As discussed previously, we propose that the codes describing the bundled payment for an episode of care with a medication not otherwise specified, HCPCS codes GXXX9 and GXX18, should be used when the OTP furnishes MAT with a new opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA for the treatment of OUD. OTPs would use these codes until we have the opportunity to propose and finalize a new G code to describe the bundled payment for treatment using that drug and price it accordingly in the next rulemaking cycle. We note that the code describing the weekly bundle for a medication not otherwise specified should not be used when the drug being administered is not a new opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA for the treatment of OUD, and therefore, for which Medicare would not have the authority to make payment since section 1861(jjj)(1)(A) of the Act requires that the medication must be an opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA for the treatment of OUD. Given the program integrity concerns regarding the potential for misuse of such a code, we also welcome comments as to whether this code is needed.

The codes and long descriptors for the proposed OTP bundled services are:

- HCPCS code GXXX1: *Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX2: *Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX3: *Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX4: *Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX5: *Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX6: *Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX7: *Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX8: *Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXXX9: *Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code GXX10: *Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX1.*
- HCPCS code GXX11: *Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX2.*
- HCPCS code GXX12: *Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX3.*

- HCPCS code GXX13: *Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode (only to be billed once every 6 months). Do not report with GXXX4.*
- HCPCS code GXX14: *Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX5.*
- HCPCS code GXX15: *Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX6.*
- HCPCS code GXX16: *Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX7.*
- HCPCS code GXX17: *Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX8.*
- HCPCS code GXX18: *Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX9.*
- HCPCS code GXX19: *Each additional 30 minutes of counseling or group or individual therapy in a week of medication assisted treatment, (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*

See Table 15 for proposed valuations for HCPCS codes GXXX1–GXX19. We propose that only an entity enrolled with Medicare as an OTP could bill these codes. Additionally, we propose that OTPs would be limited to billing only these codes describing bundled payments, and may not bill for other codes, such as those paid under the PFS.

(6) Payment Rates

The codes describing the proposed OTP bundled services (HCPCS codes GXXX1–GXX19) would be assigned flat dollar payment amounts, which are listed in Table 15. As discussed previously, section 2005 of the SUPPORT Act amended the definition of ''medical and other health services'' in section 1861(s) of the Act to provide for coverage of OUD treatment services furnished by an OTP and also added a new section 1834(w) to the Act and amended section 1833(a)(1) of the Act to establish a bundled payment to OTPs for OUD treatment services furnished during an episode of care beginning on or after January 1, 2020. Therefore, OUD treatment services and the payments for such services are wholly separate from physicians' services, as defined under section 1848(j)(3) of the Act, and for which payment is made under the section 1848 of the Act. Because OUD treatment services are not considered physicians' services and are paid outside the PFS, they would not be priced using relative value units (RVUs).

Consistent with section 1834(w) of the Act, which requires the Secretary to make a bundled payment for OUD treatment services furnished by OTPs, we are proposing to build the payment rates for OUD treatment services by combining the cost of the drug and the non-drug components (as applicable) into a single bundled payment as described in more detail below.

(a) Drug Component

As part of determining a payment rate for these proposed bundles for OUD treatment services, a dosage of the applicable medication must be selected in order to calculate the costs of the drug component of the bundle. We propose to use the typical or average maintenance dose, as discussed earlier in this section, to determine the drug costs for each of the proposed bundles. As dosing for some, but not all, of these drugs varies considerably, this approach attempts to strike an appropriate balance between high- and low-dose drug regimens in the context of a bundled payment. Specifically, we propose to calculate payment rates using a 100 mg daily dose for methadone, a 10 mg daily dose for oral buprenorphine, a 100 mg monthly dose for the extended-release buprenorphine injection, four rods each containing 74.2 mg of buprenorphine for the 6-month buprenorphine implant, and a 380 mg monthly dose for extended-release injectable naltrexone. We invite public comments on our proposal to use the typical maintenance dose in order to calculate the drug component of the bundled payment rate for each of the proposed codes. We also seek comment on the specific typical maintenance dosage level that we have identified for each drug, and a process for identifying the typical maintenance dose for new opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA when such medications are billed using the medication NOS code, such as using the FDA-approved prescribing information or a review of the published, preferably peer-reviewed, literature. We note that the bundled payment rates are intended to be comprehensive with respect to the drugs provided; therefore, we do not intend to include any other amounts related to drugs, other than for administration, as discussed below. This means, for example, that we would not pay for drug wastage, which we do not anticipate to be significant in the OTP setting.

i. Potential Drug Pricing Data Sources

Payment structures that are closely tailored to the provider's actual acquisition cost reduce the likelihood that a drug will be chosen primarily for a reason that is unrelated to the clinical care of the patient, such as the drug's profit margin for a provider. We are proposing to estimate an OTP's costs for the drug component of the bundles based on available data regarding drug costs rather than a provider-specific cost-to-charge ratio or another more direct assessment of facility or industry-specific drug costs. OTPs do not currently report costs associated with their services to the Medicare program, and we do not believe that a cost-to-charge ratio based on such reported information could be available for a significant period of time. Furthermore, we are unaware of any industry-specific data that may be used to more accurately assess the prices at which OTPs acquire the medications used for OUD treatment. Therefore, at this time, we are proposing to estimate an OTP's costs for the drugs used in MAT based on other available data sources, rather than applying a cost-to-charge ratio or

another more direct assessment of drug acquisition cost, though we intend to continue to explore alternate ways to gather this information. As described in greater detail below, we propose that the payment amounts for the drug component of the bundles be based on CMS pricing mechanisms currently in place. We request comment on other potential data sources for pricing OUD treatment medications either generally or specifically with respect to acquisition by OTPs. In the case of oral drugs that we are proposing to include in the OTP bundled payments and for which we do not receive manufacturer-submitted ASP data, we are considering several potential approaches for determining the payment amounts for the drug component of the bundles. Although we are not proposing a specific pricing mechanism at this time, we are soliciting comments on several different approaches, and we intend to develop a final policy for determining the payment amount for the drug component of the relevant bundles after considering the comments received.

In considering the payment amount for the drug component of each of the bundled payments that include a drug, we will begin by breaking the drugs into two categories based on their current coverage and payment by Medicare. First, we discuss the injectable and implantable drugs, which are generally covered and paid for under Medicare Part B, and then discuss the oral medications, which are generally covered and paid for under Medicare Part D.[53] Buprenorphine (injection), buprenorphine (implant), and naltrexone (injection) would fall into the former category and methadone and buprenorphine (oral) would fall into the latter category.

ii. Part B Drugs

Part B includes a limited drug benefit that encompasses drugs and biologicals described in section 1861(t) of the Act. Currently, covered Part B drugs fall into three general categories: Drugs furnished incident to a physician's services, drugs administered via a covered item of durable medical equipment, and other drugs specified by statute (generally in section 1861(s)(2) of the Act). Types of providers and suppliers that are paid for all or some of the Medicare-covered Part B drugs that they furnish include physicians, pharmacies, durable medical equipment suppliers, hospital outpatient departments, and end-stage renal disease (ESRD) facilities.

The majority of Part B drug expenditures are for drugs furnished incident to a physician's service. Drugs furnished incident to a physician's service are typically injectable drugs that are administered in a non-facility setting (covered under section 1861(s)(2)(A) of the Act) or in a hospital outpatient setting (covered under section 1861(s)(2)(B) of the Act). The statute (sections 1861(s)(2)(A) and 1861(s)(2)(B) of the Act) limits ''incident to'' services to drugs that are not usually self-administered; self-administered drugs, such as orally administered tablets and capsules are not paid for under the ''incident to'' provision. Payment for drugs furnished incident to a physician's service falls under section 1842(o) of the Act. In accordance with section 1842(o)(1)(C) of the Act, ''incident to'' drugs furnished in a non-facility setting are paid under the methodology in section 1847A of the Act. ''Incident to'' drugs furnished in a facility setting also are paid using the methodology in section 1847A of the Act when it has been incorporated under the relevant payment system (for example, the Hospital Outpatient Prospective Payment System (OPPS) [54]).

In most cases, determining payment using the methodology in section 1847A of the Act means payment is based on the ASP plus a statutorily mandated 6 percent add-on. The payment for these drugs does not include costs for administering the drug to the patient (for example, by injection or infusion); payments for these physician and hospital services are made separately, and the payment amounts are determined under the PFS [55] and the OPPS, respectively. The ASP payment amount determined under section 1847A of the Act reflects a volume-weighted ASP for all NDCs that are assigned to a HCPCS code. The ASP is calculated quarterly using manufacturer-submitted data on sales to all purchasers (with limited exceptions as articulated in section 1847A(c)(2) of the Act such as sales at nominal charge and sales exempt from best price) with manufacturers' rebates, discounts, and price concessions reflected in the manufacturer's determination of ASP.

Although the Part B drug benefit is generally considered to be limited in scope, it includes many categories of drugs and encompasses a variety of care settings and payment methodologies. In addition to the ''incident to'' drugs described above, Part B also covers and pays for certain oral drugs with specific benefit categories defined under section 1861(s) of the Act including certain oral anti-cancer drugs and certain oral antiemetic drugs. In accordance with section 1842(o)(1) of the Act or through incorporation under the relevant payment system as discussed above, most of these oral Part B drugs are also paid based on the ASP methodology described in section 1847A of the Act.

However, at times Part B drugs are paid based on wholesale acquisition cost (WAC) as authorized under section 1847A(c)(4) of the Act [56] or average manufacturer price (AMP)-based price substitutions as authorized under section 1847A(d) of the Act.[57] Also, in accordance with section 1842(o) of the Act, other payment methodologies may be applied to determine the payment amount for certain Part B drugs, for example, AWP-based payments (using current AWP) are made for influenza, pneumococcal pneumonia, and hepatitis B vaccines.[58] We also use current AWP to make payment under the OPPS for very new drugs without an ASP.[59] Contractors may also make independent payment amount determinations in situations where a national price is not available for physician and other supplier claims and for drugs that are specifically excluded from payment based on section 1847A of the Act (for example, radiopharmaceuticals as noted in section 303(h) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (MMA) (Pub. L. 108–173, enacted December 8, 2003). In such cases, pricing may be determined based on compendia or invoices.[60]

While most Part B drugs are paid based on the ASP methodology, MedPAC has noted that the ASP methodology may encourage the use of more expensive drugs because the 6 percent add-on generates more revenue

[53] Because, by law, methadone used in MAT cannot be dispensed by a pharmacy, it is not currently considered a Part D drug when used for MAT. Methadone used for this purpose can be dispensed only through an OTP certified by SAMHSA. However, methadone dispensed for pain may be considered a Part D drug and can be dispensed by a pharmacy.

[59] 80 FR 70426 and 80 FR 70442–3; Medicare Claims Processing Manual 100–04, Chapter 17, Section 20.1.3.

[60] Medicare Claims Processing Manual 100–04, Chapter 17, Section 20.1.3.

for more expensive drugs.[61] The ASP payment amount also does not vary based on the price an individual provider or supplier pays to acquire the drug. The statute does not identify a reason for the additional 6 percent add-on above ASP; however, as noted in the MedPAC report (and by sources cited in the report), the add-on is needed to account for handling and overhead costs and/or for additional mark-up in the distribution channels that are not captured in the manufacturer-reported ASP.[62]

We propose to use the methodology in section 1847A of the Act (which bases most payments on ASP) to set the payment rates for the ''incident to'' drugs. However, we propose to limit the payment amounts for ''incident to'' drugs to 100 percent of the volume-weighted ASP for a HCPCS code instead of 106 percent of the volume-weighted ASP for a HCPCS code. We believe limiting the add-on will incentivize the use of the most clinically appropriate drug for a given patient. In addition, we understand that many OTPs purchase directly from drug manufacturers, thereby limiting the markup from distribution channels. We also propose to use the same version of the quarterly manufacturer-submitted data used for calculating the most recently posted ASP data files in preparing the CY 2020 payment rates for OTPs. Please note that the quarterly ASP Drug Pricing Files include ASP plus 6 percent payment amounts.[63] Accordingly, we would adjust these amounts consistent with our proposal to limit the payment amounts for these drugs to 100 percent of the volume-weighted ASP for a HCPCS code. Proposed payment rates are provided below in this section of this proposed rule. A discussion of the proposed annual payment update methodology is also provided below. We propose to codify the ASP payment methodology for the drug component at § 410.67(d)(2). We solicit public comment on these proposals, as well as on using alternative ASP-based payments to price these drugs, such as a rolling average of the past year's ASP payment rates.

iii. Oral Drugs

We propose to use ASP-based payment, which would be determined based on ASP data that have been calculated consistent with the provisions in 42 CFR part 414, subpart 800, to set the payment rates for the oral product categories when we receive manufacturer-submitted ASP data for these drugs. We believe that using the ASP pricing data for oral OTP drugs currently covered under Part D[64] would facilitate the computation of the estimated costs of these drugs. However, we do not collect ASP pricing information under section 1927(b) of the Act for these drugs. We request public comment on whether manufacturers would be willing to submit ASP pricing data for OTP drugs currently covered under Part D on a voluntary basis.

We also propose to limit the payment amounts for oral drugs to 100 percent of the volume-weighted ASP for a HCPCS code instead of 106 percent of the volume-weighted ASP for a HCPCS code. We believe limiting the add-on will incentivize the use of the most clinically appropriate drug for a given patient. In addition, we understand that many OTPs purchase directly from drug manufacturers, thereby limiting the markup from distribution channels. We propose to use the same version of the quarterly manufacturer-submitted data used for calculating the most recently posted ASP data files in preparing the CY 2020 payment rates for OTPs. Please note that the quarterly ASP Drug Pricing Files include ASP plus 6 percent payment amounts.[65] Accordingly, we would adjust these amounts consistent with our proposal to limit the payment amounts for these drugs to 100 percent of the volume-weighted ASP for a HCPCS code. Proposed payment rates are provided below in this section of this proposed rule. A discussion of the proposed annual payment update methodology is also provided below. We propose to codify the ASP payment methodology for the drug component at § 410.67(d)(2). We solicit public comment on these proposals, as well as on using alternative ASP-based payments to price these drugs, such as a rolling average of the past year's ASP payment rates.

In the event that we do not receive manufacturer-submitted ASP pricing data, we are considering several potential pricing mechanisms to estimate the payment amounts for oral drugs typically paid for under Medicare Part D but that would become OTP drugs paid under Part B when used as part of MAT in an OTP. We are not proposing a specific pricing mechanism for these drugs at this time, but are requesting public comment on the following potential approaches for estimating the acquisition cost and payment amounts for these drugs and on alternative approaches. We will consider the comments received in developing our final policy for determining these drug prices.

Approach 1: The Methodology in Section 1847A of the Act

One approach for estimating the cost of the drugs that are currently covered under Part D and for which ASP data are not available would be to use the methodology in section 1847A of the Act. Please see above for a discussion of the methodology in section 1847A of the Act. Under the methodology in section 1847A of the Act, when ASP data are not available, this option would price drugs using, for example, WAC or invoice pricing.

Approach 2: Medicare's Part D Prescription Drug Plan Finder Data

On January 28, 2005, we issued the ''Medicare Program; Medicare Prescription Drug Benefit'' final rule (70 FR 4194) which implemented the Medicare voluntary prescription drug benefit, as enacted by section 101 of the MMA. Beginning on January 1, 2006, a prescription drug benefit program was available to beneficiaries with much broader drug coverage than was previously provided under Part B to include: Brand-name prescription drugs and biologicals, generic drugs, biosimilars, vaccines, and medical supplies associated with the injection of insulin.[66] This prescription drug benefit is offered to Medicare beneficiaries through Medicare Advantage Drug Plans (MA–PDs) and stand-alone Prescription Drug Plans (PDPs). The prescription drug benefit under Medicare Part D is administered based on the ''negotiated prices'' of covered Part D drugs. Under § 423.100 of the Part D regulations, the negotiated price of a Part D drug equals the amount paid by the Part D sponsor (or its pharmacy benefit manager) to the pharmacy at the point-of-sale for that drug. Typically, these Part D ''negotiated prices'' are based on AWP minus a percentage for brand drugs or either the maximum allowable cost, which is based on proprietary methodologies used to establish the same payment for therapeutically equivalent products marketed by multiple labelers with different AWPs,

[61] See MedPAC Report to the Congress: Medicare and the Health Care Delivery System June 2015, pages 65–72.

[62] Ibid.

[63] See *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/2016ASPFiles.html.*

[64] Please note that methadone is not currently considered a Part D drug when used for MAT. Methadone used for this purpose can be dispensed only through an OTP certified by SAMHSA. However, methadone dispensed for pain may be considered a Part D drug.

[65] See *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/2016ASPFiles.html.*

[66] See section 1860D–2(e) of the Act.

or the Generic Effective Rate, which guarantees aggregate minimum reimbursement (for example, AWP–85 percent). The negotiated price under Part D also includes a dispensing fee (for example, $1–$2), which is added to the cost of the drug.

Many of the beneficiaries who choose to enroll in Part D drug plans must pay premiums, deductibles, and copayments/co-insurance. The Medicare Prescription Drug Plan Finder is an online tool available at *http://www.medicare.gov*. This web tool allows beneficiaries to make informed choices about enrolling in Part D plans by comparing the plans' benefit packages, premiums, formularies, pharmacies, and pricing data. PDPs and MA–PDs are required to submit this information to CMS for posting on the Medicare Drug Plan Finder. The database structure provides the drug pricing and pharmacy network information necessary to accurately communicate plan information in a comparative format. The Medicare Prescription Drug Plan Finder displays information on pharmacies that are contracted to participate in the sponsors' network as either retail or mail order pharmacies.

Another approach for estimating the cost of the drugs that are currently covered under Part D and for which ASP data are not available would be to use data retrieved from the online Medicare Prescription Drug Plan Finder. For example, the Part D drug prices for each drug used by an OTP as part of MAT could be estimated based on a national average price charged by all Part D plans and their network pharmacies. However, the prices listed in the Medicare Prescription Drug Plan Finder generally reflect the prices that are negotiated by larger buying groups, as larger pharmacies often have significant buying power and smaller pharmacies generally contract with a pharmacy services administrative organization (PSAO). As a result, our primary concern with this pricing approach is that such prices may fail to reflect the drug prices that smaller OTP facilities may pay in acquiring these drugs and could therefore disadvantage these facilities. If we were to select this pricing approach for oral drugs for which ASP data are not available, we would anticipate setting the pricing for these drugs using the most recent Medicare Drug Plan Finder data available at the drafting of the CY 2020 PFS final rule. We note that, for the Part B ESRD prospective payment system (PPS) outlier calculation, which provides ESRD facilities with additional payment in situations where the costs for treating patients exceed an established threshold under the ESRD PPS, we chose to adopt the ASP methodology in section 1847A of the Act, and the other pricing methodologies under section 1847A of the Act, as appropriate, when ASP data are not available, to price the renal dialysis drugs and biological products that were or would have been separately billable under Part B prior to implementation of the ESRD PPS,[67] and the national average drug prices based on the Medicare Prescription Drug Plan Finder as the data source for pricing the renal dialysis drugs or biological products that were or would have been separately covered under Part D prior to implementation of the ESRD PPS.[68]

We believe that all of the MAT drugs proposed for inclusion in the OTP benefit that are currently covered under Part D have clinical treatment indications beyond MAT such as for the treatment of pain.[69] These drugs will continue to be covered under Part D for these other indications. Buprenorphine will continue to be covered under Part D for MAT as well. Consequently, Part D pricing information should continue to be available for these drugs and could be used in the computation of payment under the approach discussed above.

Because, by law, methadone used in MAT cannot be dispensed by a pharmacy, it is not currently considered a Part D drug when used for MAT. Methadone used for this purpose can be dispensed only through an OTP certified by SAMHSA. However, methadone dispensed for pain may be considered a Part D drug and can be dispensed by a pharmacy. Accordingly, we also seek comment on the applicability of Part D payment rates for methadone dispensed by a pharmacy to methadone dispensed by an OTP for MAT.

Approach 3: Wholesale Acquisition Cost (WAC)

Another approach for estimating the cost of the oral drugs that we propose to include as part of the bundled payments but for which ASP data are not available would be to use WAC. Section 1847A(c)(6)(B) of the Act defines WAC as the manufacturer's list price for the drug to wholesalers or direct purchasers in the U.S., not including prompt pay or other discounts, rebates, or reductions in price, for the most recent month for which the information is available, as reported in wholesale price guides or other publications of drug pricing data. As noted above in the discussion of Part B drugs, WAC is used as the basis for pricing some Part B drugs; for example, it is used when it is less than ASP in the case of single source drugs (section 1847A(b)(4) of the Act) and in cases where ASP is unavailable during the first quarter of sales (section 1847A(c)(4) of the Act).

Because WAC is the manufacturer's list price to wholesalers, we believe that it is more reflective of the price paid by the end user than the AWP. As a result, we believe that this pricing mechanism would be consistent with pricing that currently occurs for drugs that are separately billable under Part B. However, we have concerns about the fact that WAC does not include prompt pay or other discounts, rebates, or reductions in price. If we select this option to estimate the cost of certain drugs, we would develop pricing using the most recent data files available at the drafting of the CY 2020 PFS final rule.

Approach 4: National Average Drug Acquisition Cost (NADAC)

Another approach for estimating the cost of the oral drugs that we propose to include as part of the bundled payments but for which ASP data are not available would be to use Medicaid's NADAC survey. This survey provides another national drug pricing benchmark. CMS conducts surveys of retail community pharmacy prices, including drug ingredient costs, to develop the NADAC pricing benchmark. The NADAC was designed to create a national benchmark that is reflective of the prices paid by retail community pharmacies to acquire prescription and over-the-counter covered outpatient drugs and is available for consideration by states to assist with their individual pharmacy payment policies.

State Medicaid agencies reimburse pharmacy providers for prescribed covered outpatient drugs dispensed to Medicaid beneficiaries. The reimbursement formula consists of two parts: (1) Drug ingredient costs; and (2) a professional dispensing fee. In a final rule with comment period titled ''Medicaid Program; Covered Outpatient Drugs,'' which appeared in the February 1, 2016 **Federal Register** (81 FR 5169), we revised the methodology that state Medicaid programs use to determine drug ingredient costs, establishing an Actual Acquisition Cost (AAC) based determination, as opposed to a determination based on estimated acquisition costs (EAC). AAC is defined

[67] 82 FR 50742 through 50745.

[68] 75 FR 49142.

[69] For example, while methadone is not covered by Medicare Part D for MAT, methadone dispensed for pain may be considered a Part D drug.

at 42 CFR 447.502 as the agency's determination of the pharmacy providers' actual prices paid to acquire drugs marketed or sold by specific manufacturers. As explained in the Covered Outpatient Drugs final rule with comment period (81 FR 5175), CMS believes shifting from an EAC to an AAC based determination of ingredient costs is more consistent with the dictates of section 1902(a)(30)(A) of the Act. In 2010, a working group within the National Association of State Medicaid Directors (NASMD) recommended the establishment of a single national pricing benchmark based on average drug acquisition costs. Pricing metrics based on actual drug purchase prices provide greater accuracy and transparency in how drug prices are established and are more resistant to manipulation. The NASMD requested that CMS coordinate, develop, and support this benchmark.

Section 1927(f) of the Act provides, in part, that CMS may contract with a vendor to conduct monthly surveys with respect to prices for covered outpatient drugs dispensed by retail community pharmacies. We entered into a contract with Myers & Stauffer, LLC to perform a monthly nationwide retail price survey of retail community pharmacy covered outpatient drug prices (CMS–10241, OMB 0938–1041) and to provide states with weekly updates on pricing files, that is, the NADAC files. The NADAC survey process focuses on drug ingredient costs for retail community pharmacies. The survey collects acquisition costs for covered outpatient drugs purchased by retail pharmacies, which include invoice prices from independent and chain retail community pharmacies. The survey data provide information that CMS uses to assure compliance with federal requirements. We believe NADAC data could be used to set the prices for the oral drugs furnished by OTPs for which ASP data are not available. Survey data on invoice prices provide the closest pricing metric to ASP that we are aware of. However, similar to the other available pricing metrics, we have concerns about the applicability of retail pharmacy prices to the acquisition costs available to OTPs since we have no evidence to suggest that these entities would be able to acquire drugs at a similar price point. If we select this option, we would develop pricing using the most recent data files available at the drafting of the CY 2020 PFS final rule.

Alternative Methadone Pricing: TRICARE

We are also considering an approach for estimating the cost of methadone using the amount calculated by TRICARE. As discussed above in this section of this proposed rule, the TRICARE rates for medications used in OTPs to treat opioid use disorder are spelled out in the 2016 TRICARE final rule (81 FR 61068); in the regulations at § 199.14(a)(2)(ix); and in Chapter 7, Section 5 and Chapter 1, Section 15 of the TRICARE Reimbursement Manual 6010.61–M, April 1, 2015.

In the 2016 TRICARE final rule, DOD established separate payment methodologies for OTPs based on the particular medication being administered for treatment.[70] Based on TRICARE's review of industry billing practices, the initial weekly bundled rate for administration of methadone included a daily drug cost of $3, which is subject to an update factor.[71]

This option would only be applicable for methadone because TRICARE has developed a fee-for-service payment methodology for buprenorphine and naltrexone.[72] In the 2016 TRICARE final rule, the DOD stated that the payments for buprenorphine and naltrexone are more variable in dosage and frequency for both the drug and non-drug services.[73] Accordingly, TRICARE pays for drugs listed on Medicare's Part B ASP files, such as the injectable and implantable versions of buprenorphine using the ASP; drugs not appearing on the Medicare ASP file, such as oral buprenorphine, are priced at the lesser of billed charges or 95 percent of the AWP.[74]

We believe that pricing methadone consistent with the TRICARE payment rate may provide a reasonable payment amount for methadone when ASP data are not available. As DOD noted in the 2016 TRICARE final rule, ''a number of commenters indicated that they believed the rates DOD proposed for OTPs' services are near market rates and are acceptable.'' [75]

We are proposing to codify this proposal to apply an alternative approach for determining the payment rate for oral drugs only if ASP data are not available in § 410.67(d)(2). We request public comment on the potential alternative approaches set forth above for estimating the cost of oral drugs that we propose to include as part of the bundled payments but for which ASP data are not available, including any other alternate sources of data to estimate the cost of these oral MAT drugs. Payment rates based on these different options are set forth in Table 14. We will consider the comments received on these different potential approaches when deciding on the approach that we will use to determine the payment rates for these drugs in the CY 2020 PFS final rule. We also invite public comment on any other potential data sources for estimating the provider acquisition costs of OTP drugs currently paid under either Part B or Part D. As noted previously, we welcome comments on how new drugs with a novel mechanism of action should be priced, and specifically whether pricing for non-opioid agonist and/or antagonist medications should be determined using the same pricing methodology, including the alternatives discussed above, as would be used for medications included in the proposed definition of OUD treatment services.

TABLE 14—ESTIMATED * INITIAL DRUG PAYMENT RATES FOR EACH PRICING APPROACH

Pricing approach (or alternative)	Estimated initial weekly drug payment for methadone	Estimated initial weekly drug payment for oral buprenorphine
Proposal: ASP-Based Payment	ASPs currently not reported	ASPs currently not reported.
Approach 1: The Methodology in Section 1847A of the Act.	$29.61	$117.68.
Approach 2: Medicare's Part D Prescription Drug Plan Finder Data.	22.47	97.65.
Approach 3: WAC	27.93	111.02.
Approach 4: NADAC	11.76	97.02.

TABLE 14—ESTIMATED * INITIAL DRUG PAYMENT RATES FOR EACH PRICING APPROACH—Continued

Pricing approach (or alternative)	Estimated initial weekly drug payment for methadone	Estimated initial weekly drug payment for oral buprenorphine
Alternative Methadone Pricing: TRICARE	22.19	N/A.

* The estimated payment amounts in this table are based on data files posted at the time of the drafting of this proposed rule. We would develop the final pricing for CY 2020 using the most recent data files available at the drafting of the CY 2020 PFS final rule.

(b) Non-Drug Component

To price the non-drug component of the bundled payments, we are proposing to use a crosswalk to the non-drug component of the TRICARE weekly bundled rate for services furnished when a patient is prescribed methadone. As described above, in 2016, TRICARE finalized a weekly bundled rate for administration of methadone that included a daily drug cost of $3, along with a $15 per day cost for non-drug services (that is, the costs related to the intake/assessment, drug dispensing and screening and integrated psychosocial and medical treatment and supportive services). The daily projected per diem cost ($18/day) was converted to a weekly rate of $126 ($18/day × 7 days) (81 FR 61079). TRICARE updates the weekly bundled methadone rate for OTPs annually using the Medicare update factor used for other mental health care services rendered (that is, the Inpatient Prospective Payment System update factor) under TRICARE (81 FR 61079). The updated amount for CY 2019 to $133.15 (of which $22.19 is the methadone cost and the remainder, $110.96, is for the non-drug services).[76] We believe using the TRICARE weekly bundled rate is a reasonable approach to setting the payment rate for the non-drug component of the bundled payments to OTPs, particularly given the time constraints in developing a payment methodology prior to the January 1, 2020 effective date of this new Medicare benefit category. The TRICARE rate is an established national payment rate that was established through notice and comment rulemaking. As a result, OTPs and other interested parties had an opportunity to present information regarding the costs of these services. Furthermore the TRICARE rate describes a generally similar bundle of services to those services that are included in the definition of OUD treatment services in section 1861(jjj)(1) of the Act. We recognize that there are differences in the patient population for TRICARE compared with the Medicare beneficiary population. However, as OTP services have not previously been covered by Medicare, it is not clear what impact, if any, these differences would have on the cost of the services included in the non-drug component of the proposed bundled payments. We are proposing to codify the methodology for determining the payment rate for the non-drug component of the bundled payments using the TRICARE weekly rate for non-drug services at § 410.67(d)(2). As part of this proposal, we would plan to monitor utilization of non-drug services by Medicare beneficiaries and, if needed, would consider in future rulemaking ways we could tailor the TRICARE payment rate for these non-drug services to the Medicare population, including dually eligible beneficiaries.

Because the TRICARE payment rate for the non-drug services included in its weekly bundled rate for methadone includes daily administration of methadone, as part of our proposed approach we would adjust the TRICARE payment rate for non-drug services for most of the other bundled payments to more accurately reflect the cost of administering the other drugs used in MAT. For the oral buprenorphine bundled payment, we propose to retain the same amount as the rate for the methadone bundled payment based on an assumption that this drug is also being dispensed daily. We understand that patients who have stabilized may be given 7–14 day supplies of oral buprenorphine at a time, but for the purposes of developing the proposed rates, we valued this service to include daily drug dispensing to account for cases where daily drug dispensing is occurring. For the injectable drugs (buprenorphine and naltrexone), we propose to subtract from the non-drug component, an amount that is comparable to the dispensing fees paid by several state Medicaid programs ($10.50) for a week of daily dispensing of methadone. This adjustment accounts for the fact that these injectable drugs are not oral drugs that are dispensed daily; we would then instead add the fee that Medicare pays for the administration of an injection (which is currently $16.94 under the CY 2019 non-facility Medicare payment rate for CPT code 96372). We propose to update the amount of this adjustment annually using the same methodology that we are proposing to use to update the non-drug component of the bundled payments.

Similarly, the payment rates for the non-drug component of the codes for the weekly bundled payments for buprenorphine implants would be adjusted to add an amount for insertion and/or removal based on a direct crosswalk to the non-facility payment rates under the Medicare PFS for the insertion, removal, or insertion and removal of these implants, which describe the physician work, practice expense (PE), and malpractice costs associated with these procedures, and to remove the costs of daily drug dispensing (determined based on the dispensing fees paid by several state Medicaid programs for a week of daily dispensing of methadone, currently $10.50). For HCPCS code GXXX5, we would use a crosswalk to the rate for HCPCS code G0516 (*Insertion of non-biodegradable drug delivery implants, 4 or more (services for subdermal rod implant)*); for HCPCS code GXXX6, we would use a crosswalk to the rate for HCPCS code G0517 (*Removal of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)*); and for HCPCS code GXXX7, we would use a crosswalk to the rate for HCPCS code G0518 (*Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)*). The amounts for HCPCS codes G0516, G0517 and G0518 under the CY 2019 non-facility Medicare payment rate are $111.00, $126.86, and $204.70, respectively.

In order to determine the payment rates for the code describing a non-drug bundled payment, HCPCS code GXXX8, we propose to use a crosswalk to the reimbursement rate for the non-drug services included in the TRICARE weekly bundled rate for administration of methadone, adjusted to subtract the cost of methadone dispensing (using an amount that is comparable to the dispensing fees paid by several state Medicaid programs for a week of daily dispensing of methadone, which is currently $10.50).

We propose that the payment rate for the add-on code, HCPCS code GXX19, would be based on 30 minutes of

[76] *https://health.mil/Military-Health-Topics/Business-Support/Rates-and-Reimbursement/MHSUD-Facility-Rates.*

substance use counseling and valued based on a crosswalk to the rates set by state Medicaid programs for similar services.

i. Medication Not Otherwise Specified

We would expect the non-drug component for medication not otherwise specified bundled payments (HCPCS code GXXX9) to be consistent with the pricing methodology for the other bundled payments and therefore, be based on a crosswalk to the TRICARE rate, adjusted for any applicable administration and dispensing fees. For example, for oral medications, we would use the rate for the non-drug services included in the TRICARE methadone bundle, based on an assumption that the drug is also being dispensed daily. For the injectable medications, we would adjust the TRICARE payment rate for non-drug services using the same methodology we are proposing for injectable medications above (to subtract an amount for daily dispensing and add the non-facility Medicare payment rate for administration of the injection). For implantable medications, we would also use the same methodology we propose above, with the same crosswalked non-facility Medicare payment rates (for insertion, removal, and insertion and removal). We welcome comments on all of the proposed pricing methodologies described in this section. As noted above, we also welcome comments on how new drugs with a novel mechanism of action (that is, drugs that are not opioid agonists and/or antagonists) should be priced. We additionally welcome comments on how the price of the non-drug component of such bundled payments should be determined, in particular the dispensing and/or administration fees, including whether the methodology we propose above for determining the payment rate for the non-drug component of an episodes of are that includes a new opioid agonist and antagonist medication (which is based on whether the drug is oral, injectable, or implantable) would be appropriate to use for these new drugs.

(c) Partial Episode of Care

For HCPCS codes GXX10 and GXX11 (codes describing partial episodes for methadone and oral buprenorphine), we propose that the payment rates for the non-drug component would be calculated by taking one half of the payment rate for the non-drug component for the corresponding weekly bundles. We chose one half as the best approximation of the median cost of the services furnished during a partial episode consistent with our proposal above to make a partial episode bundled payment when the majority of services described in a beneficiary's treatment plan are not furnished during a specific episode of care. However, we welcome comment on other methods that could be used to calculate these payment rates. We propose that the payment rates for the drug component of these partial episode bundles would be calculated by taking one half of the payment rate for the drug component of the corresponding weekly bundles.

For HCPCS codes GXX12 and GXX16 (codes describing partial episodes for injectable buprenorphine and naltrexone), we propose that the payment rates for the drug component would be the same as the payment rate for the drug component of the full weekly bundle so that the OTP would be reimbursed for the cost of the drug that is given at the start of the episode. For the non-drug component, we propose that the payment rate would be calculated as follows: The TRICARE non-drug component payment rate ($110.96), adjusted to remove the cost of daily administration of an oral drug ($10.50), then divided by two; that amount would be added to the fee that Medicare pays for the administration of an injection (which is currently $16.94 under the CY 2019 non-facility Medicare payment rate for CPT code 96372).

For HCPCS codes GXX13, GXX14, GXX15 (codes describing partial episodes for the buprenorphine implant insertion, removal, and insertion and removal, respectively) we propose that the payment rates for drug component would be the same as the payment rate for the corresponding weekly bundle. For the non-drug component, we propose that the payment rate would be calculated as follows: The TRICARE non-drug component payment rate ($110.96), adjusted to remove the cost of daily administration of an oral drug ($10.50), then divided by two; that amount would be added to the Medicare non-facility payment rate for the insertion, removal, or insertion and removal of the implants, respectively (based on the non-facility rates for HCPCS codes G0516, G0517, and G0518, which are currently $111.00, $126.86, and $204.70, respectively).

For HCPCS code GXX17 (code describing a non-drug partial episode of care), we propose that the payment rate would be calculated by taking one half of the payment rate for the corresponding weekly bundle.

We propose that the payment rate for the code describing partial episodes for a medication not otherwise specified (HCPCS code GXX18) would be calculated based on whether the medication is oral, injectable or implantable, following the methodology described above. For oral drugs, we would follow the methodology described for HCPCS codes GXX10 and GXX11. For injectable drugs, we would follow the methodology described for HCPCS codes GXX12 and GXX16. For implantable drugs, we would follow the methodology described for HCPCS codes GXX13, GXX14, and GXX15. We welcome comments on how partial episodes of care using new drugs with a novel mechanism of action (that is, non-opioid agonist and/or antagonist treatment medications) should be priced. For example, we could use the same approach described previously for pricing new opioid agonist and antagonist medications not otherwise specified, which is to follow the methodology based on whether the drug is oral, injectable or implantable.

BILLING CODE 4120–01–P

TABLE 15: OTP Code Descriptors and Proposed Approximate Payment Amounts

HCPCS	Descriptor	Drug Component Payment Amount**	Non-Drug Component Payment Amount***	Total Payment Amount
	Full weeks			
GXXX1	Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$22.19	$110.96	$133.15
GXXX2	Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$97.02	$110.96	$207.98
GXXX3	Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$1,580.00	$117.40	$1,697.40
GXXX4	Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$4,792.10	$211.46	$5,003.56
GXXX5	Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$0	$227.32	$227.32
GXXX6	Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$4,792.10	$305.16	$5,097.26
GXXX7	Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$1,164.38	$117.40	$1,281.78
GXXX8	Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	N/A	$100.46	$100.46
GXXX9	Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	-	-	-
	Partial episodes			
GXX10	Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX1.*	$11.10	$55.48	$66.58

HCPCS	Descriptor	Drug Component Payment Amount**	Non-Drug Component Payment Amount***	Total Payment Amount
GXX11	Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX2.*	$48.51	$55.48	$103.99
GXX12	Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX3.*	$1,580.00	$67.17	$1,647.17 *
GXX13	Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode (only to be billed once every 6 months). *Do not report with GXXX4.*	$4,792.10	$161.23	$4,953.33 *
GXX14	Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX5.*	$0	$177.09	$177.09*
GXX15	Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX6.*	$4,792.10	$254.93	$5,047.03 *
GXX16	Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX7.*	$1,164.38	$67.17	$1,231.55 *
GXX17	Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. *Do not report with GXXX8.*	N/A	$50.23	$50.23
GXX18	Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program); partial episode. Do not report with GXXX9.	-	-	-
Intensity Add-on code				
GXX19	Each additional 30 minutes of counseling or therapy in a week of medication assisted treatment, (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	N/A	$26.60	$26.60

* Full drug cost and administration/dispensing fee included.

** Drug pricing subject to change pending additional data. Methadone drug costs are calculated here using TRICARE rates, oral buprenorphine drug costs are calculated here using NADAC data, and the other drug costs are calculated using the ASP data. The estimated payment amounts in this table are based on data files posted at the time of the drafting of this proposed rule. We would develop the final pricing for CY 2020 using the most recent data files available at the drafting of the CY 2020 PFS final rule.

*** The non-drug component of the methadone bundled payment rate (HCPCS code GXXX1) is $110.96 (crosswalked from the TRICARE CY 2019 rate for non-drug services, which is the weekly rate of $133.15 minus the drug cost of $22.19); the non-drug component of the oral buprenorphine bundled payment rate (HCPCS code GXXX2) is also $110.96 (crosswalked from the non-drug component of the methadone bundled payment rate). The non-drug component of both the injectable buprenorphine bundled payment rate (HCPCS code GXXX3) and the injectable naltrexone bundled rate (HCPCS code GXXX7) is $117.40 ($110.96 minus a $10.50 dispensing fee plus a $16.94 administration fee). The non-drug components of the buprenorphine implant bundled payment rates (HCPCS codes GXXX4, GXXX5, and GXXX6 for implant insertion, removal, and insertion and removal, respectively) are $211.46, $227.32, and $305.16, respectively ($110.96 minus a $10.50 dispensing fee plus the corresponding PFS non-facility rate for implant insertion, removal, and insertion and removal, HCPCS codes G0516, G0517, and G0518, which are $111.00, $126.86, and $204.70, respectively). The rate for the no medication bundled payment (HCPCS code GXXX8) is $100.46 ($110.96 minus a $10.50 dispensing fee). As described in further detail above, we are proposing that the codes describing a medication not otherwise specified (HCPCS codes GXXX9 and GXX18) would be priced according to the methodology described above based on whether the medication is oral, injectable or implantable (based on a crosswalk to the TRICARE rate, adjusted for any applicable administration and dispensing fees). The non-drug component of the codes describing partial episodes (HCPCS codes GXX10, GXX11, GXX12, GXX13, GXX14, GXX15, and GXX16) are calculated as described in further detail above, based on a crosswalk to half of the rate for non-drug services included in the TRICARE weekly bundled payment (adjusted to account for administration and dispensing of that drug. Finally, the non-drug component for HCPCS code GXX19 is calculated based on rates set by state Medicaid programs for similar services. All non-drug components of the valuations would be geographically adjusted as discussed in the locality adjustment section of this proposed rule.

BILLING CODE 4120–01–C

(8) Place of Service (POS) Code for Services Furnished at OTPs

We are creating a new POS code specific to OTPs since there are no existing POS codes that specifically describe OTPs. Claims for OTP services would include this place of service code. We note that POS codes are available for use by all payers. We are not proposing to make any differential payment based on the use of this new POS code. Further guidance will be issued regarding the POS code that should be used by OTPs.

c. Duplicative Payments Under Parts B or D

Section 1834(w)(1) of the Act, added by section 2005(c) of the SUPPORT Act, requires the Secretary to ensure, as determined appropriate by the Secretary, that no duplicative payments are made under Part B or Part D for items and services furnished by an OTP. We note that many of the individual items or services provided by OTPs that would be included in the bundled payment rates under our proposal may also be appropriately available to beneficiaries through other Medicare benefits. Although we recognize the potential for significant program integrity concerns when similar items or services are payable under separate Medicare benefits, we also believe that it is important that any efforts to prevent duplicative payments not inadvertently restrict Medicare beneficiaries' access to other Medicare benefits even for the time period they are being treated by an OTP. For example, we believe that a beneficiary receiving counseling or therapy as part of an OTP bundle of services may also be receiving medically reasonable and necessary counseling or therapy as part of a physician's service during the same time period. Similarly, we believe there could be circumstances where Medicare beneficiaries with OUD could receive treatment and/or medication from non-OTP entities that would not result in duplicative payments, presuming that both the OTP and the other entity appropriately furnished separate medically necessary services or items. Consequently, we do not believe that provision of the same kinds of services by both an OTP and a separate provider or supplier would itself constitute a duplicative payment.

We believe that duplicative payments would result from the submission of claims to Medicare leading to payment for drugs furnished to a Medicare beneficiary and the associated dispensing fees on a certain date of service to both an OTP and another provider or supplier under a different benefit. In these circumstances, we would consider only one of the claims to be paid for appropriately. Accordingly, for purposes of implementing section 1834(w)(1) of the Act, we propose to consider payment for medications delivered, administered or dispensed to the beneficiary as part of the OTP bundled payment to be a duplicative payment if delivery, administration or dispensing of the same medications was also separately paid under Medicare Parts B or D. We propose to codify this policy at § 410.67(d)(4). We understand that some OTPs negotiate arrangements whereby community pharmacies supply MAT-related medications to OTPs. If the OTP provides medically necessary MAT-related medications as part of an episode of care, we would expect the OTP to take measures to ensure that there is no claim for payment for these drugs other than as part of the OTP bundled payment. (For example, the MAT drugs billed by an OTP as part of a bundled payment should not be reported to or paid under a Part D plan.) We expect that OTPs will take reasonable steps to ensure that the items and services furnished under their care are not reported or billed under a different Medicare benefit. CMS intends to monitor for duplicative payments, and would take appropriate action as needed when such duplicative payments are identified. Therefore, we are proposing that in cases where a payment for drugs used as part of an OTP's treatment plan is identified as being a duplicative payment because the same costs were paid under a different Medicare benefit, CMS will generally recoup the duplicative payment made to the OTP as the OTP would be in the best position to know whether or not the drug that is included as part of the beneficiary's treatment plan is furnished by the OTP or by another provider or supplier given that the OTP is responsible for managing the beneficiary's overall OUD treatment. We propose to codify this policy at § 410.67(d)(4). CMS notes that this general approach would not preclude CMS or other auditors from conducting appropriate oversight of duplicative payments made to the other provider or suppliers, particularly in cases of fraud and/or abuse.

d. Cost Sharing

Section 2005(c) of the SUPPORT Act amends section 1833(a)(1) of the Act, relating to payment of Part B services, by adding a new subparagraph (CC), which specifies with respect to OUD treatment services furnished by an OTP during an episode of care that the amount paid shall be equal to the amount payable under section 1834(w) of the Act less any copayment required as specified by the Secretary. Section 1834(w) of the Act, which was also added by section 2005(c) of the SUPPORT Act, requires that the Secretary pay an amount that is equal to 100 percent of a bundled payment under this part for OUD treatment services. Given these two provisions, we believe that there is flexibility for CMS to set the copayment amount for OTP services either at zero or at an amount above zero. Therefore, we are proposing to set the copayment at zero for a time-limited duration (for example, for the duration of the national opioid crisis), as we believe this would minimize barriers to patient access to OUD treatment services. Setting the copayment at zero also ensures OTP providers receive the full Medicare payment amount for Medicare beneficiaries if secondary payers are not available or do not pay the copayment, especially for those dually eligible for Medicare and Medicaid.[77] We intend to continue to monitor the opioid crisis in order to determine at what point in the future a copayment may be imposed. At such a time we deem appropriate, we would institute cost sharing through future notice and comment rulemaking. We welcome feedback from the public on our proposal to set the copayment at zero for a time-limited duration, such as for the duration of the national opioid crisis, and any other metrics CMS might consider using to determine when to start requiring a copayment. In developing our proposed approach, we also considered other alternatives, such as setting the copayment at a fixed fee calculated based on 20 percent of the payment rate for the bundle, consistent with the standard copayment requirement for other Part B services, or applying a flat dollar copayment amount similar to TRICARE's copayment; however, we recognize that setting the copayment for OUD services at a non-zero amount could create a barrier to access to treatment for many beneficiaries. We propose to codify the proposed copayment amount of zero at § 410.67(e). We welcome feedback on our proposal to set the copayment amount for OTP services at zero, and on the alternatives considered, including whether we should consider any of these alternatives for CY 2020 or future years.

Separately, we note that the Part B deductible would apply for OUD treatment services, as mandated for all Part B services by section 1833(b) of the Act.

4. Adjustments to Bundled Payment Rates for OUD Treatment Services

The costs of providing OUD treatment services will likely vary over time and depending on the geographic location where the services are furnished. Below we discuss our proposed adjustments to the bundled payment rates to account for these factors.

a. Locality Adjustment

Section 1834(w)(2) of the Act, as added by section 2005(c) of the SUPPORT Act provides that the Secretary may implement the bundled payment for OUD treatment services furnished by OTPs through one or more bundles based on the type of medications, the frequency of services, the scope of services furnished, characteristics of the individuals furnished such services, or other factors as the Secretary determines appropriate. The cost for the provision of OTP treatment services, like many other healthcare services covered by Medicare, will likely vary across the country based upon the differing cost in a given geographic locality. To account for such geographic cost differences in the provision of services, in a number of payment systems, Medicare routinely applies geographic locality adjustments to the payment rates for particular services. As we believe OTP treatment services will also be subject to varying cost based upon the geographic locality where the services are furnished, we propose to apply a geographic locality adjustment to the bundled payment rate for OTP treatment services. Below, we discuss our proposed approach with respect to the drug component (which reflects payment for the drug) and the non-drug component (which reflects payment for all other services furnished to the beneficiary by the OTP, such as drug administration, counseling, toxicology testing, etc.) of the bundled payment.

(1) Drug Component

Because our proposed approaches for pricing the MAT drugs included in the bundles all reflect national pricing, and because there is no geographic adjustment factor applied to the payment of Part B drugs under the ASP methodology, we do not believe that it is necessary to adjust the drug component of the bundled payment rates for OTP services based upon geographic locality. Therefore, we are proposing not to apply a geographic locality adjustment to the drug component of the bundled payment rate for OTP services.

(2) Non-Drug Component

Unlike the national pricing of drugs, the costs for the services included in the non-drug component of the OTP bundled payment for OUD treatments are not constant across all geographic localities. For example, OTPs' costs for rent or employee wages could vary significantly across different localities and could potentially result in disparate costs for the services included in the non-drug component of OUD treatment services. Because the costs of furnishing the services included in the non-drug component of the OTP bundled payment for OUD treatment services will vary based upon the geographic locality in which the services are provided, we believe it would be appropriate to apply a geographic locality adjustment to the non-drug component of the bundled payments. We believe that the geographic variation in cost of the non-drug services provided by OTPs will be similar to the geographic variation in the cost of services furnished in physician offices. Therefore, to account for the differential costs of OUD treatment services across the country, we are proposing to adjust the non-drug component of the bundled payment rates for OUD treatment services using an approach similar to the established methodology used to geographically adjust payments under the PFS based upon the location where the service is furnished. The PFS currently provides for an adjustment to the payment for PFS services based upon the fee schedule area in which the service is provided through the use of Geographic Practice Cost Indices (GPCIs), which measure the relative cost differences among localities compared to the national average for each of the

[77] For those dually eligible individuals in the Qualified Medicare Beneficiary program (7.7 million of the 12 million dually eligible individuals in 2017), state Medicaid programs cover the Medicare Part A and B deductible and coinsurance. However, section 4714 of the Balanced Budget Act of 1997 (Pub. L. 105–33) provides discretion for states to pay Medicare cost-sharing only if the Medicaid payment rate for the service is above the Medicare paid amount for the service. Since most states opt for this discretion, and most Medicaid rates are lower than Medicare's, states often do not pay the provider for the Medicare cost-sharing amount. Providers are further prohibited from collecting the Medicare cost-sharing amount from the beneficiary, effectively having to take a discount compared to the amount received for other Medicare beneficiaries.

three fee schedule components (work, PE, and malpractice).

Although we are proposing to adjust the non-drug component of the OUD treatment services using an approach similar to the established methodology used to adjust PFS payment for geographic locality, because GPCIs provide for the application of geographic locality adjustments to the three distinct components of PFS services, and the OTP bundled payment is a flat rate payment for all OUD treatment services furnished during an episode of care, a single factor would be required to apply the geographic locality adjustment to the non-drug component of the OTP bundled payment rate. Therefore, to apply a geographic locality adjustment to the non-drug component of the OTP bundled payment for OUD treatment services through a single factor, we are proposing to use the Geographic Adjustment Factor (GAF) at § 414.26. Specifically, we are proposing to use the GAF to adjust the payment for the non-drug component of the OTP bundled payment to reflect the costs of furnishing the non-drug component of OUD treatment services in each of the PFS fee schedule areas. The GAF is calculated using the GPCIs under the PFS, and is used to account for cost differences in furnishing physicians' services in differing geographic localities. The GAF is calculated for each fee schedule area as the weighted composite of all three GPCIs (work, PE, and malpractice) for that given locality using the national GPCI cost share weights. In developing this proposal, we also considered geographically adjusting the payment for the non-drug component of the OTP bundled payment using only the PE GPCI value for each fee schedule area. However, because the the non-drug component of OUD treatment services is comprised of work, PE, and malpractice expenses, we ultimately decided to propose using the GAF as we believe the weighted composite of all three GPCIs reflected in the GAF would be the more appropriate geographic adjustment factor to reflect geographic variations in the cost of furnishing these services.

The GAF, which is determined under § 414.26, is further discussed earlier in section II.D.1. of this proposed rule and the specific GAF values for each payment locality are posted in Addendum D to this proposed rule. In developing the proposed geographic locality adjustment for the non-drug component of the OUD treatment services payment rate, we also considered other potential locality adjustments, such as the Inpatient Prospective Payment System (IPPS) hospital wage index. However, we have opted to propose using the GAF as we believe the services provided in an OTP more closely resemble the services provided at a physician office than the services provided in other settings, such as inpatient hospitals. We propose to codify using the GAF to adjust the non-drug component of the OTP bundled payments to reflect the cost differences in furnishing these services in differing geographic localities at § 410.67(d)(3)(ii). We invite public comment on our proposal to adjust the non-drug component of the OTP bundled payments for geographic variations in the costs of furnishing OUD treatment services using the GAF. We also welcome comments on any factors, other than the GAF, that could be used to make this payment adjustment.

Additionally, we note that the majority of OTPs operate in urban localities. In light of this fact, we are interested in receiving information on whether rural areas have appropriate access to treatment for OUD. We are particularly interested in any potential limitations on access to care for OUD in rural areas and whether there are additional adjustments to the proposed bundled payments that should be made to account for the costs incurred by OTPs in furnishing OUD treatment services in rural areas. We invite public comment on this issue and potential solutions we could consider adopting to address this potential issue through future rulemaking.

b. Annual Update

Section 1834(w)(3) of the Act, as added by section 2005(c) of the SUPPORT Act, requires that the Secretary provide an update each year to the OTP bundled payment rates. To fulfill this statutory requirement, we are proposing to apply a blended annual update, comprised of distinct updates for the drug and non-drug components of the bundled payment rates, to account for the differing rate of growth in the prices of drugs relative to other services. We propose that this blended annual update for the OTP bundled payment rates would first apply for determining the CY 2021 OTP bundled payment rates. The specific details of the proposed updates for the drug and non-drug components respectively are discussed in this section.

(1) Drug Component

As stated above, we are proposing to establish the pricing of the drug component of the OTP bundled payment rates for OUD treatment services based on CMS pricing mechanisms currently in place. To recognize the potential change in costs of the drugs used in MAT from year to year and to fulfill the requirement to provide an annual update to the OTP bundled payment rates, we are proposing to update the payment for the drug component based upon the changes in drug costs reported under the pricing mechanism used to establish the pricing of the drug component of the applicable bundled payment rate, as discussed earlier. As an example, if we were to finalize our proposal to price the drug component of the bundled payment rate for episodes of care that include injectable and implantable drugs generally covered and paid under Medicare Part B using ASP data, the pricing of the drug component for these OTP bundled payments, would be updated using the most recently available ASP data at the time of ratesetting for the applicable calendar year. Similarly, if we finalize our proposal to price the drug component of the bundled payment rate for episodes of care that include oral drugs using ASP data, if such data are available, we would also update the pricing of the drug component using the most recently available ASP data at the time of ratesetting for the applicable calendar year. Previously, we also discussed a number of alternative data sources that could be used to price oral drugs in the drug component of OTP bundled payments in cases when we do not receive manufacturer-submitted ASP pricing data. As an example, if we were to use NADAC data as discussed as one of the alternatives, to determine the payment for the drug component of the bundled payment for oral drugs in cases when we do not have manufacturer-submitted ASP pricing data, this payment rate would also be updated using the most recently available NADAC data at the time of ratesetting for the applicable calendar year. We propose to codify this methodology for determining the annual update to the payment rate for the drug component at § 410.67(d)(3)(i).

In developing the proposal to annually update the pricing of the drug component of the OUD treatment services payment rate, we also considered other methodologies, including applying a single uniform update factor to the drug and non-drug components of the proposed payment rates. We ultimately determined not to propose the use of a single uniform update factor, because we believe that it is important to apply an annual update to the payment rates that recognizes the differing rate of growth of drug costs

compared to the rate of growth in the cost of the other services. In addition, we also considered annually updating the pricing of the drug component of the OUD treatment services payment rate via an established update factor such as the Producer Price Index (PPI) for chemicals and allied products, analgesics (WPU06380202). The PPI for chemicals and allied products, analgesics is a subset of the PPI produced by the Bureau of Labor Statistics, which measures the average change over time in the selling prices received by domestic producers for their output. Ultimately we decided against updating the pricing of the drug component of the OUD treatment services payment rate via an established update factor such as the PPI in favor of our proposed approach because we believe the proposed approach updated the pricing of the drug component of the OUD treatment services payment rate in the manner most familiar to stakeholders. We invite public comment on our proposed approach to updating the drug component of the bundled payment rates. We also seek comment on possible alternate methodologies for updating the drug component of the payment rate for OUD treatment services, such as use of the PPI for chemicals and allied products, analgesics.

(2) Non-Drug Component

To account for the potential changing costs of the services included in the non-drug component of the bundled payment rates for OUD treatment services, we are proposing to update the non-drug component of the bundled payment for OUD treatment services based upon the Medicare Economic Index (MEI). The MEI is defined in section 1842(i)(3) of the Act and the methodology for computing the MEI is described in § 405.504(d). The MEI is used to update the payment rates for physician services under section 1842(b)(3) of the Act, which states that prevailing charge levels beginning after June 30, 1973, may not exceed the level from the previous year except to the extent that the Secretary finds, on the basis of appropriate economic index data, that such a higher level is justified by year-to-year economic changes. The MEI is a fixed-weight input price index that reflects the physicians' own time and the physicians' practice expenses, with an adjustment for the change in economy-wide, private nonfarm business multifactor productivity. The MEI was last revised in the CY 2014 PFS final rule with comment period (78 FR 74264). In developing the proposed update factor for the non-drug component of the OUD treatment services payment rate, we considered other potential update factors, such as the Bureau of Labor Statistics Consumer Price Index for All Items for Urban Consumers (Bureau of Labor Statistics #CUUR0000SA0 (*https://www.bls.gov/cpi/data.htm*) and the IPPS hospital market basket reduced by the multifactor productivity adjustment. The Consumer Price Index for All Items (CPI–U) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. However, we concluded that a healthcare-specific update factor, such as the MEI, would be more appropriate for OTPs than the CPI–U, which measures general inflation, as the MEI would more accurately reflect the change in the prices of goods and services included in the non-drug component of the OTP bundled payments.

Similarly, we believe the MEI would be more appropriate than the IPPS market basket to update the non-drug component of the bundled payment rates as the services provided by an OTP more closely resemble the services provided at a physician office than the services provided by an inpatient hospital. Accordingly, we propose to update the payment amount for the non-drug component of each of the bundled payment rates for OUD treatment services furnished by OTPs based upon the most recently available historical annual growth in the MEI available at the time of rulemaking. We propose to codify this proposal at § 410.67(d)(3)(iii). We invite public comment on this proposal.

H. Bundled Payments Under the PFS for Substance Use Disorders

1. Background and Proposal

In the CY 2019 PFS proposed rule (83 FR 35730), we solicited comment on creating a bundled episode of care payment for management and counseling treatment for substance use disorders. We received approximately 50 comments on this topic, most of which were supportive of creating a separate bundled payment for these services. Some commenters recommended focusing the bundle on services related to medication assisted treatment (MAT) used in treatment for opioid use disorder (OUD). Several commenters also recommended that we establish higher payment amounts for patients with more complex needs who require more intensive services and management, and also expressed concern that an episode of care that limited the duration of treatment would not be conducive to treating OUD, given the chronic nature of this disorder. Other commenters recommended that we establish separate bundled payments for treatment of substance use disorders that does, and does not, involve MAT.

In response to the public comments, we are proposing to establish bundled payments for the overall treatment of OUD, including management, care coordination, psychotherapy, and counseling activities. We note that, if a patient's treatment involves MAT, this proposed bundled payment would not include payment for the medication itself. Billing and payment for medications under Medicare Part B or Part D would remain unchanged. Additionally, payment for medically necessary toxicology testing would not be included in the proposed OUD bundle, and would continue to be billed separately under the Clinical Lab Fee Schedule. We are also proposing in this proposed rule to implement the new Medicare Part B benefit added by section 2005 of the SUPPORT Act for coverage of certain services furnished by Opioid Treatment Programs (OTPs) beginning in CY 2020. We believe the proposed bundled payment under the PFS for OUD treatment described below will create an avenue for physicians and other health professionals to bill for a bundle of services that is similar to the new bundled OUD treatment services benefit, but not furnished by an OTP. By creating a separate bundled payment for these services under the PFS, we hope to incentivize increased provision of counseling and care coordination for patients with OUD in the office setting, thereby expanding access to OUD care.

To implement this new bundled payment, we are proposing to create two HCPCS G-codes to describe monthly bundles of services that include overall management, care coordination, individual and group psychotherapy and counseling for office-based OUD treatment. Although we considered proposing weekly-reported codes to describe a bundle of services that would align with the proposed OTP bundle, we believe that monthly-reported codes will better align with the practice and billing of other types of care management services furnished in office settings and billed under the PFS (for example, behavioral health integration (BHI) services). We believe monthly-reported codes would be less administratively burdensome for practitioners, and more likely to be consistent with care management and prescribing patterns in the office setting (as compared with an OTP) given the increased use of long-acting MAT drugs (such as injectable naltrexone or

implanted buprenorphine) in the office setting compared to the OTP setting. Based on feedback we received through the comment solicitation, we are proposing to create a code to describe the initial month of treatment, which would include intake activities and development of a treatment plan, as well as assessments to aid in development of the treatment plan in addition to care coordination, individual therapy, group therapy, and counseling; a code to describe subsequent months of treatment including care coordination, individual therapy, group therapy, and counseling; and an add-on code that could be billed in circumstances when effective treatment requires additional resources for a particular patient that substantially exceed the resources included in the base codes. In other words, the add-on code would address extraordinary circumstances that are not contemplated by the bundled code. We acknowledge that the course of treatment for OUD is variable, and in some instances, the first several months of treatment may be more resource intensive. We welcome comments on whether we should consider creating a separately billable code or codes to describe additional resources involved in furnishing OUD treatment-related services after the first month, for example, when substantial revisions to the treatment plan are needed, and what resource inputs we might consider in setting values for such codes.

We believe that, in general, bundled payments create incentives to provide efficient care by mitigating incentives tied to volume of services furnished, and that these incentives can be undermined by creating separate billing mechanisms to account for higher resource costs for particular patients. However, we share some of the concerns raised by commenters that an OUD bundle should not inadvertently limit the appropriate amount of OUD care furnished to patients with varying medical needs. In consideration of this concern, we are proposing to create an add-on code to make appropriate payment for additional resource costs in order to mitigate the risks that the bundled OUD payment might limit clinically-indicated patient care for patients that require significantly more care than is in the range of what is typical for the kinds of care described by the base codes. However, we are also interested in comments regarding ways we might better stratify the coding for OUD treatment to reflect the varying needs of patients (based on complexity or frequency of services, for example) while maintaining the full advantage of the bundled payment, including increased efficiency and flexibility in furnishing care.

We anticipate that these services would often be billed by addiction specialty practitioners, but note that these codes are not limited to any particular physician or non-physician practitioner specialty. Additionally, unlike the codes that describe care furnished using the psychiatric collaborative care model (CPT codes 99492, 99493, and 99494), which require consultation with a psychiatric consultant, we are not proposing to require consultation with a specialist as a condition of payment for these codes.

The codes and descriptors for the proposed services are:

- HCPCS code GYYY1: *Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month.*
- HCPCS code GYYY2: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*
- HCPCS code GYYY3: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

For the purposes of valuation for HCPCS codes GYYY1 and GYYY2, we are assuming two individual psychotherapy sessions per month and four group psychotherapy sessions per month; however, we understand that the number of therapy and counseling sessions furnished per month will vary among patients and also fluctuate over time based on the individual patient's needs. Consistent with the methodology for pricing other services under the PFS, HCPCS codes GYYY1, GYYY2, and GYYY3 are valued based on what we believe to be a typical case, and we understand that based on variability in patient needs, some patients will require more resources, and some fewer. In order to maintain the advantages inherent in developing a payment bundle, we are proposing that the add-on code (HCPCS code GYYY3) can only be billed when the total time spent by the billing professional and the clinical staff furnishing the OUD treatment services described by the base code exceeds double the minimum amount of service time required to bill the base code for the month. We believe it is appropriate to limit billing of the add-on code to situations where medically necessary OUD treatment services for a particular patient exceed twice the minimum service time for the base code because, as noted above, the add-on code is intended to address extraordinary situations where effective treatment requires additional resources that substantially exceed the resources included in the base codes. For example, the needs of a particular patient in a month may be unusually acute, well beyond the needs of the typical patient; or there may be some months when psychosocial stressors arise that were unforeseen at the time the treatment plan was developed, but warrant additional or more intensive therapy services for the patient. We are proposing that when the time requirement is met, HCPCS code GYYY3 could be billed as an add-on code during the initial month or subsequent months of OUD treatment. Practitioners should document the medical necessity for the use of the add-on code in the patient's medical record. We welcome comments on this proposal.

We are proposing to value HCPCS codes GYYY1, GYYY2, and GYYY3 using a building block methodology that sums the work RVUs and direct PE inputs from codes that describe the component services we believe would be typical, consistent with the approach we have previously used in valuing monthly care management services that include face-to-face services within the payment. For HCPCS code GYYY1, we developed proposed inputs using a crosswalk to CPT code 99492 (*Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: Outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional; initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan; review by the psychiatric consultant with modifications of the plan if recommended; entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric*

consultant; and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.), which is assigned a work RVU of 1.70, plus CPT code 90832 (*Psychotherapy, 30 minutes with patient*), which is assigned a work RVU of 1.50 (assuming two over the course of the month), and CPT code 90853 (*Group psychotherapy (other than of a multiple-family group)*), which is assigned a work RVU of 0.59 (assuming four over the course of a month), for a work RVU of 7.06. The required minimum number of minutes described in HCPCS code GYYY1 is also based on a crosswalk to CPT codes 99492. Additionally, for HCPCS code GYYY1, we are proposing to use a crosswalk to the direct PE inputs associated with CPT code 99492, CPT code 90832 (times two), and CPT code 90853 (times four). We believe that the work and practice expense described by these crosswalk codes is analogous to the services described in HCPCS code GYYY1 because HCPCS code GYYY1 includes similar care coordination activities as described in CPT code 99492 and bundles in the psychotherapy services described in CPT codes 90832 and 90853.

We are proposing to value HCPCS code GYYY2 using a crosswalk to CPT code 99493 (*Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: Tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant; ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers; additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant; provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies; monitoring of patient outcomes using validated rating scales; and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment*), which is assigned a work RVU of 1.53, plus CPT code 90832, which is assigned a work RVU of 1.50 (assuming two over the course of the month), and CPT code 90853, which is assigned a work RVU of 0.59 (assuming four over the course of a month), for a work RVU of 6.89. The required minimum number of minutes described in HCPCS code GYYY2 is also based on a crosswalk to CPT codes 99493. For HCPCS code GYYY2, we are proposing to use a crosswalk to the direct PE inputs associated with CPT code 99493, CPT code 90832 (times two), and CPT code 90853 (times four). We believe that the work and practice expense described by these crosswalk codes is analogous to the services described in HCPCS code GYYY2 because HCPCS code GYYY2 includes similar care coordination activities as described in CPT code 99493 and bundles in the psychotherapy services described in CPT codes 90832 and 90853.

We are proposing to value HCPCS code GYYY3 using a crosswalk to CPT code 99494 (*Initial or subsequent psychiatric collaborative care management, each additional 30 minutes in a calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional (List separately in addition to code for primary procedure)*), which is assigned a work RVU of 0.82. The required minimum number of minutes described in HCPCS code GYYY2 is also based on a crosswalk to CPT codes 99493. For HCPCS code GYYY3, we are proposing to use a crosswalk to the direct PE inputs associated with CPT code 99494. We believe that the work and practice expense described by this crosswalk code is analogous to the services described in HCPCS code GYYY3 because HCPCS code GYYY3 includes similar care coordination activities as described in CPT code 99494.

For additional details on the proposed direct PE inputs for HCPCS codes GYYY1–GYYY3, *see* Table 22.

We understand that many beneficiaries with OUD have comorbidities and may require medically-necessary psychotherapy services for other behavioral health conditions. In order to avoid duplicative billing, we are proposing that, when furnished to treat OUD, CPT codes 90832, 90834, 90837, and 90853 may not be reported by the same practitioner for the same beneficiary in the same month as HCPCS codes GYYY1, GYYY2, and GYYY3. We welcome comments on this proposal.

We are proposing that practitioners reporting the OUD bundle must furnish a separately reportable initiating visit in association with the onset of OUD treatment, since the bundle requires a level of care coordination that cannot be effective without appropriate evaluation of the patient's needs. This is similar to the requirements for chronic care management (CCM) services (CPT codes 99487, 99489, 99490, and 99491) and BHI services (CPT codes 99484, 99492, 99493, and 99494) finalized in the CY 2017 PFS final rule (81 FR 80239) The initiating visit would establish the beneficiary's relationship with the billing practitioner, ensure the billing practitioner assesses the beneficiary to determine clinical appropriateness of MAT in cases where MAT is being furnished, and provide an opportunity to obtain beneficiary consent to receive care management services (as discussed further below). We propose that the same services that can serve as the initiating visit for CCM services and BHI services can serve as the initiating visit for the proposed services described by HCPCS codes GYYY1–GYYY3. For new patients or patients not seen by the practitioner within a year prior to the commencement of CCM services and BHI services, the billing practitioner must initiate the service during a ''comprehensive'' E/M visit (levels 2 through 5 E/M visits), annual wellness visit (AWV) or initial preventive physical exam (IPPE). The face-to-face visit included in transitional care management (TCM) services (CPT codes 99495 and 99496) also qualifies as a ''comprehensive'' visit for CCM and BHI initiation. We propose that these visits could similarly serve as the initiating visit for OUD services.

We are proposing that the counseling, therapy, and care coordination described in the proposed OUD treatment codes could be provided by professionals who are qualified to provide the services under state law and within their scope of practice ''incident to'' the services of the billing physician or other practitioner. We are also proposing that the billing clinician would manage the patient's overall care, as well as supervise any other individuals participating in the treatment, similar to the structure of the BHI codes describing the psychiatric collaborative care model finalized in the CY 2017 PFS final rule (81 FR 80229), in which services are reported by a treating physician or other qualified health care professional and include the services of the treating physician or other qualified health care professional,

as well as the services of other professionals who furnish services incident to the services of the treating physician or other qualified health care professional. Additionally, we are proposing to add these codes to the list of designated care management services for which we allow general supervision of the non-face-to-face portion of the required services. Consistent with policies for other separately billable care management services under the PFS, because these proposed OUD treatment bundles include non-face-to-face care management components, we are proposing that the billing practitioner or clinical staff must document in the beneficiary's medical record that they obtained the beneficiary's consent to receive the services, and that, as part of the consent, they informed the beneficiary that there is cost sharing associated with these services, including potential deductible and coinsurance amounts, for both in-person and non-face-to-face services that are provided.

We are also proposing to allow any of the individual therapy, group therapy and counseling services included in HCPCS codes GYYY1, GYYY2, and GYYY3 to be furnished via telehealth, as clinically appropriate, in order to increase access to care for beneficiaries. As discussed in section II.F. of this proposed rule regarding Telehealth Services, like certain other non-face-to-face PFS services, the components of HCPCS codes GYYY1 through GYYY3 describing care coordination are commonly furnished remotely using telecommunications technology, and do not require the patient to be present in-person with the practitioner when they are furnished. As such, these services are not considered telehealth services for purposes of Medicare, and we do not need to consider whether the non-face-to-face aspects of HCPCS codes GYYY1 through GYYY3 are similar to other telehealth services. If the non-face-to-face components of HCPCS codes GYYY1 through GYYY3 were separately billable, they would not need to be on the Medicare telehealth list to be covered and paid in the same way as services delivered without the use of telecommunications technology.

Section 2001(a) of the SUPPORT Act amended section 1834(m) of the Act, adding a new paragraph (7) that removes the geographic limitations for telehealth services furnished on or after July 1, 2019, to an individual with a substance use disorder (SUD) diagnosis for purposes of treatment of such disorder or co-occurring mental health disorder. The new paragraph at section 1834(m)(7) of the Act also allows telehealth services for treatment of a diagnosed SUD or co-occurring mental health disorder to be furnished to individuals at any telehealth originating site (other than a renal dialysis facility), including in a patient's home. As discussed in section II.F. of this proposed rule, Telehealth Services, we are proposing to add HCPCS codes GYYY1, GYYY2, and GYYY3 to the list of Medicare Telehealth services. Because certain required services (such as individual psychotherapy or group psychotherapy services) that are included in the proposed OUD bundled payment codes would be furnished to treat a diagnosed SUD, and would ordinarily require a face-to-face encounter, they could be furnished more broadly as telehealth services as permitted under section 1834(m)(7) of the Act.

For these proposed services described above (HCPCS codes GYYY1, GYYY2, and GYYY3), we seek comment on how these potential codes, descriptors, and payment rates align with state Medicaid coding and payment rates for the purposes of state payment of cost sharing for Medicare-Medicaid dually eligible individuals. Additionally, we understand that treatment for OUD can vary, and that MAT alone has demonstrated efficacy. In cases where a medication such as buprenorphine or naltrexone is used to treat OUD alone, without therapy or counseling, we note that existing applicable codes can be used to furnishing and bill for that care (for example, using E/M visits, in lieu of billing the bundled OUD codes proposed here).

As discussed in section II.G. of this proposed rule, Medicare Coverage for Certain Services Furnished by Opioid Treatment Programs, we are proposing to set the copayment at zero for OUD services furnished by an OTP, given the flexibility in section 1834(w)(1) of the Act for us to set the copayment amount for OTP services either at zero or at an amount above zero. We note that we do not have the statutory authority to eliminate the deductible and coinsurance requirements for the bundled OUD treatment services under the PFS. We acknowledge the potential impact of coinsurance on patient health care decisions and intend to monitor its impact if these proposals were to be finalized.

Finally, we recognize that historically, the CPT Editorial Panel has frequently created CPT codes describing services that we originally established using G-codes and adopted them through the CPT Editorial Panel process. We note that we would consider new using any available CPT coding to describe services similar to those described here in future rulemaking, as early as CY 2021. We would consider and adopt any such CPT codes through subsequent rulemaking.

Additionally, we understand that in some cases, OUD can first become apparent to practitioners in the emergency department setting. We recognize that there is not specific coding that describes diagnosis of OUD or the initiation of, or referral for, MAT in the emergency department setting. We are seeking comment on the use of MAT in the emergency department setting, including initiation of MAT and the potential for either referral or follow-up care, as well as the potential for administration of long-acting MAT agents in this setting, in order to better understand typical practice patterns to help inform whether we should consider making separate payment for such services in future rulemaking. We welcome feedback from stakeholders and the public on other potential bundles describing services for other substance use disorders for our consideration in future rulemaking.

2. Rural Health Clinics (RHCs) and Federally-Qualified Health Centers (FQHCs)

In the CY 2018 PFS final rule (82 FR 53169 through 53180), we established payment for General Care Management (CCM) services using HCPCS G0511 which is an RHC and FQHC-specific G code for at least 20 minutes of CCM, complex CCM, or general behavioral health services. Payment for this code is currently set at the average of the non-facility, non-geographically adjusted payment rates for CPT codes 99490, 99487, 99491, and 99484. The types of chronic conditions that are eligible for care management services include mental health or behavioral health conditions, including substance use disorders.

In the CY 2018 PFS final rule with comment period (82 FR 53169 through 53180), we also established payment for psychiatric Collaborative Care Services (CoCM) using HCPCS code G0512, which is an RHC and FQHC specific G-code for at least 70 minutes in the first calendar month, and at least 60 minutes in subsequent calendar months of psychiatric CoCM services. Payment for this code is set at the average of the non-facility, non-geographically adjusted rates for CPT codes 99492 and 99493. The psychiatric CoCM model of care may be used to treat patients with any behavioral health condition that is being treated by the billing practitioner, including substance use disorders.

RHCs and FQHCs can also bill for individual psychotherapy services using CPT codes 90791, 90792, 90832, 90834, 90837, 90839, or 90845, which are billable visits under the RHC all-inclusive rate (AIR) and FQHC Prospective Payment System (PPS) when furnished by an RHC or FQHC practitioner. If a qualified mental health service is furnished on the same day as a qualified primary care service, the RHC or FQHC can bill for 2 visits.

RHCs and FQHCs are engaged primarily in providing services that are furnished typically in a physician's office or an outpatient clinic. As a result of the proposed bundled payment under the PFS for OUD treatment furnished by physicians, we reviewed the applicability of RHCs and FQHCs furnishing and billing for similar services. Specifically, we considered establishing a new RHC and FQHC specific G code for OUD treatment with the payment rate set at the average of the non-facility, non-geographically adjusted payment rates for GYYY1 and GYYY2, beginning on January 1, 2020. The requirements to bill the services would be similar to the requirements under the PFS for GYYY1 and GYYY2, including that an initiating visit with a primary care practitioner must occur within one year before OUD services begin, and that consent be obtained before services are furnished.

However, because RHCs and FQHCs that choose to furnish OUD services can continue to report these individual codes when treating OUD, and can also offer their patients comprehensive care coordination services using HCPCS codes G0511 and G0512, we do not believe that adding a new and separate code to report a bundle of OUD services is necessary. Therefore, we are not proposing to add a new G code for a bundle of OUD service.

I. Physician Supervision for Physician Assistant (PA) Services

1. Background

Section 4072(e) of the Omnibus Budget Reconciliation Act of 1986 (Pub. L. 99–509, October 21, 1986), added section 1861(s)(2)(K)(i) of the Act to establish a benefit for services furnished by a physician assistant (PA) under the supervision of a physician. We have interpreted this physician supervision requirement in the regulation at § 410.74(a)(2)(iv) to require PA services to be furnished under the general supervision of a physician. This general supervision requirement was based upon another longstanding regulation at § 410.32(b)(3)(i) that defines three levels of supervision for diagnostic tests, which are general, direct and personal supervision. Of these three supervision levels, general supervision is the most lenient. Specifically, the general supervision requirement means that PA services must be furnished under a physician's overall direction and control, but the physician's presence is not required during the performance of PA services.

In the CY 2018 PFS proposed rule (82 FR 34172 through 34173), we published a request for information (RFI) on CMS flexibilities and efficiencies. In response to this RFI, commenters including PA stakeholders informed us about recent changes in the practice of medicine for PAs, particularly regarding physician supervision. These commenters also reached out separately to CMS with their concerns. They stated that PAs are now practicing more autonomously, like nurse practitioners (NPs) and clinical nurse specialists (CNSs), as members of medical teams that often consist of physicians, nonphysician practitioners and other allied health professionals. This changed approach to the delivery of health care services involving PAs has resulted in changes to scope of practice laws for PAs regarding physician supervision across some states. According to these commenters, some states have already relaxed their requirements for PAs related to physician supervision, some states have made changes and are now silent about their physician supervision requirements, while other states have not yet changed their PA scope of practice in terms of their physician supervision requirements. Overall, these commenters believe that as states continue to make changes to their physician supervision requirements for PAs, the Medicare requirement for general supervision of PA services may become increasingly out of step with current medical practice, imposing a more stringent standard than state laws governing physician supervision of PA services. Furthermore, as currently defined, stakeholders have suggested that the supervision requirement is often misinterpreted or misunderstood in a manner that restricts PAs' ability to practice to the full extent of their education and expertise. The stakeholders have suggested that the current regulatory definition of physician supervision as it applies to PAs could inappropriately restrict the practice of PAs in delivering their professional services to the Medicare population.

We note that we have understood our current policy to require general physician supervision for PA services to fulfill the statutory physician supervision requirement; and we believe that general physician supervision gives PAs flexibility to furnish their professional services without the need for a physician's physical presence or availability. Nonetheless, we appreciate the concerns articulated by stakeholders. To more fully understand the current landscape for medical practice involving PA services and how the current regulatory definition may be problematic, we invite public comments on specific examples of changes in state law and state scope of practice rules that enable PAs to practice more broadly such that those rules are in tension with the Medicare requirement for general physician supervision of PA services that has been in place since the inception of the PA benefit category under Medicare law.

Given the commenters' understanding of ongoing changes underway to the state scope of practice laws regarding physician supervision of PA services, commenters on our CY 2018 RFI have requested that CMS reconsider its interpretation of the statutory requirement that PA services must be furnished under the supervision of a physician to allow PAs to operate similarly to NPs and CNSs, who are required by section 1861(s)(2)(K)(ii) of the Act to furnish their services ''in collaboration'' with a physician. In general, we have interpreted collaboration for this purpose at §§ 410.75(c)(3) and 410.76(c)(3) of our regulations to mean a process in which an NP or CNS (respectively) works with one or more physicians to deliver health care services within the scope of the practitioner's expertise, with medical direction and appropriate supervision as provided by state law in which the services are performed. The commenters stated that allowing PA services to be furnished using such a collaborative process would offer PAs the flexibility necessary to deliver services more effectively under today's health care system in accordance with the scope of practice in the state(s) where they practice, rather than being limited by the system that was in place when PA services were first covered under Medicare Part B over 30 years ago.

2. Proposal

After considering the comments we received on the RFI, as well as information we received regarding the scope of practice laws in some states regarding supervision requirements for PAs, we are proposing to revise the regulation at § 410.74 that establishes physician supervision requirements for PAs. Specifically, we are proposing to

revise § 410.74(a)(2) to provide that the statutory physician supervision requirement for PA services at section 1861(s)(2)(K)(i) of the Act would be met when a PA furnishes their services in accordance with state law and state scope of practice rules for PAs in the state in which the services are furnished, with medical direction and appropriate supervision as provided by state law in which the services are performed. In the absence of state law governing physician supervision of PA services, the physician supervision required by Medicare for PA services would be evidenced by documentation in the medical record of the PA's approach to working with physicians in furnishing their services. Consistent with current rules, such documentation would need to be available to CMS, upon request. This proposed change would substantially align the regulation on physician supervision for PA services at § 410.74(a)(2) with our current regulations on physician collaboration for NP and CNS services at §§ 410.75(c)(3) and 410.76(c)(3). We continue to engage with key stakeholders on this issue and receive information on the expanded role of nonphysician practitioners as members of the medical team. As we are informed about transitions in state law and state scope of practice governing physician supervision, as well as changes in the way that PAs practice, we acknowledge the state's role and autonomy to establish, uphold, and enforce their state laws and PA scope of practice requirements to ensure that an appropriate level of physician oversight occurs when PAs furnish their professional services to Medicare Part B patients. Our policy proposal on this issue largely defers to state law and state scope of practice and enables states the flexibility to develop requirements for PA services that are unique and appropriate for their respective state, allowing the states to be accountable for the safety and quality of health care services that PAs furnish.

J. Review and Verification of Medical Record Documentation

1. Background

In an effort to reduce mandatory and duplicative medical record evaluation and management (E/M) documentation requirements, we finalized an amended regulatory provision at 42 CFR part 415, subpart D, in the CY 2019 PFS final rule (83 FR 59653 through 59654). Specifically, § 415.172(a) requires as a condition of payment under the PFS that the teaching physician (as defined in § 415.152) must be present during certain portions of services that are furnished with the involvement of residents (individuals who are training in a graduate medical education program). Section 415.174(a) provides for an exception to the teaching physician presence requirements in the case of certain E/M services under certain conditions, but requires that the teaching physician must direct and review the care provided by no more than four residents at a time. Sections 415.172(b) and 415.174(a)(6), respectively require that the teaching physician's presence and participation in services involving residents must be documented in the medical record. We amended these regulations to provide that a physician, resident, or nurse may document in the patient's medical record that the teaching physician presence and participation requirements were met. As a result, for E/M visits furnished beginning January 1, 2019, the extent of the teaching physician's participation in services involving residents may be demonstrated by notes in the medical records made by a physician, resident, or nurse.

For the same burden reduction purposes, we issued CR 10412, Transmittal 3971 *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R3971CP.pdf* on February 2, 2018, which revised a paragraph in our manual instructions on ''Teaching Physician Services'' at Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 100.1.1B., to reduce duplicative documentation requirements by allowing a teaching physician to review and verify (sign/date) notes made by a student in a patient's medical record for E/M services, rather than having to re-document the information, largely duplicating the student's notes. We issued corrections to CR 10412 through Transmittal 4068 *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R4068CP.pdf* and re-issued the CR on May 31, 2018. Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 100 contains a list of definitions pertinent to teaching physician services. Following these amendments to our regulations and manual, certain stakeholders raised concerns about the definitions in this section, particularly those for teaching physician, student, and documentation; and when considered in conjunction with the interpretation of the manual provision at Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 100.1.1B., which addresses documentation of E/M services involving students. While there is no regulatory definition of student, the manual instruction defines a student as an individual who participates in an accredited educational program (for example, a medical school) that is not an approved graduate medical education (GME) program. The manual instructions also specify that a student is never considered to be an intern or a resident, and that Medicare does not pay for services furnished by a student (*see* Section 100.1.1B. for a discussion concerning E/M service documentation performed by students).

We are aware that nonphysician practitioners who are authorized under Medicare Part B to furnish and be paid for all levels of E/M services are seeking similar relief from burdensome E/M documentation requirements that would allow them to review and verify medical record notes made by their students, rather than having to re-document the information. These nonphysician practitioners include nurse practitioners (NPs), clinical nurse specialists (CNSs), and certified nurse-midwives (CNMs), collectively referred to hereafter for purposes of this discussion as advanced practice registered nurses (APRNs), as well as physician assistants (PAs). Subsequent to the publication of the CY 2019 PFS final rule (83 FR 59653 through 59654), through feedback from listening sessions hosted by CMS' Documentation Requirements Simplification workgroup, we began to hear concerns from a variety of stakeholders about the requirements for teaching physician review and verification of documentation added to the medical record by other individuals. Physician and nonphysician practitioner stakeholders expressed concern about the scope of the changes to §§ 415.172(b) and 415.174(a)(6) which authorize only a physician, resident, or nurse to include notes in the medical record to document E/M services furnished by teaching physicians, because they believed that students and other members of the medical team should be similarly permitted to provide E/M medical record documentation. In addition to students, these stakeholders indicated that ''other members of the medical team'' could include individuals who the teaching physician, other physicians, PA and APRN preceptors designate as being appropriate to document services in the medical record, which the billing practitioner would then review and verify, and rely upon for billing purposes.

Subsequent to the publication of the student documentation manual

instruction change at section 100.1.1B of the Medicare Claims Processing Manual, representatives of PAs and APRNs requested clarification about whether PA and APRN preceptors and their students were subject to the same E/M documentation requirements as teaching physicians and their medical students. These stakeholders suggested that the reference to ''student'' in the manual instruction on E/M documentation provided by students is ambiguous because it does not specify ''medical student''. These stakeholders also suggested that the definition of ''student'' in section 100 of this manual instruction is ambiguous because PA and APRN preceptors also educate students who are individuals who participate in an accredited educational program that is not an approved GME program. Accordingly, these stakeholders expressed concern that the uncertainty throughout the health care industry, including among our contractors, concerning the student E/M documentation review and verification policy under these manual guidelines results in unequal treatment as compared to teaching physicians. The stakeholders stated that depending on how the manual instruction is interpreted, PA and APRN preceptors may be required to re-document E/M services in full when their students include notes in the medical records, without having the same option that teaching physicians do to simply review and verify medical student documentation.

2. Proposal

After considering the concerns expressed by these stakeholders, we believe it would be appropriate to provide broad flexibility to the physicians, PAs and APRNs (regardless of whether they are acting in a teaching capacity) who document and who are paid under the PFS for their professional services. Therefore, we propose to establish a general principle to allow the physician, the PA, or the APRN who furnishes and bills for their professional services to review and verify, rather than re-document, information included in the medical record by physicians, residents, nurses, students or other members of the medical team. This principle would apply across the spectrum of all Medicare-covered services paid under the PFS. Because this proposal is intended to apply broadly, we propose to amend regulations for teaching physicians, physicians, PAs, and APRNs to add this new flexibility for medical record documentation requirements for professional services furnished by physicians, PAs and APRNs in all settings. We invite comments on this proposal.

Specifically, to reflect our simplified and standardized approach to medical record documentation for all professional services furnished by physicians, PAs and APRNs paid under the PFS, we are proposing to amend §§ 410.20 (Physicians' services), 410.74 (PA services), 410.75 (NP services), 410.76 (CNS services) and 410.77 (CNM services) to add a new paragraph entitled, ''Medical record documentation.'' This paragraph would specify that, when furnishing their professional services, the clinician may review and verify (sign/date) notes in a patient's medical record made by other physicians, residents, nurses, students, or other members of the medical team, including notes documenting the practitioner's presence and participation in the services, rather than fully re-documenting the information. We note that, while the proposed change addresses who may document services in the medical record, subject to review and verification by the furnishing and billing clinician, it does not modify the scope of, or standards for, the documentation that is needed in the medical record to demonstrate medical necessity of services, or otherwise for purposes of appropriate medical recordkeeping.

We are also proposing to make conforming amendments to §§ 415.172(b) and 415.174(a)(6) to also allow physicians, residents, nurses, students, or other members of the medical team to enter information in the medical record that can then be reviewed and verified by a teaching physician without the need for re-documentation. We invite comments on these proposed amendments to our regulations.

K. Care Management Services

1. Background

In recent years, we have updated PFS payment policies to improve payment for care management and care coordination. Working with the CPT Editorial Panel and other clinicians, we have expanded the suite of codes describing these services. New CPT codes were created that distinguish between services that are face-to-face; represent a single encounter, monthly service or both; are timed services; represent primary care versus specialty care; address specific conditions; and represent the work of the billing practitioner, their clinical staff, or both (*see* Table 16). Additional information regarding recent new codes and associated PFS payment rules is available on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html.*

TABLE 16—SUMMARY OF SPECIAL CARE MANAGEMENT CODES

Service	Summary
Care Plan Oversight (CPO) (also referred to as Home Health Supervision, Hospice Supervision) (HCPCS Codes G0181, G0182).	Supervision of home health, hospice, per month.
ESRD Monthly Services (CPT Codes 90951–70)	ESRD management, with and without face-to-face visits, by age, per month.
Transitional Care Management (TCM) (adopted in 2013) (CPT Codes 99495, 99496).	Management of transition from acute care or certain outpatient stays to a community setting, with face-to-face visit, once per patient within 30 days post-discharge.
Chronic Care Management (CCM) (adopted in 2015, 2017, 2019) (CPT Codes 99487, 99489, 99490, 99491).	Management of all care for patients with two or more serious chronic conditions, timed, per month.
Advance Care Planning (ACP) (adopted in 2016) (CPT Codes 99497, 99498).	Counseling/discussing advance directives, face-to-face, timed.
Behavioral Health Integration (BHI) (adopted in 2017) (CPT Codes 99484, 99492, 99493, 99494).	Management of behavioral health conditions(s), timed, per month.
Assessment/Care Planning for Cognitive Impairment (adopted in 2017) (CPT Code 99483).	Assessment and care planning of cognitive impairment, face-to-face visit.
Prolonged Evaluation & Management (E/M) Without Direct Patient Contact (adopted in 2017) (CPT Codes 99358, 99359).	Non-face-to-face E&M work related to a face-to-face visit, timed.

TABLE 16—SUMMARY OF SPECIAL CARE MANAGEMENT CODES—Continued

Service	Summary
Remote Patient Monitoring (adopted in 2019) (CPT Code 99091)	Review and analysis of patient-generated health data, timed, per 30 days.
Interprofessional Consultation (adopted in 2019) (CPT Codes 99446, 99447, 99448, 99449, 99451, 99452).	Inter-practitioner consultation.

Based on our review of the Medicare claims data we estimate that approximately 3 million unique beneficiaries (9 percent of the Medicare fee-for-service (FFS) population) receive these services annually, with higher use of chronic care management (CCM), transitional care management (TCM), and advance care planning (ACP) services. We believe gaps remain in coding and payment, such as for care management of patients having a single, serious, or complex chronic condition. In this proposed rule, we continue our ongoing work in this area through code set refinement related to TCM services and CCM services, in addition to proposing new coding for principal care management (PCM) services, and addressing chronic care remote physiologic monitoring (RPM) services.

2. Transitional Care Management (TCM) Services

Utilization of TCM services has increased each year since CMS established coding and began paying separately for TCM services. Specifically, there were almost 300,000 TCM professional claims during 2013, the first year of TCM services, and almost 1.3 million professional claims during 2018, the most recent year of complete claims data. However, based upon an analysis of claims data by Bindman and Cox,[78] utilization of TCM services is low when compared to the number of Medicare beneficiaries with eligible discharges. Additionally, Bindman and Cox noted that the beneficiaries who received TCM services demonstrated reduced readmission rates, lower mortality, and decreased health care costs. Based upon these findings, we believe that increasing utilization of TCM services could positively affect patient outcomes.

In developing a proposal designed to increase utilization of TCM services, we considered possible factors contributing to low utilization. Bindman and Cox identified two likely contributing factors: The administrative burdens associated with billing TCM services and the payment amount to physicians for services.

We focused initially on the requirements for billing TCM services. In reviewing the TCM billing requirements, we noted that we had established in the CY 2013 PFS final rule with comment period a list of 57 HCPCS codes that cannot be billed during the 30-day period covered by TCM services by the same practitioner reporting TCM (77 FR 68990). This list mirrored reporting restrictions put in place by the CPT Editorial Panel for the TCM codes upon their creation. At the time we established separate payment for the TCM CPT codes, we agreed with the CPT Editorial Panel that the services described by the 57 codes could be overlapping and duplicative with TCM in their definition and scope; although, many of these codes were not separately payable or covered under the PFS so even if they were reported for PFS payment, they would not be have been separately paid (*see,* for example, 77 FR 68985). In response to those concerns, we adopted billing restrictions to avoid duplicative billing and payment for covered services. In our recent analysis of the services associated with the 57 codes, we found that the majority of codes on the list remain either bundled, noncovered by Medicare, or invalid for Medicare payment purposes. Table 17 provides detailed information regarding the subset of these codes that would be separately payable under the PFS (Status Indicator ''A'') and, as such, are the focus of this year's CY 2020 proposed policy for TCM. Fourteen (14) codes on the list represent active codes that are paid separately under the PFS and that upon reconsideration, we believe may not substantially overlap with TCM services and should be separately payable alongside TCM. For example, CPT code 99358 (*Prolonged E/M service before and/or after direct patient care; first hour; non-face-to-face time spent by a physician or other qualified health care professional on a given date providing prolonged service*) would allow the physician or other qualified healthcare professional extra time to review records and manage patient support services after the face-to-face visit required as part of TCM services. CPT code 99091 (*Collection & interpretation of physiologic data, requiring a minimum of 30 minutes each 30 days*) would permit the physician or other qualified healthcare professional to collect and analyze physiologic parameters associated with the patient's chronic disease.

Thus, after review of the services described by these 14 HCPCS codes, we believe these codes, when medically necessary, may complement TCM services rather than substantially overlap or duplicate services. We also believe removing the billing restrictions associated with these codes may increase utilization of TCM services.

TABLE 17—14 HCPCS CODES THAT CURRENTLY CANNOT BE BILLED CONCURRENTLY WITH TCM BY THE SAME PRACTITIONER AND ARE ACTIVE CODES PAYABLE BY MEDICARE PFS

Code family	HCPCS code	Descriptor
Prolonged Services without Direct Patient Contact.	99358	Prolonged E/M service before and/or after direct patient care; first hour; non-face-to-face time spent by a physician or other qualified health care professional on a given date providing prolonged service.
	99359	Prolonged E/M service before and/or after direct patient care; each additional 30 minutes beyond the first hour of prolonged services.

[78] Bindman, AB, Cox DF. Changes in health care costs and mortality associated with transitional care management services after a discharge among Medicare beneficiaries [published online July 30, 2018]. *JAMA Intern Med,* doi:10.1001/jamainternmed.2018.2572.

TABLE 17—14 HCPCS CODES THAT CURRENTLY CANNOT BE BILLED CONCURRENTLY WITH TCM BY THE SAME PRACTITIONER AND ARE ACTIVE CODES PAYABLE BY MEDICARE PFS—Continued

Code family	HCPCS code	Descriptor
Home and Outpatient International Normalized Ratio (INR) Monitoring Services.	93792	Patient/caregiver training for initiation of home INR monitoring.
	93793	Anticoagulant management for a patient taking warfarin; includes review and interpretation of a new home, office, or lab INR test result, patient instructions, dosage adjustment and scheduling of additional test(s).
End Stage Renal Disease Services (patients who are 20+ years).	90960	ESRD related services monthly with 4 or more face-to-face visits per month; for patients 20 years and older.
	90961	ESRD related services monthly with 2–3 face-to-face visits per month; for patients 20 years and older.
	90962	ESRD related services with 1 face-to-face visit per month; for patients 20 years and older.
	90966	ESRD related services for home dialysis per full month; for patients 20 years and older.
	90970	ESRD related services for dialysis less than a full month of service; per day; for patient 20 years and older.
Interpretation of Physiological Data	99091	Collection & interpretation of physiologic data, requiring a minimum of 30 minutes each 30 days.
Complex Chronic Care Management Services.	99487	Complex Chronic Care with 60 minutes of clinical staff time per calendar month.
	99489	Complex Chronic Care; additional 30 minutes of clinical staff time per month.
Care Plan Oversight Services	G0181	Physician supervision of a patient receiving Medicare-covered services provided by a participating home health agency (patient not present) requiring complex and multidisciplinary care modalities within a calendar month; 30+ minutes.
	G0182	Physician supervision of a patient receiving Medicare-covered hospice services (Pt not present) requiring complex and multidisciplinary care modalities; within a calendar month; 30+ minutes.

Thus, with the goal of increasing medically appropriate use of TCM services, we are proposing to revise our billing requirements for TCM by allowing TCM codes to be billed concurrently with any of these codes. Before we finalize such a rule, however, we seek comment on whether overlap of services exists, and if so, which services should be restricted from being billed concurrently with TCM. We also seek comment on whether any overlap would depend upon whether the same or a different practitioner reports the services. We note that CPT reporting rules generally apply at the practitioner level, and we are seeking input from stakeholders as to whether our policy should differ based on whether it is the same or a different practitioner reporting the services. We are seeking comment on whether the newest CPT code in the chronic care management services family (CPT code 99491 for CCM by a physician or other qualified health professional, established in 2019) overlaps with TCM or should be reportable and separately payable in the same service period.

As part of our analysis of the utilization data for TCM services, we also examined how current payment rates for TCM might negatively affect the appropriate utilization of TCM services, an idea proposed by Bindman and Cox. CPT code 99495 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge*) and CPT code 99496 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within 7 calendar days of discharge*) were resurveyed during 2018 as part of a regular RUC review of new technologies or services. For this RUC resurvey, several years of claims data were available and clinicians had more experience to inform their views about the work required to furnish TCM services. Based upon the results of the 2018 RUC survey of the two TCM codes, the RUC recommended a slight increase in work RVUs for both codes. We believe the results from the new survey will better reflect the work involved in furnishing TCM services as care management services. Thus, also for CY 2020, we are proposing the RUC-recommended work RVU of 2.36 for CPT code 99495 and the RUC-recommended work RVU of 3.10 for CPT code 99496. We are not proposing any direct PE refinements to the RUC's recommendations for this code family.

3. Chronic Care Management (CCM) Services

CCM services are comprehensive care coordination services per calendar month, furnished by a physician or non-physician practitioner (NPP) managing overall care and their clinical staff, for patients with two or more serious chronic conditions. There are currently two subsets of codes: One for non-complex chronic care management (starting in 2015, with a new code for 2019) and a set of codes for complex chronic care management (starting in 2017). Table 17 provides a high-level summary of the CCM service elements.

Early data show that, in general, CCM services are increasing patient and practitioner satisfaction, saving costs and enabling solo practitioners to remain in independent practice.[79] Utilization has reached approximately 75 percent of the level we initially assumed under the PFS when we began paying for CCM services separately under the PFS. While these are positive results, we believe that CCM services (especially complex CCM services) continue to be underutilized. In addition, we note that, at the February 2019 CPT Editorial Panel meeting, certain specialty associations requested refinements to the existing CCM codes, and consideration of their proposal was postponed. Also, we have heard from some stakeholders suggesting that the

[79] *https://innovation.cms.gov/Files/reports/chronic-care-mngmt-finalevalrpt.pdf.*

time increments for non-complex CCM performed by clinical staff should be changed to recognize finer increments of time, and that certain requirements related to care planning are unclear. Based on our consideration of this ongoing feedback, we believe some of the refinements requested by specialty associations and other stakeholders may be necessary to improve payment accuracy, reduce unnecessary burden and help ensure that beneficiaries who need CCM services have access to them. Accordingly, we are proposing the following changes to the CCM code set for CY 2020.

a. Non-Complex CCM Services by Clinical Staff (CPT Code 99490, HCPCS Codes GCCC1 and GCCC2)

Currently, the clinical staff CPT code for non-complex CCM, CPT code 99490 *(Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/ decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.)* describes 20 or more minutes of clinical staff time spent performing chronic care management activities under the direction of a physician/qualified health care professional. When we initially adopted this code for payment and, in feedback we have since received, a number of stakeholders suggested that CMS undervalued the PE RVU because we assumed that the minimum time for the code (20 minutes of clinical staff time) would be typical (see, for example, 79 FR 67717 through 67718). In the CY 2017 PFS final rule with comment period, we continued to consider whether the payment amount for CPT code 99490 is appropriate, given the amount of time typically spent furnishing CCM services (81 FR 80243 through 80244). We adopted the complex CCM codes for payment beginning in CY 2017, in part, to pay more appropriately for services furnished to beneficiaries requiring longer service times.

There are two CPT codes for complex CCM:

- CPT code 99487 *(Complex chronic care management services, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; establishment or substantial revision of a comprehensive care plan; moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month. (Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately);* and
- CPT code 99489 *(each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure).*

Complex CCM describes care management for patients who require not only more clinical staff time, but also complex medical decision-making. Some stakeholders continue to recommend that, in addition to separate payment for the complex CCM codes, we should create an add-on code for non-complex CCM, such that non-complex CCM would be defined and valued in 20-minute increments of time with additional payment for each additional 20 minutes, or extra payment for 20 to 40 minutes of clinical staff time spent performing care management activities.

We agree that coding changes that identify additional time increments would improve payment accuracy for non-complex CCM. Accordingly, we propose to adopt two new G codes with new increments of clinical staff time instead of the existing single CPT code (CPT code 99490). The first G code would describe the initial 20 minutes of clinical staff time, and the second G code would describe each additional 20 minutes thereafter. We intend these would be temporary G codes, to be used for PFS payment instead of CPT code 99490 until the CPT Editorial Panel can consider revisions to the current CPT code set. We would consider adopting any CPT code(s) once the CPT Editorial Panel completes its work. We acknowledge that imposing a transitional period during which G codes would be used under the PFS in lieu of the CPT codes is potentially disruptive, and are seeking comment on whether the benefit of proceeding with the proposed G codes outweighs the burden of transitioning to their use in the intervening year(s) before a decision by the CPT Editorial Panel.

We are proposing that the base code would be HCPCS code GCCC1 *(Chronic care management services, initial 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; and comprehensive care plan established, implemented, revised, or monitored. (Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately)).* We propose a work RVU of 0.61 for HCPCS code GCCC1, which we crosswalked from CPT code 99490. We believe these codes have a similar amount of work since they would have the same intra-service time of 15 minutes.

We propose an add-on HCPCS code GCCC2 *(Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure). (Use GCCC2 in conjunction with GCCC1). (Do not report GCCC1, GCCC2 in the same calendar month as GCCC3, GCCC4, 99491)).* We are proposing a work RVU of 0.54 for HCPCS code GCCC2 based on a crosswalk to CPT code 11107 (*Incisional biopsy of skin (eg, wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)*), which has a work RVU of 0.54, which we believe accurately reflects the work associated with each additional 20 minutes of CCM services. Both codes have the same intraservice time of 15 minutes. We note that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, codes need not share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. In this case, CPT code 11107 shares a similar work intensity to proposed HCPCS code GCCC2. Furthermore, although HCPCS codes GCCC1 and GCCC2 share the same intraservice time, add-on codes often have lower intensity than the base codes because they describe the continuation of an already initiated service.

We are soliciting public comment on whether we should limit the number of times this add-on code (HCPCS code GCCC2) can be reported in a given service period for a given beneficiary. It

is not clear how often more than 40 minutes of clinical staff time is currently spent or is medically necessary. In addition, once 60 minutes of clinical staff time is spent, many or most patients might also require complex medical decision-making, and such patients would be already described under existing coding for complex CCM. A limit (such as allowing the add-on code to be reported only once per service period per beneficiary) may be appropriate in order to maintain distinctions between complex and non-complex CCM, as well as appropriately limit beneficiary cost sharing and program spending to medically necessary services. We note that complex CCM already describes (in part) 60 or more minutes of clinical staff time in a service period. We are seeking comment on whether and how often beneficiaries who do not require complex CCM (for example, do not require the complex medical decision making that is part of complex CCM) would need 60 or more minutes of non-complex CCM clinical staff time and thereby warrant more than one use of HCPCS code GCCC2 within a service period.

b. Complex CCM Services (CPT Codes 99487 and 99489, and HCPCS Codes GCCC3 and GCCC4)

Currently, the CPT codes for complex CCM include in the code descriptors a requirement for establishment or substantial revision of the comprehensive care plan (see above). The code descriptors for complex CCM also include moderate to high complexity medical decision-making (moderate to high complexity medical decision-making is an explicit part of the services). We propose to adopt two new G codes that would be used for billing under the PFS instead of CPT codes 99487 and 99489, and that would not include the service component of substantial care plan revision. We believe it is not necessary to explicitly include substantial care plan revision because patients requiring moderate to high complexity medical decision making implicitly need and receive substantial care plan revision. The service component of substantial care plan revision is potentially duplicative with the medical decision making service component and, therefore, we believe it is unnecessary as a means of distinguishing eligible patients. Instead of CPT code 99487, we propose to adopt HCPCS code GCCC3 *(Complex chronic care management services, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored; moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month. (Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately)).* We are proposing a work RVU of 1.00 for HCPCS code GCCC3, which is a crosswalk to CPT code 99487.

Instead of CPT code 99489, we propose to adopt HCPCS code GCCC4 (*each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure). (Report GCCC4 in conjunction with GCCC3). (Do not report GCCC4 for care management services of less than 30 minutes additional to the first 60 minutes of complex chronic care management services during a calendar month)).* We are proposing a work RVU of 0.50 for HCPCS code GCCC4, which is a crosswalk to CPT code 99489.

We intend these would be temporary G codes to remain in place until the CPT Editorial Panel can consider revising the current code descriptors for complex CCM services. We would consider adopting any new or revised complex CCM CPT code(s) once the CPT Editorial Panel completes its work. We acknowledge that imposing a transitional period during which G codes would be used under the PFS in lieu of the CPT codes is potentially disruptive. We are seeking comment on whether the benefit of proceeding with the proposed G codes outweighs the burden of transitioning to their use in the intervening year(s) before a decision by the CPT Editorial Panel.

c. Typical Care Plan

In 2013, in working with the physician community to develop and propose the CCM codes for PFS payment, the medical community recommended and CMS agreed that adequate care planning is integral to managing patients with multiple chronic conditions. We stated our belief that furnishing care management to beneficiaries with multiple chronic conditions requires complex and multidisciplinary care modalities that involve, among other things, regular physician development and/or revision of care plans and integration of new information into the care plan (78 FR 43337). In the CY 2014 PFS final rule with comment period (78 FR 74416 through 74418), consistent with recommendations CMS received in 2013 from the AMA's Complex Chronic Care Coordination Workgroup, we finalized a CCM scope of service element for a patient-centered plan of care with the following characteristics: It is a comprehensive plan of care for all health problems and typically includes, but is not limited to, the following elements: Problem list; expected outcome and prognosis; measurable treatment goals; cognitive and functional assessment; symptom management; planned interventions; medical management; environmental evaluation; caregiver assessment; community/social services ordered; how the services of agencies and specialists unconnected to the practice will be directed/coordinated; identify the individuals responsible for each intervention, requirements for periodic review; and when applicable, revisions of the care plan.

The CPT Editorial Panel also incorporated and adopted this language in the prefatory language for Care Management Services codes (page 49 of the 2019 CPT Codebook) including CCM services.

As we continue to consider the need for potential refinements to the CCM code set, we have heard that there is still some confusion in the medical community regarding what a care plan typically includes. We have re-reviewed this language for CCM, and we believe there may be aspects of the typical care plan language we adopted for CCM that are redundant or potentially unduly burdensome. We note that because these are ''typical'' care plan elements, these elements do not comprise a set of strict requirements that must be included in a care plan for purposes of billing for CCM services; the elements are intended to reflect those that are typically, but perhaps not always, included in a care plan as medically appropriate for a particular beneficiary. Nevertheless, we are proposing to eliminate the phrase ''community/social services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identify the individuals responsible for each intervention'' and insert the phrase ''interaction and coordination with outside resources and practitioners and providers.'' We believe simpler language would describe the important work of interacting and coordinating with resources external to the practice. While it is preferable, when feasible, to identify who is responsible for

interventions, it may be difficult to maintain an up-to-date listing of responsible individuals especially when they are outside of the practice, for example, when there is staff turnover or assignment changes.

Our proposed new language would read: The comprehensive care plan for all health issues typically includes, but is not limited to, the following elements:

- Problem list.
- Expected outcome and prognosis.
- Measurable treatment goals.
- Cognitive and functional assessment.
- Symptom management.
- Planned interventions.
- Medical management.
- Environmental evaluation.
- Caregiver assessment.
- Interaction and coordination with outside resources and practitioners and providers.
- Requirements for periodic review.
- When applicable, revision of the care plan.

We welcome feedback on our proposal, including language that would best guide practitioners as they decide what to include in their comprehensive care plan for CCM recipients.

Additional information regarding the existing requirements for billing CCM, including links to prior rules, is available on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html*.

4. Principal Care Management (PCM) Services

A gap we identified in coding and payment for care management services is care management for patients with only one chronic condition. The current CCM codes require patients to have two or more chronic conditions. These codes are primarily billed by practitioners who are managing a patient's total care over a month, including primary care practitioners and some specialists such as cardiologists or nephrologists. We have heard from a number of stakeholders, especially those in specialties that use the office/outpatient E/M code set to report the majority of their services, that there can be significant resources involved in care management for a single high risk disease or complex chronic condition that is not well accounted for in existing coding (FR 78 74415). This issue has also been raised by the stakeholder community in proposal submissions to the Physician-Focused Payment Model Technical Advisory Committee (PTAC), which are available at *https://aspe.hhs.gov/ptac-physician-focused-payment-model-technical-advisory-committee*. Therefore, we are proposing separate coding and payment for Principal Care Management (PCM) services, which describe care management services for one serious chronic condition. A qualifying condition would typically be expected to last between three months and a year, or until the death of the patient, may have led to a recent hospitalization, and/or place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline.

While we are not proposing any restrictions on the specialties that could bill for PCM, we expect that most of these services would be billed by specialists who are focused on managing patients with a single complex chronic condition requiring substantial care management. We expect that, in most instances, initiation of PCM would be triggered by an exacerbation of the patient's complex chronic condition or recent hospitalization such that disease-specific care management is warranted. We anticipate that in the majority of instances, PCM services would be billed when a single condition is of such complexity that it could not be managed as effectively in the primary care setting, and instead requires management by another, more specialized, practitioner. For example, a typical patient may present to their primary care practitioner with an exacerbation of an existing chronic condition. While the primary care practitioner may be able to provide care management services for this one complex chronic condition, it is also possible that the primary care practitioner and/or the patient could instead decide that another clinician should provide relevant care management services. In this case, the primary care practitioner would still oversee the overall care for the patient while the practitioner billing for PCM services would provide care management services for the specific complex chronic condition. The treating clinician may need to provide a disease-specific care plan or may need to make frequent adjustments to the patient's medication regimen. The expected outcome of PCM is for the patient's condition to be stabilized by the treating clinician so that overall care management for the patient's condition can be returned to the patient's primary care practitioner. If the beneficiary only has one complex chronic condition that is overseen by the primary care practitioner, then the primary care practitioner would also be able to bill for PCM services. We are proposing that PCM services include coordination of medical and/or psychosocial care related to the single complex chronic condition, provided by a physician or clinical staff under the direction of a physician or other qualified health care professional.

We anticipate that many patients will have more than one complex chronic condition. If a clinician is providing PCM services for one complex chronic condition, management of the patient's other conditions would continue to be managed by the primary care practitioner while the patient is receiving PCM services for a single complex condition. It is also possible that the patient could receive PCM services from more than one clinician if the patient experiences an exacerbation of more than one complex chronic condition simultaneously.

For CY 2020, we are proposing to make separate payment for PCM services via two new G codes: HCPCS code GPPP1 (*Comprehensive care management services for a single high-risk disease, e.g., Principal Care Management, at least 30 minutes of physician or other qualified health care professional time per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities*) and HCPCS code GPPP2 (*Comprehensive care management for a single high-risk disease services, e.g., Principal Care Management, at least 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities*). HCPCS code GPPP1 would be reported when, during the calendar month, at least 30 minutes of physician or other qualified health care provider time is spent on comprehensive care management for a

single high risk disease or complex chronic condition. HCPCS code GPPP2 would be reported when, during the calendar month, at least 30 minutes of clinical staff time is spent on comprehensive management for a single high risk disease or complex chronic condition.

For HCPCS code GPPP1, we are proposing a crosswalk to the work value associated with CPT code 99217 (*Observation care discharge day management (This code is to be utilized to report all services provided to a patient on discharge from outpatient hospital* ''*observation status*'' *if the discharge is on other than the initial date of* ''*observation status.*'' *To report services to a patient designated as* ''*observation status*'' *or* ''*inpatient status*'' *and discharged on the same date, use the codes for Observation or Inpatient Care Services [including Admission and Discharge Services, 99234–99236 as appropriate]*) as we believe these values most accurately reflect the resource costs associated when the billing practitioner performs PCM services. CPT code 99217 has the same intraservice time as HCPCS code GPPP1 and the physician work is of similar intensity. Therefore, we are proposing a work RVU of 1.28 for HCPCS code GPPP1.

For HCPCS code GPPP2 we are proposing a crosswalk to the work and PE inputs associated with CPT code 99490 (clinical staff non-complex CCM) as we believe these values reflect the resource costs associated with the clinician's direction of clinical staff who are performing the PCM services, and the intraservice times and intensity of the work for the two codes would be the same. Therefore, we are proposing a work RVU of 0.61 for HCPCS code GPPP2.

While we are proposing separate coding and payment for PCM services performed by clinical staff with the oversight of the billing professional and services furnished directly by the billing professional, we are seeking comment on whether both codes are necessary to appropriately describe and bill for PCM services. We note that we are basing this coding structure on the codes for CCM services with CPT code 99491 reflecting care management by the billing professional and CPT code 99490 reflecting care management by clinical staff directed by a physician or other qualified health care professional.

We acknowledge that we are concurrently proposing revisions for both complex and non-complex CCM services. Were we not to finalize the proposed changes for both complex and non-complex CCM services, we believe that the overall structure and description of the CCM services remain close enough to serve as a model for the coding structure and description of services for the proposed PCM services. We are seeking public comment on whether it would be appropriate to create an add-on code for additional time spent each month (similar to HCPCS code GCCC2 discussed above) when PCM services are furnished by clinical staff under the direction of the billing practitioner.

While we believe that PCM services describe a situation where a patient's condition is severe enough to require care management for a single complex chronic condition beyond what is described by CCM or performed in the primary care setting, we are concerned that a possible unintended consequence of making separate payment for care management for a single chronic condition is that a patient with multiple chronic conditions could have their care managed by multiple practitioners, each only billing for PCM, which could potentially result in fragmented patient care, overlaps in services, and duplicative services. While we are not proposing additional requirements for the proposed PCM services, we did consider alternatives such as requiring that the practitioner billing PCM must document ongoing communication with the patient's primary care practitioner to demonstrate that there is continuity of care between the specialist and primary care settings, or requiring that the patient have had a face-to-face visit with the practitioner billing PCM within the prior 30 days to demonstrate that they have an ongoing relationship. We are seeking comment on whether requirements such as these are necessary or appropriate, and whether there should be additional requirements to prevent potential care fragmentation or service duplication.

Due to the similarity between the description of the PCM and CCM services, both of which involve non-face-to-face care management services, we are proposing that the full CCM scope of service requirements apply to PCM, including documenting the patient's verbal consent in the medical record. We are seeking comment on whether there are required elements of CCM services that the public and stakeholders believe should not be applicable to PCM, and should be removed or altered. A high level summary of these requirements is available in Table 18 and available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/ChronicCareManagement.pdf*. Both the initiating visit and the patient's verbal consent are necessary as not all patients who meet the criteria to receive separately billable PCM services may want to receive these services. The beneficiary should be educated as to what PCM services are and any cost sharing that may apply. Additionally, as practitioners have informed us that beneficiary cost sharing is a significant barrier to provision of other care management services, we are seeking comment on how best to educate practitioners and beneficiaries on the benefits of PCM services.

Additionally, we are proposing to add GPPP2 to the list of designated care management services for which we allow general supervision as described in our regulation at § 410.26(b)(5). Due to the potential for duplicative payment, we are proposing that PCM could not be billed by the same practitioner for the same patient concurrent with certain other care management services, such as CCM, behavioral health integration services, and monthly capitated ESRD payments. We are also proposing that PCM would not be billable by the same practitioner for the same patient during a surgical global period, as we believe those resource costs would already be included in the valuation of the global surgical code.

TABLE 18—CHRONIC CARE MANAGEMENT SERVICES SUMMARY

CCM Service Summary*
Verbal Consent: • Inform regarding availability of the service; that only one practitioner can bill per month; the right to stop services effective at the end of any service period; and that cost sharing applies (if no supplemental insurance). • Document that consent was obtained.
Initiating Visit for New Patients (separately paid).
Certified Electronic Health Record (EHR) Use: • Structured Recording of Core Patient Information Using Certified EHR (demographics, problem list, medications, allergies).

TABLE 18—CHRONIC CARE MANAGEMENT SERVICES SUMMARY—Continued

CCM Service Summary *
24/7 Access (“On Call” Service).
Designated Care Team Member.
Comprehensive Care Management:
• Systematic needs assessment (medical and psychosocial).
• Ensure receipt of preventive services.
• Medication reconciliation, management and oversight of self-management.
Comprehensive Electronic Care Plan:
• Plan is available timely within and outside the practice (can include fax).
• Copy of care plan to patient/caregiver (format not prescribed).
• Establish, implement, revise or monitor the plan.
Management of Care Transitions/Referrals (e.g., discharges, ED visit follow up, referrals):
• Create/exchange continuity of care document(s) timely (format not prescribed).
Home- and Community-Based Care Coordination:
• Coordinate with any home- and community-based clinical service providers, and document communication with them regarding psychosocial needs and functional deficits.
Enhanced Communication Opportunities:
• Offer asynchronous non-face-to-face methods other than telephone, such as secure email.

* All elements that are medically reasonable and necessary must be furnished during the month, but all elements do not necessarily apply every month. Consent need only be obtained once, and initiating visits are only for new patients or patients not seen within a year prior to initiation of CCM.

We are also seeking comment on any potential for duplicative payment between the proposed PCM services and other services, such as interprofessional consultation services (CPT codes 99446–99449 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional*), CPT code 99451 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time*), and CPT code 99452 (*Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or other qualified health care professional, 30 minutes*)) or remote patient monitoring (CPT code 99091 (*Collection and interpretation of physiologic data (e.g., ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days*), CPT code 99453 (*Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*), and CPT code 99457 (*Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month*)).

5. Chronic Care Remote Physiologic Monitoring Services

Chronic Care remote physiologic monitoring (RPM) services involve the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan, and the managing of a patient under the treatment plan. The current CPT code 99457 is a treatment management code, billable after 20 minutes or more of clinical staff/physician/other qualified professional time with a patient in a calendar month.

In September 2018, the CPT Editorial Panel revised the CPT code structure for CPT code 99457 effective beginning in CY 2020. The new code structure retains CPT code 99457 as a base code that describes the first 20 minutes of the treatment management services, and uses a new add-on code to describe subsequent 20 minute intervals of the service. The new code descriptors for CY 2020 are: CPT code 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; initial 20 minutes*) and CPT code 994X0 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; additional 20 minutes*).

In considering the work RVUs for the new add-on CPT code 994X0, we first considered the value of its base code. We previously valued the base code at 0.61 work RVUs. Given the value of the base code, we do not agree with the RUC-recommended work RVU of 0.61 for the add-on code. Instead, we are proposing a work RVU of 0.50 for the add-on code. This value is supported by CPT code 88381 (*Microdissection (i.e., sample preparation of microscopically identified target); manual*), which has the same intraservice and total times of 20 minutes with an XXX global period and work RVU of 0.53, as well as the survey value at the 25th percentile. We are proposing the RUC-recommended direct PE inputs for CPT code 994X0.

Finally, we are proposing that RPM services reported with CPT codes 99457 and 994X0 may be furnished under general supervision rather than the currently required direct supervision. Because care management services include establishing, implementing, revising, or monitoring treatment plans, as well as providing support services, and because RPM services (that is, CPT codes 99457 and 994X0) include establishing, implementing, revising, and monitoring a specific treatment plan for a patient related to one or more chronic conditions that are monitored remotely, we believe that CPT codes 99457 and 994X0 should be included as designated care management services. Designated care management services can be furnished under general

supervision. Section 410.26(b)(5) of our regulations states that designated care management services can be furnished under the general supervision of the ''physician or other qualified health care professional (who is qualified by education, training, licensure/regulation and facility privileging)'' (see also 2019 CPT Codebook, page xii) when these services or supplies are provided incident to the services of a physician or other qualified healthcare professional. The physician or other qualified healthcare professional supervising the auxiliary personnel need not be the same individual treating the patient more broadly. However, only the supervising physician or other qualified healthcare professional may bill Medicare for incident to services.

6. Comment Solicitation on Consent for Communication Technology-Based Services

In the CY 2019 PFS Final Rule, CMS finalized separate payment for a number of services that could be furnished via telecommunications technology. Specifically, CMS finalized HCPCS code G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment*)), HCPCS code G2012 (*Brief communication technology-based service, e.g. virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*)), CPT codes 99446–99449 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional*), CPT code 99451 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time*), and CPT code 99452 (*Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or other qualified health care professional, 30 minutes*).

As discussed in that rule, (83 FR 59490–59491), while a few commenters suggested that it would be less burdensome to obtain a general consent for multiple services at once, we stipulated that verbal consent must be documented in the medical record for each service furnished so that the beneficiary is aware of any applicable cost sharing. This is similar to the requirements for other non-face-to-face care management services under the PFS.

We have continued to hear from stakeholders that requiring advance beneficiary consent for each of these services is burdensome. For HCPCS codes G2010 and G2012, stakeholders have stated that it is difficult and burdensome to obtain consent at the outset of each of what are meant to be brief check-in services. For CPT codes 99446–99449, 99451 and 99452, practitioners have informed us that it is particularly difficult for the consulting practitioner to obtain consent from a patient they have never seen. Given our longstanding goals to reduce burden and promote the use of communication technology-based services, we are seeking comment on whether a single advance beneficiary consent could be obtained for a number of communication technology-based services. During the consent process, the practitioner would make sure the beneficiary is aware that utilization of these services will result in a cost sharing obligation. We are seeking comment on the appropriate interval of time or number of services for which consent could be obtained, for example, for all these services furnished within a 6 month or one year period, or for a set number of services, after which a new consent would need to be obtained. We are also seeking comment on the potential program integrity concerns associated with allowing advance consent and how best to minimize those concerns.

7. Rural Health Clinics (RHCs) and Federally-Qualified Health Centers (FQHCs)

RHCs and FQHCs are paid for general care management services using HCPCS code G0511, which is an RHC and FQHC-specific G-code for 20 minutes or more of CCM services, complex CCM services, or general behavioral health services. Payment for this service is set at the average of the national, non-facility payment rates for CPT codes 99490, 99487, and 99484. We are proposing to use the non-facility payment rates for HCPCS codes GCCC1 and GCCC3 instead of the non-facility payment rates for CPT codes 99490 and 99487, respectively, if these changes are finalized for practitioners billing under the PFS. We note that we are not proposing any changes in the valuation of these codes. Upon finalization, the payment for HCPCS code G0511 would be set at the average of the national, non-facility payment rates for HCPCS codes GCCC1 and GCCC3 and CPT code 99484.

L. Coinsurance for Colorectal Cancer Screening Tests

Section 1861(pp) of the Act defines ''colorectal cancer screening tests'' and, under sections 1861(pp)(1)(B) and (C) of the Act, ''screening flexible sigmoidoscopy'' and ''screening colonoscopy'' are two of the recognized procedures. Among other things, section 1861(pp)(1)(D) of the Act authorizes the Secretary to include other tests or procedures in the definition, and modifications to the tests and procedures described under this subsection, ''with such frequency and payment limits, as the Secretary determines appropriate, in consultation with appropriate organizations.'' Section 1861(s)(2)(R) of the Act includes these colorectal cancer screening tests in the definition of the medical and other health services that fall within the scope of Medicare Part B benefits described in section 1832(a)(1) of the Act. Section 1861(ddd)(3) of the Act includes these colorectal cancer screening services within the definition of ''preventive services.'' In addition, section 1833(a)(1)(Y) of the Act provides for payment for preventive services recommended by the United States Preventive Services Task Force (USPSTF) with a grade of A or B under the PFS at 100 percent of the lesser of the actual charge or the fee schedule amount for these colorectal cancer screening tests, and under the OPPS at 100 percent of the OPPS payment amount. As such, there is no beneficiary responsibility for coinsurance for recommended colorectal cancer screening tests as defined in section 1861(pp)(1) of the Act.

Under these statutory provisions, we have issued regulations governing payment for colorectal cancer screening tests at 42 CFR 410.152(l)(5). We pay 100 percent of the Medicare payment amount established under the applicable payment methodology for the setting for providers and suppliers, and beneficiaries are not required to pay Part B coinsurance.

In addition to screening tests, which typically are furnished to patients in the absence of signs or symptoms of illness or injury, Medicare also covers various diagnostic tests (§ 410.32). In general, diagnostic tests must be ordered by the physician or practitioner who is treating the beneficiary, and who uses the results of the diagnostic test in the management of the patient's specific medical problem. Under Part B, Medicare may cover flexible sigmoidoscopies and colonoscopies as diagnostic tests when those tests are reasonable and necessary as specified in section 1862(a)(1)(A) of the Act. When these services are furnished as diagnostic tests rather than as screening tests, patients are responsible for the Part B coinsurance (normally 20 percent) associated with these services.

We define ''colorectal cancer screening tests'' in our regulation at § 410.37(a)(1) to include ''flexible screening sigmoidoscopies'' and ''screening colonoscopies, including anesthesia furnished in conjunction with the service.'' Under our current policies, we exclude from the definition of colorectal screening services colonoscopies and sigmoidoscopies that begin as a screening service, but where a polyp or other growth is found and removed as part of the procedure. The exclusion of these services from the definition of colorectal cancer screening services is based upon separate provisions of the statute dealing with the detection of lesions or growths during procedures (62 FR 59048, 59082, October 31, 1997). Section 1834(d)(2)(D) of the Act provides that if, during the course of a screening flexible sigmoidoscopy, a lesion or growth is detected which results in a biopsy or removal of the lesion or growth, payment under Medicare Part B shall not be made for the screening flexible sigmoidoscopy but shall be made for the procedure classified as a flexible sigmoidoscopy with such biopsy or removal. Similarly, section 1834(d)(3)(D) of the Act that provides if, during the course of a screening colonoscopy, a lesion or growth is detected which results in a biopsy or removal of the lesion or growth, payment under Medicare Part B shall not be made for the screening colonoscopy but shall be made for the procedure classified as a colonoscopy with such biopsy or removal.

Because we interpret sections 1834(d)(2)(C)(ii) and 1834(d)(3)(C)(ii) of the Act to require us to pay for these tests as diagnostic tests, rather than as screening tests, the 100 percent payment rate for recommended preventive services under section 1833(a)(1)(Y) of the Act, as codified in our regulation at § 410.152(l)(5), would not apply to those diagnostic procedures. As such, beneficiaries are responsible for the usual coinsurance that applies to the services (20 or 25 percent of the cost of the services depending on the setting).

Under section 1833(b) of the Act, before making payment under Medicare Part B for expenses incurred by a beneficiary for covered Part B services, beneficiaries must first meet the applicable deductible for the year. Section 4104 of the Affordable Care Act (that is, the Patient Protection and Affordable Care Act (Pub. L. 111–148, enacted March 23, 2010), and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152, enacted March 30, 2010), collectively referred to as the ''Affordable Care Act'') amended section 1833(b)(1) of the Act to make the deductible inapplicable to expenses incurred for certain preventive services that are recommended with a grade of A or B by the USPSTF, including colorectal cancer screening tests as defined in section 1861(pp) of the Act. Section 4104 of the Affordable Care Act also added a sentence at the end of section 1833(b)(1) of the Act specifying that the exception to the deductible shall apply with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as the screening test. Although the Affordable Care Act addressed the applicability of the deductible in the case of a colorectal cancer screening test that involves biopsy or tissue removal, it did not alter the coinsurance provision in section 1833(a) of the Act for such procedures. Although public commenters encouraged the agency to also eliminate the coinsurance in these circumstances, the agency found that the statute did not provide for elimination of the coinsurance (75 FR 73170, 73431, November 29, 2010).

Beneficiaries have continued to contact us noting their ''surprise'' that a coinsurance (20 or 25 percent depending on the setting) applies when they expected to receive a colorectal screening procedure to which coinsurance does not apply, but instead received what Medicare considers to be a diagnostic procedure because polyps were discovered and removed. Similarly, physicians have also expressed concerns about the reactions of beneficiaries when they are informed that they will be responsible for coinsurance if polyps are discovered and removed during what they expected to be a screening procedure to which coinsurance does not apply. Other stakeholders and some members of Congress have regularly expressed to us that they consider the agency's policy on coinsurance for colorectal screening procedures during which tissue is removed to be a misinterpretation of the law.

Over the years, we have released a wide variety of publicly available educational materials that explain the Medicare preventive services benefits as part of our overall outreach activities to Medicare beneficiaries. These materials contain a complete description of the Medicare preventive services benefits, including information on colorectal cancer screening, and also provide relevant details on the applicability of cost sharing. These materials can be found at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/MLN-Publications-Items/CMS1243319.html.* We believe that the information in these materials can be instrumental in continuing to educate physicians and beneficiaries about cost sharing obligations in order to mitigate instances of ''surprise'' billing. We invite comment on whether we should consider establishing a requirement that the physician who plans to furnish a colorectal cancer screening notify the patient in advance that a screening procedure could result in a diagnostic procedure if polyps are discovered and removed, and that coinsurance may apply. We specifically invite comment on whether we should require the physician, or their staff, to provide a verbal notice with a notation in the medical record, or whether we should consider a different approach to informing patients of the copay implications, such as a written notice with standard language that we would require the physician, or their staff, to provide to patients prior to a colorectal cancer screening. We note that we would consider adopting such a requirement in the final rule in accordance with public comments. We also invite comment on what mechanism, if any, we should consider using to monitor compliance with a notification requirement if we decide to finalize one for CY 2020 or through future rulemaking.

M. Therapy Services

1. Repeal of the Therapy Caps and Limitation To Ensure Appropriate Therapy

a. Background

In the CY 2019 PFS proposed and final rules (83 FR 34850; 83 FR 59654 and 59661), we discussed the statutory requirements of section 50202 of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018). Beginning January 1, 2018, section 50202 of the BBA of 2018 repealed the Medicare outpatient therapy caps and the therapy cap exceptions process, while retaining the cap amounts as limitations and requiring medical review to ensure that therapy services are furnished when appropriate. Section 50202 of the BBA of 2018 amended section 1833(g) of the Act by adding a new paragraph (7)(A) requiring that after expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the previous therapy cap amounts, all therapy suppliers and providers must continue to use an appropriate modifier on claims. We implemented this provision by continuing to require use of the existing KX modifier. By using the KX modifier on the claim, the therapy supplier or provider is attesting that the services are medically necessary and that supportive justification is documented in the medical record. As with the incurred expenses for the prior therapy cap amounts, there is one amount for physical therapy (PT) and speech language pathology (SLP) services combined, and a separate amount for occupational therapy (OT) services. These KX modifier threshold amounts are indexed annually by the Medicare Economic Index (MEI). After the beneficiary's incurred expenditures for outpatient therapy services exceed the KX modifier threshold amount for the year, claims for outpatient therapy services without the KX modifier are denied.

Section 50202 of the BBA of 2018 also added a new paragraph 7(B) to section 1833(g) of the Act which retained the targeted medical review (MR) process for 2018 and subsequent years, but established a lower threshold amount of $3,000 rather than the $3,700 threshold amount that had applied for the original manual MR process established by section 3005(g) of the Middle Class Tax Relief and Jobs Creation Act of 2012 (MCTRJCA) (Pub. L. 112–96, February 22, 2012). The manual MR process with a threshold amount of $3,700 was replaced by the targeted MR process with the same threshold amount through amendments made by section 202 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015).

With the latest amendments made by the BBA of 2018, for CY 2018 (and each successive calendar year until 2028, at which time it is indexed annually by the MEI), the MR threshold is $3,000 for PT and SLP services and $3,000 for OT services. For purposes of applying the targeted MR process, we use a criteria-based process for selecting providers and suppliers that includes factors such as a high percentage of patients receiving therapy beyond the medical review threshold as compared to peers. For information on the targeted medical review process, please visit *https://www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/Medicare-FFS-Compliance-Programs/Medical-Review/TherapyCap.html.*

In the CY 2019 PFS final rule (83 FR 59661), when discussing our tracking and accrual process for outpatient therapy services in the section on the KX Threshold Amounts, we noted that we track each beneficiary's incurred expenses for therapy services annually by applying the PFS-based payment amount for each service less any applicable multiple procedure reduction for CMS-designated ''always therapy'' services. We also stated that we use the PFS rates to accrue expenses for therapy services provided in critical access hospitals (CAHs) as required by section 1833(g)(6)(B) of the Act, added by section 603(b) of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, January 2, 2013). As discussed below, we mistakenly indicated that this statutory requirement was extended by subsequent legislation, including section 50202 of the BBA of 2018.

b. Proposed Regulatory Revisions

While we explained and implemented the changes required by section 50202 of the BBA of 2018 in CY 2019 PFS rulemaking (83 FR 34850; 83 FR 59654 and 59661), we did not codify those changes in regulation text. We are now proposing to revise the regulations at §§ 410.59 (outpatient occupational therapy) and 410.60 (physical therapy and speech-language pathology) to incorporate the changes made by section 50202 of the BBA of 2018. We propose to add a new paragraph (e)(1)(v) to §§ 410.59 and 410.60 to clarify that the specified amounts of annual per-beneficiary incurred expenses are no longer applied as limitations but as threshold amounts above which services require, as a condition of payment, inclusion of the KX modifier; and that use of the KX modifier confirms that the services are medically necessary as justified by appropriate documentation in the patient's medical record. We propose to amend paragraph (e)(2) in §§ 410.59 and 410.60 to specify the therapy services and amounts that are accrued for purposes of applying the KX modifier threshold, including the continued accrual of therapy services furnished by CAHs directly or under arrangements at the PFS-based payment rates. We are also proposing to amend paragraph (e)(3) in §§ 410.59 and 410.60 for the purpose of applying the medical review threshold to clarify the threshold amounts and the applicable years for both the manual MR process originally established through section 3005(g) of MCTRJCA and the targeted MR process established by the MACRA, and including the changes made through section 50202 of the BBA of 2018 as discussed previously.

In the CY 2019 PFS final rule (83 FR 59661), we incorrectly stated that section 1833(g)(6)(B) of the Act continues to require that we accrue expenses for therapy services furnished by CAHs at the PFS rate because the provision, originally added by section 603(b) of the ATRA, was extended by subsequent legislation, including section 50202 of the BBA of 2018. The requirement in section 1833(g)(6)(B) of the Act was actually time-limited to services furnished in CY 2013. To apply the therapy caps (and now the KX modifier thresholds) after the expiration of the requirement in 1833(g)(6)(B) of the Act, we needed a process to accrue the annual expenses for therapy services furnished by CAHs and, in the CY 2014 PFS final rule with comment period, we elected to continue the process prescribed in section 1833(g)(6)(B) of the Act (78 FR 74405 through 74410).

2. Proposed Payment for Outpatient PT and OT Services Furnished by Therapy Assistants

a. Background

Section 53107 of the BBA of 2018 added a new subsection 1834(v) to the Act to require in paragraph (1) that, for services furnished on or after January 1, 2022, payment for outpatient physical and occupational therapy services for which payment is made under sections 1848 or 1834(k) of the Act which are furnished in whole or in part by a therapy assistant must be paid at 85 percent of the amount that is otherwise applicable. Section 1834(v)(2) of the Act further required that we establish a modifier to identify these services by January 1, 2019, and that claims for outpatient therapy services furnished in

whole or in part by a therapy assistant must include the modifier effective for dates of service beginning on January 1, 2020. Section 1834(v)(3) of the Act required that we implement the subsection through notice and comment rulemaking.

In the CY 2019 PFS proposed and final rules (83 FR 35850 through 35852 and 83 FR 59654 through 50660, respectively), we established two modifiers—one to identify services furnished in whole or in part by a physical therapist assistant (PTA) and the other to identify services furnished in whole or in part by an occupational therapy assistant (OTA). The modifiers are defined as follows:

- *CQ Modifier:* Outpatient physical therapy services furnished in whole or in part by a physical therapist assistant.
- *CO Modifier:* Outpatient occupational therapy services furnished in whole or in part by an occupational therapy assistant.

In the CY 2019 PFS final rule, we clarified that the CQ and CO modifiers are required to be used when applicable for services furnished on or after January 1, 2020, on the claim line of the service alongside the respective GP or GO therapy modifier to identify services furnished under a PT or OT plan of care. The GP and GO therapy modifiers, along with the GN modifier for speech-language pathology (SLP) services, have been used since 1998 to track and accrue the per-beneficiary incurred expenses amounts to different therapy caps, now KX modifier thresholds, one amount for PT and SLP services combined and a separate amount for OT services. We also clarified in the CY 2019 PFS final rule that the CQ and CO modifiers will trigger application of the reduced payment rate for outpatient therapy services furnished in whole or in part by a PTA or OTA, beginning for services furnished in CY 2022.

In response to public comments on the CY 2019 PFS proposed rule, we did not finalize our proposed definition of ''furnished in whole or in part by a PTA or OTA'' as a service for which any minute of a therapeutic service is furnished by a PTA or OTA. Instead, we finalized a *de minimis* standard under which a service is considered to be furnished in whole or in part by a PTA or OTA when more than 10 percent of the service is furnished by the PTA or OTA.

We also explained in the CY 2019 PFS proposed and final rules (83 FR 35850 through 35852 and 83 FR 59654 through 59660, respectively) that the CQ and CO modifiers would not apply to claims for outpatient therapy services that are furnished by, or incident to the services of, physicians or nonphysician practitioners (NPPs) including nurse practitioners, physician assistants, and clinical nurse specialists. This is because our regulations for outpatient physical and occupational therapy services require that an individual furnishing outpatient therapy services incident to the services of a physician or NPP must meet the qualifications and standards for a therapist. As such, only therapists and not therapy assistants can furnish outpatient therapy services incident to the services of a physician or NPP (83 FR 59655 through 59656); and, the new PTA and OTA modifiers cannot be used on the line of service of the professional claim when the rendering NPI identified on the claim is a physician or an NPP. We also intend to revise our manual provisions at Pub. 100–02, Medicare Benefit Policy Manual (MBPM), Chapter 15, section 230, as appropriate, to reflect requirements for the new CQ and CO modifiers that will be used to identify services furnished in whole or in part by a PTA or OTA starting in CY 2020. We anticipate amending these manual provisions for CY 2020 to reflect the policies we adopt through the CY 2020 PFS notice and comment rulemaking process.

In PFS rulemaking for CY 2019, we identified certain situations when the therapy assistant modifiers do apply. The modifiers are applicable to:

- Therapeutic portions of outpatient therapy services furnished by PTAs/OTAs, as opposed to administrative or other non-therapeutic services that can be performed by others without the education and training of OTAs and PTAs.
- Services wholly furnished by PTAs or OTAs without physical or occupational therapists.
- Evaluative services that are furnished in part by PTAs/OTAs (keeping in mind that PTAs/OTAs are not recognized to wholly furnish PT and OT evaluation or re-evaluations).

We also identified some situations when the therapy assistant modifiers do not apply. They do not apply when:

- PTAs/OTAs furnish services that can be done by a technician or aide who does not have the training and education of a PTA/OTA.
- Therapists exclusively furnish services without the involvement of PTAs/OTAs.

Finally, we noted that we would be further addressing application of the modifiers for therapy assistant services and the 10 percent *de minimis* standard more specifically in PFS rulemaking for CY 2020, including how the modifiers are applied in different scenarios for different types of services.

b. Applying the CQ and CO Modifiers

CMS interprets the references in section 1834(v)(1) and (2) of the Act to outpatient physical therapy ''service'' and outpatient occupational therapy ''service'' to mean a specific procedure code that describes a PT or OT service. This interpretation makes sense because section 1834(v)(2) of the Act requires the use of a modifier to identify on each request for payment, or bill submitted for an outpatient therapy service furnished in whole or in part by a PTA/OTA. For purposes of billing, each outpatient therapy service is identified by a procedure code.

To apply the *de minimis* standard under which a service is considered to be furnished in whole or in part by a PTA or OTA when more than 10 percent of the service is furnished by the PTA or OTA, we propose to make the 10 percent calculation based on the respective therapeutic minutes of time spent by the therapist and the PTA/OTA, rounded to the nearest whole minute. The minutes of time spent by a PTA/OTA furnishing a therapeutic service can overlap partially or completely with the time spent by a physical or occupational therapist furnishing the service. We propose that the total time for a service would be the total time spent by the therapist (whether independent of, or concurrent with, a PTA/OTA) plus any additional time spent by the PTA/OTA independently furnishing the therapeutic service. When deciding whether the therapy assistant modifiers apply, we propose that if the PTA/OTA participates in the service concurrently with the therapist for only a portion of the total time that the therapist delivers a service, the CQ/CO modifiers apply when the minutes furnished by the therapy assistant are greater than 10 percent of the total minutes spent by the therapist furnishing the service. If the PTA/OTA and the therapist each separately furnish portions of the same service, we propose that the CQ/CO modifiers would apply when the minutes furnished by the therapy assistant are greater than 10 percent of the total minutes—the sum of the minutes spent by the therapist and therapy assistant—for that service. We propose to apply the CQ/CO modifier policies to all services that would be billed with the respective GP or GO therapy modifier. We believe this is appropriate because it is the same way that CMS currently identifies physical therapy or occupational therapy services for purposes of accruing incurred expenses for the thresholds and targeted review process.

For purposes of deciding whether the 10 percent *de minimis* standard is exceeded, we offer two different ways to compute this. The first is to divide the PTA/OTA minutes by the total minutes for the service—which is (a) the therapist's total time when PTA/OTA minutes are furnished concurrently with the therapist, or (b) the sum of the PTA/OTA and therapist minutes when the PTA/OTA's services are furnished separately from the therapist; and then to multiply this number by 100 to calculate the percentage of the service that involves the PTA/OTA. We propose to round to the nearest whole number so that when this percentage is 11 percent or greater, the 10 percent *de minimis* standard is exceeded and the CQ/CO modifier is applied. The other method is simply to divide the total time for the service (as described above) by 10 to identify the 10 percent *de minimis* standard, and then to add one minute to identify the number of minutes of service by the PTA/OTA that would be needed to exceed the 10 percent standard. For example, where the total time of a service is 60 minutes, the 10 percent standard is six (6) minutes, and adding one minute yields seven (7) minutes. Once the PTA/OTA furnishes at least 7 minutes of the service, the CQ/CO modifier is required to be added to the claim for that service. As noted above, we propose to round the minutes and percentages of the service to the nearest whole integer. For example, when the total time for the service is 45 minutes, the 10 percent calculation would be 4.5 which would be rounded up to 5, and the PTA/OTA's contribution would need to meet or exceed 6 minutes before the CQ/CO modifier is required to be reported on the claim. See Table 19 for minutes needed to meet or exceed using the ''simple'' method with typical times for the total time of a therapy service.

TABLE 19—SIMPLE METHOD FOR DETERMINING WHEN CQ/CO MODIFIERS APPLY

Method Two: simple method to apply 10 percent de minimis standard			
Total Time * examples using typical service total times	Determine the 10 percent standard by dividing service Total Time by 10	Round 10 percent standard to next whole integer	PTA/OTA Minutes needed to exceed—apply CQ/CO
10	1.0	1.0	2.0
15	1.5	2.0	3.0
20	2.0	2.0	3.0
30	3.0	3.0	4.0
45	4.5	5.0	6.0
60	6.0	6.0	7.0
75	7.5	8.0	9.0

Total Time equals total therapist minutes plus any PTA/OTA independent minutes. Concurrent minutes: When PTA/OTA's minutes are furnished concurrently with the therapist, total time equals the total minutes of the therapist's service. Separate minutes: When PTA/OTA's minutes are furnished separately from the minutes furnished by the therapist, total time equals the sum of the minutes of the service furnished by the PT/OT plus the minutes of the service furnished separately by the PTA/OTA.

We want to clarify that the 10 percent *de minimis* standard, and therefore the CQ/CO modifiers, are not applicable to services in which the PTA/OTA did not participate. To the extent that the PTA/OTA and the physical therapist/occupational therapist (PT/OT) separately furnish different services that are described by procedure codes defined in 15-minute increments, billing examples and proposed policies are included below in Scenario Two.

As we indicated in the CY 2019 PFS final rule, we are addressing more specifically in this proposed rule the application of the 10 percent *de minimis* standard in various clinical scenarios to decide when the CQ/CO modifiers apply. We acknowledge that application of the 10 percent *de minimis* standard can work differently depending on the types of services and scenarios involving both the PTA/OTA and the PT/OT. Therapy services are typically furnished in multiple units of the same or different services on a given treatment day, which can include untimed services (not billable in multiple units) and timed services that are defined by codes described in 15-minute intervals. The majority of the untimed services that therapists bill for fall into three categories: (1) Evaluative procedures, (2) group therapy, and (3) supervised modalities. We discuss each of these in greater detail below. Only one (1) unit can be reported in the claim field labeled ''units'' for each procedure code representing an untimed service. The preponderance of therapy services, though, are billed using codes that are described in 15-minute increments. These services are typically furnished to a patient on a single day in multiple units of the same and/or different services. Under our current policy, the total number of units of one or more timed services that can be added to a claim depends on the total time for all the 15-minute timed codes that were delivered to a patient on a single date of service. We address our proposals for applying the CQ/CO modifiers using the 10 percent *de minimis* standard, along with applicable billing scenarios, by category below. In each of these scenarios, we assume that the PTA/OTA minutes are for therapeutic services.

- *Evaluations and re-evaluations: CPT codes 97161 through 97163 for physical therapy evaluations for low, moderate, and high complexity level, and CPT code 97164 for physical therapy re-evaluation; and CPT codes 97165 through 97167 for occupational therapy evaluations for low, moderate, and high complexity level, and CPT 97168 for occupational therapy re-evaluation.* These PT and OT evaluative procedures are untimed codes and cannot be billed in multiple units—one unit is billed on the claim. As discussed in CY 2019 PFS rulemaking (83 FR 35852 and 83 FR 59656) and noted above, PTAs/OTAs are not recognized to furnish evaluative or assessment services, but to the extent that they furnish a portion of an evaluation or re-evaluation (such as completing clinical labor tasks for each code) that exceeds the 10 percent *de minimis* standard, the appropriate therapy assistant modifier (CQ or CO) must be used on the claim. We note that it is possible for the PTA/OTA to furnish these minutes either concurrently or separately from the therapist. For example, when the PTA/OTA assists the PT/OT concurrently for a 5-minute portion of the 30 minutes that a PT or OT spent furnishing an evaluation (for example, CPT code 97162 for moderate complexity PT evaluation or CPT code 97165 for a low complexity OT evaluation—each have a typical therapist face-to-face time of 30

minutes), the respective CQ or CO modifier is applied to the service because the 5 minutes surpasses the 10 percent *de minimis* standard. In other words, 10 percent of 30 minutes is 3 minutes, and the CQ or CO modifier applies if the PTA/OTA furnishes more than 3 minutes, meaning at least 4 minutes, of the service. If the PTA/OTA separately furnishes a portion of the service that takes 5 minutes (for example, performing clinical labor tasks such as obtaining vital signs, providing self-assessment tool to the patient and verifying its completion), and then the PT/OT separately (without the PTA/OTA) furnishes a 30 minute face-to-face evaluative procedure—bringing the total time of the service to 35 minutes (the sum of the separate PTA/OTA minutes, that is, 5 minutes, plus the 30-minute therapist service), the CQ or CO modifier would be applied to the service because the 5 minutes of OTA/PTA time exceeds 10 percent of the 35 total minutes for the service. In other words, 10 percent of 35 minutes is 3.5 minutes which is rounded up to 4 minutes. The CQ or CO modifier would apply when the PTA/OTA furnishes 5 or more minutes of the service, as discussed above and referenced in Table 19.

• *Group Therapy: CPT code 97150 (requires constant attendance of therapist or assistant, or both).* CPT code 97150 describes a service furnished to a group of 2 or more patients. Like evaluative services, this code is an untimed service and cannot be billed in multiple units on the claim, so one unit of the service is billed for each patient in the group. For the group service, the CQ/CO modifier would apply when the PTA/OTA wholly furnishes the service without the therapist. The CQ/CO modifier would also apply when the total minutes of the service furnished by the PTA/OTA (whether concurrently with, or separately from, the therapist), exceed 10 percent of the total time, in minutes, of the group therapy service (that is, the total minutes of service spent by the therapist (with or without the PTA/OTA) plus any minutes spent by the PTA/OTA separately from the therapist). For example, the modifiers would apply when the PTA/OTA participates concurrently with the therapist for 5 minutes of a total group therapy service time of 40-minutes (based on the time of the therapist); or when the PTA/OTA separately furnishes 5 minutes of a total group time of 40 minutes (based on the sum of minutes of the PTA/OTA (5) and therapist (35)).

• *Supervised Modalities: CPT codes 97010 through 97028, and HCPCS codes G0281, G0183, and G0329.* Modalities, in general, are physical agents that are applied to body tissue in order to produce a therapeutic change through various forms of energy, including but not limited to thermal, acoustic, light, mechanical or electric. Supervised modalities, for example vasopneumatic devices, paraffin bath, and electrical stimulation (unattended), do not require the constant attendance of the therapist or supervised therapy assistant, unlike the modalities defined in 15-minute increments that are discussed in the below category. When a supervised modality, such as whirlpool (CPT code 97022), is provided without the direct contact of a PT/OT and/or PTA/OTA, that is, it is furnished entirely by a technician or aide, the service is not covered and cannot be billed to Medicare. Supervised modality services are untimed, so only one unit of the service can be billed regardless of the number of body areas that are treated. For example, when paraffin bath treatment is provided to both of the patient's hands, one unit of CPT code 97018 can be billed, not two. For supervised modalities, the CQ or CO modifier would apply to the service when the PTA/OTA fully furnishes all the minutes of the service, or when the minutes provided by the PTA or OTA exceed 10 percent of total minutes of the service. For example, the CQ/CO modifiers would apply when either (1) the PTA/OTA concurrently furnishes 2 minutes of a total 8-minute service by the therapist furnishing paraffin bath treatment (HCPCS code 97018) because 2 minutes is greater than 10 percent of 8 minutes (0.8 minute, or 1 minute after rounding); or (2) the PTA/OTA furnishes 3 minutes of the service separately from the therapist who furnishes 5 minutes of treatment for a total time of 8 minutes (total time equals the sum of the PT/OT minutes plus the separate PTA/OTA minutes) because 3 minutes is greater than 10 percent of 8 total minutes (0.8 minute rounded to 1 minute).

• *Services defined by 15-minute increments/units: These timed codes are included in the following current CPT code ranges: CPT codes 97032 through 97542—including the subset of codes for modalities in the series CPT codes 97032 through 97036; and, codes for procedures in the series CPT codes 97110–97542; CPT codes 97750–97755 for tests and measurements; and CPT codes: 97760–97763 for orthotic management and training and prosthetic training.* Based on CPT instructions for these codes, the therapist (or their supervised therapy assistant, as appropriate) is required to furnish the service directly in a one-on-one encounter with the patient, meaning they are treating only one patient during that time. Examples of modalities requiring one-on-one patient contact include electrical stimulation (attended), CPT code 97032, and ultrasound, CPT code 97035. Examples of procedures include therapeutic exercise, CPT code 97110, neuromuscular reeducation, CPT 97112, and gait training, CPT code 97116.

Our policy for reporting of service units with HCPCS codes for both untimed services and timed services (that is, only those therapy services defined in 15-minute increments) is explained in section 20.2 of Chapter 5 of the Medicare Claims Processing Manual (MCPM). To bill for services described by the timed codes (hereafter, those codes described per each 15-minutes) furnished to a patient on a date of service, the therapist or therapy assistant needs to first identify all timed services furnished to a patient on that day, and then total all the minutes of all those timed codes. Next, the therapist or therapy assistant needs to identify the total number of units of timed codes that can be reported on the claim for the physical or occupational therapy services for a patient in one treatment day. Once the number of billable units is identified, the therapist or therapy assistant assigns the appropriate number of unit(s) to each timed service code according to the total time spent furnishing each service. For example, to bill for one 15-minute unit of a timed code, the qualified professional (the therapist or therapy assistant) must furnish at least 8 minutes and up to 22 minutes of the service; to bill for 2 units, at least 23 minutes and up to 37 minutes, and to bill for 3 units, at least 38 minutes and up to 52 minutes. We note that these minute ranges are applicable when one service, or multiple services, defined by timed codes are furnished by the qualified professional on a treatment day. We understand that the therapy industry often refers to these billing conventions as the ''eight-minute rule.'' The idea is that when a therapist or therapy provider bills for one or more units of services that are described by timed codes, the therapist's direct, one-on-one patient contact time would average 15 minutes per unit. This idea is also the basis for the work values we have established for these timed codes. Our current policies for billing of timed codes and related documentation do not take into consideration whether a service is furnished ''in whole or in

part'' by a PTA/OTA, or otherwise address the application of the CQ/CO modifier when the 10 percent *de minimis* standard is exceeded, for those services in which both the PTA/OTA and the PT/OT work together to furnish a service or services.

To support the number of 15-minute timed units billed on a claim for each treatment day, we require that the total timed-code treatment time be documented in the medical record, and that the treatment note must document each timed service, whether or not it is billed, because the unbilled timed service(s) can impact billing. The minutes that each service is furnished can be, but are not required to be, documented. We also require that each untimed service be documented in the treatment note in order to support these services billed on the claim; and, that the total treatment time for each treatment day be documented—including minutes spent providing services represented by the timed codes (the total timed-code treatment time) and the untimed codes. To minimize burden, we are not proposing changes to these documentation requirements in this proposed rule.

Beginning January 1, 2020, in order to provide support for application of the CQ/CO modifier(s) to the claim as required by section 1834(v)(2)(B) of the Act and our proposed regulations at §§ 410.59(a)(4) and 410.60(a)(4), we propose to add a requirement that the treatment notes explain, via a short phrase or statement, the application or non-application of the CQ/CO modifier for each service furnished that day. We would include this documentation requirement in subsection in Chapter 15, MBPM, section 220.3.E on treatment notes. Because the CQ/CO modifiers also apply to untimed services, our proposal to revise our documentation requirement for the daily treatment note extends to those codes and services as well. For example, when PTAs/OTAs assist PTs/OTs to furnish services, the treatment note could state one of the following, as applicable: (a) ''Code 97110: CQ/CO modifier applied—PTA/OTA wholly furnished''; or, (b) ''Code 97150: CQ/CO modifier applied—PTA/OTA minutes = 15%''; or ''Code 97530: CQ/CP modifier not applied—PTA/OTA minutes less than 10% standard.'' For those therapy services furnished exclusively by therapists without the use of PTAs/OTA, the PT/OT could note one of the following: ''CQ/CO modifier NA'', or ''CQ/CO modifier NA—PT/OT fully furnished all services.'' Given that the minutes of service furnished by or with the PTA/OTA and the total time in minutes for each service (timed and untimed) are used to decide whether the CQ/CO modifier is applied to a service, we seek comment on whether it would be appropriate to require documentation of the minutes as part of the CQ/CO modifier explanation as a means to avoid possible additional burden associated with a contractor's medical review process conducted for these services. We are also interested in hearing from therapists and therapy providers about current burden associated with the medical review process based on our current policy that does not require the times for individual services to be documented. Based on comments received, if we were to adopt a policy to include documentation of the PTA/OTA minutes and total time (TT) minutes, the CQ/CO modifier explanation could read similar to the following: ''Code 97162 (TT = 30 minutes): CQ/CO modifier not applied—PTA/OTA minutes (3) did not exceed the 10 percent standard.''

To recap, under our proposed policy, therapists or therapy assistants would apply the therapy assistant modifiers to the timed codes by first following the usual process to identify all procedure codes for the 15-minute timed services furnished to a beneficiary on the date of service, add up all the minutes of the timed codes furnished to the beneficiary on the date of service, decide how many total units of timed services are billable for the beneficiary on the date of service (based on time ranges in the chart in the manual), and assign billable units to each billable procedure code. The therapist or therapy assistant would then need to decide for each billed procedure code whether or not the therapy assistant modifiers apply.

As previously explained, the CQ/CO modifier does not apply if all units of a procedure code were furnished entirely by the therapist; and, where all units of the procedure code were furnished entirely by the PTA/OTA, the appropriate CQ/CO modifier would apply. When some portion of the billed procedure code is furnished by the PTA/OTA, the therapist or therapy assistant would need to look at the total minutes for all the billed units of the service, and compare it to the minutes of the service furnished by the PTA/OTA as described above in order to decide whether the 10 percent *de minimis* standard is exceeded. If the minutes of the service furnished by the PTA/OTA are more than 10 percent of the total minutes of the service, the therapist or therapy assistant would assign the appropriate CQ or CO modifier. We would make clarifying technical changes to chapter 5, section 20.2 of the MCPM to reflect the policies adopted through in this rulemaking related to the application or non-application of the therapy assistant modifiers. We anticipate that we will add examples to illustrate when the applicable therapy assistant modifiers must be applied, similar to the examples provided below.

We are providing the following examples of clinical scenarios to illustrate how the 10 percent *de minimis* standard would be applied under our proposals when therapists and their assistants work together concurrently or separately to treat the same patient on the same day. These examples reflect how the therapist or therapy provider would decide whether the CQ or CO therapy assistant modifier should be included when billing for one or more service units of the 15-minute timed codes. In the following scenarios, ''PT'' is used to represent physical therapist and ''OT'' is used to refer to an occupational therapist for ease of reference; and, the services of the PTA/OTA are assumed to be therapeutic in nature, and not services that a technician or aide without the education and training of a PTA/OTA could provide.

- *Scenario One:* Where only one service, described by a single HCPCS code defined in 15-minute increments, is furnished in a treatment day:

(1) The PT/OT and PTA/OTA each separately, that is individually and exclusively, furnish minutes of the same therapeutic exercise service (HCPCS code 97110) in different time frames: The PT/OT furnishes 7 minutes and the PTA furnishes 7 minutes for a total of 14 minutes, one unit can be billed using the total time minute range of at least 8 minutes and up to 22 minutes.

Billing Example: One 15-minute unit of HCPCS code 97110 is reported on the claim with the CQ/CO modifier to signal that the time of the service furnished by the PTA/OTA (7 minutes) exceeded 10 percent of the 14-minute total service time (1.4 minutes rounded to 1 minute, so the modifier would apply if the PTA/OTA had furnished 2 or more minutes of the service).

(2) The PT/OT and PTA/OTA each separately, exclusive of the other, furnish minutes of the same therapeutic exercise service (HCPCS code 97110) in different time frames: The PT/OT furnishes 20 minutes and the PTA/OTA furnishes 25 minutes for a total of 45 minutes, three units can be billed using the total time minute range of at least 38 minutes and up to 52 minutes.

Billing Example: All three units of CPT code 97110 are reported on the claim with the corresponding CQ/CO modifier because the 25 minutes

furnished by the PTA/OTA exceeds 10 percent of the 45-minute total service time (4.5 minutes rounded to 5 minutes, so the modifier would apply if the PTA/OTA had furnished 6 or more minutes of the service).

