and approximately two-thirds of the annual burden (18,829 hours) would be incurred by an accounting clerk with an average hourly wage rate of $164 per hour. The staff therefore estimates that the aggregate annual burden, in dollars, of the hours needed to comply with the paperwork requirements of the rule is approximately $5,771,231 ((9,415 hours × $285 = $2,683,275) + (18,829 hours × $164 = $3,087,956)). It is estimated that there is no cost burden of rule 19a–1 other than these estimates.

To comply with state law, many investment companies already must distinguish the different sources from which a shareholder distribution is paid and disclose that information to shareholders. Thus, many investment companies would be required to distinguish the sources of shareholder dividends whether or not the Commission required them to do so under rule 19a–1.

These estimates are made solely for the purposes of the Paperwork Reduction Act, and are not derived from a comprehensive or even a representative survey or study of the costs of Commission rules. Compliance with the collection of information required by rule 19a–1 is mandatory for management companies that make statements to shareholders pursuant to section 19(a) of the Act.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number.

The public may view and comment on this information collection request at: *https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202609-3235-002* or email comment to *MBX.OMB.OIRA.SEC_desk_officer@omb.eop.gov* within 30 days of the day after publication of this notice, by December 21, 2026.

Dated: November 16, 2026.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

NORTH AMERICAN INDUSTRY CLASSIFICATION SYSTEM (2022), available at *https://www.census.gov/naics/reference_files_tools/2022_NAICS_Manual.pdf* (describing the industry classification system used by BLS and other agencies). The mean hourly wage for each occupation is adjusted for changes in the seasonally adjusted employment cost index for private wages and salaries between the data reference period and when the data are released by BLS. See Employment Cost Index, U.S. BUREAU OF LABOR STATISTICS, *https://www.bls.gov/eci/*. The adjusted mean hourly wage is then multiplied by a factor that accounts for nonwage costs borne by employers, such as bonuses, benefits, and overhead. This factor is calculated as an average over the 10 most recently available years of data of the ratio of the Bureau of Economic Analysis's annual gross output data for NAICS 523 to total annual wages across all occupations for NAICS 523 in the OEWS data. See Gross Output by Industry, U.S. BUREAU OF ECONOMIC ANALYSIS, *https://www.bea.gov/data/industries/gross-output-by-industry;* Occupational Employment and Wage Statistics, U.S. BUREAU OF LABOR STATISTICS, *https://www.bls.gov/oes/*. The final product is the occupational hourly rate. See generally UPDATED METHODOLOGY FOR CALCULATING OCCUPATIONAL HOURLY RATES (Dec. 19, 2025), available at *https://www.sec.gov/files/method-occupational-hourly-rates.pdf*.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106898; File No. SR–NYSEAMER–2026–97]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Change To Amend Its Rules To Permit the Listing of Binary Options Overlying Key Performance Indicators

November 13, 2026.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 4, 2026, NYSE American LLC (''NYSE American'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange propose to amend its Rules to permit the listing of binary options overlying key performance indicators (''KPIs'') reported by certain issuers of stock (''binary KPI options'').The proposed rule change is available on the Exchange's website at *www.nyse.com* and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Rules to permit the listing of binary options overlying KPIs reported by certain issuers of stock (''binary KPI options''). The Exchange's proposal is substantively identical to the recent approval received by Cboe Exchange, Inc. (''Cboe'') to permit listing of binary options that overlie KPIs.[4]

Binary options are based on the same framework as traditional, standardized options traded on the Exchange, except the payout of a binary option is an amount contingent upon the occurrence of the option being in- or at-the-money rather than the degree to which the option is in-the-money. As a result, payout at expiration of a binary option is an all-or-nothing occurrence.

Similar to the approved proposal by Cboe, the Exchange proposes to amend its Rules to permit the listing of binary KPI options. Binary KPI options are European-style, cash-settled options contracts listed on an underlying KPI of an issuer whose exercise settlement value is determined not by the market price of the issuer's stock, but by whether a specific financial or operating metric reported by the issuer in an earnings-related filing submitted to the U.S. Securities and Exchange Commission (the ''Commission'') meets or exceeds a pre-specified strike level.

Similar to the approved proposal by Cboe, the Exchange proposes to adopt Section 20 (Binary KPI Options) to describe binary KPI options. The Rules in proposed Section 20 apply only to binary KPI options. All other Rules apply to the trading of binary KPI options, except as otherwise provided or the context otherwise requires.

Specifically, the Exchange proposes to adopt Rule 900KPI (Applicability, Definitions). Like other standardized options, binary KPI options have standardized terms that are established by the Exchange. Standardized terms for

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] *See* Securities Exchange Act Release No. 106659 (October 13, 2026) (SR–CBOE–2026–061) (Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, to Permit the Listing of Binary Options Overlying Key Performance Indicators Reported by Certain Issuers of Stock) (''Cboe Binary KPI Approval Order'').

binary KPI options include the exercise criteria that are the conditions or criteria of a binary KPI option, the exercise settlement amount (*i.e.,* payout amount), strike prices, expiration dates, settlement type as A.M.-settlement or P.M.-settlement, the settlement style (as European), and the requirements used to determine if the KPI condition or criteria of a binary KPI option has been met (the ''payout determination requirement''). The Exchange proposes to establish these terms in new Rule 900KPI and additional provisions in proposed Rule 902KPI, as described below.

The Exchange proposes to define a ''binary KPI option'' in new Rule 900KPI(b) as a cash-settled option contract listed on an underlying KPI of an issuer with an exercise settlement amount that is established at the creation of the option and with a settlement value that is determined by whether a specific KPI disclosed by the issuer in an earnings-related filing submitted to the Commission meets or exceeds its exercise price. Binary KPI options are paid out if the reported value of the applicable KPI (1) equals or is greater than (as the payout determination requirement) the exercise price for a call binary KPI option or (2) is less than (as the payout determination requirement) the exercise price for a put binary KPI option. The Exchange also proposes to provide that unless the context dictates otherwise, the terms underlying security, equity, or index, or any variations of these terms, in the Rules mean KPI for purposes of binary KPI options.

The Exchange proposes to define a ''call binary KPI option'' as an option contract that returns an exercise settlement amount if the settlement value of the underlying KPI is at or above the exercise price at expiration (*i.e.,* in- or at-the-money).[5]

The term ''Clearing Corporation'' would mean the registered clearing agency designated by the Exchange to clear binary KPI options.[6]

The Exchange proposes to define ''exercise price'' (also referred to as ''strike price'') as the value[7] to which the settlement value of the underlying KPI is compared to the exercise settlement amount. For binary KPI options, the exercise price is the exercise threshold of an option contract that establishes a number, value, or measure that is compared against the settlement value of the underlying KPI to determine if the cash payout amount (*i.e.,* the exercise settlement amount) will be paid out. In other words, binary options will have a threshold number as the exercise price that will be used to determine if the exercise criteria of the binary option has been met and the option will be exercised (and if holders will receive the cash payout amount). For binary KPI options, the exercise threshold will be a number that reflects or is compared to the underlying KPI of the binary option.

The Exchange proposes to define the term KPI (or ''key performance indicator'') as a key financial or operating metric disclosed by an issuer in its earnings-related filings submitted to the Commission (*i.e.,* Form 8–K, Form 10–Q, or Form 10–K, as applicable).[8]

The Exchange proposes to define ''put binary KPI option'' as an option contract that returns an exercise settlement amount if the settlement value of the underlying KPI is below the exercise price at expiration (*i.e.,* in-the-money).[9]

The Exchange proposes to define ''settlement value'' as the value of the underlying KPI that is used to determine whether a binary KPI option is in-, at-, or out-of-the-money.[10] The proposed definition specifies that the ''settlement value'' is the value of the applicable KPI as disclosed in the applicable issuer's earnings-related filing submitted to the Commission on the applicable expiration date (for both A.M.-settled and P.M.-settled binary KPI options).[11] The Exchange designates the applicable KPI and the relevant reporting period (for example, a calendar quarter) at the time of listing a binary KPI option. Proposed paragraph (b) of the settlement value definition provides if the applicable KPI is not reported or otherwise unavailable on the expiration date (and will not be reported), settlement (including any payout of the exercise settlement amount) will occur in accordance with the Rules of the Clearing Corporation.

Additionally, proposed paragraph (c) of the settlement value definition states if an applicable KPI is restated after the expiration date and settlement of a binary KPI option, the settlement value (and the exercise settlement amount) of the binary KPI option does not change. In other words, the value of the applicable KPI as reported by the issuer on the applicable expiration date is final, and the amount paid (or not paid) at settlement will not change, regardless of whether it is later restated by the issuer.

The Exchange proposes to adopt Rule 901KPI(a) (Designation of Binary KPI Option Contracts) to identify the binary KPI options that may be listed for trading on the Exchange. Pursuant to proposed Rule 901KPI(a), the Exchange may from time to time approve for listing and trading on the Exchange any of the following binary KPI options contracts for the following issuers:

Company	KPI (each financial metric is measured in $ unless otherwise specified)
Apple, Inc	Earnings per Share: Diluted; Total Net Sales; Net Sales by Category: iPhone; Net Sales by Category: Services; Net Sales by Reportable Segment: Americas; Net Sales by Reportable Segment: Greater China.
Advanced Micro Devices, Inc	GAAP Diluted Earnings per Share; GAAP Revenue; Net Revenue: Data Center Segment; Net Revenue: Client and Gaming Segment; GAAP Operating Margin (%).
Alphabet Inc	Diluted Net Income per Share; Revenues; YouTube Ads Revenues; Google Cloud Revenues.
Amazon.com, Inc	Diluted Earnings per Share; Total Net Sales; AWS: Net Sales; North America: Net Sales; International: Net Sales; Net Sales: Advertising Services.

[5] *See* proposed Rule 900KPI(b)(2).

[6] *See* proposed Rule 900KPI(b)(3). The definition of Clearing Corporation reflects that the Exchange may designate the Options Clearing Corporation (''OCC'') or another registered clearing agency to clear binary KPI options. References in this filing to the Clearing Corporation therefore are intended to be clearing agency-neutral. The proposed definition does not alter the requirement that clearing and settlement occur through a registered clearing agency subject to the applicable provisions of the Act and the rules and oversight applicable to that clearing agency. Upon designation of a clearing agency to clear binary KPI options, the Exchange will submit a separate rule filing to update Rules to reflect such designation.

[7] *See* proposed Rule 900KPI(b)(4). The value of an exercise price is measured in the applicable units of the KPI. For example, some KPIs are measured in U.S. dollars while others may be measured in percentages or numbers.

[8] *See* proposed Rule 900KPI(b)(6).

[9] *See* proposed Rule 900KPI(b)(7).

[10] *See* proposed Rule 900KPI(b)(8).

[11] While the timing of an issuer's official disclosure informs whether the Exchange will establish a binary KPI option as A.M.-settled or P.M.-settled (as further discussed below), the Exchange will use the KPI value included in an issuer's report submitted to the Commission (and not the press release announcing earnings results, for example) as the settlement value. The Exchange understands, however, these values are generally the same.

