

Impairments.

- **Q519:** Functional Improvement for Patients with Upper Extremity Impairments: This proposed MIPS quality measure assesses functional improvement for patients with upper extremity impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q222: Functional Status Change for Patients with Elbow, Wrist or Hand Impairments.
- **Q521:** Functional Improvement for Patients with Lower Extremity Impairments: This MIPS quality measure assesses functional improvement for patients with lower extremity impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q218 Functional Status Change for Patients with Hip Impairments and Q219: Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments.
- **Q522:** Functional Improvement for Patients with Knee Impairments: This proposed MIPS quality measure assesses functional improvement for patients with knee impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q217: Functional Status Change for Patients with Knee Impairments.
- **Q520:** Functional Improvement for Patients with Back Impairments: This proposed MIPS quality measure assesses functional improvement for patients with back impairments after completing an episode of care, excluding surgical interventions. This measure is proposed to replace Q220: Functional Status Change for Patients with Low Back Impairments.

For the reasons stated in the introduction of this appendix,[588] we proposed to remove **Q217:** Functional Status Change for Patients with Knee Impairments, **Q218:** Functional Status Change for Patients with Hip Impairments, **Q219:** Functional Status Change with Lower Leg, Foot or Ankle Impairments, **Q220:** Functional Status Change for Patients with Low Back Impairments, **Q221:** Functional Status Change for Patients with Shoulder Impairments, **Q222:** Functional Status Change for Patients with Elbow, Wrist or Hand Impairments, and **Q478:** Functional Status Change for Patients with Neck Impairments.

Improvement Activities

We proposed adding one improvement activity that is relevant to this MVP and includes an advancing health and wellness component:

- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans

For the reasons stated in the introduction of this appendix,[589] we proposed to remove **IA_BE_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care and **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings.

Symbol Key:

Clinical Grouping	**Quality**	**Cost**
	(!) Q155: Falls: Plan of Care (Collection Type: MIPS CQM)	

Rehabilitative Support Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!!) IA_BE_16:** Promote Self-management in Usual Care
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **(!!) IA_BMH_12:** Promoting Clinician Well-Being
- **(!!) IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **(*) IA_CC_8**: Implementation of documentation improvements for practice/process improvements
- **(+)(*)(!!) IA_CC_9:** Implementation of Practices/Processes for Developing Regular Individual Care Plans
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **(!) IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(*) IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools, including AI-enabled predictive decision-support interventions—and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **(!!) IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A couple of commenters supported the updates to this MVP. A few commenters supported the proposed renaming of this MVP. One commenter believed the broader designation better encompasses the holistic, multi-system interventions that occupational therapists provide. A couple of commenters appreciated the inclusion of Q155: Falls: Plan of Care as one of the MIPS core measures and one commenter supported all of the measures identified as MIPS core measures. A few commenters supported the replacement of the FOTO "functional status" measures with the PROMIS PRO-PM measures. While a commenter believed PROMIS could enhance measure relevance and feasibility for physiatrists they noted that key technical details are missing, preventing assessment of how the measures will work or whether they are meaningful. The commenter requested complete specifications to be released early and designed to enable participation by physiatrists across diverse rehabilitation conditions and settings. One commenter supported the core-measure designation for functional improvement in patients with back impairments, given how common and costly low back conditions are in outpatient rehabilitation. And one commenter supported the addition of IA_CC_9.

Response: We thank the commenters for their support. The complete measure specifications will be publicly posted after publication of the final rule.

Comment: A commenter recommended the addition of Q318: Falls: Screening for Future Fall Risk as fall risk is clinically relevant to musculoskeletal and orthopedic rehabilitation patients. In addition, the commenter recommended the addition of Q513: Patient Reported Falls and Plan of Care as an additional applicable measure. Another commenter recommended the addition of Q281: Dementia; cognitive assessment, Q286: Dementia safety concern screening and follow-up for patients with dementia, Q288: Dementia: education and support of caregivers for patients with dementia, Q502: Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder, and Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months to this MVP.

Response: We may consider the addition of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter requested that a cross-cutting functional outcome MIPS core measure option be added to this MVP. Another commenter recommended the MIPS core measures for this MVP include at least one cross-cutting, patient-reported functional outcome that can apply across body regions and diagnoses, such as PROMIS

Physical Function, and recommended PROMIS Pain Interference or an appropriate Global Health measure stating these measures could offer an additional cross condition option. The commenter also urged CMS to consider using the Patient-Specific Functional Scale (PSFS). Another commenter recommended at least one additional MIPS core measure from the existing PT/OT specialty measure set that captures outcomes beyond physical impairments be included.