(3) The PTA/OTA works concurrently with the respective PT/OT as a team to furnish the same neuromuscular reeducation service (HCPCS code 97112) for a 30-minute session, resulting in 2 billable units of the service (at least 23 minutes and up to 37 minutes).

Billing Example: Both units of HCPCS code 97112 are reported with the appropriate CQ or CO modifier because the service time furnished by the PTA/OTA (30 minutes) exceeded 10 percent of the 30-minute total service time (3 minutes, so the modifier would apply if the PTA/OTA had furnished 4 or more minutes of the service).

- *Scenario Two:* When services that are represented by different procedure codes are furnished. Follow our current policy to identify the procedure codes to bill and the units to bill for the service(s) provided for the most time. We propose that when the PT/OT and the PTA/OTA each independently furnish a service defined by a different procedure code for the same number of minutes, for example 10 minutes, for a total time of 20 minutes, qualifying for 1 unit to be billed (at least 8 minutes up to 23 minutes), the code for the service furnished by the PT/OT is selected to break the tie—one unit of that service would be billed without the CQ/CO modifier.

(1) When only one unit of a service can be billed (requires a minimum of 8 minutes but less than 23 minutes):

(a) The PT/OT independently furnishes 15 minutes of manual therapy (HCPCS code 97140) and the PTA/OTA independently furnishes 7 minutes of therapeutic exercise (HCPCS code 97110). One unit of HCPCS code 97140 can be billed (at least 8 minutes and up to 22 minutes).

Billing Example: One unit of HCPCS code 97140 is billed without the CQ/CO modifier because the PT/OT exclusively (without the PTA/OTA) furnished a full unit of a service defined by 15-minute time interval (current instructions require ''1'' unit to be reported). The 7 minutes of a different service delivered solely by the PTA/OTA do not result in a billable service. Both services, though, are documented in the medical record, noting which services were furnished by the PT/OT or PTA/OTA; and, the 7 minutes of HCPCS code 97110 would be included in the total minutes of timed codes that are considered when identifying the procedure codes and units of each that can be billed on the claim.

(b) If instead, the PT/OT independently furnished 7 minutes of CPT code 97140 and the PTA/OTA independently furnished a full 15-minutes of CPT code 97110, one unit of CPT code 97110 is billed and the CQ/CO modifier is applied; the 7 minutes of the PT/OT service (CPT code 97140) do not result in billable service, but all the minutes are documented and included in the total minutes of the timed codes that are considered when identifying the procedure codes and units of each that can be billed on the claim.

(c) If the PT/OT and PTA/OTA each independently furnish an equal number of minutes of CPT codes 97140 and 97110, respectively, that is less than the full 15-minute mark, and the total minutes of the timed codes qualify for billing one unit of a service, the code furnished by the PT/OT would be selected to break the tie and billed without a CQ/CO modifier because the PT/OT furnished that service independently of the PTA/OTA.

If instead the PT/OT furnishes an 8-minute service (CPT code 97140) and the PTA/OTA delivers a 13-minute service (CPT code 97110), one unit of the 13-minute PTA/OTA-delivered service (CPT code 97110) would be billed consistent with our current policy to bill the service with the greater time; and the service would be billed with a CQ/CO modifier because the PTA/OTA furnished the service independently.

(2) When two or more units can be billed (requires a minimum of 23 minutes), follow current instructions for billing procedure codes and units for each timed code.

(a) The PT/OT furnishes 20 minutes of neuromuscular reeducation (CPT code 97112) and the PTA/OTA furnishes 8 minutes of therapeutic exercise (CPT code 97110) for a total of 28 minutes, which permits two units of the timed codes to be billed (at least 23 minutes and up to 37 minutes).

Billing Example: Following our usual process for billing for the procedure codes and units based on services furnished with the most minutes, one unit of each procedure code would be billed—one unit of CPT code 97112 is billed without a CQ/CO modifier and one unit of CPT code 97110 is billed with a CQ/CO modifier. This is because, under our current policy, the two billable units of timed codes are allocated among procedure codes by assigning the first 15 minutes of service to code 97112 (the code with the highest number of minutes), which leaves another 13 minutes of timed services: 5 minutes of code 97112 (20 minus 15) and 8 minutes of code 97110. Since the 8 minutes of code 97110 is greater than the remaining 5 minutes of code 97112, the second billable unit of service would be assigned to 97110. The CQ/CO modifier would not apply to CPT code 97112 because the therapist furnished all minutes of that service independently. The CQ/CO modifier would apply to CPT code 97110 because the PTA/OTA furnished all minutes of that service independently.

(b) The PT/OT furnishes 32 minutes of neuromuscular reeducation (CPT code 97112), the PT/OT and the PTA/OTA each separately furnish 12 minutes and 14 minutes, respectively, of therapeutic exercise (CPT code 97110) for a total of 26 minutes, and the PTA/OTA independently furnishes 12 minutes of self-care (CPT code 97535) for a total of 70 minutes of timed code services, permitting five units to be billed (68–82 minutes). Under our current policy, the five billable units would be assigned as follows: Two units to CPT code 97112, two units to CPT code 97110, and one unit to CPT code 97535.

Billing Example: The two units of CPT code 97112 would be billed without a CQ/CO modifier because all 32 minutes of that service were furnished independently by the PT/OT. The two units of CPT code 97110 would be billed with the CQ/CO modifier because the PTA/OTA's 14 minutes of the service are greater than 10 percent of the 26 total minutes of the service (2.6 minutes which is rounded to 3 minutes, so the modifiers would apply if the PTA/OTA furnished 4 or more minutes of the service), and the one unit of CPT code 97535 would be billed with a CQ/CO modifier because the PTA/OTA independently furnished all minutes of that service.

(c) The PT/OT independently furnishes 12 minutes of neuromuscular reeducation activities (CPT code 97112) and the PTA/OTA independently furnishes 8 minutes of self-care activities (CPT code 97535) and 7 minutes of therapeutic exercise (CPT code 97110)—the total treatment time of 27 minutes allows for two units of service to be billed (at least 23 minutes and up to 37 minutes). Under our current policy, the two billable units would be assigned as follows: One unit of CPT code 97112 and one unit of CPT code 97535.

Billing Example: The one unit of HCPCS code 97112 would be billed without the CQ/CO modifier because it was furnished independently by the PT/OT; and, the one unit of CPT code 97535 is billed with the CQ/CO modifier because it was independently furnished

by the PTA/OTA. In this example, CPT code 97110 is not billable; however, the minutes for all three codes are documented and counted toward the total time of the timed code services furnished to the patient on the date of service.

(d) The PT/OT furnishes 15 minutes of each of two services described by CPT codes 97112 and 97535, and is assisted by the PTA/OTA who furnishes 3 minutes of each service concurrently with the PT/OT. The total time of 30 minutes allows two 15-minute units to be billed—one unit each of CPT code 97112 and CPT code 97535.

Billing Example: Both CPT codes 97112 and 97535 are billed with the applicable CQ/CO modifier because the time the PTA/OTA spent assisting the PT/OT for each service exceeds 10 percent of the 15-minute total time for each service (1.5 minutes which is rounded to 2 minutes, so that the modifiers apply if the PTA/OTA furnishes 3 or more minutes of the service).

c. Proposed Regulatory Provisions

In accordance with section 1834(v)(2)(B) of the Act, we are proposing to amend §§ 410.59(a)(4) and 410.60(a)(4) for outpatient physical and occupational therapy services, respectively, and § 410.105(d) for physical and occupational therapy services furnished by comprehensive outpatient rehabilitation facilities (CORFs) as authorized under section 1861(cc) of the Act, to establish as a condition of payment that claims for services furnished in whole or in part by an OTA or PTA must include a prescribed modifier; and that services will not be considered furnished in part by an OTA or PTA unless they exceed 10 percent of the total minutes for that service, beginning for services furnished on and after January 1, 2020. To implement section 1834(v)(1) of the Act, we are proposing to amend §§ 410.59(a)(4) and 410.60(a)(4) for outpatient physical and occupational therapy services, respectively, and at § 410.105(d) for physical and occupational therapy services furnished by CORFs to specify that claims from physical and occupational therapists in private practice paid under section 1848 of the Act and from providers paid under section 1834(k) of the Act for physical therapy and occupational therapy services that contain a therapy assistant modifier, are paid at 85 percent of the otherwise applicable payment amount for the service for dates of service on and after January 1, 2022. As specified in the CY 2019 PFS final rule, we also note that the CQ or CO modifier is to be applied alongside the corresponding GP or GO therapy modifier that is required on each claim line of service for physical therapy or occupational therapy services. Beginning for dates of service and after January 1, 2020, claims missing the corresponding GP or GO therapy modifier will be rejected/returned to the therapist or therapy provider so they can be corrected and resubmitted for processing.

As discussed in the CY 2019 PFS proposed and final rules (*see* 83 FR 35850 and 83 FR 59654), we established that the reduced payment rate under section 1834(v)(1) of the Act for the outpatient therapy services furnished in whole or in part by therapy assistants is not applicable to outpatient therapy services furnished by CAHs, for which payment is made under section 1834(g) of the Act. We would like to take this opportunity to clarify that we do not interpret section 1834(v) of the Act to apply to outpatient physical therapy or occupational therapy services furnished by CAHs, or by other providers for which payment for outpatient therapy services is not made under section 1834(k) of the Act based on the PFS rates.

N. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010 and CY 2015. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.E. of this proposed rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and reproposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes

within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the federal government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we propose those values as recommended. Additionally, we continually engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that included the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (*see* the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. The statute specifically defines the work component as the resources in time and intensity required in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an evaluation and management (E/M) service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for

a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommend work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time. In response to comments in the CY 2019 PFS final rule (83 FR 59515), we clarify that terms ''reference services'', ''key reference services'', and ''crosswalks'' as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate stakeholder feedback, we will seek to limit the use of the term, ''crosswalk,'' to those cases where we are making a comparison to a CPT code with the identical work RVU.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the proposed valuation considered for specific codes. Table 20 contains a list of codes and descriptors for which we are proposing work RVUs; this includes all codes for which we received RUC recommendations by February 10, 2019. The proposed work RVUs, work time and other payment information for all CY 2020 payable codes are available on the CMS website under downloads for the CY 2020 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*).

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 21 details our proposed refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain proposed refinements that would be common across codes. Proposed refinements to particular codes are addressed in the portions of this section that are dedicated to particular codes. We note

that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also note that approximately half of the refinements listed in Table 21 result in changes under the $0.35 threshold and are unlikely to result in a change to the RVUs.

We also note that the proposed direct PE inputs for CY 2020 are displayed in the CY 2020 direct PE input files, available on the CMS website under the downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*. The inputs displayed there have been used in developing the proposed CY 2020 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2020, we received invoices for several new supply and equipment items. Tables 22 and 23 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units, we encouraged stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encouraged stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 22 and 23 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address proposed code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the public use files for the PFS proposed and final rules for each year display the services subject to the MPPR for diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services. We also include a list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap for the upcoming calendar year. The public use files for CY 2020 are available on the CMS website under downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263). For more information regarding the history of the OPPS cap, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

4. Proposed Valuation of Specific Codes for CY 2020

(1) Tissue Grafting Procedures (CPT Codes 15X00, 15X01, 15X02, 15X03, and 15X04)

CPT code 20926 (*Tissue grafts, other (e.g., paratenon, fat, dermis)*), was identified through a review of services with anomalous sites of service when compared to Medicare utilization data. The CPT Editorial Panel subsequently replaced CPT code 20926 with five codes in the Integumentary section to better describe tissue grafting procedures.

We are proposing the RUC-recommended work RVUs of 6.68 for CPT code 15X00 (*Grafting of autologous soft tissue, other, harvested by direct excision (e.g., fat, dermis, fascia)*), 6.73 for CPT code 15X01 (*grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50cc or less injectate*), 2.50 for CPT code 15X02 (*grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50cc injectate, or part thereof (list separately in addition to code for primary procedure)*), 6.83 for CPT code 15X03 (*grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; 25cc or less injectate*), and 2.41 for CPT code 15X04 (*grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; each additional 25cc injectate, or part thereof (list separately in addition to code for primary procedure)*).

We are proposing the RUC-recommended direct PE inputs for this code family without refinement.

(2) Drug Delivery Implant Procedures (CPT Codes 11981, 11982, 11983, 206X0, 206X1, 206X2, 206X3, 206X4, and 206X5)

CPT codes 11980–11983 were identified as potentially misvalued since the majority specialty found in recent claims data differs from the two specialties that originally surveyed the codes. The current valuation of CPT code 11980 (*Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)*) was reaffirmed by the RUC as the physician work had not changed since the last review. The CPT Editorial Panel revised the other three existing codes in the family and created six additional add-on codes to describe orthopaedic drug delivery. These codes were surveyed and reviewed for the October 2018 RUC meeting.

CPT code 11980 (*Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)*) with the current work value of 1.10 RVUs and 12 minutes of intraservice time, and 27 minutes of total time, was determined to be unchanged since last reviewed and was recommended by the RUC to be maintained. We concur. We also are not proposing any direct PE refinements to CPT code 11980. CPT code 11981 (*Insertion, non-biodegradable drug delivery implant*) has a current work RVU of 1.48, with 39 minutes of total physician time. The specialty society survey recommended a work RVU of 1.30, with 31 minutes of total physician time and 5 minutes of intraservice time. The RUC recommended a work RVU of 1.30 (25th percentile), with 30 minutes of total physician time and 5 minutes of intraservice time. For comparable reference CPT codes to CPT code 11981, the RUC and the survey respondents had selected CPT code 55876 (*Placement of interstitial device(s) for radiation therapy guidance (e.g., fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple (work RVU = 1.73, 20 minutes intraservice time and 59 total minutes)*) and CPT code 57500 (*Biopsy of cervix,*

single or multiple, or local excision of lesion, with or without fulguration (separate procedure) (work RVU = 1.20, 15 minutes intraservice time and 29 total minutes)). The RUC further offers for comparison, CPT code 67515 (*Injection of medication or other substance into Tenon's capsule (work RVU = 1.40 (from CY 2018), 5 minutes intraservice time and 21 minutes total time*)), CPT code 12013 (*Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm (work RVU = 1.22 and 27 total minutes)*) and CPT code 12004 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm) (work RVU = 1.44 and 29 total minutes)*). In addition, we offer CPT code 67500 (*Injection of medication into cavity behind eye) (work RVU = 1.18 and 5 minutes intraservice time and 33 total minutes*) for reference. Given that the CPT code 11981 incurs a 23 percent reduction in the new total physician time and with reference to CPT code 67500, we are proposing a work RVU of 1.14, and accept the survey recommended 5 minutes for intraservice time and 30 minutes of total time. We are not proposing any direct PE refinements to CPT code 11981.

CPT code 11982 (*Removal, non-biodegradable drug delivery implant*) has a current work RVU of 1.78, with 44 minutes of total physician time. The specialty society survey recommended a work RVU of 1.70 RVU, with 10 minutes of intraservice time and 34 minutes of total physician time. The RUC also recommended a work RVU of 1.70, with 10 minutes of intraservice time and 33 minutes of total physician time. The RUC confirmed that removal (CPT code 11982), requires more intraservice time to perform than the insertion (CPT code 11981). For comparable reference codes to CPT code 11982, the RUC and the survey respondents had selected CPT code 54150 (*Circumcision, using clamp or other device with regional dorsal penile or ring block) (work RVU = 1.90, 15 minutes intraservice time and 45 total minutes)*) and CPT code 12004 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm) (work RVU = 1.44, with 17 minutes intraservice time and 29 minutes total time)*). We offer CPT code 64486 (*Injections of local anesthetic for pain control and abdominal wall analgesia on one side) (work RVU = 1.27, 10 minutes intraservice time and 35 total minutes)*) for reference. Given that the CPT code 11982 incurs a 25 percent reduction in the new total physician time and with reference to CPT code 64486, we are proposing a work RVU of 1.34, and accept the RUC-recommended 10 minutes for intraservice time and 33 minutes of total time. We are not proposing any direct PE refinements to CPT code 11982.

CPT code 11983 (*Removal with reinsertion, non-biodegradable drug delivery implant*) has a current work RVU of 3.30, with 69 minutes of total physician time. The specialty society survey recommended a work RVU of 2.50 RVU, with 15 minutes of intraservice time and 41 minutes of total physician time. The RUC also recommended a work RVU of 2.10, with 15 minutes of intraservice time and 40 minutes of total physician time. The RUC confirmed that CPT code 11983 requires more intraservice time to perform than the insertion CPT code 11981. For comparable reference codes to CPT code 11983, the RUC and the survey respondents had selected CPT code 55700 (*Biopsy, prostate; needle or punch, single or multiple, any approach) (work RVU = 2.50, 15 minutes intraservice time and 35 total minutes)*), CPT code 54150 (*Circumcision, using clamp or other device with regional dorsal penile or ring block) (work RVU = 1.90, 15 minutes intraservice time and 45 total minutes)*) and CPT code 52281 (*Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female) (work RVU = 2.75 and 20 minutes intraservice time and 46 minutes total time)*). We offer CPT code 62324 (*Insertion of indwelling catheter and administration of substance into spinal canal of upper or middle back) (work RVU = 1.89, 15 minutes intraservice time and 43 total minutes)*) for reference. Given that the CPT code 11983 incurs a 42 percent reduction in new total physician time and with reference to CPT code 62324, we are proposing a work RVU of 1.91, and accept the RUC-recommended 15 minutes for intraservice time and 40 minutes of total time. We are not proposing any direct PE refinements to CPT code 11983.

The new proposed add-on CPT codes 206X0–206X5 are intended to be typically reported with CPT codes 11981–11983, with debridement or arthrotomy procedures done primarily by orthopedic surgeons. The specialty society's survey for CPT code 206X0 (*Manual preparation and insertion of drug delivery device(s), deep (e.g., subfascial)*) found a 2.00 work RVU value at the median and a 1.50 work RVU value at the 25th percentile, with 20 minutes of intraservice time and 30 minutes of total physician time, for the preparation of the antibiotic powder and cement, rolled into beads and threaded onto suture for insertion into the infected bone. The RUC recommended a work RVU of 1.50, with 20 minutes of intraservice time and 27 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof) (work RVU = 1.80, and 30 minutes intraservice time)*), CPT codes 64484 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level) (work RVU = 1.00 and 10 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation) (work RVU = 2.09 and 20 minutes intraservice time)*). Our review of similar add-on CPT codes yielded CPT code 64634 (*Destruction of upper or middle spinal facet joint nerves with imaging guidance) (work RVU = 1.32 and 20 minutes intraservice time)*). We are proposing for CPT code 206X0, a work RVU of 1.32, and accept the RUC-recommended 20 minutes of intraservice time and 20 minutes of total time.

The specialty society's survey for CPT code 206X1 (*Manual preparation and insertion of drug delivery device(s), intramedullary*) found a 3.25 work RVU value at the median and a 2.50 work RVU value at the 25th percentile, with 25 minutes of intraservice time and 38 minutes of total physician time, for the preparation of the ''antibiotic nail'' ready for insertion into the intramedullary canal with fluoroscopic guidance. The RUC recommended a work RVU of 2.50, with 25 minutes of intraservice time and 32 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof) (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 57267 (*Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (work*

RVU = 4.88 and 45 minutes intraservice time)), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 15 minutes intraservice time)*). We find that the reference CPT code 11047, with 30 minutes of intraservice time, is suitable, but we adjust our proposed work RVU of 1.70 to account for the 25 minutes, instead of our reference code's 30 minutes of intraservice time (and the 32 minutes of total time), for CPT code 206X1.

The specialty society's survey for CPT code 206X2 (*Manual preparation and insertion of drug delivery device(s), intra-articular*) found a 4.00 work RVU value at the median and a 2.60 work RVU value at the 25th percentile, with 30 minutes of intraservice time and 45 minutes of total physician time, for the preparation of the antibiotic cement inserted into a pre-fabricated silicone mold, when after setting up, will be cemented to the end of the bone (with the joint). The RUC recommended a work RVU of 2.60, with 30 minutes of intraservice time and 37 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 57267 (*Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (work RVU = 4.88 and 45 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 20 minutes intraservice time)*). We find that the reference CPT code 11047, with 30 minutes of intraservice time, is a suitable guide and we are proposing the work RVU of 1.80 with the RUC-recommended 30 minutes of intraservice time and 37 minutes of total time, for CPT code 206X2.

The specialty society's survey for CPT code 206X3 (*Removal of drug delivery device(s), deep (e.g., subfascial)*) found a 1.75 work RVU value at the median and a 1.13 work RVU value at the 25th percentile, with 15 minutes of intraservice time and 18 minutes of total physician time. The work includes a marginal dissection to expose the drug delivery device and to remove it. The RUC recommended a work RVU of 1.13, with 18 minutes of total physician time and 15 minutes of intraservice time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 64484 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (work RVU = 1.00 and 10 minutes intraservice time)*), and CPT code 64480 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (work RVU = 1.20 and 15 minutes intraservice time)*). We are proposing the RUC-recommended work RVU of 1.13 with 15 minutes of intraservice time and 18 minutes of total time for 206X3.

The specialty society's survey for CPT code 206X4 (*Removal of drug delivery device(s), intramedullary*) found a 2.50 work RVU value at the median and a 1.80 work RVU value at the 25th percentile, with 20 minutes of intraservice time and 28 minutes of total physician time. The work includes a marginal dissection, in addition to what was in the base procedure, to loosen and expose the drug delivery device and to remove it, any remaining drug delivery device shards that may have broken off. The RUC recommended a work RVU of 1.80, with 20 minutes of intraservice time and 23 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT codes 37253 (*Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (work RVU = 1.44 and 20 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 15 minutes intraservice time)*). We are proposing the RUC-recommended work RVU of 1.80 with 20 minutes of intraservice time and 23 minutes of total time for 206X4.

The specialty society's survey for CPT code 206X5 (*Removal of drug delivery device(s), intra-articular*) found a 3.30 work RVU value at the median and a 2.15 work RVU value at the 25th percentile, with 25 minutes of intraservice time and 28 minutes of total physician time. The work includes the removal of the intra-articular drug delivery device that is cemented to both sides of the joint without removing too much bone in the process. The RUC recommended a work RVU of 2.15, with 25 minutes of intraservice time and 28 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 36476 (*Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (work RVU = 2.65 and 30 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 15 minutes intraservice time)*). We are proposing the RUC-recommended work RVU of 2.15 with 25 minutes of intraservice time and 28 minutes of total time for 206X5.

(3) Bone Biopsy Trocar-Needle (CPT Codes 20220 and 20225)

In October 2017, CPT code 20225 (*Biopsy, bone, trocar, or needle; deep (e.g., vertebral body, femur)*) was identified as being performed by a different specialty than the one that originally surveyed this service. CPT code 20220 (*Biopsy, bone, trocar, or needle; superficial (e.g., ilium, sternum, spinous process, ribs)*) was added as part of the family, and both codes were surveyed and reviewed for the January 2019 RUC meeting.

We disagree with the RUC-recommended work RVU of 1.93 for CPT code 20220 and we are proposing a work RVU of 1.65 based on a crosswalk to CPT code 47000 (*Biopsy of liver, needle; percutaneous*). CPT code 47000 shares the same intraservice time of 20 minutes with CPT code 20220 and has slightly higher total time at 55 minutes as compared to 50 minutes. It

is also one of the top reference codes selected by the survey respondents. In our review of CPT code 20220, we noted that the recommended intraservice time is decreasing from 22 minutes to 20 minutes (9 percent reduction), and that the recommended total time is increasing from 49 minutes to 50 minutes (2 percent increase). However, the RUC-recommended work RVU is increasing from 1.27 to 1.93, which is an increase of 52 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, changes in surveyed work time should be appropriately reflected in the proposed work RVUs.

In the case of CPT code 20220, we believe that it would be more accurate to propose a work RVU of 1.65, based on a crosswalk to CPT code 47000, to account for the decrease in the surveyed intraservice work time. We believe that the work carried out by the practitioner in CPT code 47000 is potentially more intense than the work performed in CPT code 20220, as the reviewed code is a superficial bone biopsy as opposed to the non-superficial biopsy taking place on an internal organ (the liver) described by CPT code 47000. We also note that the survey respondents considered CPT code 47000 to have similar intensity to CPT code 20220: 50 percent or more of the survey respondents rated the two codes as ''identical'' under the categories of Mental Effort and Judgment, Physical Effort Required, and Psychological Stress, along with a plurality of survey respondents rating the two codes as identical in the category of Technical Skill Required. We believe that this provides further support for our belief that CPT code 20220 should be crosswalked to CPT code 47000 at the same work RVU of 1.65.

We disagree with the RUC-recommended work RVU of 3.00 for CPT code 20225 and we are proposing a work RVU of 2.45 based on a crosswalk to CPT code 30906 (*Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; subsequent*). CPT code 30906 shares the same intraservice time of 30 minutes and has 1 fewer minute of total time as compared to CPT code 20225. When reviewing this code, we observed a pattern similar to what we had seen with CPT code 20220. We note that the recommended intraservice time for CPT code 20225 is decreasing from 60 minutes to 30 minutes (50 percent reduction), and the recommended total time is decreasing from 135 minutes to 64 minutes (53 percent reduction); however, the RUC-recommended work RVU is increasing from 1.87 to 3.00, which is an increase of about 60 percent. As we noted earlier, we do not believe that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, and we are not proposing a linear decrease in the work valuation based on these time ratios. Indeed, we agree with the RUC recommendation that the work RVU of CPT code 20225 should increase over the current valuation. However, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in changes to the work RVUs, and we do not believe that it would be accurate to propose the recommended work RVU of 3.00 given the significant decreases in surveyed work time.

Instead, we believe that it would be more accurate to propose a work RVU of 2.45 for CPT code 20225 based on a crosswalk to CPT code 30906. We note that this proposed work RVU is a very close match to the intraservice time ratio between the two codes in the family; we are proposing a work RVU of 1.65 for CPT code 20220 with 20 minutes of intraservice work time, and a work RVU of 2.45 for CPT code 20225 with 30 minutes of intraservice work time. (The exact intraservice time ratio calculates to a work RVU of 2.47.) We believe that the proposed work RVUs maintain the relative intensity of the two codes in the family, and better preserve relativity with the rest of the codes on the PFS.

For the direct PE inputs, we are proposing to replace the bone biopsy device (SF055) supply with the bone biopsy needle (SC077) in CPT code 20225. We note that this code currently makes use of the bone biopsy needle, and there was no rationale provided in the recommended materials to explain why it would now be typical for the bone biopsy needle to be replaced by the bone biopsy device. We are proposing to maintain the use of the current supply item. We are also proposing to adopt a 90 percent utilization rate for the use of the CT room (EL007) equipment in CPT code 20225. We previously finalized a policy in the CY 2010 PFS final rule (74 FR 61754 through 61755) to increase the equipment utilization rate to 90 percent for expensive diagnostic equipment priced at more than $1 million, and specifically cited the use of CT and MRI equipment which would be subject to this utilization rate.

(4) Trigger Point Dry Needling (CPT Codes 205X1 and 205X2)

For CY 2020, the CPT Editorial Panel approved two new codes to report dry needling of musculature trigger points. These codes were surveyed and reviewed by the HCPAC for the January 2019 RUC meeting.

We disagree with the HCPAC-recommended work RVU of 0.45 for CPT code 205X1 (*Needle insertion(s) without injection(s), 1 or 2 muscle(s)*) and we are proposing a work RVU of 0.32 based on a crosswalk to CPT code 36600 (*Arterial puncture, withdrawal of blood for diagnosis*). CPT code 36600 shares the identical intraservice time, total time, and intensity with CPT code 205X1, which makes it an appropriate choice for a crosswalk. In our review of CPT code 205X1, we compared the procedure to the top reference code chosen by the survey participants, CPT code 97140 (*Manual therapy techniques (e.g., mobilization/manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes*). This therapy procedure has 50 percent more intraservice time than CPT code 205X1, as well as higher total time; however, the recommended work RVU of 0.45 was higher than the work RVU of 0.43 for the top reference code from the survey. We did not agree that CPT code 205X1 should be valued at a higher rate, and therefore, we are proposing a work RVU of 0.32 based on the aforementioned crosswalk to CPT code 36600.

We disagree with the HCPAC-recommended work RVU of 0.60 for CPT code 205X2 (*Needle insertion(s) without injection(s), 3 or more muscle(s)*) and we are proposing a work RVU of 0.48 based on a crosswalk to CPT codes 97113 (*Therapeutic procedure, 1 or more areas, each 15 minutes; aquatic therapy with therapeutic exercises*) and 97542 (*Wheelchair management (e.g., assessment, fitting, training), each 15 minutes*). Both of these codes share the same work RVU of 0.48 and the same intraservice time of 15 minutes as CPT code 205X2, with CPT code 97113 having two fewer minutes of total time and CPT code 97542 having two additional minutes of total time. We note that this proposed work RVU is an exact match of the intraservice time ratio between the two codes in the family; we are proposing a work RVU of 0.32 for CPT code 205X1 with 10 minutes of intraservice work time, and a work RVU of 0.48 for CPT code 205X2 with 15 minutes of intraservice work time. We also considered crosswalking the work RVU of CPT code 205X2 to the

top reference code from the survey, CPT code 97140, at a work RVU of 0.43. However, we chose to employ the crosswalk to CPT codes 97113 and 97542 at a work RVU of 0.48 instead, due to the fact that the survey respondents indicated that CPT code 205X2 was more intense than CPT code 97140.

We are also proposing to designate CPT codes 205X1 and 205X2 as ''always therapy'' procedures, and we are soliciting comments on this designation. We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(5) Closed Treatment Vertebral Fracture (CPT Code 22310)

This service was identified through a screen of services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes.

For CPT code 22310 (*Closed treatment of vertebral body fracture(s), without manipulation, requiring and including casting or bracing*), we disagree with the recommended work RVU of 3.75 because we do not believe that this reduction in work RVU from the current value of 3.89 is commensurate with the RUC-recommended a 33-minute reduction in intraservice time and a 105-minute reduction in total time. While we understand that the RUC considers the current Harvard study time values for this service to be invalid estimations, we believe that a further reduction in work RVUs is warranted given the significance of the RUC-recommended reduction in physician time. We believe that it would be more accurate to propose a work RVU of 3.45 with a crosswalk to CPT code 21073 (*Manipulation of temporomandibular joint(s) (TMJ), therapeutic, requiring an anesthesia service (i.e., general or monitored anesthesia care)*), which has an identical intraservice time and similar total time as those proposed by the RUC for CPT code 22310, as we believe that this better accounts for the decrease in the surveyed work time.

For the direct PE inputs, we are proposing to refine the equipment time for the power table (EF031) to conform to our established standard for non-highly technical equipment.

(6) Tendon Sheath Procedures (CPT Codes 26020, 26055, and 26160)

The RUC identified these services through a screen of services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. For CPT code 26020 (Drainage of tendon sheath, digit and/or palm, each), we do not agree with the RUC-recommended work RVU of 7.79 based on the survey median. While we agree that the survey data validate an increase in work RVU, we see no compelling reason that this service would be significantly more intense to furnish than services of similar time values. Therefore, we are proposing a work RVU of 6.84 which is the survey 25th percentile. As further support for this value, we note that it falls between the work RVUs of CPT code 28122 *(Partial excision (craterization, saucerization, sequestrectomy, or diaphysectomy) bone (e.g., osteomyelitis or bossing); tarsal or metatarsal bone, except talus or calcaneus*), with a work RVU of 6.76, and CPT code 28289 (*Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; without implant*), with a work RVU of 6.90; both codes have intraservice time values that are identical to, and total time values that are similar to, the RUC-recommended time values for CPT code 26020.

For CPT code 26055 (*Tendon sheath incision (e.g., for trigger finger)*), we do not agree with the RUC recommendation to increase the work RVU to 3.75 despite a reduction in physician time. Instead, we are proposing to maintain the current work RVU of 3.11; we are supporting this based on a total time increment methodology between the CPT code 26020 and CPT code 26055. The total time ratio between the recommended time of 119 minutes and the recommended 262 minutes for code 26020 equals 45 percent, and 45 percent of our proposed RVU of 6.84 for CPT code 26020 equals a work RVU of 3.10, which we believe validates the current work RVU of 3.11. We are proposing the RUC-recommended work RVU of 3.57 for CPT code 26160 (*Excision of lesion of tendon sheath or joint capsule (e.g., cyst, mucous cyst, or ganglion), hand or finger*). We note that our proposed work RVUs validate the RUC's contention that CPT code 26160 is slightly more intense to perform than CPT code 26055.

For the direct PE inputs, we are proposing to refine the quantity of the impervious staff gown (SB027) supply from 2 to 1 for CPT codes 26055 and 26160. We believe that the second impervious staff gown supply is duplicative due to the inclusion of this same supply in the surgical cleaning pack (SA043). The recommended materials state that a gown is worn by the practitioner and one assistant, which are provided by one standalone gown and a second gown in the surgical cleaning pack.

(7) Closed Treatment Fracture—Hip (CPT Code 27220)

This service was identified through a screen of services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. For CPT code 27220 (*Closed treatment of acetabulum (hip socket) fracture(s); without manipulation*), we disagree with the RUC-recommended work RVU of 6.00 based on the survey median value, because we do not believe that this reduction in work RVU from the current value of 6.83 is commensurate with the RUC-recommended a 19-minute reduction in intraservice time and an 80-minute reduction in total time. While we understand that the RUC considers the current Harvard study time values for this service to be invalid estimations, we believe that a further reduction in work RVUs is warranted given the significance of the RUC-recommended reduction in physician time. We believe that it would be more accurate to propose the survey 25th percentile work RVU of 5.50, and we are supporting this value with a crosswalk to CPT code 27267 (*Closed treatment of femoral fracture, proximal end, head; without manipulation*) to account for the decrease in the surveyed work time.

For the direct PE inputs, we are proposing to refine the equipment time for the power table (EF031) to conform to our established standard for non-highly technical equipment.

(8) Arthrodesis—Sacroliliac Joint (CPT Code 27279)

In the CY 2018 PFS final rule (82 FR 53017), CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) was nominated for review by stakeholders as a potentially misvalued service. We stated that CPT code 27279 is potentially misvalued, and that a comprehensive review of the code values was warranted. This code was subsequently reviewed by the RUC. According to the specialty societies, the previous 2014 survey of CPT code 27279, was based on flawed methodology that resulted in an underestimation of intraoperative intensity. When CPT code 27279 was surveyed in 2014, there was a low rate of response. Due to the dearth of survey data and the RUC's agreement with the specialty society at the time that the

survey respondents had somewhat overvalued the work involved in performing this service, the RUC used a crosswalk to CPT code 62287 (*Decompression procedure, percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar*) to recommend a work RVU of 9.03. The specialty societies indicated that with increased and broader utilization of this technique, the 2018 survey is a more robust assessment of physician work and intensity and provides more data with which to make a crosswalk recommendation. According to the RUC, there is no compelling evidence that the physician work, intensity or complexity has changed for this service.

We are proposing to maintain the current work RVU of 9.03 as recommended by the RUC. A stakeholder stated that maintaining this RVU would constitute the continued undervaluation of this service, and that this would incentivize use of a more intensive and invasive procedure, CPT code 27280 (*Arthrodesis, open, sacroiliac joint, including obtaining bone graft, including instrumentation, when performed*), as well as incentivize this service to be inappropriately furnished on an inpatient basis. This stakeholder has requested that, in the interest of protecting patient access, we implement payment parity between the two services by proposing to crosswalk the work RVU of CPT code 27279 to that of CPT code 27280, which has a work RVU of 20.00. While we are proposing the RUC-recommended work RVU, we are soliciting public comment on whether an alternative valuation of 20.00 would be more appropriate. This alternative valuation would recognize relative parity between these two services in terms of the work inherent in furnishing them.

We are proposing the RUC-recommended direct PE inputs for CPT code 27279.

(9) Pericardiocentesis and Pericardial Drainage (CPT Code 3X000, 3X001, 3X002, and 3X003)

CPT code 33015 (*Tube pericardiostomy*) was identified as potentially misvalued on a Relativity Assessment Workgroup (RAW) screen of codes with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS or other source codes. In September 2018, the CPT Editorial Panel deleted four existing codes and created four new codes to describe periodcardiocentesis drainage procedures to differentiate by age and to include imaging guidance.

We are proposing to refine the work RVU for all four codes in the family. We disagree with the RUC-recommended work RVU of 5.00 for CPT code 3X000 (*Pericardiocentesis, including imaging guidance, when performed*) and are proposing a work RVU of 4.40 based on a crosswalk to CPT code 43244 (*Esophagogastroduodenoscopy, flexible, transoral; with band ligation of esophageal/gastric varices*). CPT code 43244 shares the same intraservice time of 30 minutes with CPT code 3X000 and has a slightly longer total time of 81 minutes as compared to 75 minutes for the reviewed code. In our review of CPT code 3X000, we noted that the recommended intraservice time as compared to the current initial pericardiocentesis procedure (CPT code 33010) is increasing from 24 minutes to 30 minutes (25 percent), and the recommended total time is remaining the same at 75 minutes; however, the RUC-recommended work RVU is increasing from 1.99 to 5.00, which is an increase of 151 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, modest increases in time should be appropriately reflected with a commensurate increase the work RVUs. We also conducted a search in the RUC database among 0-day global codes with 30 minutes of intraservice time and comparable total time of 65–85 minutes. Our search identified 49 codes and all 49 of these codes had a work RVU lower than 5.00. We do not believe that it would serve the interests of relativity to establish a new maximum work RVU for this range of time values.

As a result, we believe that it is more accurate to propose a work RVU of 4.40 for CPT code 3X000 based on a crosswalk to CPT code 43244 to account for these modest increases in the surveyed work time as compared to the predecessor pericardiocentesis codes. We are aware that CPT code 3X000 is bundling imaging guidance into the new procedure, which was not included in the previous pericardiocentesis codes. However, we do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and therefore, we do not believe that it would serve the interests of relativity to propose the RUC-recommended work values for all of the codes in this family. We also note that, through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular servicers. For example, a practitioner would not be carrying out the full preservice work twice for CPT codes 33010 and 76930, but preservice times were assigned to both codes under the old coding. We believe the new coding assigns more accurate work times, and thus, reflects efficiencies in resource costs that existed but were not reflected in the services as they were previously reported. If the addition of imaging guidance had made the new CPT codes significantly more intense to perform, we believe that this would have been reflected in the surveyed work times, which were largely unchanged from the predecessor codes.

We disagree with the RUC-recommended work RVU of 5.50 for CPT code 3X001 (*Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; 6 years and older without congenital cardiac anomaly*) and are proposing a work RVU of 4.62 based on a crosswalk to CPT code 52234 (*Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; SMALL bladder tumor(s) (0.5 up to 2.0 cm)*). CPT code 52234 shares the same intraservice time of 30 minutes with CPT code 3X001 and has 2 additional minutes of total time at 79 minutes as compared to 77 minutes for the reviewed code. In our review of CPT code 3X001, we noted many of the same issues that we had raised with CPT code 3X000, in particular with the increase in the work RVU greatly exceeding the increase in the surveyed work times as compared to the predecessor pericardiocentesis codes. We searched the RUC database again for 0-day global codes with 30 minutes of intraservice time and comparable total time of 67–87 minutes. Our search identified 43 codes and again all 43 of these codes had a work RVU lower than 5.50. As we stated with regard to CPT code 3X000, we do not believe that it would serve the interests of relativity to establish a new maximum work RVU for this range of time values. We believe that it is more accurate to propose a work RVU of 4.62 for CPT code 3X001 based on a crosswalk to CPT code 52234 based on the same rationale that we

detailed with regards to CPT code 3X000.

We disagree with the RUC-recommended work RVU of 6.00 for CPT code 3X002 (*Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; birth through 5 years of age, or any age with congenital cardiac anomaly*) and are proposing a work RVU of 5.00 based on the survey 25th percentile value. In our review of CPT code 3X002, we noted many of the same issues that we had raised with CPT codes 3X000 and 3X001, in particular with the increase in the work RVU greatly exceeding the increase in the surveyed work times as compared to the predecessor pericardiocentesis codes. The recommended work RVU of 6.00 was based on a crosswalk to CPT code 31603 (*Tracheostomy, emergency procedure; transtracheal*), which shares the same intraservice time of 30 minutes with CPT code 3X002 and very similar total time. While we agree that CPT code 31603 is a close match to the surveyed work times for CPT code 3X002, we do not believe that it is the most accurate choice for a crosswalk due to the fact that CPT code 31603 is a clear outlier in work valuation. We searched for 0-day global codes in the RUC database with 30 minutes of intraservice time and a comparable 90–120 minutes of total time. There were 21 codes that met this criteria, and the recommended crosswalk to CPT code 31603 had the highest work RVU of any of these codes at the recommended 6.00. Furthermore, there was only one other code with a work RVU above 5.00, another tracheostomy procedure described by CPT code 31600 (Tracheostomy, planned (separate procedure)) at a work RVU of 5.56. None of the other codes had a work RVU higher than 4.69, and the median work RVU of the group comes out to only 4.00. The two tracheostomy procedures have work RVUs more than a full standard deviation above any of the other codes in this group of 0-day global procedures.

We do not mean to suggest that the work RVU for a given service must always fall in the middle of a range of codes with similar time values. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. However, we also do not believe that it would serve the interests of relativity by crosswalking the work RVU of CPT code 3X002 to tracheostomy procedures that are higher than anything else in this group of codes, procedures that we believe to be outliers due to the serious risk of patient mortality associated with their performance. We believe that it is this patient risk which is responsible for the otherwise anomalously high intensity in CPT codes 31600 and 31603. Therefore, we are proposing a work RVU of 5.00 for CPT code 3X002 based on the survey 25th percentile, which we believe more accurately captures both the time and intensity associated with the procedure.

We disagree with the RUC-recommended work RVU of 5.00 for CPT code 3X003 (*Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance*) and are proposing a work RVU of 4.29 based on the survey 25th percentile value. In our review of CPT code 3X003, we noted many of the same issues that we had raised with CPT codes 3X000–3X002, in particular with the increase in the work RVU greatly exceeding the increase in the surveyed work times as compared to the predecessor pericardiocentesis codes. We searched for 0-day global codes in the RUC database with 30 minutes of intraservice time (slightly higher than the 28 minutes of intraservice time in CPT code 3X003) and a comparable 70–100 minutes of total time. Our search identified 45 codes and again all 45 of these codes had a work RVU lower than 5.00, which led us to believe that the recommended work RVU for CPT code 3X003 was overvalued. We also compared CPT code 3X003 to the most similar code in the family, CPT code 3X001, and noted that the survey respondents indicated that CPT code 3X003 should have a lower work RVU at both the survey 25th percentile and survey median values. Therefore, we are proposing a work RVU of 4.29 for CPT code 3X003 based on the survey 25th percentile value. We are supporting this proposal with a reference to CPT code 31254 (*Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)*), a recently-reviewed code with an intraservice work time of 30 minutes, a total time of 84 minutes, and a work RVU of 4.27.

The RUC did not recommend and we are not proposing any direct PE inputs for the codes in this family.

(10) Pericardiotomy (CPT Codes 33020 and 33025)

CPT code 33020 (*Pericardiotomy for removal of clot or foreign body (primary procedure)*) was identified as potentially misvalued on a Relativity Assessment Workgroup (RAW) screen of codes with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS or other source codes. The RAW determined that CPT code 33020 should be surveyed for April 2018; CPT code 33025 (*Creation of pericardial window or partial resection for drainage*) was included for review as part of this code family.

We disagree with the RUC-recommended work RVU of 14.31 (25th percentile survey value) for CPT code 33020 and are proposing a work RVU of 12.95. Our proposed work RVU is based on a crosswalk to CPT code 58700 (*Salpingectomy, complete or partial, unilateral or bilateral (separate procedure)*), which has an identical work RVU of 12.95, identical 60 minutes intraservice time, and near identical total time values as CPT code 33020.

In our review of CPT code 33020, we note that the RUC-recommended intraservice time is decreasing from 85 minutes to 60 minutes (29 percent reduction), and that the RUC-recommended total time is decreasing from 565 minutes to 321 minutes (43 percent reduction). However, the RUC-recommended work RVU is only decreasing from 14.95 to 14.31, which is a reduction of less than 5 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 33020, we believe that it would be more accurate to propose a work RVU of 12.95, based on a crosswalk to CPT code 58700 to account for these decreases in surveyed work times.

For CPT code 33025, the RUC recommended a work RVU of 13.20 (survey 25th percentile value). Although we disagree with the RUC-recommended work RVU of 13.20, based on RUC survey results and the time resources involved in furnishing these two procedures we agree that the relative difference in work RVUs between CPT codes 33020 and 33025 is equivalent to the RUC-recommended incremental difference of 1.11 less work RVUs. Therefore, we are proposing a work RVU of 11.84 based on a reference to CPT code 34712 (*Transcatheter delivery of enhanced fixation devices(s) to the endograft (e.g., anchor, screw,*

tack) and all associated radiological supervision and interpretation), which has a work RVU of 12.00, identical intraservice time of 60 minutes, and similar total time as CPT code 33025.

In reviewing CPT code 33025, we note that the RUC-recommended intraservice time is decreasing from 66 minutes to 60 minutes (9 percent reduction), and that the RUC-recommended total time is decreasing from 410 minutes to 301 minutes (27 percent reduction). However, the RUC-recommended work RVU is only decreasing from 13.70 to 13.20, which is a reduction of less than 5 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 33025, we believe that it would be more accurate to propose a work RVU of 11.84, based on less the incremental difference of 1.11 work RVUs between CPT codes 33020 and 33025 and a crosswalk to CPT code 34712 to account for these decreases in surveyed work times.

We are proposing the RUC-recommended direct PE inputs for all the codes in this family.

(11) Transcatheter Aortic Valve Replacement (TAVR) (CPT Codes 33361, 33362, 33363, 33364, 33365, and 33366)

In October 2016, the RUC's RAW reviewed codes that had been flagged in the period from October 2011 to April 2012, using 3 years of available Medicare claims data (2013, 2014 and preliminary 2015 data). The RUC workgroup determined that the technology for these transcatheter aortic valve replacement (TAVR) services was evolving, as the typical site of service had shifted from being provided in academic centers to private centers, and the RUC recommended that CPT codes 33361–33366 be resurveyed for physician work and practice expense. These six codes were surveyed and reviewed at the April 2018 RUC meeting using a survey methodology that reflected the unique nature of these codes. CPT codes 33361–33366 are currently the only codes on the PFS where the -62 co-surgeon modifier is required 100 percent of the time.

We are proposing the RUC-recommended work RVU for all six of the codes in this family. We are proposing a work RVU of 22.47 for CPT code 33361 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; percutaneous femoral artery approach*), a work RVU of 24.54 for CPT code 33362 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open femoral artery approach*), a work RVU of 25.47 for CPT code 33363 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open axillary artery approach*), a work RVU of 25.97 for CPT code 33364 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open iliac artery approach*), a work RVU of 26.59 for CPT code 33365 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transaortic approach (e.g., median sternotomy, mediastinotomy)*), and a work RVU of 29.35 for CPT code 33366 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transapical exposure (e.g., left thoracotomy)*).

Although we have some concerns that the RUC-recommended work RVUs for these six codes do not match the decreases in surveyed work time, we recognize that the technology described by the TAVR procedures is in the process of being adopted by a much wider audience, and that there will be greater intensity on the part of the practitioner when this particular new technology is first being adopted. However, we intend to continue examining whether these services are appropriately valued, in light of the proposed national coverage determination proposing to use TAVR for the treatment of symptomatic aortic valve stenosis that we posted on March 26, 2019. We will also consider any further improvements to the valuation of these services, as their use becomes more commonplace, through future notice and comment rulemaking. The text of the proposed national coverage determination is available on the CMS website at *https://www.cms.gov/medicare-coverage-database/details/nca-proposed-decision-memo.aspx?NCAId=293*.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(12) Aortic Graft Procedures (CPT Codes 338XX, 338X1, 33863, 33864, 338X2, and 33866)

In 2017, CPT created a new add-on code, CPT code 33866 (*Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion (List separately in addition to code for primary procedure)*). For CY 2019, we finalized the RUC's recommended work RVU for this code on an interim basis (83 FR 59528). CPT revised the code set to develop distinct codes for ascending aortic repair for dissection and ascending aortic repair for other ascending aortic disease such as aneurysms and congenital anomalies, creating two new codes, as well as revaluating the two other codes in the family.

For CPT code 338XX (*Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic dissection*), we disagree with the RUC-recommended work RVU of 65.00, because the RUC is recommending an increase in work RVU that is not commensurate with a reduction in physician time, and because we do not believe that the RUC's recommendation that this service be increased to a value that would place it among the highest valued of all services of similar physician time is appropriate; we think a comparison to other services of similar time indicates that the RUC's recommended increase overstates the work. Instead, we are proposing to increase the work RVU to 63.40 based on a crosswalk to CPT code 61697 (*Surgery of complex intracranial aneurysm, intracranial approach; carotid circulation*). For CPT code 338X1 (*Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic disease other than dissection (e.g., aneurysm)*), we disagree with the RUC-recommended work RVU of 50.00, because we do not believe it adequately reflects the recommended decrease in physician time, and because we do not believe this service should be assigned a value that is among the highest of all 90-day global services with similar physician time values. Instead, we are proposing a work RVU of 45.13 based on a crosswalk to CPT code 33468 (*Tricuspid valve repositioning and plication for Ebstein anomaly*), which is a code with an identical intraservice time and similar total time value.

For CPT code 33863 (*Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (e.g., Bentall)*), according to the RUC, the survey respondents underestimated the intraservice time of the procedure and the RUC recommended a work RVU of 59.00 based on the 75th percentile of survey responses for intraservice time. We believe the use of the survey 75th percentile value to be problematic, as the intraservice time values should generally reflect the survey median. We are requesting that this code be

resurveyed to determine more accurate physician time values, and we are proposing to maintain the current RVU of 58.79 for CY 2020. For CPT code 33864 (*Ascending aorta graft, with cardiopulmonary bypass with valve suspension, with coronary reconstruction and valve-sparing aortic root remodeling (e.g., David Procedure, Yacoub procedure)*), we do not agree with the RUC-recommended work RVU of 63.00, because we believe this increase is not justified given that the intraservice time is not changing from its current value, and the physician total time value is decreasing. Therefore, we are proposing to maintain the current work RVU of 60.08 for this service.

For CPT code 338X2 (*Transverse aortic arch graft, with cardiopulmonary bypass, with profound hypothermia, total circulatory arrest and isolated cerebral perfusion with reimplantation of arch vessel(s) (e.g., island pedicle or individual arch vessel reimplantation)*), we disagree with the RUC's recommended work RVU of 65.75. While we agree that an increase in work RVU is justified, as discussed above, we believe that the use of the 75th percentile of physician intraservice work time is problematic, and believe such a significant increase in work RVU is not validated. Therefore, we are proposing a less significant increase to 60.88 using the RUC-recommended difference in work value between CPT code 338X1 and the code in question, CPT code 338X2 (a difference of 15.75). As further support for this value, we note that it falls between CPT codes 33782 (*Aortic root translocation with ventricular septal defect and pulmonary stenosis repair (i.e., Nikaidoh procedure); without coronary ostium reimplantation*), which has a work RVU of 60.08, and CPT code 43112 (*Total or near total esophagectomy, with thoracotomy; with pharyngogastrostomy or cervical esophagogastrostomy, with or without pyloroplasty (i.e., McKeown esophagectomy or tri-incisional esophagectomy)*), which has a work RVU of 62.00. Both of these bracketing reference codes have similar intraservice and total time values. For CPT code 33X01 (*Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion (List separately in addition to code for primary procedure)*), we are proposing the RUC-recommended work RVU of 17.75.

For the direct PE inputs, we are proposing to refine the clinical labor to align with the number of post-operative visits. Thus, we are proposing to add 12 minutes of clinical labor time for ''Discharge day management'' for CPT codes 338X1, 33863, 33864, and 338X2, as each of these codes include a 99238 discharge visit within their global periods that should be reflected in the clinical labor inputs.

(13) Iliac Branched Endograft Placement (CPT Codes 34X00 and 34X01)

For CY 2018, the CPT Editorial Panel created a family of 20 new and revised codes that redefined coding for endovascular repair of the aorta and iliac arteries. The iliac branched endograft technology has become more mainstream over time, and two new CPT codes were created to capture the work of iliac artery endovascular repair with an iliac branched endograft. These two new codes were surveyed and reviewed for the January 2019 RUC meeting.

We are proposing the RUC-recommended work RVU of 9.00 for CPT code 34X00 (*Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral*) and the RUC-recommended work RVU of 24.00 for CPT code 34X01 (*Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral*).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(14) Exploration of Artery (CPT Codes 35701, 35X01, and 35X01)

CPT code 35701 (*Exploration not followed by surgical repair, artery; neck (e.g., carotid, subclavian)*) was identified via a screen for services with a ne.g.ative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. In September 2018, the CPT Editorial Panel revised one code, added two new codes, and deleted three existing codes in the family to report major artery exploration procedures and to condense the code set due to low frequency.

We are proposing the RUC-recommended work RVU for all three codes in the family. We are proposing a work RVU of 7.50 for CPT code 35701, a work RVU of 7.12 for CPT code 35X00 (*Exploration not followed by surgical repair, artery; upper extremity (e.g., axillary, brachial, radial, ulnar)*), and a work RVU of 7.50 for CPT code 35X01 (*Exploration not followed by surgical repair, artery; lower extremity (e.g., common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal)*).

For the direct PE inputs, we are proposing to refine the clinical labor, supplies, and equipment to match the number of office visits contained in the global periods of the codes under review. We are proposing to refine the clinical labor time for the ''Post-operative visits (total time)'' (CA039) activity from 36 minutes to 27 minutes for CPT codes 35701 and 35X00, and from 63 minutes to 27 minutes for CPT code 35X01. Each of these CPT codes contains a single postoperative level 2 office visit (CPT code 99212) in its global period, and 27 minutes of clinical labor is the time associated with this office visit. We are proposing to refine the equipment time for the exam table (EF023) to the same time of 27 minutes for each code to match the clinical labor time. Finally, we are also proposing to refine the quantity of the minimum multi-specialty visit pack (SA048) from 2 to 1 for CPT code 35X01 to match the single postoperative visit in the code's global period. We believe that the additional direct PE inputs in the recommended materials were an accidental oversight due to revisions that took place at the RUC meeting following the approval of the PE inputs for these codes.

(15) Intravascular Ultrasound (CPT Codes 37252 and 37253)

In CY 2014, the CPT Editorial Panel deleted CPT codes 37250 (*Ultrasound evaluation of blood vessel during*

diagnosis or treatment)and 37251 (*Ultrasound evaluation of blood vessel during diagnosis or treatment*) and created new bundled codes 37252 (*Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel*) and 37253 (*Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel*) to describe intravascular ultrasound (IVUS). CPT codes 37252 and 37253 were reviewed at the January 2015 RUC meeting. The RUC's recommendation for these codes were to result in an overall work savings that should have been redistributed back to the Medicare conversion factor. The codes have had a 44 percent increase in work RVUs over the old codes, CPT codes 37250 and 37251, from 2015 to 2016 and the utilization has doubled from that of the previous coding structure, not considering the radiological activities. In April 2018, the RUC reviewed this code family and determined the utilization of the bundling of these services was underestimated. Consequently, the RUC recommended that these services be surveyed for October 2018. The RUC indicated that the specialty societies should research why there was such an increase in the utilization. Accordingly, the specialty society surveyed these ZZZ-day global codes, and the survey results indicated the intraservice and total work times, along with the work RVU should remain the same despite the underestimation in utilization.

We disagreed with the RUC-recommended work RVU of 1.80 for CPT code 37252 and are proposing a work RVU of 1.55 based on a crosswalk to CPT code 19084. CPT code 19084 is a recently reviewed code with 20 minutes of intraservice time and 25 minutes of total time. In reviewing CPT code 37252, we note, as mentioned above, that in CY 2015 the specialty society stated that bundling this service would achieve savings. However, since 2015 observed utilization for CPT code 37252 has greatly exceeded proposed estimates, thus we are proposing to restore work neutrality to the intravascular ultrasound code family to achieve the initial estimated savings.

For CPT code 37253, we disagreed with the RUC-recommended work RVU of 1.44 and we are proposing a work RVU of 1.19. Although we disagreed with the RUC-recommended work RVU, we note the relative difference in work between CPT codes 37252 and 37253 is an interval of 0.36 RVUs. Therefore, we are proposing a work RVU of 1.19 for CPT code 37253, based on the recommended interval of 0.36 fewer RVUs than our proposed work RVU of 1.55 for CPT code 37252.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(16) Stab Phlebectomy of Varicose Veins (CPT Codes 37765 and 37766)

These services were identified in February 2008 via the High Volume Growth screen, for services with a total Medicare utilization of 1,000 or more that have increased by at least 100 percent from 2004 through 2006. The RUC subsequently recommended monitoring and reviewing changes in utilization over multiple years. In October 2017, the RUC recommended that this service be surveyed for April 2018. We are proposing the RUC-recommended work RVUs of 4.80 for CPT code 37765 (*Stab phlebectomy of varicose veins, 1 extremity; 10–20 stab incisions*) and 6.00 for CPT code 37766 (*Stab phlebectomy of varicose veins, 1 extremity; more than 20 incisions*). We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(17) Biopsy of Mouth Lesion (CPT Code 40808)

CPT code 40808 (*Biopsy, vestibule of mouth*) was identified via a screen for services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes.

We disagree with the RUC's recommended work RVU of 1.05 with a crosswalk to CPT code 11440 (*Excision, other benign lesion including margins, except skin tag (unless listed elsewhere), face, ears, eyelids, nose, lips, mucous membrane; excised diameter 0.5 cm or less*), as we believe this increase in work RVU is not commensurate with the RUC-recommended 5-minute reduction in intraservice time and a 10-minute reduction in total time. While we understand that the RUC considers the current time values for this service to be invalid estimations, we do not see compelling evidence that would indicate that an increase in work RVU that would be concurrent with a reduction in physician time is appropriate. Therefore, we are proposing to maintain the current work RVU of 1.01, and note that implementing the current work RVU with the RUC-recommended revised physician time values would correct the negative IWPUT anomaly.

For the direct PE inputs, we are proposing to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity to 3 minutes and to refine the clinical labor time for the ''Confirm order, protocol exam'' (CA014) activity to 0 minutes. As we detailed when discussing this issue in the CY 2019 PFS final rule (83 FR 59463 through 59464), CPT code 40808 does not include the old clinical labor task ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'' on a prior version of the PE worksheet, nor does the code contain any clinical labor for the CA007 activity (''Review patient clinical extant information and questionnaire''). CPT code 40808 does not appear to be an instance where an old clinical labor task was split into two new clinical labor activities, and we continue to believe that in these cases the 3 total minutes of clinical staff time would be more accurately described by the CA013 ''Prepare room, equipment and supplies'' activity code. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished.

We are also proposing to refine the equipment time for the electrocautery-hyfrecator (EQ110) to conform to our established standard for non-highly technical equipment.

(18) Transanal Hemorrhoidal Dearterialization (CPT Codes 46945, 46946, and 46X48)

We are proposing the RUC-recommended work RVU for all three codes in the family. We are proposing a work RVU of 3.69 for CPT code 46945 (*Hemorrhoidectomy, internal, by ligation other than rubber band; single hemorrhoid column/group, without imaging guidance*), a work RVU of 4.50 for CPT code 46946 (*2 or more hemorrhoid columns/groups, without imaging guidance*), and a work RVU of 5.57 for CPT code 46X48 (*Hemorrhoidectomy, internal, by transanal hemorrhoidal dearterialization, 2 or more hemorrhoid columns/groups, including ultrasound guidance, with mucopexy when performed*).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(19) Preperitoneal Pelvic Packing (CPT Codes 490X1 and 490X2)

In May 2018, the CPT Editorial Panel approved the addition of two codes for preperitoneal pelvic packing, removal

and/or repacking for hemorrhage associated with pelvic trauma. These new codes were surveyed and reviewed for the October 2018 RUC meeting.

We disagree with the RUC-recommended work RVU of 8.35 for CPT code 490X1 (*Preperitoneal pelvic packing for hemorrhage associated with pelvic trauma, including local exploration*) and are proposing a work RVU of 7.55 based on a crosswalk to CPT code 52345 (*Cystourethroscopy with ureteroscopy; with treatment of ureteropelvic junction stricture (e.g., balloon dilation, laser, electrocautery, and incision)*). We are also proposing to reduce the immediate postservice work time from 60 minutes to 45 minutes, which results in a total work time of 140 minutes for this procedure. We believe that the survey respondents overstated the immediate postservice work time that would typically be required to perform CPT code 490X1, which we investigated by comparing this new service against the existing 0-day global codes on the PFS. We found that among the roughly 1,100 codes with 0-day global periods, only 21 codes had an immediate postservice work time of 60 minutes or longer. The 21 codes that fell into this category had significantly higher intraservice work times than CPT code 490X1, with an average intraservice work time of 111 minutes as compared to the 45 minutes of intraservice work time in CPT code 490X1. Generally speaking, it is extremely rare for a service to have more immediate postservice work time than intraservice work time, and in fact only 28 out of the roughly 1,100 codes with 0-day global periods had more immediate postservice work time than intraservice work time. While we agree that each service on the PFS is its own unique entity, these comparisons to other 0-day global codes suggest that the survey respondents overestimated the amount of immediate postservice work time that would typically be associated with CPT code 490X1.

As a result, we believe that it would be more accurate to reduce the immediate postservice work time to 45 minutes and to propose a work RVU of 7.55 based on a crosswalk to CPT code 52345. This crosswalk code shares an intraservice work time of 45 minutes and a similar total time of 135 minutes after taking into account the reduced immediate postservice work time that we are proposing for CPT code 490X1. We searched the RUC database for 0-day global procedures with 45 minutes of intraservice work time, and at the recommended work RVU of 8.35, CPT code 490X1 would establish a new maximum value, higher than all of the 79 other codes that fall into this category. We recognize that CPT code 490X1 describes a preperitoneal pelvic packing service associated with pelvic trauma, and that this is a difficult and intensive procedure that rightly has a higher work RVU than many of these other 0-day global codes. However, we believe that it better maintains relativity to propose a crosswalk to CPT code 52345 at a work RVU of 7.55, which would still assign this code the second-highest work RVU among all 0 day global codes with 45 minutes of intraservice work time, as opposed to proposing the survey median work RVU of 8.35 at a rate higher than anything in the current RUC database.

We disagree with the RUC-recommended work RVU of 6.73 for CPT code 490X2 (Re-exploration of pelvic wound with removal of preperitoneal pelvic packing including repacking, when performed) and are proposing a work RVU of 5.70 based on the 25th percentile survey value. We believe that the survey 25th percentile work RVU more accurately describes the work of re-exploring this type of pelvic wound, and by proposing the survey 25th percentile we are maintaining the general increment in RVUs between the two codes in the family (a difference of 1.62 RVUs as recommended by the RUC as compared to 1.85 RVUs as proposed here). We are supporting this valuation with a reference to CPT code 39401 (*Mediastinoscopy; includes biopsy(ies) of mediastinal mass (e.g., lymphoma), when performed*), a recently reviewed code from CY 2015 which shares the same intraservice time of 45 minutes, a slightly higher total time of 142 minutes and a lower work RVU of 5.44.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(20) Cystourethroscopy Insertion Transprostatic Implant (CPT Codes 52441 and 52442)

In 2005, the AMA RUC began the process of flagging services that represent new technology or new services as they were presented to the AMA/Specialty Society RVS Update Committee. This service was reviewed at the October 2018 RAW meeting, and the RAW indicated that the utilization is increasing and questioned the time required to perform these services. These two codes were surveyed and reviewed for the January 2019 RUC meeting.

We disagree with the RUC-recommended work RVU of 4.50 (current value) for CPT code 52441 (*Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant*) and are proposing a work RVU of 4.00. This proposed work RVU is based on a crosswalk from recently reviewed CPT code 58562 (*Hysterscopy, surgical; with removal of impacted foreign body*), which has a work RVU of 4.00, and an identical 25 minutes of intraservice time as CPT code 52441.

We disagree with the RUC-recommended work RVU of 1.20 (current value) for CPT code 52442 (*Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)*) and are proposing a work RVU of 1.01. This proposed work RVU is based on a crosswalk from CPT code 36218 (*Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (List in addition to code for initial second or third order vessel as appropriate)*), which has a work RVU of 1.01, and an identical 15 minutes of intraservice time as CPT code 52442. The RUC survey showed a reduction in time, and the work should reflect these changes.

We are proposing the RUC-recommended direct PE inputs for all codes in the family without refinement.

(21) Orchiopexy (CPT Code 54640)

The CPT Editorial Panel revised existing CPT code 54640 to describe an additional approach for orchiopexy (scrotal) and to clearly indicate that hernia repair is separately reportable. This code was surveyed and reviewed for the January 2019 RUC meeting.

We are proposing to maintain the current work RVU of 7.73 as recommended by the RUC. We are proposing the RUC-recommended direct PE inputs for CPT code 54640 without refinement.

(22) Radiofrequency Neurootomy Sacroiliac Joint (CPT Codes 6XX00, 6XX01)

In September 2018, the CPT Editorial Panel created two new codes to describe injection and radiofrequency ablation of the sacroiliac joint with image guidance for somatic nerve procedures. We are proposing the RUC-recommended work RVU of 1.52 for CPT code 6XX00 (*Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (i.e., fluoroscopy or computed tomography)*) and the RUC-recommended work RVU of 3.39 for CPT code 6XX01 (*Radiofrequency ablation, nerves innervating the sacroiliac joint, with*

image guidance (i.e., fluoroscopy or computed tomography)).

For the direct PE inputs, we are proposing to refine the quantity of the ''needle, 18–26g 1.5–3.5in, spinal'' (SC028) supply from 3 to 1 for CPT code 6XX00. There are no spinal needles in use in the reference code associated with CPT code 6XX00, and there was no explanation in the recommended materials explaining why three such needles would be typical for this procedure. We agree that the service being performed in CPT code 6XX00 would require a spinal needle, but we do not believe that the use of three such needles would be typical.

We are proposing to refine the quantity of the ''cannula (radiofrequency denervation) (SMK–C10)'' (SD011) supply from 4 to 2 for CPT code 6XX01. We do not believe that the use of 4 of these cannula would be typical for the procedure, as the reference code currently used for destruction by neurolytic agent contains only a single cannula. We believe that the nerves would typically be ablated one at a time using this cannula, as opposed to ablating four of them simultaneously as suggested in the recommended direct PE inputs. We also searched in the RUC database for other CPT codes that made use of the SD011 supply, and out of the seven codes that currently use this item, none of them include more than 2 cannula. As a result, we are proposing to refine the supply quantity to 2 cannula to match the highest amount contained in an existing code on the PFS. We are also refining the equipment time for the ''radiofrequency kit for destruction by neurolytic agent'' (EQ354) equipment from 164 minutes to 82 minutes. The RUC's equipment time recommendation was predicated on the use of 4 of the SD011 supplies for 41 minutes apiece, and we are refining the equipment time to reflect our supply refinement to 2 cannula. It was unclear in the recommended materials as to whether the radiofrequency kit equipment was in use simultaneously or sequentially along with the cannula supplies, and therefore, we are soliciting comments on the typical use of this equipment.

Finally, we are proposing to refine the equipment time for the technologist PACS workstation (ED050) equipment to match our standard equipment time formulas, which results in an increase of 5 minutes of equipment time for both codes.

(23) Lumbar Puncture (CPT Codes 62270, 622X0, 62272, and 622X1)

In October 2017, these services were identified as being performed by a different specialty than the specialty that originally surveyed this service. In January 2018, the RUC recommended that these services be referred to CPT to bundle image guidance. At the September 2018 CPT Editorial Panel meeting, the Panel created two new codes to bundle diagnostic and therapeutic lumbar puncture with fluoroscopic or CT image guidance and revised the existing diagnostic and therapeutic lumbar puncture codes so they would only be reported without fluoroscopic or CT guidance.

For CPT code 62270 (*Spinal puncture, lumbar, diagnostic*), we disagree with the RUC-recommended work RVU of 1.44 and we are proposing a work RVU of 1.22 based on a crosswalk to CPT code 40490 (*Biopsy of lip*). CPT code 40490 has the same intraservice time of 15 minutes and 2 additional minutes of total time. In reviewing CPT code 62270, we noted that the recommended intraservice time is decreasing from 20 minutes to 15 minutes (25 percent reduction), and the recommended total time is decreasing from 40 minutes to 32 minutes (20 percent reduction); however, the RUC-recommended work RVU is increasing from 1.37 to 1.44, which is an increase of just over 5 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 62270, we believed that it was more accurate to propose a work RVU of 1.22 based on a crosswalk to CPT code 40490 to account for these decreases in the surveyed work time.

For CPT code 622X0 (*Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance*), we disagree with the RUC-recommended work RVU of 1.95 and we are proposing a work RVU of 1.73. Although we disagree with the RUC-recommended work RVU, we note that the relative difference in work between CPT codes 62270 and 622X0 is equivalent to an interval of 0.51 RVUs. Therefore, we are proposing a work RVU of 1.73 for CPT code 622X0, based on the recommended interval of 0.51 additional RVUs above our proposed work RVU of 1.22 for CPT code 62270.

For CPT code 62272 (*Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter*), we disagree with the RUC-recommended work RVU of 1.80 and we are proposing a work RVU of 1.58. Although we disagree with the RUC-recommended work RVU, we note that the relative difference in work between CPT codes 62270 and 622X0 is equivalent to the RUC-recommended interval of 0.36 RVUs. Therefore, we are proposing a work RVU of 1.58 for CPT code 62272, based on the recommended interval of 0.36 additional RVUs above our proposed work RVU of 1.22 for CPT code 62270.

For CPT code 622X1 (*Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance*), we disagree with the RUC-recommended work RVU of 2.25 and we are proposing a work RVU of 2.03. Although we disagree with the RUC-recommended work RVU, we note that the relative difference in work between CPT codes 62270 and 622X1 is equivalent to the recommended interval of 0.81 RVUs. Therefore, we are proposing a work RVU of 2.03 for CPT code 622X1, based on the recommended interval of 0.81 additional RVUs above our proposed work RVU of 1.22 for CPT code 62270.

(24) Electronic Analysis of Implanted Pump (CPT Codes 62367, 62368, 62369, and 62370)

CPT code 62368 (*Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming*) was identified by the RUC on a list of services which were originally surveyed by one specialty but are now typically performed by a different specialty. It was reviewed along with three other codes in the family for PE only at the April 2018 RUC meeting. The RUC did not recommend work RVUs for these codes and we are not proposing to change the current work RVUs.

For the direct PE inputs, we are proposing to remove the minimum multi-specialty visit pack (SA048) from CPT code 62370 as a duplicative supply due to the fact that this code is typically billed with an E/M or other evaluation service.

(25) Somatic Nerve Injection (CPT Codes 64400, 64408, 64415, 64416, 64417, 64420, 64421, 64425, 64430, 64435, 64445, 64446, 64447, 64448, 64449, and 64450)

In May 2018, the CPT Editorial Panel approved the revision of descriptors and guidelines for the codes in this family and the deletion of three CPT codes to clarify reporting (*i.e., separate reporting of imaging guidance, number of units and a change from a 0-day global to ZZZ for one of the CPT codes in this*

family). This family of services describe the injection of an anesthetic agent(s) and/or steroid into a nerve plexus, nerve, or branch; reported once per nerve plexus, nerve, or branch as described in the descriptor regardless of the number of injections performed along the nerve plexus, nerve, or branch described by the code.

CPT codes 64400 (*Injection(s), anesthetic agent(s); trigeminal nerve, each branch (ie ophthalmic, maxillary, mandibular)), 64408 (Injection(s), anesthetic agent(s), and/or steroid; vagus nerve*), 64415 (*Injection(s), anesthetic agent(s) and/or steroid; brachial plexus), 64416 (Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement)*), 64417 (*Injection(s), anesthetic agent(s) and/or steroid; axillary nerve), 64420 (Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level*), 64421 (*Injection(s), anesthetic agent(s) and/or steroid; intercostal nerves, each additional level (List separately in addition to code for primary procedure*)), 64425 (*Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves*), 64430 (*Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve), 64435 (Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve*), 64445 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve*), 64446 (*Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement)*), 64447 (*Injection(s), anesthetic agent(s); femoral nerve*), 64448 (*Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement)*), 64449 (*Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)*), and 64450 (*Injection(s), anesthetic agent(s); other peripheral nerve or branch*) were reviewed for work and PE at the October 2018 RUC meeting. The PE for CPT code 64450 was re-reviewed during the RUC January 2019 meeting.

During the October 2018 RUC presentation for this family of services, the specialty societies stated that CPT codes 64415, 64416, 64417, 64446, 66447, and 64448 were reported with CPT code 76942 (*Ultrasonic guidance for needle placement (e.g., biopsy, aspiration, injection, localization device), imaging supervision and interpretation)* more than 50 percent of the time. Specifically, 76 percent with CPT code 64415, 85 percent with CPT code 64416, 68 percent with CPT code 64417, 77 percent with CPT code 64446, 77 percent with CPT code 66447, and 79 percent with CPT code 64448. It was also noted in the RUC recommendations that this overlap was accounted for in the RUC recommendations submitted for these services. Furthermore, the RUC recommendations sated that the RUC referred CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 to be bundled with ultrasound guidance, CPT code 76942 to the CPT Editorial Panel for CPT 2021.

In reviewing this family of services, our proposed work and PE values for CPT codes 64415, 64416, 64417, 64446, 64447 and 64448 do not consider the overlap of imaging as noted in the RUC recommendations. We note that the RUC recommendations did not include values to support the valuation for the bundling of imaging in their work or PE recommendations and that the CPT code descriptors do not state that imaging is included.

For CY 2020, we are proposing the RUC-recommended work RVUs for CPT codes 64417 (work RVU of 1.27), 64435 (work RVU of 0.75), 64447 (work RVU of 1.10), and 64450 (work RVU of 0.75), the RUC reaffirmed work RVU of 0.94 for CPT code 64405 (*Injection, anesthetic agent; greater occipital nerve*), which is the current work RVU finalized in the CY 2019 final rule (83 FR 59542), and the RUC reaffirmed work RVU of 1.10 for CPT code 64418 (*Injection, anesthetic agent; suprascapular nerve*), which is the current work RVU value finalized in the CY 2018 final rule (82 FR 53054). Although we are proposing the RUC reaffirmed work RVUs for these two codes, as submitted in the RUC recommendations, we note that comparable codes in this family of services have lower work RVUs. Thus, these two codes may have become misvalued since their last valuation, as they were not resurveyed under this code family during the October 2018 RUC meeting.

In continuing our review of this code family, we disagree with the RUC-recommended work RVU of 1.00 for CPT code 64400 and are proposing a work RVU of 0.75, to maintain rank order in this code family. Our proposed work RVU is based on a crosswalk to another code in this family, CPT code 64450, which has an identical work RVU of 0.75 and near identical intraservice and total time values to CPT code 64400.

We note that the RUC-recommended intraservice time decreased from 37 to 6 minutes (84 percent reduction) and the RUC-recommended total time decreased from 69 to 20 minutes (71 percent reduction) for CPT code 64400. However, the RUC-recommended work RVU only decreased by 0.11, a 10 percent reduction. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64400, we believe that it would be more accurate to propose a work RVU of .075 based on a crosswalk to CPT code 64450, which has an identical work RVU of 0.75 and near identical intraservice and total times to CPT code 64400. We further note that our proposed work RVU maintains rank order in this code family among comparable codes.

For CPT code 64408, we disagree with the RUC-recommended work RVU of 0.90 and are proposing a work RVU of 0.75, to maintain rank order in this code family. Our proposed work RVU is based on a crosswalk to another code in this family, CPT code 64450, which has an identical work RVU of 0.75, and near identical intraservice and total time values to CPT code 64408.

We note that the RUC-recommended intraservice time decreased from 16 to 5 minutes (69 percent reduction) and RUC-recommended total time decreased from 36 to 20 minutes (44 percent reduction) for CPT code 64408. Although the RUC-recommended work RVU decreased by 0.51, a 36 percent reduction, we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64408, we believe that it would be more accurate to propose a work RVU of .075, based on a crosswalk CPT code 64450,

to account for these decrease in the surveyed work times. We further note that our proposed work RVU maintains rank order in this code family among comparable codes.

For CPT code 64415, we disagree with the RUC-recommended work RVU of 1.42 and are proposing a work RVU of 1.35, based on our time ratio methodology and further supported by a reference to CPT code 49450 (*Replacement of gastrostomy or cecostomy (or other colonic) tube, percutaneous, under fluoroscopic guidance including contrast injections(s), image documentation and report*), which has a work RVU of 1.36 and similar intraservice and total time values to CPT code 64415.

We note that the RUC-recommended intraservice time decreased from 15 to 12 minutes (20 percent reduction) and RUC-recommended total time decreased from 44 to 40 minutes (9 percent reduction). However, the RUC-recommended work RVU only decreased by 0.06, which is a 4 percent reduction. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64415, we believe that it would be more accurate to propose a work RVU of 1.35, based on our time ratio methodology and a reference to CPT code 49450, to account for these decrease in the surveyed work times.

For CPT code 64416, we disagree with the RUC-recommended work RVU of 1.81 and are proposing a work RVU of 1.48, based on our time ratio methodology and further supported by a bracket of CPT code 62270 (*Spinal puncture, lumbar, diagnostic*), which has a work RVU of 1.37, identical intraservice, and similar total time to CPT code 64416 and CPT code 91035 (*Esophagus, gastroesophageal reflux test; with mucosal attached telemetry pH electrode placement, recording, analysis and interpretation*), which has a work RVU of 1.59, identical intraservice, and near identical total time values to CPT code 64416.

We note that while the RUC-recommended intraservice time remained unchanged, the RUC-recommended total time decreased from 60 to 49 minutes (18 percent reduction). However, the RUC recommended maintaining the current work RVU of 1.81. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed total time for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64416, we believe that it would be more accurate to propose a work RVU of 1.48, based on our time ratios methodology and a bracket of CPT code 62270 and CPT code 91035, to account for these decreases in the surveyed work times.

For CPT code 64420, we disagree with the RUC-recommended work RVU of 1.18 and are proposing a work RVU of 1.08, based on our time ratio methodology and further supported by a reference to CPT code 12011 (*Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.5 cm or less*), which has a work RVU of 1.07 and similar intraservice and total time values to CPT code 64420.

We note that the RUC-recommended intraservice time decreased from 17 to 10 minutes (41 percent reduction) and the RUC-recommended total time decreased from 37 to 34 minutes (8 percent reduction). However, the RUC recommended to maintaining the current work RVU of 1.18. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed work times for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64420, we believe that it would be more accurate to propose a work RVU of 1.08 based on our times ratio methodology and a crosswalk to CPT code 12011, to account for these decreases in the surveyed work times.

For CPT code 64421, we disagree with the RUC-recommended work RVU of 0.60 and are proposing a work RVU of 0.50, based on our time ratio methodology and to maintain rank order among comparable codes in the family. Our proposed work RVU is further supported by a crosswalk to CPT code 15276 (*Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)*), which has a work RVU of 0.50 and identical intraservice and total times to CPT code 64421.

We note that our time ratio methodology suggests the code is better valued at 0.50. Furthermore, the RUC-recommended work RVU of 0.60 creates a rank order anomaly in the code family. In the case of CPT code 64421, we believe that it would be more accurate to propose a work RVU of 0.50, based on our time ratio methodology and a crosswalk to CPT code 15276, to maintain rank order among comparable codes in the family.

For CPT code 64425, we disagree with the RUC-recommended work RVU of 1.19 and are proposing a work RVU of 1.00, to maintain rank order among comparable codes in the family, based on a bracket of CPT code 12001 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less*) which has a work RVU of 0.84 and near identical intraservice and total time values to CPT code 64425 and CPT code 30901 (*Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method*), which has a work RVU of 1.10 and near identical intraservice and total times to CPT code 64425.

We note that the RUC-recommended work RVU of 1.19 creates a rank order anomaly in the code family. In the case of CPT code 64425, we believe that it would be more accurate to propose a work RVU of 1.00, based on a bracket of CPT codes 12001 and 30901 to maintain rank order among comparable codes in the family.

For CPT code 64430, we disagree with the RUC-recommended work RVU of 1.15 and are proposing a work RVU of 1.00, to maintain rank order among comparable codes in the family, based on a bracket of CPT code 45330 (*Sigmoidoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)*), which has a work RVU of 0.84 and near identical

intraservice and total time values to CPT code 64430 and CPT code 31576 (*Laryngoscopy, flexible; with biopsy(ies)*), which has a work RVU of 1.89 and near identical intraservice and total time values to CPT code 64430.

We note that the RUC-recommended intraservice time decreased from 17 to 10 minutes (41 percent reduction) and the RUC-recommended total time increased from 39 to 43 minutes (10 percent increase). While the RUC-recommended work RVU is decreasing by 0.31, a 21 percent reduction, we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed intraservice work time for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64430, we believe that it would be more accurate to propose a work RVU of 1.00, based on a bracket of CPT codes 45300 and 31576 to account for these decreases in surveyed work times and to maintain rank order among comparable codes in this family.

For CPT code 64445, we disagree with the RUC-recommended work RVU of 1.18 and are proposing a work RVU of 1.00, based on our time ratio methodology and to maintain rank order among comparable codes in the family. Our proposed work RVU is based on a bracket of CPT code 12001 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 2.5 cm or less*), which has a work RVU of 0.84 and near identical intraservice and total times to CPT code 64445 and CPT code 30901 (*Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method*), which has a work RVU of 1.10 and near identical intraservice and total time values to CPT code 64445.

We note that the RUC-recommended intraservice time decreased from 15 to 10 minutes (33 percent reduction) and the RUC-recommended total time decreased from 48 to 24 minutes (50 percent reduction). While the RUC-recommended work RVU is decreasing by 0.30, a 21 percent reduction, we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed intraservice work time for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64445, we believe that it would be more accurate to propose a work RVU of 1.00, based on a bracket of CPT codes 12001 and 30901 to account for these decreases in surveyed work times and to maintain rank order among comparable codes in the family.

For CPT code 64446, we disagree with the RUC-recommended work RVU of 1.54 and are proposing a work RVU of 1.36 based on our time ratios methodology and further supported by a reference to CPT code 51710 (*Change of cystostomy tube; complicated*), which has a near identical work RVU of 1.35 and near identical intraservice and total time values to CPT code 64446.

We note that RUC-recommended intraservice time decreased from 20 to 15 minutes (25 percent reduction) and the RUC-recommended total time decreased from 64 to 40 minutes (38 percent reduction). While the RUC-recommended work RVU is decreasing by 0.27, a 15 percent reduction, we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed intraservice work time for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64446, we believe that it would be more accurate to propose a work RVU of 1.36, based on our time ratios methodology and a reference to CPT code 51710 to account for these decreases in surveyed times and to maintain rank order among comparable codes in the family.

For CPT code 64448, we disagree with the RUC-recommended work RVU of 1.55 and are proposing a work RVU of 1.41, based our time ratio methodology and a reference to CPT code 27096 (*Injection procedure for sacroiliac joint, anesthetic/steroid, with image guidance (fluoroscopy or CT) including arthrography when performed*), which has a work RVU of 1.48 and near identical intraservice time and identical total time values to CPT code 64448.

We note that RUC-recommended intraservice time decreased from 15 to 13 minutes (13 percent reduction) and the RUC-recommended total time decreased from 55 to 38 minutes (62 percent reduction). While the RUC-recommended work RVU is only decreasing by 0.08, which is only a 5 percent reduction. We do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed intraservice work time for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 64448, we believe that it would be more accurate to propose a work RVU of 1.41, based on our time ratios methodology and a crosswalk to CPT code 27096 to account for these decreases in surveyed times and to maintain rank order among comparable codes in the family.

For CPT code 64449, we disagree with the RUC-recommended work RVU of 1.55 and are proposing a work RVU of 1.27, based our time ratio methodology and a reference to CPT code 11755 (*Biopsy of nail unit (eg, plate, bed, matrix, hyponychium, proximal and lateral nail folds) (separate procedure)*), which has a work RVU of 1.25 and near identical intraservice and total times to CPT code 64449.

We note that RUC-recommended intraservice time decreased from 20 to 14 minutes (30 percent reduction) and the RUC-recommended total time decreased from 60 to 38 minutes (37 percent reduction). While the RUC-recommended work RVU is decreasing by 0.26, a 14 percent reduction, we do not believe the RUC-recommended work RVU appropriately accounts for the substantial reductions in the surveyed intraservice work time for the procedure. Although we do not imply that the decrease in time as reflected in survey values must always equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work and time are intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to

work RVUs. In the case of CPT code 64449, we believe that it would be more accurate to propose a work RVU of 1.27, based on our time ratios methodology and a reference to CPT code 11755 to account for these decreases in surveyed times and to maintain rank order among comparable codes in the family.

For the direct PE inputs, we are proposing to remove the clinical labor time for the ''Confirm availability of prior images/studies'' (CA006) activity for CPT code 64450. This code does not currently include this clinical labor time, and unlike the new code, CPT code 64XX1, in the Genicular Injection and RFA code family, in which the PE for CPT code 64450 was resurveyed at the January 2019 RUC for PE, CPT code 64450 does not include imaging guidance in its code descriptor. When CPT code 64450 is performed with imaging guidance, it would be billed together with a separate imaging code that already includes clinical labor time for confirming the availability of prior images. As a result, it would be duplicative to include this clinical labor time in CPT code 64450. We are also proposing to refine the clinical labor time for the ''*Assist physician or other qualified healthcare professional—directly related to physician work time (100 percent)*'' (CA018) activity from 10 to 5 minutes for CPT code 64450, to match the intraservice work time and proposing to refine the equipment times in accordance with our standard equipment time formulas for CPT code 64450.

Additionally, we are proposing to refine the clinical labor time for the ''provide education/obtain consent'' (CA011) from 3 minutes to 2 minutes, for CPT codes 64400, 64408, 64415, 64417, 64420, 64425, 64430, 64435, 64445, 64447 and 64450, to conform to the standard for this clinical labor task. We are also proposing to refine the equipment time in accordance with our standard equipment time formula for these codes. We note that there were no RUC-recommended direct PE inputs provided for CPT codes 64416, 64446, and 64448.

(26) Genicular Injection and RFA (CPT Codes 64640, 64XX0, and 64XX1)

In May 2018, the CPT Editorial Panel approved the addition of two codes to report injection of anesthetic and destruction of genicular nerves by neurolytic agent. In October 2018, the RUC discussed the issues surrounding the survey of this family of services and supported the specialty societies' request for CPT codes 64640 (*Destruction by neurolytic agent; other peripheral nerve or branch*), 64XX0 (*Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches including imaging guidance, when performed*), and 64XX1 (*Destruction by neurolytic agent genicular nerve branches including imaging guidance, when performed*) to be resurveyed and presented at the January 2019 RUC meeting, based on their concern that many survey respondents appeared to be confused about the number of nerve branch injections involved with these three codes. The RUC resurveyed these services at the January 2019 RUC meeting.

For CY 2020, we are proposing the RUC-recommended work RVUs for two of the three codes in this family. We are proposing the RUC-recommended work RVU of 1.98 (25th percentile survey value) for CPT code 64640 and the RUC-recommended work RVU of 1.52 (25th percentile survey value) for CPT code of 64XX0.

For CPT code 64XX1, we disagree with the RUC-recommended work RVU of 2.62, which is higher than the 25th percentile survey value, a work RVU 2.50, and are proposing a work RVU of 2.50 (25th percentile survey value) based on a reference to CPT code 11622 (*Excision, malignant lesion including margins, trunk, arms, or legs; excised diameter 1.1 to 2.0 cm*), which has a work RVU of 2.41 and near identical intraservice and total times to CPT code 64XX1.

In our review of CPT code 64XX1, we examined the intraservice time ratio for the new code, CPT code 64XX1, in relation to an existing code in this family of services, CPT code 64640. CPT code 64XX1 has a RUC-recommended work RVU of 2.62, 25 minutes of intraservice time, and 74 minutes of total time. CPT code 64640 has a RUC-recommended work RVU of 1.98, 20 minutes of intraservice time, and 64 minutes of total time. To derive our proposed work RVU of 2.50, we calculated the intraservice time ratio between these two codes, which is a calculated value of 1.25, and applied this ratio times the RUC-recommended work RVU of 1.98 for CPT code 64650, which resulted in a calculated value of 2.48. This value is nearly identical to the January 2018 RUC 25th percentile survey value for CPT code 64XX1, a work RVU of 2.50. Our proposed work RVU of 2.50 is further supported by a reference to CPT code 11622.

For the direct PE inputs, we are proposing to remove the clinical labor time for the ''Confirm availability of prior images/studies'' (CA006) activity for CPT code 64640. This code does not currently include this clinical labor time, and unlike the new code in the family (CPT code 64XX1), CPT code 64640 does not include imaging guidance in its code descriptor. When CPT code 64640 is performed with imaging guidance, it would be billed together with a separate imaging code that already includes clinical labor time for confirming the availability of prior images. As a result, it would be duplicative to include this clinical labor time in CPT code 64640. We are proposing to refine the clinical labor time for the ''Assist physician or other qualified healthcare professional—directly related to physician work time (100 percent)'' (CA018) activity from 25 to 20 minutes for CPT code 64640, to match the intraservice work time. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas for CPT code 64640.

We are proposing the RUC-recommended direct PE inputs for CPT code 64XX0 without refinement.

For CPT code 64XX1, we are proposing to refine the quantity of the ''cannula (radiofrequency denervation) (SMK–C10)'' (SD011) supply from 3 to 1. We do not believe that the use of 3 of this supply item would be typical for the procedure. We note that the RUC recommendations for another code in this family, CPT code 64640 only contains 1 of this supply item. We believe that the nerves would typically be ablated one at a time using this cannula, as opposed to ablating three of them simultaneously as suggested in the recommended direct PE inputs. We also searched in the RUC database for other CPT codes that made use of the SD011 supply, and out of the seven codes that currently use this item, none of them include more than 2 cannula. As a result, we are proposing to refine the supply quantity to 2 cannula to match the highest amount contained in an existing code on the PFS. We are also refining the equipment time for the ''radiofrequency kit for destruction by neurolytic agent'' (EQ354) equipment from 141 minutes to 47 minutes. The equipment time recommendation was predicated on the use of 3 of the SD011 supplies for 47 minutes apiece, and we are refining the equipment time to reflect our supply refinement to 1 cannula. It was unclear in the RUC recommendation materials as to whether the radiofrequency kit equipment was in use simultaneously or sequentially along with the cannula supplies, and therefore, we are soliciting comments on the typical use of this equipment.

(27) Cyclophotocoagulation (CPT Codes 66711, 66982, 66983, 66984, 66X01, and 66X02)

In October 2017, CPT codes 66711 (*Ciliary body destruction; cyclophotocoagulation, endoscopic*) and 66984 (*Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification*) were identified as codes reported together 75 percent of the time or more. The RUC reviewed action plans to determine whether a code bundle solution should be developed for these services. In January 2018, the RUC recommended to refer to CPT to bundle 66711 with 66984 for CPT 2020. In May 2018, the CPT Editorial Panel revised three codes and created two new codes, CPT codes 66X01 (*Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (e.g., iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with endoscopic cyclophotocoagulation*) and 66X02 (*Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification); with endoscopic cyclophotocoagulation*) to differentiate cataract procedures performed with and without endoscopic cyclophotocoagulation.

The codes discussed above and CPT codes 66982 (*Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (e.g., iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage*) and 66983 *(Intracapsular cataract extraction with insertion of intraocular lens prosthesis (1 stage procedure)*) were reviewed at the January 2019 RUC meeting.

For CY 2020, we are proposing the RUC-recommended work RVU of 10.25 for CPT code 66982, the RUC recommendation to contractor-price CPT code 66983, and the RUC-recommended work RVU of 7.35 for CPT code 66984. We disagree with the RUC recommendations for CPT codes 66711, 66X01, and 66X02.

For CPT code 66711, we disagree with the RUC-recommended work RVU of 6.36 and are proposing a work RVU of 5.62, based on crosswalk to CPT code 28285 (*Correction, hammertoe (e.g., interphalangeal fusion, partial or total phalangectomy*), which has an identical work RVU of 5.62, and similar intraservice and total times.

In our review of CPT code 66711, we note that the recommended intraservice time is decreasing from 20 minutes to 10 minutes (33 percent reduction), and that the recommended total time is decreasing from 192 minutes to 191 minutes (0.5 percent reduction). While the RUC-recommended work RVU is decreasing from 7.93 to 6.36, which is a 20 percent reduction, we do not believe it appropriately accounts for the decreases in survey time. Time ratio methodology suggest that CPT code 66711 is better valued at a work RVU of 5.29, thus it is overvalued with consideration to the decreases in survey times. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 66711, we believe that it would be more accurate to propose a work RVU of 5.62, based on our time ratio methodology and a crosswalk to CPT code 28285 to account for these decreases in surveyed work times.

For CPT code 66X01, the RUC recommended a work RVU of 13.15, we disagree with the RUC-recommended work RVU and are proposing contractor-pricing for this code. In reviewing this code, we note that the RUC recommendation survey values do not support the RUC-recommended work RVU of 13.15 and furthermore, the RUC recommendations do not include a crosswalk to support the RUC-recommended work RVU. The RUC recommendations noted a lack of potential crosswalk codes due to the complete lack of similarly intense major surgical procedures comparable in the amount of skin-to-skin time, operating room time and amount of post-operative care. We note that the RUC-recommended work RVU of 13.15 is higher than similarly timed codes on the PFS. Given that lack of both survey data and a crosswalk to support the RUC-recommended work RVU for this new code, and that the RUC-recommended work RVU of 13.15 is higher than similarly timed codes on the PFS, we believe it is more appropriate to propose contractor-pricing for CPT code 66X01. We also note that the RUC recommended contractor-pricing for another code in this family, CPT code 66983, which we are proposing for CY 2020.

For CPT code 66X02, the RUC recommended a work RVU of 10.25, we disagree with the RUC-recommended work RVU and are proposing contractor-pricing for this code. In reviewing this code, we note that the RUC recommendation survey values do not support the RUC-recommended work RVU of 10.25. Furthermore, we are concerned with the RUC recommended crosswalk, CPT code 67110 (*Repair of retinal detachment; by injection of air or other gas (e.g., pneumatic retinopexy)*, which is the same crosswalk used to support the RUC-recommended work RVU of 10.25 for another code in this family, CPT code 66982. CPT code 67110 has 30 minutes of intraservice time and 196 minutes of total time. Although CPT code 67110 has the identical intraservice time to CPT codes 66982 and 66X02, we note that CPT code 67110 has 196 minutes of total time, which is 21 minutes less than the 175 minutes of total time of CPT code 66982, and 6 minutes less than the 202 minutes of total time of CPT Code 66X02. However, the RUC is recommending the same work RVU of 10.25 for CPT codes 66982 and 66X02, supported by the same crosswalk to CPT code 67110.

Given that lack of survey data and our concern for the RUC-recommended crosswalk to support the RUC-recommended work RVU of 10.25 for CPT code 66X02, we believe it is appropriate to propose contractor-pricing for CPT code 66X02. We also note that the RUC recommended contractor-pricing for another code in this family, CPT code 66983, which we are prosing for CY 2020.

We are proposing to remove all the direct PE inputs for CPT codes 66X01 and 66X02, given our proposal for contractor-pricing for these codes. We are proposing the RUC-recommended direct PE inputs for the other codes in this family.

(28) X-Ray Exam—Sinuses (CPT Codes 70210 and 70220)

CPT code 70210 (*Radiologic examination, sinuses, paranasal, less than 3 views*) and CPT code 70220 (*Radiologic examination, sinuses, paranasal, complete, minimum of 3 views*) were identified as potentially misvalued through a screen for

Medicare services with utilization of 30,000 or more annually. These two codes were first reviewed by the RUC in April 2018, but were subsequently surveyed by the specialty societies and reviewed again by the RUC in January 2019.

The RUC recommended a work RVU for CPT code 70210 of 0.20, which is a slight increase over the current work RVU for this code (0.17). The RUC's recommendation is consistent with 25th percentile of survey results and is based on a comparison of the survey code with the two key reference services. The first key reference service, CPT code 71046 (*Radiologic examination, chest; 2 views*), has a work RVU of 0.22, 4 minutes of intraservice time, and 6 minutes of total time. The RUC noted that the survey code has one minute less intraservice and total time compared with the first key reference service (CPT code 71046), which accounts for the slightly lower work RVU for the survey code. The RUC also compared CPT code 70210 to CPT code 70355 (*Orthopantogram (e.g., panoramic X-ray)*), with a work RVU of 0.20, 5 minutes of intraservice time, and 6 minutes of total time. Although the intraservice and total times are lower for CPT code 70210 than for CPT code 70355, the work is slightly more intense for the survey code, according to the RUC, justifying an identical work RVU of 0.20 for CPT code 70210. We disagree with the RUC's recommendation to increase the work RVU for CPT code 70210 from the current value (0.17) to 0.20 for two main reasons. First, the total time (5 minutes) for this code has not changed from the current total time and without a corresponding explanation for an increase in valuation despite maintaining the same total time, we do are not convinced that the work RVU for this code should increase. In addition, we note that based on a general comparison of CPT codes with identical intraservice time and total time (approximately 23 comparison codes, excluding those currently under review), a work RVU of 0.20 would establish a new upper threshold among this cohort. We are proposing to maintain the work RVU for CPT code 70210 of 0.17 work RVUs, bracketed by two services. On the upper side, we identified CPT code 73501 (*Radiologic examination, hip, unilateral, with pelvis when performed; 1 view*) with a work RVU of 0.18, and on the lower side, we identified CPT code 73560 (*Radiologic examination, knee; 1 or 2 views*) with a work RVU of 0.16. For CPT code 70220, we are proposing the RUC-recommended work RVU of 0.22.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(29) X-Ray Exam—Skull (CPT Codes 70250 and 70260)

CPT code 70250 (*Radiologic examination, skull, less than 4 views*) was identified as potentially misvalued through a screen of Medicare services with utilization of 30,000 or more annually. CPT code 70260 (*Radiologic examination, skull; complete, minimum of 4 views*) was included as part of the same family. These two codes were first reviewed by the RUC in April 2018, but were subsequently surveyed by the specialty societies and reviewed by the RUC again in January 2019.

The RUC-recommended work RVU for CPT code 70250 is 0.20, which is a slight decrease from the current work RVU for this code (0.24). The decrease, according to the RUC, reflects a slightly lower total time required to furnish the service (from 7 minutes to 5 minutes) and is consistent with the 25th percentile work RVU from the survey results. The RUC-recommended work RVU is bracketed by two CPT codes: Top key reference service, CPT code 71046 (*Radiologic examination, chest; 2 views*) with 4 minutes of intraservice time, 6 minutes total time, and a work RVU of 0.22; and key reference service, CPT code 73562 (*Radiologic examination, knee; 3 views*), with intraservice time of 4 minutes, total time of 6 minutes, and a work RVU of 0.18. The RUC noted that while the survey code has less time than CPT code 71046, the work is slightly more intense due to anatomical and contextual complexity. The survey code is also more intense compared with the second key reference service, CPT code 73562, according to the RUC, because of the higher level of technical skill involved in an X-ray of the skull (axial skeleton) compared with an X-ray of the knee (appendicular skeleton). The RUC further indicated that a comparison between the survey code and CPT codes with a work RVU of 0.18 would not be appropriate given the higher level of complexity associated with an X-ray of the skull than with other CPT codes that have similar times. We disagree with the recommended work RVU of 0.20 for CPT code 70250. The total time for furnishing the service has decreased by 2 minutes while the description of the work involved in furnishing the service has not changed. This suggests that a value closer to the total time ratio (TTR) calculation (0.17 work RVU) might be more appropriate. In addition, a search of CPT codes with 3 minutes of intraservice time and 5 minutes of total time indicates that the maximum work RVU for codes with these times is 0.18, meaning that a work RVU of 0.20 would establish a new relative high work RVU for codes with these times. We believe that a crosswalk to CPT code 73501 (*Radiologic examination, hip, unilateral, with pelvis when performed; 1 view*) with a work RVU of 0.18, 3 minutes of intraservice time, and 5 minutes of total time, accurately reflects both the time and intensity of furnishing the service described by CPT code 70250. Therefore, we are proposing a work RVU of 0.18 for CPT code 70250.

The RUC recommended a work RVU of 0.29 for CPT code 70260, which is lower than the current work RVU of 0.34. The survey times for furnishing the service are 4 minutes of intraservice time and 7 minutes total time, compared with the current intraservice time and total time of 7 minutes. However, in developing their recommendation, the RUC reduced the total time for this code from 7 minutes to 6 minutes. Although the RUC's recommended work RVU reflects the 25th percentile of survey results, the survey 25th percentile is based on an additional minute of total time compared with the RUC's total time for this CPT code. Moreover, since we are proposing a lower work RVU for the base code for this family (work RVU of 0.18 for CPT code 70250), we believe a lower work RVU for CPT code 70260 is warranted. To identify an alternative value, we calculated the increment between the current work RVU for CPT code 72050 (work RVU of 0.24) and the current work RVU for CPT code 72060 (work RVU of 0.34) and applied it to the CMS proposed work RVU for CPT code 70250 (0.18 + 0.10) to calculate a work RVU of 0.28. We believe that applying this increment is a better reflection of the work time and intensity involved in furnishing CPT code 70260. We are proposing a work RVU for CPT code 70260 of 0.28.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(30) X-Ray Exam—Neck (CPT Code 70360)

CPT code 70360 (*Radiologic examination; neck, soft tissue*) was identified as potentially misvalued through a screen of CPT codes with annual Medicare utilization of 30,000 or more. CPT code 70360 was first reviewed by the RUC in April 2018 but was subsequently surveyed by the specialty societies and reviewed by the RUC again in January 2019.

The RUC recommended a work RVU of 0.20 for CPT code 70360, which is an increase over the current work RVU

(0.17). To support their recommendation, the RUC cited the survey key reference service, CPT code 71046 (*Radiologic examination, chest; 2 views*), with a work RVU of 0.22, 4 minutes of intraservice time, and 6 minutes of total time. They noted that the key reference code has one minute higher intraservice and total time, accounting for the slightly higher work RVU compared with the survey code, CPT code 70360. The RUC also cited the second highest key reference service, CPT code 73562 (*Radiologic examination, knee; 3 views*) with a work RVU of 0.18, intraservice time of 4 minutes, and total time of 6 minutes. They noted that, while the survey code has lower intraservice time (3 minutes) and total time (5 minutes) compared with CPT code 73562, the survey code is more complex than the key reference service, thereby supporting a higher work RVU for the survey code (CPT code 70360) of 0.20. We do not agree with the RUC that the work RVU for CPT code 70360 should increase from 0.17 to 0.20. The total time for the CPT code, as recommended by the RUC (5 minutes), is unchanged from the existing total time. Without a corresponding discussion of why the current work RVU is insufficient, we do not agree that there should be an increase in the work RVU. Furthermore, although the RUC's recommendation is consistent with the 25th percentile of survey results for the work RVU, the total time from the survey results was 6 minutes, not the RUC-recommended time of 5 minutes. When we looked at CPT codes with identical times to the survey code for a crosswalk, we identified CPT code 73552 (*Radiologic examination, femur; minimum 2 views*), with a work RVU of 0.18. We believe this is a more appropriate valuation for CPT code 70360 and we are proposing a work RVU for this CPT code of 0.18.

We are proposing the RUC-recommended direct PE inputs for CPT code 70360.

(31) X-Ray Exam—Spine (CPT Codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120)

CPT codes 72020 (*Radiologic examination spine, single view, specify level*) *and 72072* (*Radiologic examination, spine; thoracic, 3 views*) were identified through a screen of CMS/Other Source codes with Medicare utilization greater than 100,000 services annually. The code family was expanded to include 10 additional CPT codes to be reviewed together as a group: CPT code 72040 (*Radiologic examination, spine, cervical; 2 or 3 views*), CPT code 72050 (*Radiologic examination, spine, cervical; 4 or 5 views*), CPT code 72052 (*Radiologic examination, spine cervical; 6 or more views*), CPT code 72070 (*Radiologic examination spine; thoracic, 2 views*), CPT code 72074 (*Radiologic examination, spine; thoracic, minimum of 4 views*), CPT code 72080 (*Radiologic examination, spine; thoracolumbar junction, minimum of 2 views*), CPT code 72100 (*Radiologic examination, spine, lumbosacral; 2 or 3 views*), CPT code 72110 (*Radiologic examination, spine, lumbosacral; minimum of 4 views*), CPT code 72114 (*Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views*), and CPT code 72120 (*Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views*). This family of CPT codes was originally valued by the specialty societies using a crosswalk methodology approved by the RUC Research Subcommittee. However, after we expressed concern about the use of this approach for valuing work and PE, the specialty society agreed to survey these codes and the RUC reviewed them again in January 2019.

For the majority of CPT codes in this family, the RUC recommended a work RVU that is slightly different (higher or lower) than the current work RVU. Three CPT codes in this family are maintaining the current work RVU. We are proposing the RUC-recommended work RVU for all 12 CPT codes in this family as follows: CPT code 72020 (work RVU = 0.16); CPT code 72040 (work RVU = 0.22); CPT code 72050 (work RVU = 0.27); CPT code 72052 (work RVU = 0.30); CPT code 72070 (work RVU = 0.20); CPT code 72072 (work RVU = 0.23); CPT code 72074 (work RVU = 0.25); 72080 (work RVU = 0.21); CPT code 72100 (work RVU = 0.22); CPT code 72110 (work RVU =0.26); CPT code 72114 (work RVU = 0.30); and CPT code 72120 (work RVU = 0.22).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(32) CT-Orbit-Ear-Fossa (CPT Codes 70480, 70481, and 70482)

In October 2017, the RAW requested that AMA staff develop a list of CMS/Other codes with Medicare utilization of 30,000 or more. CPT code 70480 (*Computed tomography (CT), orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material*) was identified. In addition, the code family was expanded to include two related CT codes, CPT code 70481 (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material*) and CPT code 70482 (*Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material followed by contrast material(s) and further sections*). In 2018, the RUC recommended this code family be surveyed.

For CPT code 70840, we disagree with the RUC-recommended work RVU of 1.28 and propose instead a work RVU of 1.13. We are proposing a lower work RVU because 1.13 represents the commensurate 12 percent decrease in work time reflected in survey values. We reference the work RVUs of CPT codes 72128 (*Computed tomography, chest, spine; without dye*) and 71250 (*Computed tomography, thorax without dye*) both of which have the same intraservice time (that is, 15 minutes) as CPT code 70840 but longer total times (that is, 25 minutes versus 22 minutes). We believe that CPT code 72128 with a work RVU of 1.0 and CPT code 71250 with a work RVU of 1.16 more accurately reflect the relative work values of CPT code 70840.

We also disagree with the RUC-recommended work RVU of 1.13 for CPT code 70481. Instead, we are proposing a work RVU of 1.06 for CPT code 70481. As with CPT code 70840, we are proposing a lower work RVU for CPT code 70481 because a work RVU of 1.06 is commensurate with the 23 percent decrease in surveyed total time from 26 to 20 minutes. We believe CPT code 76641 (*Ultrasound, breast, unilateral*) with a work RVU of 0.73 and CPT code 70460 (*Computed Tomography, head or brain, without contrast*) with a work RVU of 1.13 serve as appropriate references for our proposed work RVU for CPT code 70841. Although CPT codes 76641 and 70460 have longer total times at 22 minutes and lower intraservice times at 12 minutes, we believe they better reflect the relative work value of CPT code 70481 with a proposed work RVU of 1.06, total time of 20 minutes, and intraservice time of 13 minutes.

For the third code in the family, CPT code 70482, we are proposing the RUC-recommended work RVU of 1.27.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(33) CT Spine (CPT Codes 72125, 72126, 72127, 72128, 72129, 72130, 72131, 72132, and 72133)

CPT code 72132 (*Computed tomography, lumbar spine; with contrast material*) was identified as potentially misvalued on a screen of CMS/Other codes with Medicare

utilization of 30,000 or more. Eight other spine CT codes were identified as part of the family, and they were surveyed and reviewed together at the April 2018 RUC meeting.

We are proposing the RUC-recommended work RVU for eight of the nine codes in the family. We are proposing a work RVU of 1.22 for CPT code 72126 (*Computed tomography, cervical spine; with contrast material*), a work RVU of 1.27 for CPT code 72127 (*Computed tomography, cervical spine; without contrast material, followed by contrast material(s) and further sections*), a work RVU of 1.00 for CPT code 72128 (*Computed tomography, thoracic spine; without contrast material*), a work RVU of 1.22 for CPT code 72129 (*Computed tomography, thoracic spine; with contrast material*), a work RVU of 1.27 for CPT code 72130 (*Computed tomography, thoracic spine; without contrast material, followed by contrast material(s) and further sections*), a work RVU of 1.00 for CPT code 72131 (*Computed tomography, lumbar spine; without contrast material*), a work RVU of 1.22 for CPT code 72132 (*Computed tomography, lumbar spine; with contrast material*), and a work RVU of 1.27 for CPT code 72133 (*Computed tomography, lumbar spine; without contrast material, followed by contrast material(s) and further sections*).

We disagree with the RUC-recommended work RVU of 1.07 for CPT code 72125 (*Computed tomography, cervical spine; without contrast material*) and we are proposing a work RVU of 1.00 to match the other without contrast codes in the family. The cervical spine CT procedure described by CPT code 72125 shares the identical surveyed work time as the thoracic spine CT procedure described by CPT code 72128 and the lumbar spine CT procedure described by CPT code 72131, and we believe that this indicates that these three CPT codes should share the same work RVU of 1.00. Our proposed work RVU would also match the pattern established by the rest of the codes in this family, in which the contrast procedures (CPT codes 72126, 72129, and 72132) share a proposed work RVU of 1.22 and the without/with contrast procedures (CPT codes 72127, 72130, and 72133) share a proposed work RVU of 1.27.

We recognize that the RUC has stated that they believe CPT code 72125 to be a more complex study than CPT codes 72128 and 72131 because the cervical spine is subject to an increased number of injuries and there are a larger number of articulations to evaluate. This was the basis for their recommendation that this code should be valued slightly higher than the other without contrast codes. However, if CPT code 72125 has a more difficult patient population and requires a larger number of articulations to evaluate as compared to CPT codes 72128 and 72131, we do not understand why this was not reflected in the surveyed work times, which were identical for the three procedures. We believe that if the intensity of the procedure were higher due to these additional difficulties, it would be reflected in a longer surveyed work time. In addition, the survey respondents selected a higher work RVU for CPT code 72131 than CPT code 72125 at both the survey 25th percentile (1.20 to 1.18) and survey median values (1.39 to 1.28), which does not suggest that CPT code 72125 should be valued at a higher rate.

We also note that the surveyed intraservice work time for CPT code 72125 is decreasing from 15 minutes to 12 minutes, and we believe that this provides additional support for a slight reduction in the work RVU to match the other without contrast codes in the family. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we want to reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of prior work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(34) X-Ray Exam—Pelvis (CPT Codes 72170 and 72190)

CPT code 72190 (*Radiologic examination, pelvis; complete, minimum of 3 views*) was identified as potentially misvalued through a screen of CMS/Other codes with Medicare utilization of 30,000 or more annually. CPT code 72170 (*Radiologic examination, pelvis; 1 or 2 views*) was added as part of the family. The RUC originally reviewed these two codes after specialty societies employed a crosswalk methodology to value work and PE. However, after we expressed concern about the use of this approach, the specialty society agreed to survey the codes and the RUC reviewed them again at the meeting in January 2019.

The RUC recommended a work RVU of 0.17 for CPT code 72170, which maintains the current value. For CPT code 72190, the RUC recommended a work RVU of 0.25, which is slightly higher than the current value (0.21). We are proposing the RUC-recommended values for these two CPT codes.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(35) X-Ray Exam—Sacrum (CPT Codes 72200, 72202, and 72220)

CPT code 72220 (*Radiologic examination, sacrum and coccyx, minimum of 2 views*) was identified on a screen of CMS/Other source codes with Medicare utilization greater than 100,000 annually. CPT codes 72200 (*Radiologic examination, sacroiliac joints; less than 3 views*) and 72202 (*Radiologic examination, sacroiliac joints; 3 or more views*) were also included for review as part of the same family of codes. These three codes were originally valued by the specialty societies using a crosswalk methodology approved by the RUC Research Subcommittee. However, after we expressed concern about the use of this approach for valuing work and PE, the specialty society agreed to survey these codes and the RUC reviewed them again in January 2019.

For CPT code 72200, the RUC is recommending a work RVU of 0.20, which is higher than the current work RVU (0.17). To support their recommendation, the RUC compared the survey code to the key reference service, CPT code 73522 (*Radiologic examination, hips, bilateral, with pelvis when performed; 3–4 views*), with a work RVU of 0.29, 5 minutes of intraservice time and 7 minutes of total time. The intraservice and total times for the key reference service are one minute higher than the survey code (*4 minutes intraservice time, 6 minutes total time for CPT code 72200*) and the survey code is less intense, according to the RUC, thereby supporting a slightly lower work RVU of 0.20 for CPT code 72200. The second key reference service is CPT code 73562 (*Radiologic examination, knee; 3 views*), with 4 minutes of intraservice time, 6 minutes of total time, and a work RVU of 0.18. The RUC noted that this second key reference service is less intense to furnish than the survey code, which justifies a slightly lower work RVU despite identical intraservice time (4 minutes) and total time (6 minutes). The

RUC supported their recommendation of a work RVU for CPT code 72200 of 0.20 with two bracketing codes: CPT code 93042 (*Rhythm ECG, 1–3 leads; interpretation and report only*) with work RVU of 0.15, and CPT code 70355 (*Orthopantogram (e.g. panoramic x-ray)*) with a work RVU of 0.20 (which is identical to the RUC-recommended work RVU for CPT code 72200 but has one additional minute of intraservice time). A work RVU of 0.20 is consistent with the work RVU estimated by the TTR and reflects the 25th percentile of survey results. Nevertheless, we do not agree that there is sufficient justification for an increase in work RVU for CPT code 72200. We are concerned that the large variation in specialty societies' survey times is indicative of differences in patient population, practice workflow, or even possibly some ambiguity associated with the survey vignette. We also note that the 25th percentile of survey results are based on the overall survey total time, which is 8 minutes, rather than the RUC's recommended 6 minutes. The time parameters for furnishing the service affect all other points of comparison for purpose of valuing the code, including TTR, identification of potential crosswalks, and increment calculations. We found no corresponding explanation for the variability in survey times, leading us to question why there should be an increase in work RVU from the current value. Therefore, we are proposing to maintain the current work RVU for CPT code 72200 at 0.17.

For CPT code 72202, the RUC recommended a work RVU of 0.26, which is considerably higher than the current work RUV for this code of 0.19. The RUC supported their recommendation with two key reference services. The first is CPT code 73522 (*Radiologic examination, hips, bilateral, with pelvis when performed; 3–4 views*) with 5 minutes intraservice time, 7 minutes total time, and a work RVU of 0.29. They note that this code has an additional minute for intraservice and total time compared with the survey code, reflecting the additional views associated with evaluating bilateral hip joints. The second key reference service is CPT code 73562 (*Radiologic examination, knee; 3 views*) with 4 minutes intraservice time, 6 minutes total time, and a work RVU of 0.18. The RUC notes that the survey code has the same times but requires more intensity and includes an additional view compared with the reference service, which justifies a higher work RVU for the survey code. We disagree with the RUC's recommended work RVU for CPT code 72202. Given that there is no change in the total time required to furnish the service and there is no corresponding description of an increase in the intensity of the work relative to the existing value, we do not believe an increase of 0.07 work RVUs is warranted. The TTR calculation yields a work RVU of .019, suggesting that a value closer to the current work RVU would be more appropriate. In addition, since we consider the RUC-recommended work RVU for this code as an incremental change from the prior code in this family, we believe that an increase of 0.06 over the proposed work RVU of 0.18 for CPT code 72200, which yields a work RVU of 0.23, is a better reflection of the time and intensity required to furnish CPT code 72202. Our proposed value work RVU of 0.23 is bracketed by CPT code 73521 (*Radiologic examination, hips, bilateral, with pelvis when performed; 2 views*) on the lower end (work RVU = .22), and CPT code 74021 (*Radiologic examination, abdomen; 3 or more views*), on the higher end (work RVU = 0.27). CPT code 73521 has the same times as the survey code but describes a bilateral service with 2 views, which is slightly less intense. CPT code 74021 also has identical times but involves X-ray of the abdomen with 3 views, a slightly higher intensity than the survey code.

The RUC-recommended work RVU for CPT code 72220 is 0.20, which reflects an increase over the current work RVU for this code (0.17). The key reference service from the survey results is CPT code 73522 (*Radiologic examination, hips, bilateral, with pelvis when performed, 2–4 views*), with a work RVU of 0.29, 5 minutes intraservice time, and 7 minutes total time. The RUC noted that the recommended work RVU for CPT code 72220 has a lower value than the top key reference code (CPT code 73522) because of the shorter time and lower intensity involved in furnishing the survey code. The second highest key reference service, CPT code 73562 (*Radiologic examination, knee; 3 views*) has a work RVU of 0.18 with 4 minutes of intraservice time and 6 minutes of total time. The RUC notes that this second key reference service has a lower work RVU than the survey code despite having a slightly higher intraservice time and total time because it involves an X-ray of just one knee. We disagree with the RUC's recommended increase in the work RVU for CPT code 72220 from 0.17 to 0.20. We note that there is no change in the total time required to furnish the service. We also note that a work RVU of 0.20 for CPT code 72220 would place it near the maximum work RVU for CPT codes with identical intraservice time (3 minutes) and total time (5 minutes). Instead, we are proposing to maintain the work RVU for this service at 0.17, which is consistent with our proposal to maintain the current work RVU for CPT code 72200 at 0.17 as well.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(36) X-Ray Exam—Clavicle-Shoulder (CPT Codes 73000, 73010, 73020, 73030, and 73050)

CPT code 73030 (*Radiologic examination, shoulder; complete, minimum of 2 views*) was identified as potentially misvalued through a screen of services with more than 100,000 utilization annually. CPT codes 73000 (*Radiologic examination; clavicle, complete), 73010 (Radiologic examination; scapula, complete*), 73020 (*Radiologic examination, shoulder; 1 view*), and 73050 (*Radiologic examination, acromioclavicular joints, bilateral, with or without weighted distraction*) were included for review as part of the same family. We are proposing the RUC-recommended work RVUs for all five codes in this family as follows: CPT code 73000 (work RVU = 0.16); CPT code 73010 (work RVU = 0.17); CPT code 73020 (work RVU = 0.15); CPT code 73030 (work RVU = 0.18); and CPT code 73050 (work RVU = 0.18).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(37) CT Lower Extremity (CPT Codes 73700, 73701, and 73702)

CPT code 73701 (*Computed tomography, lower extremity; with contrast material(s)*) was identified as potentially misvalued on a screen of CMS/Other codes with Medicare utilization of 30,000 or more. Two other lower extremity CT codes were identified as part of the family, and they were surveyed and reviewed together at the April 2018 RUC meeting.

We are proposing the RUC-recommended work RVU for all three codes in this family. We are proposing a work RVU of 1.00 for CPT code 73700 (*Computed tomography, lower extremity; without contrast material*), a work RVU of 1.16 for CPT code 73701 (*Computed tomography, lower extremity; with contrast material(s)*), and a work RVU of 1.22 for CPT code 73702 (*Computed tomography, lower extremity; without contrast material, followed by contrast material(s) and further sections*).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(38) X-Ray Elbow-Forearm (CPT Codes 73070, 73080, and 73090)

CPT codes 73070 (*Radiologic examination, elbow; 2 views*) and 73090 (*Radiologic examination; forearm, 2 views*) were identified on a screen of CMS/Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 73080 (*Radiologic examination, elbow; complete, minimum of 3 views*) was included for review as part of the same code family. All three CPT codes in this family were originally valued by the specialty societies using a crosswalk methodology approved by the RUC research committee. However, after we expressed concern about the use of this approach for valuing work and PE, the specialty society agreed to survey the codes and the RUC reviewed them again at the meeting in January 2019. We are proposing the RUC-recommended work RVU for all three codes in this family as follows: CPT code 73070 (work RVU = 0. 16); CPT code 73080 (work RVU = 0.17); and CPT code 73090 (work RVU = 0.16).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(39) X-Ray Heel (CPT Code 73650)

CPT code 73650 (*Radiologic examination; calcaneous, minimum of 2 views*) was identified on a screen of CMS/Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 73650 was originally valued by the specialty societies using a crosswalk methodology approved by the RUC Research Subcommittee. However, after we expressed concern about the use of this approach for valuing work and PE, the specialty society agreed to survey the code and the RUC reviewed it again in January 2019. For CPT code 73650, we are proposing the RUC-recommended work RVU of 0.16. We are also proposing the RUC-recommended direct PE inputs for CPT code 73650.

(40) X-Ray Toe (CPT Code 73660)

CPT code 73660 (*Radiologic examination; toe(s), minimum of 2 views*) was identified on a screen of CMS/Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 73660 was originally valued by the specialty societies using a crosswalk methodology approved by the RUC Research Subcommittee. However, after we expressed concern about the use of this approach for valuing work and PE, the specialty society agreed to survey the code and the RUC reviewed it again in January 2019. We are proposing the RUC-recommended work RVU for this code of 0.13 for CPT code 73660. We are also proposing the RUC-recommended direct PE inputs for CPT code 73660.

(41) Upper Gastrointestinal Tract Imaging (CPT Codes 74210, 74220, 74230, 74X00, 74240, 74246, and 74X01)

These services were identified through a list of list of CMS/Other codes with Medicare utilization of 30,000 or more. The CPT Editorial Panel subsequently revised this code set in order to conform to other families of radiologic examinations.

We are proposing the RUC-recommended work RVUs of 0.59 for CPT code 74210 (*Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (e.g., barium) study*), 0.60 for CPT code 74220 (*Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; single-contrast (e.g., barium) study*), 0.70 for CPT code 74X00 (*Radiologic examination, esophagus, including scout chest radiograph(s) and delayed image(s), when performed; double-contrast (e.g., high-density barium and effervescent agent) study*), 0.53 for CPT code 74230 (*Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (e.g., barium) study*), 0.80 for CPT code 74240 (*Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (e.g., barium) study*) 0.90 for CPT code 74246 (*Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (e.g., high-density barium and effervescent agent) study, including glucagon, when administered*), and 0.70 for CPT code 74X01 (*Radiologic examination, upper gastrointestinal tract, including scout abdominal radiograph(s) and delayed image(s), when performed; with small intestine follow-through study, including multiple serial images (List separately in addition to code for primary procedure)*). We are also proposing the reaffirmed work RVU of 0.59 for CPT code 74210 (*Radiologic examination, pharynx and/or cervical esophagus, including scout neck radiograph(s) and delayed image(s), when performed, contrast (e.g., barium) study*) and the reaffirmed work RVU of 0.53 for CPT code 74230 (*Radiologic examination, swallowing function, with cineradiography/videoradiography, including scout neck radiograph(s) and delayed image(s), when performed, contrast (e.g., barium) study*).

For the direct PE clinical labor input CA021 ''Perform procedure/service—NOT directly related to physician work time,'' we note that no rationale was given for the RUC-recommended times for these codes, and we are requesting comment on the appropriateness of the RUC-recommended clinical labor times for this activity of 13 minutes, 13 minutes, 15 minutes, 15 minutes, 19 minutes, 22 minutes, and 15 minutes for CPT codes 74210, 74220, 74X00, 74230, 74240, and 74246, respectively. In addition, for CPT code 74230, we are proposing to refine the clinical labor times for the ''Prepare room, equipment and supplies'' (CA013) and ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity codes to the standard values of 2 minutes each, as well as to refine the equipment times to reflect these changes in clinical labor.

(42) Lower Gastrointestinal Tract Imaging (CPT Codes 74250, 74251, 74270, and 74280)

These services were identified through a list CMS/Other codes with Medicare utilization of 30,000 or more. We are proposing the RUC-recommended work RVUs of 0.81 for CPT code 74250 (*Radiologic examination, small intestine, including multiple serial images and scout abdominal radiograph(s), when performed; single-contrast (e.g., barium) study*), 1.17 for CPT code 74251 (*Radiologic examination, small intestine, including multiple serial images and scout abdominal radiograph(s), when performed; double-contrast (e.g., high-density barium and air via enteroclysis tube) study, including glucagon, when administered*), 1.04 for 74270 (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; single-contrast (e.g., barium) study*), and 1.26 for CPT code 74280 (*Radiologic examination, colon, including scout abdominal radiograph(s) and delayed image(s), when performed; double-contrast (e.g., high density barium and air) study, including glucagon, when administered*).

For the direct PE clinical labor input CA021 ''Perform procedure/service—NOT directly related to physician work time,'' we note that no rationale was given for the recommended times for these codes, and we are requesting comment on the appropriateness of the RUC-recommended clinical labor times for this activity of 19 minutes, 30 minutes, 25 minutes, and 36 minutes for CPT codes 74250, 74251, 74270, and 74280, respectively. In addition, we are proposing to refine the equipment time for the room, radiographic-fluoroscopic (EL014) for CPT code 74250 to conform to our established standard for highly technical equipment and to match the rest of the codes in the family.

(43) Urography (CPT Code 74425)

The physician time and work described by CPT code 74425 (Urography, antegrade (pyelostogram, nephrostogram, loopogram), radiological supervision and interpretation) was combined with services describing genitourinary catheter procedures in CY 2016, resulting in CPT codes 50431 (*Injection procedure for antegrade nephrostogram and/or ureterogram, complete diagnostic procedure including imaging guidance (e.g., ultrasound and fluoroscopy) and all associated radiological supervision and interpretation; existing access*) and 50432 (*Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation*). CPT code 74425 was not deleted at the time, but the RUC agreed with the specialty societies that 2 years of Medicare claims data should be available for analysis before the code was resurveyed for valuation to allow for any changes in the characteristics and process involved in furnishing the service separately from the genitourinary catheter procedures. The specialty society surveyed CPT code 74425 and reviewed the results with the RUC in October 2018.

The results of the specialty society surveys indicated a large increase in the amount of time required to furnish the service and, correspondingly, to the work RVU. The total time for CPT code 74425 based on the survey results was 34 minutes, an increase of 25 minutes over the current total time of 9 minutes. In reviewing the survey results, the RUC revised the total time for this CPT code to 24 minutes, with a recommended work RVU of 0.51. The reason for the large increase in time according to the RUC, is a change in the typical patient profile in which the typical patient is one with an ileal conduit through which nephrostomy tubes have been placed for post-operative obstruction. Based on the described change in patient population and increased time required to furnish the service, we are proposing the RUC-recommended work RVU of 0.51 for CPT code 74425.

We are proposing the RUC-recommended direct PE inputs for CPT code 74425.

(44) Abdominal Aortography (CPT Codes 75625 and 75630)

In October 2017, the RAW requested that AMA staff compile a list of CMS/Other codes with Medicare utilization of 30,000 or more. In January 2018, the RUC recommended to survey these services for the October 2018 RUC meeting. Subsequently, the specialty society surveyed these codes.

We disagree with the RUC-recommended work RVU of 1.75 for CPT code 75625 (*Aortography, abdominal, by serialography, radiological supervision and interpretation*). In reviewing CPT code 75625, we note that the key reference service, CPT Code 75710 (*Angiography, extremity, unilateral, radiological supervision and interpretation*), has 10 additional minutes of intraservice time, 10 additional minutes of total time and the same work RVU, which would indicate the RUC-recommended work RVU of 1.75 appears to be overvalued. When we compared the intraservice time ratio between the RUC-recommended time of 30 minutes and the reference code intraservice time of 40 minutes we found a ratio of 25 percent. 25 percent of the reference code work RVU of 1.75 equals a work RVU of 1.31. When we compared the total service time ratio between the RUC-recommended time of 60 minutes and the reference code total service time of 70 minutes we found a ratio of 14 percent. 14 percent of the reference code work RVU of 1.75 equals a work RVU of 1.51. Therefore, we believe an accurate value would lie between 1.31 and 1.52 RVUs. In looking for a comparative code, we have identified CPT code 38222. CPT Code 38222 is a recently reviewed CPT code with the identical intraservice and total times. As a result, we believe that it is more accurate to propose a work RVU of 1.44 based on a crosswalk to CPT code 38222.

In case of CPT code 75630 (*Aortography, abdominal plus bilateral iliofemoral lower extremity, catheter, by serialography, radiological supervision and interpretation*), we are proposing the RUC-recommended value of 2.00 RVUs.

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(45) Angiography (CPT Codes 75726 and 75774)

We are proposing the RUC-recommend work RVU for both codes in this family. We are proposing a work RVU of 2.05 for CPT code 75726 (*Angiography, visceral, selective or supraselective (with or without flush aortogram), radiological supervision and interpretation*), a work RVU of 1.01 for CPT code 75774 (*Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (List separately in addition to code for primary procedure*).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(46) X-Ray Exam Specimen (CPT Code 76098)

CPT code 70098 was reviewed by the RUC based on a request from the American College of Radiology (ACR) to determine whether CPT code 76098 was undervalued because of the assumption that the service is typically furnished concurrently with a placement of localization device service (CPT codes 19281 through 19288 each representing a different imaging modality). In a letter to the RUC, ACR expressed concern about the appropriateness of a codes valuation process in which physician time and intensity for a code are reduced to account for overlap with codes that are furnished to a patient on the same day. During the April 2018 RUC meeting, the specialty societies requested a work RVU of 0.40 for CPT code 76098, with intraservice time of 5 minutes and total time of 15 minutes. Currently, this service has a work RVU of 0.16, with 5 minutes of total time and no available intraservice time. In April 2018, the RUC and the specialty society agreed that additional analysis of the data was warranted in consideration of the relatively large change in survey time and work RVU for this service. The RUC agreed to review the CPT code (CPT code 76098) again in October 2018.

The RUC recommended a work RVU, based on the October 2018 meeting, of 0.31 for CPT code 76098, which represents an increase over the current value (0.16) but a decrease relative to the specialty society's original request of 0.40. The intraservice time for this CPT code is 5 minutes, and the total time is 11 minutes. Based on the parameters we

typically use to review and evaluate RUC recommendations, which rely heavily on survey data, we agree that a work RVU of 0.31 for a CPT code with 5 minutes intraservice and 11 minutes total time is consistent with other CPT codes with similar times and levels of intensity. We are proposing the RUC-recommended work RVU for CPT code 76098 of 0.31.

We share the ACR's interest in establishing or clarifying parameters that indicate when CPT codes that are furnished concurrently by the same provider should be valued to account for the overlap in physician work time and intensity, and even PE. We are broadly interested in stakeholder feedback and suggestions about what those parameters might be and whether or how they should affect code valuation.

We are proposing the RUC-recommended direct PE inputs for CPT code 76098.

(47) 3D Rendering (CPT Code 76376)

CPT code 76376 (*3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation*) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. It was surveyed and reviewed at the April 2018 RUC meeting.

We are proposing the RUC-recommended work RVU of 0.20 for CPT code 76376. We are also proposing the RUC-recommended direct PE inputs for CPT code 76376.

(48) Ultrasound Exam—Chest (CPT Code 76604)

CPT code 76604 (*Ultrasound, chest (includes mediastinum), real time with image documentation*) was identified as potentially misvalued on a screen of CMS/Other codes with Medicare utilization of 30,000 or more. It was surveyed and reviewed for the April 2018 RUC meeting.

We are proposing the RUC-recommended work RVU of 0.59 for CPT code 76604. We are also proposing the RUC-recommended direct PE inputs for CPT code 76604.

(49) X-Ray Exam—Bone (CPT Codes 77073, 77074, 77075, 77076, and 77077)

CPT codes 77073 (*Bone length studies (orthoroentgenogram, scanogram)*), 77075 (*Radiologic examination, osseous survey; complete (axial and appendicular skeleton)*), and 77077 (*Joint survey, single view, 2 or more joints*) were identified as potentially misvalued on a screen of CMS/Other codes with Medicare utilization of 30,000 or more. CPT codes 77074 (*Radiologic examination, osseous survey; limited (e.g., for metastases)*) and 77076 (*Radiologic examination, osseous survey, infant*) were reviewed as part of the same family.

We are proposing the RUC-recommended work RVUs for all five CPT codes in this family as follows: CPT code 77073 (work RVU = 0.26); CPT code 77074 (work RVU = 0.44); CPT code 77075 (work RVU = 0.55); CPT code 77076 (work RVU = 0.70); and CPT code 77077 (work RVU = 0.33).

We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(50) SPECT–CT Procedures (CPT Codes 78800, 78801, 78802, 78803, 78804, 788X0, 788X1, 788X2, and 788X3)

The CPT Editorial Panel revised five codes, created four new codes and deleted nine codes to better differentiate between planar radiopharmaceutical localization procedures and SPECT, SPECT–CT and multiple area or multiple day radiopharmaceutical localization/distribution procedures.

For CPT code 78800 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar limited single area (e.g., head, neck, chest pelvis), single day of imaging*), we disagree with the RUC recommendation to assign a work RVU of 0.70 based on the survey 25th percentile to this code, because we believe that it is inconsistent with the RUC-recommended reduction in physician time. We are proposing a work RVU of 0.64 based on the following total time ratio: The RUC-recommended 27 minutes divided by the current 28 minutes multiplied by the current work RVU of 0.66, which results in a work RVU of 0.64. We note that this value is bracketed by the work RVUs of CPT code 93287 (*Peri-procedural device evaluation (in person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review and report by a physician or other qualified health care professional; single, dual, or multiple lead implantable defibrillator system*), with a work RVU of 0.45, and CPT code 94617 (*Exercise test for bronchospasm, including pre- and post-spirometry, electrocardiographic recording(s), and pulse oximetry*), with a work RVU of 0.70. Both of these supporting crosswalks have intraservice time values of 10 minutes, and they have similar total time values.

For CPT code 78801 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, 2 or more areas (e.g., abdomen and pelvis, head and chest), 1 or more days of imaging or single area imaging over 2 or more days*), we disagree with the RUC recommendation to maintain the current work RVU of 0.79 despite a 22-minute reduction in intraservice time. We believe a reduction from the current value is warranted given the recommended reduction in physician time, and also to be consistent with other services of similar time values. We are proposing a work RVU of 0.73 based on the RUC-recommended incremental relationship between this code and CPT code 78800 (a difference of 0.09 RVU), which we apply to our proposed value for the latter code. As support for our proposed work RVU of 0.73, we note that it falls between the work RVUs of CPT code 94617 (*Exercise test for bronchospasm, including pre- and post-spirometry, electrocardiographic recording(s), and pulse oximetry*) with a work RVU of 0.70, and CPT code 93280 (*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; dual lead pacemaker system*) with a work RVU of 0.77.

For CPT code 78802 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, whole body, single day of imaging*), we disagree with the RUC recommendation to maintain the current work RVU of 0.86, as we believe that it is inconsistent with a reduction in time values, and because we do not agree that a work RVU that is among the highest of other services of similar intraservice time values is appropriate. We are proposing a work RVU of 0.80 based on the RUC-recommended incremental

relationship between this code and CPT code 78800 (a difference of 0.16 RVU), which we apply to our proposed value for the latter code. As support for our proposed work RVU of 0.80, we note that it falls between the work RVUs of CPT code 92520 (*Laryngeal function studies (i.e., aerodynamic testing and acoustic testing)*) with a work RVU of 0.75, and CPT code 93282 (*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; single lead transvenous implantable defibrillator system*) with a work RVU of 0.85.

For CPT code 78804 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); planar, whole body, requiring 2 or more days of imaging*), we disagree with the RUC recommendation to maintain the current work RVU of 1.07, as we believe that it is inconsistent with a reduction in time values, and because this work RVU appears to be valued highly relative to other services of similar time values. We are proposing a work RVU of 1.01 based on the RUC-recommended incremental relationship between this code and CPT code 78800 (a difference of 0.37 RVU), which we apply to our proposed value for the latter code. As support for our proposed work RVU of 1.01, we reference CPT code 91111 (*Gastrointestinal tract imaging, intraluminal (e.g., capsule endoscopy), esophagus with interpretation and report*), which has a work RVU of 1.00 and similar physician time values.

For CPT code 78803 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT), single area (e.g., head, neck, chest pelvis), single day of imaging*), we disagree with the RUC recommendation to increase the work RVU to 1.20 based on the survey 25th percentile to this code, because we believe that it is inconsistent with the RUC-recommended reduction in physician time. We are proposing to maintain the current work RVU of 1.09. We support this value with a reference to CPT code 78266 (*Gastric emptying imaging study (e.g., solid, liquid, or both); with small bowel and colon transit, multiple days*), which has a work RVU of 1.08, and similar time values.

For CPT code 788X0 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, single area (e.g., head, neck, chest or pelvis), single day of imaging*), we disagree with the RUC recommendation to assign a work RVU of 1.60 based on the survey 25th percentile to this code, as this would value this code more highly than services of similar time values. To maintain relativity among services in this family, we are proposing a work RVU of 1.49 for CPT code 788X0 based on the RUC-recommended incremental relationship between CPT code 788X0 and CPT code 78803 (a difference of 1.09 RVU), which we apply to our proposed value for the latter code. As support for our proposed work RVU of 1.49, we note that it is bracketed by the work RVUs of CPT codes 72195 (*Magnetic resonance (e.g., proton) imaging, pelvis; without contrast material(s)*) with a work RVU of 1.46, and 95861 (*Needle electromyography; 2 extremities with or without related paraspinal areas*) with a work RVU of 1.54. The physician time values of these services bracket those recommended for CPT code 778X0.

For CPT code 788X1 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT), minimum 2 areas (e.g., pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days*), we disagree with the RUC recommendation to assign a work RVU of 1.93 based on the survey 50th percentile to this code, as this would value this code more highly than services of similar time values. To maintain relativity among services in this family, we are proposing a work RVU of 1.82 based on the RUC-recommended incremental relationship between this code and CPT code 78803 (a difference of 0.73 RVU), which we apply to our proposed value for the latter code. As support for our proposed work RVU of 1.82, we note that it is bracketed by the work RVUs of the CPT codes which are members of the same code families referenced for the previous CPT code, 788X0: CPT codes 72191 (*Computed tomographic angiography, pelvis, with contrast material(s), including noncontrast images, if performed, and image postprocessing*) with a work RVU of 1.81, and 95863 (*Needle electromyography; 3 extremities with or without related paraspinal areas*) with a work RVU of 1.87. The physician time values of these services bracket those recommended for CPT code 778X1.

For CPT code 788X2 (*Radiopharmaceutical localization of tumor, inflammatory process or distribution of radiopharmaceutical agent(s), (includes vascular flow and blood pool imaging when performed); tomographic (SPECT) with concurrently acquired computed tomography (CT) transmission scan for anatomical review, localization and determination/detection of pathology, minimum 2 areas (e.g., pelvis and knees, abdomen and pelvis), single day of imaging, or single area of imaging over 2 or more days imaging*), we disagree with the RUC recommendation to assign a work RVU of 2.23 based on the survey 50th percentile to this code, as this would value this code more highly than services of similar time values. To maintain relativity among services in this family, we are proposing a work RVU of 2.12 based on the RUC-recommended incremental relationship between this code and CPT code 78803 (a difference of 1.03 RVU), which we apply to our proposed value for the latter code. As support for our proposed work RVU of 2.12, we reference CPT code 70554 (*Magnetic resonance imaging, brain, functional MRI; including test selection and administration of repetitive body part movement and/or visual stimulation, not requiring physician or psychologist administration*), which has a work RVU of 2.11 and physician intraservice and total time values that are identical to those recommended for this service.

For CPT code 788X3 (*Radiopharmaceutical quantification measurement(s) single area*), we disagree with the RUC recommendation to assign a work RVU of 0.51 based on the survey 25th percentile to this code, because we wish to maintain relativity and proportionality among codes of this family. We based our values for the other codes in this family on their relative relationship to either CPT code 78800 or 788X2, depending on the type of service described by the code. For CPT code 788X0, which describes a single day of imaging and is thus analagous to CPT code 788X3 in terms of units of service, our analysis indicates a reduction from the RUC value of approximately 7 percent is appropriate. Therefore, we apply a

similar reduction of 7 percent to the RUC-recommended work RVU of 0.51 to arrive at an RVU of 0.47. We support this value by noting that it is bracketed by add-on CPT codes 77001 (*Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal (includes fluoroscopic guidance for vascular access and catheter manipulation, any necessary contrast injections through access site or catheter with related venography radiologic supervision and interpretation, and radiographic documentation of final catheter position) (List separately in addition to code for primary procedure)*) with a work RVU of 0.38, and 77002 (*Fluoroscopic guidance for needle placement (e.g., biopsy, aspiration, injection, localization device) (List separately in addition to code for primary procedure)*), with a work RVU of 0.54. Both of these reference CPT codes have intraservice time values that are similar to, and total time values that are identical to, those recommended for CPT code 788X3.

For the direct PE inputs, we are refining the number of minutes of clinical labor allocated to the activity ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' to the 2-minute standard for CPT codes 78800, 78801, 78802, 78804, 78803, 788X0, 788X1, and 788X2, as no rationale was provided for these codes to have times above the standard for this activity. We are also refining the equipment time formulas to reflect this clinical labor refinement for these codes. For CPT codes 78800, 78801, 78802, 78804, 78803, 788X0, 788X1, and 788X2, we are proposing to refine the equipment times to match our standard equipment time formula for the professional PACS workstation. For the supply item SM022 ''sanitizing cloth-wipe (surface, instruments, equipment),'' we are refining these supplies to quantities of 5 each for CPT codes 78801, 78804, and 788X2 to conform with other codes in the family.

(51) Myocardial PET (CPT Codes 78459, 78X29, 78491, 78X31, 78492, 78X32, 78X33, 78X34, and 78X35)

CPT code 78492 was identified via the High Volume Growth screen with total Medicare utilization over 10,000 that increased by at least 100 percent from 2009 through 2014. The CPT Editorial Panel revised this code set to reflect newer technology aspects such as wall motion, ejection fraction, flow reserve, and technology updates for hardware and software. The CPT Editorial Panel deleted a Category III code, added six Category I codes, and revised the three existing codes to separately identify component services included for myocardial imaging using positron emission tomography.

For CPT code 78491 (*Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic)*), we disagree with the RUC-recommended work RVU of 1.56, which is the survey 25th percentile value, as we believe that the 30-minute reduction in intraservice time and 15-minute reduction in physician total time does not validate an increase in work RVU, and we believe that the significance of the reductions in recommended physician time values warrants a reduction in work RVU. We are proposing a work RVU of 1.00 based on the following total time ratio: The recommended 30 minutes divided by the current 45 minutes multiplied by the current work RVU of 1.50, which results in a work RVU of 1.00. As further support for this value, we note that it falls between CPT code 78278 (*Acute gastrointestinal blood loss imaging*), with a work RVU of 0.99, and CPT code 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*), with a work RVU of 1.03.

For CPT code 78X31 (*Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); single study, at rest or stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan*), we disagree with the RUC recommendation of 1.67 based on the survey 25th percentile, as we do not agree this service would be appropriately valued with an RVU that is among the highest of all services of similar times with this global period. We are proposing a work RVU of 1.11 by applying the RUC-recommended increment between CPT code 78491 and this code, an increment of 0.11, to our proposed value of 1.00 for CPT code 78491, thus maintaining the RUC's recommended incremental relationship between these codes. As further support for this value, we note that it falls between CPT codes 95977 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters*) by physician or other qualified health care professional; with complex cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional)), with a work RVU of 0.97, and CPT code 93284 (*Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead transvenous implantable defibrillator system*), with a work RVU of 1.25; both of these codes have similar physician time values.

For CPT code 78459 (*Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study*), we disagree with the RUC recommendation to increase the work RVU to 1.61 based on the survey 25th percentile. We believe that the magnitude of the recommended reductions in physician time (a 50-minute reduction in intraservice time and a 32-minute reduction in total time) suggests that this value is overestimated; furthermore, we note that the RUC's recommendation is among the highest for all XXX-global period codes with similar time values. We are proposing a work RVU of 1.05 by applying the RUC-recommended increment between this code and CPT code 78491, a difference of 0.05, which we apply to our proposed value for the latter code. We support our RVU of 1.05 by referencing two CPT codes: 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*), and 36440 (*Push transfusion, blood, 2 years or younger*), both of which have work RVUs of 1.03, as well as identical intraservice and similar total time values.

We disagree with the RUC's recommended valuation of 1.76 for CPT code 78X29 (*Myocardial imaging, positron emission tomography (PET), metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed) single study; with concurrently acquired computed tomography transmission scan*), which is based on the survey 25th percentile, because we believe a work RVU that is greater than those of all other services of similar intraservice time values is not appropriate. We are proposing a work RVU of 1.20 for CPT code 78X29. We are proposing to value CPT code 78X29 with an incremental methodology, which preserves the RUC-recommended relationship among the codes in this family; the RUC

recommends an increment of 0.20 between CPT code 78X29 and CPT code 78491. We are proposing to apply this increment to our proposed value of 1.00 for CPT code 78491 to arrive at our value of 1.20.

We disagree with the RUC's recommendation of 1.80 for CPT code 78492 (*Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); multiple studies at rest and stress (exercise or pharmacologic)*) given the magnitude of the recommended reduction in physician time values (a 35-minute reduction in intraservice time and a 17-minute reduction in total time), and also given the fact that the RUC's recommended value would be the highest of all codes of this intraservice time and global period. We are proposing a work RVU of 1.24 based on the RUC-recommended incremental difference between 78491 and 78492 of 0.24, which we add to our proposed value for 78491 for a work RVU of 1.24. As further support for this value, we reference CPT code 95908 (*Nerve conduction studies; 3–4 studies*), with a work RVU of 1.25, similar physician time values.

We disagree with the RUC's recommendation of 1.90 for CPT code 78X32 (*Myocardial imaging, positron emission tomography, perfusion study (including ventricular wall motion(s), and/or ejection fractions(s), when performed); multiple studies at rest and stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan*) which is based on a crosswalk to CPT code 64617 (*Chemodenervation of muscle(s); larynx, unilateral, percutaneous (e.g., for spasmodic dysphonia), includes guidance by needle electromyography, when performed*), because the fact that this work RVU that is greater than those of all other services of similar intraservice time values suggests that it is an overestimate. Instead we are proposing a work RVU of 1.34 for CPT code 78X32, based on an incremental methodology. We apply the RUC-recommended increment between 78491 and CPT code 78X32, a difference of 0.34, to our proposed value of 1.00 for CPT code 78491, for a value of 1.34. We support this value by referencing CPT code 77261 (*Therapeutic radiology treatment planning; simple*), with a work RVU of 1.30, and CPT code 94003 (*Ventilation assist and management, initiation of pressure or volume preset ventilators for assisted or controlled breathing; hospital inpatient/observation, each subsequent day*), with a work RVU of 1.37. These codes have similar physician time values.

We disagree with the RUC's recommendation of 2.07 for CPT code 78X33 (*Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (e.g., myocardial viability)*), because we believe the fact that this work RVU is greater than those of all other services of similar intraservice time values suggests that it is an overestimate. We are proposing a work RVU of 1.51 for CPT code 78X33, based on an incremental methodology. We apply the RUC-recommended increment between 78491 and CPT code 78X33, a difference of 0.51, to our proposed value of 1.00 for CPT code 78491, for a value of 1.51. We support this value by referencing CPT code 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*), with a work RVU of 1.46, and similar physician time values.

Similarly for CPT code 78X34 (*Myocardial imaging, positron emission tomography, combined perfusion with metabolic evaluation study (including ventricular wall motion(s), and/or ejection fraction(s), when performed), dual radiotracer (e.g., myocardial viability); with concurrently acquired computed tomography transmission scan*), we disagree with the RUC's recommendation of 2.26 based on a crosswalk to CPT code 71552 (*Magnetic resonance (e.g., proton) imaging, chest (e.g., for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences*), because we believe the fact that this work RVU is among the highest among services of similar intraservice time values suggests that it is an overestimate. We are proposing a work RVU of 1.70 by applying the RUC-recommended increment between CPT code 78X34 and CPT code 78491, which is a difference of 0.70, to our proposed value for CPT code 78491 for a value of 1.70. We support this value by referencing CPT codes 95924 (*Testing of autonomic nervous system function; combined parasympathetic and sympathetic adrenergic function testing with at least 5 minutes of passive tilt*) and 74182 (*Magnetic resonance (e.g., proton) imaging, abdomen; with contrast material(s)*), both of which have work RVUs of 1.73.

For CPT code 78X35 (*Absolute quantitation of myocardial blood flow (AQMBF), positron emission tomography, rest and pharmacologic stress (List separately in addition to code for primary procedure)*), we disagree with the RUC recommendation to assign a work RVU of 0.63 to this code based on the survey 25th percentile, because we believe a comparison to other codes with a global period of ZZZ suggests that this is somewhat overvalued, and because we wish to maintain relativity and proportionality to other codes in this series. We based our values for the other codes in this family on their relative relationships to CPT code 78491; for that code our analysis indicates that a reduction from the RUC value of roughly ⅓ is appropriate, based on a ratio of the decrease in total time to the current work RVU. Therefore, we apply a similar reduction of ⅓ to the RUC-recommended work RVU of 0.63 to arrive at an RVU of approximately 0.42. Applying a reduction that is similar to the reduction we think is warranted from the RUC value for CPT code 78491 to CPT code 78X35 will maintain consistency in value among these services. We believe this work RVU is validated by noting that it is bracketed by CPT codes 15272 (*Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)*), with a work RVU of 0.33, and 11105 (*Punch biopsy of skin (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)*), with a work RVU of 0.45. A work RVU of 0.42 is thus consistent with ZZZ global period codes of similar physician times.

For the direct PE inputs, for several of the equipment items, we are proposing to refine the equipment times to conform to our established policies for non-highly, as well as for highly technical equipment. In addition, we are proposing to refine the equipment times to conform to our established policies for PACS Workstation. For the new equipment items ER110: ''PET Refurbished Imaging Cardiac Configuration'' and ER111: ''PET/CT Imaging Camera Cardiac Configuration,'' we are proposing to assume that a 90 percent equipment utilization rate is typical, as this would be consistent with our equipment utilization assumptions for expensive diagnostic imaging equipment. For the supply item SM022 ''sanitizing cloth-wipe (surface, instruments, equipment),'' we are refining these supplies to quantities of 5 each for CPT codes 78X33 and 78X34 to conform with other codes in the family. We are proposing that we will

not price the ''Software and hardware package for Absolute Quantitation'' as a new equipment item, due to the fact that the submitted invoices included a service contract and a combined software/hardware bundle with no breakdown on individual pricing. Based on our lack of specific pricing data, we believe that this software is more accurately characterized as an indirect PE input that is not individually allocable to a particular patient for a particular service.

(52) Cytopathology, Cervical-Vaginal (CPT Code 88141, HCPCS Codes G0124, G0141, and P3001)

CPT code 88141 (*Cytopathology, cervical or vaginal (any reporting system), requiring interpretation by physician*), HCPCS code G0124 (*Screening cytopathology, cervical or vaginal (any reporting system), collected in preservative fluid, automated thin layer preparation, requiring interpretation by physician*), HCPCS code G0141 (*Screening cytopathology smears, cervical or vaginal, performed by automated system, with manual rescreening, requiring interpretation by physician*), and HCPCS code P3001 (*Screening Papanicolaou smear, cervical or vaginal, up to three smears, requiring interpretation by physician*) were identified as potentially misvalued on a list of CMS or other source codes with Medicare utilization of 30,000 or more.

In the CY 2000 PFS final rule (64 FR 59408), we finalized a policy that it was more appropriate to evaluate the work, PE, and MP RVUs for HCPCS codes P3001, G0124, and G0141 identical or comparable to the values of CPT code 88141.

For CY 2020, the RUC recommended a work RVU of 0.42 for CPT code 88141 and HCPCS codes G0124, G0141, and P3001, based on the current value. We disagree with the RUC-recommended work RVU and are proposing a work RVU of 0.26 for all four codes in this family, based on our time ratio methodology and a crosswalk to CPT code 93313 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); placement of transesophageal probe only*), which has an identical work RVU of 0.26, identical intraservice and total work times values to CPT code 88141 and HCPCS codes G0124, and G0141, and similar intraservice and total time values to HCPCS code P3001.

In reviewing this family of codes, we note that the intraservice and total work times for CPT code 88141 and HCPCS codes G0124, and G0141 are decreasing from 16 minutes to 10 minutes (38 percent reduction) and the intraservice and total work times for HCPCS code P3001 are decreasing from 16 minutes to 12 minutes (25 percent reduction). However, the RUC recommended a work RVU of 0.42 for all four codes in this family, based on the maintaining the current work RVU. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 88141 and HCPCS codes G0124, G0141, and P3001, we believe that it would be more accurate to propose a work RVU of 0.26, based on our time ratio methodology and a crosswalk to CPT code 93313 to account for these decreases in the surveyed work times.

For the direct PE inputs, we are proposing to refine the clinical labor time for the ''Perform regulatory mandated quality assurance activity'' (CA033) activity from 7 minutes to 5 minutes for all four codes in the family. We believe that these quality assurance activities would not typically take 7 minutes to perform, given that similar federally mandated MQSA activities were recommended and finalized at a time of 4 minutes for CPT codes 77065–77067 in CY 2017 (81 FR 80314–80316), and other related regulatory compliance activities were recommended and finalized at a time of 5 minutes for CPT codes 78012–78014 in CY 2013 (77 FR 69037). To preserve relativity between services, we are proposing a clinical labor time of 5 minutes for the codes in this family based on this prior allocation of clinical labor time.

We are also proposing to remove the 1-minute of clinical labor time for the ''File specimen, supplies, and other materials'' (PA008) activity from all four codes under the rationale that this task is a form of indirect PE. As we stated in the CY 2017 PFS final rule (81 FR 80324), we agree that filing specimens is an important task, and we agree that these would take more than zero minutes to perform. However, we continue to believe that these activities are correctly categorized under indirect PE as administrative functions, and therefore, we do not recognize the filing of specimens as a direct PE input, and we do not consider this task as typically performed by clinical labor on a per-service basis.

We are proposing to refine the equipment time for the compound microscope (EP024) equipment to 10 minutes for all four codes in the family to match the work time of the procedures. The recommended materials for this code family state that the compound microscope is utilized by the pathologist, and therefore, we believe that the 10-minute work time of the procedures would be the most accurate equipment time to propose.

(53) Biofeedback Training (CPT Codes 908XX and 909XX)

CPT code 90911 (*Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry*) was identified as potentially misvalued on a RAW screen of codes with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS or other source codes. In September 2018, the CPT Editorial Panel replaced this code with two new codes to describe biofeedback training initial 15 minutes of one-on-one patient contact and each additional 15 minutes of biofeedback training.

We are proposing the RUC-recommended work RVU of 0.90 for CPT code 908XX (*Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; initial 15 minutes of one-on-one patient contact*), as well as the RUC-recommended work RVU of 0.50 for CPT code 909XX (*Biofeedback training, perineal muscles, anorectal or urethral sphincter, including EMG and/or manometry when performed; each additional 15 minutes of one-on-one patient contact*). For the direct PE inputs, we are proposing to refine the equipment time for the power table (EF031) equipment in CPT code 908XX to conform to our established standard for non-highly technical equipment.

We are also proposing to designate CPT codes 908XX and 909XX as ''sometimes therapy'' procedures which means that an appropriate therapy modifier is always required when this service is furnished by therapists. For more information we direct readers to the Therapy Code List section of the CMS website at *https://www.cms.gov/Medicare/Billing/TherapyServices/AnnualTherapyUpdate.html*.

(54) Corneal Hysteresis Determination (CPT Code 92145)

In 2005, the AMA RUC began the process of flagging services that represent new technology or new services as they were presented to the AMA/Specialty Society RVS Update Committee. The AMA RUC reviewed this service at the October 2018 RAW meeting, and indicated that the

utilization is continuing to increase for this service. This code was surveyed and reviewed for the January 2019 RUC meeting.

We are proposing the work RVU of 0.10 as recommended by the RUC. We are also proposing the RUC-recommended direct PE inputs for CPT code 92145 without refinement.

(55) Computerized Dynamic Posturography (CPT Codes 92548 and 92XX0)

CPT code 92548 (*Computerized dynamic posturography*) was identified via the negative IWPUT screen. CPT revised one code and added another code to more accurately describe the current clinical work and equipment necessary to provide this service.

We do not agree with the RUC's recommended work RVUs of 0.76 for CPT code 92548 (*Computerized dynamic posturography sensory organization test (CDP–SOT), 6 conditions (i.e., eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report*), or 0.96 for CPT code 92XX0 (*Computerized dynamic posturography sensory organization test (CDP–SOT), 6 conditions (i.e., eyes open, eyes closed, visual sway, platform sway, eyes closed platform sway, platform and visual sway), including interpretation and report; with motor control test (MCT) and adaptation test (ADT)*). For CPT code 92548, we agree that an increase in work RVU is warranted; however, we believe the surveyed time values suggest an increase of a less significant magnitude than that recommended. We are proposing a work RVU of 0.67 based on the intraservice time ratio: we divide the RUC-recommended intraservice time value of 20 by the current value of 15 and multiply the product by the current work RVU of 0.50 for a ratio of 0.67. As a supporting crosswalk, we note that our value is greater than the work RVU of 0.60 for CPT code 93316 (*Transesophageal echocardiography for congenital cardiac anomalies; placement of transesophageal probe only*), which has identical intraservice and total times.

We are proposing to maintain relativity between these two codes by valuing CPT code 92XX0 by applying the RUC-recommended incremental difference between the two codes, a difference of 0.20, to our proposed value of 0.66 for CPT code 93316; therefore, we are proposing a work RVU of 0.87 for CPT code 92XX0. As further support for this value, we note that it falls between the work RVUs of CPT codes 95972 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex spinal cord or peripheral nerve (e.g., sacral nerve) neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional*), with a work RVU of 0.80, and CPT code 38207 (*Transplant preparation of hematopoietic progenitor cells; cryopreservation and storage*), with a work RVU of 0.89.

We are proposing the RUC-recommended direct PE inputs for these codes without refinement.

(56) Auditory Function Evaluation (CPT Codes 92626 and 92627)

CPT code 92626 (*Evaluation of auditory function for surgically implanted device(s), candidacy or post-operative status of a surgically implanted device(s); first hour*) appeared on the RAW 2016 high volume growth screen. In 2017, it was identified through a CMS request. CPT code 92627 (*Evaluation of auditory function for surgically implanted device(s), candidacy or post-operative status of a surgically implanted device(s); each additional 15 minutes*) the add-on code for CPT code for 92626, also was included in the CMS request to review audiology services.

For CY 2020, we are proposing the HCPAC-recommended work RVU of 1.40 for CPT code 92626, which is identical to its current RVU. We are also proposing the HCPAC-recommended work RVU of 0.33 for the add-on code, CPT code 92627. We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(57) Septostomy (CPT Codes 92992 and 92993)

CPT codes 92992 (*Atrial septectomy or septostomy; transvenous method, balloon (e.g., Rashkind type) (includes cardiac catheterization)*) and 92993 (*Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)*) were nominated as potentially misvalued services. These services are typically performed on children, a non-Medicare population, and are currently contractor-priced. These codes were surveyed and reviewed for the January 2019 RUC meeting.

We are proposing to maintain contractor pricing for CPT codes 92992 and 92993, as recommended by the RUC. These codes will be referred to the CPT Editorial Panel for revision and potential deletion. We are also proposing a change from 90-day to 0-day global period status for these two procedures, also as recommended by the RUC.

(58) Opthalmoscopy (CPT Codes 92X18 and 92X19)

CPT code 92225 was identified as potentially misvalued on a screen of codes with a negative IWPUT, with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. In February 2018, the CPT Editorial Panel deleted CPT codes 92225 and 92226 and created two new codes to specify what portion of the eye is examined for a service beyond the normal comprehensive eye exam.

