Comment: A few commenters mentioned that eligible professionals would appreciate knowing each beneficiary that was assigned to them. Further, physicians would appreciate knowing which other physicians were also providing care to the beneficiaries assigned to them.

Response: To the extent it is practicable, we are committed to providing physicians with information that targets specific performance areas. We intend to explore the feasibility of providing this detailed level of data.

Comment: One commenter requested that CMS pursue a robust evaluation of the risk adjustment methodology (pages 29 and 32 at *http://rurinfo.mathematica-mpr.com/*) used in the Program.

Response: We are committed to conducting further research to refine the risk adjustment rules currently being applied in the Program. Determining how to accurately adjust for patient risk factors is a priority for CMS.

Comment: One commenter suggested that we make the minimum thresholds for patients and episodes that are needed for statistical accuracy used in the Program publicly available.

Response: We are committed to making the methodologies used in the Program transparent. We are currently exploring the feasibility of publicly posting the minimum thresholds for patients and episodes used in the Program on our Web site.

Comment: A few commenters suggested that additional outreach and education is needed to help eligible professionals understand the reports. Further, commenters suggested including a task in the next Quality Improvement Organization (QIO) scope of work to assist physicians with interpreting their reports.

Response: We are committed to providing technical assistance to eligible professionals to aide in the understanding of the reports. We intend to explore the feasibility of including a task to provide technical assistance in understanding the reports in the QIO 10th scope of work.

Comment: One commenter questioned how E/M codes included in surgical bundle payments are used to inform CMS' designated attribution methodologies.

Response: We are committed to pursuing further research in order to refine the designated attribution rules currently being applied in the Program. Determining how to accurately attribute surgical bundles is a priority for CMS.

Comment: One commenter requested that CMS raise the minimum of 10 percent of E/M costs used to assign a patient or episode to a physician.

Response: In addition to setting the minimum threshold at 10 percent, we will test some higher minimum thresholds. We note that one of the goals of this Program is to provide confidential feedback reports to as many physicians as possible. One of the trade-offs to raising the minimum threshold is that fewer physicians may qualify to receive a feedback report.

Comment: Several commenters strongly supported CMS' use of the multiple proportional attribution rule (pages 26–27 and 33 at *http://rurinfo.mathematica-mpr.com/*).

Response: We will continue to examine the utility of this attribution rule and test others.

In the CY 2010 PFS proposed rule, we referred readers to two publicly available Web sites for commercial episode grouper vendors regarding transparency of their methodologies (74 FR 33591). We solicited public comment on the use of proprietary products to measure episodes of care in the Program.

Comment: Many commenters were in favor of CMS only using a Medicare-specific public domain episode grouper in the Program.

Response: To the greatest extent practicable, we are committed to ensuring all methodologies used in the Program are transparent. We intend to explore the feasibility of using a Medicare-specific public domain episode grouper in the Program. We refer readers to (74 FR 48979 through 48980) for an announcement regarding an upcoming public listening session that CMS is hosting to discuss this topic.

d. Phase II of the Program

For phase II, we proposed to expand the Program in ways that that targets specific performance areas for physicians. We proposed to add reporting to groups of physicians, recognizing that many physicians practice in arrangements other than solo practices. We noted that group level reporting will be more likely to resolve the sample size issues that arise when individual physicians have too few Medicare beneficiaries with specific conditions to generate statistically significant information. We solicited public comment on potential types of groups including the following: (1) Formally-established single or multi-specialty group practices; (2) physicians practicing in defined geographic regions; and (3) physicians practicing

within facilities or larger systems of care.

Comment: Commenters supported reporting to groups of physicians, including all categories listed above, in addition to individual physicians. A few commenters questioned how CMS would define groups. Commenters did not offer a definition of group reporting, however. One commenter asked us to include accountable care organizations (ACOs) in the definition of the ''group.''

Response: We are finalizing our proposal to include group reporting. Since no explicit definition of group practice was suggested through public comment, for purposes of this Program, we are finalizing the following definition of group practice: more than one physician practicing medicine together. We choose this definition because we want to recognize groups of physicians as entities that are separate and distinct from individual physicians. We are defining a group as two or more physicians both to recognize groups as separate and distinct from individual physicians and to ensure that we have the broadest possible definition of a group so that all physicians could potentially be provided with resource use reports. If groups were to be defined more narrowly, it is possible that some physicians would not be subject to the resource use reporting because they are neither working in solo practice as an individual physician or part of a practice that meets our definition of a group.

This definition applies to the following groups: (1) Formally-established single or multi-specialty group practices; (2) physicians practicing in defined geographic regions; and (3) physicians practicing within facilities or larger systems of care. With respect to ACOs, the term is not defined at this time in either the law or regulations but to the extent that the ACO includes more than one physician, the physicians in the ACO would constitute a group for resource use reporting. We are therefore, finalizing the definition for group practices and these three types of groups of physicians.

Phase I of the Program focused on providing confidential feedback on resource use measures. Section 1848(n)(1)(A) of the Act states that the Secretary may also include information on the quality of care furnished to Medicare beneficiaries by physicians (or groups of physicians) in the feedback reports. Providing physicians with feedback on both quality and cost of care better captures the value of the care provided. Including quality measures in the Program is consistent with the direction for other CMS VBP initiatives. We solicited public comments on the use of PQRI, GEM, and other aggregate quality measures to be used in the Physician Resource Use Measurement and Reporting Program.

Comment: Commenters were unanimously supportive of including quality measures, in addition to resource use measures in the Program.

Response: We are finalizing our proposal to include quality measures in the Program.

Comment: Commenters were in support of using both PQRI and GEM measures to capture quality of care. Some commenters cited the new nature of both PQRI and GEM measures as an area of concern and recommended caution in using these quality measures until the measures become more mature.

Response: Though we recognize that both the measures used in the PQRI and claims-based measures calculated without submission of quality data codes from physicians (such as GEM measures) will continue to mature over time, we intend to include them in the Program. Including these quality measures will allow us to gain more experience reporting performance metrics to eligible professionals on a confidential basis.

Comment: In addition to the use of PQRI and GEM measures, commenters also encouraged reporting of structure and outcome measures (outside of those currently included in the PQRI Program). Commenters stated that specialty societies and other measure developers should be encouraged to speed the development of these types of measures.

Response: We are committed to capturing all aspects of performance, including process, structure, and outcomes measures. As additional measures become available, we will examine the utility of such measures as an additional aspect of reporting in this Program.

Comment: A few commenters expressed that quality data should closely relate to the episodes of care that are targeted in the Program.

Response: We are committed to working collaboratively with measure developers on pairing quality measures with episodes of care.

Comment: A few commenters recommended that the time period represented by the quality and cost measures should overlap.

Response: To the greatest extent practicable, we are committed to recognizing overlapping measurement time periods between quality and cost measures in this Program.

Comment: A few commenters suggested capturing quality data from registries.

Response: We are committed to allowing the collection of quality measures from data contained within clinical registries. We refer readers to section II.G.2. of this final rule with comment period that discusses the PQRI for additional discussion on the use of registries to collect quality data.

e. General Comments

In addition to the areas where we specifically solicited comments, we also received several general comments.

Comment: Some commenters expressed concern about the use of the data contained within the feedback reports for purposes beyond confidential reporting. One commenter strongly encouraged CMS to publicly report the data contained within the feedback reports.

Response: Section 1848(n) of the Act currently provides the authority to use the information contained within the feedback reports on a confidential basis only.

Comment: One commenter suggested integrating the reporting of resource use measures into Maintenance of Certification programs.

Response: CMS is committed to working collaboratively with stakeholders on various mechanisms and programs to increase the value of care delivered to beneficiaries. We refer readers to section II.G.2. of this final rule with comment period that discusses the PQRI for additional discussion of this suggestion.

Comment: One commenter suggested that the feedback reports be used to provide information on geographic variations in the delivery of specific services.

Response: We are committed to monitoring and addressing geographic variations in the delivery of services. As mentioned above, we plan to explore group level reporting, which may include reporting to physicians within a specified geographic group.

Comment: One commenter strongly encouraged CMS to expand the number of reports delivered beyond the 310 delivered in Phase I of the Program.

Response: We are committed to providing feedback to as many physicians as our resources will allow. We intend to explore the feasibility of providing more reports in the Program.

4. Section 131(d): Plan for Transition to Value-Based Purchasing Program for Physicians and Other Practitioners

a. Background

Value-based purchasing uses payment incentives and transparency to increase the value of care by rewarding providers for higher quality and more efficient services and for publicly reporting performance information. Section 131(d) of the MIPPA requires the Secretary to develop a plan to transition to a value-based purchasing (VBP) program for Medicare payment for covered professional services made under, or based on, the PFS. Section 131(d) of the MIPPA also states that by May 1, 2010, the Secretary shall submit a report to the Congress, containing the plan, together with recommendations for such legislation and administrative action as the Secretary determines appropriate. The Secretary, through the Physician and Other Health Professional VBP (PVBP) Workgroup, submitted a progress letter to Congress on January 8, 2009 detailing the progress made on the PVBP plan for physicians and other professionals.

Currently, Medicare health professional payments are based on quantity of services and procedures provided, without recognition of quality or efficiency. Under various authorities, we have pursued the implementation of building blocks to support the establishment of a VBP program for health professionals. These include initiatives in the following major topic areas: quality and efficiency measurement and reporting, approaches for aligning incentives with providing higher quality care instead of higher volume of care, care coordination, prevention, and health information technology (HIT). The following are examples of the initiatives specifically relevant to physicians and other health professionals:

- Pay for reporting of quality measurement data instituted under the Physician Quality Reporting Initiative (PQRI);
- Resource use reports comparing overall costs, as well as costs for treatment across episodes of care, as required by the Physician Resource Use Measurement and Reporting Program; and
- Demonstration projects including the Physician Group Practice demonstration of a shared savings model, gainsharing demonstrations, medical home and other care coordination and disease management demonstrations, and the Acute Care Episodes demonstration of a bundled payment model.

We are fully committed to implementing VBP incentives to drive quality improvement and greater efficiency for services furnished to Medicare beneficiaries.

b. Approach to Plan Development

We have created an internal cross-component team, the PVBP Steering Committee (formerly referred to as PVBP Workgroup), to lead development of the PVBP plan. Four Subgroups were established to address the major sections of the Plan: measures; incentives; data strategy and infrastructure; and public reporting. The PVBP Steering Committee was tasked with reviewing the state-of-the-art in performance-based payment for physicians, including relevant Medicare programs and demonstrations and private sector initiatives; preparing an Issues Paper to present program objectives and design principles; engaging stakeholders and obtaining input on program design; and developing the PVBP Plan and Report to Congress. A similar approach was used in the development of the CMS Hospital VBP Plan.

To guide the planning process, the PVBP Steering Committee adopted the following goal to improve Medicare beneficiary health outcomes and experience of care by using payment incentives and transparency to encourage higher quality, more efficient professional services. In pursuit of this goal, the Workgroup has defined the following objectives:

- Promote evidence-based medicine through measurement, payment incentives, and transparency.
- Reduce fragmentation and duplication through accountability across settings, alignment of measures and incentives across settings, better care coordination for smoother transitions, and attention to episodes of care.
- Encourage effective management of chronic disease by improving early detection and prevention, focusing on preventable hospital readmissions, and emphasizing the importance of advanced care planning and appropriate end-of-life care.
- Accelerate the adoption of effective, interoperable HIT, including clinical registries, e-prescribing, and electronic health records.
- Empower beneficiaries to make value-based health care choices, and encourage health professionals to improve the value of care they provide by disseminating information designed to help them change their practice patterns to improve performance.

The goal and objectives were captured in an Issues Paper that was posted on the CMS Web site on November 24, 2008, in preparation for the December 9, 2008 Listening Session which was held at CMS headquarters. The Issues Paper included questions seeking public input on key design considerations. The Issues Paper is available on the CMS Web site at *http://www.cms.hhs.gov/PhysicianFeeSched/downloads/PhysicianVBP-Plan-Issues-Paper.pdf*. Nearly 500 stakeholders participated in the day-long Listening Session. We received both verbal and written comments that are informing the design of the PVBP Plan. Stakeholder input from this Listening Session is summarized in the proposed rule (74 FR 33592 through 33593).

c. Next Steps in Plan Development

Building on input from the Listening Session on the Issues Paper topics, the PVBP Steering Committee has begun to develop potential recommendations for inclusion in the Report to Congress. The first step is to design various approaches for performance-based payment that will address the planning goal and objectives for different practice arrangements. This design process will include identifying appropriate measures and incentive structures, considering the necessary data infrastructure, and addressing public reporting options. Consideration will be given to approaches that:

(1) Overlay the current PFS, such as differential fee schedule payments based on measured performance;

(2) Address multiple levels of accountability, including individual health professionals, as well as larger care teams or organizations made up of a variety of health professionals and facilities; and

(3) Promote more integrated care through shared savings models and bundled payment arrangements.

In the proposed rule, we solicited public comment on the development of the PVBP plan and Report to Congress. We specifically requested for comments on two topics: (1) the appropriate level at which to hold practitioners accountable (for example, individuals or groups); and (2) appropriate data submission mechanisms. We received comments on these topics, as well as comments on other issues we should consider when developing the PVBP Report to Congress. The following is summary of the comments we received regarding section 131(d) of the MIPPA.

Comment: Regarding the appropriate level at which to hold practitioners accountable, commenters were supportive of our intention for the PVBP

plan to recognize multiple levels of accountability ranging from individual practitioners to larger organizations. Commenters recognized that a ''one size fits all'' approach would not be appropriate. One commenter suggested conducting a series of demonstrations and pilots to help further explore this issue. Commenters also urged us to design the program to allow participation by practitioners other than physicians.

Response: We plan to continue to explore ways to measure and incentivize practitioners for higher value care at multiple levels of accountability, including possible demonstrations and pilots to test and analyze the effectiveness of certain practice arrangements and payment systems. We recognize that the Congress intended the PVBP plan to be broader than physicians, and the PVBP Steering Committee is considering approaches that allow for participation by a wide variety of health care practitioners.

Comment: Regarding the appropriate methods for data submission, commenters overwhelmingly supported the adoption and use of interoperable electronic health records. Commenters suggested that the CMS PVBP Steering Committee coordinate with the Office of the National Coordinator for Health IT (ONC) to align PVBP incentives for electronic health records with the recently enacted HITECH incentives for health IT adoption. Commenters also recognized the role of registries in data submission. In addition, commenters urged us to carefully consider procedural protections for practitioners, such as allowing their review of their own data before submission to CMS.

Response: The CMS PVBP Steering Committee is exploring ways to encourage the use of interoperable health IT systems, including registries, as part of the PVBP plan. We have been actively engaged with ONC on how to align any PVBP incentives for health IT with the HITECH provisions and will continue to work closely with ONC. We recognize the importance of the accuracy and validity of electronically submitted data, and are exploring ways to incorporate data review processes for practitioners into the PVBP plan recommendations.

Comment: Several commenters were concerned with the relationship between the PVBP plan and the current Medicare payment system. Commenters stated that the current Medicare payment system is flawed in that it does not align incentives across providers and settings, and a PVBP plan that simply overlays the existing system will not be sufficient to re-align incentives to provide higher value care.

Response: In developing the PVBP plan, we are considering both short-term and long-term recommendations. Short-term recommendations may include changes within the current payment system. Such changes, though, would be interim steps toward implementing a more long-term approach for comprehensive payment reform.

Comment: Commenters urged us to not limit the Report to Congress to recommendations for only performance-based incentive payments. Commenters suggested the plan recommend a wide range of incentives for activities such as improving beneficiary health outcomes, patient experience of care, efficient performance of services, and use of electronic health IT such as registries or e-prescribing. Commenters also urged us to recommend using the PVBP plan to encourage high quality care by being actionable on the part of all practitioners.

Response: We are considering recommending a variety of different activities within the PVBP plan, taking into account what is more feasible in the short-term versus the long-term. We are also considering what program activities are likely to be the most meaningful and actionable for practitioners, both in the short-term and long-term.

Comment: Commenters urged CMS to gain experience with confidential feedback reporting of quality and resource use before using the information for either payment or public reporting. One commenter suggested that any public reporting under the PVBP plan should be geared toward consumer decision-making.

Response: We are considering a variety of program activities, including confidential feedback reports, public reporting, and incentive payments. The PVBP Steering Committee is carefully analyzing the options for each of these activities.

Comment: Several commenters mentioned that encouraging successful management of chronic disease is essential to any PVBP plan. Commenters mentioned medical home care models and the important role they can play in promoting integrated care and reducing costs.

Response: We recognize the importance of managing chronic disease, and are currently conducting a demonstration of the medical home concept. Findings from this demonstration may be used to inform plan development.

Comment: Commenters urged us to use the PVBP plan to increase efficiency and slow cost growth in the Medicare program. Commenters specifically mentioned shared savings models and encouraged us to further explore how to incorporate appropriate shared savings principles into the plan. There was no consensus among the comments regarding whether a PVBP plan should include shared savings or gainsharing. However, some commenters cautioned that a PVBP plan should not be viewed solely as a method to slow cost growth.

Response: We recognize the importance of both slowing cost growth and maintaining beneficiary access to high quality care. The PVBP plan will carefully explore program activities that accomplish both of these goals.

Comment: We received input on several issues related to the appropriate measurement of eligible professionals in a PVBP program. Commenters suggested we recommend only transparent evidence-based measures that are vetted by physician groups and endorsed by a national consensus-based organization. Commenters also suggested we recommend strategically selecting measures to address gaps in quality, or those related to high-cost and/or high-volume services. Measures used in the program should not be ''topped out,'' but still have significant room for improvement collectively across the Medicare program. In addition, commenters urged us to recommend the use of both quality and resource use information, and to report both domains of measures together in order to give a fuller picture of an eligible professional's performance. Commenters urged us to consider incorporating a broad range of quality measures into the PVBP program, including patient experience, clinical outcomes, disparities, care coordination, and structural measures such as the adoption of health IT.

Response: The PVBP Steering Committee is carefully considering what measures to recommend for which program activities (that is, incentive payment, confidential feedback, public reporting). We recognize the potential for the PVBP plan to address gaps in quality and high-cost and/or high volume services, and the importance of recommending the use of both quality and resource use information and the value to eligible professionals of providing this information together. We also recognize the importance of recommending the use of a broad array of measures. Many of the types of measures mentioned by commenters have not yet been fully developed. Therefore, short-term recommendations for the PVBP plan cannot include them, but long-term recommendations may encourage their development and use.

Comment: Commenters supported tying a portion of payment to an eligible professional's performance, and stated that participants should not be rewarded simply for reporting data to CMS. Commenters stated that the PVBP plan should reward both attainment of specified levels of performance, and improvement over time. Commenters also suggested that such incentive payments should be aimed toward breaking down the payment silos that currently exist between Medicare Parts A and B.

Response: Whether to reward eligible professionals for performance, and not merely participation is a key design option that the PVBP Steering Committee is considering for the PVBP plan. The Steering Committee will also carefully discuss whether to recommend paying incentives for attainment, improvement, or both.

Comment: Commenters stressed the importance of risk-adjustment, especially if performance data is used to make incentive payments.

Response: We recognize that risk-adjustment is essential and we are exploring methods for its incorporation into the PVBP plan.

Comment: Commenters commended CMS for involving stakeholders in PVBP plan development, and encouraged CMS to continue to involve stakeholders as plan development proceeds. Commenters urged CMS to ensure that any PVBP plan does not impede the evolution of medical practice, discourage innovation, or interfere with practitioner-patient decision-making.

Response: We appreciate the opportunity to hear from stakeholders regarding plan recommendations, and we value the input stakeholders have provided thus far. We are carefully considering options and taking an iterative approach to PVBP plan development to avoid the potential pitfalls mentioned by commenters.

We received other comments that were outside the scope of the proposed rule, and are therefore not discussed in this final rule with comment period.

5. Section 132: Incentives for Electronic Prescribing (E-Prescribing)—The E-Prescribing Incentive Program

a. Program Background and Statutory Authority

As described in the CY 2010 PFS proposed rule (74 FR 33593 through 33600), section 1848(m)(2) of the Act, as amended by section 132 of the MIPPA, promotes the use of electronic prescribing by authorizing incentive payments to eligible professionals or group practices who are ''successful electronic prescribers.'' This E-Prescribing Incentive Program is expected to encourage significant expansion of the use of electronic prescribing by authorizing a combination of financial incentives and payment adjustment and is separate from, and in addition to, any incentive payment that eligible professionals may earn through the PQRI program. Individual eligible professionals do not have to participate in PQRI in order to participate in the E-Prescribing Incentive Program (and vice versa).

For 2010, which is the second year of the E-Prescribing Incentive Program, the Secretary is authorized to provide successful electronic prescribers, as defined in section 1848(m)(3)(B) of the Act and further discussed below in this section, an incentive payment equal to 2.0 percent of the total estimated Medicare Part B PFS allowed charges (based on claims submitted not later than 2 months after the end of the reporting period) for all covered professional services furnished during the 2010 reporting period. Covered professional services are defined under the statute to be services for which payment is made under, or is based on, the PFS and which are furnished by an eligible professional. The applicable electronic prescribing percent (2.0 percent) authorized for the 2010 E-Prescribing Incentive Program is the same as that authorized for the 2009 E-Prescribing Incentive Program.

We received several comments from the public on the CY 2010 PFS proposed rule related to the E-Prescribing Incentive Program. General comments about the E-Prescribing Incentive Program are addressed immediately below.

Comment: One commenter was opposed to making any changes to the E-Prescribing Incentive Program for 2010, but a majority of the comments voiced their support for the changes proposed for the 2010 E-Prescribing Incentive Program and discussed below.

Response: Although we understand the commenter's desire to keep the program the same in 2010, we believe that this would defeat our attempts to simplify the E-Prescribing Incentive Program and reduce the reporting burden for eligible professionals.

Comment: Some comments recommended that we conduct significant education and outreach activities, especially with respect to the changes for 2010, and that we promote the program by making participation information, as well as information about potential incentive payment amounts available.

Response: We value the input received from stakeholders and participants who have provided constructive feedback and have collaborated with us to disseminate educational materials about the E-Prescribing Incentive Program to eligible professionals in the health care community. We anticipate that ongoing education and outreach efforts will continue to evolve with the program. We will continue to work with national and regional stakeholder organizations to educate their members on program requirements for successful reporting, especially the changes that will be implemented for 2010, as discussed below. We also plan to continue to host monthly national provider calls in which we expect to provide guidance on specific topics, including having our E-Prescribing Incentive Program subject matter experts available to answer questions. Information about upcoming calls can be obtained from the CMS Sponsored Calls page of the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI/04_CMSSponsoredCalls.asp#TopOfPage.* We will also continue to make educational materials and other resources available on the E-Prescribing Incentive Program section of the CMS Web site at *http://www.cms.hhs.gov/erxincentive*. We encourage eligible professionals to visit this Web site and to review the frequently asked questions found on this Web site. Eligible professionals are also encouraged to join our physician listserv to obtain periodic updates about the E-Prescribing Incentive Program. Instructions for joining the listserv can be found at *https://list.nih.gov/archives/physicians-l.html.*

Comment: One commenter recommended that we promote the program by making participation information, as well as information about potential incentive payment amounts available.

Response: Once the 2009 program year is complete, we anticipate conducting an evaluation of the 2009 E-Prescribing Incentive Program reporting experience at an aggregate level and posting a national summary report similar to the ''PQRI 2007 Reporting Experience'' report found at *http://www.cms.hhs.gov/PQRI/Downloads/PQRI2007ReportFinal12032008CSG.pdf.*

With respect to the suggestion to make information about potential incentive payment amounts available, we are concerned that doing so may be misleading since incentive payments will differ for each eligible professional based on his or her Medicare Part B PFS allowed charges for covered

professional services. We believe that information such as the mean incentive payment amount released in the ''PQRI 2007 Reporting Experience'' report could serve the same purpose.

Comment: Many commenters expressed a desire for the Drug Enforcement Agency (DEA) to permit electronic prescribing of controlled substances. Commenters noted that until electronic prescribing of controlled substances is permitted, eligible professionals may be reluctant to adopt electronic prescribing technology due to work flow issues and the need to utilize two processes (electronic and written) for generating prescriptions.

Response: We are aware of the current limitation for electronic prescribing of controlled substances. Actions taken or that may be taken by the DEA are beyond our purview. However, we have taken this limitation into consideration in establishing the 2010 criteria for determining a successful electronic prescriber.

Comment: Some commenters suggested that we obtain data on electronic prescribing from pharmacies rather than eligible professionals or that we should also be holding pharmacies or pharmacy networks accountable for ensuring accurate, timely, and consistent transmission of electronic prescribing data.

Response: As established by MIPPA, the E-Prescribing Incentive Program is an incentive program specifically for eligible professionals, as defined by section 1848(k)(3)(B) of the Act, based on information submitted by eligible professionals. Additionally, section 1848(m)(3)(B)(iv) of the Act authorizes the use of Part D data, which reflects information submitted by pharmacies to Part D plan sponsors. As we explained in the CY 2010 PFS proposed rule (74 FR 33595), however, the accuracy and completeness of the Part D data with respect to whether a prescription was submitted electronically is unknown since Part D plan sponsors will not be required to start submitting this information until 2010. Should we rely on Part D data in the future, we anticipate that we will no longer need eligible professionals to submit data on their electronic prescribing activities to us.

Comment: One commenter was concerned that the E-Prescribing Incentive Program will include a penalty, or payment adjustment, to begin in 2012 and requested that we, in consultation with stakeholders, define in a timely manner how we intend to use the case-by-case, significant hardship penalty exemption authority.

Response: We believe the commenter is referring to section 1848(a)(5)(B) of the Act, which permits the Secretary, on a case-by-case basis, to exempt an eligible professional from the application of the payment differential if the Secretary ''determines, subject to annual renewal that compliance with the requirement for being a successful electronic prescriber would result in a significant hardship.'' This hardship exemption is to be used at the discretion of the Secretary.

As we stated in the CY 2009 PFS proposed rule (74 FR 33549), we will discuss the application of the payment adjustment in future notice and comment rulemaking. We will address the circumstances under which the hardship exemption applies at that time.

Comment: One commenter recommended that we provide a participation option for eligible professionals who predominately practice in skilled nursing facilities. The commenter is concerned that many such professionals are currently unable to participate in the E-Prescribing Incentive Program because the facility's prescribing systems generate orders to an internal pharmacy and, for reasons unspecified by the commenter, do not meet the full definition of a qualified electronic prescribing system.

Response: Since the commenter did not describe what aspects of the definition of ''qualified'' electronic prescribing system a skilled nursing facility's electronic prescribing system fails to meet, it is not entirely clear how the fact that a facility's electronic prescribing system generates orders to an internal pharmacy alone would prevent the facility's system from meeting the definition of a ''qualified'' electronic prescribing system. In an attempt to provide eligible professionals who predominately practice in skilled nursing facilities with more opportunities to participate in the E-Prescribing Incentive Program, however, we are expanding the scope of the electronic prescribing measure's denominator codes to include professional services outside the professional office and outpatient setting. The expanded codes include professional services furnished in skilled nursing facilities and in the home care setting. To be considered a successful electronic prescriber, eligible professionals need only to report 25 separate electronic prescribing events during the reporting period. To qualify for the electronic prescribing incentive payment, a successful electronic prescriber must have 10 percent of their Medicare Part B PFS allowed charges for covered professional services be comprised of the codes in the denominator of the measure. The electronic prescribing system used for these 25 electronic prescribing events must have all of the functionalities listed in the measure's specifications and described in section II.G.5.c.3. below.

Comment: One commenter was concerned that the incentive payment favors prescribers who typically bill high-cost services since the incentive payment is based on Medicare Part B PFS allowed charges. The commenter suggested that the incentive payment should be a flat-rate bonus or a bonus payment that rewards medication management.

Response: We appreciate the comment; however, we do not have the authority to change the basis for the calculation of the incentive payment amount, which is defined in section 1848(m)(2)(A) of the Act.

b. The 2010 Reporting Period for the E-Prescribing Incentive Program

Section 1848(m)(6)(C)(i)(II) of the Act defines ''reporting period'' for the 2010 E-Prescribing Incentive Program to be the entire year. Section 1848(m)(6)(C)(ii) of the Act, however, authorizes the Secretary to revise the reporting period for years after 2009 if the Secretary determines such revision is appropriate, produces valid results on measures reported, and is consistent with the goals of maximizing scientific validity and reducing administrative burden. In the CY 2010 PFS proposed rule (74 FR 33594 through 33595), we proposed that the 2010 E-Prescribing Incentive Program reporting period would be the entire calendar year (January 1, 2010–December 31, 2010).

Comment: A majority of commenters supported the proposed reporting period. One commenter, however, recommended two 6-month reporting periods, because this would allow eligible professionals who are able to implement electronic prescribing in their practice by the middle of 2010 to still benefit from the incentive for 2010.

Response: We do not believe that adoption and implementation of an electronic prescribing system after the start of the 2010 reporting period would necessarily preclude an individual eligible professional from being able to qualify for the incentive payment. The 25 electronic prescribing events required to meet the criteria for successful electronic prescriber for 2010 (see section II.G.5.c. below) can be reported at any time during the 2010 reporting period.

After considering these comments, we are finalizing the entire calendar year as

the 2010 reporting period for the E-Prescribing Incentive Program. Successful electronic prescribers will be eligible to receive an incentive payment equal to 2.0 percent of the total estimated Medicare Part B PFS allowed charges (based on claims submitted by no later than February 28, 2011) for all covered professional services furnished January 1, 2010 through December 31, 2010.

c. Criteria for Determination of Successful Electronic Prescriber for Eligible Professionals

Under section 1848(m)(3)(B) of the Act, in order to qualify for the incentive payment, an eligible professional must be a ''successful electronic prescriber,'' which the Secretary is authorized to identify using 1 of 2 possible criteria. One criterion, under section 1848(m)(3)(B)(ii) of the Act, is based on the eligible professional's reporting, in at least 50 percent of the reportable cases, on any electronic prescribing quality measures that have been established under the physician reporting system, under subsection 1848(k) of the Act (which, as noted previously, we have named ''PQRI'' for ease of reference) and are applicable to services furnished by the eligible professional during a reporting period. We applied this criterion in 2009. However, for years after 2009, section 1848(m)(3)(D) of the Act permits the Secretary in consultation with stakeholders and experts to revise the criteria for submitting data on electronic prescribing measures under section 1848(3)(B)(ii) of the Act.

The second criterion, under section 1848(m)(3)(B)(iii) of the Act, is based on the electronic submission by the eligible professional of a sufficient number (as determined by the Secretary) of prescriptions under Part D during the reporting period. If the Secretary decides to use the latter standard, then, in accordance with section 1848(m)(3)(B)(iv) of the Act, the Secretary is authorized to use Part D drug claims data to assess whether a ''sufficient'' number of prescriptions have been submitted by eligible professionals. However, under section 1848(m)(3)(B)(i) of the Act, if the standard based on a sufficient number (as determined by the Secretary) of electronic Part D prescriptions is applied for a particular reporting period, then the standard based on the reporting on electronic prescribing measures would no longer apply.

For 2010, we proposed to continue to require eligible professionals to report on the electronic prescribing measure used in the 2009 E-Prescribing Incentive Program to determine whether an eligible professional is a successful electronic prescriber, but we proposed to modify the measure's specifications and to use modified reporting criteria based on the authority provided under section 1848(m)(3)(D) of Act, as discussed below.

(1) Reporting the Electronic Prescribing Measure

For 2010, we proposed to make 3 reporting mechanisms available to individual eligible professionals to report the electronic prescribing measure. First, we proposed to retain the claims-based reporting mechanism that is used in the 2009 E-Prescribing Incentive Program. In addition, similar to the PQRI, for the E-Prescribing Incentive Program, we proposed to implement a registry-based reporting mechanism and, depending on whether we finalize the proposed EHR-based reporting mechanism for PQRI, we also proposed that an EHR-based reporting mechanism be available for the electronic prescribing measure.

We proposed that only registries qualified to submit quality measure results and numerator and denominator data on quality measures on behalf of eligible professionals for the 2010 PQRI would be qualified to submit measure results and numerator and denominator data on the electronic prescribing measure on behalf of eligible professionals for the 2010 E-Prescribing Incentive Program. Similarly, we proposed that only EHR products ''qualified'' to potentially be able to submit clinical quality data extracted from the EHR to CMS for the 2010 PQRI would be considered ''qualified'' for the purpose of an eligible professional potentially being able to submit data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program.

We solicited comments on our proposal to provide alternatives to the claims-based reporting mechanism for reporting the electronic prescribing measure, as well as on our proposal to limit the registries and EHR products qualified to submit the electronic prescribing measure for the 2010 E-Prescribing Incentive Program to those that are qualified registries and EHR products, respectively, for the 2010 PQRI.

All commenters supported having alternatives to the claims-based reporting mechanism for reporting the electronic prescribing measure. All commenters were also in agreement that only registries qualified to submit quality measure results and numerator and denominator data on quality measures on behalf of eligible professionals for the 2010 PQRI and EHR products ''qualified'' to submit clinical quality data extracted from the EHR to CMS for the 2010 PQRI be considered ''qualified'' for the purpose of an eligible professional being able to submit data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program. Based on these comments, we are finalizing our proposal that for the 2010 E-Prescribing Incentive Program, eligible professionals will be able to choose whether to submit data on the electronic prescribing measure through claims, a qualified registry, or a qualified EHR product.

Only registries qualified to submit quality measure results and numerator and denominator data on quality measures on behalf of eligible professionals for the 2010 PQRI will be qualified to submit measure results and numerator and denominator data on the electronic prescribing measure on behalf of eligible professionals for the 2010 E-Prescribing Incentive Program. We will post a list of qualified registries for the 2010 E-Prescribing Incentive Program on the E-Prescribing Incentive Program section of the CMS Web site at *http://www.cms.hhs.gov/ERXIncentive* when we post the list of qualified registries for the 2010 PQRI on the PQRI section of the CMS Web site (see section II.G.2. of this final rule with comment period). Not all registries qualified to submit quality measure results and numerator and denominator data on quality measures on behalf of eligible professionals for the 2010 PQRI will be qualified to submit quality measure results and numerator and denominator data on the electronic prescribing measure. That is to say that PQRI qualified registries may not wish to be qualified to submit all measures. The electronic prescribing measure is reportable by an eligible professional any time he or she bills for one of the procedure codes for Part B covered professional services included in the measure's denominator. Some registries that self-nominate to become a qualified registry for PQRI may not choose to self-nominate to become a qualified registry for submitting measures that require reporting at each eligible visit, such as the electronic prescribing measure. Therefore, we cannot guarantee that there will be a registry willing to submit the electronic prescribing measure on behalf of eligible professionals. Registries will need to indicate their desire to qualify to submit measure results and numerator and denominator data on the electronic prescribing measure for the 2010 E-Prescribing

Incentive Program at the time that they submit their self-nomination letter for the 2010 PQRI.

Similarly, only EHR products ''qualified'' to submit clinical quality data extracted from the EHR to CMS for the 2010 PQRI will be considered ''qualified'' for the purpose of an eligible professional being able to submit data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program. As stated in section II.G.2.d.3. of this final rule with comment period, 2009 EHR Testing Program is underway. Therefore, we cannot guarantee that any of the EHR vendors that self-nominated to have one or more of their EHR products ''qualified'' for the PQRI will successfully complete the testing process and therefore, be eligible for participation as a qualified EHR vendor the E-Prescribing Incentive Program. An EHR vendor will need to indicate its intention to have one or more of their EHR products qualified for the purpose of an eligible professional potentially being able to submit data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program at the time that they are being vetted for the 2010 PQRI. We will post a list of qualified EHR vendors and products for the 2010 E-Prescribing Incentive Program on the E-Prescribing Incentive Program section of the CMS Web site at *http://www.cms.hhs.gov/ERXIncentive* when we post the list of qualified EHR vendors and products for the 2010 PQRI on the PQRI section of the CMS Web site (see section II.G.2. of this final rule with comment period). We anticipate completing the 2009 PQRI EHR Testing Program in early 2010.

(2) The Reporting Denominator for the Electronic Prescribing Measure

The electronic prescribing measure, similar to the PQRI measures, has 2 basic elements, which include: (1) a reporting denominator that defines the circumstances when the measure is reportable; and (2) a reporting numerator.

The denominator for the electronic prescribing measure consists of specific billing codes for covered professional services. The measure becomes reportable when any one of these procedure codes is billed by an eligible professional for Part B covered professional services. As initially required under section 1848(k)(2)(A)(ii) of the Act, and further established through rulemaking and under section 1848(m)(2)(B) of the Act, we may modify the codes making up the denominator of the electronic prescribing measure. As such, we proposed to expand the scope of the denominator codes for 2010 to covered professional services outside the professional office and outpatient setting, such as professional services furnished in skilled nursing facilities or the home care setting. We proposed to add the following CPT codes to the denominator of the electronic prescribing measure for 2010: 90862, 99304; 99305; 99306; 99307; 99308; 99309; 99310; 99315; 99316; 99341; 99342; 99343; 99344; 99345; 99347; 99348; 99349; and 99350. We solicited comments on the proposed changes to codes identified for the electronic prescribing measure denominator.

The following is a summary of the comments we received regarding the proposed denominator codes for the 2010 electronic prescribing measure.

Comment: Many commenters supported the proposed expansion of the electronic prescribing measure's denominator codes. However, some commenters noted that a subset of home care physicians will not be able to participate in the E-Prescribing Incentive Program without the addition of codes for domiciliary care visits in the measure's denominator.

Response: We appreciate the commenters' support of the proposed denominator codes. Based on comments indicating that some eligible professionals exclusively make domiciliary care visits, we are adding the following codes to the electronic prescribing measure's denominator for 2010: 99324 through 99328; 99334 through 99337; and 99346.

Comment: Other commenters suggested additional codes for inclusion in the measure's denominator, including an annual nursing facility assessment code (CPT code 99318) in lieu of CPT codes 99307 through 99310, inpatient evaluation and management (E/M) codes, codes for professional services furnished in renal dialysis facilities (CPT codes 90951 through 90970 for outpatient dialysis), and interactive psychotherapy codes (CPT codes 90810 through 90815).

Response: With respect to commenters' suggestions to add other denominator codes that were not proposed, we do not believe it is necessary to expand the denominator codes to include the suggested codes. As we stated previously, the electronic prescribing measure becomes reportable when any one of the procedure codes included in the measure's denominator is billed by an eligible professional for Part B covered professional services. Eligible professionals only need to have 10 percent of their Medicare Part B PFS allowed charges for covered professional services be comprised of the codes in the denominator of the measure and meet the criteria for determining a successful electronic prescriber to qualify to earn an electronic prescribing incentive payment. The incentive payment amount, however, will be calculated based on all of the eligible professional's total estimated Medicare Part B PFS allowed charges for covered professional services, including the services reflected in the suggested codes if such services are Medicare Part B PFS covered professional services.

Accordingly, we are finalizing the following denominator codes for the 2010 electronic prescribing measure: 90862; 99304; 99305; 99306; 99307; 99308; 99309; 99310; 99315; 99316; 99324; 99325; 99326; 99327; 99328; 99334; 99335; 99336; 99337; 99341; 99342; 99343; 99344; 99345; 99346; 99347; 99348; 99349; and 99350. There are no diagnosis codes in the measure's denominator and there are no age/gender requirements in order for a patient to be included in the measure's denominator (that is, reporting of the electronic prescribing measure is not further limited to certain ages or a specific gender). Eligible professionals are not required to report this measure in all cases in which the measure is reportable. Eligible professionals who do not bill for one of the procedure codes for Part B covered professional services included in the measure's denominator will have no occasion to report the electronic prescribing measure.

By December 31, 2009, we will post the final specifications of the measure on the ''E-Prescribing Measure'' page of the E-Prescribing Incentive Program section of the CMS Web site at *http://www.cms.hhs.gov/ERXIncentive.*

(3) Qualified Electronic Prescribing System—Required Functionalities and Part D E-Prescribing Standards

To report the electronic prescribing measure in 2010, we proposed that the eligible professional must report one of the measure's numerator ''G'' codes (74 FR 33597). However, when reporting any of the G-codes for purposes of qualifying for the incentive payment for electronic prescribing in 2010, we proposed that the professional must have and regularly use a ''qualified'' electronic prescribing system, as defined in the electronic prescribing measure specifications.

Required Functionalities for a ''Qualified'' Electronic Prescriber System. We proposed (74 FR 33596 through 33597) that what constitutes a ''qualified'' electronic prescribing

system is based upon certain required functionalities that the system can perform (74 FR 33596 through 33597). As currently specified in the electronic prescribing measure for 2009, a ''qualified'' electronic prescribing system would be one that can:

(a) Generate a complete active medication list incorporating electronic data received from applicable pharmacies and PBMs, if available.

(b) Allow eligible professionals to select medications, print prescriptions, electronically transmit prescriptions, and conduct alerts (written or acoustic signals to warn the prescriber of possible undesirable or unsafe situations including potentially inappropriate dose or route of administration of a drug, drug-drug interactions, allergy concerns, or warnings and cautions). This functionality must be enabled.

(c) Provide information related to lower cost, therapeutically appropriate alternatives (if any). The ability of an electronic prescribing system to receive tiered formulary information, if available, would suffice for this requirement for 2010 and until this function is more widely available in the marketplace.

(d) Provide information on formulary or tiered formulary medications, patient eligibility, and authorization requirements received electronically from the patient's drug plan (if available).

Part D Electronic Prescribing Standards. Section 1848(m)(3)(B)(v) of the Act specifies that to the extent practicable, in determining whether an eligible professional is a successful electronic prescriber, ''the Secretary shall ensure that eligible professionals utilize electronic prescribing systems in compliance with standards established for such systems pursuant to the Part D Electronic Prescribing Program under section 1860D–4(e)'' of the Act. The Part D standards for electronic prescribing systems establish which electronic standards Part D sponsors, providers, and dispensers must use when they electronically transmit prescriptions and certain prescription related information for Part D covered drugs that are prescribed for Part D eligible individuals. To be a qualified electronic prescribing system under the current E-Prescribing Incentive Program, electronic systems must convey the information listed above under (a) through (d) using the standards currently in effect for the Part D electronic prescribing program. Additional Part D electronic prescribing standards were implemented April 1, 2009. These latest Part D electronic prescribing standards, and those that had previously been adopted, can be found on the CMS Web site at *http://www.cms.hhs.gov/eprescribing.*

To ensure that eligible professionals utilize electronic prescribing systems that meet these requirements, the electronic prescribing measure requires that those functionalities required for a ''qualified'' electronic prescribing system utilize the adopted Part D electronic prescribing standards. The Part D electronic prescribing standards relevant to the four functionalities for a ''qualified'' system in the electronic prescribing measure, described above and listed as (a), (b), (c), and (d), currently are:

(a) Generate medication list—Use the National Council for Prescription Drug Programs (NCPDP) Prescriber/Pharmacist Interface SCRIPT Standard, Implementation Guide, Version 8, Release 1, October 2005 (hereinafter ''NCPDP SCRIPT 8.1'') Medication History Standard;

(b) Transmit prescriptions electronically—Use the NCPDP SCRIPT 8.1 for the transactions listed at § 423.160(b)(2);

(c) Provide information on lower cost alternatives—Use the NCPDP Formulary and Benefits Standard, Implementation Guide, Version 1, Release 0 (Version 1.0), October 2005 (hereinafter ''NCPDP Formulary and Benefits 1.0'');

(d) Provide information on formulary or tiered formulary medications, patient eligibility, and authorization requirements received electronically from the patient's drug plan—use:

(1) NCPDP Formulary and Benefits 1.0 for communicating formulary and benefits information between prescribers and plans;

(2) Accredited Standards Committee (ASC) X12N 270/271—Health Care Eligibility Benefit Inquiry and Response, Version 4010, May 2000, Washington Publishing Company, 004010X092 and Addenda to Health Care Eligibility Benefit Inquiry and Response, Version 4010A1, October 2002, Washington Publishing Company, 004010X092A1 for communicating eligibility information between the plan and prescribers;

(3) NCPDP Telecommunication Standard Specification, Version 5, Release 1 (Version 5.1), September 1999, and equivalent NCPDP Batch Standard Batch Implementation Guide, Version 1, Release 1 (Version 1.1), January 2000 for communicating eligibility information between the plan and dispensers.

There are, however, Part D electronic prescribing standards that are in effect for functionalities that are not commonly utilized at this time. Such functionalities are not currently required for a ''qualified'' system under the E-Prescribing Incentive Program. One example is Rx Fill Notification, which is discussed in the Part D electronic prescribing final rule (73 FR 18918, 18926). For purposes of the 2010 Electronic Prescribing Program and incentive payments, we did not propose to require that an electronic prescribing system contain all functionalities for which there are available Part D electronic prescribing standards. For those required functionalities described above, we proposed that a ''qualified'' system must use the adopted Part D electronic prescribing standards for electronic messaging.

The following is a summary of the comments we received regarding the proposed required functionalities and Part D electronic prescribing standards for a qualified electronic prescribing system for 2010.

Comment: Many commenters supported the list of required functionalities for what constitutes a ''qualified'' system.

Response: We appreciate the commenters' positive feedback. We believe the list of required functionalities leverage many of the potential advantages to electronic prescribing, such as, but not limited to, improving patient safety and quality of care, improving formulary adherence, and providing access to patient's medication history.

Comment: One commenter requested clarification with respect to qualification (b) above, which requires that the functionality to allow eligible professionals to select medications, print prescriptions, electronically transmit prescriptions, and conduct alerts be enabled. The commenter recommended that we clarify in the final rule that '' 'printing prescriptions' from a qualified electronic prescribing system does *not* meet the criteria for 'creating' or 'generating' an e-prescription.''

Response: All functionalities required of a ''qualified'' electronic prescribing system must be enabled. As noted by the commenter, printed prescriptions, however, do not qualify as an electronic prescribing event. In order for a prescription to be considered an electronic prescribing event, the prescription must be transmitted electronically using the applicable standards and the prescriber's system must warn the prescriber of possible undesirable or unsafe situations.

Comment: One commenter recommended that we clearly articulate how we will align the definition of being a ''successful electronic

prescriber'' with the forthcoming ''meaningful use'' definition related to health information technology. Particularly, commenter recommended that the standards should come together in 2011 to promote the objective that for BOTH sets of incentives clinicians:

- Use computerized physician order entry (CPOE) for all orders;
- Implement drug/drug, drug/allergy, drug/formulary checks;
- Generate and transmit permissible prescriptions electronically;
- Maintain active medication lists; and
- Maintain active medication allergy lists.

The commenter is concerned that in the absence of greater alignment, the electronic prescribing standard will be inconsistent with the proposed meaningful use definition, and could undermine that definition and confuse clinicians.

Response: CMS is actively working internally and with external agencies, such as the Office of the National Coordinator (ONC) on meaningful use and its implications relative to our PQRI and E-prescribing Incentive Programs. Guidance on the definition of ''meaningful use'' is beyond the scope of this rule and will be provided in separate notice and comment rulemaking specifically addressing meaningful use.

Comment: One commenter recommended that CMS provide a list of qualified systems in order to assist eligible professionals with accurately selecting a system.

Response: We are unable to provide this information since we do not vet electronic prescribing systems to ensure that the systems have all of the required functionalities. Eligible professionals should be able to assess whether a system is qualified by going through the list of required functionalities and asking the system's vendor whether the system is capable of doing all of the required functionalities.

After considering the comments, we are finalizing as the required functionalities for a qualified electronic prescribing system for 2010 those outlined in the section above entitled ''Required Functionalities for a 'Qualified' Electronic Prescribing System.'' In addition, for each required functionality of a qualified system, the system must use the adopted Part D electronic prescribing standards for electronic messaging listed above in the section entitled ''Part D Electronic Prescribing Standards.''

There are other aspects of the functionalities for a ''qualified'' system that are not dependent on electronic messaging and are part of the software of the electronic prescribing system, for which Part D standards for electronic prescribing do not pertain and are not required for purposes of the E-Prescribing Incentive Program. For example, the requirements in qualification (b) listed above that require the system to allow professionals to select medications, print prescriptions, and conduct alerts are functions included in the particular software, for which Part D standards for electronic messaging do not apply.

We are aware that there are significant numbers of eligible professionals who are interested in earning the incentive payment, but currently do not have an electronic prescribing system. The electronic prescribing measure does not require the use of any particular system or transmission network; only that the system be a ''qualified'' system having the functionalities described above based on Part D electronic prescribing standards. If the professional does not have general access to an electronic prescribing system in the practice setting, there is nothing to report and the eligible professional would not be able to participate in the E-Prescribing Incentive Program.

(4) The Reporting Numerator for the Electronic Prescribing Measure

Currently, to report for an applicable case where 1 of the denominator codes is billed for Part B covered professional services, an eligible professional must report 1 of 3 G-codes specified in the electronic prescribing measure.

For 2010, we proposed to modify the first G-code (G8443) to indicate that at least 1 prescription in connection with the visit billed was electronically prescribed (74 FR 33597). In addition, we proposed to eliminate the 2 remaining G-codes from the measure's numerator: G8445: Qualified E-prescribing System Available, but no Prescription(s) were Generated During the Encounter; and G8446: E-prescribing System Available, but not Used for One or More Prescriptions Due to Patient/System Reasons. We solicited comments on the proposed modifications to the electronic prescribing measure numerator.

The following is a summary of the comments we received regarding the proposed reporting numerator for the electronic prescribing measure for 2010.

Comment: A majority of commenters supported simplification of the measure's numerator to only 1 G-code. However, one commenter was opposed to the elimination of both the G8445 and G8446 codes, while other commenters were specifically opposed to the elimination of the G8446 code. The commenters believed that continued reporting is needed for cases in which an eligible professional would have electronically prescribed had electronic prescribing been possible, such as electronic prescribing of controlled substances.

Response: We are finalizing our proposal to modify the G-codes for the electronic prescribing measure. Since we are revising the criteria for determining that an eligible professional is a successful electronic prescriber to assess the actual number of electronic prescribing events (with the minimum threshold of 25 events) during the reporting period rather than assessing the percentage of eligible cases on which an eligible professional reported the measure, we believe it is no longer necessary to require eligible professionals to report the measure to us for cases where an eligible professional would have electronically prescribed but electronic prescribing was not possible or that no prescriptions were generated.

Comment: One commenter requested clarification on whether the revised G8443 code indicates at least one prescription ''generated'' by a qualified system or indicates at least one prescription ''sent electronically.''

Response: The new G-code for 2010 indicates that at least 1 prescription created during the encounter was generated and transmitted electronically using a qualified electronic prescribing system.

Comment: Another commenter suggested that instead of modifying the G-code to indicate that at least 1 prescription in connection with the visit billed was electronically prescribed, we should modify the G-code to indicate that ''at least 1 electronic prescription submitted for all qualified prescriptions for this visit.'' This would allow eligible professionals to report the G-code in all of the following circumstances: (1) All prescriptions were transmitted electronically; (2) some prescriptions were transmitted electronically; other prescriptions did not qualify for electronic transmittal; and (3) no prescriptions were submitted or qualified for electronic transmittal. The commenter was concerned that the proposed single G-code approach would not allow measure rates to be calculated as the numerator would not include visits for which no qualified prescriptions were submitted. The commenter further recommended that the measure rate calculations exclude instances where there were qualified

prescriptions, but no prescriptions were transmitted electronically.

Response: We appreciate the commenter's feedback. However, before eligible professionals can begin using electronic prescribing technology, they must first adopt the technology. Since, as we discussed in the CY 2010 PFS proposed rule (74 FR 33593), rates for the adoption and use of electronic prescribing technology by eligible professionals are still low and 2010 is only the second year of this incentive program, our goal for the 2010 E-Prescribing Incentive Program is to focus on increasing eligible professionals' adoption of electronic prescribing technology. We believe that this will be facilitated by administering the E-Prescribing Incentive Program in a way that does not create an unnecessarily large reporting burden on eligible professionals in order to qualify for the incentive.

The criteria for successful reporting we are finalizing for 2010 are designed to reward those eligible professionals who demonstrate that they have adopted a qualified electronic prescribing system and actually used the system in a substantial way to electronically prescribe. In this context, the reporting of information as to circumstances where a professional did not electronically prescribe is not pertinent. Additionally, although it may be of interest to measure the proportion of prescribing events that are electronic, we do not believe such detail at the individual or group practice level is of sufficient value to warrant the high burden of reporting such information. We do note that in the future the use of Part D claims data may allow this information to be collected without the necessity for professionals to specifically report such details.

Accordingly, for the 2010 electronic prescribing measure, we are finalizing the following numerator G-code: Gxxxx: At least 1 prescription created during the encounter was generated and transmitted electronically using a qualified electronic prescribing system.

A new G-code will be assigned by CMS to the above code for 2010 and will be included in the measure's specifications, which we will post on the ''E-Prescribing Measure'' page of the E-Prescribing Incentive Program section of the CMS Web site at *http://www.cms.hhs.gov/ERXIncentive.* We will post by no later than December 31, 2009, the final electronic prescribing measure specifications for 2010.

Because the electronic prescribing quality measure will apply only when an eligible professional furnishes services indicated by one of the codes included in the measure's denominator, for claims-based reporting, for example, it will not be necessary for an eligible professional to report G-codes for the electronic prescribing measure on claims not containing one of the denominator codes. However, if reporting a G-code, the G-code data submission will only be considered valid if it appears on the same Medicare Part B claim containing one of the electronic prescribing quality measure's denominator codes.

In addition, if the eligible professional submits a Medicare Part B claim containing one of the electronic prescribing measure's denominator codes, he or she can report the numerator G-code only when the eligible professional furnishes services indicated by one of the G-codes included in the measure's numerator. That is, only when at least 1 prescription created during the encounter was generated and transmitted electronically using a qualified electronic prescribing system.

(5) Criteria for Successful Reporting of the Electronic Prescribing Measure

As discussed above, section 1848(m)(3)(B)(ii) of the Act specifies that an eligible professional shall be treated as a successful electronic prescriber for a reporting period based on the eligible professional's reporting of the electronic prescribing measure in at least 50 percent of applicable cases. For 2010, however, we proposed to exercise our authority under section 1848(m)(3)(D) of the Act to revise the criteria for submitting data on the electronic prescribing measure (74 FR 33598). For 2010, rather than requiring that the electronic prescribing measure be reported for a certain proportion of reportable cases, we proposed to make the determination of whether an eligible professional is a successful electronic prescriber based on a count of the number of times (minimum threshold of 25) an eligible professional reports that at least one prescription created during the encounter was generated using a qualified electronic prescribing system. We solicited comments on the proposed criteria for determination of successful electronic prescriber.

The following is a summary of the comments we received regarding the proposed criteria for determination of successful electronic prescriber for the 2010 E-Prescribing Incentive Program.

Comment: A majority of commenters supported the changes proposed for the criteria for the determination of successful electronic prescriber for 2010 and the proposed threshold for reporting the electronic prescribing measure at least 25 times during the reporting period. Some commenters, however, expressed concern that the proposed threshold may be insufficient to ensure that electronic prescribing is fully adopted into the prescriber's clinical practice and workflow since some eligible professionals may be able to meet this threshold in a matter of a few days or weeks.

Some commenters suggested that in lieu of a fixed threshold, we establish a percent threshold based upon the percent of eligible cases in 2009. Another commenter suggested that if an eligible professional has an electronic prescribing system, he or she should be using the system for all prescriptions. Other commenters suggested a threshold of 250–500 electronic prescribing events during the reporting period.

Response: We appreciate the commenters' feedback, and believe that lowering this requirement simplifies the reporting burden, which would encourage more eligible professionals to participate in this incentive program, and more importantly, to adopt an electronic prescribing system.

We agree with commenters that some eligible professionals may be able to meet the criteria for successful reporting in a matter of a few days or weeks. However, in establishing the threshold of 25 electronic prescribing events, we also took into account the many valid circumstances that would prevent eligible professionals who have adopted a qualified electronic prescribing system from having 25 electronic prescribing events during the calendar year and variations in practice characteristics. In addition to the patient-related, system-related, or legal reasons that were formerly addressed by reporting the G8446 code for the measure, some eligible professionals may have few opportunities to report the electronic prescribing measure since they generate a low volume of prescriptions, have few Medicare patients, infrequently provide the services included in the measure's denominator, or a combination of these factors.

Comment: Other commenters were concerned that the proposed changes to the criteria for determining a successful electronic prescriber, while lower than the 2009 criteria, would make it more difficult to qualify for the electronic prescribing incentive payment. The commenters were concerned that the impact on eligible professionals will vary depending on the percentage of Medicare patients in their practice and the volume of prescriptions generated by the practice. For some practices 25 electronic prescriptions could be achieved in a matter of days but for

other practices it may be difficult or impossible to achieve this threshold. One commenter suggested that lowering the reporting threshold from 25 to 15 may be enough to get an eligible professional to adopt and use an electronic prescribing system and to recognize its superiority. Other commenters suggested that we retain the criteria to report the electronic prescribing measure on 50 percent of applicable cases instead.

Response: As we stated previously, we have taken the commenters' concerns into consideration in establishing the proposed threshold of 25 electronic prescribing events. On average, we believe an eligible professional would need to have 2 to 3 electronic prescribing events per month to be considered a successful electronic prescriber. We believe that this is achievable by a majority of eligible professionals. However, we will monitor the 2010 E-Prescribing Incentive Program results and take the commenters' recommendation into consideration as we develop the criteria for future years.

Comment: Some commenters recommended that we allow for alternative reporting to accommodate those who may not be able to electronically prescribe at least 25 times due to state or federal laws and regulations that do not allow electronic prescribing for narcotics or other controlled substances.

Response: As stated previously, we have taken into account the many valid circumstances that would prevent eligible professionals who have adopted a qualified electronic prescribing system from having 25 electronic prescribing events during the calendar year, including state or federal laws and regulations that do not allow electronic prescribing for narcotics or other controlled substances, when we established the proposed threshold of 25 electronic prescribing events. Therefore, we do not believe that it is necessary to establish alternative reporting criteria for such eligible professionals.

Comment: One commenter recommended that, for eligible professionals who practice in a nursing facility and other institutional settings, the determination of successful electronic prescriber should be made by measuring the electronic management of prescription drugs instead of measuring adoption and use of a qualified electronic prescribing system. The commenter recommends that eligible professionals be required to submit, with each eligible CPT code, a HCPCS code verifying that all prescription medications for the patient were electronically reviewed prior to the submission of the claims. This would continue to incentivize eligible professionals, who are prescribing schedule drugs, or working in a facility which does not provide access to electronic prescribing or the internet, for electronically managing patients' drugs.

Response: We are unclear as to how incentivizing eligible professionals for electronically managing patients' drugs encourages the adoption and use of electronic prescribing technology. In contrast, the proposed criteria for determining a successful electronic prescriber encourage the adoption and use of electronic prescribing technology by requiring eligible professionals to report to us that they have used a qualified electronic prescribing system during the reporting period. Therefore, we are not adopting the commenter's recommendation.

Comment: One commenter recommended that we institute a ''floor'' or minimum number of prescriptions that must be prescribed in order to even be assessed for the electronic prescribing incentive. This would protect consultants or proceduralists who do not prescribe medications from being assessed a payment adjustment in future years.

Response: We believe that such a floor is already addressed by the limitation required under section 1848(m)(2)(B) of the Act. In order to avoid being subject to the limitation for 2010 and qualify to earn an electronic prescribing incentive payment, eligible professionals who meet the criteria for successful electronic prescriber must have at least 10 percent of their Medicare Part B PFS allowed charges for covered professional services comprised of the codes in the denominator of the electronic prescribing measure. In addition, we note that under section 1848(m)(2)(B) of the Act, eligible professionals who are subject to the limitation would not be subject to the payment adjustment.

Comment: One commenter recommended that we apply the proposed criteria for determining a successful electronic prescriber for 2010 to the 2009 E-Prescribing Incentive Program so that those eligible professionals who reported that they electronically prescribed at least 25 times in 2009 would also be eligible to receive a 2009 electronic prescribing incentive payment.

Response: We do not have the authority to change the criteria for determining a successful electronic prescriber for 2009. Section 1848(m)(3)(D) of the Act does not authorize us to revise the criteria for submitting data on electronic prescribing measures specified under subparagraph (B)(ii) until years after 2009. Additionally, even if we had the authority to modify the criteria for determining a successful electronic prescriber for 2009, we could not do so retrospectively.

Comment: Some commenters urged us to use our authority under section 1848(m)(3)(B)(iv) of the Act to utilize Part D claims to determine if eligible professionals are prescribing a sufficient number of prescriptions electronically. The commenters noted that this would be a more efficient means of capturing the information needed by us for determining whether an eligible professional is a successful electronic prescriber. One commenter stressed that it is necessary for us to overcome our concerns about the use of a certain number of Part D prescribing events as a basis for the incentive payment in time for implementation of the meaningful use criteria in 2011.

Response: We agree that using Part D claims to determine if eligible professionals are prescribing a sufficient number of prescriptions electronically could potentially be a more efficient means of capturing the information needed by us for determining whether an eligible professional is a successful electronic prescriber and we anticipate that we would do so as soon as it is practical to do so. As we stated in the CY 2010 PFS proposed rule (74 FR 33595), however, the accuracy and completeness of the Part D data with respect to whether a prescription was submitted electronically by an individual eligible professional is unknown since that information will not be collected on the Part D claims, until 2010. During 2010 we anticipate evaluating the adequacy of Part D data to determine the feasibility of its use for determining whether an eligible professional qualifies as a successful electronic prescriber. In the meantime, we are implementing alternative reporting mechanisms (that is, registry and EHR reporting) for reporting the electronic prescribing measure in 2010 in an effort to provide more flexibility to eligible professionals.

After considering the comments, for 2010, an eligible professional will be required to report the electronic prescribing measure at least 25 times during the reporting period for purposes of meeting the criteria for successful electronic prescriber and qualifying to earn the electronic prescribing incentive (subject to the limitation required under section 1848(m)(2)(B) of the Act). In other words, an eligible professional will be required to report that he or she

electronically prescribed at least 25 times during the reporting period for services indicated by one of the codes included in the measure's denominator.

As stated previously, by December 31, 2009, we will post the final specifications of the measure on the ''E-Prescribing Measure'' page of the E-Prescribing Incentive Program section of the CMS Web site at *http://www.cms.hhs.gov/ERXIncentive*.

d. Determination of the 2010 Incentive Payment Amount for Individual Eligible Professionals Who Are Successful Electronic Prescribers

Section 1848(m)(2)(B) of the Act imposes a limitation on the electronic prescribing incentive payment. The Secretary is authorized to choose 1 of 2 possible criteria for determining whether or not the limitation applies to a successful electronic prescriber. The first criterion, under section 1848(m)(2)(B)(i) of the Act, is based upon whether the Medicare Part B allowed charges for covered professional services to which the electronic prescribing quality measure applies are less than 10 percent of the total Medicare Part B PFS allowed charges for all covered professional services furnished by the eligible professional during the reporting period. The second criterion, under section 1848(m)(2)(B)(ii) of the Act, is based on whether the eligible professional submits (both electronically and nonelectronically) a sufficient number (as determined by the Secretary) of prescriptions under Part D (which can, again, be assessed using Part D drug claims data). If the Secretary decides to use the latter criterion, then, in accordance with section 1848(m)(2)(B) of the Act, the criterion based on the reporting on electronic prescribing measures would no longer apply. The statutory limitation also applies with regard to the future application of the payment adjustment.

Based on our proposal to make the determination of whether an eligible professional is a ''successful electronic prescriber'' based on submission of the electronic prescribing measure, we proposed to apply the criterion under section 1848(m)(2)(B)(i) of the Act for the limitation for the 2010 E-Prescribing Incentive Program.

The following is a summary of the comments we received regarding the proposed criterion for the limitation.

Comment: Although the commenters acknowledged that the limitation on the electronic prescribing incentive payment is required by law, a few commenters were opposed to the 10 percent threshold because certain types of eligible professionals would be unlikely to meet the 10 percent threshold.

Response: Unfortunately, we do not have the authority to change the 10 percent threshold, since the threshold is required by section 1848(m)(2)(B)(i) of the Act. In an effort to allow more eligible professionals to potentially qualify for the incentive payment, however, we have expanded the denominator of the electronic prescribing measure. Despite the requirement that 10 percent or more of an eligible professional's charges must be comprised of codes in the denominator, preliminary information from the 2009 E-Prescribing Incentive Program indicates that over 90 percent of eligible professionals who have prescribing privileges do not appear to be affected by the limitation. We believe that expanding the denominator of the measure will further reduce the percentage of eligible professionals who will be subject to the limitation.

Comment: One commenter requested that we make available to individual eligible professionals the percentage of their prior year's Medicare charges that resulted from the codes included in the electronic prescribing measure's denominator specifications since many eligible professionals may not have the time or analytic tools necessary to make the determination of whether they are likely to meet the 10 percent threshold prior to making the decision on whether to electronically prescribe.

Response: Unfortunately, we do not have the resources to calculate and provide feedback to eligible professionals regarding the composition of their charges. Most electronic billing systems, however, will have this functionality and should be able to provide eligible professionals who use such billing systems with this information.

Since, as discussed above, we are finalizing for 2010 our proposal to make the determination of whether an eligible professional is a ''successful electronic prescriber'' based on submission of the electronic prescribing measure, we also are finalizing our proposal to analyze the claims submitted by the eligible professional at the TIN/NPI level to determine whether the 10 percent threshold is met in determining the receipt of an electronic prescribing incentive payment for 2010 by an eligible professional. This calculation is expected to take place in the first quarter of 2011 and will be performed by dividing the eligible professional's total 2010 Medicare Part B PFS allowed charges for all such covered professional services submitted for the measure's denominator codes by the eligible professional's total Medicare Part B PFS allowed charges for all covered professional services (as assessed at the TIN/NPI level). If the result is 10 percent or more, then the statutory limitation will not apply and a successful electronic prescriber will qualify to earn the electronic prescribing incentive payment. If the result is less than 10 percent, then the statutory limitation will apply and the eligible professional will not earn an electronic prescribing incentive payment—even if he or she electronically prescribes and reports a G-code indicating that he or she generated and transmitted a prescription electronically at least 25 times for those eligible cases that occur during the 2010 reporting period. Although an individual eligible professional may decide to conduct his or her own assessment of how likely this statutory limitation is expected to apply to him or her before deciding whether or not to report the electronic prescribing measure, an individual eligible professional may report the electronic prescribing measure without regard to the statutory limitation for the incentive payment.

e. Reporting Option for Satisfactory Reporting of the Electronic Prescribing Measure by Group Practices

In the CY 2010 PFS proposed rule (74 FR 33599 through 33600), we discussed making incentive payments to group practices based on the determination that the group practice, as a whole (that is, the TIN), is a successful electronic prescriber for 2010, as required under section 1848(m)(3)(C)(i) of the Act. In addition, we noted that section 1848(m)(3)(C)(iii) of the Act requires that payments to a group practice by reason of the process established under section 1848(m)(3)(C)(i) of the Act shall be in lieu of the payments that would otherwise be made under this subsection to eligible professionals in the group practice for being a successful electronic prescriber.

(1) Definition of ''Group Practice''

Section 1848(m)(3)(C)(i) of the Act authorizes the Secretary to define ''group practice.'' For purposes of determining whether a group practice is a successful electronic prescriber, we proposed that a ''group practice'' would consist of a physician group practice, as defined by a TIN, with at least 200 or more individual eligible professionals (or, NPIs) who have reassigned their billing rights to the TIN (74 FR 33599). In addition, we proposed to limit the group practices eligible to participate in the 2010 E-Prescribing Incentive

Program through the group practice reporting option to those group practices selected to participate in the PQRI group practice reporting option.

The following is a summary of the comments received regarding our proposed definition of ''group practice''.

Comment: Several commenters urged CMS to permit small and mid-sized group practices with fewer than 200 eligible professionals to participate in the group practice reporting option. One commenter requested that we reconsider the 200 individual eligible professional thresholds for the definition of a group practice or that we at least offer an alternative reporting option that uses a statistical sampling model for primary care oriented group practices.

Response: We recognize that the proposed required group practice size of 200 or more individual eligible professionals limits participation. As stated in the proposed rule (74 FR 33599), for 2010, we would like to limit the number of groups participating in the group practice reporting option until we get further experience with the group practice reporting option. Therefore, we are not adopting the commenters' suggestion to permit small and mid-sized group practices with fewer than 200 eligible professionals to participate in the group practice reporting option and are finalizing the definition of ''group practice'' for the electronic prescribing group practice reporting option as proposed.

In order for a group practice to participate in the electronic prescribing group practice reporting option for 2010, the group practice must be one that is selected to participate in the PQRI group practice reporting option, which requires that group practices have 200 or more eligible professionals. Group practices cannot solely participate in the electronic prescribing group practice reporting option. A group practice can choose to participate in: (1) both the PQRI group practice reporting option and the electronic prescribing group practice reporting option; (2) the PQRI group practice reporting option but participate in the E-Prescribing Incentive Program as individual eligible professionals; or (3) the PQRI group practice reporting option but not participate in the E-Prescribing Incentive Program at all.

We will use this initial implementation year to explore and refine the group practice reporting option and anticipate expanding this option to group practices with less than 200 individual eligible professionals in future program years.

Comment: A commenter urged us to keep PQRI and the E-Prescribing Incentive programs separate and distinct for group practices wishing to participate in the PQRI group practice reporting option.

Response: The PQRI and E-Prescribing Incentive Programs are separate and distinct incentive programs with different program requirements. However, in order for a group practice to participate in the electronic prescribing group practice reporting option, one of the participation requirements is that the group practice must be one that is selected to participate in the PQRI group practice reporting option. As stated previously, a group practice can choose to participate in: (1) Both the PQRI group practice reporting option and the electronic prescribing group practice reporting option; (2) the PQRI group practice reporting option but participate in the E-Prescribing Incentive Program as individual eligible professionals; or (3) the PQRI group practice reporting option but not participate in the E-Prescribing Incentive Program at all. Therefore, participation in the E-Prescribing Incentive Program, whether as a group practice or at the individual eligible professional level, is optional for those group practices selected to participate in the PQRI group practice reporting option.

For those group practices who choose to participate in both the PQRI and electronic prescribing group practice reporting option, it is important to note that the electronic prescribing measure is not reportable using the PQRI group practice reporting option data collection tool. The electronic prescribing measure is reportable via the same reporting mechanisms that are available to individual eligible professionals participating in the 2010 E-Prescribing Incentive Program (that is claims, a qualified registry, or a qualified EHR).

Comment: A commenter had concerns that some group practices will have difficulty ramping up for participation in both the PQRI and electronic prescribing group practice reporting options between now and January 1, 2010.

Response: As we stated previously, participation in the electronic prescribing group practice reporting option by group practices selected to participate in the PQRI group practice reporting option is optional. To the extent that a group practice chooses to participate in both programs' group practice reporting options, it does not need to be ready to begin the PQRI and electronic prescribing group practice reporting options between now and January 1, 2010. As stated in section II.G.2. of this final rule with comment period, we are requiring interested group practices that meet the criteria to self-nominate by January 31, 2010 and indicate to us whether the practice wishes to participate in just the PQRI group practice reporting option or both the PQRI and electronic prescribing group practice reporting option. The reporting periods for both programs are the same (that is, January 1, 2010 through December 31, 2010), the data submission timelines, however, are different.

In an attempt to ensure the group practices have sufficient time to become acclimated to the PQRI group practice reporting option, for the 2010 PQRI, the group practice will be notified of the selection decision to participate in the PQRI group practice reporting option no later than the second quarter of 2010. Training on the data collection tool is projected to be provided in the third quarter of 2010. The group practice will not be expected to complete and return the data collection tool until the end of the first quarter of 2011.

For the 2010 E-Prescribing Incentive Program, we proposed requiring that reporting of the electronic prescribing measure by group practices would occur under the same data submission timeline as reporting of the electronic prescribing measure by individual eligible professionals. The proposed reporting mechanisms for the electronic prescribing measure would be the same regardless of whether an eligible professional is participating individually or as a group practice. Furthermore, the electronic prescribing measure was not proposed to be reportable via the PQRI group practice reporting option data collection tool.

To summarize, based on these comments, for purposes of the 2010 E-Prescribing Incentive Program, we are finalizing a group practice reporting option that will consist of ''group practice'' being defined as a TIN with at least 200 or more individual eligible professionals (as identified by NPIs) who have reassigned their billing rights to the TIN and who are participating in the 2010 PQRI group practice reporting option. Therefore, unlike individual eligible professionals who are not required to participate in the PQRI, to be eligible to earn an electronic prescribing incentive in 2010, group practices that wish to participate in the electronic prescribing group practice reporting option will be required to participate in the PQRI group practice reporting option. Participation in the E-Prescribing Incentive Program, including participation in the electronic prescribing group practice reporting option is, however, optional for group

practices that are participating in PQRI under the group practice reporting option. If a group practice wishes to participate in the 2010 E-Prescribing Incentive Program under the group practice reporting option, it must indicate its desire to do so at the time that the group practice self-nominates to participate in the 2010 PQRI group practice reporting option. There is no need for group practices to indicate their intent to participate in the 2010 E-Prescribing Incentive Program as individual eligible professionals when the group practice self-nominates to participate in the 2010 PQRI group practice reporting option.

Group practices interested in participating in the 2010 PQRI through the group practice reporting option are required to submit a self-nomination letter to CMS, requesting to participate in the 2010 PQRI group practice reporting option. Instructions for submitting the self-nomination letter will be posted on the PQRI section of the CMS Web site by November 15, 2009. A group practice that wishes to participate in the E-Prescribing Incentive Program group practice reporting option will be notified of the selection decision to participate in the E-Prescribing Incentive Program at the same time that it is notified of the selection decision for the PQRI group practice reporting option.

In addition to meeting the eligibility requirements discussed in section II.G.5.e.1. of this final rule with comment period, a group practice that wishes to participate in the 2010 E-Prescribing Incentive Program under the group practice reporting option will also have to indicate how it intends to report the electronic prescribing measure. That is, the group practice will need to indicate in its self-nomination letter which reporting mechanism the group practice intends to use for purposes of participating in the 2010 E-Prescribing Incentive Program group practice reporting option.

(2) Process for Group Practices to Participate as Group Practices and Criteria for Successful Reporting of the Electronic Prescribing Measure by Group Practices

For group practices selected to participate in the electronic prescribing group practice reporting option for 2010, we proposed the reporting period would be January 1, 2010 to December 31, 2010 (74 FR 33599 through 33600).

We proposed that physician groups selected to participate in the 2010 E-Prescribing Incentive Program through the group practice reporting option would be able to choose to report the electronic prescribing measure through the claims-based, the registry-based, or, contingent upon us finalizing this reporting mechanism for the 2010 PQRI, the EHR-based reporting mechanism.

In order for a group practice to be considered a successful electronic prescriber, we proposed that the group practice would have to report that at least 1 prescription during an encounter was generated using a qualified electronic prescribing system in at least 2,500 instances during the reporting period. We solicited comments on the proposed criteria for determining whether a group practice is a successful electronic prescriber. We also invited feedback on our underlying assumptions.

Section 1848(m)(2)(B) of the Act specifies that the limitation on the applicability of the electronic prescribing incentive applies to group practices as well as individual eligible professionals. Therefore, in determining whether a group practice will receive an electronic prescribing incentive payment for 2010 by meeting the proposed reporting criteria described above, we would determine whether the 10 percent threshold is met based on the claims submitted by the group practice.

The following is a summary of the comments we received regarding the proposed process for group practices to participate as group practices and criteria for successful reporting of the electronic prescribing measure by group practices.

Comment: One commenter agrees with CMS' assumptions and proposals for group reporting and believed it is reasonable to set criteria for successful electronic prescribing using the 2,500 threshold. Conversely, one commenter believed that 2,500 electronic prescribing events during the reporting period is too low a threshold for group practices and suggested that the threshold should be 25,000 to 50,000 electronic prescribing instances during the reporting period per group practice. One commenter believed that CMS should retain the 50 percent rule and thinks that establishing a numerical target of 2,500 electronic prescribing instances during the reporting period creates an unbalanced incentive depending on practice type, size, and percent Medicare patient mix. Another commenter stated that the electronic prescribing group practice reporting option should not be different for a group practice versus an individual eligible professional.

Response: By establishing a reporting threshold of 2,500 electronic prescribing events per reporting period per group practice, we desired to implement a threshold that is obtainable and demonstrates that the group practice has adopted and is using a qualified electronic prescribing system. Also, by establishing this threshold, we sought to reduce reporting burden. A numerical target of reporting 2,500 electronic prescribing events per reporting period will provide a tangible goal for the group practices to achieve. As stated previously, we are making every effort to promote the adoption of electronic prescribing by making participation both practical and operational so that group practices may achieve successful reporting. In establishing the threshold of 2,500 electronic prescribing events, we had to take into account not only all the circumstances that we discussed above with respect to the threshold for individual eligible professionals that could prevent a group practice who has adopted a qualified electronic prescribing system from having 2,500 electronic prescribing events during the calendar year but also the fact that the impact of these circumstances will vary depending on the types of specialties that are affiliated with each group practice.

Comment: A commenter expressed that the proposed method of calculating whether the limitation applies to a group practice will prevent most large multi-specialty group practices from being able to use the electronic prescribing group practice reporting option.

Response: We do not have the authority to change the basis for determining the applicability of the limitation. If we are making the determination of successful electronic prescriber based on reporting the electronic prescribing measure, section 1848(m)(2)(B) of the Act specifies that the limitation will apply if the Medicare Part B PFS allowed charges for all covered professional services furnished by the group practice for the codes to which the electronic prescribing quality measure applies are less than 10 percent of the total of the Medicare Part B PFS allowed charges for all covered professional services furnished by the group practice.

For the reasons mentioned above and after considering the comments, we are finalizing for the 2010 E-Prescribing Incentive Program the group practice reporting option discussed above. Specifically, group practices will be required to report the 2010 electronic prescribing measure at least 2,500 times during the reporting period in order for the group practice to be considered a successful electronic prescriber.

Group practices will be able to choose to report the electronic prescribing

measure through claims, a qualified registry, or qualified EHR product. As discussed for individual eligible professionals, only registries and EHR products qualified to participate in the 2010 PQRI will be qualified for purposes of the 2010 electronic prescribing group practice reporting option.

In addition, in determining whether a group practice will receive an electronic prescribing incentive payment for 2010 by meeting the reporting criteria described above, we will determine whether the 10 percent threshold is met based on our analysis of the claims submitted by the group practice during the reporting period. This calculation is expected to take place in the first quarter of 2011 and will be determined by dividing the group practice's total 2010 Medicare Part B PFS allowed charges for all covered professional services submitted for the measure's denominator codes by the group practice's total Medicare Part B PFS allowed charges for all covered professional services. If the result is 10 percent or more, then the statutory limitation will not apply and a group practice that is determined to be a successful electronic prescriber will qualify to earn the electronic prescribing incentive payment. If the result is less than 10 percent, then the statutory limitation will apply and the group practice will not qualify to earn the electronic prescribing incentive payment.

f. Public Reporting of Names of Successful Electronic Prescribers

Section 1848(m)(5)(G) of the Act requires the Secretary to post on the CMS Web site, in an easily understandable format, a list of the names of eligible professionals (or group practices) who satisfactorily submit data on quality measures for the PQRI and the names of the eligible professionals (or group practices) who are successful electronic prescribers. As required by section 1848(m)(5)(G) of the Act, we proposed to make public the names of eligible professionals and group practices who are successful electronic prescribers for the 2010 E-Prescribing Incentive Program on the Physician and Other Health Care Professionals Directory.

The following is summary of the comments we received regarding requirements under section 1848(m)(5)(G) of the Act with respect to the E-Prescribing Incentive Program.

Comment: Some commenters supported public reporting of the names of successful electronic prescribers. One commenter, in particular, noted that public reporting of the names of successful electronic prescribers will assist health plans in identifying such entities for related requirements in Medicare Advantage and Part D and help private health plans identify those that may need to be encouraged or assisted with electronic prescribing.

Response: We are pleased to have commenters' support for our efforts to make information about eligible professionals' adoption and use of electronic prescribing technology publicly available. We agree that such information may be relevant and useful to a broad audience.

Comment: Many commenters urged us to post only the information required by section 1848(m)(5)(G) of the Act, that is, the names of individual eligible professionals and group practices who are successful electronic prescribers.

Response: As we stated in the CY 2010 PFS proposed rule (74 FR 33600), we proposed to make public only the names of eligible professionals and group practices who are successful electronic prescribers. We do not anticipate posting any other information with respect to the E-Prescribing Incentive Program at this time.

Comment: Other commenters recognized that we are statutorily required to carry out public reporting of the names of successful electronic prescribers but are, nevertheless, opposed to publicly releasing the names of successful electronic prescribers or urged us to delay releasing such information until the public has a better understanding of the details of the E-Prescribing Incentive Program. Some of the concerns specifically cited by commenters include the following:

- The E-Prescribing Incentive Program is voluntary and excludes many eligible professionals;
- A formal independent evaluation of the E-Prescribing Incentive Program's processes and an analysis and validation of the data gathered needs to be conducted prior to any information being publicly released;
- CMS needs to provide eligible professionals with better access and feedback to the quality data they report (especially feedback on why they failed to report successfully) before the release of any information;
- There is little to be gained from this effort since eligible professionals and patients do not fully understand the details of the program and are still learning about this program;
- Patients may not understand the purpose for posting this information since the program is still new; and
- The criteria for becoming a successful electronic prescriber are changing from 2009 to 2010.

Response: We are appreciative of the commenters' thoughtful and constructive feedback and will take these concerns into consideration as we further develop our plans for publicly reporting information from the E-Prescribing Incentive Program. While we understand the commenters' concerns, we note that section 1848(m)(5)(G) of the Act requires us to list the names of individual eligible professionals and group practices who are successful electronic prescribers in an easily understandable format on our Web site. As such, it is our intent to identify the eligible professionals and group practices who are successful electronic prescribers for the 2010 E-Prescribing Incentive Program for posting in 2011. We note that we anticipate conducting an evaluation of the E-Prescribing Incentive Program and making the national evaluation results public through an experience report similar to the ''PQRI 2007 Reporting Experience'' report that we posted on the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI/Downloads/PQRI2007ReportFinal12032008CSG.pdf*.

Comment: A few commenters stressed the importance of including appropriate and prominent disclaimers or other statements on our Web site that provides information about the E-Prescribing Incentive Program and specifically state that there are valid reasons why an eligible professional may not have been a successful electronic prescriber for 2010.

Response: We agree with the commenters on the importance of including disclaimers and other information on the Web site that explains the E-Prescribing Incentive Program and its goals and the limitations of the data being reported (such as the fact that there are valid reasons why an eligible professional may not have been a successful electronic prescriber). Thus, it is our intent to include such language and disclaimers on the Web site similar to what was displayed with the 2007 PQRI participation information that was publicly released on the Physician and Other Health Care Professionals Directory in December 2008. We also anticipate being able to update the Physician and Other Health Care Professionals Directory to display the relevant disclaimers more prominently.

Comment: Some commenters recommended that eligible professionals and group practices have an opportunity to review their electronic prescribing

results before those results are made public, including access to information about why they were not able to successfully report this data, and that we continue to work with eligible professionals on the sensitive issues that surround this concept.

Response: Eligible professionals and group practices will have an opportunity to review their electronic prescribing results via the detailed, confidential feedback reports that will be made available to all eligible professionals and group practices who participle in the E-Prescribing Incentive Program. Eligible professionals and group practices will have an opportunity to obtain their feedback reports prior to any information about their success being publicly released.

Eligible professionals who have concerns about their results or any other information included on their feedback reports are encouraged to contact the QualityNet Help Desk at (866) 288–8912 or *qnetsupport@sdps.org* for assistance.

Comment: One commenter recommended that we also publicly report the names of eligible professionals who choose to not participate in the E-Prescribing Incentive Program.

Response: We do not believe it will be meaningful to the public to know the names of those eligible professionals who choose not to participate in the E-Prescribing Incentive Program. As some commenters noted, the E-Prescribing Incentive Program is a voluntary incentive program and many eligible professionals who have adopted and use a qualified electronic system have valid reasons for not participating. For example, some eligible professionals may not provide the services included in the electronic prescribing measure's denominator and, therefore, would not have an opportunity to report the measure. Other professionals may know, based on the prior year's charges, that they are unlikely to meet the statutory limitation under section 1848(m)(2)(B) of the Act that would allow them to be eligible to qualify to earn the electronic prescribing incentive payment. Therefore, such eligible professionals would most likely opt to not participate in the E-Prescribing Incentive Program even if they are electronically prescribing.

After considering the comments, we will publicly report the names of eligible professionals and group practices who are successful electronic prescribers for the 2010 E-Prescribing Incentive Program on the Physician and Other Health Care Professionals Directory. We anticipate that the names of individual eligible professionals and group practices who are successful electronic prescribers for the 2010 E-Prescribing Incentive Program will be available in 2011 after the 2010 incentive payments are paid.

Although we stated in the CY 2009 PFS proposed rule (74 FR 33600) and the CY 2008 PFS final rule with comment period (73 FR 69852) that we intended to post the names of individual eligible professionals who meet the criteria for successful electronic prescriber and for whom the limitation does not apply (in other words, eligible professionals who qualify to earn an incentive payment), we would like to clarify that for purposes of publicly reporting the names of individual eligible professionals on the Physician and Other Health Care Professionals Directory, section 1848(m)(5)(G) of the Act requires only that the Secretary post the names of eligible professionals (or group practices) who are successful electronic prescribers. Therefore, with respect to the 2010 E-Prescribing Incentive Program we intend to post the names of individual eligible professionals who report the electronic prescribing measure at least 25 times during the 2010 reporting period for patient encounters included in the measure's denominator, without regard to whether the limitation applied to the eligible professional and without regard to whether the eligible professional actually qualified to earn an incentive payment. In addition, since the PQRI and the E-Prescribing Incentive Program are two separate incentive programs and individual eligible professionals are not required to participate in both programs to earn an incentive under either program, we point out that it is possible for an eligible professional who participates in both incentive programs to be listed both as an individual eligible professional who satisfactorily submits data on quality measures for the PQRI and is a successful electronic prescriber under the E-Prescribing Incentive Program. Likewise, an individual eligible professional may be listed as an individual eligible professional who satisfactorily submits data on quality measures for the PQRI but not as a successful electronic prescriber under the E-Prescribing Incentive Program (or vice versa) even if he or she participated in both incentive programs.

Similarly, for purposes of publicly reporting the names of group practices, on the Physician and Other Health Care Professionals Directory, we intend to post the names of group practices who report the electronic prescribing measure at least 2,500 times during the 2010 reporting period for patient encounters included in the measure's denominator without regard to whether the limitation applied to the group practice or whether the group practice actually qualified to earn an incentive payment. Although any group practice participating in the E-Prescribing Incentive Program under the group practice reporting option would have had to also participate in the PQRI group practice reporting option, the criteria for satisfactory reporting of PQRI measures for group practices are different from the criteria for successful reporting of the electronic prescribing measure by group practices. Therefore, it is possible for a group practice to be listed as a group practice that satisfactorily submits data on quality measures for the PQRI but not as a successful electronic prescriber under the E-Prescribing Incentive Program, or vice versa.

6. Section 135: Implementation of Accreditation Standards for Suppliers Furnishing the Technical Component (TC) of Advanced Diagnostic Imaging Services

Section 1834(e) of the Act, as added by section 135(a) of the MIPPA, requires that beginning January 1, 2012, Medicare payment may only be made for the technical component (TC) of advanced diagnostic imaging services for which payment is made under the fee schedule established in section 1848(b) of the Act to a supplier who is accredited by an accreditation organization (AO) designated by the Secretary.

a. Accreditation Requirement

In the proposed rule, we proposed criteria for designating organizations to accredit suppliers furnishing the TC of advanced diagnostic imaging services as specified in section 1834(e) of the Act. In addition, we proposed the required procedures to ensure that the criteria used by an AO meets minimum standards for each imaging modality in § 414.68.

We did not propose any substantive standards that suppliers furnishing the TC of advanced imaging would have to meet. We have chosen to utilize clinical guidelines that are already accepted by the experienced accreditation organizations already performing accreditation. We believe that the suppliers should be able to assimilate these new accreditation requirements very easily into their medical practice.

We will be designating organizations based on, at minimum, their ability to meet the requirements set forth in the statute. In addition, in this rule we have

described the components that any organization must have in order to be considered for designated status.

As proposed, the CMS-designated AO would apply standards that set qualifications for medical personnel who are not physicians but who furnish the TC. The standards would describe the qualifications and responsibilities of medical directors and supervising physicians. including the following: recognizing whether a particular medical director or supervising physician received training in advanced imaging services in a residency program; and has attained, through experience, the necessary expertise to be a medical director or supervising physician; has completed any continuing medical education courses related to advanced imaging services; or has met such other standards as the Secretary determines appropriate.

In addition, the standards would require suppliers to: (1) Establish and maintain a quality control program to ensure the technical quality of diagnostic images produced by the supplier; (2) ensure the equipment used meets performance specifications; and (3) ensure safety of personnel. While the statute authorizes the Secretary to establish as criteria for accreditation any other standards or procedures the Secretary determines appropriate, we did not propose to establish other standards or procedures.

In the proposed rule, we also stated that we expect to publish a notice to solicit applications from entities for the purposes of becoming a designated AO the same day that this final rule with comment period is issued. We still expect to meet the January 1, 2010 statutory deadline in order to designate organizations to accredit suppliers furnishing the TC of advanced diagnostic imaging services by waiving the 60-day delay in the imaging accreditation provisions in the final rule.

We believe that we have furnished enough detail in the proposed rule, in addition to receiving extensive comments from prospective AOs, so that AOs will find that 30 days is sufficient time to respond to the solicitation.

b. Accreditation for Suppliers

Section 1834(e) of the Act requires the Secretary to designate and approve AOs to accredit suppliers of the TC of advanced diagnostic imaging services. To promote consistency in accrediting providers and suppliers throughout the Medicare program, we proposed to review existing procedures for the application, selection, and oversight of AOs detailed at 42 CFR part 488, subparts A and D, and apply them (with appropriate revisions) to organizations accrediting suppliers of the TC of advanced diagnostic imaging services. We proposed modifications to the existing part 488 requirements to meet the specialized needs of the advanced imaging industry. These modifications would require an independent AO applying for approval as a designated AO to include in their application:

- A detailed description of how the organization's accreditation criteria satisfy the statutory standards at section 1834(e)(3) of the Act, specifically:

+ Qualifications of medical personnel who are not physicians and who furnish the TC of advanced diagnostic imaging services;

+ Qualifications and responsibilities of medical directors and supervising physicians, such as training in advanced diagnostic imaging services in a residency program, expertise obtained through experience, or continuing medical education courses;

+ Procedures to ensure the safety of persons who furnish the TC of advanced diagnostic imaging services and individuals to whom such services are furnished;

+ Procedures to ensure the reliability, clarity, and accuracy of the technical quality of diagnostic images produced by the supplier.

- An agreement to conform accreditation requirements to any changes in Medicare statutory requirements in section 1834(e) of the Act.
- Information to demonstrate the AO's knowledge and experience in the advanced diagnostic imaging arena.
- The organization's proposed fees for accreditation for each modality in which the organization intends to offer accreditation and any plans for reducing the burden and cost of accreditation to small and rural suppliers.
- Any specific documentation requirements and attestations requested by CMS as a condition of designation under this part.

If, after review of an AO's submission of information, we determined that additional information was necessary to make a determination for approval or denial of the AO's application to be designated as an AO for suppliers of the TC of advanced diagnostic imaging services, the organization would be notified and afforded an opportunity to provide the additional information. We could visit the organization's offices to verify representations made by the organization in its application, including, but not limited to, review of documents and interviews with the organization's staff. The AO would receive a formal notice from CMS stating whether the request for designation was approved or denied. If approval was denied, the notice would include the basis for denial and outline the reconsideration procedures. We would make every effort to issue a final decision no more than 30 calendar days from the time the completed reapplication was received by CMS. An AO could withdraw its application for designation under section 1834(e) of the Act at any time before the formal notice of approval is received. An AO that was notified that its request for designation was denied could request reconsideration in accordance with § 488.201 through § 488.211 in Subpart D. Any AO whose request for designation was denied could resubmit its application if the organization (1) Revised its accreditation program to address the rationale for denial of its previous request; (2) provided reasonable assurance that its accredited companies meet applicable Medicare requirements; and (3) resubmitted the application in its entirety. If an AO requested a reconsideration of a denial, it could not submit a new application for the type of modality that is at issue in the reconsideration until the reconsideration was final.

A panel would evaluate all proposals from AOs seeking designation under section 1834(e) of the Act using existing CMS survey and certification processes, similar to those established at § 488.4.

c. Payment Rules for Suppliers of the TC of Advanced Diagnostic Imaging Services (§ 414.68)

We would implement at § 414.68 the statutory requirement of section 1834(e) of the Act that all suppliers of the TC of advanced diagnostic imaging services be accredited by a CMS-designated AO by January 1, 2012 for payments made under the fee schedule established under section 1848(b). In § 414.68(a), we proposed to define the following:

- ''Accredited supplier'' would mean a supplier that has been accredited by a CMS-approved AO.
- ''Advanced Diagnostic Imaging Services'' would mean diagnostic magnetic resonance imaging, computed tomography, nuclear medicine, and positron emission tomography. We did not propose to include other diagnostic imaging services in this definition under section 1834(e)(1)(B)(ii) of the Act.
- ''CMS-approved accreditation organization'' would mean an independent AO designated by CMS to perform the accreditation function established in section 1834(e) of the Act.

d. Ongoing Responsibilities of CMS–Approved Accreditation Organizations

We proposed to require a CMS-approved AO to perform several activities on an ongoing basis. The organization would provide to CMS in written form and on an ongoing basis all of the following:

- Copies of all accreditation surveys of specific suppliers along with any survey-related information that we may require (including corrective action plans and summaries of CMS requirements that were not met).
- Notice of all accreditation decisions.
- Notice of all complaints related to suppliers of the TC of advanced diagnostic imaging service.
- Information about any suppliers of the TC of advanced diagnostic imaging service for which the accrediting organization has denied the supplier's accreditation status.
- Notice of any proposed changes in its accreditation standards or requirements or survey process. If the organization implemented the changes before or without CMS approval, we could withdraw approval of the AO.
- Written notice of any deficiencies and adverse actions implemented by the CMS-approved AO against an accredited supplier of the TC of advanced diagnostic imaging within 2 days of identifying such deficiencies, if the deficiencies pose immediate jeopardy to a beneficiary or to the general public.
- Written notice of the withdrawal to all accredited suppliers within 10 days of CMS' notice to withdraw approval of the AO.
- Summary data specified by CMS related to the past year's accreditation activities and trends, on an annual basis.

In addition, the AO would permit its surveyors to serve as witnesses if CMS takes an adverse action based on accreditation findings.

e. Continuing CMS Oversight of CMS–Approved Accreditation Organizations

We proposed to add § 414.68 to establish specific criteria and procedures for continuing oversight and for withdrawing approval of an approved AO.

(1) Validation Audits

We proposed to audit the accredited organizations in order to validate the survey accreditation process of approved AOs in the TC of advanced imaging. The audits would be conducted on a representative sample of suppliers who have been accredited by a particular accrediting organization or in response to allegations of supplier noncompliance with the standards. When conducted on a representative sample basis, we proposed that the audit would be comprehensive and address all of the standards or would focus on a specific standard in issue. When conducted in response to an allegation, we proposed to specify that the CMS team or our contractor would audit for any standard that we determined was related to the allegations. We also proposed to require a supplier selected for a validation audit to authorize the validation audit to occur and authorize the CMS team or our contractor to monitor the correction of any deficiencies found through the validation audit. If a supplier selected for a validation audit failed to comply with the requirements at § 414.68, the supplier would no longer meet the Medicare requirements and, under this proposal, the supplier's accreditation for the TC of the advanced medical imaging would be revoked.

We proposed that a CMS team or our contractor would conduct an audit of an accredited organization, examine the results of the AO's own survey procedure onsite, or observe the AO's survey, in order to validate the organization's accreditation process. At the conclusion of the review, we would identify any accreditation programs for which validation audit results indicated the following:

- A 10 percent or greater rate of disparity between findings by the AO and findings by CMS or our contractor on standards that did not constitute immediate jeopardy to patient health and safety if not met;
- Any disparity between findings by the AO and findings by CMS or our contractor on standards that constituted immediate jeopardy to patient health and safety if not met; or
- There were widespread or systemic problems in the organization's accreditation process such that the accreditation no longer provided assurance that suppliers met or exceeded the Medicare requirements, irrespective of the rate of disparity.

(2) Notice of Intent To Withdraw Approval for Designating Authority

As proposed, if a validation audit, onsite observation, or our concerns with the ethical conduct (that impacted the health and safety of the beneficiary) of an AO suggest that the AO was not meeting the requirements of § 414.68, we would provide the organization written notice of our intent to withdraw approval of the AO's designating authority.

(3) Withdrawal of Approval for Designating Authority

We proposed to withdraw approval of an AO at any time if we determined that:

- Accreditation by the organization no longer provided sufficient assurance that the suppliers of the TC of advanced imaging meet the requirements of section 1834(e) of the Act and the failure to meet those requirements could pose an immediate jeopardy to the health and safety of Medicare beneficiaries;
- Conditions at an imaging supplier accredited by an AO constituted a significant hazard to the public health; or
- The AO failed to meet its obligations for application and reapplication procedures.

(4) Reconsideration

We proposed to implement requirements similar to those set out under 42 CFR part 488 without substantive changes, as the requirements have been utilized for the health care providers covered under 42 CFR part 488 since 1992. We proposed that an AO dissatisfied with a determination that its accreditation requirements did not provide or do not continue to provide reasonable assurance that the suppliers accredited by the AO met the applicable standards would be entitled to a reconsideration. We also proposed to reconsider any determination to deny, remove, or not renew the approval of the designating authority to AOs if the AO filed a written request for reconsideration through its authorized officials or through its legal representative.

We proposed to require the AO to file the request for reconsideration within 30 calendar days after the issuance of CMS notice of an adverse determination or non-renewal. We proposed to require the request for reconsideration to specify the findings or issues with which the AO disagreed and the reasons for the disagreement. A requestor could withdraw its request for reconsideration at any time before the issuance of a reconsideration determination. In response to a request for reconsideration, we would provide the accrediting organization the opportunity for an informal hearing that would be conducted by a hearing officer appointed by the CMS Administrator and provide the accrediting organization the opportunity to present, in writing and in person, evidence or documentation to refute the determination to deny approval, or to withdraw or not renew its designating authority.

As proposed, we would provide written notice of the time and place of the informal hearing at least 10 business days before the scheduled date. The informal reconsideration hearing would be open to CMS and the organization requesting the reconsideration, including authorized representatives, technical advisors (individuals with knowledge of the facts of the case or presenting interpretation of the facts), and legal counsel. The hearing would be conducted by the hearing officer, who would receive testimony and documents related to the proposed action. Testimony and other evidence could be accepted by the hearing officer. However, the normal evidentiary exclusions applicable in Federal courts would not apply to these hearings. The hearing officer would not have the authority to compel by subpoena the production of witnesses, papers, or other evidence. Within 45 calendar days of the close of the hearing, the hearing officer would present the findings and recommendations to the accrediting organization that requested the reconsideration. The written report of the hearing officer would include separate numbered findings of fact and the legal conclusions of the hearing officer. The hearing officer's decision would be final.

The following is a summary of the comments we received regarding our proposals for implementation of section 135 of MIPPA.

Comment: One commenter requested that we consider medical directors and supervising physicians to be equivalent positions, as they are frequently the same.

Response: We agree and have revised the regulation text accordingly at § 414.68(c)(1)(ii) to reflect that the clinical responsibilities of the medical director and/or supervising physician would be identical.

Comment: Some commenters stated that the physician should be qualified in the modality for which the supplier is applying. In order to ensure this compliance, one commenter suggested requiring billing under the NPI of that qualified physician and not another physician, which is commonly done to avoid self-referral provisions. Another commenter stated that we need to consider that any licensed physician, not just a radiologist who can respond to a patient's possible contrast reaction, be qualified as supervising medical directors and supervising physicians. The commenter also suggested that there be a degree of control over documented quarterly on-site interactions with nonphysician staff, creation and review of all imaging protocols along with developing quality performance guidelines as opposed to limiting the number of sites that the physician may serve as the medical director or supervising physician. The teleradiology area also needs to be included supervision performance criteria.

Response: We will develop billing policies connected to the provision of the TC of advanced subsequent to the issuance of this rule, and will take the commenters' concerns under advisement. With respect to performance measures for the Medical director and/or supervising physician, we expect that all AOs will consider performance measures in their credentialing and competency evaluations.

Comment: Some commenters stated that each designated AO should be required to evaluate the image quality produced as part of the AO's accreditation survey review process and that the accreditation personnel should have 5 years of specific documented experience and training in image acquisition and interpretation.

Response: We agree that experience in the advanced imaging area is important. For example, we are aware that some organizations require that accreditation personnel should have specific documented experience and training in image acquisition and interpretation for 5 years. CMS will review the standards for all potential accrediting organizations to determine whether it is necessary for CMS to impose a similar requirement. We intend to evaluate all accreditation organization applications based on documented evidence of having a level of experience in accrediting advanced imaging suppliers and the requirements for their surveyors who are completing these surveys.

Comment: One commenter requested that since the timeframe before the January 1, 2010 designation deadline was so near, the accompanying request for proposals should be on review prior to the display date of this final rule.

Response: Since the notice could have changed up to the display date of the final rule, we did not believe publishing a draft notice would have been helpful. We did, however, include all of the requirements in the proposed rule that we intended for the solicitation notice.

Comment: Some commenters believe that the proposed provision that exists for equipment review is not specific enough to guarantee a thorough evaluation of equipment performance and safety.

Response: We will revise our rule in § 414.68 to require that the equipment used by advanced imaging suppliers must meet the manufacturer's performance specifications.

Comment: Some commenters stated the quality of the supplier cannot adequately be assessed without a comprehensive evaluation of all aspects of the imaging service's operation, including personnel, image acquisition and quality, and the quality of the final report.

Response: We agree that all of these components are necessary in the evaluation of a TC supplier. We will be evaluating AOs' applications based on the performance standards that are used to make certain that these assessments are comprehensive.

Comment: One commenter requested clarification as to whether the proposed rules meant that advanced imaging standards could be lowered by CMS. If CMS changes its standards, the AO's experts should be given an opportunity to comment. The commenter also asked whether AOs could maintain or adopt standards that were more stringent than those required by CMS.

Response: Section 1834(e) of the Act, as added by section 135(a) of the MIPPA, requires that the Secretary consult with physician specialties and other stakeholders on provisions in this rule. We plan to do this, as required by the statute. Accreditation organizations may enforce the guidelines to be issued by CMS, or adopt standards that are more stringent than those Medicare requires.

Comment: Some commenters asked about the fee structure of the designated AOs. One commenter suggested that CMS assist small and rural suppliers, and that the fees be based on the number of imaging machines, number of testing modalities, and the number of testing sites. Another commenter stated the AOs should be allowed to use their differing methodologies for reducing accreditation costs for small and rural suppliers. The commenter believed that CMS was going to mandate the fee structure for the designated AO. One commenter suggested that we clarify the $5,000 cost per 3-year review cycle as an estimate of the cost per modality. One commenter stated that they were confused by what CMS intended the difference to be between small and specialty suppliers as compared to small and rural suppliers.

Response: We will be evaluating applications from all AOs that apply, and make certain that all have provisions for small and rural suppliers. Although we will not be prescribing the fee structure for the designated AO, we want to see that each application has a policy and procedure to determine cost and assistance that would take the

smallest supplier into consideration. As a clarification, note that this rule only applies to those specialty suppliers furnishing the TC of advance medical imaging.

Comment: Two commenters asked about unannounced site visits. There was concern that the site may either not have the appropriate staff for the modality, or in the case of a mobile unit, may not be present on the day the surveyor arrives. It was suggested that either the site visits were announced or that accrediting organizations utilize a combination of announced and unannounced surveys.

Response: We believe that a supplier who ''gets ready'' for the site survey is a supplier that is not providing quality care and services throughout the year. The supplier knows that a surveyor will be onsite every 3 years and thus would already be aware of an imminent survey.

Comment: Two commenters strongly encouraged that we include other diagnostic imaging services, such as ultrasound, to be eligible for accreditation.

Response: Section 1834(e)(1)(B)(ii) of the Act, as added by section 135(a) of MIPPA, specifically excludes X-ray, ultrasound, and fluoroscopy from those diagnostic imaging services subject to the accreditation requirement. Therefore, we cannot implement this change without Congressional action.

Comment: One comment discussed the transfer of individually identifiable health information and other information not intended for public disclosure. The commenter requested that we clarify under what circumstances such information would need to be transmitted and how that information would be safeguarded.

Response: Under normal circumstances, neither CMS or an AO would need to transfer individually-identifiable personal health information from one location to another. If, however, we need such information for investigational purposes it would either be transmitted via securely or de-identified prior to transmission.

Comment: One commenter requested clarification on the requirement that the AO notify Medicare of accreditation decisions to be intended for only those imaging suppliers that bill Medicare.

Response: We will provide that clarification. The requirement that the AO notify Medicare is only required for those suppliers billing Medicare.

Comment: Regarding the complaint reporting process, one suggested that the rule was not clear if the complaints that were to be reported were with respect to the AO or to the TC supplier being accredited. Another commenter suggested that we specify the frequency with which we expected accrediting organizations to report complaints about suppliers. The commenter also suggested that we specify the types of complaints about suppliers that would be subject to the reporting requirement. The commenter suggested that such conditions include: poor image quality, injury or harm from equipment, falsely claiming to be accredited, unqualified personnel, submission of false or misleading accreditation information. One commenter suggested that we change from 2 calendar days to 2 business days the proposed requirement that an AO notify CMS when it finds deficiencies in a TC supplier that pose an immediate jeopardy to the health and safety of patients receiving services from such supplier. One commenter also requested clarification of what was meant by ''appropriate licensing bodies,'' since there are specific State departments that control these entities.

Response: We agree with the commenter that we needed to clarify the applicability of the complaint reporting requirement. Therefore, we are clarifying in this final rule that the complaint process is applicable to any complaints that come from any source against an accredited supplier. We also agree that the reporting of complaints about conditions that pose immediate jeopardy to Medicare beneficiaries or the general public should be reported to CMS within 2 business days, because. Therefore, we are also amending § 414.68(c)(12)(iii)(G) to state that an approved AO will be required to notify CMS within 2 business days of such ''immediate jeopardy'' situations. Subsequent to the issuance of this rule, we will issue subregulatory guidance with respect to the frequency and types of other reporting that are necessary. In response to the commenter's inquiry, we are also noting that in the context of this final rule, ''Appropriate licensing body'' means any regulatory body, including State Radiation Control departments and the Nuclear Regulatory Commission.

Comment: Regarding circumstances in which CMS might withdraw its approval of an accrediting organization (thus requiring suppliers accredited by such organization to obtain new accreditation), two commenters suggested the final rule recognize that CMS and the remaining AOs would need to collaborate in order to distribute such affected suppliers among other accrediting organizations over a reasonable time period.