Company	KPI (each financial metric is measured in $ unless otherwise specified)
Bank of America Corporation	Diluted Earnings per Share; Total Revenue, Net of Interest Expense; Net Interest Income; Provision for Credit Losses; Net Income.
Citigroup Inc	Diluted Earnings per Share; Total Revenue, Net of Interest Expense; Net Interest Income; Total Provision for Credit Losses; Net Income.
Coinbase Global, Inc	Net Income per Share—Diluted; Total Revenue; Transaction Revenue; Total Trading Volume; Subscription and Services Revenue.
Ford Motor Company	GAAP Earnings per Share—Diluted; Total Revenues; Ford Pro Segment: Revenue; Ford Model e Segment: Revenue; Ford Blue Segment: Revenue.
Intel Corporation	GAAP Earnings per Share Attributable to Intel—Diluted; Net revenue; Revenue: Client Computing Group (CCG); Revenue: Data Center and AI (DCAI); Revenue: Intel Foundry; GAAP Operating Margin (%).
JPMorgan Chase & Co	Earnings per Share—Diluted; Net Revenue—Reported; Net Interest Income; Provision for Credit Losses; Net Income.
Marathon Digital Holdings, Inc	Earnings (Net Loss) per Share of Common Stock—Diluted; Revenues; Number of Blocks Won (# Bitcoin (BTC)); Energized Hashrate (EH) (# EH/s); Total Bitcoin Holdings (# BTC); BTC Produced (# BTC); BTC Purchased (# BTC).
Meta Platforms, Inc	Earnings per Share: Diluted; Revenue; Family Daily Active People (DAP) (#); Revenue: Advertising; Operating Margin (%).
Microsoft Corporation	Diluted Earnings per Share; Revenue; Intelligent Cloud: Revenue; Microsoft Cloud Revenue; More Personal Computing: Revenue.
Netflix, Inc	Earnings per Share: Diluted; Revenues; United States and Canada (UCAN): Revenue; Europe, Middle East, and Africa (EMEA): Revenue Operating Margin (%).
NVIDIA Corporation	GAAP Diluted Earnings per Share; Revenue; Data Center Revenue; Edge Computing Revenue; Automotive Revenue.
Palantir Technologies Inc	Earnings per Share Attributable to Common Stockholders, Diluted; Revenue; Net Income; Closed Deals of at Least $1 Million (#).
Robinhood Markets, Inc	Net Income Attributable to Robinhood Common Stockholders: Diluted; Total Net Revenues; Funded Customers (#); Average Revenue per User (“ARPU”); Robinhood Gold Subscribers (#).
SoFi Technologies, Inc	Earnings per Share Attributable to Common Stockholders—Diluted; Total Net Revenue; Total Net Revenue—Technology Platform; Total Net Revenue—Financial Services; Total Net Revenue—Lending.
Space Exploration Technologies Corp	Earnings per Share: Diluted; Total Revenues.
Super Micro Computer, Inc	Net Income per Common Share: Diluted; Net Sales; Gross Margin (%); Cash Flow Used in Operations; Net Income.
Target Corporation	Diluted Earnings per Share; Net Sales; Food & Beverage Net Sales; Apparel & Accessories Net Sales; Operating Income: Rate (%).
Tesla, Inc	Net Income per Share of Common Stocks Attributable to Common Stockholders: Diluted; Total Revenues; Total Automotive Revenue; Model 3/Y Production (#); Supercharger Connectors (#); Free Cash Flow.
The Walt Disney Company	Diluted Earnings per Share; Revenues; Entertainment Subscription Video on Demand (SVOD) Operating Income; Revenues: Experiences; Segment Operating Income: Sports.

The Exchange proposes to add Rule 901KPI(b) to clarify that binary KPI options are a separate class from other options overlying the stock of the issuer and are a separate class from other binary KPI options with different underlying KPIs for the same issuer. The Exchange believes this is reasonable given that an individual KPI is the specific underlying of binary KPI options, and generally options with different underlyings (*e.g.,* different underlying security or index) are different option classes.

Next, the Exchange proposes to adopt Rule 902KPI (Terms of Binary KPI Option Contracts) to describe the permissible terms of binary KPI option series. Proposed Rule 902KPI provides that binary KPI options listed and traded on the Exchange are designated as to expiration date, exercise price, settlement type, exercise style, exercise settlement amount, contract multiplier, and underlying KPI. After approving a particular binary KPI option class for listing and trading on the Exchange, the Exchange from time to time may open for trading series of options in that binary KPI option class.

Proposed Rule 902KPI(a) states binary KPI options have European-style settlement. Proposed Rule 902KPI(a) further provides that the Exchange may designate the settlement type for binary KPI options as A.M.-settled or P.M.-settled. Binary KPI options for issuers [12] that disclose their earnings results before the open of the Core Trading Session on a given trading day are designated as A.M.-settled binary KPI options, and binary KPI options for issuers that disclose their earnings results after the close of the Core Trading Session on a given trading day are designated as P.M.-settled binary KPI options. The Exchange notes that the proposed concepts of A.M.-settlement and P.M.-settlement for binary KPI options differ compared to traditional options, for which ‘‘P.M.-settled’’ generally means that the expiration of an option so designated will settle to the closing price of the underlying security or index value and ‘‘A.M.-settled’’ generally means that the expiration of an option so designated will settle to the opening price of the underlying. While different than how these terms apply to standard and binary index options, the Exchange believes the proposed description of A.M.-settlement and P.M.-settlement appropriately reflect the earnings disclosure practices of issuers. Additionally, while the timing of the event that will determine whether the Exchange designates a binary KPI option as A.M.-settled or P.M.-settled is different than that for traditional options and binary index options, the trading hours on expiration dates for each of A.M.-settled and P.M.-settled

[12] The Exchange determines whether an issuer discloses its earnings results before or after the close of the Core Trading Session on a given trading day based on publicly available information regarding the issuer’s disclosure practice.

binary KPI options are consistent with those of A.M.- settled and P.M.-settled index options (traditional and binary) today.

Proposed Rule 902KPI(a) further states that the exercise style of binary KPI options is European-style, which is consistent with exercise style of the binary KPI options that Cboe recently received approval to list.[13] A European-style option may only be exercised on its expiration date.[14]

Proposed Rule 902KPI(b) describes permissible expirations for binary KPI options. Specifically, the proposed rule change will permit the Exchange to list series that expire on the date the issuer announces its earnings results for the applicable reporting period (such as calendar quarter). The expiration date for a binary KPI option will be the date on which an issuer discloses the applicable KPI in its earnings results (for example, the date on which it issues an earnings results press release) for the specified reporting period (with the specific expiration date to be finalized when an issuer announces the date on which it will disclose its earnings results for that reporting period).[15] If that date is a Tuesday, Wednesday, Thursday, or Friday and the Exchange is not open for business on that date, the expiration date will be the first business day immediately prior to that day. If that date is a Monday and the Exchange is not open for business on that date, the expiration date will be the first business day immediately following that Monday. The disclosed KPIs relate to a specific reporting period (such as a calendar quarter), which KPIs an issuer publicly announces on a date following the end of that reporting period.[16]

While an expiration date for a binary KPI option will be a specific date, as is the case for traditional options, the Exchange's proposed designation of expiration dates for binary KPI options will differ to reflect standard issuer disclosure practices. In some instances, an issuer might not establish the specific date on which it will announce its earnings results for a reporting period until weeks prior to the disclosure date. Consequently, unlike standard equity and index options that have an exact expiration date when strikes are first listed, a binary KPI option will be listed for trading with a placeholder expiration date if the date the KPI information will be disclosed by the issuer is not publicly known. If a placeholder expiration date is required, it will be set as the first trading day following the date of the deadline for the issuer's submission of its earnings-related filing for the reporting period applicable to the series. Once an issuer announces the disclosure date of the KPI information, the expiration date will be updated as the finalized expiration date of the option contract.[17] Ultimately, the expiration date for a binary KPI option is the issuer's earnings disclosure date, even if that date is unknown at the time the series is listed.

The Exchange may designate binary KPI option series to expire up to 12 months from the time they are listed and may list up to two expirations at one time for a binary KPI option (per KPI per issuer). The Exchange may open for trading a series of binary KPI options at least one business week prior to the expiration date of a binary KPI option. First, the proposed rule change permits the Exchange to list binary KPI options to expire up to 12 months from the time they are listed. The proposed rule change also limits the Exchange to list up to two expirations at one time for binary KPI options.

The proposal to list expirations at least one business week prior to the expiration date of binary KPI option (as well as the proposed language regarding shifting an expiration date to the business day immediately before or after an expiration date that falls on a day the Exchange is not open for business) is substantially similar to current Exchange rules applicable to the binary KPI options that Cboe's recently received approval to list.[18] The Exchange believes it is appropriate to permit listing of binary KPI options that expire up to 12 months from the time they are listed to accommodate different issuer reporting periods, as well as to permit the Exchange to list expirations for consecutive calendar quarter periods or for a calendar quarter and annual reporting period at the same time. As discussed above, issuers disclose KPIs in their periodic reports submitted to the Commission.

Proposed Rule 902KPI(c) describes the automatic exercise feature of binary KPI options. Specifically, the proposed rule states that binary KPI options will be automatically exercised at expiration if the settlement value of the underlying KPI is equal to or greater than the exercise price of a call binary KPI option or less than the exercise price in the case of a put binary KPI option.

Proposed Rule 902KPI(d) describes the permissible exercise prices (or strike prices) the Exchange may designate for series of binary KPI options. Proposed Rule 902KPI(d)(1) describes how the value of exercise prices of binary KPI options are measured. Specifically, the exercise price of each binary KPI option series will be fixed at an amount equal to an underlying KPI value divided by a scaling factor. Because the value of certain KPIs may be very large (*e.g.,* billions of dollars), the Exchange proposes that the exercise price value of the underlying KPI will be divided by a scaling factor based on the value of the KPI in the issuer's most recent earnings-related disclosure as of the time a binary KPI option class is listed) as follows:

- if the most recently disclosed KPI value is greater than or equal to one trillion, the exercise price equals that value divided by one trillion (*e.g.,* for such KPIs, an exercise price of 27.00 is equivalent to a KPI value of 27,000,000,000,000.00);
- if the most recently disclosed KPI value is greater than or equal to one billion but less than one trillion, the exercise price equals that value divided by one billion (*e.g.,* for such KPIs, an exercise price of 112.00 is equivalent to a KPI value of 112,000,000,000.00);
- if the most recently disclosed KPI value is greater than or equal to one million but less than one billion, the exercise price equals that value divided by one million (*e.g.,* for such KPIs, an exercise price of 900.00 is equivalent to a KPI value of 900,000,000.00);
- if the most recently disclosed KPI value is greater than or equal to one thousand but less than one million, the exercise price equals that value divided by one thousand (*e.g.,* for such KPIs, an exercise price of 42.00 is equivalent to a KPI value of 42,000.00); and
- if the most recently disclosed KPI value is less than one thousand, the

[13] *See* Cboe Binary KPI Approval Order, *supra* note 4 and Cboe Rule 4.82(a).

[14] *See* Rule 900C(20).

[15] For example, for a binary KPI option series, the Exchange may designate the reporting period for a series to be the fourth quarter of 2026. The expiration date for that series would be the date on which the applicable issuer establishes as the date it will announce earnings results for that quarter. The Exchange will issue a Trader Update when the specific expiration date for a binary KPI option is finalized. Additionally, the Exchange will maintain a reference data file for each issuer KPI on which the Exchange lists binary KPI options (as will be described in the Exchange's technical specifications available on its public website), and that reference data file will be updated with the specific expiration date for a binary KPI option once known.

[16] While earnings results are often reported with respect to the time period covered by the issuer's earnings disclosure, such as a calendar quarter, certain issuers may disclose results for different time periods. For example, it is possible in an earnings disclosure for an issuer to announce a KPI that covers a calendar month rather than a calendar quarter.