We are proposing the RUC-recommended work RVUs of 0.40 for CPT code 92X18 (*Ophthalmoscopy, extended, with retinal drawing and scleral depression of peripheral retinal disease (e.g., for retinal tear, retinal detachment, retinal tumor) with interpretation and report, unilateral or bilateral*) and 0.26 for CPT code 92X19 (*Ophthalmoscopy, extended, with drawing of optic nerve or macula (e.g., for glaucoma, macular pathology, tumor) with interpretation and report, unilateral or bilateral*).

We are proposing the RUC-recommended direct PE inputs for this code family without refinement.

(59) Remote Interrogation Device Evaluation (CPT Codes 93297, 93298, 93299, and HCPCS Code GTTT1)

When the RUC previously reviewed the CPT code 93299 at the January 2017 RUC meeting, the specialty society submitted PE inputs for CPT code 93299 (*Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system or subcutaneous cardiac rhythm monitor system, remote data acquisitions(s), receipt of transmissions and technician review, technical support and distribution of results*); the PE Subcommittee and RUC accepted the society recommendations. In the CY 2018 PFS final rule (82 FR 53064), we did not finalize our proposal to establish national pricing for CPT code 93299 and the code remained contractor-priced.

At the October 2018 RUC meeting, the RUC re-examined CPT code 93299. CPT codes 93297 (*Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic*

monitor system, including analysis of 1 or more recorded physiologic cardiovascular data elements from all internal and external sensors, analysis, review(s) and report(s) by a physician or other qualified health care professional) and 93298 (*Interrogation device evaluation(s), remote up to 30 days; subcutaneous cardiac rhythm monitor system, including analysis or recorded heart rhythm data, analysis, review(s) and report(s) by a physician or other qualified health care professional*) were added to this family of services. These three codes were reviewed for practice expense only.

CPT codes 93297 and 93298 are work-only codes and CPT code 93299 is meant to serve as the catch-all for both 30-day remote monitoring services. The RUC is unclear why the code family was designed this way, noting it may have been a way to allow for the possibility that the technical work would be provided by vendors, but they noted that this is not how the service is currently provided. Stating that in the decade since these codes were created, it has become clear that implantable cardiovascular monitor (ICM) and implantable loop recorder (ILR) services are very different and the PE cannot be appropriately captured for both services in a single technical code. They noted that CPT codes 93297–93299 will be placed on the new technology/new services list and be re-reviewed by the RUC in 3 years to ensure correct calculation and utilization assumptions. It was noted in the RUC recommendations that the specialty society intended to submit a coding proposal to the CPT Editorial Panel to delete CPT code 93299, as it will no longer be necessary to have a separate code for PE if CPT codes 93297 and 93298 are allocated direct PE in CY 2020.

In our review of these services, we note that the RUC recommendations did not provide a detailed description of the clinical labor tasks being performed or detailed information on the typical use of the supply and equipment used when furnishing these services. These details are important in order for us to review if the RUC-recommended PE inputs are appropriate to furnish these services. The RUC submitted PE inputs (which were not previously included) for the work-only CPT codes 93297 and 93298, but did not include details to substantiate these recommended PE inputs for any of the three codes in this family.

Additionally, we are concerned with the appropriateness of the RUC's reference code, CPT code 93296 (*Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system, leadless pacemaker system, or implantable defibrillator system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results*). CPT code 93296 is for remote monitoring over a 90-day period, but was used as a reference to derive the RUC-recommended direct PE inputs for CPT codes 93297–93299, which are for remote monitoring over a 30-day period.

For the CY 2020 direct PE inputs, we are proposing to remove the clinical labor time for ''Perform procedure/service—not directly related to physician work time'' (CA021); to remove the requested quantity for the supply ''Paper, laser printing (each sheet)'' (SK057); and to refine the equipment times in accordance with our standard equipment time formulas for CPT codes 93297 and 93298.

Although we are not proposing to allocate direct PE inputs for CPT codes 93297 and 93298, we are seeking additional comment on the appropriateness of CPT code 93296 as the reference code, details on the clinical labor tasks, and more information on the typical use of the supply and equipment used to furnish these services. For example, it was unclear in the RUC recommendations how many patients are monitored concurrently. As an additional example, it was unclear in the RUC recommendations as to what tasks are involved when clinical staff engage with the patient throughout the month to perform education about the device and re-education protocols after the initial enrollment.

The CPT Editorial Panel is deleting CPT code 93299 for CY 2020. We note this differs from the RUC recommendations for this code from the October 2018 meeting, which stated that the specialty society intended to submit a coding proposal to the CPT Editorial Panel to delete CPT code 93299, as it would no longer be necessary to have a separate code for PE, if CPT codes 93297 and 93298 are allocated direct PE for CY 2020. Given that we are proposing to not allocate direct PE inputs for CPT code 93297 and 93298 for CY 2020 and CPT code 93299 is being deleted for CY 2020, we are proposing to create a G-code to describe the services previously furnished under CPT code 93299. We are proposing to create HCPCS code GTTT1 (*Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, implantable loop recorder system, or subcutaneous cardiac rhythm monitor system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results*), to describe the services previously furnished under CPT code 93299, effective for CY 2020.

(60) Duplex Scan Arterial Inflow-Venous Outflow (CPT Codes 93X00 and 93X01)

In September 2018, the CPT Editorial Panel recommended replacing one HCPCS code (G0365) with two new codes to describe the duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access for complete bilateral and unilateral study. We are proposing the RUC-recommended work RVU of 0.80 for CPT code 93X00 (*Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study*), as well as the RUC-recommended work RVU of 0.50 for CPT code 93X01 (*Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study*).

For the direct PE inputs, we are proposing to refine the clinical labor time for the ''Prepare room, equipment and supplies'' (CA013) activity from 4 minutes to 2 minutes for both codes in the family. Two minutes is the standard time for this clinical labor activity, and 2 minutes is also the time assigned for this activity in the reference code, CPT code 93990 (*Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow)*). There was no rationale provided in the recommended materials indicating why this additional clinical labor time would be typical for the procedures, and therefore, we are proposing to refine to the standard time of 2 minutes. We are also proposing to adjust the equipment times to conform to this change in the clinical labor time.

(61) Myocardial Strain Imaging (CPT Code 933X0)

The CPT Editorial Panel deleted one Category III code and created one new Category I add-on code CPT code 933X0 to describe the work of myocardial strain imaging performed in supplement to transthoracic echocardiography services. We are proposing the RUC-recommended work RVU of 0.24.

We are proposing the RUC-recommended direct PE inputs for CPT code 933X0. However, we note that no rationale was given for the RUC-recommended 12 minutes of clinical labor time for the activity CA021

''Perform procedure/service,'' and we are requesting comment on the appropriateness of this allocated time value.

(62) Lung Function Test (CPT Code 94200)

The RUC recommended this service for survey because it appeared on a list of CMS/Other codes with Medicare utilization of 30,000 or more. According to the RUC, this service is typically reported with an E/M service and another pulmonary function test, and the RUC-recommended times would appropriately account for any overlap with other services. The RUC stated that the intraservice time involves reading and interpreting the test to determine if a significant interval change has occurred and then generating a report, which supports the 5 minutes of physician work indicated in the survey. The RUC did not agree with the specialty society that communication of the report required an additional 2 minutes of physician time over the postservice time included in the other services reported on the same day. The RUC reduced the postservice time from 2 minutes to 1 minute because the service requires minimal time to enter the results into the medical record and communicate the results to the patient and the referring physician. Based in part on these reductions in physician time, the RUC recommended a reduction in work RVU from the current value with a crosswalk to CPT code 95905 (Motor and/or sensory nerve conduction, using preconfigured electrode array(s), amplitude and latency/velocity study, each limb, includes F-wave study when performed, with interpretation and report).

For CPT code 94200 (*Maximum breathing capacity, maximal voluntary ventilation*), we are proposing the RUC-recommended work RVU of 0.05. A stakeholder stated that the RUC's recommended work RVU understates the costs inherent in performing this service, and that the survey 25th percentile value of 0.10 is more accurate for this service. While we are proposing the RUC-recommended 0.05, we are soliciting public comment on this stakeholder-recommended potential alternative value.

We are proposing the RUC-recommended direct PE inputs for CPT code 94200 without refinement.

(63) Long-Term EEG Monitoring (CPT Codes 95X01, 95X02, 95X03, 95X04, 95X05, 95X06, 95X07, 95X08, 95X09, 95X10, 95X11, 95X12, 95X13, 95X14, 95X15, 95X16, 95X17, 95X18, 95X19, 95X20, 95X21, 95X22, and 95X23)

In January 2017, the RUC identified CPT code 95951 via the high volume growth screen, which considers if the service has total Medicare utilization of 10,000 or more and if utilization has increased by at least 100 percent from 2009 through 2014. The RUC recommended that this service be referred to the CPT Editorial Panel for needed changes, including code deletions, revision of code descriptors, and the addition of new codes to this family. In May 2018, the CPT Editorial Panel approved the revision of one code, deletion of five codes, and addition of 23 new codes for reporting long-term EEG professional and technical services.

We are proposing the RUC-recommended work RVU for six of the professional component codes in this family. We are proposing a work RVU of 3.86 for CPT code 95X18 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, complete study; greater than 36 hours, up to 60 hours of EEG recording, without video*), a work RVU of 4.70 for CPT code 95X19 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, complete study; greater than 36 hours, up to 60 hours of EEG recording, with video*), a work RVU of 4.75 for CPT code 95X20 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, complete study; greater than 60 hours, up to 84 hours of EEG recording, without video*), a work RVU of 6.00 for CPT code 95X21 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, complete study; greater than 60 hours, up to 84 hours of EEG recording, with video*), a work RVU of 5.40 for CPT code 95X22 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, complete study; greater than 84 hours of EEG recording, without video*) and a work RVU of 7.58 for CPT code 95X23 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, complete study; greater than 84 hours of EEG recording, with video*).

We are also proposing the RUC-recommended work RVU of 0.00 for the 13 technical component codes in the family: CPT code 95X01 (*Electroencephalogram (EEG) continuous recording, with video when performed, set-up, patient education, and take down when performed, administered in-person by EEG technologist, minimum of 8 channels*), CPT code 95X02 (*Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2–12 hours; unmonitored*), CPT code 95X03 (*Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2–12 hours; with intermittent monitoring and maintenance*), CPT code 95X04 (*Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, 2–12 hours; with continuous, real-time monitoring and maintenance*), CPT code 95X05 (*Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12–26 hours; unmonitored*), CPT code 95X06 (*Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12–26 hours; with intermittent monitoring and maintenance*), CPT code 95X07 (*Electroencephalogram (EEG) without video, review of data, technical description by EEG technologist, each increment of 12–26 hours; with continuous, real-time monitoring and maintenance*), CPT code 95X08 (*Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2–12 hours; unmonitored*), CPT code 95X09 (*Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2–12 hours; with intermittent monitoring and maintenance*), CPT code 95X10 (*Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, 2–12 hours; with continuous, real-time monitoring and maintenance*), CPT code 95X11 (*Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12–26 hours; unmonitored*), CPT code 95X12 (*Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12–26 hours; with intermittent monitoring and*

maintenance), and CPT code 95X13 (*Electroencephalogram with video (VEEG), review of data, technical description by EEG technologist, each increment of 12–26 hours; with continuous, real-time monitoring and maintenance*).

We disagree with the RUC-recommended work RVU of 2.00 for CPT code 95X14 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, 2–12 hours of EEG recording; without video*) and we are proposing a work RVU of 1.85 based on a crosswalk to CPT code 93314 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); image acquisition, interpretation and report only*). CPT code 93314 is a recently-reviewed code with 2 additional minutes of intraservice time and 4 additional minutes of total time as compared to CPT code 95X14. When considering the work RVU for CPT code 95X14, we looked to the second reference code chosen by the survey participants, CPT code 95957 (*Digital analysis of electroencephalogram (EEG) (e.g., for epileptic spike analysis)*). This code has 2 additional minutes of intraservice time and 9 additional minutes of total time as compared to CPT code 95X14, yet has a work RVU of 1.98, lower than the recommended work RVU of 2.00. These time values suggested that CPT code 95X14 would be more accurately valued at a work RVU slightly below the 1.98 of CPT code 95957. We also looked at the intraservice time ratio between CPT code 95X14 and some of its predecessor codes. The intraservice time ratio with CPT code 95953 (*Monitoring for localization of cerebral seizure focus by computerized portable 16 or more channel EEG, electroencephalographic (EEG) recording and interpretation, each 24 hours, unattended*) suggests a similar potential work RVU of 1.91 (28 minutes divided by 45 minutes times a work RVU of 3.08). Based on this information, we are proposing a work RVU of 1.85 for CPT code 95X14 based on the aforementioned crosswalk to CPT code 93314.

We disagree with the RUC-recommended work RVU of 2.50 for CPT code 95X15 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation, and report, 2–12 hours of EEG recording; with video (VEEG)*) and we are proposing a work RVU of 2.35. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 95X14 and 95X15 is equivalent to the recommended interval of 0.50 RVUs. Therefore, we are proposing a work RVU of 2.35 for CPT code 95X15, based on the recommended interval of 0.50 additional RVUs above our proposed work RVU of 1.85 for CPT code 95X14. We are supporting this work RVU with a reference to CPT code 99310 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of the 3 key components*), which shares the same intraservice time of 35 minutes and the identical work RVU of 2.35. CPT code 99310 is a lower intensity procedure but has increased total work time as compared to CPT code 95X15.

We disagree with the RUC-recommended work RVU of 3.00 for CPT code 95X16 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; without video*) and we are proposing a work RVU of 2.60 based on a crosswalk to CPT code 99219 (*Initial observation care, per day, for the evaluation and management of a patient, which requires 3 key components*). CPT code 99219 shares the same intraservice time of 40 minutes and has a slightly higher total time as compared to CPT code 95X16. We also note that the observation care described by CPT code 99219 shares some clinical similarities to the long term EEG monitoring described by CPT code 95X16, although we note as always that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another, and that codes do not need to share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

In addition, we believe that the proposed crosswalk to CPT code 99219 at a work RVU of 2.60 more accurately captures the intensity of CPT code 95X16. At the recommended work RVU of 3.00, the intensity of CPT code 95X16 is anomalously high in comparison to the rest of the family, higher than any of the other professional component codes. We have no reason to believe that the 24-hour EEG monitoring done without video as described in CPT code 95X16 would be notably more intense than the other codes in the same family. Furthermore, the recommendations for this code family specifically state that the codes that describe video EEG monitoring are more intense than the codes that describe non-video EEG monitoring. However, at the recommended work RVU for CPT code 95X16, this non-video form of EEG monitoring had the highest intensity in the family. At our proposed work RVU of 2.60, the intensity of CPT code 95X16 is no longer anomalously high in comparison to the rest of the family, and also remains lower than the intensity of the 24 hour EEG monitoring with video procedure described by CPT code 95X17.

We disagree with the RUC-recommended work RVU of 3.86 for CPT code 95X17 (*Electroencephalogram, continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, each increment of greater than 12 hours, up to 26 hours of EEG recording, interpretation and report after each 24-hour period; with video (VEEG)*) and we are proposing a work RVU of 3.50 based on the survey 25th percentile value. The RUC-recommended work RVU of 3.86 was based on a crosswalk to CPT code 99223 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires 3 key components*), a code that shares the same intraservice time of 55 minutes but has 15 additional minutes of total time as compared to CPT code 95X17, at 90 minutes as compared to 75 minutes. We disagree with the use of this crosswalk, as the 15 minutes of additional total time in CPT code 99223 result in a higher work valuation that overstates the work RVU of CPT code 95X17. These 15 additional minutes of preservice and postservice work time in the recommended crosswalk code have a calculated work RVU of 0.34 under the building block methodology; subtracting out this work RVU of 0.34 from the crosswalk code's work RVU of 3.86 results in an estimated work RVU of 3.52, which is nearly identical to the survey 25th percentile work RVU of 3.50. Similarly, if we were to calculate a total time ratio between CPT code 95X17 and the recommended crosswalk code 99223, it would produce a noticeably lower work RVU of 3.22 (75 minutes divided by 90 minutes times a work RVU of 3.86). Based on this rationale, we do not believe that it would serve the interests of relativity to propose a work RVU of 3.86 based on the recommended crosswalk.

Instead, we are proposing a work RVU of 3.50 for CPT code 95X17 based on the

survey 25th percentile value. We note that among the predecessor codes for this family, CPT code 95956 (*Monitoring for localization of cerebral seizure focus by cable or radio, 16 or more channel telemetry, electroencephalographic (EEG) recording and interpretation, each 24 hours, attended by a technologist or nurse*) has a higher intraservice time of 60 minutes and a higher total time of 105 minutes at a work RVU of 3.61. This prior valuation of CPT code 95956 does not support the RUC-recommended work RVU of 3.86 for CPT code 95X17, but does support the proposed work RVU of 3.50 at the slightly lower newly surveyed work times. We also note that at the recommended work RVU of 3.86, the intensity of CPT code 95X17 was anomalously high in comparison to the rest of the family, the second-highest intensity as compared to the other professional component codes. We have no reason to believe that the 24 hour EEG monitoring done with video as described in CPT code 95X17 would be notably more intense than the other codes in the same family. At our proposed work RVU of 3.50, the intensity of CPT code 95X17 is no longer anomalously high in comparison to the rest of the family, while still remaining slightly higher than the intensity of the 24 hour EEG monitoring performed without video procedure described by CPT code 95X16.

For the direct PE inputs, we are proposing to make a series of refinements to the clinical labor times of CPT code 95X01. Many of the clinical labor times for this CPT code were derived using a survey process and were recommended to CMS at the survey median values. This was in contrast to the typical process for recommended direct PE inputs, where the inputs are usually based on either standard times or carried over from reference codes. We believe that when surveys are used to recommended direct PE inputs, we must apply a similar process of scrutiny to that used in assessing the work RVUs that are recommended based on a survey methodology. We have long expressed our concerns over the validity of the survey results used to produce work RVU recommendations, such as in the CY 2011 PFS final rule (75 FR 73328), and we have noted that over the past decade the AMA RUC has increasingly chosen to recommend the survey 25th percentile work RVU over the survey median value, potentially responding to the same concerns that we have identified.

As a result, we believe that when assessing the survey of direct PE inputs used to produce many of the recommendations for CPT code 95X01, it would be more accurate to propose the survey 25th percentile direct PE inputs as opposed to the recommended survey median direct PE inputs. Therefore, we are proposing to refine the clinical labor time for the ''Provide education/obtain consent'' (CA011) activity from 13 minutes to 7 minutes and to refine the clinical labor time for the ''Review home care instructions, coordinate visits/prescriptions'' (CA035) activity from 10 minutes to 7 minutes. In both of these cases, the recommended clinical labor times based on the survey median values are more than double the standard time for these activities. Although we agree that additional clinical labor time would be required to carry out these activities for CPT code 95X01, we do not believe that the survey median times would be typical. We are proposing the survey 25th percentile times of 7 minutes for each activity as we believe that this time would be more typical for obtaining consent and reviewing home care instructions.

We are also proposing to refine the clinical labor time for the ''Complete pre-procedure phone calls and prescription'' (CA005) activity from 10 minutes to 3 minutes for CPT code 95X01. This is another situation where we are proposing the survey 25th percentile clinical labor time of 3 minutes instead of the survey median clinical labor time of 10 minutes. However, we also note that many of the tasks that fell under the CA005 activity code as described in the PE recommendations appear to constitute forms of indirect PE, such as collecting supplies for setup and loading equipment and supplies into vehicles. Collecting supplies and loading equipment are administrative tasks that are not individually allocable to a particular patient for a particular service, and therefore, constitute indirect PE under our methodology. Due to the fact that many of the tasks described under the CA005 activity code are forms of indirect PE, we believe that the RUC-recommended survey median clinical labor time of 10 minutes overstates the amount of direct clinical labor taking place. We believe that it is more accurate to propose the survey 25th percentile clinical labor time of 3 minutes for this activity code to reflect the non-administrative tasks performed by the clinical staff.

We are also proposing to refine the quantity of the non-sterile gloves (SB022) supply from 3 to 2 for CPT code 95X01. We note that the current reference code, CPT code 95953, uses 2 of these pairs of gloves and the survey also stated that 2 pairs of gloves were typical for the procedure. Although the recommended materials state that a pair of gloves is needed to set up the equipment, to take down the equipment, and a third is required for electrode changes, we do not agree that the use of a third pair of gloves would be typical given their usage in the reference code and in the responses from the survey.

We note that we are not proposing to refine many of the other clinical labor times for CPT code 95X01, which remain at the survey median clinical labor times. Due to the nature of the continuous recording EEG service taking place, we agree that the survey median clinical labor times of 12 minutes for the ''Prepare room, equipment and supplies'' (CA013) activity, 45 minutes for the ''Prepare, set-up and start IV, initial positioning and monitoring of patient'' (CA016) activity, and 22 minutes for the ''Clean room/equipment by clinical staff'' (CA024) activity would be typical for this procedure. We reiterate that we assess the direct PE inputs for each procedure individually based on our methodology of what would be reasonable and medically necessary for the typical patient.

For CPT codes 95X02–95X13, we are proposing to refine the clinical labor time for the ''Coordinate post-procedure services'' (CA038) activity from either 11 minutes to 5 minutes or from 22 minutes to 10 minutes as appropriate for the CPT code in question. The recommended materials for these procedures state that the tasks taking place constitute ''Merge EEG and Video files (partially automated program), confirm transfer of data, delete from laptop/computer if necessary''. We believe that many of the tasks detailed here are administrative in nature, consisting of forms of data entry, and therefore, would be considered types of indirect PE. We note that when CPT code 95812 (Electroencephalogram (EEG) extended monitoring; 41–60 minutes) was recently reviewed for CY 2017, we finalized the recommended clinical labor time of 2 minutes for ''Transfer data to reading station & archive data'', a task which we believe to be highly similar. Due to the longer duration of the procedures in CPT codes 95X02–95X13, we are proposing clinical labor times of 5 minutes and 10 minutes for the CA038 activity for these CPT codes. We are also refining the equipment time for the Technologist PACS workstation (ED050) to match the clinical labor time proposed for the CA038 activity.

For the four continuous monitoring procedures, CPT codes 95X04, 95X07, 95X10, and 95X13, we are proposing to refine the equipment time for the

ambulatory EEG review station (EQ016) equipment. The recommended equipment time for the ambulatory EEG review station was equal to four times the ''Perform procedure/service'' (CA021) clinical labor time plus a small amount of extra prep time. We do not agree that it would be typical to assign this much equipment time, as it is our understanding that one ambulatory EEG review station can be hooked up to as many as four monitors at a time for continuous monitoring. Therefore, we do not believe that each monitor would require its own review station, and that the equipment time should not be equal to four times the clinical labor of the ''Perform procedure/service'' (CA021) activity. As a result, we are proposing to refine the ambulatory EEG review station equipment time from 510 minutes to 150 minutes for CPT code 95X04, from 1,480 minutes to 400 minutes for CPT code 95X07, from 514 minutes to 154 minutes for CPT code 95X10, and from 1,495 minutes to 415 minutes for CPT code 95X13.

For the 10 professional component procedures, CPT codes 95X14–95X23, we are again proposing to refine the equipment time for the ambulatory EEG review station (EQ016) equipment. We believe that the use of the ambulatory EEG review station is analogous in these procedures to the use of the professional PACS workstation (ED053) in other procedures, and we are proposing to refine the equipment times for these 10 procedures to match our standard equipment time formula for the professional PACS workstation. Therefore, we are proposing an equipment time for the ambulatory EEG review station equal to half the preservice work time (rounded up) plus the intraservice work time for CPT codes 95X14 through 95X23. We believe that this equipment time is more accurate than the recommended equipment time, which was equal to the total work time of the procedures, as the work descriptors for CPT codes 95X14–95X23 make no mention of the ambulatory EEG review station in the postservice work period.

Finally, we are proposing to price the new ''EEG, digital, prolonged testing system with remote video, for patient home use'' (EQ394) equipment at $26,410.95 based on an invoice submission. We did not use a second invoice submitted for the new equipment for pricing, as it contained a disaggregated list of equipment components and it was not clear if they represented the same equipment item as the first invoice.

(64) Health and Behavioral Assessment and Intervention (CPT Codes 961X0, 961X1, 961X2, 961X3, 961X4, 961X5, 961X6, 961X7, and 961X8)

The 2001 Health and Behavior Assessment and Intervention (HBAI) RUC valuations were based on the old CPT code 90801 (*Psychiatric diagnostic interview evaluation*), a 60-minute service. The RUC originally recommended the Health and Behavior Assessment and Intervention procedures to be 15-minute services, approximately equal to one-quarter of the value of CPT code 90801, which we finalized without refinements. While the RUC may have assumed that these services would typically be reported in four, 15-minute services per single patient encounter, in actual claims data, there is wide variation in the number of services provided and submitted. The RUC reconsidered their rationale for the original RUC-recommended valuation of this family of codes in September 2018. The CPT Editorial Panel deleted the six existing Health and Behavior Assessment and Intervention procedure CPT codes and replaced them with nine new CPT codes.

The six deleted CPT codes include CPT code 96150 (*Health and behavior assessment (e.g., health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; initial assessment*), CPT code 96151 (*Health and behavior assessment (e.g., health-focused clinical interview, behavioral observations, psychophysiological monitoring, health-oriented questionnaires), each 15 minutes face-to-face with the patient; re-assessment*), CPT code 96152 (*Health and behavior intervention, each 15 minutes, face-to-face; individual*), CPT code 96153 (*Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)*), CPT code 96154 (*Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)*), and CPT code 96155 (*Health and behavior intervention, each 15 minutes, face-to-face; family (without the patient present)*).

The nine replacement HBAI CPT codes include CPT code 961X0 (*Health behavior assessment, including re-assessment (i.e., health-focused clinical interview, behavioral observations, clinical decision making)*), CPT code 961X1 (*Health behavior intervention, individual, face-to-face; initial 30 minutes*), CPT code 961X2 (*Health behavior intervention, individual, face-to-face; each additional 15 minutes (list separately in addition to code for primary service)*), CPT code 961X3 (*Health behavior intervention, group (2 or more patients), face-to-face; initial 30 minutes*), CPT code 961X4 (*Health behavior intervention, group (2 or more patients), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)*), CPT code 961X5 (*Health behavior intervention, family (with the patient present), face-to-face; initial 30 minutes*), CPT code 961X6 (*Health behavior intervention, family (with the patient present), face-to-face each additional 15 minutes (list separately in addition to code for primary service)*), CPT code 961X7 (*Health behavior intervention, family (without the patient present), face-to-face; initial 30 minutes*), CPT code 961X8 (*Health behavior intervention, family (without the patient present), face-to-face; each additional 15 minutes (list separately in addition to code for primary service)*).

We are proposing the RUC-recommended work RVUs for each of the codes in this family as follows.

- For CPT code 961X0, we are proposing a work RVU of 2.10.
- For CPT code 961X1, we are proposing a work RVU of 1.45.
- For CPT code 961X2, we are proposing a work RVU of 0.50.
- For CPT code 961X3, we are proposing a work RVU of 0.21.
- For CPT code 961X4, we are proposing a work RVU of 0.10.
- For CPT code 961X5, we are proposing a work RVU of 1.55.
- For CPT code 961X6, we are proposing a work RVU of 0.55.
- For CPT code 961X7, we are proposing a work RVU of 1.50 (but this code will be non-covered by Medicare).
- For CPT code 961X8, we are proposing a work RVU of 0.54 (but this code will be non-covered by Medicare).

We are proposing the RUC-recommended direct PE inputs for all of the CPT codes in this family without refinement.

(66) Cognitive Function Intervention (CPT Codes 971XX and 9XXX0)

In 2017, we received HCPAC recommendations for new CPT code 97127 (*Development of cognitive skills to improve attention, memory, problem solving, direct patient contact, 1*) that described the services under CPT code 97532 (*Development of cognitive skills to improve attention, memory, problem solving, direct patient contact, each 15 minutes*). CPT code 97532 was scheduled to be deleted and replaced by the new untimed code CPT code 97127. In the CY 2018 PFS final rule (82 FR 53074 through 53076); however, we

suggested that CPT code 97127 as an untimed/per day code did not appropriately account for the variable amounts of time spent with a patient depending upon the discipline and/or setting and assigned the code a procedure status of ''I'' (Invalid). In place of CPT code 97127, we established a new HCPCS G-code, G0515 (*Development of cognitive skills to improve attention, memory, problem solving, direct patient contact, each 15 minutes*), with a work RVU of 0.44. HCPCS code G0515 maintained the descriptor and values from the former CPT code 97532.

In September 2018, the CPT Editorial Panel revised CPT code 971XX (*Therapeutic interventions that focus on cognitive function (e.g., attention, memory, reasoning, executive function, problem solving and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (e.g., managing time or schedules, initiating, organizing and sequencing tasks), direct (one-to-one) patient contact; initial 15 minutes*) and created an add-on code, CPT code 9XXX0 (*Therapeutic interventions that focus on cognitive function (e.g., attention, memory, reasoning, executive function, problem solving and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (e.g., managing time or schedules, initiating, organizing and sequencing tasks), direct (one-to-one) patient contact; each additional 15 minutes (list separately in addition to code for primary procedure)*).

We are proposing the RUC-recommended work RVUs of 0.50 for CPT code 971XX and 0.48 for CPT code 9XXX0. We are proposing the RUC-recommended direct PE inputs for all codes in the family. We are also proposing to designate CPT codes 971XX and 9XXX0 as sometime therapy codes because the services might be appropriately furnished by therapists under the outpatient therapy services benefit (includes physical therapy, occupational therapy, or speech-language pathology) or outside the therapy benefit by physicians, NPPs, and psychologists.

(67) Open Wound Debridement (CPT Codes 97597 and 97598)

CPT code 97598 (*Debridement (e.g., high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (e.g., fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 sq cm, or part thereof*) was identified by the RUC on a list of services that were originally surveyed by one specialty but are now typically performed by a different specialty. It was reviewed along CPT code 97597 (*Debridement (e.g., high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (e.g., fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 sq cm or less*) at the October 2018 RUC meeting.

We disagree with the RUC-recommended work RVU of 0.88 for CPT code 97597 and we are proposing a work RVU of 0.77 based on a crosswalk to CPT code 27369 (*Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography*). CPT code 27369 is a recently-reviewed code with the same intraservice time of 15 minutes and a total time of 28 minutes, one minute fewer than CPT code 97597. In reviewing this code, we noted that the recommended intraservice time is increasing from 14 minutes to 15 minutes (7 percent), and the recommended total time is increasing from 24 minutes to 29 minutes (21 percent); however, the RUC-recommended work RVU is increasing from 0.51 to 0.88, which is an increase of 73 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, modest increases in time should be appropriately reflected with a commensurate increase the work RVUs. In the case of CPT code 97597, we believed that it is more accurate to propose a work RVU of 0.77 based on a crosswalk to CPT code 27369 to account for these modest increases in the surveyed work time. We also note that even at the proposed work RVU of 0.77 the intensity of this procedure as measured by IWPUT is increasing by more than 50 percent over the current value.

We are proposing the RUC-recommended work RVU of 0.50 for CPT code 97598. We are also proposing the RUC-recommended direct PE inputs for all codes in the family.

(68) Negative Pressure Wound Therapy (CPT Codes 97607 and 97608)

In the CY 2013 final rule with comment period, we created two HCPCS codes to provide a payment mechanism for negative pressure wound therapy services furnished to beneficiaries using equipment that is not paid for as durable medical equipment: G0456 (*Negative pressure wound therapy, (for example, vacuum assisted drainage collection) using a mechanically powered device, not durable medical equipment, including provision of cartridge and dressing(s), topical application(s), wound assessment, and instructions for ongoing care, per session; total wound(s) surface area less than or equal to 50 square centimeters*) and G0457 (*Negative pressure wound therapy, (for example, vacuum assisted drainage collection) using a mechanically-powered device, not durable medical equipment, including provision of cartridge and dressing(s), topical application(s), wound assessment, and instructions for ongoing care, per session; total wound(s) surface area greater than 50 sq. cm*). For CY 2015, the CPT Editorial Panel created CPT codes 97607 (Negative *pressure wound therapy, (e.g., vacuum assisted drainage collection), utilizing disposable, non-durable medical equipment including provision of exudate*) and 97608 (Negative pressure wound therapy, (*e.g., vacuum assisted drainage collection), utilizing disposable, non-durable medical equipment including provision of exudate*) to describe negative pressure wound therapy with the use of a disposable system. In addition, CPT codes 97605 (*Negative pressure wound therapy (e.g., vacuum assisted drainage collection), utilizing durable medical equipment (DME), including topical application(s), wound assessment, and instruction(s) for ongoing care, per session; total wound(s) surface area less than or equal to 50 square centimeters*) and 97606 (*Negative pressure wound therapy (e.g., vacuum assisted drainage collection), utilizing durable medical equipment (DME), including topical application(s), wound assessment, and instruction(s) for ongoing care, per session; total wound(s) surface area greater than 50 square centimeters*) were revised to specify the use of durable medical equipment. Based upon the revised coding scheme for negative pressure wound therapy, we deleted the G-codes. Due to concerns that we had with these services, we contractor priced CPT codes 97607 and 97608 beginning in CY 2015 (79 FR 67670). In the CY 2016 Final Rule (80 FR 71005),

in response to comment expressing disappointment with CMS' decision to contractor price these codes, we noted that there were obstacles to developing accurate payment rates for these services within the PE RVU methodology, including the indirect PE allocation for the typical practitioners who furnish these services and the diversity of the products used in furnishing these services.

We have received repeated requests from stakeholders, including in comment received in response to the CY 2019 PFS final rule, to assign an active status to these codes, meaning we would assign rates to the codes rather than allowing them to be contractor priced. In that rule, (83 FR 59473), we noted that we received a request that CMS should assign direct cost inputs and PE RVUs to CPT codes 97607 and 97608, and we indicated that we would take this feedback from commenters under consideration for future rulemaking.

In response to stakeholder feedback, we evaluated the codes and determined there was adequate volume to assign an active status. We are proposing to assign an active status to CPT codes 97607 and 97608 and we are proposing the work RVUs as recommended by the RUC that we received for CY 2015 when the CPT Editorial Panel created these codes. Thus, we are proposing a work RVU of 0.41 for CPT code 97607 and a work RVU of 0.46 for CPT code 97608. Similarly, we are proposing the RUC-recommended direct PE inputs originally for CY 2015 with the following refinement: For the clinical labor activity ''check dressings & wound/home care instructions/coordinate office visits/prescriptions,'' we are refining the clinical labor time to the standard 2 minutes for this task. In addition, the direct inputs for these codes include the new supply item, ''kit, negative pressure wound therapy, disposable.'' A search of publicly available commercial pricing data indicates that a unit price of approximately $100 is appropriate, and therefore, we are proposing this price for this supply item. If more accurate invoices are available, we are soliciting such invoices to more accurately price it.

(69) Ultrasonic Wound Assessment (CPT Code 97610)

In 2005, the AMA RUC began the process of flagging services that represent new technology or new services as they were presented to the Committee. CPT code 97610 (*Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day*) was flagged for CPT 2015 and reviewed at the October 2018 RAW meeting. The Workgroup indicated that the utilization is continuing to increase for this service, and recommended that it be resurveyed for physician work and practice expense for the January 2019 RUC meeting.

We are proposing the RUC-recommend work 0.40 for CPT code 97610. We are also proposing the RUC-recommended direct PE inputs for CPT code 97610.

(70) Online Digital Evaluation Service (e-Visit) (CPT Codes 98X00, 98X01, and 98X02)

In September 2018, the CPT Editorial Panel deleted two codes and replaced them with six new non-face-to-face codes to describe patient-initiated digital communications that require a clinical decision that otherwise typically would have been provided in the office. The HCPAC reviewed and made recommendations for CPT code 98X00 (*Qualified nonphysician healthcare professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 5–10 minutes*), CPT code 98X01 (*Qualified nonphysician healthcare professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 11–20 minutes*), and CPT code 98X02 (*Qualified nonphysician qualified healthcare professional online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the 7 days; 21 or more minutes*). CPT codes 9X0X1–9X0X3 are for practitioners who can independently bill E/M services while CPT codes 98X00–98X02 are for practitioners who cannot independently bill E/M services.

The statutory requirements that govern the Medicare benefit are specific regarding which practitioners may bill for E/M services. As such, when codes are established that describe E/M services that fall outside the Medicare benefit category of the practitioners who may bill for that service, we have typically created parallel HCPCS G-codes with descriptors that refer to the performance of an ''assessment'' rather than an ''evaluation''. We acknowledge that there are qualified non-physician health care professionals who will likely perform these services. Therefore, for CY 2020, we are proposing separate payment for online digital assessments via three HCPCS G-codes that mirror the RUC recommendations for CPT codes 98X00–98X02. The proposed HCPCS G codes and descriptors are as follows:

- HCPCS code GNPP1 (*Qualified nonphysician healthcare professional online assessment, for an established patient, for up to seven days, cumulative time during the 7 days; 5–10 minutes*);
- HCPCS code GNPP2 (*Qualified nonphysician healthcare professional online assessment service, for an established patient, for up to seven days, cumulative time during the 7 days; 11–20 minutes*); and
- HCPCS code GNPP3 (*Qualified nonphysician qualified healthcare professional assessment service, for an established patient, for up to seven days, cumulative time during the 7 days; 21 or more minutes*).

For CY 2020, we are proposing a work RVU of 0.25 for CPT code GNPP1, which reflects the RUC-recommended work RVU for CPT code 98X00. For HCPCS codes GNPP2 and GNPP3, we believe that the 25th percentile work RVU associated with CPT codes 98X01 and 98X02 respectively, better reflects the intensity of performing these services, as well as the methodology used to value the other codes in the family, all of which use the 25th percentile work RVU. Therefore, we are proposing a work RVU of 0.44 for HCPCS code GNPP1 and a work RVU of 0.69 for HCPCS code GNPP2.

We are proposing the direct PE inputs associated with CPT codes 98X00, 98X01, and 98X02 for GNPP1, GNPP2, and GNPP3 respectively.

(71) Emergency Department Visits (CPT Codes 99281, 99282, 99283, 99284, and 99285)

In the CY 2018 PFS final rule, we finalized a proposal to nominate CPT codes 99281–99285 as potentially misvalued based on information suggesting that the work RVUs for emergency department visits may not appropriately reflect the full resources involved in furnishing these services (FR 82 53018.) These five codes were surveyed and reviewed for the April 2018 RUC meeting. For CY 2020 we are proposing the RUC-recommended work RVUs of 0.48 for CPT code 99281, a work RVU of 0.93 for CPT code 99282, a work RVU of 1.42 for 99283, a work RVU of 2.60 for 99284, and a work RVU of 3.80 for CPT code 99285.

The RUC did not recommend and we are not proposing any direct PE inputs for the codes in this family.

(72) Self-Measured Blood Pressure Monitoring (CPT Codes 99X01, 99X02, 93784, 93786, 93788, and 93790)

In September 2018, the CPT Editorial Panel created two new codes and revised four other codes to describe self-measured blood pressure monitoring services and to differentiate self-measured blood pressuring monitoring services from ambulatory blood pressure monitoring services. The first of the two new codes that describe self-measured blood pressure monitoring is CPT code 99X01 (*Self-measured blood pressure using a device validated for clinical accuracy; patient education/training and device calibration*) and is a PE only code. The second code is 99X02 (*Self-measured blood pressure using a device validated for clinical accuracy; separate self-measurements of two readings, one minute apart, twice daily over a 30-day period* (*minimum of 12 readings*), *collection of data reported by the patient and/or caregiver to the physician or other qualified health care professional, with report of average systolic and diastolic pressures and subsequent communication of a treatment plan to the patient*).

The remaining four codes, which monitor ambulatory blood pressure, include CPT code 93784 (*Ambulatory blood pressure monitoring, utilizing report-generating software, automated, worn continuously for 24 hours or longer; including recording, scanning analysis, interpretation and report*), CPT code 93786 (*Ambulatory blood pressure monitoring, recording only*), CPT code 93788 (*Ambulatory blood pressure monitoring, scanning analysis with report*), and CPT code 93790 (*Ambulatory blood pressure monitoring, review with interpretation and report*). CPT code 93784 is a composite code that is the sum of CPT codes 93786, 93788, and 93790. CPT codes 93786 and 93788 are PE only codes.

We are proposing the RUC-recommended work RVU of 0.18 for CPT code 99X02, the RUC-recommended work RVU of 0.38 for CPT code 93784, and the RUC-recommended work RVU of 0.38 for CPT code 93790. We are proposing the RUC-recommended work RVU of 0.00 for CPT codes 93786, 93788, and 99X01. We are also proposing the RUC-recommended direct PE inputs for all codes in the family.

(73) Online Digital Evaluation Service (e-Visit) (CPT Codes 9X0X1, 9X0X2, and 9X0X3)

In September 2018, the CPT Editorial Panel deleted two codes and replaced them with six new non-face-to face codes to describe patient-initiated digital communications that require a clinical decision that otherwise typically would have been provided in the office. The RUC reviewed and made recommendations for CPT code 9X0X1 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 5–10 minutes*), CPT code 9X0X2 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 11–20 minutes*), and CPT code 9X0X3 (*Online digital evaluation and management service, for an established patient, for up to 7 days, cumulative time during the 7 days; 21 or more minutes*).

For CY 2020, we are proposing the RUC-recommended work RVUs of 0.25 for CPT code 9X0X1, 0.50 for CPT code 9X0X2, and 0.80 for CPT code 9X0X3. We are proposing the RUC-recommended direct PE inputs for all codes in the family.

(74) Radiation Therapy Codes (HCPCS Codes G6001, G6002, G6003, G6004, G6005, G6006, G6007, G6008, G6009, G6010, G6011, G6012, G6013, G6014, G6015, G6016 and G6017)

For CY 2015, CPT revised the radiation therapy code set for following identification of some of the codes as potentially misvalued and the affected specialty society's contention that the provision of radiation therapy could not be accurately reported under the existing code set. In the CY 2015 PFS final rule, we finalized that we were delaying implementation of this revised code set, citing concerns with our potentially having finalized a substantial coding revision on an interim final basis. In addition, we stated that substantial work needed to be done to assure the new valuations for these codes accurately reflect the coding changes. We finalized that we would maintain inputs at CY 2014 levels by creating G-codes as necessary to allow practitioners to continue to report services to CMS in CY 2015 as they did in CY 2014 and for payments to be made in the same way. Following the publication of the CY 2015 PFS final rule, the Patient Access and Medicare Protection Act (Pub. L. 114–115, December 28, 2015) was enacted, which included the provision that the code definitions, the work relative value units and the direct inputs for the PE RVUs for radiation treatment delivery and related imaging services (identified in 2016 by HCPCS G-codes G6001 through G6015) for the fee schedule established under this subsection for services furnished in 2017 and 2018 shall be the same as such definitions, units, and inputs for such services for the fee schedule established for services furnished in 2016. In CY 2018, Congress extended this ''freeze'' in coding descriptions and inputs through CY 2019 as a provision of the Bipartisan Budget Act of 2018. For CY 2020, in the interest of payment stability, we are proposing to continue using these G-codes, as well as their current work RVUs and direct PE inputs. We are also proposing that, for CY 2020, our PE methodology will continue to include a utilization rate assumption of 60 percent for the equipment item: ER089, ''IMRT Accelerator.''

BILLING CODE 4120–01–P

TABLE 20: Proposed CY 2020 Work RVUs for New, Revised, and Potentially Misvalued Codes

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refine-ment
11981	Insertion, non-biodegradable drug delivery implant	1.48	1.30	1.14	No
11982	Removal, non-biodegradable drug delivery implant	1.78	1.70	1.34	No
11983	Removal with reinsertion, non-biodegradable drug delivery implant	3.30	2.10	1.91	No
15X00	Grafting of autologous soft tissue, other, harvested by direct excision (eg, fat, dermis, fascia)	NEW	6.68	6.68	No
15X01	Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50 cc or less injectate	NEW	6.73	6.73	No
15X02	Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50 cc injectate, or part thereof (List separately in addition to code for primary procedure)	NEW	2.50	2.50	No
15X03	Grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; 25 cc or less injectate	NEW	6.83	6.83	No
15X04	Grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; each additional 25 cc injectate, or part thereof (List separately in addition to code for primary procedure)	NEW	2.41	2.41	No
20220	Biopsy, bone, trocar, or needle; superficial (eg, ilium, sternum, spinous process, ribs)	1.27	1.93	1.65	No
20225	Biopsy, bone, trocar, or needle; deep (eg, vertebral body, femur)	1.87	3.00	2.45	No
205X1	Needle insertion(s) without injection(s); 1 or 2 muscle(s)	NEW	0.45	0.32	No
205X2	Needle insertion(s) without injection(s); 3 or more muscles	NEW	0.60	0.48	No
206X0	Manual preparation and insertion of drug-delivery device(s), deep (eg, subfascial) (List separately in addition to code for primary procedure)	NEW	1.50	1.32	No
206X1	Manual preparation and insertion of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)	NEW	2.50	1.70	No
206X2	Manual preparation and insertion of drug-delivery device(s), intra-articular (List separately in addition to code for primary procedure)	NEW	2.60	1.80	No
206X3	Removal of drug-delivery device(s), deep (eg, subfascial) (List separately in addition to code for primary procedure)	NEW	1.13	1.13	No
206X4	Removal of drug-delivery device(s), intramedullary (List separately in addition to code for primary procedure)	NEW	1.80	1.80	No
206X5	Removal of drug-delivery device(s), intra-articular (List separately in addition to code for primary procedure)	NEW	2.15	2.15	No
22310	Closed treatment of vertebral body fracture(s), without manipulation, requiring and including casting or bracing	3.89	3.75	3.45	No
26020	Drainage of tendon sheath, digit and/or palm, each	5.08	7.79	6.84	No
26055	Tendon sheath incision (eg, for trigger finger)	3.11	3.75	3.11	No
26160	Excision of lesion of tendon sheath or joint capsule (eg, cyst, mucous cyst, or ganglion), hand or finger	3.57	3.57	3.57	No
27220	Closed treatment of acetabulum (hip socket) fracture(s); without manipulation	6.83	6.00	5.50	No
27279	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device	9.03	9.03	9.03	No
2XXX0	Excision of chest wall tumor including rib(s)	NEW		17.78	No
2XXX1	Excision of chest wall tumor involving rib(s), with plastic reconstruction; without mediastinal lymphadenectomy	NEW		22.19	No

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refine-ment
2XXX2	Excision of chest wall tumor involving rib(s), with plastic reconstruction; with mediastinal lymphadenectomy	NEW		25.17	No
33020	Pericardiotomy for removal of clot or foreign body (primary procedure)	14.95	14.31	12.95	No
33025	Creation of pericardial window or partial resection for drainage	13.70	13.20	11.84	No
33361	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; percutaneous femoral artery approach	25.13	22.47	22.47	No
33362	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open femoral artery approach	27.52	24.54	24.54	No
33363	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open axillary artery approach	28.50	25.47	25.47	No
33364	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open iliac artery approach	30.00	25.97	25.97	No
33365	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transaortic approach (eg, median sternotomy, mediastinotomy)	33.12	26.59	26.59	No
33366	Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transapical exposure (eg, left thoracotomy)	35.88	29.35	29.35	No
33863	Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (eg, Bentall)	58.79	59.00	58.79	No
33864	Ascending aorta graft, with cardiopulmonary bypass with valve suspension, with coronary reconstruction and valve-sparing aortic root remodeling (eg, David Procedure, Yacoub Procedure)	60.08	63.00	60.08	No
33866	Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion (List separately in addition to code for primary procedure)	19.74	17.75	17.75	No
338X1	Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic disease other than dissection (eg, aneurysm)	NEW	50.00	45.13	No
338X2	Transverse aortic arch graft, with cardiopulmonary bypass, with profound hypothermia, total circulatory arrest and isolated cerebral perfusion with reimplantation of arch vessel(s) (eg, island pedicle or individual arch vessel reimplantation)	NEW	65.75	60.88	No
338XX	Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic dissection	NEW	65.00	63.40	No
34X00	Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral (List separately in addition to code for primary procedure)	NEW	9.00	9.00	No
34X01	Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s)	NEW	24.00	24.00	No

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refine-ment
	proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (eg, for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral				
35701	Exploration not followed by surgical repair, artery; neck (eg, carotid, subclavian)	9.19	7.50	7.50	No
35X00	Exploration not followed by surgical repair, artery; upper extremity (eg, axillary, brachial, radial, ulnar)	NEW	7.12	7.12	No
35X01	Exploration not followed by surgical repair, artery; lower extremity (eg, common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal)	NEW	7.50	7.50	No
37252	Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel (List separately in addition to code for primary procedure)	1.80	1.80	1.55	No
37253	Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (List separately in addition to code for primary procedure)	1.44	1.44	1.19	No
37765	Stab phlebectomy of varicose veins, 1 extremity; 10-20 stab incisions	7.71	4.80	4.80	No
37766	Stab phlebectomy of varicose veins, 1 extremity; more than 20 incisions	9.66	6.00	6.00	No
3X000	Pericardiocentesis, including imaging guidance, when performed	NEW	5.00	4.40	No
3X001	Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; 6 years and older without congenital cardiac anomaly	NEW	5.50	4.62	No
3X002	Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; birth through 5 years of age or any age with congenital cardiac anomaly	NEW	6.00	5.00	No
3X003	Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance	NEW	5.00	4.29	No
40808	Biopsy, vestibule of mouth	1.01	1.05	1.01	No
46945	Hemorrhoidectomy, internal, by ligation other than rubber band; single hemorrhoid column/group, without imaging guidance	2.21	3.69	3.69	No
46946	Hemorrhoidectomy, internal, by ligation other than rubber band; 2 or more hemorrhoid columns/groups, without imaging guidance	2.63	4.50	4.50	No
46X48	Hemorrhoidectomy, internal, by transanal hemorrhoidal dearterialization, 2 or more hemorrhoid columns/groups, including ultrasound guidance, with mucopexy, when performed	NEW	5.57	5.57	No
490X1	Preperitoneal pelvic packing for hemorrhage associated with pelvic trauma, including local exploration	NEW	8.35	7.55	Yes
490X2	Re-exploration of pelvic wound with removal of preperitoneal pelvic packing, including repacking, when performed	NEW	6.73	5.70	No
52441	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; single implant	4.50	4.50	4.00	No
52442	Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant (List separately in addition to code for primary procedure)	1.20	1.20	1.01	No
54640	Orchiopexy, inguinal or scrotal approach	7.73	7.73	7.73	No
62270	Spinal puncture, lumbar, diagnostic;	1.37	1.44	1.22	No
62272	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle	1.35	1.80	1.58	No

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refine-ment
	or catheter);				
622X0	Spinal puncture, lumbar, diagnostic; with fluoroscopic or CT guidance	NEW	1.95	1.73	No
622X1	Spinal puncture, therapeutic, for drainage of cerebrospinal fluid (by needle or catheter); with fluoroscopic or CT guidance	NEW	2.25	2.03	No
62367	Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); without reprogramming or refill	0.48	0.48	0.48	No
62368	Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming	0.67	0.67	0.67	No
62369	Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming and refill	0.67	0.67	0.67	No
62370	Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming and refill (requiring skill of a physician or other qualified health care professional)	0.90	0.90	0.90	No
64400	Injection(s), anesthetic agent(s) and/or steroid; trigeminal nerve, each branch (ie, ophthalmic, maxillary, mandibular)	1.11	1.00	0.75	No
64408	Injection(s), anesthetic agent(s) and/or steroid; vagus nerve	1.41	0.90	0.75	No
64415	Injection(s), anesthetic agent(s) and/or steroid; brachial plexus	1.48	1.42	1.35	No
64416	Injection(s), anesthetic agent(s) and/or steroid; brachial plexus, continuous infusion by catheter (including catheter placement)	1.81	1.81	1.48	No
64417	Injection(s), anesthetic agent(s) and/or steroid; axillary nerve	1.44	1.27	1.27	No
64420	Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, single level	1.18	1.18	1.08	No
64421	Injection(s), anesthetic agent(s) and/or steroid; intercostal nerve, each additional level (List separately in addition to code for primary procedure)	1.68	0.60	0.50	No
64425	Injection(s), anesthetic agent(s) and/or steroid; ilioinguinal, iliohypogastric nerves	1.75	1.19	1.00	No
64430	Injection(s), anesthetic agent(s) and/or steroid; pudendal nerve	1.46	1.15	1.00	No
64435	Injection(s), anesthetic agent(s) and/or steroid; paracervical (uterine) nerve	1.45	0.75	0.75	No
64445	Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve	1.48	1.18	1.00	No
64446	Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement)	1.81	1.54	1.36	No
64447	Injection(s), anesthetic agent(s) and/or steroid; femoral nerve	1.50	1.10	1.10	No
64448	Injection(s), anesthetic agent(s) and/or steroid; femoral nerve, continuous infusion by catheter (including catheter placement)	1.63	1.55	1.41	No
64449	Injection(s), anesthetic agent(s) and/or steroid; lumbar plexus, posterior approach, continuous infusion by catheter (including catheter placement)	1.81	1.55	1.27	No
64450	Injection(s), anesthetic agent(s) and/or steroid; other peripheral nerve or branch	0.75	0.75	0.75	No
64640	#N/A	1.23	1.98	1.98	No
64XX0	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches, including imaging guidance, when performed	NEW	1.52	1.52	No
64XX1	Destruction by neurolytic agent, genicular nerve branches, including imaging guidance, when performed	NEW	2.62	2.50	No
66711	Ciliary body destruction; cyclophotocoagulation, endoscopic, without concomitant removal of crystalline lens	7.93	6.36	5.62	No
66982	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and	11.08	10.25	10.25	No

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refine-ment
	aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation				
66983	Intracapsular cataract extraction with insertion of intraocular lens prosthesis (1 stage procedure)	10.43	C	C	No
66984	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation	8.52	7.35	7.35	No
66X01	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with endoscopic cyclophotocoagulation	NEW	13.15	C	Yes
66X02	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); with endoscopic cyclophotocoagulation	NEW	10.25	C	Yes
6XX00	Injection(s), anesthetic agent(s) and/or steroid; nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)	NEW	1.52	1.52	No
6XX01	Radiofrequency ablation, nerves innervating the sacroiliac joint, with image guidance (ie, fluoroscopy or computed tomography)	NEW	3.39	3.39	No
70210	Radiologic examination, sinuses, paranasal, less than 3 views	0.17	0.20	0.17	No
70220	Radiologic examination, sinuses, paranasal, complete, minimum of 3 views	0.25	0.22	0.22	No
70250	Radiologic examination, skull; less than 4 views	0.24	0.20	0.18	No
70260	Radiologic examination, skull; complete, minimum of 4 views	0.34	0.29	0.28	No
70360	Radiologic examination; neck, soft tissue	0.17	0.20	0.18	No
70480	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material	1.28	1.28	1.13	No
70481	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; with contrast material(s)	1.38	1.13	1.06	No
70482	Computed tomography, orbit, sella, or posterior fossa or outer, middle, or inner ear; without contrast material, followed by contrast material(s) and further sections	1.45	1.27	1.27	No
72020	Radiologic examination, spine, single view, specify level	0.15	0.16	0.16	No
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	0.22	0.22	No
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.31	0.27	0.27	No
72052	Radiologic examination, spine, cervical; 6 or more views	0.36	0.30	0.30	No
72070	Radiologic examination, spine; thoracic, 2 views	0.22	0.20	0.20	No
72072	Radiologic examination, spine; thoracic, 3 views	0.22	0.23	0.23	No
72074	Radiologic examination, spine; thoracic, minimum of 4 views	0.22	0.25	0.25	No
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views	0.22	0.21	0.21	No
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	0.22	0.22	No

BILLING CODE 4120–01–C

O. Comment Solicitation on Opportunities for Bundled Payments Under the PFS

Under the PFS, Medicare typically makes a separate payment for each individual service furnished to a beneficiary consistent with section 1848 of the Act, which requires CMS to establish payment for physicians' services based on the relative resources involved in furnishing the service. The statute defines ''services'' broadly, with reference to the uniform procedure coding system established by CMS for the purpose of Medicare FFS payments, called the Healthcare Common Procedure Coding System (HCPCS). There are sets of HCPCS codes that represent health care procedures, supplies, medical equipment, products, and services. The majority of physicians' services for which payment is made under the PFS are described using HCPCS Level I codes and descriptors that are the AMA's Current Procedural Terminology (CPT) code set. CPT codes generally describe an individual item or service, while some codes describe a combination of services (a procedure and imaging guidance, for example) bundled together. Some HCPCS codes explicitly encompass multiple services (global surgery codes, for example), and the PFS payment for some services is reduced when a combination of services is furnished to the same patient on the same day (through multiple procedure payment reduction policies). However, payment for most services under the PFS is made based on rates established for individual services, each described by a CPT code. Identifying and developing appropriate payment policies that aim to achieve better care and improved health for Medicare beneficiaries is a priority for CMS. Consistent with that goal, we are interested in exploring new options for establishing PFS payment rates or adjustments for services that are furnished together. For purposes of this discussion, we will refer to the circumstances where a set of services is grouped together for purposes of ratesetting and payment as ''bundled payment.''

One of the mechanisms through which we support innovative payment and service delivery models, for Medicare and other beneficiaries, is through CMS' Center for Medicare and Medicaid Innovation (the Innovation Center). The Innovation Center is currently testing models in which payment for physicians' services is bundled on a per-beneficiary population basis, or is based on episodes of care that usually begin with a triggering event and extend for a specified period of time thereafter. An example of a model in which payment is made on a per-beneficiary population basis is Comprehensive Primary Care Plus (CPC+), in which participating practices receive prospective per-beneficiary care management fees and Comprehensive Primary Care Payments for certain primary care services such as chronic care management and evaluation and management services. An example of an episode payment model is the Oncology Care Model (OCM), in which participating physician practices receive a per-beneficiary Monthly Enhanced Oncology Services payment for care management and care coordination surrounding chemotherapy administration to cancer patients. We are actively exploring the extent to which these basic principles of bundled payment, such as establishing per-beneficiary payments for multiple services or condition-specific episodes of care, can be applied within the statutory framework of the PFS.

We are seeking public comments on opportunities to expand the concept of bundling to recognize efficiencies among physicians' services paid under the PFS and better align Medicare payment policies with CMS's broader goal of achieving better care for patients, better health for our communities, and lower costs through improvement in our health care system. We believe that the statute, while requiring CMS to pay for physicians' services based on the relative resources involved in furnishing the service, allows considerable flexibility for developing payments under the PFS.

P. Payment for Evaluation and Management (E/M) Visits

1. Background

a. E/M Visits Coding Structure

Physicians and other practitioners who are paid under the PFS bill for common office visits for evaluation and management (E/M) services under a relatively generic set of CPT codes (Level I HCPCS codes) that distinguish visits based on the level of complexity, site of service, and whether the patient is new or established. These CPT codes are broadly referred to as E/M visit codes and have three key components within their code descriptors: History of present illness (History), physical examination (Exam), and medical decision-making (MDM).[80]

The CPT code descriptors recognize counseling, care coordination, and the nature of the presenting problem as additional service components, but these are contributory factors in determining which code to report.[81] Per the CPT code descriptors, counseling and/or care coordination are provided consistent with the nature of the problem and the patient's and/or family's needs. Counseling and care coordination are not required at every patient encounter and can be accounted for in separate coding.[82]

As finalized in the CY 2019 PFS final rule, the amount of time spent by the billing practitioner is not a determining factor in code level selection unless (1) counseling and care coordination dominate the visit, in which case time becomes the key factor in determining visit level; and/or (2) the service is a prolonged (or beginning in 2021, ''extended'') (83 FR 59630) E/M visit. Typical times for each level of E/M visit are included in each of the CPT code descriptors, are used for PFS rate setting purposes, and provide a reference point for the reporting of prolonged visits. Separate add-on codes describe, and can be reported for, visits that take prolonged (or beginning in 2021, ''extended'') (83 FR 59630) amounts of time.

There are 3 to 5 E/M visit code levels, depending upon site of service and the extent of the three components of history, exam, and MDM. For example, there are 3 to 4 levels of E/M visit codes in the inpatient hospital and nursing facility settings based on a relatively narrow range of complexity in those settings. In contrast, there are 5 levels of E/M visit codes in the office or other outpatient setting based on a broader range of complexity in those settings.

PFS payment rates for E/M visit codes generally increase with the level of visit billed, although in the CY 2019 PFS final rule (83 FR 59638), for reasons discussed below, we finalized the assignment of a single payment rate for levels 2 through 4 office/outpatient E/M visits beginning in CY 2021. As for all services under the PFS, the payment rates for E/M visits are based on the work (time and intensity), practice expense, and malpractice expense resources required to furnish the typical case of the service.

In total, E/M visits comprise approximately 40 percent of allowed charges for PFS services, and office/outpatient E/M visits comprise

[80] 2019 CPT Codebook, Evaluation and Management, pp. 6–13.

[81] 2019 CPT Codebook, Evaluation and Management, pp. 6–13.

[82] 2019 CPT Codebook, Evaluation and Management, pp. 4–56.

approximately 20 percent of allowed charges for PFS services. Within the E/M services represented in these percentages, there is wide variation in the volume and level of E/M visits billed by different specialties. According to Medicare claims data, E/M visits are furnished by nearly all specialties, but represent a greater share of total allowed services for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests. Generally, these practitioners include both primary care practitioners and certain specialists such as neurologists, endocrinologists and rheumatologists. Certain specialties, such as podiatry, tend to furnish lower level E/M visits more often than higher level E/M visits. Some specialties, such as dermatology and otolaryngology, tend to bill more E/M visits on the same day as they bill minor procedures.

b. E/M Documentation Guidelines

For CY 2019 and 2020, when coding and billing E/M visits to Medicare, practitioners may use one of two versions of the E/M Documentation Guidelines for a patient encounter, commonly referenced based on the year of their release: the ''1995'' or ''1997'' E/M Documentation Guidelines (hereafter, the 1995 and 1997 Guidelines).[83] These Guidelines specify the medical record information within each of the three key components (such as number of body systems reviewed) that serves as support for billing a given level of E/M visit. The 1995 and 1997 Guidelines are very similar to the guidelines for E/M visits that currently reside within the AMA's CPT codebook for E/M visits. For example, the core structure of what comprises or defines the different levels of history, exam, and medical decision-making in the 1995 and 1997 Guidelines are the same as those in the CPT codebook. However, the 1995 and 1997 Guidelines include extensive examples of clinical work that comprise different levels of medical decision-making that do not appear in the AMA's CPT codebook. Also, the 1995 and 1997 Guidelines do not contain references to preventive care that appear in the AMA's CPT codebook. We provide an example of how the 1995 and 1997 Guidelines distinguish between level 2 and level 3 E/M visits in Table 25.

TABLE 25—KEY COMPONENT DOCUMENTATION REQUIREMENTS FOR LEVEL 2 VS. 3 E/M VISIT

Key component *	Level 2 (1995)	Level 3 (1995)	Level 2 (1997)	Level 3 (1997)
History (History of Present Illness or HPI).	Review of Systems (ROS) n/a.	Problem Pertinent ROS: Inquires about the system directly related to the problem(s) identified in the HPI.	No change from 1995	No change from 1995.
Physical Examination (Exam).	A limited examination of the affected body area or organ system.	A limited examination of the affected body area or organ system and other symptomatic or related organ system(s).	General multi-system exam: Performance and documentation of one to five elements in one or more organ system(s) or body area(s). Single organ system exam: Performance and documentation of one to five elements.	General multi-system exam: Performance and documentation of at least six elements in one or more organ system(s) or body area(s). Single organ system exam: Performance and documentation of at least six elements.
Medical Decision Making (MDM). Measured by: **	Straightforward:	Low complexity:	No change from 1995.	
1. Problem—Number of diagnoses/treatment options.	1. Minimal	1. Limited.		
2. Data—Amount and/or complexity of data to be reviewed.	2. Minimal or no data review.	2. Limited data review.		
3. Risk—Risk of complications and/or morbidity or mortality.	3. Minimal risk	3. Low risk.		

* For certain settings and patient types, each of these three key components must be met or exceeded (for example, new patients; initial hospital visits). For others, only two of the three key components must be met or exceeded (for example, established patients, subsequent hospital or other visits).

** Two of three met or exceeded.

According to both Medicare claims processing manual instructions and CPT coding rules, when counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter (or, in the case of inpatient E/M services, the floor time) the duration of the visit can be used as an alternative basis to select the appropriate E/M visit level (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.C available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf; see* also 2019 CPT Codebook Evaluation and Management Services Guidelines, page 10). Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.B states, ''Instruct physicians to select the code for the service based

[83] See *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/95Docguidelines.pdf*; *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/97Docguidelines.pdf*; and the Evaluation and Management Services guide at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/eval-mgmt-serv-guide-ICN006764.pdf.*

upon the content of the service. The duration of the visit is an ancillary factor and does not control the level of the service to be billed unless more than 50 percent of the face-to-face time (for non-inpatient services) or more than 50 percent of the floor time (for inpatient services) is spent providing counseling or coordination of care as described in subsection C.'' Subsection C states that ''the physician may document time spent with the patient in conjunction with the medical decision-making involved and a description of the coordination of care or counseling provided. Documentation must be in sufficient detail to support the claim.'' The example included in subsection C further states, ''The code selection is based on the total time of the face-to-face encounter or floor time, not just the counseling time. The medical record must be documented in sufficient detail to justify the selection of the specific code if time is the basis for selection of the code.''

Both the 1995 and 1997 Guidelines address time, stating that, ''In the case where counseling and/or coordination of care dominates (more than 50 percent of) the physician/patient and/or family encounter (face-to-face time in the office or other outpatient setting or floor/unit time in the hospital or nursing facility), time is considered the key or controlling factor to qualify for a particular level of E/M services.'' The Guidelines go on to state that, ''If the physician elects to report the level of service based on counseling and/or coordination of care, the total length of time of the encounter (face-to-face or floor time, as appropriate) should be documented and the record should describe the counseling and/or activities to coordinate care.'' [84] Additional manual provisions regarding E/M visits are housed separately within Medicare's internet-Only Manuals, and are not contained within the 1995 or 1997 Guidelines.

In accordance with section 1862(a)(1)(A) of the Act, which requires services paid under Medicare Part B to be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, medical necessity is a prerequisite to Medicare payment for E/M visits. Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.B states, ''Medical necessity of a service is the overarching criterion for payment in addition to the individual requirements of a CPT code. It would not be medically necessary or appropriate to bill a higher level of evaluation and management service when a lower level of service is warranted. The volume of documentation should not be the primary influence upon which a specific level of service is billed. Documentation should support the level of service reported.''

c. Summary of Changes to Coding, Payment and Documentation of Office/Outpatient E/M Visits Finalized for CY 2021 in the CY 2019 PFS Final Rule

In the CY 2019 PFS final rule (83 FR 59452 through 60303), we finalized a number of coding, payment, and documentation changes under the PFS for office/outpatient E/M visits (CPT codes 99201–99215) to reduce administrative burden, improve payment accuracy, and update this code set to better reflect the current practice of medicine. In summary, we finalized the following policy changes for office/outpatient E/M visits under the PFS effective January 1, 2021:

- Reduction in the payment variation for office/outpatient E/M visit levels by paying a single rate (also referred to as a blended rate) for office/outpatient E/M visit levels 2 through 4 (one rate for established patients and another rate for new patients), while maintaining the payment rate for office/outpatient E/M visit level 5 in order to better account for the care and needs of complex patients. Practitioners will still report the appropriate code for the level of service they furnished, since we did not replace these CPT codes with HCPCS G codes and will continue to use typical times associated with each individual CPT code when time is used to document the office/outpatient E/M visit.
- Permitting practitioners to choose to document office/outpatient E/M level 2 through 5 visits using MDM or time, or the current framework based on the 1995 or 1997 Guidelines.
- As a corollary to the uniform payment rate for level 2–4 E/M visits, when using MDM or the current framework to document the office/outpatient E/M visit, a minimum supporting documentation standard associated with level 2 office/outpatient E/M visits will apply. For these cases, Medicare will require information to support a level 2 office/outpatient E/M visit code for history, exam, and/or MDM.
- When time is used to document, practitioners will document the medical necessity of the office/outpatient E/M visit and that the billing practitioner personally spent the required amount of time face-to-face with the beneficiary. The required face-to-face time will be the typical time for the reported code, except for extended or prolonged visits where extended or prolonged times will apply.
- Implementation of HCPCS add-on G codes that describe the additional resources inherent in visits for primary care and particular kinds of non-procedural specialized medical care (HCPCS codes GPC1X and GCG0X, respectively). These codes were finalized in order to reflect the differential resource costs associated with performing certain types of office/outpatient E/M visits. These codes will only be reportable with office/outpatient E/M level 2 through 4 visits.
- Adoption of a new ''extended visit'' add-on G code (HCPCS code GPRO1) for use only with office/outpatient E/M level 2 through 4 visits, to account for the additional resources required when practitioners need to spend extended time with the patient for these visits. The existing prolonged E/M codes can continue to be used with levels 1 and 5 office/outpatient E/M visits.

We stated that we believed these policies would allow practitioners greater flexibility to exercise clinical judgment in documentation so they can focus on what is clinically relevant and medically necessary for the beneficiary. We believed these policies will reduce a substantial amount of administrative burden (83 FR 60068 through 60070) and result in limited specialty-level redistributive impacts (83 FR 60060). We stated our intent to continue engaging in further discussions with the public over the next several years to potentially further refine our policies for 2021. We finalized the coding, payment, and documentation changes to reduce administrative burden, improve payment accuracy, and update the code set to better reflect the current practice of medicine.

2. Continued Stakeholder Feedback

In January and February 2019, we hosted a series of structured listening sessions on the forthcoming changes that CMS finalized for office/outpatient E/M visit coding, documentation and payment for CY 2021. These sessions provided an opportunity for CMS to gain further input and information from the wide range of affected stakeholders on these important policy changes. Our goal was to continue to listen and consider perspectives from individual practicing clinicians, specialty associations, beneficiaries and their advocates, and other interested stakeholders to prepare for implementation of the office/outpatient

[84] Page 16 of the 1995 E/M guidelines and page 48 of the 1997 guidelines.

E/M visit policies that we finalized for CY 2021.

In these listening sessions, although stakeholders supported our intention to reduce burdensome, clinically outdated documentation requirements, they noted that in response to the office/outpatient E/M visit policies CMS finalized for CY 2021, the AMA/CPT established the Joint AMA CPT Workgroup on E/M to develop an alternative solution. This workgroup developed an alternative approach, similar to the one we finalized, for office/outpatient E/M coding and documentation. That approach was approved by the CPT Editorial Panel in February 2019, with an effective date of January 1, 2021 and is available on the AMA's website at *https://www.ama-assn.org/cpt-evaluation-and-management.*

Effective January 1, 2021, the CPT Editorial Panel adopted revisions to the office/outpatient E/M code descriptors, and substantially revised both the CPT prefatory language and the CPT interpretive guidelines that instruct practitioners on how to bill these codes. The AMA has approved an accompanying set of interpretive guidelines governing and updating what determines different levels of MDM for office/outpatient E/M visits. Some of the changes made by the CPT Editorial Panel parallel our finalized policies for CY 2021, such as the choice of time or MDM in determination of code level. Other aspects differ, such as the number of code levels retained, presumably for purposes of differential payment; the times, and inclusion of all time spent on the day of the visit; and elimination of options such as the use of history and exam or time in combination with MDM, to select code level.

Many stakeholders have continued to express objections to our assignment of a single payment rate to level 2–4 office/outpatient E/M visits stating that this inappropriately incentivizes multiple, shorter visits and seeing less complex patients. Many stakeholders also stated that the purpose and use of the HCPCS add-on G codes that we established for primary care and non-procedural specialized medical care remain ambiguous, expressed concern that the codes are potentially contrary to current law prohibiting specialty-specific payment, and asserted that Medicare's coding approach is unlikely to be adopted by other payers.

In meetings with stakeholders since we issued the CY 2019 PFS final rule, some stakeholders suggested that only time should be used to select the service level because time is easy to audit, simple to document, and better accounts for patient complexity, in comparison to the CPT Editorial Panel revised MDM interpretive guidance. These stakeholders stated that the implementation of the CPT Editorial Panel revised MDM interpretive guidance will result in the likely increase in the selection of levels 4 and 5, relative to current typical coding patterns. They suggested that to more accurately distinguish varying levels of patient complexity, either the visit levels should be recalibrated so that levels 4 and 5 no longer represent the most often billed visit, or a sixth level should be added. In these meetings, some stakeholders also stated that the office/outpatient E/M codes fail to capture the full range of services provided by certain specialties, particularly primary care and other specialties that rely heavily on office/outpatient E/M services rather than procedures, systematically undervaluing primary care visits and visits furnished in the context of non-procedural specialty care, thereby creating payment disparities that have contributed to workforce shortages and beneficiary access challenges across a range of specialties. They reiterated that office/outpatient E/M visit codes have not been extensively examined since the creation of the PFS and recommended that CMS conduct an extensive research effort to revise and revalue office/outpatient E/M services through a major research initiative akin to that undertaken when the PFS was first established.

The AMA believes its approach will accomplish greater burden reduction, is more clinically intuitive and reflects the current practice of medicine, and is more likely to be adopted by all payers than the policies CMS finalized for CY 2021. The AMA has posted an estimate of the burden reduction associated with the policies approved at CPT on the AMA's website, available at *https://www.ama-assn.org/cpt-evaluation-and-management.*

Given the CPT coding changes that will take effect in 2021, the AMA RUC has conducted a resurvey and revaluation of the office/outpatient E/M visit codes, and provided us with its recommendations. We discuss our proposal to adopt the CPT coding for office/outpatient E/M visits below, noting that the CPT coding changes will also necessitate some changes to CMS' policies for CY 2021, due to forthcoming changes in code descriptors. In addition, we address revaluation of the codes, proposing new values for the codes as revised by CPT. We propose to assign separate payment rather than a blended rate, to each of the office/outpatient E/M visit codes (except CPT code 99201, which CPT is deleting) and the new prolonged visit add-on CPT code (CPT code 99XXX). We propose to delete the HCPCS add-on code we finalized last year for CY 2021 for extended visits (GPRO1). We propose to simplify, consolidate and revalue the HCPCS add-on codes we finalized last year for CY 2021 for primary care (GPC1X) and non-procedural specialized medical care (GCG0X), and to allow the new code to be reported with all office/outpatient E/M visit levels (not just levels 2 through 4). All of these changes would be effective January 1, 2021. We believe our proposed policies will further our ongoing effort to reduce administrative burden, improve payment accuracy, and update the office/outpatient EM visit code set to better reflect the current practice of medicine.

3. Proposed Policies for CY 2021 for Office/Outpatient E/M Visits

a. Office/Outpatient E/M Visit Coding and Documentation

For CY 2021, for office/outpatient E/M visits (CPT codes 99201–99215) we are proposing to adopt the new coding, prefatory language, and interpretive guidance framework that has been issued by the AMA/CPT (*see https://www.ama-assn.org/cpt-evaluation-and-management*) because we believe it would accomplish greater burden reduction than the policies we finalized for CY 2021 and would be more intuitive and consistent with the current practice of medicine. We note that this includes deletion of CPT code 99201 (Level 1 office/outpatient visit, new patient), which the CPT Editorial Panel decided to eliminate as CPT codes 99201 and 99202 are both straightforward MDM and only differentiated by history and exam elements.

Under this new framework, history and exam would no longer select the level of code selection for office/outpatient E/M visits. Instead, an office/outpatient E/M visit would include a medically appropriate history and exam, when performed. The clinically outdated system for number of body systems/areas reviewed and examined under history and exam would no longer apply, and these components would only be performed when, and to the extent medically necessary and clinically appropriate. Level 1 visits would only describe or include visits performed by clinical staff for established patients.

For levels 2 through 5 office/outpatient E/M visits, the code level reported would be decided based on

either the level of MDM (as redefined in the new AMA/CPT guidance framework) or the total time personally spent by the reporting practitioner on the day of the visit (including face-to-face and non-face-to-face time). Because we would no longer assign a blended payment rate (discussed below), we would no longer adopt the minimum supporting documentation associated with level 2 office/outpatient E/M visits, which we finalized as a corollary to the uniform payment rate for level 2–4 office/outpatient E/M visits when using MDM or the current framework to document the office/outpatient E/M visit.

We would adopt the new time ranges within the CPT codes as revised by the CPT Editorial Panel. We interpret the revised CPT prefatory language and reporting instructions to mean that there would be a single add-on CPT code for prolonged office/outpatient E/M visits (CPT code 99XXX) that would only be reported when time is used for code level selection and the time for a level 5 office/outpatient visit (the floor of the level 5 time range) is exceeded by 15 minutes or more on the date of service. The long descriptor for CPT code 99XXX is *Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each 15 minutes (List separately in addition to codes 99205, 99215 for office or other outpatient Evaluation and Management services)*. We demonstrate below how prolonged office/outpatient E/M visit time would be reported:

TABLE 26—TOTAL PROPOSED PRACTITIONER TIMES FOR OFFICE/OUTPATIENT E/M VISITS WHEN TIME IS USED TO SELECT VISIT LEVEL

Established patient office/outpatient E/M visit (total practitioner time, when time is used to select code level) (minutes)	CPT code
40–54	99215.
55–69	99215x1 and 99XXXx1.
70–84	99215x1 and 99XXXx2.
85 or more	99215x1 and 99XXXx3 or more for each additional 15 mintues.
New patient office/outpatient E/M visit (total practitioner time, when time is used to select code level) (minutes)	**CPT code**
60–74	99205.
75–89	99205x1 and 99XXXx1.
90–104	99205x1 and 99XXXx2.
105 or more	99205x1 and 99XXXx3 or more for each additional 15 minutes.

We are proposing to adopt our interpretation of the revised CPT prefatory language and reporting instructions, that CPT codes 99358–9 (Prolonged E/M without Direct Patient Contact) would no longer be reportable in association or ''conjunction'' with office/outpatient E/M visits. In other words, when using time to select office/outpatient E/M visit level, any additional time spent by the reporting practitioner on a prior or subsequent date of service (such as reviewing medical records or test results) could not count towards the required times for reporting CPT codes 99202–99215 or 99XXX, or be reportable using CPT codes 99358–9. This interpretation would be consistent with the way the office/outpatient E/M visit codes were resurveyed, where the AMA/RUC instructed practitioners to consider all time spent 3 days prior to, or 7 days after, the office/outpatient E/M visit (*see* below for a discussion of revaluation proposals). Moreover we note that CPT codes 99358–9 describe time spent beyond the ''usual'' time (CPT prefatory language), and it is not clear what would comprise ''usual'' time given the new time ranges for the office/outpatient E/M visit codes and new CPT code 99XXX (prolonged office/outpatient E/M visit). New CPT prefatory language specifies, ''For prolonged services on a date other than the date of a face-to-face encounter, including office or other outpatient services (99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215), see 99358, 99359 . . . Do not report 99XXX in conjunction with . . . 99358, 99359''. We do not believe CPT code 99211 should be included in this list of base codes since it will only include clinical staff time. Also given that CPT codes 99358, 99359 can be used to report practitioner time spent on any date (the date of the visit or any other day), the CPT reporting instruction ''see 99358, 99359'' seems circular. The new prefatory language seems unclear regarding whether CPT codes 99358, 99359 could be reported instead of, or in addition to, CPT code 99XXX, and whether the prolonged time would have to be spent on the visit date, within 3 days prior or 7 days after the visit date, or outside of this new 10-day window relevant for the base code. We are seeking public input on this proposal and whether it would be appropriate to interpret the CPT reporting instructions for CPT codes 99358–9 as proposed, as well as how this interpretation may impact valuation. We believe CPT codes 99358 and 99359 may need to be redefined, resurveyed and revalued. After internal review, we believe that when time is used to select visit level, having one add-on code (CPT code 99XXX) instead of multiple add-on codes for additional time may be administratively simpler and most consistent with our goal of documentation burden reduction.

HCPCS code GPRO1 (extended office/outpatient E/M time) would no longer be needed because the time described by this code would instead be described by a level 3, 4 or 5 office/outpatient E/M visit base code and, if applicable, the single new add-on CPT code for prolonged office/outpatient E/M visits (CPT code 99XXX). Therefore, we propose to delete HCPCS code GPRO1 for CY 2021. We propose to adopt the AMA/CPT prefatory language that lists qualifying activities that could be included when time is used to select the visit level. Alternatively, if MDM is used to choose the visit level, time would not be relevant to code selection.

b. Office/Outpatient E/M Visit Revaluation (CPT Codes 99201 Through 99215)

We have received valuation recommendations from the AMA RUC for the revised office/outpatient E/M codes (CPT codes 99201 through 99215) following completion of its survey and revaluation process for these codes. Although these codes do not take effect until CY 2021, we believe that it is appropriate to follow our usual process of addressing the valuation of the revised office/outpatient E/M codes through rulemaking after we receive the RUC recommendations. Additionally, establishing values for the new codes through rulemaking this year will allow more time for clinicians to make any necessary process and systems adjustments before they begin using the codes. In recent years, we have considered how best to update and revalue the office/outpatient E/M codes as they represent a significant proportion of PFS expenditures.

MedPAC has had longstanding concerns that office/outpatient E/M services are undervalued in the PFS, and in its March 2019 Report to Congress, further asserted that the office/outpatient E/M code set has become passively devalued as values of these codes have remained unchanged, while the coding and valuation for other types of services under the fee schedule have been updated to reflect changes in medical practice (*see* pages 120 through 121 at *http://www.medpac.gov/docs/default-source/reports/mar19_medpac_ch4_sec.pdf?sfvrsn=0*).

In April 2019, the RUC provided us the results of its review, and recommendations for work RVUs, practice expense inputs and physician time (number of minutes) for the revised office/outpatient E/M code set. Please note that these proposed changes in coding and values are for the revised office/outpatient E/M code set and a new 15-minute prolonged services code. That code set is effective beginning in CY 2021, and the proposed values would go into effect with those codes as of January 1, 2021.

We are proposing to adopt the RUC-recommended work RVUs for all of the office/outpatient E/M codes and the new prolonged services add-on code. Specifically, we are proposing a work RVU of 0.93 for CPT code 99202 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 15–29 minutes of total time is spent on the date of the encounter*), a work RVU of 1.6 for CPT code 99203 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 30–44 minutes of total time is spent on the date of the encounter*), a work RVU of 2.6 for CPT code 99204 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 45–59 minutes of total time is spent on the date of the encounter*), a work RVU of 3.5 for CPT code 99205 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 60–74 minutes of total time is spent on the date of the encounter. (For services 75 minutes or longer, see Prolonged Services 99XXX)*), a work RVU of 0.18 for CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal)*), a work RVU of 0.7 for CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. When using time for code selection, 10–19 minutes of total time is spent on the date of the encounter*), a work RVU of 1.3 for CPT code 99213 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and low level of medical decision making. When using time for code selection, 20–29 minutes of total time is spent on the date of the encounter),* a work RVU of 1.92 for CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using time for code selection, 30–39 minutes of total time is spent on the date of the encounter*), a work RVU of 2.8 for CPT code 99215 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using time for code selection, 40–54 minutes of total time is spent on the date of the encounter. (For services 55 minutes or longer, see Prolonged Services 99XXX)*) and a work RVU of 0.61 for CPT code 99XXX (*Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each 15 minutes (List separately in addition to codes 99205, 99215 for office or other outpatient Evaluation and Management services)*).

Regarding the RUC recommendations for practice expense inputs for these codes, we are proposing to remove equipment item ED021 (computer, desktop, with monitor), as we do not believe that this item would be allocated to the use of an individual patient for an individual service; rather, we believe this item is better characterized as part of indirect costs similar to office rent or administrative expenses.

The information we reviewed on the RUC valuation exercise was based on an extensive survey the RUC conducted of over 50 specialty societies. For purposes of valuation, survey respondents were asked to consider the total time spent on the day of the visit, as well as any pre- and post-service time occurring within a time frame of 3 days prior to the visit and 7 days after, respectively. This is different from the way codes are usually surveyed by the RUC for purposes of valuation, where pre-, intra-, and post-service time were surveyed, but not within a specific time frame. The RUC then separately averaged the survey results for pre-service, day of service, and post-service times, and the survey results for total time, with the result that, for some of the codes, the sum of the times associated with the three service periods does not match the RUC-recommended total time. The RUC's approach sometimes results in two conflicting sets of times: The component times as surveyed and the total time as surveyed. Although we are proposing to adopt the RUC-recommended times as explained below, we are seeking comment on how CMS should address the discrepancies in times, which have implications both for for valuation of individual codes and for PFS ratesetting in general, as the intra-service times and total times are used as references for valuing many other services under the PFS and that the programming used for PFS ratesetting requires that the

component times sum to the total time. Specifically, we request comment on which times should CMS use, and how we should resolve differences between the component and total times when they conflict. Table 27A illustrates the surveyed times for each service period and the surveyed total time. It also shows the actual total time if summed from the component times.

TABLE 27A—RUC-RECOMMENDED PRE-, INTRA-, POST-SERVICE TIMES, RUC-RECOMMENDED TOTAL TIMES FOR CPT CODES 99202–99215 AND ACTUAL TOTAL TIME

HCPCS	Pre-service time	Intra-service time	Immediate post-service time	Actual total time	RUC-recommended total time
99202	2	15	3	20	22
99203	5	25	5	35	40
99204	10	40	10	60	60
99205	14	59	15	88	85
99211	.....	5	2	7	7
99212	2	11	3	16	18
99213	5	20	5	30	30
99214	7	30	10	47	49
99215	10	45	15	70	70

Table 27B summarizes the current office/outpatient E/M services code set, and the new prolonged services code physician work RVUs and total time compared to what CMS finalized in CY 2019 for CY 2021, and the RUC-recommended work RVU and total time.

TABLE 27B—SIDE BY SIDE COMPARISON OF WORK RVUS AND PHYSICIAN TIME FOR THE OFFICE/OUTPATIENT E/M SERVICES CODE SET, AND THE NEW PROLONGED SERVICES CODE

[Current versus revised]

HCPCS code	Current total time (mins)	Current work RVU	CY 2021 total time (mins)	CY 2021 work RVU	RUC rec total time (mins)	RUC rec work RVU
99201	17	0.48	17	0.48	N/A	N/A
99202	22	0.93	22	1.76	22	0.93
99203	29	1.42	29	1.76	40	1.6
99204	45	2.43	45	1.76	60	2.6
99205	67	3.17	67	3.17	85	3.5
99211	7	0.18	7	0.18	7	0.18
99212	16	0.48	16	1.18	18	0.7
99213	23	0.97	23	1.18	30	1.3
99214	40	1.5	40	1.18	49	1.92
99215	55	2.11	55	2.11	70	2.8
99XXX	N/A	N/A	N/A	N/A	15	0.61

The RUC recommendations reflect a rigorous robust survey approach, including surveying over 50 specialty societies, demonstrate that office/outpatient E/M visits are generally more complex, for most clinicians. In the CY 2019 PFS final rule, we finalized for CY 2021 a significant reduction in the payment variation in office/outpatient E/M visit levels by paying a single blended rate for E/M office/outpatient visit levels 2 through 4 (one for established and another for new patients). We also maintained the separate payment rates for E/M office/outpatient level 5 visits in order to better account for the care and needs of particularly complex patients. We believed that the single blended payment rate for E/M office/outpatient visit levels 2–4 better accounted for the resources associated with the typical visit. After reviewing the RUC recommendations, in conjunction with the revised code descriptors and documentation guidelines for CPT codes 99202 through 99215, we believe codes and recommended values would more accurately account for the time and intensity of office/outpatient E/M visits than either the current codes and values or the values we finalized in the CY 2019 PFS final rule for CY 2021. Therefore, we are proposing to establish separate values for Levels 2–4 office/outpatient E/M visits for both new and established patients rather than continue with the blended rate. We are proposing to accept the RUC-recommended work and time values for the revised office/outpatient E/M codes without refinement for CY 2021. With regard to the RUC's recommendations for practice expense inputs, we are proposing to remove equipment item ED021 (computer, desktop, with monitor), as this item is included in the overhead costs. Note that these changes to codes and values would go into effect January 1, 2021.

c. Simplification, Consolidation and Revaluation of HCPCS Codes GCG0X and GPC1X

Although we believe that the RUC-recommended values for the revised office/outpatient E/M visit codes would more accurately reflect the resources involved in furnishing a typical office/outpatient E/M visit, we believe that the revalued office/outpatient E/M code set itself still does not appropriately reflect differences in resource costs between certain types of office/outpatient E/M visits. In the CY 2019 PFS proposed rule we articulated that, based on stakeholder comments, clinical examples, and our review of the literature on office/outpatient E/M

services, there are three types of office/outpatient E/M visits that differ from the typical office/outpatient E/M visit and are not appropriately reflected in the current office/outpatient E/M code set and valuation. These three types of office/outpatient E/M visits can be distinguished by the mode of care provided and, as a result, have different resource costs. The three types of office/outpatient E/M visits that differ from the typical office/outpatient E/M service are (1) separately identifiable office/outpatient E/M visits furnished in conjunction with a global procedure, (2) primary care office/outpatient E/M visits for continuous patient care, and (3) certain types of specialist office/outpatient E/M visits. We proposed, but did not finalize, the application of an MPPR to the first category of visits, to account for overlapping resource costs when office/outpatient E/M visits were furnished on the same day as a 0-day global procedure. To address the shortcomings in the E/M code set in appropriately describing and reflecting resource costs for the other two types of office/outpatient E/M visits, we proposed and finalized the two HCPCS G codes: HCPCS code GCG0X (*Visit complexity inherent to evaluation and management associated with non-procedural specialty care including endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, interventional pain management, cardiology, nephrology, infectious disease, psychiatry, and pulmonology (Add-on code, list separately in addition to level 2 through 4 office/outpatient evaluation and management visit, new or established*) which describes the inherent complexity associated with certain types of specialist visits and GPC1X (*Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to level 2 through 4 office/outpatient evaluation and management visit, new or established*), which describes additional resources associated with primary care visits.

Although we finalized two separate codes, we valued both HCPCS codes GCG0X and GPC1X via a crosswalk to 75 percent of the work and time value of CPT code 90785 (*Interactive complexity (List separately in addition to the code for primary procedure*)). Interactive complexity is an add-on code that may be billed when a psychotherapy or psychiatric service requires more work due to the complexity of the patient, and we believed that 75 percent of its work and time values accurately captured the additional resource costs of primary care office/outpatient visits and certain types of specialty office/outpatient visits when billed with the single, blended payment rate for office/outpatient E/M visit levels 2–4.

In the CY 2019 PFS final rule, we stated that, due to the variation among the types of visits performed by certain specialties, we did not believe that the broad office/outpatient E/M code set captured the resource costs associated with furnishing primary care and certain types of specialist visits (FR 83 59638). As we stated above, we believe that the revised office/outpatient E/M code set and RUC-recommended values more accurately reflect the resources associated with a typical visit. However, we believe the typical visit described by the revised code set still does not adequately describe or reflect the resources associated with primary care and certain types of specialty visits.

As such, we believe that there is still a need for add-on coding because the revised office/outpatient E/M code set does not recognize that there are additional resource costs inherent in furnishing some kinds of office/outpatient E/M visits. However, based on previous public comments and ongoing engagement with stakeholders, we understand the need for the add-on code(s) and descriptor(s) to be easy to understand and report when appropriate, including in terms of medical record documentation and billing. We also want to make it clear that the add-on coding is not intended to reflect any difference in payment based on the billing practitioner's specialty, but rather the recognition of different per-visit resource costs based on the kinds of care the practitioner provides, regardless of their specialty. Therefore, we are proposing to simplify the coding by consolidating the two add-on codes into a single add-on code and revising the single code descriptor to better describe the work associated with visits that are part of ongoing, comprehensive primary care and/or visits that are part of ongoing care related to a patient's single, serious, or complex chronic condition.

We are proposing to revise the descriptor for HCPCS code GPC1X and delete HCPCS code GCG0X. The proposed descriptor for GPC1X appears in Table 28. We are seeking comment from the public and stakeholders regarding these proposed changes, particularly the proposed new code descriptor for GPC1X and whether or not more than one code, similar to the policy finalized last year, would be necessary or beneficial.

We have also reconsidered the appropriate valuation for this HCPCS add-on G-code in the context of the revised office/outpatient E/M service code set and proposed values. Upon further review and in light of the other proposed changes to the office/outpatient E/M service code set, we believe that valuing the add-on code at 75 percent of CPT code 90785 would understate the additional inherent intensity associated with furnishing primary care and certain types of specialty visits. As CPT code 90785 also describes additional work associated with certain psychotherapy or psychiatric services, we believe its work and time values are the most appropriate crosswalk for the revised HCPCS code GPC1X. Therefore, we are proposing to value HCPCS code GPC1X at 100 percent of the work and time values for CPT code 90785, and proposing a work RVU of 0.33 and a physician time of 11 minutes. We are also proposing that this HCPCS add-on G code could be billed as applicable with every level of office and outpatient E/M visit, and that we would revise the code descriptor to reflect that change. See Table 28 for the proposed changes to the code descriptor. We note that if the CPT Editorial Panel makes any further changes to the office and outpatient E/M codes and descriptors, or creates one or more CPT codes that duplicate this add-on code, or if the RUC and/or stakeholders or other public commenters recommend values for these or other related codes, we would consider them through subsequent rulemaking.

TABLE 28—PROPOSED REVALUATION OF HCPCS ADD-ON G CODE FINALIZED FOR CY 2021

HCPCS code	Proposed code descriptor revisions	FR 2019 total time (mins)	FR 2019 work RVU	Proposed total time (mins)	Proposed work RVU
GPC1X	*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex chronic condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established).*	8.25	0.25	11	0.33

d. Valuation of CPT Code 99xxx (Prolonged Office/Outpatient E/M)

The RUC also provided a recommendation for new CPT code 99XXX (*Prolonged office or other outpatient evaluation and management service(s) (beyond the total time of the primary procedure which has been selected using total time), requiring total time with or without direct patient contact beyond the usual service, on the date of the primary service; each 15 minutes (List separately in addition to codes 99205, 99215 for office or other outpatient Evaluation and Management services*). The RUC recommended 15 minutes of physician time and a work RVU of 0.61. We are proposing to delete to the HCPCS add-on code we finalized last year for CY 2021 for extended visits (GPRO1) and adopt the new CPT code 99XXX. Further, as discussed above we are proposing to accept the RUC recommended values for CPT code 99XXX without refinement.

We are seeking comment on these proposals, as well as any additional information stakeholders can provide on the appropriate valuation for these services.

e. Implementation Timeframe

We propose that these policy changes for office/outpatient E/M visits would be effective for services furnished starting January 1, 2021. We believe this would allow sufficient time for practitioner and provider education and further feedback; changes in clinical workflows, EHRs and any other impacted systems; and corresponding changes that may be made by other payers. In summary, we propose to adopt the following policies for office/outpatient E/M visits effective January 1, 2021:

- Separate payment for the five levels of office/outpatient E/M visit CPT codes, as revised by the CPT Editorial Panel effective January 1, 2021 and resurveyed by the AMA RUC, with minor refinement. This would include deletion of CPT code 99201 (Level 1 new patient office/outpatient E/M visit) and adoption of the revised CPT code descriptors for CPT codes 99202–99215;
- Elimination of the use of history and/or physical exam to select among code levels;
- Choice of time or medical decision making to decide the level of office/outpatient E/M visit (using the revised CPT interpretive guidelines for medical decision making);
- Payment for prolonged office/outpatient E/M visits using the revised CPT code for such services, including separate payment for new CPT code 99xxx and deletion of HCPCS code GPRO1 (extended office/outpatient E/M visit) that we previously finalized for 2021;
- Revise the descriptor for HCPCS code GPC1X and delete HCPCS code GCG0X; and
- Increase in value for HCPCS code GCG1X and allowing it to be reported with all office/outpatient E/M visit levels.

f. Global Surgical Packages

In addition to their recommendations regarding physician work, time, and practice expense for office/outpatient E/M visits, the AMA RUC also recommended adjusting the office/outpatient E/M visits for codes with a global period to reflect the changes made to the values for office/outpatient E/M visits. Procedures with a 10- and 90-day global period have post-operative visits included in their valuation. These post-operative visits are valued with reference to values for the E/M visits and each procedure has at least a half of an E/M visit included the global period. However, these visits are not directly included in the valuation. Rather, work RVUs for procedures with a global period are generally valued using magnitude estimation.

In the CY 2015 PFS final rule, we discussed the challenges of accurately accounting for the number of visits included in the valuation of 10- and 90-day global packages. (79 FR 67548, 67582.) We finalized a policy to change all global periods to 0-day global periods, and to allow separate payment for post-operative follow-up E/M visits. Our concerns were based on a number of key points including: The lack of sufficient data on the number of visits typically furnished during the global periods, questions about whether we will be able to adjust values on a regular basis to reflect changes in the practice of medicine and health care delivery, and concerns about how our global payment policies could affect the services that are actually furnished. In finalizing a policy to transform all 10- and 90-day global codes to 0-day global codes in CY 2017 and CY 2018, respectively, to improve the accuracy of valuation and payment for the various components of global packages, including pre- and post-operative visits and the procedure itself, we stated that we were adopting this policy because it is critical that PFS payment rates be based upon RVUs that reflect the relative resources involved in furnishing the services. We also stated our belief that transforming all 10- and 90-day global codes to 0-day global packages would:

- Increase the accuracy of PFS payment by setting payment rates for individual services that more closely reflect the typical resources used in furnishing the procedures;
- Avoid potentially duplicative or unwarranted payments when a beneficiary receives post-operative care from a different practitioner during the global period;
- Eliminate disparities between the payment for E/M services in global periods and those furnished individually;
- Maintain the same-day packaging of pre- and post-operative physicians' services in the 0-day global packages; and
- Facilitate the availability of more accurate data for new payment models and quality research.

Section 523(a) of MACRA added section 1848(c)(8)(A) of the Act, which

prohibited the Secretary from implementing the policy described above, which would have transformed all 10-day and 90-day global surgery packages to 0-day global packages. Section 1848(c)(8)(B) of the Act, which was also added by section 523(a) of the MACRA, required us to collect data to value surgical services. Section 1848(c)(8)(B)(i) of the Act requires us to develop a process to gather information needed to value surgical services from a representative sample of physicians, and requires that the data collection begin no later than January 1, 2017. The collected information must include the number and level of medical visits furnished during the global period and other items and services related to the surgery and furnished during the global period, as appropriate. Section 1848(c)(8)(B)(iii) of the Act specifies that the Inspector General shall audit a sample of the collected information to verify its accuracy. Section 1848(c)(8)(C) of the Act, which was also added by section 523(a) of the MACRA, requires that, beginning in CY 2019, we must use the information collected as appropriate, along with other available data, to improve the accuracy of valuation of surgical services under the PFS.

Resource-based valuation of individual physicians' services is a critical foundation for Medicare payment to physicians. It is essential that the RVUs under the PFS be based as closely and accurately as possible on the actual resources used in furnishing specific services to make appropriate payment and preserve relativity among services. For global surgical packages, this requires using objective data on all of the resources used to furnish the services that are included in the package. Not having such data for some components may significantly skew relativity and create unwarranted payment disparities within the PFS. The current valuations for many services valued as global packages are based upon the total package as a unit rather than by determining the resources used in furnishing the procedure and each additional service/visit and summing the results. As a result, we do not have the same level of information about the components of global packages as we do for other services. To value global packages accurately and relative to other procedures, we need accurate information about the resources—work, PEs and malpractice—used in furnishing the procedure, similar to what is used to determine RVUs for all services. In addition, we need the same information on the postoperative services furnished in the global period (and pre-operative services the day before for 90-day global packages).

In response to the MACRA amendments to section 1848(c)(8 of the Act), CMS required practitioners who work in practices that include 10 or more practitioners in Florida, Kentucky, Louisiana, Nevada, New Jersey, North Dakota, Ohio, Oregon, and Rhode Island to report using CPT 99024 on post-operative visits furnished during the global period for select procedures furnished on or after July 1, 2017. The specified procedures are those that are furnished by more than 100 practitioners and either are nationally furnished more than 10,000 times annually or have more than $10 million in annual allowed charges.

RAND analyzed the data collected from the post-operative visits through this claim-based reporting for the first year of reporting, July 1, 2017–June 30, 2018. They found that only 4 percent of procedures with 10-day global periods had any post-operative visits reported. While 71 percent of procedures with 90-day global periods had at least one associated post-operative visit, only 39 percent of the total post-operative visits expected for procedures with 90-day global periods were reported. (A complete report on this is available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Global-Surgery-Data-Collection-.html*).

In addition to the claims-based data collection, RAND collected data on the level of visits. They began with an attempt to collect data via a survey from all specialties as described in the 2017 final rule. Given the low rate of response from practitioners, we shifted the study and focused on three high-volume procedures with global periods that were common enough to likely result in a robust sample size: (1) Cataract surgery; (2) hip arthroplasty; and (3) complex wound repair. A total of 725 physicians billing frequently for cataract surgery, hip arthroplasty, and complex wound repair reported on the time, activities, and staff involved in 3,469 visits. Our findings on physician time and work from the survey were broadly similar to what we expected based on the Time File for cataract surgery and hip replacement and somewhat different for complex wound repair. (For the complete report, *see https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Global-Surgery-Data-Collection-.html*).

The third report in the series looks at ways we could consider revaluing procedures using the collected data. To provide us with estimates to frame a discussion, RAND modeled how valuation for procedures would change by adjusting work RVUs, physician time, and direct PE inputs based on the difference between the number of post-operative visits observed via claims-based reporting and the expected number of post-operative visits used during valuation. RAND looked at three types of changes: (1) Updated work RVUs based on the observed number of post-operative visits measured four ways (median, 75th percentile, mean, and modal observed visits); (2) Allocated PE RVUs reflecting direct PE inputs updated to reflect the median number of reported post-operative visits; and (3) Modeled total RVUs reflecting (a) updated work RVUs, (b) updated physician time, and (c) updated direct PE inputs, and including allocated PE and malpractice RVUs. This report is designed to inform further conversations about how to revalue global procedures. (For the complete report, *see https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Global-Surgery-Data-Collection-.html*.) We will give the public and stakeholders time to study the reports we are making available along with this rule and consider an appropriate approach to revaluing global surgical procedures. We also note that the Office of the Inspector General (OIG) has published a number of reports on this topic. We will continue to study and consider alternative ways to address the values for these services.

g. Comment Solicitation on Revaluing the Office/Outpatient E/M Visit Within TCM, Cognitive Impairment Assessment/Care Planning and Similar Services

We recognize there are services other than the global surgical codes for which the values are closely tied to the values of the office/outpatient E/M visit codes, such as transitional care management services (CPT codes 99495, 99496); cognitive impairment assessment and care planning (CPT code 99483); certain ESRD monthly services (CPT codes 90951 through 90961); the Initial Preventive Physical Exam (G0438) and the Annual Wellness Visit (G0439). In future rulemaking, we may consider adjusting the RVUs for these services and are seeking public input on such a policy. We note that unlike the global surgical codes, these services always include an office/outpatient E/M visit(s) furnished by the reporting practitioner as part of the service, and it may therefore be appropriate to adjust their valuation commensurate with any

changes to the values for the revised codes for office/outpatient E/M visits. While some of these services do not involve an E/M visit, we valued them using a direct crosswalk to the RVUs assigned to an office/outpatient E/M visit(s) and for this reason they are closely tied to values for office/outpatient E/M visits.

We are also seeking comment on whether or not the public believes it would be necessary or beneficial to make systematic adjustments to other related PFS services to maintain relativity between these services and office/outpatient E/M visits. We are particularly interested in whether it would be beneficial or necessary to make corresponding adjustments to E/M codes describing visits in other settings, such as home visits, or to codes describing more specific kinds of visits, like counseling visits. For example, CPT code 99348 (*Home visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 25 minutes are spent face-to-face with the patient and/or family*) is commonly used to report home visits, and like CPT code 99214, the code describes approximately 45 minutes of time with the patient and has a work RVU of 1.56. Under the proposal to increase the work RVU of CPT code 99214 from 1.5 to 1.92, the proportional value of CPT code 99348 would decrease relative to the work RVU for CPT code 99214. To maintain the same proportional value to CPT code 99214, the work RVU for CPT code 99348 would need to increase from 1.56 to 2.00. We understand that certain other services, such as those that describe ophthalmological examination and evaluation, as well as psychotherapy visit codes, are used either in place of or in association with office/outpatient visit codes. For example, CPT code 92012 (*Ophthalmological services: Medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient*) currently has a work RVU of 0.92. Under the proposal to increase the work RVU of CPT code 99213 from 0.97 to 1.30, the proportional value of CPT code 92012 would decrease relative to the work RVU for CPT code 99213, as both codes describe around 30 minutes of work. To maintain the same proportional value to CPT code 99213, the work RVU for CPT code 92012 would need to increase from 0.92 to 1.23. Similarly, behavioral health professionals report several codes to describe psychiatric diagnostic evaluations and visits they furnish. When furnished with an evaluation and management service, practitioners report psychotherapy add-on codes instead of stand-alone psychotherapy codes that would otherwise be reported. Because the overall work RVUs for the combined service, including the value for the office/outpatient visit code, would increase under the proposal, we are interested in comments regarding whether or not it would be appropriate to reconsider the value of the psychotherapy codes, as well as the psychiatric diagnostic evaluations relative to the proposed values for the office/outpatient visit codes. Under the proposed revaluation of the office/outpatient E/M visits, the proportional value of CPT code 90834 (*Psychotherapy, 45 minutes with patient*) would decrease relative to work RVUs for CPT code 99214 plus CPT code 90836. The current work RVU for CPT code 99214 when reported with CPT code 90836 is 3.40 (1.90 + 1.50) and the current work RVU for CPT code 90834 is 2.0. Under the proposed revaluation of the office/outpatient E/M visits, the combined work RVU for CPT codes 99214 and 90836 would be 3.82 (1.90 + 1.92). In order to maintain the proportionate difference between these services, the work RVU for CPT code 90834 would increase from 2.00 to 2.25. Based on these three examples, we are seeking public comment on whether we should make similar adjustments to E/M codes in different settings, and other types of visits, such as counseling services.

III. Other Provisions of the Proposed Regulations

A. Changes to the Ambulance Physician Certification Statement Requirement

Under our ongoing initiative to identify Medicare regulations that are unnecessary, obsolete, or excessively burdensome on health care providers and suppliers, we are proposing to revise §§ 410.40 and 410.41. Importantly, we first clarify that these requirements apply to ambulance providers, as well as suppliers. The proposed revisions would give certain clarity to ambulance providers and suppliers regarding the physician or non-physician certification statement and add staff who may sign certification statements when the ambulance provider or supplier is unable to obtain a signed statement from the attending physician.

1. Exceptions to Certification Statement Requirement

Under section 1861(s)(7) of the Act, ambulance services are covered where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Currently, § 410.40(d) specifies the medical necessity requirements for both nonemergency, scheduled, repetitive ambulance services and nonemergency ambulance services that are either unscheduled or that are scheduled on a nonrepetitive basis. In the final rule with comment period that appeared in the January 25, 1999 **Federal Register** (64 FR 3637) (hereinafter referred to as the ''January 25, 1999 final rule with comment period''), we stated that a physician certification statement (PCS) must be obtained as evidence that the attending physician has determined that other means of transportation are contraindicated and that the transport is medically necessary (64 FR 3639). In the final rule with comment period that appeared in the February 27, 2002 **Federal Register** (67 FR 9100) (hereinafter referred to as the ''February 27, 2002 final rule with comment period'') we added that a certification statement (hereinafter referred to as non-physician certification statement) could be obtained from other authorized staff should the attending physician be unavailable. (67 FR 9111)

Currently there are no circumstances, other than those specified at § 410.40(d)(3)(ii) and (iv), granting exceptions to the need for a PCS or non-physician certification statement, and we have received feedback from ambulance providers, suppliers, and their industry representatives (''stakeholders'') that various situations exist where the need for a PCS or non-physician certification is excessive, or at least redundant to similar existing documentation requirements. Two of the most prominent circumstances identified by the stakeholders include interfacility transports (IFTs), commonly referred to as hospital to hospital transports and specialty care transports (SCTs), and it has been requested that we incorporate additional exceptions into the regulatory framework.

Upon reviewing the need for a PCS and non-physician certification

statement, stakeholders' concerns, and our commitment to reducing the burden placed on providers and suppliers, we have determined that instead of incorporating additional exceptions, our efforts would be better served by minorly altering the structure of the existing regulatory framework. These changes are intended to maximize flexibility for ambulance providers and suppliers to obtain the requisite certification statements and maintain the focus on the determination that other means of transportation are contraindicated and that the transport is medically necessary.

To accomplish this, we are proposing to add a new paragraph (a) in § 410.40 in which we would define both PSCs, as well as non-physician certification statements. Therefore, we are proposing to redesignate existing paragraph (a) ''Basic rules'' as paragraph (b) and redesignate the remaining paragraphs, respectively. Most significantly, paragraph (d) ''Medical necessity requirements'' will be redesignated as paragraph (e).

For new proposed paragraph (a), the two definitions, PCSs and non-physician certification statements, would clarify that: (1) The focus is on the certification of the medical necessity provisions contained in proposed newly redesignated paragraph (e)(1); and (2) the form of the certification statement is not prescribed, thus affording maximum flexibility to ambulance providers and suppliers. Since the two definitions incorporate the requirement to obtain a certification of medical necessity, we are proposing a conforming change to newly redesignated paragraph (e)(2) to remove the language requiring that an order certifying medical necessity be obtained.

We have repeatedly been told by stakeholders that there are ample opportunities for ambulance providers and suppliers to convey the information required in the certification statement. Stakeholders have mentioned, for example, that for transports such as IFTs and SCTs other requirements of federal, state, or local law require them to obtain other documentation, such as Emergency Medical Treatment & Labor Act (EMTALA) forms and medical transport forms, that can serve the same purpose as the PCS or non-physician certification statement. There is every likelihood that other ambulance transports require similarly styled documentation that likewise could serve the same purpose.

To be clear, our regulations have never prescribed the precise form or format of this required documentation. To satisfy the requirements of section 1861(s)(7) of the Act, ambulance providers' and suppliers' focus should be on clearly documenting the threshold determination that other means of transportation are contraindicated and that the transport is medically necessary. The precise form or format by which that information is conveyed has never been prescribed. We aim here to ensure that ambulance providers and suppliers understand they have flexibility in the form by which they convey the requirements of proposed § 410.40(e), so long as that threshold determination is clearly expressed.

The definition of non-physician certification statement in proposed § 410.40(a) would incorporate the existing requirements that apply when an ambulance provider or supplier is unable to obtain a signed PCS from the attending physician and, instead, obtains a non-physician certification statement, including: (1) That the staff have personal knowledge of the beneficiary's condition at the time the ambulance transport is ordered or the service is furnished; (2) the employment requirements; and (3) the specific staff that can sign in lieu of the attending physician. Included within the proposed definition of non-physician certification statement, and as further discussed below, is an expansion of the list of staff who may sign when the attending physician is unavailable. In light of the staff being listed as part of the definition of non-physician certification statement proposed at § 410.40(a), we are proposing a corresponding change to proposed and newly redesignated paragraph (e)(3)(iii) to remove the reference to the staff currently listed within the paragraph. Moreover, in paragraphs (e)(3)(i) and (iv) we have proposed changes to refer to the newly redesignated paragraph (e) and in paragraph (e)(3)(v) we have proposed changes to refer to the newly defined terms in paragraph (a), specifically the physician or non-physician certification statement. Lastly, we are also proposing a corresponding change to § 410.41(c)(1) to add that ambulance providers or suppliers must indicate on the claims form that, ''when applicable, a physician certification statement or non-physician certification statement is on file.''

In the CY 2013 PFS final rule with comment period (77 FR 69161), we stated that the Secretary is the final arbiter of whether a service is medically necessary for Medicare coverage. We believe that the proposed changes would better enable contractors to establish the medical necessity of these transports by focusing more on the threshold medical necessity determination as opposed to the form or format of the documentation used. We do not anticipate that this clarification will alter the frequency of claim denials.

2. Addition of Staff Authorized To Sign Non-Physician Certification Statements

In the January 25, 1999 final rule with comment period (64 FR 3637), we finalized language at § 410.40 to require ambulance providers or suppliers, in the case of nonemergency unscheduled ambulance services (§ 410.40(d)(3)) to obtain a PCS. In that rule, we explained that: (1) Nonemergency ambulance service is a Medicare service furnished to a beneficiary for whom a physician is responsible, therefore, the physician is responsible for the medical necessity determination; and (2) the PCS will help to ensure that the claims submitted for ambulance services are reasonable and necessary, because other methods of transportation are contraindicated (64 FR 3641). We further stated that we believed the requirement would help to avoid Medicare payment for unnecessary ambulance services that are not medically necessary even though they may be desirable to beneficiaries.

In that final rule with comment period, however, we also addressed the ability of ambulance providers or suppliers to obtain a written order from the beneficiary's attending physician within 48 hours after the transport to avoid unnecessary delays. We agreed with stakeholders that while it is reasonable to expect that an ambulance supplier could obtain a pretransport PCS for routine, scheduled trips, it is less reasonable to impose such a requirement on unscheduled transports, and that it was not necessary that the ambulance suppliers have the PCS in hand prior to furnishing the service. To avoid unnecessary delays for unscheduled transports, we therefore finalized the requirement that required documentation can be obtained within 48 hours after the ambulance transportation service has been furnished.

In the February 27, 2002 final rule with comment period (67 FR 9111), we noted that we had been made aware of instances in which ambulance suppliers, despite having provided ambulance transports, were, through no fault of their own, experiencing difficulty in obtaining the necessary PCS within the required 48-hour timeframe. We stated that the 48-hour period remained the appropriate period of time, but created alternatives for ambulance providers and suppliers unable to obtain a PCS. We finalized an alternative at § 410.40(d)(3)(iii) where ambulance providers and suppliers

unable to obtain a PCS from the attending physician could obtain a signed certification (*not* a physician certification statement) from certain other staff. At that time, we identified several staff members, including a physician assistant (PA), nurse practitioner (NP), clinical nurse specialist (CNS), registered nurse (RN), and a discharge planner as staff members able to sign such a non-physician certification statement. The only additional constraints are: (1) That the staff be employed by the beneficiary's attending physician or by the hospital or facility where the beneficiary is being treated and from which the beneficiary is transported; and (2) that the staff have personal knowledge of the beneficiary's condition at the time the ambulance transport is ordered or the service is furnished.

In the intervening years, we have received feedback from stakeholders that other staff, such as licensed practical nurses (LPNs), social workers, and case managers, should be included in the list of staff that can sign a certification statement. Similar to the currently designated staff, we now believe that LPNs, social workers, and case managers who have personal knowledge of a beneficiary's condition at the time ambulance transport is ordered and the service is furnished have a skill set largely equal or similar to the other staff members. Thus, we are proposing as part of the new proposed definition of non-physician certification statement at § 410.40(a)(2)(iii) to add LPNs, social workers, and case managers to the list of staff who may sign a certification statement when the ambulance provider or supplier is unable to obtain a signed PCS from the attending physician. As with the staff currently listed in § 410.40(d)(3)(iii), LPNs, social workers, and case managers would need to be employed by the beneficiary's attending physician or the hospital or facility where the beneficiary is being treated and from which the beneficiary is transported, and have personal knowledge of the beneficiary's condition at the time the ambulance transport is ordered or the service is furnished. We also request comments on whether other staff should be included in this regulation, and request that commenters identify such staff's licensure and position and the reason it would be appropriate for such staff to sign a certification statement.

B. Proposal To Establish a Medicare Ground Ambulance Services Data Collection System

1. Background

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established under section 1834(l) of the Act. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor, and other applicable adjustment factors as set forth at section 1834(l) of the Act and 42 CFR 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments and three temporary add-on payments to the base rate and/or mileage rate. The two permanent add-on payments are: (1) A 50 percent increase in the standard mileage rate for ground ambulance transports that originate in rural areas where the travel distance is between 1 and 17 miles; and (2) a 50 percent increase to both the base and mileage rate for rural air ambulance transports. The three temporary add-on payments are: (1) A 3 percent increase to the base and mileage rate for ground ambulance transports that originate in rural areas; (2) a 2 percent increase to the base and mileage rate for ground ambulance transports that originate in urban areas; and (3) a 22.6 percent increase in the base rate for ground ambulance transports that originate in ''super rural'' areas. Our regulations relating to coverage of and payment for ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H.

2. Statutory Requirement for Ground Ambulance Providers and Suppliers To Submit Cost and Other Information

Section 50203(b) of the BBA of 2018 added a new paragraph (17) to section 1834(l) of the Act, which requires ground ambulance providers of services and suppliers to submit cost and other information. Specifically, section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. Such system must be designed to collect information: (1) Needed to evaluate the extent to which reported costs relate to payment rates under the AFS; (2) on the utilization of capital equipment and ambulance capacity, including information consistent with the type of information described in section 1121(a) of the Act; and (3) on different types of ground ambulance services furnished in different geographic locations, including rural areas and low population density areas described in section 1834(l)(12) of the Act (super rural areas).

Section 1834(l)(17)(B)(i) of the Act requires the Secretary to specify the data collection system by December 31, 2019, and to identify the ground ambulance providers and suppliers that would be required to submit information under the data collection system, including the representative sample defined at clause (ii).

Under section 1834(l)(17)(B)(ii) of the Act, not later than December 31, 2019, for the data collection for the first year and for each subsequent year through 2024, the Secretary must determine a representative sample to submit information under the data collection system. The sample must be representative of different types of ground ambulance providers and suppliers (such as those providers and suppliers that are part of an emergency service or part of a government organization) and the geographic locations in which ground ambulance services are furnished (such as urban, rural, and low population density areas), and not include an individual ground ambulance provider or supplier in the sample for 2 consecutive years, to the extent practicable.

Section 1834(l)(17)(C) of the Act requires that for each year, a ground ambulance provider or supplier identified by the Secretary in the representative sample as being required to submit information under the data collection system for a period for the year must submit to the Secretary the information specified under the system in a form and manner, and at a time specified by the Secretary.

Section 1834(l)(17)(D) of the Act requires that beginning January 1, 2022, the Secretary apply a 10 percent payment reduction to payments made under section 1834(l) of the Act for the applicable period to a ground ambulance provider or supplier that is required to submit information under the data collection system and does not

sufficiently submit such information. The term ''applicable period'' is defined under section 1834(l)(17)(D)(ii) of the Act to mean, for a ground ambulance provider or supplier, a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier has failed to sufficiently submit information under the data collection system. A hardship exemption to the payment reduction is authorized under section 1834(l)(17)(D)(iii) of the Act, which provides that the Secretary may exempt a ground ambulance provider or supplier from the payment reduction for an applicable period in the event of significant hardship, such as a natural disaster, bankruptcy, or other similar situation that the Secretary determines interfered with the ability of the ground ambulance provider or supplier to submit such information in a timely manner for the specified period. Lastly, section 1834(l)(17)(D)(iv) of the Act requires the Secretary to establish an informal review process under which a ground ambulance provider or supplier may seek an informal review of a determination that the provider or supplier is subject to the payment reduction.

Section 1834(l)(17)(E)(i) allows the Secretary to revise the data collection system as appropriate and, if available, taking into consideration the report (or reports) that the Medicare Payment Advisory Commission (MedPAC) will submit to Congress. Section 1834(l)(17)(E)(ii) of the Act specifies that, to continue to evaluate the extent to which reported costs relate to payment rates under section 1834(l) of the Act and other purposes as the Secretary deems appropriate, the Secretary shall require ground ambulance providers and suppliers to submit information for years after 2024, but in no case less often than once every 3 years, as determined appropriate by the Secretary.

As required by section 1834(l)(17)(F) of the Act, not later than March 15, 2023, and as determined necessary by MedPAC, MedPAC must assess, and submit to Congress a report on, information submitted by providers and suppliers of ground ambulance services through the data collection system, the adequacy of payments for ground ambulance services and geographic variations in the cost of furnishing such services. The report must contain the following:

- An analysis of information submitted through the data collection system;
- An analysis of any burden on ground ambulance providers and suppliers associated with the data collection system;
- A recommendation as to whether information should continue to be submitted through such data collection system or if such system should be revised by the Secretary, as provided under section 1834(l)(17)(E)(i) of the Act; and
- Other information determined appropriate by MedPAC.

Section 1834(l)(17)(G) of the Act requires the Secretary to post information on the results of the data collection on the CMS website, as determined appropriate by the Secretary.

Section 1834(l)(17)(H) of the Act requires the Secretary to implement the provisions of section 1834(l)(17) of the Act through notice and comment rulemaking.

Section 1834(l)(17)(I) of the Act provides that the Paperwork Reduction Act (Title 44, Chapter 35 of the U.S. Code) does not apply to collection of information required under section 1834(l)(17) of the Act.

Section 1834(l)(17)(J) of the Act provides that there shall be no administrative or judicial review under sections 1869 or 1878 of the Act, or otherwise, of the data collection system or identification of respondents.

We note that while the requirements of section 1834(l)(17) of the Act are specific to ground ambulance organizations, many stakeholders have expressed interest to us in making this type of information available for other providers and suppliers of ambulance services. For example, air ambulance organizations have suggested they are interested in making this information available. We recognize that the regulation of air ambulances spans multiple federal agencies, and note that section 418 of the FAA Reauthorization Act of 2018 (Pub. L. 115–254, enacted October 5, 2018) requires the Secretary of HHS, in consultation with the Secretary of Transportation, to establish an advisory committee that includes HHS, DOT, and others to review options to improve the disclosure of charges and fees for air medical services, better inform consumers of insurance options for those services, and better inform and protect consumers of these services. We welcome comments on the state of the air ambulance industry and how CMS can work within its statutory authority to ensure that appropriate payments are made to air ambulance organizations serving the Medicare population.

3. Research To Inform the Development of a Ground Ambulance Data Collection System

To inform the development of a ground ambulance data collection system, including a representative sampling plan, our contractor developed recommendations regarding the methodology for collecting cost, revenue, utilization and other information from ground ambulance providers and suppliers (collectively referred to in this proposed rule as ''ground ambulance organizations'') and a sampling plan consistent with sections 1834(l)(17)(A) and (B) of the Act. Our contractor also developed recommendations for the collection and reporting of data with the least amount of burden possible to ground ambulance organizations. The recommendations took into consideration the following:

- An environmental scan consisting of a review of existing peer-reviewed literature, government and association reports, and targeted web searches. The purpose of the environmental scan was to collect information on costs and revenues of ground ambulance transportation services, identify background information regarding the differences among ground ambulance organizations including state and local requirements that may impact the costs of providing ambulance services, and describe financial challenges facing the ambulance industry. Five previously fielded ambulance cost collection tools were also identified and analyzed and are described below.
- Interviews with ambulance providers and suppliers, billing companies, and other stakeholders to determine all major cost, revenue, and utilization components, and differences in these components across ground ambulance organizations. These discussions provided valuable information on the process for developing a data collection system, including how to best elicit valid responses and limit burden on respondents, as well as the timing of the data collection.
- Analyses of Medicare claims and enrollment data, including all fee-for-service (FFS) Medicare claims with dates of service in 2016, the most recent complete year of claims data for ground ambulance services.

Our contractor also analyzed the following five data collection tools that currently collect or have collected data from ground ambulance organizations:

- The Moran Company Statistical and Financial Data Survey (the ''Moran

survey'').[85] In 2012, American Ambulance Association (AAA) commissioned a study with the goal of developing a data collection instrument and making recommendations for collecting data to determine the costs of delivering ground ambulance services to Medicare beneficiaries. The result was the Moran survey, which is a two-step data collection method in which all ambulance providers and suppliers first complete a short survey with basic descriptive information on their characteristics, and second, a representative sample of ambulance providers and suppliers report more specific cost information.

- Ground Emergency Medical Transportation (GEMT) Cost Report form and instructions from California's Medicaid program.[86] The GEMT Cost Report form and instructions is used by some states to determine whether ambulance providers and suppliers should receive supplemental payments from state Medicaid programs to cover shortfalls between revenue and costs. This data collection instrument is geared toward government entities, as private ambulance providers and suppliers do not qualify for the supplemental payments.
- The Emergency Medical Services Cost Analysis Project (EMSCAP) framework.[87] The National Highway Traffic Safety Administration funded EMSCAP in 2007 to develop a framework for determining the cost for an EMS system at the community level. Subsequently, EMSCAP researchers used this framework to develop a cost workbook and pilot test the instrument on three communities representing rural, urban, and suburban areas. EMS services within the three communities included volunteer, paid, and combination EMS agencies, both fire department and third service-based. Third service-based refers to services provided by a local government that include a fire department, police department and a separate EMS, forming an emergency trio.
- A 2012 Government Accountability Office (GAO) ambulance survey.[88] To examine ground ambulance suppliers' costs for transports, in 2012 GAO administered a web-based survey to a random sample of 294 eligible ambulance suppliers. GAO collected data on their 2010 costs, revenues, transports, and organizational characteristics. Although the GAO survey collected data for each domain at the summary level, it also prompted respondents to take into account multiple factors when calculating their summary costs.
- The Rural Ambulance Service Budget Model.[89] This tool was developed by a task force of the Rural EMS and Trauma Technical Assistance Center with funds from the Health Resources and Services Administration (HRSA) in the early 2000s. The purpose was to provide assistance to rural ambulance entities in establishing an annual budget and to calculate the value of services donated by other entities, as well as services donated by the ambulance entity's staff to the community. The tool was last updated in 2010 and has been cited as a resource for rural ground ambulance organizations by state and national government agencies. However, use of the tool is not required by any of these agencies.

Our contractor's analysis of these tools revealed that while there was overlap of the broad cost categories collected (for example, labor, vehicles, and facilities costs) via these tools, there were significant differences in the more specific data collected within these broad categories. Overall, there was a large amount of variability regarding whether the tools allowed for detailed accounting of costs and whether the tools used respondent-defined or survey-defined categories for reporting. The five tools also differed in terms of their instructions, format, and design in terms of how a portion of organizations' total costs were allocated to ground ambulance costs, the time frame for reporting, and the flexibility of reporting.

Based on these activities, our contractor prepared a report entitled, ''Medicare Ground Ambulance Data Collection System—Sampling and Data Collection Instrument Considerations and Recommendations'' (referred to as ''the CAMH[90] report'') which is referenced throughout this proposed rule. It is available at *https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html* and provides more detail on the research, findings and recommendations concerning the data collection instrument and sampling. This report, in addition to other considerations we describe below, informed our proposals for the data collection instrument.

4. Proposals for the Data Collection Instrument

a. Proposed Format

We considered several options for collecting the data including a survey, a cost report spreadsheet like the GEMT, and the Medicare Cost Report (MCR). During interviews with ambulance providers and suppliers, some participants stated that they would prefer that data collection be done through a cost report spreadsheet, rather than a survey, such as the GEMT and other similar data collection tools utilized by state Medicaid programs. They noted that data cost collection spreadsheets such as the GEMT are used in some states where supplemental payments are made to ground ambulance organizations based on costs and revenue reported via a cost reporting template. Although these tools are valuable to the ambulance suppliers that utilize them for Medicaid payment purposes, we note that only a small number of states make use of these tools for the purpose of providing supplemental payments and that they are generally geared toward government run entities that provide a broad range of emergency medical services and not just ground ambulance services. For these reasons, we do not believe that these tools could be used by all ground ambulance organizations for Medicare payment purposes without significant revision.

Other ambulance providers and suppliers stated their preference for survey-based reporting, such as the Moran survey, because they believe survey reporting is less burdensome and allows more flexibility for reporting. We agree that survey reporting can be designed to provide greater flexibility of reporting with reduced reporting burden. However, the Moran survey recommended excluding small ground ambulance organizations with limited capacity or those which relied heavily

on volunteer services, which would exclude a large percentage of ground ambulance organizations from our sample. It would also not take into account the unique differences of government run ground ambulance entities, and specifically ground ambulance entities that provide other emergency services such as fire services, and could not be used by all ground ambulance organizations without significant revisions. Some ambulance organizations that favored using the Moran survey also recommended using cost reporting guidelines that are similar to the CMS requirements for the MCR. Although we agree that standardization is important for data analysis, many smaller ground ambulance organizations have said they would have difficulty complying with complex cost reporting guidelines. We believe that requiring ground ambulance organizations to complete and submit an MCR for the purpose of the data collection required in section 1834(l)(17) of the Act would be unnecessarily resource intensive and burdensome.

We also considered using multiple instruments or staged data collection as recommended in the Moran Report, where we would first collect organizational characteristic data from all ground ambulance organizations, use that information for sampling purposes, and then collect cost and revenue information from a sample of ambulance providers and suppliers. Using this approach, we would need 100 percent participation from all ground ambulance organizations in reporting the organizational characteristic data in order for the data to be used for sampling purposes. We are not proposing this approach because we believe multiple data collections would increase respondent burden and may not align with sections 1834(l)(17)(A) and (B) of the Act which requires CMS to collect data from a random sample and prohibits data collection from the same ground ambulance organizations in 2 consecutive years to the extent practicable. We will discuss this more in the options we considered for sampling section of this proposed rule.

Based on our analysis of the existing or previously used data collection instruments described above, we do not believe that any of them would be sufficient to adequately capture the data required by section 1834(l) of the Act. Therefore, we are proposing to collect ground ambulance organization data using a survey that we developed specifically for this purpose, which we will refer to from this point forward in this proposed rule as the data collection instrument, and which we would make available via a secure web-based system. We believe that the data collection instrument should be usable by all ground ambulance organizations, regardless of their size, scope of operations and services offered, and structure. The proposed data collection instrument includes screening questions and skip patterns that direct ground ambulance organizations to only view and respond to questions that apply to their specific type of organization. We also believe that the proposed data collection instrument is easier to navigate and less time consuming to complete than a cost report spreadsheet. The proposed secure web-based survey would be available before the start of the first data reporting period to allow time for users to register, receive their secure login information, and receive training from CMS on how to use the system. We are also proposing to codify these policies at § 414.626.

b. Proposed Scope of Cost, Revenue, and Utilization Data

Section 1834(l)(17)(A) of the Act requires CMS to develop a data collection system to collect data related to cost, revenue, utilization, and other information determined appropriate by the Secretary for ground ambulance organizations. Section 1834(1)(17)(A)(i) of the Act further specifies that the information collected through the system should be sufficient to evaluate the extent to which reported costs relate to payment rates.

We considered several options regarding the scope of collecting data on ground ambulance cost, revenue, and utilization. One option would be to require ground ambulance organizations to report on their: (1) Total costs related to ground ambulance services; (2) total revenue from ground ambulance services; and (3) total ground ambulance service utilization. This approach would consider all ground ambulance costs, revenue, and utilization, regardless of whether the service was billable to Medicare or related to a Medicare beneficiary. The advantage of this approach is that ground ambulance organizations already track information at their organizational level on total costs, revenue, and utilization for their own internal budgeting and planning. This method was also used to calculate an organization-level average cost per transport in two previous studies described below:

In a 2012 study entitled, ''Ambulance Providers: Costs and Medicare Margins Varied Widely; Transports of Beneficiaries has Increased'',[91] the GAO performed an analysis to assess how Medicare payments, including the temporary add-on payments, compared to costs reported using a survey. The GAO collected information via a survey on organizations' total costs, including operating and capital costs, without restriction to costs associated with Medicare transports or costs incurred in responding to calls for service from Medicare beneficiaries. GAO then divided reported total costs by the reported number of transports (regardless of whether Medicare paid for the transport) to calculate an average cost per transport for each organization, and reported summary statistics across these averages, including a median cost per transport of $429. However, to simplify data collection and analysis, the analysis was limited to ambulance suppliers that did not share operational costs with a fire department, hospital, or other entity. GAO stated that its calculations assumed that this average cost per transport was constant for all of an organization's transports regardless of whether or not the patient transported was a Medicare beneficiary. This approach implicitly loads the costs associated with activities that did not result in a transport, such as responses by a ground ambulance where the patient could not be located, refused transport, or was treated on the scene, into the estimated cost per transport.

The second study, ''Report to Congress Evaluation of Hospitals' Ambulance Data on Medicare Cost Reports and Feasibility of Obtaining Cost Data from All Ambulance Providers and Suppliers,'' [92] was conducted by HHS as required under the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, enacted January 2, 2013). This report used data from Medicare cost reports as its data source, rather than a survey, and included only ambulance providers, rather than ambulance providers and suppliers. It described substantially higher costs per transports for ambulance providers compared to the estimate from GAO, with a median of approximately $1,750 per transport. It did not compare reported total costs to Medicare revenue tallied in claims data with and without the temporary add-on payments. Neither the GAO nor the HHS report compared costs and AFS payment rates for specific Healthcare Common Procedure Coding System

[91] This report is available at *https://www.gao.gov/assets/650/649018.pdf.*

[92] This report is available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AmbulanceFeeSchedule/Downloads/Report-To-Congress-September-2015.pdf.*

(HCPCS) codes because the available cost data in both studies did not support that level of analysis.

Another option would be to consider only those costs that are relevant to ground ambulance services furnished to Medicare beneficiaries. Collecting costs associated with specific services (such as Medicare transports) and excluding other services (such as Medicaid transports or responses that did not result in transport) would require either a much more intensive and costly data collection approach (such as time and motion studies) or assumptions on which portions of total costs were related to the specific activity. We believe this approach would be overly burdensome and complex for ground ambulance organizations, especially those who provide other services in addition to ground ambulance services.

A third option would be to consider only those costs that are related to the specific ground ambulance transport services that are paid under the AFS. This would require ground ambulance organizations to report costs, revenue, and utilization related to specific levels of services reported with HCPCS codes, but not costs, revenue, and utilization for other services such as responses that did not result in a transport (which is not covered under the AFS). We believe this option would also be overly burdensome and complex.

In discussions with ambulance providers and suppliers, we were informed that ground ambulance organizations most often track organization-level total costs, revenue, and utilization across all activities and services furnished to all patients, and that most would find it difficult to report costs, revenue, and utilization associated with services furnished exclusively to Medicare beneficiaries or associated with Medicare services covered under the AFS.

Therefore, we propose the first option as discussed above, which would require ground ambulance organizations to report on their: (1) Total costs related to ground ambulance services; (2) total revenue from ground ambulance services; and (3) total ground ambulance service utilization. This approach would consider all ground ambulance costs, revenue, and utilization, regardless of whether the service was billable to Medicare or related to a Medicare beneficiary to collect total cost, total revenue, and total utilization data.

Although we are proposing to collect a ground ambulance organization's total costs and total revenues, we are aware that many ground ambulance organizations share operational costs with fire departments, other public service organizations, air ambulance services, hospitals, and other entities. For these organizations, only a portion of certain capital and operational costs contribute to total ground ambulance costs, and only a portion of revenue is from ground ambulance services. We are also aware that some ground ambulance suppliers deploy emergency medical technicians (EMTs) in fire trucks, which would make it difficult to determine whether the fire truck costs should be factored into the total ground ambulance costs, and if so, how that would be calculated.

One option to address these challenges is to limit data collection to ground ambulance organizations that do not share operational costs with fire departments, hospitals, or other entities, as GAO did for their 2012 report. However, we do not believe this approach meets the requirement in section 1834(l)(17)(B)(ii) of the Act for a representative sample because many ambulance suppliers and all ambulance providers share operational costs with fire, police, health care delivery or other activities. We also considered including providers' and suppliers' total costs and revenues across all activities. While this would simplify cost and revenue data reporting, the resulting data would not be limited to ground ambulance activities, and therefore, would result in biased estimates of ground ambulance costs or require significant assumptions to estimate ground ambulance costs alone.

To more accurately define total costs and total revenues related to ground ambulance services for those ground ambulance organizations that provide other services in addition to ground ambulance services, we are proposing an approach where the data collection instrument instructions would separately address three further refined proposed categories of total ground ambulance costs and revenues:

- *Cost and revenue components completely unrelated to ground ambulance services.* These costs and revenues would be unrelated to this data collection and not reported. Examples include administrative staff without ground ambulance responsibilities, health care delivery outside of ground ambulance, community paramedicine, community education and outreach, and fire and police public safety response.
- *Cost and revenue components partially related to ground ambulance services.* These costs and revenue would be reported in full, but respondents would report additional information that can be used to allocate a portion of the costs to ground ambulance services. Depending on how the data would be utilized, certain costs could be included or excluded from an analysis after data are collected. Examples include EMTs who are also firefighters and facilities with both ground ambulance and fire department functions. (We considered an alternative where respondents would allocate costs and report only costs associated with ground ambulance services but believe that would pose an additional burden on the respondent to calculate allocated amounts, and would result in an allocation process that is less transparent and standardized).
- *Cost and revenue components entirely related to ground ambulance services.* These costs are reported in full. Examples include EMTs with only ground ambulance responsibilities and ground ambulance vehicles.

We believe that this approach would enable us to collect the data necessary to evaluate the adequacy of payments for ground ambulance services, the utilization of capital equipment and ambulance capacity, and the geographic variation in the cost of furnishing such services. The data could be analyzed in the same manner as the data in the GAO report, for example, calculating an average per-transport cost for each organization and calculating Medicare margins with and without add-on payments, or could provide the basis for other analyses to link reported costs to AFS rates. For example, an analysis could use reported total costs and information on the volume of transports by levels of services to estimate a cost for each HCPCS code reported for the AFS, or regression-based approaches to estimate the marginal cost of furnishing each HCPCS code on the AFS. We believe that under our proposed approach, the collected data would be available to estimate total costs and revenue relevant to ground ambulance services.

c. Proposed Data Collection Elements

The draft data collection instrument is available on the CMS website at *https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html.* An overview of the elements of the data collection instrument we are proposing is in Table 29, including information on costs, revenues, utilization (which we define for the purposes of the instrument as service volume and service mix), as well as the characteristics of ground ambulance organizations.

To help structure the data collection instrument, we organized costs by category (for example, labor, vehicles, and facilities), which is the approach

used in the GEMT and the AAA/Moran survey.

TABLE 29—PROPOSED COMPONENTS FOR THE DATA COLLECTION INSTRUMENT

Component (data collection instrument section)	Broad description
Ground ambulance organization characteristics (2–4).	Information regarding the identity of the organization and respondent(s), service area, ownership, response time, and other characteristics; broad questions about offered services to serve as screening questions.
Utilization: Ground ambulance service volume and service mix (5 and 6).	Number of responses and transports, level of services reported by HCPCS code.
Costs (7–12)	Information on all costs partially or entirely related to ground ambulance services.
• Staffing and Labor Costs (7)	Number and costs associated with EMTs administrative staff, and facilities staff; separate reporting of volunteer staff and associated costs.
• Facilities Costs (8)	Number of facilities; rent and mortgage payments, insurance, maintenance, and utility costs.
• Vehicle Costs (9)	Number of ground ambulances; number of other vehicles used in ground ambulance responses; annual depreciation; total fuel, maintenance, and insurance costs.
• Equipment & Supply Costs (10)	Capital medical and non-medical equipment; medical and non-medical supplies and other equipment.
• Other Costs (11)	All other costs not reported elsewhere.
• Total Cost (12)	Total costs for the ground ambulance organization included as a way to cross-check costs reported in the instrument.
Revenue (13)	Revenue from health insurers (including Medicare); revenue from all other sources including communities served.

The following sections describe our proposed approach for data collection in each of these categories.

(1) Collecting Data on Ground Ambulance Provider and Supplier Characteristics

CMS is required to collect information regarding the geographic location of ground ambulance organizations to meet the requirement at section 1834(l)(17)(A)(iii) of the Act that the collected data include information on services furnished in different geographic locations, including rural areas and low population density areas. We also recognize that there are differences between and among ground ambulance organizations on several key characteristics, including geographic location; ownership (for-profit or non-profit, government or non-government, etc.); service volume, organization type (including whether costs are shared with fire or police response or health care delivery operations); EMS responsibilities; and staffing models. Research conducted for this proposal indicates that:

- There are differences in costs per transport by ground ambulance organizations with a different ownership status;
- EMS level of service and staffing models often have an important impact on costs, with higher EMS levels of service (for example, quicker response times) and static staffing models (that is, mainatining a constant response capability 24 hours a day, 7 days a week, 365 days a year) involving higher fixed costs; and
- Utilization varies significantly across ambulance providers and suppliers of different characteristics.

Due to this variation in characteristics and the effect it has on costs and revenues, we believe it is important for ground ambulance organizations to report additional characterictics, as described below, to adequately analyze the differences in costs and revenue among different types of ambulance providers and suppliers. We also believe collecting this information directly through the proposed data collection instrument will improve data quality with minimal burden on the respondents because the proposed data collection instrument is designed to tailor later sections and questions based on respondents' characteristics through programmed ''skip patterns''. We considered relying exclusively on the Medicare enrollment form CMS 855A for ground ambulance providers or CMS 855B for ground ambulance suppliers to capture this information, but believe that data accuracy would be more robust if reported directly by respondents for the specific purpose of this data collection.

The proposed data collection questions related to organizational characteristics and service area are in sections 2, 3, and 4 of the data collection instrument. We are proposing to collect information on ownership and organization type through a sequence of questions in section 2 of the data collection instrument. Some of the questions in this section are adapted in part from prior surveys (such as the GAO and Moran surveys) with changes as necessary to fit scenarios reported during interviews with ground ambulance organizations. The first question related to organizational characteristics, question 6, asks about the organizations' ownership status. This item aligns closely with a similar question on the Medicare enrollment form CMS 855B for ambulance suppliers. Question 7 asks whether the respondent's organization uses any volunteer labor. While this question could have been asked later in the data collection instrument around the collection of labor data, we opted to include it here because many ground ambulance organizations informed CMS that they view the use of volunteer labor as a defining organizational characteristic, on par with ownership status, and that a volunteer labor question was expected by respondents at this early point in the data collection instrument. Question 8 asks respondents to select a category that best describes their ambulance organization. The response options for this item are mutually exclusive and align with the ambulance provider and supplier taxonomy described in the CAMH report. The next two questions, 9 and 10, more directly ask whether the respondent has shared operational costs with an entity of another type, including a fire department, hospital, or other entity. We are proposing these questions in addition to the organization type question to account for situations where a respondent might primarily identify as an organization of one type (with implications for shared operational costs) but then might have shared

operational costs with another entity type. Responses to questions 9 and 10 play an important role in skip logic later in the data collection instrument regarding questions and response options relevant only to ground ambulance organizations with shared operational costs with an entity of another type.

Other proposed questions regarding organizational characteristics are necessary to tailor later parts of the data collection instrument to the respondent. These include proposed questions in section 2 of the data collection instrument on whether the respondent's ambulance organization:

- Is part of a broader corporation or other entity billing under multiple National Provider Identifiers (NPIs) (question 2).
- Routinely responds to emergency calls for service (question 11).
- Operates land, water, and air ambulances (questions 12–14).
- Has a staffing model that is static (that is, consistent staffing over the course of a day/week) or dynamic (that is, staffing varies over the course of a day/week) or combined deployment (certain times of the day have a fixed number of units, and other times are dynamic depending on need) (question 15).
- Provides continuous (also known as ''24/7/365'') emergency services) (question 16).
- Provides paramedic or other emergency response staff to meet ambulances from other organizations in the course of a response (questions 17 and 18).

In our interviews with ambulance providers and suppliers, some participants indicated that their staffing model is an organizational characteristic that would likely be associated with costs per transport. Organizations that need to maintain fixed staffing levels over time (for example, to maintain an emergency response capability to serve a community) would likely have higher costs than those that do not.

Section 1834(l)(17)(A)(iii) of the Act requires collecting data from ambulance providers and suppliers in different geographic locations, including rural areas and low population density areas. The area served by ambulance providers and suppliers is an important characteristic and we are proposing to collect information on the geographic area served by each ambulance provider and supplier in section 3 of the data collection instrument.

Many ground ambulance organizations have a primary service area in which they are responsible for a certain type of service (for example, ALS–1 emergency response within the borders of a county, town, or other municipality) and may have secondary services areas for a variety reasons, such as providing mutual or auto aid, or providing a different service in a secondary area (for example, non-emergency transports state-wide). We considered several alternatives to collect information on service area. One option would be to utilize Medicare claims data, but this would limit the information to Medicare billed transports only and would also not differentiate between primary and other service areas. Another option would be to allow respondents to write in a description of their primary and other service areas, but this would require converting written responses to a format that can be used for analysis. A third option would be for respondents to report the ZIP codes that constitute their primary and other service area. This approach aligns with the Medicare enrollment process requirement to submit ZIP codes where the ground ambulance organization operates. It would also collect ZIP code-based information on service area that can be easily linked to the ZIP Code to Carrier Locality file [93] that lists each ZIP code and its designation as urban; rural; or super-rural. This file is used by the MACs to determine if the temporary add-on payments should apply to a transport under the AFS. The main limitation of this approach is that ZIP codes would not always align to service areas, because ZIP codes routinely cross town, county, and other boundaries that are likely relevant for defining ground ambulance organizations' service areas.

We are proposing to require ground ambulance organizations that are selected during sampling to identify their primary service area by either: (1) Providing a list of ZIP codes that constitute their primary service area; or (2) selecting a primary service area using pre-populated drop-down menus at the county and municipality level in question 1, section 3 of the data collection instrument. We are also proposing to require respondents to specify whether they have a ''secondary'' service area, which are areas where services are regularly provided under mutual aid, auto-aid, or other agreements in section 3, question 4 of the data collection instrument and if so, to identify the secondary service area using ZIP codes or other regions as described above for the primary service area (section 3, question 5). Mutual aid agreements are joint agreements with neighboring areas in which they can ask each other for assistance. Auto-aid arrangements allow a central dispatch to send the closest ambulance to the scene. We are not proposing to collect information on areas served only in exceptional circumstances, such as areas rarely served under mutual or auto-aid agreements or deployments in response to natural disasters or mass casualty events because we believe reporting on rarely-served areas would involve significant additional burden and would add to instrument complexity without generating data that would be useful for analysis.

The proposed approach distinguishes between primary and secondary service areas. This would allow subsequent questions on the balance of transports in a respondent's primary versus secondary service area and whether average trip time and response times are substantively longer in the secondary versus primary service area. We believe this approach results in data that can be easily analyzed and eliminates the need to ask certain other questions (such as the population and square mileage of the respondent's service area) because this information can be inferred using the reported geographic service area boundaries.

We are proposing to ask the following questions in sections 3 and 4 of the of the data collection instrument, service area and subsequent emergency response time, because the responses to these questions are closely related to the area served by the organization:

- Whether the respondent is the primary emergency ambulance organization for at least one type of service in their primary service area (section 3, question 2).
- Average trip time in primary and secondary service areas (section 3, questions 3 and 6).
- Average response time (for organizations responding to emergency calls for service) for primary and secondary service areas (section 4, questions 1–2).
- Whether the organization is required or incentivized to meet response time targets by contract or other arrangement (for organizations responding to emergency calls for service) (section 4, question 3).

Average trip and response time are necessary to understand how geographic distance between the ground ambulance organization's facilities and patients affects costs. In interviews, ground ambulance organizations recommended the collection of average trip time in addition to mileage because some rural and remote areas may have relatively

[93] Available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AmbulanceFeeSchedule/index.html.*

long average trip times even though mileage may be more modest due to terrain, the quality of roads, and other factors. We believe that collecting information on average response time would allow the analysis of whether communities with different response time expectations and targets have systematically different costs.

(2) Collecting Data on Ground Ambulance Utilization

CMS is required to collect information on the utilization of ground ambulance services. While we could collect information on the volume of ground ambulance services that can be billed to Medicare, this approach would not provide information needed to determine total utilization of ground ambulance organizations. Another option would be to utilize Medicare claims data for estimates of ground ambulance transport volume and separately collect information on services not payable by Medicare (such as responses that did not result in a transport). This approach would also not provide complete information on total transport volume, since other services, such as responses that do not result in a transport, would not be included.

Based on information provided during interviews with ground ambulance organizations, we identified several distinct utilization categories, such as total responses and ground ambulance responses. This is particularly important for fire-based and police-based organizations that may have a significant volume of fire and police responses that do not involve a ground ambulance. The number of responses that did not result in a transport can be separately tallied. Other important utilization categories are ground ambulance transports (that is, responses during which a patient is loaded in a ground ambulance), which can be measured in terms of total transports (that is, all ground ambulance transports regardless of payor) or paid transports (that is, transports for which the ambulance provider or supplier was paid in part or in full). Another utilization category would include information on ambulance providers and suppliers that furnish paramedic intercept services or provide paramedic-level staff in the course of a BLS response where another organization provides the ground ambulance transport.

We believe it is important to collect utilization data related to all services, not just transports, because other services that contribute to the total volume of responses have direct implications for costs. Collecting utilization information related to transports but not other services could omit important cost information. Some utilization measures, such as the ratio of ground ambulance to total responses, may be one basis for allocating certain costs reported elsewhere in the data collection instrument. Another example would be the difference between total and paid transport, as this would provide information on services that were provided to patients but for which no payment is received.

To best capture the full range of utilization data, we are proposing a two-pronged approach to collect data on the volume and the mix of services. First, we are proposing to collect total volume of services for each of the categories listed below in section 5 of the proposed data collection instrument:

- Total responses, including those where a ground ambulance was not deployed (question 1).
- Ground ambulance responses, that is, responses where a ground ambulance was deployed (question 2).
- Ground ambulance responses that did not result in a transport (question 4).
- Ground ambulance transports (question 5).
- Paid ground ambulance transports, that is, ground ambulance transports where the ambulance provider or supplier was paid for a billed amount in part or in full (question 6).
- Standby events (question 7).
- Paramedic intercept services as defined by Medicare (question 8).
- Other situations where paramedic staff contributes to a response where another organization provides the ground ambulance transport (question 9).

The CAMH report describes several cases where an ambulance provider or suppliers' mix of services within one of the utilization categories described above could affect costs or revenue. Most importantly, within billed transports, variation in the mix of specific ground ambulance services (for example, ALS versus BLS services) will affect both costs (because ALS transports require more and more costly inputs) and revenue (because ALS services are generally paid at a higher rate). Ground ambulance organizations with a higher share of responses that are emergency responses may also face higher fixed costs, and that the costs for organizations furnishing larger shares of water ambulance transports are likely different than costs from organizations that do not furnish water ambulance transports. There is a subset of ground ambulance organizations that specialize in non-emergency transports or inter-facility transports, which suggests that this business model may result in different per-transport costs compared to EMS-focused ambulance providers and suppliers.

Second, to account for this significant variation, we are proposing to collect the following information related to service mix:

- The share of responses that were emergency versus non-emergency (section 6 question 1).
- The share of transports that were land versus water (asked only of organizations reporting that they operate water ambulances; section 6 question 2).
- The share of transports by service level (section 6 question 3).
- The share of transports that were inter-facility transports (section 6 question 4).

We are not proposing that respondents report on their mix of services in primary and secondary service areas (as defined above) separately because this would double the length of this section of the data collection instrument and require complex calculations or use of assumptions by respondents that do not separately track services by area. Instead, we are proposing that respondents report the share of total ground ambulance responses that were in a secondary rather than primary service area in a single item (section 5 question 3). We also are not proposing to collect detailed information regarding the mix of services for total transports (versus paid transports) and paid transports (versus total transports) because collecting information on the mix of services for total and paid transports separately would double the reporting burden in this section and because we believe, based on discussions with stakeholders, that it is reasonable to assume that the distribution of transports across categories would be the same.

(3) Collecting Data on Costs

Section 1834(l)(17)(A) of the Act requires CMS to collect cost information from ground ambulance organizations, and we previously discussed our proposal to collect data on a ground ambulance organization's total costs. This part of the proposed rule describes the data in each cost category that we are proposing to collect, as well as alternatives that we considered.

The costs reported separately in the categories of costs we are proposing to collect would sum to an organization's total ground ambulance costs. In addition to ground ambulance costs, we are proposing to ask all respondents in the proposed data collection instrument

to report their total annual costs (that is, operating and capital expenses), inclusive of costs unrelated to ground ambulance services, in a single survey item (section 12, question 1). For ground ambulance organizations that do not have costs from other activities (such as from operating a fire or police department), the reported total costs are a way to cross-check costs reported in individual cost categories throughout the instrument, and we can compare the reported total to the sum of costs across categories. Such a cross-check may also be appropriate for ground ambulance organizations with costs from other activities, as the sum of costs across ground ambulance cost categories should always be less than the ground ambulance organization's reported total costs. We believe that this cross-check will improve data quality and is consistent with existing survey-based data collection tools. This approach will also provide a better understanding of the overall size and scope of ground ambulance organizations, including activities other than providing ground ambulance services. Relatively larger organizations may have lower ground ambulance costs due to due to economies of scale and scope.

To avoid reporting the same costs multiple times, there are instructions and reminders throughout the proposed data collection instrument to avoid double-counting of costs. From a design perspective, we believe it is less important where a particular cost is reported on the survey data collection instrument and more important that the cost is reported only once.

We are making two proposals that have important implications for reporting in all cost sections in the proposed data collection instrument. First, in the case where a sampled organization is part of a broader organization (such as when a single parent company operates different ground ambulance suppliers), we propose to ask the respondents to report an allocated portion of the relevant ground ambulance labor, facilities, vehicle, supply/equipment, and other costs from the broader parent organization level in separate questions in several places in the cost sections of the data collection instrument (section 7.2 question 3, section 8.2 question 2, section 8.3 question 2, section 9.2 question 5, section 9.3 question 6, section 10.2 question 4, and section 11 questions 2 and 5). This scenario is discussed in more detail in the sampling section below. In exploratory analyses, we found that a small share of NPIs were part of broader parent organizations. Due to the rarity of this scenario and the complexity of calculations required, we are proposing to allow the respondent to report an allocated amount directly for these questions using an allocation approach they regularly use for this purpose. We believe that while proposing a specific allocation approach would yield more uniform and transparent data, we believe that these benefits are not worth the additional respondent burden.

Second, we are proposing to include a general instruction stating that in cases where costs are paid by another entity with which the respondent has an ongoing business relationship, the respondent must collect and report these costs to ensure that the data reported reflects all costs relevant to ground ambulance services. Examples include when a municipality pays rent, utilities, or benefits directly for a government or non-profit ambulance organization, or when hospitals provide supplies and/or medications to ground ambulance operations at no cost. During interviews with ground ambulance organizations, we were told that there are many nuanced arrangements that fit this broad scenario. Although we recognize this would be an additional step for some ground ambulance organizations, we are concerned that the lack of reported cost data in one of these major categories could significantly affect calculated total cost.

Because some ambulances, other vehicles, and buildings are donated to ground ambulance organizations, we considered asking respondents to report fair market values for these vehicles and buildings. However, we are aware that while the lack of reported cost data in one of these major categories could affect calculated total cost, it is not always clear what cost is appropriate to report. To avoid the subjectivity and burden involved in asking respondents to report fair market value, we propose instead that respondents report which ambulances, other vehicles, and buildings have been donated, but not an estimate of the fair market value of those donations. We believe fair market values could be imputed using publicly available sources of data to facilitate comparison of data between organizations that have donations and those that do not. For the same reasons, we are also proposing not to collect an estimate of fair market value for donated equipment, supplies, and costs collected in the ''other costs'' section of the instrument. As noted above, for those organizations with costs that were paid by another entity with which the respondent has an ongoing business relationship, such as a ground ambulance organization that is part of or owned by a government entity, respondents would obtain the cost information directly from that entity since we would not consider these to be donated items.

The following sections describe each cost category, alternative for data collection, and our proposals related to each category of costs separately.

(i.) Collecting Data on Staffing and Labor Costs

In interviews with ambulance providers and suppliers, they stated that labor is one the largest contributors to total ground ambulance costs (especially medical staff such as EMTs, paramedics, and medical directors) and that they use a broad mix of labor types and hiring arrangements. There is also significant variation in tracking staffing and labor cost inputs that are needed to calculate costs. We were also informed by ambulance providers and suppliers that data on the number of ground ambulance staff and associated labor costs were often available at one of three levels: The individual employee level; aggregated by category such as EMT-Basic or Medical Director; or aggregated across all staff. Additionally, we were told by ambulance providers and suppliers that ground ambulance organizations typically face challenges in tracking ground ambulance staff and costs by category when staff had multiple ground ambulance responsibilities (for example, EMTs with supervisory responsibilities, EMTs who are also firefighters, etc.).

We agree that labor costs are an important component of total costs and believe that it is necessary to collect information on both staffing levels, that is, the quantity of labor used, and the labor costs resulting from these labor inputs. Without information on staffing levels, we would not be able to gauge whether differences in labor costs are due to compensation or different levels of staffing. Collecting information on staffing levels also allows the use of imputed labor rates from other sources (such as the Bureau of Labor Statistics). We also acknowledge the practical need to balance the burden involved in reporting extremely detailed staffing and labor costs information against the usefulness of detailed data for explaining variation in ground ambulance costs. Therefore, we are proposing to collect information in the proposed data collection instrument on the number of staff and labor costs for several detailed categories of response staff (for example, EMT-basic, EMT-intermediate, and EMT-paramedic) (section 7.1), and for a single category for paid administrative and facilities

staff (for example, executives, billing staff, and maintenance staff) (section 7.2), and (c) separately for medical directors (section 7.2). We believe this approach involves less respondent burden compared to reporting on each individual staff member. If more detailed categories were used for reporting staffing levels and costs, we believe the burden involved in assigning paid administrative and facilities staff with multiple roles to individual categories or apportioning their labor and costs to separate categories would increase.

The main limitation of the proposed approach is that we would not collect detailed information on specific paid administration and facilities labor categories. Therefore, we are also proposing to collect some information that would help explain variation in labor costs by asking whether the ground ambulance organization has some staff in more specific paid administration and facilities categories such as billing, dispatch, and maintenance staff (section 7, question 1). This question also serves as a screening question to determine which response options appear to the respondent in several other questions in this section of the proposed data collection instrument. We also propose to ask for information on why individual labor categories are not used (section 7, question 1) and if there is at least one individual with 20 hours a week or more of effort devoted to specific activities such as training and quality assurance (section 7.2, question 2).

Reporting Staffing Levels

In reporting staffing levels in the proposed data collection instrument, we considered several approaches. One approach we considered was asking the respondent to report only the number of staff (that is, counts of people). Under this approach, a part-time employee would count as ''1'' to the number of staff even if they worked a small number of hours per week. We believe this approach would result in less accurate reporting of labor inputs, especially from organizations relying heavily on part-time staff or staff with responsibilities unrelated to ground ambulance services. We also considered allowing respondents to report full-time-equivalent (FTE) staff on a 40-hour per week basis, but ground ambulance organizations informed us that reporting FTEs would be burdensome. As a third approach, we considered asking respondents to report ground ambulance staffing levels in terms of hours over a reporting year. Reporting labor hours over the entire reporting year allows for more accurate reporting of staff working part-time and may involve less burden for respondents that already tally annual labor hours (for example, via payroll records), but would likely be difficult for those who do not already track labor hours in this manner. As a fourth approach, we considered asking respondents to report ground ambulance staffing levels in terms of hours worked during a typical week. Reporting staffing levels in terms of hours worked either over a reporting year or during a typical week allows detailed accounting of part-time staff and staff with ground ambulance and other responsibilities and involves fewer calculations and adjustments than reporting FTEs. Reporting in terms of hours over a typical week has the additional advantage of simplifying reporting for staff that start or stop work during the 12-month reporting period. The main limitation of reporting staffing levels in terms of hours over a typical week is that the week that the respondent selects for reporting may not be generalizable to other weeks in the reporting period.

In the interest of minimizing reporting burden, we are proposing to collect information on the number of staff in terms of hours worked over a typical week (sections 7.1 and 7.2). The instructions in the proposed data collection instrument ask respondents to ''select a week for reporting that is typical, in terms of seasonality, in the volume of services that you offer (if any) and staffing levels during the reporting year.''

Scope of Reported Labor Costs

For the purposes of collecting information on labor costs, we are proposing to define labor costs to include compensation, benefits (for example, healthcare, paid time off, retirement contributions, etc.), stipends, overtime pay, and all other compensation to staff. We refer to these costs as fully-burdened costs. Some ambulance providers and suppliers track compensation but not benefits because another entity, such as a municipality, pays for benefits, and that the ability of these ambulance providers and suppliers to report fully burdened costs may be limited. Despite this limitation, due to the importance of labor costs as a component of total ground ambulance costs, we believe that information on fully burdened costs (sections 7.1 and 7.2) must be reported so that all relevant ground ambulance transport costs are collected. Ambulance providers and suppliers selected to report data may need to implement new tracking systems or request information from other entities (such as municipalities) to be able to report fully-burdened labor costs.