Response: We agree. It certainly is our expectation that any supplier transition process of this sort would be transparent, so that no disruption in patient care would occur.

Comment: One commenter stated that the proposal included hospitals in the summary data from the CMS' Services Tracking and Reporting System. Since the hospitals are not included in this proposal, the commenter requested reconfirmation that the provisions do not apply to hospitals.

Response: In § 414.68(a), in conformity with section 1834(e), we state that the imaging accreditation requirement applies only to suppliers of the TC of advanced diagnostic imaging services for which payment is made under the physician fee schedule. Since hospitals generally are not paid pursuant to such schedule, this accreditation rule is inapplicable. Hospitals, including their inpatient radiology departments, are accredited under 42 CFR part 488.

Comment: Two commenters suggested that instead of notifying CMS of all revisions to their accreditation requirements, standards and policies, as set out at proposed § 414.68(c)(12)(iii)(E) and § 414.68(d)(1)(v), accrediting organizations notify CMS only of major revisions to their respective accreditation standards or requirements or survey processes. In this context, ''major'' would be defined as ''changes having potential impact on the supplier's ability to maintain compliance with the standards or application process.''

Response: We agree; we will clarify our language to indicate that ''major changes'' mean only significant changes from what CMS approved in the AO's initial approved application.

Comment: Several commenters had questions about the proposed CMS audits of AOs. The commenters would like to have more information about the procedures that CMS surveyors would use. The commenters also stated that the meaning of the ''10 percent disparity rate'' was not clear. One commenter asked that we clarify who would bear the cost for a validation survey, what specific information would be collected in such surveys, and what percentage of sites would be surveyed.

Response: We will provide information on those specific procedures and criteria as they are developed. The 10 percent disparity rate is meant to be that of a single survey since it is important to CMS that each supplier is furnishing all of the standards as intended in a quality manner. CMS pays for these validation surveys.

Comment: One commenter requested clarification on how CMS would determine whether an AO was capable

of making ''timely reviews'' under proposed § 414.68(c)(6)(ii).

Response: We would consider an AO to be making timely reviews of suppliers' applications if the accrediting organization presented evidence that it could conduct such reviews in an orderly manner, and that all suppliers' applications would be judged uniformly and fairly, while still meeting the January 1, 2012 statutory deadline.

Comment: Two commenters asked about how AOs would prioritize suppliers in order to meet the January 1, 2012 deadline. The commenters believe that this practice would mean that some suppliers would have a preferential priority. The commenter believes that application processing order should instead be based upon the date the supplier submits its application to the accrediting organization. The commenters went on to state that CMS should inform suppliers of the application requirements so that all suppliers can be accredited by the January 1, 2012 deadline.

Response: While we agree with the commenters regarding education of all suppliers, we believe that the intent of the statute was that beneficiary services not be affected by any supplier not having the opportunity to meet all of the accreditation requirements. We will give guidance to the designated AOs so that there is a timely review of all existing suppliers.

Comment: Two commenters expressed concern over how new suppliers after January 1, 2012 would be able to bill for the TC of advanced imaging if they had not yet been accredited. One commenter wanted CMS to continue to allow those new suppliers the ability to bill up to nine months after January 1, 2012, as long as the new supplier was undergoing part of the accreditation process or received a provisional accreditation.

Response: We do not have the statutory authority to extend the billing privileges past the statutory deadline of January 1, 2012. We believe that there will not be any disruption to beneficiary services, as there are sufficient existing suppliers to furnish the TC of advanced diagnostic imaging services.

Comment: One commenter requested clarification regarding the treatment of suppliers accredited prior to January 1, 2012 as meeting the statutory requirements for accreditation. The commenter stated that the proposed rule could be interpreted to mean that any supplier accredited at any time prior to January 1, 2010 would be considered accredited regardless of their current status which could include their accreditation having previously expired, been revoked, or denied.

Response: Only those suppliers that have a current, unexpired accreditation as of January 1, 2012 will be deemed grandfathered with respect to the January 1, 2012 requirement.

Comment: One commenter requested that CMS require that AOs report not only revoked, withdrawn or revised accreditation decisions, but also include those accreditations that have expired, closed, or ceased providing that modality. The commenter suggested that this report be in an Excel file format and on a daily basis. The commenter also stated that if CMS reviewed copies of all survey materials and corrective action it would overwhelm the agency.

Response: We will require all accreditation decisions to be reported, including revocation and expiration of accreditation. We will require the accrediting organizations to include in their ongoing data the accreditation status of all of their suppliers, which includes the effective expiration dates and any changes to that accreditation status. We generally will not review individual suppliers' survey reports or corrective action plans unless there is a particular reason for us to do so. We will consider the most effective method of data collection.

Comment: One commenter suggested that CMS require a supplier to inform its AO if it ceases providing advanced diagnostic imaging services; to arrange transfer of each patient's medical record to a subsequent receiving supplier; to provide information to patients on how they can obtain their personal medical records; and to comply with any State or local requirements for such a record transfer.

Response: We agree with the commenter and are taking the suggestion. We will require a supplier to assist beneficiaries or their legal representative, in obtaining their records if requested, and notify the supplier's AO of any changes to the modalities being furnished at the time the accreditation decision is made.

Comment: One commenter requested that CMS clarify whether the orientation and in-service requirements in the proposed rule relate to the supplier or the AO. The commenter suggested that CMS should require AOs to direct the orientation and in-service programs toward image quality reviewers and on site surveyors.

Response: We will be reviewing all proposals to make certain that all approved AOs have robust orientation and in-service programs. Those programs should standardize the supplier review process and produce consistent quality surveys in both desk reviews and site surveys.

Comment: Regarding the annual summary data specified by CMS, one commenter suggested the data include the total number of sites and units applied and accredited; pass/fail rates by modality; results of any appeals by modality; number and reasons for any suspensions/revocations of accreditation overall and by modality; number and summary results of on-site surveys over and by category (random, scheduled, targeted and validation); surveyor resources available; any new surveyor training and summary of all complaints overall and by modality, including category and resolution.

Response: We will work with the designated AOs to develop annual reports that meet the needs of our stakeholders and the general public.

Comment: One commenter stated that CMS needs to develop a system for communicating the supplier's accreditation status to the Medicare contractors so that there are no claims denial errors. The commenter suggested the system to be updated on a daily basis. The commenter also suggested CMS institute a vigorous training program for local contractor staff.

Response: We will look into the necessity and feasibility of daily feeds to the contractor. Since CMS already has a comprehensive education program for our contractors, we will use the existing methods for educating all of our contractor staffs.

Comment: One commenter requested clarification regarding what format CMS is proposing to require when AOs provide information to CMS.

Response: We intend the written format to be via electronic submission in most cases. In those cases where Protected Health Information (PHI) needs to be transmitted by the AO, data files will be encrypted.

Comment: One commenter suggested that, instead of CMS instituting a formal re-application process for AOs, CMS could renew an AO's deeming authority on the basis of good standing. CMS could consider the AO's annual report, any validation survey findings, and other ongoing compliance instead of requiring a formal reapplication process. If CMS decided that a formal reapplication process were to be retained, the commenter suggested that CMS follow the precedent set by the Mammography Quality Standards Act (MQSA) for their approved accrediting bodies and set a seven year interval.

Response: We may consider such a suggestion. We do not believe that we would need to publish proposed

rulemaking in order to implement a formal re-application process.

Comment: One commenter asked CMS to clarify whether suppliers would still need to renew their accreditations under the timeframes of their designated AOs from January 1, 2010 to January 1, 2012.

Response: An accredited supplier would still need to renew its accreditation pursuant to the timeframe of its designated AO between January 1, 2010 and January 1, 2012. We believe it was the Congress' intent under section 1834(e)(5) of the Act that all suppliers accredited before January 1, 2010 by an accreditation organization designated on that date, be ''grandfathered'' with respect to the effectiveness of their accreditations. In other words, a supplier accredited by a designated AO as of January 1, 2010 would not need to be reaccredited subsequent to the AO's designation by CMS until the supplier's term of accreditation expired. However, this does not mean that a supplier can let its accreditation lapse between 2010 and 2012. Once a reaccreditation deadline has passed without reaccreditation, the supplier would no longer be considered accredited.

Comment: One commenter stated that CMS needs to consider the administrative time involved in obtaining precertification for Computerized Tomography (CT) of the head, ear, and maxilla facial area when determining the cost of these services. The technician's time involved in performing daily quality control testing to satisfy quality assurance requirements for accreditation and the physician time spent in quality assurance committee meetings to evaluate the images and reports has greatly increased the cost of providing in-office CT imaging. Another commenter stated that operating a certified imaging laboratory with methodology and protocols to the highest standards translates into increased costs for each study.

Response: Based on supplier interviews, maintaining the accreditation requirement has resulted in suppliers having opportunities to work more efficiently and effectively, thereby reducing the overall administrative costs per hour.

Comment: One commenter stated that the anticipated impact of implementation of accreditation standards for suppliers of the TC of advanced diagnostic imaging on family physicians would be minimal. The commenter supported the proposed accreditation requirements.

Response: We thank the commenters for the comment.

Comment: One commenter requested that CMS revise the supervision level requirement for certain CPT codes when these services are performed with assistance by the Registered Radiologist Assistant.

Response: We appreciate the information provided by the commenters as it will assist in understanding the role these individuals play in the provision of imaging services.

f. Other Issues for Consideration

In the proposed rule, we solicited information on the role of radiology assistants (RA) and radiology practitioner assistants (RPA), including the level of physician supervision that would be appropriate when RAs and RPAs are involved in the performance of the TC of advanced medical imaging, whether the role varies by State, and related information.

Comment: Commenters provided information concerning information on the role of radiology assistants and radiology practitioner assistants in the performance of the TC of advanced medical imaging in response to our request.

Response: We appreciate the information provided by the commenters as it will assist in understanding the role these individuals play in the provision of imaging services.

g. Provisions of the Final Rule

After reviewing the public comments, we are finalizing the accreditation provisions of the CY 2010 PFS proposed rule as follows:

- Clarifying that the—

++ Medical directors and supervising physicians are equivalent positions;

++ Equipment used by the supplier must performance specifications;

++ AOs may maintain or adopt standards that are more stringent than those of Medicare;

++ The AOs are required to notify Medicare of the accreditation decision of those suppliers billing Medicare

++ Accreditation requirement does not apply to hospitals; and

++ AO only needs to notify CMS for significant changes from what was approved on the AO's initial approved application.

- Including a requirement that a supplier must assist the beneficiary in obtaining his/her medical records if he/she requests.
- Including a requirement that the supplier must notify the AO of any subsequent changes to the modalities being offered since the accreditation decision was made.
- Clarifying that AOs must respond to complaints from any source with respect to an accredited supplier.
- Changing the regulations text to require that an AO notify CMS of any supplier deficiency putting Medicare beneficiaries in immediate jeopardy within 2 business days (previously 2 calendar days).
- Confirming that when a designated accrediting organization has its deeming authority withdrawn, CMS and the remaining AOs will work together in a collaborative effort to distribute suppliers affected by such withdrawal amongst other accreditations organizations within a reasonable time period.

7. Section 139: Improvements for Medicare Anesthesia Teaching Programs

Section 139 of the MIPPA establishes a special payment rule for teaching anesthesiologists and provides a directive to the Secretary regarding payments for the services of teaching certified registered nurse anesthetists (teaching CRNAs). It also specifies the periods when the teaching anesthesiologist must be present during the procedure in order to receive payment for the case at 100 percent of the fee schedule amount (the regular fee schedule rate). These provisions are effective for services furnished on or after January 1, 2010.

a. Teaching Anesthesiologists: Special Payment Rule

The criteria for the payment of teaching anesthesiology services and the special rule for the teaching anesthesiologist are similar to the current criteria for payment of teaching surgeon services and the payment rule for the teaching surgeon involved in overlapping resident cases. Thus, there is a similarity in the payment rules for these physician specialties who work closely together.

(1) Payment for Anesthesia Services Furnished by a Physician

Currently, if the physician, usually an anesthesiologist, is involved in furnishing anesthesia services to a patient, the services can be furnished under one of three different scenarios. The anesthesiologist may—

- Personally perform the anesthesia services alone;
- Be involved in the case as a teaching anesthesiologist with an anesthesia resident; or
- Provide medical direction of the performance of anesthesia services for two, three or four concurrent cases involving a qualified individual (who may be a CRNA, an anesthesiologist

assistant (AA), an anesthesia resident, or a student nurse anesthetist under certain circumstances).

Under the statute and CMS policy, if the anesthesiologist personally performs the anesthesia service alone or is involved in the case as a teaching anesthesiologist with an anesthesia resident, payment for the anesthesiologist's service is made at the regular fee schedule rate.

If the anesthesiologist furnishes medical direction for two, three, or four concurrent anesthesia procedures, then payment for the anesthesiologist's service is made, in accordance with section 1848(a)(4)(B) of the Act, at 50 percent of the otherwise applicable fee schedule amount.

(2) Methodology for Payment of Anesthesia Services

Payment for anesthesia services furnished by a physician is made under the PFS under section 1848(b)(2)(B) of the Act. The methodology for the calculation of the allowable amount is unique to anesthesia services only. Payment is made on the basis of anesthesia base units and time units, calculated from the actual anesthesia time of the case, instead of on the basis of work, PE, and malpractice RVUs. The base unit reflects all activities other than anesthesia time and includes usual preoperative and postoperative visits, the administration of fluids, and blood incident to anesthesia care and monitoring services. Payment for anesthesia services is also based on the anesthesia CF instead of the general PFS CF.

(3) Section 139(a) of the MIPPA

Section 139(a) of the MIPPA adds a new paragraph at section 1848(a)(6) of the Act to establish a ''special payment rule for teaching anesthesiologists''. This provision allows payment to be made at the regular fee schedule rate for the teaching anesthesiologist's involvement in the training of residents in either a single anesthesia case or in two concurrent anesthesia cases furnished on or after January 1, 2010.

(4) Discussion

The Accreditation Council on Graduate Medical Education (ACGME) is a branch of the AMA, and it accredits allopathic residency programs. In order for a hospital to receive Medicare graduate medical education payments for its training programs, the residents must be in an ''approved medical residency program'' Under § 413.75(b), an approved medical residency program is one approved by one of the national organizations listed in § 415.152. One of the national organizations is the ACGME.

ACGME's policies and procedures require that each accredited residency program comply with the institutional requirements and the specialty program requirements. For approved anesthesia residency programs, ACGME requirements for faculty supervision and training of anesthesia residents specify that a faculty member not direct anesthesia at more than two anesthetizing locations in the clinical setting. (See the ACGME Web site at *http://www.acgme.org.*)

Consistent with this requirement, the American Society of Anesthesiologists (ASA) has advised us that, when providing services in two concurrent cases, a teaching anesthesiologist might be engaged in two concurrent anesthesia resident cases, or in two mixed concurrent cases, one a resident case and the other a CRNA or AA case.

The statute applies the special payment rule for teaching anesthesiologists to the single resident case or two concurrent cases involving anesthesia residents as long as the teaching anesthesiologist meets the requirements in sections 1848(6)((A) and 1848(6)(B) of the Act. However, the statute does not directly address a single resident case that is concurrent to another case involving a CRNA, AA, or other qualified individual who can be medically directed. The issue is whether the medical direction payment rules apply to each of these cases or whether an alternative payment policy may apply.

As an alternative to applying the medical direction payment rules to the concurrent mixed cases, we proposed to apply the payment rule for teaching anesthesiologists to the resident case that is concurrent to another case which is paid under the medical direction payment rules. While this represents a broader interpretation, it still limits the applicability of the special payment rule for teaching anesthesiologists to resident cases consistent with the terms of section 139 of the MIPPA. (See 74 FR 33603 for a more detailed discussion of this option.)

Accordingly, we proposed to delete the current regulatory language at § 414.46(e) (which is no longer relevant) and add new language to specify that the special payment rule for teaching anesthesiologists applies to resident cases under the following scenarios:

- The teaching anesthesiologist is involved in one resident case (which is not concurrent to any other anesthesia case);
- The teaching anesthesiologist is involved in each of two concurrent resident cases (which are not concurrent to any other anesthesia case); or
- The teaching anesthesiologist is involved in one resident case that is concurrent to another case paid under medical direction payment rules.

Other than the application of the special payment rule for teaching anesthesiologists in the mixed concurrent case described above, we did not propose any other revisions to our medical direction payment policies.

Comment: Commenters supported our interpretation of section 139 of the MIPPA that allows the special payment rule for teaching anesthesiologist to apply if the teaching anesthesiologist is involved in one resident physician case that is concurrent to another case paid under the medical direction payment rules.

Response: We believe this interpretation is consistent with the statute and the ACGMS requirements that allow no more than two residents to be supervised concurrently. Our policy would allow the special teaching rule to apply in mixed concurrent cases, that is, the single resident case that is concurrent to another case not involving a resident that is paid under our medical direction payment rules. We are revising § 414.46 in this final rule with comment period as proposed.

Comment: Some commenters asked if there will be new claims service modifiers created for the teaching anesthesiologist or whether teaching anesthesiologists would continue to us the ''AA'' service modifier. They also asked if the ''GC'' modifier would continue to be used for physician supervision of resident cases.

Response: At this time, we are not creating a new claims service modifier for teaching anesthesiologists, but will inform teaching anesthesiologists to continue to use the ''AA'' modifier if they qualify as the teaching anesthesiologist under the three specific scenarios discussed above. The teaching anesthesiologist should also continue to use the ''GC'' certification modifier. (See Internet Only Manual (IOM) Medicare Claims Processing Manual Chapter 12, Section 50 K., titled Anesthesia Claims Modifiers. This can be found at www.cms.hhs.gov/manuals.)

b. Teaching Anesthesiologists: Criteria for Payment

(1) Criteria for Payment of Teaching Anesthesiologists

As part of the special payment rule established for teaching anesthesiologists, the statute requires that the teaching anesthesiologist is present during all key or critical

portions of the anesthesia procedure involved. In addition, the teaching anesthesiologist (or another anesthesiologist with whom the teaching anesthesiologist has entered into an arrangement) must be immediately available to furnish anesthesia services during the entire procedure.

In the proposed rule, we discussed two options for implement this provision. One option would allow different teaching anesthesiologists in the same anesthesia group practice to be considered the ''teaching physician'' for purposes of being present at the key or critical portions of the anesthesia procedure. This option would permit a teaching anesthesiologist to handoff a key or critical portion of the anesthesia procedure to another teaching anesthesiologist as long as the other anesthesiologist is a member of the same group. Another option presented was to require that only one teaching anesthesiologist must be present during all of the key or critical portions of the procedure, which would effectively permit no handoffs. We proposed to more narrowly interpret the law and require that only one individual teaching anesthesiologist be present during all of the key or critical portions of the anesthesia procedure.

Anesthesiologists, including the ASA, have advised us that it may be common for different members of a teaching anesthesia group to provide the anesthesia service instead of a single teaching anesthesiologist. In the proposed rule, we solicited comments on how continuity of care and the quality of anesthesia care are preserved during handoffs, whether there is an accepted maximum number of handoffs, any industry studies that have examined this issue, what factors contribute to handoffs, and whether there are anesthesia practices that do not use handoffs. A handoff refers to any transfer of care for any period or a terminal transfer between two anesthesia providers during a single anesthesia case.

Comment: The ASA and many of its members stated the reasons for handoffs and their presumed benefits. In general, the commenters remarked that handoffs can improve the efficiency of operating rooms, permit teaching anesthesiologists to use their specialized skills to teach anesthesia residents in certain cases, prevent physician fatigue and error, and improve quality and patient safety.

Several medical organizations objected to our proposal and recommended that we implement the alternative proposal in the proposed rule to permit different anesthesiologists in the same anesthesia group practice to be considered the teaching anesthesiologist for purposes of being present at the key or critical periods of the anesthesia case.

Some commenters discussed handoffs in general and did not specifically tie their comments regarding handoffs to a key or critical period of the teaching anesthesia service.

Some commenters cited a 1982 study in the *Journal of Anesthesiology* (*56:456–461*), titled ''Critical Incidents Associated with Intraoperative Exchanges of Anesthesia Personnel''. This article examined anesthesia practices from four hospitals in Boston, two of which were teaching hospitals. The study examined 1,089 reports of preventable errors and failures associated with anesthesia management. In 28 incidents, the relief anesthesia provider in the handoff discovered an error or cause of an error. Although 70 of the 1089 were associated with substantive negative outcomes, none of these incidents were caused by a relieving anesthetist related to a handoff.

The study noted that ''there is a strong implication that relief is beneficial more often than not even aside from the presumed beneficial effect on the vigilance of the primary anesthetists.'' The study further noted that from the descriptions of the causes and discoveries of errors in these relief-related incidents, guidance can be drawn for the safe and effective conduct of the intraoperative exchange of anesthesia personnel. This article referred to substitutions for short breaks during long surgical procedures. It did not specify whether any of these substitutions took place during key or critical periods of the teaching case.

Based on its study of relief-associated events, the authors suggested the adoption of specific handoff protocols and communication processes to reduce errors. This protocol would address such factors as familiarity with the status of the patient, progress of the surgical procedure, trends in the anesthetic course, significant medical history, anesthesia plan, and arrangement of equipment, apparatus, drugs, and fluids. This is the only study on handoffs that commenters presented.

In its comments, the ASA described the ''SBAR'' protocol, or a variation of it, as the handoff procedure most widely taught and used in anesthesia practices, both academic and private. The SBAR protocol gives physicians a format to follow when initiating handoffs. SBAR is an acronym used to describe four basic requirements for transfer of patient care:

S = Situations: State what is going on with the patient, the type of procedure and when it started

B = Background: Explain clinical background leading up to the situation, including medical history, medications, allergies, anesthetic management (including drugs, fluids, and blood loss, etc.)

A = Assessment: Provide an assessment of the current state of the patient and describe what problems, if any, you think exist.

R = Recommendation: Recommend what you think needs to be done.

According to the ASA, some anesthesia departments have defined written protocols that they follow for handoffs, but many do not because the fundamentals of the handoff process are part of the skill set that is believed to be taught and practiced by all teaching anesthesiologists.

The ASA simply expressed the opinion that the appropriate timing of a handoff is a decision best left to the physicians responsible for the care of the patient. The ASA also stated that to raise the issue of quality in anesthesia handoffs where no issue or evidence exists exceeds CMS's authority in implementing section 139 of the MIPPA. The ASA is supportive of an approach where its members use their judgment to decide when to use handoffs and the necessary information exchanged. The ASA recommended that we implement the payment provision only and leave any issues involving handoffs unexamined.

Response: Despite the existence of the SBAR protocol, it is unclear to what extent teaching hospitals have now developed standardized tools, checklists, clinical practice guidelines, or other techniques to ensure the appropriate exchange of information, including the appropriate type and content of anesthesia information, and the assurance that optimum care occurs during handoffs.

We identified two abstracts to be presented to the ASA later this year that present limited information on handoffs. One study, ''Transfer of Anesthesia Care: Are We Hiding Bad Outcomes?'' by Vilma A. Joseph, M.D., M.P.H., Charles E. Kamen, B.A., Rhonda D. Levine, M.D., Alla Krayman, M.S., and Robert S. Lagasse, M.D. This study showed that of 1740 anesthesia cases without a transfer of care, there were 12 recorded adverse outcomes, while there were zero adverse outcomes in the 132 cases where there was a transfer of care. The other study is: ''Evaluating Safety of Handoffs between Anesthesia Care Providers'' by Rhonda Leopold, M.D., Stuart Hart, M.D., Heather Scuderi

Porter, B.A., and Neil Giovanni, M.D.''. This study pointed out that there are not many tools available for anesthesia care providers to ensure that the transfer of care occurs without error. In 70 completed surveys involving the transfer of care, 34 percent of anesthesia care providers found the current handoff process to be inadequate. The majority did believe that standardization of the process would improve patient care.

There appears to be a limited amount of research on handoffs, and a lack of a detailed, industry-defined process on their use. Commenters did not report widespread use of written protocols by academic facilities.

As noted previously, we think the teaching anesthesiologist payment policy in section 139 of the MIPPA and the handoff issues are separate, but related issues. The handoff issue is a quality of care issue not directly addressed in section 139 of the MIPPA. Therefore, we are implementing the payment provision of section 139 but not finalizing a formal policy on handoffs in this final rule. For future rulemaking, we may consider working with the industry to develop guidelines on handoffs. These guidelines may, among other things, address the content and type of information exchanged during handoffs and whether there should be any limitations on the number of handoffs permitted.

In response to comments, we believe it is appropriate to implement this payment provision consistent with current teaching anesthesia practices and handoff arrangements. Thus, different anesthesiologists in the same anesthesia group practice can be considered the teaching physician for purposes of the statutory requirement that the teaching anesthesiologist be present at the key or critical portions of the anesthesia service. Of course, the criteria for the presence of the teaching physician would also be met if only one teaching anesthesiologist was present during the key or critical periods of the anesthesia service.

We are revising § 415.178 to incorporate our policy that allows either a single teaching anesthesiologist or different teaching anesthesiologists in the same anesthesia group practice to be considered the teaching physician for purposes of being present at the key or critical portions of the anesthesia service.

c. Teaching CRNAs

(1) Payment for Anesthesia Services Furnished by a CRNA

Currently, a CRNA who provides anesthesia services while under the medical direction of an anesthesiologist is paid at 50 percent of the regular fee schedule rate as specified in section 1833(l)(4)(B)(iii) of the Act. A CRNA who provides anesthesia services without the medical direction of a physician is paid the regular fee schedule rate as specified in section 1833(l)(4)(A) of the Act.

(2) Payment for Anesthesia Services Furnished by a Teaching CRNA With a Student Nurse Anesthetist

The legislation that initially directed CMS to establish the CRNA fee schedule (that is, section 9320 of the Omnibus Budget Reconciliation Act of 1986 (Pub. L. 99–509)) did not address payment for services furnished by teaching CRNAs involved in the training of student nurse anesthetists.

In the preamble to the CRNA fee schedule final rule published in the July 31, 1992 **Federal Register** (57 FR 33888), we stated that we would pay the teaching CRNA who is not medically directed by a physician at the regular fee schedule rate for his or her involvement in a single case with a student nurse anesthetist as long as he or she was present with the student throughout the anesthesia case. No payment would be made if the teaching CRNA divided his or her time between two concurrent cases involving student nurse anesthetists.

In August 2002, based on the recommendations of the American Association of Nurse Anesthetists (AANA), we modified our policy to allow the teaching CRNA not medically directed by a physician to be paid a portion of the regular fee schedule rate for each of two concurrent cases involving student nurse anesthetists. If the teaching CRNA is present with the student nurse anesthetist during the pre- and post-anesthesia care for each of the cases involving student nurse anesthetists, the teaching CRNA can bill the full base units (comprised of pre- and post-anesthesia services not included in the anesthesia time units) for each case and the actual amount of anesthesia time per case. The resulting payment for each of these anesthesia cases is greater than 50 percent, but less than 100 percent, of the regular fee schedule amount because the full base units plus the actual anesthesia time units spent by the teaching CRNA in each of the two cases yields a payment that is greater than 50 percent of the regular fee schedule amount.

(3) Comparison of Payment Policies for Teaching CRNAs and Teaching Anesthesiologists

For several years, the ASA requested that we revise our payment regulations to allow the teaching anesthesiologist to be paid the regular fee schedule amount for each of two concurrent resident cases. In the CY 2004 PFS final rule with comment period (68 FR 63224), we finalized a policy to permit the teaching anesthesiologist to be paid similarly to a teaching CRNA for each of two concurrent resident cases. This policy took effect for services furnished on or after January 1, 2005.

Thus, the payment policy is the same for a teaching CRNA for each of two concurrent student nurse anesthetist cases, and for a teaching anesthesiologist for each of two concurrent resident cases. The policy is that the anesthesia provider is paid the full base units plus time units, based on the actual anesthesia time, relating to each of two concurrent cases.

(4) Payment Policy for an Anesthesiologist, or an Anesthesiologist and CRNA jointly, With a Student Nurse Anesthetist

Currently, there are circumstances where an anesthesiologist may be involved in the training of student nurse anesthetists in two concurrent anesthesia cases. These anesthesia cases are not paid under the teaching anesthesiologist payment policy, but are paid under the usual medical direction payment policy. Payment can be made for the physician's medical direction (that is, 50 percent of the regular fee schedule amount) for each of two concurrent cases.

If an anesthesiologist is medically directing two concurrent cases involving student nurse anesthetists and a CRNA is also jointly involved with the two student nurse anesthetist cases, then the physician service, in each case, can be paid under the medical direction rules at 50 percent of the regular fee schedule. Payment for the CRNA services would also be made at the medically directed rate (that is, 50 percent of the regular fee schedule) for CRNA services, but the time units used to compute the anesthesia fee would be based on the actual time the CRNA is involved in each case.

(5) Section 139(b) of the MIPPA

Section 139(b) of the MIPPA instructs the Secretary to make appropriate adjustments to Medicare teaching CRNA payment policy so that it—

- Is consistent with the adjustments made by the special payment rule for teaching anesthesiologists under section 139(a) of the MIPPA; and
- Maintains the existing payment differences between teaching anesthesiologists and teaching CRNAs.

We proposed to implement the first directive (under section 139(b)(1) of the MIPPA) by establishing a new payment policy for teaching CRNAs that is similar to the special payment rule for teaching anesthesiologists, and to limit applicability of the rule to teaching CRNAs who are not medically directed. We proposed to add a new regulation at § 414.61 to explain the conditions under which the special payment rule will apply and the method for calculating the amount of payment for anesthesia services furnished on or after January 1, 2010, by teaching CRNAs involved in the training of student nurse anesthetists. As proposed, we would pay the teaching CRNA at the regular fee schedule rate for each of two concurrent student nurse anesthetist cases. Our medical direction payment policy would continue to apply if both an anesthesiologist and a CRNA are involved in a student nurse anesthetist case that is concurrent to another medically directed anesthesia case.

We believe the second directive in section 139(b)(2) of the MIPPA will be satisfied as a result of these proposals. Section 139(b)(1) of the MIPPA instructs CMS to make appropriate adjustments to implement a payment policy for teaching CRNAs that is consistent with the special payment rule for teaching anesthesiologists. Section 139(b)(2) of the MIPPA instructs CMS to maintain the existing payment differences between teaching anesthesiologists and teaching CRNAs. There currently are no substantive differences in payment between teaching anesthesiologists and teaching CRNAs, and there would continue to be no such differences under our proposed policies.

Payment for Teaching CRNAs Involved in Anesthesia Cases With Student Nurse Anesthetists

Under current policy, when a CRNA is involved in a single student nurse anesthetist case, the teaching CRNA can be paid at the regular fee schedule rate if the teaching CRNA is present with the student for the pre- and post anesthesia services included in the base units and is continuously present during the anesthesia time of the case. We did not propose any change to this policy.

When the teaching CRNA is involved in two concurrent student nurse anesthetist cases, payment is based on the amount of anesthesia time the teaching CRNA spends with the student in each case. For example, as noted in the proposed rule, if the teaching CRNA spends 40 percent of his or her time in concurrent case #1 and 60 percent of his or her time in concurrent case #2, and the total anesthesia time in both cases is 3 hours (or 180 minutes), then we would currently pay as follows:

- *Case #1:* (Base units + (0.4 × 180/15)) × Anesthesia CF
- *Case #2:* (Base units + (0.6 × 180/15)) × Anesthesia CF

(The base units are explained earlier in section on general anesthesiology payment methodology.)

The current payment policy has been predicated on paying the teaching CRNA for his or her actual time spent in the student nurse anesthetist case. In the CY 2010 PFS proposed rule, we proposed to pay the teaching CRNA at the regular fee schedule rate for his or her involvement in two concurrent cases. To bill the base units for each concurrent case, the teaching CRNA must be present with the student nurse anesthetist during the pre and post anesthesia services included in the anesthesia base units.

If our goal is to minimize the effect of this change on teaching CRNAs' practice arrangements and time devoted to cases, then, as proposed, the teaching CRNA would continue to devote his or her time to the two concurrent anesthesia cases and not be involved in other services. The teaching CRNA would decide how to allocate his or her time to optimize patient care in the two cases based on the complexity of the anesthesia case, the experience and skills of the student nurse anesthetist, the patient's health status, and other factors.

We note that the Congress did not amend the statutory provisions relating to medical direction at section 1848(a)(4) of the Act. We do not believe the directives at section 139(b) of the MIPPA extend to other arrangements in which an anesthesiologist alone or both an anesthesiologist and CRNA together jointly supervise student nurse anesthetists during concurrent anesthesia cases. Therefore, we did not propose any changes to our current payment policies for anesthesia services furnished under other circumstances. We proposed that when an anesthesia provider (physician or CRNA) furnishes anesthesia services in concurrent cases under other circumstances, the current policies regarding medical direction will continue to apply.

The following is summary of the comments we received regarding section 139 of the MIPPA and teaching CRNAs.

Comment: Commenters supported the proposal to allow teaching CRNAs who are concurrently teaching two student nurse anesthetists to be able to bill the regular fee schedule rate for each anesthesia case involving the student nurse anesthetist. The commenters indicated this change is consistent with the adjustment made under section 139 of the MIPPA for teaching anesthesiologists involved in two concurrent resident cases.

Response: We are adopting our proposal that the teaching CRNA can be paid the full fee for his or her involvement in each of two concurrent cases involving student nurse anesthetists. While we are adopting this policy, we are concerned that it did not specifically address the availability of another anesthesia provider for the periods of concurrency for student nurse anesthetists. (In the case of teaching anesthesiologists and residents, section 139 specifically requires that the teaching anesthesiologist or another anesthesiologist with whom the teaching anesthesiologist has an arrangement is immediately available to furnish anesthesia services during the entire procedure.)

Subsequent to issuing the proposed rule and receiving comments, we learned more about the supervision requirements for student nurse anesthetists. According to the AANA, the standards of the Council on Accreditation of Nurse Anesthesia Programs address supervision of student nurse anesthetists in anesthesia cases. These standards require that in any case involving a student nurse anesthetist, including concurrent cases, a qualified anesthesia provider (CRNA or anesthesiologist) must be present and immediately available in the anesthetizing locations.

Furthermore, according to these standards, the qualified individual must be physically present in the area and immediately available for the student to summon for clinical assistance should it be required. As a result, if one teaching CRNA were temporarily occupied, another qualified anesthetist would respond.

Based on information received and in response to comments, we are requiring that the teaching CRNA be present during the case with the student nurse anesthetist. For periods of concurrency for two student nurse anesthetist cases, we are requiring that another anesthesia provider is available and can fulfill the requirements of the AANA standards.

Comment: Some commenters requested that we establish the same policy specified in section 139(a) of the MIPPA for teaching anesthesiologists

involved in two concurrent resident cases for situations where an anesthesiologist medically directs two concurrent student nurse anesthetists cases. The commenters stated that this would establish payment equity between teaching anesthesiologists and teaching CRNAs and not encourage anesthesiologists to select residents over student nurse anesthetists where the hospital has both types of anesthesia providers.

Response: We understand the commenters' concern and agree that their proposal would establish parity of payment in certain respects. However, in the proposed rule, we noted that the Congress did not amend the statutory provision relating to medical direction at section 1848(a)(4) of the Act. We do not believe the directives at section 139(b) of the MIPPA extend to arrangements in which anesthesiologists supervise two student nurse anesthetists during concurrent cases. While the anesthesiologist may engage in a teaching situation with a student nurse anesthetist, this does not constitute a teaching anesthesiologist relationship as conceived in the statute. The term ''teaching anesthesiologist'' as used in the Medicare statute refers to a teaching physician involved with a physician resident. Therefore, we will maintain our current policy that when an anesthesiologist is involved in two concurrent cases with student nurse anesthetists, the medical direction rules will apply.

Additionally, if we were to consider paying each student nurse anesthetist case at the regular fee schedule amount, it would be unclear what payment criteria would apply for the physician service. The teaching anesthesiologist criteria in section 139(a) of the MIPPA apply only to physician resident cases and not to student nurse anesthetist cases. It also does not seem appropriate to pay the regular fee schedule rate if the services fall within the terms of the statutory provision addressing medical direction under which the anesthesiologist is paid at 50 percent of the regular fee schedule rate. Therefore, we believe the most appropriate course is to maintain our current policy.

Comment: Commenters also requested that, in medical direction cases where there are two concurrent student nurse anesthetists directed by the anesthesiologist and one CRNA covering both student nurse anesthetist cases, that each medically directed CRNA service be paid at the usual medically directed rate or 50 percent of the anesthesia fee schedule.

Response: We make payment at 50 percent of the regular fee schedule amount for the physician who is medically directing the CRNA. We also make payment at 50 percent of the regular fee schedule amount for the service of the CRNA who is involved continuously with the patient in the administration of the anesthesia service. In the anesthesia scenario described in the comment, the student nurse anesthetist can be medically directed but payment cannot be made for the student nurse anesthetist service because he or she is not a qualified CRNA. If the CRNA is involved in two concurrent cases with the student nurse anesthetist, then we do not believe it would be reasonable to pay the usual medical direction fee for the CRNA service because the CRNA is not with the student throughout the case. We are finalizing the policy we proposed that the payment for the CRNA service would be made under the medical direction rules at 50 percent of the regular fee schedule amount, but that the time units used to compute the anesthesia fee would be based on the actual time the CRNA is involved in the case.

Comment: One commenter requested that CMS provide parallel rules for payment involving handoffs for all anesthesia providers, both teaching anesthesiologists and teaching CRNAs. Specifically, the commenter requested that CMS define anesthesia handoffs as the responsibility for care clearly transferred from one qualified anesthesia provider to the next; that handoffs are allowed for all portions of an anesthesia case; and that CRNAs be treated equitably as anesthesiologists.

Response: We addressed handoffs for teaching anesthesiologists in conjunction with our interpretation of the specific provision in section 139 of the MIPPA for coverage of teaching anesthesiologists with residents. We did not address handoff rules for teaching CRNAs. Because we made no proposal on this subject, we are not implementing the commenters' suggestion at this time.

Comment: A commenter requested that we establish a different payment modifier for teaching CRNAs to use for billing purposes when teaching student nurse anesthetists in single or concurrent cases. Currently, teaching CRNAs bill these services using the ''QZ'' modifier which is the same modifier they would use if they furnished the service alone. A new payment modifier would allow for differentiation in the claims processing system between the non-medically directed CRNA cases with student nurse anesthetists and those without the involvement of student nurse anesthetists.

Response: For the present, we will continue to use the existing claims modifier but will give consideration to whether a different modifier is needed to distinguish teaching CRNA cases from cases performed by a CRNA alone.

Comment: A commenter asked if the anesthesia teaching rules apply to an anesthesiologist assistant (AA). The services of AAs can be paid under the CRNA medical direction payment rules, but AAs must work under the supervision of an anesthesiologist.

Response: Our proposal applies only to teaching CRNAs who supervise student nurse anesthetists or to an anesthesiologist who provides medical direction for two concurrent cases involving student nurse anesthetists. It does not apply to AAs.

8. Section 144(a): Payment and Coverage Improvements for Patients with Chronic Obstructive Pulmonary Disease and Other Conditions—Cardiac Rehabilitation Services

Section 144(a) of the MIPPA amended Title XVIII of the Act, in pertinent part, to establish the benefit of cardiac rehabilitation (CR) and intensive cardiac rehabilitation (ICR) under Medicare Part B. The statute specifies certain conditions for these programs, with an effective date of January 1, 2010. The addition of the new CR and ICR programs is designed to improve the health care of Medicare beneficiaries with cardiovascular disease. This final rule with comment period implements these MIPPA provisions in order to ensure CR and ICR programs enhance the patient's clinical outcomes.

a. Background

Intensive cardiac rehabilitation (ICR) is a relatively new practice that is also commonly referred to as a ''lifestyle modification'' program. These programs typically involve the same elements as CR programs, but are furnished in highly structured environments in which sessions of the various components may be combined for longer periods of CR and may be more rigorous.

b. Cardiac Rehabilitation Coverage Under Medicare

One mechanism we use to establish coverage for certain items and services is the national coverage determination (NCD) process. An NCD is a determination by the Secretary with respect to whether or not a particular item or service is covered nationally under Title XVIII.

Since 1982, Medicare has covered, under an NCD, cardiac rehabilitation for patients who experience stable angina, have had coronary artery bypass grafts, or have had an acute myocardial infarction within the past 12 months. The NCD is located in the Medicare NCD Manual (Pub. 100–03), section 20.10. Effective March 22, 2006, we modified the NCD language to cover comprehensive cardiac rehabilitation programs for patients who experience one of the following:

- A documented diagnosis of acute myocardial infarction within the preceding 12 months.
- A coronary bypass surgery.
- Stable angina pectoris.
- A heart valve repair/replacement.
- A percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting.
- A heart or heart-lung transplant.

Comprehensive programs must include a medical evaluation, a program to modify cardiac risk factors, prescribed exercise, education, and counseling and may last for up to 36 sessions over 18 weeks or no more than 72 sessions over 36 weeks if determined appropriate by the local Medicare contractors. Facilities furnishing cardiac rehabilitation must have immediately available necessary cardio-pulmonary, emergency, diagnostic, and therapeutic life-saving equipment and be staffed with personnel necessary to conduct the program safely and effectively who are trained in advanced life support techniques and exercise therapy for coronary disease. The program must also be under the direct supervision of a physician. Until section 144(a) of the MIPPA is effective on January 1, 2010. ICR programs are covered under this NCD and are subject to the same coverage requirements.

c. Statutory Authority

Section 144(a) of the MIPPA amended the Medicare Part B program by adding new sections 1861(s)(2)(CC) and 1861(s)(2)(DD) of the Act to include items and services furnished under a new benefit referred to as a ''cardiac rehabilitation program'' and an ''intensive cardiac rehabilitation program,'' respectively. A cardiac rehabilitation program is defined in new section 1861(eee)(1) of the Act and an intensive cardiac rehabilitation program is defined in new section 1861(eee)(4)(A) of the Act.

A cardiac rehabilitation program is a physician-supervised program that furnishes the following: physician-prescribed exercise; cardiac risk factor modification, including education, counseling, and behavioral intervention; psychosocial assessment; outcomes assessment; and other items or services as determined by the Secretary under certain conditions. These items and services must be furnished in a physician's office, in a hospital on an outpatient basis, or in other settings as determined appropriate by the Secretary. A physician must be immediately available and accessible for medical consultation and emergencies at all times items and services are being furnished in a CR program except when provided in a hospital setting where such availability is presumed. The items and services furnished by a CR program are individualized and set forth in written treatment plans that describe the patient's individual diagnosis; the type, amount, frequency, and duration of items and services furnished under the plan; and the goals set for the individual under the plan. These written plans must be established, reviewed, and signed by a physician every 30 days.

An ICR program provides the same items and services under the same conditions as CR programs but must demonstrate, as shown in peer-reviewed published research, that they have accomplished one or more of the following: positively affected the progression of coronary heart disease, or reduced the need for coronary bypass surgery, or reduced the need for percutaneous coronary interventions (PCIs). The peer-reviewed published research must also show that the ICR program has resulted in a statistically significant reduction in 5 or more measures from their levels before ICR services to their levels after receipt of such services. These measures include low density lipoprotein; triglycerides; body mass index; systolic blood pressure; diastolic blood pressure; or the need for cholesterol, blood pressure, and diabetes medications. Beneficiaries eligible for ICR must have experienced the following: an acute myocardial infarction within the preceding 12 months; a coronary bypass surgery; current stable angina pectoris; a heart valve repair or replacement; a percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting; or a heart or heart-lung transplant. Section 1861(eee)(4)(C) of the Act, as added by section 144(a)(1)(B) of the MIPPA, states that an ICR program may be provided in a series of 72, 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

The statute authorizes the Secretary to establish standards for the physician supervising the ICR and/or CR programs to ensure that the physician has expertise in the management of individuals with cardiac pathophysiology and is licensed by the State in which the CR program (or ICR program) is offered. These standards ensure that the physician is responsible for the program and, in consultation with appropriate staff, is involved substantially in directing the progress of individuals in the program.

d. Provisions of the Proposed Regulation

We proposed to add § 410.49, ''Cardiac Rehabilitation Program and Intensive Cardiac Rehabilitation Program: Conditions of Coverage'' to our regulations.

Below is a summary of what we proposed for the new ICR and CR benefit in the proposed rule. (To read the proposed rule in its entirety, see the CY 2010 PFS proposed rule (74 FR 33606 through 33610, and 33675 through 33676.)

We proposed definitions with respect to the programs and services related to CR and ICR programs.

We listed the cardiac-related conditions for which CR and ICR items and services are eligible for coverage under this new benefit. We received several comments to add other conditions unrelated to cardiac conditions and will address those comments in section II.G.8.e. below.

We proposed that CR and ICR programs may only be provided in a physician's office or a hospital on an outpatient basis. Any additional settings will be added through future rulemaking.

We proposed that only a physician as defined in section 1861(r)(1) of the Act may establish the written individualized treatment plan, review the plan and update that plan. We received a few comments on this provision, specifically requesting that staff other than the physician should be able to update the plan. We address those comments in the section II.G.8.e. of this rule.

We proposed components of the CR and ICR program. All of the items and service related to the ICR and CR programs must be individualized to the beneficiary and delivered as part of the CR and ICR program. Any additional mandatory items and services will be added through future rulemaking.

We defined outcomes assessment as an evaluation of the patient's progress in the program using assessments from the commencement and conclusion of CR and ICR programs that are based upon patient centered outcomes. We also outlined the timing of when the patient centered outcomes must be measured—at the beginning of the CR and ICR program, prior to each 30-day review of

the individualized treatment plan, and at the end of the CR and ICR program.

Based on the outcomes assessment, the beneficiaries' plan of care should be updated as needed to ensure that the beneficiary continues to receive appropriate items and services based on his or her clinical needs.

We proposed the number of sessions that may be provided to a beneficiary participating in a CR program. The number of sessions that may be provided as part of an ICR program were specifically set forth in the statute and were included in the proposed rule as well.

We requested comments for specific physician standards that should be required to ensure that the physician is qualified to supervise the CR and ICR program. In addition to requesting comments for physician standards, we discussed two physician roles in the CR and ICR programs.

- Medical director: The physician who oversees or supervises the CR and ICR program at each site and who has expertise in the management of patients with cardiac pathophysiology. This person must be involved substantially in directing the progress of individuals in the program.
- Supervising physician: A physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished under the CR and ICR program. This physician must also have expertise in the management of individuals with cardiac pathophysiolgy.

We have added definitions for the medical director and supervising physician to the regulations text and discuss these additions in section II.G.8.f. of this final rule with comment period.

We noted in the proposed rule that physician supervision of the program is limited to a physician who is the program medical director or a program staff physician serving as the supervising physician. This person must be a physician as defined in section 1861(r)(1) of the Act and not another CR or ICR staff member.

We proposed that the statutorily-required ongoing physician availability for medical consultations and medical emergencies would be met through existing definitions for direct physician supervision in physicians' offices and hospital outpatient departments at § 410.26(a)(2) (defined through cross references to § 410.32(b)(3)(ii)) and § 410.27(f), respectively. We stated that direct supervision, as defined in the regulations, is consistent with the language of the MIPPA because the physician must be present and immediately available where the services are being furnished. The physician must also be able to furnish assistance and direction throughout the performance of the services, which would include medical consultations and medical emergencies.

For CR and ICR services provided in physicians' offices and other Part B settings paid under the PFS, we proposed that the physician must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service or procedure in accordance with the § 410.26(b)(5) as described in § 410.26(a)(2) of this subpart (defined through cross references to § 410.32(b)(3)(ii) of this subpart). This does not mean that the physician must be in the room when the service or procedure is performed.

For CR and ICR services provided to hospital outpatients, direct physician supervision is the standard set forth in the April 7, 2000 OPPS final rule with comment period (68 FR 18524 through 18526) for supervision of hospital outpatient therapeutic services covered and paid by Medicare in hospitals and provider-based departments of hospitals. We stated that we currently define and specify the requirement for direct supervision for services furnished in provider-based departments of hospitals at § 410.27(f). For this purpose, the physician must be on the premises of the location (meaning the provider-based department) and immediately available to furnish assistance and direction throughout the performance of the procedure. This does not mean that the physician must be present in the room when the procedure is furnished. We also noted that if we were to propose future changes to the physician office or hospital outpatient policies for direct physician supervision, we would provide our assessment of the implications of those proposals for the supervision of cardiac rehabilitation services at that time. We note that in the CY 2010 OPPS/ASC proposed rule (74 FR 35362 through 35370), we proposed changes to the policy for direct physician supervision of hospital outpatient therapeutic services. We have addressed the application of the proposed and final hospital outpatient physician supervision policies in section II.G.8.e. below.

The MIPPA provisions state that in the case of items and services furnished under such a program in a hospital, physician availability shall be presumed. As we have stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68702 through 68704), the longstanding presumption relating to direct physician supervision for hospital outpatient services means that direct physician supervision is the standard for supervision of hospital outpatient therapeutic services covered and paid by Medicare in hospitals and provider-based departments of hospitals, and we expect that hospitals are providing services in accordance with this standard.

We received the majority of the comments on the above supervising physician provision and have addressed those in section II.G.8.e. of this final rule.

In our proposal, we noted that the program medical director may fulfill both roles of medical director and supervising physician (of individual CR and ICR services furnished to patients) provided that the requirements for direct physician supervision as required in § 410.26 and § 410.27 are met when CR or ICR items and services are furnished, as discussed above.

In addition to the CR requirements, section 1861(eee)(4) of the Act requires ICR programs to meet several additional standards. To become qualified, an ICR program must demonstrate through peer-reviewed, published research that it has accomplished one or more of the following: (1) Positively affected the progression of coronary heart disease; (2) reduced the need for coronary bypass surgery; or (3) reduced the need for percutaneous coronary interventions (PCIs). A qualified ICR program must also demonstrate through peer-reviewed published research that the ICR program accomplished a statistically significant reduction for patients in 5 or more specific measures from the individual's levels before ICR services to their levels after receipt of such services. These measures include: (1) Low density lipoproteins; (2) triglycerides; (3) body mass index; (4) systolic blood pressure; (5) diastolic blood pressure; and (6) the need for cholesterol, blood pressure, and diabetes medications. To ensure that ICR programs meet these standards, we proposed that ICR programs apply to CMS to receive approval as a qualified ICR programs. Only approved programs would be eligible for Medicare coverage and would be required to undergo regular re-evaluation to maintain such status. We did not propose any specific approval process(es), but requested comments on what process should be adopted by CMS. No comments were received advocating for any specific process(es), but we did receive comments requesting that any process adopted must allow public input and be open and transparent. We have

addressed these comments and the ICR approval process in section II.G.8.e. of this final rule.

e. Analysis of and Response to Public Comments

We received over 100 public comments. Many were supportive of our proposals to establish CR and ICR rules. Most comments also addressed several of the proposed provisions in the rule. The following is a summary of the issues and our responses.

Comment: Regarding the application of the direct physician supervision requirement to hospital outpatient services, many commenters noted that the CY 2010 PFS proposed rule cited references to the current regulations in § 410.27(f), while the CY 2010 OPPS/ASC proposed rule proposed several new policies for the direct supervision of hospital outpatient therapeutic services. The commenters requested that CMS clarify that for hospital outpatient services, the proposed definitions and policies would apply.

Response: We understand the commenters' concerns and requests for clarification and have attempted to clarify the direct physician supervision requirement below. The proposed general policies for the direct supervision of hospital outpatient therapeutic services would apply to CR and ICR services furnished to hospital outpatients, with the exception of the required credentials of the supervising practitioner, as specifically discussed in the CY 2010 OPPS/ASC proposed rule for CR and ICR services. Consistent with section 1861(eee)(2)(B) of the Act, a physician must be the supervising practitioner for CR and ICR services in a hospital setting. The final policies for payment and direct physician supervision of CR and ICR services furnished to hospital outpatients are discussed in detail in section XII.B.3. through 4. of the CY 2010 OPPS/ASC final rule with comment period.

Comment: Several commenters requested that CMS allow NPPs to satisfy the physician supervision requirements for CR and ICR services. The commenters stated that the proposal in the CY 2010 OPPS/ASC proposed rule would allow certain NPPs (nurse practitioners, physician assistants, clinical nurse specialists and certified nurse-midwives) to provide direct supervision of services which they may perform themselves within their State scope of practice and hospital-granted privileges and following all other requirements. The commenters concluded that CMS should not exclude CR and ICR services from this new policy.

Response: We understand the commenters' concern regarding allowing NPPs to satisfy the physician supervision requirement. We cannot adopt this request because the statutory language of the MIPPA defines both cardiac rehabilitation and intensive cardiac rehabilitation as ''physician-supervised'' programs. A physician is defined in section 1861(r)(1) of the Act. The MIPPA also specifically requires that ''a physician is immediately available and accessible for medical consultation and medical emergencies at all times items and services are being furnished under the program * * *;'' The text of the statute uses the word ''physician'' and does not include NPPs. We believe, based on the statutory language in MIPPA and the statutory definition of physician, that the statute does not provide us the flexibility to allow the supervising role to be filled by a non-physician practitioner. In other words, for the purposes of the CR and ICR programs, whether furnished in a physician's office, hospital outpatient setting or other Part B setting, the direct physician supervision definition applies only to a physician as defined in section 1861(r)(1) of the Act.

Comment: Several commenters requested that CMS remove the requirement from § 410.49(f) for patients to participate in a minimum of 2 CR sessions per week. The comments noted that such a requirement is not supported by specific published evidence and that many patients benefit from fewer than 2 sessions of CR per week. In addition, patients who have difficulty attending CR (due to long traveling distance, limited access to transportation, etc.) may not be able to attend 2 sessions per week and should not be prohibited from participating in CR because of transportation barriers.

Response: We understand and agree with these concerns and have removed from § 410.49(f) the requirement for patients to participate in a minimum of 2 CR sessions per week, as improved outcomes have been demonstrated in patients who participate in fewer than 2 CR sessions each week.

Comment: Many commenters also recommended that CMS revise the time period over which patients are eligible for CR services. The commenters suggested that we allow coverage for CR services for up to 36 sessions over 36 weeks. Additional commenters requested that we remove a provision that enabled Medicare contractors to extend coverage to up to 72 sessions.

Response: We agree with the comments requesting coverage for 36 sessions over 36 weeks. We have removed the requirement for CR patients to participate in a minimum of 2 CR sessions each week, and we have revised proposed § 410.49(f) to allow up to 36 sessions over 36 weeks. While the proposal to cover up to 36 CR sessions over up to 18 weeks was reasonable and consistent with the NCD, we agree that improved outcomes have been demonstrated in patients who participate in as little as one CR session per week.

We disagree with the suggestion that we remove contractor discretion under section 1862(a)(1)(A) of the Act to approve additional sessions of CR. As noted in the background, the statute required that CR programs be highly individualized and structured to meet an individual's needs. The programs are directed by physicians with expertise in cardiac pathophysiology. Our experience has been that not all patients require, and not all supervising physicians support, additional sessions for all beneficiaries. While some patients may continue to benefit from additional sessions, we believe that beneficiaries and the Medicare program will be best served if the 36 additional CR sessions are approved by local Medicare contractors based on each individual patient's specific circumstances. Therefore, we have changed the final rule to allow coverage of up to 36 CR sessions for up to 36 weeks and with the option for Medicare contractors to approve an additional 36 sessions over an extended period of time. The amount of additional time is determined by the Medicare contractor.

Comment: Various commenters requested that we use the term ''comprehensive cardiac rehabilitation'' rather than ''general cardiac rehabilitation'' when referring to CR programs (as opposed to ICR programs). Other commenters request that CMS not use the term ''intensive cardiac rehabilitation'' when referring to lifestyle modification programs as such a term implies that these programs are more effective than CR programs.

Response: We understand the confusion regarding the terminology used to describe CR and ICR, but do not agree with the public comments recommending that we use different terminology. We used the adjective ''general'' for ''cardiac rehabilitation'' in the preamble and some sections of the proposed rule to try to distinguish CR programs from ICR programs for the benefit of the reader. We accept the commenter's premise that a different adjective could have been used for that purpose. In the final regulation text in § 410.49(a), we removed the adjective ''general.'' We are not adopting the recommendation to change the adjective

to ''comprehensive'' cardiac rehabilitation. We believe that term may be even more confusing given the existence of the separate ''intensive cardiac rehabilitation'' definition in § 410.49(a). In order to avoid any confusion caused by an adjective, we will describe the benefit in section 1861(eee)(1) of the Act as ''cardiac rehabilitation.'' We will amend the regulation in § 410.49(f) to eliminate the adjective ''general.'' We disagree with commenters that suggested that the term ''intensive cardiac rehabilitation'' should not be used. Intensive cardiac rehabilitation was the term specifically used in the MIPPA and added in section 1861(eee)(4) of the Act. In addition to the regulatory text changes, the preamble of the final rule refers to ''cardiac rehabilitation'' and ''intensive cardiac rehabilitation.''

Comment: Some commenters expressed confusion or suggested the need for clarification regarding the process by which ICR programs become approved by CMS and how individual sites wishing to furnish ICR items and services are able to participate. Other commenters disagreed with our proposal. Some commenters stated that establishing a process for ICR program approval should include stakeholder involvement and should not result in significant administrative costs. These commenters also insisted that the process be clear and concise so that all stakeholders know how to become approved as an ICR program or site.

Response: We agree with many of the points offered by the commenters and are clarifying the process for the approval of ICR programs and the specific sites furnishing these new part B services. Based on the comments we received, we are using the NCD process to determine whether an ICR program meets the statutory requirements set forth in section 1861(eee)(4) of the Act. The NCD process, as authorized by section 1862(l) of the Act, is open, transparent, and provides an opportunity for public comments on a proposed national coverage determination (NCD). The NCD process is a well known process; therefore, stakeholders know what to expect when we open an NCD to review an ICR program. In addition to using the NCD process to determine whether ICR programs fall within the scope of the new Part B benefit, this final rule with comment period clarifies the distinct roles of an ICR approved program and the individual sites that would provide the ICR items and services. An ICR program is a physician-supervised program that furnishes cardiac rehabilitation and has shown, in peer-reviewed published research, that it improves patients' cardiovascular disease through specific outcome measurements. By statute, an ICR program must demonstrate by peer-reviewed published research that the program satisfies specific metrics. We typically consider and review peer-reviewed published literature through the NCD process. An ICR site, on the other hand, is a hospital outpatient setting or physician's office that is providing intensive cardiac rehabilitation utilizing an approved ICR program. For purposes of appealing an adverse determination, an ICR site is considered a supplier (or prospective supplier) as defined in § 498.2.

In this final rule with comment period, we are requiring that all ICR programs be approved through the NCD process. The NCD process will review each ICR program based on peer-reviewed published research, to ensure the program (or programs) under evaluation demonstrates that it satisfies the specific standards set forth in section 1861(eee)(4) of the Act. This process will involve at least one 30-day public comment period at which time the public may comment on the proposed decision. We believe this process allows for significant stakeholder involvement and is open and transparent, consistent with the commenters' request. Once we have approved an ICR program or programs through the NCD process, individual sites wishing to furnish ICR items and services via an approved ICR program may enroll with their local Medicare contractor to become an ICR program supplier as outlined in § 424.510.

We note that this enrollment process will ensure that specific sites meet the remaining statutory and regulatory requirements needed to furnish ICR services and provide a mechanism to appeal an adverse determination. With regards to billing and payment of CR and ICR services, physician office suppliers and hospital providers will continue to use their CMS Certification Number (supplier or provider number) and appeals related to the payment of claims will follow those separate processes.

Comment: Several commenters expressed opposition to the proposed requirement for all ICR programs to request and receive approval as a CMS approved ICR program based on peer-reviewed published research demonstrating that the program accomplishes specific outcomes.

Response: We do not agree with public commenters who oppose the provision requiring approval of all ICR programs. We believe that the statute requires ICR programs to be evaluated based on peer reviewed published research. The only way we are able to ensure that ICR programs are demonstrating these outcomes and that ICR sites are eligible for payment as required by the MIPPA is by reviewing the program using peer reviewed published research. We agree that the process adopted by CMS to review ICR programs must include public input and the NCD process will provide an opportunity for public participation. The NCD process may be internally generated by CMS or requested by an external party. ICR programs evaluated through an internally generated NCD are not required to submit peer-reviewed published research, as CMS identifies relevant research during the evidence review process. ICR programs that submit an NCD request, should submit the peer-reviewed published research upon which they are requesting approval. Specific information on the NCD process is available in the **Federal Register** notice (68 FR 55634).

Once ICR programs are approved through the NCD process, individual sites wishing to furnish ICR services must enroll with their local Medicare contractors. The ICR sites will be required to demonstrate that they meet the remaining regulatory and statutory requirements relating to state licensure, expertise in the management of individuals with cardiac pathophysiology, cardiopulmonary training, and certification in basic life support and advanced cardiac life support. By requiring enrollment via a local Medicare contractor as a supplier, a prospective ICR site would be entitled to appeal rights as outlined in 42 CFR part 498 if a site is not approved as meeting those standards. As noted above, this enrollment does not affect reporting and payment of CR and ICR services furnished by the hospital provider in the hospital outpatient setting. A hospital's enrollment as an ICR site ensures a separate appeal right related to the ICR site approval.

Comment: Several commenters recommended that we remove the requirement for ICR programs seeking approval to submit peer-reviewed published research in order to achieve approval. The commenters stated that most sites where ICR services are furnished do not publish their own data and should not have to collect voluminous data in order to become approved if the program is modeled after another program for which research has been published.

Response: We agree that individual sites furnishing ICR services are not required to submit data specific to the

site. It was not our intent to require each site where ICR items and services were being furnished to submit peer-reviewed published research specific to their site. Rather we intended, and have further clarified in this final rule with comment, that we will evaluate peer-reviewed published research to approve ICR programs through the NCD process. The peer-reviewed published research required for CMS approval as an ICR program is not a requirement of the individual ICR sites. Peer-reviewed published research submission is only a requirement of the ICR programs being reviewed for CMS approval via the NCD process. We are amending § 410.49(c)(3) to eliminate the need for reporting site specific outcome data.

Comment: Several commenters requested that we include additional indications for coverage of CR and ICR services. One commenter requested coverage for patients diagnosed with diabetes, breast cancer, prostate cancer, and metabolic syndrome. Another commenter requested coverage for patients with heart failure, peripheral artery disease, type 2 diabetes, high blood pressure, metabolic syndrome, post breast cancer treatment, and watchful waiting for prostate cancer.

Response: We do not agree that CR and ICR services should be covered for these non-cardiac patient populations. Extending ICR to other illnesses would appear to require additional legislation. We do not agree, based on currently available evidence, that coverage of CR should be expanded to include heart failure patients. If we determine based on supportive evidence that coverage for CR should be expanded to additional cardiac patient populations, such a decision will be made through an NCD.

Comment: Numerous commenters requested that CMS completely remove the requirement for the CR medical director to ''review and sign the plan prior to initiation of CR'' for all CR patients. The commenters state that such a requirement requires the medical director to review each patient's medical record to determine if the referring physician's treatment plan is appropriate and such a review is ''completely unrealistic, unnecessary, potentially costly and could prevent patients from receiving their therapy in a timely manner.''

Response: We do not agree with the public comments requesting that we remove the requirement for a physician to review and sign patients' treatment plans. We have clarified at § 410.49(b)(2)(v) that the treatment plan must be signed by a physician. We also note the importance of ensuring that the medical director and all CR and ICR staff are familiar with the treatment plan and any changes to the treatment plan. While the medical director is not required to scrutinize each patient's medical record, he or she should be aware of the patient's conditions and progress through the program. As the medical director is responsible for the program as a whole, he or she should at least be knowledgeable of each patient's progress through CR or ICR.

Comment: Several commenters requested that we establish clear, concise practice guidelines for practitioners to follow. We received numerous comments addressing qualifications for CR and ICR program medical directors, supervising physicians and support staff. Many commenters referred to the American Heart Association (AHA)/American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) description of medical director duties and levels of expertise as preferred guidelines and other comments stressed the importance of administration and management experience for the medical director. Guidelines released by the AHA/AACVPR were also cited with respect to standards for supervising physician(s) and support staff. Commenters suggested that CR and ICR staff be certified in Basic Life support (BLS) and meet performance measures identified by the AACVPR. Other commenters recommended that all staff maintain current cardiopulmonary resuscitation (CPR) certification and advanced cardiac life support (ACLS) certification and automated external defibrillator (AED) training. Commenters also requested that CMS stress the importance of incorporating a multidisciplinary staff in CR and ICR programs.

Response: We understand the commenters' requests and recommendations. In the proposed rule, we solicited comments on whether we should adopt practice guidelines and if so what guidelines should be adopted. We did not receive any comments on specific guidelines CMS should adopt besides the AHA/AACVPR guidelines discussed in the preamble of the proposed rule. While those guidelines are encouraged for CR and ICR programs and sites, we are not mandating that those guidelines be used in this final rule with comment period. Instead we have required in § 410.49(d) and (e) that in addition to the statutory required qualifications, the medical director and supervising physician(s) must have cardiopulmonary training in basic life support or advanced cardiac life support.

Comment: Commenters requested that we recognize registered dietitians and occupational therapists as part of the CR and ICR multidisciplinary team.

Response: We agree that these professionals may be part of the multidisciplinary team working with CR and ICR patients during CR and ICR sessions. While they may comprise part of the CR and ICR support staff, they may not supervise sessions or bill separately for services furnished during CR or ICR sessions. For more information on payment issues, see section II.G.8.g. of this final rule with comment period.

Comment: Some commenters requested that we remove the requirement for CR and ICR patients to participate in aerobic exercise during every CR or ICR session.

Response: We understand these commenters' concerns but believe these commenters misunderstood the aerobic exercise requirement. In the proposed rule, (§ 410.49(b)(2)(i)), we proposed to require patients to participate in aerobic exercise each day CR and ICR services are furnished. If patients participate in more than one CR or ICR session in a single day, then they are required to exercise aerobically in one, but not every, session.

Comment: Several commenters requested that we revise the language addressing outcomes assessments to recognize that some patient-centered outcomes will not demonstrate measurable changes within a 30-day period and should not be measured as frequently as every 30 days.

Response: We agree with these commenters that certain outcomes measures may not change significantly in a 30-day period and will allow CR and ICR programs flexibility with respect to what outcomes must be measured every 30 days. Measurement of outcomes that typically exhibit no or minute changes during a 30-day period is not required.

f. Provisions of the Final Regulation

This final rule maintains and refines coverage for CR for beneficiaries with the six conditions as originally established in Pub. 100–03, section 20.10 as this coverage was determined to be reasonable and necessary under section 1862(a)(1)(A) of the Act due to a high level of supporting clinical evidence. We may use the NCD process in the future if necessary to identify additional medical indications for cardiac patients who could obtain CR under Medicare Part B.

In § 410.49(a), we provide definitions of key terms used in this section. Most of the key terms received no comments

and our final rules are identical to the proposed definition terms for: (1) Cardiac rehabilitation; (2) individualized treatment plan; (3) outcomes assessment; (4) physician; (5) physician-prescribed exercise; and (6) psychosocial assessment. We have changed the term intensive cardiac rehabilitation to intensive cardiac rehabilitation program, but maintained the original definition, in order to delineate between ICR programs and ICR program sites in § 410.49(a).

We have added the following terms and definitions to § 410.49(a):

- Intensive cardiac rehabilitation program site which means a hospital outpatient setting or physician's office that is providing intensive cardiac rehabilitation utilizing an approved ICR program.
- Medical director which means a physician that oversees or supervises the cardiac rehabilitation or intensive cardiac rehabilitation program at a particular site.
- Supervising physician which means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under cardiac rehabilitation and intensive cardiac rehabilitation programs.

In § 410.49(b), we set forth the general rules for covered beneficiary rehabilitation services and describe the required components of the program. The covered patient populations remain unchanged and include beneficiaries who have experienced one or more of the following:

- An acute myocardial infarction within the preceding 12 months.
- A coronary artery bypass surgery.
- Current stable angina pectoris.
- Heart valve repair or replacement.
- Percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting.
- A heart or heart-lung transplant.

We are changing the final indication to include ''cardiac'' when discussing other conditions that may be considered for coverage. The final indication states, for cardiac rehabilitation only, other cardiac conditions as specified through a national coverage determination.

The required components of cardiac rehabilitation programs remain unchanged, but we have clarified that the individualized treatment plan must be established, reviewed, and signed by a physician every 30 days.

In § 410.49(c), we establish the specific standards that ICR programs must meet. We have clarified how an ICR program will be evaluated through the NCD process, and how specific ICR sites will be evaluated to ensure those entities meet the regulatory requirements.

In order to utilize a clear and transparent process for approving ICR programs, the programs will be evaluated through the NCD process to determine if each program demonstrates through peer-reviewed published research that it has accomplished one or more of the following for its patients:

- Positively affected the progression of coronary heart disease.
- Reduced the need for coronary bypass surgery.
- Reduced the need for percutaneous coronary interventions.

ICR programs must also demonstrate through peer-reviewed published research a statistically significant reduction in 5 or more of the following measures for patients from their levels before CR services to after CR services:

- Low density lipoprotein.
- Triglycerides.
- Body mass index.
- Systolic blood pressure.
- Diastolic blood pressure.
- The need for cholesterol, blood pressure, and diabetes medications.

Individual sites wishing to furnish ICR items and services through an approved ICR program must enroll with their local Medicare contractor as an ICR program site. An ICR site will be considered a supplier or putative supplier for purposes of the appeals process in 42 CFR part 498 related to the approval of the ICR site.

In § 410.49(d), we list the specific standards that physicians must meet to be a medical director or supervising physician. All medical directors and supervising physicians must possess all of the following:

- Expertise in the management of individuals with cardiac pathophysiology.
- Cardiopulmonary training in basic life support or advanced cardiac life support.
- Be licensed to practice medicine in the State in which the cardiac rehabilitation program is offered.

In § 410.49(f), we list the specific limitations for the number of and time period over which CR and ICR sessions may be provided. The limitations for ICR coverage remain unchanged and allow for coverage of up to 72, 1-hour sessions, up to 6 sessions per day, over a period of up to 18 weeks. We have changed the limitations for CR coverage to allow a maximum of 2, 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare contractor under 1862(a)(1)(A) of the Act.

In addition to the provisions above, we have made the following revisions in the final rule:

- To clarify that the proposed and final policies for the direct supervision of hospital outpatient therapeutic services, as discussed in the CY 2010 OPPS/ASC final rule with comment period, do apply to CR and ICR services furnished to hospital outpatients. Due to specific language in the MIPPA pertaining to a physician being immediately available and accessible for medical consultation and medical emergencies at all times items and services are being furnished under the program, a physician as defined in section 1861(r)(1) of the Act must supervise CR and ICR sessions, whether furnished in physicians' offices, hospital outpatient settings, or other Part B settings.
- To remove the term ''general cardiac rehabilitation'' and replace with ''cardiac rehabilitation.''
- To clarify CR and ICR medical director and supervising physician standards.
- To clarify that CR and ICR patients must exercise aerobically each day CR and/or ICR services are furnished and are not required to exercise aerobically during every CR or ICR session. If more than one session is furnished during 1 day, then patients are required to exercise aerobically during only one of the sessions.
- To allow flexibility in the 30-day patient centered outcomes measurements in order to allow outcomes that may not exhibit changes during a 30-day period of time to be measured less frequently, but no fewer times than at the beginning and end of patients' participation in a CR or ICR program.

g. Coding and Payment

(1) Cardiac Rehabilitation (CR) Payment

Currently, the following CPT codes are used for CR services described in section 144(a) of the MIPPA: CPT code 93797, *Physician services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session*) and CPT code 93798, *Physician services for outpatient cardiac rehabilitation; with continuous ECG monitoring (per session).* We did not propose to revise these codes under the PFS because the CR program authorized by the existing National Coverage Determination (NCD) is essentially the same as what is included in the MIPPA.

(2) Intensive Cardiac Rehabilitation Payment

The statute requires that the hospital Outpatient Prospective Payment System

(OPPS) payment amount for CR services be substituted for ICR under the PFS, specifically the payment for CPT codes 93797 and 93798 or any succeeding HCPCS codes for CR. We proposed to create two new HCPCS codes for ICR services. These codes may only be billed by ICR programs that have been approved by CMS. The proposed codes are as follows:

- GXX28, *Intensive cardiac rehabilitation; with or without continuous ECG monitoring with exercise, per session.*
- GXX29, *Intensive cardiac rehabilitation; with or without continuous ECG monitoring; without exercise, per session.*

These HCPCS codes will be recognized under the PFS and the OPPS. Under the OPPS, the existing CR HCPCS codes, CPT codes 93797 and 93798, are assigned to APC 0095 (Cardiac Rehabilitation) for CY 2009. Because the payment under the PFS for the two proposed ICR G-codes is required to be the same as the payment for CR services under OPPS, we proposed to pay the same amount as will be established through rulemaking for CY 2010 OPPS. We proposed that this amount will be adjusted for the appropriate locality by applying the GPCI under the PFS. The CY 2010 proposed APC assignments and payment rates for these two ICR G-codes were published in the CY 2010 OPPS/ASC proposed rule (74 FR 35361).

We note that when a CR/ICR service is furnished in a hospital outpatient department, a physician cannot bill the Medicare contractor for CR/ICR unless the physician personally performs the CR/ICR service. To personally perform the CR/ICR service, the physician would provide direct care to a single patient for the entire session of CR/ICR that is being reported. In this case, the hospital would report the CR/ICR service and be paid the OPPS payment amount for the facility services associated with the CR/ICR session and the physician would report and be paid the PFS amount for the CR/ICR service. A physician cannot bill under the PFS for CR/ICR services furnished in a hospital for which the physician furnishes only supervision or for services furnished in part by others. If the physician furnishes no direct CR/ICR services for a given session on a given day or provides direct CR/ICR services for less than the full session, then only the hospital would report the CR/ICR services and these services would be paid only under the OPPS.

The following is a summary of the comments we received regarding the payment of CR services under section 144(a) of the MIPPA.

Note: We received comments concerning the role of physical therapists, and occupational therapists in providing CR, ICR, and pulmonary rehabilitation (PR). Those comments are addressed in the PR section which follows this section.

Comment: One commenter stated that the physician work and staff resources required to perform the mandatory outcomes assessment are not valued in the physician work and PE RVUs established for CPT codes 93797 and 93798. The commenter recommends separate reporting and payment for the outcomes assessment.

Response: We note that an outcomes assessment is part of the CR benefit established by the Congress. While it may not have been described specifically in the CR program authorized by the existing NCD we believe an assessment of the patient's condition before initiating treatment and at periodic intervals to measure the patient's progress would be an expected part of treatment. In addition we note that the language at § 410.49 has been revised to allow more flexibility with regard to the outcomes that must be measured every 30 days. Section 410.49 requires that patient centered outcomes measurements must be taken no fewer times than at the beginning and end of a patient's participation in a CR or ICR program.

Comment: Some commenters requested an increase in the payment for traditional CR. One commenter also stated concerns about the way payment for ICR was established.

Response: The MIPPA made no substantive changes to the CR program authorized by the existing NCD and reported using CPT codes 93797 and 93798. Therefore, we proposed no changes to payment for these codes under the PFS. Under the statute, the payment for ICR under the PFS is based on the OPPS payment amount for CR services. Please see section XII.B.3 of the CY 2010 OPPS/ASC final rule for a discussion of how the payment amounts for CR and ICR were established under the OPPS.

Payment for CR

After consideration of the public comments we received, we are finalizing our CY 2010 proposal, without modification, to pay for CR using CPT codes 93797 and 93798.

Payment for ICR

We also are also finalizing our CY 2010 proposal to adopt the new 2010 PFS HCPCS G-codes for ICR with the following descriptors:

- G0422, *Intensive cardiac rehabilitation; with or without continuous ECG monitoring, with exercise, per hour, per session);* and
- G0423, *Intensive cardiac rehabilitation; with or without continuous ECG monitoring, without exercise, per hour, per session.*

As required by statute, payment under PFS for these services will be based on the OPPS payment amount for CR services. For more information on how the OPPS payment amount for ICR was established, see section XII.B.3 of the CY 2010 OPPS/ASC final rule. We have added the phrase ''per hour'' to the descriptors of these codes because we believe that CR services generally last one hour as documented by existing claims data for CR services. Section 1861(eee)(4)(C) of the Act provides for up to 72, 1-hour sessions of ICR and hence, adding ''per hour'' to the two new HCPCS code descriptors for ICR services implements the statutory definition of an ICR session as being 1 hour of service.

Moreover, we have established the payment for ICR services on the presumption that one session represents 1 hour of care. Therefore, we believe that it is appropriate to specify in the descriptors of the HCPCS codes for ICR services that one unit of the code represents 1 hour of care. As discussed previously, CR is covered for up to 36 1-hour sessions, with a minimum of 1 session per week and a maximum of 2 sessions per day, and Medicare contractors have authority to approve additional sessions, up to 72 sessions, over an additional period of time. Section 144(a)(1) of the MIPPA authorizes coverage of ICR programs in a series of 72, 1-hour sessions, up to 6 sessions per day, over a period of 18 weeks.

9. Section 144(a): Payment and Coverage Improvements for Patients With Chronic Obstructive Pulmonary Disease and Other Conditions—Pulmonary Rehabilitation Services

Section 144 of the MIPPA amended Title XVIII of the Act to provide for coverage of pulmonary rehabilitation (PR) under Part B, under certain conditions, for services furnished on or after January 1, 2010. This final rule with comment period implements the new Medicare standards for a pulmonary rehabilitation program and establishes the requirements for furnishing such items and services to Medicare beneficiaries with chronic obstructive pulmonary disease (COPD).

COPD is one of the more common and severely debilitating chronic respiratory diseases, exemplified by chronic bronchitis and emphysema. Other conditions in this category include

persistent asthma, bronchiectasis, primary pulmonary hypertension, obesity-related respiratory disease, and ventilator dependency. This rule implements section 144(a) of the MIPPA to permit coverage and payment and to establish guidelines and standards as required by the statute.

a. Background

A PR program is typically a multidisciplinary program, individually tailored and designed to optimize physical and social performance and autonomy of care for patients with chronic respiratory impairment. The main goal is to empower and facilitate the individuals' ability to exercise independently. Exercise is combined with other training and support mechanisms to encourage long-term adherence to the treatment plan. The appropriate PR program will train and motivate the patient to attain his or her maximum potential in self-care and overall quality of life.

Prior to the MIPPA, some components of a pulmonary rehabilitation program were covered in office settings as individual services or as services incident to physician services.

b. Statutory Provisions of Section 144 of the MIPPA

In pertinent part, section 144 of the MIPPA amended section 1861(s)(2) of the Act to add a new subparagraph (CC) establishing coverage and payment of items and services furnished under a ''pulmonary rehabilitation program.'' A pulmonary rehabilitation program is defined in new subsection (fff)(1) to mean a ''physician supervised program'' that furnishes several specific items and services. Pulmonary rehabilitation consists of certain mandatory components including all of the following:

- Physician-prescribed exercise.
- Education or training (to the extent that the education and training is closely and clearly related to the individual's care and treatment and is tailored to such individual's needs).
- Psychosocial assessment.
- Outcomes assessment.
- Other items and services determined by the Secretary to be appropriate under certain conditions.

These mandatory components are to be provided in physicians' offices, hospital outpatient settings, and other settings determined appropriate by the Secretary.

A physician must at all times be immediately available and accessible for medical consultation and medical emergencies when PR items and services are being furnished under the program. The individual's treatment is furnished under a written treatment plan for each beneficiary participating in a PR program. The plan is developed by a physician in conjunction with the interdisciplinary team. A physician, who is involved in the patient's care and has knowledge of his or her condition, must establish and review the plan and it must be signed by a physician every 30 days. This plan must include the individual's diagnosis, the scope of services to be provided in terms of type, amount, frequency and duration, and the goals set for the individual. To be covered and receive payment from Medicare, the PR program must provide all of the specified mandatory items and services.

The statute authorizes the Secretary to establish standards for the physician supervising the PR program to ensure the physician has expertise in the management of individuals with respiratory pathophysiology and is licensed by the State in which the PR program is offered. These standards ensure that the physician is responsible for the program and, in consultation with appropriate staff, is involved substantially in directing the progress of individuals in the program.

c. Provisions of the Proposed Regulation

We proposed to add § 410.47, ''Pulmonary Rehabilitation Program: Conditions of Coverage'' to our regulations. The following is a summary of our proposals from the CY 2010 PFS proposed rule. For the full text, please see the CY 2010 PFS proposed rule (74 FR 33610 through 33614, and 33673 through 33674).

We proposed several definitions with respect to the services related to PR. These were for:

- Pulmonary rehabilitation.
- Individualized treatment plan.
- Outcomes Assessment.
- Physician.
- Physician-prescribed exercise.
- Psychosocial assessment.

We also proposed that Medicare would cover PR for beneficiaries with moderate (Stage II) to severe COPD (Stage III) when referred by the physician treating chronic respiratory diseases. Moderate and severe COPD was defined using the GOLD classification II and III.

We proposed that any additional covered clinical indications for the PR program would be added using the National Coverage Determination process.

We proposed that all PR programs must have the following components:

- Physician-prescribed exercise;
- Education or training;
- Psychosocial assessment;
- Outcomes assessment; and
- An individualized treatment plan.

The individualized treatment plan must be established, reviewed, and signed by a physician (as defined in section 1861(r)(1) of the Act) every 30 days.

The MIPPA provisions also authorized the Secretary to include other mandatory items and services within the scope of the PR program under certain conditions. We did not propose any other items or services. However, we stated that if we determine that the addition of any other items or services is appropriate, additions will made and implemented through future rulemaking.

We proposed that PR may be provided in a physician's office or in a hospital outpatient setting. If we determine that additional settings are appropriate, those settings will be added through future rulemaking. All settings should have all equipment and staff necessary to provide statutorily-mandated items and services.

We proposed that physicians furnishing PR items and services must have expertise in the management of individuals with respiratory pathophysiology and be licensed in the State in which the PR program is offered.

In the CY 2010 PFS proposed rule with comment period (74 FR 33613), we discussed that section 144 of the MIPPA includes requirements for immediate and ongoing physician availability and accessibility at all times for both medical consultations and medical emergencies when items and services are being furnished under the program. We proposed to define such availability in accordance with existing definitions for direct physician supervision services furnished in physician offices and hospital outpatient departments at § 410.26(a)(2) (defined through cross reference to § 410.32(b)(3)(ii)) and § 410.27(f), respectively. We stated that direct supervision, as defined in the regulations, is consistent with the language of the MIPPA because a physician must be present and immediately available where and when the items and services are being furnished. A physician must also be able to furnish assistance and direction throughout the performance of the services, which would include medical consultations and medical emergencies.

For PR services furnished in physicians' offices and other Part B settings paid under the PFS, we stated that this means that the physician must be present in the office suite and immediately available to furnish

assistance and direction throughout the performance of the service or procedure in accordance with § 410.26(a)(2) and (b)(5). It does not mean that the physician must be in the same room when the service or procedure is performed.

For PR services furnished in hospital outpatient settings, we stated that direct physician supervision is the standard set forth in the April 7, 2000 OPPS final rule with comment period (68 FR 18524 through 18526) for supervision of hospital outpatient therapeutic services covered and paid by Medicare in hospitals and provider-based departments of hospitals. We currently define and specify the requirement for direct supervision for services provided in provider-based departments of hospitals at § 410.27(f). For this purpose, the physician must be on the premises of the location (meaning the provider-based department) and immediately available to furnish assistance and direction throughout the performance of the procedure. This does not mean that the physician must be present in the room when the procedure is performed.

The MIPAA provisions state that in the case of items and services furnished under such a program in a hospital, physician availability shall be presumed. As we have stated in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68702 through 68704), the longstanding presumption of direct physician supervision for hospital outpatient services means that direct physician supervision is the standard and we expect that hospitals are providing services in accordance with this standard.

We proposed that up to 36 sessions in the facility setting are appropriate, no more than one session per day. Patients should generally receive 2 to 3 1-hour sessions per week. We solicited comments regarding the proposed number of sessions. We addressed these comments in the response to public comment section of this final rule with comment.

d. Analysis and Response to Public Comments

We received many public comments on various provisions of our proposed rule. Comments were generally supportive of the new PR program but requested some changes related to the sessions and covered conditions. Commenters were in support of our definitions of pulmonary rehabilitation, individual treatment plan, psychosocial assessment, physician, and physician-prescribed exercise. The commenters also were supportive of the physician standards but asked for clarification of the direct supervision rules. The commenters suggested that we add language acknowledging the role and use of the PR staff/interdisciplinary team.

We also received comments related to NCDs but they were largely focused on the effect of the rule on current local coverage determinations (LCDs). Commenters did not request the addition of new items and services. We received a few comments regarding the addition of settings for PR, such as the CORF.

We received numerous comments noting that in the CY 2010 OPPS/ASC proposed rule with comment period (74 FR 35362 through 35370), we proposed that certain NPPs may supervise hospital outpatient therapeutic services that are within their State scope of practice and hospital granted privileges, provided that they also continue to meet all other requirements. Commenters requested that we allow the use of NPPs for PR services because NPPs may provide and supervise other therapeutic services in the HOPD. We received several significant comments and are providing our responses below.

Comment: We received comments requesting that we expand coverage to another level of COPD, very severe COPD (Stage IV). The commenters stated that very severe COPD should be included since the GOLD guidelines recommend PR for patients with Very Severe COPD (Stage IV). The commenters also cited the NETT trial in which they state that the very severe COPD patients had significant improvement as a result of the PR program.

Response: As a result of the comments, we are expanding the final policy and adding very severe COPD (Stage IV) as a covered condition. Based upon the evidence cited by the commenters and our own independent evidence review. We believe it is appropriate to allow coverage for COPD for the PR program. Commenters provided evidence from the National Emphysema Treatment Trial (NETT) which included patients with very severe COPD who were required to participate in pulmonary rehabilitation; trial results showed this sample of patients had significant improvement in exercise, dyspnea, and quality of life. Commenters also provided 2008 GOLD guideline evidence which supports the addition of very severe COPD. They cited GOLD guidelines which identify PR as the standard of care for patients with COPD stages II–IV and that all COPD stages benefit from an exercise program. Specifically, included in this patient population, the GOLD guidelines support PR for individuals with very severe COPD (Stage IV), while also suggesting consideration of surgical treatments. To the extent this patient group is able to engage in all of the mandatory components, including aerobic exercise, we believe patients would experience a clinical benefit. GOLD classification IV (Very Severe COPD) is defined as FEV1/FVC 70 percent and FEV1 <30 percent of predicted or FEV1 <50 percent predicted plus chronic respiratory failure.

Comment: We received numerous comments requesting that we expand coverage to a variety of other chronic respiratory conditions in addition to the proposed ones, (moderate to severe COPD). Most of the major respiratory care organizations submitted substantial comments pertaining to this issue. The conditions for which expansion was requested include cystic fibrosis, interstitial lung disease, restrictive chest wall disease, pulmonary hypertension, respiratory disorders associated with obesity, lung cancer, very severe COPD (stage IV), and bronchiectasis. The commenters requested that we add all of the requested conditions in the final rule, because the commenters allege substantial clinical benefit for all of them from a PR program.

Response: We proposed to use the national coverage determination process to consider expanding coverage of PR for other chronic respiratory diseases should adequate evidence support these additional uses. While the statute would permit expansion to other respiratory conditions, the data reviewed thus far did not substantiate the clinical benefit of PR for conditions beyond COPD. In making determinations for national coverage, the Medicare program is an evidence-based program. The chronic respiratory disease population is a highly clinically diverse patient population. As such, determining the appropriate conditions for coverage within the patient population requires a thorough review of existing evidence to meet the ''reasonable and necessary standard'' in accordance with section 1862(a)(1)(A) of the Act.

In this final rule with comment period, we announce that we will consider other conditions for which a PR program can be used through the NCD process. The number of various respiratory diseases is expansive and variance within the stages of each disease is broad. The need for, and benefit of, a PR program may relate to the specific respiratory function rather than a broad category of diseases. The NCD process will enable us to evaluate

the medical and scientific evidence to properly ascertain the specific conditions, and appropriate patients for whom a PR program is most beneficial. However, in the interim, until the NCD process is complete, the respiratory services previously allowed by local contractors for other medical conditions under other part B benefit categories remain in effect.

Comment: Some commenters requested that we add all of the requested conditions in the final rule because the commenters believe the proposed rule will supersede existing LCDs which currently allow some respiratory/pulmonary type services for a variety of other chronic respiratory lung diseases, including COPD.

Response: As explained above, we do not agree that the limitation of PR programs to one covered condition (moderate to very severe COPD) through the final rule will eliminate the ability of beneficiaries to obtain other respiratory services that are available under local coverage decisions based on other benefit categories. The individual respiratory services currently covered do not constitute a comprehensive PR program but individualized services that may also be components of a program. Accordingly, to the extent these existing individual respiratory services are reasonable and necessary, a local contractor may still cover them. If the patient has COPD that qualifies for coverage of pulmonary rehabilitation under this final rule with comment period, we would expect to see services furnished under the PR program and billed using the specific PR code. To the extent the provider is billing for the comprehensive PR code, the PR program implemented must meet all of the requirements outlined herein and be the only PR service billed. To the extent we add other conditions through the NCD process, some LCDs may become obsolete in the future.

Comment: We received a significant number of comments regarding the number of sessions for the PR program. Some commenters stated that our proposal of 36 sessions does not reflect the standard of care nationally. Commenters recommended that we allow between 60 and 72 sessions and allow more than one session per day, based in part on the experience of the Lung Volume Reduction Surgery patients in the NETT trial. Under that trial, certain patients were allowed a total of 30 sessions, each required to be minimally 2 hours in duration. Other commenters noted that the typical PR sessions may average 2 hours or more. The major professional organizations requested 72 hours of pulmonary rehabilitation, ''based on the individual's medical necessity and reaching a level of optimal care''.

Response: We agree with commenters that additional sessions may be appropriate in some circumstances. However, any PR program, due to the broad spectrum of patients, inherently necessitates a very individualized plan of treatment. Therefore, in this final rule with comment period, we are authorizing our contractors to approve up to an additional 36 sessions when medically necessary. This would provide qualifying beneficiaries access of up to 72 sessions of PR when appropriate.

Even within the population of patients with moderate to very severe COPD, an individual's ability to participate in additional sessions would require a specific review of evidence to determine whether an additional 36 sessions are warranted under section 1862(a)(1)(A) of the Act. This case-by-case expansion allows greatest flexibility for individual needs. It also takes into account the short term nature of the program based on lifestyle modification goals towards self management of the disease. Since the programs are highly individualized, we do not specify a duration by which sessions must be completed; this allows the possibility of sessions, if necessary, up to the maximum allowable of 72, over a longer period of time.

Comment: We received a number of comments regarding the number of sessions per day for the PR program. Some commented that our proposed sessions do not reflect the standard of care nationally. Commenters recommended that we allow more than one session per day.

Response: We agree with commenters that some patients may be capable of more than one PR session per day. The patient with very severe COPD may not be able to participate in a prolonged aerobic exercise session, and may benefit from 2 shorter periods of aerobic exercise within each session. Also, two sessions will facilitate greater logistical ease for those in rural areas who may want to do multiple sessions in a day, for example, morning and afternoon, and/or provide an opportunity for more compromised COPD patients to engage in two shorter aerobic sessions in a day. Therefore, we will allow up to two 1-hour sessions per day.

Comment: Some commenters asked that we include language in this regulation which minimally refers to the use of, and role of, the interdisciplinary team and/or PR staff.

Response: We agree that the disciplinary team/PR staff play an important role under the direction of the physician. These team members may include, but are not limited to, nurses, social workers, respiratory therapists, and dietitians. (See regulations text, ''Physician standards''.) We have revised § 410.47(e)(1) to emphasize this point.

Comment: Several commenters requested that we allow NPPs to provide the direct supervision, rather than requiring supervision by a physician in accordance with the definition in section 1861(r)(1) of the Act.

Response: The statutory language of the MIPPA defines pulmonary rehabilitation as a ''physician-supervised'' program. A physician is defined in section 1861(r)(1) of the Act. The MIPAA also specifically requires that ''a physician is immediately available and accessible for medical consultation and medical emergencies at all times items and services are being furnished under the program, except that in the case of items and services furnished under such a program in a hospital, such availability shall be presumed.'' The text of the statute uses the word ''physician'' and does not include NPPs. We believe, based on the statutory language in MIPPA for pulmonary rehabilitation programs, that the statute does not provide us the flexibility to allow the supervising role to be filled by a non-physician practitioner. In other words, for the purposes of PR programs, whether furnished in a physician's office or hospital outpatient setting, the direct physician supervision definition applies only to a physician as defined in section 1861(r)(1) of the Act. As discussed previously, the supervision requirement is satisfied if the physician meets the requirements for direct supervision for physician office services at § 410.26 and for hospital outpatient services at § 410.27. The final policies for payment and direct physician supervision of PR services furnished to hospital outpatients are discussed in detail in section XII.B.2 and B.4 of the CY 2010 OPPS/ASC final rule with comment period.

Comment: A few commenters requested that we provide a session which is ''no more than 1 hour''. The commenters believe that for some individuals, an hour would be the maximum time they could physically participate due to their compromised condition.

Response: We disagree. We believe that a maximum of 1 hour would not afford sufficient time for most patients to receive both the mandatory aerobic exercise and any other component services. Those in rural areas may want

to participate in longer sessions due to travel logistics.

Comment: One commenter proposed that we require at least 30 minutes of exercise.

Response: We disagree. Imposing a strict standard of minimal 30 minutes of exercise is not realistic; the programs are highly individualized. Many patients may not, at least initially, be able to participate in thirty minutes of aerobic exercise.

Comment: One commenter suggested we use the Silver Sneakers program at the YMCA for PR in the Medicare program. The commenter remarked it costs only $40 per month.

Response: While we generally encourage beneficiaries to exercise, we do not agree that this particular suggestion would be feasible. We do not expect that a typical YMCA would meet the statutory requirements related to physician standards and supervision, or perhaps the facility standards for safety and equipment. Further, YMCAs are not currently recognized as Medicare suppliers or providers.

Comment: A few commenters requested that we include a CORF as a PR setting.

Response: While the statute would allow the Secretary to cover PR in additional settings, we are not expanding the settings in this final rule. The CORF statutory definition, in section 1861(cc) of the Act, provides requirements for all services provided in that facility type. The CORF facility does not meet the supervision requirements imposed by the MIPPA. In accordance with section 1861(cc)(1) of the Act, the term ''CORF'' provides, in part, ''comprehensive rehabilitation facility means a facility which—(A) is primarily engaged in providing (by or under the supervision of physicians) diagnostic, therapeutic, and restorative service to outpatients for the rehabilitation of *injured*, *disabled*, or sick persons.'' (Emphasis added)

''(B) provides at least the following comprehensive outpatient following rehabilitative (i) physicians' services (rendered by physicians, as defined in section 1861 (r) (1) who are available at the facility on a full or *part-time* basis;'' (Emphasis added). The definition of services and reference to the injured or disabled population is consistent with the mandate for rehabilitative services, which we maintain are not directed towards the chronically ill patients with respiratory disease such as COPD. The CORF statutory provisions allow a physician to be in the facility part-time. This conflicts with the MIPPA provisions for the physician supervision, that is, being immediately available and accessible at all times items services are being furnished under the program. However, the MIPPA PR program does not eliminate or affect the PT services provided in accordance with the CORF regulations at § 410.100. Initially, a COPD patient may be in need of PT services (in or outside of a CORF) in order to strengthen their muscles to prepare for the PR program. By clarifying the services in a CORF, which are mandated to include a majority of physical therapy, we sought to delineate these services from those provided in a PR program focused on the condition of COPD.

Comment: Commenters support the requirement that a physician must create an individualized plan of treatment for pulmonary rehabilitation. However, some commenters requested that we clarify whether we intend that physicians must personally create each plan of care or whether physicians may review and approve a plan of care created by pulmonary rehabilitation staff.

Response: A physician must establish the individualized treatment plan; however, there can be input from the pulmonary rehabilitation staff with respect to the plan.

The MIPPA provisions require that PR services be provided under written individualized treatment plans ''established, reviewed, and signed by a physician every 30 days.'' The individualized plan includes the individual's diagnosis, the types of services appropriate, the frequency and duration, and the treatment goals. This plan may initially be developed by the referring physician or the PR physician. If the plan is developed by the referring physician who is not the PR physician, the PR physician must also review and sign the plan prior to initiation of PR. The PR staff may make recommendations for modifications to the program, but the physician will still modify the plan as needed, and review and sign the plan every 30 days.

e. Provisions of the Final Rule

In the final rule we are adopting the provisions as set forth in the July 2009 proposed rule with the following revisions:

- Based on public comments and the GOLD guidelines we are expanding coverage to include individuals with very severe COPD (Stage IV) as a covered condition. We are modifying the final rule § 410.47 (b)(1) ''Beneficiaries who may be covered'', to state the addition. The GOLD standard evidence defines GOLD classification IV (Very Severe COPD) as FEV1/FVC 70 percent and FEV1 <30 percent of predicted or FEV1 <50 percent predicted plus chronic respiratory failure.
- We expanded section § 410.47(f) to include additional sessions by changing the total number of allowable sessions to 72 sessions; we did so by allowing an additional 36 at contractor discretion when medically necessary. We also expanded the daily number of the allowable sessions from one session to two sessions.
- We added definitions in § 410.47(a) for the ''Medical director'' and the ''Supervising physician''.

In addition, we are making the following clarifying and technical changes:

- We clarified in § 410.47(c)(5) that the physician establishing the treatment plan needs to be one who is involved in the patient's care and has knowledge of his or her condition.
- We added language in § 410.47(e)(1) to clarify the physician interaction with PR staff.
- We added the word ''medicine'' in § 410.47(e)(4) to conform the rule to the MIPPA statutory language.
- We added language in § 410.47(e)(3) for training requirements related to the use of emergency equipment; this correlates to the established requirements in the proposed rule for availability of this equipment.
- We added in § 410.47(f) the words ''up to'' to clarify the contractor is permitted to prescribe any additional amount lower than, and up to, 36 sessions based on medical necessity. We also added a reference to the pertinent statute.

f. Coding and Payment

We proposed to create one HCPCS code to describe and to bill for the services of a PR program as specified in section 144(a) of the MIPPA, GXX30 (now assigned code number G0424, *Pulmonary rehabilitation, including aerobic exercise (includes monitoring), per session, per day)*. This G-code is to be billed when the patient performs physician-prescribed aerobic exercises that are targeted to improve the patient's physical functioning and may also include the other aspects of pulmonary rehabilitation, such as education and training. Because the physician's role in the PR program is defined in a similar manner to that in the cardiac rehabilitation program, we stated that the physician work component should be analogous to that of CPT code 93797, *cardiac rehab without telemetry*. Therefore we proposed work RVUs of 0.18 RVUs for this new G-code. Using this same reference code, we proposed

that the malpractice RVUs would be 0.01 RVUs.

To establish the PE RVU payment for the proposed new PR G-code, we reviewed the PE inputs of similar services, particularly those of the respiratory therapy HCPCS codes, G0237 and G0238, as well as the cardiac rehabilitation codes, CPT codes 93797 and 93798 for non-facility settings. Given that various individuals, acting under the supervision of a physician, can make up the PR multidisciplinary team, we proposed that the clinical labor for the PR G-code could be best represented by the following labor types taken from the PE database: the nurse ''blend'' (RN/LPN/MTA), the respiratory therapist (RT), the social worker/psychologist and the medical/technical assistant—which we selected to represent various specialists involved in furnishing this service; these are valued at $0.37, $0.42, $0.45, and $0.26 per minute, respectively. Using an average of these values, $0.375 per minute, we proposed to use the nurse blend labor type found in the cardiac rehabilitation CPT codes, at $0.37 per minute, as the typical value for the PR clinical labor and assigning 28 minutes of clinical labor time for the new PR G-code based on the various components of the proposed PR program.

For the equipment PE inputs, we reviewed the direct PE inputs for similar existing codes and proposed a pulse oximeter (with printer), a 1-channel ECG, and a treadmill. Since no typical supplies were listed for similar existing codes in the PE database, we did not propose any specific supplies for this proposed new G-code.

The following is a summary of the comments we received regarding payment for pulmonary rehabilitation services under section 144(a) of the MIPPA.

Comment: Some commenters asked that we confirm that the services of physical therapists are not part of the PR, CR, or ICR benefits authorized by section 144(a)(1) of the MIPPA and are always paid under the physical therapy benefit and that, therefore, the therapy services do not require physician supervision when furnished as part of a PR, CR, or ICR program, including in the HOPD.

With regard to PR, some commenters stated that we have a longstanding history of recognizing the services of a therapist as an integral part of a PR program and requiring that these services be reported and paid as PT services. Specifically, the commenters indicated that in the CY 2002 PFS final rule (66 FR 55246) and in the current Medicare Claims Processing Manual (Pub. 100–04, Chapter 5, section 20.A), we specify that when physical therapists treat respiratory conditions, they should report CPT codes for PT in the 97000 series and should not report HCPCS codes G0237, *Therapeutic procedures to increase strength or endurance of respiratory muscles, one on one, face to face, per 15 minutes (includes monitoring);* G0238, *Therapeutic procedures to improve respiratory function or increase strength or endurance of respiratory muscles, one on one, face to face, per 15 minutes (includes monitoring);* or G0239, *Therapeutic procedures to improve respiratory function or increase strength or endurance of respiratory muscles, two or more individuals (includes monitoring).* The commenters added that in the September 25, 2007 Decision Memo for Pulmonary Rehabilitation (CAG–00356N), CMS recognized the importance of PT to patients with pulmonary conditions and stated that these services should be billed and paid under the PT benefit. The commenters stated that a plan of care developed by a physical therapist to improve pulmonary function for a patient with chronic obstructive pulmonary disease (COPD), which meets the medical necessity criteria for PT services, is covered and paid under the PT benefit. The commenters explained that the therapy plan of care is separate from the benefits authorized by section 144(a)(1) of the MIPPA. The commenters believe it should continue to be reported under the CPT codes for PT services, and should be paid under the PT benefit.

In addition, with regard to CR/ICR, the commenters requested that CMS confirm that skilled PT services that are rendered in the CR setting by a qualified physical therapist should be conducted, reported, and paid as PT services, and that physician supervision is not necessary in the CR setting when the physical therapist is delivering treatment that clearly meets the criteria for a PT service. The commenters explained that we have recognized and codified that PT is a separate benefit and that physical therapists are qualified to perform certain services independent of direct physician supervision. Similar comments were received concerning occupational therapy services.

Response: Section 144(a)(1) of the MIPPA authorized a new comprehensive PR benefit, and also codified specific benefits for CR and ICR. Therefore, we believe that outpatient Part B providers and suppliers should furnish the full scope of the PR, CR, or ICR benefit as comprehensive programs to those patients who qualify for coverage. We would not expect the component services of PR, CR, and ICR programs to be unbundled and billed separately by different providers or practitioners under other benefit categories, such as the PT benefit.

In the outpatient physicians office setting, we expect that most patients participating in PR, CR, or ICR programs authorized by section 144(a)(1) of the MIPPA and covered by Medicare will be debilitated based on their underlying medical condition, age, or other factors. In order to develop a PR, CR, or ICR treatment plan, some debilitated patients may require evaluations by therapists on the multidisciplinary team, in addition to assessments by other team members. In order to participate successfully in the prescribed exercise component of the PR, CR, or ICR program, we also expect that these patients may receive individualized treatments by therapists on the multidisciplinary team and others to promote the increased functionality that is a principle goal of PR, CR, and ICR programs. As we stated in the CY 2010 PFS proposed rule, the items and services furnished by a CR or PR program are individualized and set forth in written treatment plans for each beneficiary (74 FR 33607 and 33611). We believe these evaluations and individualized treatments are a part of the PR, CR, or ICR program for those beneficiaries who need them. As such, we believe they should be conducted by one or more members of the multidisciplinary team of the PR, CR, or ICR program with the appropriate expertise.

While we have not defined PR, CR, or ICR services as always including therapists' services as part of the comprehensive benefit (74 FR 33608 and 33614), we have acknowledged in the CY 2010 PFS proposed rule that written treatment plans are highly individualized and that there should be flexibility in the type, amount, frequency, and duration of services provided in each session (74 FR 33607).

We expect that physical therapists could conduct assessments and individualized treatments as part of the PR, CR, or ICR program because physical therapists have the knowledge and skills to assist in addressing common problems that lead to physicians ordering PR, CR, or ICR services for their patients, including poor aerobic capacity, poor endurance, and shortness of breath, in the context of chronic pulmonary or cardiovascular disease. In the context of PR, while we also stated that individuals requiring PR services have a chronic respiratory

disease and are in need of supervised aerobic exercise, not PT, we acknowledged that patients require assessments to address individualized needs and the provision of a mix of services necessary to address those needs (74 FR 33613).

Patients in PR, CR, or ICR programs must receive the full complement of care as defined under these benefits as specified in section 144(a)(1) of the MIPPA, in accordance with their individualized treatment plan, including assessments and prescribed exercise. Additionally, the standard HCPCS coding guidance instructs practitioners and providers to report the code for the procedure or service that most accurately describes the service performed. As stated in Section 20.12.1.b. of Chapter 5 of the Medicare Contractor Beneficiary and Provider Communications Manual, in instances where several component services, which have different CPT/HCPCS codes, may be described in one more comprehensive code, only the single code most accurately describing the procedure performed or service rendered should be reported. Therefore, we would expect that when physical therapists provide evaluations and individualized treatment services under a PR, CR, or ICR treatment plan, these services would be billed as PR, CR, or ICR services under the PR, CR, or ICR CPT or Level II HCPCS G-codes that apply. When these programs are provided in a physician office setting and the physical therapist serves as a member of a multidisciplinary team, the services may not be separately billed as therapy services or as services incident to physician services and they need not follow the requirements of those policies. Services must be provided according to the policies for PR, CR, or ICR. For example, for therapy services in physician offices, qualifications of therapists, 90-day certification of plan of care, supervision by NPPs, treatment notes, and progress reports do not apply unless required by PR, CR, and ICR policies. As discussed in detail in sections II.G.8.e. and II.G.9.d. above in this final rule with comment period, for purposes of PR, CR, and ICR services, the required direct supervision must be provided by a doctor of medicine or osteopathy as defined in section 1861(r)(1) of the Act for all services furnished under the plan. For services provided in physician's offices, direct supervision is defined in accordance with existing requirements and the existing definition of direct physician supervision for all therapeutic services furnished in physician offices at § 410.26.

We continue to believe that direct supervision, as defined in the regulations, is consistent with the language of the MIPAA because a physician must be present and immediately available where services are being furnished. A physician must also be able to furnish assistance and direction throughout the performance of the services, which would include medical consultations and medical emergencies.