[17] Issuers have different practices as to when they disclose their earnings results (and when they announce their earnings disclosure dates); however, each issuer's practice is generally consistent and predictable.

[18] *See* Cboe Binary KPI Approval Order, *supra* note 4 and Cboe Rule 4.82(b).

exercise price equals that value and is not divided by a scaling factor (*e.g.,* for such KPIs, an exercise price of 774.00 is equivalent to a KPI value of 774.00).[19]

The Exchange will apply a different scaling factor to newly listed binary KPI option series for a new expiration only after the value of the KPI in the issuer's earnings-related disclosures has a value in a different scaling tier for four consecutive reporting periods or if the Exchange deems it necessary in the interests of a fair and orderly market. Application of a different scaling factor will not affect the exercise prices of any series of the binary KPI options previously opened. For example, if the Exchange begins listing a new class of binary KPI options and the most recently disclosed KPI value for the issuer at the time of that listing was for the third quarter of 2026 and was $892,000, the exercise prices for that class of binary KPI options will be scaled by 1,000, and thus exercise prices of 895, 995, and 1005, would represent $895,000, $995,000, and $1,005,000, respectively. If the issuer discloses a KPI value of $1,020,000 in its fourth quarter 2026 earnings disclosure, the Exchange will continue to list exercise prices scaled by 1,000. If the issuer then discloses KPI values of $1,112,000, $1,237,000, and $1,064,000 for the first, second, and third quarters, respectively, of 2027, the Exchange will begin scaling the exercise prices by 1,000,000 for the fourth quarter 2027 expirations (or for the first quarter 2028 expirations if the Exchange had already listed fourth quarter 2027 expirations prior to the disclosure of the third quarter 2027 KPI value). The Exchange believes this will permit consistency for listing scaled KPI values while allowing the Exchange to update strike prices to reflect long-term changes to an issuer's KPI values.

The Exchange will announce via Trader Update if the scaling factor applied to a binary KPI options changes (for example, the KPIs will be scaled in billions rather than in millions). Additionally, the Exchange will update this information in the Exchange's technical specifications regarding binary KPI options and reference data file that describes the terms of binary KPI options, both of which will be available on the Exchange's website (customers receive notifications of such updates). This is consistent with how the Exchange provides information regarding product information (including updates) for all options the Exchange lists for trading.[20]

It is possible for a KPI to have a negative value, such as earnings per share (which is equivalent to a loss per share). Proposed Rule 902KPI(d)(1)(B) provides the Exchange may list binary KPI options series with exercise prices representing negative KPI values. For these series, the exercise price will equal the absolute value of the KPI and will be scaled as described above. For example, if an issuer's earnings per share in the last reporting period was −$3.52 (and thus was a loss per share), a binary KPI option for such issuer with a strike of 3.58 will reflect an expected loss of $3.58 per share. The Exchange will incorporate into symbology for binary KPI options whether the value of the strike price is positive or negative, including if the Exchange lists binary KPI option series with both positive and negative strike prices. Whether a symbol reflects a positive or negative value will be available on contract specifications as well as the reference data file for the specific binary KPI option on the Exchange's public website.

Proposed Rule 902KPI(d)(2) provides the minimum interval between strike prices for binary KPI options series is:

- 0.01 where the strike price is less than 10;
- 0.10 where the strike price is 10 or greater but less than 100;
- 1.00 where the strike price is 100 or greater but less than 1,000;
- 10.00 where the strike price is 1,000 or greater but less than 10,000; and
- 100.00 where the strike price is 10,000 or greater.

As discussed above, while KPI values above 1,000 are generally scaled, there may be circumstances in which the Exchange lists strikes above 1,000 or even 10,000 given the Exchange's proposal to maintain a lower scale level until a KPI value is consistently above a certain level (*e.g.,* above one billion for four consecutive quarters). This may occur when a KPI value is near the top of a scaling range; for continuity, the Exchange will continue listing strike prices using the lower scaling factor and not change to a higher scaling factor until the KPI value is regularly within that higher range (as noted above). Suppose a KPI value is 995,000,000; in this case, strike prices will be scaled by 1,000,000. Thus, the Exchange may list binary KPI options above and below 995 (995,000,000 divided by 1,000,000). However, it is realistic that the KPI may increase to above 1,000,000,000. As proposed, the Exchange may list strike prices, for example, of 1,000 (representing 1,000,000,000) and above, for expirations until the KPI value is above 1,000,000,000 for four consecutive reporting periods. To reduce confusion, the Exchange would not scale strike prices using different scaling factors within a single expiration (and would not change the scale until the KPI value is consistently at the higher level). Therefore, it is possible the Exchange may list strikes greater than 1,000. Similarly, while strikes above 10,000 may be rare, given the Exchange proposes to maintain a lower scale level until a KPI value is consistently above a certain level (*e.g.,* above one billion for four consecutive quarters, as proposed), depending on market factors and demand, it is possible (although unlikely) the Exchange may determine it is appropriate to list strikes above 10,000 if market factors or expectations signify a significant increase of the KPI value. The proposed strike intervals accommodate the listing of binary KPI options in these circumstances before the Exchange shifts the strike prices for an issuer's KPI to a different scaling level.

The proposed strike intervals are identical to the strike intervals applicable to the binary KPI options that Cboe's recently received approval to list[21] and generally consistent with current Exchange Rules for other options, which provide for larger strike intervals as the values of strike prices increase. Given the scaling factor for larger KPI values, it may appear the proposed rule change will permit smaller strike intervals for larger KPI values if those intervals are considered solely on a nominal basis. However, that is not the case if the actual values of the strike intervals are considered. The corresponding actual value of the strike interval for a strike price that was subject to a larger scale value is higher than the actual value of the strike interval for a strike price that was subject to a smaller scale value. For example, suppose a strike price of 950 represents $950 million. The proposed rule change would permit strike intervals of $1.00. However, that $1.00 corresponds to $1,000,000. In other words, if the Exchange listed strikes of 950, 951, and 952, the difference in values of those strikes are $1 million, not $1 (*i.e.,* the strikes represent values of $950,000,000, $951,000,000, and $952,000,000). Similarly, suppose a strike price of 3 represents

[19] When applying the scaling factor, the Exchange will not round the scaled KPI value and instead will truncate the value so the scaled strike price value fits within standard strike listing format.

[20] The binary KPI option contract specifications available on the Exchange's public website will set forth the scaling factor for each binary KPI option.

[21] *See* Cboe Binary KPI Approval Order, *supra* note 4 and Cboe Rule 4.82(c)(2).

$3,000,000,000. The proposed rule change would permit strike intervals of $0.01. However, in this case, that $0.01corresponds to $10,000,000. If the Exchange listed strikes of 3.00, 3.01, and 3.02, the difference in values of those strikes are $10,000,000, not $0.01 (*i.e.,* the strikes represent values of $3,000,000,000, $3,010,000,000, and $3,020,000,000, respectively). As a result, the permissible strike intervals for strike prices representing values in the billions are actually larger than the permissible strike intervals for strike prices representing values in the millions. This is consistent with the general premise underlying current strike intervals that larger strike intervals apply to larger strike values.

Proposed Rule 902KPI(e) addresses bid and offer conventions for binary options with multipliers other than 100. Proposed Rule 902KPI(e) provides that bids and offers for a binary option with a multiplier other than 100 must be expressed in terms of dollars per 1/multiplier of the total value of the contract.[22] For example, if a binary option has a multiplier of 1, an offer of ''0.50'' represents an offer of $0.50. It will provide clarity and consistency in market quotations relative to the notional size of the option and promote investor understanding of the cost and value of binary KPI option contracts. Therefore, the Exchange believes the proposed rule change is consistent with just and equitable principles of trade because it creates a pricing structure that reflects the notional value of an option based on its multiplier.

Proposed Rule 902KPI(f) describes the initial series of a binary KPI option the Exchange may open for trading. Specifically, the Exchange may open for trading one or more binary KPI option series with a fixed KPI value as the strike price (scaled as described above), with approximately the same number of strike prices being opened above and below the at-the-money KPI value (*i.e.,* the value of the KPI in the issuer's most recent earnings-related disclosure) at the time the binary KPI options are opened. The ''at-the-money'' KPI value may be the value of the KPI in the issuer's most recent earnings-related filing submitted to the Commission, the issuer's disclosed estimate of the KPI for the next reporting period, or analysts' consensus estimate as reported by major market vendors, as the Exchange deems appropriate based on the most recent market information available to the Exchange. Because KPIs are static values, the Exchange believes it is appropriate to determine strike prices based on all available information that would inform expectations about the KPIs (as investors would do). The Exchange understands that an issuer's previously disclosed KPI, as well as issuer and analyst estimates of the KPI, are primary factors investors may consider when determining in which direction the KPI value may move in the next reporting period (similar to how investors consider the then-current price of an underlying stock when considering their options investment strategies and which direction the stock price may move). Therefore, the Exchange believes using the most recently available of these values is appropriate to use for determining which strikes it should list for a specific issuer KPI. The Exchange believes this flexibility to select the most appropriate at-the-money value is similar to current rules that permit the Exchange to list additional series to maintain an orderly market, to meet customer demand, or when the market price of the underlying security moves substantially. The Exchange believes the proposed definition of at-the-money will allow the Exchange to list series with strike prices that are consistent with investor expectations and demands and that are based on information available in the market.

The Exchange will list strike prices for binary KPI option series that are reasonably close to the at-the-money KPI value at the time of listing. A strike is ''reasonably close'' to the at-the-money KPI value if (1) for KPIs less than or equal to 1, it is no more than 2;[23] (2) for KPIs greater than 1 and less than or equal to 10, it is no more than 100% above or below the at-the-money KPI value; and (3) for KPIs greater than 10, it is no more than 30% above or below the at-the-money KPI value. The Exchange may also open binary KPI option series that are more than 30% above or below the at-the-money KPI value (if the KPI is greater than 10) provided demonstrated customer interest exists for such series, as expressed by institutional, corporate or individual customers or their brokers.

Per proposed Rule 902KPI(g), the Exchange may add new series of binary KPI options series when the Exchange deems it necessary to maintain a fair and orderly market or to meet customer demand, and the opening of a new series of binary KPI options on the Exchange will not affect any other series of options of the same binary KPI option class previously opened. This is consistent with Cboe's authority to add new series of binary KPI options.[24] The Exchange may list additional series using updated at-the-money KPI values, such as if the Exchange lists binary KPI options series for an expiration before the applicable issuer has disclosed the KPI value in a filing submitted to the Commission for the immediately preceding reporting period and that value is then disclosed in a filing submitted to the Commission or if the issuer or major market data vendors publish estimates of the KPI value. For example, before expiration of a binary KPI options series set to expire on the date of an issuer's disclosure of its third quarter earnings results, the Exchange lists series of that binary KPI option to expire on the date of an issuer's disclosure of its fourth quarter earnings results (using the KPI from the second quarter earnings results as the at-the-money KPI value). After the issuer discloses its third quarter earnings results in a filing submitted to the Commission, including the applicable KPI, the Exchange may list additional series for the fourth quarter binary KPI options using the third quarter KPI result as the at-the-money KPI value. Suppose, further, that after the issuer discloses its third quarter earnings results, the issuer publishes an estimate of the fourth quarter KPI value. As investors may see this estimate (and possibly factor it into their investment decisions), the Exchange may determine it is appropriate to consider this estimate the ''at-the-money'' value and list additional strikes above and below this value Any additional strike prices the Exchange lists will be reasonably close (as defined above) to the at-the-money KPI value at the time of listing.