Volunteer Labor

Ground ambulance organizations have also informed CMS that a significant share of ambulance providers and suppliers rely in part or entirely on volunteer labor and that the systems and data available to track the number of volunteers and the time that they devote to ground ambulance services varies. We are proposing to collect information on the total number of volunteers and the total volunteer hours in a typical week using the same EMT/response staff and administrative and facilities staff categories used elsewhere in the proposed data collection instrument (section 7.3, questions 1–5). Although some suggested that assigning a value to volunteer labor hours may be important, the proposed data collection instrument collects information only on the amount of volunteer labor (measured in hours in a typical week) and not a market value for that labor. We believe reported hours can be converted, if necessary, to market rates using data from other sources. We are also proposing to collect the total realized costs associated with volunteer labor such as stipends, honorariums, and other benefits to ensure all costs associated with ground ambulance transport are collected (section 7.3, question 6).

Allocation and Reporting Staff With Other Non-Ground Ambulance Responsibilities

Since firefighter/EMTs are common in many ambulance suppliers, we are proposing to ask respondents that share costs with a fire or police department to report total hours in a typical week for paid EMT/response staff with fire/police duties only (section 7.1). We believe this information can be used to subtract a portion of associated labor costs when calculating ground ambulance labor costs. We believe our proposed approach is more consistent and involves less burden than asking respondents to perform their own allocation calculations necessary to report only the hours or full-time equivalents related to ground ambulance services.

As already noted, many ground ambulance organizations have staff with responsibilities beyond ground ambulance and fire/police response. To account for these scenarios, we are proposing to ask respondents to report the total hours in a typical week unrelated to ground ambulance or fire/police response duties (which are

addressed separately as described in section 7.1), as the costs associated with this labor can be subtracted by those analyzing the data when calculating ground ambulance labor costs. We believe this proposed approach provides both transparency and consistency in the data with minimal burden, and may avoid scenarios where all of the costs associated with staff with limited ground ambulance responsibilities contribute to total ground ambulance costs.

(ii.) Collecting Data on Facility Costs

Facility costs may include rent, mortgage payments, depreciation, property taxes, utilities, insurance, and maintenance, and the associated costs vary widely across ambulance providers and suppliers. Some ground ambulance organizations own facilities while for others, rent, mortgage, or leasing is an important component of total operational costs. Some ground ambulance organizations share facilities with other operations (such as fire and rescue services), and individual ground ambulance organizations often operate out of several facilities of different types, sizes, and share of space related to ground ambulance operations.

We considered proposing to require respondents to report facilities costs aggregated across all facilities. We believe this approach would minimize burden on the respondent by eliminating the need to break costs down by facility; however, it may also increase the risk for inconsistencies in how respondents report total facilities costs. Under this approach, respondents whose ground ambulance organizations share operational costs with a fire department or other entity would need to calculate and report an estimate of facilities costs that was relevant only to ground ambulance services.

We also considered proposing to require respondents to report all costs on a per-facility basis. We believe this approach would allow the most flexibility in reporting complex facility arrangements from ground ambulance organizations operating out of multiple facilities. However, this approach may also involve more burden, particularly for larger organizations, to report costs on a facility-by-facility basis, and many organizations do not track costs such as maintenance or utilities on a per-facility basis.

We are proposing a hybrid approach involving both per-facility and aggregate reporting of different information. First, respondents report the total number of facilities (section 8., questions 1–2) and then indicate for each facility whether they paid rent, mortgage, or neither during the reporting period, total square footage, and share of square footage related to ground ambulance services (section 8.1, question 3). Second, respondents report their per-facility rent, mortgage, or annual depreciation (section 8.2). Third, respondents report facilities-related insurance, maintenance, utilities, and property taxes aggregated across all facilities (section 8.3).

We believe this proposed approach allows for the collection of the information needed to calculate a total facilities cost related to ground ambulance services while avoiding a burden on respondents to calculate allocated facility costs. Total insurance, maintenance, utility, and property tax costs can be allocated using reported square footage and shares of square footage related to ground ambulance services. The proposed approach requires respondents to provide both the square footage of each facility, and the share of square footage for the facility that is related to ground ambulance operations. We expect that some ground ambulance organizations would have this information available and others would need to collect this square footage information to report along with facilities costs, but do not believe this information would be difficult to collect.

(iii.) Collecting Data on Vehicle Costs

Section 1834(l)(17)(A)(ii) of the Act requires CMS to collect information on ''the utilization of capital equipment and ambulance capacity.'' We are proposing to collect information on the number of ground ambulances and other vehicles related to providing ground ambulance services, as well as the costs associated with these vehicles to meet these requirements.

Ambulance providers and suppliers operate ground ambulances, as well as other vehicles to support their ground ambulance operation, and some may have a variety of other vehicles that are associated with ground ambulance responses. For example, a fire truck staffed with fire personnel cross-trained as EMTs may respond with a ground ambulance to an emergency call. Other vehicles might be used in responses and may be referred to as a non-transporting EMS vehicle, a quick response vehicle, a fly-car, or an SUV that carries a paramedic to meet a BLS ambulance from another organization during the course of a response.

We considered two alternatives for collecting vehicle costs. One alternative would be to only include the costs for ambulances and exclude other certain non-ambulance response vehicles from reported costs. We believe that excluding other certain non-ambulance response vehicles from reported costs could potentially result in underreporting of total ground ambulance costs, particularly among those providers or suppliers that rely heavily on these vehicles to support their ground ambulance services. Another alternative would be to include the costs of all vehicles that are used as part of ambulance services, such as quick response vehicles that are used to supplement ambulances.

For all vehicles, vehicle costs can be reported either in aggregate or on a per-vehicle basis. We believe that while reporting vehicle costs in aggregate may involve less burden for some respondents, those respondents that do not track aggregated costs would still require a tool to enter information on per-vehicle basis. Furthermore, we believe that aggregated costs for vehicles other than ground ambulances offer analysts with fewer alternatives to allocate a share of vehicle costs to ground ambulance services.

We are proposing to collect data on vehicle costs in the proposed data collection instrument in two parts: Ground ambulance vehicles (section 9.1); and all other vehicles related to ground ambulance operations (section 9.2). For ground ambulance vehicles, we are proposing to collect information on the number of vehicles, total miles traveled, and per-vehicle information on annual depreciated value (and remounting costs if applicable) for owned vehicles, and annual lease payments for rented vehicles (section 9.1, questions 1–4). We considered proposing to collect the necessary information to calculate annual depreciated value using a standardized approach. However, we are proposing to allow respondents with owned vehicles to use their own accounting approach to calculate annual depreciated value per vehicle. We believe that allowing flexibility for respondents to use their standard approach for this calculation would result in more accurate data and less reporting burden.

We are also proposing to use a similar approach to collect per-vehicle information for owned and leased vehicles of any other type that contribute to ground ambulance operations, including fire trucks, quick response vehicles, all-terrain vehicles, etc. (section 9.2, questions 1–5). The proposed instructions in section 9.2 of the data collection instrument specify that reported vehicles must support ground ambulance services. We are proposing to collect the type of each vehicle in broad categories in addition

to the annual depreciated value or lease payment amount for each vehicle.

In addition to the above costs, we also are proposing to collect aggregate costs associated with licensing, registration, maintenance, fuel, insurance costs for all vehicles combined (ambulance and non-ambulance) (section 9.3, questions 1–5). We believe that these costs are often aggregated within providers' and suppliers' records and that reporting in aggregate form may reduce respondent burden with minimum risk for reporting error.

When estimating total ground ambulance vehicle costs for ground ambulance organizations that share operational costs with fire and police response or other non-ground ambulance activities, a share of vehicle costs reported via the instrument will need to be allocated as vehicle costs related to ground ambulance services. One alternative we considered to do this was simply to ask respondents about the share of costs associated with ground ambulance services as we thought this would be the least burdensome approach; however, we believe data collected in this manner would not allow for estimation of costs associated with non-ground ambulance vehicles that support ambulance services. We considered another alternative where (1) the ratio of ground ambulance to total responses would be used to allocate costs associated with non-ambulance vehicles, (2) the total number of vehicles would be used to allocate aggregate costs associated with licensing, registration, maintenance, and fuel costs, and (3) depreciated annual costs and/or lease payment amounts would be used to allocate insurance costs. The main limitation of this approach is that maintenance and fuel costs could vary significantly across vehicle categories. For example, maintenance and fuel costs may be significantly different for ground ambulance than for other types of vehicles. As a result, we are proposing a modification of this alternative where we also ask respondents to list percent of total maintenance and fuel costs attributable to each type of vehicle (that is, ground ambulances, fire trucks, land rescue vehicles, water rescue vehicle, other vehicles that respond to emergencies such as quick response vehicles, and other vehicles; section 9.3, questions 4 and 5). We propose to also ask respondents to report total mileage for ground ambulance (land and water separately) and total mileage for other vehicles related to ground ambulance responses (land and water separately) as a potential alternative means to allocate fuel and maintenance costs.

(iv.) Collecting Data on Equipment and Supply Costs

In our interviews with ground ambulance organizations, we were told that not all ground ambulance organizations would be able to report detailed item-by-item equipment and supply information, and that some organizations have far more sophisticated inventory tracking systems than others that would allow them to report detailed information within a category.

We considered alternative approaches related to reporting equipment and supply costs that varied primarily on the level of detail for reporting. We considered extremely detailed data reporting as it would be potentially useful to identify variability in costs across organizations. However, as noted above, many ground ambulance organizations may not keep detailed records of all their individual equipment and supply costs. Taking those factors into account, we are proposing to request total costs in a small number of equipment and supply categories rather than itemized information for all equipment and supply categories (section 10). These would include:

- Capital medical equipment.
- Medications.
- All other medical equipment, supplies, and consumables.
- Capital non-medical equipment.
- Uniforms.
- All other non-medical equipment and supplies.

We also considered whether to have respondents report both medical and non-medical equipment and supplies together. We believe that the majority of medical supplies are more likely to be related to ground ambulance services than non-medical supplies for organizations with shared services, and therefore, we are proposing to collect this information separately.

Reporting of Capital Versus Non-Capital Equipment

To meet the requirement in section 1834(l)(17)(A)(ii) of the Act to collect information to facilitate the analysis of ''the utilization of capital equipment,'' we are proposing to separately collect information on capital equipment expenses (rather than equipment-related operating expenses). Capital equipment (both medical and non-medical) yield utility over time, which can vary depending on the expected service life of the specific good. In addition to the cost of purchasing or leasing durable goods equipment, depreciation and maintenance costs must be considered in the total cost calculations. Since ground ambulance organizations often track capital equipment on an itemized level, separating items of significantly different age and cost is necessary to calculate depreciation. Therefore, to minimize burden by aligning reporting with the accounting approaches used by respondents, we are proposing to ask for capital (section 10.1, question 1; section 10.2, question 1) and non-capital costs (section 10.1, questions 2–3; section 10.2, questions 2–3) separately so that respondents can report annual depreciated costs for capital equipment and total annual costs otherwise. We also are proposing to allow respondents to report annual maintenance and service costs for capital equipment because ground ambulance organizations have stated during interviews that these costs can be significant compared to purchase costs or annual depreciated costs. Finally, we are proposing to allow respondents to use their own standard accounting practice to categorize equipment as capital or non-capital. While we believe it would be possible to ask respondents to use a standard approach, we believe this would require respondents with another practice to recalculate annual depreciated cost and potentially increase respondent burden and reporting errors.

Allocation of Shared Costs

During interviews with ground ambulance organizations, it was noted that although the vast majority of equipment and supplies are for ground ambulance services, some costs are shared with hospitals or clinics. We believe separate reporting on medical and non-medical equipment and supplies would facilitate allocation (section 10.1, versus section 10.2). For organizations that indicate the use of shared services, we are proposing to ask separately what share of medical and non-medical equipment and supply costs are related to ground ambulance services (section 10.1, questions 1c, 2a; section 10.2, questions 1c, 2a, 3a). The share of non-medical equipment and supplies used for ambulance services may vary for respondents with operations beyond ambulance services. While other allocation methods (such as the share of responses that are ground ambulance responses) may be appropriate to allocate equipment and supply costs, asking respondents to provide their estimate of the share of equipment and supply costs related to ambulance services reduces assumptions made about how best to apply allocation across the various equipment and supplies reported.

(v.) Collecting Data on Other Costs

In addition to core costs for ambulance providers and suppliers that are associated with labor, vehicles, facilities, and equipment or supplies, ground ambulance organizations have indicated that these entities incur costs associated with contracted services (for example, for billing, vehicle maintenance, accounting, dispatch or call center services, facilities maintenance, and IT support), as well as other miscellaneous costs (for example, administrative expenses, fees and taxes) to support ground ambulance services.

We considered including contracted services as part of the labor section, since many of the contracted services related to costs that would otherwise be labor-related if the tasks were performed by employed staff. However, we were concerned that ground ambulance organizations might report this information in multiple instrument sections (for example, both labor and miscellaneous costs). As a result, we separated contracted services into their own categories. While we considered allowing respondents to report in the aggregate any other miscellaneous costs associated with ground ambulance services because we believed this approach may be less burdensome for organizations that track miscellaneous costs in aggregate, we believe this would introduce a large amount of reporting bias and inconsistency in reporting across organizations. Our proposals related to reporting contracted services and miscellaneous costs are described below.

Reporting Contracted Services

For contracted services, we are proposing that respondents indicate whether their organization utilizes contracted services to support a variety of tasks (section 11, question 1), the associated total annual cost for these services, and the percentage of costs attributable to ground ambulance services. The proposed data collection instrument would provide instructions to ensure that respondents do not report on contracted costs multiple times.

Reporting of Miscellaneous Costs

For other miscellaneous costs not otherwise captured in prior sections of the data collection instrument, we are proposing that respondents be able to report additional costs first using an extensive list of other potential cost categories (section 11, question 2) and then use write-in fields if necessary. Providing a pre-populated check list would help ensure the consistency and completeness of reporting across respondents.

Allocation of Miscellaneous Shared Costs

Information from ground ambulance organizations indicates that there are a number of miscellaneous costs associated with the overall operation of organizations that are shared across services. To account for these shared costs, we are proposing that respondents report an allocation factor for each contracted service, (section 11, question 1), as well as for each reported miscellaneous expense (section 11, questions 3–4) as described in the data collection instrument. We considered the alternative of asking for an overall share of miscellaneous costs associated with ground ambulance services or utilizing information gathered about the share of ground ambulance responses versus total responses to determine an overall allocation factor. While this would present less burden on respondents, the share of miscellaneous costs and share of contracted services varies widely across organizations with shared services.

d. Proposed Data Collection on Revenue

Section 1834(l)(17)(A) of the Act requires the development of a data collection system to collect revenue information for ground ambulance provider and suppliers. Payments from Medicare and other health care payers are important components of total revenue for some ambulance providers and suppliers. Most ambulance providers and suppliers also have other sources of revenue in addition to payments for billed services. Based on review of existing literature and discussions with ground ambulance organizations, these primary sources of revenue include, but are not limited to: Patient out-of-pocket payments; direct public financing of fire, EMS, or other agencies; subsidies, grants, and other revenue from local, state, or federal government sources; revenue from providing services under contract; and fundraising and donations. We view total revenue as the sum of payments from health care payers and all other sources of revenue, including those listed above.

While collecting information on total revenue is essential to understanding variations in how EMS services are financed across the country, this information is not collected by Medicare or by any other entity of which we are aware. Similar to other sections of the data collection instrument, we also considered what level of data to request in this section. We are proposing to ask for total revenue in aggregate (section 13, question 1) and total revenue from paid ground ambulance transports for Medicare and, if possible, broken down by payer category for other payers (section 13, questions 2–5). We are proposing this level of detail because we believe understanding payer mix would be helpful to assess Medicare's contributions to total revenue. Based on information provided by ambulance providers and suppliers, there is variation in how patient-paid amounts were recorded in ambulance billing systems. We are proposing to ask respondents whether revenue by payer includes corresponding patient cost sharing or whether cost-sharing amounts are included in a self-pay category. For other revenue (for example, contracts from facilities and membership fees (such as those associated with community members that enroll in ambulance clubs), we are proposing to request information on additional revenue in predetermined categories and using write-in fields if necessary (section 13, question 5).

Allocation of Shared Revenues. Ground ambulance organizations vary widely in the types of other revenue sources (as noted in section 13, question 6) they receive and their share of allocated costs. For this reason, we are proposing to have respondents report the share of revenue for each category that is attributable to ground ambulance services (section 13). Similar to miscellaneous costs, we considered the alternative of asking for an overall share of other revenue sources associated with ground ambulance services or utilizing information gathered about the share of ground ambulance responses versus total responses to determine an overall allocation factor. While this would present less burden on respondents, we do not believe it would not adequately capture the revenue only associated with ground ambulance services, especially for organization with shared services.

To collect information on uncompensated care, including charity care and bad debt, we are proposing to collect information on both total and paid transports. These two measures of volume can be used to provide insight into the share of transports that are not paid. The proposed data collection instrument broadly collects information on total costs (including costs incurred in furnishing services that are ultimately paid and not paid) and total transports (again including transports that are both paid and not paid). The collected data could be used to estimate per-transport costs that can be estimated by dividing total costs by total transports, so we do

not believe it is necessary to directly collect information on uncompensated care in the revenue section of the data collection instrument.

We invite comments regarding all the proposals for data collection described in this section, including our proposals on the format, scope, elements (characteristics, utilization, and costs), collection of equipment and supply costs, and other costs.

5. Proposals for Sampling

Section 1834(l)(17)(B)(i) of the Act requires that CMS identify the ground ambulance providers and suppliers organizations that would be required to submit information under the data collection system, including the representative sample. Section 1834(l)(17)(B)(ii)(II) of the Act requires the representative sample must be representative of the different types of providers and suppliers of ground ambulance services (such as those providers and suppliers that are part of an emergency service or part of a government organization) and the geographic locations in which ground ambulance services are furnished (such as urban, rural, and low population density areas). Under section 1834(l)(17)(B)(ii)(III) of the Act, the Secretary cannot include an individual ambulance provider and supplier in 2 consecutive years, to the extent practicable. In addition to meeting the requirements set forth in the statute, including developing a representative sample, our proposals around sampling aim to balance our need for statistical precision with reporting burden. Our proposals to meet these statutory requirements are described below, and were developed with the intention of obtaining statistical precision with the least amount of reporting burden.

Eligible Organizations. A sampling frame drawing on all ground ambulance organizations in the United States and its territories that provide ground ambulance services (that is, not just those enrolled in Medicare or billing Medicare in a given year) may be of interest conceptually, but we have not identified a data source listing all ambulance providers and suppliers that could be used as the source for a broader sampling frame. Since sections 1834(l)(17)(A) of the Act requires the Secretary to collect cost, revenue, and utilization information from providers of services and suppliers of ground ambulance services (which are Medicare specific terms with specific meaning) with the purpose of determining the adequacy of payment rates and section 1834(l)(17)(D) of the Act requires the Secretary to reduce payments to ground ambulance organizations that do not sufficiently report, we believe that the intent of the statute is to collect information under the data collection system from ground ambulance organizations that bill Medicare. Therefore, we are proposing to sample ground ambulance organizations that are enrolled in Medicare and that billed for at least one Medicare ambulance transport in the most recent year for which we have a full year of claims data prior to sampling. Since ground ambulance organizations have a full year to submit their claims to Medicare after the date of service, claims data for a calendar year are generally not considered complete until the end of the following calendar year. As a result, we would use 2017 Medicare claims and enrollment data to determine the sample for the 2020 data collection period because 2018 Medicare claims data could not be considered complete in late 2019 when the sample for the 2020 data collection period would be selected.

Sampling at the NPI level: Section 1834(l)(17) of the Act prohibits, to the extent practicable, sampling the same ambulance provider or supplier in 2 consecutive years. Although we considered sampling at a broader parent organization level for those that bill Medicare under more than one NPI, we found it was difficult to tease out of the Medicare enrollment data all the complexities of the business relationships and identify all NPIs that may be affiliated with the same parent organization. Therefore, we are proposing to select the sample at the NPI level and to include the specific NPI selected to report information. Furthermore, we propose to collect the name of the ground ambulance organization and the name and contact information of the person responsible for completing the data collection instrument for the purposes of confirming that the data submitted aligns with the intended NPI (section 2, questions 3 and 4).

Organizations using volunteer labor: Some stakeholders have suggested that ground ambulance organizations relying on volunteer labor above a certain threshold (for example, more than 10 percent of volunteer labor) should be exempt from sampling. Others have suggested that ground ambulance organizations using volunteer labor should not be excluded because those organizations that use volunteer labor are likely to be smaller and that a large share of ambulance suppliers (particularly those in rural and super rural areas) would be exempt from sampling, and therefore, our sample would not be representative as required by section 1834(l)(17)(B)(ii) of the Act. We acknowledge that analysis of the data may require additional steps to combine data submitted from ground ambulance organzations that do and do not rely on volunteers since reported labor costs would be significantly lower for ground ambulance organizations that use volunteer labor compared to those that do not. Ground ambulance organizations that use volunteer labor might have some costs related to their volunteer labor, such as stipends, but may not have others, such as an hourly wage. Therefore, we are proposing to collect information on paid and unpaid volunteer hours during a typical week using the same EMT/response staff categories used elsewhere in the data collection instrument. We believe reported hours can be converted to market rates using data from other sources, such as the Bureau of Labor Statistics' wage data. Ambulance providers and supplies that rely on volunteer labor report that it is becoming increasingly difficult to find volunteers and they are having to hire paid staff in their place, especially for the more costly labor categories, such as paramedics. Therefore, we are proposing that ambulance providers and suppliers that use any amount of volunteer labor be included in sampling. We invite comments as to whether organanizations that rely on volunteer labor should be exempt from sampling.

Sampling file. The organizational characteristics being proposed for the specific strata (volume of Medicare billed transports, service area population density, ownership, provider versus supplier status, and the share of transports that are non-emergency) can be obtained from available Medicare data. We are proposing to develop sampling files using the most recent full year of data available. For the first sample notified in 2019 and reporting in 2020, we are proposing to use 2017 claims and enrollment data. Another alternative we considered was using 2018 data, however we are not proposing this because such data may not be complete for all 2018 service dates at the time the sample for the initial year of data reporting is selected. We invite comments on our proposal to use the most recent full year of available Medicare data for sampling purposes, as described above.

Implications of historical sampling files. We expect there may be instances in which some ground ambulance organizations that were in operation at the time they were selected for the sample may cease operations by the

time data reporting begins. Similarily, we expect that some new ground ambulance organizations would start operating between the time the sample was pulled and when reporting begins. Since we propose to collect a full 12 continous months of data, these organizations would not have the data we are proposing to collect. Therefore, we are proposing that ground ambulance providers and suppliers organizations selected for the sample that were not in business for the full 12 continuous months of the data collection period would be exempt from reporting for the applicable data collection period; however, for newer ground ambulance organizations, they would be eligible for sampling and reporting in future years when they did have a full continuous 12 months of data.

We believe the above scenerios are inevitable given the significant amount of time between sampling and data reporting and invite comments on our proposed approach regarding exempting ground ambulance organizations who do not have a full 12-month continuous period of data.

Sampling rate: We are also proposing that 25 percent of ground ambulance organizations be sampled from all strata (as described below) in each of the first 4 years of reporting without replacement; that is, if an organization is sampled in Year 1, it would not be eligible for sampling again in the subsequent 3 years of data collection. We are proposing a 25 percent sampling rate because if a lower sampling rate is used, estimates of cost, revenue, and utilization from the data collected via the instrument for subgroups of ground ambulance suppliers would be of inadequate precision as described in the following section. Furthermore, our analyses illustrated that using 50 percent sampling rate yielded only marginal gains in precision over a corresponding strategy that involves sampling NPIs at a 25 percent rate while doubling the response burden. In our view, these gains are not sufficient to merit the increased burden that would be imposed by implementing a higher sampling rate. Our proposal was informed by analyses regarding the alternative sampling rates in Chapter 7 of the CAMH report. We invite comments on the proposed sampling rate of 25 percent each year.

We are also proposing to notify ground ambulance organizations that have been selected for the representative sample by listing such ground ambulance organizations on the CMS website at *https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html* and providing written notification to each selected ground ambulance organization via email or U.S. mail. Notification on the CMS website would be provided at least 30 days prior to the time the selected ambulance organization would be required to begin collecting data. For purposes of CY 2020, we will post such information on the website when the CY 2020 PFS final rule is issued. A discussion of the proposed collection and reporting requirements can be found in the next section. We are also proposing to codify the representative sample requirements in § 414.626(c).

Approach for Sampling: We considered several alternatives for developing a stratified sampling approach to facilitate data collection from specific types of ground ambulance oragnizations. Section 1834(l)(17)(B)(ii)(II) of the Act requires that the sample be representative of the different types of providers and suppliers of ground ambulance services, such as those providers and suppliers that are part of an emergency service or part of a government organization and the geographic locations in which ground ambulance services are funished (such as urban, rural, and low population density areas). One approach we considered was to sample ground ambulance organizations in proportion to their volume of Medicare-billed ground ambulance services. Under this approach, organizations with more billed Medicare ground ambulance transports would be more likely to be sampled than organizations with fewer billed Medicare ground ambulance transports. The analysis of our 2016 data described in the CAMH report shows that a small number of ground ambulance organizations provided a large share of total Medicare transports. Specifically, the top 10 percent of ground ambulance organizations by volume accounted for nearly 70 percent of total Medicare ground ambulance transports. In contrast, the bottom 50 percent of ambulance providers and suppliers by volume accounted for only 3 percent of total Medicare ground ambulance transports. Under this approach, the ambulance providers and suppliers in the top 10 percent by volume would therefore be much more likely to be sampled compared to those in the bottom 50 percent by volume. While this approach would efficiently collect data on the majority of Medicare ground ambulance transports, we do not believe that this approach would comport with the requirements in section 1834(l)(17)(B)(ii)(II) of the Act to develop a representative sample of ground ambulance organizations based on the characteristics (such as ownership and geographic location) of ambulance providers and suppliers. Therefore, we do not believe that data we would be collecting using this approach would meet the requirements in section 1834(l)(17)(B)(ii)(II) of the Act.

Other alternatives for a sampling methodology include simple and stratified random samples of ground ambulance organizations. A simple random sample would include a fixed share of all ground ambulance organizations, regardless of any differences in characteristics, in each year's sample. Unlike sampling in proportion to Medicare-billed ground ambulance services, a simple random sample by definition provides a representative sample. A stratified random sample first stratifies all ground ambulance organizations based on selected characteristics and then a sample is seleced at random from the strata. The rate at which these organizations are sampled would be the same for organizations in the same stratum; however, the sampling rate may vary across strata. So long as the sampling rate is not zero within any stratum and so long as appropriate weighting adjustments are used, the sample can be considered representative.

Stratified random sampling has several advantages in that it is easy to implement and it meets the requirement that the sample be representative. It also can be used to target sampling of ambulance organziations with specific characteristics, such as ownership and geographic location, to specifically meet the requirements in section 1834(l)(17)(B)(ii)(II) of the Act that the sample be representative of the different types of providers and suppliers of ground ambulance services, such as those providers and suppliers that are part of an emergency service or part of a government organziation and the geographic locations in which ground ambulance services are funished (such as urban, rural, and low population density areas). It is also possible to oversample from less prevelant strata using this approach in order to facilitate more precise estimates for certain groups or comparisons between subgroups. Furthermore, unlike a simple random sample, the flexibility to vary sampling rates across strata allows the ability to account for anticipated and unanticipated rates of nonresponse.

We believe that use of a stratified random sample would comport with the statutory requirements. Therefore, we are proposing a stratified random

sample approach. Specifically, we are proposing to sample from each strata at the same rate (25 percent, as described above). We believe that data collected from a sample of this type can be adjusted via statistical weighting to be representative of all ground ambulance organizations billing Medicare for ground ambulance services even if response rates vary across the characteristics used for stratification.

For the purposes of estimating the number of responses from the sampled ground ambulance organizations, we assumed that all ground ambulance providers and suppliers organizations sampled will report, because: (1) Reporting is a requirement; (2) there is a 10 percent payment reduction for failure to sufficiently report; and (3) we believe every ground ambulance organization would want its data accounted for in the evaluation of the extent to which reported costs relate to payment rates.

Variables for Stratification: Section 1834(l)(17)(B)(ii)(II) of the Act requires that the sample be representative of the different types of providers and suppliers of ground ambulance services, such as those providers and suppliers that are part of an emergency service or part of a government organization, and the geographic locations in which ground ambulance services are funished (such as urban, rural, and low population density areas). As discussed above, we are proposing a stratified sampling approach under which we would first sample based on a set of characterícistcs of ground ambulance organizations that are described below (that is, strata) and then assess response rates based on those characteristics. Based on our analysis of information provided by ground ambulance organizations, we believe there are several important characteristics that vary among ground ambulance organizations that have implications for their costs and revenues and that could serve as strata for the purposes of sampling:

- *Provider versus supplier status.* The GAO (2012) [94] and HHS (2015) [95] reports found much higher per-transport costs for ambulance providers than those of ambulance suppliers. This suggests that the ground ambulance cost structures for ambulance providers and suppliers are fundamentally different.
- *Service area population density.* Ground ambulance organizations operate in urban, rural, and super-rural settings. As described in the CAMH report, rural and super-rural organizations tend to be smaller, transport patients at greater distances, are more likely to be government owned, and rely more heavily on volunteer labor. The population density of the area in which a ground ambulance organization is operating is expected to affect costs and revenues in a number of ways. Organizations serving rural and super-rural areas generally are likely to face lower demand for services, and thus, deliver a smaller number of transports. In addition, in rural and super-rural areas the average distance traveled per transport tends to be greater. Payment rates will also differentially impact revenue by population density because the Medicare AFS accounts for mileage and, in addition, rural and super-rural providers and suppliers receive higher temporary add-on payments.
- *Volume of transports.* If there are economies of scale, organizations providing a larger volume of services typically would face lower per-transport costs. Our analysis found that the volume distribution is highly skewed. In other words, the majority of ground ambulance organizations have a low volume of transports, but there are a small number of organizations with a very high volume of transports. Suppliers providing a large volume of transports are more likely to be for-profit organizations.
- *Ownership.* For-profit (non-government), non-profit (non-government), and government ground ambulance organizations have different business models and mixes of services, leading to different costs. Conceptually, for-profit organizations maximize profit and operate only in markets and service lines with positive margins. Non-profit and government ground ambulance organizations more broadly provide emergency service to communities and may be organized and operated in a way that does not maximize profits. The 2012 GAO report found ground ambulance organizations with more limited government support are more likely to have incentives to keep costs lower. They found that for each 2 percent decline in the average length of government subsidy there was a 2 percent decline in the average cost per transport. As a result, we expect that costs will differ based on ownership.
- *Types of services provided.* One key distinction in the types of services provided is between emergency transports and non-emergency (for example, scheduled or inter-facility) transports. For-profit suppliers are more likely than others to specialize in non-emergency scheduled transports. Another key distinction is between the level of service provided (for example BLS versus ALS).
- *Staffing.* The level of staff training (for example, EMTs versus paramedics) and the number of staff deployed is driven in part by the type and volume of calls, the availability and proximity of the nearest providers, and resources available in that community. Some suppliers use static staffing models that use set staff schedules, whereas others use a dynamic, or flexible, staffing model that calls upon staff if there is a surge in demand.
- *Use of volunteer labor.* Volunteer labor tends to be more common among small, government-based ambulance suppliers operating in rural and super-rural settings.
- *Response times.* In many cases, response times are related to the population density of the area in which they operate, with rural areas having response times more than double those of urban areas. Rural and super-rural ambulance providers and suppliers generally travel greater distances to get to patients and transport them to a hospital or the nearest appropriate facility. Variation in response times within urban areas might also occur, for example if there is significant emergency department crowding, or in extreme cases diversion that requires the ambulance to travel further to another hospital or wait with the patient until a bed is available. This extra time affects the availability of the ambulance and the staff for subsequent trips, potentially increasing response times.

As previously discussed, we are not aware of any existing data source that lists all ground ambulance organzations or one that encompasses all the characteristics that impact costs and revenues described above. Medicare claims and enrollment data is the only source of data for which we are aware that has all the providers and suppliers that bill Medicare in a given year. Several of the organizational characteristics we discuss above (including provider versus supplier status, ownership, service area population density, Medicare billed transport volume, and type of services provided) are available from Medicare data while others, such as the use of volunteer labor, staffing model, and response times are not.

We are proposing to stratify the sample based on provider versus supplier status, ownership (for-profit, non-profit, and government), service area population density (transports originating in primarily urban, rural,

[94] This report is available at *https://www.gao.gov/assets/650/649018.pdf.*

[95] This report is available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AmbulanceFeeSchedule/Downloads/Report-To-Congress-September-2015.pdf.*

and super rural zip codes), and Medicare billed transport volume categories. Based on our analysis of the number and distribution of ground ambulance organizations' transports in 2016, we are proposing volume categories of 1 to 200, 201 to 800, 801 to 2,500, and 2,501 or more paid Medicare transports. The proposed volume categories aim to divide ground ambulance organizations into roughly similar-sized groups, while separating ground ambulance organizations with very high volume (that is, greater than 2,500 Medicare transports per year) into a separate category. We would expect that these highest-volume ground ambulance organizations may face different costs than lower-volume organizations due to economies of scale.

We are proposing to focus on these four characteristics due to data availability, and our analyses that show these to be key defining characteristics of ground ambulance organizations (which are also described in the CAMH report). Also, service area population density and Medicare billed transport volume have a direct impact on ground ambulance revenue, which is one of the categories of data that we are required to collect by section 1834(l)(17)(A) of the Act. Through Medicare claims and enrollment data, we believe we have enough information to stratify ground ambulance organizations on these four characteristics. This stratification approach results in 36 groupings of ground ambulance suppliers (defined by combinations of the three ownership categories, three service area population density categories, and four Medicare billed transport volume categories) and the same number of groupings for ambulance providers.

In some of these groupings, there are only a handful of ground ambulance organizations providing ground ambulance services with a specific set of the four characteristics. This could result in situations where few or no ground ambulance organizations with the specific set of characteristics were sampled. To minimize this risk and avoid situations where we are sampling from strata that contain only a few ambulance providers and suppliers in the entire population, we propose to stratify ground ambulance providers, which account for only 6 percent of ground ambulance organizations combined, based on service area population density only. We are proposing to use this characteristic to stratify providers rather than another characteristic because section 1834(l)(17)(A) of the Act specifically requires the Secretary to develop a data collection system to collect information on ground ambulance services furnished in different geographic locations, including rural areas and low population density areas described in section 1834(l)(12) of the Act (super rural areas).

We are also proposing to collapse the two highest Medicare ground ambulance transport volume categories (801–2500 and 2501 and more transports) into a single category (801 and more transports) for for-profit ground ambulance suppliers that primarily service super-rural areas due to the small number of ground ambulance organizations in these two volume categories. The proposed sampling rate of 25 percent aims to meet a threshold that will provide an adequate degree of precision for estimates within each strata subgroup (that is, provider versus supplier status, ownership (for-profit, non-profit, and government), service area population density (transports originating in primarily urban, rural, and super rural zip codes), and Medicare billed transport volume categories). The specific threshold is 200 expected responses in each subgroup. This number of expected responses will ensure that small to medium differences in means between groups (that is, affect size) can be detected.

A 25 percent sampling rate is expected to result in more than 200 responses in each subgroup except for ground ambulance providers (where we expect 153 responses with a 25 percent sampling rate). A 25 percent sampling rate will also result in more than 200 expected responses for other organizations not represented in the strata, including organizations providing primarily non-emergency transports and transports to and from dialysis facilities. We also expect that a 25 percent sampling rate will result in more than 200 responses for organizations that rely primarily on volunteer labor, as well as for those who do not.

We invite comments on all our proposals for sampling as described in this section, including our proposals on eligible organizations, methods for sampling, sampling at the NPI level, sampling of organizations using volunteer labor, sampling files, and sampling rates. We also invite comments on our proposals to collect data from ground ambulance organizations that bill Medicare, and the use of a stratified random sample.

6. Proposals for Collecting and Reporting of Information Under the Data Collection System

For each data collection year, section 1834(l)(17)(C) of the Act requires ground ambulance organizations identified as part of the representative sample to submit information specified under the system, with respect to a period for the year (referred to as the ''data collection period''), in a form and manner and at a time (referred to as the ''data reporting period'') specified by the Secretary. In this section, we are proposing to define the data collection period and the data reporting period. In determining when the proposed data collection and reporting periods should fall, our objectives were to: (1) Allow selected ground ambulance organizations sufficient time to collect and report the required information; and (2) collect the data for analysis in the least burdensome manner.

We considered annual (that is, 12-month) data collection periods and shorter data collection periods (for example, a 6-month period). We are proposing a 12-month data collection period because a shorter period could result in biased data due to seasonality in costs, revenue, or utilization among ground ambulance organizations.

As we stated previously, ambulance providers and suppliers constitute a diverse group of organizations with varied annual accounting practices. Accordingly, we are proposing to define the data collection period as a continuous 12-month period of time, which is either the calendar year aligning with the data collection year, or when an organization uses another fiscal year for accounting purposes and the organization elects to collect and report data over this period rather than the calendar year, the 12-month period that is their fiscal year that begins during the data collection year. We are proposing this data collection period based on feedback from ground ambulance organizations that stated that they prefer to collect data based on an annual accounting period (either calendar year or fiscal year) already used by the organization, and that requiring all organizations to report on the same 12-month period (for example, calendar year) could involve significant additional burden in terms of data collection and reporting. We believe that providing flexibility in collecting information under the data collection system would reduce the burden on ground ambulance organizations.

Therefore, we are proposing that the first data collection period be January 1, 2020 through December 31, 2021, with

organizations reporting on a calendar year basis collecting data from January 1, 2020 through December 31, 2021, and organizations reporting on a fiscal year basis collecting data over a continuous 12-month period of time from the start of the fiscal year beginning in calendar year 2020. Upon being notified that they are selected as part of the sample, ground ambulance organizations must notify CMS of their annual accounting period within 30 days according to the instructions in the notification letter, so that CMS is aware of when their data collection and data reporting periods would begin. We propose that respondents would additionally confirm the data collection period when reporting data via the data collection instrument (section 2, question 5).

We also propose that ground ambulance organizations would have up to 5 months to report to CMS (data reporting period) the data following the end of its 12-month data collection period. For example, if a ground ambulance organization is selected as part of the representative sample for the CY 2020 data collection year, and notifies CMS that its annual accounting period is based on a calendar year, the data collection period for this ground ambulance organization would begin on January 1, 2020 and end on December 31, 2020, and the data reporting period would be January 1, 2021 through May 31, 2021. A ground ambulance organization selected for CY 2020 that notifies CMS that its annual accounting period is based on a fiscal year basis with a fiscal year beginning on June 1, 2020 would have a data collection period from June 1, 2020 through May 31, 2021 and a data reporting period from June 1, 2021 through October 1, 2021. Since a 5-month reporting period is enough time for entities that file cost reports with Medicare to complete and submit their data, we believe it should also provide adequate time for ground ambulance organizations to report information under the data collection system to CMS. This proposal will allow providers and suppliers time to validate the information and certify the accuracy of their data required under the data collection before reporting it to CMS.

We propose to codify the data collection and reporting requirements for selected ground organizations at § 414.626(b).

Tables 30 and 31 illustrate various examples of data collection periods and the data reporting periods under our proposal. Please note that an individual ground ambulance organization would only be selected to participate in one data collection and reporting period, and that the specific data collection and reporting period dates might vary for each organization and be different than the dates noted in the tables.

TABLE 30—EXAMPLE OF A DATA COLLECTION AND REPORTING PERIOD FOR A GROUND AMBULANCE ORGANIZATION WITH A CALENDAR YEAR ACCOUNTING PERIOD

Year	Data collection period	Data reporting period
1	01/01/2020–12/31/2020	01/01/2021–05/31/2021
2	01/01/2021–12/31/2021	01/01/2022–05/31/2022
3	01/01/2022–12/31/2022	01/01/2023–05/31/2023
4	01/01/2023–12/31/2023	01/01/2024–05/31/2024

TABLE 31—EXAMPLE OF A DATA COLLECTION AND REPORTING PERIOD FOR A GROUND AMBULANCE ORGANIZATION WITH AN ACCOUNTING PERIOD NOT BASED ON A CALENDAR YEAR

Year	Data collection period	Data reporting period
1	06/01/2020–05/31/2021	06/01/2021–10/31/2021
2	06/01/2021–05/31/2022	06/01/2022–10/31/2022
3	06/01/2022–05/31/2023	06/01/2023–10/31/2023
4	06/01/2023–05/31/2024	06/01/2024–10/31/2024

We invite comments on our proposal to use a 12-month data collection period. We also invite comments on our proposal to give sampled ground ambulances the flexibility to collect data on either a calendar year basis or on the basis of the ground ambulance organization's fiscal year. In addition, we invite comments on our proposal to allow a ground ambulance organization 5 months to report the data collected during data collection period to CMS through the data collection system. We plan on addressing section 1834(l)(17)(E) of the Act, ongoing data collection, in future rulemaking.

7. Proposed Payment Reduction for Failure To Report

a. General Information and Applicable Period

Section 1834(l)(17)(D)(i) of the Act requires that beginning January 1, 2022, subject to clause (ii), the Secretary reduce the payments made to a ground ambulance organization under section 1834(l)(17) of the Act for the applicable period by 10 percent if the ground ambulance organization is required to submit data under the data collection system with respect to a data collection period and does not sufficiently submit such data. Section 1834(l)(17)(D)(ii) of the Act defines the applicable period as a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier failed to sufficiently submit information under the data collection system.

As previously discussed, we are proposing to define the data collection and data reporting periods based on the ground ambulance organization's annual accounting period (either calendar year or fiscal year). The timeline for the determination of the 10 percent reduction to payments would depend on: (1) The 12-month data collection period based on the organization's accounting period; (2) the end of the data reporting period that corresponds with the selected data collection period; and (3) the time it would take CMS to review the data to determine whether it had been sufficiently submitted. We are proposing that we would make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than the date that is 3 months following the date that the ambulance organization's data reporting period ends. This timeframe will allow CMS to assess whether the required data was sufficiently submitted.

For example, if a ground ambulance organization is selected in the first sampling year and it reports to CMS that its annual accounting period is an October 1 through September 30th fiscal year, then its data collection period would be October 1, 2020 through September 30, 2021, and the data reporting period that would apply to the ground ambulance organization would be from October 1, 2021–February 28 (or 29, if a leap year), 2022. We would make a determination regarding the sufficiency of that ground ambulance organization's reporting no later than June 1, 2022. With this timeframe, we would propose to apply the 10 percent reduction in payments, if applicable, for ambulance services provided by that ground ambulance organization between January 1, 2023 and December 31, 2023, because under section 1834(l)(17)(D)(iii) of the Act, the applicable period must be one year in length. As another example, if a ground ambulance organization's annual accounting period is the calendar year, its data collection period would be January 1, 2020 through December 31, 2020, the data reporting period that would apply to the ground ambulance organization would be from January 1, 2021–May 31, 2021,

and we would make a determination regarding the sufficiency of that ambulance organization's reporting no later than August 31, 2021. With this timeframe, we would propose to apply the 10 percent reduction in payments, if applicable, for ambulance services provided between January 1, 2022 and December 31, 2022. The payment reduction would always be applied to ground ambulance transports provided during the calendar year that begins following the date that we determine that the ground ambulance organization is subject to the payment reduction.

We propose that if we find the data reported is not sufficient, we would notify the ground ambulance organization that it will be subject to the 10 percent payment reduction for ambulance services provided during the next calendar year. We would interpret ''sufficient'' to mean that the data reported by the ground ambulance organization is accurate and includes all required data requested on the data collection instrument.

We are proposing to apply the 10 percent payment reduction for the appropriate calendar year as described above to ambulance fee schedule payments as described in § 414.610. The payment reduction would apply to claims for dates of service during the applicable calendar year and would be applied to the final ambulance fee schedule payment, after all other adjustments have been applied under § 414.610(c). We are proposing to codify the payment reduction by adding a new paragraph (c)(9) in § 414.610.

b. Proposed Hardship Exemption

Section 1834(l)(17)(A)(D)(iii) of the Act authorizes the Secretary to exempt a ground ambulance provider or supplier from the 10 percent payment reduction for an applicable period in the event of significant hardship, such as a natural disaster, bankruptcy, or other similar situation that the Secretary determines interfered with the ability of the ground ambulance provider or supplier to submit such information in a timely manner for the specified period.

We recognize that there may be some ground ambulance organizations that have limited resources that affect their ability to report the required information, and that for these ground ambulance organizations, a 10 percent payment reduction in Medicare payments could result in significant financial hardship.

An example of this situation could be a ground ambulance organization that is located in a super rural area with such limited resources that it cannot report the required information without significantly increasing the possibility that it would need to file for bankruptcy.

Another example could be a ground ambulance organization that is located in an area that had recently experienced a natural disaster such as widespread flooding that caused the closure of a local emergency room or other facilities. Due to the increased demand for services and rerouting of patients, this ground ambulance organization might be unable to collect and report information in a timely manner.

We are proposing that ground ambulance organizations in these or other similar situations could request that CMS grant a hardship exemption, and CMS could consider granting an exemption if the ground ambulance organization could demonstrate that the significant hardship interfered with its ability to submit the required data under the data collection system.

To request a hardship exemption, we propose that a ground ambulance organization submit to CMS a completed request form, which can be found on the Ambulance Services Center website (*https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html*), and that the following information be included:

- Ambulance Provider or Supplier Name;
- NPI Number;
- Ambulance Provider or Supplier Location Address;
- CEO and any other designated personnel contact information, including name, email address, telephone number and mailing address (must include a physical address, a post office box address is not acceptable);
- Reason for requesting a hardship exemption;
- Evidence of the impact of the hardship exemption (such as photographs, newspaper, other media articles, financial data, bankruptcy filing, etc.); and
- Date when the ground ambulance organization would be able to begin submitting information under the data collection system.

We are proposing that the completed hardship exemption request form be signed and dated by the Chief Executive Officer (CEO) or designee of the ambulance company, and be submitted as soon as possible, and not later than 90 calendar days of the date that the ground ambulance organization was notified that it will be subject to the 10 percent payment reduction as a result of not sufficiently submitting information under the data collection system. We propose that the request form be submitted to the Ambulance ODF mailbox at *AMBULANCEODF@cms.hhs.gov*. Following receipt of the request form, we are proposing to provide: (1) A written acknowledgement that the request has been received; and (2) a written response to the CEO and any designated personnel using the contact information provided in the request within 30 days of the date that we received the request. We are also proposing to codify the hardship exemption requirement at § 414.626(d).

c. Informal Review

Section 1834(l)(17)(D)(iv) of the Act requires the Secretary to establish a process under which a sampled ground organization may seek an informal review of a determination that it is subject to the 10 percent reduction. To request an informal review, we propose that a ground ambulance organization must submit the following information:

- Ground Ambulance Organization Name;
- NPI Number;
- CEO and any other designated personnel contact information, including name, email address, telephone number and mailing address (must include a physical address, a post office box address is not acceptable);
- Ground ambulance organization's selected data collection period and data reporting period; and
- A statement of the reasons why the ground ambulance organization does not agree with CMS's determination and any supporting documentation.

We propose that the informal review request must be signed by the CEO/designee of the ground ambulance organization and be submitted within 90 calendar days of the date that the ground ambulance organization received notice regarding the 10 percent reduction in payments. We are proposing 90 calendar days to submit an informal review request to allow time for the ground ambulance organization to gather the information needed to support the request for informal review. We are proposing that the request be submitted to the Ambulance ODF mailbox at *AMBULANCEODF@cms.hhs.gov*. Following receipt of the request for informal review, we would provide: (1) A written acknowledgement using the contact information provided in the request, to the CEO and any additional designated personnel, notifying them that the ambulance provider or supplier's request has been received; and (2) a written response to the CEO and any designated personnel using the contact information provided in the request within 30 days. We are seeking comments on our proposed

informal review process. We are also proposing to codify the informal review process in § 414.610(e).

We invite comments regarding all the proposals on the payment reduction for failure to report, including the applicable period, hardship exemption, and informal review.

8. Public Availability

Section 1834(l)(17)(G) of the Act requires that the results of the data collection be posted on the CMS website, as determined appropriate by the Secretary. We are proposing to post on our website a report that includes summary statistics, respondent characteristics, and other relevant results in the aggregate so that individual ground ambulance organizations are not identifiable.

We are also proposing that the data proposed above will be made available to the public through posting on our website at least every 2 years. The 2-year timeframe would allow CMS time to analyze the data that is being reported, factoring in the various accounting periods of the first group of sampled ground ambulance organizations (which have early accounting periods in the CY 2020 data collection year).

We are proposing to post summary results by the last quarter of 2022, because we believe we may have most or all of the data requested by then. We invite comments on our proposals regarding the type of information that should be posted from the data collected and the timeline in which the results of the data collection should be posted on our website.

We invite comments regarding our proposals for public availability of the data.

9. Limitations on Review

Section 1834(l)(17)(J) of the Act provides that there shall be no administrative or judicial review under sections 1869 or 1878 of the Act, or otherwise, of the data collection system or identification of respondents. We are proposing to codify the limitations on review at § 414.626(g).

C. Expanded Access to Medicare Intensive Cardiac Rehabilitation (ICR)

Section 51004 of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, enacted February 9, 2018) amended section 1861(eee)(4)(B) of the Act directing CMS to add covered conditions for intensive cardiac rehabilitation (ICR). This proposed rule includes our proposals for implementing this expansion of coverage through revisions to § 410.49(b)(1).

1. Background

Cardiac rehabilitation (CR) was developed in the 1950s from the concept of early mobilization after acute myocardial infarction (heart attack).[96] The standard of care prior to the widespread adoption of CR was bed-rest and inactivity after acute myocardial infarction.[97] In the 1970s, cardiac rehabilitation developed into highly structured, physician supervised, electrocardiographically-monitored exercise programs. However, the programs consisted almost solely of exercise alone.[98] Referencing 1998 guidelines [99] from the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR), Forman (2000) stated that ''over subsequent years the objectives of cardiac rehabilitation broadened beyond exercise into a composite of cardiac risk modification. Lipid, blood pressure, and stress reduction, smoking cessation, diet change, and weight loss were coupled to goals of exercise training.''

ICR, also commonly referred to as a ''lifestyle modification'' program, typically involves the same elements as traditional CR programs, but are furnished in highly structured environments in which sessions of the various components may be combined for longer periods of CR and also may be more rigorous.

Section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275, enacted July 15, 2008) amended Title XVIII to add new section 1861(eee) of the Act to provide coverage of CR and ICR under Medicare part B. The statute specified certain conditions for these services and an effective date of January 1, 2010, for coverage of these services. Conditions of coverage for CR and ICR consistent with the statutory provisions of section 144(a) of the MIPPA were codified in § 410.49 through the CY 2010 PFS final rule with comment period (74 FR 61872–61879 and 62004–62005). These programs were designed to improve the health care of Medicare beneficiaries with cardiovascular disease.

Under § 410.49(b), Medicare part B covers CR and ICR program services for beneficiaries who have experienced one or more of the following: (1) An acute myocardial infarction within the preceding 12 months; (2) a coronary artery bypass surgery; (3) current stable angina pectoris; (4) heart valve repair or replacement; (5) percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting; or (6) a heart or heart-lung transplant. For CR only, other cardiac conditions may be added as specified through a national coverage determination (NCD). Effective February 18, 2014, we expanded coverage of CR in NCD 20.10.1, Cardiac Rehabilitation Programs for Chronic Heart Failure (Pub. 100–03 20.10.1), to beneficiaries with stable, chronic heart failure, defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks. Stable patients are defined as patients who have not had recent (≤6 weeks) or planned (≤6 months) major cardiovascular hospitalizations or procedures.

2. Statutory Authority

Section 51004 of the BBA of 2018, entitled ''Expanded Access to Medicare Intensive Cardiac Rehabilitation Programs,'' amended section 1861(eee)(4)(B) of the Act. The amendment directs us to expand the list of covered conditions for ICR beyond the 6 conditions specified in section 144(a) of the MIPPA and codified in § 410.49(b)(1).

3. Discussion of Statutory Requirements

Section 1861(eee)(4)(B) of the Act requires that, in addition to the 6 conditions specified in section 144(a) of the MIPPA, ICR be covered for beneficiaries with (1) stable, chronic heart failure (defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks); or (2) any additional condition for which the Secretary has determined that a cardiac rehabilitation program shall be covered, unless the Secretary determines, using the same process used to determine that the condition is covered for a cardiac rehabilitation program, that such coverage is not supported by the clinical evidence.

The statute explicitly states *cardiac* rehabilitation; therefore, this proposed

[99] AACWR Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs, ed 3. Windsor, ON, Human Kinetics, 1998.

rule is specific to CR and ICR for cardiac conditions. As such, this proposed rule could not exceed the limits of the statute to apply CR and ICR other conditions (for example, cancer, metabolic syndrome, diabetes, peripheral artery disease, etc.).

4. Proposals for Implementation

We propose to amend § 410.49(b) to expand the covered conditions for ICR. We propose to amend § 410.49(b)(vii) to add coverage of ICR for patients with stable, chronic heart failure defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks. We also propose to specify in § 410.49(b)(vii) that coverage for CR was effective February 18, 2014 as per the NCD for Cardiac Rehabilitation for Chronic Heart Failure (Pub. 100–03 20.10.1) which was finalized on February 18, 2014 as discussed above, and that coverage for ICR was effective on enactment of the BBA of 2018 (February 9, 2018).

We also propose to add new § 410.49(b)(viii) to include coverage of ICR, in addition to CR, for other cardiac conditions as specified through an NCD. Under the existing § 410.49(b)(vii), coverage for CR may be established for other cardiac conditions through an NCD, and our proposal would extend this criterion to ICR, as well unless coverage for ICR is not supported by clinical evidence. As such, NCDs modifying the covered conditions would apply to both CR and ICR so long as clinical evidence supports coverage for CR and coverage for ICR.

It is important to note that conditions that may be considered for expanded coverage are limited to cardiac conditions and may not include other conditions (for example, cancer, metabolic syndrome, diabetes, peripheral artery disease, etc.).

5. Summary

In summary, we are proposing modifications to existing requirements under § 410.49(b) to implement the coverage changes specific to ICR. The proposals involve expanding coverage of ICR to beneficiaries with chronic heart failure as discussed above and providing for modifications to covered cardiac conditions for ICR, in addition to CR, as specified through an NCD. We invite the public to provide comments on these proposals.

D. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

1. Background

Sections 1903(a)(3)(F) and 1903(t) of the Act provide the statutory basis for the incentive payments made to Medicaid EPs and eligible hospitals for the adoption, implementation, upgrade, and meaningful use of Certified EHR Technology (CEHRT). We have implemented these statutory provisions in prior rulemakings to establish the Medicaid Promoting Interoperability Program.

Under sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C)(i)(II) of the Act, and the definition of ''meaningful EHR user'' in regulations at 42 CFR 495.4, one of the requirements of being a meaningful EHR user is to successfully report the clinical quality measures selected by CMS to CMS or a state, as applicable, in the form and manner specified by CMS or the state, as applicable. Section 1848(o)(2)(B)(iii) of the Act requires that in selecting electronic clinical quality measures (eCQMs) for EPs to report under the Promoting Interoperability Program, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. We have taken steps to align various quality reporting and payment programs that include the submission of eCQMs.

In the CY 2019 PFS final rule (83 FR 59452, 59703 through 59704), we established for 2019 that Medicaid EPs are required to report on any 6 eCQMs that are relevant to the EP's scope of practice, regardless of whether they report via attestation or electronically. We also adopted the Merit-based Incentive Payment System (MIPS) requirement that EPs report on at least one outcome measure (or, if an applicable outcome measure is not available or relevant, one other high priority measure). We explained that if no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, the EP may report on any 6 eCQMs that are relevant.

2. eCQM Reporting Requirements for EPs Under the Medicaid Promoting Interoperability Program for 2020

We annually review and revise the list of eCQMs for each MIPS performance year to reflect updated clinical standards and guidelines. In section III.I.3.h.(2)(b)(i) of this proposed rule, we propose to amend the list of available eCQMs for the CY 2020 performance period. To keep eCQM specifications current and minimize complexity, we propose to align the eCQMs available for Medicaid EPs in 2020 with those available for MIPS eligible clinicians for the CY 2020 performance period. Specifically, we propose that the eCQMs available for Medicaid EPs in 2020 would consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established under MIPS for the CY 2020 performance period.

In previous years, CMS proposals to align the list of eCQMs for MIPS and the Medicaid Promoting Interoperability Program for EPs received positive comments that indicated that alignment between these two programs would help reduce health care provider reporting burden (83 FR 59702). These comments thus suggest that aligning the eCQM lists might encourage EP participation in the Medicaid Promoting Interoperability Program by giving Medicaid EPs that are also MIPS eligible clinicians the ability to report the same eCQMs as they report for MIPS. Not aligning the eCQM lists could lead to increased burden, because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program if they opt to report on newly added eCQMs for MIPS. In addition, we believe that aligning the eCQMs available in each program would help to ensure the most uniform application of up-to-date clinical standards and guidelines possible.

We anticipate that this proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, particularly in light of our belief that many EPs would report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on the available eCQMs for 2020. We expect that this proposal would have only a minimal impact on states, by requiring minor adjustments to state systems for 2020 to maintain current eCQM lists and specifications.

For 2020, we propose to again require (as we did for 2019) that Medicaid EPs report on any 6 eCQMs that are relevant to their scope of practice, regardless of whether they report via attestation or electronically. This policy of allowing Medicaid EPs to report on any 6 measures relevant to their scope of practice would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established at § 414.1335(a)(1). MIPS

eligible clinicians who elect to submit eCQMs must generally submit data on at least 6 quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a) for the data submission criteria that apply to individual MIPS eligible clinicians and groups that elect to submit data with other collection types.

In addition, as we did for 2019, we propose that for 2020, EPs in the Medicaid Promoting Interoperability Program would be required to report on at least one outcome measure (or, if an outcome measure is not available or relevant, one other high priority measure). This policy would improve alignment with the requirements for the MIPS quality performance category for eligible clinicians using the eCQM collection type. We also propose that if no outcome or high priority measures are relevant to a Medicaid EP's scope of practice, the clinician may report on any 6 eCQMs that are relevant, as was the policy in 2019.

In the CY 2019 PFS final rule (83 FR 59702 and 59704), we established the following three methods to identify which of the available measures are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program. We propose to use the same three methods for identifying high priority eCQMs for the Medicaid Promoting Interoperability Program for 2020:

- The same set of measures that are identified as high priority measures for reporting on the quality performance category for eligible clinicians participating in MIPS.
- All e-specified measures from the previous year's core set of quality measures for Medicaid and the Children's Health Insurance Program (CHIP) (Child Core Set) or the core set of health care quality measures for adults enrolled in Medicaid (Adult Core Set) (hereinafter together referred to as ''Core Sets'') that are also included on the MIPS list of eCQMs.

Sections 1139A and 1139B of the Act require the Secretary to identify and publish core sets of health care quality measures for child Medicaid and CHIP beneficiaries and adult Medicaid beneficiaries. These measure sets are required by statute to be updated annually and are voluntarily reported by states to CMS. These Core Sets are composed of measures that specifically focus on populations served by the Medicaid and CHIP programs and are of particular importance to their care. The MIPS eCQM list includes several, but not all, of the measures in the Core Sets. Because the Core Sets are released at the beginning of each year, it is not possible to update the list of high-priority eCQMs with those added to the current year's Core Sets.

The eCQMs that would be available for Medicaid EPs to report in 2020, that are both part of the Core Sets and on the MIPS list of eCQMs, and that would be considered high priority measures under our proposal are: CMS2, ''Preventive Care and Screening: Screening for Depression and Follow-Up Plan''; CMS122, ''Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)''; CMS125, ''Breast Cancer Screening''; CMS128, ''Anti-depressant Medication Management''; CMS136, ''Follow-Up Care for Children Prescribed ADHD Medication (ADD)''; CMS137, ''Initiation and Engagement of Alcohol and Other Drug Dependence Treatment''; CMS153, ''Chlamydia Screening for Women''; CMS155, ''Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents''; and CMS165, ''Controlling High Blood Pressure.''

- Through an amendment to § 495.332(f), we gave each state the flexibility to identify which of the eCQMs available for reporting in the Medicaid Promoting Interoperability Program are high priority measures for Medicaid EPs in that state, with review and approval by CMS, through the State Medicaid HIT Plan (SMHP). States are thus able to identify high priority measures that align with their state health goals or other programs within the state.

All eCQMs identified via any of these three methods are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program for 2019. As noted above, we propose to use the same three methods for identifying high priority eCQMs for the Medicaid Promoting Interoperability Program for 2020. We invite comments as to whether any of these methods should be altered or removed, or whether any additional methods should be considered for 2021.

We also propose that the 2020 eCQM reporting period for Medicaid EPs who have demonstrated meaningful use in a prior year be a minimum of any continuous 274-day period within CY 2020. This 274-day eCQM reporting period corresponds to the 9-month period from January 1, 2020 to September 30, 2020. Medicaid EPs would not be required to use that exact reporting period, but would be able to use any continuous 274-day period within CY 2020. Medicaid EPs could also use a longer eCQM reporting period in CY 2020, up to the full calendar year. In addition, states would be required to allow sufficient time for EPs to attest for program year 2020 beyond January 1, 2021 so that EPs may, should they choose to do so, select EHR and eCQM reporting periods that take place at any time within the 2020 calendar year through December 31, 2020.

We are proposing this eCQM reporting period for 2020 to improve state flexibility in the penultimate year of the Medicaid Promoting Interoperability Program, and to facilitate an orderly end of the program in 2021. In the CY 2019 PFS final rule, we established that the eCQM reporting period for Medicaid EPs in 2021 will be a minimum of any continuous 90-day period within CY 2021, and also established that the end date for this period must fall before October 31, 2021, to help ensure that states can issue all Medicaid Promoting Interoperability payments to EPs by the December 31, 2021 statutory deadline (83 FR 59704 through 59706). When proposing that policy, we received comments that asked us to consider an eCQM reporting period shorter than a full year in 2020. Commenters stated that a full-year reporting period may create significant backlogs of 2020 and 2021 attestations in 2021 that may create difficulty for states to issue payments by the statutory deadline (83 FR 59705). We continue to believe that longer reporting periods create more useful data for quality measurement and improvement because they give states a broader picture of a health care provider's care and patient outcomes. However, we agree that a full-year eCQM reporting period in 2020 might unnecessarily burden states as they would need to issue incentive payments and implement systems changes for 2021 in a timely manner.

This proposal would allow states to accept attestations for program year 2020 as early as October 1, 2020 from Medicaid EPs who choose to use an eCQM reporting period early in the year, and thus could give states additional time to prepare for 2021 and the end of the Medicaid Promoting Interoperability Program. Even though states would also still have to allow EPs to submit attestations for 2020 in 2021, we believe that allowing some EPs to attest sooner could accelerate states' pre-payment verification and payment process. We considered whether to propose a Medicaid EP eCQM reporting period for 2020 from January 1, 2020 through September 30, 2020, with no flexibility for EPs to select an alternative 274-day eCQM reporting period. We also

considered whether to propose a date prior to December 31, 2020 by which all Medicaid EP EHR and eCQM reporting periods for 2020 must end. While either of these alternatives might have further helped to ensure that all states would have additional time to prepare for 2021, we decided not to propose either of them because we wanted to preserve as much flexibility as possible for Medicaid EPs. However, we seek comment, especially from states and Medicaid EPs, about whether either of these alternatives might be preferable to our proposal.

We note that states submit their attestation deadlines to CMS each year as part of their SMHPs. We do not believe that this proposal would create any additional burden on EPs or CEHRT vendors, as CEHRT should be able to report eCQM data from any length of time.

We propose that, in 2020, the eCQM reporting period for Medicaid EPs demonstrating meaningful use for the first time, which was established in the final rule entitled ''Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 Through 2017'' (80 FR 62762, 62892) (hereinafter known as the ''Stage 3 final rule''), would remain any continuous 90-day period within the calendar year, as in previous years.

3. Objective 1: Protect Patient Health Information in 2021

In the Stage 3 final rule (80 FR 62762, 62832), we established Meaningful Use Objective 1 as ''Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.'' As specified at § 495.24(d)(1)(i)(B), to meet that objective, EPs must meet the associated measure to conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process.

In the Stage 3 final rule, we explained that this measure must be completed in the same calendar year as the EHR reporting period. This may occur before, during, or after the EHR reporting period, though if it occurs after the EHR reporting period it must occur before the provider attests to meaningful use of CEHRT or before the end of the calendar year, whichever comes first (80 FR 62831). In practice, this means that EPs do not attest to meaningful use of CEHRT before completing this measure.

As discussed above, states must issue all Medicaid Promoting Interoperability Program incentive payments by the statutory deadline of December 31, 2021. States can establish state-specific deadlines for Medicaid EPs to attest to the state regarding meaningful use of CEHRT in CY 2021. However, due to changes CMS made in prior rulemaking to the Medicaid Promoting Interoperability Program EHR and eCQM reporting periods for 2021, all states must set attestation deadlines on or before October 31, 2021. *See* 42 CFR 495.4 (definition of ''EHR reporting period'') and 495.332(f)(3) and (4), and 83 FR 59704 through 59705. Because all EPs are therefore expected to attest to meaningful use of CEHRT before the end of CY 2021, Medicaid EPs would no longer have the option of completing the security risk analysis at the end of the calendar year, and would likely have to complete it well before December 2021. For example, in a state with an attestation deadline of October 1, 2021, a Medicaid EP would have to conduct the security risk analysis by September 30, 2021. Stakeholders have given us feedback that most security risk analyses are conducted on a clinic or practice level, which may include EPs and non-EPs. As we noted in the Stage 3 final rule, ''[a]n organization may conduct one security risk analysis or review which is applicable to all EPs within the organization, provided it is within the same calendar year and prior to any EP attestation for that calendar year. However, each EP is individually responsible for their own attestation and for independently meeting the objective. Therefore, it is incumbent on each individual EP to ensure that any security risk analysis or review conducted for the group is relevant to and fully inclusive of any unique implementation or use of CEHRT relevant to their individual practice'' (80 FR 62794).

If an EP or practice typically conducts the security risk analysis at the end of each year, the CY 2021 timeline for attesting to meaningful use of CEHRT may create burden for all Medicaid EPs and for non-EP health care providers within the same organization as Medicaid EPs, and may not be optimal for protecting information security, because it could disrupt the intervals between security risk analyses. As we explained in the Stage 3 final rule, a security risk analysis is not a discrete item in time, but a comprehensive analysis covering the full period of time for which it is applicable; and the annual review of such an analysis is similarly comprehensive. In other words, the analysis and review, no matter when they are conducted, should *not* be just a ''point in time'' exercise, and instead should cover a span of the entire year, including a review planning for future system changes within the year or a review of prior system changes within the year (80 FR 62831). However, EPs that typically conduct the security risk analysis in December of each calendar year might conduct one security risk analysis in December 2020, and then have to conduct another one well before December 2021, if the analysis must be completed before the EP attests to meaningful use of CEHRT for CY 2021. We believe that security risk analyses are most effective for data security when conducted on a regular schedule. In addition, practice locations may have ongoing contracts or processes in place to perform a security risk analysis at the same time each year. We do not wish to create burden for EPs and non-EPs related to changing those processes to meet the CY 2021 Medicaid Promoting Interoperability Program attestation timelines.

Therefore, we are proposing to allow Medicaid EPs to conduct a security risk analysis at any time during CY 2021, even if the EP conducts the analysis after the EP attests to meaningful use of CEHRT to the state. A Medicaid EP who has not completed a security risk analysis for CY 2021 by the time he or she attests to meaningful use of CEHRT for CY 2021 would be required to attest that he or she will complete the required analysis by December 31, 2021. Under this proposal, states could require Medicaid EPs to submit evidence that the security risk analysis has been completed as promised, even after the incentive payment has been issued. In addition, states could require EPs to attest that if a security risk analysis is not completed by December 31, 2021, they will voluntarily rescind their attestation to meaningful use of CEHRT and return the incentive payment. If this proposal is finalized as proposed, we would work with states to develop post-payment verification and audit processes that meet CMS due diligence requirements, including those in §§ 495.318 and 495.368, and generally to ensure that incentive payments are made properly. We remind states that as a condition of receiving enhanced federal financial participation (FFP), they are required to demonstrate to the satisfaction of HHS that they are conducting adequate

oversight of the program, including routine tracking of meaningful use attestations (*See* § 495.318(b)). States are also reminded that they must submit a description of the methodology used to verify that EPs have meaningfully used CEHRT for CMS approval as part of their SMHP. (*See* § 495.332(c)). In the final rule titled ''Medicare and Medicaid Programs; Electronic Health Record Incentive Program'' (75 FR 44313), CMS explained that states are expected to ''look behind'' provider attestations, and that this would require audits both pre- and post-payment (75 FR 44515). These requirements and expectations would not change under this proposal.

4. Clarification

In the CY 2019 PFS final rule (83 FR 59702), in the list of high priority eCQMs that are available for Medicaid EPs to report in 2019 because they are both part of the Core Sets and on the MIPS list of eCQMs, we inadvertently listed ''Initiation and Engagement of Alcohol and Other Drug Dependence Treatment'' as ''CMS4.'' It should have read ''CMS137, 'Initiation and Engagement of Alcohol and Other Drug Dependence Treatment.' ''

E. Medicare Shared Savings Program

As required under section 1899 of the Act, we established the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among health care providers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. Eligible groups of providers and suppliers, including physicians, hospitals, and other health care providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the ''November 2011 final rule'')). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the ''June 2015 final rule'')). The final rule entitled, ''Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,'' which addressed changes related to the program's financial benchmark methodology, appeared in the June 9, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the ''June 2016 final rule'')). A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations-Pathways to Success; final rule) (83 FR 67816) (hereinafter referred to as the ''December 2018 final rule''). In the December 2018 final rule, we finalized a number of policies including redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. In the CY 2019 PFS final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in selecting their primary care provider and in the use of that selection for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715). In the CY 2018 PFS final rule (82 FR 53209 through 53226), we finalized revisions to several different policies under the Shared Savings Program, including the assignment methodology, quality measure validation audit process, use of the skilled nursing facility (SNF) 3-day waiver, and handling of demonstration payments for purposes of financial reconciliation and establishing historical benchmarks. In addition, in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77255 through 77260, and 82 FR 53688 through 53706, respectively), we finalized policies related to the Alternative Payment Model (APM) scoring standard under the Merit-Based Incentive Payment System (MIPS), which reduced the reporting burden for MIPS eligible clinicians who participate in MIPS APMs, such as the Shared Savings Program.

As a general summary, in this CY 2020 PFS proposed rule, we:

- Discuss aligning the Shared Savings Program quality measure set with proposed changes to the Web Interface measure set under MIPS per previously-finalized policy;
- Propose a change to the claims-based measures;
- Solicit comment on aligning the Shared Savings Program quality score with the MIPS quality performance category score; and
- Propose a technical change to correct a cross-reference within a provision of the Shared Savings Program's regulations on the skilled nursing facility (SNF) 3-day rule waiver, to conform with amendments to § 425.612 that were adopted in the December 2018 final rule;

1. Quality Measurement

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the November 2011 final rule, we established a quality measure set spanning four domains: Patient experience of care, care coordination/patient safety, preventive health, and at-risk population (76 FR 67872 through 67891). Since the Shared Savings Program was established, we have updated the measures that comprise the quality performance measure set for the Shared Savings Program through the annual rulemaking in the CY 2015, 2016, 2017, and 2019 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, 81 FR 80484 through 80489, and 83 FR 59707 through 59715 respectively).

As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. For performance year 2019, 23 quality measures will be used to determine ACO quality performance (83 FR 59707 through

59715). The information used to determine ACO performance on these quality measures will be submitted by the ACO through the CMS Web Interface, calculated by us from administrative claims data, and collected via a patient experience of care survey referred to as the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for ACOs Survey.

Eligible clinicians who are participating in an ACO and who are subject to MIPS (MIPS eligible clinicians) will be scored under the APM scoring standard under MIPS (81 FR 77260). These MIPS eligible clinicians include any eligible clinicians who are participating in an ACO in a track (or payment model within a track, such as Levels A–D of the BASIC Track) of the Shared Savings Program that is not an Advanced APM, as well as those participating in an ACO in a track (or payment model within a track) that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS.

b. Proposed Changes to the CMS Web Interface and Claims-Based Measures

Since the Shared Savings Program was first established in 2012, we have updated the quality measure set to reduce reporting burden and focus on more meaningful, outcome-based measures. The most recent updates to the Shared Savings Program quality measure set were made in the CY 2019 PFS final rule (83 FR 59711). In the CY 2019 PFS final rule, we explained that in developing the proposed changes to the quality measure set for 2019, we had considered the agency's efforts to streamline quality measures, reduce regulatory burden and promote innovation as part of the agency's Meaningful Measures initiative (*see* CMS Press Release, CMS Administrator Verma Announces New Meaningful Measures Initiative and Addresses Regulatory Reform; Promotes Innovation at LAN Summit, October 30, 2017, available at *https://www.cms.gov/Newsroom/MediaReleaseDatabase/Press-releases/2017-Press-releases-items/2017-10-30.html*). We also noted that under the Meaningful Measures initiative, we have committed to assessing only those core issues that are most vital to providing high-quality care and improving patient outcomes, with the aim of focusing on high-priority measures, reducing unnecessary burden on providers, and putting patients first. The changes made in the CY 2019 PFS final rule reduced the Shared Savings Program quality measure set from 31 to 23 measures. Currently, more than half of the 23 Shared Savings Program quality measures are outcome and high-priority measures, including:

- Patient-experience of care measures collected through the CAHPS for ACOs Survey that strengthen patient and caregiver experience.
- Outcome measures supporting effective communication and care coordination, such as unplanned admission and readmission measures.
- Intermediate outcome measures that address the effective treatment of chronic disease, such as hemoglobin A1c control for patients with diabetes.

As we stated in the CY 2019 PFS final rule (83 FR 59713), we seek to align the Shared Savings Program measure set with changes made to the CMS Web Interface measures under the Quality Payment Program. In the 2017 PFS final rule, we stated that we do not believe it is beneficial to propose CMS Web interface measures for ACO quality reporting separately (81 FR 80499). Therefore, to avoid confusion and duplicative rulemaking, we adopted a policy that any future changes to the CMS Web interface measures would be proposed and finalized through rulemaking for the Quality Payment Program, and that such changes would be applicable to ACO quality reporting under the Shared Savings Program. In accordance with the policy adopted in the CY 2017 PFS final rule (81 FR 80501), we are not making any specific proposals related to changes in CMS Web Interface measures reported under the Shared Savings Program. Rather, we refer readers to Appendix 1, Table C (Existing Quality Measures Proposed for Removal Beginning with the 2022 MIPS Payment Year) and Table Group A (New Quality Measures Proposed for Addition Beginning with the 2022 MIPS Payment Year) of this proposed rule for a complete discussion of the proposed changes to the CMS Web Interface measures for performance year 2020 (2022 MIPS Payment Year). Based on the changes being proposed in Appendix 1, Table C of this proposed rule, ACOs would no longer be responsible for reporting the following measure for purposes of the Shared Savings Program starting with reporting for performance year 2020:

- ACO–14 Preventive Care and Screening Influenza Immunization

In the event we do not finalize the removal of this measure, we would maintain the measure with the ''substantive'' change described in Appendix 1, Table C (Previously Finalized Quality Measures Proposed for Removal in the 2022 Payment Year and Future Years) of this proposed rule. We have reviewed the proposed ''substantive'' change and we do not believe that this change to the measure would require that we revert the measure to pay-for-reporting for the 2020 performance year as we could create a historical benchmark.

Additionally, in section III.I.3.B.(1) of this proposed rule, we are proposing to add the following measure to the CMS Web Interface for purposes of the Quality Payment Program:

- ACO–47 Adult Immunization Status

Based on the policies being proposed for purposes of MIPS in Appendix 1, Table Group A of this proposed rule, Shared Savings Program ACOs would be responsible for reporting the Adult Immunization Status measure (ACO–47) starting with quality reporting for performance year 2020. Consistent with our existing policy regarding the scoring of newly introduced quality measures, this measure would be pay-for-reporting for all ACOs for 2 years (performance years 2020 and performance year 2021). The measure would then phase into pay-for-performance beginning in performance year 2022 (§ 425.502(a)(4)).

In section III.J.3.c.(1)(d) of this rule, we note that as discussed in Table DD (Previously Finalized Quality Measures with Substantive Changes Proposed for the 2021 MIPS Payment Year), we have determined based on extensive stakeholder feedback that the 2018 CMS Web Interface measure numerator guidance for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (ACO–17) measure is inconsistent with the intent of the CMS Web Interface version of this measure as modified in the CY 2018 Quality Payment Program final rule (82 FR 54164) and is unduly burdensome on clinicians. Moreover, due to the current guidance, we are unable to rely on historical data to benchmark the measure. Therefore, for the 2018 performance year we are designating the measure pay-for-reporting in accordance with § 425.502(a)(5). Additionally, in section III.J.3.c.(1)(d) of this proposed rule, we are proposing to update the CMS Web Interface measure numerator guidance for purposes of the Quality Payment Program. To the extent that this proposed change constitutes a change to the Shared Savings Program measure set after the start of the 2019 performance period, we believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to modify the measure as proposed in Table DD because the current guidance is inconsistent with the intent of the CMS Web Interface version of this measure,

as modified in the CY 2018 QPP final rule, and unduly burdensome on clinicians. If this modification is finalized as proposed, consistent with our discussion in the CY 2018 PFS final rule, we expect we would be able to use historical data reported on the measure to establish an appropriate 2019 benchmark that aligns with the updated specifications (82 FR 53214 and 53215) and the measure would be pay-for-performance for performance year 2019 and subsequent year.

In addition, we note that AHRQ, which is the measure steward for ACO–43—Ambulatory Sensitive Condition Acute Composite (AHRQ Prevention Quality Indicator (PQI) #91) (version with additional Risk Adjustment), made an update to the measure that will require a change to the measure specifications for performance year 2020.[100] Currently, ACO–43 assesses the risk adjusted rate of hospital discharges for acute PQI conditions with a principal diagnosis of dehydration, bacterial pneumonia, and urinary tract infection. The updated measure will only include two conditions, bacterial pneumonia and urinary tract infection. This measure is a composite measure and the rate of hospital discharges is approximately equal to the sum of the rates of hospital discharges for each of its components. Therefore, the removal of dehydration will likely decrease the composite rate by approximately the rate of dehydration discharges. Based on this substantive change, we propose to redesignate ACO–43 as pay-for-reporting for 2020 and 2021 consistent with our policy under § 425.502(a)(4), which provides that a newly introduced measure is set at the level of complete and accurate reporting for the first two reporting periods the measure is required. However, we also considered creating a benchmark using historical data for bacterial pneumonia and urinary tract infection and keeping the measure pay-for-performance. As this is a claims-based measure, we have access to historical data for both bacterial pneumonia and urinary tract infection so we would be able to create a historical benchmark for the revised measure. However, we believe that changes to measures impact how ACOs, their ACO participants, and ACO provider/suppliers allocate their resources and redesign their care process to improve quality of care for their beneficiaries. As a result, our proposal to revert the measure to pay-for-reporting for 2 years will give ACOs time to refine care processes and educate clinicians while also gaining experience with the refined composite measure and understanding of performance under revised benchmarks prior to the start of a pay for performance year.

We seek comment on this proposal and the alternative approach considered.

Table 32 shows the Shared Savings Program quality measure set for performance year 2020 and subsequent performance years that would result if the proposals in section III.I.3.B.(1) of this proposed rule are finalized, including the phase-in schedule for the proposed Adult Immunization Status measure (ACO–47).

BILLING CODE 4120–01–C

The net result, if the proposals in section III.I.3.b.(1) of this proposed rule are finalized, would be a set of 23 measures on which ACOs' quality performance would be assessed for performance year 2020 and subsequent performance years. The 4 domains would include the following numbers of quality measures (See Table 33):

- Patient/Caregiver Experience of Care-10 measures.
- Care Coordination/Patient Safety-4 measures.
- Preventive Health-6 measures.
- At Risk Populations-3 measures.

Table 33 provides a summary of the number of measures by domain and the total points and domain weights that would be used for scoring purposes.

TABLE 33: Number of Measures and Total Points for Each Domain within the Shared Savings Program Quality Performance Standard, Starting with Performance Years during 2019

Domain	Number of Individual Measures	Total Measures for Scoring Purposes	Total Possible Points	Domain Weight
Patient/Caregiver Experience	10	10 individual survey module measures	20	25%
Care Coordination/ Patient Safety	4	4 measures	8	25%
Preventive Health	6	6 measures	12	25%
At-Risk Population	3	3 individual measures	6	25%
Total in all Domains	23	23	46	100%

c. Seeking Comment on Aligning the Shared Savings Program Quality Score With the MIPS Quality Score

As discussed above, our principal goal in selecting quality measures for the Shared Savings Program has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. The Shared Savings Program quality measure set currently consists of 23 measures spanning four domains that are submitted by the ACO through the CMS Web Interface, calculated by us for ACOs from administrative claims data, and collected via a patient experience of care survey referred to as the CAHPS for ACOs Survey. The number of measures within the four domains has changed over time to reflect changes in clinical practice, move towards more outcome and high-priority measures, align with other quality reporting programs, and reduce burden; however, the overall structure of four equally weighted measure domains has remained consistent in determining ACOs' quality performance since the Shared Savings Program was established in 2012. As provided in section 1899(d)(2) of the Act and § 425.502(a) of the Shared Savings Program regulations, ACOs must meet a quality performance standard to qualify to share in savings. Currently, the quality performance standard is based on an ACO's performance year rather than financial track. The quality performance standard is defined at the level of full and complete reporting (pay-for-reporting (P4R)) for the first performance year of an ACO's first agreement period. In the second or subsequent years of the first agreement period and all years of subsequent agreement periods, quality measures are scored as pay-for-performance (P4P) according to the phase-in schedule for the specific measure and the ACO's performance year in the Shared Savings Program:

- For all performance years, ACOs must completely and accurately report all quality data used to calculate and assess their quality performance.
- CMS designates a performance benchmark and minimum attainment level for each P4P measure and establishes a point scale for the measure. An ACO's quality performance for a measure is evaluated using the appropriate point scale, and these measure specific scores are used to calculate the final quality score for the ACO.
- ACOs must meet minimum attainment (defined as the 30th percentile benchmark for P4P measures) on at least one measure in each domain

to be eligible to share in any savings generated (§ 425.502(d)(2)(iii)(A)).

ACOs are rewarded for their quality performance on a sliding scale on which higher levels of quality performance translate to higher rates of shared savings and, depending on the track under which an ACO is participating, may result in lower rates of shared losses. In addition, ACOs that demonstrate significant quality improvement on measures in a domain are eligible to receive a quality improvement reward (§ 425.502(e)(4)). Specifically, for each domain, ACOs can be awarded up to four additional points for quality performance improvement on the quality measures within the domain. These bonus points are added to the total points that an ACO achieves for the quality measures within that domain, but the total number of points cannot exceed the maximum total points for the domain.

In the CY 2018 Quality Payment Program final rule, we finalized a policy for the 2018 performance period and subsequent performance periods that the quality performance category under the MIPS APM Scoring Standard for MIPS eligible clinicians participating in a Shared Savings Program ACO will be assessed based on measures collected through the CMS Web Interface and the CAHPS for ACOs survey measures (82 FR 53688 through 53706). We assign the same MIPS quality performance category score to each Tax Identification Number (TIN)/National Provider Identifier (NPI) in a Shared Savings Program ACO based on the ACO's total quality score derived from the measures reported via the CMS Web Interface and the CAHPS for ACOs survey. Eligible clinicians in a Shared Savings Program ACO will receive full credit for the improvement activities performance category in 2020 based on their performance of improvement activities required under the Shared Savings Program. In addition, ACO participants report on the Promoting Interoperability performance category at the group or solo practice level for eligible clinicians subject to Promoting Interoperability performance category. Data for the Promoting Interoperability performance category is reported by ACO participants at the TIN level and is then weighted and aggregated to get a single ACO score for the performance category that applies to all eligible clinicians participating in the ACO. These three categories in the APM scoring standard are weighted as follows: Quality is 50 percent, Improvement Activities is 20 percent, and Promoting Interoperability is 30 percent. Eligible Clinicians participating in the Shared Savings Program are not assessed under the MIPS cost performance category as these eligible clinicians are already subject to cost and utilization performance assessments as part of the Shared Savings Program. Therefore, the cost performance category is weighted at zero percent.

Eligible clinicians who reassign their billing rights to an ACO Participant TIN in an Advanced APM (Track 2, Track 1+ ACO Model, BASIC Track Level E, and ENHANCED Track) and who are included on the Advanced APM Participation List on at least one of three snapshot dates (March 31, June 30, and August 31) during the performance year may become Qualifying APM Participants (QPs) for the year, if they meet payment or patient count thresholds. If these eligible clinicians attain QP status for the performance year via their participation in the Shared Savings Program ACO, they would receive an APM incentive payment and would not be subject to the MIPS reporting requirements or payment adjustment for the related payment year. However, they would be required to report quality for purposes of the Shared Savings Program financial reconciliation.

We recognize that ACOs and their participating providers and suppliers have finite resources to dedicate to engaging in efforts to improve quality and reduce costs for their assigned beneficiary population. Although CMS has worked to align policies under the Shared Savings Program with the Quality Payment Program, we recognize that some differences in program methodologies for the Shared Savings Program and MIPS remain and could potentially create conflicts for MIPS eligible clinicians in an ACO who are attempting to strategically transform their respective practices to earn shared savings under the terms of the Shared Savings Program and a positive payment adjustment under MIPS. Currently, under the Shared Savings Program, ACOs in performance years other than the first performance year of their first agreement period are allocated up to two points for quality measures that are pay-for-performance, according to where their performance falls, relative to benchmark deciles. Incomplete reporting of any CMS Web Interface measure will result in zero points for all CMS Web Interface measures and the ACO will fail to meet the quality performance standard for the performance year. Similarly, if a CAHPS for ACOs Survey is not administered and/or no data is transmitted to CMS, zero points will be earned for all Patient/Caregiver Experience measures and the ACO will fail to meet the quality standard for the performance year. The quality measure set for the Shared Savings Program also includes certain claims-based measures that are not part of the MIPS quality performance category, and we currently calculate performance rates on these claims-based measures for purposes of determining an ACO's overall quality score under the Shared Savings Program.

In contrast, when a group submits measures for the MIPS quality performance category via the CMS Web Interface, each measure is assessed against its benchmark to determine how many points the measure earns. For the 2019 MIPS performance period, a group can receive between 3 and 10 points for each MIPS measure (not including bonus points) that meets the data completeness and case minimum requirements by comparing measure performance to established benchmarks. If a group fails to meet the data completeness requirement on one of the CMS Web Interface measures, it receives zero points for that measure; however, all other CMS Web Interface measures that meet the data completeness requirement are assessed against the measure benchmarks, and the points earned across all measures are included in the quality performance category score. Currently, the only administrative claims-based measure used in MIPS is the All-Cause Readmission measure, which is only calculated for groups with 16 or more eligible clinicians. These differences between the Shared Savings Program quality measure set and the MIPS quality measure set highlight the different quality measurement approaches for which Shared Savings Program ACOs must simultaneously evaluate, prioritize, and target resources that may be better directed toward patient care if the quality measurement approaches under the Shared Savings Program and MIPS were more closely aligned.

We believe that using a single methodology to measure quality performance under both the Shared Savings Program and the MIPS would allow ACOs to better focus on increasing the value of healthcare, improving care, and engaging patients, and reduce burden as ACOs would be able to track to a smaller measure set under a unified scoring methodology. Accordingly, we are soliciting comment on how to potentially align the Shared Savings Program quality reporting requirements and scoring methodology more closely with the MIPS quality reporting requirements and scoring methodology.

First, we are requesting comments on replacing the Shared Savings Program quality score with the MIPS quality performance category score, for ACOs in Shared Savings Program tracks (or payment models within a track) that do not meet the definition of an Advanced APM (currently, Track 1 and BASIC Track Levels A, B, C and D). Allowing for a single quality performance score for both programs would eliminate the need for ACOs to focus their resources for quality improvement on maximizing performance under two separate quality reporting requirements with distinct scoring methodologies. Currently, for ACOs in tracks (or payment models within a track) that do not meet the definition of an Advanced APM, the MIPS quality performance category score is calculated based on the measures reported by the ACO via the CMS Web Interface and the CAHPS for ACO survey measures. For Shared Savings Program quality scoring purposes, we could utilize the MIPS quality performance category score, converted to a percentage of points earned out of the total points available, as the ACO's quality score for purposes of financial reconciliation under the Shared Savings Program. We note that for performance year 2017 (the only year from which we have complete data available), the weighted mean MIPS quality performance category score for ACOs in Shared Savings Program tracks (or payment models within a track) that do not meet the definition of an Advanced APM) was 45.01 and the weighted median MIPS quality performance score for these ACOs was 46.8, out of a possible 50 points assigned for the quality performance category.

ACOs in tracks (or payment models within a track) that meet the definition of an Advanced APM whose eligible clinicians are QPs for the year and thus are excluded from the MIPS reporting requirements, do not receive a quality performance category score under MIPS. Instead the quality data the ACO reports to the CMS Web Interface is used along with the ACO's CAHPS data and the administrative claims-based measures calculated by us, solely for the purpose of scoring the quality performance of the ACO under the Shared Savings Program quality scoring methodology. As an alternative, given that we currently collect the necessary data from these ACOs, we could also calculate a quality score for these ACOs under the MIPS scoring methodology, and use this score to assess the quality performance of the ACO for purposes of the Shared Savings Program. Using this score would also inform eligible clinicians participating in these ACOs of their MIPS quality score in the event that they lose QP status and are scored under the MIPS APM scoring standard.

Utilizing a MIPS quality performance category score to assess the quality performance for purposes of the Shared Savings Program ACOs in tracks (or payment models within a track) that qualify as an Advanced APM would not change whether eligible clinicians participating in the ACO obtain QP status and are excluded from MIPS, nor would it change the ACO participant TINs' eligibility to receive Advanced APM incentive payments. Rather, under this approach we would utilize the same scoring methodology to determine the quality performance, for Shared Savings Program ACOs that are participating in Advanced APMs as would be used to assess the quality performance of ACOs in Shared Savings Program tracks (or payment models within a track) that do not meet the definition of an Advanced APM, creating further alignment of performance results and further synergies between the Shared Savings Program and MIPS. We welcome comment on the approach of using the MIPS quality performance category score to assess quality performance for purposes of the Shared Savings Program quality performance standard for ACOs that are in tracks (or payment models within a track) that qualify as Advanced APMs. We also welcome comment on potential alternative approaches for scoring Shared Savings Program quality performance in a way that more closely aligns with MIPS.

In addition, we note that we are also soliciting comment on simplifying MIPS by implementing a core measure set using administrative claims-based measures that can be broadly applied to communities or populations and developing measure set tracks around specialty areas or public health conditions to standardize and provide more cohesive reporting and participation. We refer readers to section III.I.3.a.(3) of this proposed rule for more information on these approaches.

Currently, for ACOs in tracks (or payment models within a track) that do not meet the definition of an Advanced APM, the MIPS quality performance category score is calculated based on the measures reported by the ACO via the CMS Web Interface and the CAHPS for ACO survey measures. In section III.I.3.b.(1)(ii) of this proposed rule, we are proposing to add the MIPS All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions (MCC) measure to the MIPS quality performance category. If this measure were to be added to MIPS quality performance category, implementation of the measure would be delayed until the 2021 performance period for MIPS as explained in section III.I.3.B.(1)(ii). If the MCC measure were to be included in the MIPS quality performance category, we would also consider including the MIPS claims-based measures (MCC and MIPS All-Cause Readmission measure) in the MIPS APM scoring standard for ACOs in tracks (or payment models within a track) that are not Advanced APMs and in the MIPS quality performance category equivalent score for ACOs in tracks that are Advanced APMs, in order to fully align the quality scoring methodology under the Shared Savings Program with the MIPS scoring methodology to reduce the burden on ACOs and their eligible clinicians of tracking to multiple quality reporting requirements and quality scoring methodologies. We would then use this score for purposes of assessing quality performance under the Shared Savings Program for all ACOs. These MIPS claims-based measures are similar to those currently used to assess ACO quality under the Shared Savings Program. The proposed MIPS MCC and ACO MCC are similar because they both target patients with multiple chronic conditions but the cohort, outcome, and risk model for the proposed MIPS MCC measure would vary from the ACO MCC measure. The cohort for the ACO MCC includes eight conditions whereas the MIPS MCC measure includes nine conditions, where the additional condition is diabetes. The ACO MCC measure does not adjust for social risk factors whereas the MIPS MCC measure adjusts for two area-level social risk factors: (1) AHRQ socioeconomic status (SES) index; and (2) specialist density. For more detailed information on the MIPS MCC measure please refer to Appendix 1 Table AA (New Quality Measures Proposed for Addition for the 2023 Payment Year and Future Years) of this proposed rule. Both the MIPS and Shared Savings Program versions of the All-Cause Readmission measure were developed to fully align with the original hospital measure of Hospital-Wide Readmission. The MIPS and Shared Savings Program versions of the All Cause Readmission measure are essentially re-specifications of the same hospital measure and are updated annually to maintain that alignment. Because of this, the measures have a very similar, or identical, definition for included patients, outcome definition, and risk adjustment model. The primary

difference among the measures is only the entity that is accountable—either an ACO or a MIPS-eligible clinician—but the specifications are otherwise aligned. We also welcome comment on potentially including all of the MIPS claims-based measures in the MIPS quality performance category score for ACOs (instead of the 3 claims-based measures that are currently included in the Shared Savings Program quality score), and using this score (converted to a percentage of points earned out of the total points available) in place of the current Shared Savings Program quality score to assess quality performance for all ACOs for purposes of the Shared Savings Program. We note that we would also continue to assess ACOs on the CAHPS for ACOs survey but quality performance would be calculated by MIPS based on the methodology used for scoring the CAHPS for MIPS survey and included in the MIPS quality performance category score. The scoring and benchmarking approach for the CAHPS for MIPS is to assign points based on each summary survey measure (SSM) and then average the points for all the scored SSMs to calculate the overall CAHPS score. In contrast, ACOs currently, receive up to 2 points for each of the 10 SSMs for a total of 20 points.

In addition, we are soliciting comment on determining the threshold for minimum attainment in the Shared Savings Program using the MIPS APM quality performance category scoring. As noted previously in this section, ACOs in the first performance year of their first agreement period are considered to have met the quality performance standard and therefore to be eligible to share in savings or minimize shared losses, if applicable, when they completely and accurately report all quality measures. ACOs in all other performance years are required to completely and accurately report and meet the minimum attainment level on at least one measure in each domain, to be determined to have met the quality performance standard and to be eligible to share in savings. For these ACOs, minimum attainment is defined as a score that is at or above 30 percent or the 30th percentile of the performance benchmark. The 30th percentile for the Shared Savings Program is the equivalent of the 4th decile performance benchmark under MIPS APM quality performance category scoring. As we look to more closely align with MIPS quality performance category scoring in future years, we are considering how to determine whether ACOs have met the minimum attainment level. For example, minimum attainment could continue to be defined as complete and accurate reporting for ACOs in their first performance year of their first agreement period, while a MIPS quality performance category score that is at or above the 4th decile across all MIPS quality performance category scores would be required for ACOs in all other performance years under the Shared Savings Program. ACOs with quality scores under the 4th decile of all MIPS quality performance category scores would not meet the quality performance standard for the Shared Savings Program and thus would not be eligible to share in savings or would owe the maximum shared losses, if applicable. In addition, ACOs with quality scores under the 4th decile of all MIPS quality performance category scores would be subject to compliance actions and possible termination. We recognize that a requirement that ACOs achieve an overall MIPS quality performance category score (or equivalent score) that meets or exceeds the 4th decile across all MIPS quality performance category scores is a higher standard than the current requirement that ACOs meet the 30th percentile on one measure per Shared Savings Program quality domain; however, section 1899(b)(3)(C) of the Act not only gives us discretion to establish quality performance standards for the Shared Savings Program, but also indicates that we should seek to improve the quality of care furnished by ACOs over time by specifying higher standards. We believe that increasing the minimum attainment level would incentivize improvement in the quality of care provided to the beneficiaries assigned to an ACO. Furthermore, consistent with section 1899(b)(3)(C) of the Act, it is appropriate to require a higher standard of care in order for ACOs to continue to share in any savings they achieve. Given the maturity of the Shared Savings Program, we are also considering setting a higher threshold, such as the median or mean quality performance category score across all MIPS quality category scores, for determining eligibility to share in savings under the Shared Savings Program for all ACOs, other than those ACOs in their first performance year of their first agreement period. We welcome comment on these potential approaches or other approaches for determining Shared Savings Program quality minimum attainment using MIPS data.

We are also seeking comment on how to potentially utilize the MIPS quality performance category score to adjust shared savings and shared losses under the Shared Savings Program, as applicable. Currently, for all Shared Savings Program ACOs and Track 1+ Model ACOs, the ACO's quality score is multiplied with the maximum sharing rate of the track to determine the final sharing rate and therefore the amount of shared savings, if applicable. For some ACOs under two-sided models, specifically ACOs in Track 2 and the ENHANCED track, the ACO's quality score is also used in determining the amount of shared losses owed, if applicable. Under Track 2 and the ENHANCED track, the loss sharing rate is determined as 1 minus the ACO's final sharing rate based on quality performance, up to a maximum of 60 percent or 75 percent, respectively. Under the Track 1+ Model and two-sided models of the BASIC track (Levels C, D and E), the amount of shared losses is determined based on a fixed 30 percent loss sharing rate, regardless of the ACO's quality score. Thus, a higher quality score results in the ACO receiving a higher proportion of shared savings in all Shared Savings Program tracks and the Track 1+ Model, or greater mitigation of shared losses in Track 2 and the ENHANCED track. We could apply the MIPS quality performance category score to determine ACOs' shared savings and shared losses, if applicable, in the same manner. For instance, as an alternative to the current approach to determining shared savings payments for Shared Savings Program ACOs, we could establish a minimum attainment threshold, such as a score at or above the 4th decile of all MIPS quality performance category scores or the median or mean quality performance category score, that if met would allow ACOs to share in savings based on the full sharing rate of their track. We welcome comment on these or other potential approaches for utilizing the MIPS quality performance category score or an alternative score in determining shared savings or shared losses under the Shared Savings Program.

In addition, we are considering an option under which we would determine the MIPS quality performance category score for all Shared Savings Program ACOs as it is currently calculated for non-ACO group reporters using the CMS Web Interface. That is, ACOs would receive a score for each of the measures they report and zero points for those measures they do not report. This would be a change from the current methodology under which ACOs must report all Web Interface measures to complete quality reporting. We note that currently, for ACOs in the first year of their first agreement period,

minimum attainment is set at the level of complete and accurate reporting of all measures. If we were to adopt the MIPS quality performance category score as the Shared Savings Program quality score, we would consider no longer imposing a different quality standard for ACOs in the first year of their first participation agreement versus ACOs in later performance years. Given that the Shared Savings Program is evolving and many Medicare quality programs including MIPS are incentivizing performance rather than reporting, we are considering no longer transitioning from pay-for-reporting to pay-for-performance during an ACO's first agreement period in the Shared Savings Program. We believe that requiring all ACOs regardless of time in the program to be assessed on quality performance would be an appropriate policy since nearly 100 percent of ACOs consistently satisfactorily report all quality measures. We welcome comment on this alternative for determining the MIPS quality performance category score.

Lastly, we are seeking comment on using the MIPS quality improvement scoring methodology rather than the Shared Savings Program Quality Improvement Reward to reward ACOs for quality improvement. Under the Shared Savings Program, we currently allow ACOs not in their first performance year in the program to earn a Quality Improvement Reward in each of the four quality domains. In contrast, under MIPS improvement points are generally awarded as part of the MIPS quality performance category score if a MIPS eligible clinician (1) has a quality performance category achievement percent score for the previous performance period and the current performance period; (2) fully participates in the quality performance category for the current performance period; and (3) submits data under the same identifier for the 2 consecutive performance periods. If we were to adopt the MIPS quality performance category score for the Shared Savings Program quality score, quality improvement points earned under MIPS would be included in that score, and we would not have a need to add additional points to it. We welcome public comment on this or other approaches to considering improvement as part of using the MIPS quality performance category or an equivalent score, to determine quality performance under the Shared Savings Program.

We are seeking stakeholder feedback on the approaches discussed in this section of the proposed rule and any other recommendations regarding the potential alignment of the Shared Savings Program quality performance standard with the MIPS quality performance category in the assessment of ACO quality performance in the future for purposes of the Shared Savings Program.

2. Technical Change To Correct Reference in SNF–3 Day Rule Waiver Provision

In the December 2018 final rule, we made a number of amendments to § 425.612 (83 FR 68080). As part of these amendments, we redesignated paragraphs (a)(1)(v)(A) through (C) of § 425.612 as paragraphs (a)(1)(v)(C) through (E). In making these amendments, we inadvertently omitted a necessary update to a cross-reference to one of these provisions. Accordingly, we propose to remove the phase ''paragraph (a)(1)(v)(B)'' from § 425.612(a)(1)(v)(E), and in its place add the phrase ''paragraph (a)(1)(v)(D).''

F. Open Payments

1. Background

a. Open Payments Policies

The Open Payments program is a statutorily-mandated program that promotes transparency by providing information about the financial relationships between the pharmaceutical and medical device industry and certain types of health care providers and makes the information available to the public. Section 1128G of the Act requires manufacturers of covered drugs, devices, biologicals, or medical supplies (referred to as ''applicable manufacturers'') to annually submit information for the preceding calendar year about certain payments or other transfers of value made to ''covered recipients,'' currently defined as physicians and teaching hospitals.

Payments or other transfers of value that must be reported include such things as research, honoraria, gifts, travel expenses, meals, grants, and other compensation. The type of information required to be reported includes, but is not limited to, the date and amount of the payment or other transfer of value, identifying information about the covered recipient, and details about products associated with the transaction. When a payment or other transfer of value is related to marketing, education, or research specific to a covered drug, device, biological or medical supply, the name of that covered drug, device, biological or medical supply also must be reported under section 1128G of the Act. The estimated burden of these reporting requirements, as outlined under OMB control number 0938–1237, is just over 1 million hours over the course of 1 year.

Section 1128G of the Act establishes certain minimum dollar thresholds for required reporting, with two bases for reporting, individual and aggregate payments or transfers of value. To determine if small individual payments or other transfers of value made to a covered recipient exceed the aggregate threshold and must be reported, applicable manufacturers and applicable GPOs must aggregate all individual payments made across all payment categories within a given reporting year. The statutory threshold established in 2013 was $10 for individual payments, and $100 for aggregated payments, and this amount has increased with the consumer price index each year. For CY 2019, the annual reporting thresholds for individual payments or other transfers of value is $10.79 and the aggregate amount is $107.91.

The Open Payments program yields transparency that provides information to the general public that may influence their health care decision-making and choice of providers, as well as information that researchers looking into potential correlations between financial relationships and provider behaviors may use. More than 51 million records have been disclosed under the Open Payments program since August 2013, enabling significant transparency into covered exchanges of value. We have been committed to stakeholder engagement in an effort to limit burden in the Open Payments program reporting processes and improve clarity for the public. Additional background about the program and guidance, including FAQs, about how the program works and what type of information is required to be reported is available at *www.cms.gov/OpenPayments*.

In the February 8, 2013 **Federal Register** (78 FR 9458), we issued regulations implementing section 1128G of the Act to create the Open Payments program. Section 1128G of the Act requires manufacturers of covered drugs, devices, biologicals, or medical supplies (referred to as ''applicable manufacturers'') to submit information annually about certain payments or other transfers of value made to ''covered recipients,'' currently defined as physicians and teaching hospitals, during the course of the preceding calendar year. Additionally, section 1128G of the Act defines covered drugs, devices, biologicals, or medical supplies as those covered under Medicare or a State plan under Medicaid or the CHIP

(or a waiver of such a plan); and requires applicable manufacturers and applicable GPOs to disclose any ownership or investment interests in such entities held by physicians or physician's immediate family members, as well as information on any payments or other transfers of value provided to such physician owners or investors. Under section 1128G(e)(10)(A) of the Act, the term ''payment or other transfer of value'' refers to a transfer of anything of value, though some exclusions apply.

In the CY 2015 PFS final rule with comment period (79 FR 67548), we revised the regulations by standardizing reporting in the Open Payments program. Specifically, we: (1) Deleted the definition of ''covered device''; (2) removed the special rules for payments or other transfers of value related to continuing education programs; (3) clarified the marketed name reporting requirements for devices and medical supplies; and (4) required stock, stock options, and any other ownership interests to be reported as distinct forms of payment.

In the CY 2017 PFS proposed rule (81 FR 46395), we solicited information from the public on a wide variety of information regarding the Open Payments program. Since the implementation of the program and changes made in the CY 2015 PFS final rule with comment period, various commenters have provided us feedback. Consequently, we identified areas in the rule that might benefit from revision and solicited public comments to inform future rulemaking. We sought comment on whether the nature of payment categories listed at § 403.904(e)(2) are adequately inclusive to facilitate reporting of all payments or transfers of value, and sought ways to streamline or make the reporting process more efficient while facilitating our role in oversight, compliance, and enforcement, along with posing other program-specific questions. A summary of solicited comments was published in the CY 2017 PFS final rule (81 FR 80428–80429).

On October 24, 2018, the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–270) was signed into law. Section 6111 of the SUPPORT Act amended the definition of ''covered recipient'' under section 1128G(e)(6) of the Act with respect to information required to be submitted on or after January 1, 2022, to include physician assistants (PA), nurse practitioners (NP), clinical nurse specialists (CNS), certified registered nurse anesthetists (CRNA), and certified nurse midwives (CNM), in addition to the previously listed covered recipients of physicians and teaching hospitals. This rule proposes to codify the Open Payments provisions from the SUPPORT Act, proposes to address public comments received from the CY 2017 PFS proposed rule by simplifying the process for reporting data by adjusting the nature of payment categories, and proposes changes to standardize data on reported covered drugs, devices, biologicals, or medical supplies.

b. Legal Authority

Three principal legal authorities from the Social Security Act ground our proposed provisions:

- Sections 1102 and 1871, which provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.
- Section 1861, which defines providers and suppliers.
- Section 1128G, as amended by section 6111 of the SUPPORT Act, which requires applicable manufacturers of drugs, devices, biologicals, or medical supplies covered under Medicare or a State plan under Medicaid or CHIP to report annually to the Secretary certain payments or other transfers of value to physicians and teaching hospitals, and to PAs, NPs, CNSs, CRNAs, and CNMs for information required to be submitted under section 1128G of the Act on or after January 1, 2022.

c. Proposed Changes

In this rule, we propose to revise several Open Payments regulations at 42 CFR part 403. We are proposing that the following provisions be effective for data collected beginning in CY 2021 and reported in CY 2022: (1) Expanding the definition of a covered recipient to include the categories specified in the SUPPORT Act; (2) expanding the nature of payment categories; and (3) standardizing data on reported covered drugs, devices, biologicals, or medical supplies. We are also proposing a correction to the national drug codes (NDCs) reporting requirements for drugs and biologicals that, should the rule be finalized as proposed, would be effective 60 days following the publication of the final rule. We believe this would give all stakeholders sufficient time to prepare for these requirements.

(1) Expanding the Definition of a Covered Recipient

Section 1128G of the Act requires applicable manufacturers and applicable GPOs to report annually information about certain payments or other transfers of value made to covered recipients, as well as ownership or investment interests held by physicians or their immediate family members in such entities, though at section 1128G(e)(7) of the Act it excepts physicians who are employed by the reporting manufacturer, such that manufacturers do not report payments to their own employees. As we noted previously, section 6111 of the SUPPORT Act expanded the definition of covered recipients from physicians and teaching hospitals to include PAs, NPs, CNSs, CRNAs, and CNMs; it likewise expanded to these individuals the same exception for manufacturer-employment. The SUPPORT Act requires these changes to be in effect for information required to be submitted on or after January 1, 2022. In short, applicable manufacturers will be required to report transfers of value pertaining to these additional provider types in the same way they have been required to report transfers of value to physicians and teaching hospitals. Since the information is reported to CMS in the calendar year following the year in which it was collected, this means that the data would be collected by the industry during CY 2021.

We are proposing to revise § 403.902 to align with the statutory requirements in sections 1128G(e)(6)(A) and (B) of the Act. Specifically, we are proposing to revise the definition of ''covered recipient'' in § 403.902 to include PAs, NPs, CNSs, CRNAs, and CNMs. In addition, we are proposing at § 403.902 to reference the definitions of these additional provider types as defined in sections 1861(aa)(5)(A), 1861(aa)(5)(B), 1861(bb)(2), and 1861(gg)(2) of the Act.

We are also proposing to update certain provisions in part 403, subpart I to include provider and supplier types other than physicians as specified in sections 1128G(e)(6)(A) and (B) of the Act. Specifically, we propose the following revisions:

- In § 403.902, to add the definitions of ''certified nurse midwife,'' ''certified registered nurse anesthetist,'' ''clinical nurse specialist,'' ''non-teaching hospital covered recipient,'' ''nurse practitioner,'' and ''physician assistant.''
- In § 403.902, to revise the definition of ''covered recipient'' by adding physician assistant, nurse practitioner, clinical nurse specialist, certified registered nurse anesthetist, or certified nurse-midwife'' after the phrase ''Any physician.''
- In § 403.904(c)(1), (f)(1)(i)(A), and (h)(7), to replace the term ''physician''

with the phrase ''non-teaching hospital.''

• In § 403.904(c)(3), to replace the term ''physician'' in the title with the phrase ''non-teaching hospital,'' add the phrase ''non-teaching hospital'' after ''In the case of a,'' and remove the phrase ''who is a physician'' from the text.

• In § 403.904(c)(3)(ii) and (iii), (f)(1)(i)(A)(*1*), (f)(1)(i)(A)(*3*) and (*5*), and (f)(1)(v), to change the term ''physician'' to the phrase ''non-teaching hospital covered recipient.''

• In § 403.904(h)(13), to remove the phrase ''who is a physician'' and add the phrase ''non-teaching hospital'' after ''In the case of.''

• In § 403.904(f)(1), to remove the phrase ''(either physicians or teaching hospitals).''

• In § 403.908(g)(2)(ii), to change the words ''physicians and teaching hospitals'' to the term ''Covered recipients.''

(2) Nature of Payment Categories

Applicable manufacturers and applicable GPOs must characterize the nature of payments made to covered recipients by selecting the ''Nature of Payment'' category that most closely describes the reported payment. Some of the ''Nature of Payment'' categories, as specified at § 403.904(e)(2), are specifically required by section 1128G(a)(1)(A)(vi) of the Act, while the statute also allows the Secretary to define any other nature of payment or other transfer of value.

Based upon information we obtained from the public comments solicited in the CY 2017 PFS proposed rule (81 FR 46395), stakeholders have identified debt forgiveness, long term medical supply or device loan, and acquisitions (among others) as useful categories to add to comply with the general reporting requirement under section 1128G(a)(1)(A) of the Act. Therefore, and so as to add clarity to the types of payments or transfers of value made by applicable manufactures and applicable GPOs to covered recipients, we are proposing to revise the ''Nature of Payment'' categories in § 403.904(e)(2) by consolidating two duplicative categories and by adding the three new categories described below.

First, the categories that we are proposing to consolidate include two separate categories for continuing education programs. Section 1128G(a)(1)(A)(vi)(XIII) of the Act requires manufacturers to report direct compensation for serving as faculty or a speaker for medical education programs. The current § 403.904(e)(2)(xiv) and (xv) distinguish between accredited/certified and unaccredited/non-certified continuing education programs. At proposed revised § 403.904(e)(2)(xv), we are proposing to consolidate these categories and make the regulatory wording match the statutory language ''medical education programs,'' which we believe would streamline the reporting requirements while not detracting from the underlying context of the data. Although we defined separate categories at the inception of the Open Payments program, we no longer believe that the distinction in this category is necessary.

In addition, we are proposing three additional categories that would operate prospectively and would *not* require the updating of previously reported payments or other transfers of value that may fall within these new categories.

The three new categories are as follows:

• *Debt Forgiveness* (proposed § 403.904(e)(2)(xi)): This would be used to categorize transfers of value related to forgiving the debt of a covered recipient, a physician owner, or the immediate family of the physician who holds an ownership or investment interest.

• *Long-Term Medical Supply or Device Loan* (proposed new § 403.904(e)(2)(xiv)): Section 403.904 currently contains an exclusion from reporting for the loan of a covered device, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 days, or a quantity of 90 days of average use, respectively. This new category would be used to characterize the loans of covered devices or medical supplies for longer than 90 days. (*Note:* We are proposing to combine current paragraphs on continuing education programs § 403.904(e)(2)(xiv) and (xv) to replace paragraph (e)(2)(xv) as noted in the consolidating continuing education programs above.)

• *Acquisitions* (proposed § 403.904(e)(2)(xviii)): This addition would provide a category for characterizing buyout payments made to covered recipients in relation to the acquisition of a company in which the covered recipient has an ownership interest.

We also are proposing to add the definition of ''long-term medical supply or device loan'' to § 403.902 as ''the loan of supplies or a device for 91 days or longer.'' For consistency within the definitions section, we propose to redesignate § 403.904(h)(5)—which contains the definition of ''short-term medical supply or device loan'' to § 403.902. As a result, we are proposing a new § 403.904(h)(5) to be ''short-term medical supply or device loan.''

(3) Standardizing Data on Reported Covered Drugs, Devices, Biologicals, or Medical Supplies

When applicable manufacturers or applicable GPOs report payments or transfers of value related to specific drugs and biologicals, we currently require names and NDCs to be reported to the Open Payments program. However, based upon the lack of federally-recognized identifiers when we started the Open Payments program, we have not required analogous reporting for medical devices from the manufacturers. However, the Food and Drug Administration (FDA) established and continues to implement a system for the use of standardized unique device identifiers (UDIs) for medical devices and has issued regulations at 21 CFR part 801, subpart B, and 21 CFR part 830, requiring, among other things, that a UDI be included on the label of most devices distributed in the United States. (See 78 FR 58785, September 24, 2013.) Based upon the FDA's UDI regulatory requirements and the HHS Office of the National Coordinator's requirement that UDIs form part of the Common Clinical Data Set (45 CFR part 170), we believe that the use of UDIs and device identifiers (DIs), a subcomponent of the UDI, have become more standardized. Moreover, the HHS Office of Inspector General (OIG) included a recommendation for Open Payments to require more specific information about devices in an August 2018 report (OEI–03–15–00220).

With the standardization and typical use of UDIs and based upon OIG's recommendation, we propose that the DI component, the mandatory fixed portion of the UDI assigned to a device, if any, should be incorporated into Open Payments reporting that applicable manufacturers or applicable GPOs provide. We do not propose to require a full UDI. We believe such a step would substantially aid in enhancing the quality of the Open Payments data because the identifiers can be used to validate submitted device information. This effort would also enhance the usefulness of Open Payments data to the public by providing more precise information about the medical supplies and devices associated with a transaction. Specifically, we are proposing to revise § 403.904(c)(8) to require applicable manufacturers and applicable GPOs to provide the DIs (if any) to identify reported devices in a comprehensive fashion meaningful to the users of Open Payments data and reorganize the section accordingly.

We also seek to further clarify the reporting requirements with regard to drugs and biologicals. Since the outset of the Open Payments program, NDCs have been required for both research and non-research payments. In § 403.904(f)(1)(iv), we require that NDCs be reported for drugs and biologicals used in research. However, in the CY 2015 PFS final rule with comment period (79 FR 67548), the non-research payment NDC requirement was erroneously removed when changes were made to the rule text regarding marketed names. We propose to correct this error in order to reiterate that NDCs are required for both research and non-research payments and to make the change effective 60 days from publishing the final rule.

We propose to revise § 403.904(c)(8) to require DIs (if any) to identify reported devices in a comprehensive fashion meaningful to the users of Open Payments data and reorganize the section accordingly. We also propose to reincorporate language that specifically requires reporting of NDCs.

As a result of the proposed changes to § 403.904(c)(8), we are also proposing technical changes to § 403.904(f)(1)(iv) and to add mirrored definitions from 21 CFR 801.3 for ''device identifier'' and ''unique device identifier'' to § 403.902.

G. Solicitation of Public Comments Regarding Notification of Infusion Therapy Options Available Prior To Furnishing Home Infusion Therapy

Section 5012 of the 21st Century Cures Act (Cures Act) (Pub. L. 114–255; enacted December 13, 2016) created a separate Medicare Part B benefit under section 1861(s)(2)(GG) and section 1861(iii) of the Act to cover home infusion therapy-associated professional services for certain drugs and biologicals administered intravenously or subcutaneously through a pump that is an item of durable medical equipment in the beneficiary's home, effective for January 1, 2021. Section 5012 of the Cures Act also added section 1834(u) to the Act that establishes the payment and related requirements for home infusion therapy under this benefit.

Specifically, section 1834(u)(6) of the Act requires that prior to the furnishing of home infusion therapy to an individual, the physician who establishes the plan described in section 1861(iii)(1) of the Act for the individual shall provide notification (in a form, manner, and frequency determined appropriate by the Secretary) of the options available (such as home, physician's office, hospital outpatient department) for the furnishing of infusion therapy under this part.

We recognize there are several possible forms, manners, and frequencies that physicians may use to notify patients of their infusion therapy treatment options. For example, a physician may verbally discuss the treatment options with the patient during the visit and annotate the treatment decision in the medical records before establishing the infusion plan. Some physicians may also provide options in writing to the patient in the hospital discharge papers or office visit summaries, as well as retain a written patient attestation that all options were provided and considered. The frequency of discussing these options could vary based on a routine scheduled visit or according to the individual's clinical needs.

We are soliciting comments regarding the appropriate form, manner and frequency that any physician must use to provide notification of the treatment options available to their patient for the furnishing of infusion therapy under Medicare Part B as required under section 1834(u)(6) of the Act. We also invite comments on any additional interpretations of this notification requirement.

H. Medicare Enrollment of Opioid Treatment Programs and Enhancements to General Enrollment Policies Concerning Improper Prescribing and Patient Harm

1. Enrollment of Opioid Treatment Programs

a. Legislative and Regulatory Background

As previously explained in more detail in this proposed rule, the SUPPORT Act was designed to alleviate the nationwide opioid crisis by: (1) Reducing the abuse and supply of opioids; (2) helping individuals recover from opioid addiction and supporting the families of these persons; and (3) establishing innovative and long-term solutions to the crisis. The SUPPORT Act attempts to fulfill these objectives, in part, by establishing a new Medicare benefit category for opioid treatment programs (OTPs) pursuant to section 2005 thereof. Section 2005(d) of the SUPPORT Act amended section 1866(e) of the Act by adding a new paragraph (3) classifying OTPs as Medicare providers (though only with respect to the furnishing of opioid use disorder treatment services). This will enable OTPs that meet all applicable statutory and regulatory requirements to bill and receive payment under the Medicare program for furnishing such services to Medicare beneficiaries.

b. Definition of and Certain Requirements for OTPs

As already mentioned, an OTP is currently defined in 42 CFR 8.2 as a program or practitioner engaged in opioid treatment of individuals with an opioid agonist treatment medication registered under 21 U.S.C. 823(g)(1). Section 2005(b) of the SUPPORT Act added a new section 1861(jjj)(2) to the Act defining an OTP as an entity that meets, among other things, the definition of an OTP in § 8.2 (or any successor regulation). Section 1861(jjj)(2) of the Act also outlines certain additional requirements that an OTP must meet to qualify as such. These requirements include the following:

(1) Accreditation

Consistent with new section 1861(jjj)(2)(C) of the Act, as added by section 2005(b) of the SUPPORT Act, and also required under 42 CFR 8.11(a)(2), an OTP must have a current, valid accreditation by an accrediting body or other entity approved by the SAMHSA, the federal agency that oversees OTPs. A core purpose of OTP accreditation is to ensure that an OTP meets: (1) Certain minimum requirements for furnishing medication-assisted treatment (MAT); and (2) the applicable accreditation standards of SAMHSA-approved accrediting bodies, of which there presently are six. The accreditation process includes, but is not limited to, an accreditation survey, which involves an onsite review and evaluation of an OTP to determine compliance with applicable federal standards.

(2) Certification

A second requirement addressed in section 1861(jjj)(2)(B) of the Act, as added by section 2005(b) of the SUPPORT Act, is also in current regulations referenced in 42 CFR 8.11(a). Along with accreditation, an OTP must have a current, valid certification by SAMHSA for such a program. The prerequisites for certification (as well as the certification process itself) are outlined in 42 CFR 8.11 and include, but are not restricted to, the following:

- Current and valid accreditation (as described previously);
- Adherence to the federal opioid treatment standards described in § 8.12;
- Compliance with all pertinent state laws and regulations, as stated in § 8.11(f)(1);
- Per § 8.11(f)(6), compliance with all regulations enforced by the Drug Enforcement Administration (DEA)

under 21 CFR chapter II; this includes registration by the DEA before administering or dispensing opioid agonist treatment medications; and

• As stated in § 8.11(a)(2), compliance with all other conditions for certification established by SAMHSA.

Under § 8.11(a)(3), certification is generally for a maximum 3-year period, though this may be extended by 1 year if an application for accreditation is pending. SAMHSA may revoke or suspend an OTP's certification if any of the applicable grounds identified in § 8.14(a) or (b), respectively, exist. Under § 8.11(e)(1), an OTP that has no current certification from SAMHSA but has applied for accreditation with an accreditation body may obtain a provisional certification for up to 1 year.

At the time of application for certification or any time thereafter, an OTP may request from SAMHSA an exemption from the regulatory requirements of §§ 8.11 and 8.12. Section 8.11(h), which governs the exemption process, cites an example of a private practitioner who wishes to treat a limited number of patients in a non-metropolitan area with few physicians and no rehabilitative services geographically accessible; he or she may choose to seek an exemption from some of the staffing and service standards.

According to SAMHSA statistics, there are currently about 1,677 active OTPs; of these, approximately 1,585 have full certifications and 92 have provisional certifications.

(3) OTP Enrollment

Most pertinent to the discussion and proposals below, section 2005(b) of the SUPPORT Act, which added a new section 1861(jjj)(2)(A) to the Act, requires that an OTP be enrolled in the Medicare program under section 1866(j) of the Act to qualify as an OTP and to bill and receive payment from Medicare for opioid use disorder treatment services. Per section 1861(jjj)(2)(A) of the Act, the provisions of this proposed rule would establish requirements that OTPs must meet in order to enroll in Medicare.

c. Current Medicare Enrollment Process

(1) Background

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers in the Medicare program. The overarching purpose of the enrollment process is to help ensure that providers and suppliers that seek to bill the Medicare program for services or items furnished to Medicare beneficiaries are qualified to do so under federal and state laws. The process is, to an extent, a ''gatekeeper'' that prevents unqualified and potentially fraudulent individuals and entities from being able to enter and inappropriately bill Medicare. As further explained below, CMS and its Medicare Administrative Contractors (MACs; hereafter occasionally referred to as ''contractors'') carefully and closely screen and review Medicare enrollment applicants to verify that they meet all applicable legal requirements.

CMS has taken various steps via regulation to outline a process for enrolling providers and suppliers in the Medicare program. In the April 21, 2006 **Federal Register** (71 FR 20754), we published the ''Medicare Program; Requirements for Providers and Suppliers to Establish and Maintain Medicare Enrollment'' final rule that set forth certain requirements in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.570) that providers and suppliers must meet to obtain and maintain Medicare billing privileges. In the April 21, 2006 final rule, we cited sections 1102 and 1871 of the Act as general authority for our establishment of these requirements, which were designed for the efficient administration of the Medicare program.

Subsequent to the April 21, 2006 final rule, we published additional provider enrollment regulations. These were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us to take further action against providers and suppliers: (1) Engaging (or potentially engaging) in fraudulent or abusive behavior; (2) presenting a risk of harm to Medicare beneficiaries or the Medicare Trust Funds; or (3) that are otherwise unqualified to furnish Medicare services or items.

One of the provider enrollment regulations was the ''Medicare, Medicaid, and Children's Health Insurance Programs; Additional Screening Requirements, Application Fees, Temporary Enrollment Moratoria, Payment Suspensions and Compliance Plans for Providers and Suppliers'' final rule published in the February 2, 2011 **Federal Register** (76 FR 5862). This final rule implemented various provisions of the Affordable Care Act, including the following:

• Added a new § 424.514 that required submission of application fees by institutional providers (as that term is defined in § 424.502) as part of the Medicare, Medicaid, and Children's Health Insurance Program (CHIP) provider enrollment processes.

• Added a new § 424.518 that established Medicare, Medicaid, and CHIP provider enrollment screening categories and requirements based on the CMS-assessed level of risk of fraud, waste, and abuse posed by a particular category of provider or supplier.

We also published the ''Medicare Program; Requirements for the Medicare Incentive Reward Program and Provider Enrollment'' final rule in the December 5, 2014 **Federal Register** (79 FR 72499) wherein we addressed several vulnerabilities in the provider enrollment process. As part of the December 2014 final rule—

• We expanded the number of reasons for which we can: (1) deny a prospective provider's or supplier's enrollment in the Medicare program under § 424.530; or (2) revoke the Medicare enrollment of an existing provider or supplier under § 424.535.

• We supplemented the existing denial reason in § 424.530(a)(3) such that we could deny a prospective provider's or supplier's Medicare enrollment if a managing employee (as that term is defined in § 424.502) of the provider or supplier has, within the 10 years preceding enrollment or revalidation of enrollment, been convicted of a federal or state felony offense that we determined to be detrimental to the best interests of the Medicare program and its beneficiaries.

• We expanded the existing revocation reason in § 424.535(a)(8) to allow us to revoke a provider's or supplier's enrollment if we determine that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements.

In addition to these final rules, we have also made several other regulatory changes to 42 CFR part 424, subpart P to address various program integrity issues that have arisen.

(2) Form CMS–855—Medicare Enrollment Application

Under § 424.510, a provider or supplier must complete, sign, and submit to its assigned MAC the appropriate Form CMS–855 (OMB Control No. 0938–0685) application in order to enroll in the Medicare program and obtain Medicare billing privileges. The Form CMS–855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09–70–0532, Provider Enrollment, Chain, and Ownership System) captures information about the provider or supplier that is needed for CMS or its MACs to determine whether the provider or supplier meets all Medicare

requirements. Data collected on the Form CMS–855 is carefully reviewed and verified by CMS or its MACs and includes, but is not limited to:

- General identifying information (for example, legal business name, tax identification number).
- Licensure and/or certification data.
- Any final adverse actions (as that term is defined in § 424.502) of the provider or supplier, such as felony convictions, exclusions by the HHS Office of Inspector General (OIG), or state license suspensions or revocations.
- Practice locations and other applicable addresses of the provider or supplier.
- Information regarding the provider's or supplier's owning and managing individuals and organizations and any final adverse actions those parties may have.
- As applicable, information about the provider's or supplier's use of a billing agency.

The Form CMS–855 application is used for a number of provider enrollment transactions, such as:

- Initial enrollment: The provider or supplier is enrolling in Medicare for the first time, enrolling in another MAC's jurisdiction, or seeking to enroll in Medicare after having previously been enrolled.
- Change of ownership: The provider or supplier is reporting a change in its ownership.
- Revalidation: The provider or supplier is revalidating its Medicare enrollment information in accordance with § 424.515.
- Reactivation: The provider or supplier is seeking to reactivate its Medicare billing privileges after being deactivated under § 424.540.
- Change of information: The provider or supplier is reporting a change in its existing enrollment information in accordance with § 424.516.

After receiving a provider's or supplier's initial enrollment application, reviewing and confirming the information thereon, and determining whether the provider or supplier meets all applicable Medicare requirements, CMS or the MAC will either: (1) Approve the application and grant billing privileges to the provider or supplier (or, depending upon the provider or supplier type involved, simply recommend approval of the application and refer it to the state agency or to the CMS regional office, as applicable); or (2) deny enrollment under § 424.530.

d. Proposed OTP Enrollment Provisions

(1) Legal Basis and Necessity

As mentioned earlier, section 1861(jjj)(2)(A) of the Act requires OTPs to enroll in Medicare to bill and receive payment. In the proposals discussed in this section III.I.3. of this proposed rule, we outline the proposed requirements and procedures with which OTPs must comply to enroll and remain enrolled in Medicare. In doing so, we are relying on the authority granted to us not only under section 1861(jjj)(2)(A) of the Act but also under several other statutory provisions. First, section 1866(j) of the Act provides specific authority with respect to the enrollment process for providers and suppliers. Second, sections 1102 and 1871 of the Act furnish general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

We believe, and it has been our longstanding experience, that the provider enrollment process is invaluable in helping to ensure that: (1) All potential providers and suppliers are carefully screened for compliance with all applicable requirements; (2) problematic providers and suppliers are kept out of Medicare; and (3) beneficiaries are protected from unqualified providers and suppliers. Indeed, without this process, the Medicare program and Medicare beneficiaries are endangered, and billions of Trust Fund dollars may be paid to unqualified or fraudulent parties.

Nor, we add, are our general concerns restricted to the mere need and desire to establish provider enrollment requirements for OTPs. Though a very critical one, provider enrollment is only a single component of CMS' much broader program integrity efforts. We emphasize that in establishing and implementing an overall Medicare OTP process per the SUPPORT Act and implementing an overall program integrity strategy, our objectives will extend to matters such as: (1) Monitoring OTP billing patterns; (2) ensuring the proper payment of OTP claims; (3) performing OTP audits as required by law; (4) making certain that OTP beneficiaries receive quality care; and (5) taking action (enrollment-related or otherwise) against non-compliant or abusive OTP providers. In other words, it should not be assumed for purposes of the OTP process that the term ''program integrity'' is limited to the provider enrollment concept, for it actually applies to many other types of payment safeguards as well.

(2) OTP Enrollment Requirements

(a) Addition of 42 CFR 424.67 and General OTP Requirement To Enroll

We propose to establish a new 42 CFR 424.67 that would include most of our proposed OTP provisions. In paragraph (a), we are proposing that in order for a program to receive Medicare payment for the provision of opioid use disorder treatment services, the provider must qualify as an OTP (as that term is defined in § 8.2) and enroll in the Medicare program under the provisions of subpart P of this part and this section. As previously indicated, subpart P outlines the requirements and procedures of the enrollment process. All providers and suppliers that seek to bill Medicare must enroll in Medicare and adhere to all enrollment requirements in subpart P. Proposed § 424.67 would implement the above-mentioned requirement stated in section 1861(jjj)(2)(A) of the Act.

(b) OTPs—Procedures and Compliance

In paragraph (b) of § 424.67, we are proposing several specific enrollment requirements that OTPs must meet that either clarify or supplement those contained in subpart P.

(i) OTPs: Form CMS–855B

In § 424.67(b)(1), we propose that an OTP must complete in full and submit the Form CMS–855B application (''Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers'') (OMB Control No.: 0938–0685) and any applicable supplement or attachment thereto (which would be submitted to OMB under control number 0938–0685) to its applicable Medicare contractor. While we recognize that the Form CMS–855B is typically completed by suppliers rather than providers, we believe that certain unique characteristics of OTPs (for example, OTPs would only bill Medicare Part B) make the Form CMS–855B the most suitable enrollment application for OTPs. The supplement or attachment would capture certain information that is: (1) Unique to OTPs but not obtained via the Form CMS–855B; and (2) necessary to enable CMS to effectively screen their applications and confirm their qualifications.

As part of this general requirement concerning CMS–855 form completion, we propose two subsidiary requirements as part of the aforementioned supplement/attachment.

First, in § 424.67(b)(1)(i), we propose that the OTP must maintain and submit to CMS (via the applicable supplement or attachment) a list of all physicians and other eligible professionals (as the

term ''eligible professional'' is defined in section 1848(k)(3)(B) of the Act) who are legally authorized to prescribe, order, or dispense controlled substances on behalf of the OTP. The list must include the physician's or other eligible professional's first and last name and middle initial, Social Security Number, National Provider Identifier, and (4) license number (if applicable). This requirement, in our view, would enable us to: (1) Confirm that these individuals are qualified to perform the activities in question; and (2) screen their prescribing practices, the latter being an especially important consideration in light of the nationwide opioid epidemic.

Second, we propose in § 424.67(b)(1)(ii) that the OTP must certify via the Form CMS–855B and/or the applicable supplement or attachment thereto that the OTP meets and will continue to meet the specific requirements and standards for enrollment described in § 424.67(b) and (d) (discussed below). This is to help ensure that the OTP fully understands its obligation to maintain constant compliance with the requirements associated with OTP enrollment.

We do not believe that the requirements addressed in proposed § 424.67(b)(1) duplicate any other information collection effort involving OTPs. Indeed, the OTP enrollment process will capture various data elements not collected via other means, such as the SAMHSA certification process. Such data elements include the name, social security number (SSN) and National Provider Identification (NPI) number of all eligible professionals at the OTP who are legally authorized to prescribe, order, or dispense controlled substances. While SAMHSA's approved accreditation bodies do verify that these individuals have appropriate licensure, they do not collect this information on a form, screen against federal databases, or have a database that keeps this information. CMS, however, intends to conduct these activities.

(ii) OTPs: Application Fee

As mentioned previously in our discussion of the February 2, 2011 final rule, under § 424.514, prospective and revalidating institutional providers that are submitting an enrollment application generally must pay the applicable application fee. (For CY 2019, the fee amount is $586.) Section 424.502 defines an institutional provider as any provider or supplier that submits a paper Medicare enrollment application using the Form CMS–855A, Form CMS–855B (not including physician and non-physician practitioner organizations, which are exempt from the fee requirement if they are enrolling as a physician or non-physician practitioner organization), Form CMS–855S, Form CMS–20134, or an associated internet-based PECOS enrollment application. Since an OTP, as a specialized facility, would be required to complete the Form CMS–855B to enroll in Medicare as an OTP (and would not be enrolling as a physician and non-physician organization), we believe that an OTP would meet the definition of an institutional provider under § 424.502. It would therefore be required to pay an application fee consistent with § 424.514; we are proposing to clarify this requirement to pay the fee in new § 424.67(b)(2).

(c) OTPs: Categorical Risk Designation

We previously referenced § 424.518, which outlines screening categories and requirements based on a CMS assessment of the level of risk of fraud, waste, and abuse posed by a particular category of provider or supplier. In general, the higher the level of risk that a certain provider or supplier type poses, the greater the level of scrutiny with which CMS will screen and review providers or suppliers within that category.

There are three categories of screening in § 424.518: High, moderate, and limited. Irrespective of which category a provider or supplier type falls within, the MAC performs the following screening functions upon receipt of an initial enrollment application, a revalidation application, or an application to add a new practice location:

- Verifies that a provider or supplier meets all applicable federal regulations and state requirements for their provider or supplier type.
- Conducts state license verifications.
- Conducts database checks on a pre- and post-enrollment basis to ensure that providers and suppliers continue to meet the enrollment criteria for their provider or supplier type.

However, providers and suppliers at the moderate and high categorical risk levels must also undergo a site visit. Furthermore, for those in the high categorical risk level, the MAC performs two additional functions under § 424.518(c)(2). First, the MAC requires the submission of a set of fingerprints for a national background check from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. Second, it conducts a fingerprint-based criminal history record check of the Federal Bureau of Investigation's Integrated Automated Fingerprint Identification System on all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier. These additional verification activities are intended to correspond to the heightened risk involved.

There currently are only three provider or supplier types that fall within the high categorical risk level under § 424.518(c)(1): Newly/initially enrolling home health agencies (HHAs); newly/initially enrolling suppliers of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS); and newly/initially enrolling Medicare Diabetes Prevention Program (MDPP) suppliers. We are now proposing to assign newly enrolling OTPs to the high categorical risk level.

A principal concern is that, as indicated previously, we have no historical information on OTPs (either from an enrollment, billing, or claims payment perspective) upon which we can fairly estimate the degree of risk they may pose. This is because OTP services are an entirely new Medicare benefit. We expressed similar concerns regarding our inclusion of MDPP suppliers in § 424.518(c)(1). That is, in the CY 2017 PFS proposed rule (81 FR 46162), we proposed to assign MDPP suppliers to the high categorical risk level because the MDPP could bring organization types that are entirely new to Medicare.

Our concerns about OTPs go well beyond the above-referenced lack of historical information, though. The opioid epidemic has, in our view, increased the potential for unscrupulous providers to take advantage of Medicare beneficiaries through fraudulent billing schemes and abusive prescribing practices; recent examples include ''patient brokers'' in Massachusetts, as well as excessive stays in ''sober homes'' in Florida. Furthermore, there is a heightened risk in OTP facilities compared to other types of providers due to: (1) The core service provided at the facilities—the prescribing and dispensing of methadone and other opioids as part of medication-assisted treatment for opioid addiction; and (2) the nature of the patients at the facilities, that is, individuals grappling with opioid addiction. By assigning OTPs to the ''high-risk'' screening level—thereby capturing fingerprints of all 5 percent or greater owners and conducting site visits—we would be taking a preventative approach to stopping fraudulent billing and prescribing practices and keeping Medicare beneficiaries safe.

Given the foregoing, we are proposing four regulatory provisions. First, we are

proposing to state in new § 424.67(b)(3) that newly enrolling OTP providers will be screened at the high categorical risk level in accordance with the requirements of § 424.518(c). Second, we are proposing to add a new paragraph (iv) to § 424.518(c)(1) that would add newly enrolling OTPs to the types of providers and suppliers screened at the high categorical risk level. Third, we are proposing to add a new paragraph (xii) to § 424.518(b)(1) whereby OTPs that are revalidating their current Medicare enrollment (under § 424.515) would be screened at the moderate categorical risk level (which involves a site visit but does not include the fingerprint submission requirement of the high categorical risk level). This would be consistent with our approach towards DMEPOS suppliers, HHAs, and MDPPs, which are screened at the high categorical risk level when newly enrolling and at the moderate level when revalidating. Fourth, and consistent with the addition of new § 424.518(b)(1)(xii), we propose to require that, upon revalidation, the OTP successfully complete the moderate categorical risk level screening required under § 424.518(b) in order to remain enrolled in Medicare. This provision would be designated as new § 424.67(d)(1)(iii); as discussed below, proposed paragraph (d) addresses ongoing obligations and standards with which enrolled OTPs must comply.

(d) OTPs: Certification

We are proposing in new § 424.67(b)(4) that to enroll in Medicare, an OTP must have in effect a current, valid certification by SAMHSA for such a program. This requirement is consistent with both section 1861(jjj)(2)(B) of the Act and § 8.11. We consider SAMHSA certification to be extremely important because it would: (1) Assist us in ensuring that the provider is qualified to furnish OTP services; and (2) help confirm that the provider is in compliance with the relevant provisions of part 8 and other applicable requirements (such as federal opioid treatment standards).

We noted earlier that, under § 8.11(e), OTPs with no current SAMHSA certification that have applied for accreditation with an accreditation body are eligible to receive a provisional certification for up to 1 year. To receive a provisional certification, an OTP must submit to SAMHSA certain information required under § 8.11(e), along with:

- A statement identifying the accreditation body to which the OTP has applied for accreditation;
- The date on which the OTP applied for accreditation;
- The dates of any accreditation surveys that have taken place or are expected to take place; and
- The expected schedule for completing the accreditation process.

Under proposed § 424.67(b)(4)(ii), we state that we would not accept a provisional certification under § 8.11(e) in lieu of the certification described in § 8.11(a). As already mentioned, section 1861(jjj)(2)(B) of the Act states that an OTP must have in effect a certification by SAMHSA, a requirement we interpret to mean full SAMHSA certification rather than provisional certification. Indeed, provisional certification under § 8.11(e) applies to OTPs that do not have a current SAMHSA certification but have applied for accreditation with an accreditation body. Section 1861(jjj)(2)(C) of the Act, however, requires actual accreditation rather than the mere application for accreditation. Thus, we believe that full certification should be required.

(e) OTPs: Managing Employees

Consistent with sections 1124 and 1124A of the Act, an enrolling provider or supplier must disclose all of its managing employees on the Form CMS–855 application. Section 424.502 of our regulations defines a managing employee as a general manager, business manager, administrator, director, or other individual that exercises operational or managerial control over (or who directly or indirectly conducts) the day-to-day operation of the provider or supplier, either under contract or through some other arrangement, whether or not the individual is a W–2 employee of the provider or supplier. We are proposing in new § 424.67(b)(5) that all of the OTP's staff that meet the regulatory definition of managing employee must be reported on the Form CMS–855 application and/or any applicable supplement. Such individuals would include, but not be limited to, the OTP's medical director and program sponsor (both as described in § 8.2).

(f) Standards Specific to OTPs

Given the previously mentioned concerns about the nationwide opioid crisis and the need for drugs to be prescribed and, moreover, dispensed, in a careful, reasonable manner, we believe that OTPs should adhere to certain standards unique to the services they provide. In particular, we wish to ensure that problematic providers and personnel are not prescribing or dispensing drugs on behalf of the OTP. To this end, we propose the following additional requirements with which OTPs must comply in order to enroll in Medicare.

In new § 424.67(b)(6)(i), we propose that an OTP must not employ or contract with a prescribing or ordering physician or other eligible professional or with any individual legally authorized to dispense narcotics who, within the preceding 10 years, has been convicted (as that term is defined in 42 CFR 1001.2) of a federal or state felony that we deem detrimental to the best interests of the Medicare program and its beneficiaries, based on the same categories of detrimental felonies, as well as case-by-case detrimental determinations, found at 42 CFR 424.535(a)(3). This provision would apply irrespective of whether the individual in question is: (1) Currently dispensing narcotics at or on behalf of the OTP; or (2) a W–2 employee of the OTP. We note that SAMHSA recognizes the importance of dispensing personnel in an OTP's operations by requiring, as part of the certification process, disclosure of the names and state license numbers of all OTP personnel (other than program physicians) who legally dispense narcotic drugs even if they are not, at present, responsible for administering or dispensing methadone at the program. Such individuals include pharmacists, registered nurses, and licensed practical nurses. (See *https://www.samhsa.gov/medication-assisted-treatment/opioid-treatment-programs.apply*.) We, too, acknowledge the crucial roles of such persons in ensuring the safe dispensing of medicines and believe that those with felonious histories pose a potential risk to the health and safety of Medicare beneficiaries.

This overarching concern regarding possible patient harm also lies behind our proposed standards in new § 424.67(b)(6)(ii) and (iii). In the former paragraph, we propose that the OTP must not employ or contract with any personnel, regardless of whether the individual is a W–2 employee of the OTP, who is revoked from Medicare under § 424.535 or any other applicable section in Title 42, or who is on the preclusion list under §§ 422.222 or 423.120(c)(6). In § 424.67(b)(6)(iii), we propose that the OTP must not employ or contract with any personnel (regardless of whether the individual is a W–2 employee of the OTP) who has a current or prior adverse action imposed by a state oversight board, including, but not limited to, a reprimand, fine, or restriction, for a case or situation involving patient harm that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. We would consider the

factors enumerated at § 424.535(a)(22) in each case of patient harm that potentially applies to this provision.

Concerning § 424.67(b)(6)(ii), we believe that OTP personnel who are revoked from Medicare for problematic behavior present a potential threat to the OTP's patients. We hold a similar view regarding persons on the preclusion list (as that term is defined in §§ 422.2 and 423.100). Indeed, such individuals are precluded from receiving payment for Medicare Advantage (MA) items and services or Part D drugs furnished or prescribed to Medicare beneficiaries under, respectively, §§ 422.222 or 423.120(c)(6), due to, in general, a prior felony conviction, a current revocation, or behavior that would warrant a revocation if the person were enrolled in Medicare. As for § 424.67(b)(6)(iii), we discuss in detail our proposed new revocation reason at § 424.535(a)(22) in section III.H.2. of this proposed rule. This proposed new revocation ground pertains to improper conduct that led to patient harm. In light of the aforementioned and critical need to preserve the safety of Medicare beneficiaries, we believe that § 424.67(b)(6)(iii) is an appropriate requirement.

(g) Provider Agreement

(i) General Requirement

As previously mentioned, section 2005(d) of the SUPPORT Act amended section 1866(e) of the Act by adding a new paragraph (3) classifying OTPs as Medicare providers, though only with respect to the furnishing of opioid use disorder treatment services. Under section 1866(a)(1) of the Act, all Medicare providers (as that term is defined in section 1866(e) of the Act) must enter into a provider agreement with the Secretary. Section 1866(a)(1) outlines required terms of the provider agreement, such as allowed charges for furnished services.

Consistent with these requirements, and as previously discussed in more detail in this proposed rule, we are proposing to revise various sections of 42 CFR part 489 to include OTPs within the category of providers that must sign a provider agreement in order to participate in Medicare. To incorporate this requirement into § 424.67 as a prerequisite for enrollment, we propose to state in new § 424.67(b)(7)(i) that an OTP must, in accordance with the provisions of 42 CFR part 489, sign (and adhere to the terms of) a provider agreement with CMS in order to participate and enroll in Medicare.

(ii) Appeals

Under § 489.53, we may terminate a provider agreement if any of the circumstances outlined in that section apply (for example, the provider under § 489.53(a)(1) fails to comply with the provisions of Title XVIII of the Act). The provider may, however, appeal any such termination pursuant to 42 CFR part 498. This process is akin to what occurs with Medicare revocations, whereby: (1) Medicare may revoke a provider's or supplier's Medicare enrollment for any of the reasons identified in § 424.535; and (2) the provider or supplier may appeal said revocation under part 498. There is, though, an additional important result of the revocation process; under § 424.535(b), when a provider's or supplier's billing privileges are revoked, any provider agreement in effect at the time of revocation is terminated effective with the date of revocation.

Given this linkage in § 424.535(b) between a revocation of enrollment and the termination of a provider agreement, we are concerned about the potential for duplicate appeals processes (that is, one for the revocation and the other for the provider agreement termination) involving a revoked OTP. The same concern, of course, would apply in the reverse situation, in which a termination of the provider agreement under § 489.53 led to a revocation under § 424.535 because a provider agreement is a requirement for enrollment pursuant to proposed § 424.67(b)(7)(i). We believe that having dual appeals processes for OTPs would impose unnecessary administrative burdens on OTPs and CMS. A single appeals process would, in our view, be more efficient. To this end, we propose in new § 424.67(b)(7)(ii) that an OTP's appeals under 498 of a Medicare revocation (under § 424.535) and a provider agreement termination (under § 489.53) must be filed jointly and, as applicable, considered jointly by CMS under part 498 of this chapter. We note that there is precedence for such a consolidated approach. Under §§ 422.222(a)(2)(ii)(B) and 423.120(c)(6)(v)(B)(2) (which apply to Medicare Part C and D, respectively), if a provider's or prescriber's inclusion on the preclusion list (*see https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/MedicareProviderSupEnroll/PreclusionList.html* for background information on the preclusion list) is based on a contemporaneous Medicare revocation under § 424.535, the appeals of the preclusion list inclusion and the revocation must be filed jointly and considered jointly under part 498.

We would appreciate comment on our proposed consolidated appeals process, including suggestions of alternative processes and the potential operational components thereof.

(h) OTPs: Other Applicable Requirements

To ensure that the OTP meets all other applicable requirements for enrollment, we are proposing at § 424.67(b)(8)) that the OTP must comply with all other applicable requirements for enrollment specified in § 424.67 and in part 424, subpart P.

(i) OTPs: Denial of Enrollment and Appeals Thereof

We are proposing to state in new § 424.67(c)(1)(i) and (ii) that CMS may deny an OTP's enrollment application on either of the following grounds:

- The provider does not have in effect a current, valid certification by SAMHSA as required under § 424.67(b)(4) or fails to meet any other applicable requirement in § 424.67.
- Any of the reasons for denial of a prospective provider's or supplier's enrollment application in § 424.530 applies.

In new § 424.67(c)(2), we are proposing that an OTP may appeal the denial of its enrollment application under part 498.

We believe that § 424.67(c)(1)(i) is necessary so as to comply with the previously mentioned statutory and regulatory requirements that an OTP be SAMHSA-certified. Concerning paragraphs (c)(1)(ii) and (2), we note that because an OTP is a Medicare provider, it must be treated in the same manner as any other provider or supplier for purposes of enrollment and appeal rights; that is, subpart P and the appeals provisions in part 498 apply to OTPs to the same extent they do to all other providers and suppliers. We accordingly believe it is appropriate to include paragraphs (c)(1)(ii) and (2) in this proposed rule.

(j) OTPs: Continued Compliance, Standards, and Reasons for Revocation

For reasons identical to those behind our proposed addition of paragraph (c), we propose several provisions in new § 424.67(d).

In paragraph (d)(1), we are proposing to state that, upon and after enrollment, an OTP:

- Must remain validly certified by SAMHSA as required under § 8.11.
- Remains subject to, and must remain in full compliance with, the provisions of part 424, subpart P and

those in § 424.67. This includes, but is not limited to, the provisions of § 424.67(b)(6), the revalidation provisions in § 424.515, and the deactivation and reactivation provisions in § 424.540.

In paragraph (d)(2), we are proposing that CMS may revoke an OTP's enrollment if:

- The provider does not have a current, valid certification by SAMHSA or fails to meet any other applicable requirement or standard in § 424.67, including, but not limited to, the OTP standards in §§ 424.67(b)(6) and (d)(1).
- Any of the revocation reasons in § 424.535 applies.

Finally, in new paragraph (d)(3), we are proposing that an OTP may appeal the revocation of its enrollment under part 498.

(k) OTPs: Prescribing Individuals

We believe it is important for us to be able to monitor the prescribing and dispensing practices occurring at an OTP. We have an obligation to ensure that beneficiary safety is maintained and the Trust Funds are protected. Accordingly, we propose under new § 424.67(e)(1) (and with respect to payment to OTP providers for furnished drugs) that the prescribing or medication ordering physician's or other eligible professional's National Provider Identifier must be listed on Field 17 (the ordering/referring/other field) of the Form CMS–1500 (Health Insurance Claim Form; 0938–1197) (or the digital equivalent thereof)). We note that our use of the term ''medication ordering'' is merely intended to reiterate that our proposed provision applies to any physician or other eligible professional who prescribes or orders drugs in the OTP arena.

Section 424.67(e)(1), in our view, would help us: (1) Ensure that the physician or other eligible professional in question is qualified to prescribe drugs on behalf of the OTP; and (2) monitor the prescribing individual in relation to each claim. This requirement would have to be met in order for an OTP claim for a prescribed drug to be paid. So as to avoid the impression, however, that this is the only requirement necessary for claim payment, we propose to further clarify in new paragraph (e)(2) that all other applicable requirements in § 424.67, part 424, and part 8 must also be met.

(l) OTPs: Relationship to 42 CFR Part 8

To help ensure that OTPs understand their continuing need to comply with the provisions in part 8 (several of which are referenced above) and to clarify that the provisions in § 424.67 are generally restricted to the enrollment process, we propose to state in new § 424.67(f) that § 424.67 shall not be construed as: (1) Supplanting any of the provisions in part 8; or (2) eliminating an OTP's obligation to maintain compliance with all applicable provisions in part 8.

(m) Effective and Retrospective Date of OTP Billing Privileges

Section 424.520 of Title 42 outlines the effective date of billing privileges for provider and supplier types that are eligible to enroll in Medicare. Paragraph (d) thereof sets forth the applicable effective date for physicians, non-physician practitioners, physician and non-physician practitioner organizations, and ambulance suppliers. This effective date is the later of: (1) The date of filing of a Medicare enrollment application that was subsequently approved by a Medicare contractor; or (2) the date that the supplier first began furnishing services at a new practice location In a similar vein, § 424.521(a) states that physicians, non-physician practitioners, physician and non-physician practitioner organizations, and ambulance suppliers may retrospectively bill for services when the supplier has met all program requirements (including state licensure requirements), and services were provided at the enrolled practice location for up to:

- 30 days prior to their effective date if circumstances precluded enrollment in advance of providing services to Medicare beneficiaries; or
- 90 days prior to their effective date if a Presidentially-declared disaster under the *Robert T. Stafford Disaster Relief and Emergency Assistance Act,* 42 U.S.C. 5121–5206 (Stafford Act) precluded enrollment in advance of providing services to Medicare beneficiaries.

To clarify the effective date of billing privileges for OTPs and to account for circumstances that could prevent an OTP's enrollment prior to the furnishing of Medicare services, we propose to include newly enrolling OTPs within the scope of both § 424.520(d) and § 424.521(a). We believe that the effective and retrospective billing dates addressed therein achieves a proper balance between the need for the prompt provision of OTP services and the importance of ensuring that each prospective OTP enrollee is carefully and closely screened for compliance with all applicable requirements.

2. Revision(s) and Addition(s) to Denial and Revocation Reasons in §§ 424.530 and 424.535

a. Improper Prescribing

Under § 424.535(a)(14), CMS may revoke a physician's or other eligible professional's enrollment if he or she has a pattern or practice of prescribing Part D drugs that:

- Is abusive, and/or represents a threat to the health and safety of Medicare beneficiaries; or
- Fails to meet Medicare requirements.

This revocation reason was finalized in the ''Medicare Program; Contract Year 2015 Policy and Technical Changes to the Medicare Advantage and the Medicare Prescription Drug Benefit Programs'' final rule that was published in the May 23, 2014 **Federal Register** (79 FR 29844). It was designed to address situations, which we discussed in that final rule, where prescribers of Part D drugs engaged in prescribing activities that were or could be harmful to Medicare beneficiaries and the Trust Funds or were otherwise inconsistent with Medicare policies. Since the provision's inception, we have revoked the enrollments of practitioners who have engaged in a variety of improper prescribing practices. We believe these administrative actions have helped to shield beneficiaries and the program at large from improper prescribing practices.

The dispensing of drugs in the treatment of opioid use disorder is, as indicated previously, an important component of an OTP's function. Akin to our rationale for the establishment of § 424.535(a)(14) in 2014, we are concerned about potential instances where OTP physicians and other eligible professionals prescribe drugs in an improper fashion. This is an especially important consideration given the nationwide opioid epidemic and the need to reduce opioid abuse. Given this, we believe that § 424.535(a)(14) should no longer be restricted to Part D drugs but must extend to all Medicare drugs, including Part B drugs. Improper prescribing in the Part B context is no less troubling or potentially dangerous than prescribing in the Part D context. Thus, only through such an expansion can we, on a much broader and necessary scale, further deter parties from improper Medicare prescribing practices.

In the introductory text of § 424.535(a)(14), we currently state that CMS determines that the physician or other eligible professional has a pattern or practice of prescribing Part D drugs. Consistent with the above discussion,

we are proposing to revise this paragraph to include Part B drugs so we would specify the prescribing of ''Part B or D drugs.'' We note that this proposal would affect prescriptions of any Part B or D drugs, not merely those prescriptions given to beneficiaries using OTPs.

b. Patient Harm

As referenced previously, and due to the importance of ensuring patient safety in all provider and supplier settings (not merely those involving OTPs), we are also proposing to add § 424.535(a)(22) as a new revocation reason; this would be coupled with a concomitant new denial reason in § 424.530(a)(15). These two paragraphs would permit us to revoke or deny, as applicable, a physician's or other eligible professional's (as that term is defined in 1848(k)(3)(B) of the Act) enrollment if he or she has been subject to prior action from a state oversight board, federal or state health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care with underlying facts reflecting improper physician or other eligible professional conduct that led to patient harm. In determining whether a revocation or denial on this ground is appropriate, CMS would consider the following factors:

- The nature of the patient harm.
- The nature of the physician's or other eligible professional's conduct.
- The number and type(s) of sanctions or disciplinary actions that have been imposed against the physician or other eligible professional by a state oversight board, IRO, federal or state health care program, or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care. Such actions include, but are not limited to in scope or degree:

++ License restriction(s) pertaining to certain procedures or practices,

++ Required compliance appearances before state oversight board members,

++ Required participation in rehabilitation or mental/behavioral health programs,

++ Required abstinence from drugs or alcohol and random drug testing,

++ License restriction(s) regarding the ability to treat certain types of patients (for example, cannot be alone with members of a different gender after a sexual offense charge).

++ Administrative/monetary penalties; or

++ Formal reprimand(s).

- If applicable, the nature of the IRO determination(s).
- The number of patients impacted by the physician's or other eligible professional's conduct and the degree of harm thereto or impact upon.
- Any other information that CMS deems relevant to its determination.

We currently lack the legal basis to take administrative action against a physician or other eligible professional for a matter related to patient harm based solely on an IRO determination or an administrative action (excluding a state medical license suspension or revocation) imposed by a state oversight board, a federal or state health care program, or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care. We believe, however, that our general rulemaking authority under sections 1102, 1866(j)(1)(A), and 1871 of the Act gives us the ability to establish such legal grounds. As alluded to in this proposed rule and in previous rulemaking efforts, we have long been concerned about instances of physician or other eligible professional misconduct, and we believe our authority to take action to stem such behavior should be expanded to include the scenarios identified in proposed § 424.530(a)(15) and § 424.535(a)(22). Indeed, state oversight boards, such as medical boards and other administrative bodies, have found certain physicians and other eligible professionals to have engaged in professional misconduct and/or negligent or abusive behavior involving patient harm. IRO determinations, too, have offered valuable, independent analyses and findings of provider misconduct that we should have the opportunity to use to promote the best interests of Medicare beneficiaries. We believe that our proposed revocation and denial authorities would improve overall patient care by preventing certain problematic physicians and other eligible professionals from treating Medicare patients.

We recognize that situations could arise where a state oversight board has chosen to impose a relatively minor sanction on physician or other eligible professional for conduct that we deem more serious. We note, however, that we, rather than state boards, is ultimately responsible for the administration of the Medicare program and the protection of its beneficiaries. State oversight of licensed physicians or practitioners is, in short, a function entirely different from federal oversight of Medicare. We accordingly believe that we should have the discretion to review such cases to determine whether, in the agency's view, the physician's or other eligible professional's conduct warrants revocation or denial. Yet it should in no way be assumed, on the other hand, that a very modest sanction would automatically result in revocation or denial action. We emphasize that we would only take such a measure after the most careful consideration of all of the factors outlined above.

A number of these factors, we add, are not altogether dissimilar from those which we presently use for determining whether a revocation under § 424.535(a)(14) is appropriate (for example, general frequency and degree of the behavior in question, number of prior sanctions). We have found them to be useful in our § 424.535(a)(14) determinations and, for this reason, believe they will prove likewise with respect to § 424.530(a)(15) and § 424.535(a)(22). Certain of our other proposed criteria are designed to pertain to the unique facts addressed in these two provisions (for example, the extent of patient harm) and, in our view, would help ensure a thorough review of the case at hand.

Sections 424.530(a)(15) and 424.535(a)(22) would apply to physicians and other eligible professionals in OTP and non-OTP settings. Revocation or denial action could be taken against physicians and other eligible professionals in solo practice or who are part of a group or any other provider or supplier type.

To clarify the scope of the term ''state oversight board'' in the context of §§ 424.530(a)(15) and 424.535(a)(22), we propose to define this term in § 424.502. Specifically, we would state that, for purposes of §§ 424.530(a)(15) and 424.535(a)(22) only, ''state oversight board'' means ''any state administrative body or organization, such as (but not limited to) a medical board, licensing agency, or accreditation body, that directly or indirectly oversees or regulates the provision of health care within the state.''

We welcome comment not only on our proposed definition of ''state oversight board'' but also on our proposed revocation and denial authorities. We are especially interested in securing public feedback on additional means of preventing fraud, waste, and abuse in OTP setting; for instance, we would appreciate suggestions—based on stakeholder experience in the OUD and OTP arenas—from which we could develop further regulatory authority to take action against problematic OTPs.

I. Deferring to State Scope of Practice Requirements

When the Medicare program was signed into law in 1965, most skilled medical professional services in the United States were provided by physicians, with the assistance of nurses. Over the decades, the medical professional field has diversified and allowed for a wider range of certifications and specialties, including the establishment of mid-level practitioners such as nurse practitioners (NPs) and physician assistants (PAs). These practitioners are also known as advanced practice providers (APPs) or non-physician practitioners (NPPs). Medicare policies and regulations have been updated over recent years to make changes to allow NPPs to provide services in Medicare-certified facilities within the extent of their scope of practice as defined by state law. In recognition of the qualifications of these practitioners, we seek to continue this effort.