Response: We encourage the commenters to suggest changes to the MIPS core measures through the MVP Maintenance Process and we may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter recommended that, prior to removing IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care and IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings, there should be confirmation that the remaining or replacement activities fully recognize those functions, and, if they do not, IA_BE_15 and IA_CC_12 should be retained. Another commenter wanted to understand how beneficiary-engagement activities previously recognized under IA_BE_15 will be appropriately included under the modified language. Care planning and beneficiary engagement are complementary but distinct activities and eliminating a standalone beneficiary engagement activity may reduce the visibility of patient-centered engagement efforts within the improvement activities performance category.

Response: We acknowledge the commenter's concern regarding the removal of IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care and IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings. These improvement activities have been finalized for removal from the program and, consequently, will be removed from this MVP. Please refer to Appendix 2: Improvement Activities (Table Group C) in this final rule for details on the removal of IA_BE_15 and IA_CC_12. We are seeking to ensure that elements of removed activities such as these two are retained in the Inventory, either in combined activities or other existing activities. We are continuing to prioritize patient-centered engagement efforts in improvement activities. IA_CC_9: Implementation of Practices/Processes for Developing Regular Individual Care Plans has been proposed for addition to this MVP, as part of our preserving elements of removed or combined activities.

Comment: A commenter recommended that quality measures for rehabilitation clinicians focus on patient-centered functional outcomes aligned with rehabilitative goals, rather than process metrics used for physician specialties. The commenter emphasized assessing outpatient rehabilitation by functional improvement, safety, independence, and patient-reported outcomes (including PROMs and PROMIS), arguing this better reflects rehabilitation's value in promoting healthy aging, independence, and reduced healthcare utilization. The commenter suggested expanding the MVP to ensure it adequately reflects the breadth of contemporary rehabilitation practice. Another commenter recommended the incorporation of measures that assess functional cognitive, psychosocial, and participation-based outcomes, and successful engagement in everyday activities.

Response: We thank the commenter for the feedback. We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter expressed support for meaningful, functional measures of therapy outcomes and opposed tying accurate valuation and payment to new or untested reporting requirements. The commenter urged closing measurement gaps for occupational therapy, avoiding instruments that simply reflect treatment volume, and ensuring small practices can participate without costly infrastructure. They further recommended that voluntary, CMS-funded testing be used to evaluate whether condition-agnostic patient-reported outcome tools (such as PROMIS Global Health) add value alongside discipline-specific functional measures, with data collected at clinically meaningful intervals rather than every visit and post-treatment follow-up included only when feasible.

Response: We thank the commenter for the support. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Rehabilitative Support MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years

B.25: Surgical Care MVP

Table B.25a represents the proposed MIPS core measures for the Surgical Care MVP. The B.25b table, followed by a list of improvement activities, represents the measures and activities finalized within the Surgical Care MVP (90 FR 50461 through 50464) with modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Surgical Care MVP focuses on the clinical theme of surgery. This MVP would be most applicable to clinicians who specialize in general surgery, neurosurgery, and cardiothoracic surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.25b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[590] we proposed the following measures as MIPS core measures for the Surgical Care MVP:

- **Q047:** Advance Care Plan
- **Q164:** Coronary Artery Bypass Graft (CABG): Prolonged Intubation
- **Q354:** Anastomotic Leak Intervention
- **Q357:** Surgical Site Infection (SSI)
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication
- **Q459:** Back Pain After Lumbar Surgery

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

Surgical Care Improvement Activities

- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_17:** Patient Navigator Program
- **(!!) IA_CC_18:** Relationship-Centered Communication
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_8:** Use of Patient Safety Tools

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP.

Response: We thank the commenter for their support.

Comment: A commenter requested expanding this MVP to provide additional clinically meaningful quality measures applicable to spine surgery. The commenter specifically requested the expansion of eligible procedure populations for Q355: Unplanned Reoperation within the 30 Day Postoperative Period, and Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure, to include appropriate cervical and lumbar spine surgical procedures. Another commenter requested the addition of the following improvement activities: IA_BE_6:

Regularly Assess Patient Experience of Care and Follow Up on Findings and IA_EPA_6: Create and Implement a Language Access Plan.

Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years as well as submission of potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter believed the MIPS core measures identified for this MVP is fundamentally flawed because it applies the same MIPS core measures to very different types of clinicians and procedures, creating misleading comparisons. Measures broad enough to apply across all included clinicians (like Advance Care Plan) do not reflect surgical quality, while measures that truly capture surgical performance (like CABG: Prolonged Intubation) apply only to narrow subsets and are not reportable by most clinicians in the MVP. Requiring three or more MIPS core measures but allowing clinicians to report only one worsens this issue, since two surgeons in the same MVP could report entirely different measures, giving a false impression of comparability. The commenter opposed the MIPS core measure concept as designed and recommended that it should instead focus MIPS core measures on patient-reported outcome–based performance measures (PRO-PMs), which can apply to all patients and better capture outcomes that matter to them, such as function, recovery, quality of life, and goal attainment.

Response: We thank the commenter for their feedback and acknowledge limitations to MIPS core measure selection based upon the current MIPS quality measure inventory. Therefore, we had to balance between choosing measures that most closely represent care central to the MVP intent, while also ensuring measure availability for those clinicians who chose to report the MVP. For some MVPs, such as the Surgical Care MVP, we determined more than three measures must be selected to reflect the care central to the subspecialties able to report MVP. The intent of the selected measures is to provide a comparable data point for each of the represented specialties, while also including a more broadly applicable measure to ensure coverage for those without a specialty-specific surgical quality measure. It would be expected that like clinicians able to report the specialty-specific MIPS core measures would do so, allowing for comparison across that measure's performance. We encourage interested parties to submit potential new measures that will align with current program goals and priorities and fill these identified gaps allowing meaningful and complete assessment of MIPS eligible clinician's performance within MIPS during the annual Call for Measures.

Comment: A commenter expressed concern with the proposed MIPS core measures in this MVP as several are tied to specific procedures—such as CABG, anastomotic leak intervention, and lumbar surgery—and therefore have little or no applicability to neurosurgeons who do not perform them. The commenter added that while broader surgical measures like surgical site infection and patient-centered surgical risk assessment may apply to neurosurgeons, they still do not directly evaluate the specialized clinical care provided by many neurosurgical subspecialists.

Response: We acknowledge that not all MIPS core measures will be applicable to all clinicians reporting an MVP; however, to the extent possible, we took into account implementation factors and availability. Therefore, we identified a small subset of measures within each MVP that represents care central to the MVP intent. For MVPs that represent multiple clinician types, settings, or care scopes, we identified additional MIPS core measures ensuring measure availability for those clinicians who chose to report the MVP. Additionally, the policy includes an option for self-attestation when the MIPS core measures are not appropriate or applicable to their scope of care, allowing clinicians to choose an alternate measure that is more relevant.

After consideration of public comments, we are finalizing the *Surgical Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.26: Value in Primary Care MVP

Table B.26a represents the proposed MIPS core measures for the Value in Primary Care MVP. The B.26b table, followed by a list of improvement activities, represents the measures and activities finalized within the Value in Primary Care MVP (90 FR 50465 through 50467) with

modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Value in Primary Care MVP focuses on the clinical theme of promoting quality care for patients to reduce the risk of diseases, disabilities, and death. This MVP would be most applicable to clinicians who specialize in preventive medicine, internal medicine, family medicine, and geriatrics, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.26b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[591] we proposed the following measures as MIPS core measures for the Value in Primary Care MVP:

- **Q001:** Diabetes: Glycemic Status Assessment Greater Than 9%
- **Q134:** Preventive Care and Screening: Screening for Depression and Follow-up Plan
- **Q236:** Controlling High Blood Pressure

We proposed adding one new MIPS quality measure:

- **Q517:** Low Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management: This proposed intermediate outcome MIPS quality measure ensures lipid monitoring in patients with atherosclerotic cardiovascular disease (ASCVD) and assesses target goal achievement of an LDL-C less than 70mg/dl.

For the reasons stated in the introduction of this appendix,[592] we proposed to remove **Q483:** Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM).