Continuing the above example, suppose the Exchange lists binary KPI options for the fourth quarter before the binary KPI options for the third quarter have expired. As proposed, the Exchange would list strikes above and below the at-the-money strike, which at the time of listing would be the settlement value KPI from the issuer's second quarter earnings results disclosure (the most recently available

[22] The Exchange notes this would apply to all binary options, not just binary KPI options, as Rule 900BIN permits binary options to have multipliers of at least one.

[23] The Exchange believes this is appropriate given the potentially small values of certain KPIs. For example, suppose the second quarter earnings per share of a company was $0.04. In such a case, if strikes were limited to 100% above this value, the Exchange could only list strikes up to $0.08, which would provide investors with minimal investment options. Therefore, the Exchange believes this provision is appropriate to provide the Exchange with authority to list meaningful strikes for smaller-valued KPIs.

[24] *See* Cboe Binary KPI Approval Order, *supra* note 4 and Cboe Rule 4.82(e).

KPI). If the KPI for the option was net sales, and the second quarter value was $45.093 billion, the at-the-money strike would be 45.10, and the Exchange could list strikes within 30% of that value, and additional series based on customer demand or market changes. After the Exchange lists those series, the issuer discloses its third quarter earnings results, including net sales of $57.241 billion. As proposed, after that disclosure, the Exchange may list additional strikes within 30% of $57.24 to reflect the change in value of the underlying (as well as additional series based on customer demand or market changes).

This proposed framework for listing and adding series is identical to recently approved framework for Cboe to list and add binary KPI options [25] and similar to the framework in current Rules for listing and adding series of equity options. While the proposed strike intervals are narrower than these rules, the permissible ranges are also narrower. The Exchange acknowledges the proposed framework would still permit the Exchange to list a large number of strikes per KPI per expiration. However, the Exchange intends to apply its standard strike listing practices to binary KPI options. Specifically, the Exchange generally lists strikes at wider intervals as they move farther away from the at-the-money value, while listing more granular intervals for strikes closer to the at-the-money value. The Exchange also generally delists granular strikes that are deep out-of-the-money if the Exchange determines they are sufficiently covered by wider strike intervals that are close in value.

These proposed provisions regarding the listing of binary KPI option series are identical to recently approved framework for Cboe to list and add binary KPI options and similar to provisions regarding permissible series of other options. The Exchange believes it is reasonable to list binary KPI options for a new reporting period prior to the expiration of then-listed binary KPI options for the immediately preceding reporting period (*e.g.,* listing binary KPI options for the fourth quarter before expiration of binary KPI options for the third quarter), and thus before the settlement value of the applicable KPI is known for the immediately preceding reporting period for these options, to permit investors to roll positions from one expiration to the next. As proposed, once the settlement value for the immediately preceding reporting period is known (the third quarter in this example), the Exchange may list additional series of the binary KPI options that reflect that KPI value. This is consistent with current practice if there is a change (including a substantial change) in the price of underlying security or value of an underlying index. For example, Rule 903(d) provides that the Exchange may open additional series of a short-term option series overlying a security when the market price of the underlying security moves substantially from the exercise price or prices of the series already opened, subject to the ''reasonably close'' parameters set forth in that rule. Disclosure of, as an example, the third quarter KPI value after the fourth quarter binary KPI options series were listed based on the second quarter KPI value (if the third quarter KPI value differs from the second quarter KPI value) is similar to the move in the price of an underlying security, which may result in the Exchange listing additional series based on the updated price of the underlying security. Similarly consistent with current practice for other options (as set forth in Rule 903, Commentary .10(c), for example), opening of binary KPI options based on this later-disclosed KPI value will not affect any other series of options of the same binary KPI options class previously opened.

Proposed Rule 902KPI(h) provides that the contract multiplier for each class of binary KPI options is one.

The Exchange proposes to add new Rule 903KPI (Determination of Settlement Value) to establish that binary KPI options that are ''at-the-money,'' ''in-the-money,'' or ''out-of-the-money'' are a function of the settlement value of the underlying KPI in relation to the type of binary KPI option (*i.e.,* put or call) and the exercise price. As described above, the settlement value for a binary KPI option is the value of the KPI for the applicable reporting period as disclosed in the applicable issuer's earnings-related filing submitted to the Commission. While the Exchange factors the timing of an issuer's disclosure of a KPI value into the determination of whether the Exchange lists a binary KPI option as A.M.-settled or P.M.-settled, the Exchange will source the settlement value from the earnings-related filing for the applicable reporting period that the issuer submits to the Commission. Generally, companies issue press releases that contain earnings results and near contemporaneously submit a Form 8–K to the Commission with the press release as an exhibit. Therefore, it is unlikely the value of the KPI in the Commission filing will differ from the value in the initial disclosure; however, the value in the Commission filing will be the ultimate settlement value.

Proposed Rule 904KPI (Adjustment) provides that binary KPI options are subject to adjustment only in accordance with and to the extent specified in the Rules of the Clearing Corporation. When any such adjustment has been made pursuant to proposed Rule 904KPI (and the Rules of the Clearing Corporation), the Exchange will announce this adjustment via Trader Update, which will become effective as of the time specified in that announcement.

As described below, binary KPI options would be cleared by the Clearing Corporation, which would serve as the central counterparty to each transaction and facilitate standardized clearing, settlement, and contract administration processes pursuant to its Rules. Consistent with this centralized clearing framework, proposed Rule 904KPI provides that binary KPI options would be subject to adjustment only in accordance with and to the extent specified in the Rules of the Clearing Corporation. When any such adjustment has been determined, the Exchange will announce this adjustment via Trader Update, which will become effective at the time specified in that announcement. The Exchange believes that limiting contract adjustments to those provided under the Rules of the Clearing Corporation provides a clear and transparent framework under which any adjustments to binary KPI options would be administered. A registered clearing agency designated to clear binary KPI options would be subject to Commission oversight and would possess expertise in the clearance and settlement of financial products. Because binary KPI options represent a novel product type, the Exchange anticipates that the Clearing Corporation would develop adjustment procedures designed to address the unique characteristics of these contracts and the types of events that may require adjustment. To the extent the Clearing Corporation adopts new adjustment procedures for binary KPI options, those procedures would be subject to the applicable regulatory process, including review and approval by the Commission, as applicable, before the Exchange commences trading in the product.

Next, the Exchange proposes to add Rule 905KPI to provide that binary KPI options, may be traded on the Exchange

[25] *See* Cboe Binary KPI Approval Order, *supra* note 4 and Cboe Rule 4.82(e).

from 9:30 a.m. to 4:00 p.m.[26] Further, the last day of trading for P.M.-settled binary KPI options is the day of expiration, and the last day of trading for A.M.-settled binary KPI options is the trading day prior to expiration. The Exchange believes proposed Rule 905KPI is consistent with the approved opening auction framework of Cboe for binary KPI options [27] and will ensure that binary KPI options open for trading in an orderly and transparent manner.

The Exchange recognizes it is possible, although unusual and unlikely, that KPI information may become available at unexpected times. Proposed Rule 905KPI addresses the impact on trading and expiration that such disclosure may have. First, proposed Rule 905KPI(c) provides if the Exchange confirms an issuer discloses the KPI prior to the expiration date (*i.e.,* the date on which the issuer had announced it would disclose its earnings results for the applicable reporting period), trading in the applicable binary KPI options series will cease, and the expiration date for the option accelerates to a date on or shortly after the date of that disclosure in accordance with the Rules of the Clearing Corporation.[28] This may occur if, for example, the applicable issuer discloses the KPI information in advance of the expiration date of the option. If the issuer discloses KPI information after the expiration date, which may be the case if, for example, the issuer's disclosure of its earnings is delayed, trading in the option will not be impacted and will cease as of the expiration date. While the expiration date will not change, expiration and settlement processing of such options will be delayed until the KPI information becomes available, in accordance with the rules of the Clearing Corporation.

Additionally, proposed Rule 905KPI(d) provides if there is an unofficial disclosure [29] of the KPI prior to the expiration date, the Exchange may determine to halt (and resume) trading in the applicable binary KPI options series in accordance with Rule 953NY. In certain circumstances, the expiration date for the option may accelerate in accordance with the Rules of the Clearing Corporation; if this occurs, trading in the binary KPI will cease. This proposed provision addresses the unlikely event that KPI information becomes available through sources other than the issuer in advance of the expiration date. If the Exchange determines the KPI information reported from the unofficial source is unreliable, trading in the binary KPI option may resume until it expires.

The Exchange proposes to adopt Rule 906KPI (Position Limits for Binary KPI Options) to set forth position limit requirements for binary KPI options. The Exchange proposes to adopt Rule 906KPI(a) to provide that in determining compliance with Rule 904 (Position Limits), the position limit for binary KPI options is 25,000 standard option contracts per expiration and 100 binary KPI option contracts equal one standard option contract.

Per proposed Rule 906KPI(b), positions in binary KPI options on the same KPI that have different expiration dates are not aggregated (as proposed position limits are calculated per expiration) and positions in binary KPI options for the same issuer with different underlying KPIs are not aggregated. In addition, a long KPI call and a short put KPI of the same type, on the same issuer having the same expiration shall be aggregated. Conversely, a short KPI call and a long put KPI of the same type, on the same issuer having the same expiration shall be aggregated.

The Exchange proposes to adopt Rule 906KPI(c) to provide that Binary KPI options are not aggregated with non-binary options contracts overlying the stock of the issuer. Finally, per Rule 906KPI(d), the Exchange proposes a hedge exemption for Market Makers with respect to binary KPI options, a binary KPI option short position coupled with a binary KPI option short call position, regardless of the KPI option strike, shall be exempt from the established position limits prescribed in Rule 904.

The Exchange believes the proposed hedge exemption provision is consistent with the Act because it facilitates legitimate hedging activity in binary KPI options. Because a liquidity provider simultaneously holding a short put and short call position in binary KPI options has taken opposing sides of the potential binary outcome (*i.e.,* the short call is at risk if the KPI is met, and the short put is at risk if the KPI is not met), the Exchange believes such a position represents a defined, bounded risk profile that does not present the same potential for manipulation or market disruption that position limits are designed to prevent. The Exchange believes it is reasonable to make the proposed hedge exemption available only to binary KPI positions held by Market-Makers. The Exchange believes that offsetting binary KPI option positions create a hedge similar to those for which the equity exemption is available. The Exchange believes the proposed hedge exemption will allow Market-Makers to provide depth and liquidity in the marketplace for binary KPI options. The Exchange therefore believes the hedge exemption as proposed will encourage market-making activity and liquidity provision in binary KPI options while protecting investors and the public.

The Exchange also proposes to adopt Rule 907KPI (Reporting of Positions) to provide that positions in binary KPI options shall be reported pursuant to Rule 906, except, in computing reportable binary KPI options thereunder, aggregation of positions shall be in accordance with Rule 906KPI. The proposed Rule 907KPI further provides that for purposes of this report, 100 binary KPI option contracts equal one standard option contract. The Exchange believes this is reasonable given that binary KPI options have a multiplier of 1 while standard equity option contracts have a multiplier of 100.

The Exchange proposes to adopt Rule 908KPI to establish the minimum increment for bids and offers on orders for binary KPI options, which may not be less than $0.01.

Except as otherwise described above, all binary KPI options will be listed and traded on the Exchange in a substantially similar manner as standard equity and index options and binary index options are permitted to be listed and traded under current Rules. The Rules that apply to the listing and trading of non-binary options on the Exchange, including those related to customer accounts, margin requirements and trading halt procedures,[30] which are designed to prevent fraudulent and manipulative acts and practices, will apply to the listing and trading of binary KPI options. The Exchange has analyzed its capacity and represents that it believes the Exchange has the necessary systems capacity to handle any potential additional message traffic associated with the listing of binary KPI options.