1. Ambulatory Surgical Centers

a. Background

Ambulatory surgical centers (ASCs), as defined at 42 CFR 416.2, are distinct entities that operate exclusively for the purpose of providing surgical services to patients not requiring hospitalization, in which the expected duration of services would not exceed 24 hours following an admission. The surgical services performed at ASCs are scheduled, primarily elective, non-life-threatening procedures that can be safely performed in an ambulatory setting. Currently, there are approximately 5,767 Medicare certified ASCs in the United States.

Section 1832(a)(2)(F)(i) of the Act specifies that ASCs must meet health, safety, and other requirements specified by the Secretary in order to participate in Medicare. The Secretary is responsible for ensuring that the ASC Conditions for Coverage (CfCs) protect the health and safety of all individuals treated by ASCs, whether they are Medicare beneficiaries or other patients. The ASC regulations were established in the ''Medicare Program; Ambulatory Surgical Services'' final rule published in the August 5, 1982 **Federal Register** (47 FR 34082), and have since been amended several times.

The regulations for Medicare and Medicaid participating ASCs are set forth at 42 CFR part 416. Section 416.42, ''Condition for coverage—Surgical services'', states that surgical procedures must be performed in a safe manner by qualified physicians who have been granted clinical privileges by the governing body of the ASC in accordance with approved policies and procedures of the ASC.

Currently, the ASC CfCs have two conditions that include patient assessment requirements for patients having surgery in an ASC, anesthetic risk and pre-surgery evaluation, and pre-discharge evaluation. In the November 18, 2008 final rule, ''Medicare Program; Changes to the Hospital Outpatient Prospective Payment System and CY 2009 Payment Rates final rule (73 FR 68502), which revised some existing standards and created some new requirements. One of the new conditions added in 2008 was § 416.52, ''Conditions for coverage—Patient admission, assessment and discharge''. This condition sets standards pertaining to patient pre-surgical assessment, post-surgical assessment, and discharge requirements that must be met before patients leave the ASC. Specifically, the discharge requirements at § 416.52(b)(1) require that a post-surgical assessment be completed by a physician, or other qualified practitioner, or a registered nurse with, at a minimum, post-operative care experience in accordance with applicable state health and safety laws, standards of practice, and ASC policy. The other discharge condition, at § 416.42(a)(2), also finalized in the November 18, 2008 final rule, allows anesthetists, in addition to physicians, to evaluate each patient for proper anesthesia recovery. The requirement at § 416.42(a)(1) requires a physician to examine the patient immediately before surgery to evaluate the risk of anesthesia and the procedure to be performed.

Through various inquiries from ASCs and communication with CMS by industry associations, we have received many requests to align the anesthetic risk and pre-surgery evaluation standard at § 416.42(a)(1) with the pre-discharge standard at § 416.42(a)(2) by allowing an anesthetist, in addition to a physician, to examine the patient immediately before surgery to evaluate the risk of anesthesia and the risk of the procedure. For those ASCs that utilize non-physician anesthetists, also known as certified registered nurse anesthetists (CRNAs), this revision would allow them to perform the anesthetic risk and evaluation on the patient they are anesthetizing for the procedure to be performed by the physician. CRNAs are advanced practice registered nurses who administer more than 43 million anesthetics to patients each year in the United States. CRNAs are Medicare Part B providers and since 1989, have billed Medicare directly for 100 percent of the PFS amount for services. CRNAs provide anesthesia for a wide variety of surgical cases and in some states are the sole anesthesia providers in most rural hospitals. A study published by Nursing Economic$ in May/June 2010, found that CRNAs acting as the sole anesthesia provider are the most cost-effective model for anesthesia delivery, and there is no measureable difference in the quality of care between CRNAs and other anesthesia providers or by anesthesia delivery model.[101] We believe this alignment provides for continuity of care for the patient and allows the patient's anesthesia professional to have familiarity with the patient's health characteristics and medical history.

b. Proposed Provisions

We are proposing to revise § 416.42(a), Surgical services, to allow either a physician or an anesthetist, as defined at § 410.69(b), to examine the patient immediately before surgery to evaluate the risk of anesthesia and the risk of the procedure to be performed. By amending the CfCs to allow an anesthetist or a physician to examine and evaluate the patient before surgery for anesthesia risk and the planned procedure risk, we would be making ASC patient evaluations more consistent by allowing the option for the same clinician to complete both pre- and post-procedure anesthesia evaluations.

This proposed change is a continuation of our efforts to reduce regulatory burden. This change would increase supplier flexibility and reduce burden, while allowing qualified clinicians to focus on providing high-quality healthcare to their patients. We are also requesting comments and suggestions for other ASC requirements that could be revised to allow greater flexibility in the use of NPPs, and reduce burden while maintaining high quality health care.

2. Hospice

a. Background

Hospice care is a comprehensive, holistic approach to treatment that recognizes the impending death of a terminally ill individual, and warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. Medicare regulations define ''palliative care'' as patient and family centered care that optimizes quality of life by anticipating, preventing, and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual,

[101] Paul F. Hogan et al., ''Cost Effectiveness Analysis of Anesthesia Providers.'' Nursing Economic$. 2010; 28:159–169.

emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice (42 CFR 418.3). The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment. A hospice uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through a collaboration of professionals and other caregivers, with the goal of making the beneficiary as physically and emotionally comfortable as possible. The hospice interdisciplinary group works with the patient, family, caregivers, and the patient's attending physician (if any) to develop a coordinated, comprehensive care plan; reduce unnecessary diagnostics or ineffective therapies; and maintain ongoing communication with individuals and their families and caregivers about changes in their condition. The care plan will shift over time to meet the changing needs of the patient, family, and caregiver(s) as the patient approaches the end of life.

The regulations for Medicare and Medicaid participating hospices are set forth at 42 CFR part 418. Section 418.3 defines the term ''attending physician'' as being a doctor of medicine or osteopathy, an NP, or a PA in accordance with the statutory definition of an attending physician at section 1861(dd)(3)(B) of the Act. Section 51006 of the Bipartisan Budget Act of 2018 revised the statute to add PAs to the statutory definition of the hospice attending physician for services furnished on or after January 1, 2019. As a result, PAs were added to the definition of a hospice attending physician as part of the ''Medicare Program; FY 2019 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements'' final rule which was published in the August 6, 2018 **Federal Register** (83 FR 38622, 38634) (hereinafter referred to as the ''FY 2019 Hospice final rule'').

The role of the patient's attending physician, if the patient has one, is to provide a longitudinal perspective on the patient's course of illness, care preferences, psychosocial dynamics, and generally assist in assuring continuity of care as the patient moves from the traditional curative care model to hospice's palliative care model. The attending physician is not meant to be a person offered by, selected by, or appointed by the hospice when the patient elects to receive hospice care. Section 418.64(a) of the hospice regulations requires the hospice to provide physician services to meet the patient's hospice-related needs and all other care needs to the extent that those needs are not met by the patient's attending physician. Thus, if a patient does not have an attending physician relationship prior to electing hospice care, or if the patient's attending physician chooses to not participate in the patient's care after the patient elects to receive hospice care, then the hospice is already well-suited to provide physician care to meet all of the patient's needs as part of the Medicare hospice benefit. If the patient has an attending physician relationship prior to electing hospice care and that attending physician chooses to continue to be involved in the patient's care during the period of time when hospice care is provided, the role of the attending physician is to consult with the hospice interdisciplinary group (also known as the interdisciplinary team) as described in § 418.56, and to furnish care for conditions determined by the hospice interdisciplinary group to be unrelated to the terminal prognosis. The hospice interdisciplinary group must include the following members of the hospice's staff: A physician; a nurse; a social worker; and a counselor. The interdisciplinary group may also include other members based on the specific services that the patient receives, such as hospice aides and speech language pathologists. The hospice interdisciplinary group, as a whole, in consultation with the patient's attending physician (if any), the patient, and the patient's family and caregivers, are responsible for determining the course of the patient's hospice care and establishing the individualized plan of care for the patient that is used to guide the delivery of holistic hospice services and interventions, both medical and non-medical in nature.

b. Proposed Provisions

In the role of a consultant to the hospice interdisciplinary group, the hospice patient's chosen attending physician may, at times, write orders for services and medications as they relate to treating conditions determined to be unrelated to the patient's terminal prognosis. The law allows for circumstances in which services needed by a hospice beneficiary would be completely unrelated to the terminal prognosis, but we believe that this situation would be the rare exception rather than the norm. Section 418.56(e) requires hospices to coordinate care with other providers who are also furnishing care to the hospice patient, including the patient's attending physician who is providing care for conditions determined by the hospice interdisciplinary group to be unrelated to the patient's terminal prognosis. As part of this coordination of care, it is possible that hospices may receive orders from the attending physician for drugs that are unrelated to the patient's terminal prognosis.

The FY 2019 Hospice final rule amended the regulatory definition of attending physician, as required by the statute, to include physician assistant. Following publication of the FY 2019 Hospice final rule, stakeholders raised concerns regarding the requirements of § 418.106(b). As currently written, hospices may not accept orders for drugs from attending physicians who are PAs because § 418.106(b) specifies that hospices may accept drug orders from physicians and NPs only. This regulatory requirement may impede proper care coordination between hospices and attending physicians who are PAs, and we believe that it should be revised.

Therefore, we propose to revise § 418.106(b)(1) to permit a hospice to accept drug orders from a physician, NP, or PA. We propose that the PA must be an individual acting within his or her state scope of practice requirements and hospice policy. We also propose that the PA must be the patient's attending physician, and that he or she may not have an employment or contractual arrangement with the hospice. The role of physicians and NPs as hospice employees and contractors is clearly defined in the hospice CoPs; however, the CoPs do not address the role of PAs. Therefore, we believe that it is necessary to limit the hospice CoPs to accepting only those orders from PAs that are generated outside of the hospice's operations.

The role of a PA is not defined in the hospice CoPs because the statute does not include PA services as being part of the Medicare hospice benefit. As such, there are no provisions in the hospice CoPs to address specific PA issues such as personnel requirements, descriptions of whether such services would be considered core or non-core, or provisions to address issues of co-signatures. To more fully understand the current and future role of NPPs, including PAs, in hospice care and the hospice CoPs, we request public comment on the following questions:

- What is the role of a NPP in delivering safe and effective hospice care to patients? What duties should they perform? What is their role within the hospice interdisciplinary group and how is it distinct from the role of the physician, nurse, social work, and counseling members of the group?

- Nursing services are a required core service within the Hospice benefit, as provided in section 1861(dd)(B)(i) of the Act, which resulted in the defined role for NPs in the Hospice COPs. Should other NPPs also be considered core services on par with NP services? If not, how should other NPP services be classified?
- In light of diverse existing state supervision requirements, how should NPP services be supervised? Should this responsibility be part of the role of the hospice medical director or other physicians employed by or under contract with the hospice? What constitutes adequate supervision, particularly when the NPP and supervising physician are located in different offices, such as hospice multiple locations?
- What requirements and time frames currently exist at the state level for physician co-signatures of NPP orders? Are these existing requirements appropriate for the hospice clinical record? If not, what requirements are appropriate for the hospice clinical record?
- What are the essential personnel requirements for PAs and other NPPs?

J. Advisory Opinions on the Application of the Physician Self-Referral Law

1. Statutory and Regulatory Background

Section 4314 of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted August 5, 1997), added section 1877(g)(6) to the Act. Section 1877(g)(6) of the Act requires the Secretary to issue written advisory opinions concerning whether a referral relating to designated health services (other than clinical laboratory services) is prohibited under section 1877 of the Act. On January 9, 1998, the Secretary issued a final rule with comment period in the **Federal Register** to implement and interpret section 1877(g)(6) of the Act (the 1998 CMS advisory opinions rule). (See Medicare Program; Physicians' Referrals; Issuance of Advisory Opinions (63 FR 1646).) The regulations are codified in §§ 411.370 through 411.389 (the physician self-referral advisory opinion regulations).

Section 1877(g)(6)(A) of the Act states that each advisory opinion issued by the Secretary shall be binding as to the Secretary and the party or parties requesting the opinion. Section 1877(g)(6)(B) of the Act requires the Secretary, in issuing advisory opinions regarding the physician self-referral law, to apply the rules in paragraphs (b)(3) and (4) of section 1128D of the Act, to the extent practicable. This paragraph also requires the Secretary to take into account the regulations promulgated under paragraph (b)(5) of section 1128D of the Act.

Section 1128D of the Act was added to the statute by section 205 of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) (Pub. L. 104–191, effective August 21, 1996). Among other things, section 1128D of the Act requires the Secretary, in consultation with the Attorney General, to issue written advisory opinions as to specified matters related to the anti-kickback statute in section 1128B(b) of the Act, the safe harbor provisions in § 1001.952, and other provisions of the Act under the authority of the Office of Inspector General (OIG). To implement and interpret section 1128D of the Act, the Office of Inspector General (OIG) issued an interim final rule with comment period in the February 19, 1997 **Federal Register** entitled Medicare and State Health Care Programs: Fraud and Abuse; Issuance of Advisory Opinions by the OIG (62 FR 7350), revised and clarified its regulations in the July 16, 1998 **Federal Register** (68 FR 38311), and updated its regulations in a final rule published in the July 17, 2008 **Federal Register** that solely revised certain procedural requirements for submitting payments for advisory opinion costs (73 FR 40982) (collectively, the OIG advisory opinion rule). The regulations are codified in part 1008 of this title of the Code of Federal Regulations (the OIG advisory opinion regulations).

Section 1128D(b)(3) of the Act prohibits the Secretary from addressing in an advisory opinion whether: (1) Fair market value shall be or was paid or received for any goods, services, or property; or (2) an individual is a *bona fide* employee within the requirements of section 3121(d)(2) of the Internal Revenue Code of 1986. In the 1998 CMS advisory opinions rule, we incorporated these provisions into the physician self-referral law regulations (63 FR 1646). Section 1128D(b)(4)(A) of the Act states that an advisory opinion related to OIG authorities is binding as to the Secretary and the party or parties requesting the opinion. This section is redundant of the provision in section 1877(g)(6)(A) of the Act, and therefore, not incorporated into the physician self-referral advisory opinion regulations. Section 1128D(b)(4)(B) of the Act provides that the failure of a party to seek an advisory opinion may not be introduced into evidence to prove that the party intended to violate the provisions of sections 1128, 1128A, or 1128B of the Act. We incorporated section 1128D(b)(4)(B) of the Act in the physician self-referral regulations at § 411.388.

As discussed previously, section 1877(g)(6)(B) of the Act requires the Secretary, to the extent practicable, to take into account the regulations issued under the authority of section 1128D(b)(5) of the Act (that is, the OIG advisory opinion regulations). Section 1128D(b)(5)(A) requires that the OIG advisory opinion regulations must provide for: (1) The procedure to be followed by a party applying for an advisory opinion; (2) the procedure to be followed by the Secretary in responding to a request for an advisory opinion; (3) the interval in which the Secretary will respond; (4) the reasonable fee to be charged to the party requesting an advisory opinion; and (5) the manner in which advisory opinions will be made available to the public. We interpret Congress' directive to take into account OIG regulations to mean that we should use the OIG regulations as our model, but that we are not bound to follow them (63 FR 1647). Nonetheless, in the 1998 CMS advisory opinions rule, we largely adopted OIG's approach to issuing advisory opinions, stating that we intend for physician self-referral law advisory opinions to provide the public with meaningful advice regarding whether, based on specific facts, a physician's referral for a designated health service (other than a clinical laboratory service) is prohibited under section 1877 of the Act (63 FR 1648).

2. Proposed Revisions to the CMS Advisory Opinion Process and Regulations

In the June 25, 2018 **Federal Register**, we published a Request for Information Regarding the Physician Self-Referral Law (83 FR 29524) (June 2018 CMS RFI) that sought recommendations from the public on how to address any undue impact and burden of the physician self-referral statute and regulations. Although we did not specifically request comments on the CMS advisory opinion regulations, we received a number of comments urging that CMS reconsider its approach to advisory opinions and transform the process such that the regulated industry may obtain expeditious guidance on whether a physician's referrals to an entity with which he or she has a financial relationship would be prohibited under section 1877 of the Act. These commenters stated their belief that the current advisory opinion process could be improved. Some commenters stated also that the process is too restrictive, noting that CMS has placed what the commenters see as unreasonable limits on the types of questions that qualify for

an advisory opinion (for example, CMS will not issue an advisory opinion where the arrangement at issue is hypothetical and does not issue advisory opinions on general questions of interpretation) and CMS advisory opinions apply only to the specific circumstances of the requestor. These commenters asserted that the OIG's advisory opinion process, upon which the CMS advisory opinion process is modeled, is inappropriate for a payment statute. These commenters noted that OIG opines on matters related to a felony criminal statute, whereas the physician self-referral law, by contrast, is a payment rule. The commenters highlighted the complexity of the physician self-referral regulations, the strict liability nature of the physician self-referral law, and the need for certainty before arrangements are initiated and claims submitted as reasons why an advisory opinion process related to a felony criminal statute is inappropriate for the physician self-referral law. Other commenters asserted that the process is arduous and inefficient. These commenters noted that the advisory opinion process can extend beyond the 90-day timeframe provided for at § 411.380 and asserted that it lags behind the OIG process in terms of efficiency.

In designing its advisory opinion process, OIG carefully balanced stakeholders' desire for an accessible process and meaningful and informed opinions with its need to closely scrutinize arrangements to insure that requesting parties are not inappropriately granted protection from sanctions. (63 FR 38312 through 38313). We appreciate that there are important differences between the physician self-referral law, a strict liability statute designed to prevent payment for services where referrals are affected by inherent financial conflicts of interest, and the anti-kickback statute, which is a criminal law designed to prosecute intentional acts of fraud and abuse.

More than 20 years have passed since the CMS advisory opinion regulations were issued. In those 20 years, we have issued 30 advisory opinions,[102] 15 of which addressed the 18-month moratorium on physician self-referrals to specialty hospitals in which they have an ownership or investment interest. In light of the comments received on the RFI, we have undertaken a fresh review of the CMS advisory opinion process. We agree that it is important to have an accessible process that produces meaningful opinions on the applicability of section 1877 of the Act, especially in light of the perceived complexity of the physician self-referral regulations, including the requirements of the various exceptions and the key terminology applicable to many of the exceptions, and we recognize that our current advisory opinion process has not been utilized by stakeholders or resulted in a significant number of issued opinions to date. Accordingly, we have reviewed our advisory opinion regulations in an effort to identify limitations and restrictions that may be unnecessarily serving as an obstacle to a more robust advisory opinion process.

Failure to satisfy the requirements of an exception to the physician self-referral law carries significant consequences, regardless of a party's intent.[103] The safe harbors under the anti-kickback statute are voluntary, and the failure of an arrangement to fit squarely within a safe harbor does not mean that the arrangement violates the anti-kickback statute. By contrast, the physician self-referral law prohibits a physician's referral if there is a financial relationship that does not satisfy the requirements of one of the enumerated exceptions. In other words, the physician self-referral law is a strict liability law, and parties that act in good faith may nonetheless face significant financial exposure if they misunderstand or misapply the law's exceptions.

Regulated parties' desire for certainty must be balanced with CMS' interest in maintaining the integrity of the advisory opinion process, and ensuring that it is not used to inappropriately shield improper financial arrangements. But we believe that the risk of such misuse is acceptably low with respect to the section 1877 of the Act advisory opinion process because the advisory opinion authority at section 1877(g) of the Act is narrowly tailored. CMS can only issue favorable advisory opinions for arrangements that do not violate section 1877 of the Act—for example, because there is no referral for designated health services, there is no financial relationship, or the arrangement meets an exception. In contrast, OIG has issued favorable advisory opinions for arrangements that do not fit within a safe harbor where it has concluded, based on a totality of the facts and circumstances, that the arrangement poses a sufficiently low risk of fraud and abuse under the anti-kickback statute. CMS cannot similarly extend protection beyond the exceptions, so there is a built-in safeguard against protecting an arrangement that the law would not otherwise protect. Furthermore, a favorable advisory opinion from CMS does not immunize parties from liability under the anti-kickback statute.

a. Matters Subject to Advisory Opinions (§ 411.370)

Section 1877(g)(6) of the Act requires the Secretary to issue advisory opinions concerning ''whether a referral relating to designated health services (other than clinical laboratory services) is prohibited under this section.'' In accordance with section 1877(g)(6)(B) of the Act, CMS adopted in regulation the rules in paragraphs (b)(3) and (4) of section 1128D of the Act, which prohibit the OIG from opining on whether an arrangement is fair market value and whether an individual is a *bona fide* employee within the requirements of section 3121(d)(2) of the Internal Revenue Code. In addition to these statutory restrictions on matters that are not subject to advisory opinions, our current regulation at § 411.370(b)(1) states that CMS does not consider, for purposes of an advisory opinion, requests that present a general question of interpretation, pose a hypothetical situation, or involve the activities of third parties. When explaining this regulation, we stated that we interpret section 1877(g)(6) of the Act to allow for opinions on specific referrals involving physicians in specific situations (63 FR 1649). We also noted our reasons for avoiding opinions on generalized arrangements, stating that it would not be possible for an advisory opinion to reliably identify all the possible hypothetical factors that might lead to different results (*Id.*).

Under our current regulations, CMS accepts requests for advisory opinions that involve existing arrangements, as well as requests that involve arrangements into which the requestor plans to enter. Some commenters on the June 2018 CMS RFI suggested that CMS expand the scope of the requests that it will consider for an advisory opinion to include requests that involve hypothetical fact patterns and general questions of interpretation. It is our position that some requests are not appropriate for an advisory opinion.

[102] These advisory opinions are available on CMS' website, at *https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/advisory opinions.html.* This number does not include advisory opinion requests that were withdrawn.

[103] The CMS Voluntary Self-Referral Disclosure Protocol (SRDP) allows providers of services and suppliers to self-disclose actual or potential violations of the physician self-referral statute. Under the SRDP, CMS may reduce the amount due and owing for violations of section 1877 of the Act. Information about the SRDP can be found at *https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/Downloads/CMS-Voluntary-Self-Referral-Disclosure-Protocol.pdf.*

Further, although we are proposing a number of changes to improve the advisory opinion process for stakeholders, we believe that expanding the process to include questions regarding hypothetical fact patterns or general interpretation could overwhelm the agency. Thus, we are not proposing an expansion of the scope of requests at this time; however, we are soliciting comments on whether we should do so in the future. We are proposing minor clarifications to § 411.370(b) regarding matters that qualify for advisory opinions and the parties that may request them. Specifically, we are proposing to clarify that the request for an advisory opinion must ''relate to'' (rather than ''involve'') an existing arrangement or one into which the requestor, in good faith, specifically plans to enter. Requestors continue to be obligated to disclose all facts relevant to the arrangement for which an advisory opinion is sought. We are also proposing revisions to the regulation text for grammatical purposes.

We note that CMS currently responds to questions pertaining to the physician self-referral law through the CMS Physician Self-Referral Call Center. Although we are unable to provide formal guidance or an opinion regarding whether a specific referral is permissible or whether a financial relationship satisfies the requirements of an exception, we are able to assist parties with identifying relevant guidance. The CMS Physician Self-Referral Call Center is free to the public, and inquiries may be sent to *1877CallCenter@cms.hhs.gov*. For additional information, *see https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/Call-Center.html*. CMS also responds to frequently asked questions (FAQs) regarding the physician self-referral law from time to time. FAQs issued to date may be found on our website at *https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/FAQs.html*.

Current § 411.370(e) states that CMS does not accept an advisory opinion request or issue an advisory opinion if: (1) The request is not related to a named individual or entity; (2) CMS is aware that the same or substantially the same course of action is under investigation or is or has been the subject of a proceeding involving HHS or another governmental agency; or (3) CMS believes that it cannot make an informed opinion or could only make an informed opinion after extensive investigation, clinical study, testing, or collateral inquiry. We are proposing changes to this regulation. First, we are proposing to add to the reasons that CMS will not accept an advisory opinion request or issue an advisory opinion. Specifically, we are proposing that CMS will reject an advisory opinion request or not issue an advisory opinion with respect to a request that does not describe the arrangement at issue with a level of detail sufficient for CMS to issue an opinion, and the requestor does not timely respond to CMS requests for additional information. We believe that this is important to the agency's ability to focus its resources on complete requests.

Second, we are proposing to amend current § 411.370(e)(2), which states that CMS will not issue an advisory opinion if it is aware that the same, or substantially the same, course of action is under investigation or is or has been the subject of a proceeding involving HHS or other government entities. Although CMS consults with other HHS components and governmental agencies, including OIG and DOJ, on pending advisory opinion requests, we believe the current regulation is too restrictive, and unnecessarily limits CMS' flexibility to issue timely guidance to requestors engaged in or considering legitimate business arrangements. Therefore, we are proposing to ease the restriction at § 411.370(e)(2) that prohibits the acceptance of an advisory opinion request or issuance of an advisory opinion if CMS is aware of pending or past investigations or proceedings involving a course of action that is ''substantially the same'' as the arrangement or proposed arrangement between or among the parties requesting an advisory opinion, and instead allow CMS more discretion to determine, in consultation with OIG and DOJ, whether acceptance of the advisory opinion request or issuance of the advisory opinion is appropriate. Specifically, we propose at § 411.370(e)(2) that CMS may elect not to accept an advisory opinion request or issue an advisory opinion if, after consultation with OIG and DOJ, it determines that the course of action described in the request is substantially similar to conduct that is under investigation or is the subject of a proceeding involving HHS or other law enforcement agencies, and issuing an advisory opinion could interfere with the investigation or proceeding. We propose to retain at renumbered § 411.370(e)(1)(iii) the restriction on accepting requests if CMS is aware that the specific course of action (involving the same specific parties) is under investigation or is, or has been the subject of a proceeding involving the Department or another governmental agency. We also propose to clarify that CMS would consult with OIG and DOJ regarding investigations or proceedings involving the same course of conduct described in an advisory opinion request. We seek comments on this approach.

Although we are not proposing changes to § 411.370(f) which describes the effects of an advisory opinion on other government authority, we note that a determination regarding whether a referral is prohibited by section 1877 of the Act is a determination that rests solely and exclusively with the Secretary (and, in this case, the Administrator, to whom the Secretary has delegated this authority). Under section 1877(g)(6) of the Act, an advisory opinion is binding on the Secretary, and if the Secretary determines that a particular fact pattern does not trigger liability under section 1877 of the Act, that determination is binding on the Secretary, as well as any component of HHS that exercised the authority delegated by the Secretary. Such a determination would preclude the imposition of sanctions under section 1877(g) of the Act.[104] A favorable advisory opinion would not, however, insulate parties from liability under the anti-kickback statute or any other laws or regulations outside of section 1877 of the Act. It would also not preclude OIG from exercising its authority under the Inspector General Act of 1978 (Pub. L. 95–452, as amended by Pub. L. 115–254, enacted October 05, 2018). In a physician self-referral law advisory opinion, CMS may opine on whether an arrangement is ''commercially reasonable'' as defined by the physician-self-referral law regulations. Such a determination by CMS may not apply in the context of the anti-kickback statute and should not be interpreted as such. A CMS determination that an arrangement is or is not a ''financial relationship,'' as defined at section 1877(a)(2) of the Act and § 411.354(a), or that an arrangement satisfies a specific requirement of an exception to the physician self-referral law (for example, whether a compensation arrangement is ''commercially reasonable''), would be a separate and distinct inquiry from any determination by law enforcement that the arrangement does or does not violate the anti-kickback statute.

b. Timeline for Issuing an Advisory Opinion (§ 411.380)

Section 1877(g)(6) of the Act does not impose any deadlines by which the

[104] The Secretary has delegated the civil monetary penalty authority under section 1877 of the Act to the OIG.

agency must respond to an advisory opinion request, but section 1128D(b)(5)(B)(i) of the Act provides that the Secretary shall be required to issue an advisory opinion no later than 60 days after the request is received. In the 1998 CMS advisory opinions rule, we adopted a 90-day timeframe for most requests. In addition, for requests that we determine, in our discretion, involve complex legal issues or highly complicated fact patterns, we reserved the right to issue an advisory opinion within a reasonable timeframe. We created this timeframe based upon our estimates on the volume and complexity of expected requests, and based upon our then-current staffing situation.

We are proposing to modify this time period and establish a 60-day timeframe for issuing advisory opinions. The 60-day period would begin on the date that CMS formally accepts a request for an advisory opinion. The 60 days would be tolled during any time periods in which the request is being revised or additional information compiled and presented by the requestor. We are also considering whether CMS should provide requestors with the option to request expedited review. We believe that a more efficient and expeditious process could give stakeholders more certainty and encourage innovative care delivery arrangements. We seek comment on the proposed changes to the timeframe, whether CMS in the final rule should include a provision on expedited review and, if so, the parameters for expedited review.

c. Certification Requirement (§ 411.373)

In the 1998 CMS advisory opinions rule, we adopted a requirement identical to OIG's requirement that a requestor must certify to the truthfulness of its submissions, including its good faith intent to enter into proposed arrangements. CMS finalized regulations that require a requestor to make two certifications as part of its request for an advisory opinion. Under current § 411.373(a), the requestor must certify that, to the best of the requestor's knowledge, all of the information provided as part of the request is true and correct and constitutes a complete description of the facts regarding which an advisory opinion is being sought. If the request relates to a proposed arrangement, current § 411.373(b) states that the request must also include a certification that the requestor intends in good faith to enter into the arrangement described in the request. A requestor may make this certification contingent upon receiving a favorable advisory opinion from CMS or from both CMS and OIG. Under current § 411.372(b)(8), if the requestor is an individual, the individual must sign the certification; if the requestor is a corporation, the certification must be signed by the Chief Executive Officer, or a comparable officer; if the requestor is a partnership, the certification must be signed by a managing partner; and, if the requestor is a limited liability company, the certification must be signed by a managing member. We are proposing to revise § 411.372(b)(8) to clarify that the certification must be signed by an officer that is authorized to act on behalf of the requestor. We are also considering whether it would be appropriate to eliminate the certification requirement in our regulations, given that section 1001 of Title 18 of the United States Code prohibits material false statements in matters within the jurisdiction of a federal agency. We seek comment on whether the existing certification requirement creates undue burden for requestors, and whether the requirement is necessary given Section 1001.

d. Fees for the Cost of Advisory Opinions (§ 411.375)

In the 1998 CMS advisory opinions rule, we established a fee that is charged to requestors to cover the actual costs incurred by CMS in responding to a request for an advisory opinion. Under current § 411.375, there is an initial fee of $250, and parties are responsible for any additional costs incurred that exceed the initial $250 payment. A requestor may designate a triggering dollar amount, and CMS will notify the requestor if CMS estimates that the costs of processing the request have reached or are likely to exceed the designated triggering amount. This fee structure was modeled after OIG regulations that were in effect at that time.

Since CMS issued the 1998 CMS advisory opinions rule, OIG has updated its regulations to eliminate the initial fee, and instead charges requesting parties a consolidated final payment based on costs associated with preparing an opinion (73 FR 15936). We believe it is appropriate to adopt an hourly fee of $220 for preparation of an advisory opinion. We believe this amount reflects the costs incurred by the agency in processing an advisory opinion request. We are also considering adding a provision establishing an expedited pathway for requestors that seek an advisory opinion within 30 days of the request. If we establish such a pathway, we would consider charging $440 an hour to process the request, reflecting the extra resources necessary to produce an advisory opinion within the abbreviated timeframe. We request comments on this approach. To ensure that obtaining an advisory opinion is affordable, and to prevent unfair surprises to requestors at the end of the process, we are considering promulgating a cap on the amount of fees charged for an advisory opinion. We solicit comments on the amount of the cap. We also request comments on whether CMS should eliminate the initial $250 fee.

e. Reliance on an Advisory Opinion (§ 411.387)

As we consider improvements to the advisory opinion process, we are also considering regulatory changes to clarify current CMS policies and practices, and make our advisory opinions more useful compliance tools for stakeholders. Specifically, we are soliciting comment on proposals, described in more detail below, to remove some of the regulatory provisions limiting the universe of individuals and entities that can rely on an advisory opinion, and to add language expressing what we believe are permissible uses of an advisory opinion.

Section 1877(g)(6)(A) of the Act states that an advisory opinion shall be binding on the Secretary and on the party or parties requesting an opinion. Consistent with the policy adopted by OIG, CMS took the view that an advisory opinion may legally be relied upon only by the requestors. While section 1877 of the Act is silent on how third parties may use an advisory opinion, in regulation, CMS has precluded legal reliance on the opinion by non-requestor third parties. At the time, we stated that advisory opinions are capable of being misused by persons not a party to the transaction in question in order to inappropriately escape liability (63 FR 1648). While such a preclusion may be appropriate for purposes of an OIG advisory opinion on the application of a criminal statute, we believe it may be unduly restrictive in the context of a strict liability payment rule that applies regardless of a party's intent.

In practice, CMS does anticipate that parties to an arrangement that is subject to a favorable advisory opinion will rely on the opinion, even if the parties did not join in the request. If, for instance, CMS determines that an arrangement does not constitute a financial relationship because it satisfies all requirements of an applicable exceptions to the physician self-referral law, that determination would necessarily apply equally to any individuals and entities that are parties to the specific arrangement, for example, the referring physician and the entity to which he or she refers patients

for designated health services. Thus, even if the physician party to the arrangement was not a requestor of the advisory opinion, the physician party is entitled to rely on that advisory opinion. We are proposing changes to § 411.387 to reflect this view. Specifically, we are proposing at § 411.387(a) that an advisory opinion would be binding on the Secretary and that a favorable advisory opinion would preclude the imposition of sanctions under section 1877(g) of the Act with respect to the party or parties requesting the opinion and any individuals or entities that are parties to the specific arrangement with respect to which the advisory opinion is issued.

We are proposing at § 411.387(b) that the Secretary will not pursue sanctions under section 1877(g) of the Act against any individuals or entities that are parties to an arrangement that CMS determines is indistinguishable in all material aspects from an arrangement that was the subject of the advisory opinion. Even though a favorable advisory opinion with respect to one arrangement would not legally preclude CMS from pursuing violations against parties to a different arrangement, in practice, the Secretary would not consider using enforcement resources for purposes of imposing sanctions under section 1877(g) of the Act to investigate the actions of parties to an arrangement that CMS believes is materially indistinguishable from an arrangement that has received a favorable advisory opinion. As discussed above, such a determination would not preclude a finding by DOJ or OIG that the arrangement violates the anti-kickback statute or any other law. All facts relied on and influencing a legal conclusion in an issued favorable advisory opinion are material; deviation from that set of facts would result in a party not being able to claim the protection proposed in § 411.387(b). If parties to an arrangement are uncertain as to whether CMS would view it as materially indistinguishable from an arrangement that has received a favorable advisory opinion, then those parties can submit an advisory opinion request to query whether a referral is prohibited under section 1877 of the Act because the arrangement is materially indistinguishable from an arrangement that received a favorable advisory opinion. We seek comment on this approach.

Finally, we are also proposing at § 411.387(c) to recognize that individuals and entities may reasonably rely on an advisory opinion as non-binding guidance that illustrates the application of the self-referral law and regulations to specific facts and circumstances. We believe that stakeholders already look to advisory opinions issued by OIG and CMS to inform their decision-making, and these proposed changes would make clear that CMS acknowledges that such reliance is permissible and reasonable. We request comments on all aspects of these proposals.

f. Rescission (§ 411.382)

Under current § 411.382, CMS may rescind or revoke an advisory opinion after it is issued. To date, CMS has not rescinded an advisory opinion. At the time we finalized this regulation, which is modeled on OIG's rescission authority regulation, we sought comment on whether this approach reasonably balanced the government's need to ensure that advisory opinions are legally correct and the requestor's interest in finality (63 FR 1653). We are again requesting comment on this issue. Specifically, we are soliciting comments on whether CMS should retain a more limited right to rescind an advisory opinion; that is, CMS could rescind an advisory opinion only when there is a material regulatory change that impacts the conclusions reached, or when a party has received a negative advisory opinion and wishes to have the agency reconsider the request in light of new facts or law.

g. Other Modifications to Procedural Requirements

We are proposing minor modifications to § 411.372 to improve readability and clarity. We are also proposing to eliminate the reference to the provision of stock certificates as part of the advisory opinion request submission, as these are typically electronic and may not necessarily list the name of the owner. We are requesting comments on these and other updates to the procedure for submitting an advisory opinion request that will improve the efficiency of the review process.

K. CY 2020 Updates to the Quality Payment Program

1. Executive Summary

a. Overview

This section of the proposed rule sets forth changes to the Quality Payment Program starting January 1, 2020, except as otherwise noted for specific provisions. The 2020 performance period of the Quality Payment Program should build upon the foundation that has been established in the first 3 years of the program, which provides a trajectory for clinicians moving to performance-based payments, and will gradually prepare clinicians for the 2022 performance period of the program and the 2024 MIPS payment year. Participation in both tracks of the Quality Payment Program—Advanced Alternative Payment Models (APMs) and Merit-based Incentive Payment System (MIPS)—have increased from 2017 to 2018.[105] The number of QPs—Qualifying APM Participations—nearly doubled from 2017 to 2018, from 99,076 to 183,306 clinicians. In MIPS, 98 percent of eligible clinicians participated in 2018, up from 95 percent in 2017. As the Quality Payment Program continues to mature, CMS recognizes additional long-term improvements will need to occur. Beginning with the 2024 MIPS payment year, the cost performance category will be weighted at 30 percent, which has been gradually increased in the last few years, and the performance threshold will be set at the mean or median of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Beginning in the 2022 performance period, there will no longer be the same flexibility in establishing the weight of the cost performance category or in establishing the performance threshold. Refer readers to sections III.K.3.c.(2)(a) and III.K.3.e.(2) of this proposed rule for more information about the statutory requirements related to these provisions.

b. Summary of Major Proposals

(1) MIPS Value Pathways Request for Information

CMS is committed to the transformation of MIPS, which will allow for: More streamlined and cohesive reporting; enhanced and timely feedback; and the creation of MIPS Value Pathways (MVPs) of integrated measures and activities that are meaningful to all clinicians from specialists to primary care clinicians and patients. The new MVPs would remove barriers to APM participation and promote value by focusing on quality, interoperability, and cost. Additionally, MVPs would create a cohesive and meaningful participation experience for clinicians by moving away from siloed activities and measures and towards an aligned set of measures that are more relevant to a clinician's scope of practice, while further reducing reporting burden and

[105] Quality Payment Program (QPP) Participation in 2018: Results at a Glance *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/586/2018%20QPP%20Participation%20Results%20Infographic.pdf.*

easing the transition to APMs. MVPs are described in greater detail at section III.K.1.b.(2) and the full Request for Information at section III.K.3.a. of this proposed rule.

(2) Major MIPS Proposals

The major MIPS proposals in this year's proposed rule include a focus on a strategic vision to further transform MIPS by empowering patients and simplifying MIPS to improve value and reduce burden. We envision a future state of the program where patients have the information needed to make informed decisions about their healthcare, clinicians improve health outcomes and quality of care for their patients in alignment with the Meaningful Measures initiative,[106] and the data collection burden is limited in alignment with the Patients over Paperwork initiative.[107] Hence, we are proposing to apply a new MVPs framework to future proposals beginning with the 2021 MIPS Performance Year. MVPs would utilize sets of measures and activities that incorporate a foundation of promoting interoperability and administrative claims-based population health measures and layered with specialty/condition specific clinical quality measures to create both more uniformity and simplicity in measure reporting. The MVP framework will also connect quality, cost, and improvement activities performance categories to drive toward value; integrate the voice of patients; and reduce clinician barriers to movement into Advanced APMs. Further, the MVP framework would reduce the number of performance measures and activities clinicians may select. Ultimately, we believe this would decrease clinician burden and improve performance data quality, while still accounting for different types of specialties and practices. In addition to comments requested on the framework, we are seeking feedback on several implementation elements within section III.K.3.a. of this proposed rule. Within this section, we describe our vision that includes the following:

- Furthering the application of the Meaningful Measures framework.
- Implementing a measure set using additional administrative claims-based quality measures.
- Developing MVPs, using an approach which connects measures and activities from the quality, cost, and improvement activities performance categories; requiring completion of the Promoting Interoperability performance category to maintain alignment with hospitals; and focusing on a specialty or condition to standardize and provide more cohesive reporting and participation.
- Providing timely quality and cost performance data feedback using administrative claims, registry, and electronically submitted data to enhance a clinician self-tracking to facilitate care improvements.
- Enhancing information available to patients to inform decision making, including increasing the patient reported measures in MVPs.

This vision will ultimately help us to better measure and incentivize value, ensure participation is more meaningful to clinicians and their patients, provide information to patients to assist with clinician selection, reduce clinician reporting burden, respond to program concerns, and increase alignment with APMs, and increase alignment with APMs. The RFI solicits comment on the types of information that would be useful to patients (Medicare beneficiaries) and individual clinicians reporting data for purposes of sharing on CMS public websites. We have assessed new opportunities, such as, implementation of a foundational claims-based population health core measure set using administrative claims-based quality measures that can be broadly applied to communities or populations, development of MVP measure tracks to provide uniformity in measure reporting and to unify performance categories, and enhancement of the patient voice, to increase simplicity, reduce burden, and increase the value of MIPS performance data. We strongly encourage feedback on how we can best realize our path to value vision of MIPS Value Pathways.

In addition to this framework, we are making two significant proposals for the 2020 MIPS performance period:

- As discussed in section III.K.3.g.(2) of this proposed rule, we are proposing to strengthen the Qualified Clinical Data Registry (QCDR) measure standards for MIPS to require measure testing, harmonization, and clinician feedback to improve the quality of QCDR measures available for clinician reporting. These policies relate to CY 2020 and CY 2021 for QCDRs.
- As discussed in section III.K.3.c.(2)(b)(iii) of this proposed rule, we are proposing to add new episode-based measures in the cost performance category to more accurately reflect the cost of care that specialists provide. Further, we are proposing to revise the total per capita cost and the Medicare Spending Per Beneficiary (MSPB) measures in response to stakeholders' feedback suggestions.

While we continue efforts to strengthen the Quality Payment Program, we remain interested in clinician participation and engagement in the program. Finally, as the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, enacted February 9, 2018) extended the flexibility and transition years within the Quality Payment Program, we believe these proposed policies for Year 4 and our strategic vision will assist us in working towards a more robust program in the future.

(3) Major APM Proposals

(a) Aligned Other Payer Medical Home Models

We are proposing to add the defined term, Aligned Other Payer Medical Home Model, to § 414.1305. The proposed definition of Aligned Other Payer Medical Home Model includes the same characteristics as the definitions of Medical Home Model and Medicaid Medical Home Model, but it applies to other payer payment arrangements. We believe that structuring this proposed definition in this manner is appropriate because we recognize that other payers could have payment arrangements that may be appropriately considered medical home models under the All-Payer Combination Option.

Neither the current Medical Home Model financial risk and nominal amount standards nor the Medicaid Medical Home Model financial risk and nominal amount standards apply to other payer payment arrangements. Consistent with our proposal to define the term Aligned Other Payer Medical Home Model, we are proposing to amend § 414.1420(d)(2), (d)(4), and (d)(8) of our regulations to also apply the Medicaid Medical Home Model financial risk and nominal amount standards, including the 50 eligible clinician limit, to Aligned Other Payer Medical Home Models.

(b) Marginal Risk for Other Payer Advanced APMs

We are proposing to modify our definition of marginal risk when determining whether a payment arrangement is an Other Payer Advanced APM. We propose that in event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the average marginal risk rate across all possible levels of actual

[106] *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html.*

[107] *https://www.cms.gov/About-CMS/story-page/patients-over-paperwork.html.*

expenditures would be used for comparison to the marginal risk rate specified in with exceptions for large losses and small losses as described in § 414.1420(d). Average marginal risk would be computed by adding the marginal risk rate at each percentage of level to determine to determine participants' losses, and dividing it by the percentage above the benchmark to get the average marginal risk. When considering average marginal risk in the context of total risk, we believe that certain risk arrangements can create meaningful and significant risk-based incentives for performance and at the same time ensure that the payment arrangement has strong financial risk components.

(c) Estimated APM Incentive Payments and MIPS Payment Adjustments

As we discuss in section VI.E.10.a. of this proposed rule, for the 2022 payment year and based on estimated Advanced APM participation during the 2020 QP Performance Period, we estimate that between 175,000 and 225,000 clinicians will become Qualifying APM Participants (QPs). As a QP for the 2022 payment year, an eligible clinician is excluded from the MIPS reporting requirements and payment adjustment and qualifies for a lump sum APM Incentive Payment equal to 5 percent of their aggregate payment amounts for covered professional services for the year prior to the payment year. We estimate that the total lump sum APM Incentive Payments will be approximately $500–600 million for the 2022 Quality Payment Program payment year.

We estimate that approximately 818,000 clinicians would be MIPS eligible clinicians for the 2020 MIPS performance period in section VI.E.10.b.(1)(b) of this proposed rule. The final number will depend on several factors, including the number of eligible clinicians excluded from MIPS based on their status as QPs or Partial QPs, the number that report as groups, and the number that elect to opt into MIPS. In the 2022 MIPS payment year, MIPS payment adjustments, which only apply to payments for covered professional services furnished by a MIPS eligible clinician, will be applied based on a MIPS eligible clinician's performance on specified measures and activities within four integrated performance categories. We estimate that MIPS payment adjustments will be approximately equally distributed between negative MIPS payment adjustments ($584 million) and positive MIPS payment adjustments ($584 million) to MIPS eligible clinicians, as required by the statute to ensure budget neutrality. Up to an additional $500 million is also available for the 2022 MIPS payment year for additional positive MIPS payment adjustments for exceptional performance for MIPS eligible clinicians whose final score meets or exceeds the additional performance threshold of 80 points that we are proposing in section III.K.3.e.(3) of this proposed rule. However, the distribution will change based on the final population of MIPS eligible clinicians for the 2022 MIPS payment year and the distribution of final scores under the program.

2. Definitions

At § 414.1305, we are proposing to define the following terms:

- Aligned Other Payer Medical Home Model.
- Hospital-based MIPS eligible clinician.
- MIPS Value Pathway.

We are additionally proposing to revise at § 414.1305 the following term:

- Rural area.

These terms and definitions are discussed in detail in relevant sections of this proposed rule.

3. MIPS Program Details

a. Transforming MIPS: MIPS Value Pathways Request for Information

(1) Overview

In this proposed rule, we are proposing to apply a new MIPS Value Pathways (MVP) framework to future proposals beginning with the 2021 MIPS performance period/2023 MIPS payment year to simplify MIPS, improve value, reduce burden, help patients compare clinician performance, and better inform patient choice in selecting clinicians. As discussed in section III.K.3.a.(3)(a) of this proposed rule, the MVP framework would be implemented as early as feasible to produce a MIPS program that more effectively meets the 7 strategic objectives described in the CY 2018 QPP final rule (82 FR 53570) and drives continued progress and improvement. The MVP framework would connect measures and activities across the 4 MIPS performance categories, incorporate a set of administrative claims-based quality measures that focus on population health, provide data and feedback to clinicians, and enhance information provided to patients. As discussed in section III.K.3.a.(3)(a) of this proposed rule, we are proposing to apply this MVP framework to future proposals beginning with the 2021 MIPS performance period rather than the 2020 MIPS performance period, so that we can seek necessary feedback on the details of implementing this transformative approach and address additional details of the methodology in next year's rulemaking cycle. We understand that clinicians want timely performance feedback data on quality and cost to track their performance and prepare to take on risk, as required in Advanced APMs, and we intend to provide enhanced feedback and data analysis information to clinicians in the future. We plan to engage with clinician professional organizations and front-line clinicians to develop the MVPs.

(2) MVP Framework

(a) MVP Overview

We believe the MVPs will reduce the complexity of the MIPS program and the burden to participate. We intend to simplify MIPS while continuing to reward high value clinicians and help all clinicians improve care and engage patients. While we emphasized flexibility during the initial years of MIPS, we believe we must balance flexibility with a degree of standardization to hold clinicians accountable for the quality of care, identify and reward high value care, and limit clinician burden. Any solution to improving MIPS performance measurement data must account for the large variation in specialty, size, and composition of clinician practices. MVPs allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to the population they are caring for, a specialty or medical condition.

The MIPS program aims to drive quality and value through the collection, assessment, and public reporting of data that informs and rewards the delivery of high-value care. For purposes of this discussion, we define ''value'' as a measurement of quality as related to cost, ''value-based care'' as paying for health care services in a manner that directly links performance on cost, quality, and the patient's experience of care, and ''high value clinicians'' as clinicians that perform well on applicable measures of quality and cost. We believe implementing a ''path to value'' framework will transform the MIPS program by better informing and empowering patients to make decisions about their healthcare and helping clinicians to achieve better outcomes, and also by promoting robust and accessible healthcare data, and interoperability.

We are targeting policies that remove APM participation barriers as clinicians

and practices prepare to take on and successfully manage risk as practices build out their quality infrastructures with components that align with the MIPS performance categories. Critical practice infrastructure components that support higher value care and readiness to join APMs include performance measurement tracking, performance improvement processes, interoperability, and data information systems that assist clinicians and practices in monitoring performance and adopting new workflows and care delivery methods. Performance measure reporting for specific populations encourages practices to build an infrastructure with capabilities to compile and analyze population health data, a critical capability in assuming and managing risk. For example, quality measurement can bolster the development of a practice infrastructure that rapidly integrates evidence-based best practices into the structure and execution of care delivery, to leverage a value-based payment, and to produce achievement of better health outcomes. Improvement Activities add a continuous clinical practice improvement component, that can help clinicians use the experiences and perspectives of front-line staff and beneficiaries to constantly assess, reconfigure, and innovate processes and systems of care delivery to better manage revenue and risk expenditure. Sensitivity to cost and experience with cost measures within a practice infrastructure is critical to managing value based payment and APM risk, while awareness of and sensitivity to cost from the beneficiary perspective (out-of-pocket cost, cost of time off from work for the patient and/or caregiver, cost of disruption of normal activities/relationships) can help support shared decision-making. An interoperability infrastructure component supports the development of a practice infrastructure that recognizes the critical role of information exchange in supporting safe, effective, and efficient coordination and transitions of care through a complex health care system, and better management of costs and risk. We believe that experience with MVPs, in which there is measurement of quality (of care and of experience of care) and cost-efficiency, continuous improvement/innovation within the practice, and efficient management and transfers of information, will remove barriers to APM participation.

We believe it is important to transform the MIPS program. We must change the current program to move along the path to value and enter a future state of MIPS, which includes a more cohesive and simplified participation experience for clinicians, increased voice of the patient, increased CMS provided data and feedback to clinicians to reduce reporting burden, and facilitated movement to Alternative Payment Models. Please refer to the on line MVP graphic (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/587/MIPS%20Value%20Pathways%20Diagrams.zip*) that provides an overview of our vision for the MIPS future state.

We have built the MIPS program recognizing the large variation in specialty, size, and composition of clinician practices, providing broad flexibility for clinician choice of measures and activities, data submission types, and individual or group level participation. Although we believe this flexibility contributed to Year 1 participation of 95 percent of MIPS eligible clinicians, including 94 percent of rural practices and 81 percent of small practices,[108] and the increase in Year 2 participation to 98 percent of MIPS eligible clinicians.[109] we also believe there is room to improve upon the program. Specifically, we believe this flexibility has inadvertently resulted in a complex MIPS program that is not producing the level of robust clinician performance information we envision providing to meet patient needs and spur clinician care improvements.

Although we have been reducing the numbers of MIPS quality measures in accordance with the Meaningful Measures initiative (*see* 83 FR 59763 through 59765), we have heard concerns from some stakeholders that MIPS presents clinicians with too much complexity and choice (for example, of several hundred MIPS and QCDR quality measures), causing unnecessary burden. As noted in the CY 2019 PFS final rule (83 FR 59720), we have received feedback that some clinicians find the performance requirements confusing, and that it is difficult for them to choose measures that are meaningful to their practices and have a direct benefit to beneficiaries.

We have also heard concerns from stakeholders that MIPS does not allow for sufficient differentiation of performance across practices due to clinician quality measures selection bias. This detracts from the program's ability to effectively measure and compare performance, provide meaningful feedback, and incentivize quality. For example, in its June 2017 Report to Congress, MedPAC documented the need for changes to the MIPS program to increase clarity, reduce complexity, and make the burden of data submission worthwhile through higher impact. MedPAC recommended in their March 2018 Report to Congress using a uniform set of population-based measures for clinicians paid by Medicare who are not participating in an advanced APM, and provided an illustrative voluntary value model that used administrative claims and patient experience surveys. The MedPAC model did not include any specific clinical specialty or practice level measures.

We believe a hybrid approach is warranted—where clinicians are measured on a unified set of measures and activities around a clinician condition or specialty, layered on top of a base of population health measures, which would be included in virtually all of the MVPs. Over time, the information clinicians and groups are required to submit will be less burdensome and more meaningful to clinicians and patients. At the same time, we intend to analyze Medicare information to provide to clinicians and patients more information to improve the health of the Medicare beneficiaries. Finally, we anticipate capturing additional information important to patients. We envision applying this framework to future proposals beginning with the 2021 MIPS performance period/2023 MIPS payment year as we integrate new MVPs, so that eventually, all MIPS eligible clinicians would have to participate through an MVP or a MIPS APM. We seek feedback on numerous elements related to the MVPs in sections III.K.3.a.(3)(a)(i) through III.K.3.a.(3)(a)(iv) of this proposed rule.

(b) Clinician Data Feedback

Clinicians have expressed an interest in leveraging data, such as timely claims data, to track performance and inform care improvements. We understand that performance data feedback on administrative claims-based quality and cost measures would potentially assist clinicians in understanding their performance and preparing to take on risk as required in Advanced APMs. We see the critical need for data feedback and intend to provide enhanced clinician driven data feedback and analysis information under the future MVP approach. We are interested in

[108] 2017 Quality Payment Program Reporting Experience, March 20, 2019 (*https://qpp-cm-prod-content.s3.amazonaws.com/uploads/491/2017%20QPP%20Experience%20Report.pdf*).

[109] Quality Payment Program (QPP) Participation in 2018: Results at a Glance, *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/586/2018%20QPP%20Participation%20Results%20Infographic.pdf*.

whether clinicians would like to see outlier analysis or other types of actionable data feedback and are seeking comments on clinician data feedback content and timing needs in section III.K.3.a.(6) of this proposed rule.

(c) Enhancing Information for Patients

The MIPS program aims to drive quality and value through the collection, assessment, and public reporting of data that informs and rewards the delivery of high-value care. We believe that our performance measurement should focus more on patient reported measures, including patient experience and satisfaction measures and clinical outcomes measures, as we believe that clinicians can use feedback from the patient perspective to inform care improvement efforts. We believe that MVPs should include patient reported measures when feasible. We believe implementing an MVP framework will transform the MIPS program by better informing and empowering patients to make decisions about their healthcare and helping clinicians achieve better outcomes, and also by promoting robust and accessible healthcare data and interoperability.

We are dedicated to putting patients first and providing the information they need to be engaged and active decision-makers in their care. We believe that whenever feasible the MIPS program should provide meaningful information at the individual clinician level. We believe we need specific specialty information from multispecialty groups and are considering approaches to use the MVPs to require reporting relevant to multiple specialty types within a group to provide more comprehensive information for patients. We seek comment, as discussed in section III.K.3.a.(3)(b) of this proposed rule, on the best ways to identify which MVPs should be reported by multispecialty groups and how we should balance the need for information at the individual clinician level with the burden of reporting.

We are also looking at ways that we can gather and display information that is useful to patients. We are considering approaches, as discussed in section III.K.3.a.(6) of this proposed rule, to developing and reporting on Physician Compare a ''value indicator'' representing each clinician's performance on cost, quality, and the patient's experience of care. We are committed to learning more about the types of information patients use in making decisions and determining what information can be derived from the data reported or gathered as part of MIPS.

(3) Implementing MVPs

(a) MVP Definition, Development, Specification, Assignment, and Examples

We are seeking comments on the development and structure of MVPs, which would connect measures and activities across the quality, cost, and improvement activities performance categories. We believe that interoperability is a foundational element and thus would generally apply to all clinicians, regardless of the specific MVP, for whom the Promoting Interoperability performance category is required. MVPs would support our vision to measure value, reduce burden, simplify the MIPS performance measurement and scoring approaches, and ensure strong alignment of quality and cost measures. The four guiding principles we would use to define MVPs are:

1. MVPs should consist of limited sets of measures and activities that are meaningful to clinicians, which will reduce or eliminate clinician burden related to selection of measures and activities, simplify scoring, and lead to sufficient comparative data.

2. MVPs should include measures and activities that would result in providing comparative performance data that is valuable to patients and caregivers in evaluating clinician performance and making choices about their care.

3. MVPs should include measures that encourage performance improvements in high priority areas.

4. MVPs should reduce barriers to APM participation by including measures that are part of APMs where feasible, and by linking cost and quality measurement.

We request public comments on the MVP guiding principles noted above. We also request public comments on how to best develop MVPs to allow for the development of better comparative data, reduce burden, and provide valuable information to patients and clinicians.

MVPs would be organized around clinician specialty or health condition and encompass a set of related measures and activities. We intend to ensure equity in MVPs so that clinicians are not advantaged by reporting one MVP over another (for example, in terms of reporting burden and scoring), but also want to include measures that have opportunities for improvement. Bundling quality and cost measures and improvement activities that are highly correlated in addition to the measures from the Promoting Interoperability performance category will strengthen clinical improvement and streamline reporting. As an initial step, we are proposing to require that beginning with the 2020 Call for measures process, MIPS quality measure stewards must link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible. We refer readers to section III.K.3.c.(1)(d)(i) of this proposed rule for further discussion of our proposal.

We believe that MVPs can be created with significant input from clinicians and specialty societies, to ensure that measures and activities within MVPs are relevant and important to clinician practices. The most significant change with MVPs is that eventually all MIPS eligible clinicians would no longer be able to select quality measures or improvement activities from a single inventory. Instead, measures and activities in an MVP would be connected around a clinician specialty or condition (*see* examples of potential MVPs in section III.K.3.a.(3)(a) of this proposed rule). We also intend that a population health measure/administrative claims-based measures would be layered into measuring the quality performance category, applied whenever there is a sufficient case minimum. Cost measures would be specific to the MVP and applied only when a clinician or group meets the case minimum. MVPs could potentially also allow for the use of multi-category measures, should they be developed, as clinician feedback has indicated there is an interest in the development of these performance measures that simultaneously address two or three of the MIPS performance categories (83 FR 35932).

As outlined in our goals for the Promoting Interoperability performance category in section III.K.3.c.(4)(b), we look to continue MIPS alignment with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs, where appropriate. We envision Promoting Interoperability performance category measures, which focus on the meaningful use of certified EHR technology to support care coordination and electronic health information exchange, to be a key structural part of any MVP. Initially, there would be a uniform set of Promoting Interoperability measures in each MVP, though in future years we may consider customizing the Promoting Interoperability measures in each MVP. At this time, we are not considering making modifications to the Promoting Interoperability performance category as it becomes incorporated into the MVP framework. We believe that interoperability is a foundational element and thus would apply to all

clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required. However, we are seeking comment on how the Promoting Interoperability performance category could evolve in the future to meet our goal of greater cohesion between the MIPS performance categories. We believe that eligible clinicians could benefit from more targeted approaches to assessing the meaningful use of health IT which aligns with clinically relevant MVPs cutting across the MIPS performance categories. One approach we could consider is exploring which measures for the Promoting Interoperability performance category would be directly aligned with measures in other MIPS performance categories. For instance, many improvement activities are enabled by, or could be enabled by, the use of certified health IT including care coordination and patient engagement through health information exchange. We could develop Promoting Interoperability measures which measure the use of health IT in conducting these improvement activities, while relevant quality measures for a given MVP could assess quality outcomes associated with these activities. We invite comment on these concepts, as well as other suggestions for how the Promoting Interoperability performance category can be better integrated into MVPs.

We also believe that improvement activities can be closely linked to the quality and cost measures, to encourage improvement on performance of those measures. As clinicians report on a stable set of measures, there is an inherent incentive to change practice patterns to increase performance on required quality and cost measures. We are seeking feedback in section III.K.3.a.(3)(a)(ii) of this proposed rule on how many improvement activities should be included in an MVP and how much flexibility there should be in selecting improvement activities. We also seek feedback on the extent to which improvement activities in MVPs should be specialty-specific, condition-focused improvement activities, versus other areas relevant to the practice such as patient experience and engagement, team-based care, and care coordination. More generally, we would like to understand how improvement activities are used to improve quality measure performance within clinical practices.

Our goal in using MVPs is to standardize which measures and activities are reported, both to reduce clinician burden and better measure performance among comparable clinicians while appropriately recognizing the variability of clinician practices and potentially reducing barriers to moving into APMs, which generally measure quality for their respective participants using the same quality measures. We can also look to APMs for methods of linking quality and value measurement as APMs are designed around value, and address quality, cost, and care redesign for a specific population.

We realize that there are numerous issues on which we need stakeholder feedback to fully implement MVPs, but we believe the basic approach could start in the 2021 MIPS performance period/2023 MIPS payment year. We are requesting public comments on the following issues:

- How to construct MVPs, including approach, definition, development, specification, and examples referenced at III.K.3.a.(3)(a)(i) of this proposed rule;
- How to select measures and activities for MVPs, referenced at III.K.3.a.(3)(a)(ii) of this proposed rule;
- How to determine MVP assignment, referenced at III.K.3.a.(3)(a)(iii) of this proposed rule; and
- How to transition to MVPs, referenced at III.K.3.a.(3)(a)(iv) of this proposed rule.

To begin implementing MVPs, we are proposing to define a MIPS Value Pathway at § 414.1305 as a subset of measures and activities specified by CMS. We anticipate that MVPs may include, but would not be limited to, administrative claims-based population health, care coordination, patient-reported (which may include patient reported outcomes, or patient experience and satisfaction measures), and/or specialty/condition specific measures. MVPs would include a population health quality measure set, and measures and activities such that all 4 MIPS performance categories are addressed, and each performance category would be scored according to its current methodology. Under MVPs, the current MIPS performance measure collection types would continue to be used to the extent possible, but these details need to be worked out and would be addressed in next year's rulemaking cycle. We request comment on performance measure collection types for MVPs in section III.K.3.a.(3)(a)(ii) of this proposed rule.

We provide 4 illustrative examples of MVPs in Table 34. The examples demonstrate how MVPs could be constructed and show the types of measures and activities that might be assigned to each MVP. We present 2 example MVPs for primary care and general medicine, which includes preventive health and diabetes prevention and treatment, as well as two example MVPs for procedural specialties, which include major surgery and general ophthalmology. Within our sample MVPs, we present no more than 4 quality or cost measures or improvement activities for each performance category. However, the exact number of measures and activities could vary across MVPs. We envision that we would no longer require the same number of measures or activities for all clinicians but focus on what is needed to best assess the quality and value of care within a particular specialty or condition. To assign quality measures in these examples, we prioritized outcome and patient reported measures, non-topped out measures, and eCQMs. To assign cost measures, we reviewed existing measures and selected those that fit into the MVP topic. We also included population health measures, which are described in section III.K.3.a.(4) of this proposed rule. We reviewed and selected relevant improvement activities that align with the quality and cost measures in the MVPs. We are interested in feedback on whether improvement activities should focus on improving the quality and cost measures within an MVP or be much broader including any improvement activities that are relevant to the practice. We are interested in exploring approaches to leverage participation in specialty accreditation programs, such as the American College of Surgeons' Commission on Cancer accreditation program. Since specialty accreditation programs may promote the evaluation and improvement of clinical processes and care, we believe it may be appropriate to incorporate attestation to participation in such programs as an approach to satisfy the requirements of the improvement activities performance category, for example, by proposing to specify such participation as an improvement activity for all MVPs or specific MVPs in future rulemaking. To align with the statutory requirement that a practice that is certified or recognized as a patient-centered medical home or comparable specialty practice be given the highest potential score for the improvement activities performance category, we have also included an illustrative example under the Preventive Health MVP to depict how patient-centered medical homes or comparable specialty practices would receive credit under the improvement activities performance category. We anticipate that all measures in the Promoting Interoperability performance category would initially be applicable to

each MVP unless an exclusion applies; thus, we assigned all Promoting Interoperability measures to all MVPs. We welcome comments on the examples of possible MVPs and on options for encouraging interoperability to promote improvements in care and performance measurement results.

BILLING CODE 4120–01–P

TABLE 34: Examples of Possible MIPS Value Pathways

MVP Example	Quality Measures	Cost Measures	Improvement Activities**	Promoting Interoperability
Preventive Health	• Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Quality ID: 226) • Osteoarthritis: Function and Pain Assessment (Quality ID: 109) Adult Immunization Status, proposed (Quality ID: TBD) • Controlling High Blood Pressure (Quality ID: 236) • PLUS: population health administrative claims quality measures (e.g., all-cause hospital readmission)	• Total Per Capita Cost (TPCC_1) • Medicare Spending Per Beneficiary (MSPB_1)	• Chronic Care and Preventive Care for Empaneled Patients (IA_PM_13) • Engage patients and families to guide improvement in the system of care (IA_BE_14) • Collection and use of patient experience and satisfaction data on access (IA_EPA_3)	• All measures in Promoting Interoperability***
Diabetes Prevention and Treatment	• Hemoglobin A1c (HbA1c) Poor Care Control (>9%) (Quality ID: 001) • Diabetes: Medical Attention for Nephropathy (Quality ID: 119) • Evaluation Controlling High Blood Pressure (Quality ID: 236) • PLUS: population health administrative claims quality measures	• Total Per Capita Cost (TPCC_1) • Medicare Spending Per Beneficiary (MSPB_1)	• Glycemic Management Services (IA_PM_4) • Chronic Care and Preventative Care Management for Empaneled Patients (IA_PM_13)	• All measures in Promoting Interoperability ***
Major Surgery	• Unplanned Reoperation within the 30-Day Postoperative Period (Quality ID: 355) • Surgical Site Infection (SSI) (Quality ID: 357) • Patient-Centered Surgical Risk Assessment and Communication (Quality ID: 358) • PLUS: population health administrative claims quality measures	• Medicare Spending Per Beneficiary (MSPB_1) • Revascularization for Lower Extremity Chronic Critical Limb Ischemia (COST_CCLI_1) • Knee arthroplasty (COST_KA_1)	• Use of patient safety tools (IA_PSPA_8) • Implementing the use of specialist reports back to referring clinician or group to close referral loop (IA_CC_1) OR • Completion of an Accredited Safety or Quality Improvement Program (IA_PSPA_28)	• All measures in Promoting Interoperability ***
General Ophthalmology	• Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation (Quality ID: 012) • Diabetic Retinopathy: Communication with Physician Managing Ongoing Diabetes Care (Quality ID: 019)	• Medicare Spending Per Beneficiary (MSPB_1) • Routine Cataract Removal with Intraocular Lens Implantation (COST_IOL_1)	• Implementation of improvements that contribute to more timely communication of test results (IA_CC_2) • Comprehensive eye exam (IA_AHE_7)	• All measures in Promoting Interoperability ***

	• Cataracts: 20/40 or Better Visual Acuity within 90 days Following Cataract Surgery (Quality ID: 191) • PLUS: population health administrative claims quality measures			

*Measures and activities selected for illustrative purposes and are subject to change.

**Recognized or certified patient-centered medical homes or comparable specialty practices could participate in an MVP and still receive credit for the improvement activity performance category.

***See Table 41 in section III.K.3.c.(4)(d)(ii)(B) for the Promoting Interoperability measures.

BILLING CODE 4120–01–C

The examples in Table 34 are illustrative only, but we envision that we would start building MVPs by reviewing the existing specialty measure sets for the quality performance category. However, some specialty measure sets contain multiple conditions or concepts, so we do not envision a one-to-one correlation between the specialty measure sets and MVPs.

We anticipate that eventually many clinicians would have at least one relevant MVP, while other clinicians may have several. In particular, we believe that multispecialty groups will have more than one relevant MVP. If technically feasible, we would like to establish a methodology that allows us to identify and assign in advance the relevant MVP(s) for MIPS eligible clinicians or groups and require the clinician or groups to report on those MVPs. In addition, we would consider folding MIPS APM measures and activities into MVPs and develop an assignment process as described in the CY 2018 Quality Payment Program final rule (82 FR 53785 through 53787), applying a hierarchy which applies APM entity final scores over any other final score.

We are interested in feedback on the level of choice that should be provided to clinicians for MVP selection or selection of measures and activities within an MVP. We have heard from some clinicians that they would prefer a clear list of what specific measures and activities they have to perform versus various options of measures and activities to report. We believe a methodology in which clinicians are informed of the potential MVP(s) that are available for a clinician or group to report on would be simpler to communicate and allow for both clinicians and CMS to better understand what measures and activities should be submitted. We are considering assigning MVPs to clinicians and groups, if technically feasible, starting with the 2021 MIPS performance period as MVPs become available and would propose the MVP assignment process in next year's rulemaking cycle. We are considering the feasibility of potential data sources or methods to use to assign clinicians to an MVP, such as the specialty reported on Part B claims or use of Medicare Provider Enrollment, Chain, and Ownership System (PECOS) data. We seek comment on circumstances when we should allow clinicians and groups to select an alternative MVP, rather than the one or more MVP(s) assigned. Those clinicians and groups who would not have an applicable MVP for the 2021 MIPS performance period would continue the current process of reporting MIPS measures and activities for the 4 performance categories. As an alternate option, we could consider self-assignment of MVPs for the 2021 MIPS performance year period with the intention of assigning MVPs to clinicians starting in the 2022 MIPS performance period. Clinicians have had flexibility in choosing MIPS quality measures to date, and we expect retaining a degree of choice will be welcome by some clinicians as we transition to MVPs. We anticipate that the number of available MVPs would increase in the 2022 MIPS performance period and subsequent years, which would allow for MVP assignment for all clinicians and groups. We are requesting public comments on whether clinicians and groups should be able to self-select an MVP or if an MVP should be assigned. If assigned, we are requesting comments on the best way to assign an MVP—should it be based on place of service codes, specialty designation on Part B claims, or in the case of groups, should the assigned MVP(s) be based on the specialty designation of the majority of clinicians in the group, specific services, or other factors?

We are considering approaches to assigning MVPs to multispecialty groups to be inclusive of the different specialties providing care to patients. Alternatively, we are also considering approaches that would allow for self-assignment of MVPs where multispecialty groups would select one or more MVPs that are most relevant to the specialty mix within the group.

We believe the approach to MVPs must find the right balance between having a sufficient number of MVPs to allow clinicians to report on measures and activities relevant to their practices, without developing so many MVPs that reporting is diluted and developing benchmarks is hampered. For example, we would not want to have several MVPs for the same specialty or condition because then only a portion of the MIPS eligible clinicians are reporting on the quality measures, which limits the ability to develop benchmarks and to make meaningful comparisons of clinicians.

In addition, due to differences in collection types for many quality measures, we can have multiple benchmarks for each measure, which further complicates the ability to make meaningful comparisons. The diversity of MVPs and collection types of quality measures may hamper MIPS in meeting its vision of effectively measuring and comparing performance, providing meaningful feedback, incentivizing quality, and providing patients with enhanced information for making clinician selection choices.

We believe Electronic Clinical Quality Measures (eCQMs) have the potential to decrease reporting burden within MVPs. Stakeholders have previously supported eCQMs and the associated reduction in information collection burden under a variety of CMS programs and have made recommendations for improving eCQMs (83 FR 41593). While we support the reporting of eCQMs through the MIPS program, we have identified certain eCQMs for removal. We may propose to remove measures that are extremely topped out, duplicative of a new measure, or are low-adopted measures that have been in the program for 2 or more years. We refer readers to Table Group C of Appendix 1 for the list of previously finalized quality measures proposed for removal in the 2022

payment year. Through our Call for Measures process, and related measure development resources, such as the CMS BluePrint at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf* and the CMS Measure Development Plan at *https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/2018-MDP-annual-report.PDF*, we encourage stakeholders to submit electronically specified measures for CMS consideration. We recognize that there are challenges related to development of new eCQMs and technical aspects, however, we are interested in eCQMs and their potential use in MVPs to reduce reporting burden. For further discussion of strategies for reducing burden associated with reporting eCQMs, refer to the Office of the National Coordinator for Health Information Technology draft report, *Strategy of Reducing Regulatory and Administrative Burden Relating to the Use of Health IT and EHRs* (*https://www.healthit.gov/sites/default/files/page/2018-11/Draft%20Strategy%20on%20Reducing%20Regulatory%20and%20Administrative%20Burden%20Relating.pdf*).

We are interested in feedback on our timeframe for transitioning into MVPs. We anticipate that we will have a number of MVPs proposed for the 2021 MIPS performance period. However, we understand that there are many operational considerations that should be taken into account. We request comment on approaches to accelerate the development and implementation of MVPs, as well as any comments on the optimal timeline for transition.

Over the next year, we may consider convening public forum listening sessions, webinars, and office hours, or use additional opportunities such as the pre-rulemaking measures process to understand what is important to clinicians, patients, and stakeholders, as we develop MVPs.

(i) Request for Feedback on MVP Approach, Definition, Development, Specification, Assignment, and Examples

We are requesting public comments on how MVPs are developed.

- We have stated MVP guiding principles regarding reducing burden, providing comparative performance data to patients and caregivers, encouraging improvements in high priority areas, and reducing barriers to APM participation. Should we consider other guiding principles as we define and develop MVPs?
- In addition to gathering feedback from this proposed rule, how do we best engage stakeholders in the development of MVPs?

++ How would stakeholders like to be engaged in MVP development? What type of outreach would be the most effective in gathering the voice of the patient in the MVP concept and the selection of measures?

++ For quality measures, should we initiate a ''Call for MVPs'' that aligns with policies developed for the Call for Measures and Measure Selection Process, described in section III.K.3.c.(1)(d)(i) of this proposed rule, or should we use an approach similar to the process used to solicit recommendations for new specialty measure sets and revisions to existing specialty measure sets, as described in section III.K.3.c.(1)(d)(i) of this proposed rule?

- How should MVPs be organized, for example, around specialties and areas of practice? Alternatively, should MVPs be organized to address a small number of public health priorities, for example, HIV care or healthcare-associated infections? Please refer to Table 34 for examples of specialty MVPs.
- How can we ensure the right number of MVPs that result in comparable and comprehensive information that is meaningful for the clinicians, patients, and the Medicare program? How should we limit the number of MVPs? Should each specialty have a single MVP?
- How should we build on Promoting Interoperability, a foundational component of MVPs, as we link the 4 categories within MVPs? How could we best promote the use of health information technology and interoperability in practices not yet using electronic health records?
- How can MVPs effectively reduce barriers to clinician movement into APMs, such as practice inexperience with cost measurement and lack of readiness to take on financial risk?

(ii) Request for Feedback on Selection of Measures and Activities for MVPs

We are requesting public comments on the selection of measures and activities in MVPs.

- Please provide feedback on the Example MVPs in Table 34 that might help us in our development of additional MVPs. In the example, there is a list of required quality measures and improvement activities. Should MVPs include only required measures and activities, or a small list of quality measures and activities from which clinicians could choose what to report?
- What criteria should be used for determining which measures and activities should be included in an MVP, such as prioritizing outcome, high priority and patient-reported measures; limiting the number of quality measures to 4, including only cost measures that align with quality measures, etc.? How should performance categories and associated measures and activities be linked (*e.g.,* quality measures aligned with cost measures)?
- For the quality measures, should clinicians and groups be required to use a certain collection type (eCQMs, MIPS Clinical Quality Measures [MIPS CQMs], CMS Web Interface, or QCDR measures) in order to have a comparable data set in the MVPs? What will clinicians' administrative burden be for changing to a new, specific collection type for a measure, for example, changing from MIPS CQM to an eCQM?
- Currently we have similar measures addressing the same clinical topic, with different collection types (for example, eCQMs, MIPS CQMs, QCDR measures, etc.) that have different specifications and separate benchmarks. What methodology could be used to develop a single benchmark when multiple collection types are used? Another solution we may consider to ensure comparable measure data and request feedback on is to require a single collection type. Please also refer to section III.K.3.a.(3)(c) of this proposed rule for more about QCDR measures in MVP.
- Should improvement activities in MVPs be restricted to activities directly related to the clinical outcomes of the quality and cost measures in the MVP, for example, IA_PM_4 ''Glycemic Management Services'' for a Diabetes MVP, or should the selection of improvement activities include cross-cutting activities, for example, IA_EPA_1 Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record? Should attestation to participation in a specialty accreditation program satisfy the improvement activities performance category requirements for an MVP? Should this option be available for all MVPs or limited to specific MVPs, such as particular specialties for which accreditation programs are available? What criteria should we use to identify such programs?

(iii) Request for Feedback on MVP Assignment

We are requesting public comments on how we determine the most relevant MVP for clinicians and groups.

• How should we identify which MVP(s) are most appropriate for a clinician? Would it be based on the clinician specialty as identified in PECOS or the specialty reported on claims? If we assign an MVP, how would we be able to verify the applicability of the assigned MVP?

• Should we provide clinicians and groups more than one applicable MVP and allow clinicians to select their MVP(s) from those identified? What tools would be helpful for clinicians to understand what MVP(s) might be applicable, for example NPI lookup, measure shopping cart, etc.?

(iv) Request for Feedback on Transition to MVPs

We are requesting public comments on how we transition to MVPs beginning with the 2021 MIPS performance period/2023 MIPS payment year.

• What practice level operational considerations do we need to account for in the timeline for implementing MVPs?

(b) Adjusting MVPs for Different Practice Characteristics

(i) Small and Rural Practices Participation in MVPs

We realize that reporting burden associated with MIPS can vary by the size of the practice. Under current quality performance category submission requirements, the same number of measures and activities are reported regardless of group size, which may impose a high burden on small practices, given their very limited resources to address program requirements. Another challenge for small and rural group practices is the lack of a sufficient case mix to report measures that can be reliably scored, which makes the use of a set of administrative claims-based quality and cost measures especially challenging. Policies for submission of measures and scoring for MVPs may need to account for these challenges. As we move towards MVPs, we will be evaluating other policies (such as eligibility requirements, including the low-volume threshold (§ 414.1305), submission requirements (§ 414.1325), scoring (§ 414.1380), etc.) for further modification.

We also want to adopt policies that reduce barriers for small practices transitioning into APMs where available. We have seen that there are innovative small groups including over 83,000 clinicians (in small practices with less than 4 clinicians) that joined the Transforming Clinical Practice Initiative (TCPI) Practice Transformation Networks (PTNs), who followed tailored, targeted and disciplined practices, and transitioned into advanced practices, for example, practices that met APM readiness milestones in their practice assessments and considers itself ready for migrating into an alternative based payment arrangement. Presently, there are a total of 60,311 clinicians that have transitioned to APMs. Within TCPI, these APMs, in alignment with the CMS Healthcare Payment Learning and Action Network APM Framework, are Category 3 (APMs Built on Fee For-Service Architecture) and Category 4 (Population-Based Payment) payment arrangements.[110] We understand that there are certain factors that enable clinicians to make the transition into APMs, including the readiness to take on additional risk, the ability to use timely feedback to make practice changes, willingness to engage in peer-to-peer learning and community of practices, accessing technical assistance, and an ability to invest in infrastructure to enable care improvement and efficiencies. Developing MVPs in alignment with APM measures may assist small practices by providing experience with some APM requirements, and enhanced CMS feedback data on quality and cost performance can help clinicians make practice improvements and increase readiness to participate in Advanced APMs.

(A) Request for Feedback on Small and Rural Practices Participation in MVPs

We are requesting public comments on policies to support small practices.

• How should we structure the MVPs to provide flexibility for small and rural practices and reduce participation burden? What MVP related policies could best assist small and/or rural groups when submitting measures and activities? Should we have alternate measures and activities submission requirements for small and/or rural practices? For example, should small and/or rural practices be allowed to report fewer measures and activities within an MVP?

• How can we mitigate challenges small and/or rural practices have in reporting? What types of technical assistance would be most helpful to help small and/or rural practices to have successful participation in MVPs?

• How can we reduce barriers to small and/or rural groups to transitioning into APMs, such as lack of information on performance on quality and cost measures and limited resources? What approaches could help small practices transition to MVPs?

(ii) Multispecialty Practices Participation in MVPs

At § 414.1305, a group is defined as a single TIN with two or more eligible clinicians (including at least one MIPS eligible clinician), as identified by their individual NPI, who have reassigned their billing rights to the TIN. Section 1848(q)(1)(D)(ii) of the Act requires that the MIPS process, for assessing group practices, must to the extent practicable reflect the range of items and services furnished by the MIPS eligible clinicians in the group practice involved. Multispecialty groups, especially those groups with a large number of clinicians, often provide an array of services that may not be captured in a single set of measures or in a single MVP. We have also heard similar concerns from stakeholders. In the CY 2019 PFS proposed rule (83 FR 35891), we acknowledged one of the overarching themes we have heard from stakeholders is that we make an option available to groups that would allow a portion of a group to report as a separate sub-group on measures and activities that are more applicable to the sub-group and be assessed and scored accordingly based on the performance of the sub-group. We solicited comment on specific options and questions for implementation of sub-group level reporting in future years in response to some stakeholders who requested the ability to report quality data for a portion of a TIN so that they can report measures and activities more relevant to their practice. However, as we noted in the CY 2019 PFS final rule (83 FR 59742), because there are numerous operational challenges with implementing such a sub-group option, we did not propose any such changes to our established reporting policies regarding the use of a sub-group identifier. In the CY 2018 Quality Payment Program final rule (82 FR 53593), we stated that in future rulemaking we intend to explore the feasibility of establishing group-related policies that would permit participation in MIPS at a sub-group level and create such functionality through a new identifier.

As we consider this transition to MVPs, we are seeking public comment on whether we can use the MVP approach as an alternative to sub-group reporting to more comprehensively capture the range of the items and services furnished by the group practice. This approach could address

[110] *http://hcp-lan.org/workproducts/apm-framework-onepager.pdf.*

stakeholder concerns about reporting on meaningful measures which are related to their practice without adding undue operational and data collection burden associated with creating and maintaining identifiers for sub-groups. Under this approach, multispecialty groups would report on multiple assigned or selected MVPs, where assignment or selection of MVPs would be proposed in future rulemaking, at the group level. Depending on how the MVPs are then combined and scored at the group level, this may eliminate the need for groups to create sub-TIN identifiers and apply eligibility criteria at the sub-TIN level.

We are interested in developing criteria to identify which MVPs are applicable to multispecialty groups and whether or not we should require the reporting of multiple MVPs. Such an approach would provide patients with better information about care and services provided by multispecialty groups. If we require reporting on more than one MVP, we may consider putting a cap on the number of MVPs, measures, and activities to ensure there is no undue burden for multispecialty practices. We are interested in how to improve both large and small multispecialty group reporting of MIPS performance measures and activities.

(A) Request for Feedback on Multispecialty Practices Participation in MVPs

We are requesting public comments on MVP policies for multispecialty practices.

- We are considering a requirement in future years that multiple specialty types within a group report relevant MVPs to provide more comprehensive information for patients. We are seeking comment on whether we can use the MVP approach as an alternative to sub-group reporting to more comprehensively capture the range of the items and services furnished by the group practice. For example, would it better for multispecialty groups to report and be scored on multiple MVPs to offer patients a more comprehensive picture of group practice performance or for multispecialty groups to create sub-groups which would break the overall group into smaller units which would independently report MVPs? How should we balance the need for information for patients on clinicians within the multispecialty practice with the clinician burden of reporting?
- What criteria should be used to identify which MVPs are applicable to multispecialty groups? For example, should it be based on the number or percentage of clinicians from the same specialty in the group? Should a group be able to identify which clinicians will report which MVP?
- Should there be a limit on the number of MVPs that could be reported by a multispecialty group?
- What mechanisms should be used to assess a group's specialty composition to determine which MVPs are applicable? For example, would groups need to submit identifying information to assure that measure MVPs aligned with the number or percent of clinicians of different specialties within a group? Is there information (such as specialty as identified in PECOS or the specialty reported on claims) we could leverage to ensure the appropriateness of MVPs for groups?
- In section III.E.1.c. of this proposed rule, we seek public comment on whether to align Shared Savings Program quality reporting requirements and quality scoring methodology with MIPS. As MIPS transitions to MVPs and addresses multispecialty practices, What MVP policies should be applied to MIPS APM participants?

(c) Incorporating QCDR Measures Into MVPs

As part of our path to value focus, we want participation in MIPS to become more meaningful to patients and clinicians. QCDR measures are not included in our proposals for annual rulemaking and are separate from MIPS measures, which are finalized through the rulemaking process. We refer readers to section III.K.3.g.(2)(c) of this rule for discussion of proposals to strengthen QCDR measures.

Both QCDR and MIPS measures are currently available for clinicians to choose from to fulfill the requirements under the quality performance category. We have been encouraged by clinician adoption of QCDRs and their measures in the time since the Quality Payment Program became operational. Clinicians are interested and dedicated to quality improvement and have worked with QCDRs to foster an innovative and flexible approach to quality measurement and improvement. We continue to believe that participation in these QCDR quality improvement programs is a strong sign of a commitment to quality and improvement.

While this environment has encouraged a flexible approach to quality improvement, we believe it has also contributed to confusion and lack of consistency in measurement as our list of MIPS measures is greatly outpaced by the number of QCDR measures.

As noted in section III.K.3.a.(3)(a) of this rule, we are considering a major change in the submission requirements for MIPS eligible clinicians beginning with the 2021 MIPS performance period. We believe that a smaller and more focused set of quality measures assembled into an MVP, integrated with cost measures and improvement activities, will better serve the program by reducing the complexity of identifying how to participate in the program for clinicians, improving our ability to compare clinicians, and improving beneficiaries' ability to identify high quality practices. A proliferation of measures that are different for every modest variation in practice is contrary to such a goal. Therefore, we need to consider the role of QCDR measures in such an environment.

(i) Request for Feedback on Incorporating QCDR Measures Into MVPs

We are requesting public comments on policies for how QCDR measures would be used in MVPs:

- Should QCDR measures be integrated into MVPs along with MIPS measures, or should they be limited to specific MVPs consisting of only QCDR measures? How do we continue to encourage clinicians to use QCDRs under MVPs?

(d) Scoring MVP Performance

As we are proposing to apply the MVP framework to future proposals beginning with the 2021 MIPS performance period/2023 MIPS payment year, we may propose scoring changes in future rulemaking. We anticipate that our basic approach to scoring measures and activities would remain stable with MVPs. In particular, we believe that both quality and cost performance category measures within MVPs would be scored using a scale of 0 to 10 and performance assessed by comparing to a benchmark, using the current approach to calculate benchmarks. We refer readers to sections III.K.3.c.(1)(b) and III.K.3.c.(2)(a) of this proposed rule for further discussion on how the quality and cost performance categories respectively contribute to the final score. For quality measures, we anticipate, when possible, that MVPs would use a single benchmark for each measure and that all clinicians and groups in the MVP would be compared against the same standard. In addition, we would no longer need special scoring policies and bonuses to incent selection of certain measures because clinicians would be required to report

all measures and activities in the MVP. Finally, we could align improvement scoring for quality and cost performance measures, because clinicians would use a stable set of measures, allowing for comparison year-to-year at the measure level. We believe the standardized sets of measures in MVPs would enable us to smoothly integrate new measures and collect data to develop robust benchmarks before scoring these measures on performance. We believe that scoring under the MVPs will potentially reduce barriers to clinicians' movement into APMs, which generally score their respective participants using the same quality measures and strongly align quality and cost measures.

We believe that small practices will continue to face challenges with meeting case minimums that allow reliable scoring of quality measures. Our scoring policies will need to take into account that not all measures reported by small practices can be scored based on the case mix available for reporting.

We anticipate that the underlying scoring framework for scoring improvement activities referenced in III.K.3.d.(1)(d) of this proposed rule would not change for clinicians; however, there could be the potential to better link cost and quality measures and the associated improvement activities. We do not anticipate that the underlying framework for scoring Promoting Interoperability measures referenced in III.K.3.d.(1)(e) of this proposed rule would change because of the introduction of the MVP framework. Promoting Interoperability is a foundational component of MVPs. Scoring policies may be developed as more details of the implementation of MVPs are developed.

We would also consider proposing scoring policies to evaluate MVPs holistically, making sure that scoring across MVPs is equitable and that clinicians are not unfairly advantaged by reporting a specific MVP. We seek feedback on scoring policies that will help us create level comparability across MVPs.

Additionally, if we propose in the future to allow or require multispecialty groups to submit more than a single MVP of measures and activities, we would need to develop scoring policies to fairly score such groups.

(i) Request for Feedback on Scoring MVP Performance

We are requesting comments on the following:

- What scoring policies can be simplified or eliminated with the introduction of MVPs? For example, we may consider eliminating scoring available for 2021 MIPS performance period providing a 3-point floor for each submitted measure that can be reliably scored (83 FR 59842). Additionally, we may consider eliminating the scoring bonuses available for the 2021 MIPS performance period for submitting high-priority measures and use of CEHRT to support quality performance category submissions (83 FR 59850 to 59852). Are there other scoring policies that could be simplified or eliminated?
- We seek feedback on scoring policies that will help us create level comparability across MVPs. Are there approaches we should take to create equity across MVPs and across clinician types, for example, that regardless of the number of measures and activity, no single MVP would ''outperform'' others? For example, should there be an MVP adjustment added to the performance category scores?
- How should we score multispecialty groups reporting multiple MVPs? Should scores be consolidated for a single group score or scored separately (and with separate MIPS payment adjustments) for specialists within the group? Alternatively, should we have an aggregate score for the multispecialty group?

(4) MVP Population Health Quality Measure Set

Section 1848(q)(2)(C)(iii) of the Act provides that the Secretary may use global measures, such as global outcome measures, and population-based measures, for purposes of the MIPS quality performance category. Currently, the MIPS program has one administrative claims-based quality measure, the all-cause readmission measure, which is calculated and scored for groups with 16 or more clinicians that meet a 200-patient case minimum (81 FR 77300). In the CY 2019 PFS proposed rule (83 FR 59719), we discussed our intent to use the Meaningful Measures Initiative within the Quality Payment Program to help address clinician reporting burden and improve patient outcomes through MIPS performance measurement. The Meaningful Measures Initiative represents an approach to quality measures that fosters operational efficiencies, reduces costs associated with collection and reporting burden, and produces quality measurement focused on meaningful outcomes. As we apply the Meaningful Measures framework within MIPS to reduce reporting burden and strengthen the use of measures that matter to patients and clinicians, we are considering how to implement a population health administrative claims-based quality measure set.

Global or population quality measures calculated from administrative claims-based quality data can be used as a foundational measure set to help improve patient outcomes, reduce data reporting burden and costs, better align clinician quality improvement efforts, and increase alignment with APMs and other payer performance measurement. The April 2019 Health Care Payment Learning & Action Network's *Roadmap for Driving High Performance in Alternative Payment Models* (*https://hcp-lan.org/workproducts/roadmap-final.pdf*), intended as a tool to begin identifying promising practices for implementing successful APMs, points out that:

- Payers use HEDIS® quality measures along with administrative claims-based quality measures, such as preventable admissions and readmissions, in designing ACOs and primary care model APMs
- Providers are more likely to participate in APMs if the required measures align with measures they already track (*see* Roadmap page 19), and
- There is room for improvement in the area of quality measurement to meaningfully assess health and quality-of-life outcomes (*see* Roadmap page 60).

We believe an administrative claims-based quality measure set consisting of a small number of quality measures focused on outcomes and intermediate outcomes can move MIPS towards population health measurement.

We have heard from some stakeholders that we should drive quality measurement towards a set of population-based outcome measures. We believe increasing the number of population health measures that utilize administrative claims data in the MIPS program while reducing the number of required condition and specialty specific measures would reduce the burden associated with quality reporting. However, we recognize that the use of an administrative claims-based quality measure set would entail certain tradeoffs. These measures historically have been applicable to primary care clinicians, with less relevance for some specialists. They have also been limited to Medicare fee for service patients, excluding other payer patients, and therefore, have not provided a picture of a clinician's entire practice and patient base. In addition, administrative claims-based quality measures require a large sample to produce reliable results, which presents challenges in a clinician program that allows for participation by individuals

and groups with relatively few patients in a specific measure denominator. However, given the opportunity to reduce burden (because clinicians do not need to report the administrative claims-based quality measures themselves), apply measures across different clinician types, focus on important public health priorities, and reduce barriers to APM participation, we want to find ways to effectively use administrative claims-based population health quality measures in MIPS.

We are working on multiple fronts to find the best and most appropriate measures for the MIPS program. For example, we are working with measure stewards on technical specifications to ensure the measures are reliable and broadly applicable to MIPS eligible clinicians. We intend to have the measures reviewed by a consensus-based entity, for example, the National Quality Forum (NQF) Measure Applications Partnership (MAP). We have looked at the use of administrative claims-based quality measures in the Shared Savings Program and the Comprehensive Primary Care Plus (CPC+) model to identify examples of measures that could be included as MIPS measures. As one example, in addition to an all-cause readmission measure (similar to the one currently used in MIPS), the Shared Savings Program has a measure (ACO—38), the All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions, that we are in the process of adapting and testing for the MIPS program. In section III.K.3.c.(1)(d)(ii) of this proposed rule, we are proposing to add All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions measure to MIPS for the 2021 MIPS performance period. The Shared Savings Program also has a risk adjusted measure, (ACO—43), the Ambulatory Sensitive Condition Acute Composite (AHRQ Prevention Quality Indicator (PQI) #91), which assesses the risk adjusted rate of hospital discharges for acute PQI conditions with a principal diagnosis of dehydration, bacterial pneumonia, or urinary tract infection among ACO assigned Medicare fee-for-service (FFS) beneficiaries 18 years and older. In section III.E.1.b., we recognize that the measure steward, AHRQ, has made ''substantive'' change to the measure and propose to redesignate ACO—43 to a pay-for-reporting measure for the 2020 and 2021 performance years, while seeking comment on other approaches including developing historic benchmarks.

As we work to improve and develop a foundational population health quality measure set, we are reviewing measures that we could propose in future rulemaking. We are reviewing whether it would be appropriate to add a measure similar to the ACO—43 Ambulatory Sensitive Condition Acute Composite (AHRQ Prevention Quality Indicator (PQI) #91) to MIPS. We are also reviewing two risk adjusted utilization measures that are included in the CPC+ Model Quality and Utilization Measure Set for the 2019 Performance Period for potential inclusion in the MIPS program: The HEDIS® Acute Hospital Utilization (AHU) (this is the inpatient hospital utilization measure in CPC+ Model that was updated by NCQA in 2018); and the HEDIS® Emergency Department Utilization (EDU).[111] These measures assess the risk-adjusted ratio of observed-to-expected acute inpatient and observation stay discharges during the measurement year reported by surgery, medicine and total among members 18 years of age and older. These measures are currently specified for health plans, but we intend to work with the measure steward, NCQA, for appropriateness for the MIPS program.

Clinicians raised concerns in response to previously proposed administrative claims-based quality measures. These concerns included measure reliability and applicability case size, attribution, risk adjustment, application at the clinician or group level, and degree of actionable feedback for improvements (81 FR 77130 through 77136). We finalized use of the all-cause readmission measure but limited its applicability to groups of 16 or more clinicians with a minimum of 200 cases to mitigate some of the concerns. We did not finalize the proposed AHRQ Acute Conditions Composite and Chronic Conditions Composite measures (81 FR 28192 and 28447). Our intention is to address the technical challenges as we test the Ambulatory Sensitive Condition Acute Composite measure and present to a consensus-based entity (for example NQF) to ensure the measure is reliable. We seek feedback on additional steps to ensure the measure addresses the concerns noted above.

Clinician feedback also called for the examination of potential sociodemographic status risk adjustment for administrative claims-based quality measures. Please refer to section III.K.3.d.(2)(a) of this proposed rule for information on our approach to accounting for risk factors in MIPS, including the complex patient bonus which was finalized for the 2020 MIPS payment year (82 FR 53771 through 53776), as well as plans to take into consideration a second report by ASPE expected in October 2019 on accounting for risk factors in quality, resource use and other measures in Medicare. We are proposing to continue the complex patient bonus in MIPS and would continue to assess the need for and effectiveness of such a scoring adjustment to ensure fair performance comparisons between clinicians.

In summary, we plan to increase the use of global and population based administrative claims-based quality measures as we develop a population health quality measure set and are outlining our proposal to add at least one additional administrative claims-based quality measure starting in the 2021 MIPS performance period in section III.K.3.c.(1)(d)(ii) of this proposed rule.

(a) Request for Feedback on Population Health Quality Measure Set

We are requesting public comments on the use of a population health quality measure set.

- In addition to the quality measures described above, are there specific administrative claims-based quality measures we should consider, including, but not limited to, any that assess specialty care that are specified and/or tested at the clinician/group practice level?
- We would like to balance the desire for quality measures specific to a clinical practice with a reduction in administrative burden for submission. Should administrative claims-based quality measures be used to replace some of the reporting requirements in the quality performance category? For example, if two additional administrative claims-based quality measures were added to MVPs should we reduce the required quality measures by 1 measure for each of the MVPs?
- In addition to testing, what other information or methods should be used to mitigate concerns about administrative claims-based quality measure reliability, applicability, and degree of actionable feedback for clinician performance improvement? What concerns should be prioritized?

(5) Clinician Data Feedback

Clinicians have expressed an interest in leveraging data to track performance and inform care improvements. We see the critical need for data feedback and

[111] The Acute Hospital Utilization and Emergency Department Utilization measures and specifications were developed by the National Committee for Quality Assurance (''NCQA'') under the Performance Measurements contract (HHSM–500–2006–00060C) with CMS and are included in HEDIS® with permission of CMS. HEDIS is a registered trademark of NCQA.

intend to provide enhanced clinician driven data feedback and analysis information under the future MVP approach. We understand that performance data feedback on administrative claims-based quality and cost measures would potentially assist clinicians in understanding their performance and preparing to take on risk as required in Advanced APMs. We are interested in whether clinicians would benefit from receiving feedback on administrative data that is available to us, such as information on the services that their patients receive or information on the clinician's volume of services in comparison to their peers to determine if the clinician is an outlier. Clinicians may also benefit from timely actionable clinical data feedback from registries, and we have proposed to enhance data feedback requirements for QCDRs and registries in sections III.K.3.g.(2)(a)(iii) and III.K.3.g.(3)(a)(ii) respectively of this proposed rule. We also understand the need for timely data feedback and are seeking comments on clinician data feedback content and timing needs.

(a) Request for Feedback on Clinician Data Feedback

We are requesting public comments on the Clinician Feedback.

- We would like to provide meaningful clinician feedback on administrative claims-based quality and cost measures. As clinicians and groups move towards joining APMs, is there particular data from quality and cost measures that would be helpful?
- Would it be useful to clinicians to have feedback based on an analysis of administrative claims data that includes outlier analysis or other types of actionable data feedback? What type of information about practice variation, such as the number of procedures performed compared to other clinicians within the same specialty or clinicians treating the same type of patients, would be most useful? What level of granularity (for example, individual clinician or group performance) would be appropriate?

(6) Enhanced Information for Patients

(a) Patient Reported Measures

We intend to incorporate more patient reported outcomes and care experience measures into MVPs. We want to learn how patient reported information is being effectively used in the field to improve care to assist patients with clinician selection and to incentivize high value care. We believe that feedback from the patient perspective can inform care improvement efforts as clinicians assess patient reported feedback to identify ways to elevate quality of care.

MIPS currently includes patient reported measures, including optimal asthma control and measures for functional status assessment following hip and knee replacements, and other patient reported measures are being added. We recognize current limitations with the availability of patient reported measures. Patient reported measures are often specific to a clinical condition or procedure, and we do not have measures that are available or applicable to the majority of clinicians in the MIPS program. The Consumer Assessments of Healthcare Providers and Systems (CAHPS) for MIPS survey, a patient experience survey, is offered to group practices as an optional quality measure and is a high-weighted improvement activity. Section III.K.3.c.(1)(c)(i) of this proposed rule discusses initiatives to expand the information collected in the CAHPS for MIPS survey.

We have assessed additional approaches to gathering information on experience and satisfaction from work both within and outside of the health care environment. The Robert Wood Johnson Foundation working with Patients Like Me, a health information sharing website for patients, has provided guidance on what should be measured through a publication entitled ''Development of a Conceptual Framework of ''Good Healthcare'' from The Patient's Perspective'' [112] We understand that some organizations such as Patients Like Me are working with patients throughout the measure development process to enhance their ability to capture information that is useful to patients. Outside of healthcare, many industries are approaching the measurement of satisfaction as a business priority. Service industries have pioneered single question ''surveys'' asked at each encounter to learn if they are meeting customer expectations and satisfying their customers, that could include a question about the service provided or whether the assistance provided addressed their problems. We are interested in how information from single question or brief surveys to measure the quality of patient experience and satisfaction with health care delivery could be better incorporated into MVPs.

[112] *https://patientslikeme_posters.s3.amazonaws.com/2017_Development%20of%20a%20Conceptual%20Framework%20of%20%E2%80%9CGood%20Healthcare%E2%80%9D%20from%20The%20Patient%E2%80%99s%20Perspective.pdf.*

(i) Request for Feedback on Patient Reported Measures

We are requesting public comments on enhancing the patient voice in MVPs. Specifically, we seek comment on:

- What patient experience/satisfaction measurement tools or approaches to capturing information would be appropriate for inclusion in MVPs? How could current commercial approaches for measuring the customer experience outside of the health care sector (for example, single measures of satisfaction or experience) be developed and incorporated into MVPs to capture patient experience and satisfaction information?
- What approaches should we take to get reliable performance information for patients using patient reported data, in particular at the individual clinician level? Given the current TIN reporting structure, are there recommendations for ensuring clinician level specific information in MVPs? Should clinicians be incentivized to report patient experience measures at the individual clinician level to facilitate patients making informed decisions when selecting a clinician, and, if so, how?
- How should patient-reported measures be included in MVPs? How can the patient voice be better incorporated into public reporting under the MVP framework, in particular at the individual clinician level?

(b) Publicly Reporting MVP Performance Information

We believe implementing a path to value will transform our healthcare system by empowering well-informed patients to make decisions about their healthcare and helping clinicians achieve better outcomes. As we consider publicly reporting MVP performance information, we want to ensure that patients have information that is important and useful, which we believe includes information on clinician performance on cost, quality, patient experience, and satisfaction with care.

Currently, all MIPS quality measure information is displayed on Physician Compare clinician and group profile pages at the individual quality measure level. User testing with patients and caregivers has shown that performance on certain individual quality measures is particularly useful for selecting clinicians for their healthcare needs. However, testing has also shown that patients and caregivers are interested in a single overall rating called a ''value indicator'' for a clinician or group when making comparisons across groups or clinicians. To date, a ''value indicator'' to compare the performance of a

clinician or group has not been possible due to the current approach in which clinicians can select from an inventory of measures across a variety of collection types and activities. Since clinicians are not all reporting on the same quality measures, we have been unable to develop direct overall comparisons under our public reporting standards. However, we believe that MVPs, in which clinicians of a particular specialty are held accountable for a uniform set of quality and cost measures, would better allow for such comparisons.

Related to the MVP approach, we seek comment on the types of clinician performance information we should include in the display for a single ''value indicator''. As we think about value and information that is important to patients, we want to incorporate measurement of cost, quality, and patient experience and satisfaction in a way that is meaningful to patients. We have heard that Medicare patients and caregivers greatly desire information such as a value indicator, to help make decisions about their healthcare. We seek comment on whether displaying an overall indicator for the MVP for a clinician or group would be useful for patients' making healthcare decisions. We refer readers to the Public Reporting on Physician Compare at section III.K.3.h.(4) of this proposed rule for additional considerations for publicly reporting these types of information such as a value indicator, patient narratives, and patient reported outcome measures.

(i) Request for Feedback on Publicly Reporting MVP Performance Information

We seek feedback on approaches to publicly reporting MVP performance information:

- What considerations should be taken into account if we publicly report a value indicator, as well as corresponding measures and activities included in the MVPs?
- If we develop a value indicator, what data elements should be included? For example, should all reported measures and activities be aggregated into the value indicator?
- How would a value indicator, based on information from MVPs, be useful for patients making health care decisions?
- What methods of displaying MVP performance information should we consider other than our current approach to using star ratings for quality measure information on clinician profile pages?
- What factors should be considered to ensure publicly reported MVP information is comparable across relevant clinicians and groups?

b. Group Reporting

For previous discussions of the policies for group reporting, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77070 through 77073) and the CY 2018 Quality Payment Program final rule (82 FR 53592 through 53593). In addition, for previous discussions of the policies for group reporting related to the Promoting Interoperability performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77214 through 77216) and the CY 2018 Quality Payment Program final rule (82 FR 53687).

It has come to our attention that the regulation text regarding group reporting at § 414.1310(e)(3) through (5) contains duplicative language. Specifically, it is duplicative of the regulation text at § 414.1310(e)(2)(ii) through (iv). To avoid redundancy and potential confusion, we are proposing to remove § 414.1310(e)(3) through (5). In addition, we have noticed that previously established policies for group reporting with regard to the Promoting Interoperability performance category (81 FR 77214 through 77216, 82 FR 53687) are not reflected in the regulation text for group reporting at §§ 414.1310(e)(2)(ii) and for virtual groups at § 414.1315(d)(2). In the CY 2017 Quality Payment Program final rule (81 FR 77215), we stated that to report as a group for the Promoting Interoperability performance category, the group will need to aggregate data for all of the individual MIPS eligible clinicians within the group for whom they have data in CEHRT. In an effort to more clearly and concisely capture our existing policy for the Promoting Interoperability performance category, we are proposing to revise §§ 414.1310(e)(2)(ii) and 414.1315(d)(2. Specifically, we are proposing to revise § 414.1310(e)(2)(ii) to state that individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data across the group's TIN, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the group's TIN for whom the group has data in CEHRT.

Similarly, we are proposing to revise § 414.1315(d)(2) to state that solo practitioners and groups of 10 or fewer eligible clinicians that elect to participate in MIPS as a virtual group must aggregate their performance data across the virtual group's TINs, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the virtual group's TINs for whom the virtual group has data in CEHRT.

We request comments on these proposals.

c. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

We refer readers to § 414.1330 through § 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies regarding the quality performance category.

In the CY 2020 PFS proposed rule, we seek to:

- Propose to weigh the quality performance category at 40 percent for the 2022 MIPS payment year, 35 percent for the 2023 MIPS payment year, 30 percent for the 2024 MIPS payment year as described in § 414.1330(b)(4), (5), and (6); The associated increases to the weight of the cost performance category are discussed in section III.K.3.c.(2) of this proposed rule;
- Seek comment on adding narratives to the CAHPS for MIPS survey and on whether the survey should collect data at the individual eligible clinician level;
- Propose to increase the data completeness criteria to 70 percent for the 2022 MIPS payment year as described in § 414.1340(b)(3);
- Propose to require MIPS quality measure stewards to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible;
- Seek comment as to whether we should consider realigning the MIPS quality measure update cycle with that of the eCQM annual update process;
- Propose changes to the MIPS quality measure set as described in Appendix 1 of this proposed rule, including: Substantive changes to existing measures, addition of new measures, removal of existing measures, and updates to specialty sets.
- Seek comment on whether we should increase the data completeness threshold for extremely topped out quality measures that are retained in the program due to limited availability of measures for a specific specialty and potential alternative solutions in addressing extremely topped out measures;
- Propose to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in

the program for 2 consecutive CY performance periods;

- Propose to remove quality measures from the program in instances where the measure steward or owner refuses to enter into a user agreement with CMS; and
- Request information on a Potential Opioid Overuse Measure.

(b) Contribution to Final Score

Under § 414.1330(b)(2), we state that performance in the quality performance category will comprise 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year, and under § 414.1330(b)(3), we state that performance in the quality performance category will comprise 45 percent of a MIPS eligible clinician's final score for MIPS payment year 2021. Section 1848(q)(5)(E)(i)(I) of the Act, as amended by section 51003(a)(1)(C)(i) of the Bipartisan Budget Act of 2018, provides that 30 percent of the final score shall be based on performance for the quality performance category, but that for each of the 1st through 5th years for which MIPS applies to payments, the quality performance category performance percentage shall be increased so that the total percentage points of the increase equals the total number of percentage points that is based on the cost performance category performance is less than 30 percent for the respective year. As discussed in section III.K.3.c.(2) of this proposed rule, we propose to weight the cost performance category at 20 percent for the 2022 MIPS payment year, 25 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. Accordingly, we are proposing to add § 414.1330(b)(4) to provide that performance in the quality performance category will comprise 40 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year. In addition, we are proposing at § 414.1330(b)(5) to state that the quality performance category comprises 35 percent of a MIPS eligible clinician's final score for the 2023 MIPS payment year. Lastly, we are proposing to add § 414.1330(b)(6) to state that the quality performance category comprises 30 percent of a MIPS eligible clinician's final score for the 2024 MIPS payment year and future years. We believe that being transparent in how both the quality and cost performance category weights will be modified over the next few years of the program will allow stakeholders to better plan and anticipate how eligible clinicians and group scores will be calculated in future years as we incrementally make changes to the final score weights. We seek comment on our proposals to incrementally reduce the weight of the quality performance category as we gradually increase the weight of the cost performance category. Specifically, the quality performance category will comprise 40 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year, 35 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year and future years.

(c) Quality Data Submission Criteria

(i) Submission Criteria for Groups Electing To Report the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey

We are not proposing any changes to the established submission criteria for the CAHPS for MIPS Survey. We refer readers to the CY 2019 PFS final rule (83 FR 59756) for previously finalized policies regarding the CAHPS for MIPS survey.

Although we are not making any proposals in regard to the CAHPS for MIPS survey this year, we are interested in feedback to add to the survey, in future years, specific to a solicitation of comments we previously requested to expand the survey to add narratives in the CY 2018 Quality Payment Program final rule (82 FR 53630). Currently, the CAHPS for MIPS survey is available for only groups to report under the MIPS. The patient experience survey data that is available on Physician Compare is highly valued by patients and their caregivers as they evaluate their health care options. However, in user testing with patients and caregivers over the last several years, the users regularly request more information from patients like them in their own words, and to publicly report narrative reviews of individual clinicians and groups. User testing further indicates that patients want patient-generated information when selecting a clinician. Since the CAHPS for MIPS survey is only at the group level, we are also interested in feedback related to collection of data on patient experiences from individual clinicians, which would be new data for CMS and consequently new data to publicly report to patients and caregivers. Including data at the individual level is of interest to CMS as we have heard this is valuable to patients and caregivers in making decisions related to their health care. See section III.K.3.h. of this proposed rule where we are seeking comment on public reporting considerations on the Physician Compare website for adding patient narratives in future rulemaking.

Through efforts such as the Patients Over Paperwork initiative and MyHealthEData initiative (*https://www.cms.gov/newsroom/press-releases/trump-administration-announces-myhealthedata-initiative-put-patients-center-us-healthcare-system*), we are dedicated to putting patients first and empowering patients to have the information they need to be engaged and active decision-makers in their care. We are also mindful that a patient is a health care consumer for whom aspects of the health care delivery experience, such as wait times or how a clinician interacts with patients, may factor into a patient's decision to select a clinician. We believe that measuring patient experience can help inform patient decision-making and considered previous government efforts to measure experience, such as the President's Management Agenda—OMB Circular No. A–11 section 280—Managing Customer Experience and Improving Service Delivery (*https://www.whitehouse.gov/wp-content/uploads/2018/06/s280.pdf*). Specifically, the OMB Circular No. A–11 section 280.7 references how should customer experience be measured in the federal government. At a minimum, the federal government customer experience should be measured in seven domains: [113]

- *Overall:* (1) Satisfaction; (2) Confidence/Trust.
- *Service:* (3) Quality.
- *Process:* (4) Ease/Simplicity; (5) Efficiency/Speed; (6) Equity/Transparency.
- *People:* (7) Employee Helpfulness.

While the CAHPS for MIPS survey is an assessment of clinicians within a group, we are looking at ways to enhance that feedback to ensure the customer (patient) experience is being measured in such a way that data from the CAHPS for MIPS survey can be used in healthcare decision making. We are seeking comments on the above referenced seven domains and if additional elements, questions, or context should be added to the current CAHPS for MIPS survey (available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/459/2019%20CAHPS%20for%20MIPS%20Survey_Sample%20Copy.pdf*), or if these domains should be used to measure individual clinicians if a new instrument was developed to gather that data and share the feedback with

[113] President's Management Agenda (2018)—OMB Circular No. A–11 section 280—Managing Customer Experience and Improving Service Delivery (*https://www.whitehouse.gov/wp-content/uploads/2018/06/s280.pdf*).

patients to make decisions about their healthcare.

For considerations as we prepare for future policies and rulemaking, we are also seeking comment on:

• Measures that would expand the information collected in the CAHPS for MIPS survey, including a question regarding the patients' overall experience and satisfaction rating with a recent health care encounter. Patients value the ''voice'' of other patients and want information that helps to choose their clinicians, and whether they would recommend the clinician, group, office or facility to their family and friends, as detailed in section III.K.3.a. of this rule. Several versions of the CAHPS survey, including the CAHPS Clinician & Group Survey 3.0, do have a question regarding the patients' rating of a clinician. We refer readers to the Agency for Healthcare Research and Quality's website on CAHPS Clinician and Group Survey for additional information at *https://www.ahrq.gov/cahps/surveys-guidance/cg/index.html*. We currently do not collect and display information from a single question about the patients' satisfaction or experience. Patient experience measures provide a more objective assessment of health care quality, since satisfaction may change frequently based on subjective expectations. The CAHPS for MIPS survey has traditionally focused on measures of patient experience.

• Method for collecting this type of information from patients and caregivers and if a web, paper, phone, or email based survey would be preferred? Currently the CAHPS for MIPS survey is only administered through paper and phone based methods.

• Should a tool be developed to collect information about individual clinicians? Or should this information be kept at the group level only? Currently patient experience data is only available through the CAHPS for MIPS survey, and this survey does not collect information on individual clinicians.

• Should this data be collected at a pilot level first, provided that such an approach is consistent with our statutory authority, so that we learn from this data before fully implementing broader across the program? If so, we seek comments regarding the framework and implementation criteria of a pilot.

In addition, we are seeking comment on the value of using narrative questions, inviting patients to respond to a series of questions in free text responding to open ended questions and describing their experience with care. Patients can write a response in their own words. We would build from work done by AHRQ to develop a Narrative Elicitation Protocol (*https://www.ahrq.gov/cahps/surveys-guidance/item-sets/elicitation/index.html*), which is a set of open-ended questions that prompt patients to tell a clear and comprehensive story about their experience with a clinician. Narratives from patients about their health care experiences can provide a valuable complement to standardized survey scores, both to help clinicians understand what they can do to improve their care and to engage and inform patients about differences among clinicians. Five questions underwent initial item development for the Clinician & Group CAHPS Survey, focusing on the patient's relationship with the clinician, patient expectations, how the expectations were met, what went well, and what could have been better. We believe patients will be interested in this information to make informed decisions about their healthcare. In section III.K.3.c.(1), we seek comment on how the free text questions might be scored as part of the Quality Payment Program. We seek comment on the value of collecting and displaying information from narrative questions, and whether stakeholders have concerns with the potential burden involved with drafting narrative responses. We also are interested in understanding whether clinicians would find this information useful in improving the care they provide to beneficiaries

As we continue learning about what patient experience data and format is most usable to patients, caregivers, and clinicians we plan to conduct additional item development and testing of implementation processes at CMS. Information gathered from these activities, along with comments received from this rule will be taken into consideration as we consider future policies for future rulemaking, using a human-centered design approach where applicable.

(ii) Data Completeness Criteria

We refer readers to the CY 2019 PFS final rule (83 FR 59756 through 59758) where we discuss and codified at § 414.1340 finalized data completeness criteria.

As described in the CY 2018 Quality Payment Program final rule (82 FR 53632 through 53634), we anticipated on proposing increases to the data completeness thresholds for data submitted on quality measures (QCDR measures, MIPS CQMs, eCQMs, and Medicare Part B Claims measures) in future years of the program. For MIPS payment years 2019 and 2020, the data completeness threshold was finalized and retained at 50 percent. We provided an additional year for individual MIPS eligible clinicians and groups to gain experience with MIPS before increasing the data completeness threshold for MIPS payment year 2021, for which the data completeness threshold was finalized at 60 percent.

We continue to believe it is important to incorporate higher data completeness thresholds over time to ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures. We previously noted concerns raised about the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinicians' ability to participate and perform well under MIPS. We want to ensure that an appropriate yet achievable data completeness is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the 2017 performance period of MIPS, as described in Table 35, we believe that it is feasible for eligible clinicians and groups to achieve a higher data completeness threshold.

TABLE 35—CY 2017 DATA COMPLETENESS RATES FOR MIPS INDIVIDUAL ELIGIBLE CLINICIANS, GROUPS, AND SMALL PRACTICES

Average data completeness rate—individual eligible clinician	Average data completeness rate—groups	Average data completeness rate—small practices
76.14	85.27	74.76

With the support of the data in Table 35, we propose to amend § 414.1340 to add paragraph (a)(3) to adopt a higher data completeness threshold for the 2020 MIPS performance period, such that MIPS eligible clinicians and groups submitting quality measure data on QCDR measures, MIPS CQMs, and eCQMS must submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2020 MIPS performance period. As we observe increased use of electronic methods of reporting, such as EHRs and QCDRs, we believe it is important to continue to increase the data completeness threshold, and are interested in stakeholder feedback on an appropriate incremental approach, and on how this incremental increase should be implemented. In crafting our proposal, we also considered other thresholds, such as a higher threshold of 80 percent, but have concerns that requiring every clinician or group to adhere to an increased data completeness threshold that is increased by such a large amount may be considered burdensome to clinicians. We are requesting comments on other considerations or possible thresholds we should consider, such as whether we should increase the data completeness threshold to 80 percent to provide for more accurate assessments of quality.

We have received inquiries regarding perceived opportunities to selectively submit MIPS data that are unrepresentative of a clinician or group's performance, suggesting that certain parties may have misunderstood the intent of our incremental approach to the data completeness thresholds, and may not fully appreciate their current regulatory obligations. As stated in §§ 414.1390(b) and 414.1400(a)(5), all MIPS data submitted by or on behalf of a MIPS eligible clinician, group, or virtual group must be certified as true, accurate and complete. MIPS data that are inaccurate, incomplete, unusable, or otherwise compromised can result in improper payment. Using data selection criteria to misrepresent a clinician or group's performance for a performance period, commonly referred to as ''cherry-picking,'' results in data that are not true, accurate, or complete. Accordingly, we propose to further amend § 414.1340 to add a new subsection (d) to clarify that if quality data are submitted selectively such that the data are unrepresentative of a MIPS eligible clinician or group's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5). We believe this clarification will emphasize to all parties that the data submitted on each measure is expected to be representative of the clinician's or group's performance.

We continue to strongly urge all MIPS eligible clinicians to report on quality measures where they have performed the quality actions with respect to all applicable patients.

We would like to note that we are not proposing any changes to § 414.1340(c), which states that groups submitting quality measures data using the CMS Web Interface or a CMS-approved survey vendor to submit the CAHPS for MIPS survey must submit data on the sample of the Medicare Part B patients CMS provides, as applicable. We refer readers to the CY 2019 PFS final rule (83 FR 59756 through 59758) for additional discussion of this requirement. Table 36 describes the data completeness requirements by collection type.

TABLE 36—SUMMARY OF DATA COMPLETENESS REQUIREMENTS AND PERFORMANCE PERIOD BY COLLECTION TYPE FOR THE 2020 MIPS PERFORMANCE PERIOD

Collection type	Performance period	Data completeness
Medicare Part B claims measures	Jan 1–Dec 31	70 percent sample of individual MIPS eligible clinician's, or group's Medicare Part B patients for the performance period.
QCDR measures, MIPS CQMs, and eCQMs.	Jan 1–Dec 31	70 percent sample of individual MIPS eligible clinician's, or group's patients across all payers for the performance period.
CMS Web Interface measures	Jan 1–Dec 31	Sampling requirements for the group's Medicare Part B patients: populate data fields for the first 248 consecutively ranked and assigned Medicare beneficiaries in the order in which they appear in the group's sample for each module/measure. If the pool of eligible assigned beneficiaries is less than 248, then the group would report on 100 percent of assigned beneficiaries.
CAHPS for MIPS survey measure	Jan 1–Dec 31	Sampling requirements for the group's Medicare Part B patients.

(d) Selection of MIPS Quality Measures

(i) Call for Measures and Measure Selection Process

In the CY 2019 PFS final rule (83 FR 59758 through 59761), we discuss the importance of classifying measures by meaningful measure areas, and updates to the definition of a high priority measure. We refer readers to the CY 2019 PFS final rule for additional details.

Furthermore, in the CY 2018 Quality Payment Program final rule (82 FR 53635 through 53637), we state that quality measure submissions submitted during the timeframe provided by us through the pre-rulemaking process of each year will be considered for inclusion in the annual list of MIPS quality measures for the performance period beginning 2 years after the measure is submitted. This process is consistent with the pre-rulemaking process and the annual Call for Measures, which is further described through the CMS Pre-Rulemaking website at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking.html*. The annual Call for Measures process allows for eligible clinician organizations and other relevant stakeholder organizations to identify and submit quality measures for consideration. Presumably, stakeholders would not submit measures for consideration unless they believe the measures are applicable to clinicians and can be reliably and validly measured. Through the annual convention of the consensus-based entity, stakeholders are given the opportunity provide input on whether or not they believe measures are applicable to clinicians, feasible, scientifically acceptable, reliable, and valid at the clinician level. We intend to continue to submit future MIPS quality measures to the consensus-based entity, as appropriate, and consider the recommendations provided as part of the comprehensive assessment of each measure considered for inclusion in MIPS. In addition, we must go through notice and comment rulemaking to consider stakeholder feedback prior to

finalizing the annual list of quality measures. Furthermore, as required by statute, new measures must be submitted to an applicable specialty-appropriate, peer-reviewed journal. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53636) for additional details on the peer-reviewed journal requirement.

In the CY 2018 Quality Payment Program final rule (82 FR 53636), we requested stakeholders apply the following set of considerations when submitting quality measures for possible inclusion in MIPS:

- Measures that are not duplicative of an existing or proposed measure.
- Measures that are beyond the measure concept phase of development, with a strong preference for measures that have completed reliability, feasibility, and validity testing.
- Measures that are outcomes-based rather than process measures.
- Measures that address patient safety and adverse events.
- Measures that identify appropriate use of diagnoses and therapeutics.
- Measures that address the domain of care coordination.
- Measures that address of patient and caregiver experience.
- Measures that address efficiency, cost, and resource use.
- Measures that address significant variation in performance and are not considered topped out.
- Measures that are specified as a collection type other than Medicare Part B Claims. We strongly encourage measure stewards to keep this in mind as they develop and submit measures for consideration.

We also encourage stakeholders to consider electronically specifying their quality measures, as eCQMs, in order to encourage clinicians and groups to move towards the utilization of electronic reporting, as we believe electronic reporting will increase timeliness and efficiency of reporting by replacing manual data entry. In addition to the aforementioned considerations, when considering quality measures for possible inclusion in MIPS, we are proposing that beginning with the 2020 Call for Measures process, MIPS quality measure stewards would be required to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible. MIPS quality measure stewards will be required to provide a rationale as to how they believe their measure correlates to other performance category measures and activities as a part of the Call for Measures process. We recognize there are instances where costs measures are not available for all clinician specialties or that improvement activities may not be associated with a given quality measure. However, we believe that when possible, it is important to establish a strong linkage between quality, cost, and improvement activities. We seek comments on this proposal.

Furthermore, previously finalized MIPS quality measures can be found in the CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). The new MIPS quality measures proposed for inclusion in MIPS for the 2020 performance period and future years are found in Table Group A of Appendix 1 of this proposed rule.

In addition to the individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with choosing quality measures that are most relevant to their scope of practice. The following specialty measure sets have been excluded from this proposed rule because we did not propose any changes to these specialty measure sets: Pathology, Electro-Physiology Cardiac Specialist, and Interventional Radiology. Therefore, for the finalized Pathology specialty measure set, we refer readers to the CY 2019 PFS final rule corrections notice (84 FR 566). In addition, we refer readers to the CY 2018 Quality Payment Program final rule for the finalized Electro-Physiology Cardiac Specialist specialty measure set (82 FR 53990) and the finalized Interventional Radiology specialty measure set (82 FR 54098 through 54099). Our proposals for modifications to existing specialty sets and new specialty sets can be found in Table Group B of Appendix 1 of this proposed rule. Specialty sets may include: New measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Please note that the proposed specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 18, 2019,[114] we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for Year 4 of MIPS under the Quality Payment Program. These recommendations were based on the MIPS quality measures finalized in the CY 2019 PFS final rule, the 2019 Measures Under Consideration list, and provides recommendations to add or remove the current MIPS quality measures from existing specialty sets, or provides recommendations for the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and those recommendations that we agree with are being proposed within this proposed rule.

In addition, MIPS quality measures with proposed substantive changes can be found in Table Groups D and DD of Appendix 1 of this proposed rule. As discussed in Table DD of this proposed rule, we have determined based on extensive stakeholder feedback that the 2018 CMS Web Interface measure numerator guidance for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention measure is inconsistent with the intent of the CMS Web Interface version of this measure as modified in the CY 2018 Quality Payment Program final rule (82 FR 54164) and is unduly burdensome on clinicians. Moreover, due to the current guidance, we are unable to rely on historical data to benchmark the measure. Therefore, for the 2018 MIPS performance period and 2020 MIPS payment year, we are excluding the Web Interface version of this measure from MIPS eligible clinicians' quality scores in accordance with § 414.1380(b)(1)(i)(A)(2). Beginning with reporting for the 2019 MIPS performance period and 2021 MIPS payment adjustment, we are proposing in Table DD of this proposed rule to update the CMS Web Interface measure numerator guidance. To the extent that this proposed change constitutes a change to the MIPS scoring or payment methodology for the 2021 MIPS payment adjustment after the start of the 2019 MIPS performance period, we believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to modify the measure as proposed in Table DD of this proposed rule because the current guidance is inconsistent with the intent of the CMS Web Interface version of this measure, as modified in the CY 2018 QPP final rule, and unduly burdensome on clinicians. If this modification is finalized as proposed, we expect that we would be

[114] Listserv messaging was distributed through the Quality Payment Program listserv on January 18th, 2019, titled: ''CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets for the Quality Performance Category and/or Revisions to the Existing Specialty Measure Sets for the Quality Performance Category for the 2020 Program Year of Merit-based Incentive Payment System (MIPS).''

able to benchmark and score the CMS Web Interface version of this measure for the 2019 MIPS performance period and 2021 MIPS payment adjustment.

As discussed in section III.E.1.b of this proposed rule, changes to the CMS Web Interface measures for MIPS that are proposed and finalized through rulemaking would also be applicable to ACO quality reporting under the Medicare Shared Savings Program. As discussed in Table Group A of Appendix 1 of this proposed rule, we propose to add 1 new measure to the CMS Web Interface in MIPS. Furthermore, as discussed in Table Group C of Appendix 1 of this proposed rule, we are proposing to remove 1 measure from the CMS Web Interface in MIPS. If finalized, groups reporting CMS Web Interface measures for MIPS would be responsible for reporting the finalized measure set, inclusive of any finalized measure removals and/or additions. We refer readers to the Appendix 1 of this proposed rule for additional details on the proposals related to changes in CMS Web Interface measures.

On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive as described above. We note that the current cycle of measure updates to MIPS quality measures is separate from the eCQM annual update process. An overarching timeline of milestones related to eCQMs available at *https://ecqi.healthit.gov/ecqm-annual-timeline*. We seek stakeholder comment as to whether we should consider realigning the measure update cycle with that of the eCQM annual update process. We note if the update cycles were to align, quality measure specifications updates would be gathered earlier in the year, which may pose an issue when considerations need to be given, but not limited to: Updates to clinical guidelines and changes in NQF endorsement status.

In addition, we refer readers to the CY 2019 PFS final rule (83 FR 59759) for additional details on reporting requirements of eCQM measures. Furthermore, in section III.D. of this proposed rule, we propose to generally align the CY 2020 eCQM reporting requirements for the eligible professionals participating in the Medicaid Promoting Interoperability Program with the MIPS eCQM reporting requirements. We refer readers to section III.D. of this proposed rule for additional details and criteria on the Medicaid Promoting Interoperability Program proposals.

(ii) Global and Population-Based Measures

Section 1848(q)(2)(C)(iii) of the Act provides that the Secretary may use global measures, such as global outcome measures, and population-based measures for purposes of the quality performance category. We believe the purpose of global and population-based measures is to encourage systemic health care improvement for the populations being served by MIPS eligible clinicians. In addition, as described in the CY 2017 Quality Payment Program final rule (81 FR 77130 through 77136), we believe that all MIPS eligible clinicians, including specialists and subspecialists, have a meaningful responsibility to their communities, which is why we chose to focus on population health and prevention measures for all MIPS eligible clinicians. It is important to note that an individual's health relates directly to population and community health, which is an important consideration for quality measurement in MIPS and in general. Furthermore, we have heard from stakeholders that we should drive quality measurement towards a set of population-based outcome measures to publicly report on quality of care.

In addition, we believe including additional administrative claims based measures in the program will reduce the burden associated with quality reporting. Quality measures that are specified through the administrative claims collection type do not require separate data submission to CMS. Administrative claims measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare Part B claims. For these reasons, in Table Group AA of Appendix 1 of this proposed rule, we are proposing the inclusion of a population health based quality measure (The All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions measure) beginning with the 2021 MIPS performance period. We are proposing this measure with a delayed implementation until the 2021 performance period of MIPS, to allow for time to work through operational factors of implementing the measure. Factors include allowing for time for the All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions measure to go through the Measures Under Consideration and Measures Application Partnership (MAP) process that is typically applied for all MIPS quality measures. We refer readers to section III.K.3.a.(4) of this proposed rule for additional information on our interest to include other global and population-based measures in future years of MIPS, which we envision would include the modification of the submission requirements under the quality performance category.

(iii) Topped Out Measures

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53637 through 53640), where we finalized the 4-year timeline to identify topped out measures, after which we may propose to remove the measures through future rulemaking. We also refer readers to the 2019 MIPS Quality Benchmarks' file that is located on the Quality Payment Program resource library (*https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Resource-library.html*) to determine which measure benchmarks are topped out for 2019 and would be subject to the scoring cap if they are also identified as topped out in the 2020 MIPS Quality Benchmarks' file. We note that the final determination of which measure benchmarks are subject to the topped out cap would not be available until the 2020 MIPS Quality Benchmarks' file is released in late 2019.

In the CY 2019 PFS final rule (83 FR 59761 through 59763), we finalized that once a measure has reached extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle. However, we would also consider retaining the measure if there are compelling reasons as to why it should not be removed (for example, if the removal would impact the number of measures available to a specialist type or if the measure addressed an area of importance to the Agency).

As an example, four of the five quality measures within the pathology specialty set have been identified as extremely topped out in the 2019 benchmarking file. However, we believe that it is important to retain these pathology specific measures in the MIPS quality measure set to ensure that pathologists have a sufficient number of quality measures to report. Quality measures identified as extremely topped out are considered to have high, unvarying performance where no meaningful room for improvement can be identified, and are only identified as such through data received during the submission period. We have heard from stakeholders that

some measures tend to appear topped out or extremely topped out due to clinicians' ability to select measures they expect to perform well on, and because of this, the data we receive is not actually representative of how clinicians perform across the country on these metrics. For this reason, we seek comment on whether we should increase the data completeness threshold for quality measures that are identified as extremely topped out, but are retained in the program due to the limited availability of quality measures for a specific specialty. In addition, we seek comment on potential alternative solutions in addressing extremely topped out measures.

We encourage stakeholders to continue their measure development efforts in creating new pathology specific quality measures that can demonstrate a meaningful performance gap, thereby offering opportunities for quality improvement. We also encourage pathologists to consider reporting on pathology specific QCDR measures through a CMS-approved QCDR available for the 2020 performance period. A list of CMS-approved QCDRs for the 2020 performance period will be made available on or prior to January 1, 2020, and will be posted on the Quality Payment Program resource library at *https://qpp.cms.gov/about/resource-library*.

In addition, in the CY 2019 PFS final rule (83 FR 59761 through 59763), we also finalized our policy to exclude QCDR measures from the topped out measure timeline. When a QCDR measure reaches topped out status, as determined during the QCDR measure approval process, it may not be approved as a QCDR measure for the applicable performance period.

(iv) Removal of Quality Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we discussed removal criteria for quality measures, including that a quality measure may be considered for removal if the Secretary determines that the measure is no longer meaningful, such as measures that are topped out. Furthermore, if a measure steward is no longer able to maintain the quality measure, it would also be considered for removal. In addition, in the CY 2019 PFS final rule (83 FR 59763 through 59765), we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set, we believe incrementally removing non-high priority process measures through notice and comment rulemaking is appropriate. We refer readers to the CY 2019 PFS final rule (83 FR 59763 through 59765) for details on the previously established criteria to remove measures.

In addition to previously established measure removal criteria, we have observed instances where MIPS quality measures have had low reporting rates year over year, and have made it difficult for some MIPS quality measures to achieve a benchmark. As a result, these measures have resulted in clinicians receiving no more than 3 points for each measure that is unable to meet benchmarking criteria. For these reasons, we are proposing to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. We believe that a time period of 2 consecutive CY performance periods is appropriate, as we anticipate that any newly finalized measure would need more than 1 CY performance period in order to observe measure reporting trends, and believe that 2 consecutive CY performance periods allows for sufficient time to monitor reporting volumes. We will factor in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome) prior to determining whether to remove the measure. Removing measures with this methodology ensures that the MIPS quality measures available in the program are truly meaningful and measureable areas, where quality improvement is sought and that measures that are low reported for 2 consecutive CY performance periods are removed from the program. We believe low reported measures can point to that the measure concept does not provide meaningful measurement to most clinicians. If the measure has too few reporting clinicians and does not meet the case minimum and reporting volumes, but other considerations favor retaining the measure, we may consider keeping the MIPS quality measure, with the caveat that the measure steward should have a plan in place (prior to approval of the measure) to encourage reporting of the measure, such as education and communication or potentially measure specification changes. We seek comments on this proposal. In addition, we refer readers to Table Group C of Appendix 1 of this proposed rule for a list of quality measures and rationales for removal. We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We believe our proposal to remove the quality measures outlined in Table Group C will lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to remove measures should occur through an iterative process that will include an annual review of the quality measures to determine whether they meet our removal criteria.

We have heard from stakeholders concerns on removing measures and the need for more notice before a measure is removed. Therefore, we are interested in what factors should be considered in delaying the removal of measures. For example, we have not heard concerns from stakeholders that selection bias may be impacting low reporting rates, we are interested if this is something we should consider, and how we could determine when low-reporting is due to selection bias versus instances where the measure is not a meaningful metric to the majority of clinicians who would have reported on the measure otherwise. We seek comment on whether we should delay the removal of a specific quality measure by a year, for any of the MIPS quality measures identified for removal. We also request feedback on which quality measure's removal should be delayed for a year, and why.

Furthermore, when we finalize measures to be a part of the MIPS quality measure inventory for a given MIPS payment year, we generally intend that the measures will be available for reporting by or on behalf of all MIPS eligible clinicians since MIPS is a government quality reporting program. It has come to our attention that certain MIPS measure stewards have limited or prohibited the use of their measures by third party intermediaries such as QCDRs and qualified registries. To the extent that MIPS measure stewards limit the availability of previously finalized measures for MIPS quality reporting, including reporting by third party intermediaries on behalf of MIPS eligible clinicians, these limitations may lead to inadvertent increases in burden both for the MIPS eligible clinicians who rely on third party intermediaries and for third party intermediaries themselves. In addition, these limitations may adversely affect our ability to benchmark the measure or the robustness of the benchmark. For these reasons, we propose to adopt an additional removal criterion, specifically, that we may consider a MIPS quality measure for removal if we determine it is not available for MIPS quality reporting by or on behalf of all

MIPS eligible clinicians. We seek comments on this proposal.

(v) Request for Information on Potential Opioid Overuse Measure

To address concerns associated with long-term, high-dose opioids, we developed an electronic clinical quality measure (eCQM) titled: Potential Opioid Overuse. The Potential Opioid Overuse measure captures the proportion of patients aged 18 years or older who receive opioid therapy for 90 days or more with no more than a 7-day gap between prescriptions with a daily dosage of 90 morphine milligram equivalents (MME) or higher. It is intended to report the extent of long-term, high-dose opioid prescribing with the goal of improving patient safety by reducing the potential for opioid-related harms and encouraging the use of alternative pain management. The measure was field tested in 2017. The testing population included 3 test sites, consisting of 19 practices representing 87 clinicians, for CY 2016. Initial results from measure testing indicated that this measure is important, feasible, reliable, valid, and usable. Stakeholders supported the measure concept's importance in addressing a quality improvement opportunity in a priority population.

Through interviews primarily with EHR vendors, we have identified potential challenges for implementing the Potential Opioid Overuse measure. The human readable CQL-based specification is more than 200 pages long in order to accommodate a library providing more information on opioid medications than is currently available to export for the Value Set Authority Center (VSAC). Vendors expressed concerns about the feasibility of accurately capturing some of the medication-specific data elements within the measure, such as medication start and end dates and times, because these are not consistently captured during typical workflows.

We seek to mitigate the usability and feasibility issues for the measure by gathering information from a wider audience of technical implementers to strengthen the potential for measure adoption. We invite public comment on the Potential Opioid Overuse CQL-based specifications in this section. Specifically, we seek comment on the following questions:

- Would you select this measure to support your quality measure initiatives? Why?
- Would you implement this measure in its current state? Why?
- How can we improve the usability of this measure?
- This measure performs medication calculations, to calculate MME, which helps compare different opioids and opioid dosages. Are there any workflow, mapping, or other implementation factors to consider related to the required medication related data elements needed to perform the MME calculations in this measure? Specifically related to: Use of the opioid data library, which clearly lists the required medication information directly in the measure specification; Use of medication end dates, to calculate medication durations; Use of coded medication frequencies, such as ''3 times daily'' or ''every 6 hours,'' required to calculate daily medication dosages.
- Are there any other foreseeable challenges to implementing this measure?

(2) Cost Performance Category

For a description of the statutory basis and our existing policies for the cost performance category, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019 PFS final rule (81 FR 77162 through 77177, 82 FR 53641 through 53648, and 83 FR 59765 through 59776, respectively).

In this year's rule, we are proposing to:

- Weight the cost performance category at 20 percent for MIPS payment year 2022, 25 percent for MIPS payment year 2023, and 30 percent for MIPS payment year 2024 and all subsequent MIPS payment years;
- Change our approach to proposing attribution methodologies for cost measures by including the methodology in the measure specifications;
- Add 10 episode-based measures;
- Modify the total per capita cost and Medicare Spending Per Beneficiary (MSPB) measures; and
- Seek comments on the future inclusion of an additional episode-based measure.

These proposals are discussed in more detail in the following sections of this proposed rule.

(a) Weight in the Final Score

In the CY 2019 PFS final rule, we established at § 414.1350(d)(3) that the weight of the cost performance category is 15 percent of the final score for the 2021 MIPS payment year (83 FR 59765 through 59766). Section 51003(a)(1)(C) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) (BBA of 2018) amended section 1848(q)(5)(E)(i)(II)(bb) of the Act such that for each of the second, third, fourth, and fifth years for which the MIPS applies to payments, not less than 10 percent and not more than 30 percent of the MIPS final score shall be based on the cost performance category score. Additionally, section 1848(q)(5)(E)(i)(II)(bb) of the Act as amended states that it shall not be construed as preventing the Secretary from adopting a 30 percent weight if the Secretary determines, based on information posted under section 1848(r)(2)(I) of the Act, that sufficient cost measures are ready for adoption for use under the cost performance category for the relevant performance period.

In the CY 2019 PFS proposed rule, we solicited comments on how we should weight the cost performance category for the 2022 and 2023 MIPS payment years given the changes within the BBA of 2018 (83 FR 35901). Several commenters noted that the increased flexibility provided by the BBA of 2018 should be used to maintain the weight at 10 percent for MIPS payment year 2021 and in future years. A few commenters were concerned about increasing the weight of the cost performance category because of the challenges with the existing attribution and risk-adjustment methodologies. Some commenters recommended that the cost performance category weight should be increased to 30 percent as soon as possible. We considered these comments when we developed our proposals for setting the weight of the cost performance category in this proposed rule.

We are proposing a steady increase in the weight of the cost performance category from the existing weight of 15 percent for the 2021 MIPS payment year to 30 percent beginning with the 2024 MIPS payment year as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act. We believe this gradual and predictable increase would allow clinicians to adequately prepare for the 30 percent weight while gaining experience with the new cost measures. We recognize that cost measures are still being developed and that clinicians may not have the same level of familiarity or understanding of cost measures that they do of comparable quality measures. We also recognize that there may be greater understanding of the measures in the cost performance category as clinicians gain more experience with them.

We are proposing at § 414.1350(d)(4) that the cost performance category would make up 20 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year. We plan to increase the weight of the cost performance category at standard increments of 5 percent each year until

MIPS payment year 2024. Therefore, we propose at § 414.1350(d)(5) to weight the cost performance category at 25 percent for the 2023 MIPS payment year and propose at § 414.1350(d)(6) to weight the cost performance category at 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. This would allow us to meet the 30 percent cost performance category weight when required by the statute and give clinicians adequate time to gain experience with the cost measures while they represent a smaller portion of the final score. We also believe that a predictable increase in the weight of the cost performance category each year would allow clinicians to better prepare for each year going forward. We considered maintaining the weight of the cost performance category at 15 percent for the 2022 and 2023 MIPS payment years as we recognize that we are still introducing new measures for the cost performance category and clinicians are still gaining familiarity and experience with these new measures. However, recognizing that we are required by the statute to weight the cost performance category at 30 percent beginning with the 2024 MIPS payment year, we are concerned about having to increase the cost performance category's weight significantly for the 2024 MIPS payment year. We invite comments on whether we should consider an alternative weight for the 2022 and/or 2023 MIPS payment years.

In accordance with section 1848(q)(5)(E)(i)(II)(bb) of the Act, we will continue to evaluate whether sufficient cost measures are included under the cost performance category as we move towards the required 30 percent weight in the final score. As described in section III.K.3.c.(2)(b)(iii) of this proposed rule, we are proposing to add 10 episode-based measures to the cost performance category beginning with the 2020 MIPS performance period. We are continuing our efforts to develop more robust and clinician-focused cost measures. We will also be continuing to work on developing additional episode-based measures that we may consider proposing for the cost performance category in future years to address additional clinical conditions. Introducing more measures over time would allow more clinicians to be measured in this performance category, with an increasing focus on costs associated with services provided by clinicians for specific episodes of care. In section III.K.3.c.(2)(b)(v) of this proposed rule, in efforts to ensure that our existing cost measures hold clinicians appropriately accountable, we propose modifications to both the total per capita cost and MSPB measures.

(b) Cost Criteria

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. We will continue to evaluate cost measures that are included in MIPS on an ongoing basis and anticipate that measures could be added, modified, or removed through rulemaking as measure development continues. Any substantive changes to a measure would be proposed for adoption in future years through notice and comment rulemaking, following review by the Measure Applications Partnership (MAP). We would take all comments and feedback from both the public comment period and the MAP review process into consideration as part of the ongoing measure evaluation process. For the CY 2020 performance period and future performance periods, we propose to add 10 newly developed episode-based measures to the cost performance category in section III.K.3.c.(2)(b)(iii) of the proposed rule and propose modifications to both the total per capita cost and MSPB measures in section III.K.3.c.(2)(b)(v) of this proposed rule. In section III.K.3.c.(2)(b)(viii) of this proposed rule, we summarize all new and existing measures that would be included in the cost performance category starting with the CY 2020 performance period. Some modifications to measures used in the cost performance category may incorporate changes that would not substantively change the measure. Examples of such non-substantive changes may include updated diagnosis or procedure codes or changes to exclusions to the patient population or definitions. While we address such changes on a case-by-case basis, we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. However, as described in section 3 of the Blueprint for the CMS Measures Management System Version 14.1 (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf*), if substantive changes to these measures that are owned and developed by CMS become necessary, we expect to follow the pre-rulemaking process for new measures, including resubmission to the Measures Under Consideration (MUC) list and consideration by the MAP. The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are applicable to clinicians and complement program-specific statutory and regulatory requirements. Through its Measure Selection Criteria, the MAP focuses on selecting high-quality measures that address the NQF's three aims of better care, healthy people/communities, and affordable care, as well as fill critical measure gaps and increase alignment among programs.

In section III.K.3.c.(2)(b)(v)(A) of this proposed rule, we have summarized the timeline for measure development, including stakeholder engagement activities that are undertaken by the measure development contractor, which include a technical expert panel (TEP), clinical subcommittees, field testing, and education and outreach activities.

(ii) Attribution

In this section of the proposed rule, we discuss our approach to the attribution methodology for cost measures along with revisions to our existing cost measures. In the CY 2017 Quality Payment Program final rule (81 FR 77168 through 77169), we adopted an attribution methodology for the total per capita cost measure under which beneficiaries are attributed using a method generally consistent with the method of assignment of beneficiaries used in the Shared Savings Program. We codified this policy under § 414.1350(b)(2) in the CY 2019 PFS final rule (83 FR 59774). In the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77176), we also adopted an attribution methodology for the MSPB measure under which an episode is attributed to the MIPS eligible clinician who submitted the plurality of claims (as measured by allowed charges) for Medicare Part B services rendered during an inpatient hospitalization that is an index admission for the MSPB measure during the applicable performance period. We codified this policy under § 414.1350(b)(3) in the CY 2019 PFS final rule (83 FR 59775).

In the CY 2019 PFS final rule (83 FR 59775), we established at § 414.1350(b)(6) that for acute inpatient medical condition episode-based measures, an episode is attributed to each MIPS eligible clinician who bills inpatient E/M claim lines during a trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E/M claim lines in that

hospitalization, and at § 414.1350(b)(7) that for procedural episode-based measures, an episode is attributed to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes.

As discussed in section III.K.3.c.(2)(b)(v) of this proposed rule, we have reevaluated the total per capita cost and MSPB measures. In the process of evaluating these measures, the TEP identified areas for potential refinement within the attribution methodology, and the revised measures that we propose include substantial changes to the attribution methodology. As we explain in section III.K.3.c.(2)(b)(v), we believe these new attribution methodologies better establish the relationship between the clinician and the patients. In general, for the cost performance category, we believe that attribution is a fundamental element of the measures, and we do not believe that a cost measure can be separated from its attribution methodology. Although in prior rulemaking, we have discussed the attribution methodologies for the cost performance category measures in the preamble and included those methodologies in the regulation text, we intend to take a different approach going forward and address attribution as part of the measure logic and specifications. For this proposed rule and in future rulemaking, we will include the attribution methodology for each cost performance category measure in the measure specifications, which are available for review and public comment at *https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html* during the public comment period for the proposed rule, and will be available in final form at *https://qpp.cms.gov/about/resource-library* after the final rule is published. We believe this approach is preferable because it would reduce complexity for MIPS eligible clinicians and other stakeholders by presenting the attribution methodology with the rest of the cost measure specifications, ensure non-substantive changes could be implemented without undertaking rulemaking, and align with the approach taken for measures in the quality performance category. Therefore, we propose to revise § 414.1350(b)(2), (3), (6), and (7) to reflect that these previously finalized attribution methods apply for the 2017 through 2019 performance periods. We also propose to establish at § 414.1350(b)(8) that beginning with the 2020 performance period, each cost measure would be attributed according to the measure specifications for the applicable performance period.

In the CY 2017 Quality Payment Program final rule, we established a final policy to attribute cost measures at the TIN/NPI level, regardless of whether a clinician's performance for purposes of MIPS is assessed as an individual (the TIN/NPI level) or as part of a group (the TIN level) (81 FR 77175 through 77176). We codified this policy under § 414.1350(b)(1) in the CY 2019 PFS final rule (83 FR 59774 through 59775). Similar to the attribution methodology for cost measures, we also believe that the level of attribution (TIN/NPI or TIN) is best addressed as part of the measure specifications, allowing for different considerations for group and individual attribution based on the underlying measure specification. For this proposed rule and in future rulemaking, we will include the level of attribution for each cost performance category measure in the measure specifications, which will be publicly available as described in the preceding paragraph. The measure specification documents will provide the methodology for assigning attribution to an individual clinician or a group, which will align with whether the participant is reporting data as an individual clinician or a group under the MIPS program. Therefore, we propose to revise § 414.1350(b)(1) to reflect that the current policy of attributing cost measures at the TIN/NPI level, regardless of whether a clinician's performance for purposes of MIPS is assessed as an individual or a group, applies for the 2017 through 2019 performance periods. We intend for the new regulation text proposed at § 414.1350(b)(8) also to include the level of attribution (individual clinician or group), so we are not proposing additional regulation text. We note that in section III.K.3.c.(2)(b)(vi)(B) of this proposed rule, we propose to limit the assessment of certain cost measures to MIPS eligible clinicians who report as a group based on our assessment of the reliability of the measure at the group and individual level. Although this is not directly related to attribution, it does limit the assessment of certain measures for MIPS eligible clinicians who report as individuals.

(iii) Episode-Based Measures for the 2020 and Future Performance Periods

In this section of the proposed rule, we discuss our proposal to add 10 newly developed episode-based measures to the cost performance category beginning with the 2020 performance period. We developed episode-based measures to represent the cost to Medicare and beneficiaries for the items and services furnished during an episode of care (''episode''). Episode-based measures are developed to compare clinicians on the basis of the cost of the care clinically related to their initial treatment of a patient and provided during the episode's timeframe. Specifically, we define cost based on the allowed amounts on Medicare claims, which include both Medicare payments and beneficiary deductible and coinsurance amounts. We refer our readers to the CY 2019 PFS final rule for more detail on episode-based measures and how they are established (83 FR 59767).

Prior to presenting our cost measures to the MAP for consideration, the measure development contractor has continued to seek extensive stakeholder feedback on the development of episode-based measures, building on the processes outlined in the CY 2018 PFS final rule (82 FR 53644). These processes included convening a TEP and clinical subcommittees to solicit expert and clinical input for measure development, conducting national field testing on the episode-based measures developed, and seeking input from clinicians and stakeholders through engagement activities.

To gather input on the 10 episode-based measures that we are proposing, the measure development contractor convened 10 clinical subcommittees composed of more than 260 clinicians affiliated with 120 specialty societies through an open call for nominations between February 6, 2018 and March 20, 2018. Applicants who submitted materials after the March 20, 2018 deadline were added to a standing pool of nominees and considered for membership in the measure-specific workgroups. The clinical subcommittees met during an in-person meeting in April 2018 to select episode group(s) for development and provide input on the composition of measure-specific workgroups. The smaller measure-specific workgroups were introduced as a refinement to the measure development process based on feedback from members of the first set of clinical subcommittees. The small group size was intended to facilitate more focused discussions. The workgroups—one for each measure—met through in-person meetings and webinars between June and December 2018 to provide detailed clinical input on each component of the episode-based measures. These components include episode triggers and windows (to limit the timing of services included in the episode), item and service assignment, exclusions,

attribution, and risk adjustment variables.

In addition, the 10 episode-based measures we are proposing were developed with input from the Person and Family Committee, a body of patients and their family members and caregivers who provide input iteratively during the measure development process. Discussions regarding patient and caregiver perspectives on the types of episodes that should be prioritized informed the clinical subcommittees' considerations for episode selection. Throughout measure development, the workgroups engaged in bidirectional conversations with the Person and Family Committee to inform measure specifications. For example, patient perspectives on services perceived as aiding recovery or helping to avoid unnecessary costs and complications helped the workgroup provide recommendations for service assignment, and in turn, the workgroup provided questions to the Person and Family Committee, which helped guide their in-depth interviews. After considering each round of input, clinicians had multiple opportunities to solicit additional information and feedback from Person and Family Committee members. In total, the measure developer conducted 84 interviews with 65–70 Person and Family Committee members via one-on-one interviews during development of the 10 episode-based measures.

Finally, as with the measures finalized in the CY 2019 PFS final rule (83 FR 59767), the 10 episode-based measures we are proposing underwent a measure development process based on high level guidance provided to the measure development contractor by a standing TEP. This TEP provided oversight and cross-cutting guidance to the measure development contractor for development of episode-based measures through four meetings between August 2016 and August 2017.

Further detail can be found in the Measure Development Process document at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-measure-development-process.pdf*, which includes a discussion of the detailed clinical input obtained at each step, and details about the components of episode-based measures.

We provided an initial opportunity for clinicians to review their performance under the new episode-based measures via national field testing conducted in fall of 2018. During field testing, we sought feedback from stakeholders on the draft measure specifications, feedback report format, and supplemental documentation through an online form, and we received 67 responses, including 25 comment letters. The measure development contractor shared the feedback on the draft measure specifications with the measure-specific workgroups, who considered it in providing input on further refinements after the end of field testing. A field testing feedback summary report, which details post-field testing refinements added based on the input from the measure-workgroups, is publicly available on the MACRA feedback page (*https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html*).

Similar to previous years, we continued to engage clinicians and stakeholders, conducting extensive outreach activities. These activities included general informational email blasts, targeted email outreach to specialty societies, hosting office hours to gather input on additional opportunities for participation and outreach, and hosting the MACRA Cost Measures Field Testing Webinar to provide information about the measure development process and field test reports and a forum for stakeholder questions to ask questions.

Following the successful field testing and review through the MAP process, we propose to add the 10 episode-based measures listed in Table 37 as cost measures for the 2020 performance period and future performance periods.

The detailed specifications for these 10 episode-based measures are available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2019-revised-ebcm-measure-specs.zip*. These specifications documents consist of (i) methodology for constructing each measure, and (ii) measure codes list file with medical codes and clinical logic. First, the methodology document provides an overview of the measure, including a description of the measure numerator and denominator, the patient cohort, and the care settings in which the measure is assessed. In addition, the document includes two one-page, high-level overviews of (i) methodology and (ii) clinical logic and service codes, which were added in response to stakeholder feedback regarding provision of documentation with varying levels of detail to ensure the information is accessible to all stakeholders. The methodology document provides detailed descriptions of each logic step involved in constructing the episode groups and calculating the cost measure. Second, the measure codes list file contains the service codes and clinical logic used in the methodology, including the episode triggers, exclusions, episode sub-groups, assigned items and services, and risk adjustors. More information about the attribution methodology for each measure is available in section A.2 of the methodology documentation. In addition, measure justification forms containing testing results for these measures are available at the MACRA Feedback page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*.

TABLE 37—EPISODE-BASED MEASURES PROPOSED FOR THE 2020 PERFORMANCE PERIOD AND FUTURE PERFORMANCE PERIODS

Measure topic	Episode measure type
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural
Elective Primary Hip Arthroplasty	Procedural.
Femoral or Inguinal Hernia Repair	Procedural.
Hemodialysis Access Creation	Procedural.
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition.
Lower Gastrointestinal Hemorrhage *	Acute inpatient medical condition.
Lumbar Spine Fusion for Degenerative Disease, 1–3 Levels	Procedural.
Lumpectomy Partial Mastectomy, Simple Mastectomy	Procedural.
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural.

TABLE 37—EPISODE-BASED MEASURES PROPOSED FOR THE 2020 PERFORMANCE PERIOD AND FUTURE PERFORMANCE PERIODS—Continued

Measure topic	Episode measure type
Renal or Ureteral Stone Surgical Treatment	Procedural.

*This measure is being proposed only for groups. Please reference section III.K.3.c.(2)(b)(vi)(B) of the proposed rule.

(iv) Proposed Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve the physician, practitioner, and other stakeholder communities in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from stakeholders, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other stakeholders.

In December 2016, we published the Episode-Based Measure Development for the Quality Payment Program (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Draft-list-of-episode-groups-and-trigger-codes-December-2016.zip*) and requested input on a draft list of care episode and patient condition groups and codes as required by sections 1848(r)(2)(E) and (F) of the Act. We additionally requested feedback on our overall approach to cost measure development, including several pages of specific questions on the proposed approach for clinicians and stakeholders to provide feedback. We used this feedback to modify our cost measure development and ensure that our approach is continually informed by stakeholder feedback. As required by section 1848(r)(2)(G) of the Act, in January 2018, we posted an operational list of 8 care episode groups and patient condition groups that we refined with extensive stakeholder input, along with the codes and logic used to define these episode groups. This operational list is available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-Operational-List-of-Care-Episode-and-Patient-Condition-Codes.zip*.

Under section 1848(r)(5)(A)(iii) of the Act, to evaluate the resources used to treat patients with respect to care episode and patient condition groups, the Secretary shall, as the Secretary determines appropriate, conduct an analysis of resources use with respect to care episode and patient condition groups. In accordance with this section, we used the 8 care episode groups and patient condition groups included in the operational list as the basis for the eight episode-based measures that we developed in 2017 through early 2018 and finalized for use in MIPS in the CY 2019 PFS final rule (83 FR 59767–59773). We did not revise this operational list through rulemaking in 2018 as we did not receive stakeholder feedback requesting updates to how these episode groups are defined and there were no new developments requiring revisions. Under section 1848(r)(2)(H) of the Act,we propose to revise the operational list beginning with CY 2020 to include 10 new care episode and patient condition groups, based on input from clinician specialty societies and other stakeholders. The 10 care episode and patient condition groups were included in the draft list that we posted in December 2016 and refined based on extensive stakeholder input as described in section III.K.3.c.(2)(b)(v)(A) of this proposed rule. Our proposed revisions to the operational list beginning with CY 2020 are available on our MACRA feedback page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*. These care episode and patient condition groups serve as the basis for the 10 new episode-based measures that we are proposing in section III.K.3.c.(2)(b)(iii) of this proposed rule for the cost performance category.

(v) Revised Cost Measures

(A) Re-Evaluation Process for the Total per Capita Cost and Medicare Spending per Beneficiary Clinician Measures

For the purpose of assessing performance of MIPS eligible clinicians in the cost performance category, we finalized both the total per capita cost and MSPB measures to be included in the MIPS program in CY 2017 Quality Payment Program final rule (81 FR 77166). We are proposing to modify both of these measures based on stakeholder input from prior public comment periods and recommendations from the TEP. We also propose to modify the measure title from Medicare Spending Per Beneficiary (MSPB) to Medicare Spending Per Beneficiary clinician (MSPB clinician) to distinguish it from measures with similar names in use in other CMS programs and to improve clarity. We propose to change the name from MSPB to MSPB clinician at §§ 414.1350(b)(3) and 414.1350(c)(2).

The measure development contractor convened the TEP for two in-person meetings in August 2017 and May 2018 to provide input on potential refinements to both measures and for a webinar in November 2018 to determine additional refinements to the measures based on feedback received from field testing. The TEP's discussion from the May 2018 meeting can be found in the TEP Summary Report at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/TEP-Current-Panels.html#a0913*. In addition, the measure development contractor convened the MSPB Service Refinement Workgroup, an expert workgroup that the TEP recommended to provide detailed clinical input on service assignment rules for the revised MSPB clinician measure. The MSPB Service Refinement Workgroup convened twice during summer 2018 to develop the service exclusion list. The service exclusion list contains the service codes and logic for services that are

considered clinically unrelated to the index admission of the revised MSPB clinician episodes and are removed from the episodes and measure calculation. The revised measures underwent field testing in fall of October 2018 during which we sought feedback on the refined measure specifications and supplemental documentation through an online form. At the end of field testing, the measure development contractor shared feedback with the standing TEP, which considered the feedback in determining further measure refinements for the total per capita cost measure. The TEP also discussed the MSPB clinician measure after field testing and had the opportunity to provide input on further refinements to this measure. A field-testing feedback summary report is publicly available on the MACRA feedback page (*https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html*).