We expect that most patients who meet the diagnosis requirements for coverage of PR, CR, or ICR would receive component services covered under the PR, CR, or ICR benefit as part of a comprehensive PR, CR, or ICR program, subject to the coverage and payment policies that we are finalizing in this final rule with comment period and the CY 2010 OPPS/ASC final rule with comment period. We understand that some component services of PR, CR, or ICR have previously been furnished to beneficiaries and paid by Medicare under other benefits, such as the outpatient PT benefit.

As stated above, since section 144(a)(1) of the MIPPA authorized a new comprehensive PR program and legislated the CR benefit to also recognize ICR services, we believe that outpatient Part B providers and suppliers should furnish the components of PR, CR, or ICR as comprehensive programs to those patients who qualify for coverage. We would not expect the component services of PR, CR, and ICR programs to be unbundled and billed separately by different providers or practitioners under other benefit categories, such as the PT benefit. Therefore, we expect that it would be uncommon for a patient receiving care under a PR, CR, or ICR treatment plan to also be receiving PT services under a separate PT plan of care.

There may be patients with therapy needs that are outside the treatment plan appropriate for PR, CR, or ICR and such patients should receive medically necessary PT services specific to those other needs under a PT plan of care and according to the policies for PT services. However, we would not expect it to be the norm that PT services and PR, CR, or ICR services are furnished to the same beneficiaries in the same day. Clearly, a single period of care can only be billed as one type of treatment service, so providers and suppliers could never bill both PT and PR, CR, or ICR services for the same time period for the same patient (for example, during an hour session from 10 to 11 a.m. on a single date of service).

We plan to monitor claims data for PR, CR, and ICR services as well as any additional claims for therapy services. If we detect patterns of care that are inconsistent with our stated expectations for PR, CR, or ICR services and therapy services, we may encourage Medicare contractors to review cases in which a provider or supplier reports both types of services for the same patient during the same span of time (for example, over a several month period) or we may propose changes to our payment methodologies for these services.

After considering the public comments received, we are clarifying that we would expect component services that are furnished under a PR, CR, or ICR treatment plan to beneficiaries who qualify for PR, CR, or ICR services to be furnished as PR, CR, or ICR services, regardless of whether they are furnished by a physical therapist or other healthcare practitioner, and that all of the coverage and payment requirements, including, but not limited to, the physician supervision requirements for services incident to a physician in the physician office setting, apply to those PR, CR, or ICR services. We expect that providers and suppliers of Part B services will furnish the comprehensive set of services that is described in the criteria for PR, CR, or ICR programs to beneficiaries who qualify for the benefit.

Similar comments were expressed concerning the inclusion of occupational therapy services in PR programs. The policies for occupational therapy services are the same as for physical therapy services.

Comment: Some commenters believed there were flaws in our method of determining the payment rate. The commenters did not agree that the physician work in pulmonary rehabilitation mirrors the physician work in cardiac rehabilitation without telemetry (CPT 93797). The commenters stated that CPT code 93797 has 11 minutes of physician time, but we applied a similar payment for a minimum of 60 minutes of PR service. Some commenters thought we should multiply the physician work RVUs of CPT code 93797 by 4 for a 60-minute session. Some commenters also stated that the respiratory therapy services paid by the G-codes currently are valued at about $15–20 for each 15 minutes of service and that we are proposing to pay $16 for a 1-hour session which is not enough to cover and pay for the services required.

Response: We do not agree that the physician work is substantially different in CR than in PR. We do not expect that the physician work for a 60-minute PR session equals 60 minutes. We believe the work is performed primarily by the multidisciplinary team, and not the physician. The current G-codes were valued for respiratory therapy services and not for a comprehensive pulmonary rehabilitation program.

Comment: Some commenters stated that our staffing and equipment assumptions were not valid. For example, some commenters stated that the list of individuals recommended by the guidelines for PR should be reflected by those included in the PE for PR. Commenters stated that PR includes review of data that is comparable to telemetry, such as EKG and oximetry. The commenters indicated that the equipment needed for PR should be included in the payment.

Response: We anticipate that a variety of team members will contribute to PR during a session, and we have blended the values of the types of staff that we believe would most commonly be used. In response to the comments, we have increased the variety of team members included in the mix. However, we have not included physical therapists or occupational therapists in the PE because we anticipate that beneficiaries who are eligible for the PR program will not typically require physical therapy as part of their PR program. If a therapist does participate as a member of the team, we believe that therapist typically would be furnishing PR services to meet PR goals that do not require the skills of a therapist. In addition, we have revised the PE to include more equipment as requested.

Comment: Several commenters requested that the pulmonary rehabilitation code exclude certain services that they would like to bill separately, especially the 6 minute walk test, outcomes assessments, 30 day reviews, physician E/M services, therapy codes, the current G0237–9 codes, and related services such as 94620, 94667, and 94667. The commenters stated that bundling the services of the PR program will result in reduced payment rates that could shut down PR programs.

Response: The pulmonary rehabilitation therapy G-codes were developed for a comprehensive pulmonary rehabilitation program as described in the statutory benefit. All of the services of the program are included in the payment. We would expect that an individual who is receiving PR services would receive the full complement of services within the PR program and that these services would be billed using the PR HCPCS code G0424. We recognize that an individual may require additional medically necessary services such as physician E/M or physical therapy, outside of the PR plan of care. However, as we noted above, we will monitor billing patterns to assess whether the full scope of services is being furnished to patients under PR treatment plans. If we detect patterns of care that are inconsistent with our expectations, we may encourage Medicare contractors to review cases in which a provider or supplier reports services for the same patient during the same span of time that might be considered part of a PR treatment plan, and as a result, we may propose changes to our payment methodologies for these services.

Comment: Some commenters requested that the current HCPCS G-codes for therapeutic procedures for respiratory function (G0237, G0238 and G0239) continue to be used to bill for pulmonary rehabilitation, E/M, and diagnostic services for pulmonary rehabilitation programs.

Response: The current HCPCS G-codes were developed for use in CORFs and other settings to describe the provision of respiratory therapy services. They continue to be appropriate for use in CORFs for this purpose. Outside of the CORF setting those codes are not appropriate for use in office settings to provide pulmonary rehabilitation services under the new pulmonary rehabilitation program as defined by the MIPAA. The pulmonary rehabilitation benefit was added by Congress for the purpose of covering services for patients with certain pulmonary conditions who require a coordinated program of treatment.

The existing HCPCS G-codes do not represent the full scope of services in a comprehensive PR program now authorized by the new PR benefit. We want to ensure that when a physician office bills and is paid for PR services that it attests to meeting all of the requirements of the comprehensive PR program by the reporting of a HCPCS G-code specific to a PR session. We would expect beneficiaries who could qualify for a PR program, where a program is available, to receive services related to those conditions in such a program rather than having services unbundled and provided separately outside a PR program. Therefore, specific codes have been developed to identify and make payment for services furnished as part of pulmonary rehabilitation programs. However, a beneficiary who was receiving treatment in a CORF and in need of respiratory therapy services could receive those services and the CORF could bill using the existing G-codes, as they would have prior to the MIPPA.

Comment: Many commenters expressed concern about the duration of the PR session which we proposed as a minimum of 1 hour. The commenters alleged the session is *capped* at 1 hour and requested longer sessions. The commenters maintained that the typical PR session is a minimum duration of 2 to 3 hours.

Response: We did not cap the length of the session at 1 hour, but proposed to require a minimum of 1 hour of treatment. Implied in these comments is justification for a higher payment rate, related to a longer duration for a session. In response to comments requesting longer treatments, we are adding the phrase ''per hour'' to the new HCPCS code G0424 descriptor to conform the descriptor of the code to the basis for the payment being made for one unit of the code and to enable suppliers to determine when one session of PR ends and the second session begins. The code descriptor is G0424, *Pulmonary rehabilitation, including exercise (includes monitoring), per hour, per session.*

In addition, we are modifying our final policy to cover up to 2 sessions of PR per day.

After reviewing the public comments, we will finalize our proposals with modifications. In summary, we will:

- Change the HCPCS code descriptor as follows: G0424, *Pulmonary rehabilitation, including aerobic exercise (includes monitoring), per hour, per session.*
- As discussed above, we will also allow up to two sessions of PR per day.
- Modify PE inputs, as recommended by commenters, resulting in increased PE RVUs. However, we continue to believe the physician work for PR is comparable to CR and will make no changes to the work RVUs.

10. Section 144(b): Repeal of Transfer of Title for Oxygen Equipment

a. Payment Rules for Oxygen and Oxygen Equipment

(i) Overview

The general Medicare payment rules for durable medical equipment (DME) are set forth in section 1834(a) of the Act and 42 CFR part 414, subpart D of our regulations. Section 1834(a)(1) of the Act and § 414.210(a) of our regulations establish the Medicare payment for a DME item as equal to 80 percent of either the lower of the actual charge or the fee schedule amount for the item. The beneficiary coinsurance is equal to

20 percent of either the lower of the actual charge or the fee schedule amount for the item once the deductible is met.

Specific rules regarding payment for oxygen and oxygen equipment are set forth in sections 1834(a)(5), (a)(9), (a)(14) and (a)(21) of the Act and § 414.226 of our regulations. Suppliers are paid a monthly payment amount for furnishing medically necessary stationary oxygen equipment under the class described in § 414.226(c)(1)(i) and oxygen contents (for both stationary and portable). Equipment in the stationary class includes stationary oxygen concentrators, which concentrate oxygen from room air; stationary liquid oxygen systems, which use oxygen stored as a very cold liquid in cylinders and tanks; and gaseous oxygen systems, which administer compressed oxygen directly from cylinders.

We also pay a monthly add-on payment to suppliers furnishing medically necessary portable oxygen equipment falling under one of two classes described in § 414.226(c)(1)(ii) and (iii). Equipment in these classes includes traditional portable equipment that includes portable liquid oxygen systems and portable gaseous oxygen systems and oxygen generating portable equipment (OGPE) that includes portable oxygen concentrators and oxygen transfilling equipment used to fill portable tanks or cylinders in the home. Both the liquid and gaseous oxygen systems (for stationary and portable) require on-going delivery of oxygen contents.

(ii) Provisions of the Deficit Reduction Act of 2005 (DRA)

Section 5101(b) of the DRA amended section 1834(a)(5) of the Act by limiting monthly rental payments to suppliers for oxygen equipment to 36 months of continuous use. At the end of this 36-month rental period, suppliers were required to transfer title of the oxygen equipment to the beneficiary. This requirement started for existing beneficiaries using oxygen on January 1, 2006 and new beneficiaries using oxygen on or after January 1, 2006. The provision also required payments for oxygen contents continue after title to the equipment has been transferred. In the November 9, 2006 **Federal Register**, we issued the ''Home Health Prospective Payment System Rate Update for CY 2007 and Deficit Reduction Act of 2005 Changes to Medicare Payment for Oxygen Equipment and Capped Rental Durable Medical Equipment'' final rule (71 FR 65884) to implement these DRA changes. We amended § 414.226 to clarify that the monthly rental payments for items falling under the classes now described in § 414.226(c)(1)(i) thru (iii) are made for periods of continuous use not to exceed 36 months. We revised the rules regarding a period of continuous use for the rental of DME in § 414.230 of our regulations to clarify the continuous use determination. We also added § 414.226(f) requiring a supplier to transfer title to the oxygen equipment to the beneficiary on the first day after the 36th continuous month in which payment is made for the equipment. In addition, we revised § 414.226 to allow monthly payments to suppliers for furnishing gaseous or liquid oxygen contents for use with either beneficiary-owned stationary equipment or beneficiary-owned portable equipment.

Section 5101(b) of the DRA also authorized payments for maintenance and servicing of beneficiary-owned oxygen equipment if the Secretary determined such payments to be reasonable and necessary. We determined that paying for necessary repairs and periodic maintenance and servicing of beneficiary-owned oxygen equipment was reasonable and necessary to ensure that oxygen equipment owned by beneficiaries continued to function properly. Without these payments, we were concerned that there was little incentive for suppliers to maintain this equipment, because the equipment was no longer owned by the supplier.

In the November 9, 2006 final rule, we established other safeguards for beneficiaries receiving oxygen and oxygen equipment, which are set forth at § 414.210(e)(5) and § 414.226(g). Section 414.210(e)(5) requires suppliers—after transferring title of the oxygen equipment to the beneficiary—to furnish replacement equipment at no cost to the beneficiary or the Medicare program if the item furnished by the supplier does not last (that is, it breaks down and is irreparable) for the entire reasonable useful lifetime established for the equipment in accordance with § 414.210(f)(1). Per § 414.210(f), a beneficiary is allowed to elect to receive new oxygen equipment if the original equipment has been in continuous use by the beneficiary for the equipment's reasonable useful lifetime. Section 414.210(f)(1) states the reasonable useful lifetime for equipment is determined through program instructions. In the absence of program instructions, the carrier may determine the reasonable useful lifetime for equipment, but in no case can it be less than 5 years. Computation is based on when the equipment is delivered to the beneficiary, not the age of the equipment. If the beneficiary elects to obtain new oxygen equipment after the reasonable useful lifetime, the payment is made in accordance with § 414.226(a). Section 414.226(g)(2) prohibits suppliers from replacing oxygen equipment prior to the expiration of the 36-month rental period unless a specific exception applies. This was intended to protect the beneficiary from the supplier changing the beneficiary's equipment in order to maximize Medicare payments. For example, the supplier may want to move a beneficiary from a portable oxygen concentrator to portable gaseous equipment for which Medicare makes additional payments after the 36-month rental period ends.

Section 414.226(g)(4) provides that, by no later than 2 months before the date on which the supplier must transfer title to oxygen equipment to the beneficiary, the supplier must disclose to the beneficiary: (1) whether, in the case of oxygen transfilling equipment and stationary or portable oxygen concentrators, it can maintain and service the equipment after the beneficiary acquires title to it; and (2) whether, in the case of stationary or portable gaseous or liquid oxygen systems, it can continue to deliver oxygen contents to the beneficiary after the beneficiary acquires title to the equipment.

(iii) Provisions of Medicare Improvements for Patients and Providers Act (MIPPA) Section 144(b)—Repeal of Transfer of Ownership of Oxygen Equipment

In the CY 2009 PFS final rule with comment period, we outlined the provisions of section 144(b) of the MIPPA (73 FR 69875 through 69876). Section 144(b) of the MIPPA repeals the requirement that the supplier transfer title to oxygen equipment to the beneficiary after the 36-month rental period. In its place, section 144(b) establishes a 36-month rental cap and amends section 1834(a)(5)(F) of the Act by adding three new payment rules and supplier requirements for furnishing oxygen and oxygen equipment after the 36-month rental period. Each of these provisions is discussed below.

(a) Furnishing Oxygen Equipment After the Rental Cap

Under this new provision, the supplier that furnishes oxygen equipment during the 36-month rental period must continue to furnish the oxygen equipment after the 36-month rental period. The supplier is required to continue to furnish the equipment during any period of medical need for the remainder of the reasonable useful

lifetime of the equipment. Section 144(b) does not provide any exceptions to this requirement. For example, if the beneficiary relocates outside the supplier's normal service area at some time after the 36-month rental period but before the end of the reasonable useful lifetime of the equipment, the supplier must make arrangements for the beneficiary to continue receiving the equipment at his or her new place of residence. This responsibility is not transferred to another supplier. It is important to note that § 414.226(g)(1)(ii) does not apply this same requirement in situations where the beneficiary relocates during the 36-month rental period. We received comments from interested parties on whether this should be changed in light of the repeal of transfer of ownership of oxygen equipment and other recently enacted provisions of the MIPPA.

We revised § 414.226(f) to conform our regulations to this new requirement. We deleted the transfer of ownership requirement and added the new requirement that the supplier must continue furnishing the oxygen equipment after the 36-month rental period during any period of medical need for the remainder of the reasonable useful lifetime of the equipment.

In addition, we revised § 414.230 to specify that under no circumstance will a new period of continuous use begin following the 36-month rental period and before the end of the equipment's reasonable useful lifetime since the supplier is responsible for furnishing the equipment after the 36-month rental period for any period of medical need for the remainder of the reasonable useful lifetime of the equipment. Regardless of the length of any break in medical need that occurs following the 36-month rental period, once the break ends and medical need for the oxygen equipment resumes, the supplier is obligated to continue furnishing the item for no additional rental payments until the end of the equipment's reasonable useful lifetime. If the equipment's reasonable useful lifetime ends during the break in medical need, the supplier is under no obligation to continue furnishing the equipment. However, in accordance with § 414.210(f), the beneficiary may elect to obtain new equipment in these situations. If the beneficiary elects to obtain new equipment, a new 36-month rental period begins. It is important to note that, in accordance with section 5101(b)(2)(B) of the DRA, in the case of beneficiaries receiving oxygen equipment on December 31, 2005, the 36-month rental period begins on January 1, 2006. However, in accordance with § 414.210(f)(1), the reasonable useful lifetime of durable medical equipment, including oxygen equipment, begins on the date that the equipment is first delivered to the beneficiary. The reasonable useful lifetime of oxygen equipment furnished to beneficiaries on December 31, 2005, is not adjusted to begin anew on January 1, 2006, to correspond with the start of the 36-month rental period. Therefore, in these situations, the equipment's reasonable useful lifetime may end at any point during or after the 36-month rental period depending on the first day the equipment was delivered to the beneficiary. In these situations, a new period of continuous use and a new 36-month rental period would begin if the beneficiary elects to obtain new equipment.

We also revised § 414.210(e)(2), (e)(4) and (e)(5) to delete regulatory text which relates to beneficiary ownership of oxygen equipment. In addition, we deleted § 414.210(e)(3) because beneficiaries will no longer own oxygen tanks and cylinders. Because § 414.210(e)(3) was deleted, we redesignated § 414.210(e)(4) and § 414.210(e)(5) as § 414.210(e)(3) and § 414.210(e)(4), respectively.

We also revised § 414.226 to state that the protection against supplier replacement of oxygen equipment, unless an exception applies, continues to be in effect after the 36-month rental period ends. Specifically, we revised § 414.226(g)(2) to indicate that this prohibition applies until the expiration of the reasonable useful lifetime established for the equipment. As discussed in the November 9, 2006 final rule (71 FR 65894), we believe this is a necessary safeguard for the beneficiary against changes in equipment made by the supplier in order to maximize payments resulting from moving from one modality to another. Finally, we deleted § 414.226(g)(4) because the transfer of ownership of oxygen equipment provision has been repealed, rendering this provision inapplicable.

The following is a summary of the comments we received and our responses.

Comment: Numerous commenters requested a delay in the implementation of the 36-month rental cap on oxygen and oxygen equipment. Many commenters expressed concerns about the impact of the 36-month cap on suppliers. Some commenters stated the amendments of section 144(b) of the MIPPA are sparse and that more time is needed to consider options for implementing these amendments to the statute. Other commenters had concerns that the program has not issued adequate guidance to implement these provisions.

Response: While we recognize that the regulatory changes established new requirements for oxygen suppliers after the 36 month payment cap, the statutory mandate for implementing the 36-month oxygen payment cap does not provide any flexibility for a delay in the implementation of this provision. In accordance with section 1834(a)(5) of the Act, as amended by section 5101(b) of the DRA, we are required to limit monthly payments to suppliers for oxygen equipment to 36 months of continuous use, effective January 1, 2006. Since implementation of the 36-month rental cap is required by section 5101(b) of the DRA, it is outside the scope of this rulemaking effort, which addresses implementation of section 144(b) of the MIPPA. Section 144(b) of the MIPPA amendments to section 1834(a)(5)(F) of the Act, repealing the transfer of ownership of oxygen equipment after the 36-month payment rental cap, were effective January 1, 2009. CMS was committed to meeting this statutory mandate. We note that sub-regulatory guidance was issued which provided additional details on implementing the provisions of section 144(b) of the MIPPA.

Comment: Many commenters disagree that the 36-month rental cap on oxygen and oxygen equipment applies to all equipment, accessories, and supplies used in conjunction with the oxygen equipment (other than the oxygen contents). They believe that separate payment should be allowed after the cap for replacement supplies and accessories such as cannulas, tubing, and regulators.

Response: As discussed in the above response, implementation of the 36-month rental payment cap for oxygen equipment was mandated by section 5101(b) of the DRA. The cap applies to both the monthly payment amount for oxygen and oxygen equipment and the portable equipment add-on payments. Since 1989, suppliers have been paid, in accordance with the rules set forth in section 1834(a)(5) of the Act and § 414.226 of our regulations, a monthly payment amount that includes payment for all equipment, accessories, supplies, and stationary and portable oxygen contents. The November 9, 2006 final rule (71 FR 65885) to implement section 5101(b) of the DRA provides additional discussion on the implementation of the oxygen 36-month rental payment cap. Section 1834(a)(5)(F) of the Act only authorizes payment for oxygen contents following the 36-month cap. These rules mandate continued payments for furnishing oxygen contents for use with

gaseous or liquid oxygen equipment after the cap. The statute does not authorize payment after the cap for accessories and supplies used with the oxygen equipment.

Comment: Two commenters suggested that the Congress repealed the provisions of the DRA requiring transfer of title for oxygen equipment to the beneficiary because the Congress realized that oxygen recipients need frequent services from suppliers. These commenters believe that the new regulatory changes did not address the number of oxygen service visits thereby permitting reductions in service visits and quality of care.

Response: In accordance with section 1834(a)(5)(F) of the Act, we have revised § 414.226(f)(1) to require a supplier who furnished oxygen equipment to a beneficiary during the 36th month of continuous use to continue furnishing the equipment for any period of medical need until the end of the reasonable useful lifetime established for the equipment. Section 1834(a)(5)(F) of the Act authorizes payments following the 36-month cap for oxygen contents. The statute does not authorize payment after the cap for services related to furnishing oxygen equipment other than maintenance and servicing of the equipment, which is addressed in section II.G.10.c. below in this section.

Comment: A number of commenters noted that accreditation standards require oxygen suppliers to have on-call availability 24 hours a day to respond to patient respiratory issues. However, without additional program reimbursement after the 36-month cap, these commenters believe that suppliers may not adequately comply with the accreditation requirement unless accreditation is addressed separately at § 414.226.

Response: This comment is outside the scope of the rule. The accreditation standards are required by Section 1834(a)(20) of the Act, as amended by Section 302 of the Medicare Prescripton Drug, Improvement, and Modernization Act of 2003 (MMA). Section 424.57(c)(22) requires compliance with accreditation as part of the DMEPOS supplier standards. Also, if a supplier is found to not meet a mandatory supplier standard such as accreditation requirements, we may invoke administrative remedies. In accordance with § 424.57(d), failure to meet a mandatory supplier standard may be addressed by revoking a supplier's billing privileges.

Comment: Several commenters indicated that we did not amend our regulations to include beneficiary safeguards to prevent oxygen suppliers, who do not want to provide services after the 36 month cap, from forcing more complex and costly oxygen patients into skilled nursing facilities or forcing beneficiaries to pay out-of-pocket for certain services.

Response: We appreciate the commenter's interest in the prevention of abuse to oxygen beneficiaries. We believe beneficiary safeguards for prevention of abuse when furnishing of oxygen and oxygen equipment are encompassed in the DMEPOS supplier standards. The supplier standard at § 424.57(c)(1) requires the supplier to operate its business and furnish Medicare-covered items in compliance with all applicable Federal and State licensure and regulatory requirements. Also, § 414.226(f) of our regulations requires that the supplier that furnishes oxygen equipment for the 36th continuous month during which payment is made must continue to furnish the equipment during any period of medical need for the remainder of the equipment's reasonable useful lifetime. The supplier may not charge the beneficiary or the program for services associated with meeting these requirements. Thus, if it is determined that the supplier is out of compliance with these requirements, CMS sanctions may apply.

As we discussed above, if a supplier is found to not meet a mandatory supplier standard, we may invoke administrative remedies. For example, in accordance with § 424.57(d), failure to meet a mandatory supplier standard may be addressed by revoking a supplier's billing privileges.

Comment: A number of commenters suggested amending our regulations to provide additional reimbursement after the 36-month cap when the oxygen supplier must assist beneficiaries due to power outages caused by natural disasters and other emergencies. Another commenter explained that an emergency could be defined as a beneficiary who is having trouble breathing after facing an unexpected environmental emergency situation.

Response: Section 1834(a)(5)(F) of the Act authorizes specific types of payments following the 36-month cap. The statute mandates continued payments for oxygen contents for use with gaseous or liquid oxygen equipment after the cap. Other than maintenance and servicing of the equipment, which is addressed in section II.G.10.c. below, the statute does not authorize other payment for services related to furnishing oxygen equipment. Thus, if a beneficiary's concentrator cannot function due to a power outage, the supplier may meet the beneficiary's oxygen needs by furnishing gaseous or liquid stationary equipment until the power resumes at the beneficiary's home. If oxygen equipment is lost or irreparably damaged due to an emergency situation such as a fire or flood, Medicare payment can be made for replacement of the oxygen equipment in accordance with § 414.210(f)(2).

Comment: Numerous commenters opposed the provisions in § 414.226(f)(1)(ii) and (f)(2)(ii) which requires the supplier to arrange to furnish oxygen equipment and oxygen if the beneficiary relocates to an area that is outside the normal service area of the supplier that initially furnished the equipment. Many commenters emphasized small and rural suppliers will have greater difficulty making arrangements outside their service area because these suppliers do not have expertise and resources to enter many arrangements outside their service area. Several commenters were concerned that supplier licensing and accreditation is not applicable outside their state or normal service area and this would present problems when supervising the furnishing of oxygen services for a beneficiary that relocates outside their service area. A few commenters noted that the costs associated with transferring a beneficiary to an out of area supplier were not discussed and thus a reasonable basis for the provisions at § 414.226(f)(1)(ii) and (f)(2)(ii) had not been established. One commenter contended that § 414.226(f)(2) is inconsistent with other regulations for the DME competitive bidding program.

Response: We understand there may be challenges with furnishing oxygen and oxygen equipment to traveling and relocating beneficiaries. However, in the CY 2009 PFS final rule with comment period (73 FR 69876), we explained that the provisions of section 144(b) of the MIPPA do not contain exceptions to the 36 month rental cap for situations when a beneficiary travels or permanently relocates to another area. In instances in which a beneficiary relocates outside of the normal service area of a supplier, the current supplier must make arrangements in the new service area with a Medicare-enrolled supplier who is required to be compliant with all applicable Federal and State licensure and regulatory requirements. Furthermore, we have worked with our contractors who issued subregulatory guidance on billing for situations when a beneficiary travels or permanently relocates because these situations necessitate attention to the date of service and location of the supplier. We

will continue to monitor this issue and if necessary, develop additional subregulatory instructions. Concerns related to the regulations for the DMEPOS competitive bidding program are not in the scope of these regulatory changes.

Comment: Some commenters noted that beneficiaries that have not reached the end of the 36-month cap may confront difficulties in securing a new supplier in an area that is outside the normal service area of the supplier that initially furnished the equipment since the new supplier will receive a reduced number of payments before the end of the 36-month rental period. Several commenters requested confirmation that § 414.226(g) does not require that the supplier furnish or make arrangements to furnish oxygen to a beneficiary outside of the service area during the 36-month rental period.

Response: Regulatory changes concerning the 36-month rental cap are outside the scope of this rule which is intended to implement the provisions of section 144(b) of the MIPPA. As a result, we are finalizing § 414.226(f)(1)(ii) and (f)(2)(ii) as proposed.

However, as discussed in our response above, we have worked with our contractors who issued subregulatory guidance on billing for situations when a beneficiary travels or permanently relocates because these situations necessitate attention to the date of service and location of the supplier. When a beneficiary travels or relocates during the 36-month rental period, the existing supplier can aid the beneficiary in locating a supplier in the new service area. In addition, ombudsman staff at 1–800–Medicare has been trained to assist beneficiaries in these situations to find a new supplier. We will continue to monitor this issue closely and will take appropriate actions to address these situations.

Comment: Several commenters requested clarification on how to apply the § 414.230 requirement of continuous use for durable medical equipment to the 36-month rental cap for oxygen equipment.

Response: In the CY 2009 PFS final rule with comment period (73 FR 69937), we added § 414.230(h) to our regulation on determining a period of continuous use to clarify that after the 36-month rental period, a new period of continuous use does not begin under any circumstance in the case of oxygen equipment furnished between the end of the 36-month rental cap and the end of the equipment's reasonable useful lifetime. The statute and regulation require a supplier to continue furnishing the oxygen equipment after the 36th continuous month for any period of medical need for the remainder of the equipment's reasonable useful lifetime. Additional details pertaining to the definition of continuous use of oxygen and oxygen equipment both before and after the 36-month rental cap have been issued through sub-regulatory guidance as part of the implementation of the 36-month rental cap mandated by the DRA. In addition to transmittal 421 (Change Request 6297), we provided program guidance on January 26, 2009 to contractors containing oxygen and oxygen equipment continuous use policies. These policies have been posted on the contractors' Web sites.

Comment: Several commenters requested clarification on supporting documentation for replacement oxygen equipment after the expiration of the 5-year useful lifetime.

Response: When oxygen equipment is replaced because the equipment has been in continuous use by the patient for the equipment's reasonable useful lifetime, a new Certificiate of Medical Necessity (CMN) is required to establish a new 36-month rental period and new reasonable useful lifetime. Suppliers must also furnish documentation in order to verify that the equipment being replaced has been in use for at least 5 years. Additional details pertaining to the documentation required to support the replacement of oxygen equipment after the expiration of the 5-year reasonable useful lifetime have been issued through Medicare contractor subregulatory guidance which has been posted on the contractor's Web sites.

Comment: Several commenters suggested that the requirements at § 414.226(f)(1)(i) and (f)(2)(i) for a supplier to continue furnishing oxygen and oxygen equipment after the cap prevent a beneficiary from changing suppliers if the supplier is performing poorly. This potentially results in the beneficiary being forced to utilize a low quality supplier for at least 5 years.

Response: Section 144(b) of the MIPPA requires that the supplier furnishing equipment in the 36th continuous month continue furnishing the equipment during any period of medical need for the remainder of the reasonable useful lifetime of the equipment, as determined by the Secretary. We believe the language of section 1834(a)(5)(F) of the Act, as amended by 144(b) of the MIPPA, is clear. Since oxygen contents are furnished as part of the continued furnishing of gaseous or liquid oxygen equipment, this requirement extends to oxygen contents furnished after the cap. This is explained in more detail in section II.G.10.b below. Regarding the quality of items and services provided by suppliers of oxygen and oxygen equipment, beneficiaries who encounter such problems should report them by contacting 1–800–Medicare. A beneficiary ombudsman will work to resolve the issue. Also, we note that program requirements are now in place and require suppliers of oxygen and oxygen equipment to have surety bonds and be accredited to meet mandated quality standards. Failures to remain in compliance with these quality standards will be reported to the supplier's accreditation organization.

Comment: Several commenters requested clarification on changing oxygen equipment systems during and after the oxygen rental period.

Response: During and after the 36-month rental period, if the beneficiary's physician orders a change in modality (oxygen equipment delivery system), the supplier must furnish that new modality without a restart of the 36-month rental period per the continuous use regulations at § 414.230. Section 414.226(g)(2) prohibits a supplier from changing a beneficiary's oxygen equipment/modality during the 36 month payment period without a physician's order, unless the equipment is lost, stolen, irreparably damaged, or in cases where the beneficiary elects to upgrade to newer technology equipment. Also, § 414.226(g)(1) requires that the supplier that furnished oxygen equipment for the first month during which payment is made must continue to furnish the equipment for the entire 36-month period unless certain specific exeptions apply.

After consideration of the public comments, we are finalizing these provisions without modification.

b. Payment for Oxygen Contents After the Rental Cap

Section 144(b)(1) of the MIPPA amends section 1834(a)(5)(F)(ii)(II) of the Act and requires us to continue to make payments to suppliers for furnishing oxygen contents after the 36-month rental cap for oxygen equipment ends. Under this provision, an oxygen supplier that furnished liquid or gaseous oxygen equipment during the 36-month rental period, and is required by section 1834(a)(5)(F)(ii)(I) of the Act to continue furnishing the equipment after the 36-month rental period ends, will receive payment for furnishing oxygen contents necessary for use with liquid or gaseous oxygen equipment after the 36-month rental period. Section 1834(a)(5)(F)(ii)(II) of the Act establishes the payment amount for the

oxygen contents as that set forth in section 1834(a)(9) of the Act.

We revised § 414.226(d) and (f) to specify that payment shall be made for oxygen contents for use with supplier-owned liquid or gaseous oxygen equipment furnished after the 36-month rental period. An oxygen supplier that furnishes liquid or gaseous oxygen equipment during the 36-month rental month must continue to furnish the oxygen contents for any period of medical need for the remainder of the reasonable useful lifetime of the liquid or gaseous oxygen equipment established in accordance with § 414.210(f)(1). This requirement is necessary because liquid and gaseous oxygen systems (stationary and portable) require on-going delivery of oxygen contents in tanks or cylinders to furnish oxygen to the patient. We believe that the MIPPA provisions when read together provide that the supplier that continues to furnish liquid or gaseous oxygen equipment in accordance with section 1834(a)(5)(F)(ii)(I) of the Act is also required to furnish the oxygen contents housed in those tanks. This is based on the nature of the benfit and the requirement in the statute that the supplier ''must continue to furnish'' the equipment during any period of medical need. Empty tanks furnished in accordance with section 1834(a)(5)(F)(ii)(I) of the Act would provide no benefit to the patient, since the patient would not be receiving oxygen through the equipment.

We revised § 414.226(f) to specify that the supplier must make arrangements for the beneficiary to continue receiving the equipment if the beneficiary relocates at some time after the 36-month rental period but before the end of the reasonable useful lifetime of the equipment. Likewise, we revised § 414.226(f) to specify that, in the case of liquid or gaseous equipment (stationary and portable) the supplier must make arrangements for the beneficiary to continue receiving oxygen contents if the beneficiary relocates at some time after the 36-month rental period but before the end of the reasonable useful lifetime of the liquid or gaseous equipment (stationary and portable). The supplier must make arrangements for the beneficiary to continue receiving the oxygen contents and equipment at his or her new residence.

Comment: One commenter noted the rule does not specify if Medicare pays for the delivery of oxygen contents when the beneficiary elects to purchase their oxygen equipment.

Response: In accordance with § 414.226(d)(3)(i) and § 414.226(d)(4)(i), payment is made for the delivery of oxygen contents used with beneficiary-owned equipment as long as such contents are medically necessary.

Comment: Several commenters questioned the billing instructions for oxygen contents with regards to HCPCS codes, supporting documentation, and units of service.

Response: Since the publication of the CY 2009 PFS final rule with comment period, we have released subregulatory instructions on these issues for oxygen and oxygen equipment. The contents of these instructions have been posted on the contractors' Web sites.

Comment: Some commenters requested increased payments for higher contents usage. One commenter stated that after the 36 month cap, individual patient usage may increase due to a change in patient condition requiring more oxygen contents. The commenters suggested the supplier should be permitted to issue an Advanced Beneficiary Notice (ABN) and bill the beneficiary for nonassigned claims.

Response: Section 144(b)(1) of MIPPA, which amends section 1834(a)(5)(F)(ii) of the Act, does not provide for additional payments for volume adjustments on content payments after the 36-month rental cap. The monthly payments for oxygen contents include payment for oxygen contents needed for the entire month. The payment amount does not vary depending on the quantity (low or high) of oxygen needed. Use of an ABN is therefore not appropriate in these situations.

Comment: One commenter requested clarification on whether a nonparticipating DME supplier who has accepted assignment of claims for oxygen and oxygen equipment during the 36-month rental cap period has to continue to accept assignment of claims for oxygen contents furnished after the 36-month cap.

Response: Since nonparticipating suppliers can elect to accept assignment on a claim by claim basis, a non-participating supplier can decide to provide oxygen contents on an unassigned basis after the 36-month payment cap.

After consideration of the comments received, we are adopting these provisions as final without modifications.

c. Maintenance and Servicing of Supplier-Owned Oxygen Equipment After the Rental Cap

Section 1834(a)(5)(F)(ii)(III), as amended by section 144(b)(1) of the MIPPA, authorizes payment for maintenance and servicing of supplier-owned oxygen equipment furnished after the 36-month rental period if we determine such payments are reasonable and necessary.

In the CY 2009 PFS final rule with comment period, we determined that it is not reasonable and necessary to pay for servicing (repair) and non-routine maintenance of supplier-owned oxygen equipment. Given that the supplier owns the equipment, we believe the supplier should be responsible for maintaining its equipment in working order as it did during the 36-month rental period. In addition, warranties covering 5 years are generally available for the top selling brands of oxygen equipment and as discussed in the November 9, 2006 final rule (71 FR 65917) and the CY 2009 PFS final rule with comment period (73 FR 69878), we understand from manufacturers that such products are generally dependable. In a September 2006 report entitled ''Medicare Home Oxygen Equipment: Cost and Servicing,'' (OEI–09–04–00420), the Office of Inspector General (OIG) of the Department of Health and Human Services found that only 22 percent of beneficiaries who began renting oxygen equipment in 2001 rented the equipment for 36 months or longer. Recent claims data analysis indicates that more than 75 percent of Medicare beneficiaries do not rent oxygen equipment for longer than the 36 months (see Table 52 in section XIII. of this final rule with comment period.) Therefore, oxygen equipment is returned to suppliers before the end of the 36-month rental period in more than 75 percent of cases, and suppliers are then able to furnish the equipment to other beneficiaries, starting new 36-month periods of rental payments for the same equipment. Given that equipment that is less than 5 years old requires minimal maintenance and servicing, and in more than 75 percent of oxygen equipment rental episodes, suppliers receive more than 36 rental payments for the same piece of equipment, we concluded that suppliers should be responsible for maintaining their equipment in working order after the 36-month rental period as they did during the 36-month rental period.

Although we determined as part of the CY 2009 PFS final rule with comment period provisions that it is not reasonable and necessary to make payments for repair or non-routine maintenance of the supplier-owned oxygen equipment, we made an initial determination applicable to CY 2009 only that it is reasonable and necessary for the safety of the beneficiary to make

payments for periodic, in-home visits by suppliers to inspect oxygen concentrators and transfilling equipment and provide routine maintenance and servicing during these visits to ensure that the equipment is functioning properly. Therefore, we revised § 414.210(e)(2), to provide payment in 2009 for general maintenance and servicing of supplier-owned oxygen concentrators and transfilling equipment furnished after the 36-month rental period in accordance with section 1834(a)(5)(F)(ii)(I) of the Act consistent with our authority in section 1834(a)(5)(F)(ii)(III) of the Act. Payments are made in 2009 when the supplier performs routine maintenance and servicing as part of a visit to the beneficiary's home, 6 months after the 36-month rental period ends. Payments in 2009 for a maintenance and service visit may be made when the beneficiary is at home or at a temporary residence (for example, a vacation residence). For each visit, payment is equal to the Medicare allowed payment amount for 30 minutes of labor associated with repair of beneficiary-owned DME. As we indicated in the November 9, 2006 final rule for implementing section 5101(b) of the DRA (71 FR 65917), we believe that payment for 30 minutes of labor will adequately compensate suppliers for general maintenance and servicing visits based on findings by the OIG in their September 2006 report (OEI–09–04–00420) that many routine maintenance activities performed by suppliers on concentrators could be performed within that timeframe.

Separate payment is not made for parts replaced during the general maintenance and servicing visit, as the primary purpose of the periodic visit is to check the supplier-owned equipment to ensure that it is functioning properly. If parts need to be replaced in order to make the equipment serviceable, we concluded that the supplier should be responsible for replacing the parts on equipment from their inventory that they are furnishing to the beneficiary in order to meet the beneficiary's medical need for oxygen.

We solicited comments from interested parties on whether these payments should continue past CY 2009. The following is a summary of the comments we received and our responses.

Comment: Numerous commenters were in favor of continuing payment for maintenance and servicing visits past 2009. However, many commenters stated that a biannual maintenance and servicing payment is insufficient in frequency. Other commenters suggested that limiting maintenance and servicing payments to visits every 6 months will result in patients being hospitalized due to respiratory conditions. The commenters suggested that more frequent maintenance and servicing visits will prevent hospitalizations. Commenters also opposed basing the payment amount for maintenance and servicing on 30 minutes of labor. These commenters felt that the payment amount of two units of labor was inadequate to cover travel, labor (average 2 to 4 hours for travel and visit time), repairs, and supplies for a home visit. Several commenters requested clarification on the specific timeframe for when a maintenance and servicing visit may occur after the end of the 36-month rental period. Several commenters requested that we provide more specific data and the methodology used to compute the reimbursement for a maintenance and servicing visit.

A number of commenters suggested that the maintenance and servicing rules and payments for oxygen equipment should be similar to those described at § 414.229(e) for capped rental items furnished prior to January 1, 2006. Under these rules, the maintenance and servicing payment amounts are made every 6 months, beginning 6 months after the end of the rental cap period and cover all maintenance, servicing, and repair of the equipment that is needed after the rental cap. The payment amounts are limited to one month's rental payment for the item.

Response: We appreciate the comments received and agree that continuing maintenance and servicing payments for oxygen concentrators and transfilling equipment past 2009 is reasonable and necessary for the safety of the beneficiary. We are also clarifying that the supplier that furnishes the equipment during the 36th continuous month during which payment is made is responsible for continuing to furnish the equipment after the 36th continuous month (after the cap) and is responsible for furnishing equipment in good working order regardless of the implementation of section 1834(a)(5)(F)(ii)(III) of the Act. We would like to stress this point for commenters who suggest that beneficiaries will be harmed unless these payments are sufficient to cover specific costs incurred by the supplier for maintaining and servicing supplier-owned equipment.

Nevertheless, we agree with commenters that it is reasonable and necessary to increase the maintenance and servicing payment established for 2009 to further ensure the equipment is maintained and serviced by the supplier, thereby protecting beneficiaries who rely on oxygen equipment to deliver a sufficient concentration and quantity of oxygen on an uninterrupted basis. We also agree with commenters who believe that it is reasonable and necessary to establish rules for maintenance and servicing of certain oxygen equipment that are similar to the rules described at § 414.229(e) for capped rental items furnished to beneficiaries beginning on or before December 31, 2005.

These rules allow payment every 6 months, beginning 6 months after the end of the rental cap period, for all necessary maintenance and servicing. In accordance with § 414.229(e), a reasonable fee is established for maintenance and servicing not to exceed 10 percent of the purchase price of the item. Our experience and an OIG report from June 2002 entitled ''Medicare Maintenance Payments for Capped Rental Equipment'' (OEI–03–00–00410) indicates that such rules more than adequately reimbursed suppliers for maintenance and servicing of capped rental items. In addition, we believe it is necessary to continue requiring that suppliers make visits every 6 months to the beneficiary's home to inspect the oxygen equipment to ensure that all of the equipment maintenance and servicing needs are being addressed.

Regarding the fee for maintenance and servicing, in order to model the payment for maintenance and servicing of certain oxygen equipment after the capped rental maintenance and servicing provision at § 414.229(e), it is necessary to develop maintenance and servicing payments for oxygen equipment in a way that ensures that the amount does not exceed 10 percent of the purchase price of the equipment. The monthly payment amount for oxygen and oxygen equipment includes payment for oxygen contents in addition to equipment rental and is not established based on a percentage of the purchase price of the equipment, as is the case for capped rental items. In the September 2006 report on oxygen equipment, the OIG found that the average cost of an oxygen concentrator was $587. Increasing this amount to a 2010 price based on the percentage change in the Consumer Price Index for all Urban Consumers (CPI–U) from 2006 to 2010 yields a purchase price of $660. We note that the percentage change in the CPI–U from June 2008 to June 2009, the factor used to inflate prices from 2009 to 2010, is a negative 1.41 percent. Therefore, we use a factor of zero percent as the indicator for inflation for this year. Establishing the maintenance

and servicing fee based on 10 percent of this average price would result in a payment of $66 for CY 2010. For subsequent years, the payment amount will be adjusted based on the covered item update for DME as set forth in section 1834(a)(14) of the Act.

After careful consideration of comments on this issue, we are adding § 414.210(e)(5) to make ongoing maintenance and servicing payments for oxygen concentrators and transfilling equipment (or equipment other than stationary or portable gaseous or liquid oxygen equipment) furnished on or after July 1, 2010 based on a reasonable fee not to exceed 10 percent of the purchase price for a stationary oxygen concentrator. We are making these changes effective for items furnished on or after July 1, 2010, to allow time for necessary systems changes. We are revising § 414.210(e)(2) to continue the maintenance and servicing policy established for certain oxygen equipment for 2009, for items furnished from January 1, 2010 through June 30, 2010. For items furnished on or after July 1, 2010, the maintenance and servicing payments would be made following each subsequent 6-month period until either medical necessity ends or the beneficiary elects to obtain new equipment. Only one maintenance and servicing payment will be made during each 6-month period for any combination of concentrator and oxygen transfilling equipment used by the beneficiary in their home. The maintenance and servicing payment includes payment for all necessary maintenance and servicing of the beneficiary's oxygen concentrator (stationary or portable) and transfilling equipment and a minimum of one required visit to the beneficiary's home to inspect the equipment. Consistent with our existing policy, no payment is made for maintenance and servicing of gaseous or liquid oxygen equipment. Finally, in response to comments, we are revising § 414.210(e)(2), and adding (e)(2)(iii) and (e)(5)(iv) to clarify that the visit to the beneficiary's home must occur during the first month of the 6-month period. This will ensure that the visits occur in 6-month intervals so that maintenance and servicing necessary to keep the equipment in good working order for the next 6 months is performed for each subsequent 6-month period and avoids overlap of 6-month maintenance and servicing episodes.

Comment: One commenter asked for clarification as to whether suppliers can enter into a service contract with the beneficiary after the 36-month cap for additional maintenance and service visits along with any necessary on-call visits.

Response: In accordance with 1834(a)(5)(F)(ii)(I) of the Act and regulations at § 414.226(f)(1), the supplier is responsible for furnishing, or making arrangements to furnish, the oxygen equipment in good working order for any period of medical need after the 36-month cap for the remainder of the reasonable useful lifetime of the equipment. In addition, as indicated above, we are revising § 414.210(e)(2) and § 414.210(e)(5) to make payment for ongoing maintenance and servicing of equipment other than gaseous or liquid oxygen equipment after the cap. Therefore, we believe it would be inconsistent with these provisions for suppliers to require that beneficiaries enter into service contracts for maintenance and servicing of rented oxygen equipment at any time or to charge the beneficiary for maintenance and servicing of equipment beyond those allowed by regulations at § 414.210(e). As explained previously, the supplier is required to furnish gaseous or liquid oxygen equipment in good working order during the 36-month rental period and following the 36-month rental period when payments continue for delivery of oxygen contents. Therefore, it would be inconsistent with these provisions for the supplier to charge the beneficiary for maintenance and servicing of gaseous or liquid oxygen equipment.

After consideration of the comments received, we are adopting as final § 414.210 by revising § 414.210(e)(2) and adding § 414.210(e)(5).

d. Other Public Comments Received on the CY 2009 PFS Final Rule With Comment Period

Comment: Several commenters noted that CMS did not discuss the application of policies for Advanced Beneficiary Notices (ABN) on the period following the 36-month oxygen payment cap.

Response: Using an ABN in the post 36-month period is only applicable when upgrading to medically unnecessary equipment or equipment with features that are not medically necessary. As a result, we do not anticipate frequent application of an ABN during the post 36-month period and did not incorporate this issue in our regulations at § 414.226(f) and (g).

Comment: Several commenters explained that currently respiratory therapists are not separately reimbursed as licensed practitioners under the PFS. As a result, they receive payment for their professional services from suppliers receiving payment for furnishing oxygen equipment. Thus, reductions in payment for home oxygen equipment will adversely affect payments for respiratory therapists. The commenters requested that payment should be established for respiratory therapists under the PFS.

Response: This topic of Medicare coverage and payment for the professional services of licensed respiratory therapists is not a subject of the CY 2009 PFS final rule with comment period or this final rule with comment period for implementation of section 144(b) of MIPPA and therefore outside the scope of this rule.

Comment: Several commenters raised concern that our regulations do not address situations where an oxygen supplier discontinues its business or declares bankruptcy. The commenters believe a new supplier will refrain from accepting patients from a terminating supplier because the new supplier will receive fewer monthly rental payments and upon reaching the payment cap, the new supplier must continue furnishing the oxygen and oxygen equipment for the remainder of the reasonable useful lifetime of the equipment.

Response: We will evaluate current regulations to determine if oxygen equipment that is lost due to bankruptcy can be replaced. We are not addressing bankruptcy in this rulemaking which is intended to address the provisions of section 144(b) of the MIPPA.

Comment: Several commenters objected that our regulation at § 414.210(f)(1) establishes that the reasonable useful lifetime of DME cannot be less than 5 years and instead recommended that the regulation be revised for oxygen equipment to 3 years. One commenter stated most oxygen compressors expire after approximately 9,000 to 10,000 hours of use of the equipment. Additionally, one commenter requested clarification on whether the useful lifetime restarts if the oxygen equipment has been changed or replaced after the equipment was originally delivered to the patient but before the expiration of 5 years.

Response: The reasonable useful lifetime begins with the initial delivery date of the equipment. Equipment can be changed for another oxygen modality or replaced without affecting the duration of the reasonable useful lifetime as long as there is not a break in the medical necessity of oxygen (break in need) during the 36-month rental period, for at least 60 days plus the days remaining in the last paid rental month. It is important to note, however, that our regulations did not propose an amendment to § 414.210(f)(1) and as such, revisions to

the length of the reasonable period are outside the scope of this rulemaking effort.

11. Section 152(b): Coverage of Kidney Disease Patient Education Services

Section 152(b) of the MIPPA provides for coverage of kidney disease education (KDE) services for patients. The following is an outline of our final rule to implement the statutory amendments.

a. Statutory Authority

Section 152(b) of the MIPPA amended section 1861(s)(2) of the Act by adding a new subparagraph (EE) ''kidney disease education services'' as a Medicare-covered benefit under Part B. This new benefit is available for Medicare beneficiaries diagnosed with Stage IV CKD, who in accordance with accepted clinical guidelines identified by the Secretary, will require dialysis or a kidney transplant. KDE services will be designed to provide comprehensive information regarding:

- The management of comorbidities, including delaying the need for dialysis;
- Prevention of uremic complications;
- Options for renal replacement therapy (including hemodialysis and peritoneal dialysis, at home and in-center, as well as vascular access options and transplantation);
- Ensuring that the beneficiary has the opportunity to actively participate in his or her choice of therapy; and
- Tailored to meet the needs of the beneficiary involved.

b. Public Meetings

Section 1861(ggg)(3), as added by section 152(b) of the MIPPA, requires that the Secretary set standards for the content of the KDE services after consulting with various stakeholders, who to the extent possible, had not received industry funding from a drug or biological manufacturer or dialysis facility. On November 6, 2008, and December 16, 2008, we held two feedback sessions to solicit stakeholder comments regarding the implementation of section 152(b) of the MIPPA. Both feedback sessions were open to the public. In addition to the feedback sessions, we conducted an internal review of the available medical evidence, literature, and currently available CKD patient education programs. Transcripts from both events are available on the CMS Web site at *http://www.cms.hhs.gov/CoverageGenInfo/08_CKD.asp#TopOfPage.* A summary of the feedback sessions is available in the proposed rule (74 FR 33615 through 33616).

c. Summary of Proposed Rule and Comments

We proposed, consistent with section 1861(ggg) of the Act, to amend 42 CFR part 410 to add new § 410.48 for KDE services as a Medicare Part B benefit. The following is a summary of the provisions of the proposed rule, and the comments we received on the proposed rule, and the changes we are making in this final rule regarding coverage of KDE under section 152(b) of the MIPPA. We received broad support from commenters regarding the addition of KDE services as a Medicare Part B covered benefit. Most were generally pleased with the proposed rule and commended us for our expeditious implementation of the MIPPA provisions. Commenters appreciated that CMS collected and incorporated broad stakeholder feedback in the development of the proposed rule.

(1) Definitions (§ 410.48(a))

As related to the implementation of section 1861(ggg) of the Act, we proposed the following definitions in § 410.48:

- Kidney Disease Patient Education Services: Consistent with section 1861(ggg)(1) of the Act, we defined Kidney Disease Patient Education Services as face-to-face educational services provided to patients with stage IV CKD. We specified that KDE services are provided in a face-to-face manner based on stakeholder feedback received during the consultation meetings and our general rulemaking authority. Face-to-face education is consistent with sections 1861(ggg)(C)(ii) and (iii) of the Act, which provide that the services should be designed to ensure that the beneficiary has the opportunity to actively participate in the choice of therapy and be tailored to meet the needs of the beneficiary involved.

Comment: One commenter agreed with our proposal to define KDE as face-to-face educational services provided to patients with Stage IV CKD. Several commenters asked us to consider allowing the services to be provided via telehealth and in Federally qualified health centers (FQHCs), since multiple education sessions may be difficult for some patients due to transportation issues and recommended that KDE services be added to the telehealth services at § 410.78. One commenter stated that we have recognized telehealth as a ''face-to-face'' encounter in the past.

Response: We appreciate the concerns raised by commenters regarding access to services in rural areas. In the proposed rule, we specified that KDE services be provided in a face-to-face manner based on stakeholder feedback received during the consultation meetings and our general rulemaking authority. Face-to-face education is consistent with sections 1861(ggg)(C)(ii) and (iii) of the Act, which provide that the services should be designed to ensure that the beneficiary has the opportunity to actively participate in the choice of therapy and be tailored to meet the needs of the beneficiary involved.

At this time, we believe that it would be more appropriate to consider the addition of KDE services for telehealth through full notice and comment procedures in the CY 2011 PFS proposed rule, based on the experience we gain observing the KDE programs over 1 year. We will accept requests for consideration to add KDE services to the list of approved telehealth services in the CY 2011 PFS proposed rule if received prior to December 31, 2009. For more information on submitting a request for an addition to the list of Medicare telehealth services, including where to mail these requests, visit our Web site at *http://www.cms.hhs.gov/telehealth/*.

Comment: One commenter stated that qualified persons should be precluded from using videos as a method for providing KDE services since patients need to ask questions and may fall asleep during a video due to their illness and anemia levels.

Response: We received similar feedback from stakeholders during the feedback sessions and understand the commenter's concerns about using videos as a method for providing KDE services. We agree that a video is not an appropriate modality for providing KDE services, which is why we specify that KDE services are services provided in a face-to-face manner.

We are retaining the definition of Kidney Disease Patient Education Services as proposed in this final rule.

- Physician: For purposes of KDE services, we proposed to define physician using the definition in section 1861(r)(1) of the Act; it defines ''physician'' as ''a doctor of medicine or osteopathy legally authorized to practice medicine and surgery by the State in which he or she performs such function or action (including a physician within the meaning of section 1101(a)(7) [of the Act].'' We received no comments regarding our proposed definition of physician and are adopting this definition in this final rule.
- Qualified Person: Consistent with section 1861(ggg)(2)(A) of the Act, for purposes of KDE services, we proposed to define a ''qualified person'' as a

physician (as defined in section 1861(r)(1) of the Act); a physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS) (as defined in section 1861(aa)(5) of the Act, and implemented in § 410.74, § 410.75, and § 410.76 of this subpart). A provider of services located in a rural area is also included in the statute's definition of a qualified person. Section 1861(u) of the Act defines ''provider of services'' to be ''a hospital, critical access hospital, skilled nursing facility, comprehensive outpatient rehabilitation facility, home health agency, hospice program or, for purposes of sections 1814(g)and section 1835(e) [of the Act], a fund''. We define a ''qualified person'' to include a provider of services located in a rural area and would include each of these healthcare entities except for a ''fund.''

In order for a provider of services to be a ''qualified person,'' the entity must be located in a rural area. We include in the definition of a ''qualified person'', only those hospitals, critical access hospitals (CAHs), skilled nursing facilities (SNFs), comprehensive outpatient rehabilitation facilities (CORFs), home health agencies (HHAs), and hospice programs that are located in a rural area under section 1886(d)(2)(D) of the Act (as defined in our regulations at § 412.64(b)(ii)(C)) and include hospitals and CAHs that are reclassified from urban to rural status pursuant to section 1886(d)(8)(E) of the Act, as defined in § 412.103. Specifically, § 412.64(b)(ii)(C) defines ''rural'' to mean any area outside an urban area, which § 412.64(b)(ii)(A) defines as a metropolitan statistical area (MSA) as defined by the President's Office of Management and Budget (OMB). Therefore, we believe that a hospital, CAH, SNF, CORF, HHA, or hospice program that is not physically located in an MSA should be considered ''rural'' for this benefit.

Section 1886(d)(8)(E) of the Act, implemented in § 412.103, requires us to treat hospitals that meet specified criteria as geographically rural under section 1886(d)(2)(D) of the Act even though they are physically located in an MSA. Because the statute identifies these hospitals as rural, we believe that it is appropriate to consider these hospitals as qualified persons for purposes of the KDE benefit.

Comment: Several commenters requested that we consider adding various other healthcare professionals to the definition of a qualified person including registered dietitians, renal dieticians, licensed dieticians, nutrition support clinicians (nutrition support physician, nurse, or pharmacist), medical nutrition therapists, nephrology social workers, registered nurses, nephrology nurses, and/or transplant coordinators as qualified persons or as members of a multi-disciplinary team headed by the qualified person to provide KDE services. One commenter was concerned that dietary advice provided by physicians, nurses, and NPs, while well meaning, is often overly restrictive, and could lead to malnutrition and lower quality of life. One commenter requested that at least one of the sessions be designated for the patient to meet with a registered dietitian. One commenter stated that a dietitian who is board certified in renal adds additional competency to his or her qualifications to provide KDE services.

Response: The Congress did not specifically authorize the Secretary to approve additional healthcare professionals within this defined term. Therefore, we are not accepting the comments to further expand the definition to include other healthcare professionals.

Comment: Regarding providers of services located in rural areas, one commenter recommended that we rely on facilities to schedule the appropriate staff to teach KDE services in these facilities and not to narrow the clinical practice activities beyond those permitted within each state's clinical scope of practice laws.

Response: Providers of services are responsible for providing proper staffing of KDE services. We encourage facilities to review the standards for content of KDE services when determining who will be providing such services, similar to how a facility would choose the appropriate staff for other facility functions.

Comment: One commenter disagreed with our proposed definition of a provider of services located in a rural area as a ''qualified person'' who may be paid for kidney disease education services. The commenter believes that the definition of a provider of services in a rural area should include rural hospital-based dialysis facilities. The commenter stated that these types of facilities are the only dialysis facilities that could be interpreted as a qualified person under section 1861(ggg)(2)(A)(i) of the Act and that renal dialysis facilities not located within a hospital are not providers of services under 1861(ggg)(2)(B). Furthermore, the commenter indicated that, as a practical matter, hospital-based dialysis facilities in rural areas are the only providers of services that would be capable of providing kidney disease education services as the Congress intended under the provisions of MIPAA.

Response: We disagree with the commenter's request to include dialysis facilities within the definition of a ''provider of services located in a rural area.'' Section 1861 (ggg)(2)(B) of the Act explicitly excludes renal dialysis facilities from being ''qualified persons'' for purposes of the kidney disease education benefit. The statute does not provide an exception for dialysis facilities located within hospitals. We do not consider dialysis facilities located in a hospital to be different from a freestanding dialysis facility for purposes of the statutory exclusion.

In addition, section 1861(u) of the Act defines a provider of services to be a hospital, critical access hospital, skilled nursing facility, comprehensive outpatient rehabilitation facility, home health agency, or hospice. The provisions of MIPAA require that the provider of services must be located in a rural area in order to furnish KDE services. In implementing the KDE benefit, to exclude these providers of services located within a rural area would be contrary to the statutory definition of the term ''provider of services.''

Therefore, in this final rule with comment period and as specified in the statutory definition of a ''qualified person,'' we consider a qualified person to be either a physician (as defined in section 1861 (r)(1) of the Act) or a PA, NP, or CNS; or a provider of services located in a rural area, which includes a hospital, critical access hospital, skilled nursing facility, comprehensive outpatient rehabilitation facility, home health agency or hospice. A qualified person under this benefit does not include a renal dialysis facility, whether freestanding or hospital-based, regardless of whether the renal dialysis facility is located in a rural area or not. While the hospital-based renal dialysis facility located in a rural area is not a ''qualified person'' for purposes of payment for KDE services, we note that the hospital of which the hospital-based renal dialysis facility is a part would meet the definition of a ''qualified person'' because it is in a rural area.

- Renal Dialysis Facility: The Congress has provided in section 1861(ggg)(2)(B) of the Act that a ''renal dialysis facility'' may not be a ''qualified person.'' We proposed to define this term, consistent with § 405.2102 of this title, as ''a unit which is approved to furnish dialysis services(s) directly to ESRD patients.'' We received no comments on the definition and are adopting the proposed definition in this final rule.

• Stage IV Chronic Kidney Disease: Section 1861(ggg)(1)(A) of the Act states that KDE services shall be furnished to beneficiaries diagnosed with Stage IV CKD, who according to accepted clinical guidelines identified by the Secretary, will require dialysis or a kidney transplant. Based on stakeholder feedback, we proposed to define Stage IV CKD as kidney damage with a severe decrease in GFR quantitatively defined by a GFR value of 15–29 ml/min/1.73 m^2, using the Modification of Diet in Renal Disease (MDRD) Study formula.[1] Because there are currently no agreed upon accepted clinical guidelines that describe the stage IV patients who would eventually require dialysis or a kidney transplant, we proposed to cover all stage IV patients. We received no comments regarding our proposed definition of Stage IV CKD or regarding clinical guidelines for identifying beneficiaries with stage IV CKD that will require dialysis or a kidney transplant. Therefore, we are adopting our proposed definition of Stage IV CKD in this final rule.

(2) Covered Beneficiaries (§ 410.48(b))

Consistent with section 1861(ggg)(1)(A) of the Act, we proposed that Medicare beneficiaries are eligible to receive KDE services if the beneficiaries are diagnosed with Stage IV CKD (as defined in new § 410.48(a)), and have been referred for such services by the physician managing the beneficiary's kidney condition.

Comment: Some commenters recommended that we modify the provisions regarding beneficiaries eligible to receive KDE services to indicate that the beneficiary be diagnosed with at least stage IV CKD. Several commenters held the opinion that the Congress envisioned that defining stage IV CKD would not be a precise process by requiring that CMS rely upon accepted clinical guidelines. Commenters were also of the opinion that the Congress recognized that some beneficiaries should qualify for the benefit because they were at a stage where RRT was imminent, but had not commenced. Commenters believed that the Congress added a limiting clause that precludes beneficiaries who are on dialysis or have received a transplant, which would prevent more than the targeted population from obtaining these services. Several commenters pointed out that the KDOQI guidelines acknowledge that the GFR ranges/measurements established in the guidelines should not be used as definitive cut-offs between stages because using such cut-offs is inherently arbitrary. Commenters requested that CMS not adopt a ridged approach, but rather recognize that beneficiaries with stage IV and those beneficiaries with stage V that have not yet started renal replacement therapy should be treated similarly for purposes of qualifying for the KDE services.

Response: We understand and appreciate that the staging criteria is a classification system and understand the commenters' desire for beneficiaries to have access to this important benefit. However, there is no statutory authority to expand eligibility for individuals beyond those noted in the proposed rule.

Comment: One commenter asked that we consider the needs of adolescent/young adult renal transplant patients between 18 and 24 years old that are transitioning from pediatric to adult nephrology care.

Response: We appreciate that adolescents and young adults with CKD have unique needs that need to be addressed as part of their overall plan of care. The standards for content allow for the KDE services to be tailored to the needs of the beneficiary involved. We note that an adolescent/young adult described by the commenter would need to be a Medicare beneficiary and meet the eligibility provisions of this rule in order to obtain services under this benefit.

Comment: One commenter requested that we use a standardized method to screen qualifying beneficiaries to participate in the KDE services.

Response: We are defining stage IV CKD as ''kidney damage with a severe decrease in glomerular filtration rate (GFR) quantitatively defined by a GFR value of 15–29 ml/min/1.73m^2, using the MDRD Study formula,'' and required that the beneficiary obtain a referral from the physician managing the beneficiary's kidney condition. These provisions provide a standardized method for determining if a beneficiary is eligible for KDE services.

Comment: Some commenters indicated that referrals for KDE services should not be limited to just those obtained from the physician managing the beneficiary's kidney condition. Commenters suggested that we allow referrals from those that meet the definition of a qualified person since many CKD patients are not under the care of a single physician managing the beneficiary's kidney condition. Commenters were concerned that a physician who diagnoses the beneficiary with CKD but has not been managing the kidney condition for a period of time, would be precluded from making a referral for KDE services. Commenters stated that beneficiaries may be diagnosed late in the progression of their CKD and may not have been managed by a physician up to that point. Commenters recommended that we clarify the language in this provision so that physicians or other healthcare professionals that diagnose the beneficiary's kidney condition be able to refer the beneficiary for KDE services.

Response: Beneficiary access to these new services is important and we recognize the commenters' concerns about whether a beneficiary's kidney disease is being managed by a physician. Section 1861(ggg)(1)(B) of the Act expressly requires that KDE services are ''(B) furnished, upon the referral of the physician managing the individual's kidney condition, by a qualified person[…]'' We interpret the statute to mean that referrals are made by physicians and KDE services are furnished by qualified persons. Appropriate referral of a patient is left to the discretion of the physician as described above. If a physician diagnoses and discusses KDE services, we consider this to be sufficient to be considered the physician managing the beneficiary's kidney condition. Therefore, the physician, within his or her discretion, can make a referral for KDE services.

Comment: One commenter requested that the physician managing the beneficiary's kidney condition, as part of the KDE program, should initiate a referral for Medical Nutrition Therapy (MNT). Commenters also recommended that referrals for MNT be added to the KDE standards for content.

Response: We recognize that MNT can be an important benefit available to beneficiaries with chronic kidney disease. The MNT benefit (42 CFR 410 Subpart G) has distinct eligibility criteria, though it does overlap somewhat with the eligibility criteria for KDE services. A qualified person that provides KDE services and a physician managing a beneficiary's kidney condition may want to consider making patients aware that MNT is a Medicare covered benefit that provides beneficiaries with chronic kidney disease information about proper nutrition. We encourage physicians, healthcare professionals, and beneficiaries to discuss whether a referral for MNT services would be appropriate. Referral of a patient for MNT services is left to the discretion of the physician. Therefore, we do not believe it would be appropriate to

[1] Levey, A.S., Greene, T., Kusek, J, and Beck, G.A. J Am Soc Nephrol. 2000. 11: p. 155A.; Levey, A.S., Bosch, J.P., Lewis, J.B., Greene, T., Rogers, N., and Roth, D. Ann Intern Med. 1999 Mar 16; 130(6):461–70.

include a requirement for referral to MNT services as part of the referral process or the standards for content for KDE services.

Therefore, in this final rule, we are retaining our proposed provisions for covered beneficiaries.

(3) Standards for Qualified Persons and Exclusions (§ 410.48(c))

We proposed requiring that a qualified person be able to properly receive Medicare payment under 42 CFR part 424 (Conditions for Medicare Payment). Consistent with section 1861(ggg)(2)(B) of the Act, we proposed to specifically exclude a hospital, CAH, SNF, CORF, HHA, or hospice that is physically located outside of a rural area under § 412.64(b)(ii)(C), except for a hospital or CAH that is treated as being located in a rural area under § 412.103. In addition, consistent with section 1861(ggg)(2)(B) of the Act, a renal dialysis facility is not a qualified person.

While we did not propose specific education, experience, training, and/or certification requirements in the proposed rule, we solicited public comments on the appropriate level of education, experience, training, and/or certification appropriate for a qualified person to effectively provide KDE services. Factors to consider included specific education and expertise regarding the topic and the ability to explain these areas for the purpose of patient education.

Comment: Many commenters recommended that qualified persons either be board certified in nephrology or have at least 2 years experience working primarily with kidney disease patients. Commenters believed that the suggested qualifications supported our objective that the qualified person be able to explain the subjects enumerated in the proposed rule.

Response: The recommended qualifications were popular among commenters, but to our knowledge, the recommendations are not universally agreed upon standards for educators in existing education programs. Therefore, we are not adding specific education/experience qualifications for qualified persons to this final rule with comment period.

In this final rule with comment period, we are retaining the proposed standards for the ''Qualified Persons and Exclusions'' provisions.

(4) Standards for Content of Kidney Disease Patient Education Services (§ 410.48(d))

We believe that patient education needs vary by severity of the disease, the age of the patient, the patient's comorbid conditions and disabilities, the patient's primary language and culture, and desire to learn more about the disease and treatment options. Education services are more effective if the services are tailored to meet an individual beneficiary's needs. We proposed that KDE services include the content as specified in proposed new § 410.48(d).

Commenters were overwhelmingly supportive of the proposed standards for content and provided suggestions for improvement.

Comment: Some commenters requested that we provide more detailed regulatory guidance regarding the minimum core curriculum to maintain consistency and a balanced/comprehensive nature of the education sessions. Specifically, the commenters requested:

- Nature and treatment for co-morbidities that accompany CKD such as anemia, mineral and bone disorders, diabetes, and high blood pressure;
- Separate vascular access into its own topic heading and specify the benefits and risks of each option, the need to preserve vasculature for creation of fistulas, and care of vascular access to avoid infection and stenosis;
- Transplantation including preparation for transplantation, pre-emptive transplantation and differences between living donor and deceased donor transplantation, immunosuppression, allocation policies, and lifestyle post-transplant;
- Smoking cessation;
- Use of non-steroidal anti-inflammatory agents;
- Impact of blood transfusions on transplant candidacy;
- Nutrition, risk of malnutrition, impact of dietary interventions on the progression to kidney failure, and pre-dialysis and dialysis patient dietary prescriptions;
- Conservative management without renal replacement therapy and palliative care as a therapeutic option; and
- Advanced directives education.

Response: We appreciate the suggestions provided. The intent of the standards for content is that qualified persons provide a comprehensive set of information, but allow qualified persons flexibility in specific session design to meet the needs of the individual beneficiary(s) involved. Anemia, mineral and bone disorders, diabetes, and high blood pressure are addressed under § 410.48(d)(1), management of comorbidities including for the purpose of delaying the need for dialysis. Vascular access options, impact of blood transfusions on transplant candidacy, preparation for transplantation, pre-emptive transplantation, differences between living donor and deceased donor transplantation, immunosuppression, allocation policies, and lifestyle post-transplant are addressed under § 410.48(d)(3), therapeutic options, where we specify that qualified persons discuss the advantages and disadvantages of each therapeutic option. Regarding smoking cessation, conservative management without renal replacement therapy, palliative care as a therapeutic option, and advanced directives are addressed in § 410.48(d)(4), opportunities for beneficiaries to actively participate in the choice of therapy and be tailored to meet the needs of the individual beneficiary involved. Nutrition, risk of malnutrition, impact of dietary interventions on the progression to kidney failure, and pre-dialysis and dialysis patient dietary prescriptions are addressed in § 410.48(d)(2), prevention of uremic complications, under diet and fluid restrictions; and medication review, including how each medication works, possible side effects and minimization of side effects, the importance of compliance, and informed decision-making if the patient decides not to take a specific drug. The topics we list in § 410.48(d) do not constitute an all inclusive list. Specifically, we are stating with this final rule that the education provided to beneficiaries includes, but is not limited to the content standards topics listed in new § 410.48(d). We leave it to the discretion of the qualified person to tailor the services to individual needs.

Comment: One commenter requested that CMS include language stating that KDE services include, but are not limited to, the content as specified in § 410.48(d) and permit qualified providers to include additional reasonable and necessary content at their discretion.

Response: Under the standards for content, each content heading specifies that education sessions include, but are not limited to, the topics listed. We note that in the proposed rule § 410.48(d)(3), Therapeutic options, the ''not limited to'' language was inadvertently omitted. In this final rule, we are correcting this omission and clarifying that qualified persons discuss, but are not limited to, the topics listed under this content heading.

Comment: Some commenters requested standardized content. One commenter recommended the KDOQI guidelines as a source for standardization criteria.

Response: We understand and appreciate the suggestion that the KDE

services content should be standardized. The intent of the standards for content is consistent with the statutory provisions at section 1861(ggg)(1)(C)(iii) of the Act, which state that KDE services ''be tailored to meet the needs of the individual involved.'' The intent of the standards for content was to strike a balance between ensuring that beneficiaries are provided comprehensive information, but also that the services are tailored to individual needs. We outlined the major topics in the content standards that need to be addressed during KDE sessions, but also believe it is important to allow flexibility for qualified persons to tailor the education sessions to meet the needs of the beneficiaries involved, per the statutory requirements.

Comment: Commenters stated that the terminology ''vascular access'' does not encompass peritoneal dialysis access and recommended that we change the terminology to ''dialysis access for both hemodialysis and peritoneal dialysis.''

Response: We agree with the comments provided regarding vascular access and we are changing ''all vascular access options'' to ''all dialysis access options for hemodialysis and peritoneal dialysis.''

(5) Session Specifications (§ 410.48(e))

(a) Limitations on the number of sessions: Consistent with section 1861(ggg)(4) of the Act, we limit the number of KDE sessions to six (6). We did not receive any comments on the session limitations. Therefore, we are adopting the limits, as proposed, in this final rule.

(b) Session Length: In the proposed rule we defined the session length as 60 minutes.

Comment: One commenter concurred that 6 hours was sufficient to provide comprehensive KDE services, but recommended that we recognize a partial/fraction of a session. For example, one session could be billed in four 15-minute increments, to allow for variation in session length based on beneficiary needs.

Response: Consistent with section 1861(ggg)(4) of the Act, we limit the number of KDE sessions to six (6). As we discussed in the proposed rule, stakeholders provided a variety of recommendations regarding appropriate session length. In the absence of supporting evidence for session length, we are defining the session length in this final rule as one (1) hour, which coincides with the session length of some programs in existence and is the approximate average of stakeholder suggested session lengths.

(c) Individual and Group Session Format: Consistent with section 1861(ggg)(C)(iii) of the Act, we specify that the qualified person tailor the design of the education services to meet the needs of the beneficiary based on whether the beneficiary needs more individualized education, would benefit more from a group environment, or a combination; and consider any communication accessibility needs based on disability, language and health literacy.

Generally speaking, medical services are provided to beneficiaries on an individual basis. Beneficiaries can also benefit from the interaction in a group setting. We believe that the beneficiary, in consultation with the referring physician, will be able to best determine the education services modality that most effectively meets his or her needs.

Comment: One commenter recommended that we needed to build in flexibility of group versus the individual setting since some patients are more comfortable in the group setting. Other patients may be traumatized by the prospect of dialysis and need more individualized attention. One commenter suggested that the initial KDE education should be standardized and then later sessions be customized to meet patient specific needs. Another commenter requested that we mandate that at least 2 or more of each of the beneficiary's 6 KDE sessions be provided in a one-on-one format.

Response: We recognize that each individual, in consultation with the physician managing their kidney condition, are best able to determine the education services modality that most effectively meets his or her needs, whether that be group sessions, individual sessions, or a combination. The provisions of this rule allow for such flexibility.

Comment: One commenter requested an equal level of intensity for all sessions.

Response: In the final rule, we state that each KDE session is one (1) hour long, which addresses the commenter's concerns regarding session intensity.

Comment: One commenter requested that qualified persons should provide material that is specific to the patient, taking into account the patient's primary language, reading level, and comprehension level.

Response: We recognize the importance of providing beneficiaries with information in a format that is easy to comprehend. The provisions of the final rule allow that the KDE services be tailored to meet the needs of the individual beneficiary involved. We also address the commenter's concerns as part of the outcomes assessment process. This final rule with comment period states that the outcomes assessments will serve to assess KDE program effectiveness in meeting the communication needs of underserved populations, persons with limited English proficiency, and persons with health literacy.

Comment: One commenter recommended that we define a group session as consisting of between 2 and 20 participants.

Response: In § 410.48(e)(2) of this final rule, we specify that a session is one (1) hour long and may be provided individually or in group settings of 2 to 20 individuals who need not all be Medicare beneficiaries. We believe that this provision addresses the commenter's concerns about group size.

(6) Outcomes Assessment

The intent of the education services is for the beneficiary to take the information he or she has learned during the educational sessions in order to facilitate active participation by the beneficiary in the healthcare decision-making process with the physician managing his or her kidney condition. We believe that it is important that beneficiaries be assessed at the conclusion of the education sessions and that program assessments be used by the educators and CMS to assess the effectiveness of the education services, to help improve the programs for future participants, and better facilitate patient understanding of the material.

Based on stakeholder feedback and our general rulemaking authority, we proposed that qualified persons develop outcomes assessments and that each beneficiary be assessed during one of the education sessions. Section 410.48(d)(5) specifies that the outcomes assessment measures beneficiary knowledge about CKD and its treatment for the purpose of, and as a contributor to, the beneficiary's ability to make informed decisions regarding their healthcare and treatment options.

After completing the KDE services, the beneficiary should be able to take the information learned and use it to make informed choices about their healthcare during future consultations with the physician managing the beneficiary's kidney condition. It is important that the assessments be tailored to the beneficiary's reading level and language if the assessment is not administered by the qualified person that provided the education services, and be made available to CMS in a summarized format upon request. In the proposed rule, we specifically

solicited public comments regarding the development and administration of the outcomes assessments.

Comment: Commenters recommended both pre- and post-assessments and comparison studies of those beneficiaries that participated in KDE versus individuals that did not obtain the KDE services. Commenters recommended that the assessments cover topics specific to the content discussed during the KDE sessions, suggested that we work with stakeholders to develop standardized assessment tools, and provide a flexible implementation schedule that accounts for the time necessary for providers to adopt the new assessment instruments. Some commenters stressed the importance of long term post-assessment and follow-up by the physician managing the beneficiary's kidney condition, along with adoption of incentives to encourage providers to undertake such assessments. One commenter recommended that we re-evaluate the assessments over time to ensure that they address the most relevant topics and are administered effectively. One commenter requested standardized curriculum, evaluation, and monitoring tools.

Response: We are encouraged by the support from commenters about the development of outcomes assessments. After reviewing the feedback received during the stakeholders meetings and from commenters, there does not appear to be a standardized or agreed upon outcomes assessment mechanism. While we are not making any changes in this final rule from the proposed outcomes assessment provisions, we are considering working with organizations that are developing outcomes assessments as they work to develop a standardized assessment tool.

Comment: One commenter suggested that we develop an outcomes measure for ''physician referral for medical nutrition therapy'' as one of the monitoring tools.

Response: We appreciate the importance of proper nutritional counseling services. Since the outcomes assessment is part of the KDE services, it will not be paid separately and there is no need for a separate reporting tracking code.

Comment: One commenter requested clarification about whether pre- and/or post-assessments are included as part of the 6 sessions or in addition to the 6 sessions and whether there would be a separate reporting code and payment for the assessments.

Response: Outcomes assessments must be administered during a KDE session, meaning that the assessments are included as part of the sessions. Requests for separate reporting codes and payment for assessments would require a benefit category determination to determine if separate payment would fall within a Medicare benefit category.

Additional Issues

Comment: One commenter requested that we amend the ''Welcome to Medicare'' physical exam regulations to incorporate KDE as part of the preventive services checklist. Another commenter encouraged us to coordinate with Medicaid to examine whether stage IV education should be part of Medicaid case management services.

Response: We appreciate the attention being drawn to the importance of coordination with other benefits and programs such as the ''Welcome to Medicare'' physical exam and the Medicaid program. The commenter's requests do not fall within the scope of this rule. However, we plan to convey the commenter's suggestions to the appropriate components.

Comment: One commenter recommended that we promote the KDE program and the MNT benefit to beneficiaries and physicians.

Response: Medicare will release appropriate manual and transmittal instructions and information from our educational components for the medical community, including an MLN Matters article (Medicare Learning Network). The medical community can join this effort in educating physicians and beneficiaries by distributing their own communications, bulletins, or other publications. In addition, we have included information on the KDE benefit in the 2010 version of the Medicare and You Handbook. While we understand the importance of the MNT benefit, the commenter's request for promotion of the MNT benefit does not fall within the scope of this rule.

As a result of the comments received, we are making the following changes in this final rule with comment period:

- In the Standards for Content section, we are changing ''all vascular access options'' to ''all dialysis access options for hemodialysis and peritoneal dialysis.''
- In the standards for content section, we are clarifying that qualified persons discuss, but not be limited to, the topics listed under the 'therapeutic options' content standard heading.
- In the Limitations for Coverage of Kidney Disease Education Services section, we are changing the description of session length from ''60 minutes'' to ''one (1) hour.''

d. Payment for KDE Services

Section 152(b) of the MIPPA creates a new benefit category for KDE services. The MIPPA amends section 1848(j)(3) of the Act, which allows for payment of KDE services under the PFS. As we stated in the CY 2010 PFS proposed rule (74 FR 33619), KDE services are covered when they are furnished by a qualified person as defined in § 410.48(a) that meets the requirements of § 410.48(c) which means a physician, PA, NP, CNS, or a provider of services located in a rural area including a CAH, SNF, HHA, CORF, and hospice. We note that there is a possibility that a beneficiary may receive services from more than one ''qualified person''; however, payment should be made to only one qualified person on the same day for the same beneficiary.

In the proposed rule, we noted that the ''incident to'' requirements for physician services at section 1861(s)(2)(A) of the Act do not apply to KDE services. The MIPPA requirements are explicit, that the education services must be provided by a qualified person. We noted that rural health clinics (RHCs) do not meet the statutory definition of a provider of services (as defined in 1861(u) of the Act) and cannot be separately paid for furnishing KDE services.

In the proposed rule, we noted that the ''incident to'' provision does not apply to the implementation of a new service with a distinct benefit category under the PFS. We stated that the ''incident to'' requirements would not apply to KDE services.

Comment: Some commenters stated that CMS has the discretion and flexibility to allow KDE services to be provided ''incident to'' unless the statute explicitly precludes it. They also stated that section 152(b) of the MIPPA requires that KDE be furnished by a ''qualified person'', which includes physicians and specified nonphysician practitioners (NPPs) and that the statute does not prohibit KDE from being performed ''incident to'' the services of a ''qualified person''. Commenters also stated that CMS should allow a qualified person, as defined in section 152(b) of the MIPPA, to bill an E/M code on the same day as a KDE service.

Response: We do not agree that CMS has discretion to allow KDE services to be furnished incident to because the MIPPA specifically provides a benefit policy for KDE and that policy is different from incident to policy. In the December 31, 2002 final rule (67 FR 79994), we stated that ''Congress specifically provided for the many separate benefit categories of medical

and health services in the Act. We believe that the Congress intended for incident to services to be a catch-all category to allow payment for certain services and supplies commonly furnished in a physician's office and not having their own separate benefit category. The billing of services with their own separate and independent coverage benefit categories as incident to may circumvent the coverage and payment rules applicable to those other categories. Therefore, only services that do not have their own benefit category are appropriately billed as incident to a physician service.'' KDE has a benefit category with its own policies. For example, section 152(b) of the MIPPA requirements is explicit, that the education services must be provided by a qualified person, which is defined as a physician, NP, CNS or PA. A qualified person may include a provider of services located in a rural area. Therefore, the ''incident to'' requirements will not apply to KDE services. A qualified person can bill an E/M service on the same day they bill for a KDE service if the services being provided are not the same services which are included in KDE under our regulations at § 410.48.

Comment: A commenter stated that CMS has allowed separately and independently listed services to be provided under the ''incident to'' benefit. They also stated that CMS clarified in the CY 2002 PFS final rule that many services, even those that are separately and independently listed, can be furnished as ''incident to'' and need not meet the requirements of an ''incident to'' service.

Response: The commenter may be referring to policies prior to 2001. We have previously stated, ''In the November 2001 final rule (66 FR 5238), we revised regulations on services and supplies furnished incident to a physician's professional services. In the revised regulations at § 410.26(a)(7) we defined such services and supplies that may be provided as incident to as '* * * any services and supplies * * * that are included in section 1861(s)(2)(A) of the Act and are not specifically listed in the Act as a separate benefit included in the Medicare program.' '' (67 FR 79993) The commenter refers to one response to a comment in that rule that caused confusion. We repeated that comment at 67 FR 79994, column 1, and we clarified the intent of the response in column 2 of the same page. (See the previous response for the quotation that clarifies the intention of that response.) KDE has a benefit category with its own policies and, those policies are not the same as policies for services incident to physician services.

It is our policy that only services without a benefit category may be provided ''incident to'' the services of physicians or NPPs.

Comment: One commenter stated that while the patient's physician may know him or her, other members of the patient's multidisciplinary team may know them as well. The commenter also stated that the patient might receive better care if KDE services were provided by a team of persons such as nurses, dieticians, social workers and physicians, which could be done if we allow KDE to be provided incident to.

Response: The section 152(b) of the MIPPA requirements are explicit, in that the education services must be delivered by a qualified person, which is defined as a physician, NP, CNS, or PA, and also includes a provider of services located in a rural area.

Comment: A commenter stated that CMS has established subregulatory policy by which services furnished under the Medical Nutrition Therapy (MNT) and Diabetes Self Management Training (DSMT) benefits may not be provided ''incident to''. However, the commenter stated that there is no statutory or regulatory provision preventing those services from being performed ''incident to'' and that the services furnished under those benefits are not performed by physicians or NPPs. The commenter stated that the distinction is that the MNT and the DSMT benefits are furnished by practitioners who were previously not able to bill the Medicare program and who do not have an ''incident to'' benefit for their service. In contrast, the KDE benefit will be provided by practitioners who bill the Medicare program independently and who have an ''incident to'' benefit attached to their services.

Response: For separately and independently listed services, a physician and a NPP can bill using the ''incident to'' benefit. However, KDE is not defined as a separately and independently listed service, but as a separate and distinct benefit category and so the ''incident to'' benefit does not apply.

In summary we are finalizing our determination that the ''incident to'' benefit does not apply to KDE.

Section 1861(ggg)(4) of the Act limits the number of KDE services that a beneficiary may receive to up to six sessions in the NPRM. We proposed to create two HCPCS codes GXX26 now assigned as G0420 (individual) and GXX27 now assigned as G0421 (group), to describe and to bill for KDE services. The two G-codes consist of 1-hour face-to-face KDE sessions for an individual or group. We proposed to pay both G0420 and G0421 at the nonfacility rate. We also proposed that G0420 educational services related to the care of chronic kidney disease; individual per session will be crossed-walked to CPT code 97802; and that G0421, educational services related to the care of chronic kidney disease; group, per session will be crosswalked to CPT code 97804. We stated that the rationale for the proposed pricing of the G-codes is based on the similarity of this service to MNT in the individual (97802) and group (97804) setting.

In the CY 2010 OPPS/ASC proposed rule (74 FR 35358), we discussed our proposed payment for KDE to qualified persons located in rural areas who are hospitals, CAHs, SNFs, CORFs, HHAs, or hospices (74 FR 35358).

The following is a summary of the comments we received regarding our proposals related to the MPFS payment for kidney disease education under section 152(b) of the MIPPA.

Comment: One commenter suggested that CMS add the phrase ''furnished by a rural provider'' or similar language to the proposed Level II HCPCS G-code descriptors for KDE, to clarify that these services are intended for patients who solely meet the qualifications for coverage under the KDE benefit.

Response: We do not agree that the HCPCS G-code descriptors for KDE services should contain language that would limit their use to KDE services furnished by rural providers of services. The purpose of a HCPCS code is to describe a service furnished to a beneficiary. Generally code descriptors do not describe the provider who is furnishing these services. Adding a phrase to the G-code descriptors indicating that these services are furnished by a rural provider would exclude other qualified persons delineated in the Act from being able to bill and be paid for the KDE services they furnish. These qualified persons include a physician, PA, NP, or clinical nurse specialist, in addition to providers of services located in a rural area. Moreover, adding the language the commenter requests would not ensure that the service would be provided to patients who meet the criteria for coverage.

Comment: We received several comments stating that CMS accurately matched individual KDE to individual MNT and group KDE to group MNT. However, commenters stated that CMS did not take into account the relative time of the KDE and MNT sessions. The new KDE codes were cross-walked to

the MNT codes which are paid only for 15-minute individual sessions and 30-minute group sessions. We also received a comment concerning the inputs for supplies and equipment. In addition, commenters stating the proposed payment rates were too low to enable rural providers of services to furnish KDE.

Response: As a result of the comments we received and our own further analysis, we have adjusted the payment rates for G0420 and G0421 to reflect the 1-hour time limit for a session. We have multiplied the work RVUs for G0420 by four and the work RVUs for G0421 by two to account for the fact that we are crosswalking a 15 minute code to a 60 minute code (CPT code 97802 to G0420) and a 30 minute code to a 60 minute code (CPT code 97804 to G0421). We also adjusted the inputs for supplies. However, we did not do a straight multiplication of the actual inputs because we do not believe the required equipment and supplies would increase in direct proportion to the time for the codes. We did not increase the inputs for the body analysis machine and the printer and scale for use during the session. However, we did increase the inputs for equipment and supplies for the use of the table, computer, paper and other printed materials because regardless of how long the session is, it takes only 5 minutes to use the body/mass index item, 2 minutes to weigh the individual, and 2 minutes to use the printer (this time equals the number of pieces of paper).

Comment: A commenter stated that a significant portion of kidney education is about nutrition and diet and that the MNT benefit includes provisions of MNT to patients with kidney disease. Therefore, some kidney education is already being provided to Stage IV kidney patients through the MNT benefit and it would be inappropriate to pay four times more for nutrition education when it is provided under the MNT benefit than when the exact same education is provided under the kidney education benefit. The commenter also stated that MNT is provided by dieticians and KDE is provided by physicians and midlevel practitioners and the new G-codes should be cross-walked to the ''all physicians'' PE and not to the registered dieticians PE.

Response: As stated, we did adjust the inputs for supplies and equipment to eliminate any duplication. We also cross-walked the ''all physicians'' PE to HCPCS codes G0420 and G0421 at the mid-level office visit.

In summary, we are finalizing the proposed HCPCS codes G0420, *Face-to-face educational services related to the care of chronic kidney disease; individual, per session, per one hour,* and G0421, *Face-to-face educational services related to the care of chronic kidney disease; group, per session, per one hour,* for KDE with the adjustments noted above. Refer to the Addendum B for the specific RVUs for G0420 and G0421.

12. Section 153: Renal Dialysis Provisions

Section 153 of the MIPPA requires changes to ESRD facilities for ESRD services effective January 1, 2010. The following is a summary of these changes.

Section 153(a)(1) of the MIPPA increases the current ESRD composite rate by 1.0 percent for services furnished on or after January 1, 2010. This also requires us to update the adjusted drug add-on. Since we compute the drug add-on adjustment as a percentage of the composite rate, the drug add-on percentage is decreased to account for the higher CY 2010 composite payment rate and results in a 15.0 percent drug add-on adjustment for CY 2010. As a result, the drug add-on amount of $20.33 per treatment remains the same for CY 2010, which results in a 15.0 percent increase to the base composite payment rate of $135.15 (see section II.I of this final rule with comment).

The composite rate paid to hospital-based facilities will be the same as the composite rate paid to independent renal dialysis facilities for services furnished on or after January 1, 2010, as required by section 153(a)(2) of the MIPPA. In addition, section 153(a)(2) of the MIPPA requires that in applying the geographic index to hospital-based facilities, the labor share shall be based on the labor share otherwise applied for renal dialysis facilities.

These MIPPA provisions are self-implementing and require no substantive exercise of discretion on the part of the Secretary. A detailed discussion of the MIPPA provisions can be found in section III. of the CY 2009 PFS final rule with comment period (73 FR 69881).

The following is summary of the comments we received regarding section 153 of the MIPPA.

Comment: One commenter supports the composite payment rates for both independent and hospital-based facilities be site neutral, and urges CMS to ensure that pediatric facilities are not adversely impacted by this adjustment.

Response: Section 153(a)(2) of the MIPPA requires the composite payment rate for both independent and hospital-based facilities to be site neutral and does not negatively impact pediatric facilities because, in addition to the composite payment rate, all pediatric facilities including hospital-based facilities are paid the basic case-mix adjustment of 1.62 for pediatric patients.

13. Section 182(b): Revision of Definition of Medically-Accepted Indication for Drugs; Compendia for Determination of Medically-Accepted Indications for Off-Label Uses of Drugs and Biologicals in an Anti-cancer Chemotherapeutic Regimen

a. Background

(1) Process for Revising the List of Statutorily Named Compendia

Generally, compendia are ''pharmacopeia providing information on drugs, their effectiveness, safety, toxicity, and dosing and are frequently used to determine whether a medication has a role in the treatment of a particular disease; these roles include both therapeutic uses approved by the U.S. Food and Drug Administration (FDA) and off-label indications'' (Agency of Healthcare Research and Quality (AHRQ), *Potential Conflict of Interest in the Production of Drug Compendia* White Paper).[2] Compendia are published by various institutions and by traditional reference book publishing houses.

Compendia publishers, including internal editorial staff and external experts, review requests received for the inclusion of recommendations regarding off-label uses of drugs or biologicals in anticancer regimens. These requests may be internally generated by the publisher or may be received as requests from external parties. The publisher reviews evidence related to the request and reaches a disposition of the request.

Section 1861(t)(2)(B)(ii)(I) of the Act lists the following compendia as authoritative sources for use in the determination of a ''medically-accepted indication'' of drugs and biologicals used off-label in an anti-cancer chemotherapeutic regimen: American Medical Association Drug Evaluations (AMA–DE); United States Pharmacopoeia-Drug Information (USP–DI) or its successor publication; American Hospital Formulary Service-Drug Information (AHFS–DI); and other authoritative compendia as identified by the Secretary. Due to changes in the pharmaceutical reference industry, AHFS–DI was the only statutorily

[2] Agency for Healthcare Research and Quality. White Paper: Potential Conflict of Interest in the Production of Drug Compendia. (2009, April 27). Available online at *http://www.cms.hhs.gov/mcd/viewtechassess.asp?from2=viewtechassess.asp&where=index&tid=64&*.

named compendium in current publication in CY 2008.

Section 1861(t)(2)(B) of the Act provides the Secretary the authority to revise the list of compendia in section 1861(t)(2)(B)(ii)(I) for determining medically-accepted indications for off-label use of drugs and biologicals in an anti-cancer chemotherapeutic regimen. Consequently, in § 414.930, we established an annual process to revise the list and a definition of ''compendium'' in the CY 2008 PFS final rule with comment period (72 FR 66222, 66303 through 66306, and 66404).

Currently, four compendia are recognized for purposes of section 1861(t)(2) of the Act: National Comprehensive Cancer Network Compendium, Gold Standard Clinical Pharmacology, Thompson Micromedex DrugDex, and AHFS–DI.

In addition to these compendia, the statute provides an alternative method for identifying medically-accepted off-label uses of drugs and biologicals in an anti-cancer chemotherapeutic regimen. Section 1861(t)(2)(B)(ii)(II) of the Act provides that local contractors may use ''supportive clinical evidence in peerreviewed medical literature'' to make such determinations. Thus these medically-accepted uses could be identified even if there were no compendia recognized for this purpose. We discussed this in our response to comments in the CY 2008 PFS final rule with comment period (72 FR 66305).

(2) Statutory Amendment

Section 182(b) of the MIPPA amended section 1861(t)(2)(B) of the Act (42 U.S.C. 1395x(t)(2)(B)) by adding the sentence, ''On and after January 1, 2010, no compendia may be included on the list of compendia under this subparagraph unless the compendia has a publicly transparent process for evaluating therapies and for identifying potential conflicts of interests.''

As discussed in the proposed rule, we proposed revisions to the compendia standards to implement the MIPPA amendments. We note that the publishers of the four compendia that are currently recognized for purposes of section 1861(t)(2) of the Act have already adopted conflict of interest disclosure policies that are similar to our proposal. Though there are individual differences among the publishers, we note that these policies commonly include publication on the compendia publisher's Web site of the name of the individuals that participate in the compendia recommendation and the entity with which there is a significant relationship, the nature of the relationship (for example, salary, ownership, grant support), and the value of the relationship.

Additional information with respect to the conflict of interest policies of those compendia can be found on their Web sites.

In addition, there is a growing body of literature, including that from the Institute of Medicine (IOM),[3] that discusses the conflict of interest between research funding and research results. We believe that section 182(b) of the MIPPA is designed, in part, to address this issue in the compendia review process. For a detailed discussion of our proposals concerning conflict of interest, see the CY 2010 PFS proposed rule (74 FR 33620 through 33623).

b. Provisions of the Proposed Regulation

As discussed in the proposed rule, we believe that the implementation of this statutory provision that compendia have a ''publicly transparent process for evaluating therapies and for identifying potential conflicts of interests'' is best accomplished by amending the current definition of a compendium at § 414.930(a) to include the MIPPA requirements and by defining the key components of publicly transparent processes for evaluating therapies and for identifying potential conflicts of interests.

In order to implement the MIPPA requirements concerning a publicly transparent process for evaluating therapies, we proposed that a compendium could meet this standard by publishing materials used in its evaluation process on its Web site. This mode of publication provides broad contemporaneous public access to relevant materials. We believe that public access to such materials will increase transparency of the process used by compendia publishers for evaluating therapies and facilitate independent review of recommendations by interested parties. In addition, as discussed in the CY 2008 PFS final rule with comment period (72 FR 66305 through 66306), such disclosure may assist beneficiaries and their physicians in choosing among treatment options.

In the CY 2010 PFS proposed rule (74 FR 33620 through 33623), we proposed the following amendments to § 414.930(a):

- To revise the definition of ''compendium'' by adding an additional requirement that a compendium have a publicly transparent process for evaluating therapies and for identifying potential conflicts of interests.
- To add a definition of a ''publicly transparent process'' for evaluating therapies whereby a compendium publisher would publish on its Web site the complete application for inclusion of a therapy including criteria used to evaluate the request; disclosure of the evidence considered; the names of the individuals who have substantively participated in the development of the compendia recommendations; and transcripts of meetings and records of votes for disposition of the request. We requested comments on the requirement for publication of the transcript and the suitability of other alternatives such as minutes or other documents.
- To add a definition of a ''publicly transparent process for identifying potential conflicts of interests'' whereby a compendium publisher would disclose by publication on its Web site information regarding potential conflicts of interests associated with individuals who are responsible for the compendium's recommendations, as well as their immediate family members. We requested comments on the suitability of this process or whether the compendia should prescribe their own process. The specific details of the proposed process were outlined in the proposed rule (74 FR 33621 through 33623). We received the following comments on our proposed revisions.

c. Public Comment and Response

Comment: Commenters generally agreed with the principle that conflicts of interest pose a risk to the integrity of compendia and should be minimized.

Response: We appreciate the general support for the principle.

Comment: Some commenters were concerned with the technological burden of maintaining disclosable information publicly on the compendia Web sites for a 5-year period.

Response: Public interest in the review and disposition of a request pertaining to a drug or biological may in some cases arise only after a drug or biological has been in widespread use for several years, during which its risks or adverse effects become apparent. In order to balance the burden on the compendia publishers with the public's interest in timely access to this information, we are revising our proposal to require that the publicly transparent process provide for disclosures to remain available on the compendium's Web site for not less than 3 years. However, for the reasons discussed in the proposed rule (see 74

[3] Institute of Medicine. Conflict of Interest in Medical Research, Education, and Practice. Available online at *http://www.nap.edu/catalog.php?record_id=12598.*

FR 33622 through 33623), the compendia should retain custody of the relevant information, enabling public access to the material upon request for not less than 5 years.

Comment: Commenters suggested that the burden of disclosing conflict of interest information regarding individuals who participate substantively in the review and disposition of multiple requests could be lessened if there were no requirement to separately disclose this information for each and every request.

Response: We recognize that some individuals may participate substantively in the review and disposition of more than one request. However, we also recognize that a single relationship may present a significant conflict of interest in some cases but not others. Therefore, we are requiring compendia in establishing a publicly transparent process for identification of potential conflicts of interest, to list the names of those individuals who substantively participated in the review or disposition of each request.

Comment: Some commenters were concerned that the immediate removal of a compendium that fails to meet the statutorily-mandated January 1, 2010 implementation date as specified by section 182(b) of the MIPPA would adversely impact a patient being treated with an off-label anti-cancer chemotherapeutic regimen based on a recommendation from that compendium. One commenter suggested grandfathering patients that began an off-label anti-cancer chemotherapeutic regimen based the recommendation of a compendium that is removed from the list of statutorily recognized compendia based on noncompliance with section 182(b) of the MIPPA.

Response: The statute provides an alternative method for identifying medically-accepted off-label uses of drugs and biologicals in an anti-cancer chemotherapeutic regimen. In accordance with section 1861(t)(2)(B)(ii)(II) of the Act, local contractors have additional authority to make determinations regarding medically-accepted indications. We discussed this in our response to comments in the CY 2008 PFS final rule with comment period (72 FR 66305).

Comment: A few commenters were concerned that the proposed publicly transparent process for evaluating therapies might be interpreted to apply only to externally generated requests received by compendia.

Response: We appreciate this comment and have clarified this provision, because in some instances, a compendium's determination is internally generated. Therefore, we have added text to clarify that the requirements pertain to an internally or externally generated request.

Comment: Some of the commenters were concerned that requiring transcripts would inhibit discussion amongst compendia recommendation decision makers and would be too burdensome to compendia publishers because of the number or length of meetings, which may include discussion of topics beyond the request. The commenters suggested requiring minutes and voting records rather than transcripts. One commenter suggested that we delay the implementation of this requirement for up to 1 year.

Response: We agree that publication of minutes and voting records would be sufficient because it would provide public transparency regarding the evaluation of the therapy at issue. We also believe that this requirement can be implemented much more readily than the proposed requirement for transcripts.

Comment: A few commenters were concerned about the requirement for compendia to publicly transcribe all meetings pertaining to compendium recommendations. Specifically, some compendia publishers convene telephone conferences rather than meetings or have processes that isolate advisors from each others' recommendations.

Response: We have replaced the transcript requirement as noted above. However, this comment remains relevant as we have been made aware that some compendia publishers do not conduct actual meetings of individuals substantively involved in reviewing and reaching dispositions of requests and thus could not provide minutes of meetings. We believe that minutes of telephone conferences, to the extent that such conferences are used in the evaluation of the request, could also be used to demonstrate the evaluation process used by the compendia.

Comment: One commenter questioned the use of § 411.354 to define direct and indirect financial conflicts of interests.

Response: In the proposed rule, we stated that the process for identifying potential conflicts of interest should include disclosure of direct and indirect ''similar to those relationships identified in 42 CFR part 411.'' Compendia maintain discretion to develop their own definitions for direct and indirect financial conflicts of interests, however, the definitions included in 42 CFR part 411 are provided as a resource for compendia to use in the development of these definitions.

Comment: One commenter suggested that we establish a specific dollar value that would trigger disclosure of financial conflicts of interests that exceed some minimum amount.

Response: We are not requiring compendia to disclose a specific dollar amount. We have left it to the discretion of the compendia publisher as to whether a specific dollar value would be publicly disclosed.

Comment: Many commenters expressed support for the disclosure of the conflicts of interests of individuals who are responsible for the compendium's recommendations, as well as their *immediate family members*. There was concern from some commenters that the definition of immediate family member in § 411.351 (which includes, in part, relationships with a spouse, children, and grandparents) was too extensive.

Response: We agree with this comment and are amending the provision concerning the process for public disclosure of immediate family members to be less extensive and more consistent with the current FDA *Guidance for the Public, FDA Advisory Committee Members, and FDA Staff on Procedures for Determining Conflict of Interest and Eligibility for Participation in FDA Advisory Committees* released in August of 2008.

We have also amended the publicly transparent process for identifying potential conflicts to include a provision that requires compendia to have a process for collecting and maintaining conflict of interest information and disclosure, if requested by the public in lieu of publishing this information on their Web sites. We believe this strikes a reasonable balance between the individual's personal privacy and the public interest in transparency.

Comment: Some requestors asked if the regulatory requirements would apply to past requests that were received or under review by compendia publishers before January 1, 2010 that may have led to treatment recommendations that are published after that date.

Response: These provisions would not apply retroactively. However, the MIPPA provisions are effective on or after January 1, 2010. Thus, compendia are responsible for complying with these provisions with respect to requests received after the date.

d. Provisions of the Final Regulation

This final regulation amends § 414.930(a) to revise the definition of

compendium to add a requirement that a compendium have a publicly transparent process for evaluating therapies and for identifying conflicts of interests. We also define a publicly transparent process for evaluating therapies and for identifying conflicts of interests. The revised definitions read as follows:

• *Publicly transparent process for evaluating therapies* means that the process provides that the following information from an internal or external request for inclusion of a therapy in a compendium are available to the public for a period of not less than 5 years, which includes availability on the compendium's Web site for a period of not less than 3 years, coincident with the compendium's publication of the related recommendation:

(i) The internal or external request for listing of a therapy recommendation including criteria used to evaluate the request.

(ii) A listing of all the evidentiary materials reviewed or considered by the compendium pursuant to the request.

(iii) A listing of all individuals who have substantively participated in the review or disposition of the request.

(iv) Minutes and voting records of meetings for the review and disposition of the request.

• *Publicly transparent process for identifying potential conflicts of interests* means that the process provides that the following information is identified and made timely available in response to a public request for a period of not less than 5 years, coincident with the compendium's publication of the related recommendation:

(i) Direct or indirect financial relationships that exist between individuals or the spouse or minor child of individuals who have substantively participated in the development or disposition of compendia recommendations and the manufacturer or seller of the drug or biological being reviewed by the compendium. This publicly transparent process may include disclosure of, for example, compensation arrangements such as salary, grant, contract, or collaboration agreements between individuals or the spouse or minor child of individuals who have substantively participated in the review and disposition of the request and the manufacturer or seller of the drug or biological being reviewed by the compendium.

(ii) Ownership or investment interests between individuals or the spouse or minor child of individuals who have substantively participated in the development or disposition of compendia recommendations and the manufacturer or seller of the drug or biological being reviewed by the compendium.

H. Part B Drug Payment

1. Average Sales Price (ASP) Issues

a. Immunosuppressive Drugs Period of Eligibility

Before enactment of section 9335(c) of the Omnibus Budget Reconciliation Act of 1986 (Pub. L. 99–509) (OBRA '86), there was no specific Medicare benefit that provided for Medicare Part B coverage of prescription drugs used in immunosuppressive therapy. OBRA '86 added subparagraph (J) to section 1861(s)(2) of the Act to provide Medicare coverage for immunosuppressive drugs, furnished to an individual who receives an organ transplant for which Medicare payment is made, for a period not to exceed 1 year after the transplant procedure. Coverage of these drugs under Medicare Part B began January 1, 1987.

Section 13565 of the Omnibus Budget Reconciliation Act of 1993 (Pub. L. 103–66) amended section 1861(s)(2)(J) of the Act to allow eligible beneficiaries to receive additional Part B coverage within 18 months after the discharge date for immunosuppressive drugs furnished in 1995; within 24 months for immunosuppressive drugs furnished in 1996; within 30 months for immunosuppressive drugs furnished in 1997; and within 36 months for immunosuppressive drugs furnished after 1997. Beginning January 1, 2000, section 227 of the Medicare, Medicaid and SCHIP Balanced Budget Refinement Act of 1999 (Pub. L. 106–113) (BBRA) extended coverage to eligible beneficiaries whose coverage for drugs used in immunosuppressive therapy expires during the calendar year, an additional 8 months beyond the 36-month period.