Trading in Flexible Execution (''FLEX'') options, Qualified Contingent

[26] Unless otherwise specified, all times in this proposal are Eastern Time.

[27] *See* Cboe Rule 5.1(3)(F).

[28] The proposed acceleration of binary KPI options is similar to the existing acceleration process for equity options when the underlying security of such options has been converted entirely to cash. *See* OCC Rule 807.

[29] Unofficial disclosure of a KPI may include, for example, an unsanctioned leak of the KPI or disclosure of the KPI by a source other than the issuer.

[30] Binary KPI options will not be tied to the trading state of the underlying issuer stock and thus, trading in binary KPI options will not be affected by halts in the underlying issuer stock. The binary KPI options will halt in accordance with Rule 953NY.

Cross (''QCC'') orders and complex Customer Best Execution (''CUBE'') auctions will not be offered. The Exchange may determine to support particular order types, order instructions, or times-in-force on a class-by-class basis. If the Exchange modifies the applicability of any functionality or order instructions for binary KPI options, the Exchange will submit a proposed rule change to reflect such changes to the trading system.

The Exchange will send quotation and transaction price information for binary KPI options to The Options Price Reporting Authority (''OPRA'') in the same manner it sends this information to OPRA for all other options the Exchange lists. Additionally, the Exchange understands from OPRA that it will disseminate information regarding binary KPI options in the same manner it does for all other options the Exchange lists. The Exchange intends to follow OPRA's standard capacity monitoring process for binary KPI options (in accordance with OPRA instructions), which includes submission of quarterly capacity projections (the Exchange will include its projected binary KPI option volume in the applicable submission). Further, the Exchange understands from OPRA that no technical changes are required to accommodate the reporting to OPRA of quotation and transaction information regarding binary KPI options (the Exchange represents, if later required by OPRA, it will adhere to any new technical requirements OPRA deems necessary to accommodate binary KPI options).[31]

The Exchange does not believe American Trade Permit (''ATP'') Holders will experience any capacity issues as a result of this proposal and represents that it will monitor the trading volume associated with binary options and the effect (if any) of binary options on market fragmentation and the capacity of the Exchange's automated system.

The Exchange represents that the same surveillance procedures applicable to all other options currently listed and traded on the Exchange will apply to binary KPI options, and that it has the necessary systems capacity to support the option series. The Exchange's existing surveillance and reporting safeguards are designed to deter and detect possible manipulative behavior and other improper trading In addition, the Exchange has a Regulatory Services Agreement with the Financial Industry Regulatory Authority, Inc. (''FINRA''). Pursuant to a multi-party 17d–2 joint plan, all options exchanges allocate regulatory responsibilities to FINRA to conduct certain options-related market surveillances.[32] The Exchange is also a member of the Intermarket Surveillance Group (''ISG'') under the ISG Agreement. ISG members work together to coordinate surveillance and investigative information sharing in the stock, options, and futures markets. Further, the Exchange will implement any new surveillance procedures it deems necessary to effectively monitor the trading of binary KPI options.

The Exchange will report any information regarding binary KPI options required to be reported to the Consolidated Audit Trail (''CAT'') in the same manner it reports this information to CAT for all other options the Exchange lists.[33] The Exchange represents, if later required by FINRA CAT, it will adhere to any new technical requirements FINRA CAT deems necessary to accommodate binary KPI options.

Pursuant to the Options Order Protection and Locked/Crossed Market Plan (''Linkage Plan''),[34] participant exchanges to the Linkage Plan established a framework to provide order protection. The Linkage Plan (and Exchange Rules 990NY through 993NY regarding intermarket linkage) applies during all trading sessions during which multiply listed options trade. Rule 993NY addresses order routing away from the Exchange to promote compliance with the Linkage Plan. If the proposed binary KPI options become multiply listed options, Users may designate an order for routing (or not available for routing), and the Exchange System is designed to, at all times, prevent trade-throughs and avoid displaying locked/crossed markets in accordance with the Linkage Plan (and Exchange Rules 990NY through 993NY regarding intermarket linkage).

Upon launch, binary KPI options will clear through the Clearing Corporation as that term is defined in proposed Rule 900KPI(b). In doing so, the proposal would bring these securities products within the established regulatory infrastructure applicable to listed options, including exchange trading and surveillance, standardized disclosure, and centralized clearance and settlement through a registered clearing agency, as further described below. Additionally, binary KPI options would be cleared through a registered clearing agency, which would serve as the central counterparty to each transaction and facilitate risk mitigation through established clearing, settlement, contract adjustment, and other standardized operational processes.

The Options Listing Procedure Plan (the ''OLPP'') sets forth procedures to facilitate the listing and trading of standardized options. This plan currently describes procedures with respect to options issued by and cleared at the OCC. If the Exchange ultimately does not designate the OCC as the Clearing Corporation for the purposes of the definition set forth in proposed Rule 900KPI(b), the Exchange will take steps necessary and within its authority to amend the OLPP to reflect listing procedures applicable to binary KPI options to the extent not cleared by the OCC.

The Exchange represents it will not list for trading binary KPI options until the registered clearing agency designated as the Clearing Corporation is authorized and operationally ready to clear the options and until all applicable filings and documents of the Clearing Corporation related to binary KPI options being cleared through the Clearing Corporation are approved by the Commission or effective after review by the Commission, as applicable.

As discussed in further detail below, the Exchange intends for binary KPI options to be treated as listed standardized options. Rule 9b–1 under the Act establishes a disclosure

[31] The Exchange understands OPRA may need to update how it disseminates open interest information for binary KPI options, as its current process incorporates information from OCC and references in this filing are clearing agency-neutral.

[32] Section 19(g)(1) of the Act, among other things, requires every self-regulatory organization (''SRO'') registered as a national securities exchange or national securities association to comply with the Act, the rules and regulations thereunder, and the SRO's own rules, and, absent reasonable justification or excuse, enforce compliance by its members and persons associated with its members. *See* 15 U.S.C. 78q(d)(1) and 17 CFR 240.17d–2. Section 17(d)(1) of the Act allows the Commission to relieve an SRO of certain responsibilities with respect to members of the SRO who are also members of another SRO. Specifically, Section 17(d)(1) allows the Commission to relieve an SRO of its responsibilities to: (i) receive regulatory reports from such members; (ii) examine such members for compliance with the Act and the rules and regulations thereunder, and the rules of the SRO; or (iii) carry out other specified regulatory responsibilities with respect to such members.

[33] CAT reporting requirements will apply to broker-dealers with respect to binary KPI options in the same manner as they apply to any other options the Exchange lists. The Exchange understands from FINRA CAT there will be no changes to the reporting specifications for broker-dealers to accommodate the reporting of information regarding binary KPI options to CAT.

[34] The Linkage Plan requires U.S. options exchanges to establish a framework for providing order protection and addressing locked and crossed markets in eligible options classes. The Linkage Plan is a national market system plan approved by the Commission pursuant to Section 11A of the Act and Rule 608 thereunder. The full text of the Linkage Plan is available at *https://www.theocc.com/getcontentasset/7fc629d9-4e54-4b99-9f11-c0e4db1a2266/dfc3d011-8f63-43f6-9ed8-4b444333a1d0/options_order_protection_plan.pdf.*

framework for standardized options pursuant to which investors receive a disclosure document describing the terms, characteristics, and risks of the product before trading. Depending on which registered clearing agency is designated as the Clearing Corporation, the applicable Rule 9b–1 disclosure document may be based on an existing options disclosure document utilized by that clearing agency, as modified or supplemented, as appropriate, or another comparable disclosure document prepared in connection with the clearance of binary KPI options. In either case, the disclosure document would contain substantially similar information regarding the terms, characteristics, risks, settlement mechanics, and other material features of binary KPI options and would be tailored, as necessary, to address the product's unique features and distinctions from traditional listed options. The Exchange believes that disclosure through the Rule 9b–1 framework would better serve the informational needs of investors than a traditional prospectus because binary KPI options are standardized options for which the principal investor considerations relate to the contract's terms, payout structure, settlement mechanics, and trading characteristics rather than the disclosure typically provided in connection with an offering of a corporate issuer's securities.

The Exchange will not commence listing and trading of binary KPI options until a registered clearing agency is authorized and operationally ready to clear the contracts; the applicable disclosure document under Rule 9b–1 is in place; any necessary changes relating to CAT, FINRA, OPRA, the Linkage Plan, and OLPP have been completed; and the Exchange has issued an implementation notice to Members.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[35] in general, and furthers the objectives of Section 6(b)(5) of the Act,[36] in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest. In addition, the Exchange believes that the proposed rule change is consistent with the Section 6(b)(5)[37] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

As an initial matter, the Exchange's proposal is substantively the same as the recently approved proposal made by the Cboe to list binary KPI options.[38] Similar to Cboe, the Exchange believes that trading such instruments as binary KPI options would promote a fair and orderly market and facilitate new investment and hedging opportunities on a Commission-regulated exchange.

The Exchange believes the proposal is consistent with Section 6(b) of the Act, in general, and furthers the objectives of Section 6(b)(5) of the Act,[39] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

Specifically, the Exchange believes the proposed rule change will remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest because it establishes a clear and transparent framework for a new category of listed options (binary KPI options) that are tied to financial and operating metrics of issuers that are publicly disclosed in submitted to the Commission. Currently, investors wishing to position their investment strategies around earnings disclosures must rely primarily on equity options, whose pricing is affected by a wide range of variables beyond the reported financial or operating measure of interest (*e.g.,* implied volatility, delta, time value, and general market movement). Binary KPI options allow investors to take a targeted, defined-risk position directly on a specific financial or operating measure (*i.e.* a KPI) for a particular reporting period. The Exchange believes this additional investment tool will protect investors and the public interest because it will promote market efficiency, enable more precise price discovery around earnings events, allow investors to hedge against potential idiosyncratic risks, and remove a gap in current national securities exchange-listed products available to market participants.

The Exchange believes the proposed list of issuers and KPIs on which the Exchange may list binary KPI options will prevent fraudulent and manipulative acts and practices, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest. First, as noted above, the Exchange is proposing to list binary KPI contracts based on specific financial and operating metrics reported by the following issuers in their earnings-related disclosures submitted to the Commission: Apple, Inc.; Advanced Micro Devices, Inc.; Alphabet Inc.; Amazon.com, Inc.; Bank of America Corporation; Citigroup Inc.; Coinbase Global, Inc.; Ford Motor Company; Intel Corporation; JPMorgan Chase & Co.; Marathon Digital Holdings, Inc.; Meta Platforms, Inc.; Microsoft Corporation; Netflix, Inc.; NVIDIA Corporation; Palantir Technologies Inc.; Robinhood Markets, Inc.; SoFi Technologies, Inc.; Space Exploration Technologies Corp.; Super Micro Computer, Inc.; Target Corporation; Tesla, Inc.; and The Walt Disney Company. The Exchange believes offering investors an additional investment tool on a national securities exchange related to some of the most actively traded stocks and options will perfect the mechanism of a free and open market and benefit investors by allowing them to further refine their investment strategies, including using these options to hedge idiosyncratic, even-specific risk embedded in the specific KPIs (as further discussed below), for these actively traded companies.