(B) Total per Capita Cost Measure

We finalized the total per capita cost measure for use in MIPS as an important measurement of clinician cost performance. Having been used in the Physician Value Modifier program, it had been tested and was reliable for Medicare populations and was familiar to the clinician community. When we finalized this measure for use in MIPS, we noted that as with all the cost measures, we would maintain this measure and update its specifications as appropriate (82 FR 53643). We continue to believe that the existing measure is appropriate to use in MIPS and continue to be committed to maintaining the cost measures with consideration of stakeholder input and testing. However, as a part of our routine measure maintenance, we re-evaluated the total per capita cost measure. The re-evaluation was informed by feedback received on this measure through prior public comment periods, as described in the CY 2017 (81 FR 77017 through 77018) and CY 2018 (82 FR 53577 through 53578) Quality Payment Program final rules, as well as feedback that arose in the measure development contractor's discussions with the TEP during the process of re-evaluation. This feedback is summarized below:

- The total per capita cost measure's attribution methodology assigned costs to clinicians over which the clinician has no influence, such as costs occurring before the start of the clinician-patient relationship.
- The attribution methodology did not effectively identify primary care relationships between a patient and a clinician and could potentially attribute beneficiaries to a clinician not responsible for the beneficiaries' primary care.
- The measure did not account for the shared accountability of clinicians and that attributing costs to a single clinician or clinician group could cause fragmentation of care.
- The beneficiary risk factors were determined one year prior to the start of the performance period, which would preclude the risk adjustment methodology from reflecting the more expensive treatment resulting from comorbidities and/or complications that might arise during the performance period.
- The feedback summarized above informed the four modifications that we are proposing for the total per capita cost measure.

First, we are proposing to change the attribution methodology to more accurately identify a beneficiary's primary care relationships. This is done by identifying a combination of services that occur within a short period of time and indicate the beginning of a relationship. More specifically, a primary care relationship is identified by a candidate event, defined as the occurrence of an E/M service such as an established patient assisted living visit or an outpatient visit (that is, the E/M primary care service), paired with one or more additional services indicative of general primary care (for example, routine chest X-ray, electrocardiogram, or a second E/M service provided at a later date). The candidate event initiates a year-long risk window from the E/M primary care service. The risk window is the period during which a clinician or clinician group could reasonably be held responsible for the beneficiary's treatment costs, and the initiation of the risk window at the onset of the candidate event ensures that costs are attributed only after the start of the clinician-patient relationship. Only the portion of the risk window that overlaps with the performance period, which is divided into 13 four-week blocks called beneficiary-months, is attributable to a clinician for a given performance period. For example, if the risk window were initiated during one MIPS performance period and ends in the following MIPS performance period, only the beneficiary-months that occur during the earlier MIPS performance period would be attributed to the clinician/clinician group to calculate the measure for that particular MIPS performance period. Dividing the performance period into beneficiary-months allows costs to be assigned to clinicians and clinician groups during the parts of the year they are primarily responsible for the patient's care management.

With this methodology, it is possible for multiple candidate events to occur between a clinician and beneficiary over time, and an additional candidate event occurring during an existing risk window reaffirms and extends the period of the clinician's responsibility. For example, if 2 candidate events for the same clinician and the same beneficiary occur 6 months apart, a separate 12-month risk window initiates from the start of each of these candidate events, and the clinician may be attributed beneficiary-months spanning 18 months and 2 different performance periods. As we described above, for risk windows that span multiple performance periods, only the beneficiary-months contained within a given performance period are used to calculate the measure for that performance period. Beneficiary-months that overlap between the 2 risk windows are collapsed to ensure that costs are only accounted for once. Furthermore, if different clinician groups initiated these 2 risk windows for the same beneficiary, the risk windows would occur concurrently and would be attributed to their respective TINs. Within an attributed TIN, only the clinician with the TIN/NPI combination performing the highest number of candidate events is attributed the beneficiary-months, since this TIN/NPI combination is deemed to have the most substantive relationship with the beneficiary. Finally, multiple TINs and TIN/NPIs billing under different TINs may be attributed beneficiary-months for the same beneficiary during the performance period. This attribution method allows multiple clinicians to be considered for the provision of ongoing primary care for a patient, which accounts for changes in primary care relationships (for example, for beneficiaries who move during the year) and reflects shared clinical responsibility for a patient's care.

To illustrate how candidate events identify primary care relationships, we are providing an example of a clinical scenario in which physicians in the primary care medical practice see a beneficiary as part of the beneficiary's routine health maintenance. A beneficiary is feeling unwell and goes to a medical practice. At the practice, the beneficiary sees a family practice clinician who provides an E/M service (one that has been identified as related to primary care) for routine health maintenance. The clinician prescribes a course of medication as part of the care

plan. The beneficiary returns to the same practice 2 months later when she notices new symptoms. At this visit, she sees a different family practice clinician who examines her, adjusts her care plan, and asks her to return in 3 months for a follow-up in case diagnostic testing or a change in medication is required. These two E/M services that occur within proximity (that is, the initial E/M service and the paired event 2 months later—a second E/M service) constitute the candidate event and indicate that a primary care relationship has begun from the time of the first visit to the medical practice. The first E/M service (identified as related to primary care) opens a one-year period (or risk window) from the date of the service. This is illustrated graphically in section 2.0 of the measure specifications available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2019-revised-TPCC-measure-specs.zip*. During the risk window, the attributed clinician/clinician group can be held responsible for the overall costs of care for that beneficiary. The TIN for the medical practice would be attributed the beneficiary and the TIN/NPI within this practice that provides the most primary care E/M services that initiate candidate events would be attributed the beneficiary. Under the current total per capita cost measure, the TIN and TIN/NPI would have been attributed this beneficiary from the beginning of the calendar year and held accountable for services the beneficiary might have received before her first visit to the medical practice.

Second, we are proposing to change the attribution methodology to more accurately identify clinicians who provide primary care services, by the addition of service category exclusions and specialty exclusions. Specifically, candidate events are excluded if they are performed by clinicians who (i) frequently perform non-primary care services (for example, global surgery, chemotherapy, anesthesia, radiation therapy) or (ii) are in specialties unlikely to be responsible for providing primary care to a beneficiary (for example, podiatry, dermatology, optometry, ophthalmology). As a result of these exclusions, clinician specialties considered for attribution are only those primarily responsible for providing primary care, such as primary care specialties and internal medicine subspecialties that frequently manage patients with chronic conditions that are in their area(s) of expertise. We do not propose to change the adjustment for specialty; as such, the measure would continue to adjust for specialty to account for variation in cost across clinician specialties and in clinician groups with diverse specialty compositions.

Third, we are proposing to change the risk adjustment methodology to determine a beneficiary's risk score for each beneficiary-month using diagnostic data from the year prior to that month rather than calculating one risk score for the entire performance period using diagnostic data from the previous year. This methodology would better account for any changes in the health status of the beneficiary for the duration of a primary care relationship and during the performance period. In addition, we are proposing to add an institutional risk model to improve risk adjustment for clinicians treating institutionalized beneficiaries.

Fourth, we are proposing to change the measure to evaluate beneficiaries' costs on a monthly basis rather than an annual basis. Specifically, the performance period during which costs are assessed is divided into 13 beneficiary-months, mentioned earlier, allowing for the measure and the risk adjustment model to reflect changes in patient health characteristics at any point throughout the performance period. In addition, this refinement would avoid measuring annualized costs for beneficiaries whose death date occurs during the performance period, which could potentially disincentivize care for older and sicker patients.

Further detail about these proposed changes to the measure, as well as a comparison to the total per capita cost measure as currently specified, is available in the measure specifications documents available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2019-revised-TPCC-measure-specs.zip*.

The revised total per capita cost measure underwent MAP review during the 2018–2019 cycle. In December 2018, the MAP Clinician Workgroup gave the preliminary recommendation of 'conditional support for rulemaking,' with the condition of NQF endorsement. In January 2019, the MAP Coordinating Committee reversed the Clinician Workgroup's preliminary recommendation and provided a final recommendation of ''do not support for rulemaking with potential for mitigation''. More detail on the mitigating factors is available in the MAP's final report at *http://www.qualityforum.org/Publications/2019/03/MAP_Clinicians_2019_Considerations_for_Implementing_Measures_Final_Report.aspx*. We believe that the revised measure provides a more appropriate and valid attribution approach. We considered the option of proposing to remove the current version of the measure from the program and not proposing to replace it with a revised version. However, because we have developed and implemented only a handful of episode-based measures at this time, a substantial proportion of clinicians would be left with only MSPB clinician measure for the cost performance category. Because fewer than half of all clinicians in MIPS meet the case minimum for the MSPB clinician measure, and no other measure addresses the costs of primary care, we believe it is appropriate to use the best version of the total per capita cost measure available to us. While we recognize and value the MAP's expressed concerns regarding the revised measure specifications, we believe we have adequately addressed the mitigating factors through the information we have made publicly available (including testing results in the measure justification forms available at *https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html*), as well as our discussions with stakeholders at the MAP and through further education and outreach activities. Thus, we are proposing to include the total per capita cost measure with these revised specifications in the cost performance category beginning with the CY 2020 performance period.

(C) Medicare Spending per Beneficiary Clinician Measure

Similar to the total per capita cost measure, we finalized the MSPB clinician measure for use in MIPS as an important measurement of clinician cost performance. Having been used in the Physician Value Modifier program, it had been tested and was reliable for Medicare populations and was familiar to the clinician community. However, when we finalized this measure for use in MIPS, we noted that as with all the cost measures, we would maintain this measure and update its specifications as appropriate (82 FR 53643). We continue to believe that the existing measure is appropriate to use in MIPS and continue to be committed to maintaining this cost measure with consideration of stakeholder input and testing. Hence, we re-evaluated the MSPB clinician measure as part of our routine measure maintenance. The re-evaluation was

informed by feedback received on this measure through prior public comment periods, as described in the CY 2017 Quality Payment Program final rule (81 FR 77017 through 77018) and the CY 2018 Quality Payment Program final rule (82 FR 53577 through 53578), as well as feedback that arose in the measure development contractor's discussions with the standing TEP during the process of re-evaluation. This feedback is summarized below:

- The attribution methodology did not recognize the team-based nature of inpatient care;
- The attribution based on the plurality of Part B service costs during index admission could potentially attribute episodes to specialties providing expensive services as opposed to those providing the overall care management for the patient; and
- The measure captured costs for services that are unlikely to be influenced by the clinician's care decisions.

The feedback summarized above informed the two modifications that we are proposing as part of the re-evaluation of this measure.

First, we are proposing to change the attribution methodology to distinguish between medical episodes (where the index admission has a medical MS–DRG) and surgical episodes (where the index admission has a surgical MS–DRG). A medical episode is first attributed to the TIN billing at least 30 percent of the inpatient E/M services on Part B physician/supplier claims during the inpatient stay. The episode is then attributed to any clinician in the TIN who billed at least one inpatient E/M service that was used to determine the episode's attribution to the TIN. A surgical episode is attributed to the surgeon(s) who performed any related surgical procedure during the inpatient stay, as determined by clinical input, as well as to the TIN under which the surgeon(s) billed for the procedure. The list of related surgical procedures MS–DRGs may be found in the measure codes list for the revised measure at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/mspb-clinician-zip-file.zip*. This revised attribution methodology accounts for the team-based nature of care provided when managing medical conditions during an inpatient stay and allows for attribution to multiple clinicians to ensure that all clinicians involved in a beneficiary's care are appropriately attributed.

Second, to account for the more limited influence clinicians' performance has on costs when compared with hospitals, we are proposing to add service exclusions to the measure to remove costs that are unlikely to be influenced by the clinician's care decisions. Specifically, we are proposing to exclude unrelated services specific to groups of MS–DRGs aggregated by major diagnostic categories (MDCs). Some examples of unrelated services include orthopedic procedures for episodes triggered by MS–DRGs under Disorders of Gastrointestinal System (MDC 06 and MDC 07) or valvular procedures for episodes triggered by MS–DRGs under Disorders of the Pulmonary System (MDC 04).

Further detail about these proposed changes to the measure is included in the measure specifications documents, which are available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/mspb-clinician-zip-file.zip*. This includes a comparison of the proposed changes against the MSPB clinician measure as currently specified. A measure justification form containing testing results for this measure with the proposed revisions is available on the MACRA Feedback page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*. We are proposing to include the revised MSPB clinician measure with these specifications in the cost performance category beginning with the CY 2020 performance period.

(vi) Reliability

(A) Reliability for Episode-Based Measures

In the CY 2017 QPP final rule (81 FR 77169 through 77170), we finalized a reliability threshold of 0.4 for measures in the cost performance category. In the CY 2019 PFS final rule, we established at § 414.1350(c)(4) and (5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures and 10 episodes for procedural episode-based measures (83 FR 59773 through 59774). We examined the reliability of the proposed 10 episode-based measures listed in Table 38 at our established case minimums and found that all of these measures meet the reliability threshold of 0.4 for the majority of groups at a case minimum of 10 episodes for procedural episode-based measures and 20 episodes for acute inpatient medical condition episode-based measures. All of the proposed measures meet this standard at the individual clinician level as well, with the exception of the Lower Gastrointestinal Hemorrhage episode-based measure. In section III.K.3.c.(2)(b)(vi)(B) of this proposed rule, we discuss a proposal to limit our assessment of certain cost measures to groups (identified by a TIN) based on the results of our reliability analysis.

TABLE 38—PERCENT OF TINS AND TIN/NPIS THAT MEET 0.4 RELIABILITY THRESHOLD

Measure name	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Acute Kidney Injury Requiring New Inpatient Dialysis	100.0	0.58	85.3	0.48
Elective Primary Hip Arthroplasty	100.0	0.85	100.0	0.78
Femoral or Inguinal Hernia Repair	100.0	0.86	100.0	0.81
Hemodialysis Access Creation	93.1	0.63	70.1	0.48
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	100.0	0.69	68.0	0.46
Lower Gastrointestinal Hemorrhage *	74.6	0.51	0.0	0.20
Lumbar Spine Fusion for Degenerative Disease, 1–3 Levels	100.0	0.77	100.0	0.69
Lumpectomy Partial Mastectomy, Simple Mastectomy	100.0	0.64	100.0	0.60
Non-Emergent Coronary Artery Bypass Graft (CABG)	100.0	0.82	100.0	0.74
Renal or Ureteral Stone Surgical Treatment	100.0	0.77	100.0	0.65

* This measure is being proposed only for groups. Please reference section III.K.3.c.(2)(b)(vi)(B) of the proposed rule.

(B) Limiting Assessment of Certain Measures to Groups

We have assessed clinicians and groups on cost measures when they meet the case minimum for a measure. As part of our efforts to ensure reliable measurement, we have examined the reliability of cost measures at the group and individual level, as clinicians are able to participate in MIPS in either way. However, for clinicians who participate in MIPS as individuals, we have found the proposed Lower Gastrointestinal Hemorrhage episode-based measure does not meet the reliability threshold of 0.4 that we established for measures in the cost performance category. While we considered not including the measure in MIPS for this reason, we do find that this measure meets the reliability threshold for those who participate in MIPS as part of a group. Therefore, we propose to include the measure in the cost performance category only for MIPS eligible clinicians who report as a group or virtual group. We will continue to assess the reliability of cost measures for group and individual participation as the measures are introduced or are revised. If we identify measures that are similarly found to meet our reliability threshold at the group level but not at the individual level, we would again consider limiting the assessment of the measure to groups.

(C) Reliability for Revised Cost Measures

In the CY 2017 Quality Payment Program final rule, we finalized a reliability threshold of 0.4 for measures in the cost performance category (81 FR 77169 through 77170). Additionally, we established a case minimum of 35 episodes for the MSPB clinician measure (81 FR 77171) and a case minimum of 20 beneficiaries for the total per capita cost measure (81 FR 77170). We codified these case minimums at § 414.1350(c)(1) and (2) in the CY 2019 PFS final rule (83 FR 59774). We based these case minimums on our interest in ensuring that the majority of clinicians and groups that were measured met the threshold of 0.4 reliability, which we felt best balanced our interest in ensuring moderate reliability without limiting participation. Given the significant changes to these measures that we are proposing in section III.K.3.c.(2)(b)(v), we again examined the reliability of the revised MSPB clinician and total per capita cost measures at these case minimums and found that the measures meet the reliability threshold of 0.4 for the majority of clinicians and groups at the existing case minimums, as shown in Table 39.

TABLE 39—PERCENT OF TINS AND TIN/NPIS THAT MEET 0.4 RELIABILITY THRESHOLD FOR THE REVISED MSPB CLINICIAN AND TOTAL PER CAPITA COST MEASURES

Measure name	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Medicare Spending Per Beneficiary Clinician	100.0	0.77	100.0	0.69
Total Per Capita Cost	100.0	0.82	100.0	0.89

Based on this analysis, in this proposed rule we are not proposing any changes to the case minimums, which we previously finalized as 35 for the MSPB clinician measure, and 20 for the total per capita cost measure.

(vii) Request for Comments on Future Potential Episode-Based Measure for Mental Health

We plan to continue to develop episode-based measures and propose to adopt them for the cost performance category in future rulemaking. As a part of these efforts, we seek to expand the range of procedures and conditions covered to ensure that more MIPS eligible clinicians have their cost performance assessed under clinically relevant episode-based measures. In recognition of the importance of assessing mental health care, we developed an acute inpatient medical condition episode-based measure for the treatment of inpatient psychoses and related conditions through the same process involving extensive expert clinician input as the measures proposed in section III.K.3.c.(2)(b)(vii) of this proposed rule. The specifications for the Psychoses/Related Conditions episode-based measure are available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2019-revised-ebcm-measure-specs.zip*. The Psychoses/Related Conditions episode-based measure represents an opportunity to incentivize improvement in the field of mental health, a CMS priority area.

The Psychoses/Related Conditions episode-based measure was reviewed by the MAP Clinician Workgroup in December 2018 as part of a group with the 10 episode-based measures in Table 40 that we are proposing and received a preliminary recommendation of ''Conditional support for rulemaking,'' on the condition of NQF endorsement. In January 2019, The MAP Coordinating Committee pulled this measure for separate discussion from the other 10 episode-based measures and voted to finalize a recommendation of ''Do not support for rulemaking.'' The MAP's concerns with this measure related to: (i) The attribution model and its potential to hold clinicians responsible for costs outside of their influence; (ii) geographic variation in community resource availability; (iii) effects of physical comorbidities on measure score; and (iv) the potential to exacerbate access issues in mental health care. More detail is available in the 2019 MAP Clinician Workgroup final report at *http://www.qualityforum.org/Publications/2019/03/MAP_Clinicians_2019_Considerations_for_Implementing_Measures_Final_Report.aspx*.

We appreciate the feedback from the MAP but believe that the measure already accounts for these concerns. The expert workgroup convened by the measure development contractor to provide input on the specifications carefully considered these and other issues unique to mental health care throughout the development process and field testing. The expert workgroup, which reconvened to consider the MAP's concerns, noted that they had addressed each of the MAP's concerns during development activities and that this measure could be a significant step towards mental health parity by including psychiatry with other specialties in a MIPS episode-based measure. In addition, the measure provides opportunities for innovation in care coordination, which the Person and Family Committee expressed as an improvement need. We are now seeking

comments on the Psychoses/Related Conditions episode-based measure. In future years, we may propose the use of this measure.

Regarding the MAP's first concern about clinician accountability, the Psychoses/Related Conditions measure is constructed to only capture costs within an attributed clinician's influence through judicious service assignment rules. That is, services are only included in the cost of an episode when they meet specific conditions defined by procedure, diagnosis, and timing within the episode window. Members of the expert workgroup also noted that the measure can incentivize improved care coordination across care settings by holding clinicians accountable for certain post-discharge care. This recognition of the potential for measures to incentivize systems care coordination aligns with the rationale for quality measures currently available for reporting in MIPS, which acknowledge the goal of promoting shared accountability and collaboration with patients, families, and providers. For example, NQF #0576/Quality #391 Follow-Up After Hospitalization for Mental Illness (81 FR 77645) holds clinicians accountable for certain follow-up care.

Regarding the MAP's second concern about geographic variation, empirical analyses indicate the impact of geographic variation has limited effect on measure score and is similar across episode-based measures. The measure development contractor conducted empirical analyses to examine the effect of adding variables to the current risk adjustment model to account for state differences to assess the impact of geographic variation. The analyses indicated that there is a high correlation between the measure using the current risk adjustment model and the model accounting for state differences. At the TIN level, the correlation between the Psychoses/Related Conditions base measure and state-augmented measure is 0.838. At the TIN–NPI level, the correlation between the Psychoses/Related Conditions base measure and state-augmented measure is 0.835.

Regarding the MAP's third concern about physical comorbidities, the measure's risk adjustment model includes variables to account for patient comorbidities, including variables for patient history of other physical or mental health issues that might affect outcomes for patients captured under this measure.

Regarding the MAP's fourth concern about mental healthcare access, the large number of beneficiaries covered by this measure mitigates the potential for clinicians to limit access for Medicare patients. The potential coverage of beneficiaries is high, as there are approximately 102,000 beneficiaries with at least one episode (for episodes ending between January 1, 2017 and December 31, 2017). Additionally, the measure is designed to account for complex case mix to preserve access to care: The patient cohort is divided into sub-groups to ensure meaningful clinical comparisons between homogenous patient populations. We believe that this measure has the potential to incentivize improved care coordination and team-based care, and encourage the use of use community resources, which would improve access to care.

The Psychoses/Related Conditions episode-based measure would bridge the measurement gap in the MIPS cost performance category by providing mental health clinicians an episode-based measure as a complement to the two broader, population cost measures currently in MIPS. Based on episodes ending between January 1, 2017 and December 31, 2017, approximately 97 percent of MIPS eligible TINs and 36 percent of MIPS eligible TIN/NPIs meeting the 20 episode-case minimum for the Psychoses/Related Conditions measure also meet the case minimum for the revised MSPB clinician measure. Similarly, approximately, 98 percent of MIPS eligible TINs and 23 percent of MIPS eligible TIN/NPIs meeting the case minimum for the Psychoses/Related Conditions measure also meet the case minimum for the revised total per capita cost measure. We believe that this measure accurately reflects cost associated with inpatient psychiatrists' care and can provide information about cost performance that is actionable for mental health clinical practice as they provide clinicians with feedback on the cost of services within their reasonable influence.

A key goal for cost measures is to assess provider variation due to practice differences rather than chance, which can be determined by the measure's reliability. The Psychoses/Related Conditions measure tests well for reliability. The measure has a mean reliability over 0.7, generally considered the threshold for high reliability, at both TIN and TIN–NPI levels at the 10, 20, and 30-episode case minima. At the 20-epsiode case minimum imposed for acute inpatient medical condition episode-based measures, mean reliability is 0.83 for TIN and 0.88 for TIN–NPI level reporting, with 100.0 percent of TINs and 100.0 percent of TIN–NPIs meeting or exceeding the 0.4 threshold for moderate reliability. A measure justification form with additional testing results for this measure is available at the MACRA Feedback page at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html*.

We are seeking comments on the potential use of this new Psychoses/Related Conditions episode-based measure in the cost performance category in a future MIPS performance period.

(viii) Summary of Previously Established and Proposed Measures for the Cost Performance Category for the 2020 and Future Performance Periods

TABLE 40—SUMMARY TABLE OF COST MEASURES FOR THE 2020 PERFORMANCE PERIOD AND FUTURE PERFORMANCE PERIODS

Measure topic	Measure type	Measure Status
Total Per Capita Cost	Population-Based	Revised and proposed for 2020 performance period and beyond.
Medicare Spending Per Beneficiary Clinician	Population-Based	Revised and proposed for 2020 performance period and beyond.
Elective Outpatient Percutaneous Coronary Intervention (PCI).	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond.
Knee Arthroplasty	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond.
Revascularization for Lower Extremity Chronic Critical Limb Ischemia.	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond.

TABLE 40—SUMMARY TABLE OF COST MEASURES FOR THE 2020 PERFORMANCE PERIOD AND FUTURE PERFORMANCE PERIODS—Continued

Measure topic	Measure type	Measure Status
Routine Cataract Removal with Intraocular Lens (IOL) Implantation.	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond.
Screening/Surveillance Colonoscopy	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond.
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition episode-based.	Currently in use for 2019 Performance Period and Beyond.
Simple Pneumonia with Hospitalization	Acute inpatient medical condition episode-based.	Currently in use for 2019 Performance Period and Beyond.
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI).	Acute inpatient medical condition episode-based.	Currently in use for 2019 Performance Period and Beyond.
Acute Kidney Injury Requiring New Inpatient Dialysis.	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Elective Primary Hip Arthroplasty	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Femoral or Inguinal Hernia Repair	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Hemodialysis Access Creation	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation.	Acute inpatient medical condition episode-based.	Proposed for 2020 Performance Period and Beyond.
Lower Gastrointestinal Hemorrhage *(at group level only)*.	Acute inpatient medical condition episode-based.	Proposed for 2020 Performance Period and Beyond.
Lumbar Spine Fusion for Degenerative Disease, 1–3 Levels.	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Lumpectomy, Partial Mastectomy, Simple Mastectomy.	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Non-Emergent Coronary Artery Bypass Graft (CABG).	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.
Renal or Ureteral Stone Surgical Treatment	Procedural episode-based	Proposed for 2020 Performance Period and Beyond.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), and the CY 2019 PFS final rule (83 FR 59776 through 59777).

In this proposed rule, we are proposing to: (1) Modify the definition of rural area; (2) update § 414.1380(b)(3)(ii)(A) and (C) to remove the reference to the four listed accreditation organizations in order to be recognized as patient-centered medical homes and to remove the reference to the specific accrediting organization for comparable specialty practices; (3) increase the group reporting threshold to 50 percent; (4) establish factors to consider for removal of improvement activities from the Inventory; (5) remove 15, modify seven, and add two new improvement activities for the 2020 performance period and future years; and (6) conclude and remove the CMS Study on Factors Associated with Reporting Quality Measures. These proposals are discussed in more detail in this proposed rule.

(b) Small, Rural, or Health Professional Shortage Areas Practices

For our previously established policies regarding small, rural, or Health Professional Shortage Areas Practices, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77188), CY 2018 Quality Payment Program final rule (82 FR 53581), and § 414.1305. In the CY 2018 Quality Payment Program final rule (82 FR 53581 through 53582), we changed the definition of rural area at § 414.1305 to mean ZIP codes designated as rural, using the most recent Health Resources and Services Administration (HRSA) Area Health Resource File data set available.

It has come to our attention that the rural area definition at § 414.1305 includes the incorrect file name for the rural designation. While we used the correct file, we just referenced it incorrectly. Therefore, we are proposing to update the MIPS rural area definition by correcting the file name. In the CY 2017 Quality Payment Program final rule (81 FR 77188), we incorrectly referenced the file we used for rural designation as ''*the most recent Health Resources and Services Administration (HRSA) Area Health Resource File data set available*'' instead of the correct file entitled ''*Federal Office of Rural Health Policy (FORHP) eligible ZIP codes*'' which may currently be found at *https://www.hrsa.gov/rural-health/about-us/definition/datafiles.html*. The HRSA Area Health Resources Files (AHRF) include data on Health Care Professions, Health Facilities, Population Characteristics, Economics, Health Professions Training, Hospital Utilization, Hospital Expenditures, and Environment at the county, state and national levels, from over 50 data sources [115] but does not contain specific data on rurality developed by HRSA's FORHP. To be clear, we have been using the more appropriate FORHP eligible ZIP code file in all previous 3 years of MIPS; we simply inadvertently listed the incorrect file name in the definition. Furthermore, the definition of rural in MIPS is based on the rural definition developed by HRSA's FORHP which may be found at *https://www.hrsa.gov/rural-health/about-us/definition/index.html*. The FORHP defines all non-Metro counties as rural and uses an additional method of determining rurality called the Rural-Urban

[115] *https://data.hrsa.gov/topics/health-workforce/ahrf.*

Commuting Area (RUCA) codes. The FORHP eligible ZIP codes are available in a file located at *https://www.hrsa.gov/sites/default/files/hrsa/ruralhealth/aboutus/definition/forhp-eligible-zips.xlsx*. Therefore, we are proposing to modify the definition of rural area at § 414.1305 to mean a ZIP code designated as rural by the Federal Office of Rural Health Policy (FORHP), using the most recent FORHP Eligible ZIP Code file available. We invite public comment on our proposal as discussed in this proposed rule.

(c) Patient-Centered Medical Home and Comparable Specialty Practice Accreditation Organizations

In the CY 2017 Quality Payment Program final rule (81 FR 77179 through 77180), we finalized at § 414.1380(b)(3)(ii) an expanded definition of what is acceptable for recognition as a certified-patient-centered medical home or comparable specialty practice. Specifically, we finalized that one of the criteria, as stated at § 414.1380(b)(3)(ii)(A), is whether the practice has received accreditation from one of four accreditation organizations that are nationally recognized; (A)(1) through (A)(4) lists the four organizations with nationally recognized patient-centered medical home accreditation programs: (1) The Accreditation Association for Ambulatory Health Care; (2) the National Committee for Quality Assurance (NCQA) Patient-Centered Medical Home; (3) The Joint Commission Designation; or (4) the Utilization Review Accreditation Commission (URAC) (81 FR 77180). In addition, we finalized another criteria at § 414.1380(b)(3)(ii)(C), which states that the practice is a comparable specialty practice that has received the NCQA Patient-Centered Specialty Recognition (81 FR 77180). Further, we finalized that the criteria for being a nationally recognized accredited patient-centered medical home are that it must be national in scope and must have evidence of being used by a large number of medical organizations as the model for their patient-centered medical home (81 FR 77180).

Since finalizing these criteria, it has come to our attention that, we do not want to exclude other organizations. It was and is not our intention to limit patient-centered medical home or comparable specialty practice accreditation organizations to those listed. We realize that there may be additional accreditation organizations that have nationally recognized programs for accrediting patient-centered medical homes and comparable specialty practices that were not included. Therefore, we request comments on our proposal to update § 414.1380(b)(3)(ii)(A) and (C) to remove specific entity names.

(d) Improvement Activities Data Submission

We are proposing changes to the improvement activities data submission for group reporting requirements, as discussed below.

(i) Submission Mechanisms

For our previously established policies regarding improvement activities performance category submission mechanisms, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53650 through 53656), the CY 2019 PFS final rule (83 FR 59777), and § 414.1360(a)(1). We are not proposing any changes to these policies.

(ii) Submission Criteria

For our previously established policies regarding improvement activities performance category submission criteria, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77185), the CY 2018 Quality Payment Program final rule (82 FR 53651 through 53652), the CY 2019 PFS final rule (83 FR 59777 through 59778), and § 414.1380. We are not proposing any changes to these policies.

(iii) Group Reporting

In this proposed rule, we are making two proposals with respect to group reporting: (a) Increasing the group reporting threshold from at least one clinician to at least 50 percent of the group beginning with the 2020 performance year, and (b) at least 50 percent of a group's National Provider Identifiers (NPIs) must perform the same activity for the same continuous 90 days in the performance period beginning with the 2020 performance year. These are discussed in more detail below.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77181), in response to a public comment, we stated that if at least one clinician within the group is performing the activity for a continuous 90 days in the performance period, the group may report on that activity. In addition, we specified that all MIPS eligible clinicians reporting as a group would receive the same score for the improvement activities performance category if at least one clinician within the group is performing the activity for a continuous 90 days in the performance period (81 FR 77181).

In the CY 2018 Quality Payment Program proposed rule (82 FR 30053), we requested comment for future consideration on issues related to whether we should establish a minimum threshold (for example, 50 percent) of the clinicians (NPIs) that must complete an improvement activity in order for the entire group (Taxpayer Identification Number (TIN)) to receive credit in the improvement activities performance category in future years. Some commenters expressed concerns that setting a minimum threshold would add complexity or burden for clinicians. Other commenters supported the establishment of a minimum participation threshold in future years, noting that a minimum threshold will ensure scoring is reflective of care delivered by the group as a whole rather than one or a few high-performing clinicians.

We believe that by Year 4 (2020 performance year) of the Quality Payment Program, clinicians should be familiar with the improvement activities performance category. We believe that increasing the minimum threshold for a group to receive credit for the improvement activities performance category will not present additional complexity and burden for a group. With over 100 improvement activities available for eligible clinicians to choose from in the Improvement Activities Inventory, which may be found at the Quality Payment Program website *https://qpp.cms.gov/*, that provide a range of options for clinicians seeking to improve clinical practice that are not specific to practice size or specialty or practice setting, we believe that a group should be able to find applicable and meaningful activities to complete that would apply to at least 50 percent of individual MIPS eligible clinicians in a group.

Therefore, we are proposing to increase the minimum number of clinicians in a group or virtual group who are required to perform an improvement activity to 50 percent for the improvement activities performance category beginning with the 2020 performance year and future years. We would like to note that if finalized the proposed changes to the group threshold would have no impact on the previously finalized policy that eligible clinicians participating in an APM will receive full points for the improvement activities performance category as discussed in the CY 2017 Quality Payment Program final rule (81 FR 77258 through 77260). This is an increase to the previously established requirement finalized in the CY 2017 Quality Payment Program final rule (81

FR 77181) that only one clinician within a TIN needs to attest to the completion of an improvement activity to get credit towards the MIPS final score. We believe a 50 percent threshold is achievable and appropriate because, if a group or virtual group has implemented an improvement activity, the activity should be recognized and adopted throughout much of the practice in order to improve clinical practice, care delivery, and outcomes. This aligns with our definition of an improvement activity at § 414.1305. In crafting our proposal, we also considered other thresholds, such as a lower threshold of 25 percent. However, we believe that improvement activities should be adopted throughout much of the practice to achieve improved outcomes. We do not believe that 25 percent group participation would reflect improved outcomes. We also considered a higher threshold of 100 percent, but have concerns that requiring every clinician within a group to perform improvement activities may be premature at this time because increasing the threshold by such a large amount may be considered burdensome to clinicians. However, we believe that 50 percent provides an appropriate balance between requiring at least half of the NPIs reporting as part of a group to participate in the improvement activities performance category and acknowledging the challenges to requiring every NPI in a group to perform the improvement activity for a group to receive credit. We also believe our proposal aligns with the 50 percent threshold for the number of practice sites that must be recognized for a TIN to receive full credit as a patient-centered medical home (82 FR 53655) and is both achievable and appropriate at this time.

Furthermore, we believe that requiring at least 50 percent of a group practice or TIN to perform an improvement activity for the same continuous 90-day performance period would facilitate improvement in clinical practice within a TIN. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77186), we considered setting the threshold for the minimum time required for performing an activity to longer periods up to a full calendar year. However, after researching several organizations we stated that we believed a minimum of 90 days is a reasonable amount of time (81 FR 77186). In addition, in response to comments we stated that we believed that each activity can be performed for a full 90 consecutive days by some, if not all, MIPS eligible clinicians, and that there are a sufficient number of activities included that any eligible clinician may select and perform for a continuous 90 days that will allow them to successfully report under this performance category (81 FR 77186).

Therefore, we are requesting comments on our proposal to revise § 414.1360(a)(2) to state that beginning with the 2020 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable; and these NPIs must perform the same activity for the same continuous 90 days in the performance period. To be clear, other submission requirements would remain the same. In other words, each TIN would need to submit an attestation for each improvement activity selected that at least 50 percent of its NPIs performed the same activity for the same continuous 90 days in the performance period. For example, TIN 1234 attests that at least 50 percent of its NPIs performed the improvement activity entitled: ''Participation in a QCDR that promotes use of patient engagement tools'' (IA_BE_7) for the same continuous 90-day period. Because IA_BE_7 is medium-weighted, the example TIN would receive 10 points toward the total possible improvement activities score. TIN 1234 also attests that at least 50 percent of its NPIs performed the improvement activity entitled: ''Implementation of formal quality improvement methods, practice changes, or other practice improvement processes'' (IA_PSPA_19) for the same continuous 90-day period. Because IA_PSPA_19 is medium-weighted, the example TIN would receive another 10 points toward the total possible improvement activities score. We refer readers to the CY 2019 Quality Payment Program final rule (83 FR 59753 through 59754) where we discuss the data submission deadline which was finalized at § 414.1325(e)(1) as follows: For the direct, login and upload, login and attest, and CMS Web Interface submission types, March 31 following the close of the applicable performance period or a later date as specified by CMS.

We invite public comments on our proposal as discussed above, as well as the alternatives considered.

(e) Improvement Activities Inventory

We are proposing changes to the Improvement Activities Inventory to: (1) Establish removal factors to consider when proposing to remove improvement activities from the Inventory; (2) remove 15 improvement activities for the 2020 performance period and future years contingent on our proposed removal factors being finalized; (3) modify seven existing improvement activities for the 2020 performance period and future years; and (4) add two new improvement activities for the 2020 performance period and future years. These proposals are discussed in more detail in this proposed rule.

(i) Proposed Factors for Consideration in Removing Improvement Activities

In the CY 2017 Quality Payment Program final rule (82 FR 53660 through 53661), we discussed that in future years, we anticipated developing a process and establishing factors for identifying activities for removal from the Improvement Activities Inventory through the Annual Call for Activities process. In the CY 2018 Quality Payment Program proposed rule (82 FR 30056), we invited public comments on what criteria should be used to identify improvement activities for removal from the Inventory. A few commenters did not support the idea of establishing removal factors for improvement activities, believing that many practices have made financial investments to perform these activities and that no activities should be removed. Some commenters suggested that we should remove activities that: Have become obsolete, are topped out, do not show demonstrated improvements over time, or are not attested to for three consecutive years. The commenters recommended that their removal should be conducted using an approach similar to what is used for the removal of quality measures. In our responses, we stated that we appreciate the commenters input. In addition, we understand that many practices may have made financial investments to perform these activities, but believe that over time, certain improvement activities should be considered for removal to ensure the list is robust and relevant. We will fully examine each activity prior to removal. In addition, we stated that commenters would have an opportunity to provide their input during notice-and-comment rulemaking. We agreed with commenters that we should remove activities as needed and should consider the removal criteria already established for quality measures. We continue to believe that having factors to consider in removing improvement activities would provide transparency and alignment with the removal of quality measures. Therefore, we are proposing to adopt the following factors for our consideration when

proposing the removal of an improvement activity:

- Factor 1: Activity is duplicative of another activity;
- Factor 2: There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice;
- Factor 3: Activity does not align with current clinical guidelines or practice;
- Factor 4: Activity does not align with at least one meaningful measures area;
- Factor 5: Activity does not align with the quality, cost, or Promoting Interoperability performance categories;
- Factor 6: There have been no attestations of the activity for 3 consecutive years; or
- Factor 7: Activity is obsolete.

These factors directly reflect those already finalized for quality measures found in the CY 2019 PFS final rule (83 FR 59765). The removal of improvement activities from the Inventory, including discussion of the removal factor(s) considered, would occur through notice-and-comment rulemaking. We note that these removal factors are considerations taken into account when deciding whether or not to remove improvement activities; but they are not firm requirements.

Therefore, we invite public comments on our proposal to implement factors to consider in removing improvement activities from the Inventory. In conjunction with this proposal, we are proposing a number of improvement activity removals as discussed in the next section and in Appendix 2 of this proposed rule. Those removals are contingent upon finalization of these removal factors.

(ii) New Improvement Activities and Modifications to and Removal of Existing Improvement Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would add new improvement activities or modifications to existing improvement activities to the Improvement Activities Inventory through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), and Tables X and G in the Appendix 2 of the CY 2019 PFS final rule (83 FR 60286 through 60303) for our previously finalized Improvement Activities Inventory. We also refer readers to the Quality Payment Program website at *https://qpp.cms.gov/* for a complete list of the most current list of improvement activities. In this proposed rule, we invite comments on our proposals to: (1) Remove 15 improvement activities from the Inventory beginning with the 2020 performance period, (2) modify seven existing improvement activities for 2020 performance period and future years, and (3) add two new improvement activities for 2020 performance period and future years. We refer readers to Appendix 2 of this proposed rule for further details. Our proposals to remove improvement activities are being made in conjunction with our proposal to adopt removal factors and are contingent upon finalization of that proposal.

(f) CMS Study on Factors Associated With Reporting Quality Measures

In this proposed rule, we are proposing to end this study and concurrently, remove the incentive under the improvement activity performance category that this study provided for study participants.

(i) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77195), we created the Study on Improvement Activities and Measurement. In our quest to create a culture of improvement using evidence-based medicine on a consistent basis, we believe fully understanding the strengths and limitations of the current processes of collecting and submitting quality measurement data is crucial to better understand and improve these current processes. We proposed to conduct a study on clinical improvement activities and measurement to examine clinical quality workflows and data capture using a simpler approach to quality measures (81 FR 77195). In the CY 2018 Quality Payment Program final rule (82 FR 53662) and CY 2019 PFS final rule (83 FR 59783), we finalized updates to the study.

Starting in CY 2017, this annual study was slated for a minimum period of 3 years, as stated in CY 2019 PFS final rule (83 FR 59776). Study participants were recruited every study year. The study population started in CY 2017 with a minimum of 42 individuals (81 FR 77195), grew to a minimum of 102 individuals for CY 2018 (82 FR 53662) and 200 individuals for CY 2019 (83 FR 59783). Each years' study population is comprised of the following categories: Urban versus non-urban, groups and individual clinicians; clinicians reporting quality measures in groups or reporting individually, different practice sizes; and different specialty groups (81 FR 77195). These changes to the study sample size over the years provided data for the study's analysis. The goals of the study are to see whether there will be improved outcomes, reduced burden in reporting, and enhancements in clinical care by selected MIPS eligible clinicians desiring: A more data driven approach to quality measurement, measure selection unconstrained by a CEHRT program or system, improving data quality submitted to CMS, enabling CMS get data more frequently and provide feedback more often (81 FR 77195). To encourage participation by clinicians and counterbalance clinician burden for anticipation of study, participating clinicians were incentivized with full improvement activity credit as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77195 through 77197).

(ii) Proposal To End and Remove Study

We believe by the end of 2020 we will have reached the minimum sample size and have accrued the minimum data needed for the analysis to achieve the study goals. Therefore, we request comments on our proposal to conclude this study at the end of the CY 2019 performance period. In conjunction with our proposal to end the study, we are also proposing to remove the study and the incentive provided towards the improvement activity performance category beginning with the 2020 performance period. If the study is ended as proposed above, we are proposing to remove this activity because it would be obsolete (proposed removal factor 7). As a result, the full improvement activity credit given to participants as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77195–77197), would no longer be available starting with the 2020 performance period.

(iii) Future Steps

After completing this data collection phase, we next plan to analyze the data gathered (which include lessons learned) and to make recommendations to improve outcomes, reduce burden, and enhance clinical care. We plan to finish the final data analysis by Spring 2020. This analysis would contain all the study years. It would show the trends and associations of all the factors we examined. It would also show the lessons learnt by study participants over the 3 years of the study. At the conclusion of this study and after analysis of the results, we plan to shift our focus to implementation of recommendations. We intend for this to include feedback to clinicians and stakeholders and educational and

outreach work. We plan to undertake education and outreach to the public. We would also include the results in other Quality Payment Program educational materials such as webinars.

(4) Promoting Interoperability

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of Certified Electronic Health Record Technology (CEHRT) as a performance category under the MIPS. In prior rulemaking, we referred to this performance category as the Advancing Care Information performance category, and it was reported by MIPS eligible clinicians as part of the overall MIPS program. In 2018, we renamed the Advancing Care Information performance category as the Promoting Interoperability performance category (83 FR 35912). As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the Promoting Interoperability performance category.

For the Promoting Interoperability performance category, our proposals include: (1) For the 2023 MIPS payment year, establishing a performance period of a minimum of a continuous 90-day period within CY 2021, up to and including the full calendar year; (2) making the Query of Prescription Drug Monitoring Program (PDMP) measure optional in CY 2020, and in the event we finalize this proposal, making the e-Prescribing measure worth up to 10 points in CY 2020; (3) removing the numerator and denominator for the Query of PDMP measure and instead requiring a ''yes/no'' response beginning in CY 2019; (4) removing the Verify Opioid Treatment Agreement measure beginning in CY 2020; (5) redistributing the points for the Support Electronic Referral Loops by Sending Health Information measure to the Provide Patients Access to Their Health Information measure if an exclusion is claimed, beginning in CY 2019; (6) revising the description of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure exclusion to more clearly and precisely capture our intended policy, beginning in CY 2019; (7) continuing the existing policy of reweighting the Promoting Interoperability performance category for certain types of non-physician practitioner MIPS eligible clinicians for the performance period in 2020; and (8) proposals related to hospital-based MIPS eligible clinicians and non-patient facing MIPS eligible clinicians in groups.

These proposals are discussed in more detail in this proposed rule.

We are also seeking input through Requests for Information as follows: (1) Potential Opioid Measures for Future Inclusion in the Promoting Interoperability performance category, (2) NQF and CDC Opioid Quality Measures, (3) a Metric to Improve Efficiency of Providers within EHRs, (4) the Provider to Patient Exchange Objective, (5) Integration of Patient-Generated Health Data into EHRs Using CEHRT, and (6) Engaging in Activities that Promote the Safety of the EHR.

(b) Goals of Proposed Changes to the Promoting Interoperability Performance Category

As we look toward the future of the Promoting Interoperability performance category, the general goals of our proposals in this proposed rule center on: (1) A priority of stability within the performance category after the recent changes made in the CY 2019 PFS final rule (83 FR 59785 through 59820) while continuing to further interoperability through the use of CEHRT; (2) reducing administrative burden; (3) continued use of the 2015 Edition CEHRT; (4) improving patient access to their EHRs so they can make fully informed health care decisions; and (5) continued alignment with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs, where appropriate.

(c) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2019 PFS final rule at § 414.1320(e)(1) (83 FR 59745 through 59747), for purposes of the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period within CY 2020, up to and including the full CY 2020 (January 1, 2020 through December 31, 2020).

For the 2023 MIPS payment year, we are proposing to add § 414.1320(f)(1), which would establish a performance period for the Promoting Interoperability performance category of a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year (CY 2021). This proposal aligns with the proposed EHR reporting period in CY 2021 for the Medicare Promoting Interoperability Program for eligible hospitals and CAHs (84 FR 19554). We believe this would be an appropriate performance period because of the maturation needed within the performance category, including the changes to measures and other changes being proposed in this rule. In addition, it would offer stability and continuity for the Promoting Interoperability performance category after the performance category overhaul that was finalized in the CY 2019 PFS final rule (83 FR 59785 through 59820).

We are requesting comments on this proposal.

(d) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Proposed Changes to Measures for the e-Prescribing Objective

(A) Background

Beginning with the MIPS performance period in 2019, we adopted two new measures for the e-Prescribing objective that are based on electronic prescriptions for controlled substances: (1) Query of Prescription Drug Monitoring Program (PDMP) (83 FR 59800 through 59803); and (2) Verify Opioid Treatment Agreement (83 FR 59803 through 59806). These measures built upon the meaningful use of CEHRT, as well as the security of electronic prescribing of Schedule II controlled substances while preventing diversion. For both measures, we defined opioids as Schedule II controlled substances under 21 CFR 1308.12, as they are recognized as having a high potential for abuse with potential for severe psychological or physical dependence. Additionally, we noted the intent of the new measures was not to dissuade the prescribing or use of opioids for patients with medical diagnoses or conditions that benefit from their use, such as patients diagnosed with cancer or those receiving hospice.

During the comment period for the CY 2019 PFS proposed rule (83 FR 35921 through 35925), and subsequently through public forums and correspondence, we received extensive comments from stakeholders regarding the Query of PDMP measure and the Verify Opioid Treatment Agreement measure. While this feedback is the main catalyst for our proposals, there have also been significant legislative changes that have the potential to

positively impact the Promoting Interoperability performance category, specifically the Substance Use–Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271, enacted October 24, 2018). This legislation was enacted to address the opioid crisis and affects a wide range of HHS programs and policies. While this legislation is not the main reason for our proposals, we believe it may significantly affect the maturation, requirements, and use of PDMPs and State networks upon which the Query of PDMP measure is dependent.

In this proposed rule, we are aiming to be responsive to the comments that we have received from stakeholders since the CY 2019 PFS final rule was published and to take into account certain aspects of the SUPPORT Act that may have implications for the policy goals of the Promoting Interoperability performance category.

As explained in further detail below, we are proposing to make the Query of PDMP measure optional in CY 2020, remove the numerator and denominator that we established for the Query of PDMP measure and instead require a ''yes/no'' response beginning in CY 2019, and remove the Verify Opioid Treatment Agreement measure beginning in CY 2020. In section III.K.3.c.(4)(d)(i) of this proposed rule, we are also requesting information on potential new opioid use disorder (OUD) prevention and treatment-related measures. We believe the requests for information will help to inform future rulemaking and not only help prevent and treat substance use disorder, but allow us to adopt measures that enable flexibility without added burden for clinicians. We value stakeholders' continued interest in and support for combating the nation's opioid epidemic.

(B) Query of Prescription Drug Monitoring Program (PDMP) Measure

(aa) Query of PDMP Measure

As we stated in the CY 2019 PFS final rule (83 FR 59800 through 59803), the Query of PDMP measure is optional and available for bonus points for the 2019 performance period, and we will propose our policy for the Query of a PDMP measure for the 2020 performance period in future rulemaking. We afforded MIPS eligible clinicians' flexibility for implementing this measure, including the flexibility to query the PDMP in any manner allowed under their State law.

However, we have received substantial feedback from health IT vendors and specialty societies that this flexibility presents unintended challenges, such as the significant burden associated with IT system design and development needed to accommodate the measure and any future changes to it. During the CY 2019 PFS proposed rule comment period (83 FR 35922 through 35925) and after the final rule was published, these stakeholders stated that it is premature to require the Query of PDMP measure in the 2020 performance period especially given the maturation needed in PDMP development.

We agree with stakeholders that PDMPs are still maturing in their development and use. In addition there is considerable variation among state PDMP programs as many only operate within a state and are not linked to larger systems. For more information, we refer readers to the following: The National Alliance of Model State Drug Laws (*https://namsdl.org/topics/pdmp/*) and PDMP Training and Technical Assistance Center (*https://www.pdmpassist.org/content/pdmp-maps-and-tables*).

Stakeholders also mentioned the challenge posed by the current lack of integration of PDMPs into the EHR workflow. Historically, health care providers have had to go outside of the EHR workflow in order to separately log in to and access the State PDMP. In addition, stakeholders noted the wide variation in whether PDMP data can be stored in the EHR. By integrating PDMP data into the health record, health care providers can improve clinical decision making by utilizing this information to identify potential opioid use disorders, inform the development of care plans, and develop effective interventions. ONC is currently engaged in an assessment to better understand the current state of policy and technical factors impacting PDMP integration across States. This assessment is exploring factors like PDMP data integration, standards and hubs used to facilitate interstate PMDP data exchange, access permissions, and laws and regulations governing PDMP data storage.

In October 2018, the SUPPORT Act became law, signifying an important investment and approach for our nation in combating the opioid epidemic. The provisions of this law aim to provide for opioid use disorder prevention, recovery, and treatment and aim to increase access to evidence-based treatment and follow-up care included through legislative changes specific to the Medicare and Medicaid programs. Specifically, with respect to PDMPs, the SUPPORT Act includes new requirements and federal funding for PDMP enhancement, integration, and interoperability, and establishes mandatory use of PDMPs by certain Medicaid providers, in an effort to help reduce opioid misuse and overprescribing, and in an effort to help promote the overall effective prevention and treatment of opioid use disorder.

Section 5042(a) of the SUPPORT Act added section 1944 to the Act, titled ''Requirements relating to qualified prescription drug monitoring programs and prescribing certain controlled substances.'' This section increases federal Medicaid matching rates during FY 2019 and 2020 for certain state expenditures relating to qualified PDMPs administered by states. Under section 1944(b)(1) of the Act, to be a qualified PDMP, a PDMP must facilitate access by a covered provider to, at a minimum, the following information with respect to a covered individual, in as close to real-time as possible: Information regarding the prescription drug history of a covered individual with respect to controlled substances; the number and type of controlled substances prescribed to and filled for the covered individual during at least the most recent 12-month period; and the name, location, and contact information of each covered provider who prescribed a controlled substance to the covered individual during at the least the most recent 12-month period. Under section 1944(b)(2) of the Act, a qualified PDMP must also facilitate the integration of the information described in section 1944(b)(1) of the Act into the workflow of a covered provider, which may include the electronic system used by the covered provider for prescribing controlled substances.

Section 1944(f) of the Act establishes, for FY 2019 and FY 2020, a 100 percent federal Medicaid matching rate for state expenditures to design, develop, or implement a PDMP that meets the requirements outlined in section 1944(b)(1) and (2) of the Act, and to make connections to that PDMP. Section 1944(f)(2) of the Act specifies that, to qualify for the 100 percent federal matching rate, a state must have in place agreements with all contiguous states that, when combined, enable covered providers in all the contiguous states to access, through the PDMP, all information described in 1944(b)(1) of the Act.

Section 5042(b) of the SUPPORT Act requires CMS, in consultation with the Centers for Disease Control and Prevention (CDC), to issue guidance not later than October 1, 2019 on best practices on the uses of PDMPs required of prescribers and on protecting the

privacy of Medicaid beneficiary information maintained in and accessed through PDMPs. Furthermore, section 5042(c) of the SUPPORT Act requires that HHS develop and publish, not later than October 1, 2020, model practices to assist State Medicaid program operations in identifying and implementing strategies to utilize data-sharing agreements described in section 1944(b) of the Act for the following purposes: Monitoring and preventing fraud, waste, and abuse; and improving health care for individuals enrolled in Medicaid who transition in and out of Medicaid coverage, who may have sources of health care coverage in addition to Medicaid coverage, or who pay for prescription drugs with cash. We note that section 7162 of the SUPPORT Act also supports PDMP integration as part of the CDC's grant programs aimed at efficiency and enhancement by states, including improvement in the intrastate and interstate interoperability of PDMPs.

In addition, the explanatory statement that accompanied Title II of Division H of the Consolidated Appropriations Act, 2018 (Pub. L. 115–141),[116] encouraged the CDC to work with the ONC to enhance the integration of PDMPs and EHRs. As part of this effort, the CDC and ONC are collaborating to expand upon previous and leverage input from current federal efforts to advance and scale PDMP integration with health IT systems. This collaboration includes testing and refining standard-based approaches to enable effective integration into clinical workflows, exploring emerging technical solutions to enhance access and use of PDMP data, providing technical resources to a variety of stakeholders to advance and scale the interoperability of health IT systems and PDMPs, and incorporating policy considerations, as relevant, to inform the implementation and success of integration approaches.

We understand that there is wide variation across the country in how health care providers are implementing and integrating PDMP queries into health IT and clinical workflows, and that it could be burdensome for health care providers if we were to narrow the measure to allow only a single workflow. At the same time, we have heard extensive feedback from EHR developers that incorporating the ability to count the number of PDMP queries in CEHRT would require more robust certification specifications and standards. These stakeholders state that health IT developers may face significant cost burdens under the current flexibility allowed for health care providers if they fully develop numerator and denominator calculations for all the potential use cases and are required to change the specification at a later date. Developers have indicated that the costs of additional development will likely be passed on to health care providers without additional benefit as this development would be solely for the purpose of calculating the measure rather than furthering the clinical goal of the measure.

Given the stakeholder concerns discussed above regarding the lack of integration, the recent enactment of the SUPPORT Act (in particular, its provisions specific to Medicaid providers and qualified PDMPs), and the activities funded by the CDC, we believe that additional time is needed to evaluate the changing PDMP landscape prior to requiring a Query of PDMP measure, or introducing requirements related to EHR–PDMP integration.

Therefore, we are proposing to make the Query of PDMP measure optional and eligible for 5 bonus points for the Electronic Prescribing objective in CY 2020. Making the measure optional in CY 2020 would allow time for further integration of PDMPs and EHRs to minimize the burden on MIPS eligible clinicians reporting this measure while still giving clinicians an opportunity to report on and earn points for the measure. We are proposing that, in the event we finalize this proposal for the Query of PDMP measure, the e-Prescribing measure would be worth up to 10 points in CY 2020.

In addition, beginning with the 2019 performance period, we are proposing to remove the numerator and denominator that we established for the Query of PDMP measure in the CY 2019 PFS final rule (83 FR 59800 through 59803) and instead require a ''yes/no'' response. Under this proposal, the measure description would remain the same (83 FR 59803), but instead of submitting numerator and denominator information for the measure, MIPS eligible clinicians would submit a ''yes/no'' response. A ''yes'' response would indicate that for at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician used data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law. We are proposing this change to give us more time to restructure the measure and develop a robust measure that meets the needs of both health care providers and other stakeholders. Because currently there are not standards-based interfaces between CEHRT and PDMPs, health care providers must manually track the number of times that they query a PDMP outside of CEHRT. We are proposing this change to reduce the burden on health care providers of having to manually keep track of information related to the measure and to mitigate the burden on health IT developers who would otherwise have to develop the measure's numerator and denominator calculations when we expect to propose changes to the measure in the near future. Therefore, health care providers and health IT developers have suggested that, given the current state, there would be a significant reduction in burden by allowing health care providers to satisfy the measure by submitting a ''yes/no'' response, rather than reporting a numerator and denominator. In addition, for the 2019 performance period, the Query of PDMP measure is not scored based on a clinician's performance as determined by a numerator and denominator; instead, it is an optional measure that is eligible for a full five bonus points regardless of how a clinician performs (83 FR 59794 through 59795). Thus, because the measure is not scored based on performance, requiring a ''yes/no'' response instead of a numerator and denominator would not affect the potential number of points that a clinician could earn by reporting on the measure.

We do not believe that these changes would result in additional costs (time or money) for health care providers, and instead would reduce the burden of manually tracking information needed to report on this measure in its current form. For CY 2019, we did not provide exclusions for the Query of PDMP and Verify Opioid Treatment Agreement measures because they were optional and eligible for bonus points, and similarly, we do not believe exclusions would be necessary for the Query of PDMP measure if we finalize our proposal to make the measure optional and eligible for bonus points in CY 2020.

We also welcome comments on future timing for requiring a measure that includes EHR–PDMP integration and on the value of the measure for advancing the effective prevention and treatment of opioid use disorder especially in relation to the requirements of the SUPPORT Act described above.

We also note that some stakeholders have requested that we define a value set for controlled substances for the opioid-related measures, Query of

[116] *https://www.govinfo.gov/content/pkg/CREC-2018-03-22/html/CREC-2018-03-22-pt3-PgH2697.htm.*

PDMP and Verify Opioid Treatment Agreement. In the CY 2019 PFS final rule (83 FR 59803), for the Query of PDMP and Verify Opioid Treatment Agreement measures, we defined opioids as Schedule II controlled substances under 21 CFR 1308.12. We recognize that some challenges remain related to electronic prescribing of controlled substances, including more restrictive state laws and lack of products both for health care providers and pharmacies that include the necessary functionalities. We anticipate working closely with the Drug Enforcement Administration (DEA) on future technical requirements that can better support measurement of adoption and use of electronic prescribing of controlled substances, which may include the definition of a value set related to such measures. As more information on developing technical requirements becomes available, we will provide additional information.

As we seek comment and continue to advance this measure, we are excited about future innovations that may help improve PDMPs and support the electronic prescribing of controlled substances. We envision a future state where PDMP data is integrated into the clinical workflow and where clinicians do not have to access multiple systems to find and reconcile the information. While we may have a long distance to go to get to this state, we believe that it is an achievable goal for the future of the Promoting Interoperability performance category.

We are inviting comments on these proposals.

(C) Verify Opioid Treatment Agreement Measure

In the CY 2019 PFS final rule (83 FR 59803 through 59806), we finalized the Verify Opioid Treatment Agreement measure as optional in both CYs 2019 and 2020. Since we proposed this measure, we have received feedback from stakeholders that this measure has presented significant implementation challenges and an increase in burden, and does not further interoperability. Below, we outline some of the ongoing concerns we heard since the measure was finalized in the CY 2019 PFS final rule (83 FR 59803 through 59806).

(aa) Lack of Certification Standards and Criteria

Stakeholders have continually expressed concern regarding the lack of defined data elements, structure, standards and criteria for the electronic exchange of opioid treatment agreements and how this impacts verifying whether there is an opioid treatment agreement to meet this measure. We acknowledged these concerns in the CY 2019 PFS final rule (83 FR 59803 through 59806).

In the CY 2019 PFS final rule (83 FR 59803 through 59806), we stated that there are a number of ways that certified health IT may be able to support the electronic exchange of opioid abuse-related treatment data such as the care plan template within the Consolidated-Clinical Document Architecture (C–CDA). We stated this information could be considered as part of an opioid treatment agreement, even though we did not define the elements of one. However, we understand that while such standards may include relevant information, the lack of clarity around a specific standard to support incorporation of an opioid treatment agreement presents an additional source of burden to clinicians seeking to report on the measure.

(bb) Calculating 30 Cumulative Day Look-Back Period

Another area where stakeholders have expressed concern is how to calculate 30 cumulative days of opioid prescriptions in a 6-month period. One possible solution we offered was to utilize the NCPDP 10.6 Medication History query. In the CY 2019 PFS final rule (83 FR 59803 through 59806), we noted that the Medication History query does not contain a discrete field for prescription days and relies on third party data that may not be discrete. Since the CY 2019 PFS final rule was published, stakeholders have continued to express this concern and impress upon us that the 30-cumulative day total in a 6-month look-back period cannot be automatically calculated, requiring health care providers to engage in a burdensome, manual calculation process if they wish to report on this measure.

In addition, we have heard concerns over which medications should be used to determine the 30-cumulative day threshold. For example, stakeholders were unsure if medications given while a patient is admitted to the hospital should count towards the 30 cumulative days and also how as needed, or PRN, medications should be addressed.

Stakeholders have also indicated that this measure could present timing challenges. For example, it may cause patients being discharged on opioids to be delayed in their discharge to account for the possible time-consuming nature of having to search for an opioid treatment agreement.

(cc) Unintended Burden Caused by Flexibility

In the CY 2019 PFS final rule (83 FR 59803 through 59806), we chose not to define what constitutes an opioid treatment agreement. While we believed that this would allow flexibility for health care providers to determine which elements they believed were most important to an opioid treatment agreement, we have heard from stakeholders that the lack of definition and standards around what would constitute an opioid treatment agreement has created an unintended burden. Specifically, some stakeholders indicated that we should define an opioid treatment agreement so that MIPS eligible clinicians would have a standardized definition of an opioid treatment agreement and the criteria to make up an opioid treatment agreement. However, other stakeholders indicated that given the lack of consensus within the industry on what should or should not be included in an opioid treatment agreement and on the clinical efficacy of various options for such agreements, that it would be inappropriate for us to define what should constitute an opioid treatment agreement at this time.

We have heard from stakeholders that the challenges described above result in a measure that is vague, burdensome to measure and does not necessarily offer a clinical value to the health care providers or support the clinical goal of supporting OUD treatment. Therefore, we are proposing to remove the Verify Opioid Treatment Agreement measure from the Promoting Interoperability performance category beginning with the performance period in CY 2020.

While we are proposing to remove the Verify Opioid Treatment Agreement measure, we believe there may be other opioid measures that would be more effective in combatting the opioid epidemic, offer value for health care providers in measuring the impacts of health IT-enabled resources on OUD prevention and treatment, and engage patients in care coordination and planning. We are seeking public comment on a series of question in requests for information regarding new opioid measures in section III.K.3.c(4)(d)(i) of this proposed rule.

We invite comments on this proposal.

(ii) Health Information Exchange Objective

There are two measures under the Health Information Exchange objective: The Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating

Health Information Measure. We are proposing minor modifications to both measures.

(A) Proposed Modification of the Support Electronic Referral Loops by Sending Health Information Measure

In the CY 2019 PFS final rule (83 FR 59807 through 59808), we renamed the Send a Summary of Care measure to the Support Electronic Referral Loops by Sending Health Information measure. Although an exclusion is available for this measure (83 FR 59808), we acknowledged that we did not address in the CY 2019 PFS proposed rule how the points for the measure would be redistributed in the event the exclusion is claimed, and stated that we intended to propose a redistribution policy in next year's rulemaking (83 FR 59795). Accordingly, we are proposing to redistribute the points for the Support Electronic Referral Loops by Sending Health Information measure to the Provide Patients Access to Their Health Information measure if an exclusion is claimed. We have chosen to redistribute the points to the Provide Patients Access to Their Health Information measure because we believe that many MIPS eligible clinicians may be eligible to claim exclusions for both measures under the Health Information Exchange objective. Under our existing policy (83 FR 59788), if an exclusion is claimed for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, the 20 points associated with it will be redistributed to the Support Electronic Referral Loops by Sending Health Information measure. Under our proposal, if exclusions are claimed for both the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure and the Support Electronic Referral Loops by Sending Health Information measure, the 40 points associated with these measures would be redistributed to the Provide Patients Access to Their Health Information measure. We are proposing that this redistribution policy would be applicable beginning with the 2019 performance period/2021 MIPS payment year.

We invite comments on this proposal.

(B) Modification of the Support Electronic Referral Loops by Receiving and Incorporating Health Information Measure

In the CY 2019 PFS final rule (83 FR 59808 through 59812), we replaced the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure with a new measure called the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. We established the following exclusion for the new measure: Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period would be excluded from this measure (83 FR 59812). We are proposing to revise this description of the exclusion to more clearly and precisely capture our intended policy. The Request/Accept Summary of Care measure, which as noted previously was replaced by the new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, included the following exclusion: Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period (83 FR 59798, 82 FR 53679 through 53680). Our intention was to use that same exclusion from the Request/Accept Summary of Care measure for the new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. Instead, the description of the exclusion that we included in the CY 2019 PFS final rule (83 FR 59812) did not precisely track the description of the Request/Accept Summary of Care measure exclusion, and could be construed in a way that would make the exclusion more difficult for a MIPS eligible clinician to meet. Specifically, it could be read to create two different sets of exclusion criteria: Receiving fewer than 100 transitions of care or referrals; or having fewer than 100 encounters with patients never before encountered. This was not our intention. Rather, as with the Request/Accept Summary of Care measure exclusion, our intention was that a combination of the two criteria must occur fewer than 100 times during the performance period for the exclusion to be applicable to a MIPS eligible clinician. Thus, we are proposing to revise the description of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure exclusion to track the description of the Request/Accept Summary of Care measure exclusion (83 FR 59798, 82 FR 53679 through 53680): Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period. For example, during the performance period, if a MIPS eligible clinician received 50 transitions of care, 50 referrals, and 50 patient encounters in which they have never before encountered the patient, the total sum of 150 would be above the threshold of fewer than 100 times, and therefore the MIPS eligible clinician would not be eligible for this exclusion. We are proposing that the revised description of the exclusion would be applicable beginning with the 2019 performance period/2021 MIPS payment year.

For ease of reference, Table 41 lists the objectives and measures for the Promoting Interoperability performance category for the 2020 performance period as revised to reflect the proposals made in this proposed rule. For more information on the 2015 Edition certification criteria required to meet the objectives and measures, we refer readers to Table 43 in the CY 2019 PFS final rule (83 FR 59817).

BILLING CODE 4120–01–P

TABLE 41: Objectives and Measures for the Promoting Interoperability Performance Category in 2020

Objective	Measure	Numerator	Denominator	Exclusion
e-Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
e-Prescribing: Generate and transmit permissible prescriptions electronically.	Query of PDMP (bonus): For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law.	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

Objective	Measure	Numerator	Denominator	Exclusion
new patient, and incorporates summary of care information from other health care providers into their EHR using the functions of CEHRT.				
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other health care providers into their EHR using the functions of CEHRT.	Support Electronic Referral Loops by Receiving and Incorporating Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, mediation allergy, and current problem list.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information.	Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and	Number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications	Number of unique patients seen by the MIPS eligible clinician during the performance period.	N/A

BILLING CODE 4120–01–C

(e) Scoring Methodology

(i) Proposed Changes to the Scoring Methodology for the 2020 Performance Period

In the CY 2019 PFS final rule (83 FR 59785 through 59796), we finalized a new performance-based scoring methodology for the Promoting Interoperability performance category beginning with the performance period in 2019. As previously discussed in section III.K.3.c.(4)(d)(i) of this proposed rule, we are proposing to: (1) Make the Query of PDMP measure optional and eligible for five bonus points in CY 2020; (2) make the e-Prescribing measure worth up to 10 points in CY 2020, in the event we finalize the proposal for the Query of PDMP measure; and (3) remove the Verify Opioid Treatment Agreement measure beginning in 2020. Table 42 reflects these proposals, although the maximum points available do not include points that would be redistributed in the event that an exclusion is claimed.

TABLE 42: Proposed Scoring Methodology for the Performance Period in 2020

Objectives	Measures	Maximum Points
e-Prescribing	e-Prescribing**	10 points
	Query of PDMP	5 points (*bonus*)
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information**	20 points
	Support Electronic Referral Loops by Receiving and Incorporating Health Information**	20 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report to two different public health agencies or clinical data registries for any of the following: Immunization Registry Reporting** Electronic Case Reporting** Public Health Registry Reporting** Clinical Data Registry Reporting** Syndromic Surveillance Reporting**	10 points

** Exclusion available.

BILLING CODE 4120–01–C

(f) Additional Considerations

(i) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

In prior rulemaking (83 FR 59818 through 59819), we discussed our belief that certain types of MIPS eligible clinicians (NPs, PAs, CNSs, and CRNAs) may lack experience with the adoption and use of CEHRT. Because many of these non-physician clinicians were or are not eligible to participate in the Medicare or Medicaid EHR Incentive Program (now known as the Promoting Interoperability Program), we stated that we have little evidence as to whether there are sufficient measures applicable and available to these types of MIPS eligible clinicians under the advancing care information (now known as Promoting Interoperability) performance category. We established a policy at § 414.1380(c)(2)(i)(A)(5) for the performance periods in 2017, 2018, and 2019 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act. We stated our intention to use data from the first performance period (2017) to further evaluate the participation of these MIPS eligible clinicians in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians.

We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category, and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. While we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For example, when a group of MIPS eligible clinicians chooses to report for MIPS as a group, the data submitted are representative of that entire group, as opposed to each individual MIPS eligible clinician in the group submitting data that exclusively reflect his/her own performance. Approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. Additionally, we are challenged because many of the measures that were available for submission for the 2017 performance period are now unavailable, due to our discontinuation of the Promoting Interoperability transition measure set, and the overhaul of the performance category that further reduced the number of available measures. For these reasons, we are unable to determine, at this time, whether the measures currently specified for the Promoting Interoperability performance category for the 2020 performance period are applicable and available for NPs, PAs, CRNAs, and CNSs. However, as more data beyond this first year become available, we plan to reevaluate the measures and consider how we could ensure that there are sufficient measures applicable and available for these types of MIPS eligible clinicians.

Thus, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the performance period in 2020, and to revise § 414.1380(c)(2)(i)(A)(*5*) to reflect this proposal. We are requesting public comments on this proposal.

(ii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologist, Qualified Audiologists, Clinical Psychologists, and Registered Dieticians or Nutrition Professionals

In the CY 2019 PFS final rule (83 FR 59819 through 59820), we adopted a policy at § 414.1380(c)(2)(i)(A)(4) to apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs for the performance periods in 2017–2019 to these new types of MIPS eligible clinicians (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals) for the performance period in 2019. Because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category.

For the reasons discussed in section III.K.3.c.(4)(f)(i), for the performance period in 2020, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals, and to revise § 414.1380(c)(2)(i)(A)(4) to reflect this proposal. We invite comments on this proposal.

(iii) Hospital-Based MIPS Eligible Clinicians in Groups

We define a hospital-based MIPS eligible clinician under § 414.1305 as a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of services identified by the Place of Service (POS) codes used in the HIPAA standard transaction as an inpatient hospital (POS 21), on campus outpatient hospital (POS 22), off campus outpatient hospital (POS 19), or emergency room (POS 23) setting, based on claims for the MIPS determination period (81 FR 77238 through 77240, 82 FR 53686 through 53687, 83 FR 59727 through 59730). We established under § 414.1380(c)(2)(i)(C)(6) that a MIPS eligible clinician who is a hospital-based MIPS eligible clinician as defined in § 414.1305 will be assigned a zero percent weight for the Promoting Interoperability performance category, and the points associated with the Promoting Interoperability performance category will be redistributed to another performance category or categories (81 FR 77238 through 77240, 82 FR 53684, 83 FR 59871). However, if a hospital-based MIPS eligible clinician chooses to report on the Promoting Interoperability performance category measures, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score. We stated that this policy includes MIPS eligible clinicians choosing to report as part of a group or part of a virtual group (82 FR 53687).

Under § 414.1310(e)(2)(ii), individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data across the group's TIN (81 FR 77058). For groups reporting on the Promoting Interoperability performance category,

we stated that group data should be aggregated for all MIPS eligible clinicians within the group (81 FR 77214 through 77216, 82 FR 53687). We stated that this includes those MIPS eligible clinicians who may qualify for a zero percent weighting of the Promoting Interoperability performance category due to circumstances such as a significant hardship or other type of exception, hospital-based or ASC-based status, or certain types of non-physician practitioners (82 FR 53687). We established at § 414.1380(c)(2)(iii) that for MIPS eligible clinicians submitting data as a group or virtual group, in order for the Promoting Interoperability performance category to be reweighted, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting (82 FR 53687, 83 FR 59871). We have heard from several stakeholders that our policy for groups that include hospital-based MIPS eligible clinicians sets a threshold that is too restrictive for a variety of reasons. Some stated that due to high turnover rates for hospital medicine groups, many such groups rely on locum tenens clinicians who may practice in multiple settings. They stated that if a hospital medicine group includes only one MIPS eligible clinician who does not meet the definition of a hospital-based MIPS eligible clinician, it could prevent the group from qualifying for reweighting because not all of the MIPS eligible clinicians in the group would be considered hospital-based. A few acknowledged that while hardship exceptions are available for MIPS eligible clinicians who lack control over CEHRT because they use the hospital's CEHRT, it is an administrative burden to have to submit a hardship exception application, especially if the clinician has a locum tenens relationship. We agree that hospital medicine groups may face unique circumstances due to the nature of their practice area and the staffing practices described by stakeholders. Thus, we are proposing to revise the definition of a hospital-based MIPS eligible clinician under § 414.1305 to include groups and virtual groups. We are proposing that, beginning with the 2022 MIPS payment year, a hospital-based MIPS eligible clinician under § 414.1305 means an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician during the MIPS determination period. We believe a threshold of more than 75 percent is appropriate because it is consistent with the thresholds for groups in the definitions of facility-based MIPS eligible clinician and non-patient facing MIPS eligible clinician under § 414.1305. We are proposing to revise § 414.1380(c)(2)(iii) to specify that for the Promoting Interoperability performance category to be reweighted for a MIPS eligible clinician who elects to participate in MIPS as part of a group or virtual group, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting, or the group or virtual group must meet the proposed revised definition of a hospital-based MIPS eligible clinician (or the definition of a non-patient facing MIPS eligible clinician, as proposed in section III.K.3.c.(4)(f)(iv), as defined in § 414.1305.

(iv) Non-Patient Facing MIPS Eligible Clinicians in Groups

We define a non-patient facing MIPS eligible clinician under § 414.1305 as an individual MIPS eligible clinician who bills 100 or fewer patient facing encounters (including Medicare telehealth services defined in section 1834(m) of the Act), as described in paragraph (3) of this definition, during the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a non-patient facing individual MIPS eligible clinician. We established under § 414.1380(c)(2)(i)(C)(5) that a MIPS eligible clinician who is a non-patient facing MIPS eligible clinician as defined in § 414.1305 will be assigned a zero percent weight for the Promoting Interoperability performance category, and the points associated with the Promoting Interoperability performance category will be redistributed to another performance category or categories (81 FR 77240 through 77243, 82 FR 53680–53682, 83 FR 59871). However, if a non-patient facing MIPS eligible clinician chooses to report on the Promoting Interoperability performance category measures, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score. We stated that this policy includes MIPS eligible clinicians choosing to report as part of a group or part of a virtual group (82 FR 53687).

As noted in section III.K.3.c.(4)(f)(iii) of the proposed rule in connection with our discussion of hospital-based MIPS eligible clinicians in groups, under § 414.1380(c)(2)(iii), for MIPS eligible clinicians submitting data as a group or virtual group, in order for the Promoting Interoperability performance category to be reweighted, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting. In that section, we are proposing to revise § 414.1380(c)(2)(iii) to account for groups and virtual groups that meet the proposed revised definition of a hospital-based MIPS eligible clinician under § 414.1305, which would only require the group or virtual group to meet a threshold of more than 75 percent instead of a threshold of all of the MIPS eligible clinicians in the group or virtual group. In an effort to more clearly and concisely capture our existing policy for non-patient facing MIPS eligible clinicians, we are proposing to revise § 414.1380(c)(2)(iii) to also account for a group or virtual group that meets the definition of a non-patient facing MIPS eligible clinician under § 414.1305, such that the group or virtual group only has to meet a threshold of more than 75 percent.

(g) Future Direction of the Promoting Interoperability Performance Category

(i) Request for Information (RFI) on Potential Opioid Measures for Future Inclusion in the Promoting Interoperability Performance Category

In the past, the Promoting Interoperability performance category measures focused on very general process focused actions supported by health IT. In the Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62766 through 62768), we sought to expand the potential for Medicare and Medicaid Promoting Interoperability Program measures to include more complex measures and closer relationships to high priority health outcomes.

In this RFI, we are seeking comment on Promoting Interoperability performance category measures that might be relevant to specific clinical priorities or goals related to addressing OUD prevention and treatment. As the Query of PDMP measure matures, we believe it will be essential in improving

prescribing practices. As outlined in section III.K.3.c.(4)(d).(i) of this proposed rule, stakeholders indicated that the Verify Opioid Treatment Agreement measure presented significant implementation challenges for MIPS eligible clinicians. Therefore, we are seeking comment on potential new measures for OUD prevention and treatment that could be included in future years of the Promoting Interoperability performance category. We welcome all comments, but we are seeking comment specifically on possible OUD prevention and treatment measures that include the following characteristics:

- Include evidence of positive impact on outcome-focused improvement activities, and the opioid crisis overall;
- Leverage the capabilities of CEHRT where possible, including: near-automatic calculation and reporting of numerator, denominator, exclusions and exceptions to minimize manual documentation required of the provider; and timing elements to reduce quality measurement and reporting burdens to the greatest extent possible;
- Are based on well-defined clinical concepts, measure logic and timing elements that can be captured by CEHRT in standard clinical workflow and/or routine business operations. Well-defined clinical concepts include those that can be discretely represented by available clinical and/or claims vocabularies such as SNOMED CT, LOINC, RxNorm, ICD–10 or CPT;
- Align with clinical workflows in such a way that data used in the calculation of the measure is collected as part of a standard workflow and does not require any additional steps or actions by the health care provider;
- Are applicable to all clinicians (for example, clinicians participating as individuals or as a group, or clinicians located in a rural area, designated health professional shortage area (HPSA), designated medically-underserved area (MUA), or urban area);
- Could potentially align with other MIPS performance categories; and
- Are represented by a measure description, numerator/denominator or yes/no attestation statement, and possible exclusions.

(ii) Request for Information (RFI) on NQF and CDC Opioid Quality Measures

We also are specifically seeking public comment on the development of potential measures for consideration for the Promoting Interoperability performance category that are based on existing efforts to measure clinical and process improvements specifically related to the opioid epidemic, including the opioid quality measures endorsed by the National Quality Forum (NQF) and the CDC Quality Improvement (QI) opioid measures discussed below. The NQF measures represent a reference point for evaluating opioid prescribing behaviors based on measures that have undergone the rigorous NQF measure endorsement process. The CDC guidelines ''encourage careful and selective use of opioid therapy in the context of managing chronic pain through . . . an evidence-based prescribing guideline.'' [117] The guidelines have led to the development of CDC measures on prescribing practices on which we are seeking comment. We believe these measures may help participants understand the relationship between the measure description and the use of health IT to support the actions of the measures.

For example, the measures may describe a clinical concept, such as the CDC Measure 12: Counsel on Risks and Benefits Annually. The actions for this activity can be supported by CEHRT through the use of standards to record key health information for the patient and to identify which patients should be included in the denominator based on information in the medication list, information gained through medication reconciliation of data received through health information exchange with another health provider of care, and/or information incorporated after a query of a PDMP is completed. The actions for the numerator could include leveraging CEHRT to provide patient-specific education, to capture or record Patient Generated Health Data (PGHD), to engage in secure messaging with the patient and ensure the patient is engaging with their record through a patient portal or an Application Programming Interface (API).

We believe that the clinical actions identified within both the NQF quality measures and the CDC QI opioid measures, can be supported by the standards and functionalities of certified health IT and we welcome public comment on the specific use cases for health IT implementation for the potential measure actions. We recognize that modifications to the NQF and CDC measures may be necessary to make the measures as applicable as possible to all participants of the Promoting Interoperability performance category, and are seeking comment on any modifications that would be necessary. In addition, we note that there is some overlap between some of the NQF quality measures and the CDC QI opioid measures and are seeking comment on whether there are ways in which the two sets of measures could be correlated to support potential new measures of the meaningful use of health IT for the Promoting Interoperability performance category. Finally, we are seeking comment on which measures might best advance the implementation and use of interoperable health IT and encourage information exchange between care teams and with patients.

(A) NQF Quality Measures

Three NQF-endorsed quality measures that were stewarded by the Pharmacy Quality Alliance (PQA) evaluate patients with prescriptions for opioids in combination with benzodiazepines, at high-dosage, or from multiple prescribers and pharmacies. Each measure was evaluated and recommended for endorsement by the NQF's Patient Safety Standing Committee [118] and endorsed by the Consensus Standards Approval Committee. These measures, NQF #2940, #2950, and #2951, were recommended by the NQF Measure Application Partnership for inclusion on the December 2018 Measures Under Consideration List for the Medicare Shared Savings Program.

We are seeking public comment on the development of potential measures for consideration for the Promoting Interoperability performance category that are based on existing efforts to measure clinical and process improvements specifically related to the opioid epidemic, including the opioid quality measures endorsed by the NQF above and the CDC QI opioid measures discussed below. The NQF measures represent a reference point for evaluating opioid prescribing behaviors based on measures that have undergone the rigorous NQF measure endorsement process. The CDC guidelines ''encourage careful and selective use of opioid therapy in the context of managing chronic pain through . . . an evidence-based prescribing guideline.'' [119] The guidelines have led to the development of CDC measures on prescribing practices on which are seeking comment. We are seeking comment on the following three NQF measures for possible inclusion in the Promoting Interoperability performance category and any modifications that may be

[117] *https://www.cdc.gov/drugoverdose/pdf/prescribing/CDC–DUIP-QualityImprovementAndCareCoordination-508.pdf.*

[118] *https://www.qualityforum.org/News_And_Resources/Press_Releases/2017/NQF_Statement_on_Endorsement_of_Opioid_Patient_Safety_Measures.aspx.*

[119] *https://www.cdc.gov/drugoverdose/pdf/prescribing/CDC–DUIP-QualityImprovementAndCareCoordination-508.pdf.*

necessary to maximize their use in the Promoting Interoperability performance category:

- Use of Opioids at High Dosage in Persons Without Cancer (NQF #2940).
- Use of Opioids from Multiple Providers in Persons Without Cancer (NQF #2950).
- Use of Opioids from Multiple Providers and at High Dosage in Persons Without Cancer (NQF #2951).

We believe these measures relate to activities that hold promise in combatting the opioid epidemic and can be supported using CEHRT to complete the actions of the measures. Therefore, we are seeking comment on how the Promoting Interoperability performance category can incorporate the description of the use of technology into measure guidance if these measures were considered for use by MIPS eligible clinicians. For example, the actions related to the Use of Opioids from Multiple Providers in Persons Without Cancer (NQF #2950) measure could include using health IT to electronically prescribe the medication, to query a PDMP, to identify other care team members, to conduct medication reconciliation based on information received through health information exchange with other providers of care, and recording key health information in a structured format. Additional information regarding each measure is available using NQF's Quality Positioning System at *http://www.qualityforum.org/QPS/QPSTool.aspx*.

(B) CDC Quality Improvement Opioid Measures

We believe there may be promise in the CDC QI opioid measures based on the prescribing best practices found in Appendix B in the CDC document, ''Quality Improvement and Care Coordination: Implementing the CDC Guideline for Prescribing Opioids for Chronic Pain'' (Implementing the CDC Prescribing Guideline).[120] CDC developed the ''Implementing the CDC Prescribing Guideline'' document to help healthcare providers and systems integrate the CDC Prescribing Guideline [121] and the associated QI opioid measures found in the Implementing the CDC Prescribing Guideline document into their clinical practices. The CDC developed 16 QI opioid measures to align with the recommendations in the CDC Prescribing Guideline and to improve opioid prescribing. These measures are intended to measure implementation of the recommended practices.

Generally, we believe these guidelines and measures are consistent with the objective and measure concept of the Promoting Interoperability performance category where the recommendation in the CDC Prescribing Guideline is the overarching objective and an associated QI opioid measure is a description of the patient population focus (denominator) and the desired action (numerator). The ''Implementing the CDC Prescribing Guideline'' document, also, includes practice-level strategies to help organize and improve the management and coordination of long-term opioid therapy:

- Using an interdisciplinary team approach.
- Establishing practice policies and standards.
- Using EHR data to develop registries and track QI opioid measures.

These following measures address treatment guidelines for initial treatment practices and long-term treatment and outcomes. Examples of measures related to short term OUD prevention and treatment activities include:

- *CDC Measure 2:* Check PDMP Before Prescribing Opioids.
- *CDC Measure 4:* Evaluate Within Four Weeks of Starting Opioids.

Examples of measures related to long term OUD prevention and treatment activities include:

- *CDC Measure 11:* Check PDMP Quarterly.
- *CDC Measure 12:* Counsel On Risks and Benefits Annually.

The data sources from these measures include State PDMP data or the practice EHR data field.

The CDC and the Agency for Healthcare Research and Quality (AHRQ) are also developing electronic clinical decision support tools that can provide real-time clinical decision support for some of the best practices included in the Implementing the CDC Prescribing Guideline document based on well-defined clinical concepts.[122] Well-defined clinical concepts are those that can be discretely represented by available content standards or vocabularies such as SNOMED CT or LOINC. In the context of QI measures, these well-defined clinical concepts that are part of the clinical decision support artifacts, including the clinical conditions or prescribed medications that trigger the decision support, could also be used to develop measures for the Promoting Interoperability performance category related to OUD prevention and treatment. This can create a tight linkage between the guidelines, the recommended clinical actions based on the guidelines, and the improved outcomes based on the recommended clinical actions.

Therefore, we are seeking comment on which of the 16 CDC QI opioid measures have value for potential consideration for the Promoting Interoperability performance category. We are further seeking comment on whether we should consider a different type of measurement concept for OUD prevention and treatment, such as reporting on a set of cross-cutting activities and measures to earn credit in the Promoting Interoperability performance category (for example, a set of one clinical decision support, the related CDC QI opioid measure, and a potentially relevant clinical quality measure). While the CDC quality measures could be implemented for the Quality category, they are highlighted as under consideration for the PI category as they have been linked in the CDC work to the use of CDS artifacts through health IT, as discussed.

We refer readers to the ''Implementing the CDC Prescribing Guideline'' document, and the related measures, in Appendix B of that document, which is available at *https://www.cdc.gov/drugoverdose/pdf/prescribing/CDC-DUIP-QualityImprovementAndCareCoordination-508.pdf*.

(iii) Request for Information (RFI) on a Metric To Improve Efficiency of Providers Within EHRs

One of the benefits of adopting EHRs is increasing the efficiency of health care processes and generating cost savings by eliminating time-consuming paper-based processes. Through the use of EHRs, health care providers are able to automate administrative aspects of delivery system management, such as coding and scheduling, easily locate patient information in electronic charts, and streamline communications with other health care providers through electronic means.

However, research, also, points to variable results from the implementation of health IT across practice settings, suggesting that health IT adoption is not a universal remedy for inefficient practice. Stakeholders continue to describe ways in which the potential benefits of EHRs have not been fully realized, and are pointing to non-optimized electronic workflows and poor system design that can increase, rather than reduce, administrative burden, which contributes to physician

[120] *https://www.cdc.gov/drugoverdose/pdf/prescribing/CDC-DUIP-QualityImprovementAndCareCoordination-508.pdf*.

[121] *https://www.cdc.gov/mmwr/volumes/65/rr/rr6501e1.htm*.

[122] *https://cds.ahrq.gov/cdsconnect/topic/opioids-and-pain-management*.

burnout.[123] For instance, in many systems, stakeholders have identified EHR functionality associated with clinical documentation, order entry, and messaging as cumbersome. It is our understanding that in order to achieve true EHR efficiency gains in today's healthcare environment, the way forward must include reductions in the persistent sources of technology-related burden, an increased allowance for ancillary medical staff to assist in medical documentation, and through the more effective use of technology.

In November 2018, the Office of the National Coordinator for Health Information Technology (ONC) released the draft report ''Strategy on Reducing Regulatory and Administrative Burden Relating to the Use of Health IT and EHRs,'' [124] as required by section 4001 of the 21st Century Cures Act (Pub. L. 114–255, enacted December 13, 2016). In the draft report, ONC described a variety of factors that may contribute to EHR-related burden, and provided draft recommendations for how HHS, as well as other stakeholders may be able to address these factors. Specifically, the draft report discussed processes where adoption of improved electronic processes could reduce the EHR-related burden, such as processes related to prior authorization requests. The draft report, also, discussed EHR usability and design challenges which may contribute to EHR-related burden, and identified best practices for design, as well as a variety of emerging system features which may improve efficiency in health IT usage. We believe further adoption of more efficient workflows and technologies, such as those identified in the draft report, will help health care providers with overall improvements in patient care and interoperability, and we are seeking comment on how such implementation of such processes can be effectively measured and encouraged as part of the Promoting Interoperability performance category.

We also are interested in how to measure and incentivize efficiency as it relates to the meaningful use of CEHRT and the furthering of interoperability. In 2017, the NQF released, ''A Measurement Framework to Assess Nationwide Progress Related to Interoperable Health Information Exchange to Support the National Quality Strategy,'' [125] which included discussion of measure concepts of productivity and efficiency that can result from the use of health IT, specifically the health information exchange. For instance, the NQF report identifies a measure concept for the ''percentage of reduction of duplicate labs and imaging over time,'' which can capture the impact of electronic availability of imaging studies on duplicative studies that are often conducted when health care providers do not have the ability to locate an existing study. However, we recognize that there are challenges associated with tying such measures of economic efficiency to a single factor, such as electronic workflow improvements.[126]

Consistent with our commitment to reducing administrative burden, increasing efficiencies, and improving beneficiary experience via the ''Patients over Paperwork initiative,'' [127] we are seeking stakeholder feedback on a potential metric to evaluate health care provider efficiency using EHRs. Specifically, we are requesting information on the following questions:

- What do stakeholders believe would be useful ways to measure the efficiency of health care processes due to the use of health IT? What are measurable outcomes demonstrating greater efficiency in costs or resource use that can be linked to the use of health IT-enabled processes? This includes measure description, numerator/denominator or yes/no reporting, and exclusions.
- What do stakeholders believe may be hindering their ability to achieve greater efficiency (for example, product, measures, CMS regulations)? Please, provide examples.
- What are specific technologies, capabilities, or system features (beyond those currently addressed in the Promoting Interoperability performance category) that can increase the efficiency of provider interactions with technology systems; for instance, alternate authentication technologies that can simplify provider logon? How could we reward providers for adoption and use of these technologies?
- What are key administrative processes that can benefit from more efficient electronic workflows; for instance, conducting prior authorization requests? How can we measure and reward providers for their uptake of more efficient electronic workflows?
- Could CMS successfully incentivize efficiency? What role should CMS play in improving efficiency in the practice of medicine? The underlying goal is to move to a more streamlined, efficient, easier user experience, whereby providers can input and access a patient's data in a reliable, timely manner. Having not yet reached this point, we are seeking feedback on the best way(s) to get there.

(iv) Request for Information (RFI) on the Provider to Patient Exchange Objective

In March 2018, the White House Office of American Innovation and the CMS Administrator announced the launch of MyHealthEData and CMS' role in improving patient access and advancing interoperability. As part of the MyHealthEData initiative, we are taking a patient-centered approach to health information access and moving to a system in which patients have immediate access to their computable health information and can be assured that their health information will follow them as they move throughout the health care system from provider to provider, payer to payer. To accomplish this, we have launched several initiatives related to data sharing and interoperability to empower patients and encourage plan and provider competition. One example is our overhaul of the Advancing Care Information performance category under MIPS to transform it into the new Promoting Interoperability performance category, which put a heavy emphasis on patient access to their health information through the Provide Patients Electronic Access to Their Health Information measure.

Through the Provide Patients Electronic Access to Their Health Information measure, we are ensuring that patients have access to their information through any application of their choice that is configured to meet the technical specifications of the API in the MIPS eligible clinician's CEHRT. To make these APIs fully useful to patients, they should provide immediate access to updated information whenever the patient needs that information, should be always available, configured using standardized technology and contain the information a patient needs to make informed decisions about their care.

In the CY 2019 PFS proposed rule (83 FR 35932), we introduced a potential future Promoting Interoperability performance category concept that explored creating a set of priority health IT activities that would serve as alternatives to the traditional Promoting

[123] *https://www.ahrq.gov/professionals/clinicians-providers/ahrq-works/burnout/index.html.*

[124] *https://www.healthit.gov/sites/default/files/page/2018-11/Draft%20Strategy%20on%20Reducing%20Regulatory%20and%20Administrative%20Burden%20Relating.pdf.*

[125] *https://www.qualityforum.org/Publications/2017/09/Interoperability_2016-2017_Final_Report.aspx.*

[126] *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2699907/.*

[127] *https://www.cms.gov/About-CMS/story-page/patients-over-paperwork.html.*

Interoperability performance category measures. We requested public comment on whether MIPS eligible clinicians should earn credit in the Promoting Interoperability performance category by attesting to health IT or interoperability activities in lieu of reporting on specific measures. We identified specific health IT activities and sought public comment on those and additional activities that would add value for patients and health care providers, are relevant to patient care and clinical workflows, support alignment with existing objectives, promote flexibility, are feasible for implementation, are innovative in the use of health IT, and promote interoperability. We received feedback in support of this future concept.

One such activity that we specifically requested comment on was a health IT activity in which MIPS eligible clinicians may obtain credit in the Promoting Interoperability performance category if they maintain an ''open API,'' or standards-based API, which allows patients to access their health information through a preferred third-party application. An API can be thought of as a set of commands, functions, protocols, or tools published by one software developer (''Developer A'') that enables other software developers to create programs (applications or ''apps'') that can interact with developer A's software without needing to know the internal workings of developer A's software, all while maintaining consumer privacy data standards. This is how API technology creates a seamless user experience that is, typically, associated with other applications that are used in more common aspects of consumers' daily lives, such as travel and personal finance. Standardized, transparent, and pro-competitive API technology can enable similar benefits to consumers of health care services.[128]

We received feedback from several commenters regarding concerns that an ''open'' API may open the door to patient data without security, leaving MIPS eligible clinicians' EHR systems open for cyber-attacks. However, we wish to note that the term ''open API'' does not imply that any and all applications or application developers would have unfettered access to individuals' personal or sensitive information nor would it allow for any reduction in the required protections for privacy and security of patient health information. Additionally, with respect to patient access, a patient will need to authenticate him/herself to a health care organization that is the steward of their data (for example, username and password) and the access provided to an app will be for that one patient. The overall HIPAA Security Rule, HIPAA Privacy Rule, and other cybersecurity obligations that apply to HIPAA covered entities remain the same and would need to be applied to an API in the same way they are currently applied to any and all other interfaces a health care organization deploys in production.

ONC's 21st Century Cures Act proposed rule (84 FR 7424 through 7610) includes new proposals that focus on how certified health IT can use APIs to allow health information to be accessed, exchanged, and used without special effort through the use of APIs or successor technology or standards, as provided for under applicable law. For instance, ONC has proposed to adopt a new criterion for a standards-based API at § 170.315(g)(10). This standards-based API criterion would replace the existing API criterion with one that requires the use of the HL7 Fast Healthcare Interoperability Resources (FHIR®) standard. ONC has also proposed a series of requirements for the standards-based API that would improve interoperability by focusing on standardized, transparent, and pro-competitive API practices.

ONC has proposed to make the standards-based API criterion part of the 2015 Edition base EHR definition (84 FR 7427), which would ensure that this functionality is ultimately included in the CEHRT definition required for participation in the Promoting Interoperability performance category. If finalized, health IT developers would have 24 months from the publication of the final rule to implement these changes to certified health IT products.

(A) Immediate Access

The existing Provide Patients Electronic Access to Their Health Information measure specifies that the MIPS eligible clinicians provide the patient timely access to view online, download, and transmit his or her health information, and further specifies that patient health information must be made available to the patient within 4 business days of its availability to the MIPS eligible clinicians. We believe it is critical for patients to have access to their health information when making decisions about their care. In the recently published proposed rule titled, ''Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans in the Federally-facilitated Exchanges and Health Care Providers proposed rule'' (84 FR 7610 through 7680) (hereinafter referred to as the ''CMS Interoperability and Patient Access proposed rule''), we proposed that certain health plans and payers be required to make patient health information available through an open, standards-based API no later than one business day after it is received by the health plan or payer.

Recognizing the importance of patients having access to their complete health information, including clinical information from the MIPS eligible clinicians' CEHRT, and appreciating the new technical flexibility a standards-based API would provide, we are seeking comment on whether MIPS eligible clinicians should make patient health information available immediately through an open, standards-based API, no later than one business day after it is available to the MIPS eligible clinicians in their CEHRT. We seek comment on the barriers to more immediate access to patient information. Additionally, we seek comment on whether there are specific data elements that may be more or less feasible to share no later than one business day. We also seek comment as to when implementation of such a requirement is feasible.

(B) Persistent Access and Standards-Based APIs

As discussed above, the ONC 21st Century Cures Act proposed rule (84 FR 7479) includes a proposal for adoption of API conditions of certification that ensure a standards-based API is implemented in a manner that provides unimpeded access to technical documentation, is non-discriminatory, preserves rights of access, and minimizes costs or other burdens that could result in special effort. The ONC 21st Century Cures Act proposed rule (84 FR 7575), also, includes requirements for the standardized API related to privacy and security to ensure that patient health information is protected.

The existing Provide Patients Electronic Access to Their Health Information measure does not specify the overall operational expectations associated with enabling patients' access to their health information. For instance, the measure only specifies that

[128] ONC has made available a succinct, non-technical overview of APIs in context of consumers' access to their own medical information across multiple providers' EHR systems, which is available at the *HealthIT.gov* website at *https://www.healthit.gov/api-education-module/story_html5.html*.

access must be ''timely.'' As a result, we request public comment on whether we should revise the measure to be more specific with respect to the experience patients should have regarding their access. For instance, in the ONC 21st Century Cures Act proposed rule (84 FR 7481 through 7484), there is a proposal regarding requirements around persistent access to APIs, which would accommodate a patient's routine access to their health information without needing to reauthorize their application and re-authenticate themselves. We seek comment on whether the Promoting Interoperability performance category measure should be updated to accommodate this proposed technical requirement for persistent access.

As we work to advance interoperability and empower patients through access to their health information, we continue to explore the role of APIs. We support the ONC 21st Century Cures Act proposed rule (84 FR 7424) proposal to move to an HL7 FHIR®-based API under 2015 Edition certification (84 FR 7479). Health care providers committed to a standards-based API could benefit from joining in on the industry's new FHIR standards framework to reduce burden in, and improve on, quality measurement through automation and simplification. Use of FHIR-based APIs could help push forward interoperability regardless of EHR systems used providing standardized way to share information.

Understanding this, we are, specifically, seeking public comments on the following question:

- If ONC's proposed FHIR-based API certification criteria is finalized, would stakeholders support a possible bonus under the Promoting Interoperability performance category for early adoption of a certified FHIR-based API in the intermediate time before ONC's final rule's compliance date for implementation of a FHIR standard for certified APIs?

(C) Available Data

Recognizing the overall burden that switching EHR systems places on health care providers, ONC has introduced a new proposal that seeks to minimize that burden. In the ONC 21st Century Cures Act proposed rule, ONC proposed to adopt a new 2015 Edition certification criterion for the EHI export at 45 CFR 170.315(b)(10). The purpose of this criterion is to provide patients and health IT users the ability to securely export the entire EHR for a single patient, or all patients, in a computable, electronic format, and facilitate receiving the health IT system's interpretation, and use of the EHI, to the extent that is reasonably practicable using the existing technology of developers. This patient-focused export capability complements other provisions of the proposed rule that support patients' access to their EHI, including information that may eventually be accessible via the proposed standardized API in 45 CFR 170.215. It is also complementary to the proposals in the CMS Interoperability and Patient Access proposed rule, which proposed to require certain health plans and issuers to provide patients access to their health data through a standardized API.

Building on these proposals, we are seeking comment on an alternative measure under the Provider to Patient Exchange objective that would require clinicians to use technology certified to the EHI criterion to provide the patient(s) their complete electronic health data contained within an EHR.

Specifically, we are seeking comment on the following questions:

- Do stakeholders believe that incorporating this alternative measure into the Provider to Patient Exchange objective will be effective in encouraging the availability of all data stored in health IT systems?
- In relation to the Provider to Patient Exchange objective, as a whole, how should a required measure focused on using the proposed total EHI export function in CEHRT be scored?
- If this certification criterion is finalized and implemented, should a measure based on the criterion be established as a bonus measure? Should this measure be established as an attestation measure?
- In the long term, how do stakeholders believe such an alternative measure would impact burden?
- If stakeholders do not believe this will have a positive impact on burden, in what other way(s) might an alternative measure be implemented that may result in burden reduction? Please, be specific.
- Which data elements do stakeholders believe are of greatest clinical value or would be of most use to health care providers to share in a standardized electronic format if the complete record was not immediately available?

In addition to the above questions, we have some general questions that are related to health IT activities, for which we are, also, seeking public comment:

- Do stakeholders believe that we should consider including a health IT activity that promotes engagement in the health information exchange across the care continuum that would encourage bi-directional exchange of health information with community partners, such as post-acute care, long-term care, behavioral health, and home and community based services to promote better care coordination for patients with chronic conditions and complex care needs? If so, what criteria should we consider when implementing a health information exchange across the care continuum health IT activity in the Promoting Interoperability performance category?
- What criteria should we employ, such as specific goals or areas of focus, to identify high priority health IT activities for the future of the performance category?
- Are there additional health IT activities we should consider recognizing in lieu of reporting on existing measures and objectives that would most effectively advance priorities for nationwide interoperability and spur innovation?

(D) Patient Matching

ONC has stated that patient matching is critically important to interoperability and the nation's health IT infrastructure as health care providers must be able to share patient health information and accurately match a patient to his or her data from a different health care provider in order for many anticipated interoperability benefits to be realized. We continue to support ONC's work promoting the development of patient matching initiatives. Per Congress' guidance, ONC is looking at innovative ways to provide technical assistance to private sector-led initiatives to further develop accurate patient matching solutions in order to promote interoperability without requiring a unique patient identifier (UPI). We understand the significant health information privacy and security concerns raised around the development of a UPI standard and the current prohibition against using HHS funds to adopt a UPI standard (84 FR 7656).

Recognizing Congress' statement regarding patient matching and stakeholder comments stating that a patient matching solution would accomplish the goals of a UPI, we are seeking comment for future consideration on ways for ONC and CMS to continue to facilitate private sector efforts on a workable and scalable patient matching strategy so that the lack of a specific UPI does not impede the free flow of information. We are also seeking comment on how we may leverage our authority to provide support to those working to improve patient matching. We note that we intend to use comments we receive for

the development of policy and future rulemaking.

- Do stakeholders believe that CMS and ONC patient matching efforts impact burden? Please, explain.
- If stakeholders believe that patient matching is leading to increased burden, what suggestions might stakeholders have to promote interoperability securely and accurately, without the requirement of a UPI, that may result in burden reduction? Please, be specific.

(v) Request for Information (RFI) on Integration of Patient-Generated Health Data Into EHRs Using CEHRT

The Promoting Interoperability performance category is continuously seeking ways to prioritize the advanced use of CEHRT functionalities, encourage movement away from paper-based processes that increase health care provider burden, and empower individual beneficiaries to take a more impactful role in managing their health to achieve their goals. Increased availability of patient-generated health data (PGHD) [129] offers providers an opportunity to monitor and track a patient's health-related data from information that is provided by the patient and not the provider. Increasingly affordable wearable devices, sensors, and other technologies capture PGHD, providing new ways to monitor and track a patient's healthcare experience. Capturing important health information through devices and other tools between medical visits could help improve care management and patient outcomes, potentially resulting in increased cost savings. Although many types of PGHD are being used in clinical settings today, the continuous collection and integration of patients' health-data into EHRs to inform clinical care has not been widely achieved across the health care system.

In the 2015 Edition Health IT Certification Criteria final rule (80 FR 62661; 45 CFR 170.315(e)(3)), ONC finalized a criterion for patient health information capture functionality within certified health IT that allows a user to identify, record, and access information directly and electronically shared by a patient. We finalized a PGHD measure requiring health care providers to incorporate PGHD or data from a nonclinical setting into CEHRT (80 FR 62851). However, we removed this measure in the CY 2019 PFS final rule (83 FR 59813), due to concerns that the measure was not fully health IT-based and could include paper-based actions, an approach which did not align with program priorities to advance the use of CEHRT. Stakeholder comments regarding this measure also noted that manual processes to conduct actions associated with the measure could increase health care provider reporting burden and that there was confusion over which types of data would be applicable and the situations in which the patient data would apply. At the same time, there was ample support from the public for ONC and CMS to continue to advance certified health IT capabilities to capture PGHD.

However, we continue to believe that it is important for the Promoting Interoperability performance category to explore new ways to incentivize health care providers who take proactive steps to advance the emerging use of PGHD. As relevant technologies and standards continue to evolve, there may be new approaches through which we can address challenges related to emerging standards for PGHD capture, appropriate clinical workflows for receiving and reviewing PGHD, and advance the technical architecture needed to support PGHD use.

In 2018, ONC released the white paper, ''Conceptualizing a Data Infrastructure for the Capture, Use, and Sharing of Patient-Generated Health Data in Care Delivery and Research through 2024,'' [130] which described key challenges, opportunities and enabling actions for different stakeholders, including clinicians, to advance the use of PGHD. For instance, the report identified an enabling action around supporting ''clinicians to work within and across organizations to incorporate prioritized PGHD use cases into their workflows.'' This action urges clinicians and care teams to identify priority use cases and relevant PGHD types that would be valuable to improving care delivery for patient populations. It, also, highlights the importance of developing clinical workflows that avoid overwhelming the care team with extraneous data by encouraging care teams to develop management strategies for shared responsibilities around collecting, verifying, and analyzing PGHD. A second enabling action the white paper identifies for clinicians is, ''collaboration between clinicians and developers to advance technologies supporting PGHD interpretation and use.'' This enabling action highlights feedback for developers about prioritized use cases and application features as critical to ensuring that the necessary refinements are made to technology solutions to effectively support the capture and use of PGHD. Finally, the report encourages ''clinicians in providing patient education to encourage PGHD capture and use in ways that maximize data quality,'' recognizing the important role that clinicians can play in helping patients understand how to share PGHD, the differences between solicited and unsolicited PGHD, and how PGHD are relevant for the patient's care.

Considering the enabling actions for clinicians identified in the white paper, we are interested in ways that the Promoting Interoperability performance category could adopt new elements related to PGHD that: (1) Represent clearly defined uses of health IT; (2) are linked to positive outcomes for patients; and (3) advance the capture, use, and sharing of PGHD. In considering how the Promoting Interoperability performance category could continue to advance the use of PGHD, we also note that a future element related to PGHD would not necessarily need to be implemented as a traditional measure requiring reporting of a numerator and denominator. For instance, in the CY 2019 PFS proposed rule (83 FR 35932), we requested comment on the concept of ''health IT'' or ''interoperability'' activities to which a health care provider could attest, potentially in lieu of reporting on measures associated with certain objectives. By addressing the use of PGHD through such a concept, rather than traditional measure reporting, we could potentially reduce the reporting burden associated with a new PGHD-related element.

We are inviting stakeholder comment on these concepts, and the specific questions below:

- What specific use cases for capture of PGHD as part of treatment and care coordination across clinical conditions and care settings are most promising for improving patient outcomes? For instance, use of PGHD for capturing advanced directives and pre/post-operation instructions in surgery units.
- Should the Promoting Interoperability performance category explore ways to reward providers for engaging in activities that pilot promising technical solutions or approaches for capturing PGHD and incorporating it into CEHRT using standards-based approaches?
- Should health care providers be expected to collect information from their patients outside of scheduled appointments or procedures? What are the benefits and concerns about doing so?
- Should the Promoting Interoperability performance category

[129] For more information, we refer readers to *https://www.healthit.gov/topic/scientific-initiatives/patient-generated-health-data.*

[130] *https://www.healthit.gov/sites/default/files/onc_pghd_final_white_paper.pdf.*

explore ways to reward health care providers for implementing best practices associated with optimizing clinical workflows for obtaining, reviewing, and analyzing PGHD?

We believe the bi-directional availability of data, meaning that both patients and their health care providers have real-time access to the patient's electronic health record, is critical. This includes patients being able to import their health data into their medical record and have it be available to health care providers. We welcome input on how we can encourage, enable, and reward health care providers to advance capture, exchange, and use of PGHD.

(vi) Request for Information (RFI) on Engaging in Activities That Promote the Safety of the EHR

The widespread adoption of EHRs has transformed the way health care is delivered, offering improved availability of patient health information, supporting more informed clinical decision making, and reduce medical errors.[131] However, many stakeholders have identified risks to patient safety as one of the unintended consequences that may result from the implementation of EHRs. By disrupting established workflows and presenting clinicians with new challenges, EHR implementation may increase the incidence of certain errors, resulting in harm to patients.

As we continue to advance the use of CEHRT in health care, we are seeking comment on how to further mitigate the specific safety risks that may arise from technology implementation. Specifically, we are seeking comment on ways that the Promoting Interoperability performance category may reward MIPS eligible clinicians for engaging in activities that can help to reduce the errors associated with EHR implementation.

For instance, we are requesting comment on a potential future change to the performance category under which MIPS eligible clinicians would receive points towards their Promoting Interoperability performance category score for attesting to performance of an assessment based on one of the ONC SAFER Guides. The SAFER Guides (available at *https://www.healthit.gov/topic/safety/safer-guides*) are designed to help healthcare organizations conduct self-assessments to optimize the safety and safe use of EHRs in nine different areas: High Priority Practices, Organizational Responsibilities, Contingency Planning, System Configuration, System Interfaces, Patient Identification, Computerized Provider Order Entry, Test Results Reporting and Follow-Up, and Clinician Communication.

Each of the SAFER Guides is based on the best evidence available, including a literature review, expert opinion, and field testing at a wide range of healthcare organizations, from small ambulatory practices to large health systems. A number of EHR developers currently utilize the SAFER Guides as part of their health care provider training modules.

Specifically, we might consider offering points towards the Promoting Interoperability performance category score to MIPS eligible clinicians that attest to conducting an assessment based on the High Priority Practices [132] and/or the Organizational Responsibilities [133] SAFER Guides which cover many foundational concepts from across the guides. Alternatively we might consider awarding points for review of all nine of the SAFER Guides. We are also inviting comments on alternatives to the SAFER Guides, including appropriate assessments related to patient safety, which should also be considered as part of any future bonus option.

We are requesting comment on the ideas above, as well as inviting stakeholders to suggest other approaches we may take to rewarding activities that promote reduction of safety risks associated with EHR implementation as part of the Promoting Interoperability performance category.

(5) APM Scoring Standard for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

As codified at § 414.1370(a), the APM scoring standard is the MIPS scoring methodology applicable for MIPS eligible clinicians identified on the Participation List for the of an APM Entity participating in a MIPS APM for the applicable MIPS performance period.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77246), the APM scoring standard is designed to reduce reporting burden for such clinicians by reducing the need for duplicative data submission to MIPS and their respective APMs, and to avoid potentially conflicting incentives between those APMs and MIPS.

We established at § 414.1370(c) that the MIPS performance period under § 414.1320 applies for the APM scoring standard. We finalized under § 414.1370(f) that the MIPS final score calculated for the APM Entity is applied to each MIPS eligible clinician in the APM Entity, and the MIPS payment adjustment is applied at the TIN/NPI level for each MIPS eligible clinician in the APM Entity group. Under § 414.1370(f)(2), if the APM Entity group is excluded from MIPS, all eligible clinicians within that APM Entity group are also excluded from MIPS.

As finalized at § 414.1370(h)(1) through (4), the performance category weights used to calculate the MIPS final score for an APM Entity group for the APM scoring standard performance period are: Quality at 50 percent; cost at 0 percent; improvement activities at 20 percent; and Promoting Interoperability at 30 percent.

(b) MIPS APM Criteria

We established at § 414.1370(b) that for an APM to be considered a MIPS APM, it must satisfy the following criteria: (1) APM Entities must participate in the APM under an agreement with CMS or by law or regulation; (2) the APM must require that APM Entities include at least one MIPS eligible clinician on a Participation List; (3) the APM must base payment on quality measures and cost/utilization; and (4) the APM must be neither a new APM for which the first performance period begins after the first day of the MIPS performance year nor an APM in the final year of operation for which the APM scoring standard is impracticable. In the CY 2019 PFS final rule (59820 through 59821), we clarified that we consider whether each distinct track of an APM meets the criteria to be a MIPS APM and that it is possible for an APM to have tracks that are MIPS APMs and tracks that are not MIPS APMs. We also clarified that we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM.

Based on the MIPS APM criteria, we expect that the following 10 APMs will satisfy the requirements to be MIPS APMs for the 2020 MIPS performance period:

- Comprehensive ESRD Care Model (all Tracks).
- Comprehensive Primary Care Plus Model (all Tracks).
- Next Generation ACO Model.
- Oncology Care Model (all Tracks).

[131] *https://www.healthit.gov/topic/health-it-basics/improved-patient-care-using-ehrs.*

[132] *https://www.healthit.gov/sites/default/files/safer/guides/safer_high_priority_practices.pdf.*

[133] *https://www.healthit.gov/sites/default/files/safer/guides/safer_organizational_responsibilities.pdf.*

- Medicare Shared Savings Program (all Tracks).
- Medicare ACO Track 1+ Model.
- Bundled Payments for Care Improvement Advanced.
- Maryland Total Cost of Care Model (Maryland Primary Care Program).
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).
- Primary Care First (All Tracks).

Final CMS determinations of MIPS APMs for the 2020 MIPS performance period will be announced via the Quality Payment Program website at *https://qpp.cms.gov/*. Further, we make these determinations based on the established MIPS APM criteria as specified in § 414.1370(b).

(c) Calculating MIPS APM Performance Category Scores

(i) Quality Performance Category

As noted, the APM scoring standard is designed to reduce reporting burden for MIPS eligible clinicians participating in MIPS APMs by reducing the need for duplicative data submission to MIPS and their respective APMs, and to avoid potentially conflicting incentives between those APMs and MIPS. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77246), due to operational constraints, we did not require MIPS eligible clinicians participating in MIPS APMs other than the Shared Savings Program and the Next Generation ACO Model to submit data on quality measures for purposes of MIPS for the 2017 MIPS performance period. As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53695), we designed a means of overcoming these operational constraints and required MIPS eligible clinicians participating in such MIPS APMs to submit data on APM quality measures for purposes of MIPS beginning with the 2018 MIPS performance period. We also finalized a policy to reweight the quality performance category to zero percent in cases where an APM has no measures available to score for the quality performance category for a MIPS performance period, such as where none of the APM's measures would be available for calculating a quality performance category score by the close of the MIPS submission period because measures were removed from the APM measure set due to changes in clinical practice guidelines. Although we anticipated different scenarios where quality would need to be reweighted, we did not anticipate at that time that the quality performance category would need to be reweighted regularly.

After several years of implementation of the APM scoring standard, we have found that for participants in certain MIPS APMs (as defined in § 414.1305), it often is not operationally possible to collect and score performance data on APM quality measures for purposes of MIPS because these APMs run on episodic or yearly timelines that do not always align with the MIPS performance periods and deadlines for data submission, scoring, and performance feedback. In addition, although we anticipated different scenarios where quality would need to be reweighted, we do not believe the quality performance category should be reweighted regularly.

To achieve the aims of the APM scoring standard, we believe it is necessary to consider new approaches to quality performance category scoring.

(A) Allowing MIPS Eligible Clinicians Participating in MIPS APMs To Report on MIPS Quality Measures

We propose to allow MIPS eligible clinicians participating in MIPS APMs to report on MIPS quality measures in a manner similar to our established policy for the Promoting Interoperability performance category under the APM scoring standard for purposes of the MIPS quality performance category beginning with the 2020 MIPS performance period.

Similar to our approach for the Promoting Interoperability performance category, we would allow MIPS eligible clinicians in MIPS APMs to receive a score for the quality performance category either through individual or TIN-level reporting based on the generally applicable MIPS reporting and scoring rules for the quality performance category. Under such an approach, we would attribute one quality score to each MIPS eligible clinician in an APM Entity by looking at both individual and TIN-level data submitted for the eligible clinician and using the highest reported score, excepting scores reported by a virtual group. Thus, we would use the highest individual or TIN-level score attributable to each MIPS eligible clinician in an APM Entity in order to determine the APM Entity score based on the average of the highest scores for each MIPS eligible clinician in the APM Entity.

As with Promoting Interoperability performance category scoring, each MIPS eligible clinician in the APM Entity group would receive one score, weighted equally with that of the other MIPS eligible clinicians in the APM Entity group, and we would calculate one quality performance category score for the entire APM Entity group. If a MIPS eligible clinician has no quality performance category score—if the individual's TIN did not report and the individual did not report—that MIPS eligible clinician would contribute a score of zero to the aggregate APM Entity group score.

We would use only scores reported by an individual MIPS eligible clinician or a TIN reporting as a group; we would not accept virtual group level reporting because a virtual group level score is too far removed from the eligible clinician's performance on quality measures for purposes of the APM scoring standard.

We request comment on this proposal.

(B) APM Quality Reporting Credit

We are also proposing to apply a minimum score of 50 percent, or an ''APM Quality Reporting Credit'' under the MIPS quality performance category for certain APM entities participating in MIPS, where APM quality data cannot be used for MIPS purposes as outlined below. Several provisions of the statute address the possibility of considerable overlap between the requirements of MIPS and those of an APM. Most notably, section 1848(q)(1)(C)(ii) of the Act excludes QPs and partial QPs that do not elect to participate in MIPS from the definition of a MIPS eligible clinician. In addition, section 1848(q)(5)(C)(ii) of the Act requires that participation by a MIPS eligible clinician in an APM (as defined in section 1833(z)(3)(C) of the Act) earn such MIPS eligible clinician a minimum score of one-half of the highest potential score for the improvement activities performance category.

In particular, we believe that section 1848(q)(5)(C)(ii) of the Act reflects an understanding that APM participation requires significant investment in improving clinical practice, which may be duplicative with the requirements under the improvement activities performance category. We believe that MIPS APMs require an equal or greater investment in quality, which, due to operational constraints, cannot always be reflected in a MIPS quality performance category score. Accordingly, we are proposing to apply a similar approach to quality performance category scoring under the APM scoring standard. Specifically, we are proposing that APM Entity groups participating in MIPS APMs receive a minimum score of one-half of the highest potential score for the quality performance category, beginning with the 2020 MIPS performance period.

To the extent possible, we would calculate the final score by adding to the credit any additional MIPS quality score received on behalf of the individual NPI or the TIN. For the purposes of final

scoring this credit would be added to any MIPS quality measure scores we receive. All quality category scores would be capped at 100 percent. For example, if the additional MIPS quality score were 40 percent, that would be added to the 50 percent credit for a total of 90 percent; if the quality score were 70 percent, that would be added to the 50 percent credit and because the result is 120 percent, the cap would be applied for a final score of 100 percent.

We request comment on this proposal.

(i) Exceptions From APM Quality Reporting Credit

Under this proposal, we would not apply the APM Quality Reporting Credit to the APM Entity group's quality performance score for those APM Entities reporting only through a MIPS quality reporting mechanism according to the requirements of their APM, such as the Medicare Shared Savings Program, which requires participating ACOs to report through the CMS Web Interface and the CAHPS for ACOs survey measures. In these cases, no burden of duplicative reporting would exist, and there would not be any additional unscored quality measures for which to give credit.

In the case where an APM Entity group is in an APM that requires reporting through a MIPS quality reporting mechanism under the terms of participation in the APM, should the APM Entity group fail to report on required quality measures, the individual eligible clinicians and TINs that make up that APM Entity group would still have the opportunity to report quality measures to MIPS for purposes of calculating a MIPS quality performance category score as finalized in they would in any Other MIPS APM in accordance with § 414.1370(g)(1)(ii). However, as in these cases no burden of duplicative reporting would exist, they would remain ineligible for the APM Quality Reporting credit.

(C) Additional Reporting Option for APM Entities

We recognize that some APM Entities may have a particular interest in ensuring that MIPS eligible clinicians in the APM Entity group perform well in MIPS, or in reducing the overall burden of joining the entity. Likewise, we recognize that some APMs, such as the CMS Web Interface reporters already require reporting on MIPS quality measures as part of participation in the APM. Therefore, we are proposing that, in instances where an APM Entity has reported quality measures to MIPS through a MIPS submission type and using MIPS collection type on behalf of the APM Entity group, we would use that quality data to calculate an APM Entity group level score for the quality performance category. We believe this approach best ensures that all participants in an APM Entity group receive the same final MIPS score while reducing reporting burden to the greatest extent possible.

We request comment on this proposal.

(D) Bonus Points and Caps for the Quality Performance Category

In the 2018 Quality Payment Program final rule (82 FR 53568, 53700), we finalized our policies to include bonus points in the performance category score calculation when scoring quality at the APM Entity group level. Because these adjustments would, under the proposals discussed in section[s] III.J.3.d.(1)(b) of this proposed rule, already be factored in when calculating an individual or TIN-level quality performance category score before the quality scores are rolled-up and averaged to create the APM Entity group level score, we believe it would be inappropriate to continue to calculate these adjustments at the APM Entity group level in the case where an APM Entity group's quality performance score is reported by its composite individuals or TINs. However, in the case of an APM Entity group that chooses to or is required by its APM to report on MIPS quality measures at the APM Entity group level, we would continue to apply any bonuses or adjustments that are available to MIPS groups for the measures reported by the APM Entity and to calculate the applicability of these adjustments at the APM Entity group level.

We request comment on this proposal.

(E) Special Circumstances

In prior rulemaking, with regard to the quality performance category, we did not include MIPS eligible clinicians who are subject to the APM scoring standard in the automatic extreme and uncontrollable circumstances policy or the application-based extreme and uncontrollable circumstances policy that we established for other MIPS eligible clinicians (82 FR 53780–53783, 53895–53900; 83 FR 59874–59875). However, in section III.J.3.c.(5)(c)(i)(c) of this proposed rule, we are proposing to allow MIPS eligible clinicians participating in MIPS APMs to report on MIPS quality measures and be scored for the MIPS quality performance category based on the generally applicable MIPS reporting and scoring rules for the quality performance category. In light of this proposal, we believe that the same extreme and uncontrollable circumstances policies that apply to other MIPS eligible clinicians with regard to the quality performance category should also apply to MIPS eligible clinicians participating in MIPS APMs who would report on MIPS quality measures as proposed. Therefore, beginning with the 2020 MIPS performance period/2022 MIPS payment year and only with regard to the quality performance category, we propose to apply the application-based extreme and uncontrollable circumstances policy (82 FR 53780–53783) and the automatic extreme and uncontrollable circumstances policy (83 FR 59874–59875) that we previously established for other MIPS eligible clinicians and codified at § 414.1380(c)(2)(i)(A)(6) and (8), respectively, to MIPS eligible clinicians participating in MIPS APMs who are subject to the APM scoring standard and would report on MIPS quality measures as proposed in section III.J.3.c.(5)(c)(i). We would limit the proposed application of these policies to the quality performance category because our proposal in section III.J.3.c.(5)(c)(i) pertains to reporting on MIPS quality measures.

Under the previously established policies, MIPS eligible clinicians who are subject to extreme and uncontrollable circumstances may receive a zero percent weighting for the quality performance category in the final score (82 FR 53780–53783, 83 FR 59874–59875). Similar to the policy for MIPS eligible clinicians who qualify for a zero percent weighting of the Promoting Interoperability performance category (82 FR 53701 through 53702), we propose that if a MIPS eligible clinician who qualifies for a zero percent weighting of the quality performance category in the final score is part of a TIN reporting at the TIN level that includes one or more MIPS eligible clinicians who do not qualify for a zero percent weighting, we would not apply the zero percent weighting to the qualifying MIPS eligible clinician. The TIN would still report on behalf of the entire group, although the TIN would not need to report data for the qualifying MIPS eligible clinician. All MIPS eligible clinicians in the TIN who are participants in the MIPS APM would count towards the TIN's weight when calculating the aggregated APM Entity score for the quality performance category.

However, in this circumstance, if the MIPS eligible clinician was a solo practitioner and qualified for a zero percent weighting, if the MIPS eligible clinician's TIN did not report at the group level and the MIPS eligible

clinician was individually eligible for a zero percent weighting, or if all MIPS eligible clinicians in a TIN qualified for the zero percent weighting, neither the TIN nor the individual would be required to report on the quality performance category and would be assigned a weight of zero when calculating the APM Entity's quality performance category score.

If quality performance data were reported by or on behalf of one or more TIN/NPIs in an APM Entity group, a quality performance category score would be calculated for, and would be applied to, all MIPS eligible clinicians in the APM Entity group. If all MIPS eligible clinicians in all TINs of an APM Entity group qualify for a zero percent weighting of the quality performance category, the quality performance category would be weighted at zero percent of the MIPS final score.

We welcome comments from the public in this discussion of how best to address the technical infeasibility of scoring quality for many of our MIPS APMs, and whether the above described policy or some other approach may be an appropriate path forward for the APM entity group scoring standard in CY 2020.

We request comment on this proposal.

(d) Request for Comment on APM Scoring Beyond 2020

We are also seeking comment on potential policies to be included in next year's rulemaking to further address the changing incentives for APM participation under MACRA. We want the design of the APM scoring standard to continue to encourage appropriate shifts of MIPS eligible clinicians into MIPS APMs and eventually into Advanced APMs while ensuring fair treatment for all MIPS eligible clinicians.

We note that the QP threshold will be increasing in future years, potentially resulting in larger proportions of Advanced APM participants being subject to MIPS under the APM scoring standard. At the same time the MIPS performance threshold will be increasing annually, gradually reducing the impact of the APM scoring standard on participants' ability to achieve a neutral or positive payment adjustment under MIPS.

(F) Excluding Virtual Groups From APM Entity Group Scoring

Due to concerns that virtual groups could be used to calculate APM Entity group scores, we have excluded virtual group MIPS scores when calculating APM Entity group scores. Previously, we have effectuated this exclusion through the use and application of terms defined in § 414.1305, specifically, ''APM Entity,'' ''APM Entity group,'' ''group,'' and ''virtual group.'' To improve clarity around the exclusion of virtual group scores in calculating APM Entity group scores, we now are proposing to effectuate this exclusion more explicitly, by amending § 414.1370(e)(2) to state that the score calculated for an APM Entity group, and subsequently the APM Entity, for purposes of the APM scoring standard does not include MIPS scores for virtual groups.

(i) Sunsetting the APM Quality Reporting Credit for APM Entities

One proposal we may consider beginning in the 2021 performance year would be to apply the APM Quality Reporting Credit described above, if finalized, to specific APM Entities for a maximum number of MIPS performance years; this may be set for all APMs or tied to the end of each APM's initial agreement period.

We believe that this proposal would create an incentive for new APM Entity groups to continue to form and join new MIPS APMs while maintaining the incentive for APM Entity groups and MIPS eligible clinicians to continue to strive to achieve QP status. This proposal also would complement the shift we are seeing within APMs, such as the Shared Savings Program, to require APM participants to move into two-sided risk tracks and Advanced APMs within 2 to 5 years of joining the model or program.

(ii) Sunsetting the APM Quality Reporting Credit for Non-Advanced APMs

Similar to the first proposal, we may consider an approach whereby we would implement the above approach to quality scoring and then phase out the APM Quality Reporting Credit for MIPS APMs that are not also Advanced APM tracks.

We would have the option to implement this change by removing the APM Reporting Credit for non-Advanced MIPS APMs entirely at the end of a set number of years for all non-Advanced APMs (for example, 2 years).

Alternatively we could tie this sunsetting of the APM Quality Reporting Credit for a non-Advanced APM to the initial agreement period of each APM, creating a well-timed incentive for movement into Advanced APM tracks of an APM after the initial agreement period after the start of the APM.

(iii) Sunsetting the APM Quality Reporting Credit for APM Entities in One-Sided Risk Tracks

One possible way of acknowledging the uncertainty involved with joining an APM without extending the APM Reporting Credit to all APM participants would be to retain the APM Quality Reporting Credit for all two-sided risk APM tracks but to remove this credit for participants in all one-sided risk tracks except for those APM Entities in the first 2 years—or first agreement period—of a MIPS APM.

We believe this approach would help ease the transition from MIPS to APM participation and ultimately into Advanced APM participation. However, this proposal would continue to provide the APM Quality Reporting Credit for participants in two-sided risk APMs who have not reached the QP threshold. In this way, we could create an incentive for APM participants to move towards Advanced APMs, even in situations where it is unlikely the participant would be able to reach the QP threshold.

(iv) Retain Different APM Quality Reporting Credits for Advanced APMs and MIPS APMs

Another available option would be to apply an APM Reporting Credit, as described above to all MIPS APM participants but base the available credit on the level of risk taken on by the MIPS APM. For example, the maximum 50 percent credit may continue to be available to APM Entities in Advanced APM tracks while the value of the credit may be limited to 25 percent for participants in one-sided risk tracks. We are soliciting comments on how we might best divide these tracks and address the advent of two-sided risk MIPS APMs that do not meet the nominal amount and financial risk standards in order to be considered an Advanced APM, and what an appropriate reporting credit would be for these tracks.

(v) Other Options

We seek comments and suggestions on other ways in which we could modify the APM scoring standard to continue to encourage MIPS eligible clinicians to join APMs, with an emphasis on encouraging movement toward participation in two-sided risk APMs that may qualify as Advanced APMs.

(e) MIPS APM Performance Feedback

As we discussed in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77270, and 82 FR 53704 through 53705, respectively), MIPS

eligible clinicians who are scored under the APM scoring standard will receive performance feedback under section 1848(q)(12) of the Act.

Regarding access to performance feedback, whereas split-TIN APM Entities and their participants can only access their performance feedback at the APM Entity group or individual MIPS eligible clinician level, MIPS eligible clinicians participating in the Shared Savings Program, which is a full-TIN APM, were able to access their performance feedback at the ACO participant TIN level for the 2017 performance period. However, due to confusion caused by the policy in cases, where not all eligible clinicians in a Shared Savings Program participant TIN received the APM Entity score, for example eligible clinicians that terminate before the first snapshot, we intend to better align treatment of Shared Savings Program ACOs and their participant TINs with other APM Entities and, where appropriate, with other MIPS groups. We will continue to allow ACO participant TIN level access to the APM Entity group level final score and performance feedback, as well as provide the APM Entity group level final score and performance feedback to individual MIPS eligible clinicians who bill through the TINs identified on the ACO's ACO participant list. However, we will also provide TIN level performance feedback to ACO participant TINs that will include the information that is available to all TINs participating in MIPS, including the applicable final scores for MIPS eligible clinicians billing under the TIN, regardless of their MIPS APM participation status.

d. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

For the 2022 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years, which allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. The rationale for our scoring methodology continues to be grounded in the understanding that the MIPS scoring system has many components and various moving parts. As we transform MIPS through the MIPS Value Pathways (MVP) Framework as discussed in section III.K.3.a. of this proposed rule, we may propose modifications to our scoring methodology in future rulemaking as we continue to develop a methodology that emphasizes simplicity and that is understandable for MIPS eligible clinicians.

In this proposed rule, we are proposing policies to help eligible clinicians as they participate in the 2020 performance period/2022 MIPS payment year, and as we move beyond the transition years of the program.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, CMS Web Interface Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus.

As we move towards the transformation of the program through the MVP Framework discussed in section III.K.3.a.(2) of this proposed rule, we anticipate we will revisit and remove many of our scoring policies such as the 3-point floor, bonus points, and assigning points for measures that cannot be scored against a benchmark through future rulemaking. As we propose to transform the MIPS program through MVPs, our goal is to incorporate ways to address these issues without developing special scoring policies. We refer readers to section III.K.3.a.(3)(d) of this proposed rule, for further discussion on scoring of MVPs.

In section III.K.3.d.(1) of this proposed rule, we discuss the limited proposals for our scoring policies as we anticipate future changes as we work to transform MIPS through MVPs. Specifically, we are proposing to: (1) Maintain the 3-point floor for measures that can be scored for performance; (2) develop benchmarks based on flat percentages in specific cases where we determine the measure's otherwise applicable benchmark could potentially incentivize inappropriate treatment; (3) continue the scoring policies for measures that do not meet the case-minimum requirement, do not have a benchmark, or do not meet the data-completeness criteria; (4) maintain the cap on measure bonus points for high-priority measures and end-to-end reporting; and (5) continue the improvement scoring policy. In addition, we are requesting comment on future approaches to scoring the CAHPS for MIPS survey measure if new questions are added to the survey. These proposals are discussed in more detail in this section of the proposed rule.

(i) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1) for more on our policies for scoring performance on quality measures.

(A) Scoring Measures Based on Achievement

We established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as for the hospital readmission measure (if applicable). MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we established that measures with a benchmark based on the performance period (rather than on the baseline period) would continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that the 3-point floor was for the transition year and that we would revisit the 3-point floor in future years.

For the 2022 MIPS payment year, we are proposing to again apply a 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period. As we move towards the proposed MVPs discussed in section III.K.3.a. of this proposed rule, we anticipate we will revisit and possibly remove the 3-point floor in future years. As a result, we will wait until there is further policy development under the proposed framework before proposing to remove the 3-point floor. Accordingly, we are proposing to amend § 414.1380(b)(1)(i) to remove the years 2019, 2020, and 2021 and adding in its place the years 2019 through 2022 to provide that for the 2019 through 2022 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. The number of measure achievement points received for each measure is determined based on the applicable benchmark decile category and the percentile distribution.

MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement. A summary of the proposed policies for the CY 2020 MIPS performance period is provided in Table 43.

TABLE 43—QUALITY PERFORMANCE CATEGORY: PROPOSED SCORING POLICIES FOR THE CY 2020 MIPS PERFORMANCE PERIOD *

Measure type	Description	Scoring rules
Class 1	For the 2020 MIPS performance period: Measures that can be scored based on performance. Measures that are submitted or calculated that meet all the following criteria: (1) Has a benchmark; (2) Has at least 20 cases; and (3) Meets the data completeness standard (generally 70 percent for 2020.) ** ** We refer readers to section III.K.3.c.(1)(c) for our proposal to increase data completeness.	For the 2020 MIPS performance period: 3 to 10 points based on performance compared to the benchmark.
Class 2	For the 2020 MIPS performance period: Measures that are submitted and meet data completeness, but do not have either of the following: (1) A benchmark (2) At least 20 cases.	For the 2020 MIPS performance period: 3 points.
Class 3	For the 2020 MIPS performance period: Measures that are submitted, but do not meet data completeness threshold, even if they have a measure benchmark and/or meet the case minimum	Beginning with the 2020 MIPS performance period: MIPS eligible clinicians other than small practices will receive zero measure achievement points. Small practices will continue to receive 3 points.

* The Class 2 and 3 measure scoring policies are not applicable to CMS Web Interface measures or administrative claims-based measures.

For the 2022 MIPS payment year, we are proposing to again apply the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement. Accordingly, we are proposing to amend § 414.1380(b)(1)(i)(A)(*1*) to remove the years 2019, 2020, and 2021 and adding in its place the years 2019 through 2022 to provide that except as provided in paragraph (b)(1)(i)(A)(2) (which relates to CMS Web Interface measures and administrative claims-based measures), for the 2019 through 2022 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

(C) Modifying Benchmarks To Avoid the Potential for Inappropriate Treatment

We established at § 414.1380(b)(1)(ii) that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period. We also established at § 414.1380(b)(1)(i) that the number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution.

We believe all the measures in the MIPS program are of high standard as they have undergone extensive review prior to their inclusion in the program. MIPS measures go through the rulemaking process, and QCDR measures have an approval process before they are included in MIPS. We also believe our benchmarking generally provides an objective way to compare performance differences across different types of quality measures. However, we have heard concerns from stakeholders that for a few measures, the benchmark methodology may incentivize the inappropriate treatment of certain patients, in order for a clinician to achieve a score in the highest decile. Our scoring system already provides some protection from inappropriate treatment because all clinicians in the top 10 percent of the distribution receive the same 10-point score, thus a clinician with performance in the 90th percentile has no incentive to go higher. However, for certain measures with benchmarks set at very high or maximum performance in the top decile, we are concerned that these levels may not be representative and may not provide the most appropriate incentives for clinicians. Specifically, there are some measures that may have the potential to encourage clinicians to alter the clinical interaction with patients inappropriately, regardless of the individual patient's circumstances, in order to achieve that top decile performance level, for example, intermediate outcome measures that may encourage clinicians to over treat patients in order to achieve the highest performance level. Patient safety is our primary concern; therefore, we are proposing to establish benchmarks based on flat percentages in specific cases where we determine the measure's

otherwise applicable benchmark could potentially incentivize treatment that could be inappropriate for a particular patient type. Rather than develop benchmarks based on the distribution of scores we would base them on flat percentages such that any performance rate at or above 90 percent would be in the top decile and any performance rate above 80 percent would be in the second highest decile, and this would continue for the remaining deciles. We believe the measures that would fall under this methodology are high-priority or outcome measures for clinicians to focus on. However, we want to ensure that benchmarks are set to incentivize the most appropriate behavior, and ensure that our method for scoring against a benchmark accurately reflects performance and does not result in clinicians receiving low scores, despite adherence to the most appropriate treatment.

For the measures identified, we are proposing to use a flat percentage, similar to how the Shared Savings Program uses flat percentages to set benchmarks for measures with high performance. We selected this methodology for the following reasons: First, it is a straight-forward and simple methodology that currently exists for some MIPS measures that are collected through the CMS Web Interface. Second, because we are applying this methodology to measures with very high performance, we believe this approach is consistent with the Shared Saving Program approach established at § 425.502(b)(2)(ii) of using flat percentages to set benchmarks when many reporters demonstrate high achievement on a measure. The Shared Savings Program uses this method to avoid penalizing high ACO performance; however, in this case, we would be applying the flat percentages to ensure that the benchmark does not result in inappropriate and potentially harmful patient treatment. We believe this adjustment would provide additional protection to patients and reduce the potential incentive for inappropriate treatment of patients.

We propose that to determine whether a measure benchmark may not provide the most appropriate incentives for treatment, thus creating the potential for inappropriate treatment based on the patient's circumstances, CMS medical officers would assess if there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure benchmark. This assessment will include reviews of factors such as whether the measure specifications allow for clinical judgment to adjust for inappropriate outcomes, if the benchmarks for any of the impacted measure's collection types could put these patients at risk by setting a potentially harmful standard for top decile performance, or whether the measure is topped out. The intent of the assessment is to have CMS medical officers determine whether certain measure benchmarks may have unintended consequences that put patients at risk and the measure benchmark should therefore move to a flat percentage. The assessment will take into account all available information, including from the medical literature, published practice guidelines, and feedback from clinicians, groups, specialty societies, and the measure steward. Before applying the flat percentage benchmarking methodology to any recommended measure, we would propose the modified benchmark for the applicable MIPS payment year through rulemaking. This policy would be effective beginning with the CY 2020 MIPS performance period (and thus the 2022 MIPS payment adjustment year). We also seek comment on future actions we should take to help us in determining which measures to apply the flat percentage benchmarking to; for example, convening a technical expert panel.

We have identified two measures for which we believe we need to apply benchmarks based on flat percentages to avoid potential inappropriate treatment—MIPS #1 (NQF 0059): Diabetes: Hemoglobin A1c (HbA1c) Poor Control (9%) and MIPS #236 (NQF 0018): Controlling High Blood Pressure. Although there are protections built into both of these measures, such as the use of less stringent requirements than current clinical guidelines, they lack comprehensive denominator exclusions and risk-adjustment or risk-stratification, which can lead to the possible over treatment of patients in order to meet numerator compliance. Overtreatment could lead to instances where the patient's blood sugar or blood pressure is lowered to a level that meets the measure standard but is too low for their optimum health given other coexisting medical conditions.

Because the factors for determining if a measure benchmark has the potential to cause inappropriate treatment may include both measure and benchmark considerations, we are concerned that all the benchmarks associated with the different collection types of a measure could be affected. Therefore, we are proposing to use the flat percentage benchmarks as an alternative to our standard method of calculating benchmarks by a percentile distribution of measure performance rates under for all collection types where the top decile for any measure benchmark is higher than 90 percent under the performance-based benchmarking methodology at § 414.1380(b)(1)(ii). We are limiting the application of the flat percentage methodology to all collection types where the top decile for any measure benchmark is higher than 90 percent so that our flat percentage methodology will actually reduce or remove the incentive for inappropriate care. If the top decile was originally below 90 percent, using the flat percentages would actually raise the level up to 90 percent and therefore provide a stronger incentive to provide inappropriate care in order to get the top score. We also seek comment on whether we should use a criteria different than applying it to collection types where the top decile would be higher than 90 percent if the benchmark was based on a distribution. For the two measures we are proposing to modify, we would not know which benchmarks and their associated collection types are impacted until we run our analysis; however, based on the benchmarks for the 2019 MIPS performance period, we would anticipate using the modified benchmarks for the Medicare Part B claims and the MIPS CQM collection types.

We considered whether we should rerun the benchmarks excluding those in the top decile but are concerned that the approach would add complexity to the program overall. We seek comment on whether we should consider different methodologies for the modified benchmarks such as excluding the top decile or increasing the required data completeness for the measure to a very high level (for example, 95 to 100 percent) and use performance period benchmarks rather than historical benchmarks.

We are proposing to add paragraph § 414.1380(b)(1)(ii)(C) to state that beginning with the 2022 MIPS payment year, for each measure that has a benchmark that CMS determines has the potential to result in inappropriate treatment, CMS will set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology at § 414.1380(b)(1)(ii). We also propose to revise the text at § 414.1380(b)(1)(ii) to provide exceptions and to clarify the requirement that benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

(ii) Request for Feedback on Additional Policies for Scoring the CAHPS for MIPS Survey Measure

We refer readers to § 414.1380(b)(1)(vii)(B) for more on our policy on reducing the total available measure achievement points for the quality performance category by 10 points for groups that submit 5 or fewer quality measures and register for the CAHPS for MIPS survey, but do not meet the minimum beneficiary sampling requirements.

In this proposed rule, we are not proposing any changes to the scoring of the CAHPS for MIPS survey Measure. However, to the extent consistent with our authority to collect such information under section 1848(q) of the Act, we are considering expanding the information collected in the CAHPS for MIPS survey measure, described in section III.K.3.c.(1) of this proposed rule, and seek comment on scoring. One consideration is adding narrative questions to the CAHPS for MIPS survey measure, which would invite patients to respond to a series of questions in free text, such as responding to open ended questions and describing their experience with care in their own words. We believe narratives from patients about their health care experiences would be helpful to other patients when selecting a clinician and can provide a valuable complement to standardized survey scores, both to help clinicians understand what they can do to improve care and to engage and inform patients about differences among their experiences of care. On the other hand, there may be concerns about the accuracy and usefulness of narrative information reported by patients. For more information on the rationale for adding narrative questions, we refer readers to section III.K.3.c.(1)(c)(i) of this proposed rule. In addition, we are interested in learning from organizations with experience scoring narrative information, including methodologies. We would work with stakeholders on user testing before proposing any such methodology in future rulemaking. We are also considering adding an additional CAHPS for MIPS survey question allowing patients to provide a score for their overall experience and satisfaction rating with a recent health care encounter, to capture the patient ''voice'' and provide patients with information useful to making a decision on clinicians, as detailed in section III.I.3.a.(1) of this proposed rule. We are interested in feedback regarding how to score this measure. The new questions could potentially be added to the calculation for a score for the CAHPS for MIPS survey measure. We would consider any changes for future notice and comment rulemaking.

(iii) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2019 PFS final rule (83 FR 35950), we finalized our proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen.

In this proposed rule, we do not propose any changes to this policy. However, we refer readers to section III.K.3.d.(2)(b)(ii)(A) of this proposed rule for discussion on the rare circumstances when we are unable to calculate a quality performance category score for a MIPS eligible clinician because they do not have applicable or available quality measures. If we are unable to score the quality performance category for a MIPS eligible clinician, then we will reweigh the clinician's quality performance category score according to the reweighting policies described in sections III.K.3.d.(2)(b)(iii) of this proposed rule.

(iv) Incentives To Report High-Priority Measures

We refer readers to § 414.1380(b)(1)(v)(A) for more on the cap on high-priority measure bonus points for the first 3 years of MIPS at 10 percent of the denominator (total possible measure achievement points the MIPS eligible clinician could receive in the quality performance category) of the quality performance category.

In the CY 2019 PFS final rule (83 FR 59851), we finalized technical updates to § 414.1380(b)(1) to more clearly and concisely capture previously established policies in the section. During this effort we inadvertently added that a high priority measure must have a benchmark. This was not intended to be a policy change. We are clarifying that in order for a measure to qualify for high priority bonus points it must meet case minimum and data completeness and not have a zero percent performance. The measure does not need to have a benchmark. Accordingly, we propose to revise § 414.1380(b)(1)(v)(A)(*1*)(*i*) to provide that each high priority measure must meet the case minimum requirement at (b)(1)(iii) of this section, meet the data completeness requirement at § 414.1340, and have a performance rate that is greater than zero.

We also removed high priority bonus points for CMS Web interface reporters in the CY 2019 PFS final rule (83 FR 59850 through 59851). We refer readers to the CY 2019 PFS final rule for further discussion on this policy.

In this proposed rule, we propose to maintain the cap on measure points for reporting high priority measures for the 2022 MIPS payment year. Accordingly, we propose to revise § 414.1380(b)(1)(v)(A)(*1*)(*ii*) to remove the years 2019, 2020, and 2021 and adding in its place the years 2019 through 2022 to provide that for the 2019 through 2022 MIPS payment years, the total measure bonus points for high priority measures cannot exceed 10 percent of the total available measure achievement points.

(v) Incentives To Use CEHRT To Support Quality Performance Category Submissions

We refer readers to § 414.1380(b)(1)(v)(B) for more on our policy assigning one bonus point for each quality measure submitted with end-to-end electronic reporting, under certain criteria.

In this proposed rule, we propose to continue to assign and maintain the cap on measure bonus points for end-to-end electronic reporting for the 2022 MIPS payment year. We believe with the proposed framework for transforming MIPS through the MVPs discussed in section III.K.3.a. of this proposed rule, we can find ways in future years to incorporate eCQM measures without needing to incentivize end-to-end reporting with bonus points. As a result, we will wait until there is further policy development under the proposed framework before proposing to remove our policy of assigning bonus points for end-to-end electronic reporting. Accordingly, we propose to revise § 414.1380(b)(1)(v)(B)(*1*)(*i*) to remove the years 2019, 2020, and 2021 and add in its place the years 2019 through 2022 to provide that for the 2019 through 2022 MIPS payment years, the total measure bonus points for measures submitted with end-to-end electronic reporting cannot exceed 10 percent of the total available measure achievement points.

(vi) Improvement Scoring for the MIPS Quality Performance Category Percent Score

We refer readers to § 414.1380(b)(1)(vi)(C)(*4*) for more on our policy stating that for the 2020 and 2021 MIPS payment year, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In this proposed rule, we propose to continue our previously established

policy for the 2022 MIPS payment year and to revise § 414.1380(b)(1)(vi)(C)(*4*) to remove the phrase ''2020 and 2021 MIPS payment year'' and adding in its place the phrase ''2019 through 2022 MIPS payment years'' to provide that for the 2020 through 2022 MIPS payment years, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. Specifically, for the 2022 MIPS payment year, we will compare the MIPS eligible clinician's quality performance category achievement percent score for the 2020 MIPS performance period to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent for the 2019 MIPS performance period.

(c) Facility-Based Measurement Scoring Option for the Quality and Cost Performance Categories for the 2022 MIPS Payment Year

(i) Background

For our previously established policies regarding the facility-based measurement scoring option, we refer readers to both the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767) and the CY 2019 PFS final rule (83 FR 59856 through 59867). In the CY 2019 PFS proposed rule (83 FR 35962 through 35963), we requested comments on a number of issues and topics related to whether we should expand the facility-based scoring option to other facilities and programs in future years, particularly the use of end-stage renal disease (ESRD) and post-acute care (PAC) settings as the basis for facility-based measurement and scoring. We appreciate the many comments we received in response to this request. We are not proposing an expansion to other facility types as part of this rule but may consider addressing this issue in future rulemaking.

(ii) Facility-Based Measurement Eligibility

In the CY 2019 PFS final rule (83 FR 59856 through 59860), we established the policies that determine eligibility for scoring for facility-based measurement as an individual and as a group. In the CY 2019 PFS final rule, we established at § 414.1380(e)(2)(i)(C) that a MIPS eligible clinician is facility-based if the clinician can be attributed, under the methodology specified in § 414.1380(e)(5), to a facility with a value-based purchasing score for the applicable period. While we do not propose any changes to the eligibility of facility-based measurement for individuals or groups, we are proposing to amend § 414.1380(e)(2)(i)(C) to improve clarity. Specifically, we propose to amend § 414.1380(e)(2)(i)(C) to state that a MIPS eligible clinician is facility-based if the clinician can be assigned, under the methodology specified in § 414.1380(e)(5), to a facility with a value-based purchasing score for the applicable period. We hope to avoid any ambiguity as we have used the term ''attribute'' and ''attribution'' in two ways. We have used the term to refer to the use of the facility's performance in place of the clinician's own performance (83 FR 59857). We have also used the term at § 414.1380(e)(2)(i)(C) to reference our method of connecting clinicians to a facility and indicate that the facility score will be the clinician's score. We believe these are related but distinct concepts; therefore, we are proposing to revise § 414.1380(e)(2)(i)(C) to use the term ''assign'' instead of ''attribute.'' We believe this change in language more clearly describes how a clinician receives a score under facility-based measurement while avoiding making any changes to our methods in determining eligibility for facility-based measurement or their score. This does not constitute a change in policy.

(iii) Facility-Based Measures for CY 2020 MIPS Performance Period/2022 MIPS Payment Year

For informational purposes, we are providing in Table 44 a list of the measures included in the FY 2021 Hospital VBP Program measure set that will be used in determining the quality and cost performance category scores for the CY 2020 MIPS performance period/ 2022 MIPS payment year. The FY 2021 Hospital VBP Program has adopted 12 measures covering 4 domains (83 FR 20412 through 20413). The performance period for measures in the Hospital VBP Program varies depending on the measure, and some measures include multi-year performance periods. These measures are determined through separate rulemaking; the applicable rulemaking is usually the Hospital Inpatient Prospective Payment Systems (IPPS) for Acute Care Hospitals and the Long-Term Care Hospital (LTCH) Prospective Payment System (PPS) rule. We are using these measures, benchmarks, and performance periods for the purposes of facility-based measurement in accordance with § 414.1380(e)(1). The measures for FY 2021 Hospital VBP Program were summarized in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 41454 through 41455).

BILLING CODE 4120–01–P

TABLE 44: FY 2021 Hospital VBP Program Measures

Short Name	Domain/Measure Name	NQF #	Performance Period
Person and Community Engagement Domain			
HCAHPS	Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) (including Care Transition Measure)	0166 (0228)	January 1, 2019-December 31, 2019
Clinical Outcomes Domain			
MORT-30-AMI	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (AMI) Hospitalization	0230	July 1, 2016-June 30, 2019
MORT-30-HF	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Heart Failure (HF) Hospitalization	0229	July 1, 2016-June 30, 2019
MORT-30-PN (updated cohort)	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Pneumonia Hospitalization.	0468	September 1, 2017-June 30, 2019
MORT-30-COPD	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization.	1893	July 1, 2016-June 30, 2019
THA/TKA	Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)	1550	April 1, 2016-March 31, 2019
Safety Domain			
CAUTI	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure.	0138	January 1, 2019-December 31, 2019
CLABSI	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure	0139	January 1, 2019-December 31, 2019
Colon and Abdominal Hysterectomy SSI	American College of Surgeons—Centers for Disease Control and Prevention (ACS–CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure.	0753	January 1, 2019-December 31, 2019
MRSA Bacteremia	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure	1716	January 1, 2019-December 31, 2019
CDI	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset *Clostridium difficile* Infection (CDI) Outcome Measure	1717	January 1, 2019-December 31, 2019
Efficiency and Cost Reduction Domain			
MSPB	Payment-Standardized Medicare Spending Per Beneficiary (MSPB)	2158	January 1, 2019-December 31, 2019

BILLING CODE 4120–01–C

(d) Scoring the Improvement Activities Performance Category

For our previously established policies regarding scoring the improvement activities performance category, we refer readers to § 414.1380(b)(3), the CY 2018 Quality Payment Program final rule (82 FR 53767 through 53769), and the CY 2019 PFS final rule (83 FR 59867 through 59868). We also refer readers to § 414.1355 and the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53662), and the CY 2019 PFS final rule (83 FR 59776 through 59785) for our previously established policies regarding the improvement activities performance category generally and section III.K.3.c.(3) of this proposed rule, where we discuss our proposals for the improvement activities performance category.

(e) Scoring the Promoting Interoperability Performance Category

We refer readers to section III.K.3.c.(4) of this proposed rule, where we discuss our proposals for the Promoting Interoperability performance category.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for MIPS eligible clinicians, we refer readers to § 414.1380(c) and the discussion in the CY 2017 Quality Payment Program final rule (81 FR 77319 through 77329), CY 2018 Quality Payment Program final rule (82 FR 53769 through 53785), and CY 2019 PFS final rule (83 FR 59868 through 59878). In this proposed rule, we are proposing to continue the complex patient bonus for the 2022 MIPS payment year and to establish performance category reweighting policies for the 2022, 2023, and 2024 MIPS payment years.

(a) Complex Patient Bonus for the 2022 MIPS Payment Year

In the CY 2019 PFS final rule (83 FR 59869 through 59870), under the authority in section 1848(q)(1)(G) of the Act, we finalized at § 414.1380(c)(3) to maintain the complex patient bonus, which we previously finalized in the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776), of up to five points to be added to the final score for the 2021 MIPS payment year. The complex patient bonus was developed as a short-term solution to address the impact patient complexity

may have on MIPS scoring that we would revisit on an annual basis while we continue to work with stakeholders on methods to account for patient risk factors. Our overall goal for the complex patient bonus was twofold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. For a detailed description of the complex patient bonus finalized for prior MIPS payment years, please refer to the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776) and CY 2019 PFS final rule (83 FR 59869 through 59870).

For the 2020 MIPS performance period/2022 MIPS payment year, we propose to continue the complex patient bonus as finalized for the 2019 MIPS performance period/2021 MIPS payment year and to revise § 414.1380(c)(3) to reflect this policy. Although we intend to maintain the complex patient bonus as a short-term solution, we do not believe we have sufficient information available at this time to develop a long-term solution to account for patient risk factors in MIPS such that we would be able to include a different approach in this proposed rule. Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our scoring methodology for MIPS. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on individuals' health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted by the Office of the Assistant Secretary for Planning and Evaluation (ASPE) under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, enacted October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. ASPE completed its first report [134] in December 2016, which examined the effect of individuals' socioeconomic status on quality, resource use, and other measures under the Medicare program, and included analyses of the effects of Medicare's current value-based payment programs on providers serving socially at-risk beneficiaries and simulations of potential policy options to address these issues. The second ASPE report is expected in October 2019 as required by the IMPACT Act, and will examine additional risk factors and data. We expect the second report will build on the analyses included in initial report and may provide additional insight for a long-term solution to addressing risk factors in MIPS. At this time, we do not believe additional data sources are available that would be feasible to use as the basis for a different approach to account for patient risk factors in MIPS. We plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify policy solutions that achieve the goals of attaining health equity for all beneficiaries and minimizing unintended consequences.

With newly available data from the Quality Payment Program, we considered whether the data still support the complex patient bonus at the final score level. We have replicated analyses similar to the ones presented in Table 27 of the CY 2018 Quality Payment Program final rule (82 FR 53776). However, our latest analyses use the data submitted for the Quality Payment Program for the 2017 MIPS performance period and assess eligibility and final scores based on the proposals we are making for the 2020 MIPS performance period/2022 MIPS payment year using the methodology described in the Regulatory Impact Analysis in section VI. of this proposed rule.

[134] U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation, Report to Congress: Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs (2016). Available at *https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicares-value-based-purchasing-programs.*

In the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776), when considering approaches for a complex patient bonus, we reviewed evidence to identify how indicators of patient complexity have an impact on performance under MIPS, as well as availability of data to implement the bonus. Specifically, we identified two potential indicators for complexity: Medical complexity as measured through Hierarchical Condition Category (HCC) risk scores; and social risk as measured through the proportion of patients with dual eligible status.

We identified these indicators because they are common indicators of patient complexity in the Medicare program and the data is readily available. Both of these indicators have been used in CMS programs to account for risk and both data elements are already publicly available for individual NPIs in the Medicare Physician and Other Supplier Public Use File (referred to as the Physician and Other Supplier PUF).

We divided clinicians and groups into quartiles based on average HCC risk score and percentage of dual eligible patients. To assess whether there was a difference in MIPS simulated scores by these two variables, we analyzed the effect of average HCC risk score and dual eligible ratio separately for groups and individuals. When looking at individuals, we focused on individuals that reported 6 or more measures (removing individuals who reported no measures or who reported less than 6 measures). We restricted our analysis to individuals who reported 6 or more measures because we wanted to look at differences in performance for those who reported the 6 measures which are generally required under MIPS if there are six measures that apply to the MIPS eligible clinician, rather than differences in scores due to MIPS eligible clinicians not fully reporting for MIPS.

We also ranked MIPS eligible clinicians by proportion of patients with dual eligibility as previously done in Table 27 of the CY 2018 Quality Payment Program final rule (82 FR 53776). We have updated the analysis by using the components of the complex patient bonus and dividing clinicians into quartiles. The preliminary results are shown in Table 45.

TABLE 45—MIPS SIMULATED AVERAGE FINAL SCORE * BY HCC RISK QUARTILE AND DUAL ELIGIBLE RATIO QUARTILE

HCC risk score	Estimated 2022 MIPS payment year final scores using data submitted for the quality payment program for the 2017 MIPS performance period	
	Individuals with 6+ measures *	Groups
Quartile 1—Lowest Average HCC	72.32	70.3
Quartile 2	72.58	77.59
Quartile 3	73.2	73.93
Quartile 4—Highest Average HCC	72.68	67.66
Dual Eligible Ratio		
Quartile 1—Low Proportion of Dual Status	73.51	73.04
Quartile 2	72.37	76.28
Quartile 3	72.16	72.21
Quartile 4—Highest Proportion of Dual Status	70.7	68.79

* We restricted our analysis to individuals who reported 6 or more measures because we wanted to look at differences in performance for those who reported the 6 measures which are generally required under MIPS if there are six measures that apply to the MIPS eligible clinician, rather than differences in scores due to MIPS eligible clinicians not fully reporting for MIPS.