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Caret symbol (^): finalized new measure or improvement activity.
Plus sign (+): measures and improvement activities finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.26a: Value in Primary Care MVP MIPS Core Measures

Value in Primary Care MVP MIPS Core Measures
Q001: Diabetes: Glycemic Status Assessment Greater Than 9%
Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan
Q236: Controlling High Blood Pressure

Value in Primary Care Improvement Activities

- **(!!) IA_AHW_1:** Chronic Care and Preventative Care Management for Empaneled Patients
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making

- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **(!!) IA_PM_22:** Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- **(!!) IA_PM_23:** Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines
- **(!!) IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. A couple of commenters supported the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested the addition of IA_BMH_1: Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring to this MVP. A couple of commenters requested the addition of Q488: Kidney Health Evaluation be added. Other commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood and Q117: Diabetes Eye Exam. Another commenter requested the addition of Q281: Dementia: Cognitive Assessment and Q282: Dementia: Functional Status Assessment. A commenter recommended the addition of measures to this MVP that better capture advanced primary care management and longitudinal, team-based care. The commenter emphasized that these measures should recognize the roles of nurses, advanced practice registered nurses (APRNs), and other interdisciplinary team members in coordinating care, managing complex conditions, improving outcomes, and supporting chronic disease prevention and management.

Response: We may consider the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A few commenters recommended designating HIV screening as a MIPS core measure in this MVP, emphasizing that screening is the gateway to the full continuum of HIV services. A negative result can prompt prevention discussions and offer pre-exposure prophylaxis (PrEP), while a positive result should lead quickly to confirmatory testing, linkage to care, and treatment. The commenter cautioned that treating HIV screening as optional in primary care contributes to missed and delayed diagnoses, especially when providers make assumptions based on age, gender, sexual orientation, or relationship status. Another commenter requested Q515: Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes be considered a MIPS core measure within this MVP. A few commenters requested the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure be identified as a MIPS core measure.

Response: We thank the commenters for their feedback and agree that screening for HIV is a critically important step in prompting either prevention discussions or treatment options. The intent of the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP is to focus on driving quality care for patients suffering from an infectious disorder, such as HIV, and those clinicians within the practices of infectious disease and immunology, including NPPs. When determining which quality measures to include as MIPS core measures, we sought to include measures that assess quality actions and outcomes for patients that are being actively treated by the clinician. We may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: Many commenters opposed the removal of Q483: Person-Centered Primary Care Measure Patient-Reported Outcome Performance Measure (PCPCM PRO-PM) from MIPS and from this MVP. They expressed concern that eliminating this measure would leave the MVP without a patient-reported outcome (PRO) performance measure that reflects the core functions of primary care—accessibility, continuity, comprehensiveness, coordination, and person-centeredness—from the patient's perspective.

Response: We acknowledge the commenters' concern regarding the removal of measure Q483: Person-Centered Primary Care Measure Patient-Reported Outcome Performance Measure (PCPCM PRO-PM). This measure has been finalized for removal from the program and, consequently, will be removed from this MVP. Please refer to Appendix 1: MIPS Quality Measures (Table Group C) in this final rule for details on the removal of Q483.

After consideration of public comments, we are finalizing the *Value in Primary Care MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.

B.27 Vascular Surgery MVP

Table B.27a represents the proposed MIPS core measures for the Vascular Surgery MVP. The B.27b table, followed by a list of improvement activities, represents the measures and activities finalized within the Vascular Surgery MVP (90 FR 50400 through 50405) with proposed modifications for the CY 2027 performance period/2029 MIPS payment year and future years. The Vascular Surgery MVP focuses on the clinical theme of providing high quality care for patients treated under vascular surgery. This MVP would be most applicable to clinicians who treat patients within the surgical setting of vascular surgery, including NPPs such as nurse practitioners, clinical nurse specialists, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses to this MVP are included immediately after Table B.27b and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix,[593] we proposed the following measures as MIPS core measures for the Vascular Surgery MVP:

- **Q344:** Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2)
- **Q356:** Unplanned Hospital Readmission within 30 Days of Principal Procedure
- **Q358:** Patient-Centered Surgical Risk Assessment and Communication

Improvement Activities

For the reasons stated in the introduction of this appendix,[594] we proposed to remove **IA_PM_2:** Anticoagulant Management Improvements.

Symbol Key:

Exclamation point (!): MIPS core measure within an MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Double exclamation point (!!): improvement activities with an advancing health and wellness component.