The Exchange believes the proposed universe of issuers will prevent fraudulent and manipulative acts and practices, because the proposed issuers are large, well-capitalized, and widely followed issuers with highly liquid underlying securities and options markets. During May 2026, each of the issuers exceeded $3 billion in market capitalization and ranked among the top 200 U.S. companies by average daily options or stock volume, with the exception of Space Exploration Technologies Corp (commonly referred to as SpaceX), which was not trading in May 2026 but which the Exchange believes will satisfy these measures with

[39] 15 U.S.C. 78f(b).

its first month of trading results based on its volumes since it began trading.[40]

Securities with high market capitalizations and liquid markets are generally less susceptible to manipulation because of the substantial capital required to artificially influence prices of those securities. The depth and breadth of trading activity for securities with significant market capitalizations, such as the stocks of the proposed issuers, make it unlikely that a single market participant would be able to exert undue influence on the price of such a stock, as large volumes of buyers and sellers are what ultimately continuously reflect the true market value of the stock. The Exchange believes the KPIs of issuers with high market capitalizations proposed to underlie binary KPI options are similarly less susceptible to manipulation because any attempt to distort a financial metric of such an issuer would require an enormous and economically impractical deployment of capital, which would likely exceed the fixed payout of a binary KPI option. Therefore, like stocks of large-cap issuers, KPIs of large-cap issuers are less susceptible to manipulation due to the structural barriers that would make manipulating KPI values operationally difficult and financially irrational (in addition to the rigorous financial oversight to which these issuers are subject, as further discussed below).

In addition to the proposed issuers being highly capitalized and having actively traded stocks and options on such stocks, the Exchange also believes the proposed limited universe of issuers for binary KPI options to those proposed will prevent fraudulent and manipulative acts and practices because each issuer is subject to periodic reporting requirements under the Act. Therefore, each of the proposed issuers must file annual reports on Form 10–K, quarterly reports on Form 10–Q, and current reports on Form 8–K with the Commission, which as discussed above disclose information the issuer believes is necessary for an investor to understand its financial condition, changes in financial condition and results of operations, which can include KPIs. Further, each issuer maintains audited financial statements prepared in accordance with U.S. Generally Accepted Accounting Principles (''GAAP'') and is subject to executive certification requirements under the Sarbanes-Oxley Act. As a result, the settlement-determining KPI values for each eligible issuer are produced within the Commission's supervisory jurisdiction, are publicly verifiable from a Commission-regulated source and are subject to relevant anti-fraud provisions under the Act, which the Exchange believes will reduce the potential for manipulation of the underlying KPIs as well as the applicable issuer's stock.

Further, the Exchange believes the proposed limited universe of issuers will introduce binary KPI options in a well-developed, well-understood, and transparent Commission-regulated market environment. Each issuer is among the most widely followed, actively traded, and extensively analyzed issuers in its respective sector, with deep and liquid equity and derivatives markets and a broad institutional and retail investor base. The depth of existing market activity surrounding these issuers supports fair and orderly pricing by ensuring that binary KPI options are listed in markets where price discovery is well-established, liquidity is readily available, and participants have broad access to the information necessary to form and express informed views on KPI outcomes. The Exchange believes the continuous public scrutiny to which these issuers are subject substantially reduces the likelihood that any market participant could obtain or maintain an informational advantage sufficient to manipulate the settlement value of the binary KPI options.

The Exchange believes the proposed KPI metrics will similarly prevent fraudulent and manipulative acts and practices, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest. The Exchange's proposal limits eligible KPIs to GAAP and non-GAAP measures and other statistics related to an issuer's financial condition and operational results, all of which the proposed issuers disclose in their earnings-related filings (*i.e.,* Forms 8–K, 10–Q, and 10–K) submitted to the Commission. As such, the settlement values of the proposed binary KPI options are derived exclusively from information that issuers deem as material information required to be disclosed in reports submitted to the Commission. These metrics are routinely referenced and tracked in the investment community and are figures that the market recognizes as a meaningful and central indicator of issuer performance. The Exchange believes that the inclusion of well-established metrics as eligible KPIs expands the value of binary KPI options for investors without compromising the integrity of trading processes, including the settlement process.

The proposed KPI metrics are among the most widely followed and extensively analyzed measures for the proposed issuers. Specifically, the Exchange proposes to be able to list a binary KPI option on earnings per share (prepared in accordance with GAAP) for each proposed issuer. This metric is among the most widely followed and extensively analyzed figures in public company financial disclosure and is disclosed in each issuer's periodic Commission filings.

Similarly, the Exchange proposes to list binary KPI options on revenue, prepared in accordance with the applicable GAAP, for each issuer. As is the case for earnings per share, revenue is a widely followed financial metric for publicly reporting companies and is the subject of extensive analyst coverage.

The Exchange proposes KPIs representing revenues broken out by applicable reportable segment, business unit, or product category, including cloud and artificial intelligence infrastructure revenues, streaming and geographic subscription revenues, automotive segment revenues, financial services segment revenues, consumer product category revenues, and digital asset exchange transaction and subscription revenues, among others, for several of the proposed issuers. Each such metric is a GAAP-defined figure required to be disclosed in the issuer's periodic Commission filings. The Exchange understands these metrics enable market participants to express views on specific high-profile business lines that are extensively covered by analysts and subject to a high volume of publicly available forecasts.

The Exchange proposes KPIs for the proposed financial institution issuers that are specific to financial institution income statement presentation, including net interest income, provision for credit losses, and net income. Each such metric reflects the distinct GAAP reporting framework applicable to banking institutions and is subject to the same periodic disclosures as other proposed KPIs.

The proposed rule change also includes operating margin, gross margin, or cash flow from operations KPIs for several issuers, each of which is computed directly from GAAP financial statement line items disclosed in the issuer's periodic Commission filings. These metrics provide market participants with insight into issuer profitability and capital generation and complement other revenue and earnings figures when market participants are

[40] The ADV of SpaceX stock between June 12 and June 22, 2026 was approximately 290,009,963 shares. The market capitalization of SpaceX as of June 22, 2026 was $2.145 trillion.

evaluating the value of an issuer and its stock.

The Exchange also proposes several non-financial operational KPIs that issuers disclosed in their periodic Commission filings, including relevant production volumes, network and infrastructure counts, user engagement metrics, deal counts, digital asset trading volume, and digital asset mining and holdings metrics. Each designated non-financial operational metric is closely tied to the core economic activity of the respective issuer's business and is a figure that the issuer has affirmatively chosen to disclose to the public as a key indicator of business performance. Issuers typically designate and disclose such metrics precisely because they are understood by the market to be among the most meaningful measures of their business activities. As discussed above, this is consistent with Commission guidance that an issuer should include KPIs in these report that the issuer believes an investor needs to gain understanding of its financial condition, changes in financial condition and results of operations, as such KPIs present the ''pulse'' of the issuer's business. The market significance of these metrics is further reflected in the extensive analyst coverage and investor attention, particularly near each reporting date. Each metric is subject to executive certification as part of the periodic report in which it appears and is widely tracked by financial data services and equity research analysts.

Overall, the Exchange believes that the proposed well-established, publicly reported metrics as eligible KPIs will expand the value of binary KPI options for investors without compromising the integrity of trading processes, including the settlement process. As a result, the Exchange believes the proposed KPIs will protect investors and the public interest as it will permit the Exchange to offer investors additional investment and hedging tools on the Exchange that investors can incorporate into their investment strategies regarding the proposed issuers.

The Exchange believes the proposed contract terms for binary KPI options will promote just and equitable principles of trade, remove impediments to and perfect a free and open market and national market system, and protect investors. As discussed above, the Exchange believes the proposed contract terms for binary KPI options are standardized option terms. Like standard option contracts and binary index option contracts currently listed for trading on the Exchange, each proposed binary KPI option will be a call or a put, will have an underlying, exercise price, an expiration date, a settlement type, a exercise style, and a multiplier. As is the case for binary index options, each proposed binary KPI option will have an exercise settlement amount paid depending on how the settlement value of the underlying compares to the exercise price.

The proposed binary KPI options will function identically to, and carry the same contractual terms as, the binary KPI options the Cboe has recently been approved to list. The proposed definitions of binary KPI option, call binary KPI option, exercise price, and put binary KPI option are the same as those terms employed by Cboe for its binary KPI options.

The proposed definition of settlement value for binary KPI options is identical to the definition applied by Cboe for binary KPI options. The Exchange believes the proposed $1 exercise settlement amount is reasonable given the retail nature of the proposed binary KPI options and merely adds specificity to the Rules for binary KPI options. The Exchange notes binary KPI options differ from standardized index options (which are also cash-settled) in that the exercise settlement amount is $1.00 rather than the cash difference amount between the settlement value of the index and the strike price of an option. Since the $1.00 exercise settlement amount will be paid out to the option holder if the criteria of the binary KPI option have been met, binary KPI options utilize a fixed exercise settlement amount.

The Exchange proposes new Rule 901KPI to list the specific binary KPI option contracts with the KPI criteria for each option contract. Such KPI criteria are established as the set KPI events that will be used to determine whether an option contract will be exercised by comparing the strike price of the binary KPI option to the KPI value. The Exchange believes these proposed contracts (including the issuers and KPIs) are consistent with the Act for the reasons set forth above.

The Exchange believes the proposed expirations for binary KPI options will remove impediments to and perfect the mechanism of a free and open market and a national market system because they will align with the reporting periods for which the proposed issuers disclose earnings results and submit corresponding reports to the Commission. These expirations will, therefore, permit investors to incorporate binary KPI options into their investment strategies that correspond to issuers' earnings results. Further, as discussed above, the Exchange believes aligning expirations with Commission-regulated sources will reduce the potential for manipulation of the underlying KPIs, which will ultimately protect investors and the public interest.

The proposed rule establishes a strike regime for binary KPI options similar to that for traditional options and binary index options. As is the case for traditional options and binary index options, the proposed rule change establishes permissible strike intervals, the amounts of which increase as the value of the strike increases. Additionally, the Exchange proposes to list initial and additional series pursuant to a similar framework as traditional equity options. The differences in the proposed strike regime compared to that of standard equity and index options are necessary and appropriate to reflect the static nature of KPIs (unlike underlying equities and indexes, the values of which change throughout the trading day) and the timing of their disclosure. As noted above, the Exchange intends to list binary KPI options aligned with the cadence of the KPI disclosures as their expiration cycle (generally quarterly). The Exchange intends to list for trading binary KPI options with expirations for the then-current reporting period (*e.g.,* third quarter) as well as the following period (*e.g.,* fourth quarter) prior to the expiration of the binary KPI options for the then-current reporting period.

As the Exchange does for standard options, as well as binary index options, the Exchange lists strikes (subject to its Rules) based on relevant market information—including the then-current value of the underlying—and customer demand. As described above, the Exchange intends to do the same for binary KPI options by listing strikes relative to the then-current value of the underlying KPI or publicly available estimates from the issuer or major market data vendors. The Exchange believes it is consistent with just and equitable principles of trade to permit the Exchange to list strikes based on all available information that would inform expectations about the KPIs (as investors would do), and then add strikes based on new or updated information, as it will allow the Exchange to list series with strikes consistent with investor expectations and demands. This will enable the Exchange to respond to changes in market conditions for binary KPI options in the same manner it is able to do today for equity and index options (including binary index options), factoring in the static value of KPIs.