Section 113 of the Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act of 2000 (Pub. L. 106–554) (BIPA 2000) revised section 1861(s)(2)(J) of the Act to eliminate the time limits for coverage of prescription drugs used in immunosuppressive therapy under the Medicare program. Effective with immunosuppressive drugs furnished on or after December 21, 2000, there is no longer any time limit for Medicare benefits. This policy applies to all Medicare entitled beneficiaries who meet all of the other program requirements for coverage under this benefit. Therefore, for example, entitled beneficiaries who had been receiving benefits for immunosuppressive drugs under section 1861(s)(2)(J) of the Act, but whose immunosuppressive drug benefit was terminated solely because of the time limit described above, resumed receiving that benefit for immunosuppressive drugs furnished on or after December 21, 2000.

According to section 226A(b)(2) of the Act, ''ESRD only'' beneficiaries continue to lose their general Medicare coverage and, by extension, Part B coverage for immunosuppressive drug therapy 36 months after discharge from a hospital following a covered transplant. Beneficiaries will have Part B coverage for immunosuppressive drug therapy for as long as they remain eligible for Medicare.

Our proposal to codify the immunosuppressive drug coverage does not cause a substantive programmatic change since the provisions in section 113 of the BIPA 2000 eliminating the time limit from section 1861(s)(2)(J) of the Act are self implementing for services on or after December 21, 2000. We included this topic in the proposed rule in order to make conforming changes to the regulatory text at § 410.30. We proposed to amend paragraph (b) to codify the changes to the immunosuppressive drug coverage time limit as required by section 113 of the BIPA 2000.

The following is a summary of the comments we received and our responses:

Comment: We received a few comments which supported our proposal. Commenters noted that this technical change will reduce the potential for confusion in the future about the scope of Medicare coverage of and payment for immunosuppressive drug therapy.

Response: We appreciate the supportive comments and agree that any steps which reduce confusion benefit Medicare and its stakeholders.

After reviewing the public comments, we are finalizing our proposed revisions to § 410.30.

b. WAMP/AMP Threshold

Section 1847A(d)(1) of the Act states that ''the Inspector General of HHS shall conduct studies, which may include surveys to determine the widely available market prices (WAMP) of drugs and biologicals to which this section applies, as the Inspector General, in consultation with the Secretary, determines to be appropriate.'' Section 1847A(d)(2) of the Act states that, ''Based upon such studies and other data for drugs and biologicals, the Inspector General shall compare the ASP under this section for drugs and biologicals with—

• The widely available market price (WAMP) for these drugs and biologicals (if any); and

• The average manufacturer price (AMP) (as determined under section 1927(k)(1) of the Act for such drugs and biologicals).''

Section 1847A(d)(3)(A) of the Act states that, ''The Secretary may disregard the ASP for a drug or biological that exceeds the WAMP or the AMP for such drug or biological by the applicable threshold percentage (as defined in subparagraph (B)).'' The applicable threshold is specified as 5 percent for CY 2005. For CY 2006 and subsequent years, section 1847A(d)(3)(B) of the Act establishes that the applicable threshold is ''the percentage applied under this subparagraph subject to such adjustment as the Secretary may specify for the WAMP or the AMP, or both.'' In CY 2006 through CY 2009, we specified an applicable threshold percentage of 5 percent for both the WAMP and AMP. We based this decision on the limited data available to support a change in the current threshold percentage.

For CY 2010, we proposed to specify an applicable threshold percentage of 5 percent for the WAMP and the AMP. At present, the OIG is continuing its comparisons of both the WAMP and the AMP. In April 2008, we implemented a change in the weighting methodology for calculating ASP. Information on how recent changes to the calculation of the ASP may affect the comparison of ASP to WAMP or AMP is limited at this time. In addition, due to the ongoing legal issues surrounding the availability of AMP, we believe it is prudent not to change the threshold at this time. Since we do not have sufficient data that suggest another level is more appropriate, we believe that continuing the 5 percent applicable threshold percentage for both the WAMP and AMP is appropriate for CY 2010.

As we noted in the CY 2009 PFS final rule with comment period (73 FR 69752), we understand that there are complicated operational issues associated with potential payment substitutions. We will continue to proceed cautiously in this area and provide stakeholders, including providers and manufacturers of drugs impacted by potential price substitutions with adequate notice of our intentions regarding such, including the opportunity to provide input with regard to the processes for substituting the WAMP or the AMP for the ASP.

The following is a summary of the comments we received and our responses:

Comment: Most commenters supported maintaining the threshold at 5 percent. Other comments suggested that we exercise caution in the determination of price substitutions and that we develop a formal process and criteria to determine when substitutions are necessary. Comments also recommended that we provide adequate notice prior to making a price substitution. One commenter objected to the continuation of the 5 percent threshold but did not provide an alternative solution.

Response: We appreciate the comments supporting the continuation of the 5 percent threshold. As we noted in the CY 2009 PFS final rule with comment period (73 FR 69753), we understand there are complex operational issues associated with potential payment substitutions. As we continue to proceed in this area, we will provide stakeholders, including providers and manufacturers of drugs impacted by potential price substitutions an opportunity to provide input with regard to the processes for substituting the WAMP or the AMP for the ASP. As part of our approach we intend to develop a better understanding of the issues that may be related to certain drugs for which the WAMP and AMP may be lower than the ASP over time.

After reviewing the public comments, we are finalizing our proposal to continue the 5 percent WAMP/AMP threshold for CY 2010.

2. Competitive Acquisition Program (CAP) Issues

Section 303(d) of the MMA requires the implementation of a competitive acquisition program (CAP) for certain Medicare Part B drugs not paid on a cost or PPS basis. The provisions for acquiring and billing drugs under the CAP were described in the Competitive Acquisition of Outpatient Drugs and Biologicals Under Part B proposed rule (March 4, 2005, 70 FR 10746) and the interim final rule (July 6, 2005, 70 FR 39022), and certain provisions were finalized in the CY 2006 PFS final rule with comment period (70 FR 70236). The CY 2007 PFS final rule with comment period (72 FR 66260) then finalized portions of the July 6, 2005 IFC that had not already been finalized.

The CAP is an alternative to the ASP (buy and bill) methodology of obtaining certain Part B drugs used incident to physicians' services. Physicians who choose to participate in the CAP obtain drugs from vendors selected through a competitive bidding process and approved by CMS. Under the CAP, participating physicians agree to obtain all of the drugs on the CAP drug list from an approved CAP vendor. The approved CAP vendor retains title to the drug until it is administered, bills Medicare for the drug, and bills the beneficiary for cost sharing amounts once the drug has been administered. The participating CAP physician bills Medicare only for administering the drug to the beneficiary. The initial implementation of the CAP operated with a single CAP drug category from July 1, 2006 to December 31, 2008.

After the CAP was implemented, section 108 of the MIEA–TRHCA made changes to the CAP payment methodology. Section 108(a)(2) of the MIEA–TRHCA requires the Secretary to establish (by program instruction or otherwise) a post payment review process (which may include the use of statistical sampling) to assure that payment is made for a drug or biological only if the drug or biological has been administered to a beneficiary. The Secretary is required to recoup, offset, or collect any overpayments. This statutory change took effect on April 1, 2007. Conforming changes were proposed in the CY 2008 PFS proposed rule (72 FR 38153) and finalized in the CY 2008 PFS final rule with comment period (72 FR 66260).

In the CY 2009 PFS proposed rule, we proposed several refinements to the CAP regarding the annual CAP payment amount update mechanism, the definition of a CAP physician, the restriction on physician transportation of CAP drugs, and the dispute resolution process (73 FR 38522). However, after the publication of the CY 2009 proposed rule, we announced the postponement of the CAP for 2009 due to contractual issues with the successful bidders. As a result, CAP physician election for participation in the CAP in 2009 was put on hold, and CAP drugs have not been available from an approved CAP vendor for dates of service after December 31, 2008. Physicians who participated in the CAP have transitioned back into the Average Sales Price (ASP) method of acquiring part B drugs for dates of service after December 31, 2008.

After the postponement was announced, we solicited public feedback on the CAP from participating physicians, potential vendors, and other interested parties. We solicited public comments on several issues, including, but not limited to the following: the categories of drugs provided under the CAP; the distribution of areas that are served by the CAP; and procedural changes that may increase the program's flexibility and appeal to potential vendors and participating physicians.

We also hosted a CAP Open Door Forum (ODF) on December 3, 2008, where participants had an opportunity to discuss the postponement and suggest changes to the program.

In the CY 2009 PFS final rule with comment period, we stated that we would review the public comments and consider implementing changes to the CAP before proceeding with another bid solicitation for approved CAP vendor contracts. Based on this information, we addressed items that were not finalized in the CY 2009 PFS final rule with comment period, and made additional proposals for the CAP. Our approach seeks to better define certain aspects of the program based on our experience. We also seek to continue to increase participation by minimizing the administrative burden for physicians and vendors who choose to participate. We appreciate the additional comments that we have received during the comment period.

a. Frequency of Drug Payment Amount Updates

As described in the July 6, 2005 IFC (70 FR 39070 through 39071) and § 414.906(c), payment amounts for drugs furnished under the CAP are set through a competitive bidding process, and as described in § 414.908(b), bids that exceed a composite bid threshold of 106 percent of the weighted ASP for the drugs in the CAP category are not accepted. The CAP payment amounts that are calculated from successful bids are updated from the time of the bidding period to the payment year. During the 2006 through 2008 CAP contract period, the initial update calculation used the change in the Producer Price Index (PPI) for prescription preparations to account for the time period between the bidding and the period in which the payment amounts were to be in effect, which was the middle of the first year of the three year CAP contract period (70 FR 39074). Finally, as specified in § 414.906(c), CAP payment amounts were updated again during the second and third year of the contract period based on the approved CAP vendor's reported reasonable net acquisition costs (RNAC). The annual updates are limited by payment amounts described in section 1847A of the Act and codified in § 414.906(c).

Section 1847B(c)(7) of the Act gives the Secretary the discretion to establish an appropriate schedule for the approved CAP vendor's disclosure of RNAC information to us, provided that disclosure is not required more frequently than quarterly. In the July 6, 2005 IFC (70 FR 39075 through 39076), we specified that each approved CAP vendor will disclose its RNAC for the drugs covered under the contract annually during the period of its contract and that we would calculate an annual payment adjustment based on this information. We specified an annual disclosure of RNAC because it imposes the minimal burden on approved CAP vendors. In 2005, some commenters suggested that more frequent updates would be desirable. Additional feedback about the CAP that was obtained after the program's postponement in 2008, as well as comments on previous rules, indicated that potential vendors would like the frequency of price adjustments to increase. In the past, various commenters have suggested a quarterly price adjustment in order to parallel the ASP process, to better match payment amounts with increases or decreases in drug costs, and to attract vendor interest. We believe that quarterly adjustments also would lower approved CAP vendors' financial risks because CAP payment amounts will be better able to keep up with unanticipated drug cost increases and would benefit the Medicare program by reacting to significant cost decreases more promptly.

Quarterly price updates also will eliminate the PPI-based increase that currently occurs between the time bids are submitted and the first day of CAP claims processing. The application of the PPI-based payment adjustment described in the July 6, 2005 IFC (70 FR 39074) has resulted in situations where the ASP+6 percent payment amount was exceeded during the first year of the 3-year approved CAP vendor contract. We do not believe that CAP payment amounts should exceed ASP+6 percent. In our discussion of bid ceilings in the July 6, 2005 IFC, we stated that the bid ceiling ''ensures that the CAP will be no more costly to the Medicare program than the alternative method of paying for drugs at 106 percent of ASP. This ceiling is thus consistent with the possibility of realizing savings to the Medicare program. It would also serve to maintain a level of parity between the two systems, preventing a situation in which significant payment differentials might skew incentives and choices (70 FR 39070).'' For this reason, and to remain consistent with current regulation text at § 414.906, we believe that all payment amounts calculated under the update process should be limited by the weighted payment amount established under section 1847A of the Act. We also believe that this approach will continue to provide for an ''appropriate price adjustment'' as required under section 1847B(c)(7) of the Act by improving responsiveness to unexpected price changes, and continuing a prudent limitation on the magnitude of payment amount adjustments.

Our approach for implementing quarterly updates is consistent with the ASP+6 percent limit on payment amounts and is based on composite bid price calculations, as described in the July 6, 2005 IFC (70 FR 39072 through 39073). Briefly stated, the ASP+6 percent limit would be applied by comparing the (weighted) composite update payment amount, calculated from participating approved CAP vendors' reasonable net acquisition cost data, to the most recent available weighted ASP prices for the same drugs. If the composite drug update payment amount exceeds the weighted ASP+6 percent payment limit, the composite payment amount for that group of drugs would be reduced to equal the ASP+6 percent limit by applying an equal percent reduction to each drug in the group. By way of example only, if a quarter's composite update payment was calculated as +2.3 percent, based on the median of all participating approved CAP vendors' data, but the calculated weighted ASP+6 percent limit for that group of drugs was +2.1 percent, the payment amounts for all HCPCS codes in the composite group would be increased by 2.1 percent in order to account for reported increases to the vendor's acquisition cost, but not to exceed the ASP+6 percent limit. This means that a 2.1 percent increase would be applied to CAP payment amounts for all HCPCS codes that are in the composite drug list and are being supplied under the CAP by one or more approved CAP vendors. For HCPCS codes that are priced separately, each code available through the CAP will be compared to the most recent ASP+6 percent limit for that code. CAP payment amounts for codes that exceed the ASP+6 percent limit will be reduced to ASP+6 percent. Each ''Not Otherwise Classified'' (NOC) drug described in § 414.906(f)(2)(iv), would also be updated on an individual (rather than composite) basis.

We proposed to discontinue annual CAP payment amount updates and to implement quarterly CAP payment amount updates at § 414.906(c). We also proposed to discontinue the special quarterly adjustments described at § 414.906(c)(2) (for the introduction of new drugs, expiration of drug patents or availability of generic drugs, material shortages, or withdrawal of a drug from the market) and instead to add details about the payment amount update

process described in section II.J.2.f. of this final rule with comment period (Annual CAP Payment Amount Update Mechanism). A quarterly RNAC reporting and payment adjustment process would begin as soon as we enter into contracts with the approved CAP vendor(s); that is, beginning with the first quarter during which CAP claims are submitted under the contract. Thus, we also proposed to eliminate the PPI-based adjustment for the time period between the time bids are submitted and the time claims processing begins under the contract, because that adjustment would no longer be necessary. We believe that using one payment update process will be easier to administer and will minimize the potential for CAP payment amounts to exceed ASP+6 percent for the first contract year. In order to provide sufficient time for the calculation of payment amount updates, we proposed that approved CAP vendors report quarterly RNAC data for drug purchased for use under the CAP during the previous quarter within 30 days of the close of that quarter. We made corresponding changes to regulation text at § 414.906(c) and asked for comments on these proposed changes.

The following is summary of the comments we received regarding the proposed revisions to the frequency of drug payment amount updates under the CAP.

Comment: All commenters agreed with the proposal to implement quarterly updates; however, some commenters were concerned that even quarterly updates would not cover losses that began prior to an update. The response to the ASP+6 percent limit was mixed. Several commenters supported the limit, but several commenters were concerned that payment at ASP+6 percent or less was a financial risk to vendors. Commenters suggested several approaches to further minimize vendors financial risks due to price increases, including a transaction fee to offset the financial risk associated with certain drugs, especially low cost items, the use of varying update percentages, including amounts greater that 6 percent, and product specific (NDC level) adjustments.

Response: We agree with comments that support the quarterly update process and agree that changing to a quarterly payment amount update frequency will benefit approved CAP vendors by reducing financial risk, even though the process is more burdensome than an annual process. The quarterly process will eliminate the need for a PPI based payment amount adjustment at the beginning of a contract period. We appreciate the discussion of risk presented by commenters, but we also believe that it is appropriate to maintain an ASP+6 percent limit for price increases for the reasons stated in our proposal and we note that the lag period between quarterly adjustments will apply to both price increases and price decreases, including situations where generic versions of a drug are introduced. As mentioned in the proposed rule and in previous rules, we continue to believe that the ASP+6 percent ceiling is consistent with our previous policies because it preserves the potential for savings to the program, while providing parity between the CAP and ASP payment systems.

We also believe that the elimination of many low cost items from the drug list, as discussed in the next section, will decrease financial risk and administrative burden for approved CAP vendors, and therefore, we do not believe that transaction fees are necessary or are consistent with the policy to maintain an ASP+6 percent ceiling. Finally, we remind readers that although payment amount updates for the core group of CAP drugs will be done as a group, payment amount updates for drugs added by approved CAP vendor request will continue to be calculated by individual HCPCS code, thereby further minimizing the financial risk associated with the addition of new drugs to the approved CAP vendor's CAP drug list.

Therefore, we are finalizing all of our proposals for this section without change. This includes the discontinuation of the annual payment amount adjustments, the discontinuation of PPI-based increases and the discontinuation of special quarterly payment amount increases described in § 414.906(c). We are also finalizing the implementation of quarterly payment amount increases that begin in the first quarter of the CAP claims contract period, the ASP+6 percent limit on payment amount increases, and all corresponding regulation text changes.

b. Changes to the CAP Drug List

(1) CAP Drug List

In the July 6, 2005 IFC, we responded to comments on our proposed approach for determining the CAP drug categories and how we select the specific drugs in the CAP drug list (70 FR 39026 through 39034). As stated in the CY 2006 PFS final rule with comment period (70 FR 70237), the CAP is intended to provide beneficiaries with access to Medicare Part B drugs and maintain physician flexibility when prescribing medications. Our approach incorporated drugs commonly administered by the range of physician specialties that bill for Part B drugs (70 FR 39030) and resulted in a list of about 180 drugs that were available through the CAP during the CY 2006 through CY 2008 contract period. We also developed a number of methods by which an approved CAP vendor's CAP drug list could be changed (see Table 26 at 70 FR 70242).

We believe that our general approach, to provide a wide variety of drugs to a variety of physicians over a large portion of the United States, is on target. Although we believe that the CAP is a means for physicians to minimize their drug inventory costs, we acknowledge that participation in the CAP cannot completely eliminate the need for participating CAP physicians to maintain at least a minimal drug inventory at the office. Many physicians who participate in Medicare also provide services to non-Medicare patients, and even physicians with a predominantly Medicare patient population may find it useful to keep a small stock of drugs on hand for unforeseen situations, such as emergencies and breakage.

During the CAP postponement, we became aware that both participating CAP physicians and potential vendors supported narrowing the CAP drug list. Both agreed that low cost drugs should be removed from the CAP. Although these items were initially included in the CAP so that an approved CAP vendor would be in a position to supply many of the Part B drugs that an office might administer, CAP physicians and the vendor community have stated that the inclusion of these items in the CAP creates an accounting, tracking, and claims submission burden for some participants. Based on these comments, we believe that low-cost, frequently utilized items, such as corticosteroid injections, could be removed from the list without significant impact on the CAP's utility to participating CAP physicians. Furthermore, it appears that physicians would be more interested in obtaining expensive products, such as biologicals, through the CAP. However, we are also mindful that narrowing the CAP drug list significantly also would decrease an approved CAP vendor's overall purchase volume, and we believe that this could limit the approved CAP vendor's ability to obtain volume-based discounts from the manufacturers or distributors from which it obtains drugs for use in the CAP. Creating a more tailored CAP drug category also could limit physician participation to one or several specialties, and may create a situation

where sudden supply interruptions and unexpected changes to distribution channels could affect a greater proportion of drugs in the program than would be the case with a broader CAP drug category.

We proposed to create a new CAP drug category for the next round of CAP contracting. Our approach is intended to address comments about the administrative burden of tracking and billing low cost/high volume items while maintaining access to a variety of high cost items. We proposed to identify the new CAP drug category using the existing CAP drug category as a starting point. The 2008 CAP drug list was compiled based on Part B drug claims data, the identification of specialties that frequently administer drugs under Part B, and public comment during rulemaking in 2005 (70 FR 39026 through 39033). We believe that using the 2008 CAP drug list as a starting point would maintain prescribing flexibility for a wide range of specialties and would also maintain access to a wide spectrum of drugs that have been utilized under the program previously. Furthermore, we do not believe it is necessary to develop a new approach because the 2008 CAP drug list was based on heavily utilized drugs in Medicare Part B physician practices; we believe that this approach is on target.

We proposed to amend our list based on CAP physician participation, claims data, and comments indicating that the list should be narrowed to higher cost items. First, we ''filtered'' the original CAP drug category (drugs furnished in 2006 through 2009) by the specialties that most frequently prescribe drugs under the CAP, and the highest dollar volume CAP drugs (top 20 percent of allowed charges) compiled from 2008 claims data. This filtered list is the starting point for the updated CAP drug category. However, we acknowledged that a filtering process based on frequency of claims from a subset of physicians who might participate in the CAP cannot fully capture all drugs that may be used by certain specialties. In other words, the filtering steps described above narrow the CAP drug list based on physician specialties and dollar volume and do not necessarily preserve groups of drugs that certain prescribers may utilize, especially the less frequently utilized items in such groups. Therefore, we also proposed to ''fill in'' groups of drugs with related items that do not appear on our list. We stated that we will consider ''filling in'' any drug or biological product that is physician-administered, has a reasonably high utilization in the Medicare population, is related to drugs already in the CAP (for example, because of similar clinical uses), and is otherwise appropriate for inclusion in the program. The concept of ''filling in'' drug groups is supported by feedback from former participating CAP physicians who suggested that certain categories of drugs, such as antibiotics, be more fully represented.

We solicited comments on specific drugs that should be added to the 29 item draft list presented in the proposed rule (Table 35 in the CY 2010 PFS proposed rule (74 FR 33627)), and we also sought comments on the method to assess whether a particular drug should be ''filled in'' so that it is included in the new, narrowed CAP drug category, especially drugs that did not pass the ''filtering'' step described above. We proposed an approach using the 180 item 2009 through 2011 CAP vendor bidding list (See the Downloads section at *http://www.cms.hhs.gov/CompetitiveAcquisforBios/03a_vendorbackground.asp#TopOfPage*) that was used during the approved CAP vendor bidding for the 2009–11 contract. This list includes CMS approved items added to the original contract's bid list, as well as items approved for addition during the 2006–2008 contract period. This list's weighting is based on claims volume data by HCPCS code units rather than dollar volume and provides a different perspective than a dollar volume sorting. We proposed adding drugs from the 2009–2011 CAP Vendor bid list to the CAP drug category if the drug's weight is in the top 25 percent of the 2009–11 CAP vendor bidding list, indicating frequent claims submission, and if the drug's clinical uses are similar to a drug on the 29 item proposed list. This method results in the addition of 12 items, including several commonly used antibiotics, two antiemetics and several chemotherapeutic agents. Although this method helps ''fill in'' the proposed CAP drug list, we stated that this method still does not fully capture less frequently used drugs, or newly approved drugs, and we asked for comments on this method and alternative methods of filling this proposed list.

In order to provide additional flexibility for participating CAP physicians and approved CAP vendors, and to allow for participants to further tailor the program to meet their needs, we also proposed to add § 414.906(f)(2)(v) to allow approved CAP vendors to submit a request to CMS to add drugs (or biologicals) to the list of drugs furnished by the requesting vendor if there is sufficient demand and if the drug has therapeutic uses that are similar to other drugs already available through the CAP. The request and approval process would follow the existing regulations at § 414.906(f), and HCPCS code additions that are requested under this process would still be subject to CMS approval. This process adds to the process for adding newly issued HCPCS codes under § 414.906(f)(2)(iii) and newly approved drugs without HCPCS codes (NOC drugs) under § 414.906(f)(2)(iv). It is intended to facilitate more complete access to groups of drugs that may be used by certain specialties, and drugs used to treat certain disease states without having to rely on rigid definitions of classes of drugs that may not apply well to actual clinical practice across a large and diverse geographic area. We believe that this addition to the methods for changing an approved CAP vendor's drug list (see Table 26 in the CY 2007 PFS final rule with comment period (70 FR 70242)) will add to the flexibility of the program.

The following is summary of the comments we received regarding the proposed revisions the CAP drug list.

Comment: Narrowing the CAP drug list as proposed, particularly removing lower-cost items that are burdensome to track, was supported by numerous commenters, although one commenter pointed out that our revisions could affect participation by infectious disease physicians because of the limited number of antimicrobials. One comment specifically recommended using volume data to create the updated list. Also, commenters supported the concept of filling in drugs based on similar clinical uses. Several commenters requested that the following specific drugs or groups of drugs be added to the final list: Vectibix® (panitumumab); Nplate® (romiplostim); LHRH analogues-specifically leuprolide depot; orphan drugs; and more antibiotics. Several commenters recommended that plasma protein derived drugs and biologicals not be included in the CAP drug list. One commenter recommended that stakeholders other than vendors be allowed to request changes to the drug list.

Response: Based on overall support for a narrowed CAP drug list, we are specifying a 41 item bid list that appears in Table 29. This list includes both the list of drugs that we proposed to include as well as all of the potential additions that we discussed in the proposed rule and this list is the single drug category for the next bidding period. No plasma protein therapies described in comments appear on this list. Plasma protein therapies, including IVIG, clotting factors, and alpha-1 proteinase

inhibitors, have not been furnished under the CAP in the past and therefore would not have been included in the list from which we applied the ''filtering steps'' to develop this drug list. Also in the July 2005 interim final rule with comment (70 FR 39029) we stated that before adding clotting factors or IVIG to the CAP drug list, we would publish a proposed rule and seek public comment. At this time, we are not adding these items to the CAP drug list because we did not specifically propose to do so in the proposed rule.

Although we did not receive any comments that presented a specific and detailed method to further expand or fill in the drug list, the use of volume based filtering and the concept of filling in the drug list was supported by commenters. Thus, as noted above, we are including the potential additions specified in the proposed rule. Further, we are finalizing the proposed approach for approved CAP vendor-requested additions of drugs that have similar uses to drugs on the bid list.

We believe that selecting the larger base drug list and providing a process for approved CAP vendors to request to add drugs that can further ''fill in'' this list strikes a balance between specifying a minimum scope of drugs and biologicals that will be available under the CAP and providing flexibility for the approved CAP vendor to manage the risk associated with providing a broader array of drugs and biologicals. For this reason, we are not adding any other drugs or biologicals to the bid list or creating an addendum to the bid list at this time. We believe that vendors will be interested in expanding groups of drugs and biologicals available under the CAP in order to maximize physician participation and order volume, and that this will tend to increase the number of therapeutically similar items within the drug list.

We disagree with the commenter who requested that parties other than the approved CAP vendor, for example manufacturers, be permitted to request that CMS add drugs to the CAP category. First, we believe this rulemaking has provided an opportunity for the public to provide input on the CAP drug category, so an additional process is unnecessary. Second, we believe it would be imprudent to permit such a process during the CAP contracting period, because we believe it would be inappropriate to force an approved CAP vendor, mid-contract, to supply drugs that it did not initially consider in its bid and that may be financially risky, may require highly specialized handling, or may necessitate participation in specialized purchasing arrangements.

We believe that requiring approved CAP vendors to add products that they did not choose to bid on or subsequently provide may also limit bidders' interest and could limit the number of approved CAP vendors for physicians to choose from, thereby restricting all access to CAP drugs. We will continue with our policy that allows only approved CAP vendors to request changes to the CAP drug list; however, external stakeholders may approach approved CAP vendors to discuss the potential addition of products to an approved CAP vendor's drug list. As noted above, we believe approved CAP vendors would have an incentive to be responsive to such requests. The new mechanism for deleting drugs from the CAP drug list is discussed in the following section.

With respect to the specific drug and biological products mentioned in the comments, we believe that the addition of specific items mentioned in the comments appears to be best suited for addition to the CAP drug list through vendor requests. We have discussed issues pertaining to orphan drugs, leuprolide and drugs similar to leuprolide and in a previous rule (70 FR 70241 and 70 FR 70243, respectively). While we appreciate these suggestions, we are not compelled to add these drugs to the CAP drug list as required items based on these comments. For the reasons stated in our previous rules, we continue to believe it is prudent to continue to omit these drugs from the CAP. Further, because we are not certain of the potential market volume for these drugs in the CAP, we will not add them to the drug list at this time. We are aware that leuprolide and other gonadotropin releasing hormone agonists are commonly used to treat prostate cancer and are highly utilized items in Medicare; however CAP participation by providers that prescribe these drugs has been low. However, we note that triptorelin (J3315), a gonadotropin releasing hormone agonist used in the treatment of prostate cancer is on the CAP drug list, and therefore, the addition of other gonadotropin releasing hormone analogues though the approved CAP vendor process for adding drugs described above and in new regulation text at § 414.908 would be feasible.

Similarly, new drugs such as Vetibix® and some antibiotics, which were on the CAP drug list during the last contract period, but were filtered out during the development of the new drug list, appear to be good candidates for approved CAP vendor-requested additions because agents with similar therapeutic uses are on the drug list. We will not add these drugs to the drug list at this time because we are not certain that these drugs will have sufficient market volume in the CAP. We also note that one item, Nplate®, an orphan drug only available through a single specialty vendor, and with limited use potential in the Medicare population, also appears to be a candidate for addition upon approved CAP vendor request. As discussed above, we are seeking to balance physician access and approved CAP vendor risk related to the drug list. In light of the lack of widespread demand for such drugs to be included in the CAP drug list (and thus available from all approved CAP vendors), we believe that permitting approved CAP vendors to request to supply those drugs, but not requiring them to do so, strikes the appropriate balance.

BILLING CODE 4120–01–C

2. Removing Drugs From the CAP List

Although there are several methods under the CAP to add drugs to an approved CAP vendor's drug list, the current regulations do not specify a process for removing drugs from an approved CAP vendor's list. Our experience has shown that interruptions in availability can affect an approved CAP vendor's ability to supply CAP drugs during the course of a 3-year contract. For example, during the first contract period, we became aware of long-term and permanent drug unavailability, sometimes at the HCPCS level, due to removal of drugs from the market, or interruption of supply to an approved CAP vendor for reasons beyond the approved CAP vendor's control, such as changes to drug distribution methods, changes in agreements between manufacturers and distributors and/or pharmacies regarding who may purchase certain drugs, and direct distribution arrangements.

In order to better respond to sudden, long-term changes in drug supply that are beyond the control of the approved CAP vendor, we proposed to allow an approved CAP vendor to request the permanent removal from its CAP drug list of a HCPCS code for which no NDCs are available. Our proposal is intended to better manage situations where all NDCs from an entire HCPCS code unexpectedly become unavailable to an approved CAP vendor, and we would require the approved CAP vendor: (1) to document the situation in writing, including the unavailability of all NDC codes in a HCPCS code that is supplied under the CAP; (2) to describe the reason for the unavailability and its anticipated duration; and (3) to attest that the unavailability is beyond the approved CAP vendor's control. Approval of the deletion would apply only to the approved CAP vendor or vendors that requested the deletion. Our proposal was not intended to be used frequently, or to permit an approved CAP vendor to remove a HCPCS code from its CAP drug list simply because it has become unprofitable to provide it—we believe the payment amount adjustment proposals discussed in sections II.J.2.a. and f. of this final rule addresses that concern. Furthermore, our proposal was also not intended to be used for managing short-term unavailability, or unavailability of a finite duration—we believe the existing drug substitution policy described in § 414.906(f) already addresses those concerns. We proposed to add this process as § 414.906(g) because those regulations currently provide for additions and substitutions to the CAP drug list, and would therefore require a

written request to CMS, as well as CMS' approval.

Participating CAP physicians who are affected by the deletion of a HCPCS code from an approved CAP vendor's drug list would have the option of remaining with their selected approved CAP vendor and using the ASP (buy and bill) methodology for obtaining the drug that has been deleted, or selecting another approved CAP vendor under the exigent circumstances provision at § 414.908(a)(2). We believe that the deletion of an expensive and highly utilized CAP drug by one approved CAP vendor in the middle of a physician election period could cause hardship for a practice if it had to revert to the ASP methodology of acquiring and billing for that drug. Such a situation would constitute an exigent circumstance. Given CAP's goal of improving access to drugs, allowing the participating CAP physician to switch approved CAP vendors outside of a regular election period in this instance would be prudent.

The following is summary of the comments we received regarding the proposed method to remove items from an approved CAP vendor's drug list.

Comment: Comments supported a mechanism to delete unavailable drugs from vendors' lists and also supported allowing physicians affected by the deletion of a HCPCS to have an opportunity to obtain the drug through the ASP process or to select another vendor. One commenter asked for well-defined standards for removing a drug from the list.

Response: Based on support for our proposal in the comments, we are finalizing the proposed process where an approved CAP vendor may request the permanent removal from its CAP drug list of a HCPCS code for which no NDCs are available. Participating CAP physicians affected by such a deletion will be able to obtain the deleted drug under the ASP methodology, or will be able to switch approved CAP vendors outside of the regular physician election process under the exigent circumstance provision.

We believe that the preamble text provides sufficiently detailed guidance about the process. Specifically, we require the approved CAP vendor: (1) to document the situation in writing, including the unavailability of all NDC codes in a HCPCS code that is supplied under the CAP; (2) to describe the reason for the unavailability and its anticipated duration; and (3) to attest that the unavailability is beyond the approved CAP vendor's control. By way of example only, situations that create unavailability beyond the vendor's control could include: FDA action to remove a drug from the market, long-term unavailability of specialized raw materials or long-term manufacturing delays, and changes in distribution arrangements that prevent the approved CAP vendor from buying or supplying the drug within CAP requirements. CMS will assess the information provided by the vendor and approve such requests as described in regulation text at § 414.908(f)(3) and (4).

This process is intended to provide the approved CAP vendor with flexibility to respond to long-term drug supply issues, however, this process is not intended to be used frequently, or to permit an approved CAP vendor to remove a HCPCS code from its CAP drug list simply because it has become unprofitable to provide it, and this process is not intended to be used for managing short-term unavailability, or unavailability of a finite duration.

c. Geographic Area Served by the CAP

In the July 6, 2005 IFC (70 FR 39034 through 39036), we established a single, national competitive acquisition area for the initial stage of the CAP. This national distribution area included the 50 States, the District of Columbia, Puerto Rico, and U.S. territories. We recognized that designating a single national area might limit participation to those vendors that could compete to bid and supply drugs nationally, but we indicated this approach was a part of the phase-in plan for the CAP. We also discussed potential phase-in options for the future, stating that smaller areas might become a solution as the program expanded.

According to the vendor community, certain areas of the United States (especially Alaska, Hawaii, and the Territories) currently present logistical challenges and are associated with high drug shipping costs. Moreover, physician participation in these areas has been low; in 2008, physicians from Alaska, Hawaii, and the Territories represented less than 2 percent of total participating CAP physicians. Temporarily limiting the geographic areas served by the CAP could help limit costs and risks for approved CAP vendors associated with shipping drugs to distant parts of the country. However, we believe that the CAP is intended to provide services to all Medicare physicians (including those in distant parts of the country), and therefore, we do not believe that a limitation on the geographic area in which the CAP is available should be permanent.

Section 1847B(a)(1)(B) of the Act specifically requires the Secretary to phase-in the CAP with respect to the categories of drugs and biologicals in the program, in such a manner as the Secretary determines to be appropriate. We believe that this provision, particularly in conjunction with the statutory definition of a competitive acquisition area as ''an appropriate geographic region established by the Secretary'' provides broad authority for the Secretary to phase in the CAP with respect to the geographical areas in which the program would be implemented. As stated in the July 6, 2005 IFC, we considered several factors when defining geographic areas for the CAP, including aspects of vendors and their distribution systems, such as current geographic service areas, the density of distribution centers, the distances drugs and biologicals are typically shipped, and costs associated with shipping and handling (70 FR 39035). Taking these factors into consideration again, and considering entities who have bid on, or expressed interest in bidding on approved CAP vendor contracts, we believe that it is appropriate to use the authority granted under the Statute to temporarily narrow the area served by the CAP during the program's re-implementation. We appreciate the logistical issues associated with shipping drugs to remote areas and the uncertainties associated with transportation costs that have been described by the potential vendor community; however, we are reluctant to significantly reduce the area served by the CAP because at some point, the approved CAP vendor's volume would be affected and the likelihood of obtaining volume based discounts would decrease.

In the current proposed rule, we proposed to designate the CAP competitive acquisition area as the 48 contiguous States and the District of Columbia for the next round of CAP contracting. This change in the geographic area that is served by the CAP is meant as an interim measure under our phase-in authority and the statutory definition of a competitive acquisition area. We believe that omitting Alaska, Hawaii, and the Territories from the CAP competitive acquisition area at this time will balance the need to revise the CAP to attract more vendors with the need to offer the maximum number of physicians a meaningful opportunity to participate. We believe that the proposal will encourage potential vendors to participate in the CAP because it would temporarily omit areas associated with low physician participation, long shipping times, and high shipping costs. Furthermore, this measure is unlikely to

significantly decrease CAP drug order volume relative to historical physician participation in the CAP. However, we are aware that our proposal temporarily eliminates the CAP option for physicians in the areas not included in this CAP competitive acquisition area. Therefore, we did not propose this definition of the CAP geographical area as a permanent solution.

The following is summary of the comments we received regarding the proposed to revisions the geographic area serviced by the CAP.

Comment: Commenters supported the proposal; one commenter recommended a more limited approach using smaller areas and selected physician specialties.

Response: Based on comments supporting our proposal, we are finalizing the proposal to temporarily limit the CAP geographic area to the 48 contiguous States and the District of Columbia for the next bidding period. We do not believe that a smaller geographic area is desirable or necessary. Overnight shipping is available over much of the proposed area and we are concerned about further limiting access to the CAP.

As suggested in comments and discussed in the proposed rule, we will continue to assess the CAP and update plans for phase in activity in future rulemaking efforts, including determining the circumstances under which CAP participation will be offered to physicians in Alaska, Hawaii, and the Territories. We will also continue to consider modifying the definition of competitive acquisition area on the basis of regions, States, or some smaller geographic area, which might expand the number of vendors that could bid to participate in the program.

d. CAP Drug Stock at the Physician's Office

Our discussion about the CAP emergency restocking option in the July 6, 2005 IFC indicated that a participating CAP physician could not maintain a stock of an approved CAP vendor's drug in his or her inventory. This was done because we had reservations about potential program integrity and drug diversion issues (70 FR 39047).

Since that time, we have gained operational experience with the CAP and a better understanding of the ordering and drug delivery process. We have also received additional public feedback about the different ways that the program could be refined, and we have not received any negative feedback from the vendor community indicating a concern about storing CAP drugs in physicians' offices. Therefore, we believe at this time it is appropriate to consider allowing additional flexibility to encourage CAP participation.

Our experience with the CAP, and our increased understanding about the options approved CAP vendors might have for furnishing drugs to a participating CAP physician's office also support considering additional flexibility in this area. For example, we are aware of electronic inventory control and charge capture devices that could be utilized in ways that conform to CAP regulations and are compliant with applicable State and Federal laws. Such devices utilize an electronic transaction based on a physician's order to track the administration of drugs from inventory to a specific patient and to document appropriate charges for the drug. We believe that such systems could fit into the current CAP framework when transactions in such systems are based on a physician's order, because such systems can track inventory, and can be used to capture patient charge data.

For these reasons, we proposed to allow approved CAP vendors to utilize electronic transactions to furnish CAP drugs from nominal quantities of approved CAP vendor-owned stock located at the physician's office in response to specific prescription orders and to capture charges related to such transactions. The proposal was also intended to clarify that entities with alternative approaches to supplying drugs that utilize an electronic transaction are welcome to participate in the CAP bidding process. We believe that this will allow for additional flexibility and efficiency in the ordering and delivery of drugs within the program because it allows for more efficient shipping of approved CAP vendor-owned stock and provides the option of CAP participation for physicians who use or may choose to use such drug inventory management platforms. The proposal did not change our position that a participating CAP physician shall not take title to or pay for CAP drugs, nor does it alter the requirements for information that must be submitted with a prescription order under § 414.908(a) or the application of HIPAA to such data.

Furthermore, the proposal does not affect the applicability of State licensing requirements for an approved CAP vendor. As stated in the July 6, 2005 IFC (70 FR 39066), either the approved CAP vendor, its subcontractor under the CAP, or both, must be licensed appropriately by each State to conduct its operations under the CAP. Therefore, if a State requires it, an approved CAP vendor would be required to be licensed as a pharmacy, as well as a distributor. We did not propose to revise the requirements at § 414.908(c) and § 414.914(f)(9), and we noted that sections 1847B(b)(6) and 1847B(b)(2)(B) of the Act continue to apply. In order to participate in the CAP successful bidders must continue to submit proof of pharmacy licensure, consistent with applicable State requirements.

Also, we stated that the proposal would not modify our definition of ''emergency delivery'' or its corresponding requirements at § 414.902. As we stated in our July 6, 2005 IFC, the intent of the 1-business-day timeframe for emergency deliveries is to address the participating CAP physician's need for more rapid delivery of drugs in certain clinical situations with the approved CAP vendor's ability to ship the drug and have it delivered promptly in a nationwide delivery area (70 FR 39045). The emergency delivery timeframe still applies in situations when CAP drugs are not available in the office for electronic delivery.

Moreover, the proposal did not seek to change the CAP inventory requirements. CAP drugs belong to the approved CAP vendor, and as indicated in the July 6, 2005 IFC (70 FR 39048), participating CAP physicians are required to maintain a separate electronic or paper inventory for each CAP drug obtained. CAP drugs must be tracked separately in some way (for example, an electronic spreadsheet). CAP drugs do not have to be stored separately from a physician's own stock; that is, co-mingling of CAP drug with drug from a participating CAP physician's own private stock is acceptable as long as a record of approved CAP vendor-owned drug is kept in a manner that is consistent with § 414.908(a)(3)(x) and the approved CAP vendor-owned drug can be accounted for, as needed.

Also, the proposal did not affect the CAP emergency restocking requirements. Section 1847B(b)(5) of the Act and § 414.906(e) provide criteria for the replacement of drugs taken from a participating CAP physician's inventory in the event of an emergency situation. When the emergency resupply criteria are met, a participating CAP physician can replace the drugs that were used from his or her own inventory by submitting a prescription order to the approved CAP vendor.

The proposal sought to clarify the potential approaches that a bidder may use (separately or in combination) to supply drugs under the CAP and did not seek to specify a particular approach that bidders must use in future responses to CAP bid solicitations or to strictly define the types of entities that

could bid on CAP vendor contracts; for example, whether bidders must be pharmacies, drug distributors, or a hybrid of the two; whether bidders must utilize just in time shipping, or electronic inventory transactions to supply CAP drugs. We stated that we will consider approving bidders' approaches that are consistent with the statutory framework, applicable laws, and regulations.

The following is a summary of the comments we received regarding CAP drug stock at the participating CAP physician's office.

Comment: Most commenters supported the concept of electronic transactions in the CAP drug supply process. However, a few commenters appear to have misunderstood our proposal as authorizing a CAP vendor to store unlimited amounts of stock in a physician's office. Some commenters also requested details about the types of systems we will accept, how these systems could work in smaller offices, and some commenters were concerned about how appropriate or ''nominal'' stock levels would be defined.

Response: The comments lead us to believe that we need to clarify our proposal. We proposed to allow approved CAP vendors to utilize electronic transactions to furnish CAP drugs from nominal quantities of approved CAP vendor-owned stock located at the physician's office in response to specific prescription orders and to capture charges related to such transactions. This proposal is primarily intended to work with automated cabinets that provide controlled access to drugs and was intended to make clear that entities using electronic inventory devices were welcome to participate in the CAP. However, we are not requiring that these specific devices be used in conjunction with nominal amounts of vendor owned office stock or requiring any specific types of devices, hardware, or software.

Instead, we are providing a framework under which certain quantities of vendor-owned CAP drug stock may be located in a participating CAP physician's office and delivered in conjunction with electronic transactions and charge capture. An electronic transaction may be used to communicate the fact that participating CAP physician is submitting a prescription order for a CAP drug and, on the basis of that prescription order, the drug is being delivered to the participating CAP physician from the nominal amount of vendor-owned stock at the office for administration to a beneficiary. Once the approved CAP vendor receives the prescription order it may bill for the drug in accordance with existing rules. Corresponding documentation of drug administration in the medical record is still required for meeting post-payment review requirements to establish that the drug has been administered to a beneficiary and is thus eligible for payment under section 1847B(a)(3)(D) of the Act.

This process is intended to work with CAP inventory requirements in § 414.906(e) and § 414.908(a), and can also work with office stock models that utilize periodic shipment of stock to maintain predetermined levels. In such systems, periodic shipments of regularly used amounts of items are made, for example, weekly. The shipped amounts are based on average amounts used over the time period between shipments, but may be modified as necessary to accommodate for actual use.

We agree with commenters that we should provide further information about what we would consider to be a ''nominal'' level of vendor-owned stock. Therefore, we are clarifying that that ''nominal quantities of stock'' means quantities that do not exceed what is typically used by the participating CAP physician's office between the approved CAP vendor shipment periods. We are not specifying what the shipment periods must be, however, we would like to point out that we do not intend this process to mean that large quantities of CAP drug would be kept at a physician's office.

We also remind readers that CAP drug stock remains the property of the approved CAP vendor, and that participating CAP physicians do not take title to CAP drug stock or make any payment for drugs that furnished and administered under the CAP. CAP drugs must be stored in a manner that is consistent with applicable law and regulations, as well as product integrity and handling requirements.

Comment: One commenter understood the proposal to mean that physician-owned stock supplied by entities other than the approved CAP vendor may be used for the CAP. Another commenter encouraged a mechanism to reassign physician-owned stock for the CAP.

Response: CAP drugs remain the property of the approved CAP vendor until they are administered to a beneficiary, at which time billing for the drug by the approved CAP vendor may take place. Under our emergency restocking provisions (described in further detail below), drugs purchased by the participating CAP physician's office for its own drug inventory may be used instead of approved CAP vendor inventory in certain situations, and then the approved CAP vendor may supply a replacement.

However, we do not believe that the physician's office stock, that is, drugs bought by the physician's office, should be used as a primary source of drugs for the CAP because such a structure is inconsistent with the CAP program as set forth in section 1847B of the Act, which clearly contemplates that the approved CAP vendor supply CAP drugs to the participating CAP physician rather than merely just bill for drugs that the participating CAP physician already owns. Furthermore, the CAP is an alternative to the ASP or buy and bill process of obtaining drugs administered incident to a physicians' services, and under the CAP as we have implemented it, participating CAP physicians do not take title to or make any payment for drugs furnished under the CAP.

In situations where an approved CAP vendor maintains a certain nominal amount of drugs in a participating CAP physician's office, as discussed above, we anticipate that at certain times a prescription order for an unusual drug or an unexpectedly great demand may result in a situation where the approved CAP vendor's stock is not immediately available in the participating CAP physician's office. In such situations, the approved CAP vendor must ship the drug under the timeframe definitions at § 414.902.

In cases where the drug cannot be delivered in time to meet a clinical need, a participating CAP physician is permitted to use the practice's own inventory and obtain replacement inventory from the approved CAP vendor under § 414.906(e) if all of the following requirements are met: (1) The drugs are required immediately; (2) The participating CAP physician could not have anticipated the need for the drugs; and (3) The approved CAP vendor could not have delivered the drugs in a timely manner, as defined in § 414.902.

This provision is intended for clinical emergencies if a CAP drug is not available from the approved CAP vendor in time. Additional information about the emergency restocking provision appears in the July 6, 2005 interim final rule with comment (70 FR 39047). The physician will be expected to maintain documentation in the patient's medical record to verify that he or she complied with the criteria governing the resupply provision.

Comment: Commenters also suggested periodic inventory reconciliation between approved CAP vendors and participating CAP physicians to accurately track the actual amount of

vendor-owned drug in a physician's inventory.

Response: We believe that the method and the frequency with which an approved CAP vendor may want to account for nominal CAP drug stock at the physician's office will vary based on the cost and handling requirements of the drugs, quantities of drug at the offices, and the approved CAP vendor's experience with the practice. The role of special agreements between approved CAP vendors and participating CAP physicians was discussed in the July 2005 IFC (70 FR 39050).

We believe that details associated with inventory reconciliation, such as the frequency that the process is carried out, whether a vendor's representative would visit the location, etc., could be arranged under such an agreement. However, parties to such arrangements must ensure that the arrangements do not violate the physician self-referral (''Stark'') prohibition (section 1877 of the Act), the Federal anti-kickback statute (section 1128B(b) of the Act), or any other Federal or State law or regulation governing billing or claims submission.

Comment: Commenters also requested clarification about whether CAP is a pharmacy- or distribution-based program and recommended that CMS specify one model in order to decrease vendor risk. One commenter recommended that the CAP be a distribution model in order to capture efficiencies.

Response: We appreciate the comments that suggested we consider our overall approach to the CAP. We have not specified whether the CAP must follow a distribution or a pharmacy model, or a combination, in previous rules. We believe that leaving the option open will maximize the number of bidders and will encourage a variety of approaches for supplying CAP drugs. Given the wide geographic area that the program covers and the diverse Medicare physician population, we also do not want to discourage bidders from developing novel or combined approaches to supplying CAP drugs. Although we acknowledge that vendor interest in the program has been limited, we believe that leaving these options open will benefit the program in the long run by allowing a variety of approaches to supplying drugs under the CAP. Choices between approved CAP vendors with different models will encourage physician interest and are more likely to serve a varied physician population, including large and small offices. We also do not want to unduly limit the types of subcontracting relationships that a bidding entity may develop to supply CAP drugs across a geographic area, particularly in light of the diversity of State laws and regulations, which may change over time.

Comment: One commenter asked whether the bidding documents would contain more detail about licensing requirements.

Response: We acknowledge the comment that suggested the licensing expectations be more clearly described at the time bids are announced. At this time, we will continue to require that an approved CAP vendor must be appropriately licensed in all States.

Comment: One commenter asked about a limited bid involving automation.

Response: This rule did not propose changes to the bidding process, and therefore, we are not making any changes to the bidding process at this time.

e. Exclusion of CAP Sales From ASP Calculations

In response to the March 4, 2005 proposed rule, many commenters requested clarification about whether the prices determined under the CAP will be taken into account in computing the ASP under section 1847A of the Act. In the July 6, 2005 IFC, we responded that prices offered under the CAP must be included in ASP calculations (70 FR 39077). This was done because we initially believed that we did not have the statutory authority to exclude prices determined under the CAP from the computation of ASP under section 1847A of the Act. Section 1847A(c)(2) of the Act contains a specific list of sales that are exempt from the ASP calculation, and sales to approved CAP vendors operating under CAP are not included on that list (70 FR 39077). Comments received in response to the July 6, 2005 IFC opposed this policy (70 FR 70479).

Ultimately, as stated in the November 21, 2005 IFC, we recognized commenters' concerns about the effect of including CAP prices in the calculation of ASP and agreed that the best outcome for both the ASP methodology and the CAP programs would be one in which prices under CAP did not affect payment amounts under the ASP methodology. In particular, we found compelling arguments from commenters about the separation of the ASP and CAP programs and that the two programs are intended to be alternatives to each other. Therefore, we excluded units of CAP drugs that are administered to beneficiaries by participating CAP physicians from the ASP calculation for the initial 3-year approved CAP vendor contract period (70 FR 70479). Accordingly, the definition of ''Unit'' at § 414.802 was also revised to reflect this exclusion.

In our August 18, 2006 interim final rule, we further addressed concerns pertaining to our definition of Unit. We published a PRA notice regarding a proposed modification of the OMB-approved ASP information collection requirements (CMS Form 10110 (OMB #0938–0921)) about the collection of the number of CAP units excluded from the ASP calculation. In response, a commenter expressed concern over manufacturers' reliance on approved CAP vendors for information about the number of units of CAP drugs that are administered to beneficiaries by participating CAP physicians (71 FR 48132). Since approved CAP vendors are the only entities with direct information on CAP units administered, the commenter believed that the requirement to exclude units of CAP drugs administered to beneficiaries by participating CAP physicians placed the manufacturer in the untenable position of reporting ASP and certifying reports of ASP based on second-hand information from approved CAP vendors. Further, the commenter noted that manufacturers may not have timely access to this information and that they could not independently confirm its accuracy (71 FR 48132). Additional feedback received as part of our ongoing work with manufacturers also indicated that they were concerned that they would have difficulty obtaining information from approved CAP vendors that would be necessary to accurately exclude administered CAP units from the ASP calculation (71 FR 48132).

Therefore, we further revised the definition of unit to clarify that for the initial 3-year contract period under the CAP units of CAP drugs sold to an approved CAP vendor for use under the CAP would be excluded from the calculation of ASP (70 FR 48132).

In the July 6, 2005 and August 18, 2006 IFCs, we stated that we would examine the effect of this exclusion and, if necessary, revisit our decision at the end of the initial 3-year period of the CAP (70 FR 70480 and 71 FR 48132, respectively).

Since then, operational experience has not indicated a reason for changing our policy of excluding CAP units sold to approved CAP vendors for use under the CAP from ASP calculations. Therefore, in the current proposed rule, we proposed to permanently exclude drugs supplied under the CAP from ASP calculations and make conforming

changes to the definition of unit at § 414.802. We stated that we believe that the proposal will continue to promote the separation and independence of the two drug payment models.

The following is a summary of the comments we received regarding the proposed revisions to the exclusion of CAP sales from ASP calculations.

Comment: All comments supported permanent exclusion of CAP Sales from ASP calculations.

Response: As a result of the comments, we are finalizing the proposal to permanently exclude CAP Sales from ASP calculations.

f. Annual CAP Payment Amount Update Mechanism

In the July 6, 2005 IFC (70 FR 39076), we described a two-step process to calculate RNAC-based price adjustment if there is a change in the RNAC reported by a particular approved CAP vendor. We stated that ''we would adjust the bid price that the vendor originally submitted by the percentage change indicated in the cost information that the vendor disclosed. Next, we would recompute the single price for the drug as the median of all of these adjusted bid prices.'' The two-step process contemplated that there would be more than one approved CAP vendor at the time prices were to be adjusted and that all successful bidders would participate in the CAP.

However, during the first round of CAP contracting, after offering more than one contract, we entered into a contract with only one successful bidder. Thus, during the 2008 price update calculation process, we developed an approach to account for the lack of RNAC data for bidders who chose not to participate in the CAP. In the CY 2009 PFS proposed rule, we stated that the approach we used to adjust prices for the 2008 contract year is consistent with § 414.906(c) and with the July 6, 2005 IFC because it retains a two-step calculation based on the approved CAP vendor's RNAC, as well as the calculation of a median of adjusted bid prices.

We also posted our approach on the Approved CAP Vendor page of the CMS CAP Web site at *http://www.cms.hhs.gov/CompetitiveAcquisforBios/15_Approved_Vendor.asp.* The percent change in RNAC for 2008 was calculated based on data supplied by the approved CAP vendor. This percent change in RNAC was used as a proxy for the percent change in RNAC for successful bidders that chose not to become approved CAP vendors.

Then, in the CY 2009 PFS proposed rule (73 FR 38522 through 38523), we proposed to continue using this approach for future CAP payment amount updates where the number of approved CAP vendors is less than the number of successful bidders. We proposed that the average of the approved CAP vendor-supplied RNAC data would be used as a proxy for data from vendors who bid successfully but are not participating in the CAP. For example, if the payment amounts for the first year of a CAP contract are based on five successful bidders, but only four have signed contracts to supply drugs under the CAP (that is, there are four approved CAP vendors), only RNAC data collected from the four approved CAP vendors would be used to calculate the percent change in the RNAC. The average of the four approved CAP vendors' adjusted payment amounts would be used as a proxy for the RNAC of the successful bidder that is not participating in the CAP. The updated CAP payment amount would then be calculated as the median of the five data points (one data point for each approved CAP vendor's updated payment amount, and one data point calculated using the average of the approved CAP vendors' RNAC). Similarly, if there were five successful bidders but only three chose to become approved CAP vendors, the average of the three approved CAP vendors' RNAC would be the proxy for the RNAC of the two bidders who did not participate. The median of those five data points would become the updated CAP payment amount.

Our approach in the CY 2009 PFS proposed rule was intended to provide us with a flexible method for updating CAP prices, to be consistent with our original policy as stated in the July 6, 2005 IFC, and to account for bidders or approved CAP vendors who are not participating in the program at the time the price updates are calculated. However, our approach was limited in scope because it was made during a contract period and during bidding for an upcoming contract and we did not want to make any significant changes to the CAP program which could affect contractual obligations. Furthermore, we received a comment in response to the CY 2009 PFS proposed rule that suggested the elimination of the proxy procedure so that payments would be based on actual data from participating vendors and would better reflect experience within the program.

After additional consideration, we believe that it would be prudent to simplify and update our 2009 proposal in order to account for successful bidders who choose not to participate in the CAP, possible changes in the number of approved CAP vendors over the life of a 3-year CAP contract, and to allow for flexibility in setting the frequency of payment amount adjustments as described in section II.J.2.a. above. We believe that our updated proposal is easier for the vendor community to understand and for us to implement. Furthermore, our revised proposal is not constrained by concerns about the impact of changes on an active contract.

We proposed to clarify that the RNAC-based adjustment calculations are intended to apply only to approved CAP vendors (not all bidders), and that the most recent previous CAP payment amount (for example, the previous year's or the previous quarter's payment amount) will be the starting point for making the subsequent period's adjustment. Simply put, we proposed to eliminate the use of proxy data for bidders that are no longer participating in the program. Instead, we proposed to use RNAC data only from approved CAP vendors that are participating in the CAP at the time that an RNAC-based price update is being calculated. We also proposed to clarify that the starting point for the payment amount adjustment is the most recent payment amount. The percent change calculated from each participating approved CAP vendor's RNAC data will be applied to the most recent payment amount by recomputing the single price using the median of all participating vendors' adjusted prices.

For example, if quarterly adjustments beginning at the start of claims processing approved CAP vendor's contract as described in section a. above are implemented, and the post bid period's CAP payment amounts are calculated based on five successful bids, but only four approved CAP vendors are participating when CAP claims processing begins, the RNAC-based payment amount adjustment for the first quarter of CAP claims would be based on RNAC data provided by the four approved CAP vendors that will be furnishing drugs under the CAP. The four approved CAP vendors would be required to submit a quarter of RNAC data within thirty days of the close of the quarter to which the data applied, prior to the beginning of CAP claims processing for the new contract. We would apply the percentage change in RNAC reported by each of the four approved CAP vendors to the CAP payment amounts calculated from successful bids, and the adjusted payment amount would be the median of those four adjusted amounts. Assuming that these four vendors are

still furnishing drugs during the second quarter, calculations for the second quarter would apply the RNAC-based adjustment calculated from the four vendors' data to the first quarter's payment amount. That is, the payment amounts for the second quarter would be calculated from the first quarter's payment amounts, adjusted by RNAC data.

This process would apply to the composite bid drug list as amended by rulemaking, meaning that a single weighted percent change in RNAC is calculated for all drugs in the composite bid list (also referred to as the single drug category) and that single percent change is applied to all drugs in the list. For drugs that are bid as separate line items, such as drugs that were included in addendum B of the 2006 bidding period (see 70 FR 39072 and updated as addendum G in 70 FR 70238), or for drugs that are added during a contract period, each HCPCS code will be adjusted as a separate line item. Such codes will not be included in the composite, weighted drug list. Our process will continue to assign a single payment amount to all approved CAP vendors that supply a given HCPCS code; we do not intend to have more than one payment amount for any HCPCS code under the CAP or for individual ''NOC'' drugs described in § 414.906(f)(2)(iv).

This updated approach is flexible, and we believe it can accommodate a variety of scenarios, including a changing number of approved CAP vendors and changes to the frequency with which payment amount updates are made. It provides a straightforward and accurate clarification of the price adjustment mechanism described in regulation text. We believe that this proposal remains consistent with our original preamble language and with our CY 2009 PFS proposal, because it retains the two-step calculation using the percent change in RNAC. Finally, we believe that our approach will eliminate any perception that nonparticipating vendors can significantly affect CAP payment amount adjustments.

The following is summary of the comments we received regarding the proposed to revisions to the annual CAP payment amount update mechanism.

Comment: Comments about CAP price updates focused on the quarterly update frequency. We did not receive any comments that specifically discussed the proposed refinements to our approach, although one commenter recommended caution when using a single update percentage across a large group of drugs because this may increase vendors' financial risk, and suggested product level updates.

Response: We are finalizing the proposal to simplify the update calculation process. Although no comments directly mentioned this proposal, we believe that the updated approach will simplify the calculation process.

We appreciate the comment that suggested that price updates be done at the product or NDC level. However, bidding and payment for drugs furnished under the CAP is made at the HCPCS level. We believe that the smaller single drug category list finalized in section II.J.2.b will decrease the risk associated with applying a single percentage update over a group of drugs, and we also note that drugs added during the CAP contract period through a CMS approved vendor request and drugs that are separately bid will continue to be updated at the individual HCPCS level.

g. 2009 PFS Proposals

(1) Definition of a CAP Physician

In the July 6, 2005 IFC, we stated that section 1847B of the Act most closely describes a system for the provision of and the payment for drugs provided incident to a physician's service (70 FR 39026). In the November 21, 2005 IFC (70 FR 70258), we stated that for the purposes of the CAP, a physician includes all practitioners that meet the definition of a ''physician'' in section 1861(r) of the Act. This definition includes doctors of medicine, osteopathy, dental surgery, dental medicine, podiatry, and optometry, as well as chiropractors. However, this definition does not include other health care professionals, such as nurse practitioners (NPs), clinical nurse specialists (CNSs), and other professions such as physician assistants (PAs) who may be able to legally prescribe medications and enroll in Medicare.

In the CY 2009 PFS proposed rule (73 FR 38523), we proposed to further clarify that, for the purposes of the CAP, the definition of a physician included all practitioners that meet the definition of a ''physician'' in section 1861(r) of the Act, as well as practitioners (such as NPs, CNSs and PAs) described in section 1861(s)(2)(K) of the Act and other practitioners who legally prescribe drugs associated with services under section 1861(s) of the Act if those services and the associated drugs are covered when furnished incident to a physician's service. While we believed that most practitioners described in section 1861(s)(2)(K) of the Act would bill under specific physician provider numbers, it was not our intent to exclude practitioners who are able to bill independently for drugs associated with services that are covered when provided by a physician and legally authorized to be performed.

In response to our CY 2009 proposed rule, only a few commenters were concerned about the inclusion of inadequately trained practitioners and risks to patient safety under this expanded definition. Another commenter stated that this definition goes beyond the scope of the provisions in the MMA and the strict definition of ''physician'' in the statute. However, the majority of comments supported this proposal.

We did not receive any feedback during the CAP postponement that would lead for us to reconsider this proposal. Therefore, we again proposed to further clarify that, for the purposes of the CAP, the definition of a physician included all practitioners that meet the definition of a ''physician'' in section 1861(r) of the Act, as well as practitioners (such as NPs, CNSs and PAs) described in section 1861(s)(2)(K) of the Act and other practitioners who legally prescribe drugs associated with services under section 1861(s) of the Act if those services and the associated drugs are covered when furnished incident to a physician's services.

Our proposal was specific to the Part B Drug CAP and was not intended to affect the definition of physician in section 1861(r) of the Act, or the definition of ''Medical and Other Health Services'' described in section 1861(s) of the Act. The proposal also did not seek to expand the scope of the CAP beyond what has been described in previous rules, other than to clarify that a small number of providers who are enrolled in Medicare, and who legally prescribe drugs associated with services under section 1861(s) of the Act and can be paid by Medicare may elect to participate in the CAP if billing independently. In short, the CAP remains a program that provides Part B drugs furnished incident to a physician's services.

The following is summary of the comments we received regarding the updated definition of a CAP physician.

Comment: The majority of commenters supported our proposal to expand the definition of a physician for the purposes of the CAP. Commenters indicated that this proposal could increase patient access to drugs and treatment options, particularly in rural and underserved areas. It could also increase physician participation in the CAP and allow for greater program flexibility. However, some comments

expressed concerns about our approach. One commenter was concerned about the inclusion of inadequately trained health professionals and risks to patient safety under this expanded definition. This commenter also urged us to limit what types of CAP drugs could be handled by these additional health professionals included under our proposal. Another comment indicated that CMS more thoroughly refine its definition of ''physician'' through regulation since our proposed rule language seemingly implied that health practitioners included in this expanded definition who participate in the CAP could administer drugs regardless of any state-level prescription and administration laws. Another commenter indicated that we had exceeded our regulatory authority by expanding the definition of physician to include health professionals beyond those listed in section 1861(r) of the Act.

Response: We appreciate the comments that supported our proposal; however, we have further considered the comments on the 2009 PFS rule and the 2010 PFS proposed rule that cautioned us about potentially exceeding the statutory definition of a physician under section 1861(r) of the Act. Our proposal's intent was not to affect the definition of physician as specified in section 1861(r) of the Act. Upon further consideration in light of the comments, we agree that our proposal to expand the definition of a CAP physician is problematic, because it can be interpreted to be in conflict with section 1861(r) of the Act. Section 1847B of the Act specifically uses the term ''physician'' rather than a more general term, like provider, to describe who may select a CAP contractor to supply CAP drugs. Section 1861(r) of the Act specifies that the term physician includes, in some cases subject to certain limitations, the following types of practitioners: a doctor of medicine or osteopathy, a doctor of dental surgery or of dental medicine, a doctor of podiatric medicine, a doctor of optometry, or a chiropractor.

Therefore, at this time, we will not be revising the definition of a CAP physician beyond what was previously stated in the November 21, 2005 IFC (70 FR 70258), that is for the purposes of the CAP, a physician includes all practitioners that meet the definition of a ''physician'' in section 1861(r) of the Act. Based on CAP physician election data, we believe that the impact of not updating our definition at this time will have minimal impact on access to CAP drugs.

(2) Easing the Restriction on Physicians Transporting CAP Drugs

Although section 1847B(b)(4)(E) of the Act provides for the shipment of CAP drugs to settings other than a participating CAP physician's office under certain conditions, in initially implementing the CAP, we did not propose to implement the CAP in alternative settings. We implemented the CAP with a restriction that CAP drugs be shipped directly to the participating CAP physician, as stated in § 414.906(a)(4), and that participating CAP physicians may not transport CAP drugs from one location to another, as stated in § 414.908(a)(3)(xii). However, we were aware that physicians may desire to administer drugs in alternative settings. Therefore, in the July 6, 2005 IFC, we sought comment on how this could be accommodated under the CAP in a way that addresses the potential vendors' concerns about product integrity and damage to the approved CAP vendors' property (70 FR 39048). We discussed comments submitted in response to the July 6, 2005 IFC in the CY 2008 PFS proposed rule (72 FR 38158). We also requested comments in the CY 2008 PFS proposed rule (72 FR 38157) on the potential feasibility of easing the restriction on transporting CAP drugs where this is permitted by State law and other applicable laws and regulations. We responded to submitted comments in the CY 2008 PFS final rule with comment period (72 FR 66268).

In the CY 2009 PFS proposed rule (70 FR 38523), we proposed to permit the transportation of CAP drug between a participating CAP physician's practice locations subject to voluntary agreements between the approved CAP vendor and the participating CAP physician. Because of the 2009 CAP postponement, we did not address this issue in the CY 2009 PFS final rule. However, we did receive the following comments in response to our proposed rule on easing transportation restrictions in the CAP:

- Many commenters indicated that this change would increase program flexibility and facilitate patient treatment.
- Some commenters were supportive, but also raised concerns about drug integrity and liability, and requested that appropriate safeguards be in place before transportation restrictions were eased.
- Generally, commenters wanted CMS to explicitly delineate standards about voluntary agreements that address concerns about product integrity, liability, transportation procedures, and documentation. One commenter indicated that such standards should be developed through a separate rulemaking period to allow for public comment.
- Several commenters cited State pedigree laws as possible impediments to physician transport of drugs.

We also requested and received feedback about the program during the 2009 postponement period. One member of the potential vendor community urged us to be mindful of increased legal liability for an approved CAP vendor if this policy were to be implemented, but also acknowledged that the proposal might substantially increase physician interest in the program.

We continue to be mindful of the concerns expressed by the commenters, and have evaluated both the advantages and disadvantages of easing the restriction on transportation of CAP drugs. Thus, we again proposed to permit transport of CAP drug between a participating CAP physician's practice locations subject to voluntary agreements between the approved CAP vendor and the participating CAP physician. As indicated in our CY 2009 PFS proposed rule, we continued to propose that such agreements must comply with all applicable State and Federal laws and regulations and product liability requirements, and be documented in writing.

We would again like to reiterate the voluntary nature of these proposed agreements. Approved CAP vendors would not be required to offer and participating CAP physicians would not be required to accept such agreements when selecting an approved CAP vendor. An approved CAP vendor may not refuse to do business with a participating CAP physician because the participating CAP physician has declined to enter into such an agreement with the approved CAP vendor. Furthermore, we are not seeking to define which CAP drugs may be subject to the proposed voluntary agreements. In other words, each approved CAP vendor could specify which CAP drug(s) could be transported.

However, our proposal continues to contain certain limitations. In previous rulemaking, we have described requirements for voluntary agreements between approved CAP vendors and participating CAP physicians. In the July 6, 2005 IFC (70 FR 39050) and the CY 2006 PFS final rule (70 FR 70251 through 70252), we stated that we will not dictate the breadth of use or the specific obligations contained in voluntary arrangements between approved CAP vendors and

participating CAP physicians, other than to note that they must comply with applicable law and to prohibit approved CAP vendors from coercing participating CAP physicians into entering any of these arrangements. Parties to such arrangements must also ensure that the arrangements do not violate the physician self-referral (''Stark'') prohibition (section 1877 of the Act), the Federal anti-kickback statute (section 1128B(b) of the Act), or any other Federal or State law or regulation governing billing or claims submission. We proposed to apply these standards to any agreement for the transport of CAP drugs.

We remain concerned about opportunities for disruption in the drug's chain of custody and appropriate storage and handling conditions that may ultimately affect patient care or increase the risk of drug theft or diversion. Therefore, in order to maintain safety and drug integrity in the CAP and to protect against the fraudulent diversion of CAP drugs, we reproposed that any voluntary agreements between an approved CAP vendor and a participating CAP physician regarding the transportation of CAP drug must include requirements that drugs are not subjected to conditions that will jeopardize their integrity, stability, and/or sterility while being transported. We solicited comments on these issues, including the identification of who may transport the drugs, how documentation of transportation activities could be accomplished, and how the oversight of such agreements will be carried out.

In conclusion, we believe that the proposal to ease the restriction on transporting CAP drugs between a participating CAP physician's practice locations—when agreed upon by the participating CAP physician and the approved CAP vendor—will make the CAP more flexible and ultimately more appealing to participating CAP physicians. Additionally, we believe that this proposal will facilitate the participation of CAP physicians who have office locations in rural areas and/or have satellite offices with limited hours. Moreover, we believe that this proposal will promote beneficiary care, particularly for beneficiaries who live in rural locations. Since participating CAP physicians would be able to transport CAP drugs to another office location in accordance with a voluntary agreement with their approved CAP vendor, beneficiaries would have more flexibility in scheduling the location of their appointments. We solicited comments about this proposal.

The following is summary of the comments we received regarding the proposal to ease transport restrictions between participating CAP physicians' offices.

Comment: The comments represented a variety of perspectives and were very similar to the comments discussed in our previous proposal and outlined in the bullet points above. Many comments were supportive, but some also raised reservations pertaining to drug integrity and liability. The commenters requested that appropriate safeguards be in place before transportation restrictions were eased and that liability should be clearly defined in these voluntary agreements. One commenter supported our proposal, but indicated that concerns about drug integrity and liability would prevent approved CAP vendors from offering such voluntary agreements for transporting CAP drug. Another commenter indicated that the approved CAP vendor must be responsible for notifying physicians of handling or storage requirements for any drug. Two commenters indicated that licensed practitioners are able to take responsibility for transporting drugs because of their training and knowledge. A commenter requested that we develop specific transportation standards through a separate rulemaking period. Another comment indicated that the approved CAP vendor should develop and submit explicit drug transportation standards to CMS. One commenter suggested that CMS require physicians to document drug transfers via a standardized transport sheet.

A number of comments were supportive of our proposal and indicated that this change would increase program flexibility, make the program more desirable to physicians, and facilitate patient treatment. One commenter understood our proposal to mean that we would ''ship'' CAP drug directly to the site of service. Another commenter suggested that approved CAP vendors should be required to offer such agreements. Several commenters cited State pedigree laws as possible impediments to physician transport of drugs.

Response: Overall, there was support for our proposal and we agree that these agreements would provide flexibility for CAP providers. We agree with commenters who expressed concerns about product integrity and liability. However, we do not agree that additional CMS involvement such as developing detailed and specific agreements now, or through other means such as separate rulemaking, will contribute to the quality or appropriateness of these agreements. We believe that the details of these agreements can best be determined by the parties that participate in the agreement rather than CMS. Detailed knowledge about applicable State laws (including ''pedigree laws''), practice requirements and specialized knowledge about drug handling are beyond CMS' expertise. However, we believe that our proposal outlines a sufficient framework of safeguards and provisions to mitigate risks associated with damage to the product, drug diversion, and financial loss. We have stated that agreements must be made in writing and must comply with all applicable State and Federal laws and regulations and product liability requirements and must include requirements that drugs are not subjected to conditions that will jeopardize their integrity, stability, and/or sterility while being transported.

We are not seeking to define specific items in these agreements, such as which CAP drugs may be subject to the proposed voluntary agreements regarding drug transport because the parties involved in the agreement will have the greatest insight regarding such details and will better understand the variables and practical applications associated with these decisions. Drugs that may be furnished under the CAP are subject to a broad range of storage requirements—some drugs are especially temperature sensitive and some may be light sensitive.

Also, some CAP drugs are very expensive, and the loss of even a single dose could create significant financial impact for an approved CAP vendor. We believe that assessments and decisions about which drugs may be transported must be made by the approved CAP vendor at the drug level in order to allow the approved CAP vendor to better control the risk associated with transporting vendor-owned product and to apply its knowledge and expertise in product handling in order to either facilitate, or to choose not to allow the transportation of certain drugs that may require special handling, such as strict temperature control or limits to light exposure. So long as they are consistent with the standards we have set forth for these voluntary agreements, we also believe such agreements can address issues of financial liability for the drug, and we believe that the approved CAP vendor is in the best position to assess the financial risk associated with the transportation of specific drugs, and to make corresponding changes as new drugs are added to the CAP, or information about drugs already supplied under the CAP changes.

We are also concerned that additional CMS involvement regarding the details of these agreements could cause negative consequences by further delaying the implementation of this provision, or delays in responding to changes as new drugs become available under the CAP. Because the parties to the agreement have a better understanding of the specific information that must be used to assess each drug, CMS involvement could also result in the addition of requirements that may not be necessary, or the exclusion of requirements that may be beneficial. Providing a framework rather than specific requirements also provides an adaptable and scalable solution that can accommodate different drugs with different handling requirements, different participating CAP physician populations, and individual approved CAP vendors' financial risk assessments at the drug level.

We also note that shipment of drugs and biologicals often across significant distances is being done routinely by pharmacies, drug distributors, and home infusion providers. Therefore, we believe that significant practical experience associated with safely transporting drugs between various locations outside of standard shipping arrangements exists, and this experience could be applied to the transportation agreements. We encourage approved CAP vendors who enter into agreements with participating CAP physicians to permit transport of one or more CAP drugs between offices to assist with the dissemination of details and practical applications of specialized knowledge about drug handling and to either specify, or provide mechanisms to track, drugs that are being transported between offices.

We also agree with the comments that stated that participating CAP physicians and other CAP practitioners are able to follow the handling requirements associated with the drugs that they administer and we agree that they may be held responsible for adherence to those requirements. We believe that the participating CAP physicians will want to adhere to these requirements not only for the safety of the beneficiary who will receive the drug, but also for the financial well being of the approved CAP vendor—the entity that still owns the drug.

Based on the comments that we received, we are finalizing our proposal to ease the transportation restriction between a participating CAP physicians' offices as listed on the CAP physician election agreement using voluntary agreements between the approved CAP vendors and participating CAP physicians. The finalized proposal does not affect the current requirement that drugs be shipped from the approved CAP vendor only to a participating CAP physician.

We also remind readers that the change applies only to transportation of CAP drugs between the offices of a group to which the drug was shipped and does not include shipment to office locations not listed on the physician's election agreement, or transportation to sites other than the participating CAP physician's offices; these issues are outside the scope of what we had proposed.

We also remind readers that at a minimum, voluntary agreements that allow the transportation of CAP drugs between office locations must comply with all applicable State and Federal laws and regulations and product liability requirements, and be documented in writing and must include requirements that drugs are not subjected to conditions that will jeopardize their integrity, stability, and/or sterility while being transported. While we are not dictating the breadth of use or the specific obligations contained in voluntary arrangements between approved CAP vendors and participating CAP physicians, including the drugs covered by an agreement, the agreements must comply with applicable law and prohibit approved CAP vendors from coercing participating CAP physicians into entering any of these arrangements. Parties to such arrangements must also ensure that the arrangements do not violate the physician self-referral (''Stark'') prohibition (section 1877 of the Act), the Federal anti-kickback statute (section 1128B(b) of the Act), or any other Federal or State law or regulation governing billing or claims submission.

By way of example only, we believe that a voluntary agreement between the participating CAP physician and approved CAP vendor could also be used to address the following issues: assignment of financial liability associated with product loss or damage, tracking and stock reconciliation mechanisms, oversight and compliance mechanisms, who may transport the drug, and specific handling requirements for the each of the drugs that may be transported.

(3) Dispute Resolution Process

In the CY 2009 PFS proposed rule (73 FR 38524 through 38525), we discussed two changes to the CAP dispute resolution process. Section 1847B(b)(2)(A)(ii)(II) of the Act requires an approved CAP vendor to have a grievance and appeals process for the resolution of disputes. In the July 6, 2005 IFC (70 FR 39054 through 39058), we described the process for the resolution of participating CAP physicians' drug quality and service complaints and approved CAP vendors' complaints regarding noncompliant participating CAP physicians. We encouraged participating CAP physicians, beneficiaries, and vendors to use informal communication as a first step to resolve service-related administration issues. However, we recognized that certain disputes would require a more structured approach, and therefore, we established processes under § 414.916 and § 414.917.

(i) Approved CAP Vendor's Status During the Reconsideration Process

Section 414.917 outlines the dispute resolution process for participating CAP physicians. As discussed in the July 6, 2005 IFC (70 FR 39057 through 39058), if a participating CAP physician finds an approved CAP vendor's service or the quality of a CAP drug supplied by the approved CAP vendor to be unsatisfactory, then the physician may address the issues first through the approved CAP vendor's grievance process, and second through an alternative dispute resolution process administered by the designated carrier and CMS. In turn, the designated carrier would gather information about the issue as outlined in § 414.917(b)(2) and make a recommendation to CMS on whether the approved CAP vendor has been meeting the service and quality obligations of its CAP contract. We would then review and act on that recommendation after gathering any necessary, additional information from the participating CAP physician and approved CAP vendor. If we suspend an approved CAP vendor's CAP contract for noncompliance or terminate the CAP contract in accordance with § 414.914(a), the approved CAP vendor may request a reconsideration in accordance with § 414.917(c).

In the July 6, 2005 IFC (70 FR 39058), we indicated that the approved CAP vendor's participation in the CAP would be suspended while the approved CAP vendor's appeal of our decision is pending. This suspended status is also implied in § 414.917(c)(9), which states that the ''approved CAP vendor may resume participation in CAP'' if the final reconsideration determination is favorable to the approved CAP vendor. In order to improve the clarity of our regulations, we proposed in the CY 2009 PFS proposed rule that the approved CAP vendor's contract will remain suspended during the reconsideration

period in § 414.917 (73 FR 38525). We believed that this proposed technical change is consistent with basic contracting concepts and with our current practices for the CAP. This proposal was not finalized due to the 2009 CAP postponement.

Comments submitted in response to our CY 2009 PFS proposed rule supported this proposed clarification and we did not receive additional feedback about this issue after the CAP was postponed. Based on this and our continued need to improve the clarity of our regulations, we reproposed that the approved CAP vendor's contract will remain suspended during the reconsideration period in § 414.917. We solicited additional comments on our proposal.

Comment: One commenter supported our proposal regarding the CAP's dispute resolution process.

Response: We are finalizing our proposal that the approved CAP vendor's contract will remain suspended during the reconsideration period in § 414.917. We believe that this technical change is consistent with basic contracting concepts and with our current practices for the CAP.

(ii) Termination of CAP Drug Shipments to Suspended CAP Physicians

Section 414.916 provides a mechanism for approved CAP vendors to address noncompliance problems with participating CAP physicians. As stated at § 414.916(a), ''Cases of an approved CAP vendor's dissatisfaction with denied drug claims are resolved through a voluntary alternative dispute resolution process delivered by the designated carrier, and a reconsideration process provided by CMS.'' Once the decision is made to suspend a participating CAP physician's CAP election agreement, the participating CAP physician will be suspended from the CAP as described in § 414.916(b)(3).

Physicians whose participation in the CAP has been suspended are not eligible to receive CAP drugs. This is implied in § 414.906(a)(4), which speaks of approved CAP vendors providing CAP drugs directly to ''[a] participating CAP physician.'' However, we believe that the clarity of our dispute resolution regulations would be improved if this drug delivery issue were stated explicitly. Therefore, in the CY 2009 PFS proposed rule, we proposed to revise § 414.916 to specify that approved CAP vendors shall not deliver CAP drugs to participating CAP physicians whose participation in the CAP has been suspended after an initial determination by CMS. The proposal also applied to physicians engaged in the reconsideration process outlined in § 414.916(c) and included a conforming change at § 414.914(f)(12). We believed that these changes were in accord with the underlying intent of § 414.916, namely to provide a mechanism for approved CAP vendors to address noncompliance problems with participating CAP physicians, and we believe that these changes will increase the clarity of our regulations. We also noted that the participating CAP physicians who are suspended from participation in the CAP will be able to obtain drugs and bill for them under the ASP payment system provided they have not been excluded from participation in Medicare and/or their billing privileges have not been revoked.

Comments submitted in response to the CY 2009 PFS proposed rule agreed with our proposal. Though we did not finalize this proposal due to the 2009 CAP postponement, we received no comments from the public in response to our request for feedback during the CAP 2009 postponement. Based on positive public feedback and our continued belief that the clarity of our dispute resolution regulations would be improved by being explicit about this issue, we reproposed to revise § 414.916 to specify that approved CAP vendors shall not deliver CAP drugs to participating CAP physicians whose participation in the CAP has been suspended after an initial determination by CMS. This suspension in drug shipment would also apply to physicians engaged in the reconsideration process outlined in § 414.916(c). We have also proposed a conforming change to § 414.914(f)(12). Physicians who are suspended from participation in the CAP will be able to obtain drugs and bill for them under the ASP payment system provided they have not been excluded from participation in Medicare and/or their billing privileges have not been revoked.

Comment: We received comments that both supported and opposed this proposal. One commenter supported this approach. Another commenter questioned the sufficiency of our procedures and indicated that the suspension of CAP drug shipments to a physician should not be implemented after an initial determination by CMS, but rather only after a final decision on reconsideration has been made.

Response: We disagree with the comment about the sufficiency of our dispute resolution procedures. We believe that in light of the very limited grounds for which a participating CAP physician may be suspended, the protections afforded under § 414.916(b)(3) prior to CMS's initial decision to suspend the physician from the CAP are sufficient. Indeed, a participating CAP physician may be suspended from the CAP only upon CMS approval after: information is collected and analyzed by the carrier on the issue of whether the participating CAP physician has been filing his or her CAP drug administration claims in accordance with the requirements of § 414.908(a)(3), the designated carrier provides numbered findings of fact to CMS, and CMS reviews the carrier's information and gathers relevant additional information from the participating CAP physician. These procedures allow a participating CAP physician to be actively involved in the dispute resolution process prior to CMS's decision to suspend the CAP election agreement. For these reasons, we believe that appropriate initial mechanisms are in place to protect the physician's access to drugs under the CAP.

Furthermore, physicians who are suspended from participation in the CAP and to whom the approved CAP vendor has ceased shipments of CAP drugs are able to obtain drugs and bill for them under the ASP payment system. Thus, these physicians will have continuous access to Part B drugs. Finally, because a participating CAP physician's failure to comply with regulations at § 414.908(a)(2) can negatively affect the approved CAP vendor's ability to receive payment for CAP drugs that it shipped to the physician, we believe that suspending shipment of CAP drugs upon CMS's initial determination of suspension of the CAP physician election agreement appropriately balances the needs of the participating CAP physician and those of the approved CAP vendor. For the foregoing reasons, at this time, we are finalizing our proposal that approved CAP vendors shall not ship CAP drugs to physicians whose participation in the CAP has been suspended after an initial determination by CMS.

I. Provisions Related to Payment for Renal Dialysis Services Furnished by End-Stage Renal Disease (ESRD) Facilities

In the CY 2010 PFS proposed rule (74 FR 33634 through 33639), we outlined the proposed updates to the case-mix adjusted composite rate payment system established under section 1881(b)(12) of the Act, as added by section 623 of the Medicare Modernization Act (MMA), which included updates to the drug add-on component of the composite rate system, as well as the wage index values used to adjust the labor component of

the composite rate. Specifically, as described in more detail below in this section, we proposed the following:

- A zero growth update to the proposed 15.0 add-on adjustment to the composite rates for 2010 required by section 1881(b)(12)(F) of the Act (resulting in a $20.33 per treatment drug add-on amount).
- An update to the wage index adjustment to reflect the latest available wage data, including a revised BN adjustment factor of 1.057888.
- A reduction to the ESRD wage index floor from 0.7000 to 0.6500.

We received few public comments on our proposals. The ESRD payment related comments are discussed in detail below in this section. In addition, as discussed in section II.G.12. of this rule, section 1881(b)(12)(G)(iv) of the Act, as added by section 153(a)(1) of the MIPPA, increases the composite rate by 1.0 percent for ESRD services furnished on or after January 1, 2010. Therefore, the 1.0 percent increases the current composite rate of $133.81 to $135.15 for services furnished on or after January 1, 2010.

1. Update to the Drug Add-on Adjustment to the Composite Rate

Section 1881(b)(12)(B)(ii) of the Act, as added by section 623(d) of the MMA, requires an add-on to the composite rate to account for changes in the drug payment methodology. Section 1881(b)(12)(C) of the Act provides that the drug add-on must reflect the difference in aggregate payments between the revised drug payment methodology for separately billable ESRD drugs and the Average Wholesale Price (AWP) payment methodology. In 2005, we generally paid for ESRD drugs based on average acquisition costs. Thus the difference from AWP pricing was calculated using acquisition costs. However, in 2006 when we moved to Average Sales Price (ASP) pricing for ESRD drugs, we recalculated the difference from AWP pricing using ASP prices.

In addition, section 1881(b)(12)(F) of the Act requires that, beginning in CY 2006, we establish an annual increase to the drug add-on to reflect estimated growth in expenditures for separately billable drugs and biologicals furnished by ESRD facilities. This growth update applies only to the drug add-on portion of the case-mix adjusted payment system. The CY 2009 drug add-on adjustment to the composite rate was 15.2 percent. The drug add-on adjustment for CY 2009 reflected a zero increase. This computation is explained in detail below and in the CY 2009 PFS final rule with comment period (73 FR 69755 through 69757).

a. Estimating Growth in Expenditures for Drugs and Biologicals for CY 2010

Section 1881(b)(12)(F) of the Act specifies that the drug add-on increase must reflect ''the estimated growth in expenditures for drugs and biologicals (including erythropoietin) that are separately billable * * *'' By referring to ''expenditures'', we believe the statute contemplates that the update would account for both increases in drug prices, as well as increases in utilization of those drugs.

In the CY 2007 PFS final rule with comment period (71 FR 69682), we established an interim methodology for annually estimating the growth in ESRD drugs and biological expenditures that used the Producer Price Index (PPI) for pharmaceuticals as a proxy for pricing growth in conjunction with 2 years of ESRD drug data to estimate per patient utilization growth. We indicated that this interim methodology would be used to update the drug add-on to the composite rate until such time that we had sufficient ASP drug expenditure data to project the growth in ESRD drug expenditures.

However, for CY 2008, due to declining ASP prices, we no longer believed that using the PPI as a proxy for pricing growth was appropriate. Accordingly, for CY 2009, we revised the interim methodology for estimating the growth in ESRD drug expenditures by using ASP pricing to estimate the price component of the update calculation. Due to the declining trend in ASP pricing and utilization, we calculated a decrease in the drug add-on adjustment, and applied a zero update to the drug add-on adjustment (73 FR 69755 through 69757).

b. Estimating Growth in Expenditures for Drugs and Biologicals in CY 2010

Since we now have 3 years of drug expenditure data based on ASP pricing, we have reevaluated our methodology for estimating growth in drug expenditures. We believe that 3 years of drug expenditure data based on ASP pricing is sufficient to project drug expenditure growth based on trend analysis. Therefore, for CY 2010, we proposed to use trend analysis from ASP drug expenditure data to update the per treatment drug add-on adjustment (74 FR 33636).

In addition, we proposed to estimate per patient growth in drug expenditures by removing growth in ESRD enrollment from growth in total drug expenditures. To estimate drug expenditure growth using trend analysis, we looked at the average annual growth in total drug expenditures between 2006 and 2008. First we had to estimate the total drug expenditures for all ESRD facilities in CY 2008. For the CY 2010 PFS proposed rule, we used the final CY 2006, the final CY 2007 ESRD claims data, and the latest available CY 2008 ESRD facility claims, updated through December 31, 2008 (that is, claims with dates of service from January 1 through December 31, 2008, that were received, processed, paid, and passed to the National Claims History File as of December 31, 2008). For the CY 2010 PFS proposed rule, we adjusted the December 2008 file to reflect our estimate of what total drug expenditures would be using the final June 30, 2009 bill file for CY 2008 (74 FR 33636). The net adjustment we applied to the CY 2008 claims data was an increase of 11.1 percent to the December 2008 claims file. In this final rule with comment period, we are using additional updated CY 2008 claims with dates of service for the same timeframe. This updated CY 2008 data file will include claims received, processed, paid, and passed to the National Claims History File as of June 30, 2009.

Using the full-year 2008 drug expenditure figure, we calculated the average annual change in drug expenditures from 2006 through 2008. This average annual change showed a decrease of 1.7 percent for this timeframe. We are using this 1.7 percent decrease to project drug expenditures for both 2009 and 2010.

c. Estimating per Patient Growth

Once we determined the projected growth in drug expenditures from 2009 to 2010, we then removed growth in enrollment for the same time period from the expenditure growth, so that the residual reflects per patient expenditure growth (which includes price and utilization combined). We believe that this approach is consistent with section 1881(b)(12)(F) of the Act, which requires us to annually update the drug add-on adjustment. To calculate the per patient growth in drug expenditures between CYs 2009 and 2010, we removed the enrollment component which represents the estimated growth in enrollment between CY 2009 and CY 2010. This was approximately 1.9 percent. To determine the growth in per patient expenditures, we divided the total drug expenditure decrease between 2009 and 2010 of 1.7 percent ($1.000 - 0.017 = 0.983$) by enrollment growth of 1.9 percent (1.019) for the same timeframe. The result is a per patient expenditure growth factor equal to 0.965 ($0.983/1.019 = 0.965$). Thus, we

are projecting a 3.5 percent decrease in per patient growth in drug expenditures between 2009 and 2010 (0.965 = 1.000–0.035).

d. Applying the Growth Update to the Drug Add-On Adjustment

In the CY 2006 PFS final rule (71 FR 69683), we applied the projected growth update percentage to the total amount of drug add-on dollars established for CY 2005 to establish a dollar amount for the CY 2006 growth update. In addition, we projected the growth in dialysis treatments for CY 2006 based on the projected growth in ESRD enrollment. We divided the projected total dollar amount of the CY 2006 growth by the projected growth in total dialysis treatments to develop the per treatment growth update amount. This growth update amount, combined with the CY 2005 per treatment drug add-on amount, resulted in an average drug add-on amount per treatment of $18.88 (or a 14.5 percent adjustment to the composite rate) for CY 2006.

In the CY 2007 PFS final rule with comment period (71 FR 69684), we revised our update methodology by applying the growth update to the per treatment drug add-on amount. That is, for CY 2007, we applied the growth update factor of 4.03 percent to the $18.88 per treatment drug add-on amount for an updated amount of $19.64 per treatment.

In the CY 2008 PFS final rule with comment period (72 FR 66282), we revised our update methodology by applying the growth update to the per treatment drug add-on amount. That is, for CY 2008, we applied the growth update factor of 3.5 percent to the $19.64 per treatment drug add-on amount for an updated amount of $20.33 per treatment.

In the CY 2009 PFS final rule with comment period (73 FR 69755 through 69757), we applied a zero update to the per treatment drug add-on amount which left it at $20.33. As discussed in detail below, for CY 2010, we again will apply a zero update to the per treatment drug add-on amount of $20.33 established in CY 2008.

e. Update to the Drug Add-on Adjustment

As discussed previously in this section, we estimate a 1.7 percent decrease in total drug expenditures between CY 2009 and CY 2010. Growth in per patient drug expenditures is computed by dividing growth in total drug expenditures by growth in enrollment for the same time period. Therefore, to calculate growth in per patient drug expenditures, we remove the enrollment component, which is an estimated increase of 1.9 percent (1.019) from growth in total drug expenditures, which is an estimated decrease of 1.7 percent (1.000 − 1.017 = 0.983). As described above, the removal of the enrollment component from total drug expenditures is computed as follows: 0.983/1.019 = 0.965. Therefore, we are projecting a 3.5 percent decrease in per patient growth of drug expenditures between CY 2009 and CY 2010. However, similar to last year and as indicated above, we are finalizing a zero update to the drug add-on adjustment.

We believe this approach is consistent with the language under section 1881(b)(12)(F) of the Act which states in part that ''the Secretary shall annually increase'' the basic case-mix adjusted payment amounts by an amount determined by applying the estimated growth in expenditures for separately billed ESRD drugs for the drug add-on amount. Our understanding of the statute contemplates ''annually increase'' to mean a positive or zero update to the drug add-on. Therefore, we will apply a zero update to maintain the $20.33 per treatment drug add-on amount for CY 2010. The current $20.33 per treatment drug add-on reflected a 15.2 percent drug add-on adjustment to the composite rate in effect for CY 2009. However, given that the MIPPA mandates a 1 percent increase to the composite rate (effective January 1, 2010), this 1 percent increase results in a decrease in the CY 2009 drug add-on adjustment from 15.2 percent to 15.0 percent to keep the drug add-on amount at $20.33 per treatment.

Comment: Many commenters agreed with our decision to continue to use the ASP+6 percent methodology for separately billable drugs. The commenters indicated that the ASP+6 percent methodology is appropriate since the drugs will be reimbursed at the same amount as they would when furnished in a physician office.

Response: Although we did not propose any changes to reimbursement for separately billiable ESRD drugs and biologicals, we appreciate the commenters' support of our use of the ASP+6 percent methodology.

Comment: The commenters also agreed with our decision to continue with a zero update to the drug add-on adjustment. MedPAC stated that although it recognizes the elimination of the drug add-on payment will occur beginning January 1, 2011, MedPAC believes that the composite payment rate and the drug add-on should be combined because the add-on payment is complex and may not be the most appropriate way to pay for dialysis services

Response: We appreciate the commenter's support that we continue with a zero update to the drug add-on adjustment. As we explained above, we are finalizing our proposal to provide a zero update to the drug add-on adjustment for CY 2010. With regard to MedPAC's suggestions, under the proposed bundled ESRD prospective payment system (PPS) effective in CY 2011, the drug add-on adjustment will be eliminated for ESRD providers and facilities that opt to be paid under the proposed ESRD PPS system beginning in CY 2011 (and not go through the 4-year transition). However, we note that under the proposed ESRD PPS, we will continue to update the drug add-on adjustment during the transition period. For further details regarding the proposed ESRD PPS, please refer to the Medicare End-State Renal Disease Prospective Payment System Proposed Rule (74 FR 50003 to 50005).

f. Update to the Geographic Adjustments to the Composite Rate

Section 1881(b)(12)(D) of the Act, as amended by section 623(d) of the MMA, gives the Secretary the authority to revise the wage indexes previously applied to the ESRD composite rate. The purpose of the wage index is to adjust the composite rates for differing wage levels covering the areas in which ESRD facilities are located. The wage indexes are calculated for each urban and rural area. In the CY 2006 PFS final rule with comment period (70 FR 70167), we announced our adoption of the OMB CBSA-based geographic area designations to develop revised urban/rural definitions and corresponding wage index values for purposes of calculating ESRD composite rates. In addition, we generally have followed wage index policies related to these definitions used under the inpatient hospital prospective payment system (IPPS), but without regard to any approved geographic reclassification authorized under sections 1886(d)(8) and (d)(10) of the Act or other provisions that only apply to hospitals paid under the IPPS (70 FR 70167). For purposes of the ESRD wage index methodology, the hospital wage data we use is pre-classified, pre-floor hospital data and unadjusted for occupational mix.

g. Updates to Core-Based Statistical Area (CBSA) Definitions

In the CY 2006 PFS final rule with comment period (70 FR 70167), we announced our adoption of the OMB's CBSA-based geographic area

designations to develop revised urban/rural definitions and corresponding wage index values for purposes of calculating ESRD composite rates. The CBSA-based geographic area designations are described in OMB Bulletin 03–04, originally issued June 6, 2003, and is available online at *http://www.whitehouse.gov/omb/bulletins/b03-04.html.* In addition, OMB has published subsequent bulletins regarding CBSA changes, including changes in CBSA numbers and titles. We wish to point out that this and all subsequent ESRD rules and notices are considered to incorporate the CBSA changes published in the most recent OMB bulletin that applies to the hospital wage index used to determine the current ESRD wage index. The OMB bulletins may be accessed online at *http://www.whitehouse.gov/omb/bulletins/index.html.*

h. Updated Wage Index Values

In the CY 2007 PFS final rule with comment period (71 FR 69685), we stated that we intended to update the ESRD wage index values annually. The ESRD final wage index values for CY 2010 were developed from FY 2006 wage and employment data obtained from the Medicare hospital cost reports. As we indicated above, the ESRD wage index values are calculated without regard to geographic classifications authorized under sections 1886(d)(8) and (d)(10) of the Act and utilize pre-floor hospital data that is unadjusted for occupational mix. We proposed to use the same methodology for CY 2010, using FY 2006 hospital data to develop the CY 2010 ESRD wage index values. For a detailed description of the development of the CY 2010 wage index values based on FY 2006 hospital data, see the FY 2010 IPPS final rule with comment period (74 FR 43834). Section III.G. of the preamble to the FY 2010 IPPS final rule with comment period, ''Method for Computing the Proposed FY 2010 Unadjusted Wage Index'', describes the cost report schedules, line items, data elements, adjustments, and wage index computations. The wage index data affecting the ESRD composite rate for each urban and rural locale may also be accessed on the CMS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/WIFN/list.asp.* The wage data are located in the section entitled, ''FY 2010 Final Rule Occupational Mix Adjusted and Unadjusted Average Hourly Wage and Pre-reclassified Wage Index by CBSA.''

In the CY 2009 final rule with comment period (73 FR 69758 and 69759), we indicated that CY 2009 was the final year of the transition period and each ESRD facility's composite payment rate would be based entirely on its applicable CBSA-based wage index value.

i. Reduction to the ESRD Wage Index Floor

In the CY 2009 PFS final rule with comment period, we stated our intention to continue to reassess the need for a wage index floor (73 FR 63758). We also stated that a gradual reduction in the floor is needed to support continuing patient access to dialysis in areas that have low wage index values, especially in Puerto Rico where the wage index values are below the current wage index floor. For CY 2010, we proposed to reduce the wage index floor from 0.70 to 0.65. We also anticipate that we may reduce the floor gradually until full implementation of the ESRD PPS required by section 1881(b)(14) of the Act.

Comment: We received comments from commenters in both Puerto Rico and Wheeling, WV–OH CBSA expressing concern about the reduction to the wage index floor.

Response: The majority of facilities located in Puerto Rico have wage indices significantly below the 0.65 floor. The steady reduction in the proposed ESRD wage index floor of 0.65 still remains higher than the actual wage index values which range from 0.3348 to 0.4740 for facilities located in Puerto Rico. Although a reduction in the wage index floor may negatively impact these providers, these facilities still benefit from a 0.65 floor rather than their actual wage index value.

There are 2 facilities located in Wheeling, WV–OH CBSA, which have an actual wage index value of 0.6869 and is above the proposed 0.65 floor, but not significantly below the CY 2009 0.70 floor. We note that the CY 2010 wage index value of 0.6869 for the Wheeling, WV–OH CBSA is prior to application of the wage index BN factor. After application of the wage index BN factor of 1.057735, the wage index value for Wheeling, WV–OH CBSA is 0.7266.

Comment: One commenter noted that the ESRD facilities in the Wheeling WV–OH CBSA have a wage index value that is less than the wage index value for rural WV. The commenter requested that CMS apply the rural floor policy that is applicable under the Hospital IPPS.

Response: Under the ESRD basic case-mix adjusted composite payment system, currently there is no mechanism for allowing providers to seek geographic reclassification. We reviewed the MedPAC's wage index recommendations as discussed in MedPAC's June 2007 report entitled ''Report to Congress: Promoting Greater Efficiency in Medicare.'' We note that MedPAC's June 2007 Report to Congress recommends that the Congress ''repeal the existing hospital wage index statute, including reclassification and exceptions, and give the Secretary authority to establish new wage index systems.'' We believe that adopting the IPPS wage index policies (such as the rural floor) for the ESRD wage index would not be prudent at this time, because MedPAC suggests that the reclassification and exception policies in the IPPS wage index alters the wage index values for one-third of IPPS hospitals. In addition, MedPAC found that the exceptions may lead to anomalies in the wage index. By adopting the IPPS rural floor at this time, the ESRD basic case-mix adjusted composite payment system wage index could become vulnerable to problems similar to those that MedPAC identified in their June 2007 Report to Congress. We will continue to review and consider MedPAC's recommendations on a refined or alternative wage index methodology for the IPPS and how it could potentially apply to the ESRD basic case-mix adjusted composite rate system in future years.

We also note that section 106(b)(2) of the Medicare Improvements and Extension Act (MIEA) of 2006 (which is Division B of the Tax Relief and Health Care Act (TRCHA) of 2006, Pub. L. 109–432, collectively referred to as ''MIEA–TRHCA'') required the Secretary of Health and Human Services, taking into account MedPAC's recommendations on the Medicare wage index classification system, to include in the FY 2009 IPPS proposed rule one or more proposals to revise the wage index adjustment applied under section 1886(d)(3)(E) of the Act for purposes of the IPPS. To assist CMS in meeting the requirements of section 106(b)(2) of MIEA–TRHCA, in February 2008, we awarded a Task Order under its Expedited Research and Demonstration Contract, to Acumen, LLC. Acumen, LLC conducted a study of both the current methodology used to construct the Medicare wage index and the recommendations reported to the Congress by MedPAC. Part One of Acumen's final report, which analyzes the strengths and weaknesses of the data sources used to construct the CMS and MedPAC indexes, is available online at *http://www.acumenllc.com/reports/cms.* MedPAC's recommendations are presented in the FY 2009 IPPS final rule (73 FR 48745). We plan to continue monitoring IPPS wage index research efforts and the impact or influence these

efforts may have for the ESRD basic case-mix adjusted composite payment rate system wage index.

Moreover, in light of all of the pending research and review of wage index issues in general, we believe that it would be premature at this time to adopt the IPPS rural floor policy to the ESRD wage index.

j. Wage Index Values for Areas With No Hospital Data

In CY 2006, while adopting the CBSA designations, we identified a small number of ESRD facilities in both urban and rural geographic areas where there are no hospital wage data from which to calculate ESRD wage index values. The affected areas were rural Puerto Rico, and the urban area of Hinesville, GA (CBSA 25980), and rural Massachusetts. For CY 2006, CY 2007, CY 2008, and CY 2009, we calculated the ESRD wage index values for those areas as follows:

- For the urban area of Hinesville, GA, we calculated the CY 2006 through CY 2009 wage index value based on the average wage index value for all urban areas within the State of Georgia.
- For rural Massachusetts, because we had not determined a reasonable wage proxy, we used the FY 2005 wage index value in CY 2006 and CY 2007. As discussed below, we adopted an alternative methodology for CYs 2008 and 2009.
- For rural Puerto Rico, because all geographic areas in Puerto Rico were subject to the wage index floor in CYs 2006 through 2009, we applied the ESRD wage index floor to rural Puerto Rico as well. We note that there are currently no ESRD facilities located in rural Puerto Rico.

For CY 2008, we adopted an alternative methodology for establishing a wage index value for rural Massachusetts and continued to apply this methodology in CY 2009. Because we used the same wage index value for 2 years with no update, we believed it was appropriate to establish a methodology which employed reasonable proxy data for rural areas (including rural Massachusetts) and also permitted annual updates to the wage index based on that proxy data. For rural areas without hospital wage data, we used the average wage index values from all contiguous CBSAs as a reasonable proxy for that rural area.

In determining the imputed rural wage index, we interpreted the term ''contiguous'' to mean sharing a border. In the case of Massachusetts, the entire rural area consists of Dukes and Nantucket Counties. We determined that the borders of Dukes and Nantucket counties are contiguous with CBSA 12700, Barnstable Town, MA, and CBSA 39300, Providence-New Bedford-Fall River, RI–MA. We proposed to use the same methodology for CY 2010. Under this methodology, the CY 2010 final wage index values for CBSA 12700 (Barnstable Town, MA—1.2618) and CBSA 39300 (Providence-New Bedford-Fall River, RI–MA—1.0782) averages results in an imputed wage index value of 1.1700 for rural Massachusetts in CY 2010.

For rural Puerto Rico, for CY 2010, all areas in Puerto Rico that have a wage index are eligible for the proposed ESRD wage index floor of 0.65. Therefore, we proposed to apply the proposed ESRD wage index floor of 0.65 to facilities that are located in rural Puerto Rico.

For Hinesville-Fort Stewart, GA (CBSA 25980), which is an urban area without specific hospital wage data, we proposed to apply the same methodology used to impute a wage index value that we used in CY 2009. Specifically, we proposed to utilize the average wage index value for all urban areas within the State of Georgia. That would result in a CY 2010 final wage index value of 0.9028 for the Hinesville-Fort Stewart GA CBSA.

We received no comments on our proposals for wage areas with no hospital data. Therefore, we are finalizing our policies for wage areas with no hospital data as proposed.