TABLE B.27a: Vascular Surgery MVP MIPS Core Measures

[593] See MVP Development: Quality Measure and Improvement Activity Updates
[594] See MVP Development: Quality Measure and Improvement Activity Updates

Vascular Surgery MVP MIPS Core Measures
Q344: Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2)
Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure
Q358: Patient-Centered Surgical Risk Assessment and Communication

TABLE B.27b: Vascular Surgery MVP Clinical Groupings

Vascular Surgery MVP		
Clinical Grouping	**Quality**	**Cost**
Interventional	**Q259:** Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2) (Collection Type: MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(!) Q344: Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) (Collection Type: MIPS CQM)	
Surgical	**Q355:** Unplanned Reoperation within the 30-Day Postoperative Period (Collection Type: MIPS CQM)	**COST_HAC_1:** Hemodialysis Access Creation **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(!) Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure (Collection Type: MIPS CQM)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q357: Surgical Site Infection (SSI) (Collection Type: MIPS CQM)	**COST_HAC_1:** Hemodialysis Access Creation **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
Dialysis-Related	**RCOIR12:** Tunneled Hemodialysis Catheter Clinical Success Rate (Collection Type: QCDR)	**MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician **COST_HAC_1:** Hemodialysis Access Creation

General Vascular Surgery	**(*) Q374:** Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM)	**COST_CCLI_1:** Revascularization For Lower Extremity Chronic Critical Limb Ischemia

Vascular Surgery MVP		
Clinical Grouping	**Quality**	**Cost**
		COST_HAC_1: Hemodialysis Access Creation **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
Advancing Health and Wellness	**(*) Q001:** Diabetes: Glycemic Status Assessment Greater Than 9% (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	**COST_CCLI_1:** Revascularization For Lower Extremity Chronic Critical Limb Ischemia **COST_HAC_1:** Hemodialysis Access Creation **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	(*) Q130: Documentation of Current Medications in the Medical Record (Collection Type: eCQM, MIPS CQM)	
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	
	(*) Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Collection Type: eCQM, MIPS CQM)	
Experience of Care	**Q047:** Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	**COST_CCLI_1:** Revascularization For Lower Extremity Chronic Critical Limb Ischemia **COST_HAC_1:** Hemodialysis Access Creation **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician
	Q321: CAHPS for MIPS Clinician/Group Survey (Collection Type: CMS-approved Survey Vendor)	
	(!) Q358: Patient-Centered Surgical Risk Assessment and Communication (Collection Type: MIPS CQM)	

Vascular Surgery Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **(!!) IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(!!) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_15:** PSH Care Coordination
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **(!!) IA_PM_5:** Engagement of community for health status improvement
- **IA_PM_11:** Regular Review Practices in Place on Targeted Patient Population Needs
- **IA_PM_15:** Implementation of episodic care management practice improvements
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the updates to this MVP. Another commenter supported the designation of Q344: Rate of Carotid Endarterectomy (CEA) or Carotid Artery Stenting (CAS) for Asymptomatic Patients,

Without Major Complications (Discharged to Home by Post-Operative Day #2) as a MIPS core measure for this MVP.

Response: We thank the commenters for their support.

Comment: A few commenters recommended the inclusion of the Low-Density Lipoprotein (LDL-C) Monitoring and Management measure in this MVP. A commenter recommended the addition of Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood. Another commenter recommended the addition of all of the newly proposed improvement activities.

Response: We may consider the addition of quality measures for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter suggested alternative MIPS core measures for this MVP, including Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention; Q259: Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2); Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease; and the new Low-Density Lipoprotein Cholesterol (LDL-C) Monitoring and Management measure.

Response: We may consider alternative MIPS core measures and the addition of quality measures and improvement activities for this MVP through the MVP Maintenance Process and future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website.

Comment: A commenter requested this MVP include at least one eCQM, CAHPS Survey Vendor, or Administrative Claims measure as a MIPS core measure option. As proposed, participants may be required to engage a third-party reporting vendor solely to satisfy the MIPS core measure requirements, increasing reporting complexity and expense. Providing a reporting pathway that leverages existing eCQM, CAHPS, or claims-based infrastructure would better support participation while reducing administrative burden.

Response: We thank the commenter for their suggestions. The commenter may suggest changes to the MIPS core measures through the MVP Maintenance Process and we may consider alternative MIPS core measures for this MVP through future rulemaking. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Currently, the policy includes an option for self-attestation when the MIPS core measures are not appropriate or applicable to their scope of care, allowing clinicians to choose an alternate measure within the MVP that is more relevant.

After consideration of public comments, we are finalizing the *Vascular Surgery MVP* with modifications as proposed for the CY 2027 performance period/2029 MIPS payment year and future years.