Specifically, the Exchange believes this flexibility is appropriate for binary KPI options because the value of a KPI changes only when an issuer discloses that KPI, which generally happens every three months, unlike other underlyings, the value of which changes every trading day. While this proposed strike listing regime for binary KPI options differs from that of other options, the concept is the same, which is to permit the Exchange to list strikes reflective of the then-current value of the underlying and in response to customer demand. It is possible the changed value of an underlying KPI in a more recent earnings disclosure or new or updated estimates may be more sudden and pronounced than changes in the value of an underlying equity or index (which are susceptible to sudden value changes); however, like the listing rules for equity and index options, the proposed rules permit the Exchange to list strikes to reflect changes in the value of the underlying, including substantial changes.

The Exchange believes the proposed scaling of strike prices is reasonable and will protect investors, as it will permit the Exchange to list strike values in amounts similar to current strike values for other options. As noted above, values of certain KPIs may be large (*e.g.,* in the billions). The proposed scaling will permit the Exchange, for example, to list a strike of 27 rather than 27,000,000,000, which the Exchange believes will be simpler for investors to understand (as it will be made clear that 27 will reflect billions in this example) and consistent with current strike levels. The proposed scaling also permits the strike prices for binary KPI options to fit within current system capabilities regarding strike price values. The Exchange believes scaling rather than modifying its systems (and potentially causing investors to modify their systems) will benefit investors by allowing them to trade binary KPI options in the same manner as they trade other options today.

The Exchange believes the proposed strike intervals promote just and equitable principles of trade because it will permit the Exchange to list commercially meaningful strikes that will permit investors to tailor their trading strategies with precision. The Exchange acknowledges the proposed strike intervals are smaller than those in current Rules for other types of options. However, the Exchange believes the precision is appropriate and necessary given the nature of KPIs and the proposed options. The purpose of binary KPI options is to permit investors to take discrete and precise positions on KPIs. Therefore, the Exchange needs the ability to list strikes with the precision necessary to permit investors to take these positions. For example, earnings per share is generally a relatively small number (under $10). While strike intervals for other options are limited to $0.50 intervals, that would not be meaningful in the context of binary KPI options when investors are looking to take positions for a specific KPI, which will be measured in penny intervals. Therefore, the Exchange believes smaller strike intervals will benefit investors because they will allow the Exchange to list binary KPI options that will enable investors to use these options in the precise nature for which they are intended and provide sufficient flexibility for the Exchange to list series to respond to changes in market conditions and customer demand, while other rules will place bounds around the strikes the Exchange may list.

Further, as discussed above, the proposed strike intervals are consistent with the strike intervals used by Cboe for the binary KPI options it recently received approval to list. Given the scaling factor for larger KPI values, while it may appear the proposed rule change will permit smaller strike intervals for larger KPI values, that may be true on a nominal basis but is not the case if the actual value of the strike intervals is considered. The corresponding actual value of the strike interval for a strike price that was subject to a larger scale value is higher than the actual value of the strike interval for a strike price that was subject to a smaller scale value. As a result, the permissible strike intervals for strike prices representing higher KPI values are actually larger than the permissible strike intervals for strike prices representing lower KPI values. This is consistent with general premise underlying current strike intervals that larger strike intervals apply to larger strike values and, therefore, the Exchange believes the proposed rule change will promote just and equitable principles of trade.

The Exchange believes this proposed rule change clearly describes the proposed terms of binary KPI options, such as with respect to expirations (including the Exchange's announcement of the specific expiration date after binary KPI options series for that expiration are listed) and exercise prices (including the scaling factor, negative values, and potential changes to that scaling factor for a binary KPI option class) for all investors. As discussed above, these terms and changes to such terms will be described in Exchange notices, technical specifications (including binary KPI option reference data files), and contract specifications (all of which are posted on the Exchange's public website and thus available to all investors). Exchange ATP Holders and retail brokerage firms are highly sophisticated investors that intake information regarding other Exchange-listed options (including changes) in the same manner that the Exchange plans to release this information for binary KPI options. Therefore, the Exchange expects retail customers to have access to all relevant information regarding the terms of binary KPI options they choose to trade, including changes to expiration dates and exercise price values as announced by the Exchange.

Proposed Rule 902KPI(e) specifies a multiplier of one for binary KPI options rather than require the Exchange to designate a multiplier of at least one as the rules for binary index options do. This proposed multiplier is consistent with the definition of contract multiplier applicable to the binary KPI options approved for listing on Cboe. Therefore, the Exchange believes the proposed rule change is consistent with just and equitable principles of trade because it creates a pricing structure that reflects the notional value of an option based on its multiplier.

The Exchange believes proposed Rule 905KPI, which establishes the Core Trading Session for binary KPI options is consistent with the Act, protects investors, and prevents fraudulent and manipulative practices. The Exchange believes the proposed structure ensures that trading in binary KPI options ceases before the earnings disclosure that determines settlement. The distinction between A.M.- and P.M.-settled contracts mirrors the settlement terms applicable to the binary KPI options approved for listing on Cboe.

The Exchange believes proposed Rule 905KPI(e), which provides that for binary KPI options, the System initiates the opening rotation at 9:30 a.m., removes impediments to a free and open market by applying the same proven opening process to binary KPI options that governs other listed options classes on the Exchange. Additionally, unlike equity options, for which the underlying opens for trading and can trigger the opening rotation, KPIs do not trade, so triggering the opening rotation based on a set time is reasonable for binary KPI options.

The Exchange believes excluding binary KPI options from the obvious error provisions in Rule 975NY is consistent with the Act and promotes just and equitable principles of trade because the standard obvious error

framework, which evaluates whether an execution price deviates from a ''theoretical value'' by a prescribed amount, is incompatible with the structure of binary KPI options. Binary KPI options have no continuously observable theoretical value (unlike equity and index options) prior to the date of the earnings-related disclosure. Rather, their exercise settlement amount is fixed at either a pre-specified dollar amount or zero, depending entirely on whether the reported KPI satisfies the exercise condition, which itself is based on a single, publicly verifiable metric, disclosed in Commission filings. Applying an obvious error framework premised on theoretical value calculations to a product with a binary, fixed payout would be technically inapplicable and could produce unjust or arbitrary results. Moreover, because settlement of binary KPI options is determined by issuer-reported metrics disclosed through Commission filings (*i.e.,* figures produced pursuant to established accounting standards, subject to independent audit, and certified under the Sarbanes-Oxley Act), the settlement process is itself governed by a comprehensive external regulatory framework. The Exchange believes that establishing any alternative dispute mechanism in this context would be not only unnecessary, but potentially disruptive to market integrity, as it may introduce an element of post-hoc discretion into a settlement process that is expressly designed to be objective, verifiable, and rule-bound.

Finally, the Exchange notes that it is planning to implement a systemic maximum execution price protection for binary KPI options on a class basis, pursuant to which any execution price for a binary KPI option above the Exchange-designated maximum execution price for that class is either rejected or adjusted down to that maximum execution price. This protection will provide investors with an additional safeguard against executions at potential erroneous prices, further limiting the need for a separate obvious error provision applicable to binary KPI options, which the Exchange believes protects investors and the public interest. The Exchange represents it will not list for trading binary KPI options until such systemic control is in place.

The Exchange believes the proposed amendments related to position limits for binary KPI options are consistent with the Act because they establish a rational position limit framework for binary KPI options that protects against manipulation while facilitating legitimate trading activity in a novel product.

The Exchange believes the proposed position limit, which is the smallest possible position limit that can apply to equity options, is appropriate and consistent with the Act. Specifically, the proposed position limit of 25,000 standard contracts is equivalent to the position limit in Rule 904, Commentary .07 that applies to an equity option for which the underlying security does not meet the requirements for a higher option contract limit (including newly listed equity options). The position limit for options on the stocks of the issuers of the proposed KPIs is ten times higher (*i.e.,* 250,000 contracts) pursuant to Rule 904, Commentary .07. Given the large market capitalization and liquidity of these stocks, the Exchange believes the proposed position limit for binary KPI options for the issuers of those stocks is conservative and reasonable for the binary KPI options. Therefore, the Exchange believes the proposed position limit will promote just and equitable principles of trade, as it is sufficient to mitigate potential manipulation and prevent disruption in the markets for the issuers' stocks and options on the stocks while accommodating investors trading activity for legitimate economic purposes.

As proposed, binary KPI options with a multiplier of one will count toward applicable limits on a proportional basis relative to standard equity options on the issuer's stock, which carry a multiplier of 100. This treatment is consistent with the position limits applied to other reduced-value options, such as micro-options (which also have a contract multiplier of one).[41] Because the proposed binary KPI options have a multiplier of one, while standard option contracts have a multiplier of 100, the notional value of a binary KPI option is significantly less than the notional value of standard option contracts. For example, 25,000 contracts with a value of $1.00 with a multiplier of 100 would equate to $2,500,000 notional value, while 25,000 binary KPI option contracts with a value of $1.00 (which is the fixed maximum value of a binary KPI option contract) with a multiplier of one would equate to $25,000 notional value. Counting 100 binary KPI contracts as one standard option contract for purposes of calculating compliance with position limits effectively calibrates these limits so that investors may hold positions in binary KPI options for an economically equivalent number of contracts as they may hold in standard equity options. Therefore, the Exchange believes this proposed treatment is consistent with just and equitable principles of trade, as it counts option positions in a manner equivalent with their value.

The Exchange further believes the proposal is reasonable given the nature of binary KPI options and their relationship to the underlying issuer. Because binary KPI options have a fixed maximum notional value and settle on an all-or-nothing basis based on a KPI of the issuer rather than the price of the issuer's stock as with a standard equity option, the Exchange believes the proposed position limits appropriately reflects the distinct structure of these contracts and limits the potential for any single market participant to exert undue influence over binary KPI option settlement. With respect to binary KPI options, the economic risk of a position is binary, in that the contract either settles in-the-money at $1.00 or out-of-the money at $0.00. Additionally, with respect to binary KPI options, the maximum notional exposure per contract is fixed in advance; it cannot exceed $1.00.

Further, the Exchange's proposal to provide that positions in binary KPI options on the same KPI with different expiration dates and positions in binary KPI options for the same issuer with different underlying KPIs are not aggregated reflects the distinct structure of binary KPI options. Each binary KPI option expiration corresponds to a separate event tied to a specific issuer reporting period. Thus, the Exchange believes aggregating positions across different expiration dates would not accurately reflect the risk profile of these positions and would impose an unnecessary burden on market participants seeking exposure to company KPI events across different reporting periods.

Similarly, the Exchange believes it is reasonable to provide that binary KPI options are not aggregated with non-binary options contracts overlying the stock of the issuer. Because binary KPI options and equity options overlying the same issuer have different risk profile (*i.e.,* binary KPI options settle based on a KPI of the issuer rather than its stock price), the Exchange believes it would be inappropriate and misleading to require aggregation of these positions for purposes of position limits. As noted above, binary KPI options are based solely on whether a single, specified-issuer KPI meets a discrete threshold at a defined future date, and their value reflects the market's probability assessment of that singular outcome. Standard equity options, on the other

[41] *See* Rule 904, Commentary .07.

hand, reflect a broad array of factors bearing on the price of the underlying security, including macroeconomic conditions and sector dynamics, of which any individual KPI is only one component. Because the two products are not priced off of a common reference and do not represent economically equivalent or fungible exposures, aggregating positions across them would not meaningfully advance the prevention of manipulative practices with respect to the underlying security.

The Exchange further notes that this proposed non-aggregation framework in proposed Rule 906KPI(b) is consistent with that applied by Cboe regarding binary KPI options. To avoid possible confusion the proposed rule provides that a long KPI call and a short put KPI of the same type, on the same issuer having the same expiration shall be aggregated and, conversely, that a short KPI call and a long put KPI of the same type, on the same issuer having the same expiration shall be aggregated.