In the CY 2009 PFS final rule with comment period (73 FR 69759 through 69760), we stated that we would continue to evaluate existing hospital wage data and possibly wage data from other sources such as the Bureau of Labor Statistics, to determine if other methodologies might be appropriate for imputing wage index values for areas without hospital wage data for CY 2010 and subsequent years. To date, no data from other sources, superior to that currently used in connection with the IPPS wage index has emerged. Therefore, for ESRD purposes, we continue to believe this is an appropriate policy.

k. Budget Neutrality Adjustment

Section 1881(b)(12)(E)(i) of the Act, as added by section 623(d) of the MMA, required that any revisions to the ESRD composite rate payment system as a result of the MMA provision (including the geographic adjustment) be made in a budget neutral manner. Given our application of the ESRD wage index, this means that aggregate payments to ESRD facilities in CY 2010 would be the same as aggregate payments that would have been made if we had not made any changes to the geographic adjusters. We note that this BN adjustment only addresses the impact of changes in the geographic adjustments. A separate BN adjustment was developed for the case-mix adjustments required by the MMA. As we did not propose any changes to the case-mix measures for CY 2010, the current case-mix BN adjustment of 0.9116 would remain in effect for CY 2010. As in CY 2009, for CY 2010, we proposed to apply the proposed wage-index BN adjustment factor of 1.057888 directly to the ESRD wage index values. Because the ESRD wage index is only applied to the labor-related portion of the composite rate, we computed the BN adjustment factor based on that proportion (53.711 percent).

To compute the proposed CY 2010 wage index BN adjustment factor (1.057888), we used the FY 2006 pre-floor, pre-reclassified, non-occupational mix-adjusted hospital data to compute the wage index values, 2008 outpatient claims (paid and processed as of December 31, 2008), and geographic location information for each facility which may be found through Dialysis Facility Compare Web page on the CMS Web site at *http://www.cms.hhs.gov/DialysisFacilityCompare/*. The FY 2006 hospital wage index data for each urban and rural locale by CBSA may also be accessed on the CMS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/WIFN/list.asp*. The wage index data are located in the section entitled, ''FY 2010 Final Rule Occupational Mix Adjusted and Unadjusted Average Hourly Wage and Pre-Reclassified Wage Index by CBSA.''

Using treatment counts from the 2008 claims and facility-specific CY 2009 composite rates, we computed the estimated total dollar amount each ESRD provider would have received in CY 2009. The total of these payments became the target amount of expenditures for all ESRD facilities for CY 2010. Next, we computed the estimated dollar amount that would have been paid for the same ESRD facilities using the ESRD wage index for CY 2010. The total of these payments became the new CY 2010 amount of wage-adjusted composite rate expenditures for all ESRD facilities. Section 153(a) of the MIPPA revised section 1881(b)(12)(G) of the Act to provide for an update of 1 percent to the composite rate component of the payment system effective January 1, 2010. We note that when computing the new CY 2010 amount, we did not include this 1 percent increase because the BN adjustment would negate the increase.

After comparing these two dollar amounts (target amount divided by the new CY 2010 amount), we calculated an

adjustment factor that, when multiplied by the applicable CY 2010 ESRD wage index value, would result in aggregate payments to ESRD facilities that would remain within the target amount of composite rate expenditures. When making this calculation, the final ESRD wage index floor value of 0.6500 is applied whenever appropriate. The final wage BN adjustment factor is 1.057735 for CY 2010.

To ensure BN, we also must apply the wage index BN adjustment factor to the wage index floor of 0.6500 which results in an adjusted wage index floor of 0.6875 (0.6500 x 1.057735) for CY 2010.

General Comments

Comment: One commenter supports our proposal to maintain the existing case-mix adjusters and believes it will be important to maintain consistency in the current composite rate by preserving the current case-mix adjustors, given the anticipated shift to a bundled payment system.

Response: As explained earlier in this section, we did not propose any changes to the current basic case-mix composite rate payment system. We have maintained the current basic case-mix adjusters for CY 2010. We have proposed a number of patient-level adjusters in the new bundled ESRD PPS system, which are explained in detail in the ESRD PPS proposed rule (74 FR 49925 and 49926).

l. ESRD Wage Index Tables

The CY 2010 ESRD wage index tables are located in Addenda F and G of this final rule with comment period.

J. Discussion of Chiropractic Services Demonstration

1. Background

Section 651 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) requires the Secretary to conduct a 2-year demonstration to evaluate the feasibility and advisability of expanding coverage for chiropractic services under Medicare. Medicare coverage for chiropractic services is limited to manual manipulation of the spine to correct a subluxation described in section 1861(r)(5) of the Act. The demonstration expanded current Medicare coverage to include ''care for neuromusculoskeletal conditions typical among eligible beneficiaries and diagnostic and other services that a chiropractor is legally authorized to perform by the State or jurisdiction in which such treatment is provided'' and was conducted in four geographically diverse sites, two rural and two urban regions, with each type including a Health Professional Shortage Area (HPSA). The two urban sites were 26 counties in Illinois and Scott County, Iowa, and 17 counties in Virginia. The two rural sites were the States of Maine and New Mexico. The demonstration, which ended on March 31, 2007, was required to be budget neutral as section 651(f)(1)(B) of the MMA mandates the Secretary to ensure that ''the aggregate payments made by the Secretary under the Medicare program do not exceed the amount which the Secretary would have paid under the Medicare program if the demonstration projects under this section were not implemented.''

In the CY 2006, 2007, and 2008 PFS final rules with comment period (70 FR 70266, 71 FR 69707, 72 FR 66325, respectively), we included a discussion of the strategy that would be used to assess BN and the method for adjusting chiropractor fees in the event the demonstration results in costs higher than those that would occur in the absence of the demonstration. We stated BN would be assessed by determining the change in costs based on a pre-post comparison of Medicare costs for beneficiaries in the demonstration and their counterparts in the control groups and the rate of change for specific diagnoses that are treated by chiropractors and physicians in the demonstration sites and control sites. We also stated that our analysis would not be limited to only review of chiropractor claims because the costs of the expanded chiropractor services may have an impact on other Medicare costs. If the demonstration was not budget neutral, we anticipated making reductions in the CY 2010 and CY 2011 physician fee schedules. We indicated that if we determined that the adjustment for BN was greater than 2 percent of spending for the chiropractor fee schedule codes, we would implement the adjustment over a 2-year period. However, if the adjustment was less than 2 percent of spending under the chiropractor fee schedule codes, we would implement the adjustment over a 1-year period.

2. Analysis of Demonstration

Brandeis University, the demonstration evaluator, used two approaches in examining BN. The ''All Neuromusculoskeletal Analysis (NMS)'' reflects an intent-to-treat approach whereby the utilization of all beneficiaries who received any Medicare covered services for neuromusculoskeletal conditions in the demonstration areas was examined. This method is potentially subject to large external forces because of its inclusion of all beneficiaries including those who did not use chiropractic services and who would not become users of chiropractic services, even with expanded coverage for them. Therefore, a second analysis, termed the ''Chiropractic User Analysis'' was conducted to examine only the subset of beneficiaries who used chiropractic services for the treatment of their neuromusculoskeletal conditions. Both approaches use hierarchical linear modeling of costs over 3 years—1 year prior to the demonstration and the 2 years of the demonstration. We posted a report describing these analyses on CMS Web site at *http://www.cms.hhs.gov/reports/downloads/MMA651_BudgetNeutrality.pdf.*

The results of both analyses indicate that the demonstration was not budget neutral. In the ''All NMS Analysis,'' which compared the Medicare costs associated with NMS conditions for *all* beneficiaries in the demonstration areas with those of beneficiaries with similar characteristics from similar geographic areas that did not participate in the demonstration, the total effect of the demonstration to Medicare was $114 million. In the ''Chiropractic User Analysis,'' which compared the Medicare costs associated with NMS conditions for beneficiaries who used expanded chiropractic services in the demonstration areas, with those of beneficiaries with similar characteristics who used chiropractic services as currently covered by Medicare to treat a neuromusculoskeletal condition from similar geographic areas that did not participate in the demonstration, the total effect of the demonstration to Medicare was $50 million.

Both approaches to assessing BN have strengths and limitations. The ''All NMS Analysis'' provides the broadest view of the Medicare population that would have been eligible for the demonstration's expanded coverage of chiropractic services. Its inclusion of all beneficiaries with neuromusculoskeletal conditions guards against validity threats of selection. However, this approach creates a large heterogeneous group which may only include a small proportion of chiropractic service users. Basing estimates of BN on such a large heterogeneous group increases the potential for changes in the use of services seldom affected by chiropractors to be falsely attributed to the demonstration, which could result in the costs of the demonstration to appear larger than actual.

Consistent with the CY 2010 PFS proposed rule (74 FR 33520, 33639 through 33640), for this final rule with comment period, we continue to believe

that the BN estimate should be based on the ''Chiropractic User Analysis'' because of its focus on users of chiropractic services rather than all Medicare beneficiaries with neuromusculoskeletal conditions, including those who did not use chiropractic services and who would not have become users of chiropractic services even with expanded coverage for them. Users of chiropractic services are most likely to have been affected by the expanded coverage provided by this demonstration. Cost increases and offsets, such as reductions in hospitalizations or other types of ambulatory care, are more likely to be observed in this group. Therefore, as proposed, we are adjusting the Medicare PFS for all chiropractors using the estimate provided in the ''Chiropractic User Analysis.''

The CMS Office of the Actuary (OACT) estimates chiropractic expenditures in CY 2010 to be approximately $487 million based on actual Medicare spending for chiropractic services for the most recent available year. Because the costs of this demonstration were higher than expected and we did not anticipate a reduction to the PFS of greater than 2 percent per year, we are finalizing our proposal (74 FR 33639 through 33640) to recoup the $50 million in expenditures from this demonstration over a 5-year period rather than over a 2-year period. As proposed, we are recouping $10 million each year through adjustments to the PFS for chiropractic codes in calendar years 2010 through 2014. This approach reflects a change from our BN discussion in the CY 2006, 2007, and 2008 PFS rules, which was described previously in this section. In those rules, we had proposed that if the adjustment for BN was greater than 2 percent of spending for the chiropractor fee schedule codes, the adjustment would be implemented over a 2-year period. Under this final rule, we are recouping costs by reducing payment under the PFS for chiropractic fee codes by $10 million each year starting CY 2010 through CY 2014. We note that in the proposed rule, we proposed a 2 percent reduction in the chiropractic fee codes in order to achieve the $10 million yearly recoupment. We note that 2 percent was an approximation. Because of rounding, the $10 million recoupment in each of CYs 2010 through 2014 will amount to approximately a 2 percent reduction since the reduction in the chiropractic fee codes may be slightly higher or lower than 2 percent, depending on OACT's estimate of chiropractic expenditures for that calendar year. In order to reflect this fact, we are refining the language in this final rule to indicate that the chiropractic fee codes will be reduced by approximately 2 percent for CYs 2010 through 2014. Additionally, we believe that spreading this adjustment over a longer period of time will minimize its potential negative impact on chiropractic practices.

3. Payment Adjustment

To implement the required BN adjustment, as was proposed (74 FR 33640), we are reducing the payment amount under the PFS for the chiropractic CPT codes (that is, CPT codes 98940, 98941, and 98942). As explained previously, we are finalizing our plans to recoup $10 million each year through adjustments to chiropractic CPT codes for calendar years 2010 through 2014. In order to achieve the $10 million recoupment during such years, payment under the PFS for these codes will be reduced by approximately 2 percent. As stated in prior PFS rules, application of the BN adjustment would be specific to these three codes which represent the ''chiropractic fee schedule'' because they are the only chiropractic codes recognized under the PFS. This methodology also appropriately impacts the chiropractic profession that is directly affected by the demonstration. Consistent with the proposed rule, for this final rule with comment period, we are reflecting this reduction only in the payment files used by the Medicare contractors to process Medicare claims rather than through adjusting the RVUs. Avoiding an adjustment to the RVUs would preserve the integrity of the PFS, particularly since many private payers also base payment on the RVUs. The RVUs published in Addendum B and posted on our Web site will not show this reduction but will be annotated to state that the reduction resulting from the chiropractic demonstration is not reflected in the RVUs.

We received the following comments regarding the methodology used to evaluate BN in the chiropractic services demonstration.

Comment: Instead of the application of an adjustment to the national chiropractor fee schedule, the commenter believes the Congressional intent was for CMS to make an adjustment to the totality of services payable under the Part B Trust Fund because of the language in section 651(f)(A) of the MMA, which directs the Secretary to ''provide for the transfer from the Federal Supplementary Insurance Trust Fund * * * of such funds as are necessary for the costs of carrying out the demonstration projects under this section.''

Response: We disagree that the intent of section 651 of the MMA requires the application of a BN adjustment to the totality of services payable under the Part B Trust Fund. Specifically, section 651(f)(1)(B) of the MMA requires the Secretary to ''ensure that the aggregate payments made by the Secretary under the medicare program do not exceed the amount which the Secretary would have paid under the medicare program if the demonstration projects under this section were not implemented.'' This statutory provision does not specify a particular methodology for ensuring BN, but leaves that decision to the Secretary. Additionally, section 651(f)(1)(A) of the MMA, in pertinent part, provides that ''the Secretary shall provide for the transfer from the Federal Supplementary Insurance Trust Fund * * * of such funds as are necessary for the costs of carrying out the demonstration projects under this section.'' This provision merely indicates that payment for the demonstration is to be made from Part B Trust Fund dollars. Section 651(f)(1)(A) of the MMA does not specify in any manner the methodology by which the Secretary is to ensure BN. Consequently, we do not believe it is a mandate requiring the application of an adjustment to the totality of services payable under the Part B Trust Fund.

Comment: The commenter states that more information is necessary to fully understand the findings provided by the evaluator, Brandeis University. The commenter noted that the increase in costs from the demonstration was completely due to the Illinois site, and not the other sites, and that it is ''premature to use demonstration findings to estimate the cost of a national roll out * * * without further investigation of why the Chicago area is such an outlier.'' The commenter also asks how the increase in costs for all neuromusculoskeletal conditions could be causally related to the demonstration project.

Response: Regardless of the differences in the demonstration areas, the evaluation conducted by Brandeis University found that expanding coverage for chiropractic services under the demonstration resulted in increased Medicare expenditures, and the Secretary must recoup these costs in order to meet the BN requirement of the law. The decision to recoup funds is related to the results of the demonstration and the requirement in the law and not to the discussion in the

evaluation report of the costs of a national expansion of coverage.

With respect to the comment questioning how the increase in costs for all NMS conditions could be causally related to the demonstration, we are unsure of what the commenter is asking. If the commenter is asking if Medicare costs associated with all neuromusculoskeletal conditions were used in the evaluation, the response is no, only costs for specific NMS diagnoses that can be treated by chiropractors were included in the evaluation. If the commenter is asking for the rationale for the ''All NMS'' analysis, the response is that this analysis provides a broader view of all of the beneficiaries who would have been eligible for the expanded coverage under the demonstration. This analysis includes beneficiaries with the appropriate neuromusculoskeletal conditions who could have been treated by either a chiropractic physician or other medical physician. The intent-to-treat approach of the ''All NMS'' analysis guards against selection threats to validity. As mentioned previously in this section, we did not base the BN estimate on the ''All NMS'' analysis because it included Medicare beneficiaries who did not use chiropractic services and who would not have become users of chiropractic services even with expanded coverage for them.

K. Comprehensive Outpatient Rehabilitation Facilities (CORF) and Rehabilitation Agency Issues

A Comprehensive Outpatient Rehabilitation Facility (CORF) is a Medicare provider that furnishes respiratory therapy services among other services. In § 485.70, we set forth the personnel qualifications that must be satisfied by a CORF as a condition of participation under § 485.58 and as a condition of coverage of CORF services, including personnel qualifications for respiratory therapists providing CORF respiratory therapy services.

In the CY 2009 PFS proposed rule (73 FR 38502) and subsequent final rule with comment period (73 FR 69942), we revised the definition of a respiratory therapist under § 485.70(j). The change in the definition of respiratory therapist was intended to ensure accuracy in reference to persons who are qualified to perform respiratory therapy and to ensure that language regarding these professionals is consistent with current industry requirements for education, training, and practice.

Prior to its modification by the CY 2009 PFS final rule with comment period, § 485.70(j) reflected the qualifications for Certified Respiratory Therapists (CRTs)'' and ''Registered Respiratory Therapists (RRTs)'' as terms commonly used by the professional industry to identify persons furnishing respiratory therapy services.

Since publication of the CY 2009 PFS final rule with comment, we have been informed by the industry that the changes made in the definition of respiratory therapist exclude a category of professional that has completed the requirements of a CRT, has completed a nationally accredited educational program that confers eligibility for the National Board for Respiratory Care (NBRC) registry exam for respiratory therapists (RTs), and is eligible to sit for the national registry examination administered by the NBRC, but has not yet passed the examination. These persons are referred to in the industry as CRTs.

Because it is our policy that Medicare payment is available for respiratory services provided to Medicare beneficiaries in a CORF only if provided by a respiratory therapist meeting the qualifications set forth in § 485.70(j), payment is not available for respiratory services provided by CRTs in the CORF setting. We note that personnel qualifications for respiratory therapists previously set forth at § 485.70(j) prior to its modification by the CY 2009 PFS final rule with comment period did not exclude this category of personnel from the definition of respiratory therapist. We have also heard from CRTs and from CORFs that this change has limited the availability of respiratory therapy services to Medicare beneficiaries in certified CORFs, as many of these services are provided by CRTs. Thus, in modifying the definition of respiratory therapist in the CY 2009 PFS final rule with comment period, we may have inadvertently impacted access to respiratory therapy services for some Medicare beneficiaries.

Thus, we proposed to modify the definition of respiratory therapist and to clarify the terms that are used to identify those persons who furnish respiratory services in CORFs in § 485.70(j) to include CRTs, that is those individuals who have completed a nationally accredited educational program for respiratory therapists and are eligible to sit for the national registry examination administered by the National Board for Respiratory Care (NBRC), but who have not yet passed the examination. The change in the definition we proposed would permit CRTs to furnish respiratory therapy services to Medicare beneficiaries in the CORF setting.

As proposed, our intent was to assure that persons who were qualified to furnish respiratory therapy services to patients in CORFs prior to the finalization of CY 2009 PFS final rule with comment period (73 FR 69942), will continue to qualify to furnish RT services to CORF patients under this proposed rule.

We solicited public comment on the proposed change to § 485.70(j). We also solicited comments from the industry regarding the difference in services furnished by the different levels of professionals who provide RT services in CORFs.

The following is summary of the comments we received regarding the discussion of the proposed changes to § 485.70(j).

Comment: Commenters expressed strong support for the regulatory changes that we proposed, specifically the clarification of the professional qualifications for respiratory therapists (RTs) in the CORFs setting.

Response: We appreciate support for this regulatory change as we believe it is in the best interest of Medicare and Medicaid beneficiaries. As a result of the comments, we are finalizing these regulatory requirements as proposed.

L. Ambulance Fee Schedule: Technical Correction to the Rural Adjustment Factor Regulations (§ 414.610)

Section 1834(l)(9) of the Act provides that for ''ground ambulance services furnished on or after July 1, 2001, and before January 1, 2004, for which transportation originates in a rural area * * * or in a rural census tract of a metropolitan statistical area * * * the fee schedule established under this subsection shall provide that, with respect to the payment rate for mileage for a trip above 17 miles, and up to 50 miles, the rate otherwise established shall be increased by not less than ½ of the additional payment per mile established for the first 17 miles of such a trip originating in a rural area.'' Thus, the statute authorized a rural mileage bonus for miles 18 through 50 for ground ambulance services furnished on or after July 1, 2001 and prior to January 1, 2004. This provision was implemented in § 414.610(c)(5)(i), but the regulation text does not currently specify the statutory time period during which this rural mileage bonus was effective. In the ''Medicare Program; Coverage and Payment of Ambulance Services; Inflation Update for CY 2004'' final rule with comment period (68 FR 67960, 67961), we acknowledged that we inadvertently omitted from the regulation text the time period during which this statutory adjustment was

applicable, and stated we were ''revising § 414.610(c) to reflect that this bonus payment applies only for services furnished during the statutory period.'' Thus, in the ''Medicare Program; Coverage and Payment of Ambulance Services; Inflation Update for CY 2004'' final rule with comment period, we revised the regulation to include the time period during which the adjustment is applicable (68 FR 67963). However, the revised language specifying the statutory time period was dropped inadvertently from the regulation text when § 414.610(c)(5) was later republished in the ''Medicare Program; Medicare Ambulance MMA Temporary Rate Increases Beginning July 1, 2004'' interim final rule (69 FR 40288, 40292).

In this final rule with comment period, we are finalizing our proposal to reinstate the language that was originally finalized in ''Medicare Program; Coverage and Payment of Ambulance Services; Inflation Update for CY 2004'' final rule with comment period (68 FR 67963), but then inadvertently omitted again when § 414.610(c)(5) was later republished, so that § 414.610(c)(5)(i) correctly sets forth the statutory time period during which this rural mileage bonus was applicable. This revision to the regulation is a technical correction to conform the regulation to the statute. For further information, see program instruction, Transmittal AB–03–110; Date August 1, 2003; Change Request 2767 which was issued to inform contractors to discontinue paying such bonuses effective January 1, 2004 in accordance with the statute.

M. Clinical Laboratory Fee Schedule: Signature on Requisition

In the March 10, 2000 **Federal Register**, we published the ''Medicare Program; Negotiated Rulemaking: Coverage and Administrative Policies for Clinical Diagnostic Laboratory Services'' proposed rule (65 FR 13082) announcing and soliciting comments on the results of our negotiated rulemaking committee tasked to establish national coverage and administrative policies for clinical diagnostic laboratory tests under Part B of Medicare. In our final rule published in the November 23, 2001 **Federal Register** (66 FR 58788), we explained our policy on ordering clinical diagnostic laboratory services and amended § 410.32 to make our policy more explicit. Our regulation at § 410.32(a) included the requirement that ''[a]ll diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests must be ordered by the physician who is treating the beneficiary.'' In the November 23, 2001 final rule, we added paragraph (d)(2) to § 410.32 to require that the physician or qualified nonphysician practitioner (NPP) (that is, clinical nurse specialists, clinical psychologists, clinical social workers, nurse-midwives, nurse practitioners (NPs), and physician assistants (PAs)) who orders the service must maintain documentation of medical necessity in the beneficiary's medical record (66 FR 58809). In the preamble discussions to the March 10, 2000 proposed rule and November 23, 2001 final rule (65 FR 13089 and 66 FR 58802, respectively), we noted that ''[w]hile the signature of a physician on a requisition is one way of documenting that the treating physician ordered the test, it is not the only permissible way of documenting that the test has been ordered.'' In those preambles, we described the policy of not requiring physician signatures on requisitions for clinical diagnostic laboratory tests, but implicitly left in place the existing requirements for a written order to be signed by the ordering physician or NPP for clinical diagnostic laboratory tests, as well as other types of diagnostic tests. We further stated in the preambles of the proposed and final rules that we would publish an instruction to Medicare contractors clarifying that the signature of the ordering physician is not required for Medicare purposes on a requisition for a clinical diagnostic laboratory test (65 FR 13089 and 66 FR 58802).

On March 5, 2002, we published a program transmittal implementing the administrative policies set forth in the final rule, including the following instruction: ''Medicare does not require the signature of the ordering physician on a laboratory service requisition. While the signature of a physician on a requisition is one way of documenting that the treating physician ordered the service, it is not the only permissible way of documenting that the service has been ordered. For example, the physician may document the ordering of specific services in the patient's medical record.'' (Transmittal AB–02–030, Change Request 1998, dated March 5, 2002).

On January 24, 2003, we published a program transmittal in order to manualize the March 5, 2002 Transmittal. (Transmittal 1787, Change Request 2410, dated January 24, 2003). The cover note to the transmittal states, ''Section 15021, Ordering Diagnostic Tests, manualizes Transmittal AB–02–030, dated March 5, 2002. In accordance with negotiated rulemaking for outpatient clinical diagnostic laboratory services, no signature is required for the ordering of such services or for physician pathology services.'' In the manual instructions in that transmittal in a note, we stated: ''No signature is required on orders for clinical diagnostic services paid on the basis of the physician fee schedule or for physician pathology services.'' The manual instructions did not explicitly reference clinical diagnostic laboratory tests as the cover note did. Rather, the transmittal seemed to extend the policy set forth in the **Federal Register** (that no signature is required on requisitions for clinical diagnostic laboratory tests paid under the Clinical Laboratory Fee Schedule) to also apply to clinical diagnostic tests paid on the basis of the PFS and physician pathology services. In addition, the manual instructions used the term ''order'' instead of ''requisition,'' which some members of the industry have asserted caused confusion.

When we transitioned from paper manuals to the current electronic Internet Only Manual system, these manual instructions were inadvertently omitted from the new Benefit Policy Manual (BPM).

In August 2008, we issued a program transmittal (Transmittal 94, Change Request 6100, dated August 29, 2008) to update the BPM to incorporate language that was previously contained in section 15021 of the Medicare Carriers Manual. The reissued language states, ''No signature is required on orders for clinical diagnostic tests paid on the basis of the clinical laboratory fee schedule, the physician fee schedule, or for physician pathology services.'' Based on further review, we have determined that there are no clinical diagnostic laboratory tests paid under the PFS. After Transmittal 94 was published, we received numerous inquiries from laboratory, diagnostic testing, and hospital representatives who had questions about whether the provision applied to all diagnostic services, including x-rays, MRIs, and other nonclinical laboratory fee schedule diagnostic services.

To resolve any existing confusion surrounding the implementation of the policy in 2001 and subsequent transmittals, we restated and solicited public comments on our policy in the CY 2010 PFS proposed rule (74 FR 33641). Our current policy is that a physician's signature is not required on a requisition for clinical diagnostic laboratory tests paid on the basis of the Clinical Laboratory Fee Schedule (CLFS); however, it must be evident, in accordance with our regulations at § 410.32(d)(2) and (3), that the physician ordered the services. The policy that

signatures are not required on requisitions applies to requisitions for clinical diagnostic laboratory tests paid under the CLFS.

We note that we solicited and received comments on this signature requirement during the notice and comment period for the March 10, 2000 proposed rule in the context of our proposal to add paragraph (d)(2)(i) to § 410.32 to require that the practitioner who orders a diagnostic laboratory test must maintain documentation of medical necessity in the beneficiary's medical record. The majority of comments supported the adoption of a policy that the signature of the practitioner on a requisition for a clinical diagnostic laboratory test paid under the CLFS is not the only way of documenting that the test has been ordered and, thus, should not be required provided such documentation exists in an alternate form.

This policy regarding requisitions for clinical diagnostic laboratory tests does not supersede other applicable Medicare requirements (such as those related to hospital Conditions of Participation (CoPs)) which require the medical record to include an order signed by the physician who is treating the beneficiary. Nor do we believe that anything in our policy regarding signatures on requisitions for clinical diagnostic lab tests supersedes other requirements mandated by professional standards of practice or obligations regarding orders and medical records promulgated by Medicare, the Joint Commission, or State law; nor do we believe the policy would require providers to change their business practices.

We also restated and solicited public comment on our long-standing policy consistent with the principle in § 410.32(a) that a written order for diagnostic tests including those paid under the CLFS and those that are not paid under the CLFS (for example, that are paid under the PFS or under the OPPS), such as X-rays, MRIs, and the TC of physician pathology services, must be signed by the ordering physician or NPP. That is, the policy that signatures are not required on requisitions for clinical diagnostic laboratory tests paid based on the CLFS applies only to requisitions (as opposed to written orders) (74 FR 33642).

Additionally, we solicited public comments about the distinction between an order and a requisition (74 FR 33642). We note that an ''order'' as defined in our IOM, 100–02, Chapter 15, Section 80.6.1, is a communication from the treating physician/practitioner requesting that a diagnostic test be performed for a beneficiary. The order may conditionally request an additional diagnostic test for a particular beneficiary if the result of the initial diagnostic test ordered yields to a certain value determined by the treating physician/practitioner (for example, if test X is negative, then perform test Y). An order may be delivered via the following forms of communication:

- A written document signed by the treating physician/practitioner, which is hand-delivered, mailed, or faxed to the testing facility.
- A telephone call by the treating physician/practitioner or his or her office to the testing facility; or
- An electronic mail, or other electronic means, by the treating physician/practitioner or his or her office to the testing facility.

If the order is communicated via telephone, both the treating physician/practitioner, or his or her office, and the testing facility must document the telephone call in their respective copies of the beneficiary's medical records.

In the proposed rule (74 FR 33642), we defined a ''requisition'' as the actual paperwork, such as a form, which is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. It may contain patient information, ordering physician information, referring institution information, information about where to send reports, billing information, specimen information, shipping addresses for specimens or tissue samples, and checkboxes for test selection. We believe it is ministerial in nature, assisting labs with billing and handling of results, and serves as an administrative convenience to providers and patients. We believe that a written order, which may be part of the medical record, and the requisition are two different documents, although a requisition that is signed may serve as an order. We welcomed comments from the public about the distinction between requisitions and orders.

The following is summary of the comments we received regarding the discussion of the physician signature on requisitions issue.

Comment: We received several comments concerning the fact that a diagnostic test, such as an x-ray, continues to require the signature of the ordering physician or NPP on the written order whether or not the diagnostic test is paid under the CLFS.

Response: We are appreciative that the general public recognized a clear distinction in the proposed rule between clinical diagnostic laboratory tests paid under the CLFS and diagnostic tests that may also be paid under the PFS or OPPS. The discussion in the proposed and final rules this year concerns our current policy that a physician's signature is not required on a requisition for clinical diagnostic laboratory tests paid on the basis of the CLFS. This policy was the result of Negotiated Rulemaking and was outlined in proposed and final rules published during 2000 and 2001, respectively (65 FR 13089 and 66 FR 58790, 58801, and 58802). This policy does not include diagnostic tests such as x-rays.

Comment: One commenter was supportive of both policies on which we solicited comments. Specifically, this commenter supported our policy that a written order for diagnostic tests (including those paid under the CLFS and those that are not paid under the CLFS) must be signed by the ordering physician or NPP. The commenter further stated that the request for a diagnostic test represents part of the physician's plan for the patient, which is part of the patient's medical record. As such, when the request is in writing, a physician signature would be appropriate and likely easily generated. The commenter also supported our policy that a physician's signature is not required on a requisition for clinical diagnostic laboratory tests paid on the basis of the CLFS. The commenter stated that, to the extent a requisition is simply a paper mechanism for transmitting an order and more administrative in nature, it is less likely to be generated or handled by the physician. Thus, to require a physician's signature on a requisition for clinical diagnostic laboratory tests paid on the basis of the CLFS would be an added and unnecessary burden on physicians.

Response: We appreciate the commenter's support of our policies and the commenter's input on these issues.

Comment: Several commenters suggested that we should not require a physician's signature on a medical request, whether that request be an order or a requisition, for any type of test, paid under the CLFS or not, within or outside the hospital setting.

Response: To do as commenters suggest would be a departure from long-standing Medicare policy requiring the physician's signature on written orders in other settings. This procedure serves to document that the physician or NPP ordered the test and documented the medical necessity of the test. The exception of not requiring a physician's signature on the requisition for a clinical diagnostic laboratory test paid under the CLFS only is very narrow and does not include other types of tests paid in other types of settings.

Comment: Several commenters raised concerns about issues relating to electronic medical records. Specifically, commenters were concerned whether or not an electronic signature would be acceptable and had questions about what constitutes a medical record in a paperless environment. One commenter stated that, generally, electronic systems that are used to request laboratory testing can be used by physicians with authorized access only and that as a result, a physician's signature should not be expected or required.

Response: We appreciate the commenters' concerns about these issues. CMS is in the process of developing guidelines concerning electronic records and electronic signatures for use in CMS programs. These guidelines will be finalized at a later date. The general public will be kept apprised of our progress on this issue through future official issuances.

Comment: One commenter urged us to establish a ''rule of reason'' with regard to what is required to be in the medical record, while two other commenters provided detailed suggestions on how to improve our manual language in this regard. These commenters were concerned about the fact that physicians sometimes make shorthand notes or indicate that there was an office visit only without further details in the medical record concerning the specific laboratory tests that are ordered.

Response: We believe that, whenever a physician orders services, including laboratory tests, for a patient in order to assist in diagnosing or treating the patient's conditions, the ordering of those services should be documented in the patient's medical record. Nonetheless, we do appreciate the commenters' concerns about the scope of the medical record and efforts to make detailed suggestions about how to improve the direction provided in our manuals. We will carefully consider these issues and if we decide that further clarification is warranted, will issue such clarification.

Comment: Several commenters were concerned that, while documentation to support an unsigned requisition would be required to be maintained in the medical record, employees at the clinical diagnostic laboratory do not have access to the medical record to verify whether or not this documentation exists. Commenters stated that, once a laboratory receives an order or requisition, it is obligated to perform the test as quickly as possible because it is in the best interest of the Medicare beneficiary, regardless of whether or not a physician signature is present. Commenters also raised the issue of fragility of the specimen and that it is essential to complete testing as soon as possible before the specimen begins to degrade. Commenters were concerned about being obligated to ensure that orders maintained in the physician's office were signed prior to being able to perform the test in the laboratory. The commenters do not believe that this obligation is fair to them or the Medicare patient as access to essential information could be delayed or compromised. Conversely, another commenter recommended that, in addition to the affirmation by the physician in the medical record that the laboratory test had been ordered, the laboratory should be required to close the loop and provide documentation that the test had been performed for inclusion in the medical record as well.

Response: We recognize that, without the physician's signature on the requisition, some clinical diagnostic laboratories believe it is burdensome to verify that the request for services is valid. However, our regulations at § 410.32(d)(2)(iii) provide the entity submitting the claim (that is, the clinical diagnostic laboratory) with the option to request additional diagnostic and other medical information to document that the services it bills are reasonable and necessary.

Comment: Several commenters believe that the signature issue is burdensome because multiple physician services can be requested on the same form, and, in such cases, one service might require the physician's signature while another might not. For example, it is possible that both the Technical Component (TC) of physician pathology services and clinical laboratory services may appear on the same requisition and that it would be confusing to have one set of requirements for clinical diagnostic laboratory tests and a different set of requirements for physician pathology services. Physicians may not know whether a particular laboratory or pathology test is paid under the CLFS or the PFS. The commenters suggested that we further clarify our policy to address this particular issue. We received a number of comments specifically requesting that we develop a single policy for all outpatient laboratory services, without distinction for those paid under the CLFS or the PFS.

Response: We appreciate the commenters' concerns. We will examine options for creating a fair and consistent policy regarding signatures that will address situational needs.

Comment: Several commenters stated that we needed to draw a clearer distinction between a requisition and an order, as they did not understand the difference between them. Commenters also suggested that, as medical records move to an electronic format, this distinction becomes more difficult to describe.

Response: We agree with the commenters' interest in having clear and concise distinctions between ''requisition'' and ''order'' especially as we move toward electronic means of record keeping and communication. We asked for comments about how to define a requisition, and we did receive some helpful suggestions. At this time, we are not addressing the specific comments on the distinction between orders and requisitions. We will continue to develop clearer direction on this issue, taking into consideration the suggestions submitted by commenters.

Comment: One commenter was concerned that physicians are signing stacks of laboratory requisition forms in advance of their use, or using a pre-signed hand stamp to make a requisition form official. The commenter stated that we did not draw a distinction between requisitions signed in advance and requisitions signed at the point of service for a specific purpose in the presence of the patient.

Response: We appreciate that the commenter brought these real world procedures to our attention. We will review this issue and consider it in the future as we consider all the issues that were brought to our attention through the proposed rulemaking effort this year.

Comment: We received several comments concerning the date of service (DOS) rule in reference to performing clinical diagnostic laboratory tests on stored specimens which were collected from the patient during the time that he/she was an inpatient at a hospital.

Response: We thank the commenters for their concerns on this issue. However, since we have not proposed any changes to the DOS rule at this time, we will not be addressing this comment in this final rule as these comments are outside the scope of our proposals for CY 2010.

In light of the issues and concerns raised during the comment period, and our desire to create policy that will address the concerns in a meaningful, clear, and thoughtful way, we will continue to carefully consider the issues of physician signatures on requisitions and orders. We plan to revisit these issues in the future paying particular attention to the definition of order and requisition.

N. Physician Self-Referral

1. General Background

Section 1877 of the Act, also known as the physician self-referral law, prohibits the following: (1) a physician from making referrals for certain designated health services (''DHS'') payable by Medicare to an entity with which he or she (or an immediate family member) has a direct or indirect financial relationship (an ownership/investment interest or a compensation arrangement), unless an exception applies; and (2) the entity from presenting or causing a claim to be presented to Medicare (or billing another individual, entity, or third party payor) for those referred services. The statute establishes a number of exceptions and grants the Secretary the authority to create regulatory exceptions for financial relationships that pose no risk of program or patient abuse.

In the proposed rule, we proposed to clarify § 411.354(c)(3)(i) regarding the application of certain exceptions to arrangements in which a physician stands in the shoes of his or her physician organization. In section II.N.2. of this final rule with comment period, we respond to public comments on this proposal and finalize it without change.

In the FY 2009 IPPS final rule (73 FR 48721), we revised the definition of ''entity'' to include any person or entity that has ''performed services that are billed as DHS.'' In section II.N.3 of this final rule with comment period, we solicit comments regarding whether we should issue further guidance on what constitutes performing services billed as DHS and if so, the nature or content of such guidance.

2. Physician Stand in the Shoes

Determining whether an entity furnishing DHS and a physician have a direct or indirect compensation arrangement is a key step in applying the statute because it affects which compensation exceptions may apply to the arrangement. Section 411.354(c) governs when a physician ''stands in the shoes'' of his or her physician organization and may therefore, depending on the circumstances, have a direct, rather than an indirect, compensation arrangement with an entity furnishing DHS.

Our proposal (74 FR 33643) sought to clarify one aspect of the physician stand in the shoes provisions at § 411.354(c). Specifically, we proposed to clarify the second sentence of § 411.354(c)(3)(i) to provide that, ''[w]hen applying the exceptions in § 411.355 and § 411.357 of this part to arrangements in which a physician stands in the shoes of his or her physician organization, the relevant referrals and other business generated 'between the parties' are referrals and other business generated between the entity furnishing DHS and the physician organization (including all members, employees, and independent contractor physicians).''

Section 411.354(c)(3)(i) addresses the application of the general exceptions to the referral prohibition related to both ownership/investment and compensation (§ 411.355) and the exceptions to the referral prohibition related to compensation arrangements (§ 411.357), to arrangements in which a physician stands in the shoes of his or her physician organization. Many of these exceptions require the arrangement to be in writing and signed by the parties and prohibit the compensation from taking into account the volume or value of referrals or other business generated by the referring physician.

Under § 411.354(c)(3)(i), a physician who stands in the shoes of his or her physician organization is deemed to have the same compensation arrangements with the same parties and on the same terms as the physician organization. The second sentence of § 411.354(c)(3)(i) provides that ''[f]or purposes of applying the exceptions in § 411.355 and § 411.357 to arrangements in which a physician stands in the shoes of his or her physician organization, the 'parties' to the arrangements are considered to be the entity furnishing DHS and the physician organization (including all members, employees, or independent contractor physicians).''

After the publication of Phase III, some members of the industry questioned whether the second sentence of § 411.354(c)(3)(i) defined the term ''parties'' everywhere it appears in the physician self-referral regulations, including the requirement in many exceptions that a compensation arrangement be in writing and ''signed by the parties.'' Consequently, these members believed it was necessary for everyone within a physician organization (that is, all members, employees, and independent contractor physicians) to sign a myriad of different arrangements with an entity furnishing DHS. This was not our intent. In January 2008, we posted a frequently asked question (FAQ) on our Web site to explain that ''we consider a physician who is standing in the shoes of his or her physician organization to have signed the written agreement when the authorized signatory of the physician organization has signed the agreement.'' After the FY 2009 IPPS final rule, under which only physician owners are deemed to stand in the shoes of their physician organizations, some industry representatives questioned whether physicians who did *not* stand in the shoes remained ''parties'' under § 411.354(c)(3)(i) and, would therefore, need to become signatories to any compensation arrangement that was required to be in writing and ''signed by the parties.''

We proposed to clarify the second sentence of § 411.354(c)(3)(i) to provide that, ''[w]hen applying the exceptions in § 411.355 and § 411.357 of this part to arrangements in which a physician stands in the shoes of his or her physician organization, the relevant referrals and other business generated 'between the parties' are referrals and other business generated between the entity furnishing DHS and the physician organization (including all members, employees, and independent contractor physicians).''

Our proposed change clarifies that we are not defining the term ''parties'' and should eliminate any possible public misconception that all physicians in a physician organization (whether or not they stand in the shoes of the physician organization) must sign the writing(s) memorializing a compensation arrangement between their physician organization and an entity furnishing DHS. Furthermore, we note that some members of the industry have erroneously applied the second sentence of § 411.354(c)(3)(i) by analyzing whether the compensation takes into account the referrals between the entity furnishing DHS and the physician who stands in the shoes of the physician organization *only,* not the referrals of all members, employees, and independent contractor physicians in the physician organization. The revised regulation reiterates that the relevant referrals and other business generated between the physician organization and the entity furnishing DHS are the referrals of all physicians in the physician organization (including all members, employees, and independent contractors), not simply the referrals made by each physician who stands in the shoes of the physician organization.

We solicited public comments regarding our proposal and alternative approaches to address this issue. We received five public comments that related to our proposal which supported our proposal. After consideration of the public comments received, we are adopting our proposal unchanged. We are revising the second sentence of § 411.354(c)(3)(i) to provide that, ''[w]hen applying the exceptions in § 411.355 and § 411.357 of this part to arrangements in which a physician

stands in the shoes of his or her physician organization, the relevant referrals and other business generated 'between the parties' are referrals and other business generated between the entity furnishing DHS and the physician organization (including all members, employees, and independent contractor physicians).'' We believe the finalized language clarifies the regulation text and is consistent with our intent to minimize the potential for abuse without imposing undue burden on the provider community. We address below the specific comments that we received in response to our proposal in the CY 2010 proposed rule.

Comment: The commenters supported the clarification to the physician stand in the shoes provision. Several commenters appreciated that we clarified that not all physicians in a physician organization must sign documents memorializing a compensation arrangement between their organization and a DHS entity. One commenter stated that it is beneficial to consider a physician to have signed the written agreement if the agreement is signed by the organization's authorized signatory.

Response: The commenters' responses supported the approach we took in the proposed rule. Thus, as stated above, we are revising § 411.354(c)(3)(i) to state that when applying the exceptions in § 411.355 and § 411.357 to arrangements in which a physician stands in the shoes of his or her physician organization, the relevant referrals and other business generated ''between the parties'' are referrals and other business generated between the entity furnishing DHS and the physician organization (including all members, employees, and independent contractor physicians). With regards to deeming a physician to have signed the written agreement, our revision of the regulation text to avoid the appearance of defining the word ''parties,'' eliminates the need to consider any particular physician to have signed an agreement that he or she did not actually sign.

3. Services Provided ''Under Arrangements'' (Services Performed by an Entity Other Than the Entity That Submits the Claim): Solicitation of Comments

Under section 1877(a)(1)(A) of the Act, if a physician (or an immediate family member) has a financial relationship with an ''entity,'' it may not make a referral to the entity for the ''furnishing'' of DHS, unless the financial relationship meets an exception. In the Phase I final rule, we defined the term ''entity'' at § 411.351 and specified that ''a person or entity is considered to be furnishing DHS if it is the person or entity to which [Medicare] makes payment.'' Thus, under the Phase I rule, only the person or entity that billed Medicare for the DHS was considered the DHS ''entity,'' and not the person or entity that actually performed the DHS (where that person or entity was not the person or entity billing for it) (66 FR 953). In the CY 2008 PFS proposed rule (72 FR 38186 through 38187, 38219, and 38224), we expressed concern that the Phase I definition of ''entity'' might permit certain abusive agreements for services provided under arrangements with hospitals and other providers. Based upon our concerns about overutilization, corruption of medical judgment and other abuse, we proposed to revise the definition of ''entity'' at § 411.351 to include ''the person or entity that has performed the DHS''.

In the FY 2009 IPPS final rule (73 FR 48434 and 48729), we stated our belief that, in some instances, hospitals would prefer to furnish services directly but have been concerned about losing referral streams if they compete with physician service providers. Very few comments submitted by hospitals objected to our proposed revision to the definition of entity, and, instead, two major hospital associations were generally supportive of it. Some physician commenters asserted that hospitals are risk averse to bringing services to communities. We questioned whether physicians are less risk averse because they can control the referral stream. We stated that hospitals may be more concerned about risk because they fear that referrals will go to their competitors if they do not enter into contractual arrangements with physician groups. Finally, we stated that ''our proposal as finalized will create a more level playing field between hospitals and physicians and also among hospital competitors.''

In that rule, we finalized the proposal by amending the definition of entity at § 411.351 to specify that an entity furnishing DHS includes the person or entity that has presented a claim to Medicare for the DHS as well as any person or entity that has ''performed services that are billed as DHS,'' notwithstanding that another person or entity actually billed the services as DHS.

Commenters to the proposed rule expressed concern regarding the potential ambiguity of the meaning of ''performs.'' We declined to provide a specific definition of ''performed services that are billed as DHS,'' but stated the following in response to one of the commenters:

> By way of example only, we consider a service to have been ''performed'' by a physician or physician organization if the physician or physician organization does the medical work for the service and could bill for the service, but the physician or physician organization has contracted with the hospital and the hospital bills for the service instead * * *. We do not consider an entity that leases or sells space or equipment used for the performance of the service, *or* furnishes supplies that are not separately billable but used in the performance of the medical service, *or* that provides management, billing services, *or* personnel to the entity performing the service, to perform DHS. (73 FR 48726, emphasis added).

We delayed the effective date of the amendment to the definition of ''entity'' until October 1, 2009, in order to afford parties an adequate time to restructure arrangements (73 FR 48723).

We assume that health care providers have restructured their arrangements to come into compliance with the new rule by the October 1, 2009 effective date. We have received numerous inquiries regarding whether we plan to issue additional guidance on the revised definition of entity, including the meaning of ''performed services that are billed as DHS.'' We continue to believe that the changes set forth in the FY 2009 IPPS final rule effectuated our intent to minimize overutilization and anti-competitive behavior and, as such, we decline to issue a specific proposal concerning the definition of entity at this time. In order to keep abreast of the views of industry stakeholders, we are soliciting comments to determine if further guidance is necessary and, if so, what clarification(s) may be beneficial to the industry in interpreting and applying the changes finalized in the FY 2009 IPPS final rule. Therefore, we are interested in receiving comments on the following:

- Whether we should define or clarify ''performed services that are billed as DHS,'' and, if so, how.
- Whether ''performed services that are billed as DHS'' should be analyzed in the same manner for inpatient and outpatient services provided under arrangements.
- Whether performance of a service billed as DHS should be determined based on how many of the following elements are provided: (1) Lease of space used for performance of the service; (2) lease of equipment used for the performance of the service; (3) supplies that are not separately billable but used in the performance of the service; (4) management services; (5) billing services, and (6) nonphysician services that are not separately billable.

If so, whether certain of these elements should be weighed more heavily than others in determining whether DHS are performed.

• Whether an interpretation of ''medical work'' was relied upon in restructuring arrangements and, if so, how.

• The degree to which the amount and nature of services provided by physician and nonphysician personnel (for example, technicians) should influence the determination of whether a person or organization has performed services billed as DHS.

• The degree to which the ability to bill separately for the service should influence the determination regarding whether a person or organization has ''performed services that are billed as DHS.''

• Whether there are other comments or alternative approaches or criteria that would address our policy concerns about overutilization and other abuse while minimizing the impact on legitimate non-abusive arrangements.

We welcome any information concerning how the industry interpreted and applied the definition of entity and how under arrangement agreements may have been restructured in order to comply with the new definition of entity at § 411.351.

O. Durable Medical Equipment-Related Issues

1. Damages to Suppliers Awarded a Contract Under the Acquisition of Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (Medicare DMEPOS Competitive Bidding Program) Caused by the Delay of the Program

Section 1847 of the Act, as amended by section 302(b)(1) of the MMA, requires the Secretary to establish and implement a Medicare Durable Medical Equipment, Prosthetics, Orthotics, and Supplies Competitive Bidding Program (DMEPOS CBP). On July 15, 2008, the MIPPA was enacted. Section 154 of the MIPPA amended section 1847 of the Act to make certain limited changes to the competitive bidding program, including adding a new subsection (a)(1)(D) to section 1847 of the Act. Section 1847(a)(1)(D) terminates retroactively the competitive bidding contracts that were awarded to suppliers in 2008 for the Round 1 of competitive bidding and prohibits payment based on such contracts. Section 154 of the MIPPA effectively reinstated payment for competitively bid items and services to the Medicare fee schedule amounts, as set forth in section 1834 of the Act and 42 CFR part 414, subpart D of our regulations.

Section 1847(a)(1)(D)(i)(I) of the Act, as amended by the MIPPA, stipulates that to the extent any damages may be applicable as a result of the termination of contracts, payment is to be made from the Federal Supplementary Medical Insurance Trust Fund under section 1841 of the Act. Section 1847(a)(1)(D) of the Act also states that nothing in section 1847(a)(1)(D)(i)(I) of the Act, which includes the reference to damages, shall be construed to provide an independent cause of action or right to administrative or judicial review with the regard to the termination of the Round 1 contracts.

For further discussion of the Competitive Bidding Program and the bid evaluation process, see the Medicare Program; Competitive Acquisition for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) and Other Issues final rule published in the April 10, 2007 **Federal Register** (72 FR 17992) and the Medicare Program; Changes to the Competitive Acquisition of Certain Durable Medical Equipment, Prosthetics, Orthotics and Supplies (DMEPOS) by Certain Provisions of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) interim final rule with comment period (IFC) published on January 16, 2009 **Federal Register** (74 FR 2873).

We proposed to add new § 414.425 to establish a process to evaluate any claims for damages caused by the termination of contracts awarded in early 2008 under the DMEPOS CBP that were terminated as a result of section 154(a)(1)(A)(iv) of the MIPPA.

We offered contracts in March 2008 to selected suppliers for the first round of the DMEPOS CBP. The contracts that were accepted were terminated by the MIPPA retroactive to June 30, 2008. We considered the terms of the contracts and other processes of the DMEPOS CBP as we developed this proposed process to determine, on a case-by-case basis, whether to award damages and, where applicable, the amount of damages to be awarded for the termination of these contracts.

When considering whether to submit a claim for damages, suppliers may consider the following factors:

• Each contract stipulated that the contract is subject to any changes to the statute or regulations that affect the Medicare program.

• Each contract indicated CMS does not guarantee any amount of business or profits.

• Each contract stipulated that CMS shall not pay for any expenses incurred by the supplier for the work performed under the contract other than for payment of Medicare claims authorized under the contract.

• Upon termination of the contracts by the MIPPA, payments reverted to the CY 2008 fee schedule amount, which was on average 26 percent higher than payment amounts under the DMEPOS CBP.

• We will review a supplier's estimated and historic capacity and any expansion plans that were submitted as part of a supplier's bid.

• We will review a supplier's action to meet its obligation to mitigate its damages.

• We listed the winning suppliers on the Medicare.gov Web site in the supplier locator tool; a supplier is allowed to keep any new customers they may have obtained because of being listed on the supplier locator tool.

• This list is not intended to suggest that there are not legitimate claims for damages. However, these are factors that a supplier may consider when deciding whether to submit a claim for damages.

The proposed provisions outline the information that suppliers would need to provide when submitting claims for damages and the process that we would follow to review these claims. The information we proposed to collect from suppliers is necessary for us to make a reasonable decision on whether damages are warranted and how much in damages should be awarded. We believe that the process is not overly burdensome to those suppliers choosing to participate in this review process and would ensure a thorough review of a supplier's claim for damages.

We proposed the following process to file a claim for damage claims:

a. Eligibility To File a Claim

Any aggrieved supplier that was awarded a contract in March 2008 for the Round 1 DMEPOS CBP and believes it has suffered damages is eligible to submit a claim. The supplier must be able to demonstrate how its company was damaged. These damages must be substantiated and be as a direct result of the termination by MIPPA of their Round 1 DMEPOS CBP contract. Only a contract supplier, and not a subcontractor of a contract supplier, is eligible to submit a claim for damages.

Comment: One commenter stated that although CMS has no direct obligation to subcontractors, CMS should allow contract suppliers to include in their claims the damages incurred by their subcontractors.

Response: We disagree with the commenter's statement that we should consider the damages incurred by

subcontractors because the contract is between CMS and the contract supplier. We believe the extent of our obligation should only consider damages realized by the contract supplier. However, should a contract supplier realize damages due to their arrangement with a subcontractor those damages may be included if they are directly attributable to the Round 1 terminations. We do not believe that the language of MIPPA extends beyond the original contract arrangements between CMS and contract suppliers, as required by the MMA.

After consideration of the public comments we received, we are not making any changes to the proposed process for awarding damages for contracts terminated under the MIPPA.

b. Timeframes for Filing a Claim

A completed claim, including all documentation described below in section II.O.1.c., must be filed within 90 days of January 1, 2010, which is the effective date of these damages provisions, unless the 90th day is a weekend or Federal holiday. In that case, the last date to file a claim will be the day following the weekend or Federal holiday. The date of filing is the actual date of receipt by the Competitive Bidding Implementation Contractor (CBIC) of a completed claim from the supplier that includes all of the information required by this rule. We strongly urge claimants to use a tracking method such as with the United States Postal Service or a carrier that requires a return receipt that indicates the date on which the claim was delivered.

We did not receive any comments on this section of the proposed process for awarding damages for contracts terminated under the MIPPA. Therefore, we are finalizing these provisions as proposed with a minor change by adding the effective date of these damages provisions.

c. Information That Must Be Included in a Claim

At a minimum, a claim should include all of the following:

- Supplier's name and bidding number.
- Supplier's current contact information (Name of authorized official, U.S. Post Office mailing address, phone number and e-mail address).
- A copy of the DMEPOS CBP Round 1 contract(s) the supplier signed with CMS.
- A detailed explanation of the damages incurred by the supplier. The explanation must document the supplier's damages through receipts and records that establish the claimant's damages directly related to meeting the terms of the DMEPOS CBP Round 1 contract.
- The supplier must also explain how it would be damaged if not reimbursed.
- A detailed explanation of the steps of all attempts to use for other purposes, return, or dispose of equipment or other assets purchased or rented for use in the Round 1 DMEPOS CBP contract performance.

Damages claimed must be specifically related to carrying out the terms of the contract, and may include, but are not limited to, the following:

- Items or equipment purchased or rented and dates of such rental or purchases.
- Additional employee costs.
- Additional inventory costs.
- Additional facility costs.

The supplier must include a separate justification for any of these items for which it is claiming damages and explain how they were necessary to meet the deadline of July 14, 2008 of the Round 1 DMEPOS CBP contract. This does not include expenses that would have occurred if the supplier had not been awarded a contract but only those expenses that were incurred for the Round 1 DMEPOS CBP contract performance. The claim must also detail steps taken by the supplier to mitigate damages that they may have incurred due to the contract termination.

In addition, we are not considering claims for expenses incurred prior to March 20, 2008, including the purchase or rental of items or equipment before that date, because a supplier would not have known that it was going to be offered a contract. We are not considering claims for most expenses incurred after July 14, 2008, including the purchase or rental of items or equipment, because this is the date on which MIPPA terminated all of the Round 1 contracts. The only exception to this requirement would be for expenses incurred to mitigate damages associated with the termination of the Round 1 contracts.

Comment: One commenter suggested that CMS should not exclude costs incurred prior to March 20, 2008 and after July 14, 2008.

Response: We disagree with the commenter. We first notified suppliers on March 20, 2008, that they were being offered a contract. We are not considering claims for expenses incurred prior to March 20, 2008, because a supplier would not have known that it was going to be offered a contract before that date. We are also not considering claims for most expenses incurred after July 14, 2008, including the purchase or rental of items or equipment, because this is the date on which MIPPA terminated all of the Round 1 contracts.

Comment: One commenter suggested that CMS should include costs incurred in preparing or submitting a claim for damages.

Response: We disagree with the commenter. Any damages awarded under this contract only include costs incurred in carrying out the terms of the contract. The cost of submitting a claim for damages is not a cost that is incurred in carrying out the terms of the contract. Suppliers must weigh the cost of filing a claim for damages against damages they believe they incurred.

Comment: One commenter suggested that CMS should include consulting and legal expenses required to submit a bid in the competitive bidding program.

Response: We disagree. Suppliers could have incurred these costs even if they were not awarded a contract. The MIPPA provision pertains to damages that were the result of the termination of the contract and not the cost of applying for the contract. This does not include expenses that would have occurred if the supplier had not been awarded a contract but only those expenses that were incurred for the Round 1 DMEPOS CBP contract performance. Damages claimed must be specifically related to carrying out the terms of the contract.

Comment: One commenter suggested that CMS should allow suppliers to amend a claim deemed incomplete by the CBIC.

Response: We disagree with the commenter. The proposed rule describes what constitutes, at a minimum, a complete claim. While all claims for damages will be considered, there is certain minimum information that has to be submitted with the claim in order for the claim to be processed. Without this information we will not be able to process the claim. We believe that 90 days is sufficient time for the supplier to submit a completed claim. This provides an equal amount of time for all suppliers filing a claim for damages to submit their claim.

Comment: One commenter suggested that CMS should not exclude from damages ''costs that the supplier has recouped by any means''.

Response: We disagree with the commenter. We believe that all parties to a contract are obligated to take action to mitigate any damages and to describe the steps they have taken to meet this obligation. For example, if a supplier purchases inventory to carry out the terms of the contract and later uses this inventory for other Medicare

beneficiaries, in effect the Medicare program would be charged twice for the same item, if it were to include these costs in an award for damages. Each supplier has an obligation to mitigate, as far as possible, damages associated with the termination of its Round 1 contract(s).

After consideration of the public comments we received, we are not making any changes to this section of the proposed process for awarding damages for contracts terminated under the MIPPA.

e. Filing a Claim

Suppliers should submit claims, with all supporting documentation, with the CMS CBIC at the following address: CBIC; Bldg 200, Suite 400; 2743 Perimeter Parkway; Augusta, Georgia 30909. The authorized official for the supplier must certify the accuracy of the information on the claim and all supporting documentation. The authorized official is appointed by the supplier and has the legal authority granted by the supplier to submit the claim for damages. This person may be the supplier's general partner, chairman of the board, chief financial officer, chief executive officer, president, direct owner of the supplier organization, or must hold a position of similar status and authority within the supplier's organization. The CBIC will not accept electronic submissions of claims for damages.

Comment: Several commenters recommended that CMS allow suppliers who are dissatisfied with CMS' decision to obtain an independent administrative review of the determination for damages under this process.

Response: We disagree with the commenter. The statute does not provide for review of such determinations. Section 1847(a)(1)(D) of the Act, as amended by section 154(a)(1)of MIPPA does not provide for administrative or judicial review of the Determining Authority's decision. Section 1847(a)(1) of the Act, as revised by section 154(a) of the MIPPA, terminated the contracts that were awarded under the competitive acquisition program, and provided that such termination and award of damages should not be construed to provide an independent cause of action or right to administrative or judicial review. Therefore, the Determining Authority's final decision is not subject to administrative or judicial review.

Comment: One commenter recommended that CMS should identify who within CMS will be tasked with the reviews and the standards that will apply to requests for claims.

Response: We will utilize the necessary resources within the agency to make these decisions. We will be utilizing the expertise from various components within CMS, such as the Office of Acquisition and Grants Management, Office of Financial Management and the Office of the General Counsel in the Department of HHS as necessary. An Agency official who is a senior executive and who has responsibility for the competitive bidding program will be designated as the Determining Authority.

After consideration of the public comments, we are not making any changes to this section of the proposed process for awarding damages for contracts terminated under the MIPPA.

f. Review of Claim

(1) Role of the CBIC

The CBIC will conduct the first level of review and make recommendations to CMS, hereafter referred to as the Determining Authority regarding:

- Whether the claim is complete and was filed in a timely manner. The CBIC may seek further information from the claimant when making its recommendation. The CBIC may set a deadline for receipt of additional information.
- When the claim is incomplete or was not filed in a timely manner, the CBIC will make a recommendation to the Determining Authority not to process the claim further.
- Whether the government owes damages because of the MIPPA. The CBIC will include an explanation supporting its recommendation. The CBIC will recommend a reasonable amount of damages, if any, based on the claim submitted, including all accompanying documentation. The CBIC will consider the language of the contract, as well as both costs incurred and the contract supplier's attempts and actions to limit the damages.

(2) CMS' Role as the Determining Authority

CMS is the Determining Authority because we are responsible for the final review and final determination regarding claims for damages.

- The Determining Authority shall review the recommendation of the CBIC.
- The Determining Authority may seek further information from the claimant or the CBIC in making a concurrence or non-concurrence determination.
- The Determining Authority may set a deadline for receipt of additional information. A claimant's failure to respond timely may result in a denial of the claim.
- If the Determining Authority concurs with the CBIC recommendation, the Determining Authority shall submit a final signed decision to the CBIC and direct the CBIC to notify the claimant of the determination and the reasons for the final determination.
- If the Determining Authority nonconcurs with the CBIC recommendation, the Determining Authority may:

+ Write a determination granting (in whole or in part) a claim for damages or denying a claim in its entirety; or direct the CBIC to write said determination for the Determining Authority's signature.

+ Return the claim to the CBIC with further instructions.

- The Determining Authority's determination is final and binding; it is not subject to administrative or judicial review under section 1847(a)(1)(D) of the Act, as amended by section 154(a)(1) of the MIPPA.

Comment: Several commenters suggested that an additional step be included to permit affected suppliers to cure technical and other deficiencies in their claim.

Response: We do not agree with the commenters. Claimants are required to submit a complete claim in a timely manner. CMS stated in the rule that either the CBIC or CMS as the Determining Authority may seek further information from the claimant concerning the claim. This does not mean that claimants will have an opportunity to provide additional information after the deadline for filing has ended, unless requested to do so by the CBIC or CMS.

After consideration of the public comments, we are not making any changes to this section of the proposed process for awarding damages for contracts terminated under the MIPPA.

g. Timeframe for Final Determinations

Every effort will be made to make a final determination within 120 days of initial receipt of the claim for damages by the CBIC or the receipt of additional information that was requested by the CBIC, whichever is later. In the case of more complex cases, or in the event of a large workload, a decision will be issued as soon as practicable.

We did not receive any comments on this section of the proposed process for awarding damages for contracts terminated under the MIPPA. Therefore, we are finalizing the provisions as proposed.

h. Notification to Claimant of Damage Determination

The CBIC shall mail the final determination to the claimant by

certified mail return receipt requested. If CMS determines that money is due to a claimant, this notification will indicate when and how the money will be transmitted. If a monetary award is due, the supplier will be required to provide banking information for electronic deposit.

We did not receive any comments on this section of the proposed process for awarding damages for contracts terminated under the MIPPA. Therefore, we are finalizing these provisions as proposed.

We are finalizing the provisions concerning damages as proposed in the CY 2010 PFS proposed rule (74 FR 33644).

2. Notification to Beneficiaries for Suppliers Regarding Grandfathering

Section 1847(a)(4) of the Act requires that in the case of covered durable medical equipment (DME) items for which payment is made on a rental basis under section 1834(a) of the Act, and in the case of oxygen for which payment is made under section 1834(a)(5) of the Act, the Secretary shall establish a ''grandfathering'' process under which rented DME items that were furnished prior to the start of the Competitive Bidding Program (CBP) may be continued to be rented to the beneficiary by a noncontract supplier. Agreements for those covered items and supplies that were rented by the supplier to the beneficiary before the start of a CBP may be continued, regardless of whether the existing supplier participates in the CBP.

In the April 10, 2007 final rule (72 FR 17992), in § 414.408(j), we established the grandfathering process described below for rented DME and oxygen and oxygen equipment when these items are included under the Medicare DMEPOS CBP. A supplier that is furnishing DME or is furnishing oxygen or oxygen equipment on a rental basis to a beneficiary prior to the implementation of a CBP in the competitive bidding area (CBA) where the beneficiary maintains a permanent residence may elect to continue furnishing the item as a grandfathered supplier. This process only applies to suppliers that began furnishing the competitive bid items described above before the start of the CBP to beneficiaries who maintain a permanent residence in a CBA.

In the case of the rented DME and oxygen and oxygen equipment identified in this section, we established in § 414.408(j)(4) that Medicare beneficiaries have the choice of deciding whether they would like to continue receiving the rented item from a grandfathered supplier or if they would like to receive the item from a contract supplier.

Suppliers that agree to be a grandfathered supplier for an item must agree to be a grandfathered supplier for all current beneficiaries who request to continue to rent that item from them. The beneficiary's decision to use a grandfathered supplier depends on the decision of the noncontract supplier that is currently renting the competitive bidding item to continue renting the item as a grandfathered supplier after the start of the CBP in accordance with the terms we have specified. The payment rules for grandfathered suppliers are specified in existing § 414.408(j)(2).

In addition, the beneficiary may elect, at any time, to transition from a noncontract supplier to a contract supplier. The contract supplier would be required to accept the beneficiary as a customer regardless of how many rental months had already been paid for the beneficiary to receive this item. If the grandfathered supplier is not willing to continue furnishing the item, a beneficiary must select a contract supplier to furnish the item in order to receive Medicare payment for that item. The grandfathered supplier is paid based on the payment rules outlined in the final rule on Competitive Bidding at § 414.408(j).

As a result of what we learned from Round 1 of the CBP, we proposed changes to the ''grandfathering'' rules by establishing notification requirements for noncontract suppliers that are furnishing rented DME competitive bid items at the time of implementation of the CBP in the CBA in which the beneficiary resides. We also proposed a new definition for a grandfathered item to include all rented item(s) in a competitive bidding product category that a supplier currently provides to its beneficiaries. Under the current regulation, suppliers may choose the items within a product category for which they want to become a grandfathered supplier.

As proposed, a noncontract supplier would have to choose to be either a grandfathered supplier for all or for none of the rented DME items within a product category that the supplier currently provides.

For further discussion of the CBP and the bid evaluation process, see the April 10, 2007 final rule and the January 16, 2009 interim final rule with comment period.

We proposed to revise the definition of ''grandfathered item'' in § 414.402 so that the term would refer to all rented items within a competitive bid product category that the supplier currently rents to beneficiaries. In addition, we proposed to redesignate the current § 414.408(j)(5) as § 414.408(j)(7) and add new § 414.408(j)(5) and (j)(6). The new § 414.408(j)(5) and (j)(6) will specify the notification requirements that apply to noncontract suppliers that are renting DME competitive bid items in a CBA at the time of implementation of the CBP.

a. Definition of a Grandfathered Item

We proposed to revise the definition of a ''grandfathered item'' in § 414.402 to avoid confusion, on the part of beneficiaries, regarding rented DME items for which a noncontract supplier is willing or not willing to be a grandfathered supplier. Under the current regulations, a supplier may make separate choices regarding grandfathering for each individual HCPCS code. For example, a supplier may choose to be a grandfathered supplier for a particular type of walker within the product category instead of all of the walkers included in that product category that are furnished on rental basis.

Under the revised definition, a noncontract supplier would have to choose to be either a grandfathered supplier for all or for none of the DME rented items within a product category that the supplier currently provides. We believe that it would be easier for beneficiaries to recognize which items a supplier is grandfathering or not grandfathering if the supplier's election concerning grandfathering was made by product category rather than making separate choices for each individual HCPCS code. In addition, this proposed revision would prevent suppliers from choosing to be a grandfathered supplier for only the more profitable items, which could disadvantage certain beneficiaries.

Comment: One commenter stated that CMS should allow noncontract suppliers to furnish and bill for supplies, such as CPAP masks, for ''capped'' rental equipment, as well as, supplies for rental equipment that they have chosen to grandfather.

Response: Section 1847(a)(4) of the Act only refers to DME items for which payment is made on a rental basis under section 1834(a) of the Act. Therefore, grandfathering can only apply to those items and necessary accessories and supplies provided during the rental period. Once the rental period ends additional accessories and supplies must be provided by the contract supplier.

Comment: Several commenters suggested that CMS should expand the grandfathering provisions to all

products including diabetic testing supplies subject to the CBP.

Response: Section 1847(a)(4) of the Act only refers to DME items for which payment is made on a rental basis under section 1834(a) of the Act. Therefore, we cannot extend grandfathering provisions to items that are not DME or not paid on a rental basis.

After consideration of the public comments we received, we are not making any changes to this section of the proposed rule.

b. Notification of Beneficiaries and CMS by Suppliers That Choose To Become Grandfathered Suppliers

We proposed to add a new § 414.408(j)(5)to require suppliers furnishing items to be included in a CBP that are eligible for grandfathering to notify beneficiaries in the CBA and CMS regarding their decision whether to become grandfathered suppliers.

The notification requirements we proposed will prohibit certain inappropriate practices of noncontract suppliers. These inappropriate practices include: (1) suppliers attempting to receive additional monthly rental payments from Medicare by circumventing the grandfathering requirements; and (2) suppliers not formally notifying beneficiaries before picking up the rented item from the beneficiary's home. We also proposed to require a notification process to protect beneficiaries and to ensure less confusion during the transition period prior to implementation of the CBP. The proposed requirements will help ensure that beneficiaries are contacted and informed about the grandfathering process and what choices they have concerning their choice of supplier. Moreover, the notice will help to ensure that beneficiaries do not have medically necessary DME equipment taken from them unexpectedly by a noncontract supplier.

(1) Notification of Beneficiaries by Suppliers That Choose To Become Grandfathered Suppliers

We proposed to add § 414.408(j)(5)(i) which requires a noncontract supplier that elects to become a grandfathered supplier in a CBA to provide a written notification to each Medicare beneficiary in that CBA who is currently renting a grandfathered item from that supplier. The notification must state that the supplier is willing to continue to rent the grandfathered item(s) to the beneficiary as a grandfathered supplier. The notice must identify the DME grandfathered rented items for which the supplier will be a grandfathered supplier.

To ensure that beneficiaries are sufficiently informed and prepared for competitive bidding changes that affect rented DME, we proposed in § 414.408(j)(5) to require that the notification of the beneficiary must meet the following requirements. The notification must:

- Be sent by the supplier to the beneficiary at least 30 business days before the start date of the implementation of the CBP in the CBA in which the beneficiary resides. The 30-day notice is necessary to give the beneficiary sufficient time before the start of the CBP to consider whether to continue to use their current supplier. Suppliers will be given sufficient time to meet the 30-day notification requirement.
- Identify the grandfathered items that the supplier is willing to continue to rent to the beneficiary.
- Be in writing (for example, by letter or postcard) and the supplier must maintain proof of delivery.
- State that the supplier is offering to continue to furnish certain rented DME, oxygen and oxygen equipment, and supplies that the supplier is currently furnishing to the beneficiary (that is, before the start of the CBP) and is willing to continue to provide these items to the beneficiary for the remaining rental months.
- State that the beneficiary has the choice to continue to receive a grandfathered item(s) from the grandfathered supplier or may elect to receive the item(s) from a contract supplier after the end of the last month for which a rental payment is made to the noncontract supplier.
- Provide the supplier's telephone number and instruct the beneficiaries to call the supplier with questions regarding grandfathering and to notify the supplier of his or her election.
- State that the beneficiary can obtain information about the CBP by calling 1–800–MEDICARE or accessing *http://www.medicare.gov* on the internet.

In § 414.408(j)(i)(B), we proposed that the supplier should obtain an election from the beneficiary and maintain a record of its attempts to communicate with the beneficiary to obtain the beneficiary's election regarding grandfathering. We also proposed that the supplier maintain a record of the beneficiary's choice, the date on which the choice was made, and how the beneficiary communicated his or her choice to the supplier. The 30-day notice to the beneficiary must be in writing to ensure that there is a record that the notification was made.

Comment: One commenter stated there may be difficulty contacting the beneficiary within the 30-business day requirement.

Response: We disagree. The suppliers should have an ongoing relationship with beneficiaries and be aware of how to contact them. In addition, suppliers are responsible for keeping themselves informed about the CBP and the notification requirements. When a supplier begins providing rented items to a beneficiary just prior to the start of the CBP and there are less than 30 days remaining before the start of the CBP, the supplier is required to provide the 30-day notification to the beneficiary at the time the supplier agrees to provide the items to the beneficiary. If the supplier decides not to be a grandfathered the supplier would still be required to provide the 10-day and 2-day notifications prior to picking up the equipment.

Comment: One commenter recommended that the supplier send out the initial notification letter to the beneficiary notifying them of the grandfathering option. The commenter also suggested that the beneficiary should not be required to take any additional steps if they would like to continue with their current supplier. The beneficiary would only be required to provide their current supplier with documentation if they wish to make a change to an alternate supplier.

Response: Beneficiaries are responsible for notifying their current supplier of their decision. We believe that this is the only way to ensure that the beneficiary has made an informed decision. The supplier must obtain an election from the beneficiary and document this in their records; however, this may be a verbal election.

Comment: Another commenter stated that CMS should limit the notification by noncontract supplier to a 30-day notice as to whether they will be a grandfathered supplier.

Response: We believe the notification process as outlined in the proposed rule is a necessary beneficiary protection to ensure that beneficiaries do not have medically necessary equipment taken from them unexpectedly by a noncontract supplier.

Comment: One commenter stated the notice should include information for the beneficiary on how to contact the supplier to notify them as to their decision.

Response: We agree. The proposed rule states it is a requirement to provide a 30-day written notification that should include the supplier's telephone number and instructions for the beneficiary to call the supplier to notify them of his or her election and provide the opportunity for them to ask any

questions they may have regarding grandfathering.

Comment: One commenter recommended that the two suppliers should then be required to coordinate the pickup and delivery of equipment.

Response: We agree. The proposed rule states when a beneficiary chooses to switch to a new contract supplier, the current noncontract supplier, and the new contract supplier are responsible for making arrangements that are suitable to the beneficiary.

Comment: One commenter stated that multiple notification requirements impose a burden on suppliers who have lost competitive bids and will have little or no incentive to comply with these requirements.

Response: We disagree. The noncontract supplier has been paid for furnishing the equipment up to the first anniversary date after the start of the CBP. Therefore, they have already received compensation for this time period. In addition, the suppliers should have an ongoing relationship with the beneficiary, be aware of how to contact them, and know about any changes in their circumstances. We believe the notification process is necessary to protect the beneficiaries.

Comment: Another commenter believes that CMS has underestimated the paperwork burden requiring the beneficiary sign another document and for suppliers to track that documentation.

Response: There is no requirement for the beneficiary to sign an additional document. The supplier must obtain an election from the beneficiary; however, this may be a verbal election. We also believe suppliers should have an ongoing relationship with the beneficiaries for which they are providing items and services and billing Medicare. We do not believe this is an additional paperwork burden but rather good business practices.

After consideration of the public comments, we are finalizing this section of the proposed rule as proposed.

We proposed to add paragraphs § 414.408(j)(5)(i)(C)(*1*) through (*3*) which state if the beneficiary chooses not to continue to receive a grandfathered item(s) from the noncontract supplier, the supplier must provide the beneficiary with 2 additional notices prior to picking up its equipment. These notices are described below as the 10-Day Notification and the 2-Day Notification.

(i) 10-Day Notification

Ten business days prior to picking up the item, the supplier should have direct contact (for example, a phone call) with the beneficiary or the beneficiary's caregiver and receive acknowledgement that the beneficiary understands their equipment will be picked up and that this should occur on the first anniversary date after the start of the CBP or another date agreed to by the beneficiary. The noncontract supplier must bill and will be paid for the furnishing of the equipment up to the first anniversary date after the start of the CBP and the new supplier cannot bill for furnishing the equipment prior to this anniversary date. This requirement still applies if a date other than the anniversary date is chosen.

The beneficiary's anniversary date occurs every month on the date of the month on which the item was first delivered to the beneficiary by the current supplier. The anniversary date marks the date of every month on which a new monthly rental period begins. For example, using July 1 as the beginning date of the Medicare DMEPOS CBP:

- If a beneficiary's last anniversary date before the beginning of the CBP is June 29, the noncontract supplier must submit a claim for the rental month beginning June 29 and ending July 28. The noncontract supplier should not pick up the equipment prior to July 29. In this case, the noncontract supplier has been paid up to July 29 and therefore should pick up its equipment on July 29, and the contract supplier would deliver its equipment on July 29 and begin billing for the next month's rental as of that date.
- If a beneficiary's anniversary date is July 1, also the beginning date for the CBP, the noncontract supplier should not pick up the equipment before July 1 and should not submit a claim for the July rental period. The contract supplier should deliver the equipment to the beneficiary on July 1 and submit a claim for this month.

When a DME supplier submits a monthly bill for capped rental DME items, the date of delivery (''from'' date) on the first claim must be the ''from'' or anniversary date on all subsequent claims for the item. For example, if the first claim for a wheelchair is dated September 15, all subsequent bills must be dated for the 15th of the following months (October 15, November 15, etc.). In cases where the anniversary date falls at the end of the month (for example, January 31) and a subsequent month does not have a day with the same date (for example, February), the final date in the calendar month (for example, February 28) will be used.

Comment: One commenter stated that the burden of the coordination for the equipment pickup and replacement of an item should be placed upon the winning bidder and the losing bidder, in coordination with the beneficiary, rather than requiring the beneficiary to be in contact with both suppliers.

Response: We agree. In the proposed rule, we stated that when a beneficiary chooses to switch to a new contract supplier, the current noncontract supplier and the new contract supplier must make arrangements that are suitable to the beneficiary. We believe that such arrangements need to be coordinated between the noncontract and contract supplier to ensure that the beneficiary has continued access to medically necessary equipment.

Comment: One commenter stated that the beneficiary and the new contract supplier must assume the primary responsibility for the transition. Any other allocation of responsibility between contract and noncontract supplier is impractical.

Response: We disagree. The noncontract supplier has been paid for furnishing the equipment up to the first anniversary date after the start of the CBP. Therefore, they have already received compensation for this time period. The notification process is for beneficiary protection to ensure less confusion during the transition period. Therefore, we believe the noncontract supplier must play a role in this transition.

After consideration of the public comments we received, we are finalizing this section of the proposed rule as proposed.

(ii) 2-Day Notification

Two business days prior to picking up the item, the supplier must contact the beneficiary by phone to remind the beneficiary of the date the supplier will pick up the item. This supplier should not pick up the item before the beneficiary's first anniversary date that occurs after the start of the CBP.

There may be unusual circumstances that make it difficult to contact certain beneficiaries. However, we do not expect this to occur often because these suppliers have been submitting monthly rental claims for providing services to these beneficiaries. Therefore, the supplier should have an ongoing relationship with the beneficiary and be aware of how to contact them and any changes in their circumstances. However, under no circumstance should a supplier pick up a rented item prior to the supplier's receiving acknowledgement from the beneficiary that they are aware of the date on which the supplier is picking up the item and that arrangements have been made to have the item replaced on that date by a contract supplier. The pickup of the

noncontract supplier's equipment and the delivery of the new contract supplier's equipment should occur on the same date. The pick up by the noncontract supplier and the delivery by the contract supplier should occur on the first rental anniversary date of the equipment that occurs after the start of the CBP. When a beneficiary chooses to switch to a new contract supplier, the current noncontract supplier and the new contract supplier must make arrangements that are suitable to the beneficiary. This provides some latitude, for the pickup and the delivery date but not in terms of billing. The new equipment cannot be billed for until the anniversary date and the old equipment cannot be taken from the beneficiary before the anniversary date.

Comment: One commenter stated that if a supplier decides it does not want to grandfather a product category, it should be sufficient if the supplier provides notice one time in writing and follows up by phone as the deadline for transitioning approaches.

Response: We agree. The initial 30-day notification must be in writing to ensure there is a record that the notification was made. The supplier must maintain a record of its attempts to communicate with the beneficiary to obtain the beneficiary's election regarding grandfathering. The supplier must maintain a record of the beneficiary's choice, the date on which the choice was made, and how the beneficiary communicated his or her choice to the supplier. The 10 and 2-day notices can be done by phone. We proposed the 10 and 2-day notification process as a safeguard to protect Medicare beneficiaries and ensure that the beneficiary has continued access to medically necessary equipment. We do not believe this process is too burdensome because these suppliers have been submitting monthly rental claims for providing services to these beneficiaries and this notice can be satisfied by a phone call to the beneficiary.

After consideration of the public comments we received, we are not making any changes to this section of the proposed rule and finalizing it as proposed.

c. Notification to CMS for Suppliers That Choose To Become Grandfathered

We proposed to add § 414.408(j)(5)(ii) to state that suppliers that have chosen to become grandfathered suppliers must also notify CMS of their decision at least 30 business days before the start of the CBP. We believe that 30 business days is a reasonable period to allow CMS to compile a list of grandfathered suppliers and to answer questions about the availability of these suppliers. Unless the supplier notifies CMS consistent with this subsection, the supplier will not be considered a grandfathered supplier. Having a list of grandfathered suppliers is important to assist CMS in administering the grandfathering process. The list will be used to answer questions from beneficiaries concerning which suppliers have chosen the grandfathering option. The notification requirement will also help us to ensure that suppliers are not offering the grandfathering option to only a select number of beneficiaries. Also, having a list of suppliers that have chosen to be grandfathered suppliers will assist us in reviewing whether only noncontract suppliers that have elected to be grandfathered suppliers have received Medicare payment for rented competitive bid items in a CBA.

The notice that a noncontract supplier must provide to CMS if it elects to become a grandfathered supplier must meet the following requirements:

- State that the supplier agrees to continue to furnish certain rented DME, oxygen and oxygen equipment that it is currently furnishing to beneficiaries (that is, before the start of the CBP) in a CBA and will continue to provide these grandfathered items to these beneficiaries for the remaining months of the rental period.
- Include all of the following: Name and address of the supplier; 6-digit NSC number of the supplier; and product category(s) by CBA for which the supplier is willing to be a grandfathered supplier.
- Suppliers with multiple locations must submit one notification for the company rather than for each individual location.
- State that the supplier agrees to meet all the terms and conditions applicable to grandfathered suppliers.
- Be provided by the supplier to CMS in writing at least 30 business days before the start date of the implementation of a CBP.

d. Notifications of Beneficiaries by Suppliers That Choose Not To Become Grandfathered Suppliers

We propose to clarify under § 414.408(j)(6) that a noncontract supplier that elects not to become a grandfathered supplier is required to pick up the item it is currently renting to the beneficiary from the beneficiary's home after proper notice to the beneficiary. A noncontract supplier that decides not to become a grandfathered supplier does not have the option of leaving its equipment in the beneficiary's home. The noncontract supplier is responsible for picking up the item from the beneficiary.

Proper notification by a supplier who chooses not to become a grandfathered supplier must include a 30-day, a 10-day, and a 2-day notice of its decision not to be a grandfathered supplier. These notifications must meet all of the requirements listed above for the 30-day, 10-day and 2-day notices that must be sent by suppliers who decide to be grandfathered suppliers, except for the following differences for the 30-day notice.

- The 30-day notice must indicate the items for which the supplier has decided not to become a grandfathered supplier and indicate the date upon which the equipment will be picked up.
- It must state that the supplier will only continue to rent these competitively bid item(s) up to the beneficiary's first anniversary date, as defined in § 414.408(j)(5), that occurs after the start of the Medicare DMEPOS CBP.
- It must also state that the beneficiary must select a contract supplier for Medicare to continue to pay for these items.

It must state that the beneficiary can obtain information about the CBP by calling 1–800–MEDICARE or accessing *http://www.medicare.gov* on the internet.

- It must also refer him or her to the supplier locator tool on *http://www.medicare.gov*.

The supplier must also provide the beneficiary with the 10-day and the 2-day notices prior to picking up their equipment.

When a beneficiary chooses to switch to a new contract supplier, the current noncontract supplier and the new contract supplier must make arrangements that are suitable to the beneficiary. This provides some latitude, but the new equipment may not be billed by the contract supplier until the first anniversary date following the start of the CBP. Also, the old equipment may not be taken from the beneficiary before proper arrangements are made and the date of service cannot occur before the anniversary date.

As discussed above, under no circumstance should a supplier pick up the rented item prior to the supplier making an arrangement with the new contract supplier for the delivery of the new equipment at a time suitable to meet the beneficiary's medical needs. The noncontract supplier has been furnishing services to the beneficiary and receiving payments from the program. To ensure that the beneficiary has continued access to medically necessary equipment, the noncontract

supplier is expected to assist the beneficiary in locating a contract supplier. The noncontract supplier should communicate with the beneficiary the urgency of arranging to have the new equipment delivered as soon as possible.

e. Other Comments

Comment: Several commenters stated that the current accreditation and surety bond requirements were too burdensome.

Response: All comments concerning accreditation and surety bond requirements are considered beyond the scope of this rulemaking.

We are finalizing the provisions concerning grandfathering as proposed in the CY 2010 PFS proposed rule (74 FR 33644).

P. Five-Year Refinement of Relative Value Units

1. Background

Section 1848(c)(2)(C)(i) of the statute states that the Secretary shall determine a number of work RVUs for the service based on the relative resources incorporating physician time and intensity required in furnishing the service. Section 1848(c)(2)(B)(i) of the Act requires that we review all RVUs no less than every 5 years.

We initiated the first Five-Year Review of work RVUs in 1994 and refinements went into effect beginning in 1997 (59 FR 63410 and 61 FR 59490). The scope of the Five-Year Review was limited to work values, since at that time, the statute required that PE and malpractice RVUs be calculated based on 1991 allowed charges and PE and malpractice expense shares for the specialties performing the services.

The second Five-Year Review of physician work RVUs began in 1999 and refinements went into effect beginning in CY 2002 (64 FR 59380 and 66 FR 55246). The third Five-Year Review of the physician work RVUs began in CY 2004 with the resulting changes being effective beginning in 2007 (69 FR 66236 and 71 FR 69624).

While the statute requires the Secretary to review the relative values for services no less than every 5 years, the work RVUs for many services, have never been specifically reviewed since the inception of the PFS. Since we approach our review with the underlying assumption that services are appropriately valued, the focus of the Five-Year Reviews has been on potentially misvalued services that are identified by us or commenters.

2. Codes Reviewed Outside the Usual Five-Year Review Process

Although it was our practice for many years to wait for the next Five-Year Review to review and revise any potentially misvalued services, we remained concerned that it was inappropriate to wait 5 years (or until the next Five-Year Review of work RVUs) when we had some evidence that certain services were not valued correctly. MedPAC, the Congress, and other stakeholders have expressed similar concerns.

Subsequent to the completion of the third Five-Year Review, in collaboration with the AMA RUC, based on the additional concern that some services had not been reviewed since the inception of the PFS we have undertaken to review certain potentially misvalued codes. This effort is discussed elsewhere in this final rule with comment period (see section II.F.). The fourth Five–year Review will be conducted independently of the review of codes under the potentially misvalued code initiative.

3. Fourth Five-Year Review of Work RVUs

We are initiating the fourth Five-Year Review of work RVUs with the resulting changes being effective beginning in 2012. As with the previous Five-Year Reviews, we are soliciting comments only on services for which the currently assigned work RVUs may be inappropriate. To the extent that there are changes in physician time or in the number or level of post procedure visits as a result of the Five-Year Review of work, the PE inputs, and we could be impacted and we would them accordingly.

Under the Five-Year Review process, we solicit comments from the public on codes that are potentially misvalued. We then review the public comments and forward codes identified in those comments, as well as codes that we have identified as potentially misvalued, to the AMA RUC. The AMA RUC then follows a process, similar to that used for new CPT codes (see description below). The AMA RUC:

- Surveys its members to assess their level of interest in reviewing relative values for certain services (and to identify services for which the code descriptors may no longer be appropriate);
- Develops survey instruments for the specialty societies to use to assess the work or level of effort involved with the service;
- Asks specialty committees to conduct the surveys, review the results and prepare their recommendations for the AMA RUC; and
- Reviews the specialty committee recommendations and may either adopt them, refer them back to the specialty society or modify them prior to submitting its recommendations to CMS.

We then review the AMA RUC recommendations, decide whether we agree or disagree, and propose to accept or reject/revise the AMA RUC recommendations. Our responses to the AMA RUC recommendations are presented, and any changes in valuations are established through notice and comment rulemaking.

Consistent with the format for the previous Five-Year Reviews, in addition to the codes submitted by the commenters, we will also identify codes and submit them to the AMA RUC. Our focus will be on codes (especially high-volume codes across specialties) that:

- Are valued as being performed in the inpatient setting, but that are now predominantly performed on an outpatient basis, and
- Were not previously reviewed by the AMA RUC, (for example, Harvard-based codes).

In prior years, we solicited comments on codes for which there is a rank order anomaly within the family of codes, and accepted the possible existence of a rank order anomaly as a primary reason for specialty societies to submit codes for review. An anomalous relationship may exist between the code being valued and other codes. For example, code A describes a service that requires more work than codes B, C, and D, but code A is valued lower. For the fourth Five-Year Review of work RVUs, we will no longer consider the existence of a possible rank order anomaly to be the primary basis for undertaking the review of a code. However, rank order anomalies will continue to be used as a way to screen for potential problem areas.

In addition, when we submit codes to the RUC for review, we note that in order to maintain relativity, we may decide to submit the entire family of codes (including the base code) for review. The base code is the most important code to review because it is the basis for the valuation of other codes within the family and allows for all related codes to be reviewed at the same time. We believe that reviewing the entire family of codes can assist in ensuring relativity between services and consistent valuation of services.

We also note that codes that have been reviewed/revised under the potentially misvalued code initiative may also be considered for review under

the Five-Year Review of work RVUs. We believe this will allow for the most systematic review possible to ensure the appropriateness of values under the PFS.

The AMA RUC has developed detailed ''Compelling Evidence Standards'' which are used by the RUC as part of its process to determine if a recommendation to change the work RVU is warranted for a given code. We are including these standards in section II.P.4. of this final rule with comment period solely for informational purposes so that commenters are aware of the kind of information that has been used in the past to make a successful argument to the RUC for changing work RVUs.

We typically publish a proposed notice for the Five-Year Review separate from the annual notice of proposed rulemaking that is published for the PFS. Publishing the Five-Year Review notice separate from the annual PFS rule allows time for the potential establishment of refinement panels to address comments received on proposed work RVU changes resulting from the Five-Year Review.

The fourth Five-Year Review of Work RVUs will be addressed in a proposed notice that we intend to publish in the spring of 2011. In that proposed notice, we will discuss: the codes considered for review under this fourth Five-Year Review; the AMA RUC recommended work RVUs; and our proposed valuation of the services, including the rationale for the work valuation. We will solicit comments on our proposed valuation of the codes. We will then review and analyze the comments received in response to the proposed notice and publish our decisions as part of the CY 2012 PFS final rule with comment period. (As previously mentioned, in past years we have addressed comments on the proposed notice through the use of refinement panels, similar to those used to address comments received on interim values for new or revised codes.) The changes would be effective January 1, 2012.

In the last Five-Year Review of work RVUs, some specialty societies used methods other than the AMA RUC-developed survey instrument to arrive at recommended work RVUs. These methods included reliance on other data sources (for example, Department of Veteran Affairs (VA) National Surgical Quality Improvement Program (NSQIP) and the Society for Thoracic Surgeons (STS) databases).

- The NSQIP was initiated by the VA for quality improvement purposes in 1991 with 128 VA medical centers. It currently includes a large volume of surgical procedures from non-VA medical centers as well. The total number of cases for VA and non-VA medical centers is greater than one million. The NSQIP database contains pre-, intra-, and post-operative data, including intra-service times and length of stay data.
- The STS National database is a voluntary reporting system for the collection of outcomes data related to cardiothoracic surgical services. This database currently contains over two million patient records collected from more than 450 practices (from 1995 through 2004). Over 70 percent of the hospitals currently performing heart surgeries in the U.S. reportedly participate in this database.

As discussed earlier in this section, specialty societies usually rely on the AMA RUC survey process to arrive at work values for their services, often referencing the median work value (50th percentile) resulting from the survey as a recommendation for a proposed work RVU. However, for the last Five-Year Review, a few specialty societies used other data sources, such as those mentioned above, to establish recommended work values. We are concerned that reliance solely on these other data sources could result in an inconsistent assignment of work RVUs, eroding the relativity of the PFS.

We would like to emphasize that the most common approach used by the AMA RUC for valuation of the work of a service is the building block approach. In constructing the building blocks, a service is divided into pre-, intra-, and post-service components. For a surgical procedure, the pre-service component consists of all services furnished before the physician makes the skin incision (for example, pre-operative evaluation and scrubbing); the intra-service component consists of the ''skin-to-skin'' time (that is the operative time between surgical opening and closing); and the post-service component includes immediate post-surgery services and subsequent hospital and office visits. Each component (or building block) is then assigned work RVUs. Pre-service and intra-service work RVUs are based on time and the intensity of the activities. Post-service work is based on the specified E/M service for each post-operative visit. These three component work values are then summed to compute ''building-block'' work RVUs.

For purposes of the fourth Five-Year Review of work RVUs and in order to gain a better understanding of the distribution of data from surveys and other data sources submitted in support of work RVU refinements, we will require that the minimum/maximum values, the 5th, 25th, 50th (median), 75th, and 95th percentiles be reported. In addition, we will require reporting of the geometric mean. This is similar to information currently reported for the specialty surveys, with some additional percentiles and the geometric mean being included. However if the AMA RUC recommendation does not include the information discussed above we may reject the recommendation.

To the extent the PQRI databases may include information similar to that previously described in the physician surveys, these databases might serve as an additional source for establishing or validating work RVUs.

4. RUC Compelling Evidence Standards

The AMA RUC operates with the initial presumption that the current values assigned to the codes under review are correct. This presumption can be challenged by a society or other organization presenting a compelling argument that the existing values are no longer rational or appropriate for the codes in question. The justification for a change must be substantial and meet the RUC's compelling evidence standards.

The argument in support of a change in work RVUs must be provided in a comment letter to us, and then later to the AMA RUC in writing on the Summary of Recommendation form. The following guidelines may be used to develop a ''compelling argument'' that the published relative value units assigned for a service are inappropriate:

- Documentation in the peer reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following:
  - ++ Technique.
  - ++ Knowledge and technology.
  - ++ Patient population.
  - ++ Site-of-service.
  - ++ Length of hospital stay.
  - ++ Physician time.
- An anomalous relationship between the code being proposed for review and other codes. For example, if code A describes a service that requires more work than codes B, C, and D, but is nevertheless valued lower. The specialty would need to assemble evidence on service time, technical skill, patient severity, complexity, length of stay and other factors for the code being consideredand the codes to which it is compared. These reference services may be both inter- and intra-specialty. (**Note:** The AMA RUC may wish to continue to use this as part of its method for determination of compelling evidence. However, if it is

not used according to the parameters we have discussed earlier in this section we may reject the AMA RUC recommendation.)

• Evidence that technology has changed physician work, that is, diffusion of technology.

• Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.

• Evidence that incorrect assumptions were made in the previous valuation of the service, as documented, such as:

++ A misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation;

++ A flawed mechanism or methodology used in the previous valuation, for example, evidence that no pediatricians were consulted in assigning pediatric values; and

++ A previous survey was conducted by one specialty to obtain a value, but in actuality that service is currently provided primarily by physicians from a different specialty according to utilization data.

5. Five-Year Review of Other PFS Components

a. Malpractice RVUs

From 1992 to 1999, malpractice RVUs were charge-based, using weighted specialty-specific malpractice expense percentages and 1991 average allowed charges. Malpractice RVUs for new codes after 1991 were extrapolated from similar existing codes or as a percentage of the corresponding work RVU. Section 4505(f) of the BBA required us to implement resource-based malpractice RVUs for services furnished beginning in 2000. Initial implementation of resource-based malpractice RVUs occurred in 2000. The statute also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. The first review and update of resource based malpractice RVUs was addressed in the CY 2005 PFS final rule (69 FR 66263). Minor modifications to the methodology were addressed in the CY 2006 PFS final rule (70 FR 70153). In this rule, we are implementing the second review and update of malpractice RVUs (see section II.C. of this final rule with comment period).

b. Practice Expense RVUs

The resource-based PE RVUs were effective January 1, 1999. To assist in the refinement of the direct PE inputs (developed by the specialty-specific Clinical Practice Expense Panels conducted in the late 1990s), the AMA RUC created the Practice Expense Advisory Committee (PEAC) in CY 1999. The PEAC refined the PE inputs for nearly all of the CPT codes in the PFS by the time it sunsetted 5 years later in March 2004. (The remainder of the codes, approximately 200, were refined at the September 2004 and February 2005 AMA RUC meetings.) These PEAC (and subsequent AMA RUC) refinements of the PE inputs were provided as recommendations to CMS.

A comprehensive review of PE was undertaken prior to the 4-year transition period for the PE methodology from the top-down to the bottom-up methodology which will be complete in 2010. In this final rule with comment period we are incorporating new Physician Practice Information Survey (PPIS) data. (These data are used to update the specialty-specific PE/HR data used to develop PE RVUs.)

The next Five-Year Review of PE RVUs will be addressed in CY 2014 and we are soliciting comments on approaches to take for this next Five-Year Review of PE RVUs. However, to the extent that there are changes in physician time or in the number or level of post procedure visits as a result of the fourth Five-Year Review of work, there will be a potential impact on the practice expense inputs, and we will revise the inputs accordingly.

In the interim, we will continue with our efforts as part of the misvalued code initiative to develop a process to ensure that prices for certain high cost supplies that are used to determine PE RVUs are accurate and reflect current information.

Q. Other Issues: 2010 Therapy Caps

Section 1833(g) of the Act applies an annual, per beneficiary combined cap on expenses incurred for outpatient physical therapy and speech-language pathology services under Medicare Part B. A similar separate cap for outpatient occupational therapy services under Medicare Part B also applies. (The caps do not apply to expenses incurred for therapy services furnished in an outpatient hospital setting.) The caps were in effect during 1999, from September 1, 2003 through December 7, 2003 and beginning January 1, 2006. Also beginning January 1, 2006, the Deficit Reduction Act (Pub. L. 109–171) (DRA) provided for an exception process to the therapy cap until December 31, 2006. Subsequent legislation (MIEA–TRHCA and the MMSEA) extended the exception process for therapy caps until December 31, 2007 and June 30, 2008, respectively. Section 141 of the MIPPA extended the exception process through December 31, 2009. Several therapy associations have requested that we announce the amount of the therapy cap for CY 2010 in the PFS final rule.

The annual, per beneficiary therapy cap for CY 2010 is computed by multiplying the cap amount for CY 2009, which is $1840, by the Medicare Economic Index, which is 1.2 percent, and rounding to the nearest $10. Therefore, each cap for CY 2010 will be $1860. The agency's authority to provide for exceptions to therapy caps will expire on December 31, 2009, unless the Congress acts to extend it. If the current exception process expires, the only exceptions to therapy caps will be for services billed by the outpatient hospitals.

III. Refinement of Relative Value Units for Calendar Year 2010 and Response to Public Comments on Interim Relative Value Units for 2009

A. Summary of Issues Discussed Related to the Adjustment of Relative Value Units

Sections III.B. and III.C. of this final rule with comment describe the methodology used to review the comments received on the RVUs for physician work and the process used to establish RVUs for new and revised CPT codes. Changes to the RVUs and billing status codes reflected in Addendum B are effective for services furnished beginning January 1, 2010.

B. Process for Establishing Work Relative Value Units for the Physician Fee Schedule

The CY 2009 PFS final rule with comment period (73 FR 69726) contained the work RVUs for Medicare payment for existing procedure codes under the PFS and interim RVUs for new and revised codes beginning January 1, 2009. We considered the RVUs for the interim codes to be subject to public comment under the annual refinement process. In this section, we address comments on the interim work RVUs published in the CY 2009 PFS final rule with comment period, and our establishment of the work RVUs for new and revised codes for the CY 2010 PFS.

C. Work Relative Value Unit Refinements of Interim Relative Value Units

1. Methodology (Includes Table titled ''Work Relative Value Unit Refinements of the 2009 Interim and Related Relative Value Units'')

Although the RVUs in the CY 2009 PFS final rule with comment period were used to calculate 2009 payment amounts, we considered the RVUs for the new or revised codes to be interim.

We accepted comments for a period of 60 days. We received substantive comments on approximately 12 CPT codes with interim work RVUs.

To evaluate these comments we used a process similar to the process used since 1997. (See the October 31, 1997 final rule (62 FR 59084) for the discussion of refinement of CPT codes with interim work RVUs.) We convened a multispecialty panel of physicians to assist us in the review of the comments. We invited representatives from the organizations from which we received substantive comments to attend a panel for discussion of the code on which they had commented. The panel was moderated by our medical staff, and consisted of the following voting members:

- One or two clinicians representing the commenting organization.
- Two primary care clinicians nominated by the American Academy of Family Physicians and the American College of Physicians.
- Four carrier medical directors.
- Clinicians with practices in related specialties who were expected to have knowledge of the services under review.

The panel discussed the work involved in the procedure under review in comparison to the work associated with other services under the PFS. We assembled a set of 300 reference services and asked the panel members to compare the clinical aspects of the work of the service a commenter believed was incorrectly valued to one or more of the reference services. In compiling the set, we attempted to include: (1) Services that are commonly performed whose work RVUs are not controversial; (2) services that span the entire spectrum from the easiest to the most difficult; and (3) at least three services performed by each of the major specialties so that each specialty would be represented. The intent of the panel process was to capture each participant's independent judgment based on the discussion and his or her clinical experience. Following the discussion, each participant rated the work for the procedure. Ratings were individual and confidential, and there was no attempt to achieve consensus among the panel members.

We then analyzed the ratings based on a presumption that the interim RVUs were correct. To overcome this presumption, the inaccuracy of the interim RVUs had to be apparent to the broad range of physicians participating in each panel.

Ratings of work were analyzed for consistency among the groups represented on each panel. In addition, we used statistical tests to determine whether there was enough agreement among the groups of the panel and whether the agreed-upon RVUs were significantly different from the interim RVUs published in Addendum C of the final rule. We did not modify the RVUs unless there was a clear indication for a change. If there was agreement across groups for change, but the groups did not agree on what the new RVUs should be, we eliminated the outlier group and looked for agreement among the remaining groups as the basis for new RVUs. We used the same methodology in analyzing the ratings that we first used in the refinement process for the 1993 PFS. The statistical tests were described in detail in the November 25, 1992 final rule (57 FR 55938).

Our decision to convene multispecialty panels of physicians and to apply the statistical tests described above was based on our need to balance the interests of those who commented on the work RVUs against the redistributive effects that would occur in other specialties.

The following table lists those interim codes reviewed under the refinement panel process described in this section. This table includes the following information:

- CPT Code. This is the CPT code for a service.
- Description. This is an abbreviated version of the narrative description of the code.
- 2009 Work RVU. The work RVUs that appeared in the November 2008 rule are shown for each reviewed code.
- Requested Work RVU. This column identifies the work RVUs requested by commenters.
- 2010 Work RVU. This column contains the final RVUs for physician work.

2009 Interim Work Relative Value Units For Codes Reviewed Under the Refinement Panel Process

CPT Code[1]	Mod	Descriptor	2009 Work RVU	Requested Work RVU	2010 Work RVU[2]
17106		Destruction Of Skin Lesions	3.61	4.55	3.69
17107		Destruction Of Skin Lesions	4.68	9.18	4.79
17108		Destruction Of Skin Lesions	6.37	13.52	7.49
61796		Srs, Cranial Lesion Simple	10.79	15.75	13.93
61798		Srs, Cranial Lesion Complex	10.79	19.75	19.85
63620		Srs, Spinal Lesion	10.79	18.00	15.60
93282	26	Icd Device Prog Eval, 1 Sngl	0.85	0.91	0.85
93283	26	Icd Device Progr Eval, Dual	1.05	1.20	1.15
93289	26	Icd Device Interrogate	0.78	1.03	0.92
93295		Icd Device Interrogat Remote	1.17	1.28	1.29
97802		Medical Nutrition, Indiv, In	0.53	0.75/0.65	0.53
97803		Med Nutrition, Indiv, Subseq	0.45	0.55/0.65	0.45

[1] All CPT codes and descriptions copyright 2009 American Medical Association. All rights reserved and applicable FARS/DFARS clauses apply.

[2] Work RVU values included in the summaries below may differ from the 2010 work RVU noted in this table due to work increases in 10 and 90 day global codes as a result of the elimination of the consultation codes.

D. Interim 2009 Codes

1. Destruction of Skin Lesions Codes

CPT codes 17106, *Destruction of cutaneous vascular proliferative lesions (e.g., laser technique); less than 10 sq cm, 17107, Destruction of cutaneous vascular proliferative lesions (e.g., laser technique); 10.0 to 50.0 sq cm,* and 17108, *Destruction of cutaneous vascular proliferative lesions (e.g., laser technique); over 50.0 sq cm* were identified by the AMA RUC's Five-Year Review Identification Workgroup through the high intra-service work per unit of time (IWPUT) screen. The AMA RUC recommended 3.61 work RVUs for CPT code 17106, 4.68 work RVUs for

CPT code 17107, and 6.37 work RVUs for CPT code 17108, which we accepted in the CY 2009 PFS final rule with comment (73 FR 69884).

Comment: Commenters disagreed with the AMA RUC-recommended work values for these services, which we had accepted. The commenters expressed concerns about the AMA RUC's use of IWPUT to not only identify potentially misvalued services but also to revalue them. Commenters were also concerned that a ranking system (that is, IWPUT) not formally recognized by CMS had been used inappropriately to identify and value these services. Many commenters encouraged CMS to conduct a Refinement Panel Review of the valuation of these codes.

Response: Based on these concerns, we referred these codes to the Multi-Specialty Validation Panel for review. As a result of the statistical analysis of the 2009 Multi-Specialty Validation Panel ratings, we have assigned 3.61 work RVUs to CPT code 17106, 4.68 work RVUs to CPT code 17107, and 7.35 work RVUs to CPT code 17108.

2. Hemorrhoidectomy Code

For CPT code 46930, *Destruction of internal hemorrhoid(s) by thermal energy (eg, infrared coagulation, cautery, radiofrequency),* the AMA RUC recommended 1.56 work RVUs and a global period assignment of 090 (major surgery with a 1-day preoperative period and 90-day postoperative period included in the fee schedule amount), which we accepted in the CY 2009 PFS final rule with comment (73 FR 69892).

Comment: We received comments from independent providers, one manufacturer, and specialty societies representing gastroenterologists who disagreed with the 90-day global period assignment and requested that we assign a 10-day (minor procedure with preoperative relative values on the day of the procedure and postoperative relative values during a 10-day postoperative period included in the fee schedule amount) global period instead. The commenters believe this procedure is a minor procedure and a 10-day global period assignment would be appropriate. The commenters also believe that the work RVUs assigned to this procedure are more in line with a 10-day global period. We did not receive any comments from the colon and rectal surgeons and general surgeons who participated in the survey of this code and predominately perform this procedure.

Response: Prior to the creation of CPT code 46930, this procedure was performed using deleted CPT code 46934, *Destruction of hemorrhoids, any method; internal* which was assigned a 90-day global period. We believe the valuation and assignment of a 90-day global period is appropriate for this procedure. The post-operative care and potential clinical problems remain the same despite having a new technology to address this clinical condition. We will plan to review the clinical experience with this technology in the future to learn how patients fared who underwent destruction of hemorrhoids with this new technology. In the meantime, we will maintain a 90-day global period for this procedure.