Table 45 illustrates the average estimated MIPS final scores for individual MIPS eligible clinicians who submitted at least 6 measures (generally, those who fully report for MIPS quality) and for group reporters, stratified by the average HCC risk score and dual eligible ratio quartiles. For more detail on the original analysis, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53776).[135]

Overall, the analysis of preliminary data shows a consistent relationship between the dual eligible ratio quartiles and the average MIPS final scores only for individuals, where the average MIPS final score decreases as the quartile increases. We see slight differences in the average HCC risk score and dual eligible ratio quartiles for groups, but virtually no difference for average HCC risk score for individuals. However, we have only 1 year of data and more recent data may bring different results. In addition, we are awaiting a second report from ASPE in October 2019 that we expect will provide more direction for our approach to accounting for risk factors in MIPS. We are concerned that without the information from ASPE and without observing a clear trend that would require a change in our methodology, making any changes beyond our proposal to continue this policy would be premature at this time.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77320 through 77329 and 82 FR 53779 through 53785, respectively), as well as the CY 2019 PFS final rule (83 FR 59870 through 59878). Under our proposals in section III.K.3.c.(2)(a) of this proposed rule, the cost performance category would make up 20 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year, 25 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year. Under our proposals in section III.K.3.c.(1)(b) of this proposed rule, the quality performance category would thus make up 40 percent of a MIPS eligible clinician's final score the 2022 MIPS payment year, 35 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year. Table 46 summarizes the weights proposed for each performance category.

TABLE 46—PROPOSED WEIGHTS BY MIPS PERFORMANCE CATEGORY FOR THE 2022 THROUGH 2024 MIPS PAYMENT YEARS

Performance category	2022 MIPS payment year (proposed)	2023 MIPS payment year (proposed) (percent)	2024 MIPS payment year (proposed) (percent)
Quality	40	35	30
Cost	20	25	30
Improvement Activities	15	15	15
Promoting Interoperability	25	25	25

[135] Data submitted for 2017 MIPS performance period was subject to different policies than later years of MIPS (due to the ''pick-your-pace'' approach in the first year of MIPS and the much lower performance threshold of 3 points).

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity for each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved. Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Assigning a scoring weight of zero percent and redistributing the weight to the other performance categories differs from the scenario of a MIPS eligible clinician failing to report on an applicable measure or activity that is required to be reported. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2019 PFS final rule (83 FR 59871 through 59876).

(A) Reweighting Performance Categories Due to Data That Are Inaccurate, Unusable, or Otherwise Compromised

Under current regulations at § 414.1380(c)(2), we assign different weights to the performance categories and redistribute weight from one category to another under specified circumstances where we have determined reweighting is appropriate. These circumstances do not currently include cases where a MIPS eligible clinician submits data that are inaccurate, unusable, or otherwise compromised (referred to in this section as ''compromised data''). If we determine a MIPS eligible clinician has submitted compromised data, we assign the clinician a score of zero for the performance category. Because compromised data is not currently a basis for reweighting, the determination that data are inaccurate, unusable or otherwise compromised is likely to reduce the clinician's final score and therefore may reduce the clinician's payment adjustments. However, we believe that reweighting of the applicable performance categories may be appropriate in rare cases. Specifically, we believe reweighting may be appropriate when a MIPS eligible clinician's data are inaccurate, unusable or otherwise compromised due to circumstances that are outside of the control of the MIPS eligible clinician or its agents.

In the CY 2018 Quality Payment Program final rule, we discussed our belief that extreme and uncontrollable circumstances, such as natural disasters, could cause the MIPS measures and activities to be unavailable to a MIPS eligible clinician (82 FR 53780 through 53783). For similar reasons, we believe that the measures and activities may not be available to a MIPS eligible clinician for the quality, cost, and improvement activities performance categories under section 1848(q)(5)(F) of the Act when data related to the measures and activities are inaccurate, unusable or otherwise compromised due to circumstances that are outside of the control of the MIPS eligible clinician or its agents. In addition, we believe data that are inaccurate, unusable or otherwise compromised due to circumstances that are outside of the control of the MIPS eligible clinician or its agents could constitute a significant hardship for purposes of the Promoting Interoperability performance category under section 1848(o)(2)(D) of the Act. Therefore, we are proposing a new policy to allow reweighing for any performance category if, based on information we learn prior to the beginning of a MIPS payment year, we determine data for that performance category are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the MIPS eligible clinician or its agents.

For purposes of this reweighting policy, we propose that reweighting take into account both what control the clinician had directly over the circumstances and what control the clinician had indirectly through its agents. The term agent as used in this proposal is intended to include any individual or entity, including a third party intermediary as described in § 414.1400, acting on behalf of or under the instruction of the MIPS eligible clinician We believe that reweighting is not appropriate if a clinician could exert influence over a third party intermediary or another party to prevent or remediate compromised data and does not do so. However, we believe reweighting is appropriate in certain circumstances that may be within the control of the clinician's third party intermediary if the clinician cannot alter that party's conduct. Such circumstances would exist if a clinician's third party intermediary could correct the clinician's compromised data and despite requests from the clinician the third party intermediary chose not to do so. In this example, the decision by the third party intermediary not to make the correction would demonstrate that the third party intermediary was not acting as an agent of the clinician and the third party intermediary's conduct would not preclude reweighting. We solicit comments on this approach and possible alternatives for balancing efforts to allow reweighting in circumstances in which clinicians are not culpable for compromised data while maintaining financial incentives for clinicians, third party intermediaries and other parties to prevent and correct compromised data.

We propose that our determination of whether reweighing will be applied under this policy can take into account any information known to the agency and we will consider the information we obtain on a case-by-case basis for reweighting. We anticipate considering information provided to us through routine communication channels for the Quality Payment Program by any submitter type as defined under § 414.1305, as well as other relevant information sources of which we are aware. We request that third party intermediaries, to the extent feasible, inform MIPS eligible clinicians if the third party intermediary believes their data may have been compromised. To the extent third party intermediaries believe that MIPS data may be compromised, we encourage them to provide us with a list of or other identifying information for all MIPS eligible clinicians who may have been affected by such issues, so that we may evaluate the circumstances in a timely manner. We also encourage MIPS eligible clinicians to contact us and self-identify if they believe they have compromised data; they should not rely solely on a third party intermediary to do so. We recognize that there may be scenarios when a MIPS eligible clinician or one or more of its agents becomes aware of potential data issues prior to submission of data. We solicit comment on whether and how our proposed reweighting policy should apply to these circumstances. We note that compromised data are not true, accurate or complete for purposes of § 414.1390(b) or § 414.1400(a)(5) and knowing submission of compromised

data may result in remedial action against the submitter. A MIPS eligible clinician should not submit data and should not allow the submission of his or her data if the MIPS eligible clinician knows that the data are inaccurate, unusable, or otherwise compromised.

We propose to determine whether the requirements for reweighting are met by assessing if: (1) The MIPS eligible clinician's data are inaccurate, unusable, or otherwise compromised; and (2) the data are compromised due to circumstances outside of the control of the MIPS eligible clinician or agent. We would make the determination of whether the clinician's data are inaccurate, unusable or otherwise compromised based on documentation of the issue and its demonstrated effect on data of the particular MIPS eligible clinician. As noted above, we propose to limit this policy to cases where data are compromised outside the control of the clinician or its agent because we do not want to create incentives for clinicians or third party intermediaries to knowingly submit compromised data and want to encourage clinicians and their agents to take reasonable efforts to correct data that they believe maybe not compromised. Factors relevant to whether the circumstances were outside the control of the clinician and its agents include: Whether the affected MIPS eligible clinician or its agents knew or had reason to know of the issue; whether the affected MIPS eligible clinician or its agents attempted to correct the issue; and whether the issue caused the data submitted to be inaccurate or unusable for MIPS purposes. We solicit feedback on these factors and whether there are additional factors we should consider to determine if there should be reweighing based on compromised data. If we determine that a MIPS eligible clinician's data were compromised and the conditions for reweighting are met, we propose to notify the clinician of this determination through the performance feedback that we provide under section 1848(q)(12) of the Act if feasible, or through routine communication channels for the Quality Payment Program. We emphasize that this proposed reweighting policy is solely intended to mitigate the potential adverse financial impact of compromised data on the MIPS eligible clinician; a determination under this proposed policy that data are compromised due to circumstances outside of the control of the MIPS eligible clinician and its agent and therefore that reweighting will occur for that clinician does not indicate and should not be interpreted to suggest that a third party intermediary or other individual or entity could not be held liable for the compromised data.

We are proposing to apply reweighting only in cases when we learn of the compromised data before the beginning of the associated MIPS payment year because we want to encourage MIPS eligible clinicians and their agents to inform us of these concerns in a timely basis so we can update our data sets timely, while minimizing the impacts to other stakeholders who utilize MIPS data. For example, the Physician compare website utilizes MIPS data to provide information to patients, consumers and other stakeholders when selecting a clinician or group. We are concerned that without the appropriate incentive to notify us in a timely manner, clinicians and their agents may delay disclosures that data may be compromised and with these delays the MIPS data could be in an increased state of flux which will reduce the usefulness of the data to stakeholders. We are interested in feedback on whether there are other factors we should consider when adopting a timeline for reweighting due to compromised data and whether the period should be broader. We seek comment on whether we should restrict our reweighting due to compromised data to instances when we learn the relevant information prior to the beginning of the MIPS payment year and whether there are other incentives for MIPS eligible clinicians to alert us to concerns about compromised data. We emphasize that if we determine a MIPS eligible clinician has submitted compromised data for a performance category during the associated payment year or at a later point, the MIPS eligible clinician would not qualify for reweighting under this proposal, instead for the performance categories with compromised data the clinician's performance category score would be zero and the scoring weight for the category would not be redistributed.

In sum, under the authority in sections 1848(q)(5)(F) and 1848(o)(2)(D) of the Act, we are proposing at § 414.1380(c)(2)(i)(A)*(9),* and (c)(2)(i)(C)*(10),* beginning with the 2018 MIPS performance period and 2020 MIPS payment year, to reweight the performance categories for a MIPS eligible clinician who we determine has data for a performance category that are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician or its agents if we learn the relevant information prior to the beginning of the associated MIPS payment year. In addition, we are proposing to amend § 414.1380(c)(2)(i)(C) to ensure that the reweighting proposed at § 414.1380(c)(2)(i)(C)*(10),* would not be voided by the submission of data for the Promoting Interoperability performance category as is the case with other significant hardship exceptions. We solicit comment in this proposal and alternatives to potentially mitigate the impact on MIPS eligible clinicians who through no fault of their own have data in a performance category that are inaccurate, unusable or are otherwise compromised.

We note that we previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77326 through 77328 and 82 FR 53778 through 53779). Therefore, if a MIPS eligible clinician is scored on fewer than two performance categories as a result of reweighting due to compromised data, he or she would receive a final score equal to the performance threshold.

(iii) Redistributing Performance Category Weights

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77325 through 77329 and 82 FR 53783 through 53785, 53895 through 53900), in the CY 2019 PFS final rule (83 FR 59876 through 59878), and at § 414.1380(c)(2)(ii) we established policies for redistributing the weights of performance categories for the 2019, 2020, and 2021 MIPS payment years in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories. Under these policies, we generally redistribute the weight of a performance category or categories to the quality performance category because of the experience MIPS eligible clinicians have had reporting on quality measures under other CMS programs.

Because the cost performance category was zero percent of a MIPS eligible clinician's final score for the 2017 MIPS performance period, we stated in the CY 2019 PFS proposed rule (83 FR 35970) that it is not appropriate to redistribute weight to the cost performance category for the 2019 MIPS performance period because MIPS eligible clinicians have limited experience being scored on cost measures for purposes of MIPS. In addition, we were concerned that there would be limited measures in the cost performance category under our proposals for the 2019 MIPS performance period and stated that it

may be appropriate to delay shifting additional weight to the cost performance category until additional measures are developed. However, we also noted that cost is a critical component of the Quality Payment Program and believe placing additional emphasis on the cost performance category in future years may be appropriate. Therefore, we solicited comment on redistributing weight to the cost performance category in future years.

Several commenters expressed the belief that the weight of other performance categories should not be redistributed to the cost performance category. One commenter stated that the cost performance category weight should not be increased until additional cost measures are available and additional results of the episode-based cost measures are available. Another commenter expressed the belief that the cost performance category does not yet accurately assess the impact of a clinician's care on the total cost of care for a patient.

We do not believe it would be appropriate to redistribute weight from the other performance categories to the cost performance category for the 2022 MIPS payment year, except in scenarios in which the only other scored performance category is the improvement activities performance category. As described in section III.K.3.c.(2)(b)(v) of this proposed rule, we are proposing substantial changes to the MSPB and total per capital cost measures, as well as proposing to add 10 new episode-based measures. We believe it is appropriate to provide MIPS eligible clinicians additional time to adjust to these changes prior to redistributing weight to the cost performance category. Under the proposals we are making in this proposed rule, we would begin to redistribute more weight to the cost performance category beginning with the 2023 MIPS payment year, because MIPS eligible clinicians will have had more experience being scored on cost measures at that point, and will have had time to adjust to the changes to existing measures and new episode-based measures that we are proposing.

Under our existing policies, we redistribute weight from the other performance categories to the improvement activities performance category in certain scenarios. However, we have generally redistributed performance category weights more to the quality performance category to incentivize reporting on quality measures, and because MIPS eligible clinicians have had more experience with quality measure reporting from other CMS programs. Beginning with the 2022 MIPS payment year, we propose to not redistribute performance category weights to the improvement activities performance category in any scenario. For the improvement activities performance category, we are only assessing whether a MIPS eligible clinician completed certain activities (83 FR 59876 through 59878). Because MIPS eligible clinicians will have had several years of experience reporting under MIPS, we believe it is important to prioritize performance on measures that show a variation in performance, rather than the activities under the improvement activities performance category, which are based on attestation of completion. Therefore, we believe it is no longer appropriate to increase the weight of the improvement activities performance category above 15 percent under our redistribution policies. We note that in situations where the weights of both the quality and Promoting Interoperability performance categories are redistributed, cost would be weighted at 85 percent and improvement activities would be weighted at 15 percent. We believe this would help to reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. For example, when a clinician may be able to report on quality measures, but chooses not to report because they are located in an area affected by extreme and uncontrollable circumstances as identified by CMS and qualify for reweighting under § 414.1380(c)(2)(i)(A)(8).

For the 2022 MIPS payment year, we propose at § 414.1380(c)(2)(ii)(D) similar redistribution policies to our policies finalized for the 2021 MIPS payment year (83 FR 59876 through 59878), with minor modifications, as shown in Table 47. First, we have adjusted our redistribution policies to account for a cost performance category weight of 20 percent for the 2022 MIPS payment year. We are also proposing, in scenarios when the cost performance category weight is redistributed while the Promoting Interoperability performance category weight is not, to redistribute a portion of the cost performance category weight to the Promoting Interoperability performance category as well as to the quality performance category. We believe this is appropriate given our current focus on working with the Office of the National Coordinator for Health IT (ONC) on implementation of the interoperability provisions of the 21st Century Cures Act (the Cures Act) (Pub. L. 115–233, enacted December 13, 2016) to ensure seamless but secure exchange of health information for clinicians and patients. While we have previously redistributed all of the cost performance category weight to the quality performance category (83 FR 59876 through 59878), we propose to redistribute 15 percent to the quality performance category and 5 percent to the Promoting Interoperability performance category for the 2022 MIPS payment year (*see* Table 47). This proposed change would emphasize the importance of interoperability without overwhelming the contribution of the quality performance category to the final score. We also propose to weight the improvement activities performance category at 15 percent and to weight the Promoting Interoperability performance category at 85 percent for the 2022 MIPS payment year when the quality and cost performance categories are each weighted at zero percent, to align with our focus on interoperability and pursuant to our proposal of not redistributing weight to the improvement activities performance category.

TABLE 47—PERFORMANCE CATEGORY REDISTRIBUTION POLICIES PROPOSED FOR THE 2022 MIPS PAYMENT YEAR

Reweighting scenario	Quality (percent)	Cost (percent)	Improvement activities (percent)	Promoting interoperability (percent)
No Reweighting Needed:				
—Scores for all four performance categories	40	20	15	25
Reweight One Performance Category:				
—No Cost	55	0	15	30
—No Promoting Interoperability	65	20	15	0
—No Quality	0	20	15	65

TABLE 47—PERFORMANCE CATEGORY REDISTRIBUTION POLICIES PROPOSED FOR THE 2022 MIPS PAYMENT YEAR—Continued

Reweighting scenario	Quality (percent)	Cost (percent)	Improvement activities (percent)	Promoting interoperability (percent)
—No Improvement Activities	55	20	0	25
Reweight Two Performance Categories:				
—No Cost and no Promoting Interoperability	85	0	15	0
—No Cost and no Quality	0	0	15	85
—No Cost and no Improvement Activities	70	0	0	30
—No Promoting Interoperability and no Quality	0	85	15	0
—No Promoting Interoperability and no Improvement Activities	80	20	0	0
—No Quality and no Improvement Activities	0	20	0	80

In section III.K.3.c.(2)(a) of this proposed rule, we have proposed weights for the cost performance category of 25 and 30 percent for the 2023 and 2024 MIPS payment years, respectively. Because MIPS eligible clinicians will have had more experience being scored on cost measures, we believe it would be appropriate to begin redistributing even more of the performance category weights to the cost performance category beginning with the 2023 MIPS payment year. While we have proposed to redistribute weight to the cost performance category for the 2022 MIPS payment year in scenarios in which only the cost and improvement activities performance categories are scored, we believe that we should redistribute weight to the cost performance category in other scenarios beginning with the 2023 MIPS payment year. In general, we would redistribute performance category weights so that the quality and cost performance categories are almost equal. For simplicity, we would redistribute the weight in 5-point increments. If the redistributed weight cannot be equally divided between quality and cost in 5-point increments, we would redistribute slightly more weight to quality than cost. We believe that redistributing weight equally to quality and cost is consistent with our goal of greater alignment between the quality and cost performance categories as described in section III.K.3.c.(2) of this proposed rule. We would also continue to redistribute weight to the Promoting Interoperability performance category, but we would ensure that if the quality and cost performance categories are scored, they would have a higher weight than the Promoting Interoperability performance category. For example, beginning with the 2024 MIPS payment year, if the improvement activities performance category is the only performance category to be reweighted to zero percent, quality and cost would be 40 and 35 percent, respectively, and we would not increase the weight of the Promoting Interoperability performance category (weighted at 25 percent) so that it would not exceed the weight of the quality or cost performance categories. Our proposed redistribution polices for the 2023 and 2024 MIPS payment years, which we propose to codify at §§ 414.1380(c)(2)(ii)(E) and (F), are presented in Tables 47 and 48.

BILLING CODE 4120–01–C

e. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used in MIPS payment adjustment calculations, we refer readers to the CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343).

We are proposing to: (1) Set the performance threshold for the 2022 and 2023 MIPS payment years and (2) set the additional performance threshold for exceptional performance for the 2022 and 2023 MIPS payment years.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act includes a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional

MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies. The performance thresholds for the first 3 years of MIPS are presented in Table 50.

TABLE 50—PERFORMANCE THRESHOLDS FOR THE 2019 MIPS PAYMENT YEAR, 2020 MIPS PAYMENT YEAR, AND 2021 MIPS PAYMENT YEAR

	2019 MIPS payment year (points)	2020 MIPS payment year (points)	2021 MIPS payment year (points)
Performance Threshold	3	15	30

To determine a performance threshold to propose for the fourth year of MIPS (2020 MIPS performance period/2022 MIPS payment year) and the fifth year of MIPS (2021 MIPS performance period/2023 MIPS payment year), we are again relying upon the special rule in section 1848(q)(6)(D)(iii) of the Act, as amended by 51003(a)(1)(D) of the Bipartisan Budget Act of 2018.

As required by section 1848(q)(6)(D)(iii) of the Act, we considered data available from a prior period with respect to performance on measures and activities that may be used under the MIPS performance categories. In accordance with clause (iv) of section 1848(q)(6)(D) of the Act, we also considered which data could be used to estimate the performance threshold for the 2024 MIPS payment year to ensure a gradual and incremental transition from the performance threshold we would establish for the 2022 MIPS payment year. In accordance with section 1848(q)(6)(D)(i) of the Act, the performance threshold for the 2024 MIPS payment year would be either the mean or median of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

To estimate the performance threshold for the 2024 MIPS payment year, we considered the actual MIPS final scores for MIPS eligible clinicians for the 2019 MIPS payment year and the estimated MIPS final scores for the 2020 MIPS payment year and 2021 MIPS payment year. As referenced in the CY 2019 PFS final rule, we analyzed the actual final scores for the first year of MIPS (the 2019 MIPS payment year) and found the mean final score was 74.01 points and the median final score was 88.97 points (83 FR 59881). In the Regulatory Impact Analysis (RIA) of the CY 2019 PFS final rule, we used data submitted for the first year of MIPS (2017 MIPS performance period/2019 MIPS payment year) and applied the scoring and eligibility policies for the third year of MIPS (2019 MIPS performance period/2021 MIPS payment year) to estimate the potential final scores for the 2021 MIPS payment year. The estimated mean final score for the 2021 MIPS payment year was 69.53 points and the median final score was 78.72 points (83 FR 60048). We also estimated mean and median final scores for the 2020 MIPS payment year of 80.3 points and 90.91 points, respectively, based on information in the regulatory impact analysis in the CY 2018 Quality Payment Program final rule (82 FR 53926 through 53950). Specifically, we used 2015 and 2016 PQRS data, 2014 and 2015 CAHPS for PQRS data, 2014 and 2015 VM data, 2015 and 2016 Medicare and Medicaid EHR Incentive Program data, the data prepared to support the 2017 performance period initial determination of clinician and special status eligibility, the initial QP determination file for the 2019 payment year, the 2017 MIPS measure benchmarks, and other available data to model the final scores for clinicians estimated to be MIPS eligible in the 2020 MIPS payment year (82 FR 53930). We considered using the actual final scores for the 2020 MIPS payment year; however, the data used to calculate the final scores was submitted through the first quarter of 2019, and final scores for MIPS eligible clinicians were not available in time for us to use in our analyses for purposes of this proposed rule (although we intend to include those results in the final rule if available). We believe the data points based on actual data from the 2017 MIPS performance period/2019 MIPS payment year would be appropriate to use in our analysis in projecting the estimated performance threshold for the 2024 MIPS payment year. However, after we analyze the actual final scores for the 2020 MIPS payment year, if we see the mean or median final scores significantly increasing or decreasing, we would consider modifying our estimation of the performance threshold for the 2024 MIPS payment year accordingly.

We refer readers to Table 51 for potential values for estimating the performance threshold for the 2024 MIPS payment year based on the mean or median final score from prior periods.

TABLE 51—POTENTIAL VALUES FOR ESTIMATED PERFORMANCE THRESHOLD FOR THE 2024 MIPS PAYMENT YEAR BASED ON THE MEAN OR MEDIAN FINAL SCORE FOR THE 2019 MIPS PAYMENT YEAR; 2020 MIPS PAYMENT YEAR; AND 2021 MIPS PAYMENT YEAR

	2019 MIPS payment year * (points)	2020 MIPS payment year ** (points)	2021 MIPS payment year *** (points)
Mean Final Score	74.01	80.30	69.53
Median Final Score	88.97	90.91	78.72

Source: CY 2019 PFS final rule RIA * *** (83 FR 60048); CY 2018 Quality Payment Program final rule RIA ** (82 FR 53926 through 53950).
* Mean and median final scores based on actual final scores for 2019 MIPS payment year.
** Mean and median final scores based on information available in the RIA because actual final scores for the 2020 MIPS payment year were not available in time for this proposed rule.
*** Mean and median final scores based on estimated final scores from 2021 MIPS payment year.

We are choosing the mean final score of 74.01 points for the 2019 MIPS payment year as our estimate of the performance threshold for the 2024 MIPS payment year because it represents a mean based on actual data; is more representative of clinician performance because all final scores are considered in the calculation; is more achievable for clinicians, particularly for those that are new to MIPS; and is a value that falls generally in the middle of potential values for the performance threshold referenced in Table 51. In the CY 2019 PFS proposed rule, we requested comment on our approach to estimating the performance threshold for the 2024 MIPS payment year, which was based on the estimated mean final score for the 2019 MIPS payment year, and whether we should use the median instead of the mean (83 FR 35972). A few commenters supported the use of the mean rather than the median for determining the performance threshold because they believed this approach and the statutory requirement of a gradual and incremental transition to the performance threshold for the 2024 MIPS payment year would provide a clear path and certainty and would allow for clinicians to budget, plan, and develop a long-term strategy for successful participation in MIPS.

We note that estimating the performance threshold for the 2024 MIPS payment year based on the mean final score for the 2019 MIPS payment year is only an estimation that we are providing in accordance with section 1848(q)(6)(D)(iv) of the Act. We are proposing to use data from the 2019 MIPS payment year because it is the only MIPS final score data available and usable in time for the publication of this proposed rule. We acknowledge that via the 2020 MIPS payment year performance feedback, we have provided to MIPS eligible clinicians their calculated final scores. However, the mean and median of final scores for the 2020 MIPS payment year are not yet published. We anticipate that the mean and median data points for the 2020 MIPS payment year will be available for consideration prior to publication of the final rule and seek comment on whether and how we should use this information to update our estimates. We understand that using final scores from the early years of MIPS has numerous limitations and may not be similar to the distribution of final scores for the 2024 MIPS payment year. Eligibility and scoring policies changed in the initial years of the program. For example, beginning with the 2020 MIPS payment year, we increased the low-volume threshold compared to the 2019 MIPS payment year. We also added incentives for improvement scoring for the quality performance category and bonuses for complex patients and small practices, which could increase scores. Starting with the 2021 MIPS payment year, we modified our eligibility to include new clinician types and an opt-in policy, revised the small practice bonus, significantly revised the Promoting Interoperability performance category scoring methodology, and added a topped-out cap for certain topped out quality measures. As illustrated in Table 51, we estimated that the mean and median final scores for the 2020 MIPS payment year will be higher than for the 2019 MIPS payment year; however, we anticipate the final scores for the 2021 MIPS payment year will be lower. Recognizing the limitations of data for the 2019 MIPS payment year and the 2020 MIPS payment year, we are requesting comments on whether we should update or modify our estimates. We will propose the actual performance threshold for the 2024 MIPS payment year in future rulemaking.

Based on these analyses, we are proposing a performance threshold of 45 points for the 2022 MIPS payment year and a performance threshold of 60 points for the 2023 MIPS payment year to be codified at § 414.1405(b)(7) and (8), respectively. A performance threshold of 45 points for the 2022 MIPS payment year and 60 points for the 2023 MIPS payment year would be an increase that is consistent with the increase in the performance threshold from the 2020 MIPS payment year (15 points) to the 2021 MIPS payment year (30 points), and we believe it would allow for a consistent increase over time that provides a gradual and incremental transition to the performance threshold we will establish for the 2024 MIPS payment year, which we have estimated to be 74.01 points.

For example, if in future rulemaking we were to set the performance threshold for the 2024 MIPS payment year at 75 points (which is close to the mean final score for the 2019 MIPS payment year), this would represent an increase in the performance threshold of approximately 45 points from the 2021 MIPS payment year (that is, the difference from the Year 3 performance threshold of 30 points to a Year 6 performance threshold of 75 points). We believe an increase of approximately 15 points each year, from Year 3 through Year 6 of the MIPS program, would provide for a gradual and incremental transition toward a performance threshold that must be set at the mean or median final score for a prior period in Year 6 of the MIPS program.

We also believe this increase of 15 points per year could incentivize higher performance by MIPS eligible clinicians and that a performance threshold of 45 points for the 2022 MIPS payment year, and a performance threshold of 60 points for the 2023 MIPS payment year, represent a meaningful increase compared to 30 points for the 2021 MIPS payment year, while maintaining flexibility for MIPS eligible clinicians in the pathways available to achieve this performance threshold. In section III.K.3.e.(4) of this proposed rule, we provide examples of the ways clinicians can meet or exceed the proposed performance threshold for the 2022 MIPS payment year.

We recognize that some MIPS eligible clinicians may not exceed the proposed performance thresholds either due to poor performance or by failing to report on an applicable measure or activity that is required. We also recognize the unique challenges for small practices and rural clinicians that could prevent them from meeting or exceeding the proposed performance thresholds and refer readers to sections III.K.3.a.(3)(b)(i) and III.K.3.a.(3)(b)(i)(A) of this proposed rule for a discussion of the participation of small and rural practices in MVPs and a request for feedback on small and rural practices participation in MVPs, respectively.

We invite public comment on our proposals to set the performance threshold for the 2022 MIPS payment year at 45 points and to set the performance threshold for the 2023 MIPS payment year at 60 points. We also seek comment on whether we should adopt a different performance threshold in the final rule if we determine that the actual mean or median final scores for the 2020 MIPS payment year are higher or lower than our estimated performance threshold for the 2024 MIPS payment year of 74.01 points. For example, if the actual mean or median final score for the 2020 MIPS payment year is closer to 85 points, should we finalize a higher performance threshold than currently proposed? Or if the mean or median values are lower, should we finalize a lower performance threshold? We anticipate the data will change over time and that the distribution of final scores will differ from one year to the next. We also seek comment on whether the increase should be more gradual for the 2022 MIPS payment year, which would mean a lower performance threshold (for example, 35 instead of 45 points), or whether the increase should be steeper (for example, 50 points). We also seek comment on alternative numerical values for the performance threshold for the 2022 MIPS payment year. For the 2023 MIPS payment year, we alternatively considered whether the performance threshold should be set at a lower or higher number, for example, 55 points or 65 points, and also seek comment on alternative numerical values for the performance threshold for the 2023 MIPS payment year.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS, an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold: (1) The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or (2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold for the prior period described in section 1848(q)(6)(D)(i) of the Act. Under section 1848(q)(6)(C) of the Act, a MIPS eligible clinician with a final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the $500 million of funding available for the year under section 1848(q)(6)(F)(iv) of the Act.

As we discussed in section III.K.3.e.(2) of this proposed rule, we are relying on the special rule under section 1848(q)(6)(D)(iii) of the Act to propose a performance threshold of 45 points for the 2022 MIPS payment year and to propose a performance threshold of 60 points for the 2023 MIPS payment year. As we also discussed in section III.K.3.e.(2) of this proposed rule, for the initial 5 years of MIPS, the special rule under section 1848(q)(6)(D)(iii) of the Act also applies for purposes of establishing an additional performance threshold for a year. For the 2022 MIPS payment year and the 2023 MIPS payment year, we are relying on the discretion afforded by the special rule and proposing to again decouple the additional performance threshold from the performance threshold.

For illustrative purposes, we considered what the numerical values would be for the additional performance threshold under one of the methods described in section 1848(q)(6)(D)(ii) of the Act: The 25th percentile of the range of possible final scores above the performance threshold. With a proposed performance threshold of 45 points, the range of total possible points above the performance threshold is 45.01 to 100 points and the 25th percentile of that range is 58.75, which is just more than one-half of the possible 100 points in the MIPS final score. We do not believe it would be appropriate to lower the additional performance threshold to 58.75 points because it is below the mean and median final scores for each of the prior performance periods that are referenced in Table 51. Similarly, with a proposed performance threshold for the 2023 MIPS payment year of 60 points, the range of possible points above the performance threshold is 60.01 to 100 points and the 25th percentile of that range is 69.99 points. We do not believe it would be appropriate to lower the additional performance threshold to 69.99 points because it is below or close to the mean and median final scores for each of the prior performance periods that are referenced in Table 51.

We are relying on the special rule under section 1848(q)(6)(D)(iii) of the Act to propose at § 414.1405(d)(6) to set the additional performance threshold for the 2022 MIPS payment year at 80 points and to propose at § 414.1405(d)(7) to set the additional performance threshold for the 2023 MIPS payment year at 85 points. These values are higher than the 25th percentile of the range of the possible final scores above the proposed performance threshold for the 2022 and 2023 MIPS payment years.

We originally proposed 80 points for the additional performance threshold for the 2021 MIPS payment year in the CY 2019 PFS proposed rule (83 FR 35973) although we finalized 75 points in the CY 2019 PFS final rule (83 FR 59886). In the CY 2019 PFS final rule, we noted the impact that proposed policy changes for the 2021 MIPS payment year could have on final scores as clinicians are becoming familiar with these changes and noted our belief that 75 points was appropriate for Year 3 of MIPS (83 FR 59883 through 59886). We also signaled our intent to increase the additional performance threshold in future rulemaking. (83 FR 59886).

We believe that 80 points and 85 points are minimal and incremental increases over the additional performance threshold of 75 points for the 2021 MIPS payment year. We also believe it is appropriate to raise the bar on what is rewarded as exceptional performance for Year 4 and for Year 5 of the MIPS program and that increasing the additional performance threshold each year will encourage clinicians to increase their focus on value-based care and enhance the delivery of high quality care for Medicare beneficiaries.

An additional performance threshold of 80 points and 85 points would each require a MIPS eligible clinician to participate and perform well in multiple performance categories. Generally, under the proposed performance category weights for the 2022 MIPS payment year discussed as section III.K.3.d.(2)(b) of this proposed rule, a MIPS eligible clinician who is scored on all four performance categories could receive a maximum of 40 points towards the final score for the quality

performance category or a maximum score of 65 points for participating in the quality performance category and Promoting Interoperability performance category, which are both below the proposed 80-point and 85-point additional performance thresholds. In addition, 80 points and 85 points are at a high enough level that MIPS eligible clinicians must submit data for the quality performance category to achieve this target.

For example, if a MIPS eligible clinician gets a perfect score for the improvement activities (15 percent), cost (20 percent), and Promoting Interoperability (25 percent) performance categories, but does not submit quality measures data, then the MIPS eligible clinician would only receive 60 points (0 points for quality performance category + 20 points for the cost performance category + 15 points for improvement activities performance category + 25 points for Promoting Interoperability performance category), which is below the proposed additional performance thresholds. We believe setting the additional performance threshold at 80 points and 85 points could increase the incentive for exceptional performance while keeping the focus on quality performance.

We note that under section 1848(q)(6)(F)(iv) of the Act, funding is available for additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act only through the 2024 MIPS payment year, which is the sixth year of the MIPS program. We believe it is appropriate to further incentivize clinicians whose performance meets or exceeds the additional performance threshold for the fourth and fifth years of the MIPS program. We recognize that setting a higher additional performance threshold may result in fewer clinicians receiving additional MIPS payment adjustments. We also note that a higher additional performance threshold could increase the maximum additional MIPS payment adjustment that a MIPS eligible clinician potentially receives if the funds available (up to $500 million for each year) are distributed over fewer clinicians that have final scores at or above the higher additional performance threshold.

We invite public comment on our proposals to set the additional performance threshold at 80 points for the 2022 MIPS payment year and at 85 points for the 2023 MIPS payment year. Alternatively, for the 2022 MIPS payment year, we considered whether the additional performance threshold should remain at 75 points or be set at a higher number, for example, 85 points, and also seek comment on alternative numerical values for the additional performance threshold for the 2022 MIPS payment year. We refer readers to sections VI.E.10.c.(3) and VI.F.2. of the RIA for the estimated maximum payment adjustments when the additional performance threshold is set at 80 points and at 85 points, respectively, for the 2022 MIPS payment year.

Alternatively, for the 2023 MIPS payment year, we also considered whether the additional performance threshold should remain at 80 points as proposed for the 2022 MIPS payment year or whether a different numerical value should be adopted for the 2023 MIPS payment year, and also seek comment on alternative numerical values for the additional performance threshold for the 2023 MIPS payment year. Additionally, in the event that we adopt different numerical values for the performance threshold in the final rule than proposed in section III.K.3.e.(2) of this proposed rule, we seek comment on whether we should adopt different numerical values for the additional performance threshold and how we should set those values. We also seek comment on how the distribution of the additional MIPS payment adjustments across MIPS eligible clinicians may impact exceptional performance by clinicians participating in MIPS. For example, the distribution of the additional MIPS payment adjustments could result in a higher additional MIPS payment adjustment available to fewer clinicians or could result in a lower additional MIPS payment adjustment available to a larger number of clinicians. We also remind readers that we anticipate the data will change over time and that the distribution of final scores will differ from one year to the next.

(4) Example of Adjustment Factors

In the CY 2019 PFS proposed rule (83 FR 35978 through 35981) and the CY 2019 PFS final rule (83 FR 59891 through 59894), we provided a figure and several tables as illustrative examples of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2021 MIPS payment year. We are updating the figure and tables based on the policies we are proposing in this proposed rule.

Figure 1 provides an example of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on the policies proposed for the 2022 MIPS payment year in this proposed rule. In Figure 1, the performance threshold is 45 points. The applicable percentage is 9 percent for the 2022 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2022 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 11.25 points based on the performance threshold of 45 points for the 2022 MIPS payment year). All MIPS eligible clinicians with a final score in this range would receive the lowest negative applicable percentage (negative 9 percent for the 2022 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 would be less than or equal to 9 percent. If the scaling factor is above 1.0, but less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 would be higher than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 45 points (which is the performance threshold in this example) would receive a neutral MIPS payment adjustment. Because the performance threshold is 45 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor would be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points would be less than 9 percent.

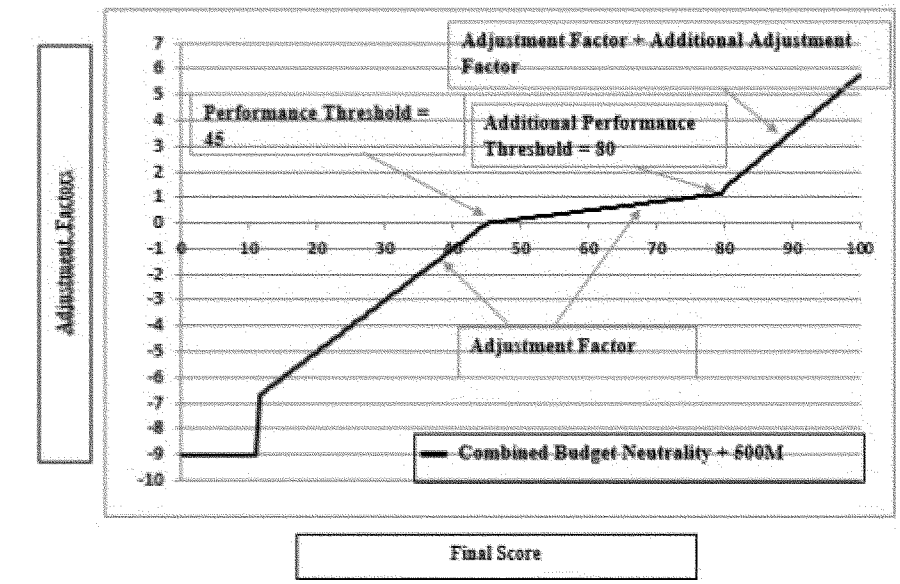

Figure 1 illustrates an example of the slope of the line for the linear adjustments for the 2022 MIPS payment year, but it could change considerably as new information becomes available. In this example, the scaling factor for the MIPS payment adjustment factor is 0.203. In this example, MIPS eligible clinicians with a final score equal to 100 would have a MIPS payment adjustment factor of 1.823 percent (9 percent ×

0.2026). (Note that this is prior to adding the additional payment adjustment for exceptional performance, which is explained below.)

The proposed additional performance threshold for the 2022 MIPS payment year is 80 points. An additional MIPS payment adjustment factor of 0.5 percent starts at the additional performance threshold and increases on a linear sliding scale up to 10 percent. This linear sliding scale line is also multiplied by a scaling factor that is greater than zero and less than or equal to 1.0. The scaling factor will be determined so that the estimated aggregate increase in payments associated with the application of the additional MIPS payment adjustment factors is equal to $500 million. In Figure 1, the example scaling factor for the additional MIPS payment adjustment factor is 0.395. Therefore, MIPS eligible clinicians with a final score of 100 would have an additional MIPS payment adjustment factor of 3.95 percent (10 percent × 0.395). The total adjustment for a MIPS eligible clinician with a final score equal to 100 would be 1 + 0.0182 + 0.0395 = 0.0578, for a total positive MIPS payment adjustment of 5.78 percent.

BILLING CODE 4120–01–P

FIGURE 1: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Proposed Performance Threshold and Proposed Additional Performance Threshold for the 2022 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality, but cannot be higher than 3.0. MIPS clinicians with a final score of at least 80 points would also receive an additional adjustment factor for exceptional performance. The additional adjustment factor is also illustrative. The additional adjustment factor starts at 0.5 percent and cannot exceed 10 percent and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

The final MIPS payment adjustments will be determined by the distribution of final scores across MIPS eligible clinicians and the performance threshold. More MIPS eligible clinicians above the performance threshold means the scaling factors would decrease because more MIPS eligible clinicians receive a positive MIPS payment adjustment factor. More MIPS eligible clinicians below the performance threshold means the scaling factors would increase because more MIPS eligible clinicians would receive a negative MIPS payment adjustment factor and relatively fewer MIPS eligible clinicians would receive a positive MIPS payment adjustment factor.

Table 52 illustrates the changes in payment adjustments based on the final policies for the 2020 and 2021 MIPS payment years, and the proposed policies for the 2022 and 2023 MIPS payment years discussed in this proposed rule, as well as the statutorily required increase in the applicable percent as required by section 1848(q)(6)(B) of the Act.

TABLE 52: Illustration of Point System and Associated Adjustments Comparison between the 2020 MIPS Payment Year, the 2021 MIPS Payment Year, and the Proposed Policies for the 2022 MIPS Payment Year and the 2023 MIPS Payment Year

2020 MIPS payment year		2021 MIPS payment year		2022 MIPS payment year (proposed)		2023 MIPS payment Year (proposed)	
Final Score Points	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**
0.0-3.75	Negative 5%	0.0-7.5	Negative 7%	0.0-11.25	Negative 9%	0.0-15.0	Negative 9%
3.76-14.99	Negative MIPS payment adjustment greater than negative 5% and less than 0% on a linear sliding scale	7.51-29.99	Negative MIPS payment adjustment greater than negative 7% and less than 0% on a linear sliding scale	11.26-44.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	15.01-59.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
15.0	0% adjustment	30.0	0% adjustment	45.0	0% adjustment	60.0	0% adjustment
15.01-69.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for scores from 15.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	30.01-74.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for scores from 30.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	45.01-79.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 45.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	60.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality
70.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for final scores from 15.00 to 100.00. This sliding scale is multiplied by a	75.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for final scores from 30.00 to 100.00. This sliding scale is multiplied by a	80.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final	85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges

This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionatel y distribute the available funds for exceptional performance

BILLING CODE 4120–01–C

We have provided updated examples below with the policies proposed for the 2022 MIPS payment year to demonstrate scenarios in which MIPS eligible clinicians can achieve a final score above the proposed performance threshold of 45 points based on our final policies.

Example 1: MIPS Eligible Clinician in Small Practice Submits 5 Quality Measures and 1 Improvement Activity

In the example illustrated in Table 53, a MIPS eligible clinician in a small practice reporting individually exceeds the performance threshold by performing at the median level for 5 quality measures via Part B claims collection type and one medium-weight improvement activity. The practice does not submit data for the Promoting Interoperability performance category, but does submit a significant hardship exception application which is approved; therefore, the weight for the Promoting Interoperability performance

category is redistributed to the quality performance category under the proposed reweighting policies discussed in section III.K.3.d.(2)(b)(iii) of this proposed rule. We also assumed the small practice has a cost performance category percent score of 50 percent. Finally, we assumed a complex patient bonus of 3 points which represents the average HCC risk score for the beneficiaries seen by the MIPS eligible clinician, as well as the proportion of Medicare beneficiaries that are dual eligible. There are special scoring rules for the improvement activities performance category which affect MIPS eligible clinicians in a small practice.

- Six measure achievement points for each of the 5 quality measures submitted at the median level of performance. We refer readers to § 414.1380(b)(1)(i) for further discussion of the quality performance category scoring policy. Because the measures are submitted via Part B claims, they do not qualify for the end-to-end electronic reporting bonus, nor do the measures submitted qualify for the high-priority bonus. The small practice bonus of 6 measure bonus points apply because at least 1 measure was submitted. Because the MIPS eligible clinician does not meet full participation requirements, the MIPS eligible clinician does not qualify for improvement scoring. We refer readers to § 414.1380(b)(1)(vi) for the full participation requirements for improvement scoring. Therefore, the quality performance category is (30 measure achievement points + 6 measure bonus points)/60 total available measure points + zero improvement percent score which is 60 percent.
- The Promoting Interoperability performance category weight is redistributed to the quality performance category so that the quality performance category score is worth 65 percent of the final score. We refer readers to section III.K.3.d.(2)(b)(iii) of this proposed rule for a discussion of this policy.
- MIPS eligible clinicians in small practices qualify for special scoring for improvement activities so a medium weighted activity is worth 20 points out of a total 40 possible points for the improvement activities performance category. We refer readers to § 414.1380(b)(3) for further detail on scoring policies for small practices for the improvement activities performance category.
- This MIPS eligible clinician exceeds the performance threshold of 45 points (but does not exceed the additional performance threshold). This score is summarized in Table 53.

TABLE 53—SCORING EXAMPLE 1, MIPS ELIGIBLE CLINICIAN IN A SMALL PRACTICE

[A] Performance category	[B] Performance score	[C] Category weight	[D] Earned points ([B] * [C] * 100)
Quality	60%	65%	39
Cost	50%	20%	10
Improvement Activities	20 out of 40 points—50%	15%	7.5
Promoting Interoperability	N/A	0% (redistributed to quality)	0
Subtotal (Before Bonuses)			56.5
Complex Patient Bonus			3
Final Score (not to exceed 100).			59.5

Example 2: Group Submission Not in a Small Practice

In the example illustrated in Table 54, a MIPS eligible clinician in a medium size practice participating in MIPS as a group receives performance category scores of 75 percent for the quality performance category, 50 percent for the cost performance category, and 100 percent for the Promoting Interoperability and improvement activities performance categories. There are many paths for a practice to receive a 75 percent score in the quality performance category, so for simplicity we are assuming the score has been calculated at this amount. Again, for simplicity, we assume a complex patient bonus of 3 points. The final score is calculated to be 83 points, and both the performance threshold of 45 and the additional performance threshold of 80 are exceeded. In this example, the group practice exceeds the additional performance threshold and will receive the additional MIPS payment adjustment.

TABLE 54—SCORING EXAMPLE 2, MIPS ELIGIBLE CLINICIAN IN A MEDIUM PRACTICE

[A] Performance category	[B] Performance score	[C] Category weight (%)	[D] Earned points ([B] * [C] * 100)
Quality	75%	40	30
Cost	50%	20	10
Improvement Activities	40 out of 40 points—100%	15	15
Promoting Interoperability	100%	25	25
Subtotal (Before Bonuses)			80
Complex Patient Bonus			3
Final Score (not to exceed 100)			83

Example 3: Non-Patient Facing MIPS Eligible Clinician

In the example illustrated in Table 55, an individual MIPS eligible clinician that is non-patient facing and not in a small practice receives performance category scores of 50 percent for the quality performance category, 50 percent for the cost performance category, and 50 percent for 1 medium-weighted improvement activity. Again, there are many paths for a practice to receive a 50 percent score in the quality performance category, so for simplicity we are assuming the score has been calculated. Because the MIPS eligible clinician is non-patient facing, they qualify for special scoring for improvement activities and receive 20 points (out of 40 possible points) for the medium weighted activity. Also, this individual did not submit Promoting Interoperability measures and qualifies for the automatic redistribution of the Promoting Interoperability performance category weight to the quality performance category. Again, for simplicity, we assume a complex patient bonus of 3 points.

In this example, the final score is 53 and the performance threshold of 45 points is exceeded while the additional performance threshold of 80 points is not.

TABLE 55—SCORING EXAMPLE 3, NON-PATIENT FACING MIPS ELIGIBLE CLINICIAN

[A] Performance category	[B] Performance score	[C] Category weight	[D] Earned points ([B] * [C] * 100)
Quality	50%	65%	32.5
Cost	50%	20%	10
Improvement Activities	20 out of 40 points for 1 medium weight activity—50%.	15%	7.5
Promoting Interoperability	0%	0% (redistributed to quality)	0
Subtotal (Before Bonuses)			50
Complex Patient Bonus			3
Final Score (not to exceed 100).			53

We note that these examples are not intended to be exhaustive of the types of participants in MIPS nor the opportunities for reaching and exceeding the performance threshold.

f. Targeted Review and Data Validation and Auditing

For previous discussions of our policies for targeted review, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77353 through 77358).

We are proposing to: (1) Identify who is eligible to request a targeted review; (2) revise the timeline for submitting a targeted review request; (3) add criteria for denial of a targeted review request; (4) update requirements for requesting additional information; (5) state who will be notified of targeted review decisions and require retention of documentation submitted; and (6) codify the policy on scoring recalculations. These proposals are discussed in more detail in this proposed rule.

(1) Targeted Review

(a) Who Is Eligible To Request Targeted Review

In the CY 2017 Quality Payment Program final rule, we established at § 414.1385(a) that MIPS eligible clinicians and groups may submit a targeted review request and that these submissions could be with or without the assistance of a third party intermediary (81 FR 77353). In our efforts to minimize burden on MIPS eligible clinicians and groups, we believe it is important to allow designated support staff and third party intermediaries to submit targeted review requests on their behalf. To expressly acknowledge the role of designated support staff and third party intermediaries in the targeted review process, we are proposing to revise § 414.1385(a)(1) to state that a MIPS eligible clinician or group (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a request for a targeted review. MIPS eligible clinicians and groups (including their designated support staff) can request a targeted review by logging into the QPP website at *qpp.cms.gov*, and after reviewing their performance feedback for the relevant performance period and MIPS payment year, they can submit a request for targeted review. An authorized third party intermediary as defined at § 414.1305, such as a qualified registry, health IT vendor, or QCDR, that does not have access to their clients' performance feedback still would be able to request a targeted review on behalf of their clients. Third party intermediaries do not have access to the performance feedback of MIPS eligible clinicians and groups; therefore, we will share an URL link to the Targeted Review Request Form with these designated entities. In the CY 2017 Quality Payment Program final rule, we established at § 414.1385(a)(2) that CMS will respond to each request for targeted review timely submitted and determine whether a targeted review is warranted (81 FR 77353). We are proposing to redesignate this provision as § 414.1385(a)(4).

(b) Timeline for Targeted Review Requests

In the CY 2017 Quality Payment Program final rule (81 FR 77358), we finalized at § 414.1385(a)(1) that MIPS eligible clinicians and groups have a 60-day period to submit a request for targeted review, which begins on the day we make available the MIPS payment adjustment factor, and if applicable the additional MIPS payment adjustment factor (collectively referred to as the MIPS payment adjustment factors), for the MIPS payment year and ends on September 30 of the year prior to the MIPS payment year or a later date specified by CMS. During the first year of targeted review for MIPS, we allowed MIPS eligible clinicians and groups 90 days, with an additional 14-day extension, to submit a targeted review request. In response to user feedback, in December 2018, we made available revised performance feedback to MIPS eligible clinicians and groups who had filed a targeted review request. We believe it is important to ensure MIPS eligible clinicians and groups have an opportunity to review their revised

performance feedback prior to the application of the MIPS payment adjustment factors. We anticipate that by limiting the targeted review period to 60 days, we would be able to make available the revised performance feedback during October of the year prior to the MIPS payment year, which would be approximately 2 months earlier than what we were able to do for the first year of targeted review. Therefore, we are proposing to revise § 414.1385(a)(2) to state that all requests for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins on the day CMS makes available the MIPS payment adjustment factors for the MIPS payment year, and to state that the targeted review request submission period may be extended as specified by CMS. We are proposing this change would apply beginning with the 2019 performance period.

(c) Denial of Targeted Review Requests

Each targeted review request is carefully reviewed based upon the information provided at the time the request is submitted. During the first year of targeted review, CMS received many targeted review requests that were duplicative. We continue to seek opportunities to limit burden and improve the efficiency of our processes. Therefore, we are proposing to revise § 414.1385(a)(3) to state that a request for a targeted review may be denied if: The request is duplicative of another request for targeted review; the request is not submitted during the targeted review request submission period; or the request is outside of the scope of targeted review, which is limited to the calculation of the MIPS payment adjustment factors applicable to the MIPS eligible clinician or group for a year. Notification will be provided to the individual or entity that submitted the targeted review request as follows:

- If the targeted review request is denied; in this case, there will be no change to the MIPS final score or associated MIPS payment adjustment factors for the MIPS eligible clinician or group.
- If the targeted review request is approved; in this case, the MIPS final score and associated MIPS payment adjustment factors may be revised, if applicable, for the MIPS eligible clinician or group.

(d) Request for Additional Information

In the CY 2017 Quality Payment Program final rule (81 FR 77358), we finalized at § 414.1385(a)(3) that the MIPS eligible clinician or group may include additional information in support of their request for targeted review at the time the request is submitted, and if CMS requests additional information from the MIPS eligible clinician or group, it must be provided and received by CMS within 30 days of the request, and that non-responsiveness to the request for additional information may result in the closure of the targeted review request, although the MIPS eligible clinician or group may submit another request for targeted review before the deadline. Supporting documentation is a critical component of evaluating and processing a targeted review request. We may need to request supporting documentation, as each targeted review request is reviewed individually and by category. Therefore, we are proposing to add § 414.1385(a)(5) to state that a request for a targeted review may include additional information in support of the request at the time it is submitted. If CMS requests additional information from the MIPS eligible clinician or group that is the subject of a request for a targeted review, it must be provided and received by CMS within 30 days of CMS's request. Non-responsiveness to CMS's request for additional information may result in a final decision based on the information available, although another request for a targeted review may be submitted before the end of the targeted review request submission period. Documentation can include, but is not limited to:

- Supporting extracts from the MIPS eligible clinician or group's EHR.
- Copies of performance data provided to a third party intermediary by the MIPS eligible clinician or group.
- Copies of performance data submitted to CMS.
- QPP Service Center ticket numbers.
- Signed contracts or agreements between a MIPS eligible clinician/group and a third party intermediary.

(e) Notification of Targeted Review Decisions

In the CY 2017 Quality Payment Program final rule (81 FR 77358), we finalized at § 414.1385(a)(4) that decisions based on the targeted review are final, and there is no further review or appeal. We are proposing to renumber this provision as § 414.1385(a)(7) and to add text to § 414.1385(a)(7) to state that CMS will notify the individual or entity that submitted the request for a targeted review of the final decision. To align with policies finalized at § 414.1400(g) regarding the auditing of entities submitting MIPS data, we are also proposing to add § 414.1385(a)(8) to state that documentation submitted for a targeted review must be retained by the submitter for 6 years from the end of the MIPS performance period.

(f) Scoring Recalculations

In the CY 2017 Quality Payment Program final rule (81 FR 77353), we stated that if a request for targeted review is approved, the outcome of such review may vary. We stated, for example, we may determine that the clinician should have been excluded from MIPS, re-distribute the weights of certain performance categories within the final score (for example, if a performance category should have been weighted at zero), or recalculate a performance category score in accordance with the scoring methodology for the affected category, if technically feasible (81 FR 77353). Therefore, we are proposing to add § 414.1385(a)(6) to state that if a request for a targeted review is approved, CMS may recalculate, to the extent feasible and applicable, the scores of a MIPS eligible clinician or group with regard to the measures, activities, performance categories, and final score, as well as the MIPS payment adjustment factors.

(2) Data Validation and Auditing

For previous discussions of our policies for data validation and auditing at § 414.1390, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77358 through 77362). Among other requirements, § 414.1390(b) establishes that all MIPS eligible clinicians and groups that submit data and information to CMS for purposes of MIPS must certify to the best of their knowledge that the data submitted is true, accurate and complete. MIPS data that are inaccurate, incomplete, unusable or otherwise compromised can result in improper payment. Despite these existing obligations, we have received inquiries regarding perceived opportunities to selectively submit data that are unrepresentative of the MIPS performance of the clinician or group. Using data selection criteria to misrepresent a clinician or group's performance for an applicable performance period, commonly referred to as ''cherry-picking,'' results in data submissions that are not true, accurate or complete. A clinician or group cannot certify that data submitted to CMS are true, accurate and complete to the best of its knowledge if they know the data submitted is not representative of the clinician's or group's performance. Accordingly, a clinician or group that submits a certification under § 414.1390(b) in connection with the

submission of data they know is cherry-picked has submitted a false certification in violation of existing regulatory requirements. If CMS believes cherry-picking of data may be occurring, we may subject the MIPS eligible clinician or group to auditing in accordance with § 414.1390(a) and in the case of improper payment a reopening and revision of the MIPS payment adjustment in accordance with § 414.1390(c).

g. Third Party Intermediaries

We refer readers to §§ 414.1305 and 414.1400, the CY 17 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), and the CY 2019 PFS final rule (83 FR 59894 through 59910) for our previously established policies regarding third party intermediaries.

In this proposed rule, we propose to make several changes. We propose to establish new requirements for MIPS performance categories that must be supported by QCDRs, qualified registries, and Health IT vendors. We are proposing to modify the criteria for approval as a third party intermediary, and establish new requirements to promote continuity of service to clinicians and groups that use third party intermediaries for their MIPS submissions. With respect to QCDRs, we are also proposing requirements to: Engage in activities that will foster improvement in the quality of care; and enhance performance feedback requirements. These QCDR proposals would also affect the self-nomination process. We are also proposing to update considerations for QCDR measures. With respect to qualified registries, we are also proposing to require enhanced performance feedback requirements. Finally, we are clarifying the remedial action and termination provisions applicable to all third party intermediaries.

Because we believe that third party intermediaries, such as QCDRs, represent a useful path to fulfilling MIPS requirements while reducing the reporting burden for clinicians, we believe the proposals discussed in this section justify the collection of information and regulatory impact burden estimates discussed in sections IV. and VI. of this proposed rule, respectively, for additional information on the costs and benefits.

(1) Proposed Requirements for MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We refer readers to § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088) for our current policy regarding the types of MIPS data third-party intermediaries may submit. In sum, the current policy is that QCDRs, qualified registries, and health IT vendors may submit data for any of the following MIPS performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. Through education and outreach, we have become aware of stakeholders' desires to have a more cohesive participation experience across all performance categories under MIPS. Specifically, we have heard of instances where clinicians would like to use their QCDR or qualified registry for reporting the improvement activities and promoting interoperability performance categories, but their particular third party intermediary does not support all categories, only quality. Based on this feedback and additional data regarding QCDRs and qualified registries respectively, which are discussed further below, we believe it is reasonable to strengthen our policies at § 414.1400(a)(2), and require QCDRs and qualified registries to support three performance categories: Quality; improvement activities; and Promoting Interoperability. Accordingly, we propose to amend § 414.1400(a)(2) to state that beginning with the 2021 performance period and for all future years, for the MIPS performance categories identified in the regulation, QCDRs and qualified registries must be able to submit data for each category, and Health IT vendors must be able to submit data for at least one category. We solicit feedback on the benefits and burdens of this proposal, including whether the requirement to support all three identified categories of MIPS performance data should extend to health IT vendors.

However, we recognize the need to create an exception to allow QCDRs and qualified registries that only represent MIPS eligible clinicians that are eligible for reweighting under the Promoting Interoperability performance category. For example, as discussed in the CY 2019 PFS final rule (83 FR 59819 through 59820), physical therapists generally are eligible for reweighting of the Promoting Interoperability performance category to zero percent of the final score; therefore, under this exception, a QCDR or qualified registry that represents only physical therapists that reweighted the Promoting Interoperability performance category to zero percent of the final score, would not be required to support the Promoting Interoperability performance category. Therefore, we are proposing to revise § 414.1400(a)(2)(iii) to state that for the Promoting Interoperability performance category, the requirement applies if the eligible clinician, group, or virtual group is using CEHRT; however, a third party could be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1)–(7) or § 414.1380(c)(2)(i)(C)(9). We refer readers to section III.K.3.c.(4) of this proposed rule for additional information on the clinician types that are eligible for reweighting the Promoting Interoperability performance category. We anticipate using the self-nomination vetting process to assess whether the QCDR or qualified registry is subject to our proposed requirement to support reporting the Promoting Interoperability performance category. We solicit comments on this proposal, including the scope of the proposed exception from the Promoting Interoperability reporting requirement for certain types of QCDRs and qualified registries. Specifically, we solicit comment on whether we should more narrowly tailor, or conversely broaden, the proposed exceptions for when QCDRS and qualified registries must support the Promoting Interoperability performance category.

(2) Approval Criteria for Third Party Intermediaries

We refer readers to § 414.1400(a)(4) and the CY 2019 PFS final rule (83 FR 59894 through 59895; 60088) for previously finalized policies related to the approval criteria for third party intermediaries.

Based on experience with third party intermediaries thus far, in this proposed rule we are proposing to adopt two additional criteria for approval at § 414.1400(a)(4) to ensure continuity of services to MIPS eligible clinicians, groups, and virtual groups that utilize the services of third party intermediaries. Specifically, we have experienced instances where a third party intermediary withdraws mid-performance period, which impacts the clinician or group's ability to participate in the MIPS program, through no fault of their own. We are proposing two

changes to help prevent these disruptions. First, we are proposing at § 414.1400(a)(4) to add a new paragraph (v) to establish that a condition of approval for a third party intermediary is for the entity to agree to provide services for the entire performance period and applicable data submission period. In addition, we are proposing at § 414.1400(a)(4) to add a new paragraph (vi) to establish that a condition of approval is for third party intermediary to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate data submission mechanism or third party intermediary according to a CMS approved a transition plan. We believe it is important to condition the approval of a third party intermediary on the entity agreeing to follow this process so that in the case a third-party intermediary fails to meet its obligation under the proposed new § 414.1400(a)(4)(v) to provide services for the entire performance period and corresponding data submission period, the third party intermediary and the clinicians, groups, and virtual groups it serves have common expectations of the support the third party intermediary will provide to its users in connection with its withdrawal. We believe these proposed conditions of approval will help ensure that entities seeking to become approved as third party intermediaries are aware of the expectations to provide continuous service for the duration of the entire performance period and corresponding data submission period, will help reduce the extent to which the clinicians, groups, and virtual groups are inadvertently impacted by a third party intermediary withdrawing from the program, and will help clinicians, groups, and virtual groups avoid additional reporting burden that may result from withdrawals mid-performance period. We note that under this proposal, if CMS determines that a third party intermediary has ceased to meet either of these proposed new criteria for approval, CMS may take remedial action or terminate the third party intermediary in accordance with § 414.1400(f). We also refer readers to sections III.K.3.g.(3) and III.K.3.g.(4) where we discuss these proposals for QCDRs and qualified registries specifically.

(3) Qualified Clinical Data Registries (QCDRs)

In this proposed rule, we propose to update: (a) QCDR approval criteria; and (b) various policies related to QCDR measures. These proposals would also affect the QCDR self-nomination process.

(a) QCDR Approval Criteria

We generally refer readers to section 1848(m)(3)(E) of the Act, as added by section 601(b)(1)(B) of the American Taxpayer Relief Act of 2012, which requires the Secretary to establish requirements for an entity to be considered a Qualified Clinical Data Registry (QCDR) and a process to determine whether or not an entity meets such requirements. We refer readers to section 1848(m)(3)(E)(i), (v) of the Act, the CY 2019 PFS final rule (83 FR 60088), and § 414.1400(a)(4) through (b) for previously finalized policies about third party intermediaries and QCDR approval criteria. In this proposed rule, we are proposing to add to those policies to require QCDRs to: (a) Support all three performance categories where data submission is required; (b) engage in activities that will foster improvement in the quality of care; and (c) enhance performance feedback requirements.

(i) Requirement for QCDRs To Support All Three Performance Categories Where Data Submission Is Required

We also refer readers to section III.K.3.g.(1) above, where we propose to require QCDRs and qualified registries to support three performance categories: Quality, improvement activities, and Promoting Interoperability. In this section, we discuss QCDRs specifically. As previously stated in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), section 1848(q)(1)(E) of the Act encourages the use of QCDRs in carrying out MIPS. Although section 1848(q)(5)(B)(ii)(I) of the Act specifically requires the Secretary to encourage MIPS eligible clinicians to use QCDRs to report on applicable measures for the quality performance category, and section 1848(q)(12)(A)(ii) of the Act requires the Secretary to encourage the provision of performance feedback through QCDRs, the statute does not specifically address use of QCDRs for the other MIPS performance categories (81 FR 77363). Although we previously could have limited the use of QCDRs to assessing only the quality performance category under MIPS and providing performance feedback, we believed (and still believe) it would be less burdensome for MIPS eligible clinicians if we expand QCDRs' capabilities (81 FR 77363). By allowing QCDRs to report on quality measures, improvement activities, and Promoting Interoperability measures, we alleviate the need for individual MIPS eligible clinicians and groups to use a separate mechanism to report data for these performance categories (81 FR 77363). It is important to note that QCDRs do not need to submit data for the cost performance category since these measures are administrative claims-based measures (81 FR 77363).

As noted above, based on previously finalized policies in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088), the current policy is that QCDRs, qualified registries, and health IT vendors may submit data for any of the following MIPS performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability.

Through education and outreach, we have become aware of stakeholders' desires to have a more cohesive participation experience across all performance categories under MIPS. Specifically, we have heard of instances where clinicians would like to use their QCDR for reporting the improvement activities and promoting interoperability performance categories, but their particular QCDR does not support all categories, only quality. This results in the clinician needing to enter into a business relationship with another third party to complete their MIPS reporting or leverage a different submitter type or submission type, which can create additional burden to the clinician. We believe that requiring QCDRs to be able to support these performance categories will be a step towards addressing stakeholders concerns on having a more cohesive participation experience across all performance categories under MIPS. In addition, we believe this proposal will help to reduce the reporting burden MIPS eligible clinicians and groups face when having to utilize multiple submission mechanisms to meet the reporting requirements of the various performance categories. Furthermore, as we move to a more cohesive participation experience under the MIPS Value Pathways (MVP), as discussed in section III.K.3.a., Transforming MIPS: MIPS Value Pathways Framework, we believe this proposal will assist clinicians in that transition.

Based on our review of existing 2019 QCDRs through the 2019 QCDR Qualified Posting, approximately 92

QCDRs, or about 72 percent of the QCDRs currently participating in the program are supporting all three performance categories. The 2019 QCDR qualified posting is available in the QPP Resource Library at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/347/2019%20QCDR%20Qualified%20Posting_Final_v3.xlsx*. In addition, in our review of prior data through previous qualified postings for the 2017 and 2018 performance periods, we have observed that a majority of the QCDRs participating in the program supported the three performance categories that require data submission. In 2017, 73 percent (approximately 83 QCDRs) and in 2018, 73 percent (approximately 110 QCDRs) have supported all three performance categories. Based on this data, we believe it is reasonable to want to continue to strengthen our policies at § 414.1400(a)(2), to require that QCDRs have the capacity to support the reporting requirements of the quality, improvement activities, and promoting interoperability performance categories.

Therefore, beginning with the 2021 performance period and for future years, we propose to require QCDRs to support three performance categories: Quality, improvement activities, and Promoting Interoperability. Additionally, for reasons, as discussed above, we propose to amend § 414.1400(a)(2) to state beginning with the 2021 performance period and for all future years, for the following MIPS performance categories, QCDRs must be able to submit data for all categories, and Health IT vendors must be able to submit data for at least one category: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability with an exception. As discussed in section III.K.3.g.(1) of this proposed rule, we are proposing that based on the proposed amendment to § 414.1400(a)(2)(iii), for the Promoting Interoperability performance category, the requirement applies if the eligible clinician, group, or virtual group is using CEHRT; however, a third party could be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4), (c)(2)(i)(A)(5), (c)(2)(i)(C)(1) through (c)(2)(i)(C)(7), or (c)(2)(i)(C)(9). As part of this proposal, we would require QCDRs to attest to the ability to submit data for these performance categories, as applicable, at time of self-nomination.

(ii) Requirement for QCDRs To Engage in Activities That Will Foster Improvement in the Quality of Care

We generally refer readers to section 1848(m)(3)(E)(i) and (v) of the Act, which requires the Secretary to establish requirements for an entity to be considered a qualified clinical data registry and a process to determine whether or not an entity meets such requirements. Section 1848(m)(3)(E)(ii)(IV) of the Act provides that in establishing such requirements, the Secretary must consider whether an entity, among other things, supports quality improvement initiatives for participants.

As detailed at § 414.1305(1) a QCDR means: For the 2019, 2020 and 2021 MIPS payment year, a CMS-approved entity that has self-nominated and successfully completed a qualification process to determine whether the entity may collect medical or clinical data for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients.

Although ''improvement in the quality of care'' is broadly included under paragraph (2) of the definition of a QCDR at § 414.1305 in the 2019 PFS final rule (83 FR 59897), we want to further clarify how a QCDR can be successful in fostering improvement in the quality of care provided to patients by clinicians and groups. We understand putting parameters around exactly what improvement in the quality of care may be can be difficult due to the varying nature of QCDRs organizational structures. For example, we have QCDRs that are founded by both large and small specialty societies, and healthcare systems where the volumes of services, available resources, and volume of members may vary. However, we believe QCDRs should enhance education and outreach to clinicians and groups to improve patient care.

The definition of qualified clinical data registry (QCDR) at § 414.1305(2) currently states that beginning with the 2022 MIPS payment year, an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. In this proposed rule, we are proposing policies with regards to ''foster improvement in the quality of care.''

Therefore, we are proposing to add § 414.1400(b)(2)(iii) that beginning with the 2023 MIPS payment year, the QCDRs must foster services to clinicians and groups to improve the quality of care provided to patients by providing educational services in quality improvement and leading quality improvement initiatives. Quality improvement services may be broad, and do not necessarily have to be specific towards an individual clinical process. An example of a broad quality improvement service would be for the QCDR to provide reports and educating clinicians on areas of improvement for patient populations by clinical condition for specific clinical care criteria. Furthermore, an example of an individual clinical process specific quality improvement service would be if the QCDR supports a metric that measures blood pressure management, the QCDR could use that data to identify best practices used by high performers and broadly educate other clinicians and groups on how they can improve the quality of care they provide. We believe educational services in quality improvement for eligible clinicians and groups would encourage meaningful and actionable feedback for clinicians to make improvements in patient care. To be clear, these QCDR quality improvement services would be separate and apart from any activities that are reported on under the improvement activities performance category. We believe improvement activities can be distinguished from quality improvement services, because they are actions taken by MIPS eligible clinicians under the improvement activities performance category. Improvement activities means an activity that relevant MIPS eligible clinician, organizations and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes (§ 414.1305). Quality improvement services, on the other hand, would be actions taken by the QCDR. While these QCDR quality improvement services could potentially overlap with an improvement activity, requirements for the improvement activities performance category would still apply to MIPS eligible clinicians and groups.

We are proposing to require QCDRs to describe the quality improvement services they intend to support in their self-nomination for CMS review and approval. We intend on including the QCDR's approved quality improvement services in the qualified posting for each approved QCDR.

(iii) Enhanced Performance Feedback Requirement

Section 1848(q)(12)(A)(ii) of the Act requires the Secretary to encourage the provision of performance feedback through QCDRs. In addition, in establishing the requirements, the Secretary must consider, among other things, whether an entity provides timely performance reports to participants at the individual participant level (section 1848(m)(3)(E)(ii)(III) of the Act). Currently, CMS requires QCDRs to provide timely performance feedback at least 4 times a year on all of the MIPS performance categories that the QCDR reports to CMS (82 FR 53812). Based on our experiences thus far under the Quality Payment Program, we agree that providing feedback at least 4 times a year is appropriate. However, in the future CMS would like to see, and therefore encourages QCDRs, to provide timely feedback on a more frequent basis more than 4 times a year. Receipt of more frequent feedback will help clinicians and groups make more timely changes to their practice to ensure the highest quality of care is being provided to patients. We see value in providing more timely feedback to meet the objectives [136] of the Quality Payment Program in improving the care received by Medicare beneficiaries, lowering the costs to the Medicare program through improvement of care and health, and advance the use of healthcare information between allied providers and patients. We also believe there is value in this performance feedback, and therefore, encourage QCDRs to work with their clinicians to get the data in earlier in the reporting period so the QCDR can give meaningful, timely feedback.

In the QCDR performance feedback currently being provided to clinicians and groups, we have heard from stakeholders that that not all QCDRs provide feedback the same way. We have heard through stakeholder comments that some QCDR feedback contains information needed to improve quality, whereas other QCDR feedback does not supply such information due to the data collection timeline. Additionally, we believe that clinicians would benefit from feedback on how they compare to other clinicians who have submitted data on a given measure (MIPS quality measure or QCDR measure) within the QCDR they are reporting through, so they can identify areas of measurement in which improvement is needed, and furthermore, they can see how they compare to their peers based within a QCDR, since the feedback provided by the QCDR would be limited to those who reported on a given measure using that specific QCDR.

Therefore, we are proposing a change so that QCDRs structure feedback in a similar manner. We propose a new paragraph at § 414.1400(b)(2)(iv), beginning with the 2023 MIPS payment year, to require that QCDRs provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR. Exceptions to this requirement may occur if the QCDR does not receive the data from their clinician until the end of the performance period. We are also soliciting comment on other exceptions that may be necessary under this requirement.

We also understand that QCDRs can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the QCDR does not have access to. We believe QCDR internal comparisons can still help MIPS eligible clinicians identify areas where further improvement is needed. The ability for MIPS eligible clinicians to be able to know in real time how they are performing against their peers, within a QCDR, provides immediate actionable feedback. We believe this provides value gained for clinicians as the majority of QCDRs are specialty specific or regional based, therefore the clinician can gain peer comparisons that are specific to their peer cohort, which can be specialty specific or locality based.

Furthermore, we are also proposing to strengthen the QCDR self-nomination process at § 414.1400(b)(1) to add that beginning with the 2023 MIPS payment year, QCDRs are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(b)(2)(iv)).

In addition, the current performance period begins January 1 and ends on December 31st, and the corresponding data submission deadline is typically March 31st as described at § 414.1325(e)(1). As discussed above, we have heard from QCDR stakeholders that in some instances clinicians wait until the end of the performance period to submit data to the third party intermediary, who are then unable to provide meaningful feedback to their clinicians 4 times a year. Therefore, we are also seeking comment for future notice-and-comment rulemaking on whether we should require MIPS eligible clinicians, groups, and virtual groups who utilize a QCDR to submit data throughout the performance period, and prior to the close of the performance period (that is, December 31st). We are also seeking comment for future notice-and-comment rulemaking, on whether clinicians and groups can start submitting their data starting April 1 to ensure that the QCDR is providing feedback and the clinician or group during the performance period. This would allow QCDRs some time to provide enhanced and actionable feedback to MIPS eligible clinicians prior to the data submission deadline.

(b) QCDR Measures

We refer readers to § 414.1400(b)(1), the CY 2018 Quality Payment Program final rule (82 FR 53814) and the CY 2019 PFS final rule (83 FR 59898 through 59900) for our previously established policies for the QCDR measure self-nomination process. In this proposed rule, we are proposing policies related to: (a) Considerations for QCDR measure approval; (b) requirements for QCDR measure approval; (c) considerations for QCDR measure rejections; (d) the approval process; and (e) QCDR measures that have failed to reach benchmarking thresholds. These are discussed in detail below.

(c) QCDR Measure Requirements

(i) QCDR Measure Considerations and Requirements for Approval or Rejection

Through education and outreach, we have heard stakeholders' concerns about the complexity of reporting when there is a large inventory of QCDR measures to choose from, and believe our proposals will help to ensure that the measures made available in MIPS are meaningful to a clinician's scope of practice. In this proposed rule, we are proposing to codify established QCDR measure considerations and propose, beginning with the CY 2021 performance period, a number of QCDR measure specific requirements, that would generally align with MIPS measure policies, which can be found in the CY 2018 Quality Payment Program final rule (82 FR 53636), and as described in section III.K.3.c.(1) of this proposed rule.

[136] Quality Payment Program Overview. *https://qpp.cms.gov/about/qpp-overview.*

(A) QCDR Measure Considerations

(aa) Previously Finalized QCDR Measure Considerations

We generally refer readers to the § 414.1400(b)(3), CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) and the CY 2019 PFS final rule (83 FR 59900 through 59902) for previously finalized standards and criteria used for selecting and approving QCDR measures. QCDR measures are reviewed for inclusion on an annual basis during the QCDR measure review process that occurs once the self-nomination period closes (82 FR 53810). All previously approved QCDR measures and new QCDR measures are currently reviewed on an annual basis to determine whether they are appropriate for the program (82 FR 53811). The QCDR measure review process occurs after the self-nomination period closes on September 1st. QCDR measures are not finalized or removed through notice and comment rulemaking; instead, they are currently approved or not approved through a subregulatory processes (82 FR 53639).

In the CY 2019 PFS final rule (83 FR 59902), we finalized our proposal to apply the following criteria beginning with the 2021 MIPS payment year when considering QCDR measures for possible inclusion in MIPS:

- Measures that are beyond the measure concept phase of development.
- Preference given to measures that are outcome-based rather than clinical process measures.
- Measures that address patient safety and adverse events.
- Measures that identify appropriate use of diagnosis and therapeutics.
- Measures that address the domain for care coordination.
- Measures that address the domain for patient and caregiver experience.
- Measures that address efficiency, cost and resource use.
- Measures that address significant variation in performance.

In this proposed rule, we propose to codify a number of those previously finalized QCDR measure considerations (83 FR 59902). We are proposing to amend § 414.1400 by adding § 414.1400(b)(3)(iv) to include the following previously finalized QCDR measure considerations for approval:

- Preference for measures that are outcome-based rather than clinical process measures.
- Measures that address patient safety and adverse events.
- Measures that identify appropriate use of diagnosis and therapeutics.
- Measures that address the domain of care coordination.
- Measures that address the domain for patient and caregiver experience.
- Measures that address efficiency, cost, and resource use.

More information on QCDR measure approval criteria can be found in the QCDR/Qualified Registry Self-Nomination Tool-Kit in the QPP Resource Library. We refer readers to section III.K.3.g.(3)(c)(i)(B) of this rule where we are proposing to change the following previously finalized considerations into requirements:

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

(bb) New QCDR Measure Considerations for Approval

(AA) QCDR Measure Availability

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we finalized a policy beginning with the 2018 performance period, that allowed QCDRs to seek permission from another QCDR to use an existing and approved QCDR measure. If a QCDR would like to report on an existing QCDR measure that is owned by another QCDR, they must have permission from the QCDR that owns the measure that they can use the measure for the performance period. Permission must be granted at the time of self-nomination, so that the QCDR that is using the QCDR measure can include written proof of permission for CMS review and approval. We also finalized in the CY 2018 Quality Payment Program final rule (82 FR 53814) that once QCDR measures are approved, we will assign QCDR measure IDs, and the same measure IDs must be used by the other QCDRs that have permission to also report on the measure.

We generally encourage QCDR measure owners to permit other QCDRs to report their measures on behalf of MIPS eligible clinicians for purposes of MIPS. To the extent that QCDR measure owners limit the availability of their measures, such limitations may adversely affect a QCDR's ability to benchmark the measure, the robustness of the benchmark, or the comparability of MIPS eligible clinicians' performance results on the measure. For these reasons, we propose to amend § 414.1400 to add paragraph (b)(3)(iv)(H) to state that CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure.

(BB) QCDR Measure Addresses a Measurement Gap

As a part of the QCDR measure development process, QCDRs should conduct an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy program, PQRS; and review the most recent CMS Quality Measure Development Plan Annual Report, which is currently available for 2019 at: *https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/2019-Quality-MDP-Annual-Report-and-Appendices.zip* and the Blueprint for the CMS Measures Management System: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf* for guidance in areas where CMS has identified gaps in quality measurement to reduce the possibility of duplicative measure development. We propose to amend § 414.1400 to add § 414.1400(b)(3)(iv)(I) to state that we would give greater consideration to measures for which QCDRs: (a) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and (b) utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development.

(CC) QCDRs Measures Meeting Benchmarking Thresholds

Over the first 2 years of MIPS, we have observed instances where QCDR measures have been approved for continued use in the program, but have had low reporting volumes, below the case minimum and reporting volume thresholds required for a measure to be benchmarked within the program. As described in the CY 2017 Quality Payment Program final rule (81 FR 77277 through 77282), for benchmarks to be developed, a measure must have a minimum of 20 individual clinicians or groups who reported the measure to meet the data completeness requirement and the minimum case size criteria. QCDRs should be aware of which measures are considered low-reported, since measures that do not meet benchmarking thresholds result in a 3-point floor, as described in the CY 2017 Quality Payment Program final rule (81 FR 77282). QCDR measures are reviewed and approved on an annual

basis, and as a part of the review process, we review: The benchmarking file from the previous year (for example, the 2019 Quality Benchmark file, found on the QPP Resource Library, which is available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip*); production submission data submitted from the previous year's data submission period; and data provided to us by the QCDRs themselves.

As discussed in our QCDR measure rejection considerations proposal below, we propose a QCDR measure that does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance may not continue to be approved in the future if our proposal is finalized as proposed. We note that this factor is parallel to what is being proposed for MIPS quality measures in section III.K.3.c.(1) of this proposed rule, and is important when considering the volume of QCDR measures that are currently in the program that have had low reporting rates year-over-year. We propose to amend § 414.1400 to add paragraph (b)(3)(iv)(J) to state that beginning with the 2020 performance period, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved. We refer readers to section III.K.3.g.(3)(c)(ii) below in this proposed rule, for discussion on how QCDRs may create participation plans for existing approved QCDR measures that have failed to reach benchmarking thresholds, in order to be reconsidered for future use. We also refer readers to § 414.1330 for additional information.

(B) QCDR Measure Requirements

(aa) Previously Finalized Requirements Considerations Codified as Requirements

As mentioned above, in this proposed rule, we propose to change two previously finalized measure considerations into requirements and codify those requirements. We previously finalized that we would apply certain criteria beginning with the 2021 MIPS payment year when considering QCDR measures for possible inclusion in MIPS (83 FR 59902). We refer readers to section III.K.3.g.(3)(c)(i)(A) where we are proposing to codify the majority as measure considerations. However, for two of those previously finalized consideration, we are proposing them as requirements:

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

We believe the previously finalized consideration that measures are beyond the measure concept phase of development should be a requirement because measures that do not surpass the measure concept phase will not be able to complete another QCDR measure requirement, measure testing. In addition, we believe the previously finalized consideration that measures address significant variation in performance should be a requirement because QCDR measures that do not demonstrate performance variation will likely be identified as topped out and will not be approved.

Therefore, beginning with the 2020 performance period, we are proposing to change both of those considerations into requirements and are proposing to amend § 414.1400 by adding § 414.1400(b)(3)(v) to include the following:

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

(bb) Linking QCDR Measures to Cost Measures, Improvement Activities, and MIPS Value Pathways (MVP)

To prepare QCDR measures for self-nomination, we believe there should be consideration of how these QCDR measures relate to similar topics covered through the other performance categories. We believe (as noted in the Transforming MIPS: MIPS Value Pathways Framework, *see* section III.K.3.a. of this proposed rule) that to transform the MIPS program to one of value, MIPS measures and QCDR measures, should have an associated cost measure, improvement activity, and eventually a corresponding MVP. This would strengthen the QCDR measure's relevance in the program. We believe that evaluating the strength of these linkages may decrease the frequency of receiving extraneous QCDR measures that are not relevant or meaningful within the framework of the MIPS program.

Therefore, beginning with the 2021 performance period and future years, we propose that QCDRs must identify a linkage between their QCDR measures to the following, at the time of self-nomination: (a) Cost measure (as found in section III.K.3.c.(2) of this proposed rule); (b) Improvement Activity (as found in Appendix 2: Improvement Activities Tables); or (c) CMS developed MVPs (as described in Table C–B1 of section III.K.3.a. of this proposed rule). Under the pathway framework for example, a surgery specific QCDR should be able to correlate their surgery-related QCDR measure to an MVP, such as the Major Surgery pathway.

We understand that not all measures may have a direct link. In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements defined above.

However, we believe that when possible, it is important to establish a strong linkage between quality, cost, and improvement activities. Therefore, we also propose to amend § 414.1400 to add paragraph (b)(3)(iv)(G) to require, beginning with the 2021 performance period, that QCDRs link their QCDR measures to the following at the time of self-nomination: (a) Cost measure; (b) improvement activity; and (c) an MVP. If the potential QCDR measure otherwise meets the QCDR measure requirements but does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions for measures that otherwise meet the QCDR measure requirements and considerations as discussed above.

Therefore, we also propose to amend § 414.1400 to add paragraph (b)(3)(iv)(G) to require, beginning with the 2021 performance period, that QCDRs link their QCDR measures to the following at the time of self-nomination: (a) Cost measure; (b) improvement activity; and (c) an MVP. In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements.

(cc) Completion of QCDR Measure Testing

We refer readers to the CY 2019 PFS final rule, where we gave notice to the public that we were considering proposing to require reliability and feasibility testing as an added criteria in order for a QCDR measure to be considered for MIPS in future rulemaking (83 FR 59901 through 59902). After consideration of the public comments received, and our priority to ensure that all measures available in MIPS are reliable and valid thereby reducing reporting burden on eligible clinicians and groups, we are moving forward with a proposal in this proposed rule.

Beginning with the 2021 performance period and future years, we propose,

that for a QCDR measure to be considered for use in the program, all QCDR measures submitted at the time of self-nomination must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System (available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf*), and as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures. We believe that full development and testing with completed testing results at the clinician level helps to demonstrate whether the QCDR measure is ready for implementation at the time of self-nomination. We intend to include only measures that are valid, reliable, and feasible for use by clinicians and will be consistent with the criteria that is expected of MIPS quality measures. As a result, we are also proposing to amend § 414.1400 to add paragraph (b)(3)(v)(C) to reflect this proposal. At § 414.1400(b)(3)(v)(C), we propose beginning with the 2021 performance period, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

We note that the testing process for quality measures is dependent on the measure type (for example, a measure that is specified as an eCQM measure has additional steps it must undergo when compared to other measure types). The National Quality Forum (NQF) has developed guides for measure testing criteria and standards which further illustrate these differences based on measure type. Additionally, the costs associated with testing vary based on the complexity of the measure and the developing organization. The Journal of the American Medical Association states that the costs associated with quality measures are generally unknown or unreported.[137] While we understand the proposed policy will result in additional costs for QCDRs to develop measures, given the uncertainty regarding the number and types of measures that will be proposed in future performance periods coupled with the lack of available cost data on measure development and testing, we are unable to determine the financial impact of this proposal on QCDRs beyond the likelihood of it being more than trivial. Likewise, we understand that some QCDRs already perform measure testing prior to submission for approval while others do not. This variability makes it difficult to estimate the incremental impact of this regulation. Please refer to section VI the Regulatory Impact Analysis of this rule for additional details.

(dd) Collection of Data on QCDR Measures

We have observed several instances in which QCDRs have attempted to use the MIPS Program to ''test'' out measure concepts without concrete evidence that there is a measurement performance gap. We want to discourage that and ensure QCDR measures used for the MIPS Program are valid and reliable. In addition, through reviews of QCDR measure submissions, where reporting data was provided by the QCDR or through submission data from the 2017 performance period, we have identified some current QCDR measures in the program that have continuously low reporting rates, which affects the ability to meet benchmarking criteria. The data submitted is insufficient in meeting the case minimum and volume thresholds required for benchmarking.

Therefore, we are proposing to require QCDRs to collect data on the potential QCDR measure. For a QCDR measure to be considered for use in the program, beginning with the 2021 performance period and future years, we are proposing to amend § 414.1400 to add paragraph (b)(3)(v)(D) that QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period. The data collected must demonstrate whether the QCDR measure is valid and reflects an important clinical concept(s) that clinicians wish to be measured on. By collecting data on the QCDR measure prior to self-nomination, QCDRs would be able to demonstrate whether the measure is implementable and data collection on the metric is possible. In addition, the data collected on the QCDR measure prior to self-nomination, could be used to demonstrate that there is a performance gap and need for measurement. We suggest QCDRs to collect data on as many months as possible, but strongly encourage QCDRs to collect data for 12 months prior to submitting the QCDR measure for our consideration at the time of self-nomination, since quality reporting requires 12 months of data, as described in § 414.1335, as this will also likely increase the chance that the measure will be able to be benchmarked.

(ee) Duplicative QCDR Measures

As first discussed by commenters in the CY 2018 Quality Payment Program final rule (82 FR 53814), the topic of ''shared'' measures was discussed and how would CMS intend to harmonize. In the CY 2019 PFS proposed rule (83 FR 35983), and further discussed in CY 2019 PFS final rule (83 FR 59901), we shared that we believe duplicative measures are counterintuitive to the Meaningful Measures initiative that promotes more focused quality measure development towards outcomes that are meaningful to patients, families and their providers. Therefore, it is our intent to move toward measure harmonization, which supports our efforts to increase measure alignment and eliminate redundancy both within the MIPS measure set and across our programs (83 FR 59901). Taking the previous feedback into consideration, we are moving forward with a proposal in this rule.

Therefore, we propose, beginning with the 2020 performance period, that after the self-nomination period closes each year, we will review newly self-nominated and previously approved QCDR measures based on considerations as described in the CY 2019 PFS final rule (83 FR 59900 through 59902). In instances in which multiple, similar QCDR measures exist that warrant approval, we may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. The QCDR could do so by harmonizing its measure with, or significantly differentiating its measure from, other similar QCDR measures. QCDR measure harmonization may require two or more QCDRs to work collaboratively to develop one cohesive QCDR measure that is representative of their similar yet, individual measures. In other words, we would not approve duplicative QCDR measures (which will be identified as a part of our scan of previously approved measures, and new QCDR measure submissions) if QCDRs choose not to address the areas of duplication with other approved QCDR measures identified by us during the previous year's QCDR measure review period. We believe this policy would help to reduce the number of duplicative QCDR measures that are submitted as a part of the self-nomination process. Adding a structured timeframe provides

[137] Schuster, Onorato, and Meltzer. ''Measuring the Cost of Quality Measurement: A Missing Link in Quality Strategy'', Journal of the American Medical Association. 2017; 318(13):1219–1220. *https://jamanetwork.com/journals/jama/fullarticle/2653111?resultClick=1.*

transparency to QCDRs who will know what next steps to expect if they do not address the identified areas of duplication as requested. Therefore, we propose to amend § 414.1400 to add paragraph (b)(3)(v)(E) to state beginning with the 2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. If the QCDR measures are not harmonized, CMS may reject the duplicative QCDR measure(s) as discussed in section III.K.3.g.(3)(c)(i)(C) below.

(C) QCDR Measure Rejections

We are proposing QCDR measure rejection criteria that generally aligns with finalized removal criteria for MIPS quality measures in the CY 2019 PFS final rule (83 FR 59763 through 59765). Utilizing these considerations would help to ensure that QCDR measures available in the program are truly meaningful and measurable areas where quality improvement is sought. As part of this proposal, all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review process that occurs after the self-nomination period closes on September 1st) to determine whether they are appropriate for the program.

We propose to amend § 414.1400 to add paragraph (b)(3)(vii) to state that beginning with the 2020 performance period, we propose to reject QCDR measures with consideration of, but not limited to, the following factors:

- QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.
- QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.
- QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.
- QCDR measures that meet the ''topped out'' definition as described at § 414.1305 and in the CY 2017 QPP final rule (81 FR 77282 through 77283). If a QCDR measure is topped out and rejected, it may be reconsidered for the program in future years if the QCDR can provide evidence through additional data and/or recent literature that a performance gap exists and show that the measure is no longer topped out during the next QCDR measure self-nomination process.
- QCDR measures that are process-based, with considerations to whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the QCDR measure has potential unintended consequences to a patient's care. For example, the measure disqualifies a patient from receiving oxygen therapy or other comfort measures.
- Considerations and evaluation of the measure's performance data, to determine whether performance variance exists.
- Whether the previously identified areas of duplication have been addressed as requested. (We refer readers to our proposal discussed in section III.K.3.g.(3)(c)(i)(B) above.)
- QCDR measures that split a single clinical practice or action into several QCDR measures. For example, splitting a measure into multiple measures based on a particular body extremity: Improvement in toe pain—the 5th toe, and a separate measure for the 2nd toe.
- QCDR measures that are ''check-box'' with no actionable quality action. For example, a QCDR measure that measures that a survey has been distributed to patients.
- QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years (we also refer readers to our proposal in section III.K.3.g.(3)(c)(ii) below).
- Whether the existing approved QCDR measure is no longer considered robust, in instances where new QCDR measures are considered to have a more vigorous quality action, where CMS preference is to include the new QCDR measure rather than requesting QCDR measure harmonization.
- QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician (that is, the quality aspect being measured cannot be attributed to the clinician or is not under the direct control of the reporting clinician).
- QCDR measures that focus on rare events or ''never events'' in the measurement period. An example of a ''never event'' would be a fire in the operating room.

(ii) QCDR Measure Review Process

(A) Current QCDR Measure Approval Process

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), and the CY 2019 PFS final rule (83 FR 59900 through 59906), and § 414.1400(b)(3) for our previously established policies for the QCDR measure self-nomination process. QCDR measures are reviewed for inclusion on an annual basis during the QCDR measure review process that occurs once the self-nomination period closes (82 FR 53810). All previously approved QCDR measures and new QCDR measures are currently reviewed on an annual basis to determine whether they are appropriate for the program (82 FR 53811). The QCDR measure review process occurs after the self-nomination period closes on September 1st. QCDR measures are not finalized or removed through notice and comment rulemaking; instead, they are currently approved or not approved through a subregulatory processes (82 FR 53639). While we would continue to review measures on an annual basis, in this proposed rule, we are proposing the addition of a multi-year approval process.

(B) Multi-Year QCDR Measure Approval

Previously in the CY 2018 Quality Payment Program final rule (82 FR 53808), we discussed our concerns with multi-year approval for QCDR measures and sought comment from stakeholders as to how to mitigate our concerns. Based on the evolution of public comments in the CY 2019 PFS final rule (83 FR 59898 through 59901) and ongoing engagement with QCDRs, we are moving forward with a proposal in this rule.

Currently, our QCDR measure approvals are on a year-to-year basis (82 FR 53811), from September to December once self-nomination occurs. In addition to that process, to help reduce yearly self-nomination burden and address stakeholder feedback (83 FR 59898 through 59901), we are proposing to amend § 414.1400 to add paragraph (b)(3)(vi) to implement, beginning with the 2021 performance period, 2-year QCDR measure approvals (at our discretion) for QCDR measures that attain approval status by meeting the QCDR measure considerations and requirements described above.

However, as part of this proposal, upon annual review, we may revoke the second year's approval if a QCDR measure approved for 2 years is:

- Topped out (we refer readers to § 414.1305, in the CY 2017 QPP final rule (81 FR 77282 through 77283));
- Duplicative of a more robust measure (this proposal aligns with our

proposal at section III.K.3.g.(3)(c) above);

- Reflects an outdated clinical guideline;
- Requires measure harmonization (this proposal aligns with our proposal at section III.K.3.g.(3)(c)(i)(B) above); or
- The QCDR self-nominating the QCDR measure is no longer in good standing, as described in the CY 2018 Quality Payment Program final rule (82 FR 53808).

We believe that this policy should be an incentive for QCDRs who have remained in good standing in the program. Additionally, for QCDRs not in good standing, we want to make clear that we would not remove a measure mid-year; rather, the measure's 2-year approval would be revoked during annual review after 1 year and the QCDR's measures would no longer qualify for multi-year approval in the future. For example, if QCDR ABC is placed on probation in July, all of the QCDR's measures still would be available for reporting for that performance period (until December 31st); however, if any of QCDR ABC's QCDR measures were previously approved for 2 years, the approval would be revoked for the second year.

(iii) Participation Plan for Existing QCDR Measures That Have Failed To Reach Benchmarking Thresholds

We refer readers to section III.K.3.g.(3)(c)(i), above in this proposed rule for discussion of the consideration of QCDR measures that fail to meet benchmarking thresholds after being in the program for 2 consecutive CY performance may not continue to be approved in the future.

However, we understand that there are instances where measures that are low-reported may still be considered important to a respective specialty. Therefore, beginning with the 2020 performance period, we propose to amend § 414.1400 to add paragraph (b)(3)(iv)(J)(aa) to state in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program. As examples, a QCDR measure participation plan could include one or more of the following:

- Development of an education and communication plan.
- Update the QCDR measure's specification with changes to encourage broader participation, which would require review and approval by us.
- Require reporting on the QCDR measure as a condition of reporting through the QCDR.

To be clear, implementation of a participation plan would not guarantee that a QCDR measure would be approved for a future performance period, as we consider many factors in whether to approve QCDR measures. At the following annual review of QCDR measures, we would analyze the measure's data submissions to determine whether the QCDR measure participation plan was effective (meaning, reporting volume increased, thereby increasing the likelihood of the QCDR measure being benchmarked). If the data does not show an increase in reporting volume, we may not approve the QCDR measure for the subsequent year.

(4) Qualified Registries

We refer readers to §§ 414.1305 and 414.1400, the CY 2018 Quality Payment Program final rule (82 FR 53815 through 53818) and the CY 2019 PFS final rule proposed rule (83 FR 59906) for our previously finalized policies regarding qualified registries. In this proposed rule, we propose to update qualified registry required services. These proposals would also affect the qualified registry self-nomination process.

(a) Qualified Registry Required Services

(i) Requirement for Qualified Registries To Support All Three Performance Categories Where Data Submission Is Required

We refer readers to section 1848(k)(4) of Act for statutory authority. We also refer readers to section III.K.3.g.(3) above, where we propose to require QCDRs and qualified registries to support three performance categories: Quality, improvement activities, and Promoting Interoperability. In addition, we refer readers to section III.K.3.g.(3)(a)(i) where we discuss a parallel requirement for QCDRs. In this section, we discuss qualified registries specifically. Based on previously finalized policies the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at (83 FR 60088) and § 414.1400(a)(2), the current policy is that QCDRs, qualified registries, and health IT vendors may submit data for any of the following MIPS performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability.

We want to continue to strengthen our policies at § 414.1400(a)(2). Based on our review of existing 2019 qualified registries, approximately 95 qualified registries, or about 70 percent of the qualified registries currently participating in the program are supporting all three performance categories. The qualified posting of approved 2019 qualified registries can be found on the QPP resource library at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/348/2019%20Qualified%20Registry%20Posting_Final_v1.0.xlsx*. We believe it is reasonable that all qualified registries have the capacity to support the improvement activities and promoting interoperability performance categories.

We believe that requiring qualified registries to be able to support these performance categories will be a step towards addressing stakeholders concerns on having a more cohesive participation experience across all performance categories under MIPS. In addition, we believe this proposal will help to reduce the reporting burden MIPS eligible clinicians and groups face when having to utilize multiple submission mechanisms to meet the reporting requirements of the various performance categories. Furthermore, as we move to a more cohesive participation experience under the MVPs, as discussed in section III.K.3.a. of this proposed rule, Transforming MIPS Path to Value, we believe this proposal will assist clinicians in that transition.

Therefore, as discussed above beginning with the 2021 performance period and for future years, we propose at § 414.1400(a)(2) to require qualified registries to support all three performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability with an exception. As discussed in section III.K.3.g.(1) of this rule, we are proposing that based on the proposed amendment to § 414.1400(a)(2)(iii), to state that for the Promoting Interoperability performance category, the requirement applies if the eligible clinician, group, or virtual group is using CEHRT; however, a third party could be be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4), (c)(2)(i)(A)(5), (c)(2)(i)(C)(1) through (c)(2)(i)(C)(7), or (c)(2)(i)(C)(9). As part of this proposal, we would require qualified registries to attest to the ability to submit data for

these performance categories, as applicable, at time of self-nomination. We are also proposing this same requirement for QCDRs in section III.K.3.g.(3) of this proposed rule.

(ii) Enhanced Performance Feedback Requirement

Section 1848(q)(12)(A)(ii) of the Act requires the Secretary to encourage the provision of performance feedback through qualified registries. In addition, in establishing the requirements, the Secretary must consider, among other things, whether an entity ''provides timely performance reports to participants at the individual participant level''. Currently, CMS requires qualified registries to provide feedback on all of the MIPS performance categories at least 4 times per year (81 FR 77367 through 77386). While based on our experiences thus far during the initial years of the Quality Payment Program, we agree that providing feedback at least 4 times a year is appropriate. However, in the future CMS would like to see, and therefore encourages qualified registries, to provide timely feedback on a more frequent basis more than 4 times a year. Receipt of more frequent feedback will help clinicians and groups make more timely changes to their practice to ensure the highest quality of care is being provided to patients. We see value in providing more timely feedback to meet the objectives [138] of the Quality Payment Program in improving the care received by Medicare beneficiaries, lowering the costs to the Medicare program through improvement of care and health, and advance the use of healthcare information between allied providers and patients. We also believe there is value in this performance feedback and therefore encourage qualified registries to work with their clinicians to get the data in earlier in the reporting period so the qualified registry give that meaningful timely feedback.

Surrounding the qualified registry performance feedback provided to clinicians and groups, we have heard from stakeholders that not all qualified registries provide feedback the same way. We have heard through stakeholder comments some qualified registries feedback contains information needed to improve quality, whereas other qualified registries feedback does not supply such information due to the data collection timeline. Additionally, we believe that clinicians would benefit from feedback on how they compare to other clinicians who have submitted data on a given MIPS quality measure within the qualified registry they are reporting through, so they can identify areas of measurement in which improvement is needed, and furthermore they can see how they compare to their peers based within a qualified registry, since the feedback provided by the qualified registry would be limited to those who reported on a given measure using that specific qualified registry.

As a result, we are proposing to add a new paragraph at § 414.1400(c)(2) to require (i) and (ii). We are simply proposing to revise the current § 414.1400(c)(2) to reclassify at paragraph (c)(2)(i) that beginning with the 2022 MIPS payment year, the qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period. Additionally, we are proposing to add a new paragraph, § 414.1400(c)(2)(ii), beginning with the 2023 MIPS payment year, to require that qualifed registries provide the following as a part of the performance feedback given at least 4 times a year: Feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the qualified registry. We understand that there would be instances in which the qualified registry cannot meet this requirement; and therefore, we are also proposing an exception to this requirement: If the qualified registry does not receive the data from their clinician until the end of the performance period, this will preclude the qualified registry from providing feedback 4 times a year, and the qualified registry could be excepted from this requirement. We are also soliciting comment on other exceptions that may be necessary under this requirement.

We also understand that qualified registries can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the qualified registry does not have access to. We believe qualified registry internal comparisons can still help MIPS eligible clinicians identify areas where further improvement is needed. The ability for MIPS eligible clinicians to be able to know in real time how they are performing against their peers, within a qualified registry, provides immediate actionable feedback.

Furthermore, we are also proposing to strengthen the qualified registry self-nomination process at § 414.1400(c)(1) to add that beginning with the 2023 MIPS payment year, qualified registries are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(c)(2)(ii)). We refer readers to section III.K.3.g.(3)(1) where we are proposing a parallel requirement for QCDRs; we intend to have the same requirements for both QCDRs and qualifies registries.

In addition, the current performance period begins January 1 and ends on December 31st, and the corresponding data submission deadline is typically March 31st as described at § 414.1325(e)(1). As discussed above, we have heard from qualified registry stakeholders that in some instances clinicians wait until the end of the performance period to submit data to the third party intermediary, who are then unable to provide meaningful feedback to their clinicians 4 times a year. Therefore, we are also seeking comment for future notice-and-comment rulemaking on whether we should require MIPS eligible clinicians, groups, and virtual groups who utilize a qualfied registry to submit data throughout the performance period, and prior to the close of the performance period (that is, December 31st). We are also seeking comment for future notice-and-comment rulemaking, on whether clinicians and groups can start submitting their data starting April 1 to ensure that the qualified registry is providing feedback and the clinician or group during the performance period. This would allow qualified registries some time to provide enhanced and actionable feedback to MIPS eligible clinicians prior to the data submission deadline.

(5) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548) and the CY 2019 PFS final rule (83 FR 59908 through 59910) for previously finalized policies for remedial action and termination of third party intermediaries.

Based on experience with third party intermediaries thus far, we have concerns that certain third party intermediaries may not fully appreciate their existing compliance obligations or the implications of non-compliance. Among other provisions, § 414.1400(a)(5) specifically obligates each third party intermediary to certify that all data it submits to CMS on behalf of a MIPS eligible clinician, group or virtual group is true, accurate and complete to the best of its knowledge.

[138] Quality Payment Program Overview. *https://qpp.cms.gov/about/qpp-overview.*

Section 414.1400(f)(1) states that, after providing written notice, CMS may take remedial action or terminate a third party intermediary if CMS determines that the third party intermediary has ceased to meet one or more of the applicable criteria for approval or has submitted data that is inaccurate, unusable or otherwise compromised. Moreover, § 414.1400(f)(3) identifies specific circumstances under which CMS may determine that data submitted by a third party intermediary meets the standard for inaccurate, unusable or otherwise compromised data.

Third parties intermediaries have an affirmative obligation to certify that the data they submit on behalf of a MIPS eligible clinician, group or virtual group are true, accurate and complete to the best of its knowledge. MIPS data that are inaccurate, incomplete, unusable or otherwise compromised can result in improper payment. Using data selection criteria to misrepresent a clinician or group's performance for an applicable performance period, commonly referred to as ''cherry-picking,'' results in data submissions that are not true, accurate or complete. A third party intermediary cannot certify that data submitted to CMS by the third party intermediary are true, accurate and complete to the best of its knowledge if the third party intermediary knows the data submitted are not representative of the clinician's or group's performance. As described in section III.K.3.c.(1) of this proposed rule, we proposed to further amend § 414.1340(a)(3) to clarify that the submitted data should be reflective of a 70 percent random sample. We believe this clarification will emphasize to all parties that the data submitted on each measure is expected to be representative of the clinician's or group's performance. Accordingly, a third party intermediary that submits a certification under § 414.1400(a)(5) in connection with the submission of data it knows are cherry-picked has submitted a false certification in violation of existing regulatory requirements. If CMS believes cherry-picking of data may be occurring, we may subject the third party intermediary and its clients to auditing in accordance with § 414.1400(g).

Despite these existing obligations, we have received inquiries from third party intermediaries regarding perceived opportunities to selectively submit data that are unrepresentative of the MIPS performance of the clinician or group for which the third party intermediary is submitting data. These inquires suggest that certain third party intermediaries may not fully appreciate their current regulatory obligations or their implications.

The current regulations at § 414.1400(f) clearly establish that CMS enforcement authority includes the authority to pursue remedial actions or termination based on its determination that a third party intermediary was non-compliant with any applicable criteria for approval in § 414.1400(a) through (e) or if the third party intermediary submitted data that are inaccurate, unusable or otherwise compromised. Compliance within § 414.1400(a)(5) is a criteria for approval. Using data selection criteria to misrepresent a clinician or group's performance for an applicable performance period results in data that are inaccurate, unusable and otherwise compromised. Accordingly, if CMS determined that third party intermediary knowingly submitted data that are not representative of the clinician's or group's performance and certified that the submitted data were true, accurate and complete, CMS would have multiple grounds to impose remedial action or termination under existing regulations.

In this proposed rule, we propose two changes to more expressly emphasize CMS enforcement authority. First, we propose to clarify in this proposed rule that remedial action and termination provisions at § 414.1400(f)(1) are triggered if we determine that a third party intermediary submits a false certification under paragraph (a)(5). Second, as discussed below, we propose to clarify in this proposed rule that CMS authority to bring remedial actions or terminate a third party intermediary for submitting data that is inaccurate, unusable or otherwise compromise extends beyond the specific examples set forth in § 414.1400(f)(3). With these revisions and a grammatical correction described below, the proposed § 414.1400(f)(1) would affirm existing CMS authority to purse remedial actions or termination if we determine that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, submits a false certification under paragraph (a)(5), or has submitted data that are inaccurate, incomplete, unusable, or otherwise compromised. We anticipate that these proposed revisions will emphasize to third party intermediaries the sanctions they may face from CMS if they submit improper data to CMS. In addition, we note that third party intermediaries may face liability under the federal False Claims Act if they submit or cause to submission of false MIPS data.

As noted above, we are proposing revisions to § 414.1400(f)(3) to clarify the intent of this provision. We refer readers to CY 2019 PFS final rule (83 FR 59908 through 59910) for the discussion of the evolution of policies regarding remedial actions and termination of a third party intermediary. The agency's enforcement authority as codified in § 414.1400(f) broadly extends to include instances of willful misconduct by the third party intermediary and well as other instances in which a third party intermediary inadvertently submits data with deficiencies and errors that render the data ''inaccurate, unusable or otherwise compromised.'' To facilitate a more fulsome understanding on when inadvertent conduct could trigger an enforcement action against a third party intermediary, the current regulatory text in § 414.1400(f)(3) provides that the threshold for ''inaccurate, unusable or otherwise compromised'' may be met if the submitted data includes TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies that affect more 3 percent of the total number of MIPS eligible clinicians or groups for which data was submitted by the third party intermediary. Through this proposed rule, we propose to add the phrase ''including but not limited to'' to the text of § 414.1400(f)(3) to emphasize that this provision is illustrative of circumstances that may result in enforcement action and should not be misinterpreted to limit the agency's ability to impose remedial actions or terminate a third party intermediary that knowingly submits inaccurate data.

Lastly, we propose grammatically corrections related to the use of the plural term ''data.''

h. Public Reporting on Physician Compare

(1) Background

For previous discussions on the background of Physician Compare, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), and the Physician Compare Initiative website at *https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/physician-compare-initiative/*.

We are proposing to publicly report on Physician Compare: (1) Aggregate MIPS data, including the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians, beginning with Year 2 (CY 2018 data, available starting in late CY

2019), as technically feasible; and (2) an indicator on the profile page or in the downloadable database that displays if a MIPS eligible clinicians is scored using facility-based measurement, as specified under § 414.1380(e)(6)(vi), as technically feasible. These proposals are discussed in more detail in this proposed rule.

(2) Regulation Text Changes

Section 1848(q)(9)(A) and (D) of the Act requires that we publicly report on Physician Compare in an easily understandable format:

- The final score for each MIPS eligible clinician;
- Performance of each MIPS eligible clinician for each performance category;
- Periodic aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of performance of all the MIPS eligible clinicians for each performance category;
- The names of eligible clinicians in advanced APMs and, to the extent feasible, the names of such advanced APMs and the performance of such APMs.

Section 1848(q)(9)(B) of the Act requires that the information made available under section 1848(q)(9) of the Act must indicate, where appropriate, that publicized information may not be representative of the eligible clinician's entire patient population, the variety of services furnished by the eligible clinician, or the health conditions of individuals treated.

To more completely and accurately reference the data available for public reporting on Physician Compare, we propose to amend § 414.1395(a) by adding paragraph (1) stating that CMS posts on Physician Compare, in an easily understandable format: (i) Information regarding the performance of MIPS eligible clinicians, including, but not limited to, final scores and performance category scores for each MIPS eligible clinician; and (ii) the names of eligible clinicians in Advanced APMs and, to the extent feasible, the names and performance of such Advanced APMs. As discussed in section III.K.3.h.(3) of this proposed rule, we are also proposing to amend § 414.1395(a) by adding paragraph (2) stating that CMS periodically posts on Physician Compare aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible clinicians with respect to each performance category. Finally, we propose to amend § 414.1395(a) by adding paragraph (3) stating that the information made available under § 414.1395 will indicate, where appropriate, that publicized information may not be representative of an eligible clinician's entire patient population, the variety of services furnished by the eligible clinician, or the health conditions of individuals treated.

(3) Final Score, Performance Categories, and Aggregate Information

Section 1848(q)(9)(D) of the Act requires the Secretary to periodically post on Physician Compare aggregate information on the MIPS, including the range of composite scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible clinicians with respect to each performance category. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53823), where we previously finalized policies to publicly report on Physician Compare, either on profile pages or in the downloadable database, the final score for each MIPS eligible clinician and the performance of each MIPS eligible clinician for each performance category, and to periodically post aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of performance of all the MIPS eligible clinicians for each performance category, as technically feasible, for all future years.

Although we previously finalized a policy to periodically post aggregate information on the MIPS, as technically feasible, for all future years, we have not proposed or finalized in rulemaking a specific timeframe for doing so. As part of our phased approach to public reporting, we wanted to first gain experience with the MIPS data prior to publicly reporting it in aggregate, since we had not publicly reported on Physician Compare aggregate data under legacy programs. For example, we publicly reported the Physician Quality Reporting System (PQRS) performance information only at an individual clinician and group practice level. Now that we have experience with the MIPS data, including the Year 1 performance information which was not available for analysis at the time of prior rulemaking, we can now propose a specific timeframe for publicly reporting aggregate MIPS data on Physician Compare.

Therefore, in accordance with section 1848(q)(9)(D) of the Act, we propose to publicly report on Physician Compare aggregate MIPS data, including the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians, beginning with Year 2 (CY 2018 data, available starting in late CY 2019), as technically feasible, and to codify this proposed policy at § 414.1395(a). We wish to clarify that the aggregate data publicly reported would be inclusive of all MIPS eligible clinicians. We also note that some aggregate MIPS data is already publicly available in other places, such as via the Quality Payment Program Experience Report. We note that the 2017 Quality Payment Program Experience Report is available at *https://qpp-cm-prod-content.s3.amazonaws.com/uploads/491/2017%20QPP%20Experience%20Report.pdf*. As noted in the CY 2018 Quality Payment Program final rule (82 FR 53823), we will use statistical testing and user testing, as well as consultation with the Physician Compare Technical Expert Panel, to determine how and where these data are best reported on Physician Compare (for example in the Physician Compare Downloadable Database or on the Physician Compare Initiative page). In addition to minimum and maximum MIPS performance category and final scores, we also seek comment on any other aggregate information that stakeholders would find useful for future public reporting on Physician Compare.

(4) Quality

For previous discussions on publicly reporting quality performance category information on the Physician Compare website, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53824) and the CY 2019 Quality Payment Program final rule (83 FR 59912).

Although we are not making any proposals regarding publicly reporting quality performance category information, we are seeking additional comments on adding patient narratives to the Physician Compare website in future rulemaking, to the extent consistent with our authority to collect such information under section 1848(q) of the Act and our authority to include an assessment of patient experience and patient, caregiver, and family engagement under section 10331(a)(2)(E) of the Affordable Care Act. Physician Compare website user testing has repeatedly shown that Medicare patients and caregivers greatly desire narrative reviews, quotes and testimonials by their peers, and a single overall ''value indicator,'' reflective for each MIPS eligible clinician and group, and would expect to find such information on the Physician Compare website already, based on their experiences with other consumer-oriented websites. We currently do not

display any narrative patient satisfaction information on Physician Compare or any single overall value indicator for MIPS eligible clinicians and groups (except MIPS performance category and final scores); currently all performance information on Physician Compare is publicly reported at the individual measure level. Therefore, we are seeking comment on the value of and considerations for publicly reporting such information to assist patients and caregivers with making healthcare decisions, building upon the feedback received in response to the CY 2018 Quality Payment Program proposed rule (82 FR 30166 through 30167), in which we specifically sought comment on publicly reporting responses to five open-ended questions that are part of the Agency for Healthcare Research and Quality (AHRQ)'s CAHPS Patient Narrative Elicitation Protocol (*https://www.ahrq.gov/cahps/surveys-guidance/item-sets/elicitation/index.html*). We refer readers to section III.K.3.c.(1)(c)(i) of this proposed rule for an additional solicitation for comments to add narrative reviews into the CAHPS for MIPS group survey in future rulemaking.

To be publicly reported on Physician Compare, patient narrative data would have to meet our public reporting standards, described at § 414.1395(b), and reviewed in consultation with the Physician Compare Technical Expert Panel, to determine how and where these data would be best reported on Physician Compare. We seek comment on the value of collecting and publicly reporting information from narrative questions and other PROMs, as well as publishing a single ''value indicator'' reflective of cost, quality and patient experience and satisfaction with care for each MIPS eligible clinician and group, on the Physician Compare website and will consider feedback from the patient, caregiver, and clinician communities before proposing any policies in future rulemaking. We also note that if we propose to publicly report patient narratives in future rulemaking, we will address all related patient privacy safeguards consistent with section 10331(c) of the Affordable Care Act, which requires that information on physician performance and patient experience is not disclosed in a manner that violates the Freedom of Information Act (5 U.S.C. 552) or the Privacy Act of 1974 (5 U.S.C. 552a) with regard to the privacy individually identifiable health information, and other applicable law.

(5) Promoting Interoperability

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53827) and the CY 2019 Quality Payment Program final rule (83 FR 59913) for previously finalized policies related to the Promoting Interoperability performance category and Physician Compare.

Although we are not making any proposals regarding publicly reporting Promoting Interoperability category information, we do want to refer readers to the ''Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans in the Federally Facilitated Exchanges and Health Care Providers'' proposed rule (referred to as the Interoperability and Patient Access proposed rule) published in the March 4, 2019 **Federal Register** (84 FR 7646 through 7647), where we proposed to include an indicator on Physician Compare for the eligible clinicians and groups that submit a ''no'' response to any of the three prevention of information blocking attestation statements in § 414.1375(b)(3)(ii)(A) through (C). To report successfully on the Promoting Interoperability performance category, in addition to satisfying other requirements, a MIPS eligible clinician must submit an attestation response of ''yes'' for each of these statements. These statements contain specific representations about a clinician's implementation and use of CEHRT and are intended to verify that a MIPS eligible clinician has not knowingly and willfully taken action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology. In the event that these statements are left blank, that is, a ''yes'' or a ''no'' response is not submitted, the attestations would be considered incomplete, and we would not include an indicator on Physician Compare. We also proposed to post this indicator on Physician Compare, either on the profile pages or the downloadable database, as feasible and appropriate, starting with the 2019 performance period data available for public reporting starting in late 2020. We refer readers to the CY 2017 Quality Payment Program final rule for additional information on these attestation statements (81 FR 77028 through 77035).

We note that addressing comments on this proposed policy is outside of the scope of this proposed rule and instead direct readers to review that proposed rule, available at *https://www.federalregister.gov/documents/2019/03/04/2019-02200/medicare-and-medicaid-programs-patient-protection-and-affordable-care-act-interoperability-and*, for more information.

(6) Facility-Based Clinician Indicator

As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53823), we finalized a policy to publicly report the MIPS performance category and final scores earned by each MIPS eligible clinician on Physician Compare, either on profile pages or in the downloadable database. We also finalized that we will make all measures under the MIPS quality performance category available for public reporting on Physician Compare, either on profile pages or in the downloadable database, as technically feasible (82 FR 53824). We will use statistical testing and user testing to determine how and where measures are reported on Physician Compare. We established at § 414.1380(e) a facility-based measurement scoring option under the MIPS quality and cost performance categories for clinicians that meet certain criteria beginning with the 2019 MIPS performance period/2021 MIPS payment year. Section 414.1380(e)(1)(ii) provides that the scoring methodology applicable for MIPS eligible clinicians scored with facility-based measurement is the Total Performance Score methodology adopted for the Hospital VBP Program, for the fiscal year for which payment begins during the applicable MIPS performance period.

With this in mind, we have considered how to best display facility-based MIPS eligible clinician quality and cost information on Physician Compare, appreciating our obligation to publicly report certain MIPS data for MIPS eligible clinicians and groups. As those clinicians and groups scored under the facility-based option are MIPS eligible, we will publicly report their performance category and MIPS final scores on Physician Compare and considered two options for publicly reporting their facility-based measure-level performance information on Physician Compare: (a) Displaying hospital-based measure-level performance information on Physician Compare profile pages, including scores for specific measures and the hospital overall rating; or (b) including an indicator showing that the clinician or group was scored using the facility-based scoring option with a link from the clinician's Physician Compare profile page to the relevant hospital's

measure-level performance information on Hospital Compare. We believe that a link from the clinician's Physician Compare profile page to the relevant hospital's performance information on Hospital Compare is preferable for several reasons including: Concerns about duplication with Hospital Compare, interpretability by Physician Compare website users expecting to find clinician-level, rather than hospital-level, information and operational feasibility. Additionally, we believe this approach is consistent with our consumer testing findings that Medicare patients and caregivers find value in information on the relationships clinicians and groups may have with facilities where they perform services. We note that the facility-based scoring indicator would be separate from the hospital affiliation information for admitting privileges currently posted on Physician Compare profile pages.

For these reasons, we are proposing to make available for public reporting an indicator on the Physician Compare profile page or downloadable database that displays if a MIPS eligible clinician is scored using facility-based measurement, as specified under § 414.1380(e)(6)(vi), as technically feasible. We are also proposing to provide a link to facility-based measure-level information, as specified under § 414.1380(e)(1)(i), for such MIPS eligible clinicians on Hospital Compare, as technically feasible. In addition, we are proposing to post this indicator on Physician Compare with the linkage to Hospital Compare beginning with CY 2019 performance period data available for public reporting starting in late CY 2020 and for all future years, as technically feasible. We request comment on this proposal.

4. Overview of the APM Incentive

a. Overview

Section 1833(z) of the Act requires that an incentive payment be made in years 2019 through 2024 (or, in years after 2025, a different PFS update) to Qualifying APM Participants (QPs) for achieving threshold levels of participation in Advanced APMs. In the CY 2017 Quality Payment Program final rule (81 FR 77399 through 77491), we finalized the following policies:

- Beginning in payment year 2019, if an eligible clinician participated sufficiently in an Advanced APM during the QP Performance Period, that eligible clinician may become a QP for the year. Eligible clinicians who are QPs are excluded from the MIPS reporting requirements for the performance year and payment adjustment for the payment year.
- For payment years from 2019 through 2024, QPs receive a lump sum incentive payment equal to 5 percent of their prior year's estimated aggregate payments for Part B covered professional services. Beginning in payment year 2026, QPs receive a higher update under the PFS for the year than non-QPs.
- For payment years 2019 and 2020, eligible clinicians may become QPs only through participation in Medicare Advanced APMs.
- For payment years 2021 and later, eligible clinicians may become QPs through a combination of participation in Medicare Advanced APMs and Other Payer Advanced APMs (which we refer to as the All-Payer Combination Option).

In the CY 2018 Quality Payment Program final rule (82 FR 53832 through 53895), we finalized clarifications, modifications, and additional details pertaining to Advanced APMs, QP and Partial QP determinations, Other Payer Advanced APMs, Determination of Other Payer Advanced APMs, Calculation of All-Payer Combination Option Threshold Scores and QP Determinations, and Physician-Focused Payment Models (PFPMs).

In the CY 2019 PFS final rule (83 FR 59915 through 59940), we finalized clarifications, modifications, and additional details pertaining to use of Certified Electronic Health Record Technology (CEHRT), MIPS-comparable quality measures, bearing financial risk for monetary losses, the QP Performance Period, Partial QP election to report to MIPS, Other Payer Advanced APM criteria, determination of Other Payer Advanced APMs, calculation of All-Payer Combination Option Threshold Scores and QP determinations under the All-Payer Combination Option.

In this proposed rule, we discuss proposals pertaining to Advanced APMs and the All-Payer Combination Option.

b. Terms and Definitions

As we continue to develop the Quality Payment Program, we have identified the need to propose new definitions to go along with the previously defined terms. A list of the previously defined terms is available in the CY 2017 Quality Payment Program final rule (81 FR 77537 through 77540), the CY 2018 Quality Payment Program final rule (82 FR 53951 through 53952), and in the CY 2019 PFS final rule (83 FR 60075 through 60076), and reflected in our regulation at § 414.1305.

In the CY 2017 Quality Payment Program final rule, we defined the term ''Medical Home Model'' and ''Medicaid Medical Home Model.'' Since defining these terms in the CY 2017 Quality Payment Program final rule, we have sought comment on whether or not to establish a similar definition to describe payment arrangements similar to Medical Home Models and Medicaid Medical Home Models that are operated by other payers (82 FR 30180).

As discussed in section III.I.4.d.(2)(a) of this proposed rule, we propose to add the defined term ''Aligned Other Payer Medical Home Model'' to § 414.1305, to mean a payment arrangement (not including a Medicaid payment arrangement) operated by an other payer that formally partners with CMS in a CMS Multi-Payer Model that is a Medical Home Model through a written expression of alignment and cooperation, such as a memorandum of understanding (MOU), and is determined by CMS to have the following characteristics:

- The other payer payment arrangement has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;
- Empanelment of each patient to a primary clinician; and
- At least four of the following: Planned coordination of chronic and preventive care; Patient access and continuity of care; Risk-stratified care management; Coordination of care across the medical neighborhood; Patient and caregiver engagement; Shared decision-making; and/or Payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

c. Advanced APMs

(1) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77408), we finalized the criteria that define an Advanced APM based on the requirements set forth in sections 1833(z)(3)(C) and (D) of the Act. An Advanced APM is an APM that:

• Requires its participants to use certified EHR technology (CEHRT) (81 FR 77409 through 77414);

• Provides for payment for covered professional services based on quality measures comparable to measures under the quality performance category under MIPS (81 FR 77414 through 77418); and

• Either requires its participating APM Entities to bear financial risk for monetary losses that are in excess of a nominal amount, or is a Medical Home Model expanded under section 1115A(c) of the Act (81 FR 77418 through 77431). We refer to this criterion as the financial risk criterion.

In the CY 2018 Quality Payment Program final rule (82 FR 53832 through 53895), we finalized clarifications, modifications, and additional details pertaining to the Advanced APM criteria, Qualifying APM Participant (QP) and Partial QP determinations, the Other Payer Advanced APM criteria, Determination of Other Payer Advanced APMs, Calculation of All-Payer Combination Option Threshold Scores and QP Determinations, and we discussed Physician-Focused Payment Models (PFPMs).

In the CY 2019 PFS final rule (83 FR 59915 through 59938), we finalized the following:

Use of CEHRT:

• We revised § 414.1415(a)(i) to specify that an Advanced APM must require at least 75 percent of eligible clinicians in each APM Entity, or, for APMs in which hospitals are the APM Entities, each hospital, use CEHRT as defined at § 414.1305 to document and communicate clinical care with patients and other health care professionals.

MIPS-Comparable Quality Measures:

• We revised § 414.1415(b)(2) to clarify, effective January 1, 2020, that at least one of the quality measures upon which an Advanced APM bases payment must either be finalized on the MIPS final list of measures, as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidenced-based, reliable, and valid.

• We revised § 414.1415(b)(3), effective January 1, 2020, to provide that at least one outcome measure, for which measure results are included as a factor when determining payment to participants under the terms of the APM must either be finalized on the MIPS final list of measures as described in § 414.1330, endorsed by a consensus-based entity; or determined by CMS to be evidence-based, reliable, and valid.

Bearing Financial Risk for Monetary Losses:

• We revised § 414.1415(c)(3)(i)(A) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

In this section of the proposed rule, we address policies regarding several aspects of the Advanced APM criterion on bearing financial risk for monetary losses—specifically our proposal to amend the definition of expected expenditures, and our request for comment on whether certain items and services should be excluded from the capitation rate for our definition of full capitation arrangements.

(2) Bearing Financial Risk for Monetary Losses

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77418), we divided the discussion of this criterion into two main topics: (1) What it means for an APM Entity to bear financial risk for monetary losses under an APM (which we refer to as either the generally applicable financial risk standard or Medical Home Model financial risk standard); and (2) what levels of risk we would consider to be in excess of a nominal amount (which we refer to as either the generally applicable nominal amount standard or the Medical Home Model nominal amount standard).

(b) Expected Expenditures

In the CY 2017 Quality Payment Program final rule (81 FR 77550), we established a definition of expected expenditures at § 414.1415(c)(5) to mean the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, 'expected expenditures' means the episode target price. We established this definition of expected expenditures for the purpose of applying the Advanced APM financial risk criterion to determine whether an APM meets the generally applicable nominal amount standard.

In the CY 2017 Quality Payment Program proposed rule (81 FR 28305 through 28309), we proposed to measure three dimensions of risk under our generally applicable nominal amount standards: (1) Marginal risk, which refers to the percentage of the amount by which actual expenditures exceed expected expenditures for which an APM Entity would be liable under the APM; (2) minimum loss rate (MLR), which is a percentage by which actual expenditures may exceed expected expenditures without triggering financial risk; and (3) total potential risk, which refers to the maximum potential payment for which an APM Entity could be liable under the APM.

However, based on commenters' concerns regarding technical complexity, we did not finalize the marginal risk and MLR components of the generally applicable nominal standard under the Advanced APM criteria (81 FR 77427), but did finalize those additional elements of risk under the Other Payer Advanced APM criteria. We stated in the CY 2017 Quality Payment Program final rule (81 FR 77426) that the marginal risk and MLR components were not necessary to explicitly include in the generally applicable nominal amount standard for Advanced APMs because we are committed to creating Advanced APMs with strong financial risk designs that incorporate risk adjustment, benchmark methodologies, sufficient stop-loss amounts, and sufficient marginal risk; and that all APMs involving financial risk that we operate now or in the future would meet or exceed the proposed marginal risk and MLR requirements. In the CY 2017 Quality Payment Program proposed rule (81 FR 28306), we explained that to determine whether an APM satisfies the marginal risk component of the generally applicable nominal amount standard, we would examine the payment required under the APM as a percentage of the amount by which actual expenditures exceeded expected expenditures. We proposed that we would require that this percentage exceed a required marginal risk percentage of 30 percent regardless of the amount by which actual expenditures exceeded expected expenditures. We believed that any marginal risk below 30 percent could create scenarios in which the total risk could be very high, but the average or likely risk for an APM Entity would actually be very low (81 FR 28306).

Our rationale for proposing the marginal risk requirement was that the inclusion of the marginal risk requirement would contribute to maintaining a more than nominal level of average or likely risk under an Advanced APM. We did not finalize the marginal risk requirement under the Advanced APM criteria because, as noted above, we believed that all Advanced APMs that we operate now or would potentially operate in the future would meet or exceed the previously proposed marginal risk and MLR requirements, and more importantly, we believed the total risk portion of the nominal amount standard alone was sufficient to ensure that the level of average or likely risk under an

Advanced APM would actually be more than nominal for participants.

However, based on our experience to date, we are concerned that the total risk portion of the benchmark-based nominal amount standard as currently constructed may not always be sufficient to ensure that the level of average or likely risk under an Advanced APM is actually more than nominal for participants. This is because the benchmark-based nominal amount standard at § 414.1415(c)(3)(i)(B) is dependent upon the definition of expected expenditures codified at § 414.1415(c)(5), where expected expenditures are defined as the beneficiary expenditures for which an APM Entity is responsible under an APM, and for episode payment models, the episode target price.

In our experience implementing the Quality Payment Program and considering the diversity of model designs, we now believe there is a need to amend the definition of expected expenditures to ensure there are more-than-nominal levels of average or likely risk under an Advanced APM that would meet the generally applicable benchmark-based nominal amount standard. For instance, an APM could have a sufficient total risk to meet the benchmark-based nominal amount standard and a sharing rate that results in adequate marginal risk if actual expenditures exceed expected expenditures. However, in that same APM, the level of expected expenditures reflected in the APM's benchmark or episode target price could be set in a manner that would substantially reduce the amount of loss the APM Entity would reasonably expect to incur.

For an APM to meet the generally applicable benchmark-based nominal amount standard, we believe there should be not only the potential for financial losses based on expenditures in excess of the benchmark as provided in § 415.1415(c)(3)(i)(B) of our regulations, but also a meaningful possibility that an APM Entity might exceed the benchmark. If the benchmark is set in such a way that it is extremely unlikely that participants would exceed it, then there is little potential for participants to incur financial losses, and the amount of risk is essentially illusory.

Therefore, in § 414.1415(c)(5), we are proposing to amend the definition of expected expenditures. Specifically, we are proposing to define expected expenditure as, for the purposes of this section, the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, expected expenditures means the episode target price. For purposes of assessing financial risk for Advanced APM determinations, the expected expenditures under the terms of the APM should not exceed the expected Medicare Parts A and B expenditures for a participant in the absence of the APM. If expected expenditures under the APM exceed the Medicare Parts A and B expenditures that an APM Entity would be expected to incur in the absence of the APM, such excess expenditures are not considered when CMS assesses financial risk under the APM for Advanced APM determinations.

In general, expected expenditures are expressed as a dollar amount, and may be derived for a particular APM from national, regional, APM Entity-specific, and/or practice-specific historical expenditures during a baseline period, or other comparable expenditures. However, we recognize expected expenditures under an APM often are risk-adjusted and trended forward, and may be adjusted to account for expenditure changes that are expected to occur as a result of APM participation. For the purpose of this proposed definition of expected expenditures, we would not consider risk adjustments to be excess expenditures when comparing to the costs that an APM Entity would be expected to incur in the absence of the APM.

We believe that this proposed amendment would allow us to ensure that there are more-than-nominal amounts of average or likely risk under an APM that meets the generally applicable benchmark-based nominal amount standard. We believe that the proposed amended definition of expected expenditures, particularly by our not considering excess expenditures when determining whether an APM meets the benchmark-based nominal amount standard, would provide a more definite basis for us to assess whether an APM Entity would bear more than a nominal amount of financial risk for participants under the generally applicable benchmark-based nominal amount standard.

We are also proposing a similar amendment to the definition of expected expenditures applicable to the Other Payer Advanced APM criteria in section III.I.4.d.(2)(b)(i) of this proposed rule.

We seek comment on this proposal.

(c) Excluded Items and Services Under Full Capitation Arrangements

In the CY 2017 Quality Payment Program final rule (81 FR 74431), we finalized a capitation standard at § 414.1415(c)(6), which provides that a full capitation arrangement meets the Advanced APM financial risk criterion. We defined a capitation arrangement as a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed to reconcile or share losses incurred or savings earned by the APM Entity. We clarified that arrangements between CMS and Medicare Advantage Organizations under the Medicare Advantage program are not considered capitation arrangements for purposes of this definition.

In the CY 2019 PFS final rule (83 FR 59939), we made technical corrections to the Advanced APM financial risk capitation standard at § 414.1415(c)(6). These corrections clarified that our financial risk capitation standard applies only to full capitation arrangements where a per capita or otherwise predetermined payment is made under the APM for all items and services furnished to a population of beneficiaries during a fixed period of time, and no settlement or reconciliation is performed.

As we have begun to collect information on other payer payment arrangements for purposes of making Other Payer Advanced APM determinations, we have noticed that some payment arrangements that are submitted as capitation arrangements consistent with § 414.1420(d)(7) include a list of services that have been excluded from the capitation rate, such as hospice care, organ transplants, and out-of-network emergency services. In reviewing these exclusion lists, we believe that it may be appropriate for CMS to allow certain capitation arrangements to be considered ''full'' capitation arrangements even if they categorically exclude certain items or services from payment through the capitation rate.

As such, we are seeking comment on what categories of items and services might be excluded from a capitation arrangement that would still be considered a full capitation arrangement. Specifically, we seek comment on whether there are common industry practices to exclude certain categories of items and services from capitated payment rates and, if so, whether there are common principles or reasons for excluding those categories of services. We also seek comment on what percentage of the total cost of care such exclusions typically account for under what is intended to be a ''full'' global capitation arrangement. We also seek

comment on how non-Medicare payers define or prescribe certain categories of services that are excluded with regards to global capitation payment arrangements.

In addition, we are seeking comment on whether a capitation arrangement should be considered to be a full capitation arrangement even though it excludes certain categories of services from the capitation rate under the full capitation standard for Other Payer Advanced APMs as discussed in section III.I.4.d.(2)(c)(ii) of this proposed rule.

(3) Summary of Proposals

In this section, we are proposing the following policy:

- *Expected Expenditures:* We are proposing to amend the definition of expected expenditures codified at § 414.1415(c)(5) to state, for the purposes of this section, expected expenditures means the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, expected expenditures mean the episode target price. In addition, for purposes of assessing financial risk for Advanced APM determinations, the expected expenditures under the APM should not exceed the expected Medicare Parts A and B expenditures (including model-specific risk-adjustments and trend adjustments), for the APM Entity in the absence of the APM. If expected expenditures under the APM exceed the Medicare Parts A and B expenditures that the APM Entity would be expected to incur in the absence of the APM, such excess expenditures would not be considered when CMS assesses financial risk under the APM for Advanced APM determinations.

d. Qualifying APM Participant (QP) and Partial QP Determinations

(1) Overview

We finalized policies relating to QP and Partial QP determinations in the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77450). In the CY 2019 PFS final rule (83 FR 59923 through 59925), we finalized additional policies relating to QP determinations and Partial QP election to report to MIPS.

(2) Group Determination

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77440), we finalized that QP determinations would generally be made at the APM Entity level, but for two exceptions in which we make the QP determination at the individual level: (1) Individuals participating in multiple Advanced APM Entities, none of which meet the QP threshold as a group; and (2) eligible clinicians on an Affiliated Practitioner List when that list is used for the QP determination because there are no eligible clinicians on a Participation List for the APM Entity (81 FR 77439 through 77443). As a result, the QP determination for the APM Entity would apply to all the individual eligible clinicians who are identified as part of the APM Entity participating in an Advanced APM. If that APM Entity's Threshold Score meets the relevant QP threshold, all individual eligible clinicians in that APM Entity would receive the same QP determination, applied to their NPIs, for the relevant year. The QP determination calculations are aggregated using data for all eligible clinicians participating in the APM Entity on a determination date during the QP Performance Period.

(b) Application of Partial QP Status

In the CY 2017 Quality Payment Program final rule (81 FR 77440), we stated that we would apply QP status at the NPI level instead of at the TIN/NPI level. We noted that an individual clinician identified by an NPI may have reassigned billing rights to multiple TINs, resulting in multiple TIN/NPI combinations being associated with one individual clinician (NPI). We also stated that if QP status was only applied to one of an individual clinician's multiple TIN/NPI combinations, an eligible clinician who is a QP for only one TIN/NPI combination might still have to report under MIPS for another TIN/NPI combination. Under that approach, the APM Incentive Payment would be based on only a fraction of the clinician's covered professional services instead of, as we believe is the most logical reading of the statute, all those services furnished by the individual clinician, as represented by an NPI. Therefore, we expressed our concern with applying QP status only to a specific TIN/NPI combination as it would not effectuate the goals of the APM incentive path of the Quality Payment Program to reward individual clinicians for their commitment to Advanced APM participation.

For Partial QPs, we currently apply Partial QP status at the NPI level across all TIN/NPI combinations, as we have for QP status. However, upon further consideration, and based on our experience implementing the Quality Payment Program to date, we no longer believe we should apply Partial QP status at the individual clinician (NPI) level across all TIN/NPI combinations, as we have and do for QP status. Partial QPs are excluded from MIPS based on an election made at the APM Entity or individual eligible clinician level, and this exclusion is currently applied at the NPI level across all of their TIN/NPI combinations. When this MIPS exclusion is applied at the NPI level, it does not always provide a similar net positive outcome across an individual clinician's TIN/NPI combinations when compared to the APM Incentive Payment that QPs receive. The MIPS exclusion is different from QP status as Partial QPs do not receive an APM Incentive Payment, Partial QPs are only relieved of the MIPS reporting requirements and not subject to a MIPS payment adjustment. As such, while a Partial QP might wish to be excluded from the MIPS reporting requirements and payment adjustment with respect to the TIN/NPI combination that relates to an APM Entity in an Advanced APM, that same Partial QP might benefit from reporting to MIPS and receiving a MIPS payment adjustment with respect to some or all of their other TIN/NPI combinations because they anticipate receiving an upward MIPS payment adjustment.

So, while the current policy excludes Partial QPs from MIPS reporting requirements and allows Partial QPs to avoid any potential downward MIPS payment adjustment, we have heard from stakeholders, including some clinicians, that this policy has prevented eligible clinicians from receiving a positive MIPS payment adjustment earned through a different TIN/NPI combination not associated with the APM Entity through which they attained Partial QP status. Furthermore, in many circumstances, the election to be excluded from MIPS for an eligible clinician is made outside their control at the APM Entity level. In such scenarios, an eligible clinician may have reported to MIPS as part of a group or as an individual under a separate TIN/NPI combination, but would not receive any MIPS payment adjustment based on that reporting. If eligible clinicians who would have received a positive MIPS adjustment are excluded from MIPS because of their Partial QP status, it could potentially discourage eligible clinicians from participating in Advanced APMs. Additionally, in future years of the Quality Payment Program, we anticipate that it will become harder to attain QP and Partial QP status because the QP and Partial QP payment amount and patient count thresholds will rise, as set forth in § 414.1430. As a result, a greater number of Advanced APM participants may attain Partial QP status, which we

believe increases the importance of removing the potential disincentive for Advanced APM participation based on the way the MIPS exclusion for Partial QPs is applied.

Therefore, we are proposing that beginning with the 2020 QP Performance Period, Partial QP status would apply only to the TIN/NPI combination(s) through which an individual eligible clinician attains Partial QP status, and to amend our regulation by adding § 414.1425(d)(5) to reflect this change. This means that any MIPS election for a Partial QP would only apply to the TIN/NPI combination through which Partial QP status is attained, so that an eligible clinician who is a Partial QP for only one TIN/NPI combination may still be a MIPS eligible clinician and report under MIPS for other TIN/NPI combinations.

We seek comment on this proposal.

(3) QP Performance Period

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77446 through 77447), we finalized for the timing of QP determinations that a QP Performance Period runs from January 1 through August 31 of the calendar year that is 2 years prior to the payment year. We finalized that during the QP Performance Period, we will make QP determinations at three separate snapshot dates (March 31, June 30, and August 31), each of which will be a final determination for the eligible clinicians who are determined to be QPs. The QP Performance Period and the three separate QP determinations apply similarly for both the group of eligible clinicians on a Participation List and the individual eligible clinicians on an Affiliated Practitioner List.

(b) APM Entity Termination

In the CY 2017 Quality Payment Program final rule, we finalized at § 414.1425(c)(5) and § 414.1425(d)(3) that an eligible clinician is not a QP or Partial QP for a year if the APM Entity group voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period (81 FR 77446 through 77447). We also finalized at § 414.1425(c)(6) and § 414.1425(d)(4) that an eligible clinician is not a QP or Partial QP for a year if one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not individually achieve a Threshold Score that meets or exceeds the QP or Partial QP payment amount threshold or QP or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities (81 FR 77446 through 77447). We finalized these policies in part to ensure that APM Entities and eligible clinicians who achieve QP or Partial QP status during a QP Performance Period actually assume a more than a nominal amount of financial risk, as is necessary for Advanced APMs, for at least the full QP performance period from January 1 through August 31, if not the entire performance year under the Advanced APM.

Currently, under the terms of some Advanced APMs, APM Entities can terminate their participation in the Advanced APM while bearing no financial risk after the end of the QP Performance Period for the year (August 31). Under our current regulation, an APM Entity's termination after that date would not affect the QP or Partial QP status of all eligible clinicians in the APM Entity. We acknowledge that it may be appropriate for an Advanced APM to allow participating APM Entities to terminate without bearing financial risk for that performance period under the terms of the Advanced APM itself, including allowing such terminations to occur after the end of the QP Performance Period (August 31). However, allowing those eligible clinicians to retain their QP or Partial QP status without having borne financial risk under the Advanced APM through which they attained QP or Partial QP status is not aligned with the structure and principles of the Quality Payment Program, which is designed to reward those APM Entities and eligible clinicians for meaningfully assuming more than a nominal amount of financial risk, as required by the Advanced APM criteria. A critical aspect of Advanced APMs is that participants must bear more than a nominal amount of financial risk under the model. If an APM Entity terminates participation in the Advanced APM without financial accountability, the APM Entity has not yet borne more than a nominal amount of financial risk. As such, we do not believe it is appropriate for eligible clinicians in an APM Entity that terminates after QP determinations are made, but before bearing more than a nominal amount of financial risk, to retain any status as QPs or Partial QPs.

Therefore, regarding QP status, we are proposing to revise § 414.1425(c)(5) and add §§ 414.1425(c)(5)(i) and 414.1425(c)(5)(ii) which states, beginning in the 2020 QP Performance Period, an eligible clinician is not a QP for a year if: (1) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; (2) or the APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs. In addition, we are proposing to revise § 414.1425(c)(6) and add §§ 414.1425(c)(6)(i) and § 414.1425(c)(6)(ii), which states, beginning in the 2020 QP Performance Period, an eligible clinician is not a QP for a year if: (1) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not individually achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities; or (2) one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs, and the eligible clinician does not individually achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities.

Regarding Partial QP status, we are also proposing to revise § 414.1425(d)(3) and add §§ 414.1425(d)(3)(i) and 414.1425(d)(3)(ii), which states, beginning in the 2020 QP Performance Period, an eligible clinician is not a Partial QP for a year if: (1) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; or (2) the APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs. We are also proposing to revise § 414.1425(d)(4) and add §§ 414.1425(d)(4)(i) and 414.1425(d)(4)(ii), which states, beginning in the 2020 QP Performance Period, an eligible clinician is not a Partial QP for a year if: (1) One or more of the APM Entities in which the eligible clinician participates

voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not individually achieve a Threshold Score that meets or exceeds the Partial QP payment amount threshold or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities; or (2) one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs, and the eligible clinician does not individually achieve a Threshold Score that meets or exceeds the Partial QP payment amount threshold or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities. We believe these additions account for the scenarios in which an APM Entity terminates from an Advanced APM at a date on which the APM Entity would not incur any financial accountability under the terms of the Advanced APM.

We seek comment on this proposal.

(4) Summary of Proposals

In this section, we are proposing the following policies:

- *Application of Partial QP Status:* We propose that beginning with the 2020 QP Performance Period, Partial QP status will apply only to the TIN/NPI combination(s) through which an individual eligible clinician attains Partial QP status. We propose to amend § 414.1425(d)(5) to reflect this change.
- *APM Entity Termination:* We propose to revise §§ 414.1425(c)(5), 414.1425(c)(6), 414.1425(d)(3), and 414.1425(d)(4) to state that an eligible clinician is not a QP or a Partial QP for the year when an APM Entity terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs.

e. All-Payer Combination Option

(1) Overview

Section 1833(z)(2)(B)(ii) of the Act requires that beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the Combination All-Payer and Medicare Payment Threshold Option, which we refer to as the All-Payer Combination Option. In the CY 2017 Quality Payment Program final rule (81 FR 77459), we finalized our overall approach to the All-Payer Combination Option. The Medicare Option focuses on participation in Advanced APMs, and we make QP determinations under this option based on Medicare Part B covered professional services attributable to services furnished through an APM Entity. The All-Payer Combination Option does not replace or supersede the Medicare Option; instead, it will allow eligible clinicians to become QPs by meeting the QP thresholds through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through payment arrangements offered by payers other than Medicare that CMS has determined meet the criteria to be Other Payer Advanced APMs. We finalized that beginning in payment year 2021, we will conduct QP determinations sequentially so that the Medicare Option is applied before the All-Payer Combination Option (81 FR 77438). The All-Payer Combination Option encourages eligible clinicians to participate in payment arrangements that satisfy the Other Payer Advanced APM criteria with payers other than Medicare. It also encourages sustained participation in Advanced APMs across multiple payers.

We finalized that the QP determinations under the All-Payer Combination Option are based on payment amounts or patient counts as illustrated in Tables 36 and 37, and Figures 1 and 2 of the CY 2017 Quality Payment Program final rule (81 FR 77460 through 77461). We also finalized that, in making QP determinations with respect to an eligible clinician, we will use the Threshold Score (that is, based on payment amount or patient count) that is most advantageous to the eligible clinician toward achieving QP status, or if QP status is not achieved, Partial QP status, for the year (81 FR 77475).

BILLING CODE 4120–01–P

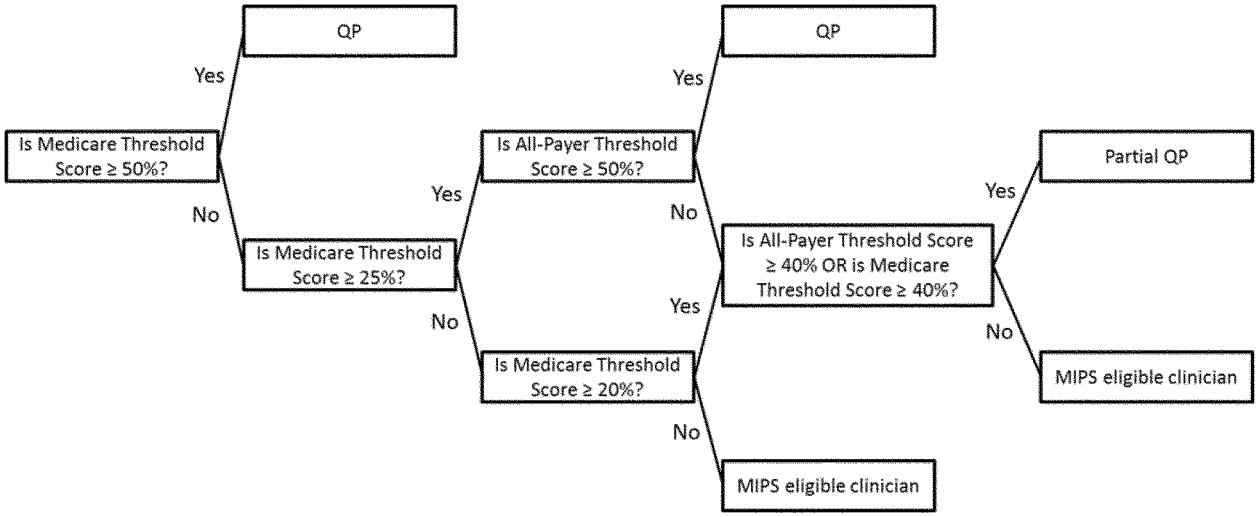

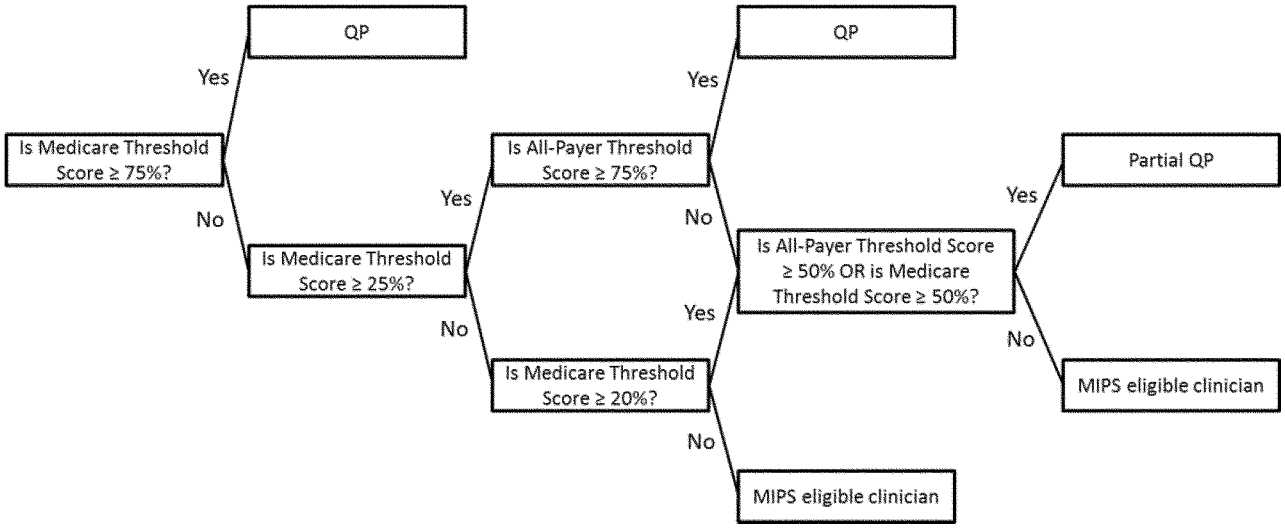

FIGURE 3: QP Determination Tree, Payment Years 2023 and Later

BILLING CODE 4120–01–C

Unlike the Medicare Option, where we have access to all of the information necessary to determine whether an APM meets the criteria to be an Advanced APM, we cannot determine whether payment arrangements offered by other payers meet the criteria to be an Other Payer Advanced APM without receiving information about the payment arrangements from an external source. Similarly, we do not have the necessary payment amount and patient count information to determine under the All-Payer Combination Option whether an eligible clinician meets the payment amount or patient count threshold to be a QP without receiving certain information from an external source.

In the CY 2018 Quality Payment Program final rule (82 FR 53844 through 53890), we established additional policies to implement the All-Payer Combination Option and finalized certain modifications to our previously finalized policies. A detailed summary of those policies can be found at 82 FR 53874 through 53876 and 53890 through 53891.

In the CY 2019 PFS final rule (83 FR 59926 through 59938), we finalized the following:

Other Payer Advanced APM Criteria:

- We changed the CEHRT use criterion so that in order to qualify as an Other Payer Advanced APM as of January 1, 2020, the other payer arrangement must require at least 75 percent of participating eligible clinicians in each participating APM Entity group, or each hospital if hospitals are the APM Entities, use CEHRT to document and communicate clinical care.

• We allowed payers and eligible clinicians to submit evidence as part of their request for an Other Payer Advanced APM determination that CEHRT is used by the requisite percentage of eligible clinicians participating in the payment arrangement (50 percent for 2019, and 75 percent for 2020 and beyond) to document and communicate clinical care, whether or not CEHRT use is explicitly required under the terms of the payment arrangement.

• We clarified § 414.1420(c)(2), effective January 1, 2020, to provide that at least one of the quality measures used in the payment arrangement in paragraph (c)(1) of this regulation must be:

++ Finalized on the MIPS final list of measures, as described in § 414.1330;

++ Endorsed by a consensus-based entity; or

++ Determined by CMS to be evidenced-based, reliable, and valid.

• We revised § 414.1420(c)(3) to require that, effective January 1, 2020, unless there is no applicable outcome measure on the MIPS quality measure list, that to be an Other Payer Advanced APM, an other payer arrangement must use an outcome measure, that must be:

++ Finalized on the MIPS final list of measures, as described in § 414.1330;

++ Endorsed by a consensus-based entity; or

++ Determined by CMS to be evidenced-based, reliable, and valid.

• We also revised our regulation at § 414.1420(c)(3)(i) to provide that, for payment arrangements determined to be Other Payer Advanced APMs for the 2019 performance year that did not include an outcome measure that is evidence-based, reliable, and valid, and that are resubmitted for an Other Payer Advanced APM determination for the 2020 performance year (whether for a single year, or for a multi-year determination as finalized in CY 2019 PFS final rule (83 FR 55931 through 55932), we would continue to apply the previous requirements for purposes of those determinations. This revision also applies to payment arrangements in existence prior to the 2020 performance year that are submitted for determination to be Other Payer Advanced APMs for the 2020 performance year and later.

• We revised § 414.1420(d)(3)(i) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the total combined revenues from the payer of providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

Determination of Other Payer Advanced APMs:

• We finalized details regarding the Payer Initiated Process for Remaining Other Payers. To the extent possible, we aligned the Payer Initiated Process for Remaining Other Payers with the previously finalized Payer Initiated Process for Medicaid, Medicare Health Plans, and CMS Multi-Payer Models.

• We eliminated the Payer Initiated Process that is specifically for CMS Multi-Payer Models. These payers will be able to submit their arrangements through the Payer Initiated Process for Remaining Other Payers as finalized in the CY 2019 PFS final rule (82 FR 59933 through 59935), or through the Medicaid or Medicare Health Plan payment arrangement submission processes, and no longer need a special pathway.

Calculation of All-Payer Combination Option Threshold Scores and QP Determinations:

• We added a third alternative to allow requests for QP determinations at the TIN level in instances where all clinicians who reassigned billing rights under the TIN participate in a single APM Entity. We modified our regulation at § 414.1440(d) by adding a third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing under the TIN participate in a single APM Entity, as well as to assess QP status at the most advantageous level for each eligible clinician.

• We clarified that, in making QP determinations using the All-Payer Combination Option, eligible clinicians may meet the minimum Medicare threshold using one method, and the All-Payer threshold using the same or a different method. We codified this clarification by amending § 414.1440(d)(1).

• We extended the weighting methodology that is used to ensure that an eligible clinician does not receive a lower score on the Medicare portion of their all-payer calculation under the All-Payer Combination Option than the Medicare Threshold Score they received at the APM Entity level in order to apply a similar policy to the proposed TIN level Medicare Threshold Scores.

In this section of the proposed rule, we address our proposal to define the term Aligned Other Payer Medical Home Model, and our proposals regarding bearing financial risk for monetary losses, specifically the Medicaid Medical Home Model financial risk standard and the definition of expected expenditures. We also discuss our request for comment on whether certain items and services should be excluded from the capitation rate for our definition of full capitation arrangements.

(2) Aligned Other Payer Medical Home Models

(a) Definition

As we explained when finalizing the definitions of Medical Home Model and Medicaid Medical Home Model in the CY 2017 Quality Payment Program final rule, MACRA does not define 'medical homes,' but sections 1848(q)(5)(C)(i), 1833(z)(2)(B)(iii)(II)(cc)(BB), 1833(z)(2)(C)(iii)(II)(cc)(BB), and 1833(z)(3)(D)(ii)(II) of the Act make medical homes an instrumental piece of the law (81 FR 77403). The terms Medical Home Model and Medicaid Medical Home Model are limited to Medicare and Medicaid payment arrangements, respectively, and do not include other payer payment arrangements.

As we discuss in section III.I.4.b. of this proposed rule, we are proposing to add the defined term ''Aligned Other Payer Medical Home Model'' to § 414.1305, which would mean an aligned other payer payment arrangement (not including a Medicaid payment arrangement) operated by an other payer formally partnering in a CMS Multi-Payer Model that is a Medical Home Model through a written expression of alignment and cooperation with CMS, such as a memorandum of understanding (MOU), and is determined by CMS to have the following characteristics:

• The other payer payment arrangement has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;

• Empanelment of each patient to a primary clinician; and

• At least four of the following: Planned coordination of chronic and preventive care; Patient access and continuity of care; risk-stratified care management; coordination of care across the medical neighborhood; patient and caregiver engagement; shared decision-making; and/or

payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

The proposed definition of Aligned Other Payer Medical Home Model includes the same characteristics as the definitions of Medical Home Model and Medicaid Medical Home Model, but it applies to other payer payment arrangements. We believe that structuring this proposed definition in this manner is appropriate because we recognize that there may be medical homes that are operated by other payers that may be appropriately considered medical home models under the All-Payer Combination Option.

We are proposing to exclude Medicaid payment arrangements from this proposed definition of Aligned Other Payer Medical Home Model because we have previously defined the term Medicaid Medical Home Model at § 414.1305 and we believe it is important to distinguish Medicaid payment arrangements from other payment arrangements, given the requirements in sections 1833(z)(2)(B)(ii)(I)(bb) and 1833(z)(3)(B)(ii)(I)(bb) of the Act requiring us to consider whether there is a medical home or alternative payment model under the Title XIX state plan in each state when making QP determinations using the All-Payer Combination Option.

For purposes of the Aligned Other Payer Medical Home Model definition, for an arrangement to be aligned, we mean through a written expression of alignment and cooperation with CMS, such as an MOU. CMS Multi-Payer Models require alignment across the different payers and a written expression reflects the fact that each arrangement has been reviewed by CMS and CMS has determined that the other payer payment arrangement is aligned with a CMS Multi-Payer Model that is a Medical Home Model. We are proposing to limit this Aligned Other Payer Medical Home Model definition to other payer payment arrangements that are aligned with CMS Multi-Payer Models that are Medical Home Models because we can be assured that the structure of these arrangements is similar to the Medical Home Models and Medicaid Medical Home Models for which we have already made a similar determination. Based on our experience to date, we anticipate that participants in these arrangements may generally be more limited in their ability to bear financial risk than other entities because they may be smaller and predominantly include primary care practitioners, whose revenues are a smaller fraction of the patients' total cost of care than those of other eligible clinicians. At the same time, we do not believe that participants in all medical homes, regardless of payer, face the same limitations on their ability to bear financial risk. We believe that some participants may have different organizational or financial circumstances that allow them to bear greater such risk. We believe that applying the proposed Aligned Other Payer Medical Home Model definition to all other payer payment arrangements would create potential new opportunities for gaming in commercial settings where we do not have control over the design of such models. However, we believe that payment arrangements that have been aligned and are similar to a Medicaid Home Model, where we have already put in place policies to control against gaming, would be similarly constrained.

In addition, we have acquired additional understanding of some other payer payment arrangements after one year of experience with the Payer Initiated Process, which included some arrangements that are aligned with CMS Multi-Payer Models that are Medical Home Models.

We seek comment on this proposal.

(b) Other Payer Advanced APM Criteria for Aligned Other Payer Medical Home Models

As defined in § 414.1305, an Other Payer Advanced APM is an other payer arrangement that meets the Other Payer Advanced APM criteria set forth in § 414.1420. Accordingly, we propose that the CEHRT criterion codified in § 414.1420(b) and the use of quality measures criterion codified in § 414.1420(c) would apply to any Aligned Other Payer Medical Home Model for which we would make an Other Payer Advanced APM determination. Further, we propose to revise § 414.1420(d)(8) to require Aligned Other Payer Medical Home Models to comply with the 50 eligible clinician limit to align with the requirements that apply to Medical Home Models and Medicaid Medical Home Models.