Finally, the Exchange believes the hedge exemption provision in proposed Rule 906KPI(d) is consistent with the Act because it facilitates legitimate hedging activity in binary KPI options. Proposed Rule 906KPI(d), provides a hedge exemption for Market Makers with respect to binary KPI options, a binary KPI option short position coupled with a binary KPI option short call position, regardless of the KPI option strike, shall be exempt from the established position limits prescribed in Rule 904.

The Exchange believes the proposed hedge exemption provision is consistent with the Act because it facilitates legitimate hedging activity in binary KPI options. Because a liquidity provider simultaneously holding a short put and short call position in binary KPI options has taken opposing sides of the potential binary outcome (*i.e.,* the short call is at risk if the KPI is met, and the short put is at risk if the KPI is not met), the Exchange believes such a position represents a defined, bounded risk profile that does not present the same potential for manipulation or market disruption that position limits are designed to prevent. The Exchange believes it is reasonable to make the proposed hedge exemption available only to binary KPI positions held by Market-Makers. The Exchange believes that offsetting short binary KPI option positions create a hedge similar to one to which the equity hedge exemption is available. The Exchange believes the proposed hedge exemption will allow Market-Makers to provide depth and liquidity in the marketplace for binary KPI options. The Exchange therefore believes the hedge exemption as proposed will encourage market-making activity and liquidity provision in binary KPI options while protecting investors and the public.

The Exchange also believes the proposed adoption of Rule 907KPI is consistent with the Act. By establishing tailored reporting requirements for binary KPI options, the Exchange will be able to monitor ATP Holder positions effectively and detect any accumulation of positions that may approach or exceed applicable limits, to the benefit of investors. The Exchange believes it is consistent with just and equitable principles of trade for 100 binary KPI option contracts to equal one standard option contract for purposes of determining whether the report in proposed Rule 907KPI is required given the size of binary KPI contracts. As discussed above, proposed binary KPI options have a multiplier of one, while standard option contracts have a multiplier of 100. Therefore, the notional value of a binary KPI option is significantly less than the notional value of standard option contracts. For example, 200 contracts with a value of $1.00 with a multiplier of 100 would equate to $20,000 notional value, while 200 binary KPI option contracts with a value of $1.00 (which is the fixed maximum value of a binary KPI option contract) with a multiplier of one would equate to $200 notional value. Counting 100 binary KPI contracts as one standard option contract for purposes of this report effectively calibrates the reporting requirement so that investors are required to submit the report for an economically equivalent number of contracts, which promotes just and equitable principles of trade.

The Exchange believes the proposal will provide the Exchange and regulators with visibility into large position concentrations in binary KPI options, preserving the ability to identify unusual activity and respond to any unforeseen concerns, while calibrating the threshold to a metric that is meaningful for this contract given its smaller multiplier relative to that of standard equity options. The Exchange believes this reporting framework, coupled with the position limits amendments, provides a fully adequate regulatory framework for these instruments.

Further, as noted above, the Exchange believes it has an adequate surveillance program in place to detect potentially manipulative trading in binary KPI options. The Exchange notes that manipulation of the reported KPI would constitute securities fraud and expose the issuer to liability under federal securities law, separate and apart from any exchange-related violation.

The Exchange believes the proposed binary KPI options will serve as a vehicle to hedge idiosyncratic, event-specific risk embedded in the specific KPIs. Standard equity options are calibrated to the price of the underlying security and capture a full spectrum of factors or risks which may affect issuer value, such as macroeconomic conditions or sector dynamics. Because equity option pricing incorporates this full spectrum, a participant seeking to hedge exposure to a single, discrete KPI outcome cannot do so precisely using standard equity options. Because settlement of a binary KPI option is determined solely by whether a specified-issuer KPI meets a defined threshold, the contract effectively isolates certain individual risks an investor may seek to manage. For example, consider an investor holding a long-term position in a particular issuer stock, who believes the issuer's quarterly revenue will fall short of expectations (for reasons unrelated to the issuer's long-term prospects). The investor may utilize the binary KPI option to hedge precisely against the near-term risk without disruption to the underlying equity position. This targeted hedging utility represents a distinct and additive function relative to existing listed products, which the Exchange believes will serve the interests of investors and provide an efficient mechanism for managing event-specific, KPI-driven risk.

The Exchange believes the proposed rule change will facilitate transactions in securities, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, protect investors and the public interest, because it will provide investors with a securities exchange-listed investment choice for these instruments, offering price transparency and the regulatory protections of a national securities exchange. The Exchange believes the proposed rule change will permit investors to manage their risk exposures and carry out their investment objectives on a securities exchange with more flexibility and broader applicability. The Exchange also believes the proposed rule change will promote competition, as it will meet demands of investors that currently may trade products structured in substantively the same manner as the proposed binary KPI options in other markets (as further discussed below). Binary KPI options would provide investors with a straightforward means of expressing a directional view on key

financial and operating metrics. The Exchange further believes the proposed rule change is consistent with the protection of investors and the public interest, as binary KPI options would be subject to the Exchange's existing rules governing the listing and trading of options. The Exchange believes expanding the universe of binary options will benefit investors, particularly retail investors and other investors who prefer simplicity, as a complementary offering to current exchange-traded options.

The proposed rule change will permit the Exchange to list binary KPI options on a national securities exchange as alternatives to products that are structured in substantially the same manner as binary options currently available in the OTC market and on other platforms. The Exchange understands investors have traded binary options similar to the proposed binary options in OTC markets for many years but may prefer to trade such options in a listed environment to receive the benefits of trading listed options. These benefits include: (1) enhanced efficiency in initiating and closing out positions; (2) increased market transparency; and (3) heightened contra-party creditworthiness. The Exchange believes the proposed rule change may encourage liquidity to shift from the OTC market onto the Exchange, which the Exchange believes would increase market transparency as well as enhance the process of price discovery conducted on the Exchange through increased order flow. The proposed rule change is intended to provide a market for binary KPI options as a standardized product without the credit risk of an individual issuer. By providing a listed and standardized market for more classes of binary options, the Exchange seeks to attract investors who desire the simplicity of a binary option with the certainty and safeguards of a regulated and standardized marketplace. Additionally, unlike an OTC binary option, counter-party credit risk for Exchange-listed binary KPI options is significantly reduced through the issuance and guarantee of the contracts by a registered clearing agency. Further, as an exchange-traded option, binary options will have the advantage of liquidity provided by Market Makers, which the Exchange believes may lead to tighter spreads than those in the OTC market. The Exchange also believes that standardization will enable more interested parties to become market participants.

In addition to the OTC market, various market platforms that are not registered as national securities exchanges currently offer products structured in substantively the same manner as binary options that the Exchange may list pursuant to current Rules and as proposed. These platforms offer binary option products overlying issuer KPI, which may be settled at varying points of the day (not just at the open and close of the trading day). However, as these venues are not national securities exchanges, they do not offer investors the benefits of centralized liquidity, market transparency, or securities regulations intended to protect investors. The Exchange believes listing competitive products on a national securities exchange would create a centralized and standardized marketplace for these products, which promotes price discovery and transparency, within an established regulatory framework designed to afford investors in securities with important protections. In other words, the Exchange believes its proposal offers a more transparent platform than the OTC market or other market platforms offer. It would contribute to leveling the playing field with these alternative markets and provide investors with safeguards associated with Commission and SRO oversight of the trading activity in these exchange-listed binary KPI options.

Ultimately, the Exchange believes the proposed rule change will provide investors with greater trading tools and opportunities and flexibility, resulting in investors having additional means to carry out their investment objectives and manage their risk exposures through products listed and traded on a national securities exchange. The Exchange believes the proposed rule change will offer market participants a simplified, transparent, and limited risk investment choice that may be more aligned with their specific timing needs, investment and hedging strategies, and risk tolerances. The Exchange believes it benefits the investing public to continue to enhance its listed product offerings to respond to continuously changing needs of investors and to a continuously changing competitive environment.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because binary KPI options will be available to all market participants who wish to trade such options on the same terms and in the same manner (including with respect to the payout terms and amount). All market participants will be subject to the same rules applicable to binary KPI options, as described in this proposed rule change. Except as set forth in the proposed rule change, binary KPI options will trade in the same manner as binary KPI options on Cboe.

The Exchange does not believe the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because binary KPI options have been approved to be listed on Cboe and other options exchanges may propose similar products. Additionally, as noted above, substantively similar products to binary KPI options, as proposed, are available in the OTC market and various other markets.

The Exchange notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues who offer similar products. The Exchange believes the proposed rule change will provide investors with a comparable alternative to the OTC market and other venues. The Exchange believes it may be a more attractive alternative to Cboe, the OTC market and these other venues, as market participants will benefit from being able to trade these options in an exchange environment, which provides, among other things: (1) enhanced efficiency in initiating and closing out positions; (2) increased market transparency; and (3) heightened contra-party creditworthiness. As a result, the Exchange believes that the proposed rule change may relieve any burden on, or otherwise promote, competition, as it will allow the Exchange to offer a securities exchange-listed alternative to the products currently available in these other markets.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section

19(b)(3)(A)(iii) of the Act[42] and Rule 19b–4(f)(6) thereunder.[43] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.[44]

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[45] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEAMER–2026–97 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEAMER–2026–97. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the filing will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to File Number SR–NYSEAMER–2026–97 and should be submitted on or before December 9, 2026.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[46]

J. Matthew DeLesDernier,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–106897; File No. SR–CBOE–2026–085]

Self-Regulatory Organizations; Cboe Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend its Fees Schedule

November 13, 2026.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 2, 2026, Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') proposes to amend its Fees Schedule to (1) apply the existing SPX/SPXW Electronic Execution Surcharge to S&P 500 Index (''SPX'') options with a.m.-settlement trading under the OSI root symbol SPXO (''SPXO''), and add SPXO to each other provision of the Fees Schedule that currently references SPXW;[3] (2) amend the fees, initiating credits, and credit cap applicable to Qualified Contingent Cross (''QCC'') orders; (3) amend the Market-Maker manual (open outcry) transaction fee for Multiply Listed options classes to distinguish between Penny and non-Penny classes; (4) adopt a new Floor Broker Break-Up Credits Program for Floor Broker orders executed against Market-Makers on the trading floor, and make related amendments to the Floor Broker Sliding Scale Rebate Program and Floor Broker Sliding Scale Supplemental Rebate Program; (5) amend footnote 55 to define Index Binaries as binary options on XSP, MRUT, DJX and MGTN, and replace references to ''XSPBX'' elsewhere in the Fees Schedule with references to ''Index Binaries (55)''; (6) adopt a fee holiday for Market-Maker orders in Index Binaries executed electronically and adding liquidity; (7) amend the transaction fee for Index Binaries where the premium is greater than or equal to $1.00 to a flat $0.01 per contract for fee codes HC (Customer), HD (Clearing Trader Permit Holder Proprietary, Broker-Dealer, Joint Back-Office, Non-Trading Permit Holder Market Maker, and Professional) and HB (Market-Maker, Electronic, Removing-Liquidity); and (8) adopt a Flex AIM Response Fee and a corresponding FLEX break-up credit for Customer Agency orders. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Commission's website (*https://www.sec.gov/rules/sro.shtml*), the Exchange's website (*https://www.cboe.com/us/options/regulation/rule_filings/cone/*), and at the principal office of the Exchange.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Noting, however, that the SPXW Surcharge Programs (described below) shall not apply to SPXO and shall remain only applicable to SPXW.