3. Stereotactic Radiosurgery Codes

For CPT codes 61796, *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 simple cranial lesion,* 61797, *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); each additional cranial lesion, simple,* and 63620, *Stereotactic radiosurgery (particle beam, gamma ray, or linear accelerator); 1 spinal lesion* the AMA RUC recommended 15.50 work RVUs for CPT code 61796, 19.75 work RVUs for CPT code 61798, and 15.50 work RVUs for CPT code 63620. We disagreed with the AMA RUC recommendations and assigned 10.79 work RVUs to all three of these codes in the CY 2009 PFS final rule with comment (73 FR 69892). We believed the specialty societies and the AMA RUC, in general, used open surgical codes as comparators during the AMA RUC process instead of a more equivalent stereotactic radiation treatment code.

Comment: The commenters disagreed with the interim work RVUs assigned by CMS and urged CMS to accept the AMA RUC-recommended values for these codes. The commenters believed CMS erred in basing the interim values on the work RVUs of two radiation oncology services instead of surgical codes. The commenters expressed that sterotactic radiosurgey is much more intense than radiation therapy. Commenters were also confused as to why CMS valued CPT codes 61796, 61798, and 63620 identically since CPT code 61796 describes treatment of a ''simple'' cranial lesion and CPT code 61798 describes treatment of a ''complex'' cranial lesion. The commenters believed the work required to treat complex lesions is much greater than the work required to treat simple lesions. Based on these concerns, we referred these codes to the Multi-Specialty Validation Panel for review.

Response: As a result of the statistical analysis of the 2009 Multi-Specialty Validation Panel ratings, we have assigned 13.83 work RVUs to CPT code 61796, 19.75 work RVUs to CPT code 61798, and 15.50 work RVUs to CPT code 63620.

4. Cardiac Monitoring Codes

For CPT codes 92382, *Programming device evaluation with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with physician analysis, review and report; single lead implantable cardioverter-defibrillator system,* 93283, *Programming device evaluation with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with physician analysis, review and report; dual lead implantable cardioverter-defibrillator system,* 92389, *Interrogation device evaluation (in person) with physician analysis, review and report, includes connection, recording and disconnection per patient encounter; single, dual, or multiple lead implantable cardioverter-defibrillator system, including analysis of heart rhythm derived data elements,* and 93295, *Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead implantable cardioverter-defibrillator system with interim physician analysis, review(s) and report(s),* the AMA RUC recommended 0.85 work RVUs for CPT code 93282, 1.18 work RVUs for CPT code 93283, 0.92 work RVUs for CPT code 93289, and 1.38 work RVUs for CPT code 93295. We agreed with the AMA RUC-recommended value for CPT code 93282, but disagreed with the AMA RUC-recommended value for CPT codes 93283, 93289, 93295 in the CY 2009 PFS final rule with comment (73 FR 69892). We questioned the recommended values for the increments between some codes within families and across families of pacemakers, implantable cardioverter defibrillators (ICDs), implantable loop recorders, and implantable cardiovascular monitoring systems and the methodology used to determine the AMA RUC recommended values. The AMA RUC primarily used a comparison methodology to determine the value of the pacemaker codes and the surveyed 25th percentile to determine the value of the implantable ICD codes. Even though different methodologies were utilized to develop the recommended values, we did not understand why the increments between various levels of the pacemaker programming codes were not also the appropriate increment between the various levels of ICD programming codes. Therefore, we did not accept the AMA RUC recommendations for CPT

codes 93283, 93289, and 93295. Instead, we established work RVUs that maintained the same incremental difference between levels of programming codes. We assigned 1.05 work RVUs to CPT code 93283, 0.78 work RVUs to CPT code 93289, and 1.17 work RVUs to CPT code 93295.

Comment: Commenters were disappointed that CMS did not accept the AMA RUC-recommended work RVUs and disagreed with CMS' assumption that there is a constant increment of work added to the programming evaluation of an ICD as it progresses from a single lead to dual lead device and from a dual lead to a multiple lead device. Commenters also disagreed with the comparison codes we used to value these codes. Although we agreed with the AMA RUC-recommended value for CPT code 93282, one commenter requested that we increase the work RVU. Based on these concerns, we referred these codes to the Multi-Specialty Validation Panel for review.

Response: As a result of the statistical analysis of the 2009 Multi-Specialty Validation Panel ratings, we have assigned 0.85 work RVUs to CPT code 93282, 1.15 work RVUs to CPT code 93283, 0.92 work RVUs to CPT code 93289, and 1.29 work RVUs to CPT code 93295.

6. Medical Nutrition Therapy

For CPT codes 97802, *Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes* and 97803, *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes,* the AMA RUC-recommended 0.53 work RVUs for CPT code 97802 and 0.45 work RVUs for CPT Code 97803, to which we agreed in the CY 2009 PFS final rule with comment (73 FR 69890).

Comment: We received a comment from a provider who disagreed with CMS' acceptance of the AMA RUC-recommended work RVUs. The commenter believed the values were flawed as a result of a methodological error dating back to the 2000 Health Care Professional Advisory Committee (HCPAC) recommendations. The commenter requested that we establish accurate work RVUs (an RVU value of 0.65 for both codes) or that we ask the AMA RUC to revisit its recommendation. Based on these concerns, we referred these codes to the Multi-Specialty Validation Panel for review.

Response: As a result of the statistical analysis of the 2009 Multi-Specialty Validation Panel ratings, we have assigned 0.53 work RVUs to CPT code 97802 and 0.45 work RVUs to CPT code 97803.

In the CY 2009 PFS final rule with comment period we also responded to the RUC recommendations on the PE inputs for new and revised CPT codes for CY 2009. In addition to the PE comments discussed in section II.B.2. of this final rule with comment period we received the following comments concerning PE inputs.

- CPT Codes 46606, 46608, 46610, 46612, and 46930: CPT code 46930, *Destruction of internal hemorrhoid(s) by thermal energy (e.g., infrared coagulation, cautery, radiofrequency),* was a new CPT code for 2009. In the CY 2009 PFS final rule (73 FR 69897), we asked for comments on whether a light guide is typical for this code and any of the other existing codes. Specifically, we did not accept the AMA RUC-recommended sheath to cover the light guide that the specialty proposed to add to the PE database for this service and 4 other procedures as we do not believe it to be typically used in furnishing these services. Because the light guide was not a component of the infrared coagulator item at the time we re-priced our entire equipment file for CY 2005, and because this same equipment item is used for 4 other endoscopy procedures, including CPT codes 46606, 46608, 46610, and 46612, we asked commenters to provide us with information and documentation as to whether the light guide is typical to any of these 5 procedures. Additionally, we invited comments about the typical use of the sheath in relationship to the light guide. In the interim, we assigned the new equipment price including the light guide to the new CPT code 46930 as well as the four other procedures that employ this infrared coagulator for CY 2009.

Comment: We received one comment stating that the sheath for the light guide is required for CPT code 46930 given the potential for contamination of the light guide if a sheath is not used, as well as the difficulty of cleaning the light guide if it is contaminated. Commenters also stated that the infrared equipment (EQ136) used with the sheath is not required for CPT codes 46606, *Anoscopy; with biopsy, single or multiple,* 46608, *Anoscopy; with removal of foreign body,* 46610, *Anoscopy; with removal of single tumor, polyp, or other lesion by hot biopsy forceps or bipolar cautery,* and 46612, *Anoscopy; with removal of multiple tumors, polyps, or other lesions by hot biopsy forceps, bipolar cautery or snare technique,* as these procedures are typically performed using electrocautery for which PE inputs are already associated with these codes.

Response: We thank the commenters for their input. We are leaving the PE inputs as is while we conduct additional research on what is typical in furnishing these procedures.

- CPT Codes 93306, 93307, 93320, 93325, and 93351: In the CY 2009 PFS final rule (73 FR 69898), we discussed the AMA RUC PE recommendations for CPT codes 93306, *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, with spectral Doppler echocardiography, and with color flow Doppler echocardiography,* and 93351, *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, during rest and cardiovascular stress test using treadmill, bicycle exercise and/or pharmacologically induced stress, with interpretation and report; including performance of continuous electrocardiographic monitoring, with physician supervision.*

For CPT code 93306, we stated that the AMA RUC did not recommend any changes to the PE direct inputs for the related echocardiography codes 93307, *Echocardiography, transthoracic, real-time with image documentation (2D), includes M-mode recording, when performed, complete, without spectral or color Doppler echocardiography,* 93320, *Doppler echocardiography, pulsed wave and/or continuous wave with spectral display (List separately in addition to codes for echocardiographic imaging); complete,* and 93325, *Doppler echocardiography color flow velocity mapping (List separately in addition to codes for echocardiography).* We asked the AMA RUC to review the PE inputs for CPT codes 93307, 93320, and 93325 to ensure that they are consistent with the recommended direct inputs for CPT code 93306.

For CPT code 93351, we stated that the AMA RUC-recommended PE inputs included three new equipment items. These items included an ultrasound machine, an echocardiography exam table, and a dual image viewing and reporting system. We did not accept the recommended ultrasound machine valued at $325,000 but used a model in a similar procedure priced at $248,000 in the PE database. We also did not accept the echocardiography exam table ($11,095) because we did not believe it was a typical equipment item found in the physician's office. Instead, we assigned the PE input typical for a similar service—a $1,915 stretcher. We

included the ''dual'' echocardiography image viewing and reporting system but we accepted the base unit price of $85,000 in place of the $173,000 price provided by the specialty.

We asked commenters to provide us with documentation as to the type and cost of equipment that is used in furnishing the procedure in the physician office along with a rationale for suggested changes from the existing inputs. We also asked commenters to provide us with the typical scenario as to whether one, two, or three ultrasound units will be connected to the third equipment item, the ''dual'' echocardiography image viewing, and reporting system. We asked for information as to the amount of time that the dual image management system is in use for this procedure.

Comment: Several commenters requested that CMS revise the PE inputs associated with CPT codes 93306 and 93351. Specifically, for CPT code 93306, commenters stated that there are increased equipment costs, that an echocardiography room should be included, and that the equipment times should be revised from 42 minutes to 63 minutes to reflect their intra-service use by the sonographer. For 93351, commenters requested that a higher priced echocardiography machine, an echocardiography table, and a cardiac ultrasound room be added to the equipment list. Commenters also requested that we update the price of the dual echocardiography image viewing and reporting system to reflect the more common purchase of this equipment with additional features compared to the base model.

Response: For CPT code 93306, we do not agree that use of an echocardiography room is typical, nor do we believe higher equipment costs are justified at this time. However, we do agree with commenters that equipment times should be increased to 63 minutes from 42 minutes to accurately reflect the use of this equipment during the procedure and have adjusted the PE database to reflect this. For CPT code 93351, the AMA RUC did not recommend these higher cost PE inputs and we agreed with them. We believe we valued the PE inputs for these CPT codes appropriately in the CY 2009 final rule. Therefore, we will assign the PE inputs from the PE database for similar services—$248,000 for the ultrasound machine and $1,915 for the stretcher—to these codes. We will also continue to use the accepted base unit price of $85,000 for the ''dual'' echocardiography image viewing and reporting system. In addition, we were advised by the AMA RUC that only one ultrasound unit is typically connected to this management system, which is used for 7 minutes during the procedure. We agree with the AMA RUC's advice.

- CPT Codes 93293 and 93296: In the CY 2009 final rule (73 FR 69897), we discussed CPT codes 93293, *Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with physician analysis, review and report(s), up to 90 days,* and 93296, *Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system or implantable cardioverter-defibrillator system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results* (73 FR 69897). The AMA RUC recommended that a ''pacemaker interrogation system'' be used for the two CPT codes 93293 and 93296. However, the PE database does not contain an equipment item with this description. Because we noted a 100 percent crosswalk from existing CPT code 93733 that utilizes the pacemaker follow-up system to the new CPT code 93293, we assigned, on an interim basis, the pacemaker follow-up system to CPT codes 93293 and 93296 (a ''new'' service without a crosswalk). We asked commenters to provide documentation as to the type and cost of equipment that is used in furnishing these services in the physician office and other information to support any changes from the prior inputs.

Comment: Several commenters agreed with our use of the ''pacemaker interrogation system'' as well as its interim $123,250 price point for CPT codes 93293 and 93296. Only one commenter provided CMS with pricing information for a comparable ''pacemaker monitoring system'' based on three different price quotes, two of which were lower than the interim pricing information.

Response: Based on the information available, we will continue to assign the ''pacemaker interrogation system'' with a price of $123,250 to CPT codes 93293 and 93296. We will continue to review the price of the appropriate cardiac equipment used in both of these codes.

- CPT Codes 97802 and 97803: 97802, *Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes;* and 97803, *Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes.*

The above codes were revalued in the CY 2009 PFS final rule with comment period as a result of the AMA RUC Recommendations for Potentially Misvalued Codes (73 FR 69890).

Comment: One commenter stated that inappropriate PE inputs were used for calculating the PE RVUs for Medical Nutrition Therapy codes (CPT codes 97802 and 97803), and requested a revision of the pre-, intra-, and post-service times listed in the PE database. The commenter believes that the pre-service and post-service times for these CPT codes should be increased to 3 minutes pre and 5 minutes post to accurately reflect the time spent.

Response: We agreed with the AMA RUC recommendations for CPT codes 97802 and 97803 in the CY 2009 final rule with comment period (73 FR 69890). We believe that the pre- and post-service times are accurate. If the commenter is concerned about the allocated times for these CPT codes, the commenter should request that the specialty society submit these codes to the AMA RUC for reconsideration.

E. Establishment of Interim Work Relative Value Units for New and Revised Physician's Current Procedural Terminology (CPT) Codes and New Healthcare Common Procedure Coding System Codes (HCPCS) for 2010 (Includes Table 30 Titled ''AMA RUC Recommendations and CMS' Decisions for New and Revised 2010 CPT Codes'')

One aspect of establishing RVUs for 2009 was to assign interim work RVUs for all new and revised CPT codes. As described in our November 25, 1992 notice on the 1993 PFS (57 FR 55951) and in section III.B. of the CY 1997 PFS final rule (61 FR 59505), we established a process, based on recommendations received from the AMA RUC, for establishing interim work RVUs for new and revised codes.

We received work RVU recommendations for 161 new and revised CPT codes from the AMA RUC for 2010. We reviewed the AMA RUC recommendations by comparing them to our reference set or to other comparable services for which work RVUs had previously been established. We also considered the relationships among the new and revised codes for which we received AMA RUC recommendations and agreed with the majority of the relative relationships reflected in the AMA RUC values. Table 30: AMA RUC Recommendations and CMS' Decisions for New and Revised 2010 CPT Codes lists the new or revised CPT codes, and their associated work RVUs, that will be interim in CY 2010. Table 30 includes the following information:

• A ''#'' identifies a new code for CY 2010.

• CPT code. This is the CPT code for a service.

• Modifier. A ''26'' in this column indicates that the work RVUs are for the PC of the code.

• Description. This is an abbreviated version of the narrative description of the code.

• AMA RUC recommendations. This column identifies the work RVUs recommended by the AMA RUC.

• CMS decision. This column indicates whether we agreed or we disagreed with the AMA RUC recommendation. Codes for which we did not accept the AMA RUC recommendation are discussed in greater detail following this table.

• 2010 Work RVUs. This column establishes the interim 2010 work RVUs for physician work.

New CPT Code

[1] All CPT codes copyright 2009 American Medical Association

[2] Work RVU values recommended by CMS may differ from the AMA RUC recommended value due to work increases in 10 and 90 day global codes as a result of the elimination of the consultation codes.

(a) AMA RUC-recommended work RVU accepted but coverage status of code is non-covered. See code discussion in section F. Discussion of Codes and AMA RUC Recommendations.

BILLING CODE 4120–01–C

F. Discussion of Codes and AMA RUC Recommendations

The following is an explanation of our rationale for not accepting particular AMA RUC-recommended work RVUs. It is arranged by type of service in CPT order and refers only to work RVUs.

1. Excision of Soft Tissue and Bone Excision of Soft Tissue and Bone Tumors

In February 2009, the CPT Editorial Panel approved the coding proposal submitted by the Soft Tissue Tumor and Bone Workgroup, which revised and expanded the soft tissue tumor and bone tumor section codes to more accurately describe the services being provided and to address the concerns raised by the AMA RUC during the Third Five-Year Review. For CY 2010, the CPT Editorial Panel split 31 codes into 62 codes differentiated by the size of the excised lesion, 18 codes were revised, and 12 additional codes were created. These codes were created to fill in anatomic gaps in the coding convention for excision of soft tissue tumors.

The survey results for these codes reflected that the majority of these services, while previously performed as outpatient services (based on 2007 Medicare claims data), had now been valued as inpatient services by the AMA RUC. We believe the Medicare claims data are accurate and do not agree with the inclusion of inpatient services in these codes, particularly, the smaller sized tumors. We have concerns about the additional minutes added to the pre-service time for positioning of the patient. We believe the additional minutes are excessive and request that the AMA RUC re-examine the minutes allocated for positioning of the patient. We also have concerns about the projected utilization for these codes. We understand that the specialty society had difficulty in estimating the frequency split for current codes and frequency estimates for new codes and for the majority of the codes, estimated that the smaller sized tumors would be reported 90 percent of the time, while the larger tumors would be reported only 10 percent of the time. The AMA RUC recommended that these services should be re-reviewed to determine the accuracy of these utilization assumptions once 2 years of frequency data from Medicare have been obtained. We agree with the AMA RUC and plan to monitor the frequency data for these codes and may propose further changes to the work RVUs in the future based upon this data.

Although we have serious concerns with the valuation of these codes for 2010, and due to the comments received on the site of service anomaly codes, we have agreed to accept the AMA RUC-recommended values for these codes on an interim basis. However, we will work with the AMA RUC to address our concerns about the valuation of these codes and will consider whether it would be appropriate to propose further changes in future rulemaking.

We note that the CPT 2010 instructions regarding the use of the excision and resection of soft tissue and bone tumor codes advise that a complex repair may be separately reported. Longstanding Medicare policy generally includes payment for all simple, intermediate, and complex repairs of procedural incisions. Therefore, Medicare will not separately pay for complex repairs for these codes.

2. Fistula Plug

For CY 2010, the AMA RUC-recommended 6.30 work RVUs for CPT code 46707, *Repair of anorectal fistula with plug (eg, porcine small intestine submucosa [SIS]).* We disagree with the AMA RUC-recommended value and believe it should be valued the same as the reference code, CPT code 46280, *Surgical treatment of anal fistula (fistulectomy/fistulotomy); complex or multiple, with or without placement of seton,* which is assigned 6.28 work RVUs. Although CPT code 46707 has 2 minutes less pre-service time and 5 minutes less intra- and post-service time than the reference code, we believe these two codes are similar and should be valued the same. While the AMA RUC noted that the intra-service time intensity is greater in CPT code 46707 than in the reference code, we do not believe this rationale justifies a higher recommended work RVU for CPT code 46707. Therefore, we have assigned 6.28 work RVUs to CPT code 46707.

3. Computed Tomography Colongraphy

For CY 2010 the AMA RUC recommended 2.40 work RVUs for CPT code 74261, *Computed tomographic (CT), colonography, diagnostic, including image postprocessing; without contrast material.* We disagree with the AMA RUC-recommended value and believe this code is comparable to CPT code 74263, *Computed tomographic (CT) colonography, screening, including image postprocessing,* which virtually has the same description of work, pre-, intra-, and post-service time for which the AMA RUC recommended 2.28 work RVUs. Therefore we have assigned 2.28 work RVUs to CPT code 74261.

CPT code 74263 was previously reported using Category III code 0066T, *Computed tomographic (CT) colonography (ie, virtual colonoscopy); screening,* which has been deleted and was a non-covered code. Based on the descriptors, these CPT codes describe services that include screening services. In general, screening services under Medicare are considered to be those services provided to beneficiaries in the absence of signs or symptoms of illness or injury; therefore, to the extent that the services described by CPT code 74263 have a screening element, the screening component would not meet the statutory requirements for coverage under section 1862(a)(1)(A) of the Act. Screening services are not covered by Medicare without specific statutory authority, such as has been provided for mammography, diabetes, and colorectal cancer screening. Accordingly, we will not recognize this CPT codes that incorporates screening for payment under the PFS.

Although we have accepted the AMA RUC recommendation for this service, we have assigned a status indicator of ''N'' (Non-covered) to CPT code 74263 since the code descriptor describe services that include screening services.

4. Myocardial Perfusion Imaging

For CY 2010 the AMA RUC recommended 1.40 work RVUs for CPT code 78451, *Myocardial perfusion imaging; tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); single study, at rest or stress (exercise or pharmacologic)* and 1.75 work RVUs for CPT code 78452, *Myocardial perfusion imaging; tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection.*

For CPT code 78451, it was unclear what methodology the AMA RUC used to calculate the recommended RVU and, therefore, we disagree with the AMA RUC-recommended value. We believe the work RVU for the 25th percentile is more appropriate and have assigned 1.38 work RVUs to CPT code 78451.

For CPT code 78452, we disagree with the reference code used, CPT code 70496, *Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing,* which is assigned 1.75. We believe CPT code 78452 is comparable to CPT code 73219,

Magnetic resonance (e.g., proton) imaging, upper extremity, other than joint; with contrast material(s), which is assigned 1.62 work RVUs and the same pre-, intra-, and post-service time. Therefore, we have assigned 1.62 work RVUs to CPT code 78452.

5. Comments Received on New CPT Codes for CY 2010

We received comments on new CPT codes for CY 2010. Since these are new codes for CY 2010, they are subject to comment as part of this final rule. To the extent that commenters have additional concerns, we would encourage them to submit comments in response to this rule.

6. Other AMA RUC Recommendations Received: H1N1 Immunization Administration

The CPT Editorial Panel created CPT code 90470, *Immunization administration (intramuscular, intranasal), including counseling when performed to assist the public health effort to vaccinate for H1N1.* The AMA RUC reviewed this service and recommended 0.20 work RVUs. However, for Medicare payment purposes, we will not recognize this code since we created a specific HCPCS code *(G9141, Influenza A (H1N1) immunization administration (includes the physician counseling the patient/family))* for this service that was effective September 1, 2009. We have assigned a status indicator of ''N'' (Non-covered) to this service and will publish the AMA RUC-recommended value in accordance with our practice for non-covered CPT codes.

G. Additional Coding Issues

1. Reduction in the Technical Component (TC) Payment for Imaging Services Paid Under the PFS to the Outpatient Department (OPD) Amount

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (Pub. L. 109–171) (DRA) capped the TC of most imaging services paid under the PFS at the amount paid under the Outpatient Prospective Payment System (OPPS) (71 FR 69659).

The list of codes subject to the OPPS cap has been revised to reflect new and deleted CPT codes for 2010. The complete list of codes subject to the OPPS cap is in Addendum H.

H. Establishment of Interim PE RVUs for New and Revised Physician's Current Procedural Terminology (CPT) Codes and New Healthcare Common Procedure Coding System (HCPCS) Codes for 2010

We have developed a process for establishing interim PE RVUs for new and revised codes that is similar to that used for work RVUs. Under this process, the AMA RUC recommends the PE direct inputs (the staff time, supplies and equipment) associated with each new code. CMS reviews the recommendations in a manner similar to our evaluation of the RUC-recommended work RVUs. The AMA RUC recommendations on the PE inputs for the new and revised CY 2010 codes were submitted to CMS as interim recommendations.

We have accepted, in the interim, the PE recommendations submitted by the RUC for the codes listed in Table 30: AMA RUC Recommendations and CMS' Decisions for New and Revised 2010 CPT Codes.

IV. Physician Self-Referral Prohibition: Annual Update to the List of CPT/HCPCS Codes

A. General

Section 1877 of the Act prohibits a physician from referring a Medicare beneficiary for certain designated health services (DHS) to a health care entity with which the physician (or a member of the physician's immediate family) has a financial relationship, unless an exception applies. Section 1877 of the Act also prohibits the DHS entity from submitting claims to Medicare or billing the beneficiary or any other entity for Medicare DHS that are furnished as a result of a prohibited referral.

Section 1877(h)(6) of the Act and § 411.351 of our regulations specify that the following services are DHS:

- Clinical laboratory services.
- Physical therapy services.
- Occupational therapy services.
- Outpatient speech-language pathology services.
- Radiology services.
- Radiation therapy services and supplies.
- Durable medical equipment and supplies.
- Parenteral and enteral nutrients, equipment, and supplies.
- Prosthetics, orthotics, and prosthetic devices and supplies.
- Home health services.
- Outpatient prescription drugs.
- Inpatient and outpatient hospital services.

B. Annual Update to the Code List

1. Background

In § 411.351, we specify that the entire scope of four DHS categories is defined in a list of CPT/HCPCS codes (the Code List), which is updated annually to account for changes in the most recent CPT and HCPCS publications. The DHS categories defined and updated in this manner are:

- Clinical laboratory services.
- Physical therapy, occupational therapy, and outpatient speech-language pathology services.
- Radiology and certain other imaging services.
- Radiation therapy services and supplies.

The Code List also identifies those items and services that may qualify for either of the following two exceptions to the physician self-referral prohibition:

- EPO and other dialysis-related drugs furnished in or by an ESRD facility (§ 411.355(g)).
- Preventive screening tests, immunizations, or vaccines (§ 411.355(h)).

The Code List was last updated in the CY 2009 PFS final rule with comment period (73 FR 69726) and in a subsequent correction notice (73 FR 80302).

2. Response to Comments

We received one public comment relating to the Code List that became effective January 1, 2009. The comment involved CPT code 0019T, *Extracorporeal shock wave involving musculosketal system, not otherwise specified, low energy.*

Comment: A commenter wrote concerning the classification of CPT code 0019T as ''physical therapy.'' The commenter stated that the use of extracorporeal shock wave generators is restricted by Federal law to sale by or on the order of a physician. The commenter stated that ''the practice of extracorporeal shock wave therapy by *non qualified providers* poses a considerable risk to the safety of the patient and a likely reduction in the effectiveness in the treatment * * *'' (emphasis added by commenter).

Response: The commenter seemed to be objecting to the classification of CPT code 0019T as physical therapy, not only for the purpose of the physician self-referral Code List, but also for broader Medicare payment purposes. We believe that the commenter also has concerns about physical therapists ordering extracorporeal shock wave therapy even though a physician must sign the plan of care. While we appreciate the commenter's concerns,

the concerns encompass issues that are outside the scope of this rule and cannot be addressed here. The purpose of our update is to announce changes to the Code List to account for changes in the most recent CPT and HCPCS publications or Medicare policies. We added CPT 0019T to the physician self-referral Code List effective January 1, 2006 (see 70 FR 70297 and 70472) under the category of ''Physical Therapy, Occupational Therapy, and Speech-language Pathology'' because it was added to the CY 2006 PFS for payment purposes, was included as a ''therapy'' code in Medicare Transmittal 805, ''Annual Update to the Therapy Code List'' that was effective January 1, 2006, and meets the definition of physical therapy services that is set forth in § 411.351. Thus, we believe the code is properly included as a physical therapy service on our Code List.

3. Revisions Effective for 2010

The updated, comprehensive Code List effective January 1, 2010 appears as Addendum I in this final rule with comment period and is available on our Web site at *http://www.cms.hhs.gov/PhysicianSelfReferral/11_List_of_Codes.asp#TopOfPage.* Additions and deletions to the Code List conform the Code List to the most recent publications of CPT and HCPCS and to changes in Medicare coverage policy and payment status.

Tables 31 and 32 identify the additions and deletions, respectively, to the comprehensive Code List that was published in Addendum J of the CY 2009 PFS final rule (73 FR 70214 through 70237) and revised in a subsequent correction notice (73 FR 80302). Tables 31 and 32 also identify the additions and deletions to the lists of codes used to identify the items and services that may qualify for the exceptions in § 411.355(g) (regarding EPO and other dialysis-related outpatient prescription drugs furnished in or by an ESRD facility) and in § 411.355(h) (regarding preventive screening tests, immunizations, and vaccines).

In Table 31, we specify additions that generally reflect new CPT and HCPCS codes that become effective January 1, 2010, or that became effective since our last update. We also are adding HCPCS codes G0416 through G0419 that represent pathology codes for prostate needle saturation biopsy sampling to the ''Clinical Laboratory Services'' category of the Code List. These codes became effective January 1, 2009, and were discussed in the preamble of the CY 2009 PFS final rule (73 FR 69751). We inadvertently failed to add them to the Code List update that was published in that rule.

Table 32 reflects the deletions necessary to conform the Code List to the most recent publications of the CPT and HCPCS. In addition, we are making other deletions based on changes in Medicare coverage and payment status. We are deleting CPT code 0085T, representing a breath test for heart transplant rejection, since this code is no longer payable by Medicare. We also are deleting CPT code 95992, a code for canalith repositioning procedures, as it will be designated as ''invalid'' for Medicare purposes as discussed in section II.E.1 of this preamble.

We will consider comments regarding the codes listed in Tables 31 and 32. Comments will be considered if we receive them by the date specified in the ''DATES'' section of this final rule with comment period. We will not consider any comment that advocates a substantive change to any of the DHS defined in § 411.351.

BILLING CODE 4120–01–C

V. Physician Fee Schedule Update for CY 2010

A. Physician Fee Schedule Update

The PFS update is determined using a formula specified in section 1848(d)(4) of the Act. Section 101 of the MIEA–TRHCA provided a 1-year increase in the CY 2007 conversion factor (CF) and specified that the CF for CY 2008 must be computed as if the 1-year increase had never applied. Section 101 of the MMSEA provided a 6-month increase in the CY 2008 CF, from January 1, 2008, through June 30, 2008, and specified that the CF for the remaining portion of 2008 and the CFs for CY 2009 and subsequent years must be computed as if the 6-month increase had never applied. Section 131 of the MIPPA extended the 6-month increase that was applicable to the CF for the first half of CY 2008 to the entire year, provided for a 1.1 percent increase to the CY 2009 CF, and specified that the CFs for CY 2010 and subsequent years must be computed as if the increases for CYs 2007, 2008, and 2009 had never applied.

If section 101 of the MIEA–TRHCA had not been enacted, the CY 2007 CF update would have been −5.0 percent (0.94953), as published in the CY 2007 PFS final rule with comment period (71 FR 69760). If section 101 of the MMSEA had not been enacted, the CY 2008 CF update would have been −10.1 percent (0.89896), as published in the CY 2008 PFS final rule with comment period (72 FR 66383).

If section 131 of the MIPPA had not been enacted, the CY 2009 CF update would have been −15.1 percent (0.84941), as discussed in the CY 2009 PFS final rule with comment period (73 FR 69900).

For CY 2010, the Medicare Economic Index (MEI) is equal to 1.2 percent (1.012). The update adjustment factor (UAF) is −7.0 percent. Our calculations of these figures are explained below in this section.

In order to determine the 2010 PFS CF update, the CFs for 2007, 2008, and 2009 must be calculated as if the various legislative changes to the CFs for those years had not occurred. Consistent with the formula specified by the statute, the CY 2010 CF update is −21.2 percent (0.78760). Our calculations are explained below in this section.

B. The Percentage Change in the Medicare Economic Index (MEI)

The Medicare Economic Index (MEI) is authorized by section 1842(b)(3) of the Act, which states that prevailing charge levels beginning after June 30, 1973 may not exceed the level from the previous year except to the extent that the Secretary finds, on the basis of appropriate economic index data, that the higher level is justified by year-to-year economic changes.

The MEI measures the weighted-average annual price change for various inputs needed to produce physicians' services. The MEI is a fixed-weight input price index, with an adjustment for the change in economy-wide multifactor productivity. This index, which has CY 2000 base year weights, is comprised of two broad categories: (1) physician's own time; and (2) physician's practice expense (PE).

The physician's own time component represents the net income portion of business receipts and primarily reflects the input of the physician's own time into the production of physicians' services in physicians' offices. This category consists of two subcomponents: (1) wages and salaries; and (2) fringe benefits.

The physician's PE category represents nonphysician inputs used in the production of services in physicians' offices. This category consists of wages and salaries and fringe benefits for nonphysician staff and other nonlabor inputs. The physician's PE component also includes the following categories of nonlabor inputs: office expense; medical materials and supplies; professional liability insurance; medical equipment; prescription drugs; and other expenses. The components are adjusted to reflect productivity growth in physicians' offices by the 10-year moving average of productivity in the private nonfarm business sector.

Table 33 presents a listing of the MEI cost categories with associated weights and percent changes for price proxies for the 2010 update. For CY 2010, the increase in the MEI is 1.2 percent, which includes a 1.3 percent productivity offset based on the 10-year moving average of multifactor productivity. This is the result of a 3.2 percent increase in physician's own time and a 1.8 percent increase in physician's PE. Within the physician's PE, the largest increase occurred in prescription drugs, which increased 7.1 percent.

BILLING CODE 4120-01-C

TABLE 33: Increase in the Medicare Economic Index Update for CY 2010[1]

Cost Categories and Price Measures	CY 2000 Weights[2]	CY 2010 Percent Changes
Medicare Economic Index Total, productivity adjusted[3]	N/A	1.2
Productivity: 10-year moving average of multifactor productivity, private nonfarm business sector[3]	N/A	1.3
Medicare Economic Index Total, without productivity adjustment	100.000	2.5
1. Physician's Own Time[4]	52.466	3.2
a. Wages and Salaries: Average Hourly Earnings, private Nonfarm	42.730	3.5
b. Fringe Benefits: Employment Cost Index, benefits, private Nonfarm[4]	9.735	1.8
2. Physician's Practice Expense[4]	47.534	1.8
a. Nonphysician Employee Compensation	18.653	2.6
(1) Wages and Salaries: Employment Cost Index, wages and salaries, weighted by occupation	13.808	2.7
(2) Fringe Benefits: Employment Cost Index, fringe benefits, weighted by occupation	4.845	2.4
b. Office Expense: Consumer Price Index for Urban Areas (CPI-U), housing	12.209	2.2
c. Drugs and Medical Materials and Supplies	4.319	4.7
(1) Medical Materials and Supplies: Producer Price Index (PPI), surgical appliances and supplies/CPI-U, medical equipment and supplies (equally weighted)	2.011	1.1
(2) Pharmaceuticals: Producer Price Index (PPI ethical prescription drugs)	2.308	7.1
d. Professional Liability Insurance: Professional liability insurance Premiums[5]	3.865	-3.6
e. Medical Equipment: PPI, medical instruments and equipment	2.055	0.8
f. Other Expenses	6.433	2.0

1. The rates of historical change are estimated for the 12-month period ending June 30, 2009, which is the period used for computing the CY 2010 update. The price proxy values are based upon the latest available Bureau of Labor Statistics data as of September 5, 2009.
2. The weights shown for the MEI components are the 2000 base-year weights, which may not sum to subtotals or totals because of rounding. The MEI is a fixed-weight, Laspeyres-type input price index whose category weights indicate the distribution of expenditures among the inputs to physicians' services for CY 2000. To determine the MEI level for a given year, the price proxy level for each component is multiplied by its 2000 weight. The sum of these products (weights multiplied by the price index levels) over all cost categories yields the composite MEI level for a given year. The annual percent change in the MEI levels is an estimate of price change over time for a fixed market basket of inputs to physicians' services.
3. These numbers may not sum due to rounding and the multiplicative nature of their relationship.
4. The measures of productivity, average hourly earnings, Employment Cost Indexes, as well as the various Producer and CPIs can be found on the BLS Web site at http://stats.bls.gov .
5. Derived from data collected from several major insurers (the latest available historical percent change data are for the period ending second quarter of 2009).

C. The Update Adjustment Factor (UAF)

Section 1848(d) of the Act provides that the PFS update is equal to the product of the MEI and the UAF. The UAF is applied to make actual and target expenditures (referred to in the statute as ''allowed expenditures'') equal. Allowed expenditures are equal to actual expenditures in a base period updated each year by the sustainable growth rate (SGR). The SGR sets the annual rate of growth in allowed expenditures and is determined by a formula specified in section 1848(f) of the Act.

1. Calculation under Current Law

Under section 1848(d)(4)(B) of the Act, the UAF for a year beginning with CY 2001 is equal to the sum of the following—

• *Prior Year Adjustment Component.* An amount determined by—

+ Computing the difference (which may be positive or negative) between the amount of the allowed expenditures for physicians' services for the prior year (the year prior to the year for which the update is being determined) and the amount of the actual expenditures for those services for that year;

+ Dividing that difference by the amount of the actual expenditures for those services for that year; and

+ Multiplying that quotient by 0.75.

• *Cumulative Adjustment Component.* An amount determined by—

+ Computing the difference (which may be positive or negative) between the amount of the allowed expenditures for physicians' services from April 1, 1996, through the end of the prior year and the amount of the actual expenditures for those services during that period;

+ Dividing that difference by actual expenditures for those services for the prior year as increased by the SGR for the year for which the UAF is to be determined; and

+ Multiplying that quotient by 0.33.

Section 1848(d)(4)(E) of the Act requires the Secretary to recalculate allowed expenditures consistent with section 1848(f)(3) of the Act. Section 1848(f)(3) specifies that the SGR (and, in turn, allowed expenditures) for the upcoming CY (CY 2010 in this case), the current CY (that is, CY 2009) and the preceding CY (that is, CY 2008) are to be determined on the basis of the best data available as of September 1 of the current year. Allowed expenditures for a year generally are estimated initially and subsequently revised twice. The second revision occurs after the CY has ended (that is, we are making the second revision to 2008 allowed expenditures in this final rule with comment).

In the CY 2010 PFS proposed rule (74 FR 33650), we noted that section 1848(f)(4)(A) of the Act provides the Secretary with clear discretion to determine what items and services should be included in the definition of ''physicians' services'' for purposes of determining allowed expenditures and the SGR. As the statute affords the Secretary clear discretion to revise the definition of ''physicians' services'', we proposed to remove physician-administered drugs from the definition of ''physicians' services'' in section 1848(f)(4)(A) of the Act for purposes of computing the SGR and levels of allowed expenditures and actual expenditures in all future years. Furthermore, given the past effect of spending growth for physician-administered drugs on future PFS updates, in order to effectuate fully the Secretary's policy decision to remove drugs from the definition of ''physicians' services'', we also indicated that we believed it was reasonable to remove drugs from the calculation of allowed and actual expenditures for all prior years.

In the proposed rule (74 FR 33651), we noted that the term ''actual expenditures'' is not defined in the statute, nor are there any statutory limitations on the Secretary's ability to recompute actual expenditures to reflect changes in the amount of actual expenditures. On several occasions, we have made revisions to the amount of actual expenditures to reflect new information regarding spending on physicians' services. In order to eliminate the disproportionate impact that the large past increases in the costs attributable to physician-administered drugs would otherwise have upon future PFS updates, we proposed to remove drugs from the calculation of allowed and actual expenditures under sections 1848(d)(3)(C) and 1848(d)(4) of the Act retrospectively to the 1996/1997 base year. Further, we proposed to remove drugs from the calculation of the SGR beginning with 2010.

Comment: Commenters strongly supported our proposal to remove drugs from the calculation of allowed and actual expenditures retrospectively to the 1996/1997 base year and our proposal to remove drugs from the calculation of the SGR beginning with 2010. Many noted that they have been requesting this change for years. However, all commenters expressed concerns about the estimated negative update for CY 2010 of approximately −21 percent, followed by multiple years of negative physician updates of approximately −5 percent. Commenters described how they believe the SGR and update formulas are flawed, and they stated their belief that the magnitude of the 1-year reduction, followed by multiple years of continued reductions, will impair beneficiary access to quality care. Many commenters urged us to work with Congress to revise or replace the physician update and SGR formulas. Some of these commenters suggested alternative methodologies for updating physician payments, and a number of them specifically expressed their support for the SGR-related provisions of H.R. 3200. A few commenters suggested using our administrative authority to implement additional changes that would further lessen the negative impact. The AMA requested that we publish in our final rule estimates of the annual updates for 2011 through 2014.

Response: As discussed in the proposed rule (74 FR 33650), the magnitude of the estimated 1-year reduction led us to reexamine administrative actions that the Secretary could take to lessen the potential for repeated further reductions in the PFS update. We explored the breadth of options available under current authority including an assessment of whether the cost of physician-administered drugs should continue to be included in actual expenditures, allowed expenditures and the SGR. As the statute affords the Secretary clear discretion to define ''physicians' services'' for purposes of determining allowed expenditures and the SGR (section 1848(f)(4)(A) of the Act), we proposed to remove physician-administered drugs from the definition of ''physicians' services'' in section 1848(f)(4)(A) of the Act for purposes of computing the SGR and the levels of allowed expenditures and actual expenditures in all future years. Moreover, given the past effect of spending growth for physician-administered drugs on future PFS updates, in order to effectuate fully the Secretary's policy decision to remove drugs from the definition of physicians' services in section 1848(f)(4)(A) of the Act, we proposed to remove drugs from the calculation of allowed and actual expenditures under section 1848(d)(3)(C) and 1848(d)(4) of the Act retrospectively to the 1996 base year in order to eliminate the disproportionate impact that the large past increases in the costs attributable to physician-administered drugs would otherwise have upon future PFS updates. (See 74 FR 33651 for a more detailed

explanation of our legal authority for this proposal). We received no public comments that disagreed with these proposals.

Accordingly, we are removing physician-administered drugs from the calculation of allowed and actual expenditures under sections 1848(d)(3)(C) and 1848(d)(4) of the Act for CY 2010 and retrospectively to the 1996/1997 base year in this final rule. We are also finalizing our proposal to remove drugs from the calculation of the SGR beginning with 2010.

With respect to the many suggestions we received in the public comments asking the Secretary and the Congress to do more to avert the reduction in PFS payments for 2010 and future years, all other options suggested in the comments would require a change to the statute. We also received a comment requesting that we include estimates of the updates from 2010 through 2014 in this final rule. We are providing the 2010 update in the final rule, but are not providing estimates of the updates for later years as future updates will vary depending on the baseline used and will also change as additional information becomes available.

Our decision to remove drugs from the allowed and actual expenditures and the SGR will have no effect on the 2010 PFS update of −21.3 percent because removing drugs from allowed and actual expenditures retroactively to the base year changes the UAF for CY 2010 from −30.9 percent to −8.8 percent. As the statute limits the UAF for a year to −7.0 percentage points, the UAF would be −7.0 percent irrespective of whether drugs are included or excluded from allowed and actual expenditures retroactive to the base year. Although the magnitude of future updates remains uncertain, as the following analysis demonstrates, it is clear that our proposal to remove drugs from allowed expenditures, actual expenditures, and the SGR will make a positive PFS update far more likely. Removing drugs from allowed and actual expenditures for all years and from future SGRs reduces the difference between cumulative allowed and actual expenditures from $71.8 billion to $19.4 billion or by over $50 billion. Future PFS updates will only have to be reduced by $19.4 billion rather than $71.8 billion to equate actual and allowed expenditures. The UAF for 2010 changes from −30.9 percent to −8.8 percent, but is limited to −7.0 percent under either scenario. If physician-administered drugs were to remain included in allowed and actual expenditures, the UAF would be expected to be at the maximum reduction of −7.0 percent for several years beyond 2010. By excluding these drugs, far fewer negative UAFs are expected in future years.

Table 34 shows annual and cumulative allowed and actual expenditures for physicians' services from April 1, 1996, through the end of the current CY, including the short periods in 1999 when we transitioned to a CY system. As discussed in the CY 2010 PFS proposed rule (74 FR 33651), once the Secretary has revised the level of allowed expenditures during the base year (as is authorized under the statute), it is reasonable to carry this revision through into all subsequent years. Thus, Table 34 also reflects recomputed allowed and actual expenditures from the base year and subsequent years to remove the costs associated with physician-administered drugs.

Table 34 also shows the SGR corresponding with each period. The calculation of the SGR is discussed in detail below in this section.

BILLING CODE 4120–01–P

TABLE 34: Annual and Cumulative Allowed and Actual Expenditures for Physicians' Services from April 1, 1996 through the End of the Current Calendar Year

Period	Annual Allowed Expenditures ($ in billions)	Annual Actual Expenditures ($ in billions)	Cumulative Allowed Expenditures ($ in billions)	Cumulative Actual Expenditures ($ in billions)	FY/CY SGR
4/1/96-3/31/97	$46.8[1]	$46.8	$46.8	$46.8	N/A
4/1/97-3/31/98	$48.3	$47.0	$95.2	$93.9	FY 1998=3.2%
4/1/98-3/31/99	$50.4	$47.8	$145.6	$141.7	FY 1999=4.2%
1/1/99-3/31/99	$12.7	$12.4	[2]	$141.7	FY 1999=4.2%
4/1/99-12/31/99	$40.3	$37.0	[3]	$178.8	FY 2000=6.9%
1/1/99-12/31/99	$53.0	$49.5	$185.8	$178.8	FY 1999/2000
1/1/00-12/31/00	$56.8	$54.1	$242.7	$232.9	CY 2000=7.3%
1/1/01-12/31/01	$59.4	$61.2	$302.1	$294.2	CY 2001=4.5%
1/1/02-12/31/02	$64.3	$64.6	$366.4	$358.7	CY 2002=8.3%
1/1/03-12/31/03	$69.0	$70.2	$435.4	$429.0	CY 2003=7.3%
1/1/04-12/31/04	$73.6	$78.3	$509.0	$507.2	CY 2004=6.6%
1/1/05-12/31/05	$76.7	$83.5	$585.7	$590.7	CY 2005=4.2%
1/1/06-12/31/06	$77.8	$84.6	$663.5	$675.3	CY 2006=1.5%
1/1/07-12/31/07	$80.5	$84.5	$744.0	$759.8	CY 2007=3.5%
1/1/08-12/31/08	$84.2	$86.7	$828.2	$846.4	CY 2008=4.5%
1/1/09-12/31/09	$89.3	$90.5	$917.5	$936.9	CY 2009=6.1%
1/1/10-12/31/10	$81.4	NA	$998.9	NA	CY 2010=-8.8%

[1] Allowed expenditures in the first year (April 1, 1996-March 31, 1997) are equal to actual expenditures. All subsequent figures are equal to quarterly allowed expenditure figures increased by the applicable SGR. Cumulative allowed expenditures are equal to the sum of annual allowed expenditures. We provide more detailed quarterly allowed and actual expenditure data on our Web site at the following address: http://www.cms.hhs.gov/SustainableGRatesConFact/. We expect to update the web site with the most current information later this month.

[2] Allowed expenditures for the first quarter of 1999 are based on the FY 1999 SGR.

[3] Allowed expenditures for the last three quarters of 1999 are based on the FY 2000 SGR.

BILLING CODE 4120–01–C

Consistent with section 1848(d)(4)(E) of the Act, Table 34 includes our second revision of allowed expenditures for CY 2008, a recalculation of allowed expenditures for CY 2009, and our initial estimate of allowed expenditures for CY 2010. To determine the UAF for CY 2010, the statute requires that we use allowed and actual expenditures from April 1, 1996 through December 31, 2009 and the CY 2010 SGR. Consistent with section 1848(d)(4)(E) of the Act, we will be making revisions to the CY 2009 and CY 2010 SGRs and CY 2009 and CY 2010 allowed expenditures. Because we have incomplete actual expenditure data for CY 2009, we are using an estimate for this period. Any difference between current estimates and final figures will be taken into account in determining the UAF for future years. In addition, as discussed above, in order to effectuate fully the Secretary's policy decision to remove drugs from the definition of ''physicians' services,'' we are removing drugs from the calculation of allowed expenditures for CY 2010, CY 2009, CY 2008, and all prior years.

We are using figures from Table 34 in the following statutory formula:

$$UAF_{10} = \frac{Target_{09} - Actual_{09}}{Actual_{09}} \times 0.75 + \frac{Target_{4/96–12/09} - Actual_{4/96–12/09}}{Actual_{09} \times SGR_{10}} \times 0.33$$

UAF_{10} = Update Adjustment Factor for CY 2010 = −8.8 percent

$Target_{09}$ = Allowed Expenditures for CY 2009 = $89.3 billion

$Actual_{09}$ = Estimated Actual Expenditures for CY 2009 = $90.5 billion

$Target_{4/96–12/09}$ = Allowed Expenditures from 4/1/1996–12/31/2009 = $917.5 billion

$Actual_{4/96–12/09}$ = Estimated Actual Expenditures from 4/1/1996—12/31/2009 = $936.9 billion

SGR_{10} = −8.8 percent (0.912)

$$\frac{\$89.3 - \$90.5}{\$90.5} \times 0.75 + \frac{\$917.5 - \$936.9}{\$90.5 \times 0.912} \times 0.33 = -8.8\%$$

If we had not removed the costs associated with physician-administered drugs from the calculation of allowed and actual expenditures retrospectively to the 1996/1997 base year and from the calculation of the SGR beginning with 2010 SGR, the UAF determined using the statutory formula would have been −30.9 percent.

$$\frac{\$93.2 - \$100.8}{\$100.8} \times 0.75 + \frac{\$958.0 - \$1,029.8}{\$100.8 \times 0.930} \times 0.33 = -30.9\%$$

The increase in the UAF reflects the reduced discrepancy between actual and target expenditures resulting from removing the costs of physician-administered drugs from our calculations.

Section 1848(d)(4)(D) of the Act indicates that the UAF determined under section 1848(d)(4)(B) of the Act for a year may not be less than −0.07 or greater than 0.03. Since −0.088 is less than −0.07, the UAF for CY 2010 will be −0.07. Moreover, because −0.088 and −0.309 are both less than −0.07, removing the costs of physician-administered drugs from our calculations did not change the effective UAF for CY 2010.

Section 1848(d)(4)(A)(ii) of the Act indicates that 1.0 should be added to the UAF determined under section 1848(d)(4)(B) of the Act. Thus, adding 1.0 to −0.07 makes the UAF equal to 0.93.

Section 1848(d) of the Act provides that the PFS update is equal to the product of the MEI and the UAF. Because the effective UAF for CY 2010 is −0.07 whether or not the costs of physician-administered drugs are included in the levels of allowed and actual expenditures, removing these costs from our calculation did not change the physician payment update for services furnished on or after January 1, 2010.

VI. Allowed Expenditures for Physicians' Services and the Sustainable Growth Rate

A. Medicare Sustainable Growth Rate

The SGR is an annual growth rate that applies to physicians' services paid by Medicare. The use of the SGR is intended to control growth in aggregate Medicare expenditures for physicians' services. Payments for services are not withheld if the percentage increase in actual expenditures exceeds the SGR. Rather, the PFS update, as specified in section 1848(d)(4) of the Act, is adjusted based on a comparison of allowed expenditures (determined using the SGR) and actual expenditures. If actual expenditures exceed allowed expenditures, the update is reduced. If actual expenditures are less than allowed expenditures, the update is increased.

Section 1848(f)(2) of the Act specifies that the SGR for a year (beginning with CY 2001) is equal to the product of the following four factors:

(1) The estimated change in fees for physicians' services;

(2) The estimated change in the average number of Medicare fee-for-service beneficiaries;

(3) The estimated projected growth in real GDP per capita; and

(4) The estimated change in expenditures due to changes in statute or regulations.

In general, section 1848(f)(3) of the Act requires us to publish SGRs for 3 different time periods, no later than November 1 of each year, using the best data available as of September 1 of each year. Under section 1848(f)(3)(C)(i) of the Act, the SGR is estimated and subsequently revised twice (beginning with the FY and CY 2000 SGRs) based on later data. (The Act also provides for adjustments to be made to the SGRs for FY 1998 and FY 1999. See the February 28, 2003 **Federal Register** (68 FR 9567)

for a discussion of these SGRs). Under section 1848(f)(3)(C)(ii) of the Act, there are no further revisions to the SGR once it has been estimated and subsequently revised in each of the 2 years following the preliminary estimate. In this final rule with comment, we are making our preliminary estimate of the CY 2010 SGR, a revision to the CY 2009 SGR, and our final revision to the CY 2008 SGR. Although we are removing drugs from the calculation of allowed and actual expenditures under sections 1848(d)(3)(C) and 1848(d)(4) of the Act retrospectively to the 1996/1997 base year, we determined that we are only authorized to remove drugs from the calculation of the SGR beginning with 2010. Therefore, we will not be removing drugs from previous years' SGR calculations, and the revisions to our estimates of the CY 2009 and CY 2008 SGRs will be limited to revisions to reflect later data available as of September 1, 2009, that were not available when we published our previous estimates.

B. Physicians' Services

Section 1848(f)(4)(A) of the Act defines the scope of physicians' services covered by the SGR. The statute indicates that ''the term physicians' services includes other items and services (such as clinical diagnostic laboratory tests and radiology services), specified by the Secretary, that are commonly performed or furnished by a physician or in a physician's office, but does not include services furnished to a Medicare+Choice plan enrollee.''

We published a definition of physicians' services for use in the SGR in the November 1, 2001 **Federal Register** (66 FR 55316). We defined physicians' services to include many of the medical and other health services listed in section 1861(s) of the Act. As discussed in section VII.C. of this final rule with comment period, the statute provides the Secretary with clear discretion to decide whether physician-administered drugs should be included or excluded from the definition of ''physicians' services.'' Accordingly, we are finalizing our proposal to remove physician-administered drugs from the definition of ''physicians' services'' in section 1848(f)(4)(A) of the Act for purposes of computing the SGR and the levels of allowed expenditures and actual expenditures CY 2010 and all future years. Furthermore, in order to effectuate fully the Secretary's policy decision to remove drugs from the definition of ''physicians' services,'' we are removing physician-administered drugs from the calculation of allowed and actual expenditures for all prior years.

Thus, for purposes of determining allowed expenditures, actual expenditures for all years, and SGRs for CY 2010 and subsequent years, we are specifying that physicians' services include the following medical and other health services if bills for the items and services are processed and paid by Medicare carriers (and those paid through intermediaries where specified) or the equivalent services processed by the Medicare Administrative Contractors:

- Physicians' services.
- Services and supplies furnished incident to physicians' services, except for the expenditures for drugs and biologicals which are not usually self-administered by the patient.
- Outpatient physical therapy services and outpatient occupational therapy services.
- Services of PAs, certified registered nurse anesthetists, certified nurse midwives, clinical psychologists, clinical social workers, NPs, and certified nurse specialists.
- Screening tests for prostate cancer, colorectal cancer, and glaucoma.
- Screening mammography, screening pap smears, and screening pelvic exams.
- Diabetes outpatient self-management training (DSMT) services.
- MNT services.
- Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests (including outpatient diagnostic laboratory tests paid through intermediaries).
- X-ray, radium, and radioactive isotope therapy.
- Surgical dressings, splints, casts, and other devices used for the reduction of fractures and dislocations.
- Bone mass measurements.
- An initial preventive physical exam.
- Cardiovascular screening blood tests.
- Diabetes screening tests.
- Telehealth services.
- Physician work and resources to establish and document the need for a power mobility device.

C. Preliminary Estimate of the SGR for 2010

Our preliminary estimate of the CY 2010 SGR is −8.8 percent. We first estimated the CY 2010 SGR in March 2009, and we made the estimate available to the MedPAC and on our Web site. Table 35 shows the March 2009 estimate and our current estimates of the factors included in the CY 2010 SGR.

TABLE 35—2010 SGR CALCULATION

Statutory factors	March estimate	Current estimate
Fees	1.2 percent (1.012)	0.9 percent (1.009)
Enrollment	−0.3 percent (0.997)	1.2 percent (1.012)
Real Per Capita GDP	0.8 percent (1.008)	0.7 percent (1.007)
Law and Regulation	−9.7 percent (0.903)	−11.3 percent (0.887)
Total	−8.2 percent (0.918)	−8.8 percent (0.912)

Note: Consistent with section 1848(f)(2) of the Act, the statutory factors are multiplied, not added, to produce the total (that is, 1.009 × 1.012 × 1.007 × 0.887 = 0.912). A more detailed explanation of each figure is provided in section VIII.F.1 of this preamble.

D. Revised Sustainable Growth Rate for 2009

Our current estimate of the CY 2009 SGR is 6.1 percent. Table 36 shows our preliminary estimate of the CY 2009 SGR that was published in the CY 2009 PFS final rule with comment period (73 FR 69904) and our current estimate.

TABLE 36—2009 SGR CALCULATION

Statutory factors	Estimate from CY 2009 final rule	Current estimate
Fees	2.1 percent (1.021)	1.8 percent (1.018)
Enrollment	−0.2 percent (0.998)	−0.8 percent (0.992)
Real Per Capita GDP	1.2 percent (1.012)	0.9 percent (1.009)
Law and Regulation	4.2 percent (1.042)	4.1 percent (1.041)
Total	7.4 percent (1.074)	6.1 percent (1.061)

A more detailed explanation of each figure is provided in section VIII.F.2 of this preamble.

E. Final Sustainable Growth Rate for 2008

The SGR for 2008 is 4.5 percent. Table 37 shows our preliminary estimate of the 2008 SGR from the CY 2008 PFS final rule with comment period (72 FR 66379), our revised estimate from the CY 2009 PFS final rule with comment period (73 FR 69904) and the final figures determined using the best available data as of September 1, 2009.

TABLE 37—2008 SGR CALCULATION

Statutory factors	Estimate from CY 2008 final rule	Estimate from CY 2009 final rule	Final
Fees	1.9 percent (1.019)	1.4 percent (1.014)	1.4 percent (1.014).
Enrollment	−0.7 percent (0.993)	−3.2 percent (0.968)	−2.0 percent (0.980).
Real Per Capita GDP	1.7 percent (1.017)	1.6 percent (1.016)	1.6 percent (1.016).
Law and Regulation	−2.9 percent (0.971)	3.5 percent (1.035)	3.5 percent (1.035).
Total	−0.1 percent (0.999)	3.2 percent (1.032)	4.5 percent (1.045).

A more detailed explanation of each figure is provided in section VIII.F.3. of this final rule.

F. Calculation of 2010, 2009, and 2008 Sustainable Growth Rates

1. Detail on the CY 2010 SGR

All of the figures used to determine the CY 2010 SGR are estimates that will be revised based on subsequent data. Any differences between these estimates and the actual measurement of these figures will be included in future revisions of the SGR and allowed expenditures and incorporated into subsequent PFS updates.

• *Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for CY 2010*

This factor is calculated as a weighted-average of the CY 2010 changes in fees for the different types of services included in the definition of physicians' services for the SGR. Medical and other health services paid using the PFS are estimated to account for approximately 90.8 percent of total allowed charges included in the SGR in CY 2010 and are updated using the MEI. The MEI for CY 2010 is 1.2 percent. Diagnostic laboratory tests are estimated to represent approximately 9.2 percent of Medicare allowed charges included in the SGR for CY 2010. Medicare payments for these tests are updated by the Consumer Price Index for Urban Areas (CPI–U), which is −1.4 percent for CY 2010. However, section 145 of the MIPPA reduces the update applied to clinical laboratory tests by 0.5 percent for CY 2009 through CY 2013. Therefore, for CY 2010, diagnostic laboratory tests will receive an update of −1.9 percent. As noted in Section VII.C. of this final rule with comment period, we are finalizing our proposal to remove physician-administered drugs from the allowed charges included in the SGR in CY 2010 and in all future years. Therefore, drugs represent 0.0 percent of Medicare allowed charges included in the SGR in CY 2010.

Table 38 shows the weighted-average of the MEI and laboratory price changes for CY 2010.

TABLE 38—WEIGHTED-AVERAGE OF THE MEI AND LABORATORY PRICE CHANGES FOR CY 2010

	Weight	Update
Physician	0.908	1.2
Laboratory	0.092	−1.9
Weighted-average	1.000	0.9

We estimate that the weighted-average increase in fees for physicians' services in CY 2010 under the SGR (before applying any legislative adjustments) will be 0.9 percent.

• *Factor 2—The Percentage Change in the Average Number of Part B Enrollees from CY 2009 to CY 2010*

This factor is our estimate of the percent change in the average number of fee-for-service enrollees from CY 2009 to CY 2010. Services provided to Medicare Advantage (MA) plan enrollees are outside the scope of the SGR and are excluded from this estimate. We estimate that the average number of Medicare Part B fee-for-service enrollees will increase by 1.2 percent from CY 2009 to CY 2010. Table 39 illustrates how this figure was determined.

TABLE 39—AVERAGE NUMBER OF MEDICARE PART B FEE-FOR-SERVICE ENROLLEES FROM CY 2009 TO CY 2010

[Excluding beneficiaries enrolled in MA plans]

	2009	2010
Overall	42.431 million	43.164 million.
Medicare Advantage (MA)	10.926 million	11.271 million.
Net	31.506 million	31.893 million.

TABLE 39—AVERAGE NUMBER OF MEDICARE PART B FEE-FOR-SERVICE ENROLLEES FROM CY 2009 TO CY 2010—Continued

[Excluding beneficiaries enrolled in MA plans]

	2009	2010
Percent Increase		1.2 percent.

An important factor affecting fee-for-service enrollment is beneficiary enrollment in MA plans. Because it is difficult to estimate the size of the MA enrollee population before the start of a CY, at this time we do not know how actual enrollment in MA plans will compare to current estimates. For this reason, the estimate may change substantially as actual Medicare fee-for-service enrollment for CY 2010 becomes known.

• *Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in 2010*

We estimate that the growth in real GDP per capita from CY 2009 to CY 2010 will be 0.7 percent (based on the 10-year average GDP over the 10 years of 2001 through 2010). Our past experience indicates that there have also been changes in estimates of real per capita GDP growth made before the year begins and the actual change in GDP computed after the year is complete. Thus, it is possible that this figure will change as actual information on economic performance becomes available to us in 2010.

• *Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Statute or Regulations in CY 2010 Compared With CY 2009*

The statutory and regulatory provisions that will affect expenditures in CY 2010 relative to CY 2009 are estimated to have an impact on expenditures of −11.3 percent. These include the MIPPA provisions regarding the physician update, e-prescribing bonuses, the expiration of the work GPCI floor, and the expiration of payment provisions related to certain pathology services.

2. Detail on the 2009 SGR

A more detailed discussion of our revised estimates of the four elements of the 2009 SGR follows.

• *Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for 2009*

This factor was calculated as a weighted-average of the 2009 changes in fees that apply for the different types of services included in the definition of physicians' services for the SGR in 2009.

We estimate that services paid using the PFS account for approximately 82.4 percent of total allowed charges included in the SGR in CY 2009. These services were updated using the CY 2009 MEI of 1.6 percent. We estimate that diagnostic laboratory tests represent approximately 8.0 percent of total allowed charges included in the SGR in CY 2009. Medicare payments for these tests are updated by the CPI–U, which is 5.0 percent for CY 2009. However, section 145 of the MIPPA reduces the update applied to clinical laboratory tests by 0.5 percent for CY 2009 through CY 2013. Therefore, for CY 2009, diagnostic laboratory tests will receive an update of 4.5 percent. We estimate that drugs represent 9.7 percent of Medicare-allowed charges included in the SGR in CY 2009. We estimate a weighted-average change in fees for drugs included in the SGR (using the ASP+6 percent pricing method) of 1.6 percent for CY 2009.

Table 40 shows the weighted-average of the MEI, laboratory, and drug price changes for CY 2009.

TABLE 40—WEIGHTED-AVERAGE OF THE MEI, LABORATORY, AND DRUG PRICE CHANGES FOR CY 2009

	Weight	Update
Physician	0.824	1.6
Laboratory	0.080	4.5
Drugs	0.097	1.6
Weighted-average	1.000	1.8

After considering the elements described in Table 40, we estimate that the weighted-average increase in fees for physicians' services in 2009 under the SGR (before applying any legislative adjustments) will be 1.8 percent. Our estimate of this factor in the CY 2009 PFS final rule with comment period was 2.1 percent (73 FR 69905). The decrease in the estimate is due to the availability of some actual data.

• *Factor 2—The Percentage Change in the Average Number of Part B Enrollees from CY 2008 to CY 2009*

We estimate that the average number of Medicare Part B fee-for-service enrollees (excluding beneficiaries enrolled in Medicare Advantage plans) decreased by 0.8 percent in CY 2009. Table 41 illustrates how we determined this figure.

TABLE 41—AVERAGE NUMBER OF MEDICARE PART B FEE-FOR-SERVICE ENROLLEES FROM CY 2008 TO CY 2009

[Excluding beneficiaries enrolled in MA plans]

	2008	2009
Overall	41.747 million	42.431 million.
Medicare Advantage (MA)	9.999 million	10.926 million.
Net	31.748 million	31.506 million.
Percent Increase		− 0.8 percent.

Our estimate of the − 0.8 percent change in the number of fee-for-service enrollees, net of Medicare Advantage enrollment for CY 2009 compared to CY 2008, is a larger change than our original estimate of − 0.2 percent in the CY 2009 PFS final rule with comment period (73 FR 69905). While our current projection based on data from 8 months of 2009 differs from our original estimate of − 0.2 percent when we had no actual data, it is still possible that our final estimate of this figure will be different once we have complete information on CY 2009 fee-for-service enrollment.

• *Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in CY 2009*

We estimate that the growth in real GDP per capita will be 0.9 percent for

CY 2009 (based on the 10-year average GDP over the 10 years of CY 2000 through CY 2009). Our past experience indicates that there have also been differences between our estimates of real per capita GDP growth made prior to the year's end and the actual change in this factor. Thus, it is possible that this figure will change further as complete actual information on CY 2009 economic performance becomes available to us in 2010.

• *Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Statute or Regulations in CY 2009 Compared With CY 2008*

The statutory and regulatory provisions that will affect expenditures in CY 2009 relative to CY 2008 are estimated to have an impact on expenditures of 4.1 percent. These include the DRA provision reducing payments for imaging services, the MMSEA provision regarding the PQRI bonuses payable in 2009, and the MIPPA provisions regarding the change in cost sharing for mental health services, the physician update, and the change in application of BN to the CF.

3. Detail on the CY 2008 SGR

A more detailed discussion of our final revised estimates of the four elements of the CY 2008 SGR follows.

• *Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for 2008*

This factor was calculated as a weighted-average of the CY 2008 changes in fees that apply for the different types of services included in the definition of physicians' services for the SGR in 2008.

Services paid using the PFS accounted for approximately 82.7 percent of total Medicare-allowed charges included in the SGR for CY 2008 and are updated using the MEI. The MEI for CY 2008 was 1.8 percent. Diagnostic laboratory tests represented approximately 7.7 percent of total CY 2008 Medicare allowed charges included in the SGR and are updated by the CPI–U. However, section 628 of the MMA specifies that diagnostic laboratory tests will receive an update of 0.0 percent from CY 2004 through CY 2008. Drugs represented approximately 9.7 percent of total Medicare-allowed charges included in the SGR for CY 2008. We estimate a weighted-average change in fees for drugs included in the SGR of − 0.7 percent for 2007. Table 42 shows the weighted-average of the MEI, laboratory, and drug price changes for CY 2008.

TABLE 42—WEIGHTED-AVERAGE OF THE MEI, LABORATORY, AND DRUG PRICE CHANGES FOR CY 2008

	Weight	Update
Physician	0.827	1.8
Laboratory	0.077	0.0
Drugs	0.097	− 0.7
Weighted-average	1.000	1.4

After considering the elements described in Table 42, we estimate that the weighted-average increase in fees for physicians' services in CY 2008 under the SGR (before applying any legislative adjustments) was 1.4 percent. This figure is a final one based on complete data for CY 2008.

• *Factor 2—The Percentage Change in the Average Number of Part B Enrollees from CY 2008 to CY 2007*

We estimate the decrease in the number of fee-for-service enrollees (excluding beneficiaries enrolled in MA plans) from CY 2007 to CY 2008 was − 2.0 percent. Our calculation of this factor is based on complete data from CY 2008. Table 43 illustrates the calculation of this factor.

TABLE 43—AVERAGE NUMBER OF MEDICARE PART B FROM CY 2007 TO CY 2008

[Excluding beneficiaries enrolled in MA plans]

	2007	2008
Overall	41.055 million	41.747 million.
Medicare Advantage (MA)	8.661 million	9.999 million.
Net	32.394 million	31.748 million.
Percent Increase		− 2.0 percent.

• *Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in 2008*

We estimate that the growth in real per capita GDP was 1.6 percent in 2008 (based on the 10-year average GDP over the 10 years of CY 1999 through CY 2008). This figure is a final one based on complete data for CY 2008.

• *Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Statute or Regulations in CY 2008 Compared With CY 2007*

Our final estimate for the net impact on expenditures from the statutory and regulatory provisions that affect expenditures in CY 2008 relative to CY 2007 is 3.5 percent. These include the DRA provision reducing payments for imaging services, the MIEA TRHCA provisions regarding the 2007 PQRI reporting bonuses payable in 2008, and the MIPPA provisions regarding the physician update and bonus payments for mental health services.

VII. Anesthesia and Physician Fee Schedule Conversion Factors for CY 2010

The CY 2010 PFS CF is $28.4061. The CY 2010 national average anesthesia CF is $16.6191.

A. Physician Fee Schedule Conversion Factor

The PFS CF for a year is calculated in accordance with section 1848(d)(1)(A) of the Act by multiplying the previous year's CF by the PFS update. The formula for calculating the PFS update is set forth in section 1848(d)(4)(A) of the Act. In general, the PFS update is determined by multiplying the CF for the previous year by the percentage increase in the MEI times the UAF, which is calculated as specified under section 1848(d)(4)(B) of the Act. However, Section 101 of the MIEA–TRHCA provided a 1-year increase in the CY 2007 CF and specified that the CF for CY 2008 must be computed as if the 1-year increase had never applied. Section 101 of the MMSEA provided a 6-month increase in the CY 2008 CF, from January 1, 2008, through June 30, 2008, and specified that the CF for the remaining portion of 2008 and the CFs for CY 2009 and subsequent years must be computed as if the 6-month increase had never applied. Section 131 of the MIPPA extended the increase in the CY 2008 CF that applied during the first half of the year to the entire year, provided for a 1.1 percent increase to the CY 2009 CF, and specified that the CFs for CY 2010 and subsequent years must be computed as if the increases for

CYs 2007, 2008, and 2009 had never applied.

In order to determine the 2010 PFS CF update, the CFs for 2007, 2008, and 2009 must be calculated as if the various legislative changes to the CFs for those years had not occurred.

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ more than $20 million from what would have been in the absence of these changes. If this threshold is exceeded, we must make adjustments to preserve BN. We estimate that CY 2010 RVU changes would result in a decrease in Medicare physician expenditures of more than $20 million. Therefore, we are increasing the CF by 1.00103 to offset this estimated decrease in Medicare physician expenditures due to the CY 2010 RVU changes.

We illustrate the calculation of the CY 2010 PFS CF in Table 44.

TABLE 44: Calculation of the CY 2010 PFS CF

CY 2006 Conversion Factor		$37.8975
CY 2007 Pre-legislation Conversion Factor Update	-5.0 percent (0.94953)	
CY 2007 Pre-legislation Conversion Factor		$35.9848
CY 2008 Pre-legislation Conversion Factor Update	-5.3 percent (0.94674)	
CY 2008 Pre-legislation Conversion Factor		$34.0682
CY 2009 Pre-legislation total, including budget neutrality adjustments totaling -6.3 percent	-11.5 percent (0.88502)	
CY 2009 Pre-legislation Conversion Factor		$30.1510
CY 2010 Medicare Economic Index	1.2 percent (1.012)	
CY 2010 Update Adjustment Factor	-7.0 percent (0.930)	
CY 2010 CF Budget Neutrality Adjustment	0.103 percent (1.00103)	
CY 2010 Conversion Factor		**$28.4061**

Payment for services under the PFS will be calculated as follows:

Payment = [(RVU work × GPCI work) + (RVU PE × GPCI PE) + (RVU malpractice × GPCI malpractice)] × CF.

B. Anesthesia Conversion Factor

We calculate the anesthesia CF as indicated in Table 45. Anesthesia services do not have RVUs like other PFS services. Therefore, we account for any necessay RVU adjustments through an adjustment tothe anesthesia CF to simulate changes to RVUs. More specifically, if there is an adjustment to thework, PE, or malpractice RVUs, these adjustments are applied to the respective shares of the anesthesia CF as these shares are proxies for the work, PE, and malpractice RVUs for anesthesia services.

As explained above, section 101 of the MIEA–TRHCA provided a 1-year increase in the CY 2007 CF and specified that the CF for CY 2008 must be computed as if the 1-year increase had never applied. Section 101 of the MMSEA provided a 6-month increase in the CY 2008 CF, from January 1, 2008, through June 30, 2008, and specified that the CF for the remaining portion of 2008 and the CFs for CY 2009 and subsequent years must be computed as if the 6-month increase had never applied. Section 131 of the MIPPA extended the increase in the CY 2008 CF from the first half of the year to the entire year, provided for a 1.1 percent increase to the CY 2009 CF, and specified that the CFs for CY 2010 and subsequent years must be computed as if the increases for CYs 2007, 2008, and 2009 had never applied.

In order to determine the 2010 PFS CF update, the CFs for 2007, 2008, and 2009 must be calculated as if the various legislative changes to the CFs for those years had not occurred. Also, section 133(b) of the MIPPA provided for the application of the 2007–2008 5-Year work review BN adjuster to the CF for years beginning with 2009. To make this change for the anesthesia CF, we recalculated the adjustments to the anesthesia CF for CY 2007 and CY 2008 by removing the BN adjuster for work which had been applied to calculate the CF for each of these years. (See the CY 2009 PFS final rule with comment period (73 FR 69909) for more information on this calculation.) Table 45 also includes the CY 2010 adjustment to the anesthesia CF due to changes in CY 2010 payment polices for PE and malpractice RVUs.

TABLE 45: Calculation of the CY 2010 Anesthesia Conversion Factor

CY 2006 Anesthesia Conversion Factor		$17.7663
CY 2007 Pre-legislation Conversion Factor Update	-5.0 percent (0.94953)	
CY 2007 Adjustment without BN adjuster	.9874	
CY 2007 Pre-legislation Conversion Factor		$16.6571
CY 2008 Pre-legislation Conversion Factor Update	-5.3 percent (0.94674)	
CY 2008 Adjustment without BN adjuster	1.2528	
CY 2008 Pre-legislation Conversion Factor		$19.7566
CY 2009 Pre-legislation total, including budget neutrality adjustments totaling -6.3 percent	-11.5 percent (0.88502)	
CY 2009 Pre-legislation Conversion Factor		$17.4849
CY 2010 Medicare Economic Index	1.2 percent (1.012)	
CY 2010 Update Adjustment Factor	-7.0 percent (0.930)	
CY 2010 Anesthesia Adjustment	0.99 percent (1.0099)	
CY 2010 Anesthesia Conversion Factor		**$16.6191**

VIII. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m) of the Act establishes the payment amount for the Medicare telehealth originating site facility fee for telehealth services provided from October 1, 2001, through December 31 2002, at $20. For telehealth services provided on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the MEI as defined in section 1842(i)(3) of the Act. The MEI increase for 2010 is 1.2 percent.

Therefore, for CY 2010, the payment amount for HCPCS code Q3014, Telehealth originating site facility fee, is 80 percent of the lesser of the actual charge or $24.00. The Medicare telehealth originating site facility fee and MEI increase by the applicable time period is shown in Table 46.

TABLE 46: The Medicare Telehealth Originating Site Facility Fee and MEI Increase by the Applicable Time Period

Facility Fee	MEI Increase	Period
$20.00	N/A	10/01/2001 – 12/31/2002
$20.60	3.0%	01/01/2003 – 12/31/2003
$21.20	2.9%	01/01/2004 – 12/31/2004
$21.86	3.1%	01/01/2005 – 12/31/2005
$22.47	2.8%	01/01/2006 – 12/31/2006
$22.94	2.1%	01/01/2007 – 12/31/2007
$23.35	1.8%	01/01/2008 – 12/31/2008
$23.72	1.6%	01/01/2009 – 12/31/2009
$24.00	1.2%	01/01/2010 – 12/31/2010

IX. Provisions of the Final Rule

The provisions of this final rule with comment period restate the provisions of the CY 2010 PFS proposed rule, except as noted elsewhere in the preamble.

X. Waiver of Proposed Rulemaking and Delay in Effective Date

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on

the proposed rule. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substance of the proposed rule or a description of the subjects and issues involved. This procedure can be waived, however, if an agency finds good cause that a notice-and-comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of the finding and its reasons in the rule issued.

We utilize HCPCS codes for Medicare payment purposes. The HCPCS is a national drug coding system comprised of Level I (CPT) codes and Level II (HCPCS National Codes) that are intended to provide uniformity to coding procedures, services, and supplies across all types of medical providers and suppliers. Level I (CPT) codes are copyrighted by the AMA and consist of several categories, including Category I codes which are 5-digit numeric codes, and Category III codes which are temporary codes to track emerging technology, services, and procedures.

The AMA issues an annual update of the CPT code set each Fall, with January 1 as the effective date for implementing the updated CPT codes. The HCPCS, including both Level I and Level II codes, is similarly updated annually on a CY basis. Annual coding changes are not available to the public until the Fall immediately preceding the annual January update of the PFS. Because of the timing of the release of these new codes, it is impracticable for CMS to provide prior notice and solicit comment on these codes and the RVUs assigned to them in advance of publication of the final rule that implements the PFS. Yet, it is imperative that these coding changes be accounted for and recognized timely under the PFS for payment because services represented by these codes will be provided to Medicare beneficiaries by physicians during the CY in which they become effective. Moreover, regulations implementing HIPAA (42 CFR parts 160 and 162) require that the HCPCS be used to report health care services, including services paid under the PFS. We also assign interim RVUs to any new codes based on a review of the RUC recommendations for valuing these services. By reviewing these RUC recommendations for the new codes, we are able to assign RVUs to services based on input from the medical community and to establish payment for them, on an interim basis, that corresponds to the relative resources associated with furnishing the services. If we did not assign RVUs to new codes on an interim basis, the alternative would be to either not pay for these services during the initial CY or have each carrier establish a payment rate for these new codes. We believe both of these alternatives are contrary to the public interest, particularly since the RUC process allows for an assessment of the valuation of these services by the medical community prior to our establishing payment for these codes on an interim basis. Therefore, we believe it would be contrary to the public interest to delay establishment of fee schedule payment amounts for these codes.

For the reasons outlined above in this section, we find good cause to waive the notice of proposed rulemaking for the interim RVUs for selected procedure codes identified in Addendum C and to establish RVUs for these codes on an interim final basis. We are providing a 60-day public comment period.

Section II.F. of this final rule with comment period discusses the identification and review of potentially misvalued codes by a workgroup of the AMA RUC, as well as our review and decisions regarding the AMA RUC workgroup's recommendations. Similar to the AMA RUC recommendations for new and revised codes discussed above, due to the timing of the AMA RUC workgroup's recommendations for the potentially misvalued codes, it was impracticable for CMS to solicit public comment regarding specific proposals for revision prior to this final rule with comment period. We believe it is in the public interest to implement the revised RVUs for the codes that were identified as misvalued, and that have been reviewed and re-evaluated by the AMA RUC workgroup, on an interim final basis for CY 2010. The revisions of RVUs for these codes will establish a more appropriate payment that better corresponds to the relative resources associated with furnishing these services. A delay in implementing revised values for these misvalued codes would not only perpetuate the known misvaluation for these services, it would also perpetuate a distortion in the payment for other services under the PFS. Implementing the changes now allows for a more equitable distribution of payments across all PFS services. We believe a delay in implementation of these revisions would be contrary to the public interest, particularly since the AMA RUC process allows for an assessment of the valuation of these services by the medical community prior to the AMA RUC's recommendation to CMS. For the reasons described above, we find good cause to waive notice and comment procedures with respect to the misvalued codes identified in Table 5, and to revise RVUs for these codes on an interim final basis. We are providing a 60-day public comment period.

We ordinarily provide a 60-day delay in the effective date of the provisions of a rule in accordance with the Administrative Procedure Act (APA) (5 U.S.C. 553(d)), which requires a 30-day delayed effective date, and the Congressional Review Act (5 U.S.C. 801(a)(3)), which requires a 60-day delayed effective date for major rules. However, we can waive the delay in the effective date if the Secretary finds, for good cause, that the delay is impracticable, unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons in the rule issued (5 U.S.C. 553(d)(3); 5 U.S.C. 808(2)).

In section II. G. 6 of this final rule with comment period, we are finalizing our proposed criteria for designating organizations to accredit suppliers furnishing the TC of advanced diagnostic imaging services as specified in section 1834(e) of the Act. We also discuss our expectation to publish a notice the same day that this final rule is issued to solicit applications from entities for the purpose of becoming a designated accreditation organization. We note that section 1834(e) of the Act requires us to designate organizations to accredit suppliers furnishing the TC of advanced diagnostic imaging services by January 1, 2010. Given the statutory deadline to designate organizations and the timing of the publication of this final rule with comment period, we believe it is impracticable to delay the effective date of these criteria for designating organizations to accredit suppliers furnishing the TC of advanced diagnostic imaging services. Therefore, we believe that we have good cause for making the imaging accreditation provisions effective upon publication.

XI. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs Regarding Pulmonary Rehabilitation Program: Conditions for Coverage (§ 410.47)

Section 410.47(c) lists the components of a pulmonary rehabilitation program. Specifically, § 410.47(c)(3) through (c)(5) discuss psychosocial assessments, outcome assessments and individualized treatment plans, respectively, and the role of these tools in pulmonary rehabilitation programs. The burden associated with meeting the requirements for conducting psychosocial assessments, outcome assessments, and individualized treatment plans is the time and effort necessary for providers to document the necessary information in the patient record. While these requirements are subject the PRA, we believe the associated burden is exempt as stated under 5 CFR 1320.3(b)(2). Psychosocial assessments, outcome assessments and individualized treatment plans are routine tools used in pulmonary rehabilitation programs and the practice of using these tools is generally recognized as an industry standard as part of usual and customary business practices.

B. ICRs Regarding Kidney Disease Education Services (§ 410.48)

Section 410.48(f) states qualified persons will develop outcomes assessments designed to:

- Measure beneficiary knowledge about chronic kidney disease (CKD) and its treatment;
- Assess program effectiveness of preparing the beneficiary to make informed decisions about their healthcare options related to CKD; and
- Assess program effectiveness in meeting the communication needs of underserved populations, including persons with disabilities, persons with limited English proficiency, and persons with health literacy needs.

The assessment will be administered to the beneficiary during one of the kidney disease education (KDE) sessions prescribed by the referring physician. The assessments will be made available to CMS upon request.

The burden associated with these requirements is the time and effort necessary to conduct an outcomes assessment, maintain record of the assessment, and to make the documentation available to CMS upon request. At this time, we are not able to accurately quantify the burden because we cannot estimate the number of entities that must comply with these requirements. Additionally, we are trying to determine if the use and maintenance of outcome assessments in KDE services is a standard industry business practice. Our preliminary research gathered during a CMS Open Door Forum held on November 6, 2008 and a stakeholders meeting hosted by the Agency for Healthcare Research and Quality (AHRQ) on December 16, 2008 indicates that outcome assessments are used by most but not all of the entities bound by the requirements in § 410.48. We solicited comments pertaining to this issue in the proposed rule that published July 13, 2009 (74 FR 33520); however, we did not receive any information to assist us in accurately quantifying the number of entities that must comply with this requirement. We will continue to evaluate the issue. If we find that the number of affected entities approaches the threshold of 10 as specified in 5 CFR 1320.3(c)(4), we will submit an information collection request to OMB for review and approval.

C. ICRs Regarding Cardiac Rehabilitation Program and Intensive Cardiac Rehabilitation Program: Conditions of Coverage (§ 410.49)

Section 410.49(b)(2) lists the required components of a cardiac rehabilitation program. Four of the five required components, including cardiac risk factor modification, psychosocial assessments, outcomes assessments and individualized treatment plans, impose information collection burdens. The burden associated with these requirements is the time and effort necessary to providers to customize each patient's cardiac risk modification program. Additionally, there is burden associated with conducting psychosocial assessments and outcome assessments and drafting individualized treatment plans. Although section 144(a) of the MIPPA sets forth these information collection requirements, we believe the associated information collection burden is exempt as stated under 5 CFR 1320.3(b)(2). Performing cardiac risk modification, psychosocial assessments, outcome assessments, and individualized treatment plans are routine tools used in cardiac rehabilitation programs. As stated earlier in the preamble of this final rule with comment period, intensive cardiac rehabilitation programs typically involve the same elements as general cardiac rehabilitation programs, but are furnished in highly structured environments in which sessions of the various components may be combined for longer periods of cardiac rehabilitation and also may be more rigorous. The ICRs and associated burden are generally recognized as an industry standard as part of usual and customary business practices.

Section 410.49(c)(1) states that to be approved as an intensive cardiac rehabilitation program, a program in an approved setting must be approved through the national coverage determination (NCD) process which may be generated internally by CMS or requested by a non-CMS entity. To be approved as an intensive cardiac rehabilitation program, the program must demonstrate through peer-reviewed, published research that it accomplishes one or more of the requirements listed in § 410.49(c)(1)(i) through (iii), as well as statistically significant reductions in 5 or more of the measures listed in § 410.49(c)(2)(i) through (vi). As described in § 410.49(c)(4), all prospective intensive cardiac rehabilitation sites must apply to enroll as an intensive cardiac rehabilitation program site using the designated forms as specified at § 424.510.

The burden associated with the requirements in § 410.49(c) is the time and effort necessary for a program to demonstrate through peer-reviewed, published research that it accomplishes one or more of the requirements listed in § 410.49(c)(1)(i) through (iii), as well as statistically significant reductions in 5 or more of the measures listed in § 410.49(c)(2)(i) through (vi) and the time and effort necessary for intensive cardiac rehabilitation sites to apply to enroll using the designated forms as specified at 424.510. At this time, we are not able to accurately quantify the burden because we cannot estimate the number of entities that will seek approval as intensive cardiac rehabilitation programs. We solicited comments pertaining to this issue in the CY 2010 PFS proposed rule (74 FR 33520); however, we did not receive any information to assist us in accurately quantifying the number of entities that must comply with this requirement. We will continue to evaluate the issue. If we find that the number of affected entities

approaches the threshold of 10 as specified in 5 CFR 1320.3(c)(4), we will submit an information collection request to OMB for review and approval.

D. ICRs Regarding Imaging Accreditation (§ 414.68)

Section 414.68(b) contains the application and reapplication procedures for accreditation organizations. Specifically, an independent accreditation organization applying for approval or reapproval of authority to survey suppliers for purposes of accrediting suppliers furnishing the technical component (TC) of advanced diagnostic imaging services must furnish CMS with all of the information listed in § 414.68(b)(1) through (14). The requirements include but are not limited to reporting, notification, documentation, and survey requirements.

The burden associated with the collection requirements in § 414.68(b) is the time and effort necessary to develop, compile and submit the information listed in § 414.68(b)(1) through (14). We believe that 3 entities will choose to comply with these requirements. We estimate that it will take each of the 3 entities, 80 hours to submit a complete application for approval or reapproval authority to become an accrediting organization approved by CMS.

Section 414.68(c) contains the information collection requirements pertaining to CMS approved accrediting organizations. An accrediting organization approved by CMS must undertake all of the activities listed in § 414.68(c)(1) through (6). The burden associated with the collection requirements in § 414.68(c) is the time and effort necessary to develop, compile and submit the information listed in § 414.68(c)(1) through (6). We believe that 3 entities will choose to comply with these requirements. We estimate that it will take each of the 3 entities, 80 hours to submit the required information on an ongoing basis.

For the aforementioned requirements in § 414.68(b) and § 414.68(c), we are aware that the potential respondent universe is greater than 10 entities; however, at this time, there are only three entities committed to the program. If the number of respondents approaches the threshold of 10 or more persons as defined in 5 CFR 1320.3(c)(4), we will develop and submit an information collection request to OMB for review and approval.

Section 414.68(d)(1) states that CMS or our contractor may conduct an audit of an accredited supplier, examine the results of a CMS-approved accreditation organization's survey of a supplier, or observe a CMS-approved accreditation organization's onsite survey of a supplier, in order to validate the CMS-approved accreditation organizations accreditation process. The burden associated with this requirement is the time and effort necessary for an accrediting organization to comply with the components of the validation audit. While this requirement is subject to the PRA, we believe the associated burden is exempt as stated in 5 CFR 1320.3(h)(6). The burden associated with a request for facts addressed to a single person, as defined in 5 CFR 1320.3(j), is not subject to the PRA.

As stated in § 414.68(e)(1), an accreditation organization dissatisfied with a determination that its accreditation requirements do not provide or do not continue to provide reasonable assurance that the suppliers accredited by the organization meet the applicable quality standards is entitled to a reconsideration. CMS reconsiders any determination to deny, remove, or not to renew the approval of deeming authority to an accreditation organization if the accrediting organization files a written request for reconsideration by our authorized officials or through its legal representative. The written request must be filed within 30 calendar days of the receipt of CMS' notice of an adverse determination or nonrenewal. In addition, the request must also specify the findings or issues with which the accreditation organization disagrees and the reasons for the disagreement.

The burden associated with this requirement is the time and effort necessary for an accrediting organization to develop and file a written request for reconsideration. While this requirement is subject to the PRA, the associated burden is exempt under 5 CFR 1320.4. The information in question is being collected as a result of an administrative action; accrediting organizations are submitting requests for reconsideration after receiving a notice of an adverse determination or nonrenewal.

E. ICRs Regarding Payment Rules (§ 414.408)

Section 414.408(j)(5) contains the notification requirements for suppliers electing to become grandfathered suppliers. Specifically, § 414.408(j)(5)(i) states that a noncontract supplier that elects to become a grandfathered supplier must provide a 30-day written notification to each Medicare beneficiary that resides in a competitive bidding area and is currently renting a competitively bid item from that supplier. The 30-day notification to the beneficiary must meet the requirements as listed in § 414.408(j)(5)(i)(A) through (G).

Subsequent to the initial 30-day notice to the beneficiary, as required by § 414.408(j)(5)(ii), suppliers must also obtain and maintain a record of the beneficiary's election choice, the date the choice was made, and the manner through which the beneficiary communicated his or her choice. Additionally, § 414.408(j)(5)(iii) states that if a beneficiary chooses not to continue to receive a grandfathered item(s) from his or her current supplier, the supplier must provide the beneficiary with two more notices prior to the supplier picking up its equipment. The supplier must provide a 10-day notification and a 2-day notification. These notification requirements must meet the criteria listed in § 414.408(j)(5)(iii)(A) though (C).

Section § 414.408(j)(5)(iv) requires suppliers that elect to become grandfathered suppliers to provide a written notification to CMS of its election decision. The notification must meet the requirements as specified in § 414.408(j)(5)(iv)(A) through (D).

The burden associated with the information collection requirements contained in § 414.408(j)(5) is the time and effort necessary for a noncontract supplier to make the aforementioned notifications to both beneficiaries and CMS. We estimate that 1,305 suppliers will elect to become grandfathered suppliers. Similarly, we estimate that each grandfathered supplier will need to make an average of 53 notifications based on an average of 52 beneficiaries per supplier and one notice to CMS. We estimate that it will take 2 hours to develop the notification to the beneficiary and 2 hours to develop the notification to CMS. Similarly, we estimate that each notification will take 15 minutes to send. The total estimated burden associated with each of the 1305 suppliers complying with the requirements in § 414.408(j)(5) is 17.25 hours per supplier for a total of 22,511 hours.

Section 414.408(j)(6) contains the information collection requirements pertaining to suppliers that choose not to become grandfathered suppliers. A noncontract supplier that elects not to become a grandfathered supplier is required to pick up the item it is currently renting to the beneficiary from the beneficiary's home after proper notification. Proper notification includes a 30-day, a 10-day, and a 2-day notice of the supplier's decision not to

become a grandfathered supplier to its Medicare beneficiaries who are currently renting certain DME competitively bid item(s) and who reside in a CBA. These notifications must meet all of the requirements listed in § 414.408(j)(5)(i) and (ii) for the 30-day, 10-day and 2-day notices that must be sent by suppliers who decide to be grandfathered suppliers. However, there are exceptions regarding the 30-day notice for noncontract suppliers electing not to become grandfathered suppliers. The exceptions are listed in § 414.408(j)(6)(iii)(A) through (C). In addition, suppliers must also comply with the criteria listed in § 414.408(j)(6)(iv).

The burden associated with the information collection requirements in § 414.408(j)(6) is the time and effort necessary for a supplier to make the required notifications to beneficiaries. We estimate that 145 suppliers will not elect to become grandfathered suppliers. Similarly, we estimate that each nongrandfathered supplier will need to make an average of 156 notifications based on an average of 52 beneficiaries per supplier. We estimate that it will take 2 hours to develop the 30-day notification to the beneficiary and 15 minutes to send out each notification. The 10-day notification will take approximately 15 minutes and the 2-day will take approximately 15 minutes. We estimate to send out all 3 notifications it will take a total of approximately 45 minutes. The total burden associated with the requirements in § 414.408(j)(6) is approximately 5,945 hours.

F. ICRs Regarding Claims for Damages (§ 414.425)

Section 414.425(a) states that any aggrieved supplier, including a member of a network that was awarded a contract for the Round 1 Durable Medical Prosthetics, Orthotics, and Supplies Competitive Bidding Program (DMEPOS CBP), may file a claim under this section for certain alleged damages arising out of MIPPA's termination of the Round 1 DMEPOS CBP contracts. Section 414.425(b) states that a completed claim, including all documentation, must be filed within 90 days of the effective date of the final rule on damages, unless that day is a holiday or Sunday in which case it will revert to the next business day. Section 414.425(c) lists the required documentation for submitting a claim.

The burden associated with this requirement is the time and effort necessary to gather required documentation as specified in § 414.425(c) and submit a claim for damages. This requirement is for a one-time process that will only impact those suppliers who were awarded a contract and were potentially damaged by the termination of their contracts by MIPPA. We awarded contracts to 329 suppliers. We expect that it will take approximately 3 hours for a supplier to gather the necessary documents and to file a claim. We anticipate that anywhere between 5 and 250 suppliers may submit a claim for damages.

While this requirement is subject to the PRA, we believe the associated burden is exempt under 5 CFR 1320.4. The information in question is being collected as a result of an administrative action; suppliers are submitting claims for damages caused by the termination of contracts awarded in 2008 under the DMEPOS CBP that were terminated as a result of section 154(a)(1)(A)(iv) of the MIPPA.

G. ICRs Dispute Resolution and Process for Suspension or Termination of Approved CAP Contract and Termination of Physician Participation Under Exigent Circumstances (§ 414.917)

As stated in § 414.97, an approved CAP vendor may appeal that termination by requesting a reconsideration. A determination must be made as to whether the approved CAP vendor has been meeting the service and quality obligations of its CAP contract. The approved CAP vendor's contract will remain suspended during the reconsideration process.

The burden associated with this requirement is the time and effort necessary for a CAP vendor to request a reconsideration of the termination. While this requirement is subject to the PRA, we believe the associated burden is exempt under 5 CFR 1320.4. The burden associated with collecting information subsequent to an administrative action is not subject to the PRA.

H. ICRs Regarding Compendia for Determination of Medically-accepted Indications for Off-label Uses of Drugs and Biologicals in an Anti-cancer Chemotherapeutic Regimen (§ 414.930)

As stated in the definition for a publicly transparent process for evaluating therapies in § 414.930(a), a compendium must make the following materials available to the public on its Web site, coincident with the compendium's publication of the related recommendation:

(i) The internal or external request for listing of a therapy recommendation including criteria used to evaluate the request.

(ii) A listing of all the evidentiary materials reviewed or considered by the compendium pursuant to the request.

(iii) A listing of all individuals who have substantively participated in the review or disposition of the request.

(iv) Minutes and voting records of meetings for the review and disposition of the request.

The definition for a publicly transparent process for identifying conflicts of interests in § 414.930(a), states that a compendium must make the following materials available to the public, coincident with the compendium's publication of the related recommendation:

(i) Direct or indirect financial relationships that exist between individuals or the spouse or minor child of individuals who have substantively participated in the development or disposition of compendia recommendations and the manufacturer or seller of the drug or biological being reviewed by the compendium. This may include, for example, compensation arrangements such as salary, grant, contract, or collaboration agreements between individuals or the spouse or minor child of individuals who have substantively participated in the review and disposition of the request and the manufacturer or seller of the drug or biological being reviewed by the compendium.

(ii) Ownership or investment interests between individuals or the spouse or minor child of individuals who have substantively participated in the development or disposition of compendia recommendations and the manufacturer or seller of the drug or biological being reviewed by the compendium.

Based on our estimate, the burden we derived for all our conflict of interest and transparency provisions above, the total burden would range from 1950 hours per compendium with 75 responses to 2600 hours per compendium with 100 responses. The variation in responses is due to the varying size of compendia publications and different processes used by compendia publishers to generate a recommendation. In our estimate we also found that the total burden from respondents would range from 30 hours per compendium with 10 respondents to 2535 hours per compendium with 845 respondents. The variation in respondents depends on a compendium's use of internal or external staff to generate compendia recommendations. Therefore, based on these burden totals, the total burden hours per compendium to comply with our conflict of interest and transparency

provisions ranges from 1980 hours (a compendium with 75 responses and 10 respondents) to 5135 hours (a compendium with 100 responses and 845 respondents). In order to capture the maximum burden for an individual compendium, we are using the highest total hour estimate, 5135 hours, per compendium to comply with our conflict of interest and transparency provisions. In addition, all these provisions could be managed by a qualified administrative assistant at an hourly rate of $33.51 per hour based on the average salary of $69,500 obtained from the Department of Labor.

We are soliciting public comments on the aforementioned requirements and the associated burden estimates in an emergency PRA notice published elsewhere in this **Federal Register.**

TABLE 47—ESTIMATED ANNUAL REPORTING AND RECORDKEEPING BURDEN

Regulation section(s)	OMB Control No.	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)
§ 414.408(j)(5)	0938–New	1305	69,165	17.25	22,511
§ 414.408(j)(6)	0938–New	145	22,620	41	5,945
§ 414.930	0938–New	845	900	*1.83	5,135
Total					33,591

*The average burden for the six tasks associated with the requirements in § 414.930.

If you comment on these information collection and recordkeeping requirements, please do either of the following:

1. Submit your comments electronically as specified in the **ADDRESSES** section of this final rule with comment period; or

2. Submit your comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, *Attention:* CMS Desk Officer, [CMS–1413–P]. *Fax:* (202) 395–6974; or *E-mail: OIRA_submission@omb.eop.gov.*

Additional Information Collection Requirements

This final rule with comment period imposes collection of information requirements as outlined in the regulation text and specified above. However, this final rule with comment period also makes reference to several associated information collections that are not discussed in the regulation text contained in this document. The following is a discussion of these information collections, some of which have already received OMB approval.

Part B Drug Payment

The discussion of average sales price (ASP) issues in section II.H.1 of this final rule with comment period does not contain any new information collection requirements with respect to payment for Medicare Part B drugs and biologicals under the ASP methodology. Drug manufacturers are required to submit ASP data to us on a quarterly basis. The ASP reporting requirements are set forth in section 1927(b) of the Act. The burden associated with this requirement is the time and effort required by manufacturers of Medicare Part B drugs and biologicals to calculate, record, and submit the required data to CMS. While the burden associated with this requirement is subject to the PRA, it is currently approved under OMB control number 0938–0921.

Competitive Acquisition Program (CAP)

Section II.H.2. of this final rule with comment period discusses issues related to the competitive acquisition program for Part B drug payment. There are no new information collection requirements associated with the CAP; however, there are several previously approved information collection requests (ICR) associated with the CAP.

TABLE 48—OMB CONTROL NUMBERS

Program component	OMB Control No.	Expiration date
Medicare Part B Drug and Biological CAP	0938–0954	06/30/2011
Medicare Part B Drug and Biological Competitive Acquisition Program Applications [1]	0938–0955	08/31/2012
Competitive Acquisition Program (CAP) for Medicare Part B Drugs: CAP Physician Election Agreement	0938–0987	12/31/2011

[1] An extension of the currently approved ICR is currently in the middle of the mandatory 60-day **Federal Register** notice and comment period. The ICR will be submitted to OMB for review and approval prior to the expiration date.

Physician Quality Reporting Initiative (PQRI)

Section II.G.2. of this final rule with comment period discusses the background of the PQRI, provides information about the measures to be available to eligible professionals who choose to participate in the 2010 PQRI, and the criteria for satisfactory reporting in 2010. Beginning on January 1, 2010, the Secretary is also required by section 1848(m)(3)(C) of the Act, to establish and have in place a process under which eligible professionals in a group practice (as defined by the Secretary) shall be treated as satisfactorily submitting data on quality measures under the PQRI.

With respect to satisfactory submission of data on quality measures by eligible professionals, eligible professionals include physicians, other practitioners as described in section 1842(b)(18)(c) of the Act, physical and occupational therapists, qualified speech-language pathologists, and qualified audiologists. Eligible professionals may choose whether to participate and, to the extent they satisfactorily submit data on quality measures for covered professional services, they can qualify to receive an incentive payment. To qualify to receive an incentive payment for 2010, the eligible professional must meet one of the criteria for satisfactory reporting described in sections II.G.2.e. and II.G.2.f. of this final rule with comment period.

For individual eligible professionals, the burden associated with the requirements of this voluntary reporting

initiative is the time and effort associated with eligible professionals identifying applicable PQRI quality measures for which they can report the necessary information and the time and effort associated with eligible professionals selecting a reporting option. We believe it is difficult to accurately quantify the burden because it would vary with each eligible professional by the number of measures applicable to the eligible professional, the eligible professional's familiarity and understanding of the PQRI, and experience with participating in the PQRI. In addition, eligible professionals may employ different methods for incorporating quality measures reporting into the office work flows and are given flexibility for determining which reporting option best fits their needs.

We believe the burden associated with participating in PQRI has declined for those familiar with the program and who have satisfactorily participated in the 2007 PQRI and/or the 2008 PQRI. However, because we anticipate even greater participation in the 2010 PQRI, including participation by eligible professionals who are participating in PQRI for the first time in 2010, we will assign 5 hours as the amount of time needed for eligible professionals to review the list of PQRI quality measures, identify the applicable measures for which they can report the necessary information, review the measure specifications for those measures applicable to the eligible professional, incorporate reporting of the measures selected by the eligible professional into the office work flows, and select a 2010 PQRI reporting option. Information from the Physician Voluntary Reporting Program (PVRP), which was a predecessor to the PQRI, indicated an average labor cost of $50 per hour per practice. To account for salary increases over time, we will use an average practice labor cost of $55 per hour in our estimates based on an assumption of an average annual increase of approximately 3 percent. Thus, we estimate the cost for an eligible professional to review the list of PQRI quality measures, identify the applicable measures for which they can report the necessary information, review the measure specifications for those measures applicable to the eligible professional, incorporate reporting of the selected measures into the office work flows, and select a 2010 PQRI reporting option to be approximately $275 per eligible professional ($55 per hour × 5 hours).

We continue to expect the ongoing costs associated with PQRI participation to decline based on an eligible professional's familiarity with and understanding of the PQRI, experience with participating in the PQRI, and increased efforts by CMS and stakeholders to disseminate useful educational resources and best practices.

In addition, for claims-based reporting, eligible professionals must gather the required information, select the appropriate quality data codes, and include the appropriate quality data codes on the claims they submit for payment. The PQRI will collect quality data codes as additional (optional) line items on the existing HIPAA transaction 837–P and/or CMS Form 1500. We do not anticipate any new forms or modifications to the existing transaction or form. We also do not anticipate changes to the 837–P or CMS Form 1500 for CY 2010.

Because this is a voluntary program, it is difficult to accurately estimate how many eligible professionals will opt to participate in the PQRI in CY 2010. Information from the ''PQRI 2007 Reporting Experience Report,'' which is available on the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI*, indicates that nearly 110,000 unique TIN/NPI combinations attempted to submit PQRI quality measures data via claims for the 2007 PQRI. Therefore, for purposes of conducting a burden analysis for the 2010 PQRI, we will assume that all eligible professionals who attempted to participate in the 2007 PQRI will also attempt to participate in the 2010 PQRI.

Moreover, the time needed for an eligible professional to review the quality measures and other information, select measures applicable to his or her patients and the services he or she furnishes to them, incorporate reporting of the selected measures into the office work flows, and select a 2010 PQRI reporting option is expected to vary along with the number of measures that are potentially applicable to a given professional's practice. Since eligible professionals are generally required to report on at least 3 measures to earn a PQRI incentive, we will assume that each eligible professional who attempts to submit PQRI quality measures data is attempting to earn a PQRI incentive payment and that each eligible professional reports on an average of 3 measures for this burden analysis.

Based on our experience with the PVRP, we continue to estimate that the time needed to perform all the steps necessary to report each measure (that is, reporting the relevant quality data code(s) for a measure) on claims ranges from 15 seconds (0.25 minutes) to over 12 minutes for complicated cases and/or measures, with the median time being 1.75 minutes. With an average practice labor cost of $55 per hour, the cost associated with this burden ranges from $0.23 in labor time to about $11.00 in labor time for more complicated cases and/or measures, with the cost for the median practice being $1.44.

The total estimated annual burden for this requirement will also vary along with the volume of claims on which quality data is reported. Results from the 2007 PQRI indicate that eligible professionals reported on 1 to 3,331 eligible instances per measure. For all 2007 PQRI measures, the median number of eligible instances reported on per measure was less than 60. On average the median number of eligible instances reported on per measure was about 9. Therefore, for this burden analysis we estimate that for each measure, an eligible professional reports the quality data on 9 cases. The actual number of cases on which an eligible professional will be required to report quality measures data will vary, however, with the eligible professional's patient population and the types of measures on which the eligible professional chooses to report (each measure's specifications includes a required reporting frequency).

Based on the assumptions discussed above, we estimate the total annual burden per eligible professional associated with claims-based reporting to range from 306.75 minutes, or 5.1125 hours [(0.25 minutes per measure × 3 measures × 9 cases per measure) + 5 hours] to 624 minutes, or 10.4 hours [(12 minutes per measure × 3 measures × 9 cases per measure) + 5 hours]. We estimate the total annual cost per eligible professional associated with claims-based reporting to range from $281.21 [($0.23 per measure × 3 measures × 9 cases per measure) + $275] to $572 [($11.00 per measure × 3 measures × 9 cases per measure) + $275].

For registry-based reporting, we are estimating that it would cost an eligible professional approximately $1,000 to participate in a registry based on input we received from commenters (these comments are addressed in the section II.G.2.a. of the preamble). This takes into account the participation fee charged by registries and the fact that this fee often includes services above and beyond what is required for PQRI. However, registries vary in their participation fees as some registries do not charge a participation fee at all or charge only nominal fees. Eligible professionals also need to authorize or instruct the registry to submit quality measures results and

numerator and denominator data on quality measures to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes for each eligible professional that wishes to authorize or instruct the registry to submit quality measures results and numerator and denominator data on quality measures to CMS on their behalf.