Regarding the applicable financial risk and nominal amount standards, consistent with the financial risk and nominal amount standards applicable to Medical Home Models and Medicaid Medical Home Models, we propose that the Aligned Other Payer Medical Home Model financial risk and nominal amount standards would be the same as the Medicaid Medical Home Model financial risk and nominal amount standards. We are proposing corresponding amendments to § 414.1420(d)(2) and (4) so that those sections note, Medicaid Medical Home Model and Aligned Other Payer Medical Home Model financial risk standard and Medicaid Medical Home Model and Aligned Other Payer Medical Home Model nominal amount standard, respectively. We believe that this proposal, as described in section III.I.3.b. of this proposed rule, is appropriate because the same expectation of ability to bear a more than nominal amount of financial risk applies to participants in these models as Medical Home Models and Medicaid Medical Home Models because the arrangements are already aligned and the participants are the same.

(c) Determination of Aligned Other Payer Medical Home Model and Other Payer Advanced APM Status

We propose that payers may submit other payer arrangements for CMS determination as Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, through the Payer Initiated Process. This proposal would be effective January 1, 2020 for the 2021 performance year. In the CY 2019 PFS final rule, we finalized a process for Remaining Other Payers to submit other payer arrangements for CMS determination of Other Payer Advanced APM status (83 FR 59934 through 59935). Other payers would be required to submit their other payer arrangements for CMS determination as Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, using this Remaining Other Payer process.

We propose that APM Entities and eligible clinicians can submit other payer arrangements for CMS to determine whether they are Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, through the Eligible Clinician Initiated Process.

We seek comment on these proposals.

(3) Bearing Financial Risk for Monetary Losses

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77466), we divided the discussion of this criterion into two main topics: (1) What it means for an APM Entity to bear financial risk if actual aggregate expenditures exceed expected aggregate expenditures under a payment arrangement (which we refer to as either the generally applicable financial risk standard or Medicaid Medical Home Model financial risk standard); and (2) what levels of risk we would consider to be in excess of a

nominal amount (which we refer to as either the generally applicable nominal amount standard or the Medicaid Medical Home Model nominal amount standard).

In the CY 2017 Quality Payment Program final rule, we finalized that for a Medicaid Medical Home Model to be an Other Payer Advanced APM, if the APM Entity's actual aggregate expenditures exceed expected aggregate expenditures, the Medicaid Medical Home Model must:

- Withhold payment for services in the APM Entity and/or the APM Entity's eligible clinicians;
- Reduce payment rates to the APM Entity and/or the APM Entity's eligible clinicians;
- Require direct payment by the APM Entity to the Medicaid program; or
- Require the APM Entity to lose the right to all or part of an otherwise guaranteed payment or payments.

We based this standard on our belief that Medicaid Medical Home Models are unique types of Medicaid APMs because they are identified and treated differently under the statute. We believe it is appropriate to establish a unique standard for bearing financial risk that reflects these statutory differences and remains consistent with the statutory scheme, which is to provide incentives for participation by eligible clinicians in Advanced APMs (81 FR 77467 through 77468).

In addition, to be an Other Payer Advanced APM, a Medicaid Medical Home Model must require that the total annual amount that an APM Entity potentially owes or foregoes under the Medicaid Medical Home Model must be at least:

- For QP Performance Period 2019, 3 percent of the APM Entity's total revenue under the payer.
- For QP Performance Period 2020, 4 percent of the APM Entity's total revenue under the payer.
- For QP Performance Period 2021 and later, 5 percent of the APM Entity's total revenue under the payer.

(b) Aligned Other Payer Medical Home Model Financial Risk and Nominal Amount Standards

Neither the current Medical Home Model financial risk and nominal amount standards nor the Medicaid Medical Home Model financial risk and nominal amount standards do not apply to similar arrangements with other payers for purposes of Other Payer Advanced APM determinations. Consistent with our proposal to define the term Aligned Other Payer Medical Home Model, we are proposing to amend § 414.1420(d)(2) and (d)(4) of our regulations to also include that conform the financial risk and nominal amount standards for Aligned Other Payer Medical Home Models with the existing Medicaid Medical Home Model financial risk and nominal amount standards for Medicaid Medical Home Models. Consistent with recognizing the similar characteristics of these payment arrangements and the same participants, we believe that the same financial risk and nominal amount standards should be applied to Aligned Other Payer Medical Home Models.

Further, we are proposing a corresponding amendment to § 414.1420(d)(2)(ii) to state that an Aligned Other Payer Medical Home Model or Medicaid Medical Home Model require the direct payment by the APM Entity to the payer, which meaning either the other payer or the Medicaid agency.

We believe that if we applied the Medicaid Medical Home Model financial risk and nominal amount standards to all other payer arrangements that would meet the Aligned Other Payer Medical Home Model definition but for not being aligned with a CMS Multi-Payer Model that is a Medical Home Model, we might create gaming opportunities amongst other payers where medical homes are developed solely to take advantage of the unique nominal amount standard, particularly because we would have less insight into the nature of arrangements not aligned with CMS Multi-Payer Models.

In addition, as the 50 eligible clinician limit as codified in §§ 414.1415(c)(7) and 414.1420(d)(8) currently applies to Medical Home Models and Medicaid Medical Home Models, respectively, we correspondingly propose that the 50 eligible clinician limit apply to Aligned Other Payer Medical Home Models by amending § 414.1420(d)(8).

We seek comment on these proposals.

(b) Generally Applicable Other Payer Advanced APM Nominal Amount Standard

(i) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77471), we finalized at § 414.1420(d)(3)(ii) that except for risk arrangements described under the Medicaid Medical Home Model Standard, for a payment arrangement to meet the nominal amount standard the specific level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures and total potential risk must be at least 4 percent of the expected expenditures. Furthermore, we finalized that a payment arrangement must require APM Entities to bear financial risk for at least 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement. Section 414.1420(d)(6) provides for the purposes of this section, expected expenditures is defined as the Other Payer Advanced APM benchmark, except for episode payment models, for which it is defined as the episode target price.

(ii) Marginal Risk

As we stated in the 2017 Quality Payment Program final rule (81 FR 77470), to determine that a payment arrangement satisfies the marginal risk portion of the nominal amount standard, we would examine the payment required under the payment arrangement as a percentage of the amount by which actual expenditures exceeded expected expenditures. Specifically for marginal risk, we finalized that for a payment arrangement to meet the nominal amount standard, the specific level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures. We also stated that the rate of marginal risk could vary with the amount of losses.

To date, we have applied the marginal risk requirement as requiring that a payment arrangement must exceed the marginal risk rate of 30 percent at all levels of total losses even as the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, consistent with § 414.1420(d)(5)(i). For example, certain other payer arrangements where the marginal risk met or exceeded 30 percent at lower levels of losses in excess of expected expenditures, but fell below 30 percent at higher levels of losses, would not meet the marginal risk requirement of the generally applicable nominal amount standard.

In general, this approach has worked well and served its intended purpose of ensuring only other payer arrangements with strong financial risk components are determined to be Other Payer Advanced APMs. At the same time, this policy has necessitated that we determine that certain other payer arrangements are not Other Payer Advanced APMs even though they include strong financial risk components and well exceed the 30 percent marginal risk requirement at the most common levels of losses in excess of expected expenditures, and employ marginal risk rates below 30 percent only at much higher levels of losses. We

do not believe these other payer arrangements include marginal risk rates below 30 percent to avoid subjecting participants to more than nominal amounts of risk. Rather, we believe that these other payer arrangements employ the lower marginal risk rates at higher levels of losses in order to protect participants from potentially catastrophic losses and undue financial burden that might arise because of market factors likely outside their control.

Therefore, we propose to amend § 414.1420(d)(5) by amending paragraph (d)(5)(i) to provide that in event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the average marginal risk rate across all possible levels of actual expenditures would be used for comparison to the marginal risk rate specified in paragraph (d)(3)(ii) of this section, with exceptions for large losses and small losses as described in paragraphs (d)(5)(ii) and (d)(5)(iii) of this section.

We would calculate the average marginal risk rate in two steps. An example of such a calculation is presented in Table 58. This example uses a model relying on a Total Cost of Care (TCOC) benchmark. This methodology can also be applied to other types of other payer payment arrangements. In this example, first, take the sum of the marginal risk for each percent above the Total Cost of Care (TCOC) benchmark to determine the participant losses. For example, at 3 percent add 50 percent (amount for 1 percent above benchmark) plus 50 percent (amount for 2 percent above benchmark) plus 50 percent (amount for 3 percent above benchmark) equals 1.50 percent. Second, divide the participant losses by the percentage above the benchmark (in our example, 1.50 percent divided by 3) to get average marginal risk. The average marginal risk rate remains above 30 percent at all levels of potential losses up to point where the participant would be responsible for losses equal to the total potential risk requirement of 3 percent. We note that this example presents the calculation only up to the point where the total potential risk requirement is met.

TABLE 58—EXAMPLE AVERAGE MARGINAL RISK CALCULATION

Performance (% above TCOC benchmark)	Marginal risk (%)	Participant losses (%)	Average marginal risk (%)
1	50	0.50	50
2	50	1.00	50
3	50	1.50	50
4	25	1.75	44
5	25	2.00	40
6	25	2.25	38
7	25	2.50	36
8	25	2.75	34
9	25	3.00	33

Through this amendment, significant and meaningful financial risk would continue to be required for Other Payer Advanced APMs because the average marginal risk rate would need to be or exceed 30 percent, while recognizing that such risk can be demonstrated with some variation in the application of marginal risk rates, allowing for continued innovation in the marketplace. This proposed policy ensures that all Other Payer Advanced APMs have 30 percent of marginal risk up until the participant owes 3 percent of losses, which is the intended effect of the standard without excluding certain payment arrangement that have strong financial risk designs. When considering average marginal risk in the context of total risk, as we do for Other Payer Advanced APM determinations, certain risk arrangements can create meaningful and significant risk-based incentives for performance and at the same time ensure that the payment arrangement has strong financial risk components.

We believe this proposed change is consistent with the statute and the use of guardrails to maintain financially strong models, and note that in making this change we are not lowering the standard for the applicable marginal risk rate but rather allowing for a new demonstration of how it can be met. We clarify that the proposed amendment would also continue to maintain the allowance for large losses provision as described in paragraph (d)(5)(ii) of § 414.1420, so that when calculating the average marginal risk rate we may disregard the marginal risk rates that apply in cases when actual expenditures exceed expected expenditures by an amount sufficient to require the APM Entity to make financial risk payments under the payment arrangement greater than or equal to the total risk requirements. We also clarify that the exception for small losses described in paragraph (d)(5)(iii) would also be maintained.

We seek comment on this proposal.

(iii) Expected Expenditures

In the CY 2017 Quality Payment Program final rule (81 FR 77551), we established the definition of ''expected expenditures'' at § 414.1420(d)(6) to mean the Other Payer APM benchmark, except for episode payment models, for which it is defined as the episode target price. We also finalized at § 414.1420(d)(3)(ii) that, except for arrangements assessed under the Medicaid Medical Home Model financial risk and nominal amount standards, in order to meet the Other Payer Advanced APM nominal amount standard, a payment arrangement's level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures and the total potential risk must be at least 4 percent (81 FR 77471).

In the CY 2017 Quality Payment Program proposed rule (81 FR 28332), we proposed to measure three dimensions of risk under our generally applicable nominal amount standards: (1) Marginal risk, which refers to the percentage of the amount by which actual expenditures exceed expected expenditures for which an APM Entity would be liable under the APM; (2) minimum loss rate (MLR), which is a percentage by which actual expenditures may exceed expected expenditures without triggering financial risk; and (3) total potential risk, which refers to the maximum potential payment for which an APM Entity could be liable under the APM. However, based on commenters' concerns regarding technical complexity, we finalized only the marginal risk and MLR requirements.

In the CY 2017 Quality Payment Program proposed rule (81 FR 28333), we explained that to determine whether an APM satisfies the marginal risk portion of the nominal risk standard, we would examine the payment required under the APM as a percentage of the amount by which actual expenditures exceeded expected expenditures. We proposed that we would require that this percentage exceed a required marginal risk percentage of 30 percent regardless of the amount by which actual expenditures exceeded expected expenditures.

Our rationale for proposing the marginal risk requirement was that the inclusion of a marginal risk requirement would be intended to focus on maintaining a more than nominal level of likely risk under an Advanced APM or an Other Payer Advanced APM. However, even with a marginal risk requirement, as there is under the Other Payer Advanced APM criteria, we believe there is a need to amend the definition of expected expenditures to ensure there are more than nominal levels of average or likely risk under Other Payer Advanced APMs that meets the generally applicable benchmark-based nominal amount standard. Even with the current marginal risk requirement, a more rigorous definition of expected expenditures is needed to avoid situations where the level of expected expenditures would be set in a manner that reduces the losses a participant might incur. We also believe it is important that our definition of expected expenditures is consistent across both the Advanced APM and Other Payer Advanced APM criteria. We generally try to align the Advanced APM and Other Payer Advanced APM criteria to the extent feasible and appropriate.

As discussed in section III.I.4.c.(2)(c) of this proposed rule, this proposal is intended to account for scenarios where a payment arrangement could have a sufficient total risk potential to meet our standard and a sharing rate that results in adequate marginal risk if actual expenditures exceed expected expenditures; however, the level of expected expenditures reflected in the payment arrangements benchmark or episode target price could be set in a manner which substantially reduces the amount of loss a participant in the payment arrangement would reasonably expect to incur.

For a payment arrangement to meet the generally applicable benchmark-based nominal amount standard, we believe there should be not only the potential for financial losses based on expenditures in excess of the benchmark as provided in § 414.1420(d)(6), but also some meaningful likelihood that a participant might exceed the benchmark. If the benchmark is set in such a way that it is extremely unlikely that participants would exceed it, then there is little potential for participants to incur financial losses, and the amount of risk is essentially illusory.

Therefore, in § 414.1420(d)(6), we are proposing to amend the definition of expected expenditures. Specifically, we would define expected expenditures as, for the purposes of this section, as the Other Payer APM benchmark. For episode payment models, expected expenditures mean the episode target price. For purposes of assessing financial risk for Other Payer Advanced APM determinations, the expected expenditures under the payment arrangement should not exceed the expenditures for a participant in the absence of the payment arrangement. If expected expenditures (that is, benchmarks) under the payment arrangement exceed the expenditures that the participant would be expected to incur in the absence of the payment arrangement such excess expenditures are not considered when CMS assesses financial risk under the payment arrangement for Other Payer Advanced APM determinations.

We believe that this proposed change would prevent the expected expenditures under the other payer payment arrangement being set in a manner which substantially reduces the amount of losses a participant may face while otherwise satisfying this Other Payer Advanced APM criterion.

We clarify that, in general, expected expenditures are expressed as a dollar amount, and may be derived from national, regional, APM Entity-specific, and/or practice-specific historical expenditures during a baseline period, or other comparable expenditures. However, we recognize expected expenditures under a payment arrangement are often risk-adjusted and trended forward, and may be adjusted to account for expenditure changes that are expected to occur as a result of payment arrangement participation. For the purpose of this proposed definition of expected expenditures, we would not consider risk adjustments to be excess expenditures when comparing to the costs that an APM Entity would be expected to incur in the absence of the payment arrangement.

We believe that this proposed amendment would allow us to ensure that there are more-than-nominal amounts of average or likely risk under an other payer payment arrangement that meets the generally applicable benchmark-based nominal amount standard. We believe that the proposed amended definition of expected expenditures, particularly by our not considering excess expenditures, would provide a more definite basis for us to assess whether an APM Entity would bear more than a nominal amount of financial risk for participants under the generally applicable benchmark-based nominal amount standard.

We seek comment on this proposal.

(iv) Excluded Items and Services Under Full Capitation Arrangements

In the CY 2017 Quality Payment Program final rule (81 FR 77551), we finalized a capitation standard at § 414.1420(d)(7) which provides a capitation arrangement meets the Other Payer Advanced APM financial risk criterion. For purposes of § 414.1420(d)(3), we defined a capitation arrangement as a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed for the purpose of reconciling or sharing losses incurred or savings earned by the APM Entity. We clarified that arrangements made directly between CMS and Medicare Advantage Organizations under the Medicare Advantage program are not considered capitation arrangements for purposes of § 414.1420(d)(7).

In the CY 2019 PFS final rule (83 FR 59939), we made technical corrections to the Advanced APM financial risk capitation standard at § 414.1420(d)(7). These corrections clarified that our financial risk capitation standard applies only to full capitation arrangements where a per capita or otherwise predetermined payment is made under the APM for all items and services furnished to a population of beneficiaries during a fixed period of time, and no settlement or reconciliation is performed.

As we have begun to collect information on other payer payment arrangements for purposes of making Other Payer Advanced APM determinations, we have noticed that some payment arrangements that are submitted for CMS to determine as capitation arrangements consistent with § 414.1420(d)(7) include a list of services that have been excluded from the capitation rate, such as hospice care, organ transplants, or out-of-network emergency room services. In reviewing

these exclusion lists, we believe that it may be appropriate for CMS to allow certain capitation arrangement to be considered ''full'' capitation arrangements even if they categorically exclude certain services from payment through the capitation rate. Therefore, we are seeking comment on how other payers define or determine what, if any, exclusions are reasonable in a given capitation arrangement. Specifically, we seek comment on whether there are common industry practices to exclude certain categories of items and services from capitated payment rates and, if so, whether there are common principles or reasons for excluding those categories of services. In addition, we seek comment on why such items or services are excluded.

We also seek comment on how non-Medicare payers define or prescribe certain categories of services that are excluded with regards to global capitation payment arrangements. We also seek comment on whether a capitation arrangement should be considered to be a full capitation arrangement even though it excludes certain categories of services from the capitation rate under a full capitation arrangement.

(4) Summary of Proposals

In this section, we are proposing the following policies:

- *Aligned Other Payer Medical Home Model:* We proposed to define the term Aligned Other Payer Medical Home Model. We also propose to apply the existing Medicaid Medical Home Model financial risk and nominal amount standards, including the 50 eligible clinician limit, to Aligned Other Payer Medical Home Models.
- *Marginal Risk:* We propose that when that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the average marginal risk rate across all possible levels of actual expenditures would be used for comparison to the marginal risk rate requirement, with exceptions for large losses and small losses as provided in § 414.1420(d)(5).
- *Expected Expenditures:* We are proposing to amend the definition of expected expenditures codified at § 414.1420(d)(6) to define expected expenditures as the Other Payer Advanced APM benchmark, and, for episode payment models, expected expenditures means the episode target price.

5. Quality Payment Program Technical Revisions

We are proposing certain technical revisions to our regulations to correct several technical errors and to reconcile the text of several of our regulations with the final policies we adopted through notice and comment rulemaking.

We are proposing a technical revision to § 414.1405(f) of our regulations to specify that the exception for the application of the MIPS payment adjustment factors to model-specific payments is applicable starting in the 2019 MIPS payment year, not just for the 2019 MIPS payment year. This proposed revision would align the regulation text with our final policy as stated in the preamble of the CY 2019 PFS final rule with comment period (83 FR 59887 through 59888) which makes clear that the exception begins with the 2019 MIPS payment year and continues in subsequent years.

We are also proposing technical revisions to Table 59 of the CY 2019 PFS final rule with comment period (83 FR 59935) to correct two dates. Specifically we propose to change the date for Medicare Health Plans: Guidance made available to ECs, then Submission Period Opens; it is currently listed as September 2020, and we propose to change that date to August 2020. Similarly, we propose to change the date for Remaining Other Payers: Guidance made available to ECs, then Submission Period Opens; it is currently listed as September 2020, and we propose to change that to August 2020. These changes align with what was originally finalized in the CY 2018 QPP final rule with comment period (82 FR 53864) which stated that the dates were to be August 2020, and which we did not intend to change in the CY 2019 PFS final rule. Table 59 is included as the corrected Table 59 from the CY 2019 PFS final rule.

BILLING CODE 4120–01–P

TABLE 59: Proposed Other Payer Advanced APM Determination Process for Medicaid, Medicare Health Plans, and Remaining Other Payers for QP Performance Period 2020

	Payer Initiated Process	Date	Eligible Clinician (EC) Initiated Process*	Date
Medicaid	Guidance sent to states, then Submission Period Opens	January 2019	Guidance made available to ECs, then Submission Period Opens	September 2019
	Submission Period Closes	April 2019	Submission Period Closes	November 2019
	CMS contacts states and posts Other Payer Advanced APM List	September 2019	CMS contacts ECs and states and posts Other Payer Advanced APM List	December 2019
Medicare Health Plans	Guidance made available to Medicare Health Plans, then Submission Period Opens	April 2019	Guidance made available to ECs, then Submission Period Opens	August 2020
	Submission Period Closes	June 2019	Submission Period Closes	November 2020

BILLING CODE 4120–01–C

We are also proposing technical revisions to §§ 414.1415(c)(6) and 414.1420(d)(7) to correct the internal citation. The current citation, 42 U.S.C. 422, is incorrect. It should instead be 42 CFR part 422. We also are proposing technical revisions to § 414.1420(d)(5). We clarify that ''APM'' in § 414.1420(d)(5) should be ''other payer payment arrangement.'' In the CY 2019 PFS final rule, we finalized deleting § 414.1420(d)(3)(ii)(B) and consolidating § 414.1420(d)(3)(ii)(A) into § 414.1420(d)(3)(ii), but that change was not applied to the regulation. We are proposing to revise the regulation accordingly in this proposed rule. Relatedly, we propose to amend § 414.1420(d)(i), (ii), and (iii) to state in ''paragraph (d)(3)(ii)'' of this section instead of ''paragraph (d)(3)(ii)(A)'' of this section. We are also proposing to clarify that ''Other Payer Advanced APM'' in § 414.1420(d)(5)(ii) should be ''other payer payment arrangement,'' as the marginal risk rate requirements are applied to any other payer payment arrangement that CMS assesses against the Other Payer Advanced APM criteria. These proposed revisions are technical in nature and do not change any substantive policies for the Quality Payment Program.

IV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. chapter 35), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a ''collection of information'' requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of the PRA's implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements (ICRs).

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' May 2018 National Occupational Employment and Wage Estimates for all salary estimates (*http://www.bls.gov/*

oes/current/oes_nat.htm). In this regard, Table 60 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 60—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
Billing and Posting Clerks	43–3021	19.00	19.00	38.00
Bookkeeping, Accounting, and Auditing Clerks	43–3031	22.46	22.46	44.92
Chief Executive	11–1011	96.22	96.22	192.44
Compliance Officer	13–1041	41.85	41.85	83.70
Computer Systems Analysts	15–1121	45.01	45.01	90.02
Health Diagnosing and Treating Practitioners	29–1000	49.02	49.02	98.04
Licensed Practical Nurse (LPN)	29–2061	22.62	22.62	45.24
Medical Secretary	43–6013	17.83	17.83	35.66
Physicians	29–1060	101.43	101.43	202.86
Practice Administrator (Medical and Health Services Managers)	11–9111	54.68	54.68	109.36

As indicated, we adjusted our employee hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

B. Proposed Information Collection Requirements (ICRs)

1. ICRs Regarding Medicare Coverage for Opioid Use Disorder Treatment Services Furnished by Opioid Treatment Programs (OTPs) (§§ 414.800 Through 414.806)

As described in section II.G. of this rule, section 2005 of the SUPPORT for Patients and Communities Act establishes a new Medicare Part B benefit for OUD treatment services furnished by OTPs for episodes of care beginning on or after January 1, 2020. In this rule, CMS proposes to use the payment methodology in section 1847A of the Act, which is based on Average Sales Price (ASP), to set the payment rates for the ''incident to'' drugs and ASP-based payment to set the payment rates for the oral product categories when we receive manufacturers' voluntarily-submitted ASP data for these drugs.

The proposed burden consists of the time/cost for manufacturers of oral opioid agonist or antagonist treatment medications (that are approved by the Food and Drug Administration under section 505 of the Federal Food, Drug, and Cosmetic Act for use in the treatment of OUD) to voluntarily prepare and submit their ASP data to CMS.

The burden for such reporting is currently approved by OMB under control number 0938–0921 (CMS–10110) and would remain unchanged (13 hours per response, 4 responses per year, 180 respondents, and 9,360 total hours) since our currently approved burden already accounts for the voluntary reporting of ASP data. We estimate that there are approximately 15 manufacturers of oral drugs used for treatment of opioid use disorder (OUD). We believe that approximately 10 of the 15 manufacturers already report ASP data to CMS for other drugs, and thus up to 5 manufacturers may newly report ASP data to CMS. However, we note that some of these new respondents may have subsidiary or similar relationships with manufacturers that already report ASP data and may be able to submit their data with a current respondent. While this rule's proposed requirements may slightly increase the number of respondents, our 180 respondent per quarter estimate historically fluctuates over time as new Part B drug manufacturers are added while others leave or consolidate. The annual fluctuation in respondents in the past has typically been +/− 5 to 10 manufacturers per year; over the past few years, the annual fluctuation has sometimes been greater, ranging from −13 to +11, but over that several year period the overall average of the annual fluctuation is near 0. As a result, the potential slight increase in respondents associated with voluntary reporting from oral OUD drug manufacturers is well within the range of recent fluctuations in the number or respondents, and the net figure, taking into account voluntary OTP reporting, remains unchanged from the currently approved burden estimate at 180 respondents. In addition, we believe that additional voluntary reporting for oral drugs used for treatment of OUD for those manufacturers that currently report ASP data to CMS would impose minimal additional burden. Consequently, we are not making any changes under the aforementioned control number. However, we will continue to monitor the number of respondents to account for various factors such as a change in the number of voluntary submissions from oral OUD drug manufacturers, as well as other issues that may not be related to the voluntary reporting for oral drugs used in OTPs, such as manufacturer consolidations, and new Part B drug and biological manufacturers. We will revise the burden estimate as needed.

2. ICRs Regarding the Ground Ambulance Data Collection System

Section 1834(l)(17)(A) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, we are not setting out the burden of the proposed collection of information under the data collection system. Please refer to section VI.F.2. of this proposed rule for a discussion of the estimated impacts associated with the ground ambulance data collection system.

3. ICRs Regarding Intensive Cardiac Rehabilitation (§ 410.49)

Section 410.49(b)(1)(vii) and (viii) of this proposed rule would expand the covered conditions to chronic heart failure and add other cardiac conditions as specified through the national coverage determination (NCD) process. The proposed rule would expand covered conditions, but, due to the breadth of the proposed and existing covered conditions, we do not anticipate the need to use the NCD process to add additional covered conditions in the near future. In the unlikely event an NCD request was submitted, it would be covered by OMB control number 0938–0776 (CMS–R–290), which will not expire until February 29, 2020. We are not proposing any changes under that control number since we are not proposing any changes to the submission process or burden.

4. ICRs Regarding the Medicare Shared Savings Program (42 CFR part 425)

Section 1899(e) of the Act provides that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to section VI.E.6. of this proposed rule for a discussion of the impacts associated with the proposed changes to the Shared Savings Program quality reporting requirements included in this proposed rule.

5. ICRs Regarding the Open Payments Program

As described in section III.F. of this rule, we propose to: (1) Expand the definition of ''covered recipient,'' (2) modify ''nature of payment'' categories, and (3) standardize data on reported covered drugs, devices, biologicals, or medical supplies.

Expanding the Definition of ''Covered Recipient'' (§§ 403.902, 403.904, and 403.908): In this rule we propose to expand the definition of a ''covered recipient'' in accordance with the SUPPORT Act to include physician assistants, nurse practitioners, clinical nurse specialists, nurse anesthetists, and certified nurse midwifes. The definition currently includes certain physicians and teaching hospitals. Section 6111(c) of the SUPPORT Act provides that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the changes to the definition of a covered recipient included in the SUPPORT Act. In this regard we are not setting out burden under the authority of the PRA. . We do, however, provide a brief estimate in section V.8 of this proposed rule.

Modification of the ''Nature of Payment'' Categories (§§ 403.902 and 403.904): The following proposed changes will be submitted to OMB for approval under control number 0938–1237 (CMS–10495). Subject to renewal, the control number is currently set to expire on March 31, 2021. It was last approved on March 21, 2018, and remains active.

The proposed changes would modify the ''nature of payment'' categories and provide more options for applicable manufacturers and GPOs to capture the nature of the payment made to the covered recipient. To accommodate this change, we project that reporting entities would need to update their system to incorporate the proposed categories. We estimate, based on the trends in the number of entities that report every year, that there are 1,600 reporting entities and estimate, using the number of records that these entities report as a proxy for size of the entity. While the total number of entities that report fluctuates year to year, but has been close to 1,600 for the last two program years. We also estimate that 38 percent (or 611 entities) are small, 29 percent (or 457 entities) are medium, and 33 percent (or 532 entities) are large. We also estimate that 25 percent of reporting entities (400) would need to make minor, one-time updates to their data collection processes because they expect to report a transaction with one of the new categories. Among the 400 entities, we estimate it would take between 5 and 30 hours per entity depending on the size of the entity (with large companies requiring more time) at $44.92/hr for support staff. For all of these entities, we estimate a subtotal of 5,895 hours [(30 hrs for a large entity × 133 entities) + (10 hrs for a medium entity × 114 entities) + (5 hrs for a small entity × 153 entities)] at a cost of $264,804 (5,895 hrs × $44.92/hr).

We also expect that all entities would need to make minor, one-time adjustments to their submission processes. For each entity we estimate that this would take 2 to 5 hours at $44.92/hr (with larger entities requiring more time) for support staff and 1 hour at $83.70/hr for compliance officers. For all entities, we estimate a subtotal of 7,767 hours [(5 hrs for support staff at a large entity × 532 entities) + (5 hrs for support staff at a medium entity × 457 entities) + (2 hrs for support staff at a small entity × 611 entities) + (1 hr for compliance officer at each entity regardless of size × 1600 entities)] at a cost of $410,941 [(2,660 hrs for support staff at large entities × $44.92/hr) + (2,285 hrs for support staff at medium entities × $44.92/hr) + (1,222 hrs for support staff at small entities × $44.92/hr) + (1,600 hrs for compliance officers across all entities × $83.70/hr)].

In aggregate, we estimate a one-time burden of 13,662 hours (5,895 hrs + 7,767 hrs) at a cost of $675,745 ($264,804 + $410,941) to implement. After these adjustments are made, we do not anticipate any ongoing added burden beyond what is currently approved under the aforementioned control number.

TABLE 61—BURDEN TO MODIFY NATURE OF PAYMENT CATEGORIES

Description	Hours	Cost
Burden to update collection processes for entities that expect to report a transaction with a new Nature of Payment category	5,895	$264,804
Burden to update submission processes and systems to account for the new Nature of Payment categories	7,767	410,941
Total	13,662	675,745

Standardizing Data Reporting for Covered Drugs, Devices, Biologicals, or Medical Supplies (§§ 403.902 and 403.904): The following proposed changes will be submitted to OMB for approval under control number 0938–1237 (CMS–10495). Subject to renewal, the control number is currently set to expire on March 31, 2021. It was last approved on March 21, 2018, and remains active.

Applicable manufacturers and GPOs will need to accommodate the reporting of device identifiers. We have made some estimates below, but we recognize that these estimates may vary because the information collection system

changes that are needed will vary since some entities may already be capturing this information in their systems while others may not. Nevertheless, we have made some assumptions below, but we welcome feedback from stakeholders regarding the potential burden associated with this proposal and the extent to which device identifiers are already tracked by reporting entities.

We estimate, based on an analysis of currently available data, that approximately 850 entities (approximately 53 percent of an assumed 1,600) would need to report at least one record with a device identifier and that 450 of those entities do not already collect the device identifier. For this analysis we assumed that 38 percent of the entities would be small, 29 percent would be medium, and 33 percent would be large. We differentiate because we assume that larger companies would incur more burden to make the changes needed to begin reporting device identifiers because they have more complex systems and potentially more records to report. The number of records submissions would not change, but this rule would add a new data element that may need to be reported along with some or all of an entity's records. The precise tasks would vary by entity, but may include developing processes for gathering device identifier information or systems for collecting the data.

For the 450 entities that would be required to start collecting device identifiers, we estimate that this task would take between 20 and 100 hours for support staff depending on the size of the company (with larger companies requiring more time) at $44.92/hr. For all entities, we estimate a subtotal of 24,840 hours [(100 hrs for a large entity × 150 entities) + (50 hrs for a medium entity × 128 entities) + (20 hrs for a small entity × 172 entities)] at a cost of $1,115,813 [(15,000 hrs for support staff at a large entity × $44.92/hr) + (6,400 hrs for support staff at a medium entity × $44.92/hr) + (3,440 hrs for support staff at a small entity × $44.92/hr)].

For the 850 entities that we expect would be required to begin reporting a device identifier, we estimate that this would take support staff between 10 and 40 hours per entity (with larger companies requiring more time) at $44.92/hr and 2 hours at $83.70/hr for compliance officers. For all entities, we estimate a subtotal of 21,100 hours [(40 hrs for support staff at a large entity × 282 entities) + (20 hrs for support staff at a medium entity × 244 entities) + (10 hrs for support staff at a small entity × 324 entities) + (2 hrs for compliance officers at every entity regardless of size × 850 entities)] at a cost of $1,013,740 [(11,280 hrs for support staff at large entities × $44.92/hr) + (4,880 for support staff at medium entities × $44.92/hr) + (3,240 for support staff at small entities × $44.92/hr) + (1,700 hrs for compliance officers across all entities regardless of size × $83.70/hr)].

We also assume that the remaining 750 entities not planning to submit a device identifier would have a small amount of burden associated with updating their submission processes. We estimate that this would take support staff between 2 and 10 hours per entity (with larger entities requiring more time) at $44.92/hr and 2 hours for compliance officers at $83.70/hr. For all entities, we estimate a subtotal of 5,637 hours [(10 hrs for support staff at a large entity × 249 entities) + (5 hrs for support staff at a medium entity × 215 entities) + (2 hrs for support staff at a small entity × 286 entities) + (750 hrs for compliance officers at all entities regardless of size × 2 hrs)] at a cost of $311,384 [(2,490 hrs for support staff at large entities × $44.92/hr) + (1,075 hrs for support staff at medium entities × $44.92/hr) + (572 hrs for support staff at small entities × $44.92/hr) + (1,500 hrs for compliance officers at all entities regardless of size × $83.70/hr)].

In aggregate, we estimate a one-time burden of 51,577 hours (24,840 hrs + 21,100 hrs + 5,637 hrs) at a cost of $2,440,937 ($1,115,813 + $1,013,740 + $311,384) to implement. After these adjustments are made, we do not anticipate there being any ongoing added burden beyond what is currently approved under the aforementioned control number.

TABLE 62—BURDEN FOR CHANGES TO STANDARDIZE DATA ON REPORTED COVERED DRUGS, DEVICES, BIOLOGICALS, OR MEDICAL SUPPLIES

Description	Hours	Cost
First year data collection burden for entities that do not currently collect a device identifier	24,840	$1,115,813
First year submission burden for all entities that would be required to report a device identifier	21,100	1,013,740
One time submission process and system updates for entities not reporting a device identifier	5,637	311,384
Total	51,577	2,440,937

6. ICRs Regarding Medicare Enrollment of Opioid Treatment Programs

Except as noted otherwise, the following proposed changes will be submitted to OMB for approval under control number 0938–0685 (CMS–855B; ''Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers'').

As discussed previously in this rule, we propose that OTP providers be required to enroll in Medicare via the paper or internet-based version of the Form CMS–855B (or its successor application) and any applicable supplement, pay the application fee, submit fingerprints, and complete a provider agreement.

Based on SAMHSA statistics and our internal data, we generally estimate that: (1) There are about 1,700 certified and accredited OTPs eligible for Medicare enrollment; and (2) 200 OTPs would become certified by SAMHSA in the next 3 years (or roughly 67 per year), bringing the total amount of OTPs eligible to enroll to approximately 1,900 over the next 3 years.

Form Completion: We estimate that it would take each OTP an average of 3 hours to obtain and furnish the information on the Form CMS–855B and a new supplement thereto designed to capture information unique to OTPs. Per our experience, we believe that the OTP's medical secretary would be responsible for securing and reporting data on the Form CMS–855B and new accompanying OTP supplement. We estimate that this task would take approximately 2.5 hours; of this amount, roughly 30 minutes would involve completion of the data on the supplement, though this timeframe could be higher or lower depending upon the number of individuals whom the OTP must list. Additionally, the form would be reviewed and signed by a health diagnosing and treating practitioner of the OTP, a process we estimate would take 0.5 hours. We thus project a first-year burden of 5,301 hours (1,767 entities × 3 hr) at a cost of $732,439 (5,301 hr × ((2.5 hr × $35.66/

hr) + (0.5 hr × $98.04/hr)), a second-year burden of 201 hours (67 entities × 3 hr) at a cost of $27,772 (201 hr × ((2.5 hr × $35.66/hr) + (0.5 hr × $98.04/hr)), and a third-year burden of 198 hours (66 entities × 3 hr) at a cost of $27,358 (198 hr x((2.5 hr × $35.66/hr) + (0.5 hr × $98.04/hr)). In aggregate, we estimate a burden of 5,700 hours (5,301 hr + 201 hr + 198 hr) at a cost of $787,569 ($732,439 + $27,772 + $27,358). When annualized over the 3-year period, we estimate an annual burden of 1,900 hours (5,700 hours/3) at a cost of $262,523 ($787,569/3).

A copy of the draft OTP supplement will be available on-line, and we welcome public comment on: (1) Its contents; (2) the usefulness of the data to be captured thereon; and (3) the anticipated burden of completion.

Fingerprinting: As we are proposing that OTPs be subject to high categorical risk level screening under § 424.518, we would require the submission of a set of fingerprints for a national background check (via FBI Applicant Fingerprint Card FD–258) from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the OTP. The burden is currently approved by OMB under control number 1110–0046. An analysis of the impact of this proposed requirement can be found in the RIA section of this rule.

Application Fee: As already discussed in this rule, each OTP would be required to pay an application fee at the time of enrollment. The application fee does not meet the definition of a ''collection of information'' and, as such, is not subject to the requirements of the PRA. Although we are not setting out such burden under this section of the preamble, the cost is scored under the RIA section.

Provider Agreement: As mentioned in the preamble of this proposed rule, OTPs would have to complete a provider agreement in order to enroll in Medicare. The burden for reporting and completing the Provider Agreement—CMS Form 1561 and 1561A (OMB control number 0938–0832) are based on SAMHSA statistics. We generally estimate that there are about 1,700 already certified and accredited OTPs eligible for Medicare enrollment initially; and approximately 200 OTPs would become certified by SAMHSA in the next 3 years (or roughly 67 per year). We anticipate would take the OPT 5 minutes at $192.44/hr for a Chief Executive to review and sign the CMS 1561 or CMS 1561A, and an additional 5 minutes at $35.66/hr for a Medical Secretary to file the document when fully executed.

In aggregate, we estimate a burden of 317 hours ([1,767 OPTs for year 1 + 67 OTPs for year 2 + 67 OTPs for year 3] × 10 min/60) at a cost of $36,154 ([317 hr/2 respondents × $192.44/hr] + [317 hr/2 respondents × $35.66/hr]). This results, roughly, in a Year 1 burden of 295 hours at $33,623, a Year 2 burden of 11 hours at $1,272, and a Year 3 burden of 11 hours at a cost of $1,254. Annually, over the course of OMB's typical 3-year approval period, we estimate a burden of 106 hours 317 hr/3 years) at a cost of $12,051 ($36,154/3 years).

Total: Table 63 summarizes our foregoing burden estimates.

TABLE 63—COMBINED BURDEN RELATED TO ENROLLMENT OF OTPS

[Completion of CMS–855B and provider agreement]

	Year 1	Year 2	Year 3	Total	Annualized average over 3-year period
Time (Hours)	5,596	212	209	6,017	2,006
Cost ($)	766,062	29,044	28,612	823,718	274,572

7. The Quality Payment Program (Part 414 and Section III.K. of This Proposed Rule)

a. Background

(1) Information Collection Requirements Associated With MIPS and Advanced APMs

The Quality Payment Program is comprised of a series of ICRs associated with MIPS and Advanced APMs.

The ICRs reflect this proposed rule's policies, as well as policies in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), and the CY 2019 PFS final rule (83 FR 59452).

(2) Summary of Quality Payment Program Changes: MIPS

As discussed in more detail in section IV.B.7, the MIPS ICRs consist of: Registration for virtual groups; qualified registry self-nomination applications; and QCDR self-nomination applications; CAHPS survey vendor applications; Quality Payment Program Identity Management Application Process; quality performance category data submission by Medicare Part B claims collection type, QCDR and MIPS CQM collection type, eCQM collection type, and CMS web interface submission type; CAHPS for MIPS survey beneficiary participation; group registration for CMS web interface; group registration for CAHPS for MIPS survey; call for quality measures; reweighting applications for Promoting Interoperability and other performance categories; Promoting Interoperability performance category data submission; call for Promoting Interoperability measures; improvement activities performance category data submission; nomination of improvement activities; and opt-out of Physician Compare for voluntary participants.

Two MIPS ICRs show an increase in burden due to proposed changes in policies: QCDR self-nomination applications and Call for Quality Measures. For the QCDR self-nomination applications ICR, we have increased our estimate of the time required to submit a QCDR measure by 1.5 hour due to the proposal to require QCDRs to identify a linkage between their QCDR measures to related cost measures, Improvement Activities, and MIPS Value Pathways starting with the 2021 self-nomination period (+1 hour); and the proposal to require QCDR measure stewards to submit measure testing data as part of the self-nomination process for each QCDR measure (+0.5 hours). For this same ICR, we have increased our estimate of the time required for a QCDR to submit their self-nomination by 0.25 due to the proposal to require QCDRs to include a description of the quality improvement services they intend to support. For the Call for Quality Measures, we have increased our estimate of the time required to nominate a quality measure for consideration by 1 hour due to the proposal to require that MIPS quality measure stewards link their MIPS quality measures to existing and related cost measures and improvement

activities and provide rationale for the linkage. The remaining changes to currently approved burden estimates are adjustments to reflect better understanding of the impacts of policies finalized in previous rules, as well as the use of updated data sources available at the time of publication of this proposed rule. We are not proposing any changes to the following ICRs: Registration for virtual groups, CAHPS survey vendor applications, Quality Payment Program Identity Management Application Process, CAHPS for MIPS survey beneficiary participation, and group registration for CAHPS for MIPS survey. See section IV.B.7.(n) of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The revised requirements and burden estimates for all Quality Payment Program ICRs (except for CAHPS for MIPS and virtual groups election) will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). The CAHPS for MIPS Survey is approved under OMB control number 0938–1222 (CMS–10450). The Virtual Groups Election is approved under OMB control number 0938–1343 (CMS–10652).

Respondent estimates for the quality, Promoting Interoperability, and improvement activities performance categories are modeled using data from the 2017 MIPS performance period with the sole exception of 104 CMS Web Interface respondents, which is based on the number of groups who submitted data for the quality performance category via the CMS Web Interface for the 2018 MIPS performance period. Although we are using data from the 2017 MIPS performance period as we did in the CY 2019 PFS final rule, our respondent estimates have been updated to reflect revised assumptions regarding QPs and APM participants. Respondent data from the 2018 MIPS performance period was unavailable in time for publication for this proposed rule as was the number of groups and virtual groups registering to submit quality performance category data using the CMS Web Interface. Assuming updated information is available, we intend to update these estimates in the final rule.

Our participation estimates are reflected in Tables 69, 70, and 71 for the quality performance category, Table 87 for the Promoting Interoperability performance category, and Table 92 for the improvement activities performance category.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted due to two primary reasons. First, we anticipate the number of QPs to increase because of total expected growth in Advanced APM participation as new models that are Advanced APMs for which we do not yet have enrollment data become available for participation. The additional QPs will be excluded from MIPS and likely not report. Second, it is difficult to predict what eligible clinicians who may report voluntarily will do in the 2020 MIPS performance period compared to the 2017 MIPS performance period, and therefore, the actual number of participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data.

(3) Summary of Quality Payment Program Changes: Advanced APMs

As discussed in more detail in sections IV.B.7. of this rule, ICRs for Advanced APMs consist of: Partial Qualifying APM participant (QP) election; Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes; and submission of data for All-Payer QP determinations under the All-Payer Combination Option.

For these ICRs, the proposed changes to currently approved burden estimates are adjustments based on updated projections for the 2020 MIPS performance period. We are not proposing any changes to our per-respondent burden estimates. We are also not proposing any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process ICR.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 64 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 64, MIPS eligible clinicians that are not in MIPS APMs and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 64.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. For the 2020 MIPS performance period, the quality data submitted by MIPS APM participants reporting through the CMS Web Interface on behalf of their participant MIPS eligible clinicians will fulfill any MIPS submission requirements for the quality performance category. For other MIPS APMs, the quality data submitted by APM Entities on behalf of their participant MIPS eligible clinicians will fulfill any MIPS submission requirements for the quality performance category if that data is available to be scored. However, as proposed in section III.K.3.c.(5)(c)(i)(A) of this rule, beginning in the 2020 MIPS performance period, MIPS eligible clinicians participating in MIPS APMs whose APM quality data is not available for MIPS may elect to report MIPS quality measures at either the APM entity, individual, or TIN-level in a manner similar to our established policy for the Promoting Interoperability performance category under the APM scoring standard for purposes of the MIPS quality performance category. If we determine there are not sufficient measures applicable and available, we will assign performance category weights as specified in § 414.1370(h)(5).

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 Quality Payment Program final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum

improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Advanced APM participants who are determined to be Partial QPs may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844), but other than the election to participate in MIPS, we do not have data to estimate that burden.

BILLING CODE 4120–01–P

TABLE 64: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

	Type of Data Submitted			
Category of Clinician	**Quality Performance Category**	**Promoting Interoperability Performance Category**	**Improvement Activities Performance Category**	**Other Data Submitted on Behalf of MIPS Eligible Clinicians**
MIPS Eligible Clinicians (not in MIPS APMs) and Other Eligible Clinicians Voluntarily Submitting MIPS Data [a]	As virtual group, group, or individual clinicians	As virtual group, group, or individual clinicians. Clinicians who are hospital-based, ambulatory surgical center-based, non-patient facing, physician assistants, nurse practitioners, clinician nurse specialists, certified registered nurse anesthetists, physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category. Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting.	As virtual group, group, or individual clinicians	Groups electing to use a CMS-approved survey vendor to administer CAHPS must register. Groups electing to submit via CMS Web Interface for the first time must register. Virtual groups must register via email.
MIPS Eligible Clinicians Participating in MIPS APMs that report via Web Interface	ACOs submit to the CMS Web Interface and CAHPS for ACOs on behalf of their participating MIPS eligible clinicians. If the ACO does not submit quality	Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [Burden estimates for	CMS will assign the improvement activities performance category score to each APM Entity group based on the activities involved in participation in the MIPS APM.[d]	APM Entities will make Partial QP election for participating MIPS eligible clinicians.

	Type of Data Submitted			
Category of Clinician	**Quality Performance Category**	**Promoting Interoperability Performance Category**	**Improvement Activities Performance Category**	**Other Data Submitted on Behalf of MIPS Eligible Clinicians**
	data, MIPS eligible clinicians participating in MIPS APMs may elect to report individually or at the TIN-level.[e] [Submissions by the ACO are not included in burden estimates for this proposed rule because quality data submission to fulfill requirements of the Shared Savings Program and for purposes of testing and evaluating the Next Generation ACO Model are not subject to the PRA].[b]	this proposed rule assume group TIN-level reporting].[c]	[The burden estimates for this proposed rule assume no improvement activity reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity performance category score.]	
MIPS Eligible Clinicians Participating in Other MIPS APMs	APM Entities submit to MIPS on behalf of their participating MIPS eligible clinicians; however if the quality data is not available to MIPS in time for scoring, MIPS eligible clinicians participating in MIPS APMs may elect to report individually or at the TIN-level.[e] [Submissions made by APM Entities to MIPS on behalf of their participating MIPS eligible clinicians are not	Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this proposed rule assume group TIN-level reporting].	CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM. [The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement	APM Entities will make Partial QP election for participating eligible clinicians.

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
	included in burden estimates for this proposed rule because quality data submission for purposes of testing and evaluating Innovation Center models tested under Section 1115A of the Social Security Act (or Section 3021 of the Affordable Care Act) are not subject to the PRA.]		activity score.]	

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

a Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

b Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA.

c Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

d APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent.(42 CFR 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

e Both group TIN and individual clinician quality data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. We would then use the highest individual or TIN-level score attributable to each MIPS eligible clinician in an APM Entity in order to determine the APM Entity score based on the average of the highest scores for each MIPS eligible clinician in the APM Entity.

BILLING CODE 4120–01–C

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019 PFS final rule and continued in this proposed rule create some additional data collection requirements not listed in Table 64. These additional data collections, some of which were previously approved by OMB under the control numbers 0938–1314 (Quality Payment Program, CMS–10621) and 0938–1222 (CAHPS for MIPS, CMS–10450), are as follows:

Additional Approved ICRs Related to MIPS Third-Party Intermediaries

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938–1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938–1314).
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).

Additional ICRs Related to the Data Submission and the Quality Performance Category

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938–1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938–1314).

Additional ICRs Related to the Promoting Interoperability Performance Category

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938–1314).

Additional ICRs Related To Call for New MIPS Measures and Activities

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938–1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938–1314).
- Call for new quality measures (83 FR 60010 through 60011) (OMB 0938–1314).

Additional ICRs Related to MIPS

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938–1314).

Additional ICRs Related to APMs

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938–1314).
- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938–1314).
- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938–1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule does not propose any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not making any virtual group election changes under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as one quality performance category measure, or can be used for completion of an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nominate process annually. The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to submit QCDR measures for the quality performance category. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

The burden associated with qualified registry self-nomination, QCDR self-nomination and measure submission, and the CAHPS for MIPS survey vendor applications follow: [139]

(2) Qualified Registry Self-Nomination Applications

The proposed requirements and burden associated with qualified registries and their self-nomination will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As explained below, this rule would both adjust the number of self-nomination applications based on current data and revise the number of self-nomination applications due to policies promulgated in the CY 2019 final rule regarding the definition of a QCDR (83 FR 59895) and minimum participation requirements (83 FR 59897) which are effective beginning in the 2020 MIPS performance period. The adjustment would increase our total burden estimates while keeping our burden per response estimates unchanged. We are not proposing changes to the self-nomination process.

We refer readers to § 414.1400(a)(2) and (c)(1) which state that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so.

In the CY 2018 Quality Payment Program final rule and as stated in § 414.1400(c)(1), previously approved qualified registries in good standing (that is, that are not on probation or disqualified) may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period (82 FR 53815). In the same rule, we stated that qualified registries in good standing that would like to make minimal changes to their previously approved self-nomination application from the previous year, may submit these changes, and attest to no other changes from their previously approved qualified registry application for CMS review during the self-nomination period (82 FR 53815). The self-nomination period is from July 1 to September 1 of the calendar year prior to the applicable performance period beginning with the 2020 MIPS performance period (83 FR 59906).

For this proposed rule, we have adjusted the number of self-nominating applicants from 150 to 290 based on more recent data and the assumption that any entity which self-nominated for approval as a QCDR in previous years and that no longer qualifies as a result of policies finalized in the CY 2019 PFS final rule, effective beginning with the 2020 MIPS performance period could elect to self-nominate for approval as a qualified registry. The policies revised both the definition of a QCDR (83 FR 59895) and minimum participation requirements for entities seeking approval as a QCDR (83 FR 59897). Entities which no longer meet the criteria for approval as QCDRs may seek other options such as collaborating with another entity to meet the new requirements or to end their participation in the Quality Payment Program, however, we believe the assumption that these entities will instead elect to self-nominate as a qualified registry is both appropriate and conservative. We were unable to change our estimates in the CY 2019 PFS final rule to reflect these policies because we had neither the data to support a change nor any notifications of intent by previously approved QCDRs indicating they would no longer self-nominate as a QCDR (83 FR 59999). As a result, we are making the necessary adjustments to our respondents' estimates in this proposed rule.

For the 2019 MIPS performance period, we received 198 applications for nomination to be a qualified registry, 135 of which were approved to submit data, a reduction of 6 from the currently approved estimate of 141 (83 FR 59997 through 59998). Based on the number of self-nominations received for the 2019 MIPS performance period, we estimate 200 entities will self-nominate as a qualified registry for the 2020 MIPS performance period, not considering

[139] As stated in the CY 2019 PFS final rule (83 FR 53998), health IT vendors are not included in the burden estimates for MIPS.

nominations from entities which previously qualified as QCDRs. Based on our analysis of the QCDRs approved for the CY 2019 performance period, 63 of the 127 approved QCDRs (49.6 percent) would not meet the criteria for approval for the CY 2020 performance period. For the 2019 MIPS performance period, 181 entities self-nominated for approval as QCDRs, therefore we assume that 90 (49.6 percent) of these entities will self-nominate for approval as qualified registries for the 2020 MIPS performance period. In total, we estimate 290 nomination applications (200 entities + 90 entities) will be received from entities seeking approval to report MIPS data as qualified registries, an increase of 140 from the currently approved estimate of 150 (83 FR 59997 through 59998). As previously stated, this increase is comprised of both an adjustment to due updated data (+50 self-nominations) and a revision due to policies promulgated in the CY 2019 PFS final rule (+90 self-nominations). Assuming updated data is available, we will update our estimates in the final rule to reflect the actual number of nomination applications received for the 2020 MIPS performance period.

The burden associated with the qualified registry self-nomination process varies depending on the number of existing qualified registries that elect to use the simplified self-nomination process in lieu of the full self-nomination process as described in the CY 2018 Quality Payment Program final rule (82 FR 53815). The QPP Self-Nomination Form is submitted electronically using a web-based tool. We will be submitting a revised version of the form for approval under OMB control number 0938–1314 (CMS–10621).

As described in the CY 2017 Quality Payment Program final rule, the full self-nomination process requires the submission of basic information, a description of the process the qualified registry will use for completion of a randomized audit of a subset of data prior to submission, and the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period (81 FR 77383 through 77384). As shown in Table 66, we estimate that the staff involved in the qualified registry self-nomination process will be mainly computer systems analysts or their equivalent, who have an adjusted labor rate of $90.02/hr. Consistent with the CY 2019 PFS final rule (83 FR 59998), we estimate that the time associated with the self-nomination process ranges from a minimum of 0.5 hours (for the simplified self-nomination process) to 3 hours (for the full self-nomination process) per qualified registry. When considering this rule's adjusted number of nomination applications (290) we estimate that the annual burden will range from 532.5 hours ([135 simplified self-nominations × 0.5 hr] + [155 full self-nominations × 3 hr]) to 870 hours (290 qualified registries × 3 hr) at a cost ranging from $47,936 (532.5 hr × $90.02/hr) to $78,317 (870 hr × $90.02/hr), respectively (*see* Table 66).

As shown in Table 65, compared to the currently approved minimum estimates of 97.5 hours and $8,777 and the maximum estimates of 450 hours and $40,509, the increase in the number of respondents would adjust our total burden estimates by 435 hours and $39,159 [(−6 registries × 0.5 hr × $90.02/hr) + (146 registries × 3 hr × $90.02/hr)] and 420 hours and $37,808 (140 registries × 3 hr × $90.02/hr). While we are proposing to adjust our total burden estimates based on more current data, the burden per response would remain unchanged.

TABLE 65—CHANGE IN ESTIMATED BURDEN FOR QUALIFIED REGISTRY SELF-NOMINATION

	Minimum burden	Maximum burden
Total Annual Hours for Qualified Registries in CY 2019 Final Rule (a)	97.5	450
Total Annual Hours for Qualified Registries in CY 2020 Proposed Rule (b)	532.5	870
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	435	870
Total Annual Cost for Qualified Registries in CY 2019 Final Rule (d)	$8,777	$40,509
Total Annual Cost for Qualified Registries in CY 2020 Proposed Rule (e)	$47,936	$78,317
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	$39,159	$37,808

As finalized in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at (83 FR 60088) and in § 414.1400(a)(2), qualified registries may submit data for any of the three MIPS performance categories quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. In section III.K.3.g.(4)(a)(i) of this rule, beginning with the 2021 performance period and for future years, we propose to require that qualified registries support the reporting of improvement activities and Promoting Interoperability measures in addition to the quality performance category. As finalized in the CY 2017 Quality Payment Program final rule, qualified registries are required to provide feedback on all of the MIPS performance categories at least 4 times a year (81 FR 77367 through 77386). In section III.K.3.g.(4)(a)(ii), we propose, beginning with the 2023 MIPS payment period, to require qualified registries to provide the following as a part of the performance feedback given at least 4 times (to the extent feasible) a year: Feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the qualified registry. Further, qualified registries will be required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year, and if not, provide sufficient rationale as to why they do not believe they would be able to meet this requirement. Because we are not requiring qualified registries to provide performance feedback to their clinicians and groups at a greater frequency than what has previously been required combined with qualified registries only being required to provide feedback using data they are already collecting, we do not believe the proposal creates enough additional burden for qualified registries to elect to discontinue participation in the Quality Payment Program. Therefore, we are not adjusting our estimates for the number of qualified registries that will self-nominate in the 2021 performance

period or future years as a result of this proposal; if reliable information becomes available indicating this assumption is incorrect, we will adjust our assumptions and respondent estimates at that time. As part of the current self-nomination process, qualified registries are already required to attest to the MIPS quality measures, performance categories, improvement activities, and/or Promoting Interoperability measures and objectives supported. In section III.K.3.g.(4)(a)(i) of this proposed rule, beginning with the 2021 performance period, we are proposing to require qualified registries to support all three performance categories: Quality, improvement activities, and Promoting Interoperability with the proviso that based on the proposed amendment to § 414.1400(a)(2)(iii) the requirement to support submission of Promoting Interoperability data would be inapplicable to the third party intermediary if the clinician, group or virtual group is exempt from this reporting requirement. As part of this proposal, we would require qualified registries to attest to the ability to submit data for all three of these performance categories at time of self-nomination. Because qualified registries will only be required to provide performance feedback to clinicians and not to CMS, and because qualified registries are already required to attest to the performance categories they support, we anticipate minimal changes to the self-nomination process as a result of these proposals and assume there will be minimal impact on the time required to complete either the simplified or full self-nomination process.

Qualified registries must comply with requirements on the submission of MIPS data to CMS. The burden associated with qualified registry submission requirements will be the time and effort associated with calculating quality measure results from the data submitted to the qualified registry by its participants and submitting these results, the numerator and denominator data on quality measures, the Promoting Interoperability performance category, and improvement activities data to us on behalf of their participants. We expect that the time needed for a qualified registry to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the qualified registry and the number of applicable measures. However, we believe that qualified registries already perform many of these activities for their participants. Therefore, we believe the estimates discussed earlier and shown in Table 66 represents the upper bound for qualified registry burden, with the potential for less additional MIPS burden if the qualified registry already provides similar data submission services.

Based on these assumptions, we estimate the total annual burden associated with a qualified registry self-nominating to be considered for approval.

TABLE 66—ESTIMATED BURDEN FOR QUALIFIED REGISTRY SELF-NOMINATION

	Minimum burden	Maximum burden
# of Qualified Registry Simplified Self-Nomination Applications submitted (a)	135	0
# of Qualified Registry Full Self-Nomination Applications submitted (b)	155	290
Total Annual Hours Per Qualified Registry for Simplified Process (c)	0.5	0.5
Total Annual Hours Per Qualified Registry for Full Process (d)	3	3
Total Annual Hours for Qualified Registries (e) = (a) * (c) + (b) * (d)	532.5	870
Cost Per Simplified Process Per Registry (@computer systems analyst's labor rate of $90.02/hr.) (f)	$45.01	$45.01
Cost Per Full Process Per Registry (@computer systems analyst's labor rate of $90.02/hr.) (g)	$270.06	$270.06
Total Annual Cost for Qualified Registries (h) = (a) * (f) + (b) * (g)	$47,936	$78,317

Both the minimum and maximum burdens shown in Table 66 reflect adjustments to the number of respondents (from 150 to 290) due to availability of more recent data (+50 respondents) and revisions due to policies finalized in the CY 2019 PFS final rule regarding the definition and minimum participation requirements for entities seeking approval as QCDRs which will be effective beginning with the 2020 MIPS performance period (+90 respondents). For purposes of calculating total burden associated with this proposed rule as shown in Table 90, only the maximum burden is being submitted to OMB for their review and approval.

(3) QCDR Self-Nomination Applications

(a) Self-Nomination Process

The proposed requirements and burden associated with QCDRs and the self-nomination process will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As explained below, this rule would both adjust the number of self-nomination applications based on current data and revise the number of self-nomination applications due to policies promulgated in the CY 2019 final rule regarding the definition of a QCDR (83 FR 59895) and minimum participation requirements (83 FR 59897) which are effective beginning in the 2020 MIPS performance period. These changes result in a decrease from 200 to 91 self-nomination applications in the 2020 MIPS performance period. This rule would also adjust the number of QCDR measures submitted for consideration by each QCDR seeking to self-nominate (from 9 to 11.5), as well as the time required to submit information (from 1 hour to 2.5 hours) for each QCDR measure. These changes would increase our minimum total burden estimate (from 2,025 hours to 2,729.25 hours) and increase our maximum total burden estimate (from 2,400 hours to 2,889.25 hours). In addition, our per response estimates for the simplified and full self-nomination processes would increase from 9.5 hours to 29.25 hours and from 12 hours to 31.75 hours, respectively.

We refer readers to § 414.1400(a)(2) and (b)(1) which states that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so.

In the CY 2018 Quality Payment Program final rule and § 414.1400(b)(1), previously approved QCDRs in good standing (that are not on probation or disqualified) that wish to self-nominate using the simplified process can attest, in whole or in part, that their previously

approved form is still accurate and applicable (82 FR 53808). Existing QCDRs in good standing that would like to make minimal changes to their previously approved self-nomination application from the previous year, may submit these changes, and attest to no other changes from their previously approved QCDR application, for CMS review during the current self-nomination period, from September 1 to November 1 (82 FR 53808). The self-nomination period is from July 1 to September 1 of the calendar year prior to the applicable performance period beginning in the 2020 MIPS performance period (83 FR 59898).

The burden associated with QCDR self-nomination will vary depending on the number of existing QCDRs that will elect to use the simplified self-nomination process in lieu of the full self-nomination process as described in the CY 2018 Quality Payment Program final rule (82 FR 53808 through 53813). The OPP Self-Nomination Form is submitted electronically using a web-based tool. We will be submitting a revised version of the form for approval under OMB control number 0938–1314 (CMS–10621).

For the 2019 MIPS performance period, we received 181 self-nomination applications from entities seeking approval as QCDRs, 127 of which were approved to submit data. Based on our analysis of the QCDRs approved for the CY 2019 performance period, 63 of the 127 approved QCDRs (49.6 percent) would not meet the criteria for approval for the CY 2020 performance period. We project that 90 (49.6 percent) of the 181 entities will not self-nominate for approval as QCDRs for the 2020 MIPS performance period but will instead self-nominate to be qualified registries. Entities which no longer meet criteria for approval as QCDRs may seek other options as well, including collaborating with another entity to meet the new requirements or to end their participation in the Quality Payment Program; however, we believe the assumption that these entities will instead elect self-nomination as a qualified registry is both appropriate and conservative. We also project the remaining 91 entities will submit nomination applications for approval to report MIPS data as QCDRs for the MIPS 2020 performance period, a decrease of 109 from the currently approved estimate of 200. This decrease of 109 is a result of both an adjustment due to use of more recent data accounts (decrease of 19 self-nominations) and a change due to previously finalized policies regarding the definition of a QCDR (83 FR 59895) and minimum participation requirements (83 FR 59897) (decrease of 90 self-nominations). We were unable to change our estimates in the CY 2019 PFS final rule to reflect these policies because we had neither the data to support a change nor any notifications of intent by previously approved QCDRs indicating they would no longer self-nominate as a QCDR (83 FR 59999). As a result, we are making the necessary adjustments to our respondent estimates in this proposed rule. We further estimate that the 64 QCDRs approved to submit data in the 2019 MIPS performance period that would also qualify as QCDRs for the 2020 MIPS performance period will use the simplified self-nomination process. Assuming updated data is available, we will update our estimates in the final rule to reflect the actual number of nomination applications received for the 2020 MIPS performance period.

Based on previously finalized policies in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088), the current policy is that all third party intermediaries may submit data for any of the three MIPS performance categories quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. In section III.K.3.g.(3)(a)(i) of this rule, we are proposing, beginning with the 2021 performance period and future years, to require that QCDRs support three performance categories: Quality, improvement activities, and Promoting Interoperability. We are also proposing in section III.K.3.g.(3)(a)(ii), beginning with the 2023 MIPS payment year and future years, QCDRs would be required to provide services to clinicians and groups to foster improvement in the quality of care provided to patients, by providing educational services in quality improvement and leading quality improvement initiatives and to describe the quality improvement services they intend to support in their self-nomination for CMS review and approval. As finalized in the CY 2018 Quality Payment Program final rule, QCDRs are required to provide feedback on all of the MIPS performance categories that the QCDR reports at least 4 times a year (82 FR 53812). In section III.K.3.g.(3)(a)(iii) we propose, beginning with the 2023 MIPS payment year, to require that QCDRs provide the following as a part of the performance feedback given at least 4 times a year: Feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure (MIPS quality measure and/or QCDR measure) within the QCDR. We also understand that QCDRs can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the QCDR does not have access to. Further, we are also proposing, beginning with the 2023 MIPS payment year, to require QCDRs to attest during the self-nomination process that they can provide performance feedback at least 4 times a year, and if not, provide sufficient rationale as to why they do not believe they would be able to meet this requirement. We do not believe these proposals create enough additional burden for QCDRs to elect to discontinue participation in the Quality Payment Program for multiple reasons: We are not requiring QCDRs to provide performance feedback to their clinicians and groups at a greater frequency than what has previously been required, QCDRs will only being required to provide feedback using data they are already collecting, and we are giving QCDRs significant flexibility to provide broad quality improvement services that are tailorable to the specific QCDR and the clinicians they support. Therefore, we are not adjusting our estimates for the number of QCDRs that will self-nominate in the 2021 performance period or future years as a result of this proposal; if reliable information becomes available indicating this assumption is incorrect, we will adjust our assumptions and respondent estimates at that time. As part of the self-nomination process, QCDRs are already required to attest to the MIPS quality measures, performance categories, improvement activities, and Promoting Interoperability measures and objectives supported and will not be required to provide performance feedback to CMS. Therefore, we anticipate no additional steps being added to the self-nomination process as a result of these proposals and assume there will be no impact on the time required to complete either the simplified or full self-nomination process. With regard to the proposal to require QCDRs to describe the quality improvement services they will provide as part of their self-nomination, we estimate this will require approximately 15 minutes to complete.

We estimate that the self-nomination process for QCDRs to submit on behalf of MIPS eligible clinicians or groups for MIPS will involve approximately 3.25 hours per QCDR to submit information

required at the time of self-nomination as described in the CY 2017 Quality Payment Program final rule including basic information about the QCDR, describing the process it will use for completion of a randomized audit of a subset of data prior to submission, providing a data validation plan, and providing results of the executed data validation plan by May 31 of the year following the performance period (81 FR 77383 through 77384). However, for the simplified self-nomination process, we estimate 0.5 hours per QCDR to submit this information.

(b) QCDR Measure Requirements

As promulgated in the CY 2017 and CY 2018 Quality Payment Plan final rules (81 FR 77366 through 77374 and 82 FR 53812 through 53813), QCDRs calculate their measure results and also must possess benchmarking capabilities (for QCDR measures) that compare the quality of care a MIPS eligible clinician provides with other MIPS eligible clinicians performing the same quality measures. For QCDR measures, the QCDR must provide to us, if available, data from years prior (for example, 2017 data for the 2019 MIPS performance period) before the start of the performance period. In addition, the QCDR must provide to us, if available, the entire distribution of the measure's performance broken down by deciles. As an alternative to supplying this information to us, the QCDR may post this information on their website prior to the start of the performance period, to the extent permitted by applicable privacy laws. The time it takes to perform these functions may vary depending on the sophistication of the entity, but we estimate that a QCDR will spend an additional 1 hour performing these activities per measure.

As discussed in section III.K.3.g.(3)(c)(i)(B)(cc), we are proposing that in order for a QCDR measure to be considered for use in the program beginning with the 2021 performance period and future years, all QCDR measures submitted for self-nomination must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System, as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures. Beginning with the 2021 performance period and future years, we are proposing in section III.K.3.g.(3)(c)(i)(B)(dd) to also require QCDRs to collect data on the potential QCDR measure, appropriate to the measure type, as defined in the CMS Blueprint for the CMS Measures Management System, prior to self-nomination. We estimate the time necessary to submit measure testing data as part of the self-nomination process will average approximately 0.5 hours per measure, understanding that this estimate may be either high or low depending on the type of measure and the quantity of data being submitted. We discuss additional impacts of this proposal in section VI.C.10.(f) of this rule's Regulatory Impact Analysis.

In section III.K.3.g.(3)(c)(i)(A)(bb) of this rule, we are proposing to amend § 414.1400 to state that CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure. Because the choice to license a QCDR measure is an elective business decision made by individual QCDRs and we lack insight into both the specific terms and frequency of agreements made between entities, we are not accounting for QCDR measure licensing costs as part of our burden estimate. However, if information regarding the number of licensing agreements and the approximate cost per agreement becomes available, we may adjust our assumptions and burden estimates at that time.

In section III.K.3.g.(3)(c)(i)(B)(cc) of this rule, we propose, beginning with the 2020 performance period, that after the self-nomination period closes each year, we will review newly self-nominated and previously approved QCDR measures based on considerations as described in the CY 2019 PFS final rule (83 FR 59900 through 59902). In instances in which multiple, similar QCDR measures exist that warrant approval, we may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. The QCDR could do so by harmonizing its measure with, or significantly differentiating its measure from, other similar QCDR measures. QCDR measure harmonization may require two or more QCDRs to work collaboratively to develop one cohesive QCDR measure that is representative of their similar yet, individual measures. We are unable to account for measure harmonization costs as part of our burden estimate, as the process and outcomes of measure harmonization will likely vary substantially depending on a number of factors, including: Extent of duplication with other measures, number of QCDRs involved in harmonizing toward a single measure, and number of measures being harmonized among the same QCDRs. We intend to identify only those QCDR measures which are duplicative to such an extent as to assume harmonization will not be overly burdensome, however, because the harmonization process will occur between QCDRs without our involvement, we are unable to predict or quantify the associated effort.

As discussed in section III.K.3.g.(3)(c)(i)(B)(bb) of this proposed rule, beginning with the 2021 performance period and future years, we are proposing that QCDRs must identify a linkage between their QCDR measures to the following, at the time of self-nomination: (a) Cost measures (as found in section III.K.3.c.(2) of this proposed rule); (b) Improvement Activities (as found in Appendix 2: Improvement Activities Tables); or (c) CMS developed MIPS Value Pathways (as described in section III.K.3.a. of this proposed rule). We estimate that a QCDR will spend an additional 1 hour performing these activities per measure, on average.

We are also proposing to formalize factors we would take into consideration for approving and rejecting QCDR measures for the MIPS program beginning with the 2020 performance period and future years. With regard to approving QCDR measures, we are proposing the following: (a) 2-year QCDR measure approval process, and (b) participation plan for existing QCDR measures that have failed to reach benchmarking thresholds. As discussed in section III.K.3.g.(3)(c)(ii)(B) of this rule, we are proposing to implement, beginning with the 2021 performance period, 2-year QCDR measure approvals (at our discretion) for QCDR measures that attain approval status by meeting the QCDR measure considerations and requirements described in section III.K.3.g.(3)(c). The 2-year approvals would be subject to the following conditions whereby the multi-year approval will no longer apply if the QCDR measure is identified as: Topped out; duplicative of a new, more robust measure; reflects an outdated clinical guideline; requires measure harmonization, or if the QCDR self-nominating the measure is no longer in good standing. We believe this could result in reduced burden for QCDRs as they would not necessarily be required to submit every measure for approval annually. However, because we are

unable to predict which previously approved QCDR measures will be removed or retained in future years, we are likewise unable to predict the total number of measures that will be submitted for approval and the resulting impact on future burden. If this policy is finalized, the number of QCDR measures submitted in the 2021 performance period will reflect the impact of this policy; at that time we will update our assumptions and burden estimates accordingly.

We estimate that on average, each QCDR will submit information for 11.5 QCDR measures, for a total burden of 11.5 hours per QCDR (1 hr per measure × 11.5 measures). The estimated average of 11.5 measures per QCDR is based on an analysis of the QCDR measures submitted for consideration and QCDR measures approved for the 2019 MIPS performance period, as well as the measures for QCDRs approved for the CY 2019 performance period that would not meet criteria for approval for the CY 2020 performance period. For the 2019 MIPS performance period, 1,123 QCDR measures were submitted for consideration and 762 were approved; an approval rate of 68 percent. Of these approved measures, 264 are for the 63 QCDRs which would not meet criteria for approval for the 2020 MIPS performance period. Averaging the remaining 498 approved QCDR measures by the 64 QCDRs that would meet the criteria for approval for the 2020 MIPS performance period results in approximately 7.8 approved measures per QCDR (498 approved measures / 64 QCDRs). Assuming an identical 68 percent QCDR measure approval rate for measures submitted for consideration for the 2020 MIPS performance period, this results in approximately 11.5 measures submitted for consideration for each QCDR (7.8 approved measures / 0.68 approval rate). We believe the proposals to change requirements for QCDR measure submission and to require QCDRs to harmonize measures we identify as duplicative discussed earlier in this section will result in a reduction in the number of QCDR measures submitted for approval in future years. However, we are unable to quantify the impact these proposed changes will have on the number of measures QCDRs will submit for approval. As information becomes available in future years, we will revisit our assumptions to better reflect the impact of these proposals on QCDRs and the quantity of measures being submitted for consideration annually. When combined with our previously stated assumption regarding our inability to predict which QCDR measures will maintain approval in future years, we believe the estimate of 11.5 measures per QCDR to be both conservative and appropriate, as well as an overall decrease of 76 QCDR measures compared to the 1,123 QCDR measures submitted for consideration in the CY2019 performance period (1,123 QCDR measures − [91 QCDRs × 11.5 measures per QCDR]).

Beginning with the 2021 performance period, we are proposing in section III.K.3.g.(3)(c)(iii) of this proposed rule that in instances where an existing QCDR measure has been in MIPS for 2 years, and has failed to reach benchmarking thresholds due to low adoption, where a QCDR believes the low-reported QCDR measure is still important and relevant to a specialist's practice, that the QCDR may develop and submit to a QCDR measure participation plan, to be submitted as part of their self-nomination. Because we are unable to predict the frequency with which existing QCDR measures will meet the proposed criteria for allowing QCDRs to submit a measure participation plan or the likelihood of QCDRs electing to submit a plan, we are unable to estimate the total burden associated with this proposal. However, we anticipate the time involved in developing a measure participation plan is likely to average between 1 and 2 hours, depending on the QCDR and the level of detail they choose to include. In future performance periods we may reassess availability of the number of QCDR measure participation plans submitted by QCDRs and estimate the associated burden, if possible. In aggregate, we estimate a QCDR will require 2.5 hours per QCDR measure, an increase of 1.5 hours from the currently approved estimate of 1 hour (83 FR 59999). As discussed earlier in this section, we estimate each QCDR will submit 11.5 QCDR measures for approval, on average. Therefore, we estimate each QCDR will require 28.75 hours (11.5 measures × 2.5 hr per measure) to submit QCDR measures for approval, independent of the selection of the simplified or full self-nomination process.

In the CY 2019 PFS final rule, the burden associated with self-nomination of a QCDR was estimated to range from a minimum of 9.5 hours (0.5 hours to submit information for simplified self-nomination process and 9 hours for submission of QCDR measures) to a maximum of 12 hours (3 hours for the full self-nomination process and 9 hours for the submission of QCDR measures) (83 FR 59999). For this rule, we propose to increase the burden associated with self-nomination to a minimum of 29.25 hours (0.5 hours to submit information for the simplified self-nomination process and 28.75 hours for the submission of QCDR measures) to a maximum of 32 hours (3.25 hours to submit information for the full self-nomination process and 28.75 hours for the submission of QCDR measures) to account for our revised estimate of the average number of QCDR measures submitted for consideration per QCDR, as well as the revised estimate of burden per QCDR measure.

We assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $90.02/hr. Considering that the time per QCDR associated with the self-nomination process ranges from a minimum of 29.25 hours to a maximum of 32 hours, we estimate that the annual burden will range from 2,736 hours ([64 QCDRs × 29.25 hr] + [27 QCDRs × 32 hr]) to 2,912 hours (91 QCDRs × 32 hr) at a cost ranging from $246,295 (2,736 hr × $90.02/hr) and $262,138 (2,912 hr × $90.02/hr), respectively (*see* Table 67).

Based on the assumptions previously discussed, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered ''qualified'' to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

TABLE 67—ESTIMATED BURDEN FOR QCDR SELF-NOMINATION AND QCDR MEASURE SUBMISSION

	Minimum	Maximum
# of QCDR Simplified Self-Nomination Applications submitted (a)	64	0
# of QCDR Full Self-Nomination Applications submitted (b)	27	91
Total Annual Hours Per QCDR for Simplified Process (c)	29.25	29.25
Total Annual Hours Per QCDR for Full Process (d)	32.00	32.00

TABLE 67—ESTIMATED BURDEN FOR QCDR SELF-NOMINATION AND QCDR MEASURE SUBMISSION—Continued

	Minimum	Maximum
Total Annual Hours for QCDRs (e) = (a) *(c) + (b) * (d)	2,736	2,912
Cost Per Simplified Process Per QCDR (@computer systems analyst's labor rate of $90.02/hr) (f)	$2,633.09	$2,633.09
Cost Per Full Process Per QCDR (@computer systems analyst's labor rate of $90.02/hr) (g)	$2,880.64	$2,880.64
Total Annual Cost for QCDRs (h) = (a) * (f) + (b) * (g)	$246,295	$262,138

Both the minimum and maximum burden shown in Table 67 reflect adjustments to the number of respondents due to availability of more recent data, as well as changes resulting from policies finalized in the CY 2019 PFS final rule regarding the definition and minimum participation requirements for entities seeking approval as QCDRs which will be effective beginning with the 2020 MIPS performance period. For purposes of calculating total burden associated with the proposed rule as shown in Table 90, only the maximum burden is used.

Independent of the change to our per response time estimate, the decrease in the number of respondents (from 200 to 91) results in an adjustment of between −1,093 hours [(−86 QCDRs × 9.5 hr) + (−23 QCDRs × 12 hr)] at a cost of −$98,392 (−1,093 hr × $90.02) and −1,308 hours (−109 QCDRs × 12 hr) at a cost of −$117,746 (−1,308 hr × $90.02/hr). Accounting for the change in the number of QCDRs, the change in time per QCDR to self-nominate results in an adjustment of 1,820 hours (91 QCDRs × 20 hr) at a cost of $163,836 (1,820 hr × $90.02/hr). As shown in Table 68, when these two adjustments are combined, the net impact ranges between 727 hours (−1,093 hr + 1,820 hr) hours at a cost of $65,444 (−$98,392 + $163,836) and 512 hours (−1,308 hr + 1,820 hr) hours at a cost of $46,090 (−$117,746 + $163,836).

TABLE 68—CHANGE IN ESTIMATED BURDEN FOR QCDR SELF-NOMINATION AND QCDR MEASURE SUBMISSION

	Minimum burden	Maximum burden
Total Annual Hours for QCDRs in CY 2019 Final Rule (a)	2,025	2,400
Total Annual Hours for QCDRs in CY 2020 Proposed Rule (b)	2,736	2,912
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	711	512
Total Annual Cost for QCDRs in CY 2019 Final Rule (d)	$182,291	$216,048
Total Annual Cost for QCDRs in CY 2020 Proposed Rule (e)	$246,295	$262,138
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	$64,004	$46,090

QCDRs must comply with requirements on the submission of MIPS data to CMS. The burden associated with the QCDR submission requirements will be the time and effort associated with calculating quality measure results from the data submitted to the QCDR by its participants and submitting these results, the numerator and denominator data on quality measures, the Promoting Interoperability performance category, and improvement activities data to us on behalf of their participants. We expect that the time needed for a QCDR to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the QCDR and the number of applicable measures. However, we believe that QCDRs already perform many of these activities for their participants. As stated in section III.K.3.g.(3)(a)(i), based on our review of existing 2019 QCDRs through the 2019 QCDR Qualified Posting, approximately 92 QCDRs, or about 72 percent of the QCDRs currently participating in the program are supporting these three performance categories. In addition, through our review of previous qualified postings for the 2018 and 2017 MIPS performance periods, we have observed that in 2018, 73 percent (approximately 110 QCDRs) and in 2017, 73 percent (approximately 83 QCDRs) have supported all three of the quality, Promoting Interoperability, and improvement activity performance categories. Given this, we believe it is reasonable that all QCDRs have the capacity to support the improvement activities and Promoting Interoperability performance categories and are not making any further changes to our burden estimates. Therefore, we believe the 2,912-hour estimate noted in this section represents the upper bound of QCDR burden, with the potential for less additional MIPS burden if the QCDR already provides similar data submission services.

(4) CAHPS for MIPS Survey Vendor

This rule does not propose any new or revised collection of information requirements or burden related to CMS-approved CAHPS for MIPS survey vendors. The requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any MIPS survey vendor changes under that control number.

d. ICRs Regarding Quality Data Submission (§§ 414.1325 and 414.1335)

(1) Background

As explained below, this rule would adjust the number of respondents based on current data. The adjustment would increase our total burden estimates while keeping our ''per response'' estimates unchanged. We are not revising any requirements regarding the number of measures to be submitted or the manner in which they may be submitted.

Under our current policies, two groups of clinicians must submit quality data under MIPS: Those who submit as MIPS eligible clinicians and those who opt to submit data voluntarily but are not be subject to MIPS payment adjustments.

Clinicians are ineligible for MIPS if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

To determine which QPs should be excluded from MIPS, we used the QP List for the 2019 predictive file that contains current participation in Advanced APMs as of January 15, 2019, that could be connected into our respondent data and are the best estimate of future expected QPs. From this data, we calculated the QP determinations as described in the Qualifying APM Participant definition at § 414.1305 for the 2020 QP performance period. We assumed that all partial QPs would participate in MIPS data collections. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future 2020 Medicare QP Performance Period (and therefore would no longer need to submit data to MIPS); hence, our model may under estimate or overestimate the number of respondents.

Using participation data from the 2017 MIPS performance period combined with the estimate of QPs for the 2020 performance period, we estimate a total of 833,243 clinicians will submit quality data as individuals or groups in the 2020 MIPS performance period, a decrease of 131,003 clinicians when compared to our estimate of 964,246 clinicians in the CY 2019 PFS final rule (83 FR 60002). As previously stated in section IV.B.7.(a.(2), respondent data from the 2018 MIPS performance period was unavailable at the time of publication of this proposed rule. Assuming that updated respondent data becomes available before the publication of the CMS–1715–F final rule, we will revise our burden estimates in that rule.

In the CY 2017 Quality Payment Program final rule, we assumed that any clinician that submits quality data codes to us for the Medicare Part B claims collection type is intending to do so for the Quality Payment Program to ensure that we fully accounted for any burden that may have resulted from our policies (81 FR 77501 through 77504); we continued using this assumption in both the CY 2018 Quality Payment Program final rule and the CY 2019 PFS final rule. In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the 2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). However, we also elected to continue using the assumption that all clinicians (except QPs) who submitted data via the Medicare Part B claims collection type in the 2017 MIPS performance period would continue to do so for MIPS to avoid overstating the impact of the change as we lacked the data to accurately estimate both the number of clinicians who would be impacted by the finalized policies and the potential behavioral response of those clinicians who would be required to switch to another collection type (83 FR 60001). For this proposed rule, beginning with the 2020 MIPS performance period, we assume only clinicians in small practices who submitted quality data via Medicare Part B claims in the 2017 MIPS performance period will continue to do so for the 2020 MIPS performance period. Further, we assume that clinicians in other practices (not small practices) who meet at least one of the following criteria will not need to find an alternate collection type for submitting quality performance category data for the Quality Payment Program for the 2020 MIPS performance period: (1) Facility-based; (2) submitted quality data via Medicare Part B claims and at least one other collection type; or (3) were previously scored as part of a group. Finally, we assume clinicians in other practices (not small practices) who meet all of the following criteria will submit via the MIPS CQM collection type for the 2020 MIPS performance period because the Medicare Part B claims collection type will no longer be available as an option for collecting and reporting quality data: (1) Scored as individuals; (2) not facility-based; and (3) submitted quality data only via the Medicare Part B claims collection type in the 2017 MIPS performance period. Because we do not have data to accurately predict what collection type each affected clinician would use to collect and report quality data, we assume that the affected clinicians will select the MIPS CQM collection type because, when compared to Medicare Part B claims, we believe this is the next most accessible and least burdensome alternative. Our assumptions result in a 121,858 decrease in the estimated number of clinicians who will submit quality data via Medicare Part B claims and a 15,556 increase in the number of clinicians who will submit via the QCDR/MIPS CQM collection type, as shown in Table 69.

We assume that 100 percent of APM Entities in MIPS APMs will submit quality data to CMS as required under their models. Consistent with assumptions used in the CY 2019 PFS final rule (83 FR 60000 through 60001), we include all quality data voluntarily submitted by MIPS APM participants made at the individual or TIN-level in our respondent estimates. Therefore, we are not making any adjustments to our respondent estimates as a result of the proposal discussed in section III.K.3.c.(5)(c)(i)(A) of this proposed rule, which allows MIPS eligible clinicians participating in MIPS APMs to elect to report MIPS quality measures at either the individual or TIN-level under the APM scoring standard beginning in the 2020 MIPS performance period. To estimate who will be a MIPS APM participant in the 2020 MIPS performance period, we used the latest 2019 predictive file that contains current participation in MIPS APMs as of January 15, 2019, using all available data. This file was selected to better reflect the expected increase in the number of MIPS APMs in future years compared to previous APM eligibility files. If a MIPS eligible clinician is determined to not be scored as a MIPS APM, then their reporting assumption is based on their reporting for the CY 2017 MIPS performance period. For clinicians who participated in an APM in 2017, were not in an APM in 2019, and did not report MIPS quality data in 2017, we assume they will elect to report to MIPS via the MIPS CQM collection type, similar to our previously stated assumption regarding clinicians who are required to use an alternate reporting option. In addition, we assume that the 80 TINs that elect to form 16 virtual groups will continue to collect and submit MIPS data using the same collection and submission types as they did during the 2017 MIPS performance period, but the submission will be at the virtual group, rather than group level.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded as sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.[140] Tables 69, 70, and 71 explain our

[140] Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 69 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the 2020 MIPS performance period based on data from the 2017 MIPS performance period.

For the 2020 MIPS performance period, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types, and CMS Web Interface. We estimate the burden for collecting data via collection type: Claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintain consistency with previous rulemaking.

For an individual, group, or third-party to submit MIPS quality, improvement activities, or Promoting Interoperability performance category data using either the log in and upload or the log in and attest submission type or to access feedback reports, the submitter must have a CMS Enterprise Portal user account. Once the user account is created using the Identity Management Application Process, registration is not required again for future years.

Table 69 shows that in the 2020 MIPS performance period, an estimated 109,951 clinicians will submit data as individuals for the Medicare Part B claims collection type; 359,621 clinicians will submit data as individuals or as part of groups for the MIPS CQM or QCDR collection types; 247,329 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 116,342 clinicians will submit as part of groups via the CMS Web Interface.

Table 69 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the expected number of clinicians to submit as individuals or part of groups.

TABLE 69—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE

	Medicare Part B claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Number of clinicians to collect data by collection type (as individual clinicians or groups) in 2020 MIPS performance period (excludes QPs) (a)	109,951	359,621	247,329	116,342	833,243
* Number of clinicians to collect data by collection type (as individual clinicians or groups) in 2019 MIPS performance period (excludes QPs) (b)	257,260	324,693	243,062	139,231	964,246
Difference between 2020 MIPS performance period (CY 2020 Proposed Rule) and 2019 MIPS performance period (CY 2019 Final Rule) (c) = (a) − (b)	−147,309	34,928	4,267	−22,889	−131,003

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

In the CY 2018 Quality Payment Program final rule (82 FR 53625 through 53626), beginning with the 2019 MIPS performance period, we allowed MIPS eligible clinicians to submit data for multiple collection types for a single performance category. Therefore, with the exception of clinicians not in small practices who previously submitted quality data via Medicare Part B claims, we captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types. Hence, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the 2017 MIPS performance period.

Table 70 uses methods similar to those described to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the 2020 MIPS performance period. We estimate that approximately 109,951 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 106,039 clinicians will submit data as individuals using MIPS CQMs or QCDR collection types; and approximately 47,455 clinicians will submit data as individuals using eCQMs collection type.

TABLE 70—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA AS INDIVIDUALS BY COLLECTION TYPE

	Medicare Part B claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Number of Clinicians to submit data as individuals in 2020 MIPS Performance Period (excludes QPs) (a)	109,951	106,039	47,455	0	263,445
* Number of Clinicians to submit data as individuals in 2019 MIPS Performance Period (excludes QPs) (b)	257,260	71,439	47,557	0	376,256

TABLE 70—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA AS INDIVIDUALS BY COLLECTION TYPE—Continued

	Medicare Part B claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Difference between 2020 MIPS Performance Period (CY 2020 proposed rule) and 2019 MIPS performance period (CY 2019 final rule) (c) = (a) − (b)	−147,309	+34,600	−102	0	−112,811

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 70 are not mutually exclusive.

Table 71 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the 2020 MIPS performance period and reflects our assumption that the formation of virtual groups will reduce burden. With the previously discussed exceptions regarding groups who experienced a change in APM participation status between the 2017 and 2019 MIPS performance periods, we assume that groups that submitted quality data as groups in the 2017 MIPS performance period will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN within a virtual group for the 2020 MIPS performance period. First, we estimated the number of groups or virtual groups that will collect data via each collection type during the 2020 MIPS performance period using data from the 2017 MIPS performance period. The second and third steps in Table 71 reflect our currently approved assumption that virtual groups will reduce the burden for quality data submission by reducing the number of organizations that will submit quality data on behalf of clinicians. We assume that 40 groups that previously collected on behalf of clinicians via QCDR or MIPS CQM collection types will elect to form 8 virtual groups that will collect via QCDR and MIPS CQM collection types. We assume that another 40 groups that previously collected on behalf of clinicians via eCQM collection types will elect to form another 8 virtual groups that will collect via eCQM collection types. Hence, the second step in Table 71 is to subtract out the estimated number of groups under each collection type that will elect to form virtual groups, and the third step in Table 71 is to add in the estimated number of virtual groups that will submit on behalf of clinicians for each collection type.

Specifically, we assume that 10,552 groups and virtual groups will submit data for the QCDR or MIPS CQM collection types on behalf of 253,582 clinicians; 4,332 groups and virtual groups will submit for eCQM collection types on behalf of 199,874 eligible clinicians; and 104 groups will submit data via the CMS Web Interface on behalf of 116,342 clinicians.

TABLE 71—ESTIMATED NUMBER OF GROUPS AND VIRTUAL GROUPS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE ON BEHALF OF CLINICIANS

	Medicare Part B claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Number of groups to collect data by collection type (on behalf of clinicians) in 2020 MIPS performance period (excludes QPs) (a)	0	10,584	4,364	104	15,052
Subtract out: Number of groups to collect data by collection type on behalf of clinicians in 2020 MIPS performance period that will submit as virtual groups (b)	0	40	40	0	80
Add in: Number of virtual groups to collect data by collection type on behalf of clinicians in 2020 MIPS performance period (c)	0	8	8	0	16
Number of groups to collect data by collection type on behalf of clinicians in 2020 MIPS performance period (d) = (a) − (b) + (c)	0	10,552	4,332	104	14,988
* Number of groups to collect data by collection type on behalf of clinicians in 2019 MIPS performance period (e)	0	10,542	4,304	286	15,132
Difference between 2020 MIPS performance period (CY 2020 proposed rule) and 2019 MIPS performance period (CY 2019 final rule) (f) = (d) − (e)	0	10	28	−182	−144

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary

along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. In terms of the quality measures available for clinicians and groups to report for the 2020 MIPS performance period, the total number of quality measures will be 206. The new MIPS quality measures proposed for inclusion in MIPS for the 2020 MIPS performance period and future years are found in Table Group A of Appendix 1; MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 72, as well as counts of new, removed, and substantively changed measures.

TABLE 72—SUMMARY OF QUALITY MEASURES FOR THE 2020 MIPS PERFORMANCE PERIOD

Collection type	Number measures proposed as new	Number measures proposed for removal	Number measures proposed with a substantive change *	Number measures remaining for CY 2020
Medicare Part B Claims Specifications	0	17	22	47
MIPS CQMs Specifications	3	52	77	184
eCQM Specifications	1	6	33	45
Survey—CSV	0	0	0	1
CMS Web Interface Measure Specifications	1	1	9	10
Administrative Claims	0	0	0	1
Total **	4	55	95	206

* This column includes all measures that have a requested substantive change from the measure stewards. The total of 95 substantive changes reflects both measures that will continue and a subset of measures that have been proposed for removal for PY2020. There are 73 substantive changes that are proposed in Appendix 1 for measures not being proposed for removal.

** A measure may be specified under multiple collection types but will only be counted once in the total.

For the 2020 MIPS performance period, there is a net reduction of 51 quality measures across all collection types compared to the 257 measures finalized for the 2019 MIPS performance period (83 FR 60003). We do not anticipate that removing these measures will increase or decrease the reporting burden on clinicians and groups as respondents are still required to submit quality data for 6 measures. Likewise, we do not anticipate a change in reporting burden as a result of the one proposed administrative claims measure (The All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions measure) which is being proposed for the 2021 MIPS performance period as discussed in section III.K.3.c.(1)(d)(ii) of this rule.

As discussed in section III.K.3.c.(1)(c)(ii) of this rule, we are proposing to adopt a higher data completeness threshold (the percentage of eligible patients the clinician must check to see whether the measure applies to) for the 2020 MIPS performance period, such that MIPS eligible clinicians and groups submitting quality measure data on QCDR measures, MIPS CQMs, and eCQMs must submit data on at least 70 percent of the MIPS eligible clinician or group's patients that meet the denominator criteria, regardless of payer for the 2020 MIPS performance period. We believe this proposal may increase administrative burden for some clinicians as it affects the amount of data they have to collect, but will have no impact on regulatory burden as it affects neither the number of quality measures they are required to report nor the amount of data they must report for each quality measure once results have been aggregated.

(2) Quality Payment Program Identity Management Application Process

This rule does not propose any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any identity management application process changes under that control number.

(3) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule does not propose any new or revised collection of information requirements related to the submission of Medicare Part B claims data for the quality performance category. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Table 69, based on 2017 MIPS performance period data, we assume that 109,951 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. This rule proposes to adjust the number of Medicare Part B claims respondents from 257,260 to 109,951 (a decrease of 147,309) based on more recent data and our updated methodology of accounting only for clinicians in small practices who submitted such claims data in the 2017 MIPS performance period rather than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type. We continue to anticipate that the Medicare Part B claims submission process for MIPS is operationally similar to the way the claims submission process functioned under the PQRS. Specifically, clinicians will need to

gather the required information, select the appropriate QDCs, and include the appropriate QDCs on the Medicare Part B claims they submit for payment. Clinicians will collect QDCs as additional (optional) line items on the CMS–1500 claim form or the electronic equivalent HIPAA transaction 837–P, approved by OMB under control number 0938–1197. This proposed rule's provisions do not necessitate the revision of either form and we are making no changes to the associated estimate of reporting burden.

As shown in Table 73, consistent with our currently approved per respondent burden estimates, we estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours at a cost of $13.50 (0.15 hr × $90.02/hr) to 7.2 hours at a cost of $648.14 (7.2 hr × $90.02/hr) per respondent. The burden will involve becoming familiar with MIPS data submission requirements. We believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at $109.36/hr for a practice administrator, 1 hour at $202.86/hr for a clinician, 1 hour at $45.24/hr for an LPN/medical assistant, 1 hour at $90.02/hr for a computer systems analyst, and 1 hour at $38.00/hr for a billing clerk. We are not proposing revisions to our currently approved per response burden estimates.

The estimate for reviewing and incorporating measure specifications for the claims collection type is higher than that of QCDRs/Registries or eCQM collection types due to the more manual, and therefore, more burdensome nature of Medicare Part B claims measures.

Considering both data submission and start-up requirements, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time ranges from 786,150 hours (7.15 hr × 109,951 clinicians) to 1,561,304 hours (14.2 hr × 109,951 clinicians). The estimated annual cost (per clinician) ranges from $717.70 [(0.15 hr × $90.02/hr) + (3 hr × $109.36/hr) + (1 hr × $90.02/hr) + (1 hr × $45.24/hr) + (1 hr × $38.00/hr + (1 hr × $202.86/hr)] to a maximum of $1,352.34 [(7.2 hr × $90.02/hr) + (3 hr × $109.36/hr) + (1 hr × $90.02/hr) + (1 hr × $45.24/hr) + (1 hr × $38.00/hr + (1 hr × $202.86/hr)]. The total annual cost ranges from a minimum of $78,912,163 (109,951 clinicians × $717.70) to a maximum of $148,691,575 (109,951 clinicians × $1,352.34).

Table 73 summarizes the range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims.

TABLE 73—ESTIMATED BURDEN FOR QUALITY PERFORMANCE CATEGORY: CLINICIANS USING THE MEDICARE PART B CLAIMS COLLECTION TYPE

	Minimum burden	Median burden	Maximum burden
# of Clinicians (a)	109,951	109,951	109,951
Hours Per Clinician to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Practice Administrator Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Clinician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2
Total Annual Hours (i) = (a) * (h)	786,150	885,106	1,561,304
Cost to Submit Quality Data (@computer systems analyst's labor rate of $90.02/hr) (j)	$13.50	$94.52	$648.14
Cost to Review Measure Specifications (@practice administrator's labor rate of $109.36/hr) (k)	$328.08	$328.08	$328.08
Cost to Review Measure Specifications (@computer systems analyst's labor rate of $90.02/hr) (l)	$90.02	$90.02	$90.02
Cost to Review Measure Specifications (@LPN's labor rate of $45.24/hr) (m)	$45.24	$45.24	$45.24
Cost to Review Measure Specifications (@billing clerk's labor rate of $38.00/hr) (n)	$38.00	$38.00	$38.00
Cost to Review Measure Specifications (@physician's labor rate of $202.86/hr) (o)	$202.86	$202.86	$202.86
Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	$717.70	$798.72	$1,352.34
Total Annual Cost (q) = (a) * (p)	$78,912,163	$87,820,173	$148,691,575

As shown in Table 74, using the unchanged currently approved per respondent burden estimates which range from $717.70 to $1,352.34, the decrease in number of respondents from 257,260 to 109,951 results in a total adjustment of between −1,053,259 hours (−147,309 respondents × 7.15 hr/respondent) at a cost of −$105,724,111 (−147,309 respondents × $717.70/respondent) and −2,091,788 hours (−147,309 respondents × 14.2 hr/respondent) at a cost of −$199,212,442 (−147,309 respondents × $1,352.34/respondent).

TABLE 74—CHANGE IN ESTIMATED BURDEN FOR QUALITY PERFORMANCE CATEGORY: CLINICIANS USING THE MEDICARE PART B CLAIMS COLLECTION TYPE

	Minimum burden	Median burden	Maximum burden
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	1,839,409	2,070,943	3,653,092
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	786,150	885,106	1,561,304

Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$78,912,163	$87,820,173	$148,691,575
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$105,724,111	−$117,658,791	−$199,212,442

(4) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

This rule does not propose any new or revised collection of information requirements related to the MIPS CQM or QCDR collection types. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Tables 69, 70, and 71, and based on 2017 MIPS performance period data, we assume that 359,621 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. Of these, we expect 106,039 clinicians, as shown in Table 70, will submit as individuals and 10,552 groups and virtual groups, as shown in Table 71, are expected to submit on behalf of the remaining 253,582 clinicians. As previously stated, we assume clinicians in other practices (not small practices) who meet all of the following criteria will submit via the MIPS CQM collection type for the 2020 MIPS performance period because the Medicare Part B claims collection type will no longer be available as an option for collecting and reporting quality data: (1) Scored as individuals; (2) not facility-based; and (3) submitted quality data only via the Medicare Part B claims collection type in the 2017 MIPS performance period. As a result of this assumption and our use of more recent data, this rule proposes to adjust the number of QCDR and MIPS CQM respondents from 81,981 to 116,591 (an increase of 34,610). Given that the number of measures required is the same for clinicians and groups, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf.

We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS collection requirements and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data total 9.083 hours at $872.37 per individual clinician or group. This consists of 3 hours at $90.02/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at $109.36/hr for a practice administrator, 1 hour at $90.02/hr for a computer systems analyst, 1 hour at $45.24/hr for a LPN/medical assistant, 1 hour at $38.00/hr for a billing clerk, and 1 hour at $202.86/hr for a clinician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) per clinician or group (respondent) for a cost of $7.50 (0.083 hr × $90.02/hr for a computer systems analyst).

In aggregate, we estimate an annual burden of 1,058,996 hours (9.083 hr/response × 116,591 groups plus clinicians submitting as individuals) at a cost of $101,710,684 (116,591 responses × $872.37/response). The increase in number of respondents from 81,981 to 116,591 results in a total adjustment of 314,363 hours (34,610 respondents × 9.083 hr/respondent) at a cost of $30,192,783 (34,610 respondents × $872.37/respondent). Based on these assumptions, we have estimated in Table 75 the burden for these submissions.

Cost LPN Review Measure Specifications (@LPN's labor rate of $45.24/hr) (p)	$45.24
Cost Billing Clerk Review Measure Specifications (@clerk's labor rate of $38.00/hr) (q)	$38.00
Cost Clinician Review Measure Specifications (@physician's labor rate of $202.86/hr) (r)	$202.86
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@computer systems analyst's labor rate of $90.02/hr) (s)	$7.50
Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	$872.37
Total Annual Cost (u) = (c) * (t)	$101,710,684

As shown in Table 76, using the unchanged currently approved per respondent burden estimate, the increase in number of respondents from 81,981 to 116,591 results in a total difference of 314,363 hours (34,610 respondents × 9.083 hr/respondent) at a cost of $30,192,783 (34,610 respondents × $872.37/respondent).

TABLE 76—CHANGE IN ESTIMATED BURDEN FOR QUALITY PERFORMANCE CATEGORY: CLINICIANS (PARTICIPATING INDIVIDUALLY OR AS PART OF A GROUP) USING THE MIPS CQM/QCDR COLLECTION TYPE

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	744,633
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	1,058,996
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	314,363
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$71,517,901
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$101,710,684
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	$30,192,783

(5) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

This rule does not propose any new or revised collection of information requirements related to the eCQM collection type. However, we are proposing to adjust our currently approved burden estimates based on more recent data. The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Tables 69, 70, and 71, based on 2017 MIPS performance period data, we assume that 247,329 clinicians will elect to use the eCQM collection type; 47,455 clinicians are expected to submit eCQMs as individuals; and 4,332 groups and virtual groups are expected to submit eCQMs on behalf of the remaining 199,874 clinicians. This rule proposes to adjust the number of eCQM respondents from 51,861 to 51,787 (a decrease of 74) based on more recent data. We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to the CMS-designated clinical data warehouse or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to the CMS-designated clinical data warehouse.

We estimate that it will take no more than 2 hours at $90.02/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS submission. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at $109.36/hr for a practice administrator, 1 hour at $202.86/hr for a clinician, 1 hour at $90.02/hr for a computer systems analyst, 1 hour at $45.24/hr for

a LPN/medical assistant, and 1 hour at $38.00/hr for a billing clerk.

In aggregate we estimate an annual burden of 414,296 hours (8 hr × 51,787 groups and clinicians submitting as individuals) at a cost of $40,128,711 (51,787 responses × $774.88/response). Based on these assumptions, we have estimated in Table 77 the burden for these submissions.

TABLE 77—ESTIMATED BURDEN FOR QUALITY PERFORMANCE CATEGORY: CLINICIANS (SUBMITTING INDIVIDUALLY OR AS PART OF A GROUP) USING THE eCQM COLLECTION TYPE

	Burden estimate
# of clinicians submitting as individuals (a)	47,455
# of Groups submitting via EHR on behalf of individual clinicians (b)	4,332
# of Respondents (groups and clinicians submitting as individuals) (c) = (a) + (b)	51,787
Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)	2
# of Hours Practice Administrator Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Clinicians Review Measure Specifications (i)	1
Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)	8
Total Annual Hours (k) = (c) * (j)	414,296
Cost Per Respondent to Submit Quality Data (@computer systems analyst's labor rate of $90.02/hr) (l)	$180.04
Cost to Review Measure Specifications (@practice administrator's labor rate of $109.36/hr) (m)	$218.72
Cost to Review Measure Specifications (@computer systems analyst's labor rate of $90.02/hr) (n)	$90.02
Cost to Review Measure Specifications (@LPN's labor rate of $45.24/hr) (o)	$45.24
Cost to Review Measure Specifications (@clerk's labor rate of $38.00/hr) (p)	$38.00
Cost to D21Review Measure Specifications (@physician's labor rate of $202.86/hr) (q)	$202.86
Total Cost Per Respondent (r) = (l) + (m) + (n) + (o) + (p) + (q)	$774.88
Total Annual Cost (s) = (c) * (r)	$40,128,711

As shown in Table 78, using the unchanged currently approved per respondent burden estimate, the decrease in number of respondents from 51,861 to 51,787 results in a total difference of −592 hours (−74 respondents × 8 hr/respondent) at a cost of −$57,341 (−74 respondents × $774.88/respondent).

TABLE 78—CHANGE IN ESTIMATED BURDEN FOR QUALITY PERFORMANCE CATEGORY: CLINICIANS (PARTICIPATING INDIVIDUALLY OR AS PART OF A GROUP) USING THE eCQM COLLECTION TYPE

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	414,888
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	414,296
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−592
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$40,186,052
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$40,128,711
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$57,341

(6) Quality Data Submission via CMS Web Interface

This rule does not propose any new or revised collection of information requirements related to submission of quality data via the CMS Web Interface. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The proposed requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We assume that 104 groups will submit quality data via the CMS Web Interface based on the number of groups who completed 100 percent of reporting quality data via the Web Interface in the 2018 MIPS performance period. This is a decrease of 182 groups from the currently approved number of 286 groups provided in the CY 2019 PFS final rule (83 FR 60007) due to receipt of more current data. We estimate that 116,342 clinicians will submit as part of groups via this method, a decrease of 22,889 from our currently approved estimate of 139,231 clinicians.

The burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization's beneficiaries that is prepopulated in the CMS Web Interface. Our burden estimate for submission includes the time (61.67 hours) needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and submit the data (we will partially pre-populate the CMS Web Interface with claims data from their Medicare Part A and B beneficiaries). The patient data either can be manually entered, uploaded into

the CMS Web Interface via a standard file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate, we estimate an annual burden of 6,414 hours (104 groups × 61.67 hr) at a cost of $577,359 (6,414 hr × $90.02/hr). Based on the assumptions discussed in this section, Table 79 summarizes the burden for groups submitting to MIPS via the CMS Web Interface.

TABLE 79—ESTIMATED BURDEN FOR QUALITY DATA SUBMISSION VIA THE CMS WEB INTERFACE

	Burden estimate
# of Eligible Group Practices (a)	104
Total Annual Hours Per Group to Submit (b)	61.67
Total Annual Hours (c) = (a) * (b)	6,414
Cost Per Group to Report (@computer systems analyst's labor rate of $90.02/hr.) (d)	$5,551.53
Total Annual Cost (e) = (a) * (d)	$577,359

As shown in Table 80, using our unchanged currently approved per respondent burden estimate, the decrease in number of respondents results in a total adjustment of −11,224 hours (−182 respondents × 61.67 hr) at −$1,010,379 (−11,224 hr × $90.02/hr).

TABLE 80—CHANGE IN ESTIMATED BURDEN FOR QUALITY DATA SUBMISSION VIA THE CMS WEB INTERFACE

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	17,637
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	6,413
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−11,224
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$1,587,739
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$577,359
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$1,010,379

(7) Beneficiary Responses to CAHPS for MIPS Survey

This rule does not propose any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any MIPS survey vendor changes under that control number.

(8) Group Registration for CMS Web Interface

This rule does not propose any new or revised collection of information requirements related to the group registration for CMS Web Interface. However, we propose to adjust our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an on-line registration process. After first time registration, groups will only need to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 81, we estimate that the registration process for groups under MIPS involves approximately 0.25 hours at $90.02/hr for a computer systems analyst (or their equivalent) to register the group.

In this rule, we propose to adjust the number of respondents from 67 to 51 based on more recent data. We assume that approximately 51 groups will elect to use the CMS Web Interface for the first time during the 2020 MIPS performance period based on the number of new registrations received during the CY 2018 registration period; a decrease of 16 compared to the number of groups currently approved by OMB. The registration period for the CY 2019 MIPS performance period ends on June 30, 2019; assuming updated information is available, we will update our respondent estimates in the final rule. As shown in Table 81, we estimate a burden of 12.75 hours (51 new registrations × 0.25 hr/registration) at a cost of $1,148 (12.75 hr × $90.02/hr).

TABLE 81—ESTIMATED BURDEN FOR GROUP REGISTRATION FOR CMS WEB INTERFACE

	Burden estimate
Number of New Groups Registering for CMS Web Interface (a)	51
Annual Hours Per Group (b)	0.25

TABLE 81—ESTIMATED BURDEN FOR GROUP REGISTRATION FOR CMS WEB INTERFACE—Continued

	Burden estimate
Total Annual Hours (c) = (a) * (b)	12.75
Labor rate for a computer systems analyst (d)	$90.02/hr
Total Annual Cost for CMS Web Interface Group Registration (e) = (a) * (d)	$1,148

As shown in Table 82 using our unchanged currently approved per respondent burden estimates, the decrease in the number of groups registering to submit MIPS data via the CMS Web Interface results in an adjustment to the total time burden of 4 hours at a cost of $360 (−16 groups × 0.25 hr × $90.02/hr).

TABLE 82—CHANGE IN ESTIMATED BURDEN FOR GROUP REGISTRATIONS FOR THE CMS WEB INTERFACE

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	16.75
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	12.75
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−4
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$1,508
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$1,148
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$360

(9) Group Registration for CAHPS for MIPS Survey

This rule does not propose any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, are not making any MIPS survey vendor changes under that control number.

e. ICRs Regarding the Nomination of Quality Measures

The proposed requirements and burden associated with this data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Quality measures are selected annually through a call for quality measures under consideration, with a final list of quality measures being published in the **Federal Register** by November 1 of each year. Under section 1848(q)(2)(D)(ii) of the Act, the Secretary must solicit a ''Call for Quality Measures'' each year. Specifically, the Secretary must request that eligible clinician organizations and other relevant stakeholders identify and submit quality measures to be considered for selection in the annual list of MIPS quality measures, as well as updates to the measures. Under section 1848(q)(2)(D)(ii) of the Act, eligible clinician organizations are professional organizations as defined by nationally recognized specialty boards of certification or equivalent certification boards.

As we described in the CY 2017 Quality Payment Program final rule (81 FR 77137), we will accept quality measures submissions at any time, but only measures submitted during the timeframe provided by us through the pre-rulemaking process of each year will be considered for inclusion in the annual list of MIPS quality measures for the performance period beginning 2 years after the measure is submitted. This process is consistent with the pre-rulemaking process and the annual call for measures, which are further described at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rule-Making.html.*

To identify and submit a quality measure, eligible clinician organizations and other relevant stakeholders use a one-page online form that requests information on background, a gap analysis which includes evidence for the measure, reliability, validity, endorsement and a summary which includes how the proposed measure relates to the Quality Payment Program and the rationale for the measure. In addition, proposed measures must be accompanied by a completed Peer Review Journal Article form. As discussed in section III.K.3.c.(1)(d)(i) of this rule, we are proposing that beginning with the 2020 Call for Measures process, MIPS quality measure stewards would be required to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible. MIPS quality measure stewards would also be required to provide a rationale as to how they believe their measure correlates to other performance category measures and activities. We believe this would require approximately 0.6 hours at $109.36/hr for a practice administrator and 0.4 hours at $202.86 for a clinician to research existing measures or activities and provide a rationale for the linkage to the new measure. We also estimate it would require 0.3 hours at $109.36/hr for a practice administrator to make a strategic decision to nominate and submit a measure and 0.2 hours at $202.86/hr for clinician review time. We recognize there is additional burden on respondents associated with development of a new quality measure beyond the 1.5 hour estimate (0.6 hr + 0.4 hr + 0.3 hr + 0.2 hr) which only accounts for the time required for recordkeeping, reporting, and third-party disclosures associated with the policy; but we believe this estimate to be reasonable to nominate and submit a measure. The 1.5 hour estimate also assumes that submitters will have the necessary information to complete the nomination form readily available,

which we believe is a reasonable assumption. Additionally, some submitters familiar with the process or who are submitting multiple measures may require significantly less time, while other submitters may require more if the opposite is true. Representing an average across all respondents based on our review of the nomination process, the information required to complete the nomination form, and the criteria required to nominate the measure, we believe the total estimate of 1.5 hours per measure to be reasonable and appropriate.

As shown in Table 83, we estimate that 26 submissions will be received during the 2019 Call for Quality Measures based on the number of submissions received during the 2018 Call for Quality Measures process; a decrease of 114 compared to the number of submissions currently approved by OMB (140 submissions). The 2019 Call for Quality Measures process ends on June 3, 2019; assuming updated information is available, we will update our estimate in the final rule. In keeping with the focus on clinicians as the primary source for recommending new quality measures, we are using practice administrators and clinician time for our burden estimates.

Consistent with the CY 2017 Quality Payment Program final rule, we also estimate it will take 4 hours at $202.86/hr for a clinician (or equivalent) to complete the Peer Review Journal Article Form (81 FR 77153 through 77155). This assumes that measure information is available and testing is complete in order to have the necessary information to complete the form, which we believe is a reasonable assumption.

As shown in Table 83, in aggregate we estimate an annual burden of 143 hours (26 submissions × 5.5 hr/submission) at a cost of $26,821 {26 submissions × [(0.9 hr × $109.36/hr) + (4.6 hr × $202.86/hr}.

TABLE 83—ESTIMATED BURDEN FOR CALL FOR QUALITY MEASURES

	Burden estimate
# of New Quality Measures Submitted for Consideration (a)	26
# of Hours Per Practice Administrator to Identify, Propose, and Link Measure (b)	0.9
# of Hours Per Clinician to Identify and Link Measure (c)	0.6
# of Hours Per Clinician to Complete Peer Review Article Form (d)	4.00
Annual Hours Per Response (e) = (b) + (c) + (d)	5.50
Total Annual Hours (f) = (a) * (e)	143
Cost to Identify and Submit Measure (@practice administrator's labor rate of $109.36/hr.) (g)	$98.42
Cost to Identify Quality Measure and Complete Peer Review Article Form (@physician's labor rate of $202.86/hr.) (h)	$933.16
Total Annual Cost Per Respondent (i) = (g) + (h)	$1,031.58
Total Annual Cost (j) = (a) * (i)	$26,821

Independent of the decrease in the number of new quality measures submitted for consideration, the increase in burden per nominated measure results in a difference of 140 hours at a cost of $20,546 {140 submissions × [(0.6 hr × $109.36/hr) + (0.4 hr × $202.86/hr)]}. The decrease in the number of new quality measures submitted results in an adjustment of −627 hours at −$117,600 (−114 submissions × [(0.9 hr × $109.36/hr) + (4.6 hr × $202.86/hr)]). As shown in Table 84, in aggregate, the combine impact of these changes is −487 hours (140 − 627) at a cost of −$97,054 ($20,546 − $117,600).

TABLE 84—CHANGE IN ESTIMATED BURDEN FOR CALL FOR QUALITY MEASURES

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	630
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	143
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−487
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$123,875
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$26,821
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$97,054

f. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the 2020 MIPS performance period, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. We have worked to further align the Promoting Interoperability performance category with other MIPS performance categories. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for the both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting

the quality data submission will also support the Promoting Interoperability data submission process. In the 2019 and prior MIPS performance periods, individuals and groups submitting data for the quality performance category via a qualified registry or QCDR that did not also support reporting of data for the Promoting Interoperability or improvement activity performance categories would be required to submit data for these performance categories using an alternate submission type. The proposals discussed in sections III.K.3.g.(3)(a)(i) and III.K.3.g.(4)(a)(i) requiring qualified registries and QCDRs to support the reporting of quality, improvement activities, and Promoting Interoperability performance categories would alleviate this issue. Hence, the following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

This rule does not propose any new or revised collection of information requirements related to the submission of reweighting applications for Promoting Interoperability and other performance categories. However, we propose to adjust our currently approved burden estimates based on an updated analysis of individuals and groups who submitted reweighting applications for the 2017 MIPS performance period but likely would not submit such applications for the 2019 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability performance category in the following circumstances: Insufficient internet connectivity, extreme and uncontrollable circumstances, lack of control over the availability of CEHRT, clinicians who are in a small practice, and decertified EHR technology (81 FR 77240 through 77243 and 82 FR 53680 through 53686, respectively). In addition, in the CY 2018 Quality Payment Program final rule, we established that MIPS eligible clinicians and groups citing extreme and uncontrollable circumstances may also apply for a reweighting of the quality, cost, and/or improvement activities performance categories (82 FR 53783 through 53785). As discussed in section III.K.3.d.(2)(b)(ii)(A), we are proposing, beginning with the 2018 MIPS performance period and 2020 MIPS payment year, to reweight the performance categories for a MIPS eligible clinician who we determine has data for a performance category that are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician or its agents if we learn the relevant information prior to the beginning of the associated MIPS payment year. Because this is a new policy and we believe these occurrences are rare based on our experience, we are unable to estimate the number of clinicians, groups, or third party intermediaries that may contact us regarding a potential data issue. Similarly, the extent and source of documentation provided to us for each event may vary considerably. Therefore, we are not proposing any changes to our currently approved burden estimates as a result of this proposal. Respondents who apply for a reweighting for any of these performance categories have the option of applying for reweighting for the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications. Data on the number of reweighting applications submitted for the 2018 MIPS performance period is unavailable for this proposed rule. Assuming updated information is available for the final rule, we will assess the utility of using this information to estimate burden for future performance periods and will make a determination at that time as to the most appropriate data to use in estimating future burden.

Table 85 summarizes the burden for clinicians to apply for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship exception (including a significant hardship exception for small practices) or as a result of a decertification of an EHR. Based on the number of reweighting applications received for the 2017 MIPS performance period, we assume 6,025 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship (including clinicians in small practices) or EHR decertification. Of that amount we estimate that 3,365 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR. An additional 2,660 respondents will submit a request for reweighting the Promoting Interoperability performance category to zero percent as a small practice experiencing a significant hardship.

The application to request a reweighting to zero percent only for the Promoting Interoperability performance category is a short online form that requires identifying the type of hardship experienced or whether decertification of an EHR has occurred and a description of how the circumstances impair the clinician or group's ability to submit Promoting Interoperability data, as well as some proof of circumstances beyond the clinician's control. The application for reweighting of the quality, cost, Promoting Interoperability, and/or improvement activities performance categories due to extreme and uncontrollable circumstances requires the same information with the exception of there being only one option for the type of hardship experienced. We estimate it would take 0.25 hours at $90.02/hr for a computer system analyst to complete and submit the application. As shown in Table 85, we estimate an annual burden of 1,506.25 hours (6,025 applications × 0.25 hr/application) at a cost of $135,593 (1,506.25 hr × $90.02/hr).

TABLE 85—ESTIMATED BURDEN FOR REWEIGHTING APPLICATIONS FOR PROMOTING INTEROPERABILITY AND OTHER PERFORMANCE CATEGORIES

	Burden estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions (a)	3,365
# of Eligible Clinicians or Groups Applying Due to Significant Hardship for Small Practice (b)	2,660
Total Respondents Due to Hardships, Other Exceptions and Hardships for Small Practices (c)	6,025
Hours Per Applicant per application submission (d)	0.25
Total Annual Hours (e) = (a) * (c)	1,506.25
Labor Rate for a computer systems analyst (f)	$90.02/hr
Total Annual Cost (g) = (a) * (f)	$135,593

As shown in Table 86, using our unchanged currently approved per respondent burden estimate, the decreased number of respondents results in a total adjustment of −4 hours (−16 respondents × 0.25 hr/respondent) and −$360 (−16 respondents × $22.50/respondent).

TABLE 86—CHANGE IN ESTIMATED BURDEN FOR REWEIGHTING APPLICATIONS FOR PROMOTING INTEROPERABILITY AND OTHER PERFORMANCE CATEGORIES

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	1,510
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	1,506
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−4
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$135,953
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$135,593
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$360

(3) Submitting Promoting Interoperability Data

This rule does not propose any new or revised collection of information requirements related to the submission of Promoting Interoperability data. However, we propose to adjust our currently approved burden estimates based on updated estimates of QPs and MIPS APMs for 2019 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

A variety of organizations will submit Promoting Interoperability data on behalf of clinicians. Clinicians not participating in a MIPS APM may submit data as individuals or as part of a group. In the CY 2017 Quality Payment Program final rule (81 FR 77258 through 77260, 77262 through 77264) and CY 2019 PFS final rule (83 FR 59822–59823), we established that eligible clinicians in MIPS APMs (including the Shared Savings Program) may report for the Promoting Interoperability performance category as an APM Entity group, individuals, or a group.

As shown in Table 87, based on data from the 2017 MIPS performance period, we estimate that a total of 93,863 respondents consisting of 81,358 individual MIPS eligible clinicians and 12,505 groups and virtual groups will submit Promoting Interoperability data. Similar to the process shown in Table 71 for groups reporting via QCDR/MIPS CQM and eCQM collection types, we have adjusted the group reporting data from the 2017 MIPS performance period to account for virtual groups, as the option to submit data as a virtual group was not available until the 2018 MIPS performance period.

Because our respondent estimates are based on the number of actual submissions received for the Promoting Interoperability performance category, it is not necessary to account for policies adopted in the CY 2017 Quality Payment Program final rule regarding reweighting, which state that if a clinician submits Promoting Interoperability data, they will be scored and the performance category will not be reweighted (81 FR 77238–77245). This approach is identical to the approach we used in the CY 2019 PFS final rule (83 FR 60013 through 60014), however we failed to state the distinction in that final rule that we no longer need to make modifications to our estimates due to the use of actual MIPS submission data. As established in the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2019 PFS final rule, certain MIPS eligible clinicians will be eligible for automatic reweighting of the Promoting Interoperability performance category to zero percent, including MIPS eligible clinicians that are hospital-based, ambulatory surgical center-based, non-patient facing clinicians, physician assistants, nurse practitioners, clinician nurse specialists, certified registered nurse anesthetists, physical therapists; occupational therapists; qualified speech-language pathologists or qualified audiologist; clinical psychologists; and registered dieticians or nutrition professionals (81 FR 77238 through 77245, 82 FR 53680 through 53687, and 83 FR 59819 through 59820, respectively). For the same reasons discussed above regarding our use of data reflecting the actual number of Promoting Interoperability data submissions received, these estimates already account for the reweighting policies in the CY 2017 and CY 2018 Quality Payment Program final rules,

including exceptions for MIPS eligible clinicians who have experienced a significant hardship (including clinicians who are in small practices), as well as exceptions due to decertification of an EHR (81 FR 77240 through 77243 and 82 FR 53680 through 53686).

In section III.K.3.c.(4)(f)(iii), we propose to revise the definition of a hospital-based MIPS eligible clinician under § 414.1305 to include groups and virtual groups. We propose that, beginning with the 2022 MIPS payment year, a hospital-based MIPS eligible clinician under § 414.1305 means an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician during the MIPS determination period. We also propose to revise § 414.1380(c)(2)(iii) to specify that for the Promoting Interoperability performance category to be reweighted for a MIPS eligible clinician who elects to participate in MIPS as part of a group or virtual group, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting, or the group or virtual group must meet the proposed revised definition of a hospital-based MIPS eligible clinician or the definition of a non-patient facing MIPS eligible clinician as defined in § 414.1305. We believe these proposals could result in a decrease in the number of data submissions for the Promoting Interoperability performance category, but we do not currently have the data necessary to determine how many groups would elect to forego submission. As additional information becomes available in future years, we will revisit the impact of this policy and adjust our burden estimates accordingly.

As discussed in section III.K.3.c.(4)(d)(i)(B) of this rule, we propose to allow clinicians to satisfy the optional bonus Query of PDMP measure by submitting a ''yes/no'' attestation, rather than reporting a numerator and denominator. In the CY 2019 PFS final rule, we updated our burden assumptions from 3 hours to 2.67 hours to reflect the change from 5 base measures, 9 performance measures, and 4 bonus measures to the reporting of 4 base measures (83 FR 60013 through 60014). Due to a lack of data regarding the number of health care providers who would submit data for bonus Promoting Interoperability measures, we have consistently been unable to estimate burden related to the reporting of bonus measures and are therefore unable to account for any change in burden due to the proposed change to a ''yes/no'' attestation for the Query of PDMP measure. If we have better data in the future, we may reassess our burden assumptions and whether we can reasonably quantify the burden associated with the reporting of bonus measures.

We assume that MIPS eligible clinicians scored under the APM scoring standard, as described in section III.K.3.c.(5)of this rule, would continue to submit Promoting Interoperability data the same as in 2017. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. In the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822–59823). Burden estimates for this proposed rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TIN as ACO participants. As we receive updated information which reflects the actual number of Promoting Interoperability data submissions submitted by Shared Savings Program ACO participants, we will update our burden estimates accordingly.

TABLE 87—ESTIMATED NUMBER OF RESPONDENTS TO SUBMIT PROMOTING INTEROPERABILITY PERFORMANCE DATA ON BEHALF OF CLINICIANS

	Number of respondents
Number of individual clinicians to submit Promoting Interoperability (a)	81,358
Number of groups to submit Promoting Interoperability (b)	12,569
Subtract: Number of groups to submit Promoting Interoperability on behalf of clinicians in 2020 MIPS performance period that will submit as virtual groups (c)	80
Add in: Number of virtual groups to submit Promoting Interoperability on behalf of clinicians in 2020 MIPS performance period (d)	16
Number of groups to submit Promoting Interoperability on behalf of clinicians in 2020 MIPS performance period (e) = (b) − (c) + (d)	12,505
Total Respondents in 2020 MIPS performance period (CY 2020 Proposed Rule) (f) = (a) + (e)	93,863
*Total Respondents in 2019 MIPS performance period (CY 2019 Final Rule) (g)	93,869
Difference between CY 2020 Proposed Rule and CY 2019 Final Rule (h) = (f) − (g)	−6

We estimate the time required for an individual or group to submit Promoting Interoperability data to be 2.67 hours. As previously discussed, beginning with the 2021 performance period and for future years, we propose to require that QCDRs and qualified registries support three performance categories: Quality, improvement activities, and Promoting Interoperability. Based on our review of 2019 qualified registries and QCDRs, we have determined that 70 percent and 72 percent of these vendors, respectively, already support reporting for these performance categories. For clinicians who currently utilize qualified registries or QCDRs that have not previously offered the ability to report Promoting Interoperability or improvement activity data, we believe this would result in a reduction of burden as it would simplify MIPS reporting. In order to estimate the impact on reporting burden, we would need to correlate the specific individual clinicians and groups who submitted quality performance category data via the MIPS CQM/QCDR collection type that are required to report data for both the quality and Promoting Interoperability performance categories

with the specific qualified registries or QCDRs that are affected by this proposal. Currently, we do not have the necessary information to perform this correlation and are therefore unable to estimate the resulting impact on burden. If data becomes available in the future which enables us to perform this analysis, we will update our burden estimates at that time.

As shown in Table 88, the total burden estimate for submission of data on the specified Promoting Interoperability objectives and measures is estimated to be 250,301 hours (93,853 respondents × 2.67 incremental hours for a computer analyst's time above and beyond the clinician, practice manager, and computer system's analyst time required to submit quality data) at a cost of $22,532,126 (250,301 hr × $90.02/hr).

TABLE 88—ESTIMATED BURDEN FOR PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY DATA SUBMISSION

	Burden estimate
Number of individual clinicians to submit Promoting Interoperability (a)	81,358
Number of groups to submit Promoting Interoperability (b)	12,505
Total (c) = (a) + (b)	93,863
Total Annual Hours Per Respondent (b)	2.67
Total Annual Hours (c) = (a) * (b)	250,301
Labor rate for a computer systems analyst to submit Promoting Interoperability data (d)	$90.02/hr
Total Annual Cost (e) = (a) * (d)	$22,532,126

As shown in Table 89, using our unchanged currently approved per respondent burden estimate, the decrease in number of respondents results in a total adjustment of −16 hours (−6 respondents × 2.67 hr/respondent) at a cost of −$1,440 (−16 hr × $90.02/hr).

TABLE 89—CHANGE IN ESTIMATED BURDEN FOR PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY DATA SUBMISSION

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	250,317
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	250,301
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−16
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$22,533,566
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$22,532,126
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$1,440

g. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule does not propose any new or revised collection of information requirements related to the nomination of Promoting Interoperability measures. However, we propose to adjusted our currently approved burden estimates based on data from the 2018 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Consistent with our requests for stakeholder input on quality measures and improvement activities, we also request potential measures for the Promoting Interoperability performance category that measure patient outcomes, emphasize patient safety, support improvement activities and the quality performance category, and build on the advanced use of CEHRT using 2015 Edition standards and certification criteria. Promoting Interoperability measures may be submitted via the Call for Promoting Interoperability Performance Category Measures Submission Form that includes the measure description, measure type (if applicable), reporting requirement, and CEHRT functionality used (if applicable). This rule does not propose any changes to that form.

We estimate 28 proposals will be submitted for new Promoting Interoperability measures, based on the number of proposals submitted during the CY 2018 nomination period. This is a decrease of 19 from the estimate currently approved by OMB (47 proposals) under the aforementioned control number. The 2019 Call for Promoting Interoperability Measures process ends on July 1, 2019; assuming updated information is available, we will update our estimate in the final rule. We estimate it will take 0.5 hours per organization to submit an activity to us, consisting of 0.3 hours at $109.36/hr for a practice administrator to make a strategic decision to nominate that activity and submit an activity to us via email and 0.2 hours at $202.86/hr for a clinician to review the nomination. As shown in Table 90, we estimate an annual burden of 14 hours (28 proposals × 0.5 hr/response) at a cost of $2,055 (28 × [(0.3 hr × $109.36/hr) + (0.2 hr × $202.86/hr)].

TABLE 90—ESTIMATED BURDEN FOR CALL FOR PROMOTING INTEROPERABILITY MEASURES

	Burden estimate
# of Promoting Interoperability Measure Nominations (a)	28
# of Hours Per Practice Administrator to Identify and Propose Measure (b)	0.30
# of Hours Per Clinician to Identify Measure (c)	0.20
Annual Hours Per Respondent (d) = (b) + (c)	0.50
Total Annual Hours (e) = (a) * (d)	14
Cost to Identify and Submit Measure (@practice administrator's labor rate of $109.36/hr) (f)	$32.81
Cost to Identify Improvement Measure (@physician's labor rate of $202.86/hr) (g)	$40.57
Total Annual Cost Per Respondent (h) = (f) + (g)	$73.38
Total Annual Cost (i) = (a) * (h)	$2,055

As shown in Table 91, using our unchanged currently approved per respondent burden estimate, the decrease in the number of respondents results in an adjustment of −9.5 hours at a cost of −$1,394 (−19 respondents × 0.5 hr × $73.38 per respondent).

TABLE 91—CHANGE IN ESTIMATED BURDEN FOR CALL FOR PROMOTING INTEROPERABILITY MEASURES

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	23.5
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	14
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−9.5
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$3,449
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$2.055
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$1,394

h. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

This rule does not propose any new or revised collection of information requirements related to the submission of Improvement Activities data. However, we propose to adjust our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As discussed in section III.K.3.c.(3)(d)(iii) of this rule, we are proposing, beginning with the 2020 MIPS performance period and for future years, to increase the minimum number of clinicians in a group or virtual group who are required to perform an improvement activity from at least one clinician to at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable; and these NPIs must perform the same activity for the same continuous 90 days in the performance period. Because eligible clinicians are able to attest to improvement activity measures at the group level, there is no impact on reporting burden as a result of this proposal.

As previously discussed, beginning with the 2021 performance period and for future years, we are proposing to require QCDRs and qualified registries to support three performance categories: Quality, improvement activities, and Promoting Interoperability; our discussion of burden for submitting Promoting Interoperability data in section IV.B.7.(f).(3) noted our inability to account for the reduction in burden associated with the proposal. Consistent with our decision not to change our per respondent burden estimate to submit Promoting Interoperability data, we are not changing our per respondent burden estimate to submit improvement activity data as a result of this proposal.

Furthermore, as discussed in section III.K.3.c.(3)(e)(i) of this rule, we are proposing to establish removal factors to consider when proposing to remove improvement activities from the Inventory. However, we do not believe this would affect reporting burden, because respondents would still be required submit the same number of improvement activities and this proposal would not require respondents to submit any additional information. We are also proposing for the CY 2020 performance period and future years to: Add 2 new improvement activities, modify 7 existing improvement activities, and remove 15 existing improvement activities. Because MIPS eligible clinicians are still required to submit the same number of activities, we do not expect these proposals to affect our currently approved burden estimates. In addition, in order for an eligible clinician or group to receive credit for being a patient-centered medical home or comparable specialty practice, the eligible clinician or group must attest in the same manner as any other improvement activity.

While our proposals do not add additional reporting burden, we have adjusted our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

The CY 2018 Quality Payment Program final rule provides: (1) That for activities that are performed for at least a continuous 90 days during the performance period, MIPS eligible clinicians must submit a ''yes'' response

for activities within the Improvement Activities Inventory (82 FR 53651); (2) that the term ''recognized'' is accepted as equivalent to the term ''certified'' when referring to the requirements for a patient-centered medical home to receive full credit for the improvement activities performance category for MIPS (82 FR 53649); and (3) that for the 2020 MIPS payment year and future years, to receive full credit as a certified or recognized patient-centered medical home or comparable specialty practice, at least 50 percent of the practice sites within the TIN must be recognized as a patient-centered medical home or comparable specialty practice (82 FR 53655).

In the CY 2017 Quality Payment Program final rule, we described how we determine MIPS APM scores (81 FR 77185). We compare the requirements of the specific MIPS APM with the list of activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77817 through 77831). If, based on our assessment, the MIPS APM does not receive the maximum improvement activities performance category score, then the APM Entity can submit additional improvement activities. We anticipate that MIPS APMs in the 2019 MIPS performance period will not need to submit additional improvement activities as the models will already meet the maximum improvement activities performance category score.

A variety of organizations and in some cases, individual clinicians, will submit improvement activity performance category data. For clinicians who are not part of APMs, we assume that clinicians submitting quality data as part of a group through direct, log in and upload submission types, and CMS Web Interface will also submit improvement activities data. In the 2019 and prior MIPS performance periods, individuals and groups submitting data for the quality performance category through a MIPS CQM or QCDR that did not also support reporting of data for the Promoting Interoperability or improvement activity performance categories would be required to submit data for these performance categories using an alternate submission type, the proposals discussed in sections III.K.3.g.(3)(a)(i) and III.K.3.g.(4)(a)(i) of this rule requiring qualified registries and QCDRs to support the reporting of quality, improvement activities, and Promoting Interoperability performance categories would help to alleviate this issue. As finalized in the CY 2017 Quality Payment Program final rule (81 FR 77264), APM Entities only need to report improvement activities data if the CMS-assigned improvement activities score is below the maximum improvement activities score. Our CY 2018 Quality Payment Program final rule burden estimates assumed that all APM Entities will receive the maximum CMS-assigned improvement activities score (82 FR 53921 through 53922).

As represented in Table 92, based on 2017 MIPS performance period data, we estimate that 102,754 clinicians will submit improvement activities as individuals during the 2020 MIPS performance period and 15,761 groups will submit improvement activities on behalf of clinicians. Similar to the process shown in Table 87 for groups submitting Promoting Interoperability data, we have adjusted the group reporting data from the 2017 MIPS performance period to account for virtual groups, as the option to submit data as a virtual group was not available until the 2018 MIPS performance period. In addition, as previously discussed regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we have updated our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or members of an APM in the 2017 MIPS performance period but will be in the 2019 MIPS performance period, and would therefore not be required to submit improvement activities data.

Our burden estimates assume there will be no improvement activities burden for MIPS APM participants. We will assign the improvement activities performance category score at the APM Entity level. We also assume that the MIPS APM models for the 2020 MIPS performance period will qualify for the maximum improvement activities performance category score and, as such, APM Entities will not submit any additional improvement activities.

TABLE 92—ESTIMATED NUMBERS OF ORGANIZATIONS SUBMITTING IMPROVEMENT ACTIVITIES PERFORMANCE CATEGORY DATA ON BEHALF OF CLINICIANS

	Count
# of clinicians to participate in improvement activities data submission as individuals during the 2020 MIPS performance period (a)	102,754
# of Groups to submit improvement activities on behalf of clinicians during the 2020 MIPS performance period (b)	15,825
Subtract: # of groups to submit improvement activities on behalf of clinicians in 2020 MIPS performance period that will submit as virtual groups (c)	80
Add in: # of Virtual Groups to submit improvement activities on behalf of clinicians during the 2020 MIPS performance period (d)	16
# of Groups and Virtual Groups to submit improvement activities on behalf of clinicians during the 2020 MIPS performance period (e)	15,761
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2020 MIPS performance period (CY 2020 Proposed Rule) (f) = (a) + (b) + (e)	118,515
* Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (CY 2019 Final Rule) (g)	136,004
Difference between CY 2020 Proposed Rule and CY 2019 Final Rule (h) = (g) − (f)	−17,489

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

Consistent with the CY 2019 PFS final rule, we estimate that the per response time required per individual or group is 5 minutes at $90.02/hr for a computer system analyst to submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set

of authenticated credentials (83 FR 60016).

As shown in Table 93, we estimate an annual burden of 9,876 hours (118,515 responses × 5 minutes/60) at a cost of $889,060 (9,876.25 hr × $90.02/hr).

TABLE 93—ESTIMATED BURDEN FOR IMPROVEMENT ACTIVITIES SUBMISSION

	Burden estimate
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (a).	118,515.
Total Annual Hours Per Respondent (b)	5 minutes.
Total Annual Hours (c)	9,876.25.
Labor rate for a computer systems analyst to submit improvement activities (d)	$90.02/hr.
Total Annual Cost (e) = (a) * (d)	$889,060.

As shown in Table 94, using our unchanged currently approved per respondent burden estimate, the decrease in the number of respondents results in an adjustment of −1,457 hours (−17,489 responses × 5 minutes/60) at a cost of −$131,197 (−1,457 hr $90.02/hr).

TABLE 94—CHANGE IN ESTIMATED BURDEN FOR IMPROVEMENT ACTIVITIES SUBMISSION

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	11,334
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	9,876
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−1,457
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$1,020,257
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$889,060
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$131,197

i. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

This rule does not include any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the nomination of improvement activities. However, we have adjusted our currently approved burden estimates based on data from the 2018 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2018 Quality Payment Program final rule, for the 2018 and future MIPS performance periods, stakeholders were provided an opportunity to propose new activities formally via the Annual Call for Activities nomination form that was posted on the CMS website (82 FR 53657). The 2018 Annual Call for Activities lasted from February 1, 2018 through March 1, 2018, during which we received 128 nominations of activities which were evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2019 Improvement Activities Inventory. Based on the number of improvement activity nominations received in the CY 2018 Annual Call for Activities, we estimate that we will receive 128 nominations for the 2020 Annual Call for Activities, which is an increase of 3 from the 125 nominations currently approved by OMB. The 2019 Annual Call for Activities ends on July 1, 2019; assuming updated information is available, we will update our estimate in the final rule.

We estimate 1.2 hours at $109.36/hr for a practice administrator or equivalent to make a strategic decision to nominate and submit that activity and 0.8 hours at $202.86/hr for a clinician's review. As shown in Table 95, we estimate an annual burden of 256 hours (128 nominations × 2 hr/nomination) at a cost of $37,571 (128 × [(1.2 hr × $109.36/hr) + (0.8 hr × $202.86/hr)]).

TABLE 95—ESTIMATED BURDEN FOR NOMINATION OF IMPROVEMENT ACTIVITIES

	Burden estimate
# of Nominations of New Improvement Activities (a)	128
# of Hours Per Practice Administrator to Identify and Propose Activity (b)	1.2
# of Hours Per Clinician to Identify Activity (c)	0.8
Annual Hours Per Respondent (d) = (b) + (c)	2
Total Annual Hours (e) = (a) * (d)	256
Cost to Identify and Submit Activity (@practice administrator's labor rate of $109.36/hr) (f)	$131.23
Cost to Identify Improvement Activity (@physician's labor rate of $202.86/hr) (g)	$162.29

TABLE 95—ESTIMATED BURDEN FOR NOMINATION OF IMPROVEMENT ACTIVITIES—Continued

	Burden estimate
Total Annual Cost Per Respondent (h) = (f) + (g)	$293.52
Total Annual Cost (i) = (a) * (h)	$37,571

As shown in Table 96, using our unchanged currently approved per respondent burden estimate, the increase in the number of nominations results in an adjustment of 6 hours at a cost of $881 {3 activities × [(1.2 hr × $109.36/hr) + (0.8 hr × $202.86/hr)]}.

TABLE 96—CHANGE IN ESTIMATED BURDEN FOR NOMINATION OF IMPROVEMENT ACTIVITIES

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	250
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	256
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	6
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$36,690
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$37,571
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	$881

j. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy, including for the 10 episode-based measures we are proposing to include in the cost performance category as discussed in section III.K.3.c.(2)(b)(iii) of this rule. Moreover, the provisions of this proposed rule do not result in the need to add or revise or delete any claims data fields. Therefore, we are not proposing any new or revised collection of information requirements or burden for MIPS eligible clinicians resulting from the cost performance category.

k. Quality Payment Program ICRs Regarding Partial QP Elections (§§ 414.1310(b)(ii) and 414.1430)

This rule does not propose any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we propose to adjust our currently approved burden estimates based on updated projections for the 2020 MIPS performance period. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section III.K.4.d.(2)(b), we propose that, beginning for eligible clinicians who become Partial QPs in the 2020 MIPS performance period, Partial QP status will only apply to the TIN/NPI combination through which Partial QP status is attained. Any Partial QP election will only apply to TIN/NPI combination through which Partial QP status is attained so that an eligible clinician who is a Partial QP for only one TIN/NPI combination may still report under MIPS for other TIN/NPI combinations. This proposal will potentially increase the total number of Partial QP elections to participate in MIPS if clinicians achieve Partial QP status under multiple TIN/NPI combinations.

As shown in Table 97, based on our predictive QP analysis for the 2020 QP performance period, which accounts for the increase in QP and Partial QP thresholds, we estimate that 12 APM Entities and 2,010 eligible clinicians will make the election to participate as a Partial QP in MIPS representing approximately 15,500 Partial QPs, an increase of 1,941 from the 81 elections currently approved by OMB under the aforementioned control number. We estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we estimate an annual burden of 505.5 hours (2,022 respondents × .25 hr/election) at a cost of $45,080 (505.5 hours × $90.02/hr).

TABLE 97—ESTIMATED BURDEN FOR PARTIAL QP ELECTION

	Burden estimate
# of respondents making Partial QP election (6 APM Entities, 75 eligible clinicians) (a)	2,022
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a) * (b)	505.5
Labor rate for computer systems analyst (d)	$90.02/hr
Total Annual Cost (d) = (c) * (d)	$45,505

As shown in Table 98, using our unchanged currently approved per respondent burden estimate, the increase in the number of Partial QP elections results in an adjustment of 485.25 (1,941 elections × 0.25hr) at a cost of $43,682 (485.25 hr × $90.02/hr).

TABLE 98—CHANGE IN ESTIMATED BURDEN FOR PARTIAL QP ELECTION

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	20.25
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	505.5
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	485.25
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$1,823
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$45,505
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	$43,682

l. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1440) and Eligible Clinician Initiated Process (§ 414.1445)

As indicated below, the proposed requirements and burden discussed under this section will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

(1) Payer Initiated Process (§ 414.1440)

This rule does not propose any new or revised collection of information requirements related to the Payer-Initiated Process. However, we propose to adjust our currently approved burden estimates based on updated projections for the 2020 MIPS performance period. As mentioned above, the adjusted burden will be submitted to OMB for approval.

As shown in Table 99, based on the actual number of requests received in the 2018 QP performance period, we estimate that in CY 2020 for the 2021 QP performance period 110 payer-initiated requests for Other Payer Advanced APM determinations will be submitted (10 Medicaid payers, 50 Medicare Advantage Organizations, and 50 remaining other payers), a decrease of 105 from the 215 total requests currently approved by OMB under the aforementioned control number. We estimate it will take 10 hours at $90.02/hr for a computer system analyst per arrangement submission. In aggregate, we estimate an annual burden of 1,100 hours (110 submissions × 10 hr/submission) at a cost of $99,022 (1,100 hr × $90.02/hr).

TABLE 99—ESTIMATED BURDEN FOR OTHER PAYER ADVANCED APM IDENTIFICATION DETERMINATIONS: PAYER-INITIATED PROCESS

	Burden estimate
# of other payer payment arrangements (15 Medicaid, 100 Medicare Advantage Organizations, 100 remaining other payers) (a)	110
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	1,100
Labor rate for a computer systems analyst (d)	$90.02/hr
Total Annual Cost for Other Payer Advanced APM determinations (e) = (a) * (d)	$99,022

As shown in Table 100, using our unchanged currently approved per respondent burden estimate, the decrease in the number of payer-initiated requests from 215 to 110 results in an adjustment of −1,050 hours (−105 requests × 10 hr) at a cost of −$94,521 (−1,050 hr × $90.02/hr).

TABLE 100—CHANGE IN ESTIMATED BURDEN FOR OTHER PAYER ADVANCED APM IDENTIFICATION DETERMINATIONS: PAYER-INITIATED PROCESS

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	2,150
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	1,100
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−1,050
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$193,543
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$99,022
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$94,521

(2) Eligible Clinician Initiated Process (§ 414.1445)

This rule does not propose any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to under that control number.

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule does not propose any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. However, we propose to adjust our currently approved burden estimates based on updated projections for the 2020 MIPS performance period. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

The CY 2017 Quality Payment Program final rule provided that either APM Entities or individual eligible clinicians must submit by a date and in a manner determined by us: (1) Payment arrangement information necessary to assess whether each other payer arrangement is an Other Payer Advanced APM, including information on financial risk arrangements, use of CEHRT, and payment tied to quality measures; (2) for each payment arrangement, the amounts of payments for services furnished through the arrangement, the total payments from the payer, the numbers of patients furnished any service through the arrangement (that is, patients for whom the eligible clinician is at risk if actual expenditures exceed expected expenditures), and (3) the total number of patients furnished any service through the arrangement (81 FR 77480). The rule also specified that if we do not receive sufficient information to complete our evaluation of another payer arrangement and to make QP determinations for an eligible clinician using the All-Payer Combination Option, we will not assess the eligible clinicians under the All-Payer Combination Option (81 FR 77480).

In the CY 2018 Quality Payment Program final rule, we explained that in order for us to make QP determinations under the All-Payer Combination Option using either the payment amount or patient count method, we will need to receive all of the payment amount and patient count information: (1) Attributable to the eligible clinician or APM Entity through every Other Payer Advanced APM; and (2) for all other payments or patients, except from excluded payers, made or attributed to the eligible clinician during the QP performance period (82 FR 53885). We also finalized that eligible clinicians and APM Entities will not need to submit Medicare payment or patient information for QP determinations under the All-Payer Combination Option (82 FR 53885).

The CY 2018 Quality Payment Program final rule also noted that we will need this payment amount and patient count information for the periods January 1 through March 31, January 1 through June 30, and January 1 through August 31 (82 FR 53885). We noted that the timing may be challenging for APM Entities or eligible clinicians to submit information for the August 31 snapshot date. If we receive information for either the March 31 or June 30 snapshots, but not the August 31 snapshot, we will use that information to make QP determinations under the All-Payer Combination Option. This payment amount and patient count information is to be submitted in a way that allows us to distinguish information from January 1 through March 31, January 1 through June 30, and January 1 through August 31 so that we can make QP determinations based on the two finalized snapshot dates (82 FR 30203 through 30204).

The CY 2018 Quality Payment Program final rule specified that APM Entities or eligible clinicians must submit all of the required information about the Other Payer Advanced APMs in which they participate, including those for which there is a pending request for an Other Payer Advanced APM determination, as well as the payment amount and patient count information sufficient for us to make QP determinations by December 1 of the calendar year that is 2 years to prior to the payment year, which we refer to as the QP Determination Submission Deadline (82 FR 53886).

In the CY 2019 PFS final rule, we finalized the addition of a third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing rights to the TIN participate in a single (the same) APM Entity (83 FR 59936). This option will therefore be available to all TINs participating in Full TIN APMs, such as the Medicare Shared Savings Program. It will also be available to any other TIN for which all clinicians who have reassigned billing rights to the TIN are participating in a single APM Entity. To make QP determinations under the All-Payer Combination Option at the TIN level as finalized using either the payment amount or patient count method, we will need to receive, by December 1 of the calendar year that is 2 years to prior to the payment year, all of the payment amount and patient count information: (1) Attributable to the eligible clinician, TIN, or APM Entity through every Other Payer Advanced APM; and (2) for all other payments or patients, except from excluded payers, made or attributed to the eligible clinician(s) during the QP performance period for the periods January 1 through March 31, January 1 through June 30, and January 1 through August 31.

As shown in Table 101, we assume that 20 APM Entities, 448 TINs, and 83 eligible clinicians will submit data for QP determinations under the All-Payer Combination Option in 2019, and increase of 242 from the 309 total submissions currently approved by OMB under the aforementioned control number. We estimate it will take the APM Entity representative, TIN representative, or eligible clinician 5 hours at $109.36/hr for a practice administrator to complete this submission. In aggregate, we estimate an annual burden of 2,755 hours (551 respondents × 5 hr) at a cost of $301,287 (2,755 hr × $109.36/hr).

TABLE 101—ESTIMATED BURDEN FOR THE SUBMISSION OF DATA FOR ALL-PAYER QP DETERMINATIONS

	Burden estimate
# of APM Entities submitting data for All-Payer QP Determinations (a)	20
# of TINs submitting data for All-Payer QP Determinations (b)	448
# of eligible submitting data for All-Payer QP Determinations (c)	83
Hours Per respondent QP Determinations (d)	5
Total Hours (g) = [(a) *(d)] + [(b) * (d)] + [(c) * (d)]	2,755

TABLE 101—ESTIMATED BURDEN FOR THE SUBMISSION OF DATA FOR ALL-PAYER QP DETERMINATIONS—Continued

	Burden estimate
Labor rate for a Practice Administrator (h)	$109.36/hr
Total Annual Cost for Submission of Data for All-Payer QP Determinations (i) = (g) * (h)	$301,287

As shown in Table 102, using our unchanged currently approved per respondent burden estimate, the increase in the number of data submissions from 309 to 551 results in an adjustment of 1,210 hours (242 requests × 5 hr) at a cost of $132,326 (1,210 hr × $109.36/hr).

TABLE 102—CHANGE IN ESTIMATED BURDEN FOR THE SUBMISSION OF DATA FOR ALL-PAYER QP DETERMINATIONS

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	1,545
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	2,755
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	1,210
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$168,961
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$301,287
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	$132,326

m. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule does not propose any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. However, we propose to adjust our currently approved burden estimates based on data from the 2018 MIPS performance period. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). Subject to renewal, the control number is currently set to expire on January 31, 2022. It was last approved on January 29, 2019, and remains active.

We estimate that 10 percent of the total clinicians and groups who will voluntarily participate in MIPS will also elect not to participate in public reporting. This results in a total of 11,516 (0.10 × 115,163 voluntary MIPS participants) clinicians and groups, a decrease of 101 from the currently approved estimate of 11,617. This decrease is due to the availability of updated estimates of QPs and APM participation for the 2020 performance period. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS final rule but have elected to submit data to MIPS. As discussed in the Regulatory Impact Analysis section of the CY 2019 PFS final rule, we estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

In section III.K.3.h.(6) of this rule, we propose to publicly report (1) an indicator if a MIPS eligible clinician is scored using facility-based measurement beginning with Year 3 (2019 performance information available for public reporting in late 2020) and (2) aggregate MIPS data beginning with Year 2 (2018 performance information available for public reporting in late 2019). We believe it is possible that the percentage of voluntary participants electing not to participate in public reporting may change as a result of this proposals, we lack the ability to predict the behavior of clinicians' response to this proposal. Table 103 shows that for these voluntary participants, we estimate it will take 0.25 hours at $90.02/hr for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 2,879 hours (11,516 requests × 0.25 hr/request) at a cost of $259,168 (2,879 hr × $90.02/hr).

TABLE 103—ESTIMATED BURDEN FOR VOLUNTARY PARTICIPANTS TO ELECT OPT OUT OF PERFORMANCE DATA DISPLAY ON PHYSICIAN COMPARE

	Burden estimate
# of Voluntary Participants Opting Out of Physician Compare (a)	11,516
Total Annual Hours per Opt-out Requester (b)	0.25
Total Annual Hours for Opt-out Requester (c) = (a) * (b)	2,879
Labor rate for a computer systems analyst (d)	$90.02/hr
Total Annual Cost for Opt-out Requests (e) = (a) * (d)	$259,168

As shown in Table 104, using our unchanged currently approved per respondent burden estimate, the decrease in the number of opt outs by voluntary participants from 11,617 to 11,516 results in an adjustment of 25.25 hours (101 requests × 0.25 hr) at a cost of −$2,273 (25.25 hr × $90.02/hr).

TABLE 104—CHANGE IN ESTIMATED BURDEN FOR VOLUNTARY PARTICIPANTS TO ELECT OPT OUT OF PERFORMANCE DATA DISPLAY ON PHYSICIAN COMPARE

	Burden estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	2,904.25
Total Annual Hours for Respondents in CY 2020 Proposed Rule (b)	2,879.00
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (c) = (b) − (a)	−25.25
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	$261,441
Total Annual Cost for Respondents in CY 2020 Proposed Rule (e)	$259,168
Difference Between CY 2020 Proposed Rule and CY 2019 Final Rule (f) = (e) − (d)	−$2,273

n. Summary of Annual Quality Payment Program Burden Estimates

Table 105 summarizes this proposed rule's burden estimates for the Quality Payment Program. To understand the burden implications of the policies proposed in this rule, we have also estimated a baseline burden of continuing the policies and information collections set forth in the CY 2019 PFS final rule into the 2020 MIPS performance period. Our estimated baseline burden estimates reflect the availability of more accurate data to account for all potential respondents and submissions across all the performance categories, more accurately reflect the exclusion of QPs from all MIPS performance categories, and better estimate the number of third-parties likely to self-nominate as qualified registries and QCDRs, as well as the number of measures submitted per QCDR. The baseline burden estimate is 3,312,523 hours at a cost of $315,630,967. This baseline burden estimate is lower than the burden approved for information collection related to the CY 2019 PFS final rule due to updated data and assumptions. The difference of 1,619 hours and $147,173 between this baseline estimate and the total burden shown in Tables 105 and 107 is the burden associated with the proposals to require QCDRs to submit measure testing data to require proposed quality measures and QCDR measures to be linked to existing cost measures, improvement activities, and MIPS Value Pathways, if possible at the time of self-nomination and to describe the quality improvements services they intend to support.

*Currently approved under OMB control number 0938-1314 (CMS-10621).

Table 106 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this proposed rule. We have divided the reasons for our change in burden into those related to new policies and those related to adjustments in burden from continued Quality Payment Program Year 3 policies that reflect updated data and revised methods.

BILLING CODE 4120–01–P

TABLE 106: Reasons for Change in Burden Compared to the Currently Approved CY 2019 Information Collection Burdens

QPP Table	Changes in burden due to CY 2020 Proposed Rule policies	Adjustments in burden from continued CY 2019 Final Rule policies due to revised methods or updated data
Table 65: Qualified Registry Self-Nomination	None.	Increase in number of respondents due to availability of data indicating number of existing QCDRs which would not meet previously finalized QCDR requirements effective beginning in 2020 performance period.
Table 67: QCDR Self-Nomination	*Increase of 11.5 hours (1 hour per proposed measure) per QCDR self-nomination due to proposed policy to require QCDRs to provide a linkage between proposed QCDR measures and related cost measures, improvement activities, and MIPS Value Pathways.* *Increase of 5.75 hours (0.5 hour per proposed measure) per QCDR nomination due to proposed policy to require QCDRs to provide measure testing data at the time of self-nomination* *Increase of 0.25 hour per QCDR to describe the quality improvements services they intend to support as part of their self-nomination.*	Decrease in number of respondents due to availability of data indicating number of existing QCDRs which would not meet previously finalized QCDR requirements effective beginning in 2020 performance period. Increase in burden per respondent due to revised estimate of average number of measures per QCDR for which information is submitted.
Table 73: Quality Performance Category Medicare Part B Claims Collection Type	None.	Decrease in number of respondents due to use of updated data incorporating limitation on submission of quality data via Medicare Part B claims to small practices. Decrease in number of respondents due to updated estimates for the number of clinicians projected to be QPs or participating in APMs during the 2020 MIPS performance period.
Table 75: Quality Performance Category QCDR/ MIPS CQM Collection Type	None.	Increase in number of respondents due to use of updated data incorporating limitation on submission of quality data via Medicare Part B claims to small practices. and our assumption that affected clinicians will submit via the MIPS CQM collection type. Net decrease in total number of respondents (number of individual submitters decreased while the number of group submitters increased) due to updated estimates for the number of clinicians projected to be QPs or participating in APMs during the 2020 MIPS performance period.
Table 77: Quality Performance Category eCQM Collection Type	None.	Net decrease in total number of respondents (number of individual submitters decreased while the number of group submitters increased) due to updated estimates for the number of clinicians projected to be QPs or participating in APMs during the 2020 MIPS performance period.

***The burden for these changes to the Open Payments program represent one-time system changes.

BILLING CODE 4120–01–C

D. Submission of Comments

We have submitted a copy of this rule to OMB for its review of the rule's proposed information collection requirements and burden. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections previously discussed, please visit CMS's website at *https://www.cms.gov/Regulations-andGuidance/Legislation/PaperworkReductionActof1995/PRAListing.html*, or call the Reports Clearance Office at (410) 786–1326.

We invite public comments on the proposed information collection requirements and burden. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** sections of this proposed rule and identify the rule (CMS–1715–P) and where applicable the ICR's CFR citation, CMS ID number, and OMB control number.

V. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VI. Regulatory Impact Analysis

A. Statement of Need

This proposed rule makes payment and policy changes under the Medicare PFS and implements required statutory changes under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), the Achieving a Better Life Experience Act (ABLE), the Protecting Access to Medicare Act of 2014 (PAMA), section 603 of the Bipartisan Budget Act of 2015, the Consolidated Appropriations Act of 2016, the Bipartisan Budget Act of 2018, and sections 2005 6063, and 6111 of the SUPPORT for Patients and Communities Act of 2018. This proposed rule also makes changes to payment policy and other related policies for Medicare Part B.

This proposed rule is necessary to make policy changes under Medicare fee-for-service. Therefore, we included a detailed regulatory impact analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explained the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this proposed rule would redistribute more than $100 million in 1 year. Therefore, we estimate that this rulemaking is ''economically significant'' as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other

providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, *see* the SBA's website at *http://www.sba.gov/content/table-small-business-size-standards* (refer to the 620000 series)). Individuals and states are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. The PFS does not reimburse for services provided by rural hospitals; the PFS pays for physicians' services, which can be furnished by physicians and non-physician practitioners in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule would not have a significant impact on the operations of a substantial number of small rural hospitals.