Registries interested in submitting quality measure results and numerator and denominator data on quality measures to CMS on their participants' behalf in 2010 will need to complete a self-nomination process in order to be considered ''qualified'' to submit on behalf of eligible professionals unless the registry was qualified to submit on behalf of eligible professionals for the 2009 PQRI and does so successfully. We estimate that the self-nomination process for qualifying additional registries to submit on behalf of eligible professionals for the 2010 PQRI involves approximately 1 hour per registry to draft the letter of intent for self-nomination. It is estimated that each self-nominated entity will also spend 2 hours for the interview with CMS officials and 2 hours for the development of a measure flow. However, the time it takes to complete the measure flow could vary depending on the registry's experience. Additionally, part of the self-nomination process involves the completion of an XML submission by the registry, which is estimated to take approximately 5 hours, but may vary depending on the registry's experience. We estimate that the registry staff involved in the registry self-nomination process have an average labor cost of $50 per hour. Therefore, assuming the total burden hours per registry associated with the registry self-nomination process is 10 hours, we estimate the total cost to a registry associated with the registry self-nomination process to be approximately $500 ($50 per hour × 10 hours per registry).

The burden associated with the registry-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the registry calculating quality measure results from the data submitted to the registry by its participants and submitting the quality measure results and numerator and denominator data on quality measures to CMS on behalf of their participants. The time needed for a registry to review the quality measures and other information, calculate the measure results, and submit the measure results and numerator and denominator data on the quality measures on their participants' behalf is expected to vary along with the number of eligible professionals reporting data to the registry and the number of applicable measures. However, since it is customary for most registries to provide their participants with information that can be used for the participants' internal quality improvement efforts, we believe that registries already perform many of these activities for their participants. The number of measures that the registry intends to report to CMS and how similar the registry's measures are to CMS' PQRI measures will determine the time burden to the registry.

For EHR-based reporting, the eligible professional must review the quality measures on which we will be accepting PQRI data extracted from EHRs, select the appropriate quality measures, extract the necessary clinical data from his or her EHR, and submit the necessary data to the CMS-designated clinical data warehouse. Because this manner of reporting quality data to CMS will be new to PQRI for 2010 and participation in this reporting initiative is voluntary, we believe it is difficult to estimate with any degree of accuracy how many eligible professionals will opt to participate in the PQRI through the EHR mechanism in CY 2010. The time needed for an eligible professional to review the quality measures and other information, select measures applicable to his or her patients and the services he or she furnishes to them is expected to be similar for EHR-based reporting and claims-based reporting. Once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the eligible professional associated with submission of data on PQRI quality measures should be minimal.

An EHR vendor interested in having their product(s) be used by eligible professionals to submit PQRI quality measures data to CMS were required to complete a self-nomination process in order for the vendor's product(s) to be considered ''qualified'' for 2010. It is difficult for us to accurately quantify the burden associated with the EHR self-nomination process as there is variation regarding the technical capabilities and experience among vendors. For purposes of this burden analysis, however, we estimate that the time required for an EHR vendor to complete the self-nomination process will be similar to the time required for registries to self-nominate, that is, approximately 10 hours at $50 per hour for a total of $500 per EHR vendor ($50 per hour × 10 hours per EHR vendor).

The burden associated with the EHR-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the eligible professional needs to submit to CMS for purposes of reporting 2010 PQRI quality measures. The time needed for an EHR vendor to review the quality measures and other information and program each qualified EHR product to enable eligible professionals to submit PQRI quality measures data to the CMS-designated clinical data warehouse will be dependent on the EHR vendor's familiarity with PQRI, the vendor's system capabilities, as well as the vendor's programming capabilities. Some vendors already have these necessary capabilities and for such vendors, we estimate the total burden hours to be 40 hours at a rate of $50 per hour for a total burden estimate of $2,000 ($50 per hour × 40 hours per vendor). However, given the variability in the capabilities of the vendors, we believe a more conservative estimate for those vendors with minimal experience would be approximately 200 hours at $50 per hour, for a total estimate of $10,000 per vendor ($50 per hour × 200 hours per EHR vendor).

With respect to the process for group practices to be treated as satisfactorily submitting quality measures data under the 2010 PQRI discussed in section II.G.2. of this final rule with comment period, group practices interested in participating in the 2010 PQRI through the group practice reporting option must complete a self-nomination process similar to the self-nomination process required of registries and EHR vendors. Therefore, we estimate that the self-nomination process for the group practices for the 2010 PQRI involves approximately 2 hours per group practice to review the 2010 PQRI reporting option and make the decision to participate as a group rather than individually and an additional 2 hours per group practice to draft the letter of intent for self-nomination, gather the requested TIN and NPI information, and provide this requested information. It is estimated that each self-nominated entity will also spend 2 hours undergoing the vetting process with CMS officials. We assume that the group practice staff involved in the group practice self-nomination process have an average practice labor cost of $55 per hour. Therefore, assuming the total burden hours per group practice associated with the group practice self-nomination process is 6 hours, we estimate the total cost to a group

practice associated with the group practice self-nomination process to be approximately $330 ($55 per hour × 6 hours per group practice).

The burden associated with the group practice reporting requirements of this voluntary reporting initiative is the time and effort associated with the group practice submitting the quality measures data. For group practices, this would be the time associated with the group practice completing the data collection tool. The information collection components of this data collection tool have been reviewed by OMB and are currently approved under OMB control number 0938–0941, with an expiration date of December 31, 2011, for use in the Physician Group Practice, Medicare Care Management Performance (MCMP), and EHR demonstrations. Based on burden estimates for the PGP demonstration, which uses the same data submission methods as what we will be using for PQRI, we estimate the burden associated with a group practice completing the data collection tool will be approximately 79 hours per physician group. Therefore, we estimate the total annual burden hours per physician group would be approximately 85 hours (2 hours for decision-making + 4 hours for self-nomination + 79 hours for data submission). Based on an average labor cost of $55 per physician group, we estimate the cost per physician group associated with participating in the PQRI group practice reporting option would be $4,675 ($55 per hour × 85 hours per group practice).

The Electronic Prescribing (E-Prescribing) Incentive Program

We believe it is difficult to accurately estimate how many eligible professionals will opt to participate in the E-Prescribing Incentive Program in CY 2010. Information from the ''PQRI 2007 Reporting Experience Report,'' which is available on the PQRI section of the CMS Web site at *http://www.cms.hhs.gov/PQRI*, indicates that nearly 110,000 unique TIN/NPI combinations attempted to submit PQRI quality measures data via claims for the 2007 PQRI. Therefore, for purposes of conducting a burden analysis for the 2010 E-Prescribing Incentive Program, we will assume that as many eligible professionals who attempted to participate in the 2007 PQRI will attempt to participate in the 2010 E-Prescribing Incentive Program. As such, we can estimate that nearly 110,000 unique TIN/NPI combinations will participate in the 2010 E-Prescribing Incentive Program.

Section II.G.5. of the preamble discusses the background of the E-Prescribing Incentive Program. Section II.G.5.c. of the preamble provides information on how eligible professionals can qualify to be considered a successful electronic prescriber in 2010 in order to earn an incentive payment. Similar to the PQRI, the E-Prescribing Incentive Program is a voluntary initiative. Eligible professionals may choose whether to participate and, to the extent they meet (1) certain thresholds with respect to the volume of covered professional services furnished and (2) the criteria to be considered a successful electronic prescriber described in section II.G.5.c. of this final rule with comment period, they can qualify to receive an incentive payment for 2010.

For the 2010 E-Prescribing Incentive Program, as discussed in section II.G.5. of the preamble, each eligible professional will need to report the 2010 electronic prescribing measure, which indicates that at least 1 prescription created during an eligible encounter was generated and transmitted electronically using a qualified electronic prescribing system. Similar to PQRI, this measure will be reportable through claims, a qualified registry, or a qualified EHR.

Similar to claims-based reporting for the PQRI, we estimate that the burden associated with the requirements of this incentive program is the time and effort associated with eligible professionals determining whether the electronic prescribing quality measure applies to them, gathering the required information, selecting the appropriate quality data codes, and including the appropriate quality data codes on the claims they submit for payment. We expect the ongoing costs associated with participation in the E-Prescribing Incentive Program to decline based on an eligible professional's familiarity with and understanding of the E-Prescribing Incentive Program, experience with participating in the E-Prescribing Incentive Program, and increased efforts by CMS and stakeholders to disseminate useful educational resources and best practices. Since the E-Prescribing Incentive Program consists of only 1 quality measure, we will assign 1 hour as the amount of time needed for eligible professionals to review the electronic prescribing measure and incorporate reporting of the measure into their office work flows and an additional hour as the amount of time needed for eligible professionals to select an appropriate reporting mechanism for them. At an average cost of approximately $55 per hour (see section XIII.E.2. above for a discussion of how we arrived at this figure), we estimate the total cost to eligible professionals for reviewing the e-prescribing measure, incorporating the reporting of the measure into the office work flows, and selecting an appropriate reporting mechanism to be approximately $110 ($55 per hour × 2 hours).

For claims-based reporting, the quality data codes will be collected as additional (optional) line items on the existing HIPAA transaction 837–P and/or CMS Form 1500. We do not anticipate any new forms or modifications to the existing transaction or form. We also do not anticipate changes to the 837–P or CMS Form 1500 for CY 2010.

Based on our experience with the PVRP described in section II.G.5., we estimate that the time needed to perform all the steps necessary to report the electronic prescribing measure via claims to be 1.75 minutes. We also estimate the cost to perform all the steps necessary to report the electronic prescribing measure to be $1.44 based on the experience with the PVRP described above.

Based on the 2010 criteria for determination of whether an eligible professional is a successful electronic prescriber, we estimate that each eligible professional will report the electronic prescribing measure in 25 instances during the reporting period.

Therefore, we estimate the total annual burden per eligible professional who chooses to participate in the 2010 E-Prescribing Incentive Program through claims-based reporting of the electronic prescribing measure to be 163.75 minutes, or 2.73 hours [(1.75 minutes per measure × 1 measure × 25 cases per measure) + 2 hours]. The total estimated cost per eligible professional to report the electronic prescribing measure is estimated to be $146 [($1.44 per measure × 1 measure × 25 cases per measure) + $110].

Because registry-based reporting of the electronic prescribing measure to CMS will be new for 2010 and participation in this reporting initiative is voluntary, it is impossible to estimate with any degree of accuracy how many eligible professionals will opt to participate in the E-Prescribing Incentive Program through the registry-based reporting mechanism in CY 2010. We do not anticipate, however, any additional burden for eligible professionals to report data to a registry as eligible professionals opting for registry-based reporting would more than likely already be reporting data to the registry for other purposes

(particularly eligible professionals who are already participating in PQRI via the registry-based reporting mechanism). Little, if any, additional data would need to be reported to the registry for purposes of participation in the 2010 E-Prescribing Incentive Program. However, in addition to the 2 hours estimated for the time needed by eligible professionals to review the applicability of the electronic prescribing measure, incorporate reporting of the measure in their practice work flows, and review the available reporting mechanisms to select the registry reporting mechanism, eligible professionals will need to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes for each eligible professional that wishes to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf.

Based on our policy to consider only registries qualified to submit quality measures results and numerator and denominator data on quality measures to CMS on their participants' behalf for the 2010 PQRI to be qualified to submit results and numerator and denominator data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program, there will be no need for a registry to undergo a separate self-nomination process for the E-Prescribing Incentive Program other than to indicate to us its desire to become a qualified registry for the E-Prescribing Incentive Program at the time that it does so for PQRI. Therefore, we estimate that any additional associated with the registry self-nomination process would be minimal.

The burden associated with the registry-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the registry calculating results for the electronic prescribing measure from the data submitted to the registry by its participants and submitting the quality measure results and numerator and denominator data on the electronic prescribing quality measure to CMS on behalf of their participants. The time needed for a registry to review the electronic prescribing measure and other information, calculate the measure's results, and submit the measure's results and numerator and denominator data on the measure on their participants' behalf is expected to vary along with the number of eligible professionals reporting data to the registry. However, we believe that registries already perform many of these activities for their participants. Since the E-Prescribing Incentive Program consists of only one measure, we believe that the burden associated with the registry reporting the measure's results and numerator and denominator to CMS on behalf of their participants would be minimal.

For EHR-based reporting, the eligible professional must review the electronic prescribing measure, extract the necessary clinical data from his or her EHR, and submit the necessary data to the CMS-designated clinical data warehouse. Because this manner of reporting quality data to CMS will be new for 2010 and participation in this reporting initiative is voluntary, it is difficult to accurately estimate how many eligible professionals will opt to participate in the E-Prescribing Incentive Program through the EHR-based reporting mechanism in CY 2010. The time needed for an eligible professional to review the electronic prescribing measure and other information to determine whether the measure is applicable to his or her patients and the services he or she furnishes to them and to review the available reporting mechanisms to select the EHR reporting mechanism is expected to be similar for EHR-based reporting and claims-based reporting. Once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the eligible professional associated with submission of data on the electronic prescribing measure should be minimal.

Based on our policy to consider only EHR products qualified for the 2010 PQRI to be qualified for the 2010 E-Prescribing Incentive Program, there will be no need for EHR vendors to undergo a separate self-nomination process for the E-Prescribing Incentive Program and therefore, no additional burden associated with the self-nomination process.

The burden associated with the EHR-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the eligible professional needs to submit to CMS for purposes of reporting the 2010 electronic prescribing measure. The time needed for an EHR vendor to review the measure and other information and program each qualified EHR product to enable eligible professionals to submit data on the measure to the CMS-designated clinical data warehouse will be dependent on the EHR vendor's familiarity with the electronic prescribing measure, the vendor's system capabilities, as well as the vendor's programming capabilities. Since only EHR products qualified for the 2010 PQRI will be qualified for the 2010 E-Prescribing Incentive Program and the E-Prescribing Incentive Program consists of only one measure, we believe that any burden associated with the EHR vendor to program its product(s) to enable eligible professionals to submit data on the electronic prescribing measure to the CMS-designated clinical data warehouse would be minimal.

Finally, with respect to the process for group practices to be treated as successful electronic prescribers under the 2010 E-Prescribing Incentive Program discussed in section II.G.5., a group practice will be required to report the electronic prescribing measure in at least 2,500 instances. Group practices have the same options as individual eligible professionals in terms of the form and manner for reporting the electronic prescribing measure (that is, group practices have the option of reporting the measure through claims, a qualified registry, or a qualified EHR product). The only difference between an individual eligible professional and group practice reporting of the electronic prescribing measure is the number of times that a group practice is required to report the electronic prescribing measure. Reporting of the electronic prescribing measure can continue to occur at the individual eligible professional level under the electronic prescribing group practice reporting option. In our analysis of the information, however, we will aggregate all of the information reported by the eligible professionals within the group practice to determine whether the group practice reported the measure a sufficient number of times. For group practices that are selected to participate in the 2010 E-Prescribing Incentive Program group practice reporting option and choose to do so through claims-based reporting of the electronic prescribing measure, we estimate the total annual burden to be 74.92 hours [(1.75 minutes per measure $\times$ 1 measure $\times$ 2,500 cases per measure) + 2 hours]. The total estimated cost per group practice to report the electronic prescribing measure through claims-based reporting is estimated to be $3,710 [($1.44 per measure $\times$ 1 measure $\times$ 2,500 cases per measure) + $110].

For group practices that are selected to participate in the 2010 E-Prescribing Incentive Program group practice reporting option and choose to do so through registry-based reporting of the

electronic prescribing measure, we do not anticipate any additional burden to report data to a registry as group practices opting for registry-based reporting would more than likely already be reporting data to the registry for other purposes, such as for the PQRI. Little, if any, additional data would need to be reported to the registry for purposes of participation in the 2010 E-Prescribing Incentive Program. However, in addition to the 2 hours estimated for the time needed by group practices to review the electronic prescribing measure to determine its applicability to the practice, incorporate reporting of the electronic prescribing measure into the practice's work flows, and review available reporting mechanisms to select group practice reporting of the measure through a qualified registry, the group practices will need to authorize or instruct the registry to submit the measure results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes for each group practice that wishes to authorize or instruct the registry to submit quality measure results and numerator and denominator data on the electronic prescribing measure to CMS on its behalf.

For group practices that are selected to participate in the 2010 E-Prescribing Incentive Program group practice reporting option and choose to do so through EHR-based reporting of the electronic prescribing measure, once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the group practice associated with submission of data on the electronic prescribing measure should be minimal.

In addition to the burden associated with group practices reporting the electronic prescribing measure, group practices will also be required to self-nominate in order to participate in the 2010 E-Prescribing Incentive Program under the group practice reporting option. Since we are limiting participation in the electronic prescribing group practice reporting option to those group practices selected to participate in the PQRI group practice reporting option, there will not be a separate group practice self-nomination process for the E-Prescribing Incentive Program and, thus, no additional burden.

We invite comments on this burden analysis, including the underlying assumptions used in developing our burden estimates.

XII. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

XIII. Regulatory Impact Analysis

A. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimate, as discussed below in this section, that the PFS provisions included in this final rule with comment period will redistribute more than $100 million in 1 year. Therefore, we estimate that this rulemaking is ''economically significant'' as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the rulemaking.

The RFA requires agencies to analyze options for regulatory relief of small businesses, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that most hospitals and most other providers are small entities as that term is used in the RFA (including small businesses, nonprofit organizations, and small governmental jurisdictions). The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the Small Business Administration (SBA) definition of a small business (having revenues of less than $7.0 million to $34.5 million in any 1 year) (for details see the SBA's Web site at *http://sba.gov/idc/groups/public/documents/sba_homepage/serv_sstd_tablepdf.pdf* (refer to the 620000 series). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

For purposes of the RFA, physicians, NPPs, and suppliers including IDTFs are considered small businesses if they generate revenues of $7 million or less based on SBA size standards. Approximately 95 percent of physicians are considered to be small entities. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS.

For purposes of the RFA, approximately 85 percent of suppliers of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) are considered small businesses according to the SBA size standards. We estimate that approximately 105,000 DMEPOS suppliers are enrolled in Medicare currently and bill Medicare for DMEPOS each year. Total annual estimated Medicare revenues for DMEPOS suppliers are approximately $11.7 billion in 2008 for which $8.7 billion was for fee-for-service (FFS) and $3.0 billion was for managed care.

For purposes of the RFA, approximately 80 percent of clinical diagnostic laboratories are considered small businesses according to the SBA size standards.

Ambulance providers and suppliers for purposes of the RFA are also considered to be small entities.

In addition, most ESRD facilities are considered small entities for purposes of the RFA, either based on nonprofit status or by having revenues of $7 million to $34.5 million or less in any year. We note that a considerable number of ESRD facilities are owned and operated by large dialysis organizations (LDOs) or regional chains,

which would have total revenues more than $34.5 million in any year if revenues from all locations are combined. However, the claims data we use to estimate payments for this RFA and RIA does not identify which dialysis facilities are parts of an LDO, regional chain, or other type of ownership. Each individual dialysis facility has its own provider number and bills Medicare using this number. Therefore, we consider each ESRD to be a small entity for purposes of the RFA. We consider a substantial number of entities to be significantly affected if the final rule with comment period has an annual average impact on small entities of 3 to 5 percent or more. The majority of ESRD facilities will experience impacts of less than 2 percent of total revenues. There are 946 nonprofit ESRD facilities with a combined increase of 0.9 percent in overall payments relative to current overall payments. We note that although the overall effect of the wage index changes is budget neutral, there are increases and decreases based on the location of individual facilities. The analysis and discussion provided in this section and elsewhere in this final rule with comment period complies with the RFA requirements.

Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule with comment period constitutes our regulatory flexibility analysis for the remaining provisions and addresses comments received on these issues.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis, if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. Any such regulatory impact analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. We do not believe this final rule with comment period has impact on significant operations of a substantial number of small rural hospitals because most dialysis facilities are freestanding. While there are 176 rural hospital-based dialysis facilities, we do not know how many of them are based at hospitals with fewer than 100 beds. However, overall, the 176 rural hospital-based dialysis facilities will experience an estimated 1.1 percent increase in payments. As a result, this rule will not have a significant impact on small rural hospitals. Therefore, the Secretary has determined that this final rule with comment period will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2009, that threshold is approximately $133 million. This final rule with comment period will not mandate any requirements for State, local, or tribal governments. Medicare beneficiaries are considered to be part of the private sector and as a result a more detailed discussion is presented on the Impact of Beneficiaries in section V. of this regulatory impact analysis. Rather, it focuses on certain categories of cost, mainly those ''Federal mandate'' costs resulting from (A) imposing enforceable duties on State, local, or tribal governments, or on the private sector, or (B) increasing the stringency of conditions in, or decreasing the funding of, State, local, or tribal governments under entitlement programs.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have examined this final rule with comment period in accordance with Executive Order 13132 and have determined that this regulation would not have any substantial direct effect on State or local governments, would not preempt States, or otherwise have a Federalism implication.

We have prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this final rule with comment period; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we are implementing a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services. We provide information for each of the policy changes in the relevant sections of this final rule with comment period. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this final rule with comment period. The relevant sections of this rule contain a description of significant alternatives if applicable.

Comment: We received comments on the CY 2010 PFS proposed rule stating that we failed to address the impact of the changes on small businesses and did not propose any measures for mitigating the negative impact the proposals might have on such businesses. One commenter stated that most portable x-ray suppliers are small businesses and that the policy changes will adversely affect them. Another commenter, representing providers of integrated cancer care, also expressed concern about the negative impact the proposed changes would have on small businesses that furnish radiation therapy services. The commenters outlined specific concerns with respect to the proposals concerning practice expense, including the change with respect to assumption for equipment utilization, the changes to malpractice RVUs, as well as application of the projected −21.5 update adjustment under the SGR.

Response: In Addendum B of the CY 2010 PFS proposed rule, we provided the proposed payment rates for the HCPCS codes paid under the PFS. Any physician or supplier of PFS services can determine the impact of the proposed Medicare payment rates using their own mix of services. In addition, we publish average impacts by Medicare specialty to assist the public in commenting on the proposed rule. The methodology that we use to develop the RVUs is publicly available as are the data files that we use in the calculations and impact analyses.

We did review the potential impact of our revised policies in the regulatory impact analysis. In light of the comments received on the proposed rule, we have revised many of the proposals made in the proposed rule such that we estimate that the impact on portable x-ray suppliers and providers of radiation therapy services in this final rule with comment period will be significantly different than in the proposed rule, as shown in Table 49. However, the PFS update, which is based in part on the SGR, is required by law, affects all PFS services, and we have no discretion to waive this provision for small businesses.

B. RVU Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by

more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve BN.

Our estimates of changes in Medicare revenues for PFS services compare payment rates for CY 2009 with payment rates for CY 2010 using CY 2008 Medicare utilization for all years. To the extent that there are year-to-year changes in the volume and mix of services provided by physicians, the actual impact on total Medicare revenues will be different than those shown in Table 49. The payment impacts reflect averages for each specialty based on Medicare utilization. The payment impact for an individual physician would be different from the average, based on the mix of services the physician provides. The average change in total revenues would be less than the impact displayed here because physicians furnish services to both Medicare and non-Medicare patients and specialties may receive substantial Medicare revenues for services that are not paid under the PFS. For instance, independent laboratories receive approximately 80 percent of their Medicare revenues from clinical laboratory services that are not paid under the PFS.

Table 49 shows only the payment impact on PFS services. The following is an explanation of the information represented in Table 49:

- Specialty: The physician specialty or type of practitioner/supplier.
- Allowed charges: Allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, or suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Impact of Work RVU changes for the CY 2010 PFS.
- Impact of PE RVU changes (Full) if these changes were fully implemented in CY 2010 PFS. These are not the estimated CY 2010 impacts since we have implemented a 4-year transition to the new PE RVUs for existing codes.
- Impact of the CY 2010 PE RVU changes under the 4-year transition (Tran) adopted in this final rule with comment period. These are the estimated CY 2010 impacts. Note that the transition does not apply to new and significantly revised codes.
- Impact of MP RVU changes for the CY 2010 PFS.
- Combined impact of all RVU changes (Full) if these changes were fully implemented in CY 2010 PFS. These are not the estimated CY 2010 impacts since we have implemented a 4-year transition to the new PE RVUs for existing codes. These impacts are prior to the application of the CY 2010 negative PFS CF update under the current statute.
- Combined impact of all of the estimated CY 2010 RVU changes under the 4-year transition (Tran) adopted in this final rule with comment period for the PE changes. These are the estimated CY 2010 impacts, prior to the application of the CY 2010 negative PFS CF update under the current statute.

BILLING CODE 4120–01–P

TABLE 49: CY 2010 Total Allowed Charge Impact for Work, Practice Expense, and Malpractice Changes*

* Does not include the impact of the current statute CY 2010 negative update except as applied in the OPPS imaging cap comparison (see next footnote). Rows may not sum to total due to rounding.

** Note: The statute caps the PFS imaging payment amount at the comparable payment amount in the hospital outpatient prospective payment system (OPPS) cap. In the absence of the negative current statute CY 2010 PFS update, the proposed fully implemented PE change to the equipment utilization rate for expensive diagnostic equipment from 50 percent to 90 percent would increase expenditures by less than 1 percent due to a loss of savings from the OPPS cap.

BILLING CODE 4120–01–C

2. Resource-Based Work, PE, and MP RVUs Impacts

a. Work RVU Impacts

The average work RVU impacts are primarily attributable to the changes for consultation services. As described earlier in this final rule with comment period, we are proposing to no longer recognize the billing codes for consultation services so we are budget neutrally eliminating the use of all consultation codes (except for telehealth) and have allocated the work RVUs that were allotted to these services to the work RVUs for new and established office visit services, initial hospital visits, and initial nursing facility visits to reflect this change.

In addition, the impacts reflect the work done by the AMA RUC related to the Five-Year Review Identification Workgroup's Codes Reported Together screen. Based upon the AMA RUCs review of the myocardial perfusion imaging family of services, it was determined that some of the existing codes for these services are performed together more than 95 percent of the time and were thus referred to CPT for creation of new bundled services. In recognition of the efficiencies associated with the services being performed together, there are less aggregate RVUs under the new bundled 2010 CPT coding structure and pricing than there are under the current 2009 CPT coding structure and pricing. These fewer aggregate RVUs will be offset by an adjustment to the CF in order to maintain overall BN. For further information on the myocardial perfusion imaging family coding changes, see section III.F.4. of this final rule with comment period.

b. PE RVUs Impacts

The PE RVU impacts are primarily attributable to the incorporation of PE data from the Physician Practice Information Survey (PPIS). For a discussion of the use of this updated survey data, see section II.A.2. of this final rule with comment period. The impacts are shown both as if they were fully implemented in CY 2010 and under our 4-year transition policy to the new PE RVUs for existing codes that have not been substantially revised.

For IDTFs, the impact of our change in the utilization rate for expensive diagnostic equipment is also significant. We estimate that for IDTFs, the utilization rate change will result in a fully implemented impact of approximately −2 percent after taking into account the OPPS payment cap. This −2 percent impact is included in the −29 percent fully implemented PE RVU impact shown in Table 49 for IDTFs. The change in the utilization rate for expensive diagnostic imaging equipment does not significantly impact overall payments for other specialties after taking into account the OPPS payment cap.

The impacts also reflect the reduced utilization for the myocardial perfusion imaging family of services stemming from the AMA RUC's review of these services as described above.

The payment impact for an individual physician may be different from the average, based on the mix of services the physician provides. Using the RVU information contained in Appendix B, an impact can be calculated for any particular mix of services either under the fully implemented RVUs or the 4-year transition RVUs.

c. Malpractice RVU Impacts

The average MP RVU impacts are attributable to the changes adopted for the Five-Year Review of MP RVUs described earlier in this final rule with comment period. Of particular note are the impacts on the specialties of Audiology (−7 percent), and IDTFs (−4 percent). These impacts are primarily driven by the expansion of the MP premium data collection and the changes to the methodology for TC services.

d. Combined Impact

Column E of Table 49 displays the combined average impact of all RVU changes by specialty. The impacts are shown both as if the new PE RVUs were fully implemented in CY 2010 and under our 4-year transition policy to the new PE RVUs for existing codes that have not been significantly revised.

The estimated CY 2010 transition impacts range from increases of +5 percent for ophthalmology to decreases of −18 percent for nuclear medicine. The effect of our policies on primary care specialties such as General Practice, Family Practice, Internal Medicine, and Geriatrics are positive with CY 2010 transition increases ranging from +2 percent to +4 percent. Again, these impacts are prior to the application of the negative CY 2010 CF update under the current statute.

Table 49 shows the estimated transition impact on total payments for selected high-volume procedures of all of the changes discussed previously, including the effect of the CY 2010 negative PFS CF update. We selected

these procedures because they are the most commonly furnished by a broad spectrum of physician specialties. There are separate columns that show the change in the facility rates and the non-facility rates. For an explanation of facility and non-facility PE, refer to Addendum A of this final rule with comment period.

BILLING CODE 4120–01–C

C. Geographic Practice Cost Indices (GPCIs)

As discussed in section II.B. of this final rule with comment period, the application of the 1.000 work GPCI floor, as extended by section 134(a) of the MIPPA, expires effective January 1, 2010. As a result, 54 (out of 89) PFS localities will receive a decrease in their work GPCI. Puerto Rico receives the largest decrease (−9.6 percent), followed by South Dakota (−5.8 percent), North Dakota (−5.3 percent), Rest of Missouri (−5.1 percent), and Montana (−5.0 percent).

D. Medicare Telehealth Services

In section II.D. of this final rule with comment period, we are adding individual health behavior and assessment services (as described by HCPCS codes 96150 through 96152) to the list of telehealth services. We are also revising § 410.78 to specify that the G-codes for follow-up inpatient telehealth consultations (as described by HCPCS codes G0406 through G0408) include follow-up telehealth consultations furnished to beneficiaries in hospitals and skilled nursing facilities.

The total annual Medicare payment amount for telehealth services (including the originating site facility fee) is approximately $2 million. Previous additions to the list of telehealth services have not resulted in a significant increase in Medicare program expenditures. While we believe that these proposals will provide more beneficiaries with access to these services, we do not anticipate that these changes will have a significant budgetary impact on the Medicare program.

E. MIPPA Provisions

1. Section 102: Elimination of Discriminatory Copayment Rates for Medicare Outpatient Psychiatric Services

This section of the MIPPA will have a positive impact on Medicare patients because coinsurance payment percentages for outpatient mental health services will be gradually reduced from January 1, 2010 through January 1, 2014. At the conclusion of this 5-year period, Medicare patients will pay the same coinsurance payment percentage for outpatient mental health services as they currently pay for most other health services under the Medicare Part B program.

Since the inception of the Medicare Part B program, Medicare patients have been required to pay for a greater percentage of the cost of outpatient mental health treatment services than for other health services because of the Medicare payment limitation (the outpatient mental health treatment limitation). While a dollar cap that previously applied to mental health services was eliminated January 1, 1991, the statute maintained the 62½ percent limitation on the recognition of incurred expenses for these services. This limitation of 62½ percent effectively reduces the program's payment for mental health services to 50 percent, leaving a Medicare patient responsible for paying the other half of these expenses through coinsurance. The 62½ percent limitation will remain in effect until December 31, 2009.

During the transition, the Medicare Part B program will incur increased expenditures as Medicare patients pay less out-of-pocket for outpatient mental health services until, in 2014, patients will pay only the deductible (if applicable) and 20 percent coinsurance. Section 102 of the MIPPA will shift cost-sharing for mental health services from Medicare patients to the program. This provision will result in a cost impact to the Medicare program of approximately $100 million for CY 2010. As section 102 of the MIPPA is implemented, the impact of the changes to the coinsurance payment percentages (that is, recognized incurred expenses) for Medicare patients and the program is as shown in Table 51.

TABLE 51: Impact of the Changes to the Coinsurance Payment Percentages under Section 102 of the MIPPA

CY 2009 and prior calendar years – Medicare limitation, 62.50 percent of recognized incurred expenses
Medicare Patient pays – 50%
Medicare Part B pays – 50%
CY 2010 and CY 2011 – Medicare limitation, 68.75 percent of recognized incurred expenses
Medicare Patient pays – 45%
Medicare Part B pays – 55%
CY 2012 – Medicare limitation, 75 percent of recognized incurred expenses
Medicare Patient pays – 40%
Medicare Part B pays – 60%
CY 2014 – No limitation, 100.00 percent of recognized incurred expenses
Medicare Patient pays – 20%
Medicare Part B pays – 80%

2. Section 131(b): Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting Initiative (PQRI)

As discussed in section II.G.2. of this final rule with comment period, the 2010 PQRI measures satisfy the requirement of section 1848(k)(2)(D) of the Act that the Secretary shall ensure that eligible professionals have the opportunity to provide input during the development, endorsement, or selection of measures applicable to services they furnish. As discussed in section II.G.2.d. of this final rule with comment period, we are also offering options in 2010 for reporting the 2010 PQRI measures via submission of data to a qualified clinical registry, options for reporting some of the 2010 PQRI measures via submission of data extracted from a qualified EHR, options for reporting on measures groups rather than individual measures, and options for group practices to be treated as satisfactorily submitting quality data under the PQRI. We received some comments regarding the cost estimates for PQRI included in the CY 2010 PFS proposed rule (74 FR 33655 through 33657). These comments have been addressed in section II.G.2. of this final rule with comment period or by revisions to our cost estimates below, where appropriate.

Although there may be some cost incurred for maintaining the measures used in the PQRI and their associated code sets, and for expanding an existing clinical data warehouse to accommodate registry-based reporting and EHR-based reporting for the PQRI, we do not anticipate a significant cost impact on the Medicare program.

Participation in the PQRI by eligible professionals is voluntary and eligible professionals and group practices may have different processes for integrating the PQRI into their practices' work flows. Therefore, it is difficult to accurately estimate the impact of the PQRI on providers. We note also that for eligible professionals who satisfactorily submit PQRI quality measures, some (if not all) of the costs incurred by the professional to participate in PQRI may be offset by the PQRI incentive payment amount earned.

With respect to satisfactory submission of data on quality measures by eligible professionals, one factor that influences the cost to eligible professionals is the time and effort associated with eligible professionals identifying applicable PQRI quality measures for which they can report the necessary information. We have no way to accurately quantify the burden because it would vary with each eligible professional by the number of measures applicable to the eligible professional, the eligible professional's familiarity, understanding of the PQRI, and experience with participating in the PQRI, and the reporting option selected by the eligible professional. In addition, eligible professionals may employ different methods for incorporating reporting of their selected measures into the office work flows. Therefore, based on an assumption that eligible professionals will select 3 measures on average and our own estimates that it takes at least 1 hour to read and understand each measure, we will assign 3 hours as the amount of time needed for eligible professionals to review the PQRI quality measures, identify the applicable measures for which they can report the necessary information, and incorporate reporting of the selected measures into the office work flows. After considering the comments received, that indicated that we need to include time for eligible professionals to review all of the reporting options, and our own estimates of the amount of time it takes to read and digest the reporting options, we will also assign an additional 2 hours as the amount of time needed for eligible professionals to review the 2010 PQRI reporting options and select the option most appropriate for their practice. Information from the Physician Voluntary Reporting Program (PVRP), which was a predecessor to the PQRI, indicated an average practice labor cost of approximately $50 per hour. To account for salary increases over time, we will use an average practice labor cost of $55 per hour for our estimates based on an assumption of an average annual increase of approximately 3 percent. Thus, we estimate the cost for an eligible professional to review the PQRI quality measures, identify the applicable measures for which they can report the necessary information, incorporate reporting of the selected measures into the office work flows, review, and select an appropriate reporting option to be approximately $275 per eligible professional ($55 per hour × 5 hours).

For claims-based PQRI reporting, one factor in the cost to eligible professionals is the time and effort associated with gathering the required information, selecting the appropriate quality data codes, and including the appropriate quality data codes on the Medicare Part B claims an eligible professional submits for payment. Information from the PVRP estimates that the time needed to perform all the steps necessary to report each measure 1 time (that is, reporting the relevant quality data code(s) for a measure on 1 case) on claims ranges from 15 seconds (0.25 minutes) to over 12 minutes for complicated cases and/or measures, with the median time being 1.75 minutes. With an average practice labor cost of $55 per hour, the cost to eligible professionals to perform all the steps necessary to report 1 quality measure 1 time ranges from $0.23 in labor time to about $11.00 in labor time for more complicated cases and/or measures. For the median practice, the cost is about $1.44 in labor time per measure per reporting instance. Eligible professionals generally are required to report at least 3 measures to satisfactorily report PQRI quality measures data. Therefore, for purposes of this impact analysis we will assume that eligible professionals participating in the 2010 PQRI will report an average of 3 measures each.

The cost of implementing claims-based reporting of PQRI quality measures data will vary with the volume of claims on which quality data is reported. Results from the 2007 PQRI indicate that eligible professionals reported on 1 to 3,331 eligible instances per measure. For all 2007 PQRI measures, the median number of eligible instances reported on per measure was less than 60. On average the median number of eligible instances reported on per measure was about 9. Therefore, for this analysis we estimate that for each measure, an eligible professional reports the quality data on 9 cases. The actual number of cases on which an eligible professional will be required to report quality measures data will vary, however, with the eligible professional's patient population and the types of measures on which the eligible professional chooses to report (each measure's specifications include a required reporting frequency).

Based on the assumptions discussed above, we estimate the total annual cost per eligible professional associated with claims-based reporting to range from $281.21 [($0.23 per measure × 3 measures × 9 cases per measure) + $275] to $572.00 [($11.00 per measure × 3 measures × 9 cases per measure) + $275].

For registry-based reporting, eligible professionals must generally incur a cost to submit data to registries. Estimated fees for using a qualified registry range from no charge, or a nominal charge, for an eligible professional to use the registry to costing eligible professionals several thousand dollars, with a majority of registries charging fees ranging from $500–$1,000. Registries also often

provide services above and beyond what is required for PQRI though and our impact analysis is limited to the incremental costs associated with participation in PQRI. Nevertheless, after considering the information above with respect to the qualified registries and the comments received, which offered anecdotal information that the annual cost to one practice of participating in a specific registry is approximately $3,000, we will estimate the cost incurred by an eligible professional to participate in PQRI via registry-based reporting to be approximately $1,000 per eligible professional.

In addition, an eligible professional who chooses to submit PQRI quality measures results and numerator and denominator data on quality measures through a registry more than likely is already reporting data to the registry for other purposes. Little, if any, additional data needs to be reported to the registry for purposes of participation in the 2010 PQRI. Therefore, there should be little additional cost to the eligible professional associated with submitting data to the registry.

Registries interested in submitting quality measures results and numerator and denominator data on quality measures to CMS on their participants' behalf must complete a self-nomination process in order to be considered ''qualified'' to submit on behalf of eligible professionals. We estimate the registry self-nomination process to cost approximately $500 per registry ($50 per hour × 10 hours per registry). This cost estimate includes the cost of submitting the self-nomination letter to CMS and completing the CMS vetting process. Our estimate of a $50 per hour average labor cost for registries is based on the assumption that registry staff include IT professionals whose average hourly rates range from $36 to $84 per hour depending on experience, with an average rate of nearly $50 per hour for a mid-level programmer.

The cost to the registry associated with the registry-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the registry calculating quality measure results from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on quality measures to CMS on behalf of their participants. The time needed for a registry to review the quality measures and other information, calculate the measures results, and submit the measures results and numerator and denominator data on the quality measures on their participants' behalf is expected to vary along with the number of eligible professionals reporting data to the registry and the number of applicable measures. However, since it is customary for most registries to provide their participants with information that can be used for the participants' internal quality improvement efforts, we believe that registries already perform many of these activities for their participants.

For EHR-based reporting, an eligible professional generally would incur a cost associated with purchasing an EHR product. The cost of purchasing an EHR product can range anywhere from as low as $500 to well over $50,000. After considering the information above and the comments received, we estimate that, on average, it costs between $15,000 and $25,000 to purchase an EHR product. An EHR vendor interested in having their product(s) be used by eligible professionals to submit PQRI quality measures data to CMS were required to complete a self-nomination process in order for the vendor's product(s) to be considered ''qualified'' for 2010. Therefore, one factor in the cost to EHR vendors is the cost associated with completing the self-nomination process in order for the vendor's EHR product(s) to be considered ''qualified.'' Similar to the estimated cost to the registry associated with the registry self-nomination process, the estimated cost for an EHR vendor to complete the self-nomination process, including the vetting process with CMS officials, is conservatively estimated to be $500 ($50 per hour × 10 hours per EHR vendor). Our estimate of a $50 per hour average labor cost for EHR vendors is based on the assumption that EHR vendor staff include IT professionals whose average hourly rates range from $36 to $84 per hour depending on experience, with an average rate of nearly $50 per hour for a mid-level programmer.

Another factor in the cost to EHR vendors is the time and effort associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the eligible professional needs to submit to CMS for purposes of reporting 2010 PQRI quality measures. The cost associated with the time and effort needed for an EHR vendor to review the quality measures and other information and program each qualified EHR product to enable eligible professionals to submit PQRI quality measures data to the CMS-designated clinical warehouse will be dependent on the EHR vendor's familiarity with PQRI, the vendor's system capabilities, as well as the vendor's programming capabilities. Some vendors already have these necessary capabilities and for such vendors, we estimate the total cost to be approximately $2,000 ($50 per hour × 40 hours per vendor). However, given the variability in the capabilities of the vendors, we believe a more conservative estimate for those vendors with minimal experience would be approximately $10,000 per vendor ($50 per hour × 200 hours per EHR vendor).

With respect to the process for group practices to be treated as satisfactorily submitting quality measures data under the 2010 PQRI discussed in section II.G.2.g. of this final rule with comment period, group practices interested in participating in the 2010 PQRI through the group practice reporting option must complete a self-nomination process similar to the self-nomination process required of registries and EHR vendors. We estimate that the group practice staff involved in the group practice self-nomination process have an average labor cost of $55 per hour. Therefore, assuming the total burden hours per group practice associated with the group practice self-nomination process is 4 hours, we estimate the total cost to a group practice associated with the group practice self-nomination process to be approximately $220 ($55 per hour × 4 hours per group practice). After considering the comments received, we will also assign an additional 2 hours as the time needed by group practices to review the 2010 PQRI reporting options and make the decision to participate as a group rather than individually. The total costs associated with the decision-making process is estimated to be $110 ($55 per hour × 2 hours per group practice)

The cost associated with the group practice reporting requirements of this voluntary reporting initiative is the time and effort associated with the group practice submitting the quality measures data. For physician group practices, this would be the time associated with the physician group completing the data collection tool. The information collection components of this data collection tool have been reviewed by OMB and are currently approved under OMB control number 0938–0941, with an expiration date of December 31, 2011. Based on cost estimates for the Physician Group Practice (PGP) demonstration, we estimate the cost associated with a physician group completing the data collection tool will be approximately 79 hours per physician group. Therefore, we estimate the total annual burden hours per physician group to be approximately 85 hours (2 hours for decision-making process + 4 hours for self-nomination + 79 hours for data submission). Based on

an average labor cost of $55 per physician group, we estimate the cost per physician group associated with participating in the PQRI group practice reporting option would be $4,675 ($55 per hour × 85 hours per group practice).

3. Section 131(c): Physician Resource Use Measurement and Reporting Program

As discussed in section II.G.3. of this final rule with comment period, section 131(c) of the MIPPA amends section 1848 of the Act by adding subsection (n), which requires the Secretary to establish and implement by January 1, 2009, a Physician Feedback Program using Medicare claims data and other data to provide confidential feedback reports to physicians (and as determined appropriate by the Secretary, to groups of physicians) that measure the resources involved in furnishing care to Medicare beneficiaries. If determined appropriate by the Secretary, the Secretary may also include information on quality of care furnished to Medicare beneficiaries by the physician (or group of physicians) in the reports. We anticipate the impact of this section to be negligible for the work completed in the Program to date.

4. Section 132: Incentives for Electronic Prescribing (E-Prescribing)—The E-Prescribing Incentive Program

Section II.G.5. of this final rule with comment period describes the 2010 E-Prescribing Incentive Program. To be considered a successful electronic prescriber in 2010, an eligible professional must meet the requirements in section II.G.5.c. of this final rule with comment period.

We anticipate that the cost impact of the E-Prescribing Incentive Program on the Medicare program will be the cost incurred for maintaining the electronic prescribing measure and its associated code set, and for expanding an existing clinical data warehouse to accommodate registry-based reporting and, potentially, EHR-based reporting for the electronic prescribing measure. We, however, do not anticipate a significant cost impact on the Medicare program since much of this infrastructure had already been established for the PQRI.

Participation in the E-Prescribing Incentive Program by eligible professionals is voluntary and eligible professionals may have different processes for integrating the E-Prescribing Incentive Program into their practices' work flows. Therefore, it is difficult to accurately estimate the impact of the E-Prescribing Incentive Program on eligible professionals. In addition, for eligible professionals who are successful electronic prescribers, some (if not all) of the cost of participating in the E-Prescribing Incentive Program may be offset by the incentive payment earned.

Similar to claims-based reporting for PQRI, one factor in the cost to eligible professionals, for those eligible professionals who choose to report the electronic prescribing measure through claims, is the time and effort associated with eligible professionals determining whether the quality measure is applicable to them, gathering the required information, selecting the appropriate quality data codes, and including the appropriate quality data codes on the claims they submit for payment. Since the E-Prescribing Incentive Program consists of only 1 quality measure, we will assign 1 hour as the amount of time needed for eligible professionals to review the electronic prescribing measure and incorporate reporting of the selected measures into their office work flows and an additional hour as the amount of time needed for eligible professionals to select an appropriate reporting mechanism for them. At an average cost of approximately $55 per hour (see section XIII.E.2. above for a discussion of how we arrived at this figure), we estimate the total cost to eligible professionals for reviewing the electronic prescribing measure, incorporating reporting of the selected measures into the office work flows, and selecting an appropriate reporting mechanism to be approximately $110 ($55 per hour × 2 hours).

Another factor in the cost to eligible professionals is the time and effort associated with gathering the required information, selecting the appropriate quality data codes, and including the appropriate quality data codes on the claims an eligible professional submits for payment. Information from the PVRP estimates that the time needed to perform all the steps necessary to report 1 measure 1 time (that is, reporting the relevant quality data code(s) for the measure for 1 case) on claims ranges from 15 seconds (0.25 minutes) to over 12 minutes for complicated cases and/or measures, with the median time being 1.75 minutes. With an average practice labor cost of $55 per hour, the cost to eligible professionals to perform all of the steps necessary to report 1 quality measure 1 time on claims ranges from $0.23 in labor time to about $11.00 in labor time for more complicated cases and/or measures. For the median practice, the cost is about $1.44 in labor time per measure. Therefore, we estimate the costs to eligible professionals to perform all the steps necessary to report the electronic prescribing measure once on a claim to be approximately $1.44.

The cost for this requirement will also vary along with the volume of claims on which quality data is reported. Based on our proposal to require an eligible professional to report the electronic prescribing measure for at least 25 instances, we estimate the total annual estimated cost per eligible professional to report the electronic prescribing measure to be $146.00 [($1.44 per measure × 1 measure × 25 cases per measure) + $110].

Because registry-based reporting of the electronic prescribing measure to CMS will be new for 2010 and participation in this reporting initiative is voluntary, it is difficult to accurately estimate how many eligible professionals will opt to participate in the E-Prescribing Incentive Program through the registry-based reporting mechanism in CY 2010. We do not anticipate, however, any additional cost for eligible professionals to report data to a registry as we believe that most eligible professionals opting for registry-based reporting would more than likely already be reporting data to the registry for other purposes, such reporting data to the registry for the PQRI. Little, if any, additional data would need to be reported to the registry for purposes of participation in the 2010 E-Prescribing Incentive Program. Furthermore, the same information has to be reported for the E-Prescribing Incentive Program and for the same number of instances regardless of the reporting mechanism selected by the eligible professional. That is, the eligible professional must report that he or she generated and transmitted at least one prescription electronically for at least 25 eligible patient encounters during the reporting period.

One potential cost to some eligible professionals associated with either claims-based reporting or registry-based reporting would be the cost of purchasing and using an electronic prescribing system. There are currently many commercial packages available for electronic prescribing. The cost to an eligible professional of obtaining and utilizing an electronic prescribing system varies not only by the commercial software package selected but also by the level at which the professional currently employs information technology in his or her practice and the level of training needed. One study indicated that a mid-range complete electronic medical record with electronic prescribing functionality costs $2500 per license with an annual fee of $90 per license for

quarterly updates of the drug database after setup costs while a standalone prescribing, messaging, and problem list system costs $1200 per physician per year after setup costs. Hardware costs and setup fees substantially add to the final cost of any software package. (Corley, S.T. (2003). ''Electronic prescribing: a review of costs and benefits.'' Topics in Health Information Management 24(1): 29–38.). Thus, for the purpose of this impact analysis, we estimate that eligible professionals who opt to purchase a standalone electronic prescribing system would incur an average cost of $1200 per physician per year. Eligible professionals who opt to purchase an EHR with electronic prescribing functionality would incur an average cost of $2500 per license with an annual fee of $90 per license for quarterly updates of the drug database.

Based on our policy to consider only registries qualified to submit quality measures results and numerator and denominator data on quality measures to CMS on their participants' behalf for the 2010 PQRI to be qualified to submit results and numerator and denominator data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program, we do not anticipate any cost to the registry associated with becoming a registry qualified to submit the electronic prescribing measure for 2010.

The cost associated with the registry-based reporting requirements of this voluntary reporting initiative for the registry will be the time and effort associated with the registry calculating results for the electronic prescribing measure from the data submitted to the registry by its participants and submitting the quality measures results and numerator and denominator data on the electronic prescribing quality measure to CMS on behalf of their participants. The time needed for a registry to review the electronic prescribing measure and other information, calculate the measure's results, and submit the measure's results and numerator and denominator data on the measure on their participants' behalf is expected to vary along with the number of eligible professionals reporting data to whom the measure applies. However, we believe that registries already perform many of these activities for their participants since the registries are already required to perform these activities for the PQRI. Since the E-Prescribing Incentive Program consists of only one measure, we believe that the cost associated with the registry reporting the measure's results and numerator and denominator to CMS on behalf of their participants would be minimal.

For EHR-based reporting, the eligible professional must review the electronic prescribing measure, extract the necessary clinical data from his or her qualified EHR, and submit the necessary data to the CMS-designated clinical data warehouse. Because this manner of reporting quality data to CMS will be new for 2010 and participation in this reporting initiative is voluntary, it is difficult to accurately estimate how many eligible professionals will opt to participate in the E-Prescribing Incentive Program through the EHR-based reporting mechanism in CY 2010. The cost associated with an eligible professional reviewing the electronic prescribing measure and other information to determine whether the measure is applicable to his or her patients and the services he or she furnishes to them and to review the available reporting mechanisms to select the EHR reporting mechanism is expected to be similar for EHR-based reporting and claims-based reporting (that is, $110 at a rate of $55 per hour). Once the EHR is programmed by the vendor to allow data submission to CMS, the cost to the eligible professional associated with the time and effort to submit data on the electronic prescribing measure should be minimal.

Based on our policy to consider only EHR products qualified for the 2010 PQRI to be qualified to submit results and numerator and denominator data on the electronic prescribing measure for the 2010 E-Prescribing Incentive Program, there will be no need for EHR vendors to undergo a separate self-nomination process for the E-Prescribing Incentive Program and therefore, no additional cost associated with the self-nomination process.

The cost to the EHR vendor associated with the EHR-based reporting requirements of this voluntary reporting initiative is the time and effort associated with the EHR vendor programming its EHR product(s) to extract the clinical data that the eligible professional needs to submit to CMS for purposes of reporting the 2010 electronic prescribing measure. The time needed for an EHR vendor to review the measure and other information and program each qualified EHR product to enable eligible professionals to submit data on the measure to the CMS-designated clinical data warehouse will be dependent on the EHR vendor's familiarity with the electronic prescribing measure, the vendor's system capabilities, as well as the vendor's programming capabilities. Since only EHR products qualified for the 2010 PQRI will be qualified for the 2010 E-Prescribing Incentive Program and the E-Prescribing Incentive Program consists of only one measure, we believe that any burden associated with the EHR vendor to program its product(s) to enable eligible professionals to submit data on the electronic prescribing measure to the CMS-designated clinical data warehouse would be minimal.

With respect to the process for group practices to be treated as successful electronic prescribers under the 2010 E-Prescribing Incentive Program discussed in section II.G.5.e. of this final rule with comment period, a group practice will be required to report the electronic prescribing measure in at least 2,500 instances. Group practices have the same options as individual eligible professionals in terms of the form and manner for reporting the electronic prescribing measure (that is, group practices have the option of reporting the measure through claims, a qualified registry, or a qualified EHR product). The only difference between an individual eligible professional and group practice reporting of the electronic prescribing measure is the number of times a group practice is required to report the electronic prescribing measure. Reporting of the electronic prescribing measure can continue to occur at the individual eligible professional level under the electronic prescribing group practice reporting option. In our analysis of the information, however, we will aggregate all of the information reported by the eligible professionals within the group practice to determine whether the group practice reported the measure a sufficient number of times. For group practices that are selected to participate in the 2010 E-Prescribing Incentive Program group practice reporting option and choose to do so through claims-based reporting of the electronic prescribing measure, we estimate the total annual estimated cost per group practice to be $3,710 [($1.44 per measure $\times$ 1 measure $\times$ 2,500 cases per measure) + $110].

For group practices that are selected to participate in the 2010 E-Prescribing Incentive Program group practice reporting option and choose to do so through registry-based reporting of the electronic prescribing measure, we do not anticipate any additional burden to report data to a registry as group practices opting for registry-based reporting would more than likely already be reporting data to the registry for other purposes, such as the PQRI. Little, if any, additional data would need to be reported to the registry for

purposes of participation in the 2010 E-Prescribing Incentive Program. However, in addition to the 2 hours estimated for the group practice to review the electronic prescribing measure to determine whether it is applicable to their practice and to review the available reporting mechanisms to select the group practice reporting option, group practices will need to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf. We estimate that the time and effort associated with this would be approximately 5 minutes for each group practice that wishes to authorize or instruct the registry to submit quality measures results and numerator and denominator data on the electronic prescribing measure to CMS on their behalf.

For group practices that are selected to participate in the 2010 E-Prescribing Incentive Program group practice reporting option and choose to do so through EHR-based reporting of the electronic prescribing measure, once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the group practice associated with submission of data on the electronic prescribing measure should be minimal.

In addition to the burden associated with group practices reporting the electronic prescribing measure, group practices will also be required to self-nominate in order to participate in the 2010 E-Prescribing Incentive Program under the group practice reporting option. Since we are limiting participation in the E-Prescribing Incentive Program group practice reporting option to those group practices selected to participate in the PQRI group practice reporting option, there will be no additional burden associated with the group practice self-nomination process for the E-Prescribing Incentive Program.

5. Section 135: Implementation of Accreditation Standards for Suppliers Furnishing the Technical Component (TC) of Advanced Diagnostic Imaging Services.

As discussed in section II.G.6. of this final rule with comment period, suppliers that provide the TC of advanced diagnostic imaging services will have to be accredited by an approved accreditation organization in order to receive Medicare payment for advanced diagnostic imaging services described in section 1848(b)(4)(B) furnished to beneficiaries. This section of the rule will impact the suppliers that provide the TC of advanced diagnostic imaging services and the organizations that accredit suppliers of such services. Suppliers that provide the TC of advanced diagnostic imaging services will incur costs for becoming accredited. Accreditation organizations will incur costs to accredit suppliers. To estimate the impact on suppliers, we calculate the total cost of accreditation as the sum of accreditation fees and other accreditation costs, and we multiply this cost by the number of providers of care requiring accreditation.

a. Factors Affecting the Cost Impact

According to our Services Tracking and Reporting System (STARS) database for 2008, there are a total of 1,131,115 physicians, IDTFs, and others billing Part B for the TC of advanced diagnostic imaging. This total includes both suppliers and providers that furnish items under Medicare Part B as suppliers.

Currently, there are suppliers accredited by one of three of the nationally recognized accreditation. We anticipate that the following accreditation organizations will seek approval from CMS to accredit suppliers that provide the TC of advanced diagnostic imaging services:

- American College of Radiology;
- Intersocietal Accreditation Commission; and
- The Joint Commission.

b. Accreditation Fees

Fees vary between accreditation organizations and, in general, currently cover all of the following items: application fee, manuals, initial accreditation fee, onsite surveys or other auditing (generally once every 3 years), and travel, when necessary for survey personnel. Accreditation costs also vary by the size of the supplier seeking accreditation, its number of locations, and the number of services it provides. Because of these factors, it is sometimes difficult to compare fees across accreditation organizations. We obtained information on total accreditation fees from the three accreditation organizations that currently accredit suppliers who provide the TC of advanced diagnostic imaging services. Based on all information we obtained, we estimate accreditation fees for each review cycle and modality will be approximately $5,000 for an advanced diagnostic imaging supplier. Because accreditation is for a 3-year period, the estimated average cost per year would be approximately $1,666 per modality.

We recognize that becoming accredited may impose a burden on suppliers that provide the TC of advanced diagnostic imaging services, especially small suppliers. We have attempted to minimize that burden. We have implemented the following options to minimize the burden of accreditation on suppliers, including small businesses:

- *Multiple accreditation organizations:* We expect that more than one accrediting organization will apply to become and be designated as an advanced diagnostic imaging accrediting organization. We believe that selection of more than one accreditation organization will introduce competition resulting in reductions in accreditation costs.
- *Required plan for small businesses:* During the application process we will require accreditation organizations to include a plan that details their methodology to reduce accreditation fees and burden for small or specialty suppliers. This will need to include that the accreditation organization's fees are based on the size of the organization.
- *Reasonable quality standards:* The quality standards that will be used to evaluate the services rendered for each imaging modality are industry standards. Many suppliers that provide the TC of advanced diagnostic imaging services already comply with the standards and have incorporated these practices into their daily operations. We have been told that that those suppliers with private insurance contracts must be accredited, thus our requirements would not be duplicative. It is our belief and has been stated by those suppliers already accredited that compliance with the quality standards will result in more efficient and effective business practices and will assist suppliers in reducing overall costs.

c. Other Accreditation Costs

It is difficult to precisely estimate the costs of preparing for accreditation. We do recognize there is cost to the supplier in order to come into compliance initially and thus prepare for the accreditation survey. This should result in minimal preparation and cost.

d. Additional Considerations

There are at least two important sources of uncertainty in estimating the impact of accreditation on suppliers that provide the TC of advanced diagnostic imaging services. First, our estimates assume that all current suppliers with positive Medicare payments will seek accreditation. We assume that suppliers who currently receive no Medicare allowed charges will choose not to seek

accreditation. It is also possible that many of the suppliers with allowed charges between $1 and $10,000 may decide not to incur the costs of accreditation.

Second, it is unclear what accreditation fees will be in the future. However, we are requiring the accreditation organization to submit their fees that are based on the size of the supplier, or on the amount billed. Our experience with another accreditation program has lead us to believe that the accreditation rates will go up, although minimally, if travel costs continue to rise.

In summary, suppliers of the TC of advanced diagnostic imaging services for which payment is made under the fee schedule established under section 1848(b) of the Act must become accredited by an accreditation organization designated by the Secretary beginning January 1, 2012. In these options, we have attempted to minimize the burden of accreditation on suppliers, which include approving multiple accreditation organizations that consider the small suppliers. Also, the fact that the surveys will be either performed as a desk review or unannounced deletes the time and cost for the accreditation organization in travel, if required.

6. Section 139: Improvements for Medicare Anesthesia Teaching Programs

As discussed in section II.G.7., this final rule with comment period would provide for increased payments under the Medicare PFS for certain cases involving teaching anesthesiologists with anesthesia residents or for teaching CRNAs with student nurse anesthetists. This provision of the MIPPA is anticipated to have a minimal budgetary impact.

7. Section 144(a): Payment and Coverage Improvements for Patients With Chronic Obstructive Pulmonary Disease and Other Conditions: Cardiac Rehabilitation Services

As described in section II.G.8. of this final rule with comment period, current levels of coverage for CR programs are expected to continue under this rule, and new ICR programs will likely develop and request approval by CMS to receive Medicare payments. Because the payment amount for ICR services under section 144(a) of the MIPPA is higher than for CR services, this expansion of coverage will result in greater costs to the Medicare program. The requirements for ICR programs, also specified in section 144(a) of the MIPPA, are extensive and will likely limit the number of individual ICR program sites that request approval. As a result, significantly fewer ICR programs and ICR program sites than CR programs will function throughout the country; however, we currently do not know how many ICR programs may request approval or how many individual sites may furnish ICR services under an approved program.

We believe that the expansion of coverage for ICR programs will enable beneficiaries to take advantage of more focused and rigorous programs that will more quickly lead to improved cardiovascular health. Having the choice of CR and ICR programs, beneficiaries eligible for coverage will be able to determine the best manner in which to achieve improved cardiovascular health, through traditional CR or more rigorous ICR program. We also expect this expansion of coverage to bring more attention to the importance of cardiac rehabilitation and the extensive benefits these programs provide to beneficiaries. As a result, the number of beneficiaries participating in CR programs may increase. We estimate that the provisions for establishing coverage of cardiac rehabilitation and intensive cardiac rehabilitation programs, as discussed in section II.G.8. of this final rule with comment period, will have a minimal budgetary impact on the Medicare program.

8. Section 144(a): Payment and Coverage Improvements for Patients With Chronic Obstructive Pulmonary Disease and Other Conditions: Pulmonary Rehabilitation Services

As discussed in section II.G.9. of this final rule with comment period, the implementation of the Medicare pulmonary rehabilitation program will allow Medicare, for the first time, to provide for payment for exercise and other services as part of a comprehensive treatment plan for beneficiaries with moderate to very severe COPD. We believe this program has the potential of not only improving the quality of life for beneficiaries who engage in it, but also reducing Medicare costs in the long range by decreasing the chances of exacerbations and further rehabilitation related to their chronic respiratory disease. We estimate this provision will have a minimal budgetary impact on the Medicare program.

9. Section 144(b): Repeal of Transfer of Title for Oxygen Equipment—Repeal of Transfer of Title for Oxygen Equipment

The revisions pertaining to oxygen and oxygen equipment in section II.G.10. of this final rule reflect changes made by the MIPPA of 2008. Section 1834(a)(5)(F) of the Act limited monthly payments to suppliers furnishing oxygen equipment to 36 months of continuous use. Prior to the MIPPA, at the end of this 36-month period, suppliers were required to transfer title to oxygen equipment to the beneficiary. Section 144(b) of the MIPPA repealed the transfer of title requirement. In its place, section 144(b) amends section 1834(a)(5)(F) of the Act by adding additional payment rules and supplier responsibilities discussed previously in this preamble that apply after the 36 month rental cap.

Based on data from the Small Business Administration (SBA), we estimate that 85 percent of suppliers of the items and services affected by this rule would be defined as small entities with total revenues of $7 million or less in any 1 year. In the case of oxygen and oxygen equipment, it is difficult to estimate the impact of section 144(b) of the MIPPA on small entities and oxygen and oxygen equipment suppliers in general. Nevertheless, we do believe that the net impact on small entities and other suppliers of oxygen and oxygen equipment will be positive rather than negative. This is based on the fact that this change allows suppliers to retain ownership of oxygen equipment in all cases when it is no longer needed by the beneficiary. Prior to this change, suppliers were required to relinquish ownership of oxygen equipment after 36 continuous rental months. While suppliers will be required to continue furnishing the equipment after the 36 month rental period for up to 2 additional years in some cases until the 5 year reasonable useful lifetime of the equipment ends, they will retain ownership of equipment when it is no longer needed and can furnish the equipment to other patients. As explained in more detail below, we estimate that suppliers could potentially receive approximately $58 million per year in payments for furnishing oxygen equipment that is returned to them after the 36 month cap and before the end of the 5 year reasonable useful lifetime. Suppliers in these situations are able to forgo the expense of purchasing new equipment from manufacturers to replace equipment they would have transferred to beneficiaries had the transfer of title requirement not been repealed.

Our data indicates that most beneficiaries who receive stationary oxygen equipment are furnished with a stationary oxygen concentrator. As we have indicated previously, oxygen concentrators require very minimal maintenance and servicing if less than

5 years old, and, as described in more detail below, suppliers will receive an annual payment, beginning 6 months after the end of the 36 month rental cap, for maintenance and servicing of the oxygen concentrator. Therefore, suppliers' costs for maintaining this equipment after the cap should be minimal unless they are furnishing equipment that is older than 5 years, in which case they will probably have received significantly more than 36 monthly rental payments from Medicare or other payers for rental of the equipment. In addition, since approximately 76 percent of Medicare beneficiaries that need oxygen do not use the oxygen equipment for more than 36 months, the changes mandated by section 144(b) of the MIPPA will have no impact on suppliers or beneficiaries in the majority of cases. The 76 percent figure is based on the most recent Medicare data available (see Table 52).

Again, if a beneficiary discontinues use of oxygen after the 36-month rental cap but before the end of the reasonable useful lifetime of the equipment (currently 5 years), the supplier will be able to retrieve the equipment and rent it to another Medicare beneficiary or other customer and receive additional rental payments for the remainder of the equipment's reasonable useful lifetime. It is difficult to estimate the magnitude of this positive impact on suppliers. If the equipment is older than 5 years at the time the 36-month rental cap is reached, the supplier may have already received 24 monthly payments or more from Medicare or other payers for rental of the equipment prior to the start of the most recent 36 month rental payment period for the equipment. Combined with the 36 monthly payments made by Medicare in situations where the cap is reached (24 percent of cases based on current data), this would equal or exceed 60 monthly payments for the equipment. On the other hand, assuming the equipment is brand new at the time it is initially furnished in the 24 percent of cases where the cap is reached, the supplier will only have received 36 monthly payments for the new equipment before the rental cap is reached. However, since the equipment will only be 3 years old at this point, depending on when the beneficiary's medical need for or use of the equipment ends, the supplier will be able to furnish the equipment to other patients for any months remaining in the equipment's 5 year or 60 month reasonable useful lifetime. Table 52 illustrates earnings that the supplier could realize from furnishing oxygen equipment that they would have been required to transfer to the beneficiary prior to the enactment of MIPPA.

BILLING CODE 4120–01–P

TABLE 52: Potential Earnings of Suppliers Given the Retention of Title to the Oxygen Equipment

Month in the Reasonable Useful Lifetime	Percentage of Beneficiaries Using Oxygen Equipment for this Number of Months	Number of Beneficiaries	Number of Months that Equipment can be Rented to another Beneficiary before the end of the Reasonable Useful Lifetime	Earnings for Supplier for a Given Month
36	24.4%			
37	23.8%	8,288	23	$33,511,396
38	23.1%	5,954	22	$23,025,830
39	22.6%	6,487	21	$23,945,761
40	22.0%	5,923	20	$20,822,401
41	21.5%	5,782	19	$19,310,298
42	21.1%	7,599	18	$24,044,916

57	14.4%	3,901	3	$2,057,452
58	14.1%	4,058	2	$1,426,720
59	13.7%	3,400	1	$597,680
60+	13.4%	161,146	0	$0
			Five-year Total =	288,222,244
			Annual Total =	57,644,449

The data is from Medicare claims data as arrayed by the CMS Pricing, Data Analysis, and Coding (PDAC) contractor in September 2009. The Medicare claims are from January 1, 2002 thru December 31, 2007. We estimate that there were approximately 1.2 million beneficiaries using oxygen equipment during this time based on our analysis of Medicare data. The earnings are calculated using the 2009 monthly payment amount for oxygen and oxygen equipment of $175.79.

BILLING CODE 4120–01–C

Again, we understand that oxygen equipment is very durable and should need few repairs in the first 5 years. Therefore, we have determined that any costs suppliers may incur in repairs and service visits would be more than offset by the gains they achieve by retaining ownership of the equipment they can then reuse and by payments received for maintenance and servicing after the cap that are established as a result of this final rule with comment period.

Finally, Medicare program expenditures will increase slightly as a result of the payments for maintenance and servicing after the 36 month rental cap for oxygen concentrators and transfilling equipment. Medicare will make maintenance and servicing payments at 6 month intervals following the 36th month payment rental cap. Through June 30, 2010, the payment for these visits is based on 30 minutes of labor. After June 30, 2010, the payment rate is a reasonable fee not to exceed 10 percent of the purchase price for a stationary oxygen concentrator. The total cost in terms of allowed charges per year is calculated to be about $8 million.

10. Section 152(b): Coverage of Kidney Disease Patient Education Services

The implementation of Medicare coverage of kidney disease patient education services as discussed in section II.G.11. of this final rule with comment period will allow Medicare to provide for payment for kidney disease education services for beneficiaries with Stage IV chronic kidney disease. We believe this program can help patients achieve better understanding of their illness, dialysis modality options, and may help delay the need for dialysis. We believe this program has the potential of improving the quality of life for beneficiaries since they will be better equipped to make informed decisions. We estimate a cost to the Medicare program of approximately $10 million for CY 2010, because the statute limits the number of kidney disease education sessions to 6, as a lifetime maximum.

11. Section 153: Renal Dialysis Provisions

A discussion of the impact of section 153 of the MIPPA is addressed in section V.H. of this regulatory impact analysis in conjunction with the other ESRD provisions of this rule.

12. Section 182(b): Revision of Definition of Medically-Accepted Indication for Drugs; Compendia for Determination of Medically-Accepted Indications for Off-Label Uses of Drugs and Biologicals in an Anti-cancer Chemotherapeutic Regimen

We anticipate that the proposals related to the compendia discussed in section II.G.13. of this final rule with comment period will have a negligible cost to the Medicare program and to the public. The information that is required to be collected and published on the compendia Web sites is information that is already collected in the normal course of business by the compendia publishers, which all have Web sites. The changes will enable CMS to efficiently implement the provisions of section 182(b) of the MIPPA that require transparent evaluative and conflict of interest policies and practices for current and future listed compendia on and after January 1, 2010.

G. Payment for Covered Outpatient Drugs and Biologicals

1. Average Sales Price (ASP) Issues

The changes discussed in section II.H.1. of this final rule with comment period with respect to payment for covered outpatient drugs and biologicals, are estimated to have no impact on Medicare expenditures as we are not making any change to the AMP/WAMP threshold and the change concerning the immunosuppressive drug period of eligibility is a conforming change to reflect the statute.

2. Competitive Acquisition Program (CAP) Issues

As discussed in section II.H.2., this final rule with comment period finalizes several CAP proposals and updates to regulations, specifically the frequency of drug payment amount updates, changes to the CAP drug list, the geographic area served by the CAP, CAP drug stock at the physician's office, exclusion of CAP sales from ASP calculations, the annual CAP payment amount update mechanism, and updates to proposals made in the 2009 PFS rule. Our changes and refinements may improve compliance, promote program flexibility, improve the quality, and maintain the availability of services for participating CAP physicians. We anticipate that these changes associated with the CAP will not result in significant additional cost savings or increases relative to the ASP payment system for two reasons. First, in 2006 through 2008, the dollar volume of claims paid under the CAP was small compared to the volume of claims paid under section 1847A of the Act, and although we anticipate that the CAP will continue to grow, we do not anticipate a significant change in the proportion of claims paid under these payment systems. Second, because CAP payment amounts are limited to prices calculated under section 1847A of the Act, we expect payment rates for the two programs to remain very similar.

H. Provisions Related to Payment for Renal Dialysis Services Furnished by End-Stage Renal Disease (ESRD) Facilities

The ESRD-related provisions are discussed in sections II.G.11 and II.I. of this final rule with comment period. To understand the impact of the changes affecting payments to different categories of ESRD facilities, it is necessary to compare estimated payments under the current year (CY 2009 payments) to estimated payments under the revisions to the composite rate payment system (CY 2010 payments) as discussed in section II.I. of this final rule with comment period. To estimate the impact among various classes of ESRD facilities, it is imperative that the estimates of current payments and estimates of payments contain similar inputs. Therefore, we simulated payments only for those ESRD facilities that we are able to calculate both current 2009 payments and 2010 payments.

ESRD providers were grouped into the categories based on characteristics provided in the Online Survey and Certification and Reporting (OSCAR) file and the most recent cost report data from the Healthcare Cost Report Information System (HCRIS). We also used the June 2009 update of CY 2008 National Claims History file as a basis for Medicare dialysis treatments and separately billable drugs and biologicals. Due to data limitations, we are unable to estimate current and payments for 42 of the 5186 ESRD facilities that bill for ESRD dialysis treatments.

Table 53 shows the impact of this year's changes to CY 2010 payments to hospital-based and independent ESRD facilities. The first column of Table 53 identifies the type of ESRD provider, the second column indicates the number of ESRD facilities for each type, and the third column indicates the number of dialysis treatments.

The fourth column shows the effect of all changes to the ESRD wage index for CY 2010 as it affects the composite rate payments to ESRD facilities. The fourth column compares aggregate ESRD wage adjusted composite rate payments in CY 2010 to aggregate ESRD wage adjusted

composite rate payments in CY 2009. In CY 2009, ESRD facilities receive 100 percent of the CBSA wage adjusted composite rate and 0 percent of the MSA wage adjusted composite rate, ending a 4-year transition period in which they had received an increasing percent of payments based on the CBSA wage adjusted composite rate. The overall effect to all ESRD providers in aggregate is zero because the CY 2010 ESRD wage index has been multiplied by a wage index BN adjustment factor to comply with the statutory requirement that any wage index revisions be done in a manner that results in the same aggregate amount of expenditures as would have been made without any changes in the wage index.

The fifth column shows the effect of changes to the ESRD wage index in CY 2010 and the effect of the MIPPA provisions on ESRD facilities. Section 153(a) of MIPPA amended section 1881(b)(12)(G) of the Act to revise payments to ESRD facilities. For services furnished on or after January 1, 2010, MIPPA provides a 1 percent increase to the composite rate component of the payment system. The fifth column also reflects the changes in payment based on changes to the wage index from CY 2009 to CY 2010.

The sixth column shows the overall effect of the changes in composite rate payments to ESRD providers including the drug add-on. The overall effect is measured as the percent change between the CY 2010 payments to ESRD facilities with all changes as finalized in this rule and CY 2009 payments to ESRD facilities under current payment policies. These payment amounts are computed by multiplying the wage adjusted composite rate including the drug add-on for each provider times the number of dialysis treatments from the CY 2008 claims. The CY 2010 payments are the wage adjusted composite rate for each provider (with the 15.0 percent drug add-on) times dialysis treatments from CY 2008 claims. The CY 2009 current payments are the wage adjusted composite rate for each provider (with the current 15.2 percent drug add-on) times dialysis treatments from CY 2008 claims.

The overall impact to ESRD providers in aggregate is 0.8 percent as shown in Table 53. Most ESRD facilities will see an increase in payments as a result of the MIPPA provision. While the MIPPA provision includes a 1 percent increase to the ESRD composite rate for services provided on or after January 1, 2009, this 1 percent increase does not apply to the drug add-on to the composite rate. For this reason, the impact of all changes in this final rule with comment period is a 0.8 percent increase for all ESRD providers. Overall, payments to independent ESRD facilities will increase by 0.8 percent and payments to hospital-based ESRD facilities will increase by 1.0 percent.

BILLING CODE 4120–01–P

TABLE 53: Impact of CY 2010 Changes in Payments to Hospital Based and Independent ESRD Facilities

[Percent change in composite rate payments to ESRD facilities]

1	2	3	4	5	6

Puerto Rico & Virgin Islands	37	0.4	-2.4%	-1.4%	-1.6%

Notes: Payments have been adjusted to reflect budget neutrality. CY 2009 includes the MIPPA 1 percent increase and site neutral rates. CY 2009 and CY 2010 both reflect 100 percent CBSA wage adjusted composite rate.

[1] This column shows the overall effect of wage index changes on ESRD providers. Composite rate payments are computed using the final CY 2010 wage indexes which are compared to composite rate payments using the current CY 2009 wage indexes.

[2] This column shows the effect of the changes in the wage indexes and the MIPPA provision which includes a 1 percent increase to the composite rate. This provision is effective for services furnished on or after January 1, 2010.

[3] This column shows the percent change between CY 2010 and CY 2009 composite rate payments to ESRD facilities. The CY 2010 payments include the CY 2010 wage adjusted composite rate, a 1 percent increase due to MIPPA effective 1/1/10 and the drug add-on of 15.0 percent.

The CY 2009 payments include the CY 2009 wage adjusted composite rate, a 1 percent increase and site neutral rates effective 1/1/09 and the drug add-on of 15.2 percent. This column shows the effect of wage index, MIPPA, and drug add-on changes. While the MIPPA provision includes a 1 percent increase to the composite rate, this 1 percent increase does not apply to the drug add-on to the composite rate. The impact of all changes in this final rule is a 0.8 percent increase for all ESRD providers.

BILLING CODE 4120–01–C

I. Chiropractic Demonstration—Application of Budget Neutrality

As discussed in section II.J. of this final rule with comment period, we are going to recoup the $50 million in expenditures from this demonstration over a 5-year period rather than over a 2-year period. We will recoup $10 million each year through adjustments to the PFS for all chiropractors in CYs 2010 through 2014.

To implement this required BN adjustment, we will reduce the payment amount under the PFS for the chiropractic CPT codes (that is, CPT codes 98940, 98941, and 98942) by approximately 2 percent.

J. Comprehensive Outpatient Rehabilitation Facilities (CORF) and Rehabilitation Agency Issues

The revisions to the conditions of participation (CoP) discussed in section II.K. of this final rule with comment period make technical corrections and update the regulations to reflect current industry standards for respiratory therapists. The revisions to the regulations will clarify the qualifications necessary for respiratory therapists' to continue to qualify to furnish respiratory therapy services to CORF patients. These changes are similar to prior rules and will have no impact on CORFs cost.

K. Physician Self-Referral Provisions

In section II N.1. of this final rule with comment period, we discuss our clarification of the physician stand in the shoes provisions at § 411.354(c)(3)(i). This revision will assist designated health services entities in structuring legitimate compensation arrangements by clarifying that the standard for determining compensation between the parties will be dictated by the language of the exceptions within § 411.355 and § 411.357. Furthermore, like other physician self-referral policies, we anticipate that this clarification will result in savings to the Medicare program by reducing overutilization and anti-competitive business arrangements. However, we cannot gauge with any degree of certainty the extent of these savings to the Medicare program.

L. Durable Medical Equipment Related Issues

1. Damages Process

In section II.O.1. of this final rule with comment period, we establish a one-time process that will only impact those suppliers who were awarded a contract and were potentially damaged by the termination of their supplier contracts by MIPPA. The DMEPOS Competitive Bidding Program that was implemented on July 1st, 2008, awarded contracts to 329 suppliers. The following factors may be considered by a contract supplier before deciding to submit a claim:

- The contract itself stipulated that the contract is subject to any changes to the statute or regulations that affect the Medicare program;
- The contract does not guarantee any amount of business or profits, therefore, an efficient business would not be expected to incur large expenses without any guaranteed increase in business and profits;
- The contract stipulates that CMS shall not pay for any expenses incurred by the supplier for the work performed under the contract other than for payment of Medicare claims authorized pursuant to the contract;
- Upon termination of the contracts by MIPPA, payments reverted back to the fee schedule amount, which was on average 26 percent higher than under the DMEPOS Competitive Bidding Program.
- There is a required responsibility under contract law for a company to take action to mitigate expenses to any stop work order.
- CMS listed the winning suppliers on the Medicare Web site at *http://www.Medicare.gov* in the supplier locator tool, a supplier is allowed to keep any new customers they may have obtained as a result of being listed on the supplier locator tool.

By mentioning the list above, we are not suggesting that there would not be legitimate claims for damages. However, these are factors that a supplier may consider when deciding whether to submit a claim for damages.

Based on these reasons and because there have been so few inquiries or responses to the reference in the MIPPA to damages (fewer than 7 suppliers), we believe that as few as 1 percent of the 329 winning suppliers may make a claim for damages. However, as a high estimate, we would estimate that approximately 76 percent of the suppliers (250) may submit a claim. We anticipate that it will take approximately 3 hours at $34/hour (3 × $34 = $102) for an accountant and a company official to review and gather the necessary documents to file a claim for a total of $25,500 (250 × $102). The hourly accountant rate was based on the Bureau of Labor Statistics data collected for June 2006 which was then adjusted to account for inflation. We estimate that this regulation will not have a large budgetary impact. The total cost range of $408 to $25,500 for potential claims from contract suppliers will not result in expenditures of $133 million or more annually. An analysis of the damage payments that may result would be dependent upon an evaluation of the actual claims once they are received.

2. Grandfathering Process

In section II.O.2. of this final rule with comment period, we are revising the definition of a *grandfathered item* to refer to all rented items within a competitively bid product category that the supplier currently rents. The definition of a *grandfathered item* would avoid confusion, on the part of beneficiaries, regarding rented DME items for which a noncontract supplier may choose to be a grandfathered supplier. Under the revised definition, a noncontract supplier will have to choose to be either a grandfathered supplier for all or for none of the DME rented items within a product category that the supplier currently provides. We believe that it will be easier for beneficiaries to recognize which items a supplier is grandfathering or not grandfathering if the supplier's election concerning grandfathering was made by product category rather than making separate choices for each individual HCPCS code.

We also believe the revision of this definition will have a negligible impact on suppliers as product categories consist of related items routinely provided by suppliers. We are only requiring a supplier to provide those rented items within a product category that the supplier was currently furnishing at the start of the competitive bidding program.

While difficult to estimate, we believe that based on 2008 data, there were approximately 1,850 suppliers in the 9 CBAs, for which we will be doing the Round 1 rebid that rented competitively bid items, on average at different points in time during 2008. Therefore, we are using this number to indicate how many suppliers would be renting a DME competitively bid item at the start of the competitive bid program. We believe some suppliers may decide not to bid because of the cost of bidding and accreditation requirements while other suppliers may not qualify for a contract. Since not all suppliers will be awarded contracts and some may not choose to submit a bid, we estimate that in the worst case scenario there will be 1,450 suppliers that will not be awarded contracts, would be renting DME competitive bid items at the time the program is implemented.

Based on our experience from the competitive bidding demonstrations, of the 1,450 suppliers who are not

awarded a contract, we expect 90 percent or 1,305 of these noncontract suppliers will offer to be grandfathered suppliers (0.90 × 1,450 = 1,305) and 10 percent or 145 (0.10 × 1,450 = 145) of the suppliers will choose not to grandfather. We believe most suppliers will not want to pick up their items before the end of the full rental period.

Based on 2008 data, we estimate that there will be 96,000 beneficiaries who reside in a CBA and are renting competitively bid items from suppliers at the start of the round 1 rebid. Based on the 2007 round 1 of the competitive bidding program, we estimate that there would be 74,880 (96,000 × 0.78 = 74,880) beneficiaries who would be renting items from a noncontract supplier.

a. Notification Requirement for Suppliers That Choose To Grandfather

(1) Notification to CMS

For those suppliers that choose to grandfather (1,305), we estimate that it would take the supplier on average 2 hours to develop the 30-day notification that it is required to send to CMS. We estimate that the cost to the supplier to develop the 30-day notification to CMS would be $89.60 for skilled administrative staff (2 hours × $44.80 per hour). The $44.80 is based on 2009 data from the Bureau of Labor Statistics plus an increase for overhead of 40 percent. We estimate that the cost to the supplier to send the notification to CMS would be $5.51 for clerical staff (0.25 hour to send the notification × $22.02 per hour = $5.51). The $22.02 is based on 2009 data from the Bureau of Labor Statistics plus an increase for overhead of 40 percent. We estimate the cost of supplies necessary to send the notification would be $2.00. The total cost for sending the notification would be $7.51 which includes the cost of clerical staff ($5.51) and supplies ($2.00). The individual costs for all suppliers to notify CMS would be $97.11 ($89.60 for development of the letter + $7.51 for preparing and sending each notification = $97.11). The overall cost for suppliers to notify CMS would be approximately $126,728.55 ($97.11 per supplier × 1,305 suppliers = $126,728.55).

(2) Notification to the Beneficiary

We estimate based on 2008 data, we expect that there will be 74,880 beneficiaries who will have been renting competitive bid items from a noncontract supplier at the start of the round 1 rebid of the CBP. Of the 74,880, we believe that approximately 100 percent of these beneficiaries will accept the offer to continue to rent competitively bid items from the noncontract supplier that offers to be a grandfathered supplier. We believe that the beneficiaries will choose to continue to rent from a grandfathered supplier if given the choice because it would be more convenient, assure continuity of care, and eliminate the need to have equipment taken from their home.

Based upon the number of suppliers and beneficiaries, we estimate that there will be an average of 52 beneficiaries per supplier that was not awarded a contract (74,880 beneficiaries/1,450 suppliers = 52). Therefore, we estimate that each noncontract supplier that chooses to grandfather would send the 30-day notification on average to 52 beneficiaries.

We expect that the cost of developing the 30-day notification to a beneficiary will be equivalent to the cost of developing the 30-day notification to CMS ($89.60 per notification). We also expect the cost of sending the 30-day notification per beneficiary to be equivalent to sending the 30-day notification to CMS ($7.51 per notification). The total costs for the 30-day notification to beneficiaries for suppliers that choose the grandfathering option would be $89.60 for development of the letter, and $7.51 for preparing and sending each notification. To calculate the total cost we multiplied $7.51 × 52 beneficiaries and added the development cost for the letter of $89.60 for a total of $480.12 per supplier. The overall cost for these suppliers to provide the 30-day notification to their beneficiaries will be approximately $626,556.60 ($480.12 per supplier × 1,305 suppliers = $626,556.60).

b. Notification Requirement for Suppliers That Choose Not To Grandfather

(1) 30-day Notification to the Beneficiary

We expect that suppliers who choose not to grandfather will incur costs equivalent to the cost of developing and sending the 30-day notification to a beneficiary by those suppliers that choose to grandfather. The overall cost for all suppliers who choose not to grandfather to provide the 30-day notification to the beneficiary is approximately $69,617.40 ($480.12 total cost per supplier × 145 non-grandfathered suppliers = $69,617.40). The estimate of 145 suppliers not choosing to be grandfathered suppliers represents 10 percent of the total number of noncontract suppliers.

While the cost for the 30-day notification to beneficiaries will be exactly the same for all suppliers, those who choose not to become a grandfathered supplier will also incur the cost of the 10-day and 2-day notification.

(2) 10-day and 2-day Notification

For the 10-day notification to a beneficiary, we estimate the supplier will make at least 1 phone call that would take an average of 15 minutes to discuss that the beneficiary must switch to a contract supplier, the schedule for picking up the current equipment by the noncontract supplier, and the delivery of new equipment by the contract supplier. For the 2-day notification to the beneficiary, we estimate that the supplier will make at least 1 phone call that would take an average of 15 minutes to ensure that all of the arrangements are finalized and to answer any last minute questions. We anticipate that clerical staff will perform both of these tasks.

The estimated cost of the 10-day notification totals $5.51 (.25 of an hour × $22.02 per hour for clerical staff based on the 2009 Bureau of Labor Statistics including overhead = $5.51). The estimated cost of the 2-day notification totals $5.51 (.25 of an hour × $22.02 per hour for clerical staff based on the 2009 Bureau of Labor Statistics including overhead = $5.51). Therefore, the 10-day and 2-day notifications for each supplier will cost approximately $11.02. The total cost for each supplier would be approximately $573.04 ($11.02 × 52 beneficiaries = $573.04). The overall impact for all suppliers to make the 10-day and 2-day notifications will be approximately $83,090.80 (145 suppliers × $573.04 per supplier = $83,090.80).

We anticipate that this process will not place a greater burden on the overall small supplier community. This process is only going to affect those small suppliers that were renting items when the competitive bidding program begins and who did not win a contract. The burden on these suppliers will generally be less because small suppliers will have fewer beneficiaries to furnish notifications to.

As an alternative, we considered relying on suppliers to develop their own schedule for informing beneficiaries regarding grandfathering. This alternative would have left the beneficiaries vulnerable to having equipment removed from the home before new equipment was delivered. The process finalized in this regulation ensures the beneficiaries can make an informed decision about the transition policy that works best for them. The alternative we selected ensures the

beneficiaries will have continued access to medically necessary items and be properly informed about the steps they must take so that their services will not be interrupted.

M. Changes to Allowed and Actual Expenditures for Calculating the Physician Fee Schedule Update

In sections V. and VI. of this final rule with comment period, we described our decision to remove drugs from the calculation of allowed and actual expenditures since the 1996/1997 base year and the SGR rate of increase for future years. While removing physician-administered drugs from allowed and actual expenditures will not change the −21.3 percent physician payment rate update (the −21.2 percent change to the CF accounts for an additional 0.1 percent BN adjustment for changes to the RVUs) for services furnished on or after January 1, 2010, this change reduces the discrepancy between actual and target expenditures. Based on the President's budget, we estimate this proposal will cost $45.4 billion from 2010 to 2014 and $122 billion for 2010 to 2019.

N. Alternatives Considered

This final rule with comment period contains a range of policies, including some provisions related to specific MIPPA provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, responds to comments on our proposals, presents rationale for our decisions and, where relevant, alternatives that were considered.

O. Impact on Beneficiaries

There are a number of changes in this final rule with comment period that would have an effect on beneficiaries. In general, we believe these changes, including the refinements of the PQRI with its focus on measuring, submitting, and analyzing quality data, the coding provisions related to the IPPE and consultation services, the changes with respect to telehealth services, the kidney disease patient education, pulmonary rehabilitation and intensive cardiac rehabilitation proposals will have a positive impact and improve the quality and value of care provided to Medicare beneficiaries. Additionally, the grandfathering process for DME suppliers will help ensure that beneficiaries are contacted and informed about this process and the choices they have concerning whether or not to use a grandfathered supplier. Moreover, the notice will help to ensure that beneficiaries do not have necessary DME equipment taken from them unexpectedly by a noncontact supplier.

As explained in more detail subsequently in this section, the regulatory provisions may affect beneficiary liability in some cases. Most changes aggregate in beneficiary liability due to a particular provision would be a function of the coinsurance (20 percent if applicable for the particular provision after the beneficiary has met the deductible). Beneficiary liability would also be impacted by the effect of the aggregate cost (savings) of the provision on the standard calculation of the Medicare Part B premium rate (generally 25 percent of the provision's cost or savings). In 2010, total cost sharing (coinsurance and deductible) per Part B enrollee associated with PFS services is estimated to be $399. In addition, the portion of the 2010 standard monthly Part B premium attributable to PFS services is estimated to be $25.70.

To illustrate this point, as shown in Table 50, the 2009 national payment amount in the non-facility setting for CPT code 99203 (Office/outpatient visit, new), is $91.97 which means that in 2009 a beneficiary is responsible for 20 percent of this amount, or $18.39. Based on this rule, the 2010 national payment amount in the non-facility setting for CPT code 99203, as shown in Table 49, is $76.98 which means that, in 2010, the beneficiary coinsurance for this service would be $15.40.

Policies discussed in this rule, such as the coding changes with respect to the RVUs for IPPE and the changes to consultation services, would similarly impact beneficiaries' coinsurance.

P. Accounting Statement

As required by OMB Circular A–4, in Table 54, we have prepared an accounting statement showing the classification of the expenditures associated with this final rule with comment period. This estimate includes the incurred benefit impact associated with the estimated CY 2010 PFS update based on the 2009 Trustees Report baseline, as well as certain MIPPA provisions. All estimated impacts are classified as transfers.

TABLE 54—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES CY 2010

Category	Transfers
Annualized Monetized Transfers	Estimated decrease in expenditures (from CY 2009 to CY 2010) of $13.3 Billion.
From Whom to Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.
Annualized Monetized Transfers	Estimated increase in expenditures of $110 Million for MIPPA Provisions (sections 102 and 152(b)).
From Whom to Whom?	Federal Government to providers.

In accordance with the provisions of Executive Order 12866, this final rule with comment period was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 410

Health facilities, Health professions, Kidney diseases, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Kidney diseases, Medicare, Physician Referral, Reporting and record keeping requirements.

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 485

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 498

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

■ For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 1. The authority citation for part 410 continues to read as follows:

Authority: Secs. 1102, 1834, 1871, and 1893 of the Social Security Act (42 U.S.C. 1302, 1395m, 1395hh, and 1395ddd).

Subpart B—Medical and Other Health Services

■ 2. Section 410.30 is amended by revising paragraph (b) to read as follows:

§ 410.30 Prescription drugs used in immunosuppressive therapy.

* * * * *

(b) *Eligibility.* For drugs furnished on or after December 21, 2000, coverage is available only for prescription drugs used in immunosuppressive therapy, furnished to an individual who received an organ or tissue transplant for which Medicare payment is made, provided the individual is eligible to receive Medicare Part B benefits.

* * * * *

■ 3. Section 410.47 is added to read as follows:

§ 410.47 Pulmonary rehabilitation program: Conditions for coverage.

(a) *Definitions.* As used in this section:

Individualized treatment plan means a written plan established, reviewed, and signed by a physician every 30 days, that describes all of the following:

(i) The individual's diagnosis.

(ii) The type, amount, frequency, and duration of the items and services under the plan.

(iii) The goals set for the individual under the plan.

Medical director means the physician who oversees or supervises the PR program.

Outcomes assessment means a written evaluation of the patient's progress as it relates to the individual's rehabilitation which includes the following:

(i) Beginning and end evaluations, based on patient-centered outcomes, which are conducted by the physician at the start and end of the program.

(ii) Objective clinical measures of effectiveness of the PR program for the individual patient, including exercise performance and self-reported measures of shortness of breath and behavior.

Physician means a doctor of medicine or osteopathy as defined in section 1861(r)(1) of the Act.

Physician-prescribed exercise means physical activity, including aerobic exercise, prescribed and supervised by a physician that improves or maintains an individual's pulmonary functional level.

Psychosocial assessment means a written evaluation of an individual's mental and emotional functioning as it relates to the individual's rehabilitation or respiratory condition.

Pulmonary rehabilitation means a physician-supervised program for COPD and certain other chronic respiratory diseases designed to optimize physical and social performance and autonomy.

Supervising physician means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished under the PR program.

(b) *Beneficiaries who may be covered.* (1) Medicare covers pulmonary rehabilitation for beneficiaries with moderate to very severe COPD (defined as GOLD classification II, III and IV), when referred by the physician treating the chronic respiratory disease.

(2) Additional medical indications for coverage for pulmonary rehabilitation program services may be established through a national coverage determination (NCD).

(c) *Components.* Pulmonary rehabilitation includes all of the following components:

(1) *Physician-prescribed exercise.* This physical activity includes techniques such as exercise conditioning, breathing retraining, step, and strengthening exercises. Some aerobic exercise must be included in each pulmonary rehabilitation session.

(2) *Education or training.* (i) Education or training closely and clearly related to the individual's care and treatment which is tailored to the individual's needs.

(ii) Education includes information on respiratory problem management and, if appropriate, brief smoking cessation counseling.

(iii) Any education or training prescribed must assist in achievement of individual goals towards independence in activities of daily living, adaptation to limitations and improved quality of life.

(3) *Psychosocial assessment.* The psychosocial assessment must meet the criteria as defined in paragraph (a) of this section and includes:

(i) An assessment of those aspects of an individual's family and home situation that affects the individual's rehabilitation treatment.

(ii) A psychosocial evaluation of the individual's response to and rate of progress under the treatment plan.

(4) *Outcomes assessment.* The outcomes assessment must meet the criteria as defined in paragraph (a) of this section.

(5) *Individualized treatment plan.* The individualized treatment plan must be established, reviewed, and signed by a physician, who is involved in the patient's care and has knowledge related to his or her condition, every 30 days.

(d) *Settings.* (1) Medicare Part B pays for a pulmonary rehabilitation in the following settings:

(i) Physician's offices.

(ii) Hospital outpatient settings.

(2) All settings must have the following available for immediate use and accessible at all times:

(i) The necessary cardio-pulmonary, emergency, diagnostic, and therapeutic life-saving equipment accepted by the medical community as medically necessary (for example, oxygen, cardiopulmonary resuscitation equipment, and defibrillator) to treat chronic respiratory disease.

(ii) A physician must be immediately available and accessible for medical consultations and emergencies at all times when services are being provided under the program. This provision is satisfied if the physician meets the requirements for direct supervision for physician office services at § 410.26 of this subpart and for hospital outpatient services at § 410.27 of this subpart.

(e) *Physician standards.* Medicare Part B pays for pulmonary rehabilitation services for PR programs supervised by a physician who meets the following requirements—

(1) Is responsible and accountable for the pulmonary rehabilitation program, including oversight of the PR staff.

(2) Is involved substantially, in consultation with staff, in directing the progress of the individual in the program including direct patient contact related to the periodic review of his or her treatment plan.

(3) Has expertise in the management of individuals with respiratory pathophysiology, and cardiopulmonary training and/or certification including basic life support.

(4) Is licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(f) *Limitations on coverage: Sessions.* Medicare Part B pays for services provided in connection with a pulmonary rehabilitation exercise

program for up to 36 sessions, no more than two sessions per day. Up to an additional 36 sessions may be approved by the Medicare contractor, based on medical necessity in accordance with section 1862(a)(1)(A) of the Act.

(g) *Effective date.* Coverage for pulmonary rehabilitation program services is effective January 1, 2010.

■ 4. Section 410.48 is added to read as follows:

§ 410.48 Kidney disease education services.

(a) *Definitions.* As used in this section:

Kidney disease patient education services means face-to-face educational services provided to patients with Stage IV chronic kidney disease.

Physician means a physician as defined in section 1861(r)(1) of the Act.

Qualified person means either of the following healthcare entities that meets the qualifications and requirements specified in this section to provide kidney disease patient education services—

(i) One of the following healthcare professionals who furnishes services for which payment may be made under the physician fee schedule:

(A) Physician (as defined in section 1861(r)(1) of the Act).

(B) Physician assistant as defined in section 1861(aa)(5) of the Act and § 410.74 of this subpart).

(C) Nurse practitioner as defined in section 1861(aa)(5) of the Act and § 410.75 of this subpart).

(D) Clinical nurse specialist (as defined in section 1861(aa)(5) of the Act and § 410.76 of this subpart),

(ii)(A) A hospital, critical access hospital, skilled nursing facility, comprehensive outpatient rehabilitation facility, home health agency, or hospice that is located in a rural area as defined in § 412.64(b)(ii)(C) of this chapter; or

(B) A hospital or critical access hospital that is treated as being rural under § 412.103 of this chapter.

Renal dialysis facility means a unit, which is approved to furnish dialysis service(s) directly to end-stage renal disease (ESRD) patients, as defined in § 405.2102 of this chapter.

Stage IV chronic kidney disease means kidney damage with a severe decrease in glomerular filtration rate (GFR) quantitatively defined by a GFR value of 15–29 ml/min/1.73m^2, using the Modification of Diet in Renal Disease (MDRD) Study formula.

(b) *Covered beneficiaries.* Medicare Part B covers outpatient kidney disease patient education services if the beneficiary meets all of the conditions and requirements of this subpart, including all of the following:

(1) Is diagnosed with Stage IV chronic kidney disease.

(2) Obtains a referral from the physician (as defined in section 1861(r)(1) of the Act) managing the beneficiary's kidney condition.

(c) *Qualified person.* (1) Medicare Part B covers outpatient kidney disease patient education services provided by a qualified person as defined in paragraph (a) of this section and must be able to properly receive Medicare payment under part 424 of this chapter.

(2) A qualified person does not include either of the following:

(i) A hospital, critical access hospital, skilled nursing facility, comprehensive outpatient rehabilitation facility, home health agency or hospice if kidney disease patient education services are provided outside of a rural area as defined in § 412.64(b)(ii)(C) of this chapter unless the services are furnished in a hospital or critical access hospital that is treated as being in a rural area under § 412.103 of this chapter.

(ii) A renal dialysis facility, as defined in § 405.2102 of this chapter.

(d) *Standards for content of kidney disease patient education services.* The content of the kidney disease patient education services includes the following:

(1) The management of comorbidities including for the purpose of delaying the need for dialysis which includes, but not limited to, the following topics:

(i) Prevention and treatment of cardiovascular disease.

(ii) Prevention and treatment of diabetes.

(iii) Hypertension management.

(iv) Anemia management.

(v) Bone disease and disorders of calcium and phosphorus metabolism management.

(vi) Symptomatic neuropathy management.

(vii) Impairments in functioning and well-being.

(2) The prevention of uremic complications which includes, but not limited to, the following topics:

(i) Information on how the kidneys work and what happens when the kidneys fail.

(ii) Understanding if remaining kidney function can be protected, preventing disease progression, and realistic chances of survival.

(iii) Diet and fluid restrictions.

(iv) Medication review, including how each medication works, possible side effects and minimization of side effects, the importance of compliance, and informed decision-making if the patient decides not to take a specific drug.

(3) Therapeutic options, treatment modalities, and settings, including a discussion of the advantages and disadvantages of each treatment option and how the treatments replace the kidney, which includes, but not limited to, the following topics:

(i) Hemodialysis, both at home and in-facility.

(ii) Peritoneal dialysis (PD), including intermittent PD, continuous ambulatory PD, and continuous cycling PD, both at home and in-facility.

(iii) All dialysis access options for hemodialysis and peritoneal dialysis.

(iv) Transplantation.

(4) Opportunities for beneficiaries to actively participate in the choice of therapy and be tailored to meet the needs of the individual beneficiary involved which includes, but not limited to, the following topics:

(i) Physical symptoms.

(ii) Impact on family and social life.

(iii) Exercise.

(iv) The right to refuse treatment.

(v) Impact on work and finances.

(vi) The meaning of test results.

(vii) Psychological impact.

(5) Qualified persons must develop outcomes assessments designed to measure beneficiary knowledge about chronic kidney disease and its treatment.

(i) The outcomes assessments serve to assess program effectiveness of preparing the beneficiary to make informed decisions about their healthcare options related to chronic kidney disease.

(ii) The outcomes assessments serve to assess the program's effectiveness in meeting the communication needs of underserved populations, including persons with disabilities, persons with limited English proficiency, and persons with health literacy needs.

(iii) The assessment must be administered to the beneficiary during a kidney disease education session.

(iv) The outcomes assessments must be made available to CMS upon request.

(e) *Limitations for coverage of kidney disease education services.* (1) Medicare Part B makes payment for up to 6 sessions of kidney disease patient education services.

(2) A session is 1 hour long and may be provided individually or in group settings of 2 to 20 individuals who need not all be Medicare beneficiaries.

(f) *Effective date.* Medicare Part B covers kidney disease patient education services for dates of service on or after January 1, 2010.

■ 5. Section 410.49 is added to read as follows:

§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program: Conditions of coverage.

(a) *Definitions.* As used in this section:

Cardiac rehabilitation (CR) means a physician-supervised program that furnishes physician prescribed exercise, cardiac risk factor modification, psychosocial assessment, and outcomes assessment.

Individualized treatment plan means a written plan tailored to each individual patient that includes all of the following:

(i) A description of the individual's diagnosis.

(ii) The type, amount, frequency, and duration of the items and services furnished under the plan.

(iii) The goals set for the individual under the plan.

Intensive cardiac rehabilitation (ICR) program means a physician-supervised program that furnishes cardiac rehabilitation and has shown, in peer-reviewed published research, that it improves patients' cardiovascular disease through specific outcome measurements described in paragraph (c) of this section.

Intensive cardiac rehabilitation site means a hospital outpatient setting or physician's office that is providing intensive cardiac rehabilitation utilizing an approved ICR program.

Medical director means a physician that oversees or supervises the cardiac rehabilitation or intensive cardiac rehabilitation program at a particular site.

Outcomes assessment means an evaluation of progress as it relates to the individual's rehabilitation which includes all of the following:

(i) Minimally, assessments from the commencement and conclusion of cardiac rehabilitation and intensive cardiac rehabilitation, based on patient-centered outcomes which must be measured by the physician immediately at the beginning of the program and at the end of the program.

(ii) Objective clinical measures of exercise performance and self-reported measures of exertion and behavior.

Physician means a doctor of medicine or osteopathy as defined in section 1861(r)(1) of the Act.

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (that is, strengthening, stretching) as determined to be appropriate for individual patients by a physician.

Psychosocial assessment means an evaluation of an individual's mental and emotional functioning as it relates to the individual's rehabilitation which includes an assessment of those aspects of an individual's family and home situation that affects the individual's rehabilitation treatment, and psychosocial evaluation of the individual's response to and rate of progress under the treatment plan.

Supervising physician means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under cardiac rehabilitation and intensive cardiac rehabilitation programs.

(b) *General rule.* (1) *Covered beneficiary rehabilitation services.* Medicare part B covers cardiac rehabilitation and intensive cardiac rehabilitation program services for beneficiaries who have experienced one or more of the following:

(i) An acute myocardial infarction within the preceding 12 months;

(ii) A coronary artery bypass surgery;

(iii) Current stable angina pectoris;

(iv) Heart valve repair or replacement;

(v) Percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting;

(vi) A heart or heart-lung transplant.

(vii) For cardiac rehabilitation only, other cardiac conditions as specified through a national coverage determination.

(2) *Components of a cardiac rehabilitation program and an intensive cardiac rehabilitation program.* Cardiac rehabilitation programs and intensive cardiac rehabilitation programs must include all of the following:

(i) Physician-prescribed exercise each day cardiac rehabilitation items and services are furnished.

(ii) Cardiac risk factor modification, including education, counseling, and behavioral intervention, tailored to the patients' individual needs.

(iii) Psychosocial assessment.

(iv) Outcomes assessment.

(v) An individualized treatment plan detailing how components are utilized for each patient. The individualized treatment plan must be established, reviewed, and signed by a physician every 30 days.

(3) *Settings.* (i) Medicare Part B pays for cardiac rehabilitation and intensive cardiac rehabilitation in one of the following settings:

(A) A physician's office.

(B) A hospital outpatient setting.

(ii) All settings must have a physician immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

(c) *Standards for an intensive cardiac rehabilitation program.* (1) To be approved as an intensive cardiac rehabilitation program, a program must demonstrate through peer-reviewed, published research that it has accomplished one or more of the following for its patients:

(i) Positively affected the progression of coronary heart disease.

(ii) Reduced the need for coronary bypass surgery.

(iii) Reduced the need for percutaneous coronary interventions;

(2) An intensive cardiac rehabilitation program must also demonstrate through peer-reviewed published research that it accomplished a statistically significant reduction in 5 or more of the following measures for patients from their levels before cardiac rehabilitation services to after cardiac rehabilitation services:

(i) Low density lipoprotein.

(ii) Triglycerides.

(iii) Body mass index.

(iv) Systolic blood pressure.

(v) Diastolic blood pressure.

(vi) The need for cholesterol, blood pressure, and diabetes medications.

(3) A list of approved intensive cardiac rehabilitation programs, identified through the national coverage determination process, will be posted to the CMS Web site and listed in the **Federal Register.**

(4) All prospective intensive cardiac rehabilitation sites must apply to enroll as an intensive cardiac rehabilitation program site using the designated forms as specified at § 424.510 of this chapter. For purposes of appealing an adverse determination concerning site approval, an intensive cardiac rehabilitation site is considered a supplier (or prospective supplier) as defined in § 498.2 of this chapter.

(d) *Standards for the physician responsible for cardiac rehabilitation program.* A physician responsible for a cardiac rehabilitation program or intensive cardiac rehabilitation programs is identified as the medical directors. The medical director, in consultation with staff, are involved in directing the progress of individuals in the program, must possess all of the following:

(1) Expertise in the management of individuals with cardiac pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the cardiac rehabilitation program is offered.

(e) *Standards for supervising-physicians.* Physicians acting as the supervising-physician must possess all of the following:

(1) Expertise in the management of individuals with cardiac pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the cardiac rehabilitation program is offered.

(f) *Limitations for coverage of cardiac rehabilitation programs.* (1) *Cardiac Rehabilitation:* The number of cardiac rehabilitation program sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare contractor under section 1862(a)(1)(A) of the Act.

(2) *Intensive Cardiac Rehabilitation:* Intensive cardiac rehabilitation program sessions are limited to 72 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

■ 6. Section 410.78 is amended by—

■ A. Revising the introductory text of paragraph (b).

■ B. Revising paragraph (e).

The revisions read as follows:

§ 410.78 Telehealth services.

* * * * *

(b) *General rule.* Medicare Part B pays for office and other outpatient visits, professional consultation, psychiatric diagnostic interview examination, individual psychotherapy, pharmacologic management, end-stage renal disease-related services included in the monthly capitation payment (except for one visit per month to examine the access site), individual medical nutrition therapy, the neurobehavioral status exam, initial and follow-up inpatient telehealth consultations furnished to beneficiaries in hospitals and SNFs, and individual health and behavior assessment and intervention services furnished by an interactive telecommunications system if the following conditions are met:

* * * * *

(e) *Limitations.* (1) A clinical psychologist and a clinical social worker may bill and receive payment for individual psychotherapy via a telecommunications system, but may not seek payment for medical evaluation and management services.

(2) The physician visits required under § 483.40(c) of this title may not be furnished as telehealth services.

* * * * *

Subpart I—Payment of SMI Benefits

■ 7. Section 410.155 is amended by—

■ A. Revising paragraphs (a), (b)(2)(i), (b)(2)(ii), (b)(2)(iv), (b)(2)(v), and (c).

■ B. Adding paragraph (b)(3).

The revisions and addition read as follows:

§ 410.155 Outpatient mental health treatment limitation.

(a) *Limitation.* For services subject to the limitation as specified in paragraph (b) of this section, the percentage of the expenses incurred for such services during a calendar year that is considered incurred expenses under Medicare Part B when determining the amount of payment and deductible under § 410.152 and § 410.160 of this part, respectively, is as follows:

(1) For expenses incurred in years before 2010, 62½ percent.

(2) For expenses incurred in 2010 and 2011, 68¾ percent.

(3) For expenses incurred in 2012, 75 percent.

(4) For expenses incurred in 2013, 81¼ percent.

(5) For expenses incurred in CY 2014 and subsequent years, 100 percent.

(b) * * *

(2) * * *

(i) Services furnished to a hospital inpatient.

(ii) Brief office visits for the sole purpose of monitoring or changing drug prescriptions used in the treatment of mental, psychoneurotic, or personality disorders *billed under HCPCS code M0064 (or its successor).*

* * * * *

(iv) Psychiatric diagnostic services billed under CPT codes 90801 and 90802 (or successor codes) and diagnostic psychological and neuropsychological tests billed under CPT code range 96101 through 96125 (or successor codes) that are performed to establish a diagnosis.

(v) Medical management such as that furnished under CPT code 90862 (or its successor code), as opposed to psychotherapy, furnished to a patient diagnosed with Alzheimer's disease or a related disorder.

(3) *Payment amounts.* The Medicare payment amount and the patient liability amounts for outpatient mental health services subject to the limitation for each year during which the limitation is phased out are as follows:

Calendar year	Recognized incurred expenses	Patient pays	Medicare pays
CY 2009 and prior calendar years	62.50%	50%	50%
CYs 2010 and 2011	68.75%	45%	55%
CY 2012	75.00%	40%	60%
CY 2013	81.25%	35%	65%
CY 2014	100.00%	20%	80%

(c) *General formula.* A general formula for calculating the amount of Medicare payment and the patient liability for outpatient mental health services subject to the limitation is as follows:

(1) Multiply the Medicare approved amount by the percentage of incurred expenses that is recognized as incurred expenses for Medicare payment purposes for the year involved;

(2) Subtract from this amount the amount of any remaining Part B deductible for the patient and year involved; and,

(3) Multiply this amount by 0.80 (80 percent) to obtain the Medicare payment amount.

(4) Subtract the Medicare payment amount from the Medicare-approved amount to obtain the patient liability amount.

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 8. The authority citation for part 411 continues to read as follows:

Authority: Secs. 1102, 1860D–1 through 1860D–42, 1871, and 1877 of the Social Security Act (42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn).

Subpart J—Financial Relationships Between Physicians and Entities Furnishing Designated Health Services

■ 9. Section 411.354 is amended by revising paragraph (c)(3)(i) to read as follows:

§ 411.354 Financial relationship, compensation, and ownership or investment interest.

* * * * *

(c) * * *

(3)(i) For purposes of paragraphs (c)(1)(ii) and (c)(2)(iv) of this section, a physician who ''stands in the shoes'' of his or her physician organization is deemed to have the same compensation arrangements (with the same parties and on the same terms) as the physician organization. When applying the exceptions in § 411.355 and § 411.357 of this part to arrangements in which a physician stands in the shoes of his or her physician organization, the relevant referrals and other business generated ''between the parties'' are referrals and other business generated between the entity furnishing DHS and the physician organization (including all members, employees, and independent contractor physicians).

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 10. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(l) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(l)).

Subpart B—Physicians and Other Practitioners

■ 11. Section 414.46 is amended by revising paragraphs (d)(2) and (e) to read as follows:

§ 414.46 Additional rules for payment of anesthesia services.

* * * * *

(d) * * *

(2) The rules for medical direction differ for certain time periods depending on the nature of the qualified individual who is directed by the physician.

(i) If more than two procedures are directed on or after January 1, 1994, the qualified individuals could be AAs, CRNAs, interns, or residents. The medical direction rules apply to student nurse anesthetists only if the physician directs two concurrent cases, each of which involves a student nurse anesthetist or the physician directs one case involving a student nurse anesthetist and the other involving a CRNA, AA, intern, or resident.

(ii) For services furnished on or after January 1, 2010, the medical direction rules do not apply to a single anesthesia resident case that is concurrent to another case which is paid under the medical direction payment rules as specified in paragraph (e) of this section.

* * * * *

(e) *Special payment rule for teaching anesthesiologist involved in a single resident case or two concurrent cases.* For physicians' services furnished on or after January 1, 2010, if the teaching anesthesiologist is involved in the training of physician residents in a single anesthesia case or two concurrent anesthesia cases, the fee schedule amount must be 100 percent of the fee schedule amount otherwise applicable if the anesthesia services were personally performed by the teaching anesthesiologist and the teaching anesthesiologist fulfilled the criteria in § 415.178 of this chapter. This special payment rule also applies if the teaching anesthesiologist is involved in one resident case that is concurrent to another case paid under the medical direction payment rules.

* * * * *

■ 12. Section 414.61 is added to read as follows:

§ 414.61 Payment for anesthesia services furnished by a teaching CRNA.

(a) *Basis for payment.* Beginning January 1, 2010, anesthesia services furnished by a teaching CRNA may be paid under one of the following conditions:

(1) The teaching CRNA, who is not under medical direction of a physician, is present with the student nurse anesthetist for the pre and post anesthesia services included in the anesthesia base units payment and is continuously present during anesthesia time in a single case with a student nurse anesthetist.

(2) The teaching CRNA, who is not under the medical direction of a physician, is involved with two concurrent anesthesia cases with student nurse anesthetists. The teaching CRNA must be present with the student nurse anesthetist for the pre and post anesthesia services included in the anesthesia base unit. For the anesthesia time of the two concurrent cases, the teaching CRNA can only be involved with those two concurrent cases and may not perform services for other patients.

(b) *Level of payment.* The allowance for the service of the teaching CRNA, furnished under paragraph (a) of this section, is determined in the same way as for a physician who personally performs the anesthesia service alone as specified in § 414.46(c) of this subpart.

■ 13. Section 414.65 is amended by revising paragraph (a)(1) to read as follows:

§ 414.65 Payment for telehealth services.

(a) * * *

(1) The Medicare payment amount for office or other outpatient visits, consultation, individual psychotherapy, psychiatric diagnostic interview examination, pharmacologic management, end-stage renal disease related services included in the monthly capitation payment (except for one visit per month to examine the access site), individual medical nutrition therapy, and individual health and behavior assessment and intervention services furnished via an interactive telecommunications system is equal to the current fee schedule amount applicable for the service of the physician or practitioner.

(i) *Initial inpatient telehealth consultations.* The Medicare payment amount for initial inpatient telehealth consultations furnished via an interactive telecommunications system is equal to the current fee schedule amount applicable to initial hospital care provided by a physician or practitioner.

(ii) *Follow-up inpatient telehealth consultations.* The Medicare payment amount for follow-up inpatient telehealth consultations furnished via an interactive telecommunications system is equal to the current fee schedule amount applicable to subsequent hospital care provided by a physician or practitioner.

* * * * *

■ 14. Section 414.68 is added to subpart B to read as follows:

§ 414.68 Imaging accreditation.

(a) *Scope and purpose.* Section 1834(e) of the Act requires the Secretary to designate and approve independent accreditation organizations for purposes of accrediting suppliers furnishing the technical component (TC) of advanced diagnostic imaging services and establish procedures to ensure that the criteria used by an accreditation organization is specific to each imaging modality. Suppliers of the TC of advanced diagnostic imaging services for which payment is made under the fee schedule established in section 1848(b) of the Act must become accredited by an accreditation organization designated by the Secretary beginning January 1, 2012.

(b) *Definitions.* As used in this section, the following definitions are applicable:

Accredited supplier means a supplier that has been accredited by a CMS-designated accreditation organization as specified in this part.

Advanced diagnostic imaging service means any of the following diagnostic services:

(i) Magnetic resonance imaging.

(ii) Computed tomography.

(iii) Nuclear medicine.

(iv) Positron emission tomography.

CMS-approved accreditation organization means an accreditation organization designated by CMS to perform the accreditation functions specified in section 1834(e) of the Act.

(c) *Application and reapplication procedures for accreditation organizations.* An independent accreditation organization applying for approval or reapproval of authority to survey suppliers for purposes of accrediting suppliers furnishing the TC of advanced diagnostic imaging services is required to furnish CMS with all of the following:

(1) A detailed description of how the organization's accreditation criteria satisfy the statutory standards authorized by section 1834(e)(3) of the Act, specifically—

(i) Qualifications of medical personnel who are not physicians and who furnish the TC of advanced diagnostic imaging services;

(ii) Qualifications and responsibilities of medical directors and supervising physicians (who may be the same person), such as their training in advanced diagnostic imaging services in a residency program, expertise obtained through experience, or continuing medical education courses;

(iii) Procedures to ensure the reliability, clarity, and accuracy of the technical quality of diagnostic images produced by the supplier, including a thorough evaluation of equipment performance and safety;

(iv) Procedures to ensure the safety of persons who furnish the TC of advanced diagnostic imaging services and individuals to whom such services are furnished;

(v) Procedures to assist the beneficiary in obtaining the beneficiary's imaging records on request; and

(vi) Procedures to notify the accreditation organization of any changes to the modalities subsequent to the organization's accreditation decision.

(2) An agreement to conform accreditation requirements to any changes in Medicare statutory requirements authorized by section 1834(e) of the Act. The accreditation organization must maintain or adopt standards that are equal to, or more stringent than, those of Medicare.

(3) Information that demonstrates the accreditation organization's knowledge and experience in the advanced diagnostic imaging arena.

(4) The organization's proposed fees for accreditation for each modality in which the organization intends to offer accreditation, including any plans for reducing the burden and cost of accreditation to small and rural suppliers.

(5) Any specific documentation requirements and attestations requested by CMS as a condition of designation under this part.

(6) A detailed description of the organization's survey process, including the following:

(i) Type and frequency of the surveys performed.

(ii) The ability of the organization to conduct timely reviews of accreditation applications, to include the organizations national capacity.

(iii) Description of the organization's audit procedures, including random site visits, site audits, or other strategies for ensuring suppliers maintain compliance for the duration of accreditation.

(iv) Procedures for performing unannounced site surveys.

(v) Copies of the organization's survey forms.

(vi) A description of the accreditation survey review process and the accreditation status decision-making process, including the process for addressing deficiencies identified with the accreditation requirements, and the procedures used to monitor the correction of deficiencies found during an accreditation survey.

(vii) Procedures for coordinating surveys with another accrediting organization if the organization does not accredit all products the supplier provides.

(viii) Detailed information about the individuals who perform evaluations for the accreditation organization, including all of the following information:

(A) The number of professional and technical staff that are available for surveys.

(B) The education, employment, and experience requirements surveyors must meet.

(C) The content and length of the orientation program.

(ix) The frequency and types of in-service training provided to survey personnel.

(x) The evaluation systems used to monitor the performance of individual surveyors and survey teams.

(xi) The policies and procedures regarding an individual's participation in the survey or accreditation decision process of any organization with which the individual is professionally or financially affiliated.

(xii) The policies and procedures used when an organization has a dispute regarding survey findings or an adverse decision.

(7) Detailed information about the size and composition of survey teams for each category of advanced medical imaging service supplier accredited.

(8) A description of the organization's data management and analysis system for its surveys and accreditation decisions, including the kinds of reports, tables, and other displays generated by that system.

(9) The organization's procedures for responding to and for the investigation of complaints against accredited facilities, including policies and procedures regarding coordination of these activities with appropriate licensing bodies and CMS.

(10) The organization's policies and procedures for the withholding or removal of accreditation status for facilities that fail to meet the accreditation organization's standards or requirements, and other actions taken by the organization in response to noncompliance with its standards and requirements. These policies and procedures must include notifying CMS of Medicare facilities that fail to meet the requirements of the accrediting organization.

(11) A list of all currently accredited suppliers, the type and category of accreditation currently held by each supplier, and the expiration date of each supplier's current accreditation.

(12) A written presentation that demonstrates the organization's ability to furnish CMS with electronic data in ASCII comparable code.

(13) A resource analysis that demonstrates that the organization's staffing, funding, and other resources are adequate to perform the required surveys and related activities.

(14) A statement acknowledging that, as a condition for approval of designation, the organization agrees to carry out the following activities:

(i) Prioritize surveys for those suppliers needing to be accredited by January 1, 2012.

(ii) Notify CMS, in writing, of any Medicare supplier that had its accreditation revoked, withdrawn, revised, or any other remedial or adverse action taken against it by the accreditation organization within 30 calendar days of any such action taken.

(iii) Notify all accredited suppliers within 10 calendar days of the organization's removal from the list of designated accreditation organizations.

(iv) Notify CMS, in writing, at least 30 calendar days in advance of the effective date of any significant proposed changes in its accreditation requirements.

(v) Permit its surveyors to serve as witnesses if CMS takes an adverse action based on accreditation findings.

(vi) Notify CMS, in writing (electronically or hard copy), within 2 business days of a deficiency identified in any accreditation supplier from any source where the deficiency poses an immediate jeopardy to the supplier's beneficiaries or a hazard to the general public.

(vii) Provide, on an annual basis, summary data specified by CMS that relates to the past year's accreditations and trends.

(viii) Attest that the organization will not perform any accreditation surveys of Medicare-participating suppliers with which it has a financial relationship in which it has an interest.

(ix) Conform accreditation requirements to changes in Medicare requirements.

(x) If CMS withdraws an accreditation organization's approved status, work collaboratively with CMS to direct suppliers to the remaining accreditation organizations within a reasonable period of time.

(d) *Determination of whether additional information is needed.* If CMS determines that additional information is necessary to make a determination for approval or denial of the accreditation organization's application for designation, the organization must be notified and afforded an opportunity to provide the additional information.

(e) *Visits to the organization's office.* CMS may visit the organization's offices to verify representations made by the organization in its application, including, but not limited to, reviewing documents and interviewing the organization's staff.

(f) *Formal notice from CMS.* The accreditation organization will receive a formal notice from CMS stating whether the request for designation has been approved or denied. If approval was denied the notice includes the basis for denial and reconsideration and reapplication procedures.

(g) *Ongoing responsibilities of a CMS-approved accreditation organization.* An accreditation organization approved by CMS must carry out the following activities on an ongoing basis:

(1) Provide CMS with all of the following in written format (either electronic or hard copy):

(i) Copies of all accreditation surveys, together with any survey-related information that CMS may require (including corrective action plans and summaries of findings with respect to unmet CMS requirements).

(ii) Notice of all accreditation decisions.

(iii) Notice of all complaints related to suppliers.

(iv) Information about all accredited suppliers against which the accreditation organization has taken remedial or adverse action, including revocation, withdrawal, or revision of the supplier's accreditation.

(v) Notice of any proposed changes in its accreditation standards or requirements or survey process. If the organization implements the changes before or without CMS' approval, CMS may withdraw its approval of the accreditation organization.

(2) Within 30 calendar days after a change in CMS requirements, the accreditation organization must submit an acknowledgment of receipt of CMS' notification to CMS.

(3) The accreditation organization must permit its surveyors to serve as witnesses if CMS takes an adverse action based on accreditation findings.

(4) Within 2 business days of identifying a deficiency of an accredited supplier that poses immediate jeopardy to a beneficiary or to the general public, the accreditation organization must provide CMS with written notice of the deficiency and any adverse action implemented by the accreditation organization.

(5) Within 10 calendar days after CMS' notice to a CMS-approved accreditation organization that CMS intends to withdraw approval of the accreditation organization, the accreditation organization must provide written notice of the withdrawal to all of the organization's accredited suppliers.

(6) The organization must provide, on an annual basis, summary data specified by CMS that relate to the past year's accreditation activities and trends.

(h) *Continuing Federal oversight of approved accreditation organizations.* This paragraph establishes specific criteria and procedures for continuing oversight and for withdrawing approval of a CMS-approved accreditation organization.

(1) *Validation audits.* (i) CMS or its contractor may conduct an audit of an accredited supplier to validate the survey accreditation process of approved accreditation organizations for the TC of advanced diagnostic imaging services.

(ii) The audits must be conducted on a representative sample of suppliers who have been accredited by a particular accrediting organization or in response to allegations of supplier noncompliance with the standards.

(A) When conducted on a representative sample basis, the audit is comprehensive and addresses all of the standards, or may focus on a specific standard in issue.

(B) When conducted in response to an allegation, CMS audits any standards that CMS determines are related to the allegations.

(2) *Notice of intent to withdraw approval.* (i) If, during the audit specified in paragraph (h)(1) of this section, CMS identifies any accreditation programs for which validation audit results indicate—

(A) A 10 percent or greater rate of disparity between findings by the accreditation organization and findings by CMS on standards that do not constitute immediate jeopardy to patient health and safety if unmet; or

(B) Any disparity between findings by the accreditation organization and findings by CMS on standards that constitute immediate jeopardy to patient health and safety if unmet; or,

(C) Irrespective of the rate of disparity, widespread or systemic problems in an organization's accreditation process such that accreditation by that accreditation organization no longer provides CMS with adequate assurance that suppliers meet or exceed the Medicare requirements; then CMS will give the organization written notice of its intent to withdraw approval as specified in paragraph (h)(3) of this section.

(ii) CMS may also provide the organization written notice of its intent to withdraw approval if an equivalency review, onsite observation, or CMS' daily experience with the accreditation organization suggests that the accreditation organization is not meeting the requirements of this section.

(3) *Withdrawal of approval.* CMS may withdraw its approval of an accreditation organization at any time if CMS determines that—

(i) Accreditation by the organization no longer adequately assures that the suppliers furnishing the technical component of advanced diagnostic imaging service are meeting the established industry standards for each modality and that failure to meet those requirements could jeopardize the health or safety of Medicare beneficiaries and could constitute a

significant hazard to the public health; or

(ii) The accreditation organization has failed to meet its obligations with respect to application or reapplication procedures.

(i) *Reconsideration.* An accreditation organization dissatisfied with a determination that its accreditation requirements do not provide or do not continue to provide reasonable assurance that the suppliers accredited by the accreditation organization meet the applicable quality standards is entitled to a reconsideration. CMS reconsiders any determination to deny, remove, or not renew the approval of designation to accreditation organizations if the accreditation organization files a written request for reconsideration by its authorized officials or through its legal representative.

(1) *Filing requirements.* (i) The request must be filed within 30 calendar days of the receipt of CMS notice of an adverse determination or non-renewal.

(ii) The request for reconsideration must specify the findings or issues with which the accreditation organization disagrees and the reasons for the disagreement.

(iii) A requestor may withdraw its request for reconsideration at any time before the issuance of a reconsideration determination.

(2) *CMS response to a filing request.* In response to a request for reconsideration, CMS provides the accreditation organization with—

(i) The opportunity for an informal hearing to be conducted by a hearing officer appointed by the Administrator of CMS and provide the accreditation organization the opportunity to present, in writing and in person, evidence or documentation to refute the determination to deny approval, or to withdraw or not renew designation; and

(ii) Written notice of the time and place of the informal hearing at least 10 business days before the scheduled date.

(3) *Hearing requirements and rules.* (i) The informal reconsideration hearing is open to all of the following:

(A) CMS.

(B) The organization requesting the reconsideration including—

(*1*) Authorized representatives;

(*2*) Technical advisors (individuals with knowledge of the facts of the case or presenting interpretation of the facts); and

(*3*) Legal counsel.

(ii) The hearing is conducted by the hearing officer who receives testimony and documents related to the proposed action.

(iii) Testimony and other evidence may be accepted by the hearing officer even though such evidence may be inadmissible under the Federal Rules of Civil Procedure.

(iv) The hearing officer does not have the authority to compel by subpoena the production of witnesses, papers, or other evidence.

(v) Within 45 calendar days of the close of the hearing, the hearing officer presents the findings and recommendations to the accreditation organization that requested the reconsideration.

(vi) The written report of the hearing officer includes separate numbered findings of fact and the legal conclusions of the hearing officer.

(vii) The hearing officer's decision is final.

Subpart D—Payment for Durable Medical Equipment and Prosthetic and Orthotic Devices

■ 15. Section 414.210 is amended by—

■ A. Revising paragraph (e)(2).

■ B. Adding paragraph (e)(5).

The revision and addition read as follows:

§ 414.210 General payment rules.

* * * * *

(e) * * *

(2) *Maintenance and servicing payment for certain oxygen equipment furnished after the 36-month rental period from January 1, 2009 through June 30, 2010.* The carrier makes a maintenance and servicing payment for oxygen equipment other than liquid and gaseous equipment (stationary and portable) as follows:

(i) For the first 6-month period following the date on which the 36-month rental period ends in accordance with § 414.226(a)(1) of this subpart, no payments are made.

(ii) For each succeeding 6-month period, payment may be made during the first month of that period for 30 minutes of labor for routine maintenance and servicing of the equipment in the beneficiary's home (including an institution used as the beneficiary's home).

(iii) The supplier must visit the beneficiary's home (including an institution used as the beneficiary's home) to inspect the equipment during the first month of the 6-month period.

* * * * *

(5) *Maintenance and servicing payment for certain oxygen equipment furnished after the 36-month rental period and on or after July 1, 2010.* For oxygen equipment other than liquid and gaseous equipment (stationary and portable), the carrier makes payment as follows:

(i) For the first 6-month period following the date on which the 36-month rental period ends in accordance with § 414.226(a)(1) of this subpart, no payments are made.

(ii) For each succeeding 6-month period, payment may be made during the first month of that period for routine maintenance and servicing of the equipment in the beneficiary's home (including an institution used as the beneficiary's home).

(iii) Payment for maintenance and servicing is made based on a reasonable fee not to exceed 10 percent of the purchase price for a stationary oxygen concentrator. This payment includes payment for maintenance and servicing of all oxygen equipment other than liquid or gaseous equipment (stationary or portable).

(iv) The supplier must visit the beneficiary's home (including an institution used as the beneficiary's home) to inspect the equipment during the first month of the 6-month period.

* * * * *

Subpart F—Competitive Bidding for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS)

■ 16. Section 414.402 is amended by revising the definition ''Grandfathered item'' to read as follows:

§ 414.402 Definitions.

* * * * *

Grandfathered item means all rented items within a product category for which payment was made prior to the implementation of a competitive bidding program to a grandfathered supplier that chooses to continue to furnish the items in accordance with § 414.408(j) of this subpart and that fall within the following payment categories for competitive bidding:

(1) An inexpensive or routinely purchased item described in § 414.220 of this part.

(2) An item requiring frequent and substantial servicing, as described in § 414.222 of this part.

(3) Oxygen and oxygen equipment described in § 414.226 of this part.

(4) Other DME described in § 414.229 of this part.

* * * * *

■ 17. Section 414.408 is amended by—

■ A. Redesignating paragraph (j)(5) as (j)(7).

■ B. Adding new paragraphs (j)(5) and (j)(6).

■ C. Revising paragraph (k)(2).

The additions and revision read as follows:

§ 414.408 Payment rules.

* * * * *

(j) * * *

(5) *Notification of beneficiaries and CMS by suppliers that choose to become grandfathered suppliers.* (i) *Notification of beneficiaries by suppliers.* (A) *Requirements of notification.* A noncontract supplier that elects to become a grandfathered supplier must provide a 30-day written notification to each Medicare beneficiary that resides in a competitive bidding area and is currently renting a competitively bid item from that supplier. The 30-day notification to the beneficiary must meet the following requirements:

(*1*) Be sent by the supplier to the beneficiary at least 30 business days before the start date of the implementation of the competitive bidding program for the CBA in which the beneficiary resides.

(*2*) Identify the grandfathered items that the supplier is willing to continue to rent to the beneficiary.

(*3*) Be in writing (for example, by letter or postcard) and the supplier must maintain proof of delivery.

(*4*) State that the supplier is willing to continue to furnish certain rented Durable Medical Equipment (DME), oxygen and oxygen equipment, and supplies that the supplier is currently furnishing to the beneficiary (that is, before the start of the competitive bidding program) and is willing to continue to provide these items to the beneficiary for the remaining rental months.

(*5*) State that the beneficiary has the choice to continue to receive a grandfathered item(s) from the grandfathered supplier or may elect to receive the item(s) from a contract supplier after the end of the last month for which a rental payment is made to the noncontract supplier.

(*6*) Provide the supplier's telephone number and instruct the beneficiary to call the supplier with any questions and to notify the supplier of his or her decision to use or not use the supplier as a grandfathered supplier.

(*7*) State that the beneficiary can obtain information about the competitive bidding program by calling 1–800–MEDICARE or on the Internet at *http://www.Medicare.gov*.

(B) *Record of beneficiary's choice.* The supplier should obtain an election from the beneficiary regarding whether to use or not use the supplier as a grandfathered supplier. The supplier must maintain a record of its attempts to communicate with the beneficiary to obtain the beneficiary's election regarding grandfathering. When the supplier obtains such an election, the supplier must maintain a record of the beneficiary decision including the date the choice was made, and how the beneficiary communicated his or her choice to the supplier.

(C) *Notification.* If the beneficiary chooses not to continue to receive a grandfathered item(s) from their current supplier, the supplier must provide the beneficiary with 2 more notices in addition to the 30-day notice prior to the supplier picking up its equipment.

(*1*) *10-day notification:* Ten business days prior to picking up the item, the supplier should have direct contact (for example, a phone call) with the beneficiary or the beneficiary's caregiver and receive acknowledgement that the beneficiary understands their equipment will be picked up. This should occur on the first anniversary date after the start of the CBP or on another date agreed to by the beneficiary or the beneficiary's caregiver. The beneficiary's anniversary date occurs every month and is the date of the month on which the item was first delivered to the beneficiary by the current supplier. When a date other than the anniversary date is chosen by the beneficiary or the beneficiary's caregiver, the noncontract supplier will still receive payment up to the anniversary date after the start of the CBP, and the new contract supplier may not bill for any period of time before the anniversary date.

(*2*) *2-day notification:* Two business days prior to picking up the item the supplier should contact the beneficiary or the beneficiary's caregiver by phone to notify the beneficiary of the date the supplier will pick up the item. This date should not be before the beneficiary's first anniversary date that occurs after the start of the competitive bidding program unless an alternative arrangement has been made with the beneficiary and the new contract supplier.

(D) *Pickup procedures.* (*1*) The pickup of the noncontract supplier's equipment and the delivery of the new contract supplier's equipment should occur on the same date, that is, the first rental anniversary date of the equipment that occurs after the start of the competitive bidding program unless an alternative arrangement has been made with the beneficiary and the new contract supplier.

(*2*) Under no circumstance should a supplier pick up a rented item prior to the supplier's receiving acknowledgement from the beneficiary that the beneficiary is aware of the date on which the supplier is picking up the item and the beneficiary has made arrangements to have the item replaced on that date by a contract supplier.

(*3*) When a beneficiary chooses to switch to a new contract supplier, the current noncontract supplier and the new contract supplier must make arrangements that are suitable to the beneficiary.

(*4*) The contract supplier may not submit a claim with a date of delivery for the new equipment that is prior to the first anniversary date that occurs after the beginning of the CBP, and the contract supplier may not begin billing until the first anniversary date that occurs after the beginning of the CBP.

(*5*) The noncontract supplier must submit a claim to be paid up to the first anniversary date that occurs after the beginning of the CBP. Therefore, they should not pick up the equipment before that date unless an alternative arrangement has been made with the beneficiary and the new contract supplier.

(ii) *Notification to CMS by suppliers.* A noncontract supplier that elects to become a grandfathered supplier must provide a written notification to CMS of this decision. This notification must meet the following requirements:

(A) State that the supplier agrees to continue to furnish certain rented DME, oxygen and oxygen equipment that it is currently furnishing to beneficiaries (that is, before the start of the competitive bidding program) in a CBA and will continue to provide these items to these beneficiaries for the remaining months of the rental period.

(B) Include the following information:

(*1*) Name and address of the supplier.

(*2*) The 6-digit NSC number of the supplier.

(*3*) Product category(s) by CBA for which the supplier is willing to be a grandfathered supplier.

(C) State that the supplier agrees to meet all the terms and conditions pertaining to grandfathered suppliers.

(D) Be provided by the supplier to CMS in writing at least 30 business days before the start date of the implementation of the Medicare DMEPOS Competitive Bidding Program.

(6) *Suppliers that choose not to become grandfathered suppliers.* (i) *Requirement for non-grandfathered supplier.* A noncontract supplier that elects not to become a grandfathered supplier is required to pick up the item it is currently renting to the beneficiary from the beneficiary's home after proper notification.

(ii) *Notification.* Proper notification includes a 30-day, a 10-day, and a 2-day notice of the supplier's decision not to become a grandfathered supplier to its Medicare beneficiaries who are

currently renting certain DME competitively bid item(s) and who reside in a CBA.

(iii) *Requirements of notification.* These notifications must meet all of the requirements listed in paragraph (j)(5)(i) of this section for the 30-day, 10-day and 2-day notices that must be sent by suppliers who decide to be grandfathered suppliers, with the following exceptions for the 30-day notice.

(A) State that, for those items for which the supplier has decided not to be a grandfathered supplier, the supplier will only continue to rent these competitively bid item(s) to its beneficiaries up to the first anniversary date that occurs after the start of the Medicare DMEPOS Competitive Bidding Program.

(B) State that the beneficiary must select a contract supplier for Medicare to continue to pay for these items.

(C) Refer the beneficiary to the contract supplier locator tool on and to 1–800–MEDICARE to obtain information about the availability of contract suppliers for the beneficiary's area.

(iv) *Pickup procedures.* (A) The pick-up of the noncontract supplier's equipment and the delivery of the new contract supplier's equipment should occur on the same date, that is, the first rental anniversary date of the equipment that occurs after the start of the competitive bidding program unless an alternative arrangement has been made with the beneficiary and the new contract supplier.

(B) Under no circumstance should a supplier pick up a rented item prior to the supplier's receiving acknowledgement from the beneficiary that the beneficiary is aware of the date on which the supplier is picking up the item and the beneficiary has made arrangements to have the item replaced on that date by a contract supplier.

(C) When a beneficiary chooses to switch to a new contract supplier, the current noncontract supplier and the new contract supplier must make arrangements that are agreeable to the beneficiary.

(D) The contract supplier cannot submit a claim with a date of delivery for the new equipment that is prior to the first anniversary date that occurs after the beginning of the CBP.

* * * * *

(k) * * *

(2) Additional payments are made in accordance with § 414.210(e)(2), (e)(3) and (e)(5) of this part for the maintenance and servicing of oxygen equipment if performed by a contract supplier or a noncontract supplier having a valid Medicare billing number.

* * * * *

■ 18. Section 414.425 is added to read as follows:

§ 414.425 Claims for damages.

(a) *Eligibility for filing a claim for damages as a result of the termination of supplier contracts by the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA).*

(1) Any aggrieved supplier, including a member of a network that was awarded a contract for the Round 1 Durable Medical Prosthetics, Orthotics, and Supplies Competitive Bidding Program (DMEPOS CBP) that believes it has been damaged by the termination of its competitive bid contract, may file a claim under this section.

(2) A subcontractor of a contract supplier is not eligible to submit a claim under this section.

(b) *Timeframe for filing a claim.* (1) A completed claim, including all documentation, must be filed within 90 days of January 1, 2010 (the effective date of these damages provisions), unless that day is a Federal holiday or Sunday in which case it will fall to the next business day.

(2) The date of filing is the actual date of receipt by the CBIC of a completed claim that includes all the information required by this rule.

(c) *Information that must be included in a claim.* (1) Supplier's name, name of authorized official, U.S. Post Office mailing address, phone number, email address and bidding number, and National Supplier Clearinghouse Number;

(2) A copy of the signed contract entered into with CMS for the Round 1 DMEPOS Competitive Bidding Program;

(3) A detailed explanation of the damages incurred by this supplier as a direct result of the termination of the Round 1 competitive bid contract by MIPPA. The explanation must include all of the following:

(i) Documentation of the supplier's damages through receipts.

(ii) Records that substantiate the supplier's damages and demonstrate that the damages are directly related to performance of the Round 1 contract and are consistent with information the supplier provided as part of their bid.

(4) The supplier must explain how it would be damaged if not reimbursed.

(5) The claim must document steps the supplier took to mitigate any damages they may have incurred due to the contract termination, including a detailed explanation of the steps of all attempts to use for other purposes, return or dispose of equipment or other assets purchased or rented for the use in the Round 1 DMEPOS CBP contract performance.

(d) *Items that will not be considered in a claim.* The following items will not be considered in a claim:

(1) The cost of submitting a bid.

(2) Any fees or costs incurred for consulting or marketing.

(3) Costs associated with accreditation or licensure.

(4) Costs incurred before March 20, 2008.

(5) Costs incurred for contract performance after July 14, 2008 except for costs incurred to mitigate damages.

(6) Any profits a supplier may have expected from the contract.

(7) Costs that would have occurred without a contract having been awarded.

(8) Costs for items such as inventory, delivery vehicles, office space and equipment, personnel, which the supplier did not purchase specifically to perform the contract.

(9) Costs that the supplier has recouped by any means, and may include use of personnel, material, suppliers, or equipment in the supplier's business operations.

(e) *Filing a claim.* (1) A claim, with all supporting documentation, must be filed with the CMS Competitive Bidding Implementation Contractor (CBIC).

(2) Claims must include a statement from a supplier's authorized official certifying the accuracy of the information provided on the claim and all supporting documentation.

(3) The CBIC does not accept electronic submissions of claims for damages.

(f) *Review of claim.* (1) *Role of the CBIC.* (i) The CBIC will review the claim to ensure it is submitted timely, complete, and by an eligible claimant. When the CBIC identifies that a claim is incomplete or not filed timely, it will make a recommendation to the Determining Authority not to process the claim further. Incomplete or untimely claims may be dismissed by the Determining Authority without further processing.

(ii) For complete, timely claims, the CBIC will review the claim on its merits to determine if damages are warranted and may seek further information from the claimant when making its recommendation to the Determining Authority. The CBIC may set a deadline for receipt of additional information. A claimant's failure to respond timely may result in a denial of the claim.

(iii) The CBIC will make a recommendation to the Determining Authority for each claim filed and

include an explanation that supports its recommendation.

(iv) The recommendation must be either to award damages for a particular amount (which may not be the same amount requested by the claimant) or that no damages should be awarded.

(A) If the CBIC recommends that damages are warranted, the CBIC will calculate a recommended reasonable amount of damages based on the claim submitted.

(B) The reasonable amount will consider both costs incurred and the contractor's attempts and action to limit the damages;

(v) The recommendation will be sent to the Determining Authority for a final determination.

(2) *CMS' role as the Determining Authority.* (i) The Determining Authority shall review the recommendation of the CBIC.

(ii) The Determining Authority may seek further information from the claimant or the CBIC in making a concurrence or non-concurrence determination.

(iii) The Determining Authority may set a deadline for receipt of additional information. A claimant's failure to respond timely may result in a denial of the claim.

(iv) If the Determining Authority concurs with the CBIC recommendation, the Determining Authority shall submit a final signed decision to the CBIC and direct the CBIC to notify the claimant of the decision and the reasons for the final decision.

(v) If the Determining Authority non-concurs with the CBIC recommendation, the Determining Authority may return the claim for further processing or the Determining Authority may:

(A) Write a determination granting (in whole or in part) a claim for damages or denying a claim in its entirety;

(B) Direct the CBIC to write said determination for the Determining Authority's signature; or

(C) Return the claim to the CBIC with further instructions.

(vi) The Determining Authority's determination is final and not subject to administrative or judicial review.

(g) *Timeframe for determinations.* (1) Every effort will be made to make a determination within 120 days of initial receipt of the claim for damages by the CBIC or the receipt of additional information that was requested by the CBIC, whichever is later.

(2) In the case of more complex cases, or in the event of a large workload, a decision will be issued as soon as practicable.

(h) *Notification to claimant of damage determination.* The CBIC must mail the Determining Authority's determination to the claimant by certified mail return receipt requested, at the address provided in the claim.

Subpart H—Fee Schedule for Ambulance Services

■ 19. Section 414.610 is amended by revising paragraph (c)(5)(i) to read as follows:

§ 414.610 Basis of payment.

* * * * *

(c) * * *

(5) * * *

(i) For ground ambulance services where the point of pickup is in a rural area, the mileage rate is increased by 50 percent for each of the first 17 miles and, for services furnished before January 1, 2004, by 25 percent for miles 18 through 50. The standard mileage rate applies to every mile over 50 miles and, for services furnished after December 31, 2003, to every mile over 17 miles. For air ambulance services where the point of pickup is in a rural area, the total payment is increased by 50 percent; that is, the rural adjustment factor applies to the sum of the base rate and the mileage rate.

* * * * *

Subpart J—Submission of Manufacturer's Average Sales Price Data

■ 20. Section 414.802 is amended by revising the definition of ''unit'' to read as follows:

§ 414.802 Definitions.

* * * * *

Unit means the product represented by the 11-digit National Drug Code. The method of counting units excludes units of CAP drugs (as defined in § 414.902 of this part) sold to an approved CAP vendor (as defined in § 414.902 of this part) for use under the CAP (as defined in § 414.902 of this part).

Subpart K—Payment for Drugs and Biologicals Under Part B

§ 414.904 [Amended]

■ 21. Amend § 414.904(d)(3) by removing the phrase ''and 2009'' and adding in its place the phrase ''2009, and 2010.''

■ 22. Section 414.906 is amended by—

■ A. Adding the introductory text to paragraph (c).

■ B. Revising paragraph (c)(1).

■ C. Redesignating paragraph (c)(2) as (c)(3).

■ D. Adding new paragraph (c)(2).

■ E. Adding a paragraph heading to newly designated paragraph (c)(3).

■ F. Adding paragraphs (f)(2)(v), (f)(3)(iv), and (g).

The revision and additions read as follows:

§ 414.906 Competitive acquisition program as the basis for payment.

* * * * *

(c) *Computation of payment amount.* Except as specified in paragraph (c)(2) of this section, payment for CAP drugs is based on bids submitted as a result of the bidding process as described in § 414.910 of this subpart.

(1) *Single payment amount.* (i) A single payment amount for each CAP drug in the competitive acquisition area is determined on the basis of the bids submitted and accepted and updated from the bidding period to the beginning of the payment year.

(ii) The single payment amount is then updated quarterly based on the approved CAP vendor's reasonable net acquisition costs for that category as determined by CMS, and limited by the weighted payment amount established under section 1847A of the Act across all drugs for which a composite bid is required in the category.

(iii) The payment amount for each other drug for which the approved CAP vendor submits a bid in accordance with § 414.910 of this subpart and each other drug that is approved by CMS for the approved CAP vendor to furnish under the CAP is also updated quarterly based on the approved CAP vendor's reasonable net acquisition costs for each HCPCS code and limited by the payment amount established under section 1847A of the Act.

(2) *Updates to payment amount.* (i) The first update is effective on the first day of claims processing for the first quarter of an approved CAP vendor's contract. The first quarterly contract update is based on the reasonable net acquisition cost (RNAC) data reported to CMS or its designee for any purchases of drug before the beginning of CAP claims processing for the contract period and reported to CMS no later than 30 days before the beginning of CAP claims processing.

(ii) For subsequent quarters, each approved CAP vendor must report to CMS or its designee RNAC data for a quarter of CAP drug purchases within 30 days of the close of that quarter.

(iii) For all quarters, only RNAC data from approved CAP vendors that are supplying CAP drugs under their CAP contract at the time updates are being calculated must be used to calculate updated CAP payment amounts.

(iv) CMS excludes such RNAC data submitted by an approved CAP vendor if, during the time calculations are being

done, CMS knows that the approved CAP vendor will not be under contract for the applicable quarterly update.

(v) The payment amount weights must be calculated based on the more recent of the following:

(A) Contract bidding weights.

(B) CAP claims data.

(vi) The payment limit must be determined using the most recent payment limits available to CMS under section 1847A of the Act.

(vii) The following payment amount update calculation must be applied for the group of all drugs for which a composite bid is required.

(A) The most recent previous composite payment amount for the group is updated by—

(*1*) Calculating the percent change in reasonable net acquisition costs for each approved CAP vendor;

(*2*) Calculating the median of all participating approved CAP vendors' adjusted CAP payment amounts; and

(*3*) Limiting the payment as described in paragraph (c)(1) of this section.

(B) The median percent change, subject to the limit described in paragraph (c)(1) of this section, must be the update percentage for that quarter.

(C) The single update percentage must be applied to the payment amount for each drug in the group of drugs for which a composite bid is required in the category.

(viii) The following payment amount update calculation must be applied for each of the following items: Each HCPCS code not included in the composite bid list; Each HCPCS code added to the drug list during the contract period; and each drug that has not yet been assigned a HCPCS code, but for which a HCPCS code will be established.

(A) The most recent previous payment amount for each drug must be updated by calculating the percent change in reasonable net acquisition costs for each approved CAP vendor, then calculating the median of all participating approved CAP vendors' adjusted CAP payment amounts.

(B) The median percent change calculated for each drug, subject to the limit described in paragraph (c)(1) of this section, must be applied to the payment amount for each drug.

(3) *Alternative payment amount.*

* * *

* * * * *

(f) * * *

(2) * * *

(v) On or after January 1, 2010, the proposed addition of drugs with similar therapeutic uses to drugs already supplied under the CAP by the approved CAP vendor(s).

(3) * * *

(iv) In the case of additions requested under paragraph (f)(2)(v) of this section, address and document the need for such an expansion based on demand for the product(s).

* * * * *

(g) *Deletion of drugs on an approved CAP vendor's CAP drug list.* Deletion of drugs on an approved CAP vendor's CAP drug list due to unavailability requires a written request and approval as described in paragraphs (f)(3)(i) through (iii) and (f)(4) of this section.

■ 23. Section 414.908 is amended by revising paragraph (a)(3)(xii) to read as follows:

§ 414.908 Competitive acquisition program.

(a) * * *

(3) * * *

(xii) Agrees not to transport CAP drugs from one practice location or place of service to another location except in accordance with a written agreement between the participating CAP physician and the approved CAP vendor that requires that drugs are not subjected to conditions that will jeopardize their integrity, stability, and/or sterility while being transported.

* * * * *

■ 24. Section 414.914 is amended by revising paragraph (f)(12) to read as follows:

§ 414.914 Terms of contract.

* * * * *

(f) * * *

(12) Supply CAP drugs upon receipt of a prescription order to all participating CAP physicians who have selected the approved CAP vendor, except when the conditions of paragraph (h) of this section or § 414.916(b) of this subpart are met;

* * * * *

■ 25. Section 414.916 is amended by—

■ A. Redesignating paragraph (b)(4) as (b)(5).

■ B. Adding new paragraph (b)(4).

The addition reads as follows:

§ 414.916 Dispute resolution for vendors and beneficiaries.

* * * * *

(b) * * *

(4) Upon notification from CMS of a participating CAP physician's suspension from the program, the approved CAP vendor must cease delivery of CAP drugs to the suspended participating CAP physician until the suspension has been lifted.

* * * * *

■ 26. Section 414.917 is amended by revising paragraph (b)(4) to read as follows:

§ 414.917 Dispute resolution and process for suspension or termination of approved CAP contract and termination of physician participation under exigent circumstances.

* * * * *

(b) * * *

(4) The approved CAP vendor may appeal that termination by requesting a reconsideration. A determination must be made as to whether the approved CAP vendor has been meeting the service and quality obligations of its CAP contract. The approved CAP vendor's contract will remain suspended during the reconsideration process.

* * * * *

■ 27. Section 414.930 is amended by—

■ A. Revising paragraph (a).

■ B. Redesignating paragraph (b)(1)(v) as paragraph (b)(1)(vi).

■ C. Adding new paragraph (b)(1)(v).

The revision and addition read as follows:

§ 414.930 Compendia for determination of medically-accepted indications for off-label uses of drugs and biologicals in an anti-cancer chemotherapeutic regimen.

(a) *Definitions.* For the purposes of this section:

Compendium means a comprehensive listing of FDA-approved drugs and biologicals or a comprehensive listing of a specific subset of drugs and biologicals in a specialty compendium, for example a compendium of anti-cancer treatment. A compendium—

(i) Includes a summary of the pharmacologic characteristics of each drug or biological and may include information on dosage, as well as recommended or endorsed uses in specific diseases.

(ii) Is indexed by drug or biological.

(iii) Has a publicly transparent process for evaluating therapies and for identifying potential conflicts of interests.

Publicly transparent process for evaluating therapies means that the process provides that the following information from an internal or external request for inclusion of a therapy in a compendium are available to the public for a period of not less than 5 years, which includes availability on the compendium's Web site for a period of not less than 3 years, coincident with the compendium's publication of the related recommendation:

(i) The internal or external request for listing of a therapy recommendation including criteria used to evaluate the request.

(ii) A listing of all the evidentiary materials reviewed or considered by the compendium pursuant to the request.

(iii) A listing of all individuals who have substantively participated in the review or disposition of the request.

(iv) Minutes and voting records of meetings for the review and disposition of the request.

Publicly transparent process for identifying potential conflicts of interests means that process provides that the following information is identified and made timely available in response to a public request for a period of not less than 5 years, coincident with the compendium's publication of the related recommendation:

(i) Direct or indirect financial relationships that exist between individuals or the spouse or minor child of individuals who have substantively participated in the development or disposition of compendia recommendations and the manufacturer or seller of the drug or biological being reviewed by the compendium. This may include, for example, compensation arrangements such as salary, grant, contract, or collaboration agreements between individuals or the spouse or minor child of individuals who have substantively participated in the review and disposition of the request and the manufacturer or seller of the drug or biological being reviewed by the compendium.

(ii) Ownership or investment interests between individuals or the spouse or minor child of individuals who have substantively participated in the development or disposition of compendia recommendations and the manufacturer or seller of the drug or biological being reviewed by the compendium.

(b) * * *

(1) * * *

(v) Considers whether the publication that is the subject of the request meets the definition of a compendium in this section.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 28. The authority citation for part 415 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart D—Physician Services in Teaching Settings

■ 29. Section 415.178 is revised to read as follows:

§ 415.178 Anesthesia services.

(a) *General rule.* (1) *For services furnished prior to January 1, 2010*, an unreduced physician fee schedule payment may be made if a physician is involved in a single anesthesia procedure involving an anesthesia resident. In the case of anesthesia services, the teaching physician must be present during all critical portions of the procedure and immediately available to furnish services during the entire service or procedure. The teaching physician cannot receive an unreduced fee if he or she performs services involving other patients during the period the anesthesia resident is furnishing services in a single case. Additional rules for payment of anesthesia services involving residents are specified in § 414.46(c)(1)(iii) of this chapter.

(2) *For services furnished on or after January 1, 2010*, payment made under § 414.46(e) of this chapter if the teaching anesthesiologist (or different teaching anesthesiologists in the same anesthesia group practice) is present during all critical or key portions of the anesthesia service or procedure involved; and the teaching anesthesiologist (or another anesthesiologist with whom the teaching anesthesiologist has entered into an arrangement) is immediately available to furnish anesthesia services during the entire procedure.

(b) *Documentation.* Documentation must indicate the teaching physician's presence during all critical or key portions of the anesthesia procedure and the immediate availability of another teaching anesthesiologist.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 30. The authority citation for part 485 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

Subpart B—Conditions of Participation: Comprehensive Outpatient Rehabilitation Facilities

■ 31. Section 485.70 is amended by revising paragraph (j) to read as follows:

§ 485.70 Personnel qualifications.

* * * * *

(j) A respiratory therapist must complete one the following criteria:

(1) *Criterion 1.* All of the following must be completed:

(i) Be licensed by the State in which practicing, if applicable.

(ii) Have successfully completed a nationally-accredited educational program for respiratory therapists.

(iii)(A) Be eligible to take the registry examination administered by the National Board for Respiratory Care for respiratory therapists; or

(B) Have passed the registry examination administered by the National Board for Respiratory Care for respiratory therapists.

(2) *Criterion 2:* All of the following must be completed:

(i) Be licensed by the State in which practicing, if applicable.

(ii) Have equivalent training and experience as determined by the National Board for Respiratory Care.

* * * * *

PART 498—APPEALS PROCEDURES FOR DETERMINATIONS THAT AFFECT PARTICIPATION IN THE MEDICARE PROGRAM AND FOR DETERMINATIONS THAT AFFECT THE PARTICIPATION OF ICFs/MR AND CERTAIN NFs IN THE MEDICAID PROGRAM

■ 32. The authority citation for part 498 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart A—General Provisions

■ 33. Section 498.2 is amended by adding paragraph (13) to the definition of ''supplier'' to read as follows:

§ 498.2 Definitions.

* * * * *

Supplier * * *

(13) A site approved by CMS to furnish intensive cardiac rehabilitation services.

Authority: Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program.

Dated: October 26, 2009.

Charlene Frizzera,

Acting Administrator, Centers for Medicare & Medicaid Services.

Approved: October 29, 2009.

Kathleen Sebelius,

Secretary.

Note: These addenda will not appear in the Code of Federal Regulations.

Addendum A: Explanation and Use of Addendum B

The addenda on the following pages provide various data pertaining to the Medicare fee schedule for physicians' services furnished in 2010. Addendum

B contains the RVUs for work, non-facility practice expense (PE), facility PE, and malpractice expense, and other information for all services included in the PFS.

In previous years, we have listed many services in Addendum B that are not paid under the PFS. To avoid publishing as many pages of codes for these services, we are not including clinical laboratory codes or the alphanumeric codes (Healthcare Common Procedure Coding System (HCPCS) codes not included in CPT) not paid under the PFS in Addendum B.

Addendum B contains the following information for each CPT code and alphanumeric HCPCS code, except for: alphanumeric codes beginning with B (enteral and parenteral therapy), E (durable medical equipment), K (temporary codes for nonphysicians' services or items), or L (orthotics); and codes for anesthesiology. Please also note the following:

• An ''NA'' in the ''Non-facility PE RVUs'' column of Addendum B means that CMS has not developed a PE RVU in the non-facility setting for the service because it is typically performed in the hospital (for example, an open heart surgery is generally performed in the hospital setting and not a physician's office). If there is an ''NA'' in the non-facility PE RVU column, and the contractor determines that this service can be performed in the non-facility setting, the service will be paid at the facility PE RVU rate.

• Services that have an ''NA'' in the ''Facility PE RVUs'' column of Addendum B are typically not paid using the PFS when provided in a facility setting. These services (which include ''incident to'' services and the technical portion of diagnostic tests) are generally paid under either the outpatient hospital prospective payment system or bundled into the hospital inpatient prospective payment system payment.

1. *CPT/HCPCS code.* This is the CPT or alphanumeric HCPCS number for the service. Alphanumeric HCPCS codes are included at the end of this addendum.

2. *Modifier.* A modifier is shown if there is a technical component (modifier TC) and a professional component (PC) (modifier-26) for the service. If there is a PC and a TC for the service, Addendum B contains three entries for the code. A code for: the global values (both professional and technical); modifier-26 (PC); and, modifier TC. The global service is not designated by a modifier, and physicians must bill using the code without a modifier if the physician furnishes both the PC and the TC of the service.

Modifier-53 is shown for a discontinued procedure, for example a colonoscopy that is not completed. There will be RVUs for a code with this modifier.

3. *Status indicator.* This indicator shows whether the CPT/HCPCS code is in the PFS and whether it is separately payable if the service is covered.

A = Active code. These codes are separately payable under the PFS if covered. There will be RVUs for codes with this status. The presence of an ''A'' indicator does not mean that Medicare has made a national coverage determination regarding the service. Carriers remain responsible for coverage decisions in the absence of a national Medicare policy.

B = Bundled code. Payments for covered services are always bundled into payment for other services not specified. If RVUs are shown, they are not used for Medicare payment. If these services are covered, payment for them is subsumed by the payment for the services to which they are incident (an example is a telephone call from a hospital nurse regarding care of a patient).

C = Carriers price the code. Carriers will establish RVUs and payment amounts for these services, generally on an individual case basis following review of documentation, such as an operative report.

D * = Deleted/discontinued code.

E = Excluded from the PFS by regulation. These codes are for items and services that CMS chose to exclude from the fee schedule payment by regulation. No RVUs are shown, and no payment may be made under the PFS for these codes. Payment for them, when covered, continues under reasonable charge procedures.

F = Deleted/discontinued codes. (Code not subject to a 90-day grace period.) These codes are deleted effective with the beginning of the year and are never subject to a grace period. This indicator is no longer effective beginning with the 2005 fee schedule as of January 1, 2005.

G = Code not valid for Medicare purposes. Medicare uses another code for reporting of, and payment for, these services. (Codes subject to a 90-day grace period.) This indicator is no longer effective with the 2005 PFS as of January 1, 2005.

H * = Deleted modifier. For 2000 and later years, either the TC or PC component shown for the code has been deleted and the deleted component is shown in the database with the H status indicator.

I = Not valid for Medicare purposes. Medicare uses another code for the reporting of, and the payment for these services. (Codes not subject to a 90-day grace period.)

L = Local codes. Carriers will apply this status to all local codes in effect on January 1, 1998 or subsequently approved by central office for use. Carriers will complete the RVUs and payment amounts for these codes.

M = Measurement codes, used for reporting purposes only. There are no RVUs and no payment amounts for these codes. Medicare uses them to aid with performance measurement. No separate payment is made. These codes should be billed with a zero (($0.00) charge and are denied) on the MPFSDB.

N = Non-covered service. These codes are noncovered services. Medicare payment may not be made for these codes. If RVUs are shown, they are not used for Medicare payment.

R = Restricted coverage. Special coverage instructions apply. If the service is covered and no RVUs are shown, it is carrier-priced.

T = There are RVUs for these services, but they are only paid if there are no other services payable under the PFS billed on the same date by the same provider. If any other services payable under the PFS are billed on the same date by the same provider, these services are bundled into the service(s) for which payment is made.

X = Statutory exclusion. These codes represent an item or service that is not within the statutory definition of ''physicians' services'' for PFS payment purposes. No RVUs are shown for these codes, and no payment may be made under the PFS. (Examples are ambulance services and clinical diagnostic laboratory services.)

4. *Description of code.* This is an abbreviated version of the narrative description of the code.

5. *Physician work RVUs.* These are the RVUs for the physician work for this service in 2010.

6. *Fully implemented non-facility PE RVUs.* These are the fully implemented resource-based practice PE RVUs for non-facility settings.

7. *2010 Transitional non-facility PE RVUs.* These are the 2010 resource-based PE RVUs for non-facility settings.

8. *Fully implemented facility PE RVUs.* These are the fully implemented resource-based practice PE RVUs for facility settings.

9. *2010 Transitional facility PE RVUs.* These are the 2010 resource-based PE RVUs for facility settings.

* Codes with these indicators had a 90-day grace period before January 1, 2005.

10. *Malpractice expense RVUs*. These are the RVUs for the malpractice expense for the service for 2010.

Note: The BN reduction resulting from the chiropractic demonstration is *not* reflected in the RVUs for CPT codes 98940, 98941 and 98942. The required reduction will only be reflected in the files used for Medicare payment.

9. *Global period*. This indicator shows the number of days in the global period for the code (0, 10, or 90 days). An explanation of the alpha codes follows:

MMM = Code describes a service furnished in uncomplicated maternity cases including antepartum care, delivery, and postpartum care. The usual global surgical concept does not apply. See the 1999 Physicians' Current Procedural Terminology for specific definitions.

XXX = The global concept does not apply.

YYY = The global period is to be set by the carrier (for example, unlisted surgery codes).

ZZZ = Code related to another service that is always included in the global period of the other service. (Note: Physician work and PE are associated with intra service time and in some instances in the post service time.

BILLING CODE 4120–01–P

ADDENDUM H: CPT/HCPCS Imaging Codes Defined By Section 5102(b) of the DRA

HCPCS/ CPT*	Short Descriptor
31620	Endobronchial us add-on
37250	Iv us first vessel add-on
37251	Iv us each add vessel add-on
51798	Us urine capacity measure
70010	Contrast x-ray of brain
70015	Contrast x-ray of brain
70030	X-ray eye for foreign body
70100	X-ray exam of jaw
70110	X-ray exam of jaw
70120	X-ray exam of mastoids
70130	X-ray exam of mastoids
70134	X-ray exam of middle ear
70140	X-ray exam of facial bones
70150	X-ray exam of facial bones
70160	X-ray exam of nasal bones
70170	X-ray exam of tear duct
70190	X-ray exam of eye sockets
70200	X-ray exam of eye sockets
70210	X-ray exam of sinuses
70220	X-ray exam of sinuses
70240	X-ray exam, pituitary saddle
70250	X-ray exam of skull
70260	X-ray exam of skull
70300	X-ray exam of teeth
70310	X-ray exam of teeth
70320	Full mouth x-ray of teeth
70328	X-ray exam of jaw joint
70330	X-ray exam of jaw joints
70332	X-ray exam of jaw joint
70336	Magnetic image, jaw joint
70350	X-ray head for orthodontia
70355	Panoramic x-ray of jaws
70360	X-ray exam of neck
70370	Throat x-ray & fluoroscopy
70371	Speech evaluation, complex
70373	Contrast x-ray of larynx
70380	X-ray exam of salivary gland
70390	X-ray exam of salivary duct
70450	Ct head/brain w/o dye

HCPCS/ CPT*	Short Descriptor
70460	Ct head/brain w/dye
70470	Ct head/brain w/o & w/dye
70480	Ct orbit/ear/fossa w/o dye
70481	Ct orbit/ear/fossa w/dye
70482	Ct orbit/ear/fossa w/o&w/dye
70486	Ct maxillofacial w/o dye
70487	Ct maxillofacial w/dye
70488	Ct maxillofacial w/o & w/dye
70490	Ct soft tissue neck w/o dye
70491	Ct soft tissue neck w/dye
70492	Ct sft tsue nck w/o & w/dye
70496	Ct angiography, head
70498	Ct angiography, neck

78700	Kidney imaging, static
78701	Kidney imaging with flow
78704	Imaging renogram
78707	Kidney flow/function image
78708	Kidney flow/function image
78709	Kidney flow/function image
78710	Kidney imaging (3D)
78715	Renal vascular flow exam
78730	Urinary bladder retention
78740	Ureteral reflux study

HCPCS/ CPT*	Short Descriptor
78760	Testicular imaging
78761	Testicular imaging/flow
78800	Tumor imaging, limited area
78801	Tumor imaging, mult areas
78802	Tumor imaging, whole body
78803	Tumor imaging (3D)
78804	Tumor imaging, whole body
78805	Abscess imaging, ltd area
78806	Abscess imaging, whole body
78807	Nuclear localization/abscess
78808	Iv inj ra drug dx study
78811	Tumor imaging (pet), limited
78812	Tumor image (pet)/skul-thigh
78813	Tumor image (pet) full body
78814	Tumor image pet/ct, limited
78815	Tumorimage pet/ct skul-thigh
78816	Tumor image pet/ct full body
92135	Scanning computer ophthalmic
92235	Fluorscein angioscopy
92240	IDC green angiography
92250	Fundus photography
92285	External ocular photography
92286	Anterior segment photography
93303	Echo transthoracic
93304	Echo transthoracic
93306	Tte w/doppler, complete
93307	Echo exam of heart
93308	Echo exam of heart
93312	Echo transesophageal
93313	Echo transesophageal
93314	Echo transesophageal
93315	Echo transesophageal
93316	Echo transesophageal
93317	Echo transesophageal
93318	Echo transesophageal intraop
93320	Doppler echo exam, heart
93321	Doppler echo exam, heart
93325	Doppler color flow add-on
93350	Echo transthoracic
93351	Stress tte complete
93352	Admin ecg contrast agent

HCPCS/ CPT*	Short Descriptor
93555	Imaging, cardiac cath
93556	Imaging, cardiac cath
93571	Heart flow reserve measure
93572	Heart flow reserve measure
93880	Extracranial study
93882	Extracranial study
93886	Intracranial study
93888	Intracranial study
93890	Tcd, vasoreactivity study
93892	Tcd, emboli detect w/o inj
93893	Tcd, emboli detect w/inj
93925	Lower extremity study
93926	Lower extremity study
93930	Upper extremity study
93931	Upper extremity study
93970	Extremity study
93971	Extremity study
93975	Vascular study
93976	Vascular study
93978	Vascular study
93979	Vascular study
93980	Penile vascular study
93981	Penile vascular study
93990	Doppler flow testing
0028T	Dexa body composition study
0042T	Ct perfusion w/contrast, cbf
0066T	Ct colonography;screen
0067T	Ct colonography;dx
0080T	Endovasc aort repr rad s&i
0081T	Endovasc visc extnsn s&i
0144T	CT heart wo dye; qual calc
0145T	CT heart w/wo dye funct
0146T	CCTA w/wo dye
0147T	CCTA w/wo, quan calcium
0148T	CCTA w/wo, strxr
0149T	CCTA w/wo, strxr quan calc
0150T	CCTA w/wo, disease strxr
0151T	CT heart funct add-on
0152T	Computer chest add-on
G0120	Colon ca scrn; barium enema
G0122	Colon ca scrn; barium enema
G0130	Single energy x-ray study
G0219	PET img wholbod melano

HCPCS/ CPT*	Short Descriptor
	nonco
G0235	PET not otherwise specified
G0275	Renal angio, cardiac cath
G0278	Iliac art angio,cardiac cath
G0288	Recon, CTA for surg plan
G0365	Vessel mapping hemo access

ADDENDUM I: List of CPT[1]/HCPCS Codes Used To Define Certain Designated Health Service Categories[2] Under Section 1877 of the Social Security Act

CLINICAL LABORATORY SERVICES	
INCLUDE CPT codes for all clinical laboratory services in the 80000 series, except EXCLUDE CPT codes for the following blood component collection services:	
86890	Autologous blood process
86891	Autologous blood, op salvage
86927	Plasma, fresh frozen
86930	Frozen blood prep
86931	Frozen blood thaw
86932	Frozen blood freeze/thaw
86945	Blood product/irradiation
86950	Leukacyte transfusion
86960	Vol reduction of blood/prod
86965	Pooling blood platelets
86985	Split blood or products
INCLUDE the following CPT and HCPCS level 2 codes for other clinical laboratory services:	
0030T	Antiprothrombin antibody
0103T	Holotranscobalamin
0104T	At rest cardio gas rebreathe
0111T	RBC membranes fatty acids
0140T	Exhaled breath condensate ph
36415	Routine venipuncture
78110	Plasma volume, single
78111	Plasma volume, multiple
78120	Red cell mass, single
78121	Red cell mass, multiple
78122	Blood volume
78130	Red cell survival study
78191	Platelet survival
78267	Breath tst attain/anal c-14
78268	Breath test analysis c-14
78270	Vit B-12 absorption exam
78271	Vit B-12 absrp exam, int fac
78272	Vit B-12 absorp, combined
78725	Kidney function study
G0027	Semen analysis
G0103	Psa screening
G0123	Screen cerv/vag thin layer
G0124	Screen c/v thin layer by MD
G0141	Scr c/v cyto,autosys and md
G0143	Scr c/v cyto,thinlayer,rescr
G0144	Scr c/v cyto,thinlayer,rescr
G0145	Scr c/v cyto,thinlayer,rescr
G0147	Scr c/v cyto, automated sys
G0148	Scr c/v cyto, autosys, rescr
G0306	CBC/diffwbc w/o platelet
G0307	CBC without platelet
G0328	Fecal blood scrn immunoassay
G0416	Sat biopsy prostate 1-20 spc
G0417	Sat biopsy prostate 21-40
G0418	Sat biopsy prostate 41-60
G0419	Sat biopsy prostate: >60
G0430	Drug screen multi class
G0431	Drug screen single class
G9143	Warfarin respon genetic test
P2028	Cephalin floculation test
P2029	Congo red blood test
P2033	Blood thymol turbidity
P2038	Blood mucoprotein
P3000	Screen pap by tech w md supv
P3001	Screening pap smear by phys
P9612	Catheterize for urine spec
P9615	Urine specimen collect mult
Q0111	Wet mounts/ w preparations
Q0112	Potassium hydroxide preps
Q0113	Pinworm examinations
Q0114	Fern test
Q0115	Post-coital mucous exam
PHYSICAL THERAPY, OCCUPATIONAL THERAPY, AND OUTPATIENT SPEECH-LANGUAGE PATHOLOGY SERVICES	
INCLUDE the following CPT and HCPCS codes for physical therapy/occupational therapy/outpatient speech-language pathology services:	
0019T	Extracorp shock wv tx,ms nos
0183T	Wound ultrasound

64550	Apply neurostimulator
90901	Biofeedback train, any meth
90911	Biofeedback peri/uro/rectal
92506	Speech/hearing evaluation
92507	Speech/hearing therapy
92508	Speech/hearing therapy
92526	Oral function therapy
92597	Oral speech device eval
92607	Ex for speech device rx, 1hr
92608	Ex for speech device rx addl
92609	Use of speech device service
92610	Evaluate swallowing function
92611	Motion fluoroscopy/swallow
92612	Endoscopy swallow tst (fees)
92614	Laryngoscopic sensory test
92616	Fees w/laryngeal sense test
93797	Cardiac rehab
93798	Cardiac rehab/monitor
94667	Chest wall manipulation
94668	Chest wall manipulation
95831	Limb muscle testing, manual
95832	Hand muscle testing, manual
95833	Body muscle testing, manual
95834	Body muscle testing, manual
95851	Range of motion measurements
95852	Range of motion measurements
96000	Motion analysis, video/3d
96001	Motion test w/ft press meas
96002	Dynamic surface emg
96003	Dynamic fine wire emg
96105	Assessment of aphasia
96110	Developmental test, lim
96111	Developmental test, extend
96125	Cognitive test by HC pro
97001	Pt evaluation
97002	Pt re-evaluation
97003	Ot evaluation
97004	Ot re-evaluation
97010	Hot or cold packs therapy
97012	Mechanical traction therapy
97016	Vasopneumatic device therapy
97018	Paraffin bath therapy
97022	Whirlpool therapy
97024	Diathermy eg, microwave
97026	Infrared therapy
97028	Ultraviolet therapy
97032	Electrical stimulation
97033	Electric current therapy
97034	Contrast bath therapy
97035	Ultrasound therapy
97036	Hydrotherapy
97039	Physical therapy treatment
97110	Therapeutic exercises
97112	Neuromuscular reeducation
97113	Aquatic therapy/exercises
97116	Gait training therapy
97124	Massage therapy
97139	Physical medicine procedure
97140	Manual therapy
97150	Group therapeutic procedures
97530	Therapeutic activities
97532	Cognitive skills development
97533	Sensory integration
97535	Self care mngment training
97537	Community/work reintegration
97542	Wheelchair mngment training
97545	Work hardening
97546	Work hardening add-on
97597	Active wound care/20cm or <
97598	Active wound care > 20cm
97602	Wound(s) care non-selective
97605	Neg press wound tx, < 50 cm
97606	Neg press wound tx, > 50 cm
97750	Physical performance test
97755	Assistive technology assess
97760	Orthotic mgmt and training
97761	Prosthetic training
97762	C/O for orthotic/prosth use
97799	Physical medicine procedure
G0281	Elec stim unattend for press

G0283	Elec stim other than wound
G0329	Electromagntic tx for ulcers
RADIOLOGY AND CERTAIN OTHER IMAGING SERVICES	
INCLUDE the following CPT and HCPCS codes:	
0042T	Ct perfusion w/contrast, cbf
0159T	Cad breast mri
0174T	Cad cxr with interp
0175T	Cad cxr remote
51798	Us urine capacity measure
70100	X-ray exam of jaw
70110	X-ray exam of jaw
70120	X-ray exam of mastoids
70130	X-ray exam of mastoids
70134	X-ray exam of middle ear
70140	X-ray exam of facial bones
70150	X-ray exam of facial bones
70160	X-ray exam of nasal bones
70190	X-ray exam of eye sockets
70200	X-ray exam of eye sockets
70210	X-ray exam of sinuses
70220	X-ray exam of sinuses
70240	X-ray exam, pituitary saddle
70250	X-ray exam of skull
70260	X-ray exam of skull
70300	X-ray exam of teeth
70310	X-ray exam of teeth
70320	Full mouth x-ray of teeth
70328	X-ray exam of jaw joint
70330	X-ray exam of jaw joints
70336	Magnetic image, jaw joint
70350	X-ray head for orthodontia
70355	Panoramic x-ray of jaws
70360	X-ray exam of neck
70370	Throat x-ray & fluoroscopy
70371	Speech evaluation, complex
70380	X-ray exam of salivary gland
70450	Ct head/brain w/o dye
70460	Ct head/brain w/dye
70470	Ct head/brain w/o & w/dye
70480	Ct orbit/ear/fossa w/o dye
70481	Ct orbit/ear/fossa w/dye
70482	Ct orbit/ear/fossa w/o&w/dye
70486	Ct maxillofacial w/o dye
70487	Ct maxillofacial w/dye
70488	Ct maxillofacial w/o & w/dye
70490	Ct soft tissue neck w/o dye
70491	Ct soft tissue neck w/dye
70492	Ct sft tsue nck w/o & w/dye
70496	Ct angiography, head
70498	Ct angiography, neck
70540	Mri orbit/face/neck w/o dye
70542	Mri orbit/face/neck w/dye
70543	Mri orbt/fac/nck w/o & w/dye
70544	Mr angiography head w/o dye
70545	Mr angiography head w/dye
70546	Mr angiograph head w/o&w/dye
70547	Mr angiography neck w/o dye
70548	Mr angiography neck w/dye
70549	Mr angiograph neck w/o&w/dye
70551	Mri brain w/o dye
70552	Mri brain w/dye
70553	Mri brain w/o & w/dye
70554	Fmri brain by tech
70555	Fmri brain by phys/psych
71010	Chest x-ray
71015	Chest x-ray
71020	Chest x-ray
71021	Chest x-ray
71022	Chest x-ray
71023	Chest x-ray and fluoroscopy
71030	Chest x-ray
71034	Chest x-ray and fluoroscopy
71035	Chest x-ray
71100	X-ray exam of ribs
71101	X-ray exam of ribs/chest
71110	X-ray exam of ribs
71111	X-ray exam of ribs/chest
71120	X-ray exam of breastbone
71130	X-ray exam of breastbone

71250	Ct thorax w/o dye
71260	Ct thorax w/dye
71270	Ct thorax w/o & w/dye
71275	Ct angiography, chest
71550	Mri chest w/o dye
71551	Mri chest w/dye
71552	Mri chest w/o & w/dye
71555	Mri angio chest w or w/o dye
72010	X-ray exam of spine
72020	X-ray exam of spine
72040	X-ray exam of neck spine
72050	X-ray exam of neck spine
72052	X-ray exam of neck spine
72069	X-ray exam of trunk spine
72070	X-ray exam of thoracic spine
72072	X-ray exam of thoracic spine
72074	X-ray exam of thoracic spine
72080	X-ray exam of trunk spine
72090	X-ray exam of trunk spine
72100	X-ray exam of lower spine
72110	X-ray exam of lower spine
72114	X-ray exam of lower spine
72120	X-ray exam of lower spine
72125	Ct neck spine w/o dye
72126	Ct neck spine w/dye
72127	Ct neck spine w/o & w/dye
72128	Ct chest spine w/o dye
72129	Ct chest spine w/dye
72130	Ct chest spine w/o & w/dye
72131	Ct lumbar spine w/o dye
72132	Ct lumbar spine w/dye
72133	Ct lumbar spine w/o & w/dye
72141	Mri neck spine w/o dye
72142	Mri neck spine w/dye
72146	Mri chest spine w/o dye
72147	Mri chest spine w/dye
72148	Mri lumbar spine w/o dye
72149	Mri lumbar spine w/dye
72156	Mri neck spine w/o & w/dye
72157	Mri chest spine w/o & w/dye
72158	Mri lumbar spine w/o & w/dye
72170	X-ray exam of pelvis
72190	X-ray exam of pelvis
72191	Ct angiograph pelv w/o&w/dye
72192	Ct pelvis w/o dye
72193	Ct pelvis w/dye
72194	Ct pelvis w/o & w/dye
72195	Mri pelvis w/o dye
72196	Mri pelvis w/dye
72197	Mri pelvis w/o & w/dye
72198	Mr angio pelvis w/o & w/dye
72200	X-ray exam sacroiliac joints
72202	X-ray exam sacroiliac joints
72220	X-ray exam of tailbone
73000	X-ray exam of collar bone
73010	X-ray exam of shoulder blade
73020	X-ray exam of shoulder
73030	X-ray exam of shoulder
73050	X-ray exam of shoulders
73060	X-ray exam of humerus
73070	X-ray exam of elbow
73080	X-ray exam of elbow
73090	X-ray exam of forearm
73092	X-ray exam of arm, infant
73100	X-ray exam of wrist
73110	X-ray exam of wrist
73120	X-ray exam of hand
73130	X-ray exam of hand
73140	X-ray exam of finger(s)
73200	Ct upper extremity w/o dye
73201	Ct upper extremity w/dye
73202	Ct uppr extremity w/o&w/dye
73206	Ct angio upr extrm w/o&w/dye
73218	Mri upper extremity w/o dye
73219	Mri upper extremity w/dye
73220	Mri uppr extremity w/o&w/dye
73221	Mri joint upr extrem w/o dye
73222	Mri joint upr extrem w/dye
73223	Mri joint upr extr w/o&w/dye
73500	X-ray exam of hip

73510	X-ray exam of hip
73520	X-ray exam of hips
73540	X-ray exam of pelvis & hips
73550	X-ray exam of thigh
73560	X-ray exam of knee, 1 or 2
73562	X-ray exam of knee, 3
73564	X-ray exam, knee, 4 or more
73565	X-ray exam of knees
73590	X-ray exam of lower leg
73592	X-ray exam of leg, infant
73600	X-ray exam of ankle
73610	X-ray exam of ankle
73620	X-ray exam of foot
73630	X-ray exam of foot
73650	X-ray exam of heel
73660	X-ray exam of toe(s)
73700	Ct lower extremity w/o dye
73701	Ct lower extremity w/dye
73702	Ct lwr extremity w/o&w/dye
73706	Ct angio lwr extr w/o&w/dye
73718	Mri lower extremity w/o dye
73719	Mri lower extremity w/dye
73720	Mri lwr extremity w/o&w/dye
73721	Mri jnt of lwr extre w/o dye
73722	Mri joint of lwr extr w/dye
73723	Mri joint lwr extr w/o&w/dye
73725	Mr ang lwr ext w or w/o dye
74000	X-ray exam of abdomen
74010	X-ray exam of abdomen
74020	X-ray exam of abdomen
74022	X-ray exam series, abdomen
74150	Ct abdomen w/o dye
74160	Ct abdomen w/dye
74170	Ct abdomen w/o & w/dye
74175	Ct angio abdom w/o & w/dye
74181	Mri abdomen w/o dye
74182	Mri abdomen w/dye
74183	Mri abdomen w/o & w/dye
74185	Mri angio, abdom w orw/o dye
74210	Contrst x-ray exam of throat
74220	Contrast x-ray, esophagus
74230	Cine/vid x-ray, throat/esoph
74240	X-ray exam, upper gi tract
74241	X-ray exam, upper gi tract
74245	X-ray exam, upper gi tract
74246	Contrst x-ray uppr gi tract
74247	Contrst x-ray uppr gi tract
74249	Contrst x-ray uppr gi tract
74250	X-ray exam of small bowel
74261	Ct colonography, w/o dye
74262	Ct colonography, w/dye
74290	Contrast x-ray, gallbladder
74291	Contrast x-rays, gallbladder
74710	X-ray measurement of pelvis
75557	Cardiac MRI for morph
75559	Cardiac MRI w/stress img
75561	Cardiac MRI for morph w/dye
75563	Card MRI w/stress img & dye
75565	Card MRI vel flw map add-on
75571	Ct hrt w/o dye w/ca test
75572	Ct hrt w/3d image
75573	Ct hrt w/3d image, congen
75574	Ct angio hrt w/3d image
75635	Ct angio abdominal arteries
76000	Fluoroscope examination
76010	X-ray, nose to rectum
76100	X-ray exam of body section
76101	Complex body section x-ray
76102	Complex body section x-rays
76120	Cine/video x-rays
76125	Cine/video x-rays add-on
76150	X-ray exam, dry process
76376	3d render w/o postprocess
76377	3d rendering w/postprocess
76380	CAT scan follow-up study
76499	Radiographic procedure
76506	Echo exam of head
76510	Ophth us, b & quant a
76511	Ophth us, quant a only
76512	Ophth us, b w/non-quant a

76513	Echo exam of eye, water bath
76514	Echo exam of eye, thickness
76516	Echo exam of eye
76519	Echo exam of eye
76536	Us exam of head and neck
76604	Us exam, chest
76645	Us exam, breast(s)
76700	Us exam, abdom, complete
76705	Echo exam of abdomen
76770	Us exam abdo back wall, comp
76775	Us exam abdo back wall, lim
76776	Us exam k transpl w/Doppler
76800	Us exam, spinal canal
76801	Ob us < 14 wks, single fetus
76802	Ob us < 14 wks, add'l fetus
76805	Ob us >/= 14 wks, sngl fetus
76810	Ob us >/= 14 wks, addl fetus
76811	Ob us, detailed, sngl fetus
76812	Ob us, detailed, addl fetus
76815	Ob us, limited, fetus(s)
76816	Ob us, follow-up, per fetus
76818	Fetal biophys profile w/nst
76819	Fetal biophys profil w/o nst
76820	Umbilical artery echo
76821	Middle cerebral artery echo
76825	Echo exam of fetal heart
76826	Echo exam of fetal heart
76827	Echo exam of fetal heart
76828	Echo exam of fetal heart
76856	Us exam, pelvic, complete
76857	Us exam, pelvic, limited
76870	Us exam, scrotum
76880	Us exam, extremity
76885	Us exam infant hips, dynamic
76886	Us exam infant hips, static
76970	Ultrasound exam follow-up
76977	Us bone density measure
76999	Echo examination procedure
77014	Ct scan for therapy guide
77051	Computer dx mammogram add-on
77052	Comp screen mammogram add-on
77055	Mammogram, one breast
77056	Mammogram, both breasts

Medicare Program; Solicitation of Independent Accrediting Organizations To Participate in the Advanced Diagnostic Imaging Supplier Accreditation Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice.

SUMMARY: This notice announces to independent accreditation organizations an opportunity to submit applications to participate in the advanced diagnostic imaging supplier accreditation program as a designated accreditation organization. Advanced diagnostic imaging accreditation is required for suppliers furnishing the technical component (TC) of advanced diagnostic imaging services. This notice contains information on accreditation application guidelines for CMS approval of suppliers who furnish the TC of advanced diagnostic imaging services.

DATES: Applications will be considered for the January 1, 2010 designation deadline if received at the address, provided in the **ADDRESSES** section of this notice, no later than 5 p.m. eastern standard time (e.s.t.) on December 1, 2009.

ADDRESSES: Applications should be sent to the following: Attention: Sandra Bastinelli, Office of Financial Management, Mail stop C3–02–16, Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244.

FOR FURTHER INFORMATION CONTACT: Sandra Bastinelli, (410) 786–3630.

SUPPLEMENTARY INFORMATION:

I. Background

Section 135(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) added section 1834(e) of the Social Security Act (the Act) that requires the Secretary to designate organizations in order to accredit suppliers furnishing the technical component (TC) of advanced diagnostic imaging service and establish procedures to ensure that the criteria used by an accreditation organization is specific to each imaging modality. Section 1834 (e)(1)(B) of the Act defines advanced diagnostic imaging services as—

(i) Diagnostic magnetic resonance imaging, computed tomography, and nuclear medicine—including positron emission tomography, and

(ii) Such other diagnostic imaging services, including services described in section 1848(b)(4)(B) (excluding x-ray, ultrasound, and fluoroscopy, as specified by the Secretary in consultation with physician specialty organizations and other stakeholders.

Section 1848(b)(4)(B) of the Act defines imaging services as ''imaging and computer-assisted imaging services, including x-ray, ultrasound (including echocardiography), nuclear medicine (including positron emission tomography), magnetic resonance imaging, computed tomography, and fluoroscopy, but excluding diagnostic and screening mammography.'' Suppliers of the TC of advanced diagnostic imaging services for which payment is made under the fee schedule established under section 1848(b) of the Act, must become accredited by an accreditation organization designated by the Secretary beginning January 1, 2012.

II. Provisions of the Notice

This notice solicits applications from accreditation organizations with the ability to accredit the TC of at least one of the categories of advanced diagnostic imaging services.

A. Eligible Organizations

An accreditation organization that can show evidence of the ability to accredit at least one of the categories of advanced diagnostic imaging services as defined in sections 1834(e)(1)(B) and 1848 (b)(4)(B) of the Act is eligible to apply for approval as a designated accreditation organization.

B. Application Requirements

To be considered for approval as a designated accreditation organization for Medicare requirements under 42 CFR 414.68, an accreditation organization must furnish to us all of the following information:

- A list of the categories of advanced diagnostic imaging services for which the organization is requesting approval.
- A description of the accrediting organization's duration of accreditation (annual, biannual, and triennial), to include a summary of activities that occur at each cycle.
- A detailed description of how the organization's accreditation criteria satisfy the statutory standards at section 1834(e)(3) of the Act, including the following:

++ Qualifications of medical personnel who are not physicians and who furnish the TC of advanced diagnostic imaging services.

++ Qualifications and responsibilities of medical directors and supervising physicians, such as training in advanced diagnostic imaging services in a residency program, expertise obtained through experience or continuing medical education courses.

++ Procedures to ensure the safety of persons who furnish the TC of advanced diagnostic imaging services and individuals to whom such services are furnished.

++ Procedures to ensure the reliability, clarity, and accuracy of the technical quality of diagnostic images produced by the supplier.

- A detailed description of the organization's survey process, to include the following:

++ Type and frequency of the surveys performed.

++ The ability of the organization to conduct timely reviews of accreditation applications, to include a projection of the organization's national capacity for processing new applications before the January 1, 2012 accreditation deadline.

++ Description of the organization's audit procedures, including—random site visits; site audits or other strategies for ensuring suppliers accredited by the organization maintain compliance throughout the period of accreditation.

++ Procedures for performing unannounced site surveys.

++ Copies of the organization's survey forms.

++ A description of the accreditation survey review process and the accreditation status decision-making process, including the process for addressing identified deficiencies with the accreditation requirements, and the procedures used to monitor the correction of deficiencies found during an accreditation survey.

++ Procedures for coordinating surveys with another accrediting organization (when the organization does not accredit all modalities) provided by an applicant for accreditation which the supplier provided.

++ Comprehensive information about the individuals who perform evaluations for the accreditation organization, including all of the following information:

—Detailed information about the size and composition of accreditation teams for each category of advanced medical imaging service supplier accredited.

—The number of professional and technical staff that are available for survey.

—The education, current employment and experience requirements surveyors must meet.

—The content and length of any orientation program.

—The frequency and types of in-service training provided to survey personnel.
—The evaluation systems used to monitor the performance of individual surveyors and survey teams.
—Policies and procedures regarding an individual's participation in the survey or accreditation decision process of any organization with which the individual is professionally or financially affiliated.

++ Policies and procedures used when an organization has a dispute regarding survey findings or an adverse decision.

• A description of the organization's data management and analysis capabilities in support of its surveys and accreditation decisions, including the kinds of reports, tables, and other displays generated by that system.

• The organization's procedures for investigating and responding to complaints against accredited facilities, including policies and procedures regarding coordination of these activities with relevant licensing bodies and CMS.

• A description of the organization's policies and procedures for withholding or removal of accreditation status for facilities that fail to meet the organization's accreditation standards and other actions taken by the organization in response to noncompliance with its accreditation criteria. These policies and procedures must include notifying CMS of facilities that fail to meet the requirements of the accrediting organization as required by CMS.

• The information submitted for notification of these organizations includes—

++ A list of all accredited suppliers that the accrediting organization has accredited to include the type and category of accreditation currently held by each supplier, and the expiration date of each supplier's current accreditation;

++ A list of all accreditation surveys scheduled to be performed by the organization;

++ A plan for reducing the burden and cost of accreditation to small and rural suppliers;

++ Information to demonstrate the accreditation organization's knowledge and experience in the advanced medical imaging arena;

++ The organization's proposed fees for accreditation for each modality in which the organization intends to offer accreditation; and

++ Any specific documentation requirements and attestations requested by CMS as a condition of designation.

• The accreditation organization must also submit the following supporting documentation:

++ A written presentation that demonstrates the organization's ability to furnish us with electronic data in ASCII comparable code.

++ A resource analysis that demonstrates that the organization's staffing, funding, and other resources are adequate to perform the required surveys and related activities.

++ A statement acknowledging that, as a condition for approval the organization will agree to the following:

—Provide a statement agreeing to notify us, in writing, of any supplier that had its accreditation revoked, withdrawn, revised, or any other remedial or adverse action taken against it by the accreditation organization within 30 calendar days of any such action taken.
—Notify all accredited suppliers within 10 calendar days of our withdrawal of the organization's approval of deeming authority.
—Notify us, in writing, at least 30 calendar days in advance of the effective date of any proposed changes in accreditation requirements.
—Permit its surveyors to serve as witnesses if we take an adverse action based on accreditation findings.
—Notify us, in writing, within 2 calendar days of a deficiency identified in any accreditation entity where the deficiency poses an immediate jeopardy to the supplier's beneficiaries or a hazard to the general public.
—Provide, on an annual basis, summary data specified by us that relates to the past years' accreditations and trends.
—Attest that the organization will not perform any accreditation surveys of Medicare participating suppliers with which it has a financial relationship with or interest.

If, after review of an accreditation organization's submission of information we determine that additional information is necessary to make a determination for approval or denial of the accreditation organization's application, the organization will be notified and afforded an opportunity to provide additional information. We may visit the organization's office(s) to verify representations made in the organization's accreditation application. The site visit may include, but is not limited to, review of documents and interviews with the organization's staff. The accreditation organization will receive a formal notice from us stating whether the request for designation has been approved or denied, the rationale for any denial and reconsideration, and reapplication procedures.

We will make every effort to issue a final decision within 30 days from the time we receive the completed accreditation reapplication. An accreditation organization may withdraw its application for designation under section 1834(e) of the Act at any time prior to the formal notice of approval or denial is received. An accreditation organization notified of a denial of request for designation may request a reconsideration in accordance with 42 CFR 488.201 through 488.211. Any accreditation organization whose request for approval of designation has been denied may resubmit the application if the organization—

• Revises its accreditation program to address the rationale for denial of its previous request;

• Provides reasonable assurance that its accredited companies meet applicable Medicare requirements; and

• Resubmits the application in its entirety. If an accreditation organization is denied reconsideration determination (as designated under section 1834(e) of the Act), the organization may not submit a new application as a designated accreditation organization for the type of modality that is at issue in the reconsideration until the reconsideration is final.

C. Application Deadline

The deadline for the submission of applications is the date specified in the **DATES** section of this notice.

D. Evaluation of Applications

A panel will evaluate all applications from accreditation organizations seeking designation under section 1834(e) of the Act using the existing survey and certification process as established in 42 CFR part 488.

III. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

• The need for the information collection and its usefulness in carrying out the proper functions of our agency.

• The accuracy of our estimate of the information collection burden.

• The quality, utility, and clarity of the information to be collected.

• Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

We detailed the burden associated with the submission of advanced diagnostic imaging provider accreditation applications from independent accrediting bodies in the CY 2010 Physician Fee Schedule final rule that published elsewhere in this **Federal Register**. We are reprinting the discussion of the information collection requirements in this notice.

Section 414.68(b) contains the application and reapplication procedures for accreditation organizations. Specifically, an independent accreditation organization applying for approval or reapproval of authority to survey suppliers for purposes of accrediting suppliers furnishing the technical component (TC) of advanced diagnostic imaging services must furnish CMS with all of the information listed in proposed § 414.68(b)(1) through (14). The requirements include but are not limited to reporting, notification, documentation, and survey requirements.

The burden associated with the collection requirements in § 414.68(b) is the time and effort necessary to develop, compile and submit the information listed in § 414.68(b)(1) through (14). We believe all 3 entities will choose to comply with these requirements. We estimate that it will take each of the 3 entities, 80 hours to submit a complete application for approval or reapproval authority to become an accrediting organization approved by CMS.

Section 414.68(c) contains the information collection requirements pertaining to CMS approved accrediting organizations. An accrediting organization approved by CMS must undertake all of the activities listed in § 414.68(c)(1) through (6). The burden associated with the collection requirements in § 414.68(c) is the time and effort necessary to develop, compile and submit the information listed in § 414.68(c)(1) through (6). We believe that 3 entities will choose to comply with these requirements. We estimate that it will take each of the 3 entities, 80 hours to submit the required information on an ongoing basis.

Section 414.68(d)(1) states that CMS or its contractor may conduct an audit of an accredited supplier, examine the results of a CMS approved accreditation organization's survey of a supplier, or observe a CMS approved accreditation organization's onsite survey of a supplier, in order to validate the CMS approved accreditation organizations accreditation process. The burden associated with this requirement is the time and effort necessary for an accrediting organization to comply with the components of the validation audit. While this requirement is subject to the PRA, we believe the associated burden is exempt as stated in 5 CFR 1320.3(h)(6). The burden associated with a request for facts addressed to a single person, as defined in 5 CFR 1320.3(j), is not subject to the PRA.

As stated in § 414.68(e)(1), an accreditation organization dissatisfied with a determination that its accreditation requirements do not provide or do not continue to provide reasonable assurance that the suppliers accredited by the organization meet the applicable quality standards is entitled to a reconsideration. CMS reconsiders any determination to deny, remove, or not to renew the approval of deeming authority to an accreditation organization if the accrediting organization files a written request for reconsideration by its authorized officials or through its legal representative. The written request must be filed within 30 calendar days of the receipt of CMS' notice of an adverse determination or nonrenewal. In addition, the request must also specify the findings or issues with which the accreditation organization disagrees and the reasons for the disagreement.

The burden associated with this requirement is the time and effort necessary for an accrediting organization to develop and file a written request for reconsideration. While this requirement is subject to the PRA, the associated burden is exempt under 5 CFR 1320.4. The information in question is being collected as a result of an administrative action; accrediting organizations are submitting requests for reconsideration after receiving a notice of an adverse decision.

Authority: Section 1834(e) of the Act.

Dated: October 13, 2009.

Title 3—

The President

Proclamation 8456 of November 20, 2009

National Family Week, 2009

By the President of the United States of America

A Proclamation

American families are the foundation on which our Nation is built. Their expressions of unconditional love and dedication sustain family members and support our Nation's communities. During National Family Week, we celebrate the inclusive spirit of American families and applaud the commitment of those family members who encourage us to reach new heights.

My Administration is committed to helping American families meet the demands of modern life, increase their self-sufficiency, and achieve their full potential. Ten days after taking office, I established the White House Task Force on Middle Class Working Families, led by Vice President Biden. This Task Force is focused on raising the living standards of working families across the country. In addition, the American Recovery and Reinvestment Act provides a broad spectrum of support to families experiencing difficult times. It boosts child care and Head Start programs, essential not only to a child's future but also a parent's peace of mind in the workplace. Health care reform will provide security and stability for American families with insurance and affordable options for uninsured Americans.

As we continue to grow as a Nation, we must also be engaged members of our larger family, composed of our neighbors, our colleagues, and the community where we live. We must appreciate the diversity of other families' traditions; we must reach out to help families in need; and we must take more responsibility for the care and development of all children, not just our own.

In this season of Thanksgiving, we are grateful that, at our best, America is a collection of strong families, standing united to make our Nation a place of hope and opportunity for future generations.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim November 22 through November 28, 2009, as National Family Week. I invite States, local communities, and individuals to join together in observing this week with appropriate ceremonies and activities to honor our Nation's families.

IN WITNESS WHEREOF, I have hereunto set my hand this twentieth day of November, in the year of our Lord two thousand nine, and of the Independence of the United States of America the two hundred and thirty-fourth.

Proclamation 8457 of November 20, 2009

National Child's Day, 2009

By the President of the United States of America

A Proclamation

America's children deserve every opportunity to reach their fullest potential, and it is our responsibility to ensure they have the tools required to grow and flourish. This includes providing our young people with access to affordable, high-quality health care and an education that both informs and inspires. On National Child's Day, we celebrate the promise living within every child.

Ensuring the health and well-being of our Nation's children is one of our highest responsibilities. I was proud to sign the reauthorization of the Children's Health Insurance Program (CHIP), extending health care to millions of young Americans who were previously uninsured. When given proper nutrition and medical care, healthy children can become productive, healthy adults.

My Administration is also committed to giving our children the educational support necessary for their development and future success. That is why we announced our Race to the Top award program, which challenges States to compete for over $4 billion in grants designed to spur systemic reform and embrace innovative approaches to teaching and learning in America's schools. If we are willing to come together and embrace a spirit of common purpose, our schools will perform better and our students will reach farther.

Across America, countless individuals selflessly provide their time and energy in our homes, schools, and community organizations to ensure our sons and daughters may one day realize their dreams. Today, we recommit ourselves to the vision of our founders to give all our children a fair chance and an equal start in life.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim November 22, 2009, as National Child's Day. I call upon all citizens to observe this day with appropriate programs, ceremonies, and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this twentieth day of November, in the year of our Lord two thousand nine, and of the Independence of the United States of America the two hundred and thirty-fourth.

Proclamation 8458 of November 20, 2009

Thanksgiving Day, 2009

By the President of the United States of America

A Proclamation

What began as a harvest celebration between European settlers and indigenous communities nearly four centuries ago has become our cherished tradition of Thanksgiving. This day's roots are intertwined with those of our Nation, and its history traces the American narrative.

Today, we recall President George Washington, who proclaimed our first national day of public thanksgiving to be observed ''by acknowledging with grateful hearts the many and signal favors of Almighty God,'' and President Abraham Lincoln, who established our annual Thanksgiving Day to help mend a fractured Nation in the midst of civil war. We also recognize the contributions of Native Americans, who helped the early colonists survive their first harsh winter and continue to strengthen our Nation. From our earliest days of independence, and in times of tragedy and triumph, Americans have come together to celebrate Thanksgiving.

As Americans, we hail from every part of the world. While we observe traditions from every culture, Thanksgiving Day is a unique national tradition we all share. Its spirit binds us together as one people, each of us thankful for our common blessings.

As we gather once again among loved ones, let us also reach out to our neighbors and fellow citizens in need of a helping hand. This is a time for us to renew our bonds with one another, and we can fulfill that commitment by serving our communities and our Nation throughout the year. In doing so, we pay tribute to our country's men and women in uniform who set an example of service that inspires us all. Let us be guided by the legacy of those who have fought for the freedoms for which we give thanks, and be worthy heirs to the noble tradition of goodwill shown on this day.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim Thursday, November 26, 2009, as a National Day of Thanksgiving. I encourage all the people of the United States to come together, whether in our homes, places of worship, community centers, or any place where family, friends and neighbors may gather, with gratitude for all we have received in the past year; to express appreciation to those whose lives enrich our own; and to share our bounty with others.

IN WITNESS WHEREOF, I have hereunto set my hand this twentieth day of November, in the year of our Lord two thousand nine, and of the Independence of the United States of America the two hundred and thirty-fourth.

Executive Order 13520 of November 20, 2009

Reducing Improper Payments

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in the interest of reducing payment errors and eliminating waste, fraud, and abuse in Federal programs, it is hereby ordered as follows:

Section 1. *Purpose.* When the Federal Government makes payments to individuals and businesses as program beneficiaries, grantees, or contractors, or on behalf of program beneficiaries, it must make every effort to confirm that the right recipient is receiving the right payment for the right reason at the right time. The purpose of this order is to reduce improper payments by intensifying efforts to eliminate payment error, waste, fraud, and abuse in the major programs administered by the Federal Government, while continuing to ensure that Federal programs serve and provide access to their intended beneficiaries. No single step will fully achieve these goals. Therefore, this order adopts a comprehensive set of policies, including transparency and public scrutiny of significant payment errors throughout the Federal Government; a focus on identifying and eliminating the highest improper payments; accountability for reducing improper payments among executive branch agencies and officials; and coordinated Federal, State, and local government action in identifying and eliminating improper payments. Because this order targets error, waste, fraud, and abuse—not legitimate use of Government services—efforts to reduce improper payments under this order must protect access to Federal programs by their intended beneficiaries.

Sec. 2. *Transparency and Public Participation.*

(a) Within 90 days of the date of this order, the Director of the Office of Management and Budget (OMB) shall:

(i) identify Federal programs in which the highest dollar value or majority of Government-wide improper payments occur (high-priority programs);

(ii) establish, in coordination with the executive department or agency (agency) responsible for administering the high-priority program annual or semi-annual targets (or where such targets already exist, supplemental targets), as appropriate, for reducing improper payments associated with each high-priority program;

(iii) issue Government-wide guidance on the implementation of this order, including procedures for identifying and publicizing the list of entities described in subsection (b)(v) of this section and for administrative appeal of the decision to publish the identity of those entities, prior to publication; and

(iv) establish a working group consisting of Federal, State, and local officials to make recommendations to the Director of OMB designed to improve the Federal Government's measurement of access to Federal programs by the programs' intended beneficiaries. The working group's recommendations shall be prepared in consultation with the Council of Inspectors General on Integrity and Efficiency (CIGIE) and submitted within 180 days of the date of this order, and the recommended measurements may be incorporated by the Secretary of the Treasury in the information published pursuant to subsection (b) of this section.

(b) Within 180 days of the date of this order, the Secretary of the Treasury in coordination with the Attorney General and the Director of OMB, shall

publish on the Internet information about improper payments under high-priority programs. The information shall include, subject to Federal privacy policies and to the extent permitted by law:

(i) the names of the accountable officials designated under section 3 of this order;

(ii) current and historical rates and amounts of improper payments, including, where known and appropriate, causes of the improper payments;

(iii) current and historical rates and amounts of recovery of improper payments, where appropriate (or, where improper payments are identified solely on the basis of a sample, recovery rates and amounts estimated on the basis of the applicable sample);

(iv) targets for reducing as well as recovering improper payments, where appropriate; and

(v) the entities that have received the greatest amount of outstanding improper payments (or, where improper payments are identified solely on the basis of a sample, the entities that have received the greatest amount of outstanding improper payments in the applicable sample).

Information on entities that have received the greatest amount of outstanding improper payments shall not include any referrals the agency made or anticipates making to the Department of Justice, or any information provided in connection with such referrals.

(c) Within 180 days of the date of this order, the Secretary of the Treasury in coordination with the Attorney General and the Director of OMB and in consultation with the CIGIE, shall establish a central Internet-based method to collect from the public information concerning suspected incidents of waste, fraud, and abuse by an entity receiving Federal funds that have led or may lead to improper payments by the Federal Government.

(d) Agencies shall place a prominently displayed link to Internet-based resources for addressing improper payments, including the resources established under subsections (b) and (c) of this section, on their Internet home pages.

Sec. 3. *Agency Accountability and Coordination.*

(a) Within 120 days of the date of this order, the head of each agency responsible for operating a high-priority program shall designate an official who holds an existing Senate-confirmed position to be accountable for meeting the targets established under section 2 of this order without unduly burdening program access and participation by eligible beneficiaries. In those agencies where the majority of payments are isolated to a single component, the head of the agency shall name a second accountable official for that component whose sole responsibility would be for program integrity activities and, as appropriate, shall consolidate and coordinate all program integrity activities within the component.

(b) Within 180 days of the date of this order, each agency official designated under subsection (a) of this section, or otherwise designated by the Director of OMB, shall provide the agency's Inspector General a report containing:

(i) the agency's methodology for identifying and measuring improper payments by the agency's high-priority programs;

(ii) the agency's plans, together with supporting analysis, for meeting the reduction targets for improper payments in the agency's high-priority programs; and

(iii) the agency's plan, together with supporting analysis, for ensuring that initiatives undertaken pursuant to this order do not unduly burden program access and participation by eligible beneficiaries.

Following the receipt and review of this information, the agency Inspector General shall assess the level of risk associated with the applicable programs, determine the extent of oversight warranted, and provide the agency head with recommendations, if any, for modifying the agency's methodology,

improper payment reduction plans, or program access and participation plans.

(c) If an agency fails to meet the targets established under section 2 of this order or implement the plan described in subsection (b)(iii) of this section for 2 consecutive years, that agency's accountable official designated under subsection (a) of this section shall submit to the agency head, Inspector General, and Chief Financial Officer a report describing the likely causes of the agency's failure and proposing a remedial plan. The agency head shall review this plan and, in consultation with the Inspector General and Chief Financial Officer, forward the plan with any additional comments and analysis to the Director of OMB.

(d) Within 180 days of the date of this order, the Chief Financial Officers Council (CFOC) in consultation with the CIGIE, the Department of Justice, and program experts, shall make recommendations to the Director of OMB and the Secretary of the Treasury on actions (including actions related to forensic accounting and audits) agencies should take to more effectively tailor their methodologies for identifying and measuring improper payments to those programs, or components of programs, where improper payments are most likely to occur. Recommendations shall address the manner in which the recommended actions would affect program access and participation by eligible beneficiaries.

(e) Within 180 days of the date of this order, the Secretary of the Treasury and the Director of OMB in consultation with the CIGIE, the Department of Justice, and program experts, shall recommend to the President actions designed to reduce improper payments by improving information sharing among agencies and programs, and where applicable, State and local governments and other stakeholders. The recommendations shall address the ways in which information sharing may improve eligibility verification and prepayment scrutiny, shall identify legal or regulatory impediments to effective information sharing, and shall address the manner in which the recommended actions would affect program access and participation by eligible beneficiaries.

(f) Within 180 days of the date of this order, and at least once every quarter thereafter, the head of each agency shall submit to the agency's Inspector General and the CIGIE, and make available to the public, a report on any high-dollar improper payments identified by the agency, subject to Federal privacy policies and to the extent permitted by law. The report shall describe any actions the agency has taken or plans to take to recover improper payments, as well as any actions the agency intends to take to prevent improper payments from occurring in the future. The report shall not include any referrals the agency made or anticipates making to the Department of Justice, or any information provided in connection with such referrals. Following the review of each report, the agency Inspector General and the CIGIE shall assess the level of risk associated with the applicable program, determine the extent of oversight warranted, and provide the agency head with recommendations, if any, for modifying the agency's plans.

Sec. 4. *Enhanced Focus on Contractors and Working with State and Local Stakeholders.*

(a) Within 180 days of the date of this order, the Federal Acquisition Regulatory Council, in coordination with the Director of OMB, and in consultation with the National Procurement Fraud Task Force (or its successor group), the CIGIE, and appropriate agency officials, shall recommend to the President actions designed to enhance contractor accountability for improper payments. The recommendations may include, but are not limited to, subjecting contractors to debarment, suspension, financial penalties, and identification through a public Internet website, subject to Federal privacy policies and to the extent permitted by law and where the identification would not interfere with or compromise an ongoing criminal or civil investigation, for knowingly failing timely to disclose credible evidence of significant overpayments received on Government contracts.

(b) Within 30 days of the date of this order, the Director of OMB shall establish a working group consisting of Federal and elected State and local officials to make recommendations to the Director of OMB designed to improve the effectiveness of single audits of State and local governments and non-profit organizations that are expending Federal funds. The Director of OMB may designate an appropriate official to serve as Chair of the working group to convene its meetings and direct its work. The working group's recommendations shall be prepared in consultation with the CIGIE and submitted within 180 days of the date of this order. The recommendations shall address, among other things, the effectiveness of single audits in identifying improper payments and opportunities to streamline or eliminate single audit requirements where their value is minimal.

(c) Within 30 days of the date of this order, the Director of OMB shall establish a working group (which may be separate from the group established under subsection (b) of this section) consisting of Federal and elected State and local officials to make recommendations to the Director of OMB for administrative actions designed to improve the incentives and accountability of State and local governments, as well as other entities receiving Federal funds, for reducing improper payments. The Director of OMB may designate an appropriate official to serve as Chair of the working group to convene its meetings and direct its work. The working group's recommendations shall be prepared in consultation with the CIGIE and submitted within 180 days of the date of this order.

Sec. 5. *Policy Proposals.* The Director of OMB, in consultation with the appropriate agencies and the CIGIE, shall develop policy recommendations, including potential legislative proposals, designed to reduce improper payments, including those caused by error, waste, fraud, and abuse, across Federal programs without compromising program access, to be included, as appropriate, in the Budget of the United States Government for Fiscal Year 2011 and future years, or other Administration proposals.

Sec. 6. *General Provisions.*

(a) Nothing in this order shall be construed to impair or otherwise affect:

(i) authority granted by law to a department, agency, the head thereof, or any agency Inspector General; or

(ii) functions of the Director of OMB relating to budgetary, administrative, or legislative proposals.

(b) Nothing in this order shall be construed to require the disclosure of classified information, law enforcement sensitive information, or other information that must be protected in the interests of national security.

(c) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(d) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with ''P L U S'' (Public Laws Update Service) on 202–741–6043. This list is also available online at *http://www.archives.gov/federal-register/laws.html*.

The text of laws is not published in the **Federal Register** but may be ordered in ''slip law'' (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO Access at *http://www.gpoaccess.gov/plaws/index.html*. Some laws may not yet be available.

S. 475/P.L. 111–97
Military Spouses Residency Relief Act (Nov. 11, 2009; 123 Stat. 3007)

S. 509/P.L. 111–98
To authorize a major medical facility project at the Department of Veterans Affairs Medical Center, Walla Walla, Washington, and for other purposes. (Nov. 11, 2009; 123 Stat. 3010)

Last List November 10, 2009

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
